House of Commons Debates

OFFICIAL REPORT

Thursday, February 27, 1941.

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

FOREIGN EXCHANGE—INTEREST AND DIVIDENDS PAID TO NON-RESIDENTS

Mr. HARRIS (Danforth):

What amount of United States exchange was provided by Canada in each of the years 1938, 1939 and 1940 for the payment of—(a) interest on investments in Canada held by investors outside of Canada; (b) dividends earned in Canada and paid to non-residents?

Mr. MacKINNON (Edmonton West):

(a) Interest payments in terms of Canadian dollars on Canadian bonds and debentures held by non-residents:

Total to non-residents—1938, $139 million; 1939, $136 million; 1940, not yet available.

To residents of the United States—1938, $84 million; 1939, $84 million; 1940, not yet available.

(b) Dividend payments in terms of Canadian dollars paid to non-residents by Canadian companies:

Total to non-residents—1938, $176 million; 1939, $174 million; 1940, not yet available.

To residents of the United States—1938, $141 million; 1939, $138 million; 1940, not yet available.

TRANS-CANADA AIR LINES—PURCHASE OF AEROPLANES

Mr. JACKMAN:

1. How many aeroplanes have been added to the Trans-Canada Air Lines since December 31, 1939?

2. What was the total cost?

3. Where were they purchased?

4. How many of the aeroplanes were airliners?

Mr. HOWE:

1. Six.

2. Total cost, including radio, $925,316.85, of which sum $260,398.62 represents duty and sales tax paid to the Canadian government.

3. United States.

4. All six are Lockheed "Lodestar" 14-passenger transport aeroplanes.

RENTAL OF PROPERTY IN SAINT JOHN, N.B.

Mr. HAZEN:

1. Has the government rented the Golden Ball Garage on the corner of Union and Sydney streets in the city of Saint John?

2. If so, from whom was it rented?

3. (a) Did it rent the whole building? (b) If not, how much of it?

4. For how long a period?

5. What rent does it pay?

Mr. RALSTON:

1. A portion of the building has been occupied for the purpose of ordnance services and the terms of occupancy are under negotiation.

2. See answer to No. 1. General Realty Co., Ltd., Saint John, N.B., are understood to be the owners.

3. See answer to No. 1. The portion occupied is four floors, comprising 55,000 sq. ft.

4. See answer to No. 1. The period for which required will probably be six months.

5. See answer to No. 1.

NATIONAL DEFENCE—SELECTION BOARDS

Mr. COCKERAM:

1. Who are the members of the Senior Selection Board of the Department of National Defence?

2. Who are the members of the Junior Selection Board of the Department of National Defence?

3. What are their qualifications for this important position?

4. Have they the power to override recommendations made by district officers commanding?

Mr. RALSTON:

1. The Chief of the General Staff, the Adjutant-General, the Quartermaster-General, the Master-General of Ordnance.

2. The Director of Staff Duties, the Director of Military Training, the Director of Personal Services, the Director of Organization.

14873—68

REVISED EDITION

3. Qualified by their training, experience and the qualifications which they possess for and the responsibilities attaching to their respective appointments.

4. All recommendations received from district officers commanding and other sources are placed on a staff list. The committees consider this list and, based on all round qualifications, submit nominations therefrom for consideration and approval of higher authority.

WEYBURN, SASK., CENSUS COMMISSIONER

Mr. DOUGLAS (Weyburn):

1. Who has been named census commissioner for the federal constituency of Weyburn?
2. By whom was he recommended?
3. Is he a great war veteran?

Mr. MacKINNON (Edmonton West):

1. D. J. Mitchell, Weyburn.

2. By the Minister of Trade and Commerce after consultation with his colleague the minister from Saskatchewan.

3. He is an ex-service man.

GASPÉ AND MAGDALEN ISLANDS CENSUS OFFICERS

Mr. ROY:

1. Who recommended to the Hon. Minister of Trade and Commerce Messrs. Terrence Pigeon of Gaspé, and Louis-Marie Keable of Ste-Anne-des-Monts, as chief census officers for the counties of Gaspé and Magdalen islands, respectively?

2. What are the dates of these recommendations?

Mr. MacKINNON (Edmonton West):

1. The Minister of Trade and Commerce recommended to the Dominion Statistician that Terrence Pigeon of Gaspé and Louis-Marie Keable of Ste-Anne-des-Monts, be appointed chief census officers for the counties of Gaspé and Magdalen islands respectively, after consultation with his colleagues in the cabinet from the province of Quebec.

2. December 27, 1940.

PORK AND POTATOES—PRICES TO PRODUCERS

Mr. LACOMBE:

1. What was the average price for pork paid to the producer in each month in 1939, 1940, and 1941 to date?

2. What was the average price for potatoes paid to the producer during the same periods?

Mr. MacKINNON (Edmonton West):

1. Hogs: Weighted average prices at all markets, 100 lbs.

	1939	1940	1941
January	$8.94	$8.79	$10.69
February	9.23	8.79	
March	9.21	8.79	
April	8.55	8.28	
May	8.33	7.73	
June	8.81	7.65	
July	8.84	7.82	
August	7.86	8.01	
September	8.64	8.57	
October	8.39	11.56*	
November	8.48	10.63	
December	8.62	10.55	

*From October, 1940, prices quoted are for dressed weight.

2. Weighted average price received by producers for potatoes per 100 pounds.

Crop year	
August, 1938, to July, 1939	69 cents
August, 1939, to July, 1940	1.13 cents
August, 1940, to December, 1940	79 cents

QUESTIONS PASSED AS ORDERS FOR RETURNS

APPOINTMENTS TO THE PUBLIC SERVICE

Mr. DIEFENBAKER:

1. How many employees have been added to the public service of Canada since the outbreak of war?

2. Of these how many are (a) permanent employees, (b) temporary employees?

3. Of these how many were appointed (a) by the civil service commission, (b) under order in council?

FOREIGN EXCHANGE—VEGETABLE OILS

Mr. CARDIFF:

1. How many dollars United States exchange were issued to shortening and soap manufacturers for the purchase of vegetable oils in the calendar year 1940?

2. What quantity of vegetable oil mentioned in the first question was imported into Canada?

ALLOWANCES TO DEPUTY MINISTERS

Mr. DIEFENBAKER:

1. Are any of the deputy ministers in receipt of a per diem allowance or expense account in addition to salary?

2. If so, who, and what is the amount per day?

AID TO MATAPEDIA-MATANE, QUE., FISHERMEN

Mr. ROY:

1. Has the government, directly or indirectly, during 1939 or 1940, made any grants in kind or in cash to the needy fishermen of the county of Matapedia-Matane?

2. If so, who was in charge of the distribution and what kind of grants were made?

3. Through the agency of what merchants, and for what amounts in each case, was the distribution made?

4. What are the names and the amounts paid in each case to the fishermen of Grosses-Roches, Ste-Felicite, Matane, Riviere Blanche, Baie-des-Sables, Les Boules, Metic, Grand Metis and Ste. Flavie?

5. What are the names of the fishermen in each of the parishes aforesaid who received deficiency payments through the medium of the salt fish board during the years 1939 and 1940, and what amount was paid in each case?

6. What was the total amount paid by the salt fish board, and by the government, to the fishermen of the above county during the said years?

PRAIRIE FARM ASSISTANCE—REGINA EMPLOYEES

Mr. PERLEY:

1. How many office employees are there in the city of Regina under the Prairie Farm Assistance Act?

2. What are their names, home addresses, positions, salaries and expenses, respectively?

3. How many have been employed under the Prairie Farm Assistance Act since the 1st of July last, (a) in field service; (b) inspectors, (c) supervisors; and what are the names, home addresses and salaries and expenses, respectively, of these persons?

THETFORD MINES, QUE., MILITARY TRAINING CAMP

Mr. LAFONTAINE:

1. During the year 1940 were any requests made to the government for the establishment of a military training camp at Thetford Mines, county of Megantic-Frontenac?

2. If so, by whom were these requests made, when, and for what reasons were they not granted?

DEFENCE OF CANADA

APPOINTMENT OF SPECIAL COMMITTEE TO CONSIDER AND REVIEW REGULATIONS AND NATURALIZATION AND DEPORTATION LAWS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

Whereas order in council P.C. 2483 was passed under the authority of the War Measures Act on the 3rd September, 1939, making regulations known as the defence of Canada regulations;

And whereas the said regulations have been amended from time to time;

And whereas by order in council P.C. 4750 of the 12th September, 1940, the said regulations were revoked and the defence of Canada regulations (consolidation), 1940, numbered one to sixty-four inclusive, were made and established in substitution therefor;

And whereas since the 12th day of September, 1940, several orders in council have been passed amending, altering or adding to the said substituted regulations;

And whereas at the last session of parliament a select committee of this house was appointed on the 13th June, 1940, to consider and review the said defence of Canada regulations made on the 3rd September, 1939, and amendments thereto;

And whereas the said committee reported to this house on the 1st August, 1940, and amongst other things recommended, in effect, that at the next session of parliament a special committee of the house be appointed to again consider and review the defence of Canada regulations; to consider and review the law relating to naturalization and to review as well the law relating to deportation;

And whereas it is deemed advisable that a committee of the house be appointed accordingly to ascertain whether the defence of Canada regulations (consolidation), 1940, and amendments thereto and the law relating to naturalization and deportation reasonably meet the requirements of the country in time of war;

Therefore be it resolved that a select committee of this house consisting of the following members: Messrs. Bertrand (Laurier), Black (Yukon), Claxton, Coldwell, Dupuis, Hansell, Hanson (Skeena), Hazen, Martin, Maybank, McKinnon (Kenora-Rainy River), Michaud, Ross (Calgary), Ross (Souris), Slaght, be appointed to consider and review the defence of Canada regulations (consolidation), 1940, and amendments thereto, and the law relating to naturalization and to review as well the law relating to deportation; with power to send for persons, papers and records; to examine witnesses under oath; and to report their opinions and observations from time to time to the house.

Mr. M. J. COLDWELL (Rosetown-Biggar): Before the motion is adopted I should like to make a few observations regarding it.

I want to say at the outset that we welcome the appointment of this committee. A similar body was established last session. It met many times, and presented a report which was not moved at the time, and therefore not adopted. As one member of that committee who was not satisfied with all the recommendations made, I was disappointed that there was no opportunity for the discussion of the regulations and of the report before the regulations were further amended. I feel that, in their present form and under the present methods of their administration, many of our elementary democratic rights are being jeopardized.

Neither I nor any member of our group would suggest that subversive activities interfering with our success in the present struggle should be permitted or tolerated for a moment. On the other hand, we insist that every accused person, every accused organization, and—may I add—every accused newspaper ought to have the right of a proper hearing before an impartial and competent tribunal. Further, we believe that a decision from such an authority set up under the defence of Canada regulations at the present time should be equally binding upon the accused and upon the Department of Justice unless some further method of appeal to an impartial tribunal is provided. As the regulations now stand, this is not the case, as I shall try to show in a very few moments.

As a member of the committee which sat last year, I and some others tried to amend the regulations to safeguard our democratic rights of citizenship. Of the many changes we suggested then, I still regard those seeking to enlarge the number of an appeal committee to at least three persons, one of whom holds high judicial office, as the most important. At the present time one person, on evidence supplied by the accuser, alone makes a decision which may involve a long period of incarceration for the accused. Even then the decision of the appeal committee is not final; for the Department of Justice may or may not accept a recommendation and act upon it.

A week ago yesterday the Minister of Justice (Mr. Lapointe) tabled his report of the action taken under the regulations from November 1 to February 17. The report alarmed me, because it showed that the committee, a judge in this case, after reviewing the evidence contained in the police files, recommended the release of twenty-four persons and the Department of Justice refused to accept the recommendation in nine of these cases. The sweeping, undemocratic power vested in the minister under regulation 21 is clearly demonstrated in a judgment of Mr. Justice Hope of Ontario dated January 9 and reported on page 49 of the *Ontario Weekly Notes* of February 7, 1941. The learned judge had before him an application for a writ of habeas corpus from J. A. P. Sullivan, president of the Seamen's Union, who was interned on June 18, 1940. As we all know, the right of habeas corpus has been for many centuries a fundamental right of the entire British judicial system. It is the cornerstone of British democratic justice. On several occasions I have stated that regulation 21 abolishes this right of habeas corpus. The judgment of Mr. Justice Hope fully substantiates this view.

The first point which emerges from the report of the judgment as it appears in the *Weekly Notes* is that, when Sullivan asked for the reasons for his internment, he was merely told the following, and upon it he had to base his appeal. I quote from the *Ontario Weekly Notes* of February 7, page 50:

> Your detention has been deemed necessary in the interests of the state because representations have been made that you are a member of the communist party of Canada, a subversive organization which is opposed to the interests of Canada. In view of this, it would appear that you are disloyal to Canada.

Can anyone in this house suggest that this information constitutes sufficient particulars upon which an accused person may base an appeal? Suppose that Sullivan denies, as I believe he does, that he is a member of the communist party; how can he prove it if all he is told is that representations have been made that he is a member of the communist party? I admit quite readily that under present war conditions ordinary court procedure may have to be set aside on the ground that it may not be feasible to produce the plainclothes officers who are checking subversive activities. But surely the accused or his counsel should have access to the written accusations against the detained person. Such particulars as dates when the accused is alleged to have joined the subversive organization or was actually at its meetings or serving in some subsidiary organization ought to be furnished in order that a proper trial may be proceeded with. Unless some such information is accessible to the accused, provision for review under regulation 22 is largely a mockery. The important point in this connection is that the judge held that the matter of particulars is—

> . . . a discretionary matter for the committee. It is not subject to the review or direction of the court.

On the matter of writ of habeas corpus itself, the court held that internment under regulation 21 is—

> . . . a matter which is discretionary with the minister in his administrative capacity and is not subject to the review of the courts.

But the judge goes further than that. He decides that a Canadian citizen interned under regulation 21 becomes "a prisoner of war" and therefore concludes that all of this—

> . . . precludes the granting of a release under writ of habeas corpus herein, without the consent of the director or internment operations.

Thus, if the court should grant the writ, it could not order the release without the consent of an officer appointed by the Department of National Defence whose duties are not concerned with the reasons for internment but with the proper administration of the camps. Surely that procedure violates the principles of British justice. In my opinion it is fantastic.

Let me summarize the situation as I see it in the light of the judgment to which I have referred. First, the minister, on the advice of the police, orders an internment. Next, the right of writ of habeas corpus is abolished. Next, the courts cannot interfere. For, next, if they did, another administrative officer, the director of internment operations, has power to detain in spite of the courts. And lastly, the review committee, one man, functions under regulations which make it impossible for the accused to put up an adequate defence and have a proper hearing; and even if the committee decides that an internee should be released, the minister can still refuse to follow its advice. In short, all power from start to finish is vested in the minister, his police department and his legal advisers.

Surely this is the antithesis of British and Canadian democracy. Even the special committee of which I was a member last session was denied access to any files or other documents relating to internments, although the reference gives us some rights in regard to the production of papers.

Now what does all this mean? It means that the police detain and intern a British subject on grounds which seem satisfactory to them. A judge examines this evidence, which the accused has no opportunity of rebutting, and recommends his release. The minister, acting on the advice of his department, including the police who originally made the investigation and laid the charge, refuses to release the person in spite of the judge's recommendation. This is surely a most dangerous situation. The department and the police accuse and detain. The committee, a judge, reviews and recommends release. But the final decision rests with the accuser. This, I submit, is a reversal of all democratic procedure which ought not to be allowed to continue.

The report of the Minister of Justice to which I have referred, presented to the house a week ago, itemizes the detentions since November 1 under the headings Germans, Italians, Communists and National Unity party. I wonder how the released are itemized, and particularly how the nine who were not released were catalogued.

Last week I had occasion to draw the attention of the minister to an article by Commissioner S. T. Wood of the Royal Canadian Mounted Police in The *Canadian Spokesman*. On February 19 the minister stated that the article clearly represented conditions as they exist in Canada according to the records of the Royal Canadian Mounted Police. The gist of the article to which I refer is contained in this paragraph:

> Many may be surprised to hear that it is not the nazi nor the fascist but the radical who constitutes our most troublesome problem. Whereas the enemy alien is usually recognizable and easily rendered innocuous by clear-cut laws applicable to his case, your "red" has the protection of citizenship, his foreign master is not officially an enemy and, unless he blunders into the open and provides proof of his guilt, he is much more difficult to suppress. Since communism was outlawed, most of his work is carried on under cover of other organizations and associations pretending to be, or in reality loyal to the constitution.

Make no mistake about this: I have nothing but the utmost contempt for communist activities in relation to the war. Make no mistake about it. Nor, I suppose, is there any group in the house which is more frequently denounced and consistently undermined by the communist party and their fellow travellers than the group to which I belong. But let me add this, that no matter what the opinion of an individual may be, under our British democratic rights of citizenship, every one of our citizens ought to be entitled to plead his cause and to have a fair and impartial trial.

I said a moment ago that I had nothing but contempt for the communist party. For after years of propaganda, demanding that the democratic nations stand firmly against Hitler and fascism, they first supported the declaration of war in September, 1939, and then, a few weeks later, because it suited Russian foreign policy, they denounced as an imperialist adventure the war which they had urged. Nevertheless, to say that communist activities are more dangerous to democratic institutions than those of fascist and nazi sympathizers is surely to fly in the face of recent history. It was this attitude of mind that allowed the war to steal upon us. It was this attitude of mind which brought about the arrest of the communist leaders in France but let the fascist sympathizers obtain power and then betray her. The views expressed by Commissioner Wood in that regard are the views which destroyed collective security, encouraged the rise of Hitler, and, through the long period of appeasement, brought us to the present crisis in our history.

Let us remember that the present struggle is not between nations as such, or imperialisms as such, but between two conflicting ways of life. As J. B. Priestley has said, we are fighting not only nazism in Germany but the same set of ideas when they are held by people who speak the English tongue and are of British stock. The statement of Commissioner Wood, approved by the department, shows an entire failure to grasp the implications of the present war and the situation generally. Commissioner Wood says, "the radical is the problem." How does he define that term?

Last session the hon. member for North Battleford (Mrs. Nielsen) complained that copies of her speeches, entitled "Why I Oppose the Budget," had been seized. I was not clear whether they had been seized as such, or among communist or other subversive literature. I therefore made some inquiry and found that at Regina they were the only pamphlets seized. No other pamphlets were taken from the hall. The officer gave his receipt, dated October 3, 1940. I have a copy of it. It reads:

> Received from W. Browne, secretary workers protective organization, quantity of papers headed "Why I opposed the budget", accepted for purposes of inquiry.
>
> Woodward, R.C.M.P.

The pamphlets consisted, I understand, of extracts from speeches made by the hon. member in this house.

Last Wednesday the Minister of Justice (Mr. Lapointe) stated that the commissioner never intended to say anything that would reflect on the rights and duties of members of parliament. We in this house have certain rights and privileges, which we should guard jealously. It may be that in this article there was no reflection upon members of parliament, but the seizure of pamphlets circulated by the hon. member for North Battleford, and being simply extracts from speeches she made in this house, is a serious interference with the privileges of this house and this parliament which ought not to be tolerated by the members of this house, no matter where they sit. I suggest to you, Mr. Speaker, that it is for you to judge whether an hon. member transgresses or exceeds his rights here, and not for the mounted police.

Having placed this matter before you I am asking that it be given some consideration. At the same time I ask the Minister of Justice, when he has time, to explain this action to the house.

Now compare the statements of the hon. member for North Battleford with statements that were made, let us say, in the Ottawa *Citizen* of January 11. That paper contained a long editorial entitled "At the Business End of the Bren." The concluding words were these:

> When the lads come home from overseas after some years of service at the real business end of the Bren gun, they may know better where to shoot than Canadian veterans did in the years of debt and privation after the last war.

Was there ever a clearer case of incitement to men in uniform when they return from overseas to use force to obtain what they were after? I believe in the freedom of the press and freedom of speech, but the government adopted regulations under which men have been prosecuted and interned for far less than this. Justice, if it is to be justice, must be impartial. What has been done by the attorney general of Canada, to whose attention I drew this editorial, or by the attorney general of Ontario, whose attention I have reason to believe was also drawn to it by someone else?

Yesterday we had the Minister of Munitions and Supply (Mr. Howe) tell us in the house that a newspaper, the *Financial Post,* was number one saboteur in Canada.

Mr. TURGEON: When the minister said that was he speaking of sabotage against Canada or against H. R. MacMillan?

[Mr. Coldwell.]

Mr. COLDWELL: I understood he was speaking of Canada, because he said that that paper right from the beginning had endeavoured to stop the production of Bren guns. That was long before Mr. MacMillan was connected with the department.

Mr. TURGEON: I think when he made that statement about sabotage he was referring to Mr. MacMillan.

Mr. COLDWELL: I hold no brief for any of the papers that have been suppressed; I hold no brief for the *Canadian Tribune,* which has been suppressed this week, but I agree with the Right Hon. Sir Percy Harris, of Bethnal Green South West division, a Liberal member of the British house, who when two communist papers were recently suppressed in Great Britain made this statement when he seconded the amendment condemning that suppression:

> It would be a very bad day for parliament and democracy if a paper could be closed down without discussion in the House of Commons.

Yet these things are being done without the knowledge or consent of this house.

I believe that the greatest threat to a successful conclusion of this war does not come from the discredited communist party, which has been revealed in its true colours as the agent of a foreign power, but from persons in high places who fear the progressive aspirations of the common people more than they fear the thing we call fascism. Was not that the story of France, and of the traitorous conduct of influential people in other fallen nations?

What I have said to-day ought to be said. The danger to democracy and progress is within our gates as well as without. And we are looking in the wrong places for the most dangerous subversive influences, I submit. When our mounted police turn their eyes to seek those who sympathize with the dictatorships, let them look above the gutter and the beer parlour, then perhaps they will find where the real danger to our democratic institutions lies.

There are subtle ways of defeating our cause. In Britain they know for what they fight. There they do not fear the so-called radical; they fear more those who through the years looked to Hitler as their protection against the will of the people. In support of that statement let me say it is significant that in Great Britain they have not bothered with the communist leaders, indeed they have only just lately suppressed the communist daily newspaper. But they have put in an internment camp a member of parliament—not a Labour or a communist member, a Conserva-

tive member of the house. They have put into internment camps men in high places, because they know that the real danger to democratic institutions in Great Britain came not from below but from those in high places who could use their influence to defeat the aims of the common people. Such statements, for example, as were made by Senator Meighen at a public function in Toronto or in another place, are subversive statements, among the most subversive I have seen. The statement in the Ottawa *Citizen* is more dangerously subversive than anything I have seen in any so-called radical or communist paper published in Canada.

I support the setting up of this committee and the broad reference made to it. But I feel it is my duty to take this opportunity of laying before this House of Commons the dangers which I see in the present regulations and their administration.

I should like to quote the material part of the resolution which was seconded by Sir Percy Harris, the Liberal member to whom I referred. It was moved by Mr. Bevan, a Labour member of the house. In part the resolution uses these words, which express my idea exactly:

> That this house expresses its detestation of the propaganda of the *Daily Worker*—

That was the communist newspaper in England.

> —in relation to the war, as it is convinced that the future of democratic institutions and the expanding welfare of the people everywhere depend on the successful prosecution of the war till fascism is finally defeated; but is of the opinion that the confidence of considerable numbers of people can be undermined if it can be shown to them that any newspaper can be suppressed in a manner which leaves that newspaper no chance of stating its case—

That which applies to a newspaper applies equally to an individual.

Mr. LAPOINTE (Quebec East): Has my hon. friend read the speech of Mr. Herbert Morrison?

Mr. COLDWELL: Yes; and I would agree with his characterization of the *Daily Worker* and its propaganda; but I say that in this country it is a blot on our democracy that the only information given to people who are detained under regulation 21 is that which I quoted once before:

> Your detention has been deemed necessary in the interests of the state because representations have been made that you are a member of the communist party of Canada, a subversive organization which is opposed to the interests of Canada. In view of this, it would appear that you are disloyal to Canada.

That, I say, is insufficient evidence upon which an accused person may contest any case.

Just before I sit down I should like to refer to the suspension of the *Canadian Tribune,* in regard to which I have received a number of telegrams. I understand that this newspaper has been suspended simply on verbal notice from the police.

Mr. CASGRAIN: I may tell my hon. friend that regular notice was duly served on that newspaper on February 25, after verbal notice had been given.

Mr. COLDWELL: I had no knowledge of that fact. I am glad to hear the Secretary of State (Mr. Casgrain) make that statement, and perhaps a little later he will have something further to say about the matter. It seems to me, however, that when a newspaper is suspended we should know the reasons for that suspension; whether or not it was guilty of some contravention of the law and in what particular, and why, if it was guilty of a contravention of the law, it was not taken into court. In contrast may I suggest that if the *Financial Post* has been the number one saboteur, surely it should have been proceeded against as was the *Canadian Tribune;* and if the statement I have quoted from the Ottawa *Citizen*—and that was a correct statement from the editorial—having been brought to the attention of the authorities, was subversive, as I believe it was, then some action should have been taken in that regard. If we are going to have regulations let them be administered impartially, without regard to who breaks the regulations. Then we shall feel that at least an attempt at justice is being made.

Right Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, may I say first that in the task which is mine, that of exercising a discretion which at times is far from pleasant, I am merely doing the work that has been entrusted to me by parliament, and more particularly by a committee which last year sat especially for the purpose of considering and revising these regulations. I was not a member of the committee. I intentionally refrained from being a member, in order that the decisions of the committee should not be influenced in any way by what I might have to say. Neither will I be a member of the committee which is to be appointed under the resolution now before the house. I will do my duty if, when that committee reports, new regulations are enacted amending the old ones. I will apply those regulations with calm, with deliberation, with circumspection; but I will apply them, whatever may be the criticism.

Are restrictions necessary in time of war? This is the first question, and hon. members must not forget that we are engaged in a life and death conflict. Are restrictions necessary which should not exist in ordinary times? If the answer is in the affirmative somebody has to be entrusted with the duty of applying those restrictions. If the person or authority or body entrusted with that duty does not deserve to be entrusted with it, has not the confidence of the community, then change him; put in somebody else who will command the confidence of the people. But the restrictions must remain, because they are a necessity in war time. My hon. friend says it is a terrible thing that in nine cases the Minister of Justice has declined to accept the recommendation of the committee, composed of one judge, for the release of an interned person.

Mr. COLDWELL: The principle is wrong. I am not criticizing the minister.

Mr. LAPOINTE (Quebec East): Then why give the discretion to the minister? Is he a rubber stamp?

Mr. COLDWELL: He should be bound by the recommendations.

Mr. LAPOINTE (Quebec East): That is entirely contrary to the whole principle of the matter. In a case of this kind the discretion of the Minister of Justice is a matter of public policy, not one of strict law. It should be so, and it is so everywhere else.

Perhaps it is better that I should give the four stages through which these matters go. Before a man is recommended for internment the police have gathered all the particulars concerning him, and there is a record of his activities. This is submitted to a legal man, who is counsel for the police. In the district of Montreal it is Mr. Fauteux, chief crown prosecutor, a very able legal gentleman. After he has passed on the case—and the man is at liberty while all this is being done—the matter is sent to a committee on which Mr. Robertson, now acting Under-Secretary of State for External Affairs, and Mr. MacNeill, are sitting. These men consider the facts, before they are submitted to me for an order for internment. Some precautions therefore are taken. Then if the man is a British subject he has the right of appeal, and the appeal is heard by the committee which, by the way, was selected by the parliamentary committee which sat last year as the proper authority to act in the matter. The committee sends the recommendation to the Minister of Justice. The Minister of Justice must then use his discretion. My hon. friend says he should not have that discretion. That will be for the committee to decide. I do not want even to discuss the matter too strongly; I merely point out that I disagree with my hon. friend in this respect. There are things with which the secret service of the Royal Canadian Mounted Police and the Minister of Justice are acquainted which could not be given out.

My hon. friend complained that last year the committee could not get production of everything it wanted. Well, we must act on communications which come to us from foreign governments, to say nothing of those which come from our secret agents. Those communications should not be made known to the community, otherwise their work would be shattered and useless.

These things we know; and if in my own view, according to my own conscience and after consultation with those charged with keeping order in Canada at this time, I come to the conclusion that in the public interest and for the public safety of the country it is better to keep that man inside, then I will keep him inside.

My hon. friend criticized the commissioner of the Royal Canadian Mounted Police for having said in his article that at the present time the communists are those who give the police the most trouble. Well, Commissioner Wood was saying exactly what conditions are, according to his own experience. My hon. friend will understand that conditions are not the same in respect to all. Alien enemies are interned—or, if they are not interned, I may tell you that those who are not are good boys and are keeping peaceful.

On the other hand we are flooded all the time with communist circulars. In spite of the fact that many of their organizations and printing presses in Montreal have been confiscated and destroyed, they have found a way of continuing to print subversive literature of all kinds. My hon. friend has said that the communists do not like his group. I may tell him that they do not like me, either; I am usually the target of those people in their dirty literature which is being circulated in Montreal, Quebec and elsewhere. They are doing the same at other points, and they are a good deal more active than some others.

It is not a question of deciding whether fascist or nazi ideals are worse or better than communist ideals. That does not enter into the consideration of the matter. It is a fact that most of those who are making trouble at this time are the men the commissioner of the mounted police described in his article.

My hon. friend criticized the inaction of the department with respect to the article in

the Ottawa *Citizen*. My hon. friend sent me that article, not very long ago. I may tell him that he is right. It was a subversive article which was published by the Ottawa *Citizen* on that date, and I may tell him that they will have to answer for it before the courts of the country.

Mr. HANSON (York-Sunbury): What does the minister mean by that?

Mr. LAPOINTE (Quebec East): I may wait a little, because some evil-minded people may think that it would be because of their editorials regarding myself that I would act now. But this is certainly an article which is subversive, which is an appeal to disorder and to trouble, and my hon. friend is right in denouncing it. I assure him that something will be done in the matter, if this has the effect of satisfying him.

I do not know very much about the *Canadian Tribune*. People seem to be under the impression that censorship is under the Department of Justice. It is not. The censors are under the Secretary of State. For a time I had the pleasure of closing a couple of newspapers, but on that occasion I was acting Secretary of State, and it was in that capacity I proceeded.

I am pleased my hon. friend did not use the commonplace argument or absurdity that Canada is fighting to save democracy in Europe and to destroy it here. That is the argument we read in some newspapers, and it has been used on platforms on different occasions. Of course it is an absurdity. We have enforced these restrictions not to destroy but to protect democracy. We have enforced them to keep and to preserve it. Essentially they are only temporary. They are operative in a state of emergency, and they will disappear as soon as we have peace and victory, as we hope to have some day. But those restrictions are there to control people who would do nothing to help Canada in her war work, and to prevent them from doing anything which would impede that work. That is the reason for the restrictions. I believe they serve a useful purpose. Our soldiers and sailors and airmen are subject to restrictions a great deal more severe than those contained in the defence of Canada regulations, and they do not complain. Surely our airmen and our sailors, who are willingly risking their lives every day on destroyers and other craft, have a right to expect that we in the parliament of Canada will prevent people from stabbing them in the back while they are fighting for us.

That, Mr. Speaker, is the purpose and the reason for these restrictions, and I am sure that my hon. friend himself (Mr. Coldwell) would be the last to propose that they should be done away with. He wants to modify them and to be sure that they are applied more fairly, and he will have his opportunity before a committee of the house. I shall accept the new regulations if changes are made, and apply them with the same force and vigour and circumspection as I do to-day, using my best discretion in their application.

So far as the trade unions are concerned, it has been stated over and over again that trade unionists have been interned under the defence of Canada regulations. But that is not so. Some people who were members of a trade union have been interned, not because they were trade unionists, but because they were communists, because they had acted for the communist party, because they had exercised their activities to spread communist ideas. Why, Mr. Speaker, the trade unions themselves in some cities of Canada have been compelled to expel members from their ranks because of such activities. We know from our records in the secret service that instructions have been given to their members by the heads of the communist party to join other associations and organizations to try to spread their ideas and to sabotage the war effort of Canada. They were even instructed to join the army. Everybody knows that one man wearing his majesty's uniform was arrested last year for distributing communist literature on the streets of Ottawa. We have to protect Canada against that sort of thing, and the fact that some of these men are members of trade unions surely should not protect them against the laws of the country and the regulations.

I believe, sir, that we have applied the laws and regulations with calmness and discretion. We have not yielded to hysteria. As a matter of fact the hon. member for Rosetown-Biggar will remember that for a long time in this house I was under attack on the opposite ground, that I was too lenient, that subversive activities were going on in Canada and that I was doing nothing to check or prevent them. But now it seems that the criticism comes from the other extremity. Under these circumstances I must have struck a pretty fair average, and one criticism helps me to answer the other.

I have said what I wanted to say on this matter. I wish to impress on the house the extreme difficulty of the work we have to do, and its extreme importance. I ask the house to give me its confidence as long as I am the one designated to do this work, for without that confidence I could not fulfil my duties. I hope that at least I shall be satisfied in my own mind that I have done my best to serve my country in this time of war.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I had not intended to intervene in the debate on this resolution except with respect to the two new subjects which are to be referred to the committee, naturalization and deportation, and upon that I intended to make some inquiry.

I have listened attentively to the remarks of the hon. member for Rosetown-Biggar (Mr. Coldwell) and also to the reply that has been given by the Minister of Justice (Mr. Lapointe), and I am bound to say that in my view the Minister of Justice has correctly stated the principles that should guide him. So far as we are concerned on this side of the house we believe in the necessity of restricting the liberty of the subject in time of war, and if we accept that principle we cannot do anything else but support the general view which the Minister of Justice has given to the house. That principle is based on something else. It is based on the theory that we must preserve the safety of the state. In times of peace British justice stands on a different principle. Any man charged in a British court of justice is deemed to be innocent until he is proven guilty. But owing to the necessities of war time and the standards we believe in, the principles which have been laid down in the defence of Canada regulations and those in England, that position must of necessity be reversed.

Parliament in its wisdom passed the War Measures Act. Is there anyone who will say that we should not have the War Measures Act? I admit at once that unless the extraordinary powers therein contained are exercised with great care and skill and judicial ability there may be abuses. I would suppose that as those administering these regulations are human, and therefore fallible, mistakes may be made, but on the whole in time of war I do suggest that we must subscribe to the principle that the constituted authority delegated by parliament itself must be upheld.

I myself have had some qualms of conscience with respect to the suspension, in effect, of the writ of habeas corpus. Recently I have been doing some reading of British history in the time of the Hanoverians, and I call to the minds of hon. members the position as it was in, I believe, 1802—I am not quite sure of the date—when Pitt the younger was the Prime Minister of England and the Napoleonic wars were on. He suspended the writ of habeas corpus. Conditions in England at the present time, and to a lesser degree here, are analogous to those which then prevailed. At that time there was the danger of invasion; to-day there is a much graver danger. I do not believe there was nearly as much danger then from what we now term the activities of the fifth columnists as there was in England prior to 1940. But, because of the principle of the safety of the state, Pitt had parliament pass an act suspending the writ of habeas corpus. And there is a curious corollary of that action, because the people of England raised a great outcry against the taking away of this sacred right, the principle of which comes down to us from the days of magna charta, and the parliament of England had to reverse the position.

Now, under these regulations and under the authority of the War Measures Act parliament has delegated certain duties and certain discretions to the Minister of Justice (Mr. Lapointe). I have had some misgivings about vesting in any one man, no matter how good, how conscientious, how upright or how capable he may be, the sole authority of exercising this discretion. But it is there, and it is the law of the land, and until parliament changes it the Minister of Justice must exercise that judicial discretion which is vested in him. It is a principle of law with which, I believe, hon. members of the legal profession will agree, that in the exercise of a legal discretion no court will interfere unless there is a clear lack of jurisdiction or a clear excess of jurisdiction. I think that is fundamental.

I am curious to know what the right hon. gentleman contemplates in the way of court action against the Ottawa *Citizen*. I read the article and I thought it was more than a borderline case; it seemed to me that it was really an incitement to force. I was astonished to see it, coming from the source it did. I did not think it was my duty to call the attention of the mounted police or the Minister of Justice to the Ottawa *Citizen*. I was quite sure that they would be fully conversant with the situation and that the police and the Department of Justice would be capable of handling it. But I am curious to know what sort of court action the minister contemplates at a later time against the Ottawa *Citizen*: I have been cudgelling my brain to determine from my knowledge of the law what action he could take against it.

Mr. LAPOINTE (Quebec East): I must say that I am hesitating as between two courses.

Mr. HANSON (York-Sunbury): If the minister would be good enough—not now necessarily, but at a later stage—to enlighten us, I am sure it would be a very interesting chapter in the history of Canada. I am not going to say anything more about that.

I have had the opportunity of looking over the decision of Mr. Justice Hope in the

Sullivan case. I think his decision is based on legal principles. I thought when that case first arose that the writ would issue but that the complete answer to it would be that the man was in custody under certain provisions of the defence of Canada regulations. I was astonished to learn that the decision was that the writ should not issue at all. I am not going to enter into a discussion of the fine legal principles which guide the judge. I am satisfied that he is right, and as no appeal has been taken that chapter is probably closed.

I am also curious to know what were the reasons for the seizure of the published speeches of the hon. member for North Battleford (Mrs. Nielsen). I understand they were verbatim reports of the speeches which she made in parliament.

Mr. LAPOINTE (Quebec East): A few little changes.

Mr. HANSON (York-Sunbury): Oh! Well, I was not aware of that. But I would suggest that the greatest care ought to be exercised in suppressing speeches of members of parliament. I might be in danger myself. However, that is only in passing.

I turn for a moment to ask the Prime Minister if he would be good enough to tell the house just what he has in mind with respect to the subject matter of naturalization. It has come to my attention that considerable hardship has arisen because of the action in this connection of the department of the Secretary of State. In the county of Victoria, in the province of New Brunswick, there was established sixty or seventy-five years ago a colony of Danish subjects, settled into a community which is known as New Denmark. Without any question they have been among the best settlers who ever came to New Brunswick. They are law-abiding and industrious. One scarcely ever hears of one of these men being before the criminal courts. In the thirty-nine years that I have been in practice I never heard of one being at the bar of justice for a major offence. Many of them, in fact most of them, have become naturalized. Yet I am informed that the certificates of naturalization of many of them have been revoked; they have not been given any reason for this, and they are in a state of alarm. One Danish couple came first to the United States in the nineteenth century, and subsequently, before we had so many restrictions and regulations about entry to this country, they came to Canada.

Mr. CASGRAIN: Might I interrupt my hon. friend to say that, as regards certificates of the people whom he has just mentioned, I do not recall that any certificates have been revoked. Some of them may not have been naturalized up to the present, but I do not recall having revoked any certificates.

Mr. HANSON (York-Sunbury): I have not my file in front of me, but I received quite recently a communication with respect to a man named Hans C. Hansen, who came to the United States with his young wife prior to 1900, and subsequently entered Canada and joined the Danish colony at New Denmark. I do not suppose they went through any immigration formalities; I do not know; I judge from the correspondence that they did not. Subsequently, I believe about the year 1900, these people were naturalized under the then law of Canada. After this war started they were visited by the mounted police. They are now about eighty years of age. I do not say that the police have harassed them; I should not like to put that construction upon their conduct. But certainly the visit of the police has alarmed them. They have been obliged to deliver up their certificates and have not got them back. I communicated with the Under-Secretary of State with regard to this case and he wrote back stating that if some reputable citizen would vouch for these people the position would be clarified and they would be left in peace. I have referred the matter to my colleague, the member for that county, and I have no doubt that will be done. But there was a case where there was absolutely no necessity for any action on the part of the police, and I hope that sort of thing will cease. I have just received a note to the effect that the certificate was returned yesterday, so that I will not pursue the case any further. It is however merely one out of a number, and I would bespeak a good word for these people down there, that they be left alone, because they are loyal British subjects, every one of them.

With regard to the question of not receiving any further applications for naturalization, I hope that will be considered by this committee and that there will be some good constructive suggestions in the report of the committee. There are still in New Brunswick a substantial number of people of European origin from countries overrun by the Germans —Dutch, Belgians in my own constituencies, coal miners, men and women from Denmark who have recently come to Canada under the auspices of the government—and they have either neglected to get their certificates or have not had the requisite length of residence to qualify them. War comes and they are denied the right to apply. I hope that some liberal consideration will be given these people.

With regard to the question of deportation, I suggest that the government ought to tell us what is proposed in this matter. I have recently read an interesting book on the Doukhobors, and I recall the efforts that were made some time about 1933 to deport one Peter Verigin from Canada. I remember the legal proceedings that took place, and how the efforts of the government of the day were halted by writ of habeas corpus based on the decision of the late Mr. Justice Mellish of Nova Scotia and subsequently reversed in the Supreme Court of Canada when it was too late.

I would ask the government to give us now, if they will—perhaps they are not prepared to do so—some of the considerations which have impelled them to include this in the order of reference. What is the government's proposal? They must have a policy in this regard. Surely these two important matters will not be left to the committee without any guiding government policy. In the final analysis the government must take the responsibility for a policy on both these points and I should like to know what their suggestions are.

Hon. J. L. ILSLEY (Minister of Finance): May I say a word about the matters of naturalization and deportation. The references to naturalization and deportation come as a result of the report of the committee last year, and that part finds its place in the report in consequence of a request of certain members of the committee, of whom the hon. member for Vancouver South (Mr. Green) was most prominent, according to my recollection. He will correct me if I am wrong, but, as I remember, he requested that the report contain a recommendation that the matters of naturalization and deportation be referred to the next committee that was set up.

There was some discussion of naturalization last year. The head of the branch relating to naturalization came before the committee. Instances were mentioned of certificates having been recommended by county court judges and granted by the Secretary of State in some doubtful cases. One case in particular, I remember, was discussed at length in the committee, but I do not think the committee had any clear idea of what it wished to do or intended to do about either naturalization or deportation.

In the minds of some members, perhaps one member, the hon. member for Vancouver South—he is the one I remember distinctly—

Mr. GREEN: You give me too much credit.

Mr. ILSLEY: —these were important subjects that should be considered by the committee. So far as I know, the government has no proposals to place before the committee in reference to either subject.

Mr. A. W. NEILL (Comox-Alberni): I did not gather the full import of the remarks of the hon. member for Rosetown-Biggar (Mr. Coldwell), owing to the distance that separates us, and the bad acoustics; and my hearing is also poor. Moreover, I have had experience of that hon. gentleman in my own riding from the point of view of the accuracy of his recollections of what took place in this house, which convinces me that I need not waste much time in listening to him here. But I gather from the remarks made in reply by the Minister of Justice (Mr. Lapointe) that the hon. member for Rosetown-Biggar had some serious complaint about the manner in which the minister had fulfilled his duties in connection with the War Measures Act with respect to people making subversive statements. If this was so, and evidently it was, I also have a complaint against the Minister of Justice in that regard, and that is that he does not go far enough—and I have the proof before me.

A year ago a logger—he may have been a labourer—was half-shot, which means in British Columbia that he had had a few drinks; not an improper quantity; he was just mellow. He made some nasty remark about the war. I forget exactly what he said. I cannot remember whether it was that a man was a d— fool who enlisted or whether he said, "To h— with the war." At any rate, popular sentiment was running high and he was promptly arrested. This was an ignorant man addressing half a dozen others like himself, and he was haled into court and sharply punished. He was given a considerable fine, but I forget whether he went to gaol or not. He was rather harshly treated. But let me give the other side of the picture. As I say, this was only an illiterate man talking to a few half-drunk chums. I used the word "logger," and those who come from British Columbia will bear me out when I say that the loggers in that province are as loyal as any class in Canada. You can trust them to subscribe liberally to anything that is intended to forward the war.

The other side of the picture presents itself in this way. A few weeks ago, I believe it was early in February, the local member for one of the districts which I represent in this house, the district of Comox, called a meeting of his constituents in the city of Courtenay, which meeting he said was for the purpose of advising them of his actions in the legislative assembly in the session just passed, and generally with regard to matters political. The

circumstances were fully set out in the local paper and I do not think the matter was unfairly stated. That was a couple of weeks ago, and he was attacked for his remarks and given an opportunity to correct them if he had been misquoted. I know that newspapers by headlines can misrepresent a man's intention, but in this case I think it is accurate. The headline reads:

Cameron opposed to war savings campaign.

The article goes on to say:

Mr. Cameron opened his address with a bitter attack upon the campaign through which the government urged the people to invest in war savings stamps and certificates, declaring that all those who condone and assist the campaign are "helping to put shackles on the people of Canada."

Further on he said:

All war necessities must be produced at cost plus wear and tear, and the entire cost must be paid out of taxation. "It won't be, however," he stated, "as long as the people allow themselves to be bamboozled by such polite blackmailing schemes as the war savings campaign."

Fairly strong! There was a large advertising scheme going on at the time to further the sale of war savings certificates. Further on he stated that:

. . . the safety of Canada depended upon dispossessing the owning classes, and that the C.C.F. party stood ready to propose a bold, almost revolutionary, programme.

An hon. MEMBER: Who is that?

Mr. NEILL: One of the leading Cooperative Commonwealth Federation men in British Columbia, a member of the local house. I think he might have left out the word "almost." Then he goes on to say:

My quarrel is against allowing our young men to risk their lives while we still leave a percentage in a privileged position to profit by the grief and woe of the rest and for that reason I cannot believe in the sincerity of those who say we are fighting this war for democracy.

The people of Canada are being misled and betrayed by such schemes as this war savings campaign and I see my duty as a public representative to protest.

I think a case like that having been presented to the minister, did require some attention. Remember, this is not a man of no importance; he occupies the position of a member of the local house and his words get the publicity and attention to which they are entitled. The paper printed an editorial objecting strongly to this and a couple of weeks went by; the gentleman had every opportunity to correct or modify his statements, and he has not done so.

This gentleman spent a great deal of his time touring the province—as he has a right to do as provincial organizer—promulgating his views. They are naturally very strongly Cooperative Commonwealth Federation, which in itself is not objectionable, but they are also strongly tinged with diluted communism; it is often hard to tell the difference between one and the other. We from British Columbia—the situation may be different on the prairies—know how close the relationship is between those two phases of thought, shall we call them?

The other day I received some adverse comment because I referred to the fact that the recent dominion election in British Columbia resulted in the return of only one Cooperative Commonwealth Federation member instead of, I think, four that were in the last parliament. They got one man in out of sixteen candidates. Perhaps the house will understand the reason better when I throw this further light on the views expressed by this prominent leader of that body:

The picture is like this—pro-Jap yesterday; anti-Canada to-day; pro-nazi to-morrow!

Mr. T. L. CHURCH (Broadview): Before the motion is carried I should like to ask the Prime Minister (Mr. Mackenzie King) a question about the text of the reference. It is about the same as last year. The minister has done very excellent work—both ministers; it has meant a lot of very heavy work for them. But would it not be better to extend the term of this committee for two or three years so they may lay out a long-range policy? They could meet in the recess, and if fees are necessary they should be paid.

I have here a copy of the report of the proceedings of the Dies committee to the United States house of representatives, adopted last month. They made one recommendation which I think is important and should be incorporated in the terms of reference. As I see it the reference is not broad enough to cover two things: (a) subversive matters in Canada; (b) anti-Canadian propaganda, in regard to which the Secretary of State and the minister have done good work. I should like to see this committee given wider powers. Last year there was a very able chairman, a university man, the hon. member for Parry Sound (Mr. Slaght).

I call attention to one clause in the Dies report of January, 1941, adopted by congress. They recommended that the government—

(4) withhold all federal financial support from any educational institution which permits members of its faculty to advocate communism, fascism or nazism as a substitute for our form of government to the student body of these educational institutions.

There was only one dissenting voice in that committee. One member objected that it

might work a grave injustice to teachers who are merely seeking to explain the principles involved in the totalitarian philosophy. But there is a great deal of criticism of our Canadian schools and colleges along that line. There has been much discussion in the press, as there was also in England. It was found there by a committee that investigated two years ago that there was wide circulation in the universities and among those in high authority of teachings concerning the nazi principles of socialism and totalitarianism.

Then the Washington committee recommended also that they should have power to bring about the immediate mandatory deportation of aliens who advocate any basic change in the form of our government, and legislation should be enacted requiring all employees and officials of the federal government to be American citizens. Those are two other recommendations of the committee. Other recommendations are:

The enactment of legislation to outlaw every political organization which is shown to be under the control of a foreign government.

The enactment of legislation to stop all immigration from foreign countries that refused to accept the return of their nationals found under American law to be deportable from this country. This legislation is made necessary by the fact that some foreign governments have refused to accept their own citizens who have been ordered deported by the United States government.

The committee also recommended:

—added legislation to place restrictions on the distribution of totalitarian propaganda, when that distribution involves any cost to the American taxpayers.

And they also recommended:

—that the statutory period during which citizenship papers can be revoked under existing law be extended to at least ten years.

Due to the fact that the committee has discovered that many members of foreign controlled organizations have travelled on American passports which have been fraudulently obtained, the committee feels that the Statute of Limitations should be extended from three to seven years. This is made necessary because of the unusual difficulty in apprehending those who resort to the use of fraudulent passports within the period of three years.

With regard to propaganda, the report states that this literature arrives in tons from Japan, for example, by boat, and is distributed by the post office, and the American taxpayers have no alternative but to foot the bill for its distribution. This propaganda is distributed to individuals, schools, colleges, institutions and business houses, and must be handled again and again by American citizens in the employ of the United States government. The cost of distribution from the time it is taken off the boat until it reaches its destination is borne by the United States; the postage is received in the country of origin. Germany and Japan are both members of the postal union.

It was found that a large part of this subversive German propaganda comes through the German consuls in the United States. I believe we should close our doors along those lines, and the reference to the committee might very well be extended to include anti-Canadian and subversive propaganda. Many universities and colleges in this country are being criticized for the way they have been allowed all kinds of preaching of pacifism and of totalitarianism foreign to the Canadian people and other new ideas which came from Russia and have been imported through Germany into the United States and to some extent into Canada to sow the seeds of enemy propaganda. It is hard to check it, even by legislation. It is the desire of every good citizen to aid the government in this work.

Hon. P. F. CASGRAIN (Secretary of State): Since the hon. member for Rosetown-Biggar (Mr. Coldwell) has drawn the attention of the house to the suspension of the newspaper *Canadian Tribune,* perhaps it would be in order for me to make a few remarks on the subject.

Contrary to the understanding and statement of the hon. member, this newspaper was not suspended only on verbal orders; a written notification, signed by myself, was served by the mounted police. Headquarters here telephoned the Toronto detachment informing them that the order had been received, and at 4.45 p.m. on Monday two constables of the police called on Mr. A. A. MacLeod, editor of the *Canadian Tribune,* informing him that they had been advised of the making of the order, and were assured by him that it would be complied with. The original order and copy were forwarded by mail and reached Toronto on February 25. Mr. MacLeod was supplied immediately with a copy of the order, and the original was available for his inspection.

One of the objects of giving the oral notice in advance was to prevent any greater degree of inconvenience than might be necessary. It is understood that the *Canadian Tribune* goes to press on Wednesday or Thursday, and obviously it was desirable that those responsible for its publication should be advised of the order at the earliest possible moment after it had been issued.

With regard to the question whether or not this paper should have been suspended, I think it would be advisable to place before the house the reasons which prompted the Canadian coordination committee on censor-

ship to advise the government to suspend this publication, and why the government has seen fit to issue such an order under my signature.

The action of the government in suspending the *Canadian Tribune* was taken only after long and careful examination of its contents, and after two warnings. The first issue appeared in January, 1940. From its inception this newspaper has studiously refrained from supporting Canada's war effort. It has repeatedly carried material which was at least on the borderline of contravening the defence of Canada regulations. The government has ample reason to believe that if it is not actually a communist publication it is pursuing the policy which a communist publication in this country would be instructed by its headquarters to follow.

The *Canadian Tribune* has been twice warned by the press censors, the first time orally and the second time in writing, that it was treading on dangerous ground. The settled policy of the newspaper, however, appears to be to print such material as would encourage readers to refrain from cooperation in the Canadian war effort.

The government has shown great restraint in dealing with this publication, since the *Canadian Tribune* has sought to create the impression that it is a left wing labour organ sincerely concerned with the problems of organized labour, the preservation of civil liberties and the welfare of the masses. The government is determined to preserve the maximum freedom of the press consistent with the defence of Canada regulations. It is anxious not to curb sincere critical comment, and has therefore tolerated considerable objectionable material in the columns of the *Canadian Tribune*. I have in my hand one of the last issues of this newspaper, dated February 1, 1941. I need not read it to the house, but it contains references to certain speeches and utterances of a member of the British House of Commons.

The recent display given by this newspaper to material obviously inspired by the actions of communists, in the light of its whole record, has driven the government to conclude that it could no longer justify its earlier forbearance. The order to suspend, rather than suppress, this newspaper will afford those responsible for its publication one more opportunity to make it what it purports to be, namely "a journal of democratic opinion." A rigid distinction must be drawn between subversion and criticism, and we cannot allow the democratic privilege of freedom of speech to be abused by sworn enemies of all democratic forms, in the furtherance of their work of destruction.

On motion of Mr. Green the debate was adjourned.

CANADIAN YOUTH CONGRESS

RAID BY MOUNTED POLICE ON HOME OF MONTREAL SECRETARY

On the orders of the day:

Right Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I have communicated with the Montreal headquarters of the Royal Canadian Mounted Police in regard to a question which was asked by the hon. member for North Battleford (Mrs. Nielsen) a couple of days ago. The answer is:

1. The home of Jack Brierley was searched on February 12 by members of the Royal Canadian Mounted Police and the Montreal city police force under authority of a search warrant issued by Judge Marin. The search was made in an endeavour to trace the source of communist publications and literature which is being insidiously and widely distributed throughout the city of Montreal. The Canadian youth congress has not, as yet, been declared an illegal organization under the provisions of the defence of Canada regulations, and the raid in question was directed not against the Canadian youth organization but against Jack Brierley. Certain important material was seized.

2. The raid was made under the authority of a search warrant.

MEAT AND CANNED FOODS

INSPECTION AND GRADING OF CANNED LOBSTER—POSSIBLE POSTPONEMENT OF REGULATIONS

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to direct a question to the Minister of Fisheries (Mr. Michaud). On the order paper, under government orders, will be found No. 7, for the second reading of Bill No. 14, to amend the Meat and Canned Foods Act (fish and shell fish). I should like to direct the minister's attention to the report of a meeting held at Amherst, Nova Scotia, on February 25, attended by nearly all the members of the maritime branch of the canned food section of the Canadian Manufacturers association, at which a resolution was passed to the effect that the lobster industry would not have time, between now and the opening of the next packing season, to adjust itself to the proposed changes, particularly under stress of war-time conditions in the industry.

I should like to ask the minister if this resolution has reached him and whether in

the light of the resolution he intends to proceed with this bill at this session; or, if he does proceed with the bill, will he allow sufficient time before it becomes operative so that the industry may adjust itself to the changes recommended? I understand it was the consensus at that meeting that the changes were desirable but that they should not become operative immediately. What is the position?

Hon. J. E. MICHAUD (Minister of Fisheries): The matter to which the leader of the opposition (Mr. Hanson) has referred was brought to my attention yesterday by the officers of the maritime section of the canned fish branch of the Canadian Manufacturers association.

I believe the views that have been expressed have resulted from a misunderstanding of the situation. The inspection and grading of canned lobster was unanimously approved at a meeting of the packers, fishermen and dealers on November 6 last, held at Moncton. After that meeting some of the officers representing the interested parties, together with officers of the department, proceeded to prepare legislation to amend the Meat and Canned Foods Act in order to give optional powers to the minister to enforce inspection and grading, subject to regulations which were to be approved by the parties. The confusion arose when the proposed amendments to the act and some of the proposed regulations to be made thereunder at a later time were forwarded to these people for their consideration. They thought all were to be approved immediately by act of parliament, and made compulsory. This matter has been explained to them, and they have been informed that they will have ample time to consider all the regulations which may be made under the proposed enactment. They have agreed to that.

WAR MUNITIONS AND MATERIALS

INQUIRY AS TO POSSIBLE USE OF PLATE MILL AT SYDNEY, N.S.

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): Mr. Speaker, I should like to ask a question of the Minister of Munitions and Supply (Mr. Howe), a copy of which I sent him this forenoon.

An hon. MEMBER: He is out.

Mr. GILLIS: Then I shall direct the question to the government. It arises out of a telegram I received this morning from lodge 1064 of the steel workers union, Sydney, Nova Scotia. Is it the intention of the government to make use of the plate mill located at Sydney, Nova Scotia, and if so, what progress is being made with respect to putting it into shape for operation? This mill was created during the last war under circumstances similar to those through which war industries are being created to-day.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, as my hon. friend has observed, the minister is not in the house at the moment. I suggest that the question stand as a notice.

SUPPLY

The house in committee of supply, Mr. Vien in the chair.

DEPARTMENT OF JUSTICE

87. Departmental administration, $154,440.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Chairman, under this vote I assume it will be in order to discuss matters relating to the penitentiaries.

Right Hon. ERNEST LAPOINTE (Minister of Justice): I believe a discussion of penitentiaries would be more properly debatable under item 96 of the estimates.

Mr. HANSON (York-Sunbury): I could discuss the matter of the policy of the department under this item. Hon. members who sat in parliament between 1930 and 1935, and more especially those who sat between 1935 and 1940, will recall that largely as a result of the agitation—I was almost going to say misplaced activities—of the former hon. member for Grey-Bruce, and as a result of the newspaper agitation of the Toronto *Globe* as constituted in earlier days, five years ago to-day this government set up another royal commission to investigate our whole penal system.

The commission consisted of Mr. Justice Joseph Archambault, of the superior court of the province of Quebec, a distinguished former member of this house, one whom it was always a pleasure to know and to meet, and who had had a wide experience at the bar in criminal practice; Mr. R. W. Craig, K.C. of Winnipeg, at one time I believe attorney general for Manitoba, and Mr. Harry W. Anderson, a distinguished member of the press gallery, in his lifetime a noted publicist in Canada, one who had taken a keen personal interest in the matter and had been to a great extent if not wholly responsible for the attitude of the *Globe* at that time. Unfortunately Mr. Anderson passed away, and his place was taken by Mr. McRuer, an experienced lawyer

of Toronto—and, by the way, a defeated Liberal candidate in the constituency of High Park.

Mr. MACKENZIE (Vancouver Centre): One of the few.

Mr. LAPOINTE (Quebec East): Was a Liberal candidate defeated? He must have been a rare specimen.

Mr. HANSON (York-Sunbury): A *rara avis?*—there are such in this world, and there will be more later.

Mr. MacNICOL: They are not rare in Toronto.

Mr. HANSON (York-Sunbury): However, that is by the way. This commission made an exhaustive survey. They held sittings in every province; they went to all the principal centres across the dominion. They held sittings in my own city. In 1937 they visited the United States. They went overseas to study the penal systems of England, Scotland, Holland, Belgium, Germany and France. On April 4, 1938—almost three years ago—the commission presented to the Minister of Justice (Mr. Lapointe) a report consisting of 418 pages. The cost of that commission to the taxpayers of Canada was, I am told, $88,810.25.

The recommendations of the commission were numerous and varied. They were so varied in fact that I shall not take up the time of the house to dwell upon them. That is not the point I have in mind. One of the recommendations which appealed strongly to the government was that a commission system should be established to administer our penitentiary system in Canada, rather than have it carried on under administration by the department, through a superintendent.

Late in the session of 1938, almost I believe in the dying days of that session, the Minister of Justice brought to the house a bill providing for the appointment of a penitentiaries commission, but carrying into effect very few of the remaining recommendations made by the royal commission. If I remember correctly, that bill, and its successor, which was subsequently enacted, reenacted a large number of the provisions of the act found in the revised statutes of Canada. The principal departure was the setting up of the principle of commission administration, in contradistinction to departmental administration. I was not then in parliament, but I understand vigorous protests were made by the opposition to the effect that sufficient opportunity was not given at that time, in the dying days of the session, properly to consider the matter.

The Minister of Justice, however, insisted on the passage of the bill, and on June 29, 1938, he made this statement, as reported at page 4383 of *Hansard*—I direct particular attention to the passage I quote:

> It is a necessity, because I do not see how we can proceed under the present system after what has taken place. I would not feel that I could safely be responsible for the administration of the penitentiaries.

That is to say, he would not feel he could be responsible if the system was continued under the old law. I pause here to say that due largely to economic conditions in Canada beginning, we will say, in 1929 and continuing on until very recent years, there was a substantial increase in the criminal population of our penitentiaries. Most of this increase was due to economic stress; most of the cases were cases of robbery and robbery with violence, and a very considerable number of desperate characters were incarcerated in our penal institutions during that period. Among them were some communists, about whom we have heard this afternoon. They carried on their nefarious work among the criminal population with the result that there were riots and all that sort of thing, an aspect of the matter which at the moment I need not traverse. But I want to emphasize the fact that it was probably because of the situation then existing that the minister made the statement which I have quoted.

The minister having made that statement upon his responsibility as the directing head of the penitentiary system, the then leader of the opposition waived his objection to the bill and it passed this house. Subsequently—I think for the same reason that had been alleged in this house, and possibly others—the bill was rejected in the other house, and there the matter stood. When the Minister of Justice announced to the house the rejection of the bill in the senate he made this statement, which will be found at page 4511 of *Hansard* of June 30, 1938:

> All I may add is that this postponement of a needed reform, apart from being detrimental to public interest, and increasing to a dangerous degree the difficulties of my task, will not serve any useful purpose, not even that which seems to be at the basis of the adverse vote.

He was referring, of course, to the action of the other house.

In the following session the minister presented the same bill, and it passed both houses and received the royal assent on April 5, 1939, nearly two years ago. The act is cited as The Penitentiary Act, 1939, chapter 6, 3 George VI, the last section of which, section 84, provides that the act shall come into force on a date to be fixed by proclama-

tion of the governor in council published in the *Canada Gazette*. I have had search made in the *Canada Gazette*, and I find that this statute has never been proclaimed. In view of the minister's statements to which I have referred, and which obviously were made in good faith—I am not suggesting anything else—one would have expected immediate action—the proclamation of the bill and the appointment of a commission to relieve the minister of the responsibility which he found so onerous and indeed dangerous. Mind you, Mr. Chairman, this was not in war time.

As I have stated, the main purpose of the bill was to set up a commission form of administration for our penal institutions, a three-man commission instead of a one-man superintendency.

What is the situation to-day? Two years have gone by. The bill has not been proclaimed, no appointments have been made, the minister still bears the heavy and onerous and dangerous burden—and in addition there is a war on. One of the inspectors continues to act as superintendent, and apparently with satisfaction, because we do not hear a word about him. If the former member for Grey-Bruce were in the house we might be hearing something about the penitentiaries, but that element having been removed from our society the agitation has entirely ceased. I am not saying that in any derogatory sense at all. She apparently has accomplished her mission here in this reform of our penal institutions and is no doubt devoting her attention to other activities, with profit I hope to herself and to those with whom she is associated. The minister is still carrying on under the old system, and I think he is to be congratulated. The cost of the superintendency to-day is less than $5,000 for salary. The minister will correct me if I am wrong, but I think I am right. The acting superintendent has the standing of an inspector with the pay of that position.

Under the proposed set-up a three-man commission is to be appointed, costing this country $24,000 a year, with a chairman at $9,000 and two other commissioners at $7,500 a year. The time has arrived when the minister ought to abandon this whole proposal, scrap the bill, appoint a superintendent of penitentiaries and proceed under the old act, which is to be found in the revised statutes.

I suggest that never at any time was this proposal anything more than a sop to the former member for Grey-Bruce and to certain newspapers. In view of the fact that our penal system has operated with apparent success on the old basis, and especially so during the past two or three years, I suggest that the proposed commission be relegated to the same pigeonhole as that in which most of the other recommendations of the $88,000 royal commission are to be found. The major part of them will never emerge and see the light of day.

By the way, if hon. gentlemen will look at the estimates they will see that this money has been voted each year since the passing of the act, and it is in the estimates to-day; but the statute itself has never been proclaimed and the money is not spent. Let us do away with this farce. Let us proceed under a system that is reasonably satisfactory, and, I would add, much more economical to the taxpayers of Canada in this time of war. I invite the minister to take heed of the suggestions I have made to him. The present is no time to embark on these new expenditures. I urge upon the minister that he remove these votes from the estimates.

Mr. LAPOINTE (Quebec East): The leader of the opposition has been fairly accurate in the historical review he has given of this matter, except in some particulars, and he adorned his oration with some comments, of course, that may not have been altogether called for. When the investigation commission was appointed there had been requests for it from various parts of Canada. My hon. friend gives too much credit to the former member for Grey-Bruce—

Mr. HANSON (York-Sunbury): I do not think so.

Mr. LAPOINTE (Quebec East): —when he states that she was the one responsible for the appointment of the commission. No doubt she was strongly in favour of it, but that attitude was not confined to the former member for Grey-Bruce. There had been difficulties and troubles, and the press had been commenting on our system in a not altogether favourable way. I remember that my own fellow townsman, Archdeacon Scott, the old padre, whom everybody in Canada loves, was perhaps the strongest advocate of a thorough investigation of our penitentiaries. As a matter of fact, in 1935 the present Prime Minister made it part of his platform; it was a pledge which he took before the electors of Canada.

Mr. HANSON (York-Sunbury): Another broken pledge?

Mr. LAPOINTE (Quebec East): He pledged there would be a commission to investigate the system.

Mr. HANSON (York-Sunbury): He was safe.

Mr. LAPOINTE (Quebec East): A commission, a very good one, as my hon. friend himself said, was appointed, and it did a

very fine piece of work. The reports of the commission deserve to be not only read but seriously studied by all those who are interested in social work. My hon. friend says that no part of the recommendations has been applied. Such of the recommendations as could be applied without the appointment of a commission, have been put into effect by regulation. As my hon. friend said, the bill was rejected by the senate in 1938. It was made law in 1939 at the end of the session, probably June.

Mr. HANSON (York-Sunbury): April.

Mr. LAPOINTE (Quebec East): April? Very well. Of course the main provision of the act is for the appointment of a permanent penitentiaries commission. My hon. friend said we should discard that altogether. May I remind him of what is stated in that report, that Canada is about the only country in the world where there is no commission in charge of prisons and penitentiaries. The British system has been mentioned in the house time and again; in Great Britain there is a very, very valuable commission. The United States and the various countries of Europe have commissions, and I believe that Canada should follow suit in this respect. Then, my hon. friend says, why do you not appoint the commission and why do you not proclaim the act? The act will be proclaimed when we are ready to appoint the commission. We could not proclaim the act without appointing the commission immediately.

Mr. HANSON (York-Sunbury): Have there been any refusals to take these jobs?

Mr. LAPOINTE (Quebec East): No refusals, no. But I do not want to consider very much too-pressing applications for appointments to the commission. I think rather that we are trying to find the men without the men offering themselves for the work.

Mr. HANSON (York-Sunbury): The minister will find plenty of men who want the jobs.

Mr. LAPOINTE (Quebec East): My hon. friend will say that the war is made responsible for all sorts of things, but I tell him in all sincerity that the war has something to do with this matter. At least a couple of men whom I had in mind for appointments on the commission are actually doing war work.

Mr. GRAYDON: Any ladies?

Mr. LAPOINTE (Quebec East): No. I have not thought about that, but if my hon. friend is making a serious suggestion, perhaps I may consider it.

Mr. GRAYDON: I was just asking a question.

Mr. LAPOINTE (Quebec East): No; I myself have not thought about it.

Mr. HANSON (York-Sunbury): That suggestion is settled, then, is it?

Mr. LAPOINTE (Quebec East): I think my hon. friend will agree with me that it is better not to appoint the commission now than to have members who would not be qualified for the work.

Mr. HANSON (York-Sunbury): If you are going on.

Mr. LAPOINTE (Quebec East): If I can find suitable men for the job, even during the war, the commission will be appointed. That is the reason why I am still putting the item in the estimates. Unless, however, we are satisfied that we have the proper men to act on the commission, it is better to wait until our man power is not so much in demand as it is to-day. That is the only reason which has prevented the appointment of the commission. But I cannot accept the suggestion of my hon. friend and do away altogether with the proposal.

Mr. CHURCH: I should like to ask the minister a question in connection with this matter. I understand that there is a separate vote for penitentiaries, and probably I can say what I have to say on that particular subject when we reach that item. Is there not some way whereby the minister's department can be consolidated? No living man could stand the strain of the department as it is set up and constituted to-day. The minister is carrying on all the work which in England is divided among three departments. There, the Home Secretary has charge of the institutions referred to by my leader. Another, the Lord Chancellor has charge of the Law Courts, and another department relates to the office of the Attorney General. Three separate ministers divide the work. In Canada the Minister of Justice is not only Minister of Justice, but also Attorney General of Canada; he is the chief law officer of the crown and home secretary in Canada; that is his second function. His third function is Minister of Justice, which means that he is administrative officer of all justice in the country. He appoints the superior and county court judges. In England they have been discussing a report of a committee of the House of Commons to create a department of justice to handle all these matters, and a book by R. M. Jackson, on the machinery

of justice in England, which book came out last month and is in the library, deals with this problem.

In the present situation in Canada the Minister of Justice has not any time to attend to one of the main questions which Canada has to consider, relative to four unsolved problems—constitutional, cabinet, law and parliamentary reform, long overdue in this country and only talked about. I say the minister has no time whatever to attend to that, and one cannot expect him to do it. I wonder how, even with his fine ability, he has stood the strain as well as he has.

Mr. LAPOINTE (Quebec East): Thank you.

Mr. CHURCH: I would, however, suggest to him that during the parliamentary recess some consideration should be given to the important subject of law, cabinet, parliamentary and constitutional reform in Canada, because we are away behind the times. Although the present minister may know much more about the matter than I do, I believe he, as head, could divide this burden with others. There should be one minister responsible solely for the administration of justice in all four items but with more help. The present minister should be assisted by an attorney general, who would appear in the law courts and undertake duties of that sort. Then, the kind of work performed by the department of the Home Secretary in England has become in Canada a very large and important part of the Department of Justice with its large detail of administration. We have had a report on this matter by a very good commission on prison reform, but the report has not yet been consummated. That part of the report about the Borstal system should be dealt with, and a great part of the recommendations contained in the report should be carried out at once, war or no war.

At the present time the administration of the department must necessarily devolve upon deputies who should get reforms under way. The head of the department, the minister, who visits various places and appoints staff has considerable work to do unless he has ample assistance. I suggest that in the recess the minister should endeavour to bring about some form of consolidation whereby deputies or other ministers might be appointed to take care of the various aspects of the work of the department.

One matter I would mention in connection with the branch of the department that has jurisdiction over law reform is the appointment of judges. More care should be taken. Many judges to-day leave the bench for months and even for a year or two, to engage in commission work in the provinces. This runs into large sums of money, and their judicial duties have to be carried out by others. I had a bill before the house a few years ago to provide that any judge who might be appointed on any commission, political or otherwise, should first vacate his judgeship. While they are on such work, away from their judicial duties, others must take their place, and work becomes congested because a salary is provided in the estimates for each of them.

With regard to the report to which I have already referred respecting machinery of government, laid before the British House of Commons and the House of Lords, the appointment of judges would be transferred to the Lord Chancellor who would have power to consult a committee, including the Prime Minister, the Minister of Justice and others.

I suggest that something should be done to relieve the congestion that exists in the courts as a result of the absence of judges from sickness and other causes—and there is at times considerable congestion in some provinces.

The chief constables' association has laid many matters before the government. For one thing it has proposed the abolition of air rifles. On a street car the other day on Bathurst street a woman was sitting near a window when a shot from an air gun came through the window and struck her, nearly blinding one eye and it might have blinded the other had her head been turned that way. I hope the government will adopt the recommendation of the association in this regard and prevent the manufacture of air guns and ban them.

Different bills have been introduced into this house having for their purpose various amendments to the criminal code in order to bring about much needed improvements in motor vehicular traffic. I hope that the minister will seriously consider adopting some of these proposals and that some definite action will be taken during the recess. I do not wish to see any member of this house knocked down by any hit-and-run driver. There is an awful slaughter on the highways to-day. I hope that the department will broaden its functions to provide some remedy for the present situation, because the slaughter is almost as bad as the destruction of life in war. Every roadway is turned red, and the loss of life is deplorable and one of Canada's scandals.

The rule has been laid down that the Attorney General of Canada should not be asked to offer legal opinions in the house, and I commend the present minister for his observance of that rule. I only regret that

the attorneys general of some of our provinces, instead of adopting a similar attitude, have seen fit to give a great many opinions on various matters. The subject matters may come before the law courts and the attorneys general are judicial officers.

Another amendment which I should like to see the department introduce is with regard to juries, to provide, for instance, that the judge shall enter verdict without any comment, because the functions of the judge and the jury are clearly defined. I trust that the jury system will not be interfered with in the code, because it has done good work and is badly needed at the present time.

Another matter to which I might refer is the question of appeals to the privy council. The former member for St. Lawrence-St. George had a bill before this house for the abolition of such appeals, and the matter went to the supreme court. I hope the bill will be left in abeyance. Appeals to the privy council are one link we hold within the empire. Under the Supreme Court Act I should like to see a reference to the Supreme Court of Canada of a bill I introduced to provide that the judges in this country shall follow the decisions of his majesty in his privy council. The case on marriage laws here came up and a decision was given on validity. This has been supported by Chief Justice Greenshields of Quebec, a very able judge, who laid down that they are legal and no canon law should upset them, I have no doubt that if there were an appeal on a question of law to the Supreme Court of Canada under the Supreme Court Act, they would establish the decision of Mr. Justice Greenshields as the law of this country long overdue. The courts are subservient to the legislature, and it is the duty of judges to interpret the law as it stands, as it is found in the textbooks and the authorities and by the court of last resort, the privy council, one court where a litigant is always sure of substantial justice. I submit that the department should come to some decision in this matter. Many requests have been made to have such an appeal taken. The minister, after all, has a function to perform as Attorney General to enforce the law and clear up the law.

In passing, may I request the right hon. gentleman's attention for a moment as Minister of Justice. I see the hon. member for Parkdale (Mr. Bruce) in conversation with him. I do not like to interrupt them, but I suggest that the subject I am discussing at the moment is of sufficient importance to call for a little of the minister's undivided attention for a few minutes. Yesterday, humorously he was talking about some of the "N.G.s" on this side. I was not one selected for the minister's team by him of the "N.G.s" "N.G." means "no game," "no goal," "no guts," "no girl," no anything you like. I hope my good friend the hon. member for Parkdale did not go over to get on the Minister of Justice team to tell him what "N.G." means, and how to play if he gets on the team, because the minister has a keen sense of good humour.

I would ask in all seriousness that the minister state a case to be referred to the supreme court in order to determine that question of law, that judges shall follow the decisions of his majesty in his privy council, because the decisions of the privy council in London are binding on all the courts of this country in every province.

I have already referred to the question of motor car accidents, but the situation to-day is so serious that I refer to it once again by way of emphasis. I hope the minister will seriously consider an amendment that will give us a real remedy. Why, fifty-four soldiers, some by hit-and-run drivers, have been knocked down and killed in the various military districts in one year. I do not want to see the minister himself knocked down, but I know he has been in danger himself. I saw him walking in front of the Rideau club one day and he had a close shave. He may not have seen the car of which he might easily have been a victim. I should not like to see the hon. member for Parkdale or the Prime Minister, or the leader of the opposition or the learned Minister of Pensions run any risks, because they do not step as lively as they used to, nor do any of us sometimes.

It is impossible for the Minister of Justice efficiently to discharge his duties unless he is given additional help along the lines I have suggested, namely, on the judicial and the administrative sides and in connection with work similar to that done in England by the Home Secretary.

Many recommendations have been made with regard to amendments to the code, and I do hope that something will be done to implement some of the most urgent of them. I think the minister is to be commended for bringing down his estimates so early in the session, so that judges and others in authority may have an opportunity to express themselves with regard to any statutory amendments that may be contemplated. The department is a very good one; there is an active minister, and I hope that during the recess he will take these suggestions into consideration.

Canada is away behind the times in law reform. It has been talked of for twenty-

five years. They have accomplished it in England; as a result of the Summary Offenders Act they closed up half the prisons in England. In Canada, law reform is discussed only by the bar at its conventions, but it should be the most important work of this house in committee.

Mr. MacNICOL: I should like to ask the minister a question, following what my leader said in reference to the report upon which the minister had made suggestions a few years ago. At that time there was a good deal of talk about instituting in the penitentiaries of Canada some means of reform along the lines of the Borstal system that has shown such splendid results in England.

In speaking on the question a few years ago, I referred to my own survey of the penitentiaries of England and the fine things I saw as a result of that system. Has anything along that line been incorporated in the administration of the Canadian penitentiaries?

Mr. LAPOINTE (Quebec East): This was one of the important matters that were left for the consideration of the commission when appointed, and that is the reason why really nothing has been done. If we ever come to the conclusion that no commission should be appointed, this matter will have to be considered. But I still hope to give effect to the recommendations of the report and have the commission appointed, and that system which my hon. friend has discussed in the house on some occasions and of which I know personally he has made a special study, put into effect as far as possible.

Mr. BRUCE: I should like to suggest publicly, as I was doing privately to the Minister of Justice, that this matter of appointing commissioners, involving considerable expenditure, might very well be left over until after the war.

Second, may I say that I personally have had some experience in making a report, and although in my case the report was not approved publicly, twenty-four of my recommendations out of twenty-five were put into effect. I think, therefore, that the Minister of Justice could very well implement many of the recommendations of the report even in advance of the appointment of the commissioners.

Mr. DOUGLAS (Weyburn): I cannot support that point of view at all. It seems to me an oversimplification to say that the bill setting up the penitentiaries commission was purely a sop to the former member for Grey-Bruce. It is true that the former member for Grey-Bruce and the hon. member for Winnipeg North Centre (Mr. Woodsworth) were both enthusiastic advocates of penitentiary reform. But there were hundreds of people, penologists and others interested in the penal problem in Canada, who for years had been pressing upon the government, both the former government and this one, the need for setting up a commission to institute modern methods of dealing with people who had broken the law and were in need of a new adaptation to society. We in this group were most enthusiastic when the government finally did bring down the bill to set up this commission. Whether there is a war on or not, this country can fight it efficiently and vigorously only as it has behind it a solidified state, and at the core of any state there lies its judiciary and its method of dealing with the malcontent and people who have broken the laws and have come under the punishment of the state.

No one has suggested that, as a war measure, we should reduce this huge sum being paid to judges, over $2,000,000, or the $300,000 being paid in pensions. If we are going to take care of one end of the law, we must also take care of the other. If we are going to spend money to try men and put them away where they can do no harm, we must also be prepared for the sake of the state to take care of these men when they come out of prison, and help them to make a proper adaptation, get back into society and play a part in the Canada that is to be when this war is over.

Someone suggested $24,000 for salaries alone for the commission. That sum or ten times that sum, if necessary for administration and so on, will be a small amount compared with what we may pay for failing to do something about penal conditions in Canada.

I was very glad to hear the minister say that the government have no intention of discarding the bill and that they do intend to follow through with the appointment of the commission. I hope the minister will continue along that course; that it will not be long until the necessary men are found and the commission set up, so that something along the lines of the Borstal system as it has operated so successfully in England can be set up in Canada and we begin to do something for that section of our society which has been too long neglected and overlooked.

Mr. GREEN: When this item of departmental administration was up for consideration in the 1940 session, I asked the Minister of Justice if he would give consideration to the appointment of a solicitor general, to be in charge particularly of the administration of

the defence of Canada regulations. At that time I pointed out, what the minister so clearly indicated this afternoon, that the administration of these regulations is based upon ministerial responsibility rather than judicial responsibility. It seemed to me then, and it does now, that it might be better if there were a minister of the crown whose sole or principal duty it would be to administer those regulations. Of course there are probably fewer cases now going through than there were last year, so the work is not so heavy. Has consideration been given to that suggestion, and, if so, has any decision been reached?

Mr. LAPOINTE (Quebec East): Consideration has certainly been given to the suggestion of my hon. friend. Of course that would mean an enlargement of the cabinet. Personally I think it is not absolutely essential that another man should be appointed to do this work. As my hon. friend says, the number of cases rather decreases because most of those who were under suspicion or to be interned have already come under the supervising control of the department. If, however, the work really justifies the course suggested by my hon. friend, I should be only too pleased to divide the work, but although I thank the hon. member for Broadview for his kind words and solicitude about my health, I am not as bad as I look.

With reference to the remarks of the hon. member for Broadview, in England not three but four ministers do the work that is done by the Minister of Justice here. They include the Home Secretary, the Attorney General, the Solicitor General and the Lord Chancellor, who appoints the judges and is responsible for them. But we must not forget that in England they have not a federal system, while we have nine provinces, with nine attorneys general and nine departments concerned with the administration of justice, which certainly makes a difference in the work that has to be done by the Minister of Justice in Canada. I will, however, still consider the suggestion of the hon. member for Vancouver South.

Mr. GREEN: I would not want the minister to take it that I was questioning his judgment in these cases; I do not think anyone in the house questions that. It is simply a question whether it is physically possible for the minister, with his many other duties, to review each of these cases in detail.

In connection with the internment camps I notice that the return filed by the minister some days ago covering internments under regulation 21 from November 1, 1940, to February 17, 1941, divides them into four classes; Germans, Italians, communists and National Unity party. I do not know whether the one from the National Unity party is ex-Mayor Houde of Montreal, or under which classification he comes. Could the minister tell us how many people there are in internment camps at the moment, divided into these classes or in any other way he wishes, and also how many women have been interned? Last year I think only two women were interned, one German and one Italian. I should like to know how many are interned at the moment, and the class in which they come.

Mr. LAPOINTE (Quebec East): I will try to have that information when the resolution discussed earlier this afternoon comes up for further consideration. I must say, however, that after having laid on the table of the house the statement to which my hon. friend has just referred, I found that in it I had gone beyond the recommendations of the committee. I was requested only to give the number of internments and the number of cases in which the Minister of Justice had declined to accept the recommendations of the committees. I am not quite sure that it is in the public interest that the classification I gave should have been given. If, however, I can amplify what has been stated already, certainly I will do so. So far as the number of people interned is concerned, certainly that can be given, together with the number of women, and I will have that information available.

Mr. GREEN: Could the minister tell us whether or not any internees have been released without a recommendation on the part of the committee?

Mr. LAPOINTE (Quebec East): None.

Mr. McCANN: I have just one or two observations to make in connection with these estimates. First, I should like to commend the Minister of Justice for having included in the estimates an appropriation to set up the penitentiaries commission. The criticism that this is a sop to the former member for Grey-Bruce is not well founded. By inference that means that it is a sop to a number of other people in this house and throughout the country who were interested in penitentiary reform. I am quite sure the leader of the opposition would not be quite so brave in the presence of the former member for Grey-Bruce as he has attempted to be this afternoon. After all, if the provisions of the Penitentiary Act, 1939, are implemented, the will of parliament will be carried out. That

act was placed upon the statute books of this country by the representatives of the people, and if it is not implemented or if the government intimated that they did not intend to implement it, I am quite sure that there would be a storm of protest from one end of this country to the other, and that the agitation for penitentiary reform which was carried on prior to the enactment of this bill would start all over again.

The minister has said that men capable of carrying on such administration may not be immediately available. Be that as it may, however, there are, I am sure, plenty of other men capable of carrying on the work of this commission. I do not believe it is a job for one man; it is not a job for a superintendent of penitentiaries. When the bill was under discussion a year or two ago, I expressed my views on the matter, after studying some of the penitentiaries of this country. At that time I pointed out that if there was to be reform, it must start in other places. It is not my intention to reiterate those opinions to-day but I do make a plea for the men who are in the penal institutions of this country. Give them a chance to learn a trade; give them a chance to be rehabilitated when they leave these institutions. At this time, when great numbers of men will be lost to the country, it is more important than ever before that we attempt this rehabilitation.

So, Mr. Chairman, I say I am pleased that the minister has included in the estimates an amount to provide for the setting up of the commission, and I hope that before long his opinions will find concrete endorsation.

Mr. ADAMSON: When civilians are interned in Canada, do they come under the director of internment operations or under some other body?

Mr. LAPOINTE (Quebec East): They come under the director of internment operations and I have nothing to do with them. They come under the Secretary of State, and under the Minister of National Defence so far as guarding the camps is concerned. The only thing I have to do is to review their appeals when they come to me.

Mr. DIEFENBAKER: The report of the penitentiary commission was one of the finest reports ever handed down anywhere as far as penal administration is concerned. While I appreciate the argument that at this time of war it might not be practicable to set up the commission as such because of the expenditure that would be involved, I would suggest to the minister that many recommendations that were made by the commission which dealt with the administration of the various penitentiaries, should be put into effect. Many of those recommendations have not been carried into effect, with the result that there has been a continuing undercurrent of resentment among some of the staffs in penitentiaries at the failure of the government to carry into effect the recommendations made. Would the minister be good enough to outline to the committee what recommendations made, in so far as internal administration in the various penitentiaries is concerned, were in fact carried into effect?

Mr. LAPOINTE (Quebec East): Of course I have not those documents here. I believe last year I gave to the committee a list of the changes made, and the regulations made following recommendations of the commission.

Mr. DIEFENBAKER: But since last year, what?

Mr. LAPOINTE (Quebec East): I shall try to find out, and let my hon. friend know.

Mr. CHURCH: What becomes of all these applications made by the bar association and the police constables' association to the Minister of Justice advocating law reform? I do not wish to criticize the minister, but I have watched his department for many years and it seems to me it suffers because of its failure to follow what a statesman in England said of the Home Office—"the swing of the pendulum in the matter of law reform." Modern reforms have been brought about in England, and have led to the closing of some institutions and a decrease in the cost of the administration of justice.

Dear knows, if ever there was a time we should follow the pendulum, it is now. As I understand it, bills proposed by private members, whether for regulations respecting motor cars, or for some other wise amendments to the statute law, are referred by the department to the attorneys general of the provinces. What have those attorneys general to do with federal law? Under section 91 of the British North America Act the federal parliament has exclusive jurisdiction in matters of this kind. Nevertheless, if any amendment to the law is proposed, it is immediately referred to the attorneys general. Federal power is at a low ebb when that is done, and I say that that power should lead in law reform for all the provinces, if federal power would only assert itself.

I have in my hand a report of a speech made by Mr. Wedgwood, a Labour member in the English House of Commons. Referring to the same principle, and addressing his observations on law reform to the new Home Secretary, he said:

One of the difficulties we have to face in this house at the present time is that we no longer change about—the Conservative government five years, the Liberal government five years and the Labour government five years. There is no adequate excuse for any change of policy. Home secretary follows home secretary, not exactly with the same government but with the same general policy of their predecessors, with the result that a policy worked up by the permanent officials becomes more and more powerful. You do not get a rebel going to the home office and saying: "I will change that." He accepts the policy of the officials. In fact, we in this country are getting to a state in which, owing to the absence of the swing of the pendulum, we have a form of papal infallibility. The lord president of the council issues a decree about the internment of all the aliens. A new "pope" comes along, with all the body of the cardinals around him in his office, and checks any tendency to deviate from the rules laid down by his predecessors.

We are getting in the home office the most conservative body of doctrine and officials, all basing themselves on what has been said and done in the past. There is no chance of breaking away.

As I see it, the minister in the Department of Justice must break away from what has been done, or in some other way bring in reforms. Law reform is a very important matter for Canada to-day. I would suggest that the minister be good enough during the recess to consider the suggestions I have indicated and adopt them.

Mr. DOUGLAS (Weyburn): What happens to the funds of organizations declared to be illegal? I have in mind for instance a case of hardship which has been brought about through an organization known as Jehovah's Witnesses. The question as to the advisability of banning or not banning their operations may be considered when we discuss further the motion to set up the committee to consider the defence of Canada regulations.

Mr. LAPOINTE (Quebec East): I am afraid the hon. member will have to wait until the estimates of the Secretary of State are before the committee. I have nothing to do with the point which has been raised. The custodian of enemy property is in charge of those matters.

Mr. HANSON (York-Sunbury): Have they any money?

Mr. LAPOINTE (Quebec East): Some of them have.

Mr. DOUGLAS (Weyburn): Does the minister mean that in the event of a Canadian citizen in Canada lending money to, let us say, Jehovah's Witnesses, and in the event of the banning of that organization, his money will go to the custodian of enemy property?

Mr. LAPOINTE (Quebec East): As a trustee, until the war is over, or the matter is disposed of. The money is not confiscated.

Mr. DOUGLAS (Weyburn): I have in mind the case of a man who lent a large sum of money to the organization known as Jehovah's Witnesses. They were paying him back at the rate of so much a month, or on an annuity basis. His entire livelihood is now cut off because he is told that his money is tied up with the custodian of enemy property. All this has come about because he lent his money to an organization which this government decided after the beginning of the war, was illegal. I believe that is most unfair.

Mr. LAPOINTE (Quebec East): A situation of that kind would be controlled by the defence of Canada regulations, and they are to be revised by the committee.

Mr. DOUGLAS (Weyburn): I am pleased to have that information from the minister.

The CHAIRMAN: Shall the item carry?

Mr. HANSON (York-Sunbury): No; do not be in a hurry. We have just begun.

Mr. LAPOINTE (Quebec East): Three hours on one item!

Mr. HANSON (York-Sunbury): This is the general item, and debate is always expected on it.

Mr. GRAYDON: I have not read the report of the penitentiaries commission for some time, but if my memory serves me correctly, there was a recommendation contained therein for the centralization of executions in Canada. In any event, some recommendation of that kind has been made, although I may be wrong when I suggest it was made in the report of the commission.

There is a feeling in many parts of Ontario—

Mr. LAPOINTE (Quebec East): That is under provincial jurisdiction.

Mr. GRAYDON: —that some move should be made toward the centralization of executions in that province. In January of this year we had the first hanging in the county of Peel for the last thirty-five years.

Mr. HOMUTH: Not enough.

Mr. GRAYDON: The man who was hanged came from Toronto. In any event, the feelings which are aroused, especially among the children, is something which I believe should be seriously considered. For some days prior to the execution, rumours fly thick and fast, and there is a good deal of talk, particularly among the children, about it. I do not think that sort of thing should be permitted in these days. I would suggest to the Minister of Justice that if anything can be done to centralize executions in Canada, in places

where they would not be carried out so publicly, it would be a worthy service to the country at large.

Mr. LAPOINTE (Quebec East): We have found out, of course, that that is entirely under provincial jurisdiction. The administration of justice is within the control of the provinces. That is why the matter of law reform, to which the hon. member for Broadview has referred, has not been dealt with more particularly. We enact the criminal law; but criminal trials, criminal courts, sheriffs and matters of that kind are under the control of the provinces.

That applies equally to executions. I have at times received from gentlemen who were applying for the position of hangman in Canada, letters specifying that they were strong and physically able to do the job and were not afraid of carrying out executions. Of course, I had to answer that I had nothing to do with the matter. The sheriff of the district where the execution is to take place is the man who is responsible. He makes arrangements with someone who is known to be an official executioner, and the sheriff takes care to apply immediately to make sure that he will get his man, because if he does not get an executioner he must do the work himself. But this is just to say that we have absolutely nothing to do with that matter.

There is another side to the question raised by my hon. friend. One of the reasons for capital punishment, whatever opinion we may have upon that method, is its deterrent effect upon the community. It has been felt for a long time that it was a good thing that the execution, if an execution had to take place, should be in the very district where the crime had been committed, that its deterrent effect was thereby the greater. I express no opinion myself, but that is the situation behind the state of things which exists to-day.

Mr. MARTIN: It may be necessary to have the executions take place in Peel.

Mr. GRAYDON: I suggest in reciprocation that the central place of execution be Windsor.

Mr. HANSON (York-Sunbury): There is another point of view. When this matter came before the public a few years ago, it was suggested that all executions in the maritime provinces should take place in the town of Dorchester, where the penitentiary is. The people of that community revolted at the idea of their town being made a Golgotha. I think they are right.

Item agreed to.

At six o'clock the committee took recess.

[Mr. Graydon.]

After Recess

The committee resumed at eight o'clock.

88. Remission service, including remuneration to members of the Royal Canadian Mounted Police force (to be expended under order in council, and not to exceed $1,600) for assistance to this service, and an amount of $10,900 to reimburse the Royal Canadian Mounted Police force the amounts disbursed by them in ordinary pay and allowances to their men on loan to this service, $50,000.

Mr. ROSS (Souris): Are applications for remissions dealt with direct by Ottawa, or does the minister have anything to do with the attorneys-general's departments of the province?

Mr. LAPOINTE (Quebec East): It is dealt with by Ottawa.

Mr. ROSS (Souris): In the matter of the reduction or remission of a sentence, does it come direct to and is it dealt with by Ottawa, or does this department have any communication with the provincial attorneys-general's departments before making a decision?

Mr. LAPOINTE (Quebec East): No. We usually ask for a report from the judge who sentenced the man, and from the warden of the penitentiary or the prison, as the case may be, in order to have every particular about the man.

Mr. CHURCH: May I ask the minister a question in connection with the mounted police? As a result of the war and some other conditions, in the cities the administration of many federal acts elsewhere administered by the mounted police devolves upon the city police commissions. They are an auxiliary and a helper of that great force. Would it not be possible for the minister to put in the estimates a sum to compensate the municipalities which are doing all this federal work for nothing? The war has placed a big responsibility upon the municipalities. It was intended that the enforcement of all federal law should be on the federal authority, but it is on the provincial attorneys general, who simply delegate it over to the police systems of the country, and the cities have to maintain a large body of men to do federal work. I forget how many statutes apply to the cities, but their enforcement costs a very large sum of money. I think the time has come when there should be some revision of this relationship, whereby our police systems would receive some subsidy.

Mr. LAPOINTE (Quebec East): I would ask hon. members kindly to wait until the item concerning the mounted police comes up, and I shall have an officer here to supply me with

the details. But I must say to my hon. friend that, as far as I can judge, the situation is the other way round. I think the Royal Canadian Mounted Police is doing more to help the provincial and municipal police than the latter are doing in the way of mounted police work.

Mr. STIRLING: Would the minister kindly explain what this rather long paragraph of item 88 means, and particularly the latter part of it?

Mr. LAPOINTE (Quebec East): This is the remission service, which is charged with the administration of the Ticket of Leave Act. Applications for tickets of leave come to that branch, and involve a very large amount of work. As far as the last part of the item is concerned, we are employing a few men of the Royal Canadian Mounted Police to do some work which was previously being done by regular employees of the department. This we are doing on account of their special qualifications, and we have to reimburse the mounted police in the amount of their salaries.

Mr. HANSON (York-Sunbury): That covers one part. It is the second item I notice on page 89 of the estimates, where the details are. One is $1,600 for remuneration, the other is for reimbursement. Is there any distinction?

Mr. LAPOINTE (Quebec East): Yes. The reimbursement is to the Royal Canadian Mounted Police.

Mr. HANSON (York-Sunbury): So is the other. If the minister has not the explanation available, I am not going to pursue the matter.

Mr. LAPOINTE (Quebec-East): I am unable to say what the distinction is between the item of $1,600 for remuneration and the item of $10,900 for reimbursement.

Mr. HANSON (York-Sunbury): I notice that this $1,600 is to be expended under order in council. I suppose it is just a sum, in special cases, for—

Mr. LAPOINTE (Quebec East): No doubt about that.

Mr. HANSON (York-Sunbury): While I am on my feet, I might say that this $1,600 must be some special remuneration which is doled out to the mounted police for special services, under order in council.

Mr. LAPOINTE (Quebec East): Yes, for assistance. I am sorry I have not any more information.

Mr. HANSON (York-Sunbury): Who is the present senior advisory counsel?

Mr. LAPOINTE (Quebec East): It is Mr. Gallagher.

Mr. HANSON (York-Sunbury): One lawyer in the branch does the whole of the work?

Mr. LAPOINTE (Quebec East): Yes. The present private secretary is an officer of that branch, but actually he is not working there because he is acting as private secretary to the minister. He is a lawyer.

Mr. HANSON (York-Sunbury): Would the minister say whether in capital cases he reads the evidence himself?

Mr. LAPOINTE (Quebec East): Oh, yes.

Mr. HANSON (York-Sunbury): I should like the minister to explain just how careful the department is in capital cases.

Mr. LAPOINTE (Quebec East): In capital cases, of course, the officers of the branch are very, very careful and particular about that special part of their work. Not only one of the officers under Mr. Gallagher, but Mr. Gallagher himself reads the evidence and he underlines all the parts which ought to be called to the attention of the minister. In cases where it is the recommendation of the officers of the branch that the law should take its course, of course it is the duty of the minister himself to read the evidence and to convince himself that that is the report which should be made to council. When the recommendation is for clemency, I always read the parts of the evidence which are specially brought to my attention, but I do not feel under the same sort of imperative duty to read every word, to look at every comma of the evidence, because the recommendation is that the law should not take its course.

Mr. NICHOLSON: Is this the procedure which is followed also in connection with applications which come to the department for the parolling of prisoners?

Mr. LAPOINTE (Quebec East): Yes.

Mr. NICHOLSON: That procedure is followed in connection with applications for parole?

Mr. LAPOINTE (Quebec East): Oh, yes. Everything comes to the minister after having been considered and studied by the officers of the branch, and after communications having been received from the various persons to whom they have applied for reports, more particularly the judge, sometimes the crown prosecutor, always the warden, as to what the conduct of the prisoner is, and, in some instances, the medical officer when the question arises.

Item agreed to.

89. Administration of Justice—miscellaneous expenditure, $6,000.

Mr. HANSON (York-Sunbury): What is this?

Mr. LAPOINTE (Quebec East): This is the cost of the administration of justice in the northwest territories to cover such matters as trials of Eskimos.

Item agreed to.

90. Expenses of litigated matters, $25,000.

Mr. HANSON (York-Sunbury): Is this the usual vote?

Mr. LAPOINTE (Quebec East): Yes.

Mr. HANSON (York-Sunbury): How much has been spent?

Mr. LAPOINTE (Quebec East): It varies from year to year. In 1936-37 it was $57,328; in 1937-38, $24,283; in 1938-39, $21,473; and in 1939-40, last year, it was $12,000 odd. The average estimated expenditure is $25,000, but only half of it was spent last year.

Item agreed to.

91. Annual contribution to the Canadian law library, London, England, $500.

(S) Attendance judicial committee of the privy council, R.S.C., chap. 105, $3,000.

Supreme Court of Canada—

(S) Judges salaries, $87,000.
Administration, $71,180.

Mr. HANSON (York-Sunbury): The item of $3,000 is marked statutory. I do not think it is quite in that category. It is provided under a statute, but the statute is entirely permissive. Section 22 of the Judges Act provides that the governor in council may pay the expenses of travelling and living while in attendance, in a sum not exceeding $3,000, to a member of his majesty's privy council who is eligible to be a member of the judicial committee and who attends any sitting thereof. What is the situation at the present time with regard to the hearing of appeals by the judicial committee? Are they hearing appeals?

Mr. LAPOINTE (Quebec East): They are hearing appeals, but not many Canadian litigants are taking advantage of it. We have cases which have been postponed until after the war. I have in mind a couple of cases with the government of Ontario. The committee is, however, sitting. The amount is put in the estimate, but I have the conviction that the chief justice will not go this year.

Mr. HANSON (York-Sunbury): We have in our own office two cases which are in exactly the same position. There is nothing to prevent people from going to the old country and having appeals heard.

[Mr. E. Lapointe.]

Mr. LAPOINTE (Quebec East): Absolutely nothing.

Mr. HANSON (York-Sunbury): There is no suspension?

Mr. LAPOINTE (Quebec East): No.

Item agreed to.

92. Administration—Exchequer Court of Canada—judges salaries and travelling allowances of admiralty judges, $24,800.

Mr. BROOKS: I understand there is a vacancy in the king's bench division in New Brunswick through the resignation of the chief justice. As the minister no doubt knows, the chief justice has been ill for a number of years and has not been able to discharge his duties on the bench. Mr. Justice Le Blanc has had other work to do in connection with the Farmers' Creditors Arrangement Act and considerable work has been piling up on the king's bench. May I ask when an appointment will be made? May we expect one soon, and does the minister feel constrained to tell us whom he has in mind for the appointment?

Mr. LAPOINTE (Quebec East): My hon. friend is asking a little too much. Perhaps I am doing my bit in the field of economy by waiting before filling the vacancy. There is another vacancy in Canada. There are only two vacancies on the bench, one in New Brunswick and another in Manitoba. I have made investigations and have been informed that the work is not suffering at all. There has been a great decline in litigation in all the provinces, so much so that I was told by the judges of the Supreme Court of Canada that for the first time since the court was established there was, at the last term, not a case from my own province. Therefore litigants are not very active anywhere, and so long as we do not appoint a judge either in New Brunswick or in Manitoba, we have no salary to pay. That is an economy. My hon. friend may be sure that if it appears to me or if I am informed that an appointment is necessary, I shall see to it that one is made. As to who the appointee will be, I respectfully decline to tell my hon. friend.

Mr. HANSON (York-Sunbury): I am not quarrelling with the minister's decision to save the salary of the king's bench judge. May I point out the exact position in New Brunswick. Years ago we had a bench of five or six members—a chief justice, a judge in equity and the others on circuit. They all met and formed a court *en banc* and no judge sat on appeal from his own decision. Subsequently, about thirty years ago, they decided to change the procedure, and they formed three divisions of the court.

Mr. LAPOINTE (Quebec East): The province did it.

Mr. HANSON (York-Sunbury): Yes. There was the king's bench, consisting of four judges who did circuit work; there was the chancery division, consisting of the chief justice and two associate justices; the chancery judges formed the appeal division; and in case of an appeal from one of their decisions, the chief justice of the king's bench was called in. Owing to the decline in litigation, the number of appeals has decreased remarkably—there is no doubt about that—and the judges of the chancery division have very little work to do, so little that one of them has been lent to the government in connection with one of the taxation measures passed last year. I am sure he is at the present time doing useful work there.

Mr. LAPOINTE (Quebec East): It is one of the appeal courts.

Mr. HANSON (York-Sunbury): He is a member of the chancery division and the appeal court. With regard to the kings bench division, the chief justice of that division has not heard a case for three years, and he has now resigned. Mr. Justice Le Blanc has in recent years been doing all the work under the Farmers' Creditors Arrangement Act, with the result that there have been only two king's bench judges active in the trial of cases; and until very recently I know they were very busy, and in arrears. The whole position in New Brunswick is top-heavy and ought to be rearranged. I quite realize that this is a matter entirely for the province. If they were to create new positions in New Brunswick they would expect this government to make the appointments and pay the salaries of those appointed. I think negotiations ought to be entered into with the government of New Brunswick to effect some permanent savings there, because the judges on the court of appeal do not have enough to do; make no mistake about that. As a matter of fact, at the last session of that court, opened the other day, there was just one case on the docket. Imagine paying three judges gross salaries of $28,000 a year with a term of the court having just one case! The situation is ridiculous. We are top-heavy.

I think the same thing is in a measure true of the county court bench. There are too many county court judges, six in that little province, drawing $5,000 a year salary and travelling expenses. Here is a case where there could be a substantial saving. I do not suggest that the government should ask the province of New Brunswick to pass legislation eliminating any of the judges now living; but as these men die or are pensioned off, having arrived at the age of seventy-five, the government might very well reduce the number. That would not be pleasing to some of the boys I know, I do not care what political complexion they are, but it would be a good thing for the taxpayers of Canada. What is true of New Brunswick I fancy is true, perhaps in a lesser degree, of certain other provinces.

I am looking over these estimates and, if I am correct, there are sixty-five county court judges in Ontario. Is that correct?

Mr. LAPOINTE (Quebec East): I wonder.

Mr. HANSON (York-Sunbury): It seems an extraordinary number. Members of the bar from that province may say that some of those county court judges are exceedingly busy. There is no doubt of that, but I suggest that some of them have very little to do. In the interest of national economy in war time, I suggest to the minister that he take this matter up, at least with the province of New Brunswick.

Mr. LAPOINTE (Quebec East): I have no doubt the remarks of my hon. friend will be heard—

Mr. HANSON (York-Sunbury): In New Brunswick.

Mr. LAPOINTE (Quebec East): —in New Brunswick.

Mr. CHURCH: How many admiralty judges are there at present in Ontario?

Mr. LAPOINTE (Quebec East): Only one.

Mr. CHURCH: What title have they? In the past the admiralty judge in Ontario was a member of the high court of justice, and afterwards a county court judge was appointed. What title has he?

Mr. LAPOINTE (Quebec East): Judge in admiralty. I do not know whether he should be called "Mr. Justice." I have no objection, as far as I am concerned.

Mr. CHURCH: We had an admiral in this high court of parliament; he has gone to another place now.

Mr. LAPOINTE (Quebec East): Is my hon. friend suggesting that we should give him an increase in salary?

Mr. CHURCH: I am wondering whether a lawyer appointed judge in admiralty is to be addressed as Mr. Justice. The admiralty court is a federal court. Supreme court judges have

held the office, county court judges would not be entitled to it, and surely a lawyer would be just "His Honour".

The CHAIRMAN: I would point out that this discussion has been out of order from the beginning, because the item under consideration is, "Administration, Exchequer Court of Canada," and most of the discussion has been with regard to provincial high courts.

Mr. HANSON (York-Sunbury): Strictly speaking, Mr. Chairman, you may be correct, but I ask for indulgence.

The CHAIRMAN: There should be some relation between the item and the discussion.

Mr. HANSON (York-Sunbury): Looking at page 95 of the estimates, I should like some information about pensions to judges. There does not seem to be any particular item under which we can discuss that. I am puzzled to know why Sir Charles Fitzpatrick, who was for many years a distinguished ornament of this house as Minister of Justice, and subsequently chief justice of the Supreme Court of Canada, should get only $6,666, while Mr. Justice Smith, who was a puisné judge of the Supreme Court of Canada, gets $8,000, and my very learned friend Mr. Justice Mignault gets $12,000. I do not criticize the amounts, but I should like an explanation.

Mr. LAPOINTE (Quebec East): When Sir Charles Fitzpatrick retired to become lieutenant-governor of Quebec, he got the superannuation then fixed by law, two-thirds of his salary. The salary then was not what it has become since for the chief justice of the supreme court. In 1921, the salaries of the supreme court judges were increased to $12,000 for the puisné judges, and $15,000 for the chief justice. Then, in 1927 or thereabouts parliament enacted a law retiring the judges of the federal courts, namely, the Supreme Court of Canada and the exchequer court, compulsorily when they reached the age of seventy-five, but it was then enacted that those who had been appointed before this law came into force should retire at that age but with their full salary, because they had been appointed for life at that salary.

Mr. HANSON (York-Sunbury): I should like to point out that under a return brought down here the other day in answer to a question put on the order paper by the hon. member for York East, Canada is paying this year for superannuation of retired judges, $307,133.30, a rather staggering sum.

Mr. LAPOINTE (Quebec East): Yes. Of course there are the judges both of the Supreme Court of Canada and the exchequer court, and the judges of the various provincial superior courts. When they are sick or unable to fulfil their duties, they retire with two-thirds of their salary. Then there are the county court judges all over Canada; when they are seventy-five years of age they have the right to retire with their full salary. When they retire because of illness before they are seventy-five years of age, they receive two-thirds of their salary. It does constitute a quite large amount when the total is shown.

Mr. HANSON (York-Sunbury): It is the law, anyway.

Mr. LAPOINTE (Quebec East): Yes, it is the law.

Mr. WHITE: The Minister of Justice has just pointed out that there has been a great decrease in the amount of litigation, especially in the Supreme Court of Canada. I notice that the salary of the registrar of the supreme court, which is a recent appointment, has been increased by $1,500. Will the minister please explain that, in view of his own statement?

Mr. LAPOINTE (Quebec East): Under the law, the salary of the registrar of the Supreme Court of Canada is fixed by the governor in council and must not exceed $8,000. When the Beatty commission investigated the matter of the higher officers in the civil service, it classified the clerk of the House of Commons, the clerk of the Senate and the registrar of the supreme court together, because each had the rank of deputy minister, and recommended that the salary should be $7,500. Parliament acted accordingly with regard to the clerk of the House of Commons and the clerk of the Senate; their salaries were increased to $7,500, and now the salary of the registrar of the supreme court is placed on the same basis. Of course the registrar sits in chambers, hears motions and carries on a good deal of the procedure of that court; he has a large staff. I could not very well give effect to that recommendation during the last few years because the gentleman who occupied that position, who was a very good registrar, had reached the age where he should have retired, and each year I had to plead with the treasury board to extend his time for another year. In those circumstances I could not very well recommend an increase in salary. I think this is the right thing to do.

Mr. HANSON (York-Sunbury): There may be something in what the minister has just said as to the reason for increasing this salary, but my recollection is that the Beatty report was made nearly twenty years ago.

Mr. LAPOINTE (Quebec East): Oh, no.

Mr. HANSON (York-Sunbury): Well, long anterior to 1930; I will put it in that way.

Mr. LAPOINTE (Quebec East): No. I have it here.

Mr. HANSON (York-Sunbury): Then what is the date?

Mr. LAPOINTE (Quebec East): February, 1930.

Mr. HANSON (York-Sunbury): Very well. In making an appointment after that, the government did not see fit to increase the salary to $7,500. A very competent man was found in the city of Ottawa who was willing to accept this position at $6,000, with free office, free staff, free everything; and I never heard any complaint at all about the work done by the former registrar for $6,000. To me it does seem a little strange that in war time we should increase this salary by 25 per cent. I am going to register a protest against the principle, and I shall have to leave it there. I wish to point out to the committee and to the country that this is not economy in the normal activity of government in war time.

Mr. NICHOLSON: I should like to support what has just been said by the leader of the opposition. During a time like this, when we are appealing to the people of Canada to make sacrifices and our people are making them, I think it is very difficult to justify an increase of 25 per cent in the salary of the registrar, who last year received $6,000. To me it seems that all these allowances are entirely out of line with what is being received by the great majority of the people of Canada, and I think this amount should be left as it was.

Mr. POULIOT: Some months ago, when I saw some criticism with regard to the readjustment of the salary of the registrar of the Supreme Court of Canada, I was very much surprised at the stand taken by some Tory members and especially by the Pickwickian leader of the opposition. Why single out this case, in which there is not an increase but a readjustment of salary, when we see all the promotions that have been made on the recommendation of the civil service commission throughout the various departments? Why single out this case? Is it because the present appointee was formerly a member of the Hepburn government, and the leader of the opposition wants to show his rancour towards Mr. Hepburn by criticizing one of his former colleagues? I wonder whether that is the reason. Why does the hon. gentleman not say something about Tories who have obtained promotions by being transferred from one department to another, men who are pests in some departments and who receive extravagant salaries? I would move that the salary of the leader of the opposition be reduced to $1. He is just as efficient as the other dollar-a-year men, and he should be treated in the same way. I should like him to tell the committee why he has singled out this case, whether it is to satisfy his rancour against Mr. Hepburn and his government.

Item agreed to.

95. Payments of gratuities to the widows or to any dependent children, of judges who die while in office, $15,000.

Mr. GRAYDON: Would the minister give us the particulars with regard to this item?

Mr. LAPOINTE (Quebec East): There is nothing in the law about it, but it is a tradition of very long standing that when a judge dies in office, an allowance or gratuity amounting to two months' salary is paid to his widow.

Mr. HANSON (York-Sunbury): Referring to the statutory item of $2,040,600 for judges' salaries and travelling allowances, may I call the minister's attention to a paragraph appearing on page 146 of the auditor general's report for the year ended March 31, 1940, and ask him to explain a certain apparent lack of uniformity:

> Section 21 of the Judges Act stipulates that the travel allowance to a superior court judge shall be "in addition to his moving or transportation expenses, the sum of ten dollars for each day, etc." This was not uniformly applied. Judges travelling between Quebec and Montreal were paid on a basis of $25 for transportation expenses; and judges travelling between Vancouver and Victoria on a basis of $15 for transportation. Others were paid their actual moving expenses.

There we have three categories. Will the minister be good enough to tell us the reason for this lack of uniformity, and whether any steps, as suggested, I think, by the auditor general, have been taken to deal with the situation?

Mr. LAPOINTE (Quebec East): So far as I remember, the auditor general merely calls attention to the discrepancy. He does not suggest a change. As a matter of fact, it is a long standing practice, and was in operation long before I came to the department. Judges of the appeal court in Quebec travel from Quebec to Montreal and from Montreal to Quebec almost continuously. It is an arrangement which went on in years gone by between the chief justice and the Department of Justice whereby, instead of sending their bills for $10 a day, plus transportation expenses, they would be paid $25 for each trip to Montreal or to Quebec. I am told that it works rather to the advantage of the department, and that while the amount is less, the

judges like it better. It is not done strictly under the law, but it is an agreement which has been accepted.

Mr. HANSON (York-Sunbury): It has gained force of law through custom.

Mr. LAPOINTE (Quebec East): Yes.

Mr. HANSON (York-Sunbury): Is the same thing true of British Columbia?

Mr. LAPOINTE (Quebec East): The same thing between Victoria and Vancouver.

Mr. HANSON (York-Sunbury): It grew up, just like Topsy.

Mr. LAPOINTE (Quebec East): Yes.

Mr. HAZEN: Of this amount of $2,040,600, how much is salaries and how much travelling expenses?

Mr. LAPOINTE (Quebec East): I am sorry I cannot give the information. Of course this amount does not need to be voted. It is statutory, and that is the reason why I have not the explanation. I can, however, supply it to my hon. friend at any time.

Mr. CHURCH: Under the British North America Act the dominion need pay only the salaries of high court, superior court and county court judges in the provinces. The payment of travelling expenses is an innovation. I doubt whether such payment could be justified under the British North America Act. The travelling expenses must be provided by the provinces for provincial courts and their constitution and administration. They provide the money for the expenses of division court and county court judges. The payment of travelling expenses is an innovation of recent years, and I suggest that the provinces should look after them.

Mr. LAPOINTE (Quebec East): If my hon. friend will look at page 92 of the estimates, he will find details of the travelling allowances in each province. For instance, in New Brunswick it is stated to be $11,000.

Mr. HANSON (York-Sunbury): About $150,000 altogether.

Mr. LAPOINTE (Quebec East): Yes.

Mr. CHURCH: I was a member of a select committee of the House of Commons which considered judges' salaries and travelling and other allowances. That committee, which sat a few years ago, was presided over by Senator Duff, and the late W. A. Boys, who at that time was member for Antigonish-Guysborough. It was contended before that committee that allowances for travelling expenses should be paid by the provinces. Some of the judges appearing before the committee to present their case showed the cost accounts for the maintenance of their automobiles, and all that sort of thing. That select committee considered the functions of the dominion and the provinces, so far as judges and their expenses were concerned. It was urged that the dominion was obligated to pay only judges' salaries in federal and provincial courts. The Minister of Justice may appoint judges to the superior and county courts, but it is the duty and the function of the provinces to pay any outside allowances.

The board of transport commissioners should have some discretion in the matter. While the government cannot afford to pay a few dollars to carry the soldiers, yet it can afford over $2,000,000 for salaries and travelling allowances of judges.

Mr. LAPOINTE (Quebec East): Travelling expenses of judges of the superior and county courts, in carrying out the work of those courts, have to be paid by the federal parliament. In some provinces, judges of the county courts do outside work for the provinces. Even at this very session of the Ontario legislature a bill is being placed before the house for the purpose of paying travelling expenses of county court judges who may do provincial work outside the county court seats. We have declined to pay travelling expenses of judges who do that sort of work.

Mr. GRAYDON: It was a matter of some controversy in the committee.

Mr. LAPOINTE (Quebec East): Yes.

Mr. GERSHAW: Would the minister explain the procedure in the event of a county court judgeship becoming vacant? In my constituency the county court judge died a few years ago, and since that time no appointment has been made. Judges do come in, of course, but it is a great inconvenience not to have a resident judge. It is claimed, too, that the expenses come to about as much as the salary of a resident judge would be. What is the procedure to be followed?

Mr. LAPOINTE (Quebec East): I cannot speak accurately from memory, but I have a vague notion the government of Alberta suggested that this vacancy should not be filled, that there was not sufficient work, and that for purposes of economy the money might be saved. I shall, however, take the trouble to look into the matter so that I may reply more accurately.

Mr. DIEFENBAKER: The minister has mentioned a considerable reduction in litigation during the last year, and a consequent reduction in the amount of work done by

the judges. In the western provinces the superior court judges also act as chairmen of the boards of review set up under the provisions of the Farmers' Creditors Arrangement Act. Do they receive, as chairmen of boards of review, any additional salary over and above their statutory salaries?

Mr. LAPOINTE (Quebec East): No, they do not.

Mr. DIEFENBAKER: Any daily allowance, or anything of that sort?

Mr. LAPOINTE (Quebec East): Travelling allowances.

Mr. NICHOLSON: I notice that there are 270 judges who are paid salaries and expenses to an amount over $2,000,000. I understand that from time to time they are engaged in other work. How many judges are engaged in that type of work at the present time, and what is the procedure in obtaining leave of absence from their regular duties?

Mr. LAPOINTE (Quebec East): The work is done by their colleagues on the same court. When, however, a judge is fully engaged doing his own judicial work, it is not the usual practice to appoint him to do some other work. Before appointing a judge to any commission, we make a practice to communicate with the chief justice and, in certain instances, the attorney general of a province, in order to ascertain whether a judge's services may be secured for the work we may have in mind.

Mr. NICHOLSON: How many are so acting at the present time?

Mr. LAPOINTE (Quebec East): I would not say offhand.

Mr. HANSON (York-Sunbury): There are two right here in Ottawa.

Mr. LAPOINTE (Quebec East): I cannot say. Speaking roughly, I would say there are six or eight. For instance, there is one judge of the Manitoba bench who is on active service in England. I refer to Judge Montague. Then there is Judge Davis who is in the Department of National War Services. Mr. Justice Martin is acting as rent controller. Mr. Harrison of New Brunswick is also working hard. Mr. Justice McTague is much in demand; in fact, I have to object sometimes because he is taken away from his work on the appeal court bench in Ontario. He is a valuable member of the court and is doing great work wherever he is called, but that is no reason for having the willing horse do all the work.

Mr. HANSON (York-Sunbury): I would ask the minister about another situation that sometimes arises under provincial legislation. I have in mind the case of a supreme court judge in one province who acted as sole arbitrator in an expropriation by a hydro-electric commission in a certain province. The case involved extensive litigation and ultimately went to the privy council. The clients whom I represented, so to speak, bought into this lawsuit in the course of the litigation. We were unwilling participants, but we had to see the thing through and pay the bills ultimately. This judge made his award and put the award in the bank. Then he notified counsel that when they had paid the bill they would get the award. The bill was for $3,500, and against my protest the bill was paid, the award being then released. What about a case like that? Is that not clearly outside the law?

Mr. LAPOINTE (Quebec East): I have no knowledge of the circumstances—

Mr. HANSON (York-Sunbury): I am stating a principle.

Mr. LAPOINTE (Quebec East): —and I would hesitate to give an opinion.

Mr. CHURCH: According to the details, provision is being made for twelve judges of the high court of justice for Ontario and for seven justices of appeal. Some of the judges of the high court of justice for Ontario and of the court of appeal are being engaged on commissions and in war work, and some are sick at times, with the result that there is often a scarcity of judges for the law courts, the twelve judges sometimes being reduced to eight. Has the minister not some regulation or control over that situation, or is it under provincial control? They are under the Attorney General of Canada, and we are being asked to provide $108,000 for these twelve judges. Who is going to do their work when they are engaged on commissions and in war work other than judicial work?

Mr. LAPOINTE (Quebec East): When they are appointed to a commission, that is only done after having communicated with their chief justice, and, in most instances, with the attorney general, to ensure that the work of the court does not suffer. The amount paid is the same.

Item agreed to.

Penitentiaries branch.

96. Branch administration, $110,350.

Mr. POULIOT: On March 2, 1939, I made some remarks on the establishment of the proposed penitentiaries commission, which remarks will be found at pages 1478-1481 of

Hansard of that session. I still maintain the same view that I then expressed, that the Minister of Justice himself can look after the penitentiaries better than any commission. He has done so in the past for a great many years and I have every confidence in him.

I do not see the necessity for any such commission; besides that, I have always been opposed to the establishment of managing or administrative commissions, and this would be one of them. The result of the work of most investigating commissions is to suggest the creation of an administrative commission, and once these administrative commissions are set up it is very difficult for members of the house to get information with regard to their work. That is the case with the broadcasting corporation, for example. I am therefore opposed to this proposed commission.

I am opposed to it also because I am interested in the welfare of the prisoners in the penitentiaries, provided that one is not too lenient with them, for, of course, when they are condemned by a court, it is not because of the good actions they have done. On the other hand, they are entitled to justice. The fact of their being condemned to the penitentiary does not deprive them of their citizenship or change them from being human beings. We must therefore see to it that they are treated fairly. Moreover, we should try to make good citizens out of them.

The way to keep control over the administration of our penitentiaries is to leave parliament free to inquire into their management. We can do so when the minister is head of the penitentiaries, but if that work was delegated to a commission it would be most difficult for members of the house to get any information about the penitentiaries. I do not say that to contradict our respected and beloved Minister of Justice. I say it because I believe it and because also in the Liberal party we have the right to express our views freely. We are not rubber stamps, as the leader of the opposition very improperly suggested the other day in quite an offensive way. I do not know what member of the house or of this committee would call Jean-François Pouliot a rubber stamp. Is he not a good Liberal? Once more the leader of the opposition was all wrong.

I hope the minister will take into consideration the views I have expressed. I remember that last year one of the bright members for Vancouver, the hon. member for Vancouver South (Mr. Green)—he sits on the other side of the house but he is bright nevertheless—suggested that appointments should be made to the proposed penitentiaries commission. I fought against that. A year has since passed and no commission has been appointed, and I thank the minister from the bottom of my heart for not having made any such appointments. I hope he will continue in the right way to have charge of the penitentiaries himself against all the hopes that may be expressed in another direction.

[Mr. Pouliot.]

Mr. CASTLEDEN: I want the details with regard to the $750 "honorarium to acting superintendent for special additional services." To whom is that paid, and what is the nature of the service?

Mr. LAPOINTE (Quebec East): It is remuneration to the acting superintendent, and his salary is still less than he would receive if he had been appointed superintendent. No appointment has been made because of the intention to establish a commission of three members, and during the time that this is not being done the whole work of a superintendent is being performed by the assistant. This is to give him a little additional allowance for that extra work.

Mr. CASTLEDEN: Where does his regular salary appear in these estimates?

Mr. LAPOINTE (Quebec East): It is the third item on page 93 under the title "penitentiaries branch, branch administration."

Mr. CASTLEDEN: Inspectors?

Mr. LAPOINTE (Quebec East): Yes. He is one of them.

Mr. HANSON (York-Sunbury): I am glad to see that there is a very substantial saving in this item, and I duly offer my congratulations to the minister. I notice that there is one inspector less than a year ago, with a resultant saving of $3,420, and it is one of these two who is performing the duties of the superintendent of penitentiaries and to whom the government is giving an extra allowance of $750. I have no objection to that. He is the acting superintendent; what is his name?

Mr. LAPOINTE (Quebec East): Inspector Sauvant.

Mr. HANSON (York-Sunbury): Who are the others?

Mr. LAPOINTE (Quebec East): There are two. Another is on active service. The two are Inspector O'Leary and Inspector Shortt.

Item agreed to.

Penitentiaries branch.

97. Operation and maintenance of penitentiaries, including administration, construction, purchase of land, supplies, equipment and livestock; maintenance, discharge and transfer of convicts; compensation to discharge of convicts permanently disabled while in penitentiaries, $2,912,685.

Mr. HANSON (York-Sunbury): I notice that the sum to be voted is exactly the same

as last year. Was that the amount spent last year? Does it vary, or is it a constant item?

Mr. LAPOINTE (Quebec East): I think that is the amount which was spent last year. There is a decrease in the amount provided for the removal of prisoners from one penitentiary to another; but of course I told the treasury board, which has been very keen on reductions, that I was hoping that there would be no necessity for transference of convicts. If the need arises, we shall have to find a way of meeting the expense.

Mr. HANSON (York-Sunbury): Are employees of the administrative branch of the penitentiaries appointed by the civil service commission?

Mr. LAPOINTE (Quebec East): In the administrative branch, yes.

Mr. HANSON (York-Sunbury): What about the guards? Are they selected by the warden?

Mr. LAPOINTE (Quebec East): Yes, and by selective competition. There is an eligible list, and the warden selects these men—

Mr. HANSON (York-Sunbury): After all, he is the main man in connection with that?

Mr. LAPOINTE (Quebec East): He is the main man.

Mr. CASSELMAN (Grenville-Dundas): Would the minister give us some information with respect to the last clause of this item, "compensation to discharged convicts permanently disabled while in penitentiaries"? What money has been paid in the last year under this item? I think the minister realizes why I am asking this. I believe that in the last two weeks he has received a request from a United States citizen who has a brother in Canada—whose name I do not wish to mention—who was permanently disabled while in a penitentiary in the vicinity of Montreal. I believe that some two or three years ago some money was paid to this man, and I understand his present condition is such that he requires continuous medical attention. At the present time he is, I believe, confined to Burwash penitentiary. I ask for this information with the object of enabling me to reply to the letter I have received. I endeavoured to see the minister to-day, but unfortunately was not able to meet him.

Mr. LAPOINTE (Quebec East): If my hon. friend will kindly let me investigate this, I will give him all the particulars, and if it is possible to meet his wishes I shall be pleased to do so.

Mr. HANSON (York-Sunbury): Is it a new item? I am speaking of compensation. I never saw it before, that I can recall.

Mr. LAPOINTE (Quebec East): It was there before.

Mr. DUPUIS: When this item last came up I inquired from the minister if there were any chance for the guards in the penitentiaries to have their salaries reconsidered, and I was told that this question was under consideration by the department. I see that there are 198 guards at $1,500; ninety-four at $1,320; one at $1,305; nine at $1,290; 55 at $1,275; one at $1,260, and fifty-two at $1,200. Would the minister be good enough to tell me if those charged with reviewing this matter have made a change for the better? I submit to the committee that the function of a guard is a responsible one, and is hard to fulfil.

Mr. HANSON (York-Sunbury): Many people want to be guards.

Mr. DUPUIS: Not many hon. members know that these guards are on duty eleven consecutive hours, and they are bound to their duty on the wall. They have to stay there, walking on the wall, whatever may be the weather. Whether it rains or snows or fogs, they have to stay there and do their duty; and I may say, to the honour of this body of guards, that they are fulfilling their duties to the satisfaction of their superiors.

I am inclined to think that as soon as a man is appointed guard of a penitentiary, he should have equal treatment with the other guards, irrespective of the number of years of service.

I wonder whether the minister would consider the suggestion? Of course I cannot do anything in the way of moving an amendment because I am not entitled to do so, but I humbly suggest that the salary should be increased.

Moreover, I would point out to the minister that, for the good administration of this branch, it would be wise to reduce the hours. Eleven hours is a very long period of duty for a man assigned to such functions.

Although I am one of those who believe that in these terrible times we should not increase salaries unnecessarily, nevertheless I submit that this is a special case and should receive the best attention possible. I have in mind the position of the guards at the penitentiary at St. Vincent de Paul near Montreal. Twelve hundred dollars a year is not a very large salary when one considers that in these small towns very often the merchants, grocers and butchers form a combine to skin poor people, so that at the end

of the month they have hardly enough money to pay the expenses incurred by their families and to bring up their children as other citizens do. I am quite convinced that $25 a week is not enough. I make the suggestion in good faith hoping that the department and this committee will give it proper consideration. I trust that hon. members will express their views on the question and support the stand I have taken if they see fit to do so.

Mr. SHAW: Will the minister explain the procedure followed and the nature and extent of the compensation paid to discharged convicts who have become permanently disabled while in the penitentiary?

Mr. LAPOINTE (Quebec East): There is no fixed mode of procedure. The compensation is arranged as fairly as possible, but there is no regular way of doing it.

Mr. SHAW: Is the compensation deemed sufficient to enable the man to provide a living for himself?

Mr. LAPOINTE (Quebec East): It depends, of course, on the nature of the injury and the extent to which it renders the man incapable of earning his living after. We try to be as fair as possible.

Mr. CASTLEDEN: Who decides that?

Mr. LAPOINTE (Quebec East): The department does.

Mr. CASTLEDEN: It comes from the department?

Mr. LAPOINTE (Quebec East): Yes.

Mr. POULIOT: I wish to ask the Minister of Justice a question, and in reply he can furnish me with personal information in writing afterwards. I should like to know the total amount that has been paid to Mr. Justice Newton Rowell from the time he resigned as a member of parliament to the time he was appointed to the bench, in the form of fees, advances—

Mr. LAPOINTE (Quebec East): Suppose my hon. friend write me about the matter.

Mr. POULIOT: —and travelling expenses as well as living allowance—everything paid him. I said to Mr. Bennett one day while he was Prime Minister, that this gentleman was well looked after, and Mr. Bennett replied, "You bet". I want to know, therefore, how much he has cost the country.

Mr. HANSON (York-Sunbury): I am sure the minister cannot turn a deaf ear to the hon. member for Chambly-Rouville (Mr. Dupuis), but he can explain that, in addition to the salaries mentioned, these gentlemen get a good many perquisites in the shape of free rent, fuel, light, meals, uniform and other things too numerous to mention.

Mr. LAPOINTE (Quebec East): I have no trouble in finding men to replace them when there are vacancies.

Mr. DUPUIS: For the information of the leader of the opposition, I may say that the perquisites they receive are not as substantial as he suggests. If I mistake not, they must bring their lunch. Moreover, they do not all get free rent and I am sure most of them have to pay high rentals. There is only the matter of uniforms. Apart from that, I do not believe they receive much.

Mr. CASSELMAN (Grenville-Dundas): I realize that the minister has not his deputy beside him and will therefore find it difficult to give definite information, but I should like to be given some information with regard to the item I referred to a minute ago, namely, the compensation that has been paid to discharged convicts permanently disabled while in penitentiaries, and the circumstances.

Mr. LAPOINTE (Quebec East): Does the superintendent know the name of the man to whom my hon. friend refers?

Mr. CASSELMAN (Grenville-Dundas): I am not interested merely in one man. I should like to know whether there is a course of action in the department under which, when people suffer permanent injuries in these institutions, compensation is paid them. It is a question of policy.

I should like the minister to answer one more question. Let us say that a settlement has been made with an individual in the last four or five years. Is the minister going to take the stand that because the department has a release from this person, who may have undergone many mental tests to disclose what his capacity was, the possession of his signature is an end of the matter?

Mr. LAPOINTE (Quebec East): No; it depends on all the circumstances. I can promise my hon. friend that I will consider the matter as carefully as possible, and if the man has been treated unfairly I will see that an adjustment is made.

Mr. CASSELMAN (Grenville-Dundas): That is quite satisfactory.

Item agreed to.

98. Pensions and other benefits—William Tatton, $564.

Mr. HANSON (York-Sunbury): This is an old friend?

Mr. LAPOINTE (Quebec East): Yes. It was authorized by order in council of June 2, 1922. He is an ex-guard at Kingston. The amount has been voted every year, but I do not know what the original basis of compensation was.

Mr. NICHOLSON: Does this include pensions to retired judges?

Mr. LAPOINTE (Quebec East): That is all statutory.

Mr. NICHOLSON: I wonder whether there is anything we can do about the matter. It seems to me that this is a very large item. Some fifty-eight judges are receiving pensions of $302,000 or an average of over $434 each a month. What is the procedure in connection with reducing such an item?

Mr. LAPOINTE (Quebec East): We cannot. In fact, the views of most of those who speak about this matter would have the effect of increasing the pensions. There is a strong feeling in many quarters that when a judge has reached a certain age he ought to be pensioned and replaced by a younger man.

Mr. NICHOLSON: What is the age?

Mr. LAPOINTE (Quebec East): Seventy-five.

Mr. NICHOLSON: That is compulsory?

Mr. LAPOINTE (Quebec East): That is what is being done in the Supreme Court of Canada and the exchequer court, because we have the right to do that; but in the provincial courts, under the British North America Act, the judges are appointed for life. We cannot enact a statute concerning that as we did for the supreme court. If they retire because of old age or incapacity, they are entitled to two-thirds of their salary. This parliament has considered a couple of times the possibility of retiring all the judges when they reach the age of seventy-five; but we have not been able to find a legal way of doing it, except to refuse to pay their salary, and that has been considered rather an arbitrary thing to do.

Mr. GRAYDON: Has the government given consideration to the matter of judges' pensions as far as future appointments are concerned? I realize that many judges might have taken the positions they have on the understanding that they were going to receive not only the salary but also a certain security for life. But what about future appointments? After all, in these days—

Mr. MARTIN: Has the hon. gentleman considered the great danger as far as his own personal position is concerned?

Mr. GRAYDON: As far as my personal position is concerned, I have always taken an unselfish attitude. I was really thinking of the hon. member for Essex East (Mr. Martin). But in these days, when so much stress is being laid on equality of sacrifice and equality all along the line, while I would not, perhaps, be in favour of disturbing present arrangements, it does seem that the government might give consideration to making it a condition of appointments made in the future that they will retire at a certain age and will have the same kind of retiring allowance as members of parliament and other lesser figures in the dominion sphere.

Mr. LAPOINTE (Quebec East): Under the British North America Act, we have not the right to do that.

Mr. NICHOLSON: Has consideration been given to the question of requiring judges to pay into a superannuation fund from which they would be able to draw benefits on reaching retirement age? Something should be done in connection with these very large pensions. I have had a great deal of correspondence with regard to old age pensions in my constituency, people having great difficulty in getting the $20 a month provided for in our province. Those pensions are really a loan on the security of the pensioners' property; their relatives have to repay the amount of the pension after the pensioner dies. Has the minister given consideration to requiring judges to make such contributions?

Mr. LAPOINTE (Quebec East): Yes; I have discussed that with many judges, who favour this proposal provided their widows would be entitled to half their pension, as widows of civil servants are under the Civil Service Superannuation Act. There are objections, but the suggestion deserves to be carefully studied; there is much merit in it. But it will have to be coupled with an indemnity to the widows when the judges die.

Mr. GRAYDON: Are the judges not paid under the Judges Act?

Mr. LAPOINTE (Quebec East): Yes.

Mr. GRAYDON: Is there any reason why the Judges Act should not be amended? Surely we do not have to be bound by the answer that the British North America Act does not permit us to do this. When we wanted to give the working men a little benefit by an unemployment insurance act, which required an amendment of the British North America Act, it went through so quickly we could hardly get into the house before it passed. I urge the Minister of Justice to consider seriously whether, if the law does not permit

him to do the things we suggest, the law could not be changed relative to future appointments.

Item agreed to.

Royal Canadian Mounted Police.

318. General administration, $216,503.

Mr. GREEN: What is the present strength of the Royal Canadian Mounted Police? I believe the minister stated last year that it was to be increased considerably. On March 31, 1940, I believe there were 2,552 exclusive of special constable guards. Also, how are these young men selected and trained?

Mr. LAPOINTE (Quebec East): The main estimates provide for a total strength of 2,515. But under the War Appropriation Act we have, I think, 2,000 special constables, and out of the increase of 500 new members we have enlisted so far, 250, so the total force would be about 4,700.

Mr. GREEN: What about recruiting and training? What length of time does the training take?

Mr. LAPOINTE (Quebec East): They have to meet the ordinary rules and regulations. We have applications, not so many as before the war because a very large number of young men who are physically fit and who would meet the educational requirements have enlisted. The officers of the force are still very strict as to the requirements, but we hope to find the remainder of the five hundred in the near future.

Mr. GREEN: Are the standards of the old force being maintained in the training?

Mr. LAPOINTE (Quebec East): Yes; rather enhanced.

Mr. CHURCH: The commissioner is getting a very fine type of new recruit in the extension programme of this fine police department, and I was wondering whether the work of the home guard and the provost marshals could not be coordinated with the work of the mounted police, particularly in cities like Ottawa and other centres. I think the mounted police might do the work more efficiently and thus avoid a great deal of duplication, because many members of the mounted police are returned men. The federal power should pay for home guards of all public property and provost marshals.

Mr. LAPOINTE (Quebec East): We are using veterans of the last war for guard duty; in fact we have 1,600 of them at work at the present time.

Mr. ROSS (Souris): In Manitoba, where the mounted police have taken over all police work, what authority has the attorney general's department over them? How do they fit into the picture as compared with Ottawa?

Mr. LAPOINTE (Quebec East): In provincial matters, in the field occupied by the attorney general in the provinces where they have their own provincial police, it is the attorney general of the province who gives instructions to the mounted police. That is in regard to everything provincial in its scope. Of course, in federal matters they are directly under our control.

Mr. BROOKS: A few years ago many provincial governments dismissed their provincial police and left the police work to the mounted police. I think that has worked out satisfactorily in most provinces. I believe the arrangement then entered into was that the provincial and federal governments each would pay 50 per cent of the cost, or was a lump sum fixed?

Mr. LAPOINTE (Quebec East): Under the contract with New Brunswick the province pays $1,000 for every man we supply for police work.

Mr. BROOKS: At that time we thought we would save money, and we did. Since then, there has been, I understand, an increase in the number of policemen in that province. What has the increase been, and what has it meant in the matter of payment by the province?

Mr. LAPOINTE (Quebec East): As between what years?

Mr. BROOKS: I understand there has been an increase all over Canada since the beginning of the war. Does that apply to New Brunswick as well as the other provinces?

Mr. LAPOINTE (Quebec East): The increase in New Brunswick has been from 115 to 167.

Mr. ROSS (Souris): Does that arrangement apply in each province? Is Manitoba on the same basis as New Brunswick?

Mr. LAPOINTE (Quebec East): Yes, the same basis.

Mr. NICHOLSON: I understand that a number of men have been engaged for guard duty on the railways at particular points across the country. How are the activities of these special guards coordinated with the activities of the mounted police?

Mr. LAPOINTE (Quebec East): They are veterans, under our supervision and paid by us.

Mr. JOHNSTON (Bow River): What is the salary paid a constable, say a married man living outside the city?

Mr. LAPOINTE (Quebec East): For a constable first class, the rate of pay is from $2 to $2.25 per diem, with a living allowance of $1.60; for a constable second class, the pay is $1.75 per diem with the same living allowance, and for a constable third class, $1.50 per diem, with the same living allowance.

Mr. JOHNSTON (Bow River): How are the different classes made up?

Mr. LAPOINTE (Quebec East): According to length of service, the number of years in the force.

Mr. JOHNSTON (Bow River): Out of their living allowance do they have to pay the rent for their houses?

Mr. LAPOINTE (Quebec East): Yes.

Mr. JOHNSTON (Bow River): At $2 a day their pay would amount to only about $60 a month.

Mr. LAPOINTE (Quebec East): Yes.

Mr. JOHNSTON (Bow River): I know of some constables who have to pay $30 or $35 a month in rent alone. If they get only $60 or $70 a month in wages they certainly would not have enough left to permit them to live decently and respectably. That is a very low wage.

Mr. LAPOINTE (Quebec East): I do not object at all to the remarks of my hon. friend, more particularly because I have recommended an increase, and that recommendation is now before the treasury board. As a matter of fact, during the last war the police were paid a bonus because of the higher cost of living. We must admit that these constables, who are first-class men in every way and who are risking their lives almost daily, are not being paid rates comparable with those paid in other services and other directions. I may say that if the committee shares my views about this, it will help me with the treasury board.

Mr. JOHNSTON (Bow River): I have had an opportunity of visiting three of these mounted policemen, and they are living under conditions right next to relief. I have been in some of their houses; I have discussed with them the wages they are paid and the work they have to do. They work long hours; sometimes they are on the road all night long. I understand, further, that they do not even receive their car expenses; I believe they are given so much a day for the use of the car, and that if they have to take long trips they are out of pocket. I do not think that is a fair deal for these people, particularly in war time when they are taking on some very hard work. I am glad to hear that the minister is contemplating giving them a little assistance.

Mr. MARTIN: In view of what the minister has just said, I might add a word of support. I know that in one important community in Ontario the mounted police receive less than the city police; and though I am not too definite about this, my impression is that they receive less, certainly in the lower brackets, than the Ontario provincial police. If that is the situation, I think we will all agree that the importance of the Royal Canadian Mounted Police is such that the salary of an officer of that force certainly should not be less than that of a city policeman, and should at least equal that of a provincial policeman.

I know of at least three officers, one of whom was a sergeant in the Royal Canadian Mounted Police, but who left the service because of inadequacy of pay. He has been taken over by a large industrial plant to work in connection with its protective service. I am sure the commissioner would be one of the first to admit that on that account the force has lost a valuable officer. I do not think the inadequacy of pay of the Royal Canadian Mounted Police can go without a protest.

Mr. SLAGHT: It is my view that the items now under discussion are of great importance. In answer to a query we have just heard the minister place on record the pay the constables in the force receive and, if I am not mistaken, the figures he gave were the maximum under the present schedule that a constable may receive for the first seven years of his service, if he is not promoted.

The great bulk of the men in this force are under the schedule of pay the minister has just recited, namely $2 to $2.25 per day, with an allowance of $1.60 for living. Then there is another class at $1.75, with a similar living allowance. I suggest to the committee that we should add our voices in the strongest possible manner to the application the minister has told us he is making to the treasury board for a substantial increase in these amounts. Whether or not our voices reach as far as the treasury board, I am not able to inform the committee. But if we look at the present remuneration in other fields, we must conclude that the pay offered in this instance is a disgrace. I find fault with nobody, because these figures have prevailed for the last twenty years, under various governments.

The figures just mentioned are a disgrace to offer to the men who serve in that force. In order to enter it, they are required to be university matriculants. They are required

to take special courses in various types of education, physical training, drill, history of the force, first aid and so on. They must be expert shots, and take revolver practice. They must be students of criminal law and must understand ballistics. They must understand the chemistry of blood stains. We can scarcely appreciate the type of service these men are required to render.

In the last year and a half I have learned something of their work in connection with the very important anti-sabotage service they are rendering to our country. We learned from the Minister of National Defence for Naval Services that in the first fourteen months of the war, 3,500 vessels left Canadian ports, and that most of them left from ports on the Atlantic coast. Those vessels are in operation to carry food supplies and munitions, and to keep the mother country filled with supplies in her time of need. Each of those vessels had to be carefully checked and inspected by the marine branch of the Royal Canadian Mounted Police, in order to avert the possibility of those terrific disasters at sea, such as occurred in the last war. Some fifteen months ago I placed on record what happened to shipping out of United States ports. I explained how bombs were planted, chemicals placed in holds, and I said that 103 vessels which in two years had left United States Atlantic ports were either blown up or had experienced incendiary fires started at sea. Those disasters lessened by millions of tons the cargoes intended for Great Britain at the time of the last war.

Our mounted police have done a wonderful job, not only on both ocean coast-lines, but throughout the country. I am not going to give a detailed account of their services, because it would be inappropriate to-night to do so. But let me give some figures: The ice man, the man who wears the white coat and fills the ice-bucket in my room in the House of Commons, receives $4 a day. In the mines the mucker or the surface man receives, according to official figures, a minimum of $4.24 a day. That is the amount paid to those surface and underground men who are performing the cheapest form of labour in connection with mining. Drill runners receive $5.25 a day. It is true that out of that amount they pay approximately $1 to $1.25 a day for board. The average pay our Canadian mines dispense to workers is $5.25 a day. At the moment I am not decrying the amount we pay the ice-man who distributes the ice to the rooms in the House of Commons. Messengers in the house, faithful fellows, receive $4 to $4.50 a day. The protective guards at our main door receive $4, $4.50 and $5 a day.

Yet we pay those men who work early and late, who leave their homes in the mornings, and whose wives and families do not know whether or not they will return—we pay those men who are engaged in one of the most dangerous and important services $1.75 and $2.25 a day, with a living allowance of $1.60. That, mind you, is the most they can earn in the first seven years of their employment.

I cannot too strongly urge upon this committee the necessity of correcting that grave injustice. Were I to take time to make comparisons, I could give figures for munition factories and shell factories. The shell factory in my own constituency of Parry Sound produces $16,000,000 worth of cordite and TNT for the British government in one year. The schedule of pay the workers in that plant receive makes the pay of this great protective and anti-sabotage service look miserable and small.

Please let us not permit an opportunity of this kind to pass without from every quarter of the house adding our voices, so that the minister's hands may be strengthened. I have had some conversation with him, and I know he feels that the pay is entirely inadequate. The commissioner, who is here to-night, is one to whom the committee owes a great debt of gratitude, because of the perilous and tremendous load he has carried since war broke out. He has taken the responsibility for matters connected with internment. Why, if four or five of these men slipped up on their jobs and a crackpot were given the opportunity, great damage might be done by destructive bombs. I shall not mention places, because we do not do that in war time. Any slip-up on the part of these men might prove costly. At the time of the last war the United States suffered a bath of blood, and to some extent they are having the same experience to-day. Any error in judgment, or any tendency to sleep while on duty might have the effect overnight of paralyzing the war industry of Ontario. Yet we are paying $1.75 and $2.25 to the men charged with that responsibility!

I do not wish to show heat. But I would hope that every hon. member will not permit this occasion to pass without making it known to the minister that we in the House of Commons, more than any other people in Canada, desire to remedy a situation which, unless remedied, will be an everlasting disgrace to our country.

Mr. ADAMSON: Mr. Chairman, I should like very much to support the observations of the hon. member for Essex East and the hon. member for Parry Sound. One cannot possibly appreciate the preventive service afforded this

country by the Royal Canadian Mounted Police. It is impossible to put a dollars-and-cents value on their services. I speak now more particularly of the Royal Canadian Mounted Police officer that you do not see—or at least you do not see him until it is too late. These men have to be experts in every line of sabotage. I do not need to tell the committee because it must know that attempts at sabotage have been made in Canada during the past year, and I think we can congratulate ourselves in this country upon our remarkable record of lack of sabotage in Canada, which has been due almost entirely to the wonderful work done by the mounted police.

Their salary as third-class constables starts at $1.50 a day. They get a 5-cent raise a day every year until they reach $2.25, if my information is right, after nine years, not seven. The plain-clothes men get an allowance of 25 cents a day for their plain-clothes and a living allowance of $1 a day as well. The maximum that a constable can get after nine years' service in the force is just about $100 a month or a little over $3 a day, and from that all taxes and the superannuation contribution are deducted.

One other item I should like to mention is the question of allowing these men enough expenses when they are out on a case. We are not looking for saboteurs who live in the gutter or frequent low dives. The intelligent saboteurs stay at the best hotels in the country, belong to good clubs, travel by Pullman and engage drawing rooms. They are the completely unsuspected saboteurs. They are the men whom the mounted police must look for and are looking for, but at the present rate of allowances they are working under tremendous difficulties in keeping on the trail of such men. I suggest to the minister that the allowances be made extremely generous, particularly in war time. I would also suggest that the minimum pay be raised to at least $3 a day for a man just starting in with the force and go on up to two and a half times what the rate is at the present time. We cannot appreciate the job that is being done by this special force, and I would urge the minister as strongly as I can to consider putting this question of pay and allowances up to the treasury board in the strongest possible manner.

Mr. LOCKHART: May I inquire of the minister if the 500 additional members of the force have been engaged or only a part of that number?

Mr. LAPOINTE (Quebec East): There have been 250 selected and engaged, and if the full quota has not been engaged it is because of lack of accommodation.

Mr. LOCKHART: I come from a community which needs careful scrutiny as much probably as any other part of Canada; on numerous occasions I have talked with the very best type of men that could be secured for the Royal Canadian Mounted Police, and I have on occasion written the department with regard to peculiarly well qualified young men who were desirous of joining the force. But because of the present rates of pay I have found an aversion to joining the force on the part of many young men who by background and environment would make in my opinion—probably it is not worth very much—the very best type of officer, the kind which has been appealed for here to-night. I could easily count ten young men who have said, "My desire was to join this service if physically fit and able to meet the other requirements". The hon. member for Parry Sound referred to university training. I think he was wrong there.

Mr. SLAGHT: Not university training but matriculation into a university. That is the test.

Mr. LOCKHART: These young men who have spoken to me have gone away sadly disappointed, and many of them have told me that they would love to join the force if only the remuneration were sufficient to give them a living wage as the years went by. Therefore I want to add my humble voice to those of other hon. members and appeal to the minister to urge upon the treasury board a higher rate of pay for the force because, I repeat, I know at least ten of the finest young men in my county who would make splendid officers, who have not put in an application simply because the remuneration was so low over such a long period of years that they could not possibly support themselves on it.

Mr. GRAHAM: As an agent of the crown in Saskatchewan I have had a long connection with the Royal Canadian Mounted Police. I do not think I can add anything to what has been said with regard to the injustice of the present rates of pay. Because it is poor business for that to continue, if for no other reason, we should increase the pay and allowances as quickly as possible.

The mounted police were originally formed as a military body and the establishment is a military establishment, but their duties in the last few years have changed considerably. Theirs is no longer the task which was presented to the mounted police in the early days of patrolling the border to guard against infractions of dominion law. They are carrying on a most difficult task, apart from

any war work they are doing, in crime detection in all its phases. That calls for a very high type of officer, as the hon. member for Parry Sound (Mr. Slaght) has pointed out, and it seems to me that it will be impossible for this government to continue to attract to and keep on the force the type of men we must have if its high reputation and good work are to be maintained unless the present rates of pay are increased.

We should perforce demand in our own interest, by reason of the change that has taken place in the duties of this police force, a proper scale of remuneration to the members of the force. I know that during the depression many types of fine young men found an outlet for their energy by joining the force but I am certain that the rates of pay to which we have listened to-night, cannot in ordinary normal times keep in the force the type of men we want to see in it. We seem to be in agreement on that to-night, and I would inquire from the minister how we can properly register our opinion as a committee. If any member of the committee disagrees with the sentiments that have been so generally expressed to-night about the force and the rates of pay, I would ask him to give expression to his views, failing which, I think the minister may take it for granted that every member of this committee would like to see the services of the Royal Canadian Mounted Police properly recognized in the matter of pay and allowances.

Mr. BLACK (Yukon): I have been a member of this house for a good many years, but never before has it been my experience that a vote brought before the committee by a minister has met with such general approval. In years gone by, the Minister of Justice has encountered opposition in presenting his vote for the mounted police. I am glad that the attitude of the committee has altered, because no one could have more admiration for the mounted police than I have. For over forty years I have seen them at work. When first I came in contact with them, they were the "North West Mounted Police," and not the "Royal Canadian Mounted Police" as they are now; and they policed the western frontier. It was my privilege to go on that great gold rush some forty-two years ago, in which people on their way to the Yukon, into the Klondike gold-fields, had to go through Alaska, where law and order were unknown, where murder and robbery were common, where people's lives were not safe and they had no protection at all. But as that crowd went up the trail and came to the Canadian boundary and the union jack and the mounted police, they faced an altogether different situation. When men came up there with revolvers or pistols strapped on their belts, their first experience of the mounted police was to be tapped on the shoulder and told, "You had just better give me that gun; you might hurt yourself with it. They are not needed on this side of the boundary." They were not allowed to carry guns, except sporting guns and rifles for hunting game; no other guns were allowed to be carried in the Yukon.

It seems shameful that a force as valuable to Canada as is the mounted police should be asked to carry on as it does, with the utmost efficiency, for so paltry a remuneration. According to figures given to the committee this evening, they are not paid as much as the commonest of common labourers. I do not think a mounted policeman should be asked to be a member of this force in any part of Canada for less than $5 a day. Where can one get labour for less? One cannot get a carpenter, for instance, for less than a dollar an hour. I am sure that the services of this force are of sufficient value to the people of Canada to warrant our paying them a stipend more in keeping with the value of the services they render.

Mr. CASTLEDEN: To make this unanimous, may I add a voice from this group. Quite by accident, last summer in this very city there came to my attention the case of a constable in the Royal Canadian Mounted Police detachment here whose pay was so low, and the cost of living in this city so high, that his wife was compelled to take in washing to maintain a decent standard of living in that home.

In supporting this direction to the minister, I would say that many men in the force find it impossible to live ordinary lives, get married and settle down, on account of the regulations and because the pay is so low, that is, in the first seven years. I would urge the department, in making any increases, to pay particular attention to the position of married men in the force who are trying to maintain homes, and see that in no case the standard of living is below that which should be maintained by ordinary decent citizens.

Mr. MACDONALD (Brantford City): There is no one in this country who has a higher regard for the Royal Canadian Mounted Police than I have. Canada is rightly proud of this great force, and we have with pride sent them to other countries, where they have always been exceedingly well received.

Anywhere in the English-speaking world where their picture appears in the moving picture theatres, it is invariably received with great applause. They are indeed a great credit to our country, and I trust that anything I say to-night will not be construed as detracting from their great merits.

The pay which they receive has been compared this evening with the pay which the ice-man receives for filling the small receptacles in the rooms in the House of Commons. But let me point out, Mr. Chairman, that the ice-men in the House of Commons probably work for only three, or a maximum of four months in the year.

Mr. SLAGHT: That is not so. Most of them have other positions and work all the year round.

Mr. MACDONALD (Brantford City): Well, I do not know much about the ice-man.

Mr. SLAGHT: Yes, but the hon. member does not drink any water.

Mr. MACDONALD (Brantford City): No doubt other hon. members can speak with greater authority on the ice-man and his duties than I can.

Mr. HANSON (York-Sunbury): May I interrupt the hon. member to say that I was here for fourteen years and I did not have an ice-man at all.

Mr. MACDONALD (Brantford City): The leader of the opposition and I are more or less in the same position in that regard. Also the rate of pay which is given to the messengers has been quoted to-night and contrasted with the rate of pay of the members of this great force. But here again I would remind hon. members that the messengers in the house work for three or a maximum of four months in the year.

I know many men in my own constituency —I am sure this is true also about other constituencies—who would work for a lower rate of pay than that received by the mounted police if they could be assured of pay from day to day throughout the year. The men of this force are assured of pay for 365 days of the year. Last year they got paid for 366 days. They also receive a clothing allowance. In addition to the $2.25, they have a clothing allowance and other allowances which one hon. member has mentioned, totalling $1.25, which brings their pay to $3.50 a day. At the end of their period of service they receive a pension, which also is something of great value. I think hon. members will agree with me that many men would work at a lower wage than they ordinarily work for if they knew that at the end of a certain time they would receive a pension for life.

I am not saying that the men of this force are overpaid. I do not say that their pay should not be increased. But I consider that these points which I have mentioned should be brought to the attention of hon. members. Not only the police in this great force but the police in our city forces are doing at this time a great and responsible work.

What about our private soldiers? I remember that in the last war the private soldier received $1.10 a day. In this war he is somewhat more fortunate, and receives $1.30 a day.

Mr. CRUICKSHANK: Not enough.

Mr. MACDONALD (Brantford City): "Not enough," my hon. friend says. My point is that a man, a private in the Royal Canadian Mounted Police starts at $1.75 a day, and a private soldier, who is prepared to go abroad and risk his life, or to risk it in this country, starts at $1.30 a day. If we are making comparisons, I think we should compare the lot of the man in this great force with that of the private soldier who is doing a great service and is prepared to do a greater service for his country. If we are to revise the rates of pay of the men in the Royal Canadian Mounted Police, then, I say, let us consider whether or not we should revise the rates of pay of the private soldiers in the army.

Mr. HANSON (York-Sunbury): In normal peace times is it the fact that there is always a substantial waiting list?

Mr. LAPOINTE (Quebec East): Yes.

Mr. ROEBUCK: At the risk of prolonging the debate unnecessarily, let me say a word. It seems to me unfortunate that we have made comparisons between the men of the mounted police and the man who delivers the ice, and the soldier, and others of that kind. The hon. member for Parry Sound had no intention of making that comparison or of putting them on the same basis at all. His only purpose was to make his plea more striking with regard to the mounted police. I regret bringing in the soldier also. The soldier is not making a life work out of winning the war. Some of them will be giving their lives, it is true, and no one with any knowledge of humanity would say that a soldier is serving his country for the miserable pay that we give him. He gets the pay, a trifling pay, but he does not serve for the pay. He is serving for something far higher than pay.

My impulse to add my voice to what has been said springs from the fact that, I suppose, I am one of the very few members of this house, if not the only one, who has actually managed a police force, because as attorney general of Ontario, I had the provincial police under my direct supervision for a period of three years. Of course there was a commissioner of police, but the management of the force was on my personal desk for a period of three years. When I took over the direction of that force, I tried to impress upon all members of it that they were occupying a position superior to that of a common labourer, and that the day of the "flat foot", so far as policemen are concerned, had gone by. They were not men who simply walked a beat and put in so many hours a day. They were highly trained specialists in a most important service. In order to carry out that ideal of a police force of a superior type, I induced the legislature of the province to make a considerable grant to a police school, which was presided over by Mr. McRuer and which went into the many subjects enumerated by the hon. member for Parry Sound, in an effort to increase the status of the police force, to abolish their own low estimate of themselves, to raise their own dignity and to impress them with the importance of the service which they render.

What strikes me is this, that one cannot have men above the grade of the ordinary labourer and yet pay them on the basis of the ordinary labourer. I am speaking from memory—and that memory is now some four years old—but what I carry in my mind with regard to the amounts that were paid to the police of the province of Ontario is that they ranged from $1,600 to $1,750 a year. That was the basic rate of pay. I may be wrong in these figures, because, as I say, it is memory and that memory is now some four years old. But I am quite sure that the province of Ontario paid to the provincial police more than $5 a day, working days; and I never heard it suggested, and it never occurred to anyone's mind, that we were paying too much. Ontario was paying a smaller wage than the city of Toronto was paying to men doing perhaps less responsible work than these members of a general police force who are on their own almost all day long and are doing the work of trained experts, judge, jury and everything else, half the time when they meet with difficulties.

I was amazed when I learned to-night the rates of pay that are being handed out to the members of the dominion police force, and if my word and my view will add anything to what has already been said, I shall be pleased. I fancy that this committee has been so unanimous in this matter that something will be done about it.

Mr. ADAMSON: The Federal Bureau of Investigation, under Mr. Hoover, start with a minimum of $3,000 a year. I believe Mr. Hoover was up to see Commissioner Wood and he remarked what a wonderful force the commissioner had, but he was amazed at the compensation and felt that it was only the marvellous loyalty of the men that kept them in the force.

Mr. CRUICKSHANK: May I make one suggestion for the benefit of the hon. member for Brantford City (Mr. Macdonald). I think I can speak with authority for the mounted police when I say that they would be perfectly satisfied to accept the pay which the federal government gives to members of the legal fraternity.

Mr. SHAW: The minister has referred to 2,000 special constables. What are the terms of their engagement and rates of pay?

Mr. LAPOINTE (Quebec East): They are engaged for a year and the pay is $1.50 a day. They are living in barracks.

Mr. SHAW: Are these special constables single men?

Mr. LAPOINTE (Quebec East): Is my hon. friend speaking of the veterans who are doing guard work? They are paid $3.20 a day and most of them are married; of course there is the usual medical attention as well.

Item agreed to.

319. Land services—arising out of the Royal Canadian Mounted Police Act, enforcement of federal statutes generally, and other incidental expenses, $5,034,041.

Mr. HANSON (York-Sunbury): What is the position in relation to the provinces? How many provinces employ the mounted police?

Mr. LAPOINTE (Quebec East): Six. British Columbia, Quebec and Ontario have their own.

Mr. HANSON (York-Sunbury): What do the other provinces pay the federal government?

Mr. LAPOINTE (Quebec East): It is on the basis of $1,000 a man.

Mr. HANSON (York-Sunbury): I had an idea it was a limit of $100,000.

Mr. LAPOINTE (Quebec East): It is $115,000. I have not the figures for all the provinces.

Item agreed to.

Pensions and other benefits.

322. Pensions to mounted police, Prince Albert volunteers and police scouts on account of the rebellion of 1885, $83.95.

Mr. HANSON (York-Sunbury): Is this the last of them? This seems to be an old item.

Mr. LAPOINTE (Quebec East): He is the only one left of that brigade.

Item agreed to.

Pensions and other benefits.

325. Pension to Basil Burke Currie, $684.20.

Mr. HANSON (York-Sunbury): Under the statute is the pension system contributory?

Mr. LAPOINTE (Quebec East): It is in the case of the constables, not the officers.

Mr. HANSON (York-Sunbury): Has the department given consideration to that? It would mean a substantial sum if it were made contributory. Has it ever been suggested that it should be? It might be better in the interests of the men themselves; it is a form of saving.

Mr. LAPOINTE (Quebec East): There is a fund for the widows and orphans to which the men contribute.

Mr. BROOKS: What is the retiring age for the mounted police, and what is the allowance?

Mr. LAPOINTE (Quebec East): For officers the retiring age is from sixty to sixty-three, and for other ranks, from fifty-six years. The allowance is based on length of service.

Mr. CRUICKSHANK: I understand the pension and other benefits in one case is to the widow of a mounted policeman who, I presume, lost his life in the service. But on a preceding page of the estimates I see that a man from the legal profession gets a pension of $555 a month, whereas the pension to the widow is $38.02 a month. Where is the justice in that?

Mr. NICHOLSON: Some of them get $1,000 a month.

Mr. CRUICKSHANK: The superannuation of a retired judge is $555.56 a month, whereas to the lady it is $456.25 a year, which, as I divide it, amounts to $38 a month. I submit that, whether she be a judge's wife or a mounted policeman's wife, a woman is entitled to a decent standard of living. If a judge is any better than a mounted policeman, I want to be shown.

Mr. LAPOINTE (Quebec East): My hon. friend is wrong about judges' wives, because they receive nothing.

Mr. WRIGHT: Is not the explanation that there are some seventy members of the legal profession in this house, and no mounted policemen?

Mr. BROOKS: Could the minister give some more definite information as to allowances paid to mounted policemen on retirement? He said it is according to years of service, but that is not quite definite.

Mr. LAPOINTE (Quebec East): It is based on length of service and rate of pay, and it would amount to about two-thirds of his salary.

Mr. GRAYDON: Many comparisons have been made to-night about many people. I was amazed to hear the hon. member for Melfort (Mr. Wright) who is one of the best farmers in Saskatchewan—I know because I was on his farm this year—raise his voice with regard to lawyers, also the hon. member for Fraser Valley (Mr. Cruickshank), both of whom pride themselves on the great reputation of agriculture; yet it is left to me, a solicitor, to raise my voice in the matter. If comparisons are to be made, why not bring in the lowest paid man in the whole country, namely, the farmer?

Mr. MARTIN: Is it not a fact that in addition to the inadequacy of pay, an officer of the Royal Canadian Mounted Police is denied during the first years of his service the legitimate opportunity of marital association?

Mr. ADAMSON: The first seven years?

Mr. LAPOINTE (Quebec East): I can not say anything as to that.

Mr. GRAYDON. I suggest that the Minister of National Defence might answer that question.

Item agreed to.

DEPARTMENT OF AGRICULTURE

Administration service.

1. Departmental administration, $121,925.

Mr. ROSS (Souris): Would the minister make a statement giving the people of this country some lead as to what they are expected to produce this year in meat, wheat and other foodstuffs essential to the prosecution of the war? It is only fair that he should give the producers some broad lead for the coming year. Would he also give some idea as to the jurisdiction and authority of the federal Department of Agriculture as compared with the officers of provincial departments in the matter of encouraging production?

Mr. HANSON (York-Sunbury): May I supplement that by asking the minister to give a statement of the government's agricultural policy, generally speaking?

Hon. J. G. GARDINER (Minister of Agriculture): That is a fairly heavy order to receive at ten-thirty at night. The question asked by the hon. member for Souris as to how much we should produce and what we should be producing in connection with the war is difficult to answer. I think I have said in this house before, and I repeat now, that the agriculturist in surplus-producing countries always experiences difficulties before a war comes on, and even greater difficulties immediately after the beginning of a war. That has always been the history of agriculture in countries outside war zones producing commodities for consumption in other countries, particularly in those areas where the war is being carried on. That was true in the last war and up to date it has been true in this war.

I have no greater knowledge than anyone else in this chamber as to when the turning point will be reached in this war. In the last war it came in 1916, or a little more than two years after the war began. In this war, judging from what has happened so far, the period during which it will be difficult for agriculture in this country will probably be somewhat longer. In other words, we have passed through one fairly difficult year; we are well into the second difficult year, and there is not much possibility that we shall get out of our difficulties in connection with agriculture during the year through which we are now passing.

Having said that, I should like to call attention to the fact that we have something over five hundred million bushels of wheat in store in Canada, which means that, without taking into consideration any of the wheat we shall produce this year, we have at least two years' supply for ourselves, Great Britain and the other countries to which we have any chance of exporting wheat, unless something happens in the course of the war that has not happened as yet. Therefore there is no reason for saying to-night that we should increase the production of wheat in Canada. Possibly there is some reason for saying that we should reduce production rather than increase it during the coming summer, but I do not think anyone could base even advice to reduce wheat production on anything in the way of statistics or any experience we have had in this country in the past or that other countries have had in relation to the production of wheat. I would not be too insistent on saying that men should even cut down their acreage this year, although I think it would be advisable for them to do so in view of storage conditions across this country. But I would not be at all sure that two or three years from now, someone could not rise in his place in this house and say that I had made a mistake in giving that advice, even with the world at war as it is to-day.

The other farm product that probably has been discussed at greatest length in Canada recently is pork products, particularly bacon. I think I have said before in this house, and, if not, I want to say it now, that in the fall of 1939, immediately after the war began, the British government took the trouble to send a man to Canada to discuss with us the matter of bacon. He was on his way to take up a position in Washington. The British government asked him to come by way of Canada and to take up his appointment in Washington after he had performed his mission here. That mission was to tell us in Canada not to increase our production of hogs because of any request we thought had been made or was likely to be made by Britain in relation to the war. He did not say we were not to increase our production of hogs; he said that was a matter for our own judgment, but he said they did not wish to be told later on that they had asked us to increase our hog production. That information was given the country at the time. I made the statement myself on many occasions, from one end of Canada to the other. That information was given to representatives of all the provincial governments, who were assembled in this city for the purpose of receiving it. They were told there was no intimation from Great Britain that they would require more in the way of pork products, and it was intimated to them that the British had clearly indicated to us that they did not want us to say later they had advised us to produce more pork products, but that we would have to form our own judgment in that regard.

During the early weeks of the war we found that our statistics with regard to the production of hogs in Canada were not authentic. We thought they were, but a very few weeks after the war began we found that there were more hogs in Canada than our statistics had led us to believe. That year we entered into an agreement with Great Britain for the delivery of 291,000,000 pounds of bacon, and all through the year we found that we were getting deliveries very much greater than the quantities required under that contract. The result was that during that year we actually delivered about 330,000,000 pounds as against the 291,000,000 pounds for which we had contracted.

By the time we entered into the second year of the war it was apparent, from the deliveries of the preceding year and from the statistics then available, which had been more carefully compiled than previously, that we would have at least 425,000,000 pounds of bacon and ham for delivery to Britain during this year without in any way interfering with the consumption in Canada. Therefore we entered into an agreement based upon those figures. Hon. members will recall that in 1932, when we entered into a trade agreement with Britain, we thought we were asking for an outside figure when we asked for a quota of 280,000,000 pounds.

Mr. BROOKS: That was when Denmark was still supplying the British market.

Mr. GARDINER: Yes; Denmark was supplying the market at that time. This year we thought we had the outside quantity at 425,000,000 pounds; but speaking in round figures, since the beginning of that contract there has been delivered an average of 3,000,000 pounds a week more than the contract calls for, and I think, as well, we have been eating more pork in Canada than at any previous time. In other words, we are getting about 3,000,000 pounds more a week than the contract calls for, up to the present time. Britain has been taking approximately a million pounds a week more than she contracted to take, and we have been putting about 2,000,000 pounds a week into cold storage.

I give these figures in order to indicate to the committee what I think will be quite apparent, in answer to the question of the hon. member for Souris; that is, that no one in the federal Department of Agriculture is asking the farmers of Canada to produce more hogs at present in order to supply the demands of our own market plus those of the British market.

There is an uncertain factor in connection with the whole position at the present time in relation to hogs, and it is this: The United States market last year, throughout the whole year, averaged about three cents a pound under our market for hogs. That was due largely to the fact that we had entered into an agreement with Great Britain last year, and that Great Britain took delivery throughout the whole year of hogs at that higher price.

This year the United States price has drawn up closer to the Canadian price, and occasionally runs a little above our price, when one takes into consideration the difference in the value of exchange, and the tariffs as between the two countries. Occasionally hogs have crossed the boundary line into the United States, since the entering into of the new agreement, because of the price being a little higher from day to day in the United States than it has been in this country. But, generally speaking, since the contract was entered into, the price in Canada is still better than the price to be obtained in the United States. How long that will last, we do not know. If there is the bidding for Canadian hogs in the United States, then there is the possibility that the entire amount that we now have will be required.

Some inquiries have been made as to whether we might be able to provide more bacon and ham to Great Britain. But nothing definite as to whether they will require more, or whether they will desire to have more, has been arrived at. Inquiries have been made as to whether we would be able to provide them, if they required it, and we have given the information to the British government that I have given the committee to-night, in order that they may be fully informed as to our position. Therefore I believe I may say in answer to the question that, in so far as bacon production and hog products generally are concerned, the farmers of Canada are producing everything we require up to date to supply the Canadian market and the British market. I am not discussing, in connection with that question, the point whether or not the farmer is getting all he needs to get for the hogs he is producing. But the farmer is doing his part at least in producing all the hog products we have been able to dispose of in supplying the British demands for bacon on the other side, supplying our own market as well, and the limited amount which has been going to the United States.

In so far as cattle are concerned, we are getting the best price for cattle we have had for many years. We are selling all our surplus cattle in the United States. Up to date there has been no necessity to ship any cattle to Great Britain, as part of our war effort. The United States is taking all our cattle, and would take more than they are getting from this country. In other words, there is no problem connected with getting rid of the surplus supply of cattle.

We have this position existing at the present time: While some people have been suggesting that our prices ought to be on a parity with those of 1926, cattle constitute the one farm product which at the present time is above the parity for 1926. I believe on an average throughout the year the price has been above the parity for 1926. Therefore there is not much complaint or much opportunity for discussion with regard to the price

of cattle, for many of those who are relying upon cattle for their returns in connection with their farming operations.

The position in connection with dairy products is that we can dispose of all the cheese we care to produce or that we are likely to produce in Canada at the price at which we are now selling it to Great Britain, namely, at 14·4 cents, beginning on the first of April. We shall be selling it at 14 cents up to April 1, but after that date at the rate of 14·4 cents Great Britain will take practically all the cheese we can produce in Canada for export. I think she will take all we can produce.

The reason for the price of 14·4 cents is this: Great Britain has an agreement under which she takes all the cheese New Zealand can export, and she has an agreement under which she gets that cheese at a certain price. We have always had a premium of between two and three cents a pound for Canadian cheese over that received for New Zealand cheese. When the normal premium is figured on top of the New Zealand price, it works out at 14·4 cents.

Since we made arrangements with Great Britain in connection with this agreement, some people have asked why we accepted a price of 14·4 cents. Other people have put it in another way and have said that 14·4 cents is all right for Great Britain to pay, if that is all she can pay, but that the farmer cannot get along on that price. All I wish to say in that connection is this—and without quoting a price at all: At the end of the last war we started a chain of difficulties for cheese producers in this country by being critical of a price, if not refusing to accept a price, which in any year between then and now would have been considered as a fairly high price. We refused to accept for cheese a price offered to us by the British government, and we withheld deliveries rather than deliver at that price.

Mr. HANSON (York-Sunbury): What was the price?

Mr. GARDINER: It was somewhere around 20 cents. I have forgotten the exact figure, but it was somewhere between 18 and 22 cents. But we were not prepared to accept that price. New Zealand on the other hand was prepared to accept the price offered. If one follows the statistics with regard to cheese production and delivery from Canada to Great Britain, and cheese production and delivery from New Zealand to Great Britain from that time to the present, or to a time about five years ago, he will find that New Zealand was gradually, from year to year, creeping up in her deliveries to Great Britain, and that from year to year we were gradually going down.

In the last three or four years we have been gradually creeping up again. In 1935 we delivered 54,000,000 pounds.

Mr. SENN: The lowest ever.

Mr. GARDINER: Yes. Last year we delivered 91,000,000 pounds, or the highest amount we had delivered for quite a number of years. This year we have contracted to deliver 112,000,000 pounds, and that will be very much higher than we have delivered for a number of years.

In dealing with cheese we have attempted to encourage production. That encouragement was given for a period of two years before the war, and for the year since the war began, by paying a premium on 93-score cheese of one cent, and a premium of 2 cents on 94-score cheese. Speaking again from memory, I believe figures I gave to the house at the time the premium was allowed, showed that about 42 per cent or 43 per cent of cheese in Canada was 93 or 94-score. To-day it is 62 per cent. In other words, the paying of the premium, along with the effort of the farmer himself to improve his quality, has resulted in our obtaining a very much higher production of 93 and 94-score cheese than we had previously.

But since the agreement came into effect we have found this further result: Instead of the farmer who produced 93-score cheese getting 14 cents, he was getting 15 cents; and the man producing 94-score was getting 16 cents. This year we have added three-fifths of a cent to the British price, making a flat price of 15 cents on all cheese delivered to Great Britain. The premium of one cent still remains, which means that those producing 93-score get 16 cents and those producing 94-score get 17 cents. That is true right across Canada.

Seventy per cent of our cheese is produced in Ontario. The greater part of the remaining percentage is produced in Quebec. Some is produced in the maritime provinces, and a comparatively small amount in Alberta and Manitoba. Eighty per cent of all the cheese going to Great Britain comes out of Ontario, and it takes the greater part of that 62 per cent which scores 93, or better, to supply the British market.

With that picture before us, I should like to say something with regard to encouragement given to farmers to produce farm products, and particularly dairy products. There are certain areas in Canada which are very well constituted as dairy sections, and

there are certain parts of even the dairy sections which are better constituted for the production of cheese than for the production of butter. The area that is best provided with those things that are necessary for the production of cheese is the area from Toronto eastward to somewhere in the province of Quebec. It is in that area that the greater part of our cheese is produced. The greater part of the cheese produced in Ontario, in spite of the fact that she produces 70 per cent of all the cheese produced in Canada, is produced in that section.

One thing we have been trying to do in connection with war policy in this war, having had some experience in the last one, has been to avoid doing those things which encourage people to go into production in a big way during the war of farm products which they cannot produce economically in peace time, particularly if the areas which produce in volume are able to provide the quantity that is required while the war lasts. For that reason, when we were asked to put a subsidy on cheese produced all across Canada, I, as Minister of Agriculture, hesitated to suggest to the government of this country, and I would hesitate to suggest to this committee, that we should put a subsidy on cheese to raise the price to, let us say 19 cents a pound, which was suggested by persons associated with the dairy industry and by others. The result would be to induce people in certain parts of Canada which are not particularly well provided with the facilities to produce cheese at even a lower price than that to go into cheese production for the time being, because, in spite of what has been said about the price of dairy products, I am convinced, as I think every hon. member is who has made a study of the question, that we cannot expect over any long period of years in peace time to be able to get as much as 19 cents a pound for our cheese.

Mr. SENN: If I may ask the minister a question, does he suggest that the premier of Ontario is making a mistake in bonussing cheese production to the extent of two cents a pound?

Mr. GARDINER: No; I was just coming to the point of saying that I think he did the right thing. In Canada we are living in a confederation, and there are some advantages in a confederation as well as some disadvantages. I think the government of Ontario came to the right conclusion when they concluded that the natural cheese-producing area in this country is in Ontario, and that they could put a subsidy on cheese to bring the price up to 19 cents a pound in that area without inducing people in other sections of the country, which probably should not be in the cheese business, to go into it for the time being, and thereby in the long run injure others. In other words, I think that the granting of a subsidy of two cents a pound on cheese in Ontario was a move in the right direction, and that it will probably get cheese production where it ought to be. I am informed that some of the other provinces are considering doing the same thing, and to the extent that it is done wisely and in the areas where it is proper that cheese should be produced, it is I think an advisable thing to do. But I do not think Canada in the long run would have benefited if this government had stepped in and simply said: We will pay a subsidy on cheese which will get production in those areas that cannot naturally adjust themselves to the production of cheese even at the price they may have to take.

Mr. PERLEY: Does that same principle apply to the Saskatchewan government as regards wheat?

Mr. GARDINER: We shall come to wheat and the prices of wheat in due course. I would just point out now that wheat is not my problem but that of my colleague the Minister of Trade and Commerce (Mr. MacKinnon). It is, of course, my problem as a citizen of Saskatchewan and as a member from Saskatchewan, but wheat itself comes under the administration of the Department of Trade and Commerce. There is another side to the wheat question. I should just like to say in passing that I do not think the farmer of western Canada has ever been subsidized on his wheat during this war, and I do not think he is being subsidized on his wheat now. I believe that what is being paid to the farmer to-day on wheat is what it has always been called and what it is called in the act—an advance on his wheat.

Mr. LECLERC: I hope the minister to-night will not get on to the subject of the western farmer and his wheat but will stick to cheese and butter.

Mr. GARDINER: The cheese situation I think is pretty well taken care of in what I have already stated to the committee. It does not make very much difference how it was accomplished, but in view of the subsidy paid by Ontario and the price which we obtained from Great Britain, and the premium provided, the farmer is getting approximately what he asked for in Ontario, and that is somewhere between 17 and 19 cents a pound for his cheese, depending on the quality.

So far as the butter situation is concerned, I do not think there is any limit to the amount of butter that we can get rid of from Canada within the limit of what we are likely to produce and can produce.

But I would point out this: Britain asked us last fall if we could deliver to her last fall 10 million pounds of butter. The reply we gave was to the effect that if she needed 10 million pounds of butter we would deliver it to her, even if we had to put our own people on rations in order to do it, just as the people of Britain were being rationed over there. We said: "What would you pay for it?" If I remember rightly, and the officials here will correct me if I am wrong, Britain at that time said 21 cents, or what would be equivalent to 21 cents in our money. Butter was selling in Canada at that time for 24 cents. We did not say to Britain: "We will send you the butter because it is here in Canada." But we said to her: "We are prepared to send the butter if you want it, and we will accept what you are prepared to pay for it."

Then they asked us what effect the shipment of 10 million pounds of butter to Britain would likely have upon the production and delivery of cheese. We said it would probably have a detrimental effect; and when they asked, "In what way?" we said that if we left our market open here and took 10 million pounds off the market, which then was said to be a little short, we would probably have a price for butter in Canada this winter and probably early next summer which would greatly encourage the production of butter, and if somebody would take our butter at the higher price that we were likely to get on our local market as long as there was a shortage here, then that could be justified, but that if we were going to have to deliver the butter to Great Britain, we would have difficulty in taking just 21 cents for the butter which we were producing in this country throughout the year, and that the production of butter would at the same time be shortening the production of cheese. Then Britain said that they did not want the butter, they wanted cheese, and they were not prepared to pay any higher price to get butter from Canada.

May I say just briefly, because it is almost eleven o'clock, that Great Britain has contracted for all of the butter of New Zealand and Australia and all the butter they can get elsewhere, and they would take at a price any butter we might have by way of surplus in Canada. But we believe that, in so far as the price itself is concerned and getting the price which the farmer must have at the present time if he is going to be able to produce butter in this country to advantage, it will be necessary for us during this coming year at least, whatever we do next year, to keep our butter production about equal to our butter consumption in Canada, and get our cheese production just as high as we can get it in Canada. We think that, by doing those two things, we shall be doing the best we possibly can as farmers to serve Britain and at the same time serve our farmers, and our country generally.

[Mr. Gardiner.]

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, February 28, 1941.

The house met at three o'clock.

WAR PENSIONS

CONCURRENCE IN FIRST REPORT OF SPECIAL COMMITTEE

Hon. CYRUS MACMILLAN (Queens) presented the first report of the select committee on the Pension Act and the War Veterans' Allowance Act, and moved that the report be concurred in.

Motion agreed to.

CANADA'S WAR EFFORT

REFERENCE TO CRITICISMS IN UNITED STATES SENATE

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I wish to draw to the attention of the government the following remarks of Senator Gerald Nye, of North Dakota, made in the debate yesterday afternoon in the United States senate on the so-called lease-lend bill. Senator Nye is reported to have said:

> As we have done until now, Canada has required of England cash on the barrel head.

That is for war supplies.

> Canada hasn't made a move to indicate other than that she would anticipate cash on the barrel head in the future.
>
> Enact this bill, and you will find England using our United States dollars which we will give her to pay Canadians for the war supplies they send to their mother country.

I would ask the government what steps, if any, are being taken to correct such damaging statements in the United States. Has any statement been issued by the Canadian legation in Washington in refutation of such unfounded charges?

Hon. H. A. BRUCE (Parkdale): I was about to ask a somewhat similar question, and I also notified the Prime Minister of the fact. My question is: The newspapers report a statement made by Senator Gerald Nye accusing this dominion of doing nothing for Britain except what is paid for in "cash on the barrel head."

As this might have some effect on the lease-lend bill before the senate, will the Prime Minister inform the house what steps he has taken to refute this slander?

Right Hon. W. L. MACKENZIE KING (Prime Minister): My hon. friend who has just spoken did give me notice of the question he was about to ask. My hon. friend the leader of the Cooperative Commonwealth Federation group (Mr. Coldwell) also gave me notice of the question he was going to ask, and I prepared a reply to be given to whichever one of the two spoke first. I have reserved in brackets a place for one name or the other, so that each might get full credit for having asked the question.

The government is of course aware not only of the specific statement to which the hon. member has referred, but also the similar allegation concerning Canada made in the course of the discussion in the United States on the lease-lend bill. After careful consideration the government decided that it would not be wise for us to make a public statement in regard to a subject of domestic debate in the United States, even for the purpose of correcting misrepresentations of Canada's action.

We have felt that Canada's position as a belligerent and a co-partner with Britain in the present war was well known in the United States. It has been a considered view of the government that the facts are so easily available and so widely known that it is much wiser to rely on Americans themselves, who are aware of the facts, to correct in public damaging statements, than to undertake Canadian intervention in a debate between Americans on United States policy. We have the best of reasons for believing that those in positions of chief responsibility in the United States are under no misapprehension as to the extent and form of Canada's contribution. They are not likely to be misled by such statements as that referred to by the hon. member—I should say now the hon. members.

The misrepresentation of any public intervention by Canada might easily prove much more damaging than the original statements it was sought to correct. The fact that we can rely with confidence on the more serious newspapers in the United States to correct misrepresentations can be illustrated by an editorial which appeared in the New York *Times* on February 21, and which I should like to read into the record. This editorial appears in the New York *Times* of February 21 this year. It is entitled "Misrepresenting Canada," and is as follows:

> Our good neighbour Canada is fortunately not unduly sensitive to misrepresentation of her status, her actions and her motives in our congressional debates, or she would have cause for resentment over a recent speech by Senator Wheeler of Montana. "Canada, which is a colony of Great Britain" said Senator Wheeler, has a law "for the drafting of men for three months' time and in that law expressly provides that no draftee may be sent abroad without his consent."
>
> Canada is not a British colony but a free and independent nation, voluntarily linked with other free nations of British origin in a commonwealth of nations in which all are on an equal footing, and from which any of the partners has the right to secede at any time. The senator should know this, for it is part of the information shared by everyone at all conversant with international affairs. Moreover, the reason for Canada's restriction of her drafts for national service is notoriously that she has already, and can continuously command, so many volunteers for service abroad that to draft more men would only be an embarrassment.
>
> Australia and New Zealand, also characterized by Senator Wheeler as "British Colonies", have the same status as Canada. When he goes on to say that "they are not even loaning, to say nothing of giving," war supplies to Britain, but are "insisting that the cash be put on the barrel top," he echoes a statement wholly contrary to the facts and frequently exposed. Canada, Australia and New Zealand all entered this war by the side of Britain of their own free will. Their participation in it is not restricted by monetary consideration other than their capacity to contribute. They pay their own bills, even reimbursing Great Britain for any supplies they cannot themselves furnish, and from their own resources they give to her freely, without measure and without price. Assertions to any other effect by responsible statesmen in Washington do not tend to help our relations with a spiritual ally and staunch friend.

I have thought it desirable to place this editorial on record to illustrate how the best informed citizens of the United States really view statements of the character referred to. I am sure hon. members will, on reflection, agree that nothing could be more unfortunate with respect to furthering the interests of Canada or the interests of the British empire at Washington than for either this country or any other nation of the British commonwealth to take any step at Washington which would give the administration, or the opponents of the administration there, reason to say that we in Canada—particularly the government—were trying to interfere in matters of

their own domestic concern, and were going out of our way to influence the free and independent judgment of the American people.

Mr. T. L. CHURCH (Broadview): Might I ask the Prime Minister if that is the Senator Nye who was the co-author of the Neutrality Act, and who objected in the senate to Canada and England sending "missionaries" as he called them to the United States, professors and lecturers, to "drag America into the war"?

Mr. MACKENZIE KING: I think my hon. friend will have to look up his own "Who's Who" in the United States.

Mr. CHURCH: Should not the government regulate, through passports or in some way, those who go to the states and lecture, because it does Canada harm? People go there and do the empire and Canada a great deal of harm, making speeches about Canada's war effort which are unauthorized by the government.

INCOME TAX

REPORT AS TO PROPOSED APPLICATION TO COOPERATIVE ORGANIZATIONS

On the orders of the day.

Mr. VICTOR QUELCH (Acadia): I wish to address a question to the Minister of National Revenue (Mr. Gibson), or in his absence, to the Minister of Finance (Mr. Ilsley).

In the March 1 issue of the *Financial Post*, on page 1, the following heading appears:

Hear Pool Asked to file tax returns.
Ottawa takes first steps to levy income tax on cooperative organizations.

My question is: Has the Department of National Revenue requested that cooperative organizations throughout the dominion file income tax returns?

Hon. J. L. ILSLEY (Minister of Finance): The attention of the Minister of National Revenue will be called to that question on his return.

WHEAT

INQUIRY AS TO POLICY FOR 1941-42 CROP YEAR

On the orders of the day:

Mr. J. A. ROSS (Souris): I wish to ask a question of the Minister of Trade and Commerce. Speaking on November 22 he intimated that a wheat policy covering the 1941-42 crop year would be announced some time in February.

As many farmers throughout Canada are now anxious to plan their spring operations, will the minister say when we may expect that announcement?

[Mr. Mackenzie King.]

Hon. JAMES MacKINNON (Minister of Trade and Commerce): I well remember making the statement that I would—I think I went that far—some time in the month of February, make a statement as to the wheat policy for the coming year. At the time I said that I had no idea that there would be any trouble in bringing finality to plans for a wheat policy for the coming season. The wheat committee of the cabinet, the cabinet generally, the wheat board, the advisory committee advising the wheat board, and practically everyone interested in wheat in western and eastern Canada, individuals and organizations, have been giving this matter of wheat the very closest study. Any delay that there has been is caused by the tremendous number of different viewpoints on the question and the great divergence of opinion as to what should be the programme for next year. During last week and the early part of this week the wheat board and the advisory committee to the wheat board has been meeting in Winnipeg attempting to bring some finality to their advice to the cabinet in this matter. The wheat board arrived in Ottawa yesterday morning to consult with the wheat committee of the cabinet and I am hopeful that we shall have at least a partial announcement on the matter of policy within the next three or four days.

Mr. DOUGLAS (Weyburn): In view of the fact that the government apparently has not a wheat policy, may I ask whether the possibility has been considered of offering a prize of war savings stamps to those suggesting the best policy?

WAR MUNITIONS AND MATERIALS

INQUIRY AS TO POSSIBLE USE OF PLATE MILL AT SYDNEY, N.S.

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): Has the Minister of Munitions and Supply any answer to the question I asked yesterday with regard to the plate mill at Sydney, Nova Scotia?

Hon. C. D. HOWE (Minister of Munitions and Supply): The plate mill at Sydney has received very careful study in the Department of Munitions and Supply. The mill was bought in the last great war but was installed too late to be used at that time and it has not since been operated. To put the mill into operating condition to-day—because I am sorry to say that a good many of the parts are gone, having been used for other purposes—would involve an expenditure of $1,500,000. The difficulty is that even though

Dominion Steel and Coal Corporation have the mill, they have no raw material to make plate. The raw material is all sold to Britain on long-term contract. Britain has been consulted by the department and has advised us that it cannot release any of that tonnage, preferring to get the ingots rather than plate, so far as that particular source of supply is concerned. The government has ample plate capacity in Canada to supply all the needs that can be foreseen at this time both for armour plate and for steel plate for shipbuilding and other requirements, although there is a temporary shortage of tin plate at the moment. We have decided that under the circumstances we are not warranted in financing the rehabilitation of the plate mill, but we are studying the question of installing additional primary steel capacity at Dosco—that is, more open hearth capacity—and I hope a decision on that question will be made early next week.

SOLDIER SETTLERS

STATUS OF MEN WHO ENLIST FOR ACTIVE SERVICE

On the orders of the day:

Mr. A. M. NICHOLSON (Mackenzie): I had intended putting a question to the Minister of Mines and Resources (Mr. Crerar), but owing to the urgency of the matter perhaps I may be allowed to ask it of the ministry. I have here a letter from one of my constituents who enlisted for active service on January 7 of this year. He has sent me a letter from the superintendent of the soldier settlement board in Saskatoon—

Mr. SPEAKER: Order.

Mr. NICHOLSON: This soldier has been notified that unless he makes payment, which he cannot make, he will lose possession of his land within thirty days. Can the minister give any assurance that men in this position will have protection while the war is on?

Mr. SPEAKER: Perhaps the hon. member would put his question on the order paper.

Mr. MACKENZIE KING: I might ask my hon. friend a question. Has he himself spoken to the minister about the matter with regard to which he wishes to have information?

Mr. NICHOLSON: I understand the minister is out of the city.

Mr. MACKENZIE KING: Has he spoken to the deputy minister?

Mr. NICHOLSON: No, I have not.

Mr. MACKENZIE KING: I would suggest, in regard to these departmental matters, that information which is desired could perhaps be expedited if such questions were brought to the attention of the minister himself or of one of the officials instead of having the time of the House of Commons taken up with such less urgent matters at this particular time. I feel it is necessary to direct attention to the fact that questions on the orders of the day should be questions arising out of some immediate necessity and should be put in the form of questions. It is very pleasant to have one's constituents know that one has received their letters and read them in the House of Commons, but that is not the purpose of questions on the orders of the day. Such questions should relate to matters that are imperative and of general interest to the house.

TRANS-CANADA AIR LINES

CONTRACT FOR CARRIAGE OF MAILS—REVISION OF PRICES

On the orders of the day:

Mr. J. H. HARRIS (Danforth): In spite of what the Prime Minister has said, may I ask a question of the Postmaster General or perhaps of the Minister of Transport. I should like to know whether a contract has been entered into between the Department of Transport, who are operating the affairs of Trans-Canada Air Lines, for the carriage of mails; if so, when does it expire, and will the minister responsible for it lay it on the table?

Hon. C. D. HOWE (for the Minister of Transport): No contract has been made for the year 1941. The act as at present drawn requires that a new contract be made each year on the basis of the performance of the old year. It has been found that in actual operation this is hardly possible, because figures for the old year are not available when the new year begins. We are asking for legislation, as my hon. friend will note from the order paper, for a revision of the act.

Mr. HARRIS (Danforth): No revision of price?

Mr. HOWE: Yes, there will be a revision of price as well. It is the intention to cut the price on the carriage of air mail from sixty cents to forty cents a mile beginning the first day of April, 1941.

HOUSE OF COMMONS

ADJOURNMENT AT SIX O'CLOCK ON FRIDAYS

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): The order of the day to-day is No. 4, for the house to go into committee of the whole on the resolution respecting the war appropriation bill. Before the house proceeds to that order, I should like to say a word about evening sittings on Friday. On one or two occasions before, I have mentioned to hon. members that as the time of the house is taken up during the week with the discussion, for the most part, of urgent war matters, and all of us are obliged to concentrate very closely on these particular questions, which are most important, that for the present at least, unless there is some special reason to the contrary it would probably meet the wishes of hon. members generally if it were understood that we would adjourn on Friday at six o'clock instead of continuing sitting during the evening. I have discussed the matter with the leader of the opposition (Mr. Hanson), and he and I hold the view that the house has much to gain and nothing to lose by having it understood that at least for this part of the session unless the government deem it important to have hon. members do otherwise, the house will not sit on either Wednesday or Friday nights. Unless there is some view to the contrary on the part of hon. members, I should like to announce now that we will not sit this Friday evening, and that for the present we will not be sitting on other Friday evenings unless there is some special reason why we should do so.

I would draw attention to the fact that intensity of effort is a factor that has to be taken into account in considering the significance of duration of effort. I imagine that in our discussions at this very critical time we are expending more energy in a few days than at other times we would expend in several days. That is a factor which has been recognized in the British House of Commons, and I think we might equally recognize it here.

Hon. R. B. HANSON (Leader of the Opposition): May I say that I concur entirely in what the Prime Minister (Mr. Mackenzie King) has said. Speaking for myself I can say honestly that at the end of the week I feel very tired. It is a tremendous effort to come here in the morning and work continuously from nine o'clock until eleven o'clock at night. I do not think the public will expect men, especially members of the government and others charged with responsibility, including myself, to put in a day as long as that. I must have some relaxation, and I welcome this release from attendance here on Friday night. I hope other hon. gentlemen will concur in the suggestion that has been made by the Prime Minister.

Mr. M. J. COLDWELL (Rosetown-Biggar): Speaking for the small group with which I am associated, Mr. Speaker, I should say we welcome this suggestion. I agree with the leader of the opposition (Mr. Hanson) that members of the government are working under a very heavy strain which to some extent will be relieved if this suggestion is adopted. I have often thought that the Prime Minister (Mr. Mackenzie King) might have some hon. members deputize for the members of the government on occasion, because I realize the heavy strain they are under. We in this little group, with our committee work and so on, welcome this change. Though we are a small group in opposition nevertheless we devote a very considerable amount of time to the work of this house. So I say that not only have we no objection to this proposal; we welcome it, and we hope all other hon. members will welcome it also.

Mr. MACKENZIE KING: I should like to express my appreciation of the cooperation given in this matter, but there is one thing I should like to say to the hon. member for Rosetown-Biggar (Mr. Coldwell). I hope he will not imagine that members of the government are being relieved of any duties because the house rises at six o'clock. We have in the past reserved Wednesday and Friday evenings, when they were free, for additional meetings of the war committee of the cabinet, so that we will be just as busy with the work of the administration at that time as we would be if we were in the house.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, February 26, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000, for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Bradette in the chair.

Mr. HANSON (York-Sunbury): Mr. Chairman, when the house adjourned on Wednesday afternoon I had partly completed the statement which I wished to make at that time. I desire now to continue with that statement, and I promise the committee that I shall not take any great length of time. May I express the hope that the heat dis-

played from time to time on that occasion has been dissipated, and that we may pursue the discussion of this subject in a calm and philosophical manner.

At the time of adjournment on Wednesday I had partly placed on *Hansard* a statement which I had handed to the press on Thursday, February 20, the opportunity of reading which was denied to me at that time. I had carried the matter down to the point of the various recommendations made by the manufacturers to the acting Minister of Munitions and Supply in January last. I then adverted to the fact that the matter had been given attention by the chairman of the war-time requirements board, who had brought in from the United States a capable executive who was an authority on aircraft production. Apparently there is some little difference of opinion between myself and the Minister of Munitions and Supply with regard to the views of this gentleman. I am informed that his views with respect to Federal Aircraft were in accord with the views of the manufacturers; it has been so stated to me.

Mr. HOWE: I think it is only fair to give the source of that information, because the three gentlemen associated with him have told me the exact opposite.

Mr. HANSON (York-Sunbury): If the minister had waited until I concluded I think I could have saved him the necessity of interrupting. I will repeat that statement. I was informed—and I will now say that I was informed by a member of one of the manufacturing concerns—that this gentleman's views as expressed to them were in accord with those of the manufacturers. The minister stated the other day that the gentleman in question had not so expressed himself to the minister, and I accept that statement. There is no printed record of what the gentleman in question said, so I think the matter will just have to be left at that point. Even if he had said one thing or the other it would not settle anything, but in any case, as far as I am concerned I have to leave there the discussion of what his views were.

I was also informed from the same source that as a result of the expression of that gentleman's views the chairman of the board was in accord with and recommended the dissolution of Federal Aircraft. I am bound to say that according to the chairman's report as it appears in the *Votes and Proceedings*, and from what the minister has said, that information was not well founded. I hasten to say so, and I am sure that is a correct position for me to take. I want to say, however, that with that single exception, everything I said in my statement with regard to this matter of the production of Anson aircraft is in accord with what the minister has said, and in accord with the facts. So far as I know there is just that one item of misinformation that was given to me.

Mr. HOWE: I just want to call my hon. friend's attention to the fact that according to my recollection of his statement it said quite definitely that the programme was very much behind schedule. I do not think that is indicated by the record.

Mr. HANSON (York-Sunbury): We will just see about that. I think I can demonstrate that myself.

I now wish to place on the record the more important of the concluding portions of the statement, in order that the matter may be fairly complete in *Hansard*. The statement proceeds:

> The matter was delayed to await the return of the minister, but as yet the public is unaware of any steps taken to change the existing Federal set-up. On the 31st of January the minister is reported as having said:
>
> "I can see nothing at the moment to indicate that we would get more planes by upsetting the Federal apple-cart." He went on to make a forecast of production, which is considered by aircraft manufacturers to be little short of fantastic.
>
> I am further advised that after his return from England the minister communicated by letter with the aircraft manufacturers who had signed the original memorandum.

That is, to the acting minister.

> He promised that a thorough study of the situation would be made at once and upbraided some of the firms for being behind in their deliveries. All the firms were requested to answer as quickly as possible three questions:
>
> 1. Will the taking of steps you recommend accelerate production of Ansons in Canada, and if so to what extent?
>
> 2. On what facts do you base your opinions?
>
> 3. What guarantee can you and your group give as to a date when substantial deliveries of Anson planes will be made, provided your recommendations are accepted?
>
> I am advised that a joint reply was made to this request, but I am unaware as to its nature, except that the manufacturers have reiterated the basic theme of the complaint against Federal Aircraft, which is that there can be no guarantee of performance under present or proposed reorganization so long as no schedule can be obtained from Federal Aircraft as to when engineering data, raw materials, parts, proprietary articles, castings, forgings, and finished parts, which are to be supplied by Federal Aircraft, will be available.

I believe that paragraph contains the gist of the defects of Federal Aircraft production. I am not going to allocate the blame to anyone. The minister stated that this was a mushroom industry, something that had never before been attempted on a large scale in Canada, the magnitude of which I

cannot at all events encompass in my own mind, and which I doubt if many hon. members can encompass.

But to me, the amazing part of it is that while the minister knew of the representations, asked the questions which he did with regard to recommendations for accelerating production of Ansons in Canada, and received the joint reply in which the manufacturers reiterated the basic theme of the complaint against Federal Aircraft, which was that there could be no guarantee of performance under present or proposed reorganization, so long as no schedule could be obtained from Federal Aircraft as to when engineering data, raw materials, parts, proprietary articles, castings, forgings and finished products, which were to be supplied by Federal Aircraft, would be available, he ignored these recommendations—

Mr. HOWE: I do not like to interrupt my hon. friend, but I think he is reading into the last letter the trade wrote something that is not there. I asked the trade to say when they could guarantee delivery, and they said they could not guarantee delivery until they had that information.

Mr. HANSON (York-Sunbury): That is about the same thing.

Mr. HOWE: I suggest that if my hon. friend wishes to be fair, he should read the last letter from the manufacturers, and take a vote on how many would switch anything to them on that letter.

Mr. HANSON (York-Sunbury): As a matter of fact the minister did not table the letters.

Mr. HOWE: Yes, I did.

Mr. HANSON (York-Sunbury): I have not been able to find them.

Mr. HOWE: I tabled them.

Mr. HANSON (York-Sunbury): I have not found them.

Mr. HOWE: They are there.

Mr. HANSON (York-Sunbury): I have not been able to get access to them; I understood they were not tabled.

Mr. HOWE: I tabled them before.

Mr. HANSON (York-Sunbury): If the minister says they were tabled, then I accept his word.

It was on the basis of all these facts that I was endeavouring in the statement I made, without wishing in any degree to embarrass the government, to ask the minister for a full, complete and true statement of the position, and to tell the house and the country what the government intended to do to end the apparently impossible position then existing with regard to aircraft production in Canada, referring particularly, of course, to the production of Avro-Ansons, one of the most urgent necessities in our war effort. My statement was directed almost entirely, if not altogether, to the production of Avro-Ansons.

I should like now to give the committee and the country a little resume of the history of aircraft production in Canada, in connection with this war effort. I am not speaking of the production of planes for civil aviation, which was carried on to a very limited degree before the war. I am speaking with regard to Canada's war effort, and the action of the government.

That history I set out as follows:

1. No contracts for aircraft in connection with the war effort were placed in Canada by the Canadian government from the time the war broke out until February, 1940.

2. Primary trainers, Fleet and Tiger Moths and intermediate trainers—Harvard—were then ordered from Canadian manufacturers.

3. Avro-Ansons at that time were to be supplied complete from England, less wings and tail surfaces, which were to be ordered in Canada.

4. When France fell, this government decided to make Avro-Ansons completely in Canada, with American Jacobs engines and instruments imported from the United States.

In July, 1940, the Canadian Avro-Anson programme was in a disorganized state, and at that time Federal Aircraft Limited was formed to coordinate the plans and to speed up production. I believe the minister will admit that this is a fair statement of the object of setting up Federal Aircraft.

Mr. HOWE: It was set up to organize it. There was no disorganization, because nothing had been done about it.

Mr. HANSON (York-Sunbury): That may be a matter of opinion. It is the opinion of some people, and it is my opinion. That, however, may not be worth much.

Mr. HOWE: Not very much, on that subject.

Mr. HANSON (York-Sunbury): Then we can agree on that, at least, that my opinion is not worth much.

I now call attention to a press release covering the week of June 28, 1940, given out by the bureau of information, in which the following information was supplied under

the heading "aircraft expansion". This is one of those press releases. I do not say the minister is responsible for it, but somebody is. Certainly the minister is partly responsible for it. It is one of those things fed to the Canadian people about that time which tended to soothe them to sleep with regard to the government's war effort. This is the part to which I call attention:

Duties in Canada previously allocated to the British supply board have been vested in the Department of Munitions and Supply. The department will now place orders direct for the British government. This arrangement is expected to expedite the placement of orders for British requirements and generally speed up the production of munitions of war in the dominion. Canadian industry is being geared up to meet Great Britain's needs.

I have no objection at all to that paragraph. I believe it contains a fair statement of the objective at that time. Then the statement goes on to say:

In announcing the appointment of Mr. R. P. Bell, prominent business executive, to the executive committee of the Department of Munitions and Supply, Hon. C. D. Howe intimated that many difficulties in the supply of aircraft had been overcome. Mr. Bell's responsibility will be that of coordinating the entire aircraft production throughout the dominion, and accelerating the output of the aviation industry. Mr. Bell is serving without remuneration. He commences at a time when the Canadian Aircraft Industry has responded splendidly to the emergency created by the inability of Great Britain to ship components under the terms of the joint air training plan.

That is quite a tribute paid to the industry by the minister at that time. It continues:

This response has been such that the larger part of the programme, which covered two years, has been compressed into a one-year plan.

Mark this sentence:

Elementary trainer planes are already being produced on a mass production basis.

I wonder whether that was a correct statement of the position—"a mass production basis." Of course I quite realize—

Mr. HOWE: What does the hon. member mean by a mass production basis?

Mr. HANSON (York-Sunbury): I am asking the minister what he means by a mass production basis. It is a quotation from his statement.

Mr. HOWE: Yes, but the hon. member says it is not on that basis. We shall have to have an agreement on that.

Mr. HANSON (York-Sunbury): I wonder whether that was a correct statement for the minister to make, having regard to the facts as they existed at that time, and especially as they existed with respect to some of the planes, the elementary planes—trainer planes —the minister had in mind.

Mr. HOWE: Elementary training planes have never been behind schedule.

Mr. HANSON (York-Sunbury): I never said they had. This does not say anything about schedule; it says they were being produced on a mass production basis. That means to the people of Canada a large production basis.

Mr. HOWE: How large?

Mr. HANSON (York-Sunbury): I do not know. The minister stated that, but he did not enlarge on his statement. His remarks continue:

Engines for other planes have been ordered from the United States to replace those to have come from Great Britain, and Canadian plants are now turning out training and service planes, bombers and fighters, as fast as modern industrial practice permits.

That may be true with regard to training and service planes, but I am just wondering, and I ask the minister, whether it is true that they are turning out bombers and fighters as fast as modern industrial practice permits. If he means modern industrial practice in Canada, then of course that does not mean much. But it was intended, I think, to lull the Canadian people into the thought that we were getting bombers and fighters in substantial numbers every week and every month. I suggest that that was not a true factual statement, that it was intended only to keep the people quiet and to prevent them from asking questions.

As the minister stated on Wednesday last, the general manager of Federal Aircraft was Mr. Moffett, chief aeronautical engineer of Canadian Vickers Limited. I do not know this gentleman and I would not wish to say one word to injure his reputation in the slightest degree. I would have no reason for saying this, and I would not have referred to him had not the minister done so. But this is clear: After public criticism and press criticism became apparent following the minister's return from England earlier this year, Mr. Moffett was replaced by Mr. Newman, of the Canadian Pacific Railway company.

In August, 1940, the minister gave Mr. Bell the choice of remaining as president of Federal Aircraft Limited or continuing as director of aircraft production. Since the retention of the former post would probably have meant his transfer to Montreal, Mr. Bell elected, as I understood the minister, to re-

main as director of aircraft production. Mr. Lawson was appointed president of Federal Aircraft.

This is the point I want to make. There was continued disorganization of the Anson programme during the latter part of 1940, after Mr. Lawson came in. I am informed that this disorganization was made even worse by bad management or bad judgment, or perhaps both, in Federal Aircraft itself. During the balance of 1940 there were many meetings held between the minister and members of the industry under contract to supply portions of the Anson programme in an effort to show him the situation.

Mr. HOWE: That is not true.

Mr. HANSON (York-Sunbury): That is the statement as made to me.

Mr. HOWE: I never in my life discussed Federal Aircraft with the industry.

Mr. HANSON (York-Sunbury): All right; I shall have to leave it at that. I am informed that, as a result, many promises were made by the minister, but that no action was taken by him in spite of the fact that many individuals in his own department, in the Department of National Defence for Air, in the industry, and even in Federal Aircraft itself, wanted a change. That is the statement which was made to me by a responsible member of the industry.

Mr. HOWE: My hon. friend is reporting what I did and I must say—

Mr. HANSON (York-Sunbury): It is what the minister did not do.

Mr. HOWE: I never discussed Federal Aircraft with the industry. I have discussed it casually with individual members of the industry, but Federal Aircraft were handling their own affairs. I have discussed Federal Aircraft with the president and directors of Federal Aircraft, but that is the only serious discussion I had with anybody.

Mr. HANSON (York-Sunbury): I am informed the minister did have a discussion. If the minister says he did not, by the rules of the house I am bound to accept his statement.

I come now to January of this year when the industry, through the Air Transport association, wrote asking for a meeting with the government to discuss the problems of aircraft production. As has already been stated, the acting minister invited six of the main contractors in the Anson programme to describe the situation to him individually and later to produce collective recommendations. This was done on January 7, and among other things they called for the dissolution of Federal Aircraft. The acting minister himself left the impression with the representatives of the industry that he was fully persuaded that they were advocating the proper policy and, it is stated, cabled the minister, who was then in England, asking permission to act, but this was refused.

Then the chairman of the war-time requirements board arranged, through Mr. Carmichael, for a report by Mr. Breech. I shall not go over this again. This is what the industry thinks ought to be done. The industry has represented that the war-time requirement is for an aircraft production head with complete authority, with its own finances, and particularly encompassing the engineering division of the Royal Canadian Air Force.

Mr. HOWE: Does my hon. friend recommend that?

Mr. HANSON (York-Sunbury): I am saying what the industry recommends.

Mr. HOWE: What about parliamentary control?

Mr. HANSON (York-Sunbury): That is another point. There was a falling off of production of aircraft in England, but Lord Beaverbrook was taken into the ministry for the purpose of getting results in production. He broke through every tradition with regard to parliamentary control; he is now a dictator in effect with respect to aircraft production, but he got results.

Mr. RALSTON: I think my hon. friend has made entirely too wide a statement when he says that Lord Beaverbrook broke through every tradition with regard to parliamentary control. That is exactly the point my colleague was making, that you could not break through parliamentary control.

Mr. HANSON (York-Sunbury): I realize the difficulty and I pointed it out. I realize there is the matter of parliamentary responsibility, and at the moment I am not advocating that Mr. Bell, or whoever may be appointed, should be made a dictator.

Mr. RALSTON: Or Lord Beaverbrook.

Mr. HANSON (York-Sunbury): He has pretty wide powers.

Mr. RALSTON: But he has not the power to supersede parliamentary control.

Mr. HANSON (York-Sunbury): What he says goes with the British government. Someone should be put on the job. He could be made responsible to the minister—I agree that that ought to be done—but he should

get results. I do not think we can go as far as the industry has suggested we could, and I have told them so. To sum up, the industry still recommends that Federal Aircraft should be dealt with as indicated in the aircraft manufacturers' joint memorandum of January 7, 1941.

It is hoped, and in order to attain economical and rapid large-scale production it is fundamentally necessary, that orders be placed with the industry for at least a year ahead. This has not been done and most of the aircraft manufacturers have not yet been fully occupied. It will be apparent, I think, that on all orders for 200 aircraft or more the manufacturers have made good deliveries—I think the minister himself demonstrated that the other day—in some instances being a year ahead of schedule.

In his anxiety to throw up a smoke screen to hide or obscure certain established facts, the minister used harsh and bitter words, especially toward certain of the press of this country. But I want to say to him and to the committee that those harsh and bitter words will not prevent us from analysing the situation objectively, or from searching out every fact that may bear upon the situation. I was pained to hear the minister use language which created the impression that everyone who differed from him or who criticized him was a saboteur. That was the impression created in my mind. Too easily has he concluded that Canada's war effort and this government are coterminous. May I suggest to him that he should understand that criticism of the government may help, not hinder, the government's war effort. One of our objectives is to demonstrate any weaknesses that may exist so that inefficiency shall not honeycomb our war effort, in order that we may have the planes and more planes so urgently requested.

There seems to be an inconsistency between some of the minister's declarations. May I point out that possibly he has a short memory? In a speech on Wednesday last, he said this, as reported at page 1053 of *Hansard:*

> In our most optimistic moments we never expected that we would get any substantial production of Avro-Anson planes until March.

That is what the minister said two days ago. On February 21, in reply to the hon. member for Cumberland, who suggested that production of Ansons was months behind schedule, the minister said, as reported in *Hansard,* page 922:

> No. There was never the slightest thought in anyone's mind that we would get the first Avro-Anson plane before the end of February, 1941. . . . All I will say now is that we never anticipated having Avro-Anson planes of Canadian manufacture delivered at this date.

But what did the minister say on the 30th July last? He may check me if he wants to; I have *Hansard* here, page 2116 of last session:

> It is anticipated that Canadian production of Ansons will commence before the end of this year.

This was after Federal Aircraft was set up. No doubt the minister had some reason for making that statement. Why does he not have his secretary or somebody check up on his previous statements?

Mr. HOWE: Well, Mr. Chairman,—

Mr. HANSON (York-Sunbury): All right, now.

Mr. HOWE: On the 30th July, Federal Aircraft had been set up for ten days, and we were not aware at that time that we had to make a complete re-design of the plane. We thought we had a straight manufacturing proposition.

Mr. HANSON (York-Sunbury): I tried to say that, to be fair, that there were reasons upon which the minister based his anticipation.

Mr. HOWE: I gave the house my best statement at the time.

Mr. HANSON (York-Sunbury): I am not questioning the minister's good faith. Again I make that statement, and make it quite clearly. I am questioning whether the minister's judgment and the minister's efforts have always been exercised to the best advantage in this matter. I never yet questioned his good faith.

I should like to go a little further. The minister, I believe, is the hardest-working member of the administration. I say that; that is evidence of fairness, is it not? I certainly believe that, but I honestly believe also that the minister undertakes too much and therefore has not accomplished all that he might have accomplished. I know it is commonly true of the man who is endeavouring to do a big job, that he thinks he can do it better than anybody else, and very often he is right, but it clogs up his effort with regard to other matters. I know that in the practice of the law, in the drafting of contracts and that sort of thing, I have often felt that I might save a good deal of time if I could delegate these matters to other people, but in the actual practice of working the thing out, it was my belief that I could do it much better than the other fellow in my office, and I did not give it to him, and sometimes got waterlogged with work. That,

I believe, has happened to all of us. The Minister of National Defence will agree with the principle I am trying to enunciate. I think, if I may be allowed to say so, that has been one of the minister's weaknesses.

Mr. RALSTON: I do not plead guilty to being "waterlogged."

Mr. HANSON (York-Sunbury): Perhaps that was not a happy term. I do not mean to suggest that it is literally true. But that is one of the defects of people of the minister's quality. In endeavouring to do a job, he has endeavoured to do too much. I beseech him to take this suggestion from me in the spirit in which it is offered, that he try to impose on somebody else the burden of aircraft production and not keep every rein in his own hands. That advice is offered in the best of good faith.

Mr. HOWE: I offer the problem of aircraft production to anyone who cares to take it.

Mr. HANSON (York-Sunbury): Do not offer it to me.

I believe, having said what I have, that I have given some evidence of good faith and shown no desire to clog the government's war effort. Believe me, I do not want to do anything of that sort, and I do not want anybody to say that I am making criticism just for the sake of criticism or to impede the minister or anybody else at this period. We think certain things are wrong. We think it is our duty to point them out. When we have done that, I believe we have concluded our duty. I may say that for one thing which we think is wrong and which I have pointed out on the floor of this house, I have pointed out to ministers, to deputy ministers and to their executives a dozen other things which will never see the light of day; and they thanked me for doing it. I regard it as my duty to do it in that way and I shall continue along that line. If I were seeking to throw mud and scandal in the faces of ministers and the administration, I would not adopt the course I have adopted. But that is the course I intend to pursue. If anybody is sending me material just for the purpose of discrediting the war effort and not for a constructive purpose, I give him public notice here and now that I do not intend to use it in that way, and that I shall not do so until the whole thing bogs down, and then we shall have a real showdown.

My mail is flooded daily with suggestions as to this, that and the other thing. Ninety per cent of it is chaff and it goes in the waste-paper basket. But ten per cent may be wheat; I try to examine it, and when a question arises, and the opportunity offers and I have time, I send for some man whose department is concerned; I tell him about it; I ask him to investigate it, and I am prepared to take his decision. I conclude that my duty is then done.

That is my practice with regard to individual matters which have arisen. Possibly I am doing a better service to the war effort of the country by adopting that line of policy than some people would give me credit for.

Coming back to this question of the minister's, shall I say optimism, I wonder whether he will take exception to this observation, that the statement made by him in this house on July 30 created the impression that this particular class of planes would be in production before the end of 1940? That was the inference which I myself took from his language. I am bound to tell the minister that I was greatly buoyed up by it, because I had known of the situation in Amherst. So far as I am concerned, this Anson business goes back to the unemployment situation in Amherst. Later on, I was there and saw the situation. Can the minister honestly complain if we rather hesitate to accept his assertions after comparing those statements and exposing their inconsistency.

I wish to refer to one other passage in his speech of July 30 last, and then I shall not quote anything more. On that same page of *Hansard*, page 2116, the minister said this—and I want the committee to mark these words:

> Early in 1941, we expect to have a production of 360 planes per month, or about 12 planes per day, Sundays and holidays included, on the basis of production now arranged for. A further production programme is now being discussed between Great Britain and ourselves which promises to materially increase this output.

I am bound to say that this was a heartening statement and I applauded it at the time. If Canada, early in 1941, could have this production of planes, 12 a day, it would be splendid. I have no doubt the minister made the statement in good faith, but unfortunately production has not measured up to that estimate. I do not blame the minister for that. I know that there have been numberless changes in the designs of these planes. None of them, I would say, are standardized so that they can be turned out by mass production like motor cars. But the Canadian people are apt to be lulled to sleep by a promise like that, and when they find that the fulfilment is not up to the promise and the expectation, then of course there is criticism. The minister must not be unmindful of that and he must not be resentful. All the criticism I make at the moment is that probably the minister was too optimistic at that stage, but

I am hopeful that aircraft production in Canada will reach the point suggested, and higher too. Like every other new industry, it has to grope its way through all difficulties; it has to go through the morass of lack of engineering data, lack of designing data, lack of many of the things we cannot make in Canada and have never made. It could not be expected that we would have a greater effort, and yet the minister promised such an effort. I think he was too optimistic. That is a charitable view to take and I will leave it at that.

We have not come very close to fulfilling expectations, and I suggest to the minister that this is the sort of thing to which the Canadian people have been objecting. Our expectations are raised and disillusionment is painful. I do not know what the facts are about production, but one newspaper states that actual deliveries in January were 60 per cent of the estimate, and most of the production is that of small primary trainers. Apparently they have been able to produce these with considerable facility. I should like the minister to tell us exactly, if he did not tell us the other day in plain terms, just what the facts are, and I suggest that vituperation and bitterness will not produce planes, but that a plain unvarnished statement of facts, without vituperation and bitterness, will help the house and the country to reach conclusions on policy and will redound to the credit of the minister.

The minister has admitted that the manufacturers were requested by the acting minister to submit recommendations as to what should be done with the Avro-Anson programme. He has read the letter submitted by the manufacturers, in which they made five recommendations, and the fact is that five important recommendations were made by the manufacturers themselves and, it is said, ignored by the minister. The minister agrees with me. He ignored their recommendations. Why did he ignore those recommendations? Were they ineffective? Were they irresponsible recommendations? Were they such that they should be ignored?

Then, the minister admitted that he personally requested the manufacturing firms to answer three questions. He admits that the questions as I stated them were exactly as asked, but he did not tell us—and I suggest that this is a significant omission—what the joint reply of the firms was. I invite him to add their reply to the record. I have already stated—I stated it in the statement I gave the press and I will not repeat it—what I believed their reply was, namely, their reiteration of the basic theme of complaint against Federal Aircraft, that there can be no guarantee of performance, and the several matters to which I have referred.

The minister has neither confirmed nor denied the statement. To my amazement, he has not given any reasons or explanations why he has refused to follow the unanimous recommendations of the manufacturers. In my view—and I say this in all charity—he failed to take the Canadian public into his confidence, and I invite him to do so while there is still time.

In conclusion, I just desire to say that we on this side have a duty to perform to the Canadian people, and we shall not be intimidated from making criticism of the government's effort. I repudiate entirely the suggestion of sabotage, and that such criticism is designed to impair production. I repudiate these suggestions on the part of the minister. The minister said that the department was being disorganized by such criticisms. We have made no criticism of the department as such, or of the executives. In fact, I have always defended the executives. I did so the other day. What we have criticized is the set-up which the minister launched in July, 1940, and which, by the unanimous consent of those who know best, namely, the aircraft industry itself, has failed to perform the functions for which it was intended.

Before I take my seat I should like to ask the Minister of Munitions and Supply if he will table at the earliest possible moment:

(a) A copy of all contracts between the government and Federal Aircraft Limited;

(b) A copy of all contracts between the government and/or Federal Aircraft Limited and the manufacturers of Avro-Anson planes;

(c) A copy of all letters, telegrams, memoranda, or other documents exchanged between the government and Federal Aircraft Limited and/or any official thereof, with reference to the speeding up of production, the personnel of Federal Aircraft Limited, the status of Federal Aircraft Limited, and associated matters;

(d) A copy of all letters, telegrams, memoranda, or other documents exchanged between the government and/or Federal Aircraft Limited and/or any official thereof and any manufacturer or manufacturers of Avro-Anson planes or parts thereof relating to the speeding up of production, the status of Federal Aircraft Limited, and associated matters.

I have finished with what I had to say on this matter. I am sorry the debate took the turn it did. I do not think it was necessary or desirable. A newspaper or a public citizen of this country, making statements based upon

information received bona fide, information which would in legal parlance constitute reasonable and probable cause, a term which my legal friends know—any public man or any public newspaper, I say, making statements based upon information of that kind, free from malice—I put that in because I think it is important—has no right to be termed a saboteur.

Mr. HOWE: Perhaps I should make a few remarks at this time in reply to my hon. friend the leader of the opposition. My remarks as to the nature of the sabotage, which were general in their character, were hardly intended to reflect on the hon. gentleman himself or any member of the opposition. I was talking rather fast that day—

Mr. HANSON (York-Sunbury): I think you were a little heated.

Mr. HOWE: I doubt if I directed them in that way. I was endeavouring to show the harm that is done by criticism of the type I call sabotage. As far as my references to one particular newspaper are concerned I have nothing to retract. I made them after careful consideration, I believed sincerely what I said and I do not wish to be regarded as softening at all those remarks.

Mr. HANSON (York-Sunbury): You are going to have the battle out.

Mr. HOWE: Oh, yes. So far as Federal Aircraft is concerned, and the reason that the trade took it upon themselves to come to Ottawa, I believe there was a little organization in that outside the trade itself. I got a letter—

Mr. HANSON (York-Sunbury): Not from me.

Mr. HOWE: No.

Mr. MacNICOL: Were they not invited?

Mr. HOWE: They asked for the appointment, they were permitted to come; we will put it that way. I did not think the acting minister indicated the other day that he asked them. I have not looked into that matter.

Mr. HANSON (York-Sunbury): He was not sure.

Mr. HOWE: I think it came the other way—they asked to come and he permitted them to come. I think the position they took was more or less outlined to them after they came. I got a private letter from one of them, written the same evening, which I received on my return, which indicates that that was the case. However, be that as it may, we have six firms who were subcontractors of Federal telling us how to operate Federal. I have never permitted my subcontractors to tell me how to operate my business, and I have had many of them "gang up" and try to tell me. Remember this: these are people holding contracts with Federal Aircraft, whose profits depended on their relation with Federal. I doubt if because six of these subcontractors "gang up" and come to Ottawa the government is bound to accept their recommendations.

Mr. HANSON (York-Sunbury): I suggest that the minister do not use that expression "gang up."

Mr. HOWE: Well, say join together. I am using the language of the contracting business, and we are talking about contracts here.

Mr. HANSON (York-Sunbury): It sounded to me like the language of thugs.

Mr. HOWE: Oh, no—perfectly good usage. However, so much for the prima facie case. I do not agree with the leader of the opposition that because six of them come and put in a report, the government is bound to accept the report. But the government is bound to give it consideration, and consideration was given.

Mr. BLACK (Cumberland): Does the minister not think it proper that those heads of industries who were made responsible for this production and who were suffering because the blame was placed on them should present their views?

Mr. HOWE: Is the hon. member asking a question or stating his own interpretation?

Mr. BLACK (Cumberland): Well, does the minister not think it perfectly proper for them to come and make these representations, when the blame for failure to get production was put on them?

Mr. HOWE: I do not question the right of the manufacturers to come. They came, they were well received, and they submitted a written statement. I am not questioning their right to do so, but I am questioning the position that when they do so we are bound to follow their views. When we received representations of that kind from six responsible firms we were bound to give them consideration and study, which we did. I wrote back to the firms—I do not remember the questions; they were tabled. Perhaps my hon. friend would lend me the letters.

Mr. HANSON (York-Sunbury): Yes. We sought in the proper office of this house for those letters, and they said they had never heard of them. We did not get them.

Mr. HOWE: I had them on my desk when I was making my address.

Mr. HANSON (York-Sunbury): According to the clerk's notation they were tabled on the twenty-sixth.

Mr. HOWE: I gave them to a page boy; I cannot trace them after that.

On January 31 I wrote to the firms saying that on my return from the United Kingdom my attention had been called to recommendations signed by six firms with some experience in the manufacture of aircraft or components, which must of course receive careful consideration. I said that a thorough study of the situation was being made at once; that I was confident they would not make recommendations without being exceedingly sure of their ground, and that I would like their prompt written reply to the following questions. Now, I think these are reasonable questions:

1. Will the taking of the steps recommended, in your opinion, accelerate the production of Ansons in Canada, and, if so, to what extent?

In other words, would we get the planes quicker by following the procedure they asked, or would we not? I had to know that. I want planes as quickly as I can get them.

2. On what facts do you base your opinion in this regard?

3. As one of the contractors holding a subcontract for this production, what guarantee can you and your group give as to a date when substantial deliveries of Anson planes will be made, provided your recommendations are adopted?

It is no trivial matter to disband a company with commitments as large as Federal had, amounting I suppose to many millions of dollars, perhaps fifteen or twenty millions. To wipe that company out with a stroke of the pen and say, "The company is gone; now someone else pick this up," I felt would not further the matter much. It would take a manufacturer six weeks to pick it up; we had a drafting staff of about fifty and a total staff of double that number.

Mr. MacNICOL: Why were plans not brought from England after the fall of France, instead of taking time to draft them here?

Mr. HOWE: Plans were brought from England, but as I tried to explain they involved Whitworth threads, English standards, and for large-scale production here it is not easy to get English threads and standards. For that reason we had to redesign to adapt them to Canadian standards. At the same time the air force said that to make the Avro-Anson their ideal twin-engine trainer they wanted extensive changes in design—a roomier cockpit in order that proper instruments could be put in, and several other changes.

We were not starting to design the plane from the beginning; we were taking the English plans and trying to make the necessary modifications for production here.

Mr. HANSON (York-Sunbury): I will help the minister further: Did they not go a long way further than that and make continuous changes in the design?

Mr. STIRLING: And a different engine?

Mr. HOWE: Yes, we had a new engine mounting to put in, which meant new piping all through the plane and involved a complete redesign.

I think those are fair questions. Here is the reply, and I would ask hon. members if, having these replies, they would have done anything other than what I did.

Mr. HANSON (York-Sunbury): Would it not facilitate matters if it was understood that the whole of the three letters should go on *Hansard?*

Mr. HOWE: Very well; I will ask that all three letters go on *Hansard.* I am now referring to the letter dated February 5, signed by five of the six contractors; apparently one dropped out. I have read the first question in my letter of January 31; this is the answer:

Our opinion is as expressed in our recommendations of January 7, that the Anson project can be expedited in the manner outlined. As to the degree of acceleration which could take place, we have not sufficient information before us to answer this question with a proper degree of accuracy. A further complete study of the present production plans of the Federal Aircraft, Limited, and the de Havilland Aircraft of Canada, Limited, would be necessary before the tempo of this acceleration could be ascertained.

That is vague, to say the least. Then to the next question,—"On what facts do you base your opinion in this regard?"—this is the answer:

The fact that the principal contractors of the Anson programme believe a change would be beneficial.

I think a fair question would be, beneficial to whom? Then this was the answer to question 3:

No guarantee of delivery dates can be given by the contractors, as no schedule has been supplied by Federal Aircraft Limited showing when the raw materials, A.G.S. parts, proprietary articles, castings, forgings, finished parts which are to be supplied by Federal will be available.

On the strength of those answers I ask the committee if anyone would be justified

in taking away that contract from Federal and giving it to the industry. The industry say, "Yes, we think we can do better." We ask, "On what do you base your opinion?" They reply, "Well, we just think it would be better, that is all." They give no basis whatever for their belief. Then we ask, "When can you give us a plane?" Their reply is, "Well, we don't know, but it depends on a lot of things." Well, so it does, but at least in connection with Federal we know on what it depends; we know the situation; we know what we can do. We have had an expert look at it, and certainly he did not recommend upsetting Federal. Nor did our own men, who were charged with the duty of investigating the matter, recommend that the contract be taken away from Federal. Certainly I would have acted on very slender information if at that time I had proceeded, on the opinion of five firms, all subcontractors of Federal, to suspend Federal and put ourselves in the hands of these subcontractors. In conclusion they say:

> In closing we would like to say that we have no interest or preference in this matter other than to see the work in which we are engaged progressing as satisfactorily and as rapidly as possible, and that whatever your decision may be you will find our companies ready as always to cooperate to the maximum of our ability.

That is a very fair statement.

Mr. MacNICOL: Did they not recommend that de Havilland alone prepare the designs, arrange the necessary set-up and everything else that had to be arranged in regard to production, at the de Havilland plant; and that after an investigation by a real manufacturer, by de Havilland, the work should be distributed among all the firms in order that they might manufacture by mass production?

Mr. HOWE: Yes, the suggestion was that de Havilland replace Federal as the main contractor, for whom the others are subcontractors. Then de Havilland would become its own subcontractor; that is, it would occupy a dual position. It would be the general contractor, because the proposal was that Federal, which was the main contractor, should be wiped out, and that de Havilland should take over that work and distribute the subcontracts among the industry.

Mr. MacNICOL: Is that not the very same method followed at Fort William, where apparently very fine work is being done? I understand that all the investigations are made at this plant, and that the other plants —they may be branches of the same company scattered across Canada—send their master mechanics to Fort William to see just what has been developed there, and to obtain the jigs, the plans and whatever else is required, and then return to their own plants. Is that not why production is going so very satisfactorily in connection with the Hurricanes being turned out by the company?

Mr. HOWE: Of course every plant making finished aeroplanes contracts out certain of its business. I think in Fort William they contract out the wings and probably many other parts. I should say, however, that at Fort William they manufacture seventy-five per cent of the plane in their own plant.

Mr. MacNICOL: And the set-up in that plant is followed in all others?

Mr. HOWE: Yes. That is the case also with Fleet and de Havilland, to a small degree; they contract out parts of their planes. Every contractor does. I suppose there must be easily two or three hundred plants in Canada making aeroplane parts.

Mr. MacNICOL: I believe there are some twenty thousand parts to each plane.

Mr. HOWE: Yes. I do not consider it any reflection on the contractors if we do not accept their views. Why should we? I have had contractors come to me before this and say they think something should be done differently. I look into it, but I am not bound to take their opinion. If I am the man in charge of the job I have to make my own decision, and I made it in this case. We decided to carry on Federal. After exhaustive investigation and a very thorough study of the possibilities of Federal we decided what could be done there by way of revamping the organization, and we decided that we could get better results with Federal than we could by dropping Federal at that stage of the proceedings and turning over the whole matter to de Havilland. That was a decision I had to make, and for better or worse I made it. I do not think any argument in this house is going to decide whether it was for better or worse. Perhaps we will know before the end of this calendar year.

Mr. ADAMSON: That was the view taken by the minister and the experts in his department?

Mr. HOWE: It was the view taken by me. I have to decide. Let us not analyse the department to see who voted this way and who voted that way. I hope my hon. friend is not suggesting that.

Mr. ADAMSON: No.

Mr. HOWE: The three letters to which I referred are as follows:

Ottawa, Ontario,
February 5, 1941.

The Honourable Mr. C. D. Howe,
Minister of Munitions and Supply,
Ottawa.

Dear Sir,—

We have before us your letter of January 31 and before answering the three questions which you have laid before us we would like to recall the circumstances under which these recommendations were made, namely that we were invited by the acting Minister of Munitions and Supply to go to Ottawa to discuss certain matters in connection with Anson aircraft. After these interviews with the acting minister we were requested to hold a meeting of the manufacturers of Ansons, and the recommendations which you refer to were the result of this meeting. Your letter refers in Question 3 to a group and we have therefore again met as quickly as possible in Ottawa and have prepared the following answers:

(1) Will the taking of the steps recommended, in your opinion, accelerate the production of Ansons in Canada, and, if so, to what extent?

Our opinion is as expressed in our recommendations of January 7, that the Anson project can be expedited in the manner outlined. As to the degree of acceleration which could take place, we have not sufficient information before us to answer this question with a proper degree of accuracy. A further complete study of the present production plans of the Federal Aircraft Limited and the de Havilland Aircraft of Canada, Limited, would be necessary before the tempo of this acceleration could be ascertained.

(2) On what facts do you base your opinion in this regard?

The fact that the principal contractors of the Anson programme believe a change would be beneficial.

(3) As one of the contractors holding a subcontract for this production, what guarantee can you and your group give as to a date when substantial deliveries of Anson planes will be made, provided your recommendations are adopted?

No guarantee of delivery dates can be given by the contractors as no schedule has been supplied by Federal Aircraft Limited, showing when the:

Raw materials
A.G.S. parts
Proprietary articles
Castings
Forgings
Finished parts

which are to be supplied by Federal will be available.

In closing we would like to say that we have no interest or preference in this matter other than to see the work in which we are engaged progressing as satisfactorily and as rapidly as possible, and that whatever your decision may be you will find our companies ready as always to cooperate to the maximum of our ability.

Yours very truly,

Canadian Car & Foundry, Limited,
V. M. Drury,

de Havilland Aircraft of Canada Limited,
P. C. Garratt,
Managing Director.

Massey Harris Limited,
M. F. Verity,
Superintendent.

January 31, 1941.

Dear Sir,—

On my return from the United Kingdom my attention has been called to the document signed by yourself and several others, dated January 7, with reference to Federal Aircraft, Limited, with which firm you are, I believe, a sub-contractor.

Recommendations signed by six firms with some experience in the manufacture of aircraft or components, must, of course, receive careful consideration, and I am having a thorough study of the situation made at once.

I am sure that you would not make recommendations without being exceedingly sure of your ground, and I would, therefore, like your prompt written reply to the following questions:

(1) Will the taking of the steps recommended, in your opinion, accelerate the production of Ansons in Canada, and, if so, to what extent?

(2) On what facts do you base your opinion in this regard?

(3) As one of the contractors holding a subcontract for this production, what guarantee can you and your group give as to a date when substantial deliveries of Anson planes will be made, provided your recommendations are adopted?

Your prompt reply will greatly assist my investigation.

Yours very truly,
(Sgd.) C. D. Howe.

14873—72

REVISED EDITION

Following the request of the Acting Minister of Munitions and Supply for the opinion of the undersigned as to how the Anson project can be expedited, the following unanimous recommendations are submitted:

1. Federal Aircraft Ltd., to be dissolved.

2. de Havilland to be asked to manage (or administer) for the department, the Anson project, taking over the personnel, material, records, etc., of Federal Aircraft Limited forthwith.

3. de Havilland to assume responsibility for engineering and procurement of material.

4. These functions of de Havilland not to include the taking over of Federal Aircraft Limited's financial obligations (other than for material) or financial functions or contractual obligations; all of which the department can handle best.

5. Contracts for components, etc., made henceforward to be with the department (upon the recommendation of de Havilland, if desired).

DATED 7th January, 1941.

Massey Harris Ltd.,
M. F. Verity,
Superintendent.

Boeing Aircraft of Canada Ltd.,
S. Burke,
President.

President.

de Havilland Aircraft of Canada, Ltd.,
P. C. Garratt,
Managing Director.

Ottawa Car & Aircraft Ltd.,
Redmond Quain,
President and Managing Director.

Mr. DOUGLAS (Weyburn): I want first to remind the committee that the members of the Cooperative Commonwealth group in this house, at the outbreak of war envisaged just such a debate as has taken place during the last few days in reference to these war appropriations. With that in mind we made two suggestions to deal with such a situation. First we suggested that from time to time the government ought to have closed sessions of this house at which hon. members could be given confidential information—not necessarily units of production—as to the actual progress being made in the supplying of war material. Failing that we suggested that a committee should be set up representing all parties in the house, to which information could be given as to the exact progress we were making in the production of war materials. We should not confuse that committee with the committee the Prime Minister is suggesting to go over the accounts. That is a different matter altogether; accounts are one thing and actual production of the article is another.

[Mr. Howe.]

The government did not see fit to accept either of these suggestions, for various reasons into which we need not go at this time. But I want to remind the Minister of Munitions and Supply that if he feels there has been undue criticism of him the blame can be laid nowhere else than at the door of the government itself, which failed to place any machinery in our parliamentary system at this time by which members could get the actual facts with reference to our war effort.

The other day sitting in his seat in the house the Minister of Justice said, across the floor of the house, that it was the opposition that needed strengthening. That may or may not be true. The fact of the matter remains that the opposition cannot do the job which under our parliamentary system it is supposed to do if it has not access to the facts. Until the minister gave his statement the other day it is doubtful whether out of the 244 men and one lady in the house there were more than twenty who knew anything about the exact state of aircraft production in Canada. In fact I doubt whether there are many who know a great deal more about it even now, after the statement.

When I listened to the minister's speech the other day my mind went back to some of the debates which took place two years ago in the British House of Commons. I recalled some of the speeches made by Sir Kingsley Wood, who was then in charge of aircraft production, by Mr. Churchill, by Mr. Amery, by Sir Roger Keyes and by Mr. Greenwood. Some of the statements made the other day by the minister were reminiscent of statements made on those occasions. People who questioned, people who queried, people who criticized two years ago in England were being accused of undermining public confidence.

I submit to the minister that abuse does not dispel criticism. Accusing one member of "groping in the sewer", another member of "getting his information by devious methods", and calling, "sabotage, sabotage!" will not answer the things hon. members want to know. I suggest further that to end every discussion of a contract by saying that it is "up to schedule" is not sufficient. That was what happened all through 1939 in Great Britain. What does "up to schedule" mean? It may mean nothing. It may refer to a pre-war schedule. It may be a schedule drawn up prior to the collapse of France. Unless we know what the schedule is, unless we have some information concerning it, to say that it is up to schedule has no meaning at all. It means nothing until we know who set the schedule, when it was set and what it

calls for. I suggest that first of all the minister ought to admit at least to himself that there is widespread misgiving in Canada with respect to the effective production of aircraft. Whether or not it is justified, let us first of all realize that that widespread misgiving does exist. Let us admit that it is true.

We cannot expect anything else, because we must remember that there are men working in those factories who have contact with people outside. People engaged in those industries are people who know at least something about the matter. The minister may refer to street rumours, or anything he likes, but the fact remains that that feeling persists. It could not help persisting when we consider that the Minister of National Defence for Air is quoted as having said in Montreal:

"Unfortunately I do not know why it has not been possible to produce these planes on schedule, and I am not in a position to judge the delay" he said. But one exasperated officer had told him the other day, "There are some manufacturers who are either damn fools or damn liars."

When statements like that, and others one might quote, come out, it is understandable that the man on the street may have misgivings. I want to suggest to the minister, too, that the people who are concerned about this matter are not people who are seeking to destroy Canada; they are people who are seeking to save Canada. I wish the minister would give close attention to that fact.

The other day the minister spoke about his duty. I believe he has as conscientious a sense of duty as any hon. member in the house. But we, too, as members of the House of Commons, have a duty to perform. We have a duty to the taxpayers, the people who before this war is over will have to shoulder the tremendous burden of taxation to finance the war. We as their representatives have a responsibility to them.

This morning I received a letter from a returned soldier who is in receipt of a pension of $15.20 a month. He tells me he proposes to put $5 a month of it into the purchase of war savings stamps. Am I to write and suggest to that man that that is a good idea, unless at the same time I can assure him that I know every dollar he is sacrificing is being used to the best possible advantage? I cannot do that. May I remind the minister, too, that we have a responsibility to the men in the fighting services.

Most hon. members will recall the shell shortage of 1915 in Great Britain. They will remember that Mr. Lloyd George and Lord Northcliffe, who began the campaign to reveal that shell shortage, were maligned from one end of Great Britain to the other. But we know now that they were right, that there was in fact a shell shortage and that thousands of British soldiers lost their lives because of the lack of ammunition in the last war. The fact that a member, newspaper or some other organization seeks to ascertain the facts or to criticize the government is not an indication that they are lacking in patriotism. It is an indication that they are seeking to serve their country in the best way they can.

I do not think anyone in the house would for one moment argue that the production of aircraft is an easy matter. The task of production must be tremendous. Any person who over-simplifies or under-estimates the task with which the minister is faced is not being fair to the minister, to the government or to himself. What we want, first of all, is that the minister be frank with us and place before us an outline of the vast department he heads, to see if together there is not some way, through suggestions, proposals or amendments to proposals, by which the set-up can be made more efficient than it is at the present time.

Last fall I came in contact with some of the people working at the Malton plant, owned by the National Steel Car Corporation of Hamilton. They drew to my attention certain disconcerting facts, some of which I placed before the house last fall. I pointed out at that time I had been informed by men working in the plant that there had been a labour turnover of some seventy-five per cent to ninety per cent, and that in six months 900 men had quit their jobs in the plant. I pointed out that there had been some serious accidents in the plant—and there have been accidents since that time. I placed those facts before the house, but to the best of my knowledge nothing has been done.

Because of my interest in the matter scores of letters have come to me from people who have worked in the plant or are working there now. I made it my business to go to Toronto and talk to some of them. We have no other way of getting information. The minister may have it, but we have not. We can only place the facts before him, as we have done; that is what I want to do. For instance I am informed that the contract for Hampden bombers was given early in 1940, and my information is that up to the present only some twenty wing assemblies have been completed; that at Montreal up to two weeks before Christmas only 21 wing assemblies had been completed, and that at that time the work had to be shut down because of the lack of certain articles. Then there is the information I have with reference to the production of Avro-Anson planes. The other day the minister said the first one had been flown, but not delivered. The minister's information

may come from a most reliable source, but I am told by those who should be in a position to know that the plane to which the minister referred was an English Anson with an American engine and with Canadian engine mountings, assembled in Canada.

Mr. HANSON (York-Sunbury): That is correct.

Mr. HOWE: I said that.

Mr. HANSON (York-Sunbury): I do not think you did.

Mr. HOWE: I stated that there were other components on it, and there were.

Mr. HANSON (York-Sunbury): The inference was that it was a Canadian plane, and it is not.

Mr. HOWE: I said it was a mock-up; I did not say it was a plane at all.

Mr. DOUGLAS (Weyburn): I think the impression given was altogether wrong. I read the minister's statement very carefully and the impression I got was that the first Canadian-made Anson had been flown, whereas my information is that no such thing as a Canadian-made Anson exists.

Mr. HOWE: Wholly Canadian-made, no.

Mr. DOUGLAS (Weyburn): In September, 1940, National Steel Car received a contract to manufacture certain parts of the Avro-Anson. I am told that one of their best men was asked to set up a jig, which he did in three weeks—a record time. But it has been waiting six weeks on the floor to be proved, which cannot be done because it needs certain parts which have not yet been ordered, nor has the manufacture of the tools needed for their production even been started. The information I have from some of the men who work there, or who have worked there, is that twenty-five per cent of the tools necessary for making the fuselages for the Avro-Anson were ordered three months ago and are completed; that 10 per cent are partly completed, but that tools for the greater proportion of the smaller parts are not yet even ordered.

Mr. HANSON (York-Sunbury): Who is responsible? Federal Aircraft.

Mr. DOUGLAS (Weyburn): The question naturally arises, who is responsible? Who ordered these parts? Who is responsible for seeing that different parts are ordered concurrently in order that they may be delivered more or less at the same time? There has been a lack of synchronization. As a matter of fact one man makes the statement that an order had gone out through the plant that there was no hurry on Avro-Ansons, that this machine had been pushed back on the priority list. I wonder if that is correct? If so, why? Is the Avro-Anson further back on the priority list than it was before? The contention has been made—I think the minister hinted at this the other day—that the reason for the delay in the production of Avro-Anson trainer bombers was a delay in the receipt of drawings from England.

Mr. HOWE: No.

Mr. DOUGLAS (Weyburn): That contention has certainly been made.

Mr. HANSON (York-Sunbury): Blueprints from the Department of National Defence.

Mr. DOUGLAS (Weyburn): My information is that drawings came from England to Federal Aircraft Limited last autumn, but that a complete set of Avro-Anson drawings have not been issued by Federal Aircraft. The result is that the Malton plant is still short some of the prints which it requires.

I should like to say a word about the Lysander, which is still considered one of the best army cooperation planes built. When I spoke before in the house I reminded hon. members that educational contracts had been given, the last of which were to be completed in November, 1939. But they were not completed until March, 1940. Post-educational contracts were given for 190 Lysander planes. On October 1, 1940, of the first group of 21 aircraft, twelve had been standing on the assembly floor of the manufacturer waiting for parts with which to complete them. Between October 1 and the end of the year those 12 and possibly eight others had been completed and accepted for delivery. But on January 1, 1941, that first group had not all been completed, accepted, and marked off. They were still on the shop books. The parts for the succeeding planes up to the 112th of the whole order of 190 Lysanders were either stalled or in some stage of production in the departments of the plant. During the last of January, 1941, twelve Lysanders were completed and assembled.

As evidence of the inefficiency which has marked this project I cite a group part given to me as No. 1470-1-2. This is a single part of which two are required for each Lysander plane. It is made from a standard section requiring virtually no machining. Early in October, 1940, the erection department notified the planning department that 52 of these parts would be needed to complete a group of Lysanders then fairly well advanced in the assembly line. The erection department has been waiting for these parts ever since and

the planes have been waiting for this part before they can be completed and assembled. I am told that one man could complete the whole order of 52 parts in an hour, but this whole group of Lysanders has been held up waiting for this particular part. The 12 planes which had been completed in January waited weeks for this part before they could be finally completed.

I should like to refer for a moment to the Boeing aircraft factory in Vancouver. Early in the year the Vancouver newspapers carried a story to the effect that between 150 and 200 men had been laid off. Trade union officials have told me that the parts which they had manufactured were stored in the Canadian Pacific shops and had not been shipped east because the firms in the east were not ready for them. At a time when young men were coming out of the technical schools hoping to go into the Boeing aircraft plant, between 150 and 200 men were laid off because of lack of material. This has had a serious effect upon the labour market.

Our newspapers carried an advertisement showing a picture of a young aviator, under which appeared this message, "Only you can give him wings. Buy war certificates." The Canadian people have made it possible to buy these wings; it is now the task of the Department of Munitions and Supply to give him the wings. When between 150 and 200 men are laid off in an aircraft plant at a time when we are supposed to be accelerating our war effort, it is quite apparent that there should be a serious investigation.

A word about the Fairchild aircraft plant in Montreal. In this case the trade union became so discouraged at the lack of efficient production methods that they submitted a memorandum to the Minister of Labour on February 6. This memorandum dealt with hours and wages and concluded with a paragraph which I should like to read. This trade union represents about 1,900 men of those who work in the Fairchild plant. The submission is:

> Besides all of the above, men have been known to quit because of the fact that they were forced to hang around killing time, there being no jobs for them. This condition is chronic in some departments, especially on the night shift where days are spent on jobs which would ordinarily take only hours. Men wishing to do their best in the war effort, are actually ashamed to take their wages, and the nights seem ten years long.
>
> Supervision is such that dozens of pieces are scrapping before an error is discovered. This is often blamed on the men unjustly.
>
> Such is the atmosphere of suspicion and distrust created in the minds of the employees, that production schedules must be seriously affected.
>
> The feeling of insecurity in employment consequent on the mass lay-offs which have taken place from time to time, is most demoralizing.
>
> The men are being goaded into rash actions which are becoming increasingly difficult to control.
>
> We feel that, in the interests of the country and the war effort, a thorough inquiry into the running of this plant is in order. We will be willing to cooperate in any such inquiry.

I suggest that the labouring men of this country are interested in this war effort—as much as any other group—and when they find reason to complain and to submit a memorandum such as this to the Minister of Labour, there is need for action.

I will pass on to the minister the main criticism which I hear. He is a technical man; the rest of us are not, and all we can do is report what we hear as to complaints in the industry. After all, the minister knows this industry; he is an engineer of high standing in this country. To most hon. members long lists of figures and schedules mean little, but results mean something, and all we can measure by is whether or not the figures which he reads in this chamber are followed by actual results in planes which take the air.

The main criticism I hear is that throughout the entire aircraft industry there is a lack of direct communication; that information goes, for instance, from the Department of Munitions and Supply to Federal Aircraft Limited, Montreal; from there to National Steel Car Corporation at their headquarters in Hamilton; from there to the plant at Malton; and when inquiries have to be made they go right round the circle again. It may be that we have created so many intermediary steps, so much red tape, so many cogs in the machine, that the machine is slowing down or at least it is not doing the job which it was intended to do.

I want, therefore, on behalf of the group with which I am associated, to make one or two suggestions, not only with reference to the minister's department but with regard to this whole war appropriation.

The first is that the government ought to enunciate a clear statement of war policy. It has been suggested in some places that we should have a war cabinet of a few ministers who would not be charged with administrative responsibility and who could give time to laying out a clear-cut war policy. I was hoping that during the discussion on this appropriation the Minister of National Defence would make a statement with reference to the government's whole war policy. All of us know that the Canadian people can produce only a certain amount of goods and services; somewhere there is a limit to our

productive capacity with reference to this war, and the government have to make a decision as to how that can be best divided. Is it being divided in the best way at the present time? The other day the Minister of Finance broke down this tremendous appropriation of $1,300,000,000: some $660,000,000 for the army, over $400,000,000 for the air force, and $175,000,000 or $180,000,000 for the navy. Well, is that the best division? In some quarters we are told that actually the appropriation for the army may go up to $800,000,000; for the air force, to close to $500,000,000, and for the navy, to nearly $200,000,000. Why is the division made on that particular basis? We should know. We believe, for instance, that our contribution—I am talking now not about our contribution with reference to foodstuffs but to the actual prosecution of the fighting services part in the war—should follow three lines.

First, our main contribution, as has been outlined by the Prime Minister, should be the supplying of planes and trained air personnel to Great Britain. We have understood that that was the cornerstone of the government's war policy. Yet from all we can gather, almost twice as much will be spent on the army as on the air force. Has there been a change of policy? If so, there should be some statement of the government's war policy. If our main contribution is to be aeroplanes and trained air personnel, why is not the vote for that particular department larger than it is, rather than the increase shown in some of the other departments?

In the second place, we believe that the army's contribution should be divided two ways: the training of a highly mechanized and highly skilled expeditionary force, and the training of militia for the defence of Canada. Personally I should like to know from the Minister of National Defence, at some stage in the discussion of these appropriations, whether he believes that the tremendous amount of money now being spent in the training of men who are not attested, who will not be sent overseas, who in many cases could not be sent overseas, would not be better expended either in training the expeditionary force, in building planes, or in training air personnel. We have a right to know why the government has divided this appropriation in the way it has done. What is the policy back of it?

The third aspect of war policy relates to the navy. I mention it as such because what we require in Canada is a navy capable of patrolling the coasts of Canada and protecting us against occasional raiders.

That is a summary of the war policy which we believe should be followed.

[Mr. T. C. Douglas.]

The second suggestion that we want to make is that the Department of Munitions and Supply might with advantage be divided into two parts, as I suggested in this house last year; that a department of aircraft production should be set up; that the department now has become large and unwieldy; that if, as has been said repeatedly in this chamber by members of the cabinet, our primary contribution is to be the production of planes and the training of air personnel, it merits the setting up of a separate department to take care of that particular activity.

The third thing we suggest is that industry be mobilized so as to increase the efficiency of our production of war materials. Under the National Resources Mobilization Act the government has the power to mobilize industry. I do not know whether they consider they have done so; certainly we do not. We maintain that, for instance, each industry should be developed on a unit basis; that the aircraft industry ought to be a unit directed by a minister of aircraft production and his officials, every firm to be merely a part of that unit; and that where it is necessary to take over a plant, or where the government has spent the money to build a plant, it should call upon the required personnel to produce the planes in that plant either on a management fee or some other basis; but that the entire production of war material in Canada should be organized on a unit basis, with industry conscripted or mobilized around the particular article which they are producing.

A while ago the minister was speaking here of the subcontractors of Federal Aircraft. There is no reason why the minister or his department for the production of aircraft, taking Federal Aircraft and the work it is doing immediately under his department, could not deal direct with each one of these subcontractors and organize them into a unit. The principle applies not only to that industry; other industrialists and technicians should be mobilized into industry. I confess that I have been troubled to read in the press from time to time in the last few months of so-called dollar-a-year men who had left the departments because of the pressure of their own business. It has happened in a number of cases. There was Mr. Duncan, the former master-general of the ordnance, and Mr. Campbell. At least half a dozen have left Ottawa in the past six to eight months. There may have been other reasons, but the reason given was pressure of their own business. Personally I do not like that. If there were other reasons they should have been stated. If these gentlemen were not efficient and were not doing their job as they should have been, that is all right. But if the reason given

is pressure of their own business, demanding that they leave the government's service and go back to their own business, that is not good enough.

Mr. RALSTON: I do not know what my hon. friend means. He referred to the master-general of the ordnance, and I wish to take issue with him if he reflects upon Mr. Chester. I do not know what he means by "not being good enough."

Mr. DOUGLAS (Weyburn): I mean that the explanation is not good enough. It does not satisfactorily inform us why a man should leave the service of the country at this critical time. I am not casting reflections on any one. Just a few weeks ago a young man, a sergeant in one of the units, was given an opportunity to go to England with a draft that was going to reinforce one of the regiments now in the old country. That young man had a business. I went with him on the day that he went down and turned the key in his door and said that business would have to wait for the duration. If he can afford to do that, so can others.

Mr. GOLDING: What was his business?

Mr. DOUGLAS (Weyburn): He runs a store, which is as important to him as the business of an executive is to that executive.

Mr. GOLDING: It may not be as important as Mr. Duncan's business.

Mr. DOUGLAS (Weyburn): At the present time nothing can be more important to Canada and Canada's war effort than the production of necessary supplies whereby men in the fighting forces are enabled to carry on the war successfully, and if there is sufficient need for these men to be here, and if they were doing a good job, there is no reason why they should leave.

Mr. RALSTON: What my hon. friend has said rather confirms the impression I received that he was making a reflection upon these gentlemen. Mr. Chester came at my earnest request in order that he might give his organizing ability to the reorganization of the department of the master-general of the ordnance. He came, as announced in the newspapers at the time, for a limited period, with the consent of the directors of Hudson's Bay company, who could not spare him indefinitely owing to the fact that their president in London, Mr. Ashley Cooper, is himself engaged in connection with war work there, and Mr. Chester had to take on an added load in the business. He came on that understanding, and I gave him my undertaking that I would make provision for him to return. He stayed a month longer than was expected. He is engaged in work in connection with war activities, besides running his business and providing employment and supplies. I say to my hon. friend that it does not lie in the mouth of anyone to suggest that this gentleman is not doing his duty or that he should stay here indefinitely when, as a matter of conscience, and having regard to his duty elsewhere, he feels it incumbent upon him to return to his work after having done a fine job for us. He fulfilled more than the contract he made with the country and he and his company have more than done their share in connection with our war effort.

The Minister of National Defence for Air is not here, but I was present when the arrangement was made with Mr. Duncan, and if I remember rightly, Mr. Duncan was to come for three months. I believe he stayed for eight or nine months, and everyone knows that he stayed at a time when the president of his company, Mr. T. A. Russell, was very ill. But Mr. Russell, with his well known tenacity and indomitable spirit, endeavoured to carry on until death overtook him and Mr. Duncan had to go back. That company is engaged in the extensive production of war materials for the country. Tribute has been paid to the magnificent contribution of Mr. Duncan and the company to the war effort, and my hon. friend therefore is not justified in anything that carries the slightest reflection upon him because he is not staying for the duration of the war.

Mr. HOWE: Perhaps I should speak with regard to Mr. Campbell's position. Mr. Campbell came to Ottawa as chairman of the war purchasing board and he remained throughout the duration of that board. The government had made preparations for eventually turning the war purchasing board into a department of government and Mr. Campbell was invited to take a position in the Department of Munitions and Supply. He stated at the time that his work at the Ford plant had expanded so rapidly and that company had taken on such heavy commitments that he felt he could render a better service to the country by going back to Windsor in order to look after the organization of his own company than he could by remaining with the department of munitions. I do not see in that anything that reflects upon him, nor is there any reflection upon the department.

Mr. DOUGLAS (Weyburn): There is no intention on my part to reflect upon anyone, but I do say that it is a question not where a man's personal inclination lies but where he can render the greatest service to the country.

If, as the minister has stated, this gentleman's own firm is engaged in war industry which is more essential than the work he was doing here, then of course it is the minister's duty to see that he goes back to the work that he can do best. But if a man is valuable enough to be brought here and his services are worth while, he ought to be retained, if possible, irrespective of his own convenience. If his departure is due to public reasons, if he can render better service elsewhere, that is a different matter. But I would point out that men do not go into the army and then decide after a while that they will go back home because the store is losing money. That is not allowed in the army and we cannot allow it to happen with any other class. The technical and executive brains of the country ought to be mobilized the same as industry and man-power.

Mr. MacNICOL: The hon. member has used the word "mobilize" frequently. May I ask him how he would mobilize all industries that have contracts to make component parts for planes? I know many industries that are making a hundred different things while they are engaged at the same time in the manufacture of parts for aeroplanes. I have no doubt that the vast majority of small parts entering into the manufacture of planes are made by companies that are engaged in the manufacture of different lines. How would the hon. gentleman mobilize each company? Firms are making large quantities of tubing, and their production in plane tubing is but a fraction of their total output, so that if they were to be mobilized for the production of this particular article they would be closed down five days out of six.

Mr. DOUGLAS (Weyburn): I am not suggesting that the idea be carried to an absurdity. I do not say that you should mobilize every firm that has anything to do with the production of a single article, but a single industry should become a unit. Every factory that could make any contribution to that unit would be part of the unit. Some factories would be giving their entire productive capacity. Others, such as those my hon. friend has mentioned, would probably devote only a small part of their time to particular work, and in that event you would let out contracts or require a part of their space and of their personnel. But the difficulty has not lain with the man producing some small amount or relatively unimportant part of aircraft production. Apparently the difficulty has lain with the organization of those producing the major things that go into aircraft production.

[Mr. T. C. Douglas.]

Mr. ILSLEY: In the sense in which the hon. member has used the word "mobilization," is there not mobilization of industry now, for example, the motor vehicle industry? Is that not completely mobilized in the sense in which the hon. gentleman has used the term?

Mr. DOUGLAS (Weyburn): No, I would not say so. Certainly the aircraft industry has shown that it is anything but mobilized: different plants in different parts of Canada manufacturing various parts, some waiting for others, some held up because a certain part has not been ordered, or tools for the production have not been begun. There was evidently a lack of mobilization of all organizations.

All I want to say to the minister is that I hope the discussion which has taken place and the criticism carried on in the press for the past few months will not be taken as any personal attack upon him, that it will not be a matter for resentment, but rather that it will cause the government to pause and consider again the setting up of some machinery whereby hon. members may be made acquainted with the actual facts. We are not getting the facts; the minister is not in a position to give us the facts in a public session like this. It is only two years ago that the son-in-law of Winston Churchill, now Prime Minister of Great Britain, was threatened with prosecution under the Official Secrets Act because in the British House of Commons he dared to present data which showed that the aircraft industry in Britain was not as it was being represented to be by the Minister for Aircraft Production at that time, Sir Kingsley Wood. We do not want a situation like that in this country, but we may have it; hon. members will not be still forever, the public will not, the press will not. We wish to be able to go back to our constituents and tell them the actual situation. For example, we are asked by the Minister of Finance to go out and appeal to people to buy war savings certificates. Most of us have done this, but we can do it only if we can do it with a clear conscience and are able to say that from information given us confidentially we can assure them that every possible effort is being mobilized for the efficient prosecution of this war.

To the Minister of Munitions and Supply all I want to say is that the saboteurs in this country are not the people who are inquiring for facts and data of aircraft production. The saboteurs here as in any other country are the people who are saying that all is well when all is not well. The real saboteurs are the people who try to lull the

country into a false sense of security. All I am asking the minister and the government to do is to set their house in order before it is too late.

Mr. HOWE: I have listened with a great deal of interest to the speech of the hon. member for Weyburn. I think he again misinterpreted my remarks of yesterday. I was not bitter against the people who want to know; I was bitter against the people who without knowledge make statements that undermine public confidence; all the difference in the world. There is no statement about aircraft production that I am not prepared to make to this committee. I told the committee that; I said I had a confidential report and would lay it on the table, and I do not know any question that can be asked about the aircraft industry in Canada to-day that I am not prepared to answer.

The criticism to-day arises largely from the fact that in the past I have been giving data on aircraft production, perhaps looking further ahead than I should have looked if I had had a more realistic view of what Canadian industry could produce. My hon. friend the leader of the opposition rather chided me for saying on July 10 or 12 that we would be producing a certain number of aircraft a month early this year. On what did I base that statement? I based it on what at that time we planned to produce. We had made a very careful study of the industry; we had gone to see all the plants and said, "What do you need to carry out this programme?" They said, "We need so much floor space." We said, "Very well, we shall have that checked up, and if that appears to be necessary for that production, we will arrange for financial assistance to provide it." We were working then on a campaign which we thought would produce planes at the rate mentioned by the leader of the opposition, I think 360 planes a month. That was all arranged. As I have repeatedly said, the difficulty has been that our plants have not been standing up to their estimated production. For example, we estimated that Fairchild would be producing 30 Bolingbroke bombers a month early this year. I had in mind perhaps March. They are not producing anything like that.

Mr. DOUGLAS (Weyburn): What is the reason, lack of material?

Mr. HOWE: It is just lack of ability to produce, as far as I can see. We have had experts there, the best we can get, and they all say they should do better, and they will do better next month. If it were an industry that had been producing for years—but this is a mushroom industry, we have no background on this industry.

Mr. CASTLEDEN: How about Malton?

Mr. HOWE: They have had all the orders they can fill since this war started. We have had experts there to find out why they are not turning out more planes. They are making a great number of components and some day the planes will come out fast.

Mr. COLDWELL: Does the minister not think that the big labour turnover in Malton is a factor?

Mr. HOWE: Certainly it is. It is a reflection on something.

Mr. COLDWELL: Can the minister tell us why there is such a large turnover?

Mr. HOWE: I cannot. We have been trying without success to find out the reason. In 1936, there was practically no aeroplane industry in Canada; I suppose it was employing less than one thousand men; to-day it is employing twenty thousand.

Mr. MacINNIS: Did the minister approach the employees at Malton to try to get their point of view?

Mr. HOWE: No, I have enough trouble approaching the management.

Mr. MacINNIS: They are an important factor in the industry.

Mr. MacNICOL: Is Federal Aircraft a small plant or a large plant? How many are engaged in it, and where is the plant?

Mr. HOWE: It is a very small operation on Delorimier avenue in Montreal; I suppose they have at the most 250 employees. It is largely a pilot plant; as they design anything they go and build it. It is a check plant for the design, and it has been represented to me that as such it is well worth while. It is carrying out a small manufacturing operation which will be useful in the entire programme; it is a small shop for fuselages and certain parts.

My hon. friend mentioned certain things that I can explain at once. He mentioned that the Boeing plant in Vancouver had to stop manufacturing wings. The reason was, in the original arrangement for the air training plan, Britain was to supply Anson planes less wings, the wings to be built and installed in Canada. We arranged accordingly with the Boeing plant in Vancouver to build the wings. When Britain stopped shipping Anson planes to Canada, there was no place to use the

wings and they piled up to such an extent that Boeing had to lay off men and stop the manufacture of wings.

Mr. HANSON (York-Sunbury): They are there yet.

Mr. HOWE: They are there yet. That is a war situation that one cannot control. Here is an arrangement that was perfectly clear at the time; circumstances made it impossible for Britain to ship Ansons, with or without wings, therefore Ansons did not come, therefore the wings were not used. I mention that just because my hon. friend mentioned it. That was a circumstance beyond the control of anyone.

Mr. MacNICOL: Is not the bottle-neck completely connected with the design of the engine, and the fact that up to the present an engine satisfactory in all particulars to all the engineers who have to pass upon it has not been developed? Should the engine not be completed first?

Mr. HOWE: Is my hon. friend referring to the engine for the Anson?

Mr. MacNICOL: Everything pertaining to the engine.

Mr. HOWE: We developed an American type engine to fit a British type plane. Of course everything about the engine is different from the British engine; all the engine fittings are different. I think that is only one of a number of things that had to be redesigned in adapting the British Anson for construction in Canada. I doubt if there is a single part of the plane exactly the same in the Canadian version as in the British version, unless possibly it is the wing.

Mr. HANSON (York-Sunbury): The minister was, I think, going to tell about the experience with Canadian Car when somebody interrupted.

Mr. HOWE: I was using that just as an illustration, because that is perhaps the most successful show in Canada to-day; certainly it is the largest. We expected and the company expected a production of thirty planes a week there by this time. Actually they have a production of fifteen. We consider that very good, and it is very good, but it is only half what they expected to have. I think this is about the best operation we have, with about five thousand men employed there, but this shows what can happen even in a well managed plant.

Mr. BRUCE: Is that at Malton?

Mr. HOWE: No; at Fort William.

[Mr. Howe.]

Mr. MacNICOL: Is the pilot plant for the plane not made by that company at Fort William?

Mr. HOWE: No, I do not think so. There is one plant there, a very good plant. The success at Fort William, of course, has been brought about because of the high type of people they have had to deal with in that locality and the great ability the workmen in that district have shown. Even with that advantage, however, they have been able to get up to only half their schedule.

Mr. HANSON (York-Sunbury): I heard there were German saboteurs in that plant, but I did not pay any attention to that.

Mr. HOWE: Oh, no; not at the head of the lakes. I make this statement simply in order to indicate some of the difficulties that have arisen. If I were asked the number of planes we hope to get by next July, I would attempt to give a forecast, but I would assume that any such forecast would be taken by hon. members as my best view of the subject at the present time. I would not expect that they would come along a year later and say, "You told us in July, 1936, that in March, 1937, we were going to have so many planes and we got only half that number." That is the difficulty in working with an industry that has no background. I could predict very closely in connection with the motor car industry, because I know and the operators of the plants know what they can do. The same is true in connection with the steel industry or any other industry that has been going a long time and has a background. We know from what they have done in the past that, given certain facilities, they can do certain things in the future and by a certain time, but that is not possible in connection with the aircraft industry.

I do not want to hold back anything with regard to the aircraft industry. If my hon. friend is worrying about facts, I will give them to him as best I can; or if I cannot do that offhand, I will get the information. I am not holding back anything, nor do I desire to hold back anything. There is nothing I could give in a secret session that I am not prepared to give in open session, so far as the aircraft industry goes. That does not apply, however, to other types of production, in connection with which the British government has placed us under the seal of secrecy.

Mr. HANSON (York-Sunbury): That is in connection with guns. Nobody is asking for that information, nor do I think we should ask for it.

Mr. HOWE: That is quite right. I do not, however, wish to be represented as holding back information that may be helpful to the committee or to hon. members.

Mr. BLACK (Cumberland): What number constitutes the present programme for the re-engineered Anson machine?

Mr. HOWE: I gave Mr. MacMillan's view on that in the report which he made following a very recent study, in which he had the benefit of the best technical advice he could find in Canada and the United States. I would prefer to leave it at that. I do not remember the figures, but the report is in *Votes and Proceedings*.

Mr. BLACK (Cumberland): But I presume the department would set an objective, that they would want a thousand or five thousand Anson machines. The other day I understood the minister to say that six thousand of these Jacobs engines had been ordered for Anson machines.

Mr. HOWE: No; I said that something over five thousand Jacobs engines had been ordered, and we are using them not only in the Anson but also in the Fleet 60 and the Cessena.

Mr. BLACK (Cumberland): Then the minister does not care to say just what the Anson expectations are at the present time?

Mr. HOWE: It is all on page 7 of *Votes and Proceedings*.

Mr. DOUGLAS (Weyburn): Before the minister goes on to another point, may I say to him that we are not asking him to make a forecast. I do not think such forecasts have a great deal of value. We wish to know what steps are being taken to deal with a situation which the minister admits is bad; what is being done to deal with the inefficiency, the lack of coordination, the poor management in certain instances. Are any steps being taken at all? Have we any reason to believe the condition will be better six months from now than it is to-day? Forecasts are not worth a great deal, but is any investigation being carried on to find the reason for the present situation, to remedy it and to accelerate production? That is what we had in mind.

Mr. HOWE: We are carrying on intensive investigations, and we have succeeded in bringing in some men with wide manufacturing experience. It is very difficult to get them, because the aeroplane industry everywhere in the world is expanding as quickly as it is in Canada, if not more quickly. It is difficult to get these men, but we have succeeded in getting two or three who already have been able to make quite a contribution and will continue to do so. Similarly, the manufacturers themselves are gaining experience from day to day. Gradually, the situation is getting less chaotic and more systematized. In the beginning it was difficult to give orders for months ahead. Now we have practically the entire industry on the basis of twelve months ahead. The industry knows exactly what it will be called upon to do for the next year, and it is getting in shape. I think three months from now, we shall have a different looking industry from the one we have to-day, but I can only say that it is improving steadily. The other day I told the press that I thought the industry was about three months behind its expectations, and I still think that is a fair statement. In other words, what we expected to have to-day we shall probably have about three months from now. As I say, everything possible is being done to get the industry on a better organized and more efficient basis, and I think every contractor is working as hard as we are to that end.

Mr. DOUGLAS (Weyburn): May I suggest one thing which I do not think is being done and which I believe ought to be done. In Great Britain, production speeded up the moment it was possible to get labour behind the war effort on an organized basis. Some similar attempt has been made in this country by the setting up of a labour supply committee, but not on anything like the same scale. Some of these firms that are working on government orders actually have refused to allow the men to organize. I have here a copy of a notice which was posted in one plant, stating that they did not want these men organizing, and that they would consider any man who tried to organize them or connect them up with any trade union as being subversive.

Mr. HOWE: May I ask my hon. friend if that is not illegal? He knows the law better than I do.

Mr. DOUGLAS (Weyburn): It may be illegal, but I suggest that it is being done.

Mr. HOWE: Then why not prosecute?

Mr. HANSON (York-Sunbury): I would suggest to the minister that there is something in this suggestion, and further I give him the name of a plant: Canadian Vickers. If he will send his public relations men, or whoever may be the proper people, to get in touch with the men in that plant, they will find that there is among the workers in Canadian Vickers a lack of morale which ought not to exist. This is due to the fact that the

men believe the pay is too low, and the company will not cooperate with the men. That is the information I have from inside that plant. I do not vouch for it, but I offer it in good faith and suggest that it be the basis of an investigation.

Mr. HOWE: I would be very glad to have that situation looked into, and I will do so to-morrow. The suggestion has been made—and it is a fair one—that the work of the Department of Munitions and Supply should be divided. There are two sides to that question. In England there are three departments purchasing supplies. The navy department purchases its requirements. The Department of Supplies purchases the requirements of the army, and the Department of Aircraft Production purchases for the air force. I have yet to find—and my colleague the Minister of National Defence (Mr. Ralston) may have a view in the matter—any great enthusiasm for dividing purchasing in that way.

As a matter of fact, I saw a cartoon by Low which appeared in Lord Beaverbrook's own paper. It showed Lord Beaverbrook and his three busy bees. They were crouched in an alley, while three very respectable gentlemen, Mr. Alexander of the navy, Sir Alexander Duncan of the supply board, and Mr. Bevin were approaching along the main street. Lord Beaverbrook has a blackjack in one hand and a revolver in the other, and a fiendish light in his eye. Apparently Beaverbrook and his gang were to take what supplies the respectable ministers had with them. This cartoon was obviously intended to illustrate the subject of common gossip in England.

The trouble is that with three departments in the same market there is bound to be competition among the three. The navy may place an order in one plant. Then the supply department may come along and think that it requires the capacity of that plant to produce for the army, and as a result may give it too large an order. Then the aircraft branch comes along and gives orders for aircraft parts, on top of all this. There you have a company that is overloaded, and will disappoint someone—and probably all three. That is the difficulty.

In the United States there are two purchasing departments. The army buys for the army. In connection with the army there is an aircraft section which buys aircraft for the army. The navy does its own buying, and buys aircraft for the navy. Then, the president has set up a coordinating committee, and that coordinating committee is attempting to set up an overriding organization which will coordinate the purchases of both. I was told in England, however, and I have been told repeatedly in the United States, that we are fortunate in Canada to have a single buying authority for all military needs.

Mr. HANSON (York-Sunbury): I think the principle is sound, and I am bound to say that to the minister.

Mr. HOWE: That, I think, is obvious. It is better to have a single buying agency. Whether or not the work is too heavy, I do not know. I always regard it as a challenge, not to my industry but to my organizing ability. I do very little work round the department, I may say. If anyone comes to me and wants an order for something I simply say, "I do not place orders. I am not the man who places orders. Go to see So-and-so, who is handling the matter." If it is a general purchasing matter I would send him to Mr. Malkin's department; if it were a matter of purchasing munitions I would send him to Mr. Drysdale's department; or if it were an inquiry respecting the purchase of guns I would send him to Mr. Carmichael. The work is departmentalized, and as a department grows top-heavy we subdivide, and may subdivide it again. That is a process of organization.

Whether two ministers could organize better than one, or whether three ministers might do better than one, I do not know. That, too, I believe is a question which has two sides to it. I am not taking either side. I took the department as it was organized by parliament. If parliament, the Prime Minister, or anyone else wishes to subdivide it and give me part of it, then that will be all right with me. Or, much better, so far as I am concerned, if it were divided into three parts, and those parts were given to three other men, and I were permitted to go back to the Department of Transport, I would be the most delighted man in Canada.

However, we have that problem. But because it is a large problem, I scarcely believe it is worth while to describe myself as overloaded, overworked and so on—I believe those are the adjectives which are usually used. I doubt if that is so. I think it is possible for one man to create a big organization. There are many big organizations in the world which function efficiently. I may not be the man to do it; however I am trying to do it, and I suggest that we must be given credit for the fact that while we are a mushroom industry we have expanded very rapidly and up to this time have been able to carry on without a major scandal and without any serious break-down in the supplies which have been expected by the army, the navy and the

air force in Canada, and by those departments in Great Britain that have entrusted their business to us.

I am the last man in the world who should answer the argument my hon. friend has made with regard to dividing the work. I do not think it is a good thing to do; but if others believe it is, I certainly will not stand in their way.

Mr. DIEFENBAKER: I believe the discussion we have heard during the past couple of days with regard to aircraft has been most interesting and illuminating. After recovering from some of the annoyances of a few days ago, the discussion to-day has been carried on in a manner that must have been helpful to the minister, and has been revealing to us.

The minister has frankly admitted that the promises made in July last, and the anticipated deliveries then expected, as well as the promises made in November and December, have not resulted in the fulfilment of his expectations. Various suggestions have been made, and one of them is that, realizing as we all do the tremendous responsibilities on the minister, and without any suggestion or any inference against him, the department should be divided, with a view to securing the fulfilment of expectations with regard to the numbers of planes to be delivered.

We have endeavoured to secure information and, speaking on behalf of the official opposition, we should like to have tabled before parliament the entire report made by Mr. H. R. MacMillan, except such matters as would in any way be of assistance to the enemy.

Mr. HOWE: It is in to-day's *Votes and Proceedings.*

Mr. DIEFENBAKER: While a portion of it is in to-day's *Votes and Proceedings,* there remains another portion which does not appear. I realize it is difficult to decide what parts would or would not be beneficial to the enemy. The minister has told us that in so far as the production of aeroplanes is concerned, industry has fallen down. He has said that it is a mushroom industry and that apparently it lacks coordination. He mentioned in particular the situation in so far as the Boeing aircraft company is concerned.

I have a suggestion to make at this time, arising out of the statement with regard to the division of responsibility in the United Kingdom. I suggest that, with a view to preventing the possibility of failures such as have occurred in the last six months in the matter of aircraft production, we have set up at this time a committee composed of representatives of the aircraft industry in Canada, and that we get in touch with the Right Hon. R. B. Bennett, acquainted as he is with requirements in Great Britain, and experienced as he must be in consequence of the assistance he has given Lord Beaverbrook, and have him come to Canada and head a committee or, if you like, a commission, to investigate the whole situation with regard to the failure of our aircraft production, to the end that further failures will not have to be admitted in this chamber.

So far as the official opposition is concerned, our attitude is not one of offering unfair criticism. We believe that as an opposition we have the right and the duty to place before parliament and Canada the facts in connection with what we believe is not being done in the interests of this country. Apathetic acceptance of conditions will not win this war. The minister has said that we have not been able to live up to our expectations, that things have not turned out as we expected they would. That is not good enough. To-day we must have planes, not promises. We must have planes, not plans for the future. We must have action from this department and not just adjectives describing the perfection of the performance.

Our position is similar to that adopted in Great Britain in 1915 and 1916. The other day the minister spoke in critical terms of the *Financial Post* and referred to that paper as a saboteur. Twenty-five years ago I heard from the gallery of the British House of Commons the same criticism levelled against the London *Times.* At that time it was taking an attitude similar to that taken by the financial and other papers of Canada to-day. Our newspapers are asking for action instead of promises and excuses. As the hon. member for Weyburn (Mr. Douglas) stated a little while ago, Lord Northcliffe was maligned, condemned and pointed out as a traitor because he condemned what he believed was wrong, because he insisted upon action.

We, as the official opposition, represent a large portion of public opinion in this dominion. We represent the majority of the men who are in the armed forces of this country. We owe a duty to those whom we represent to place before parliament the viewpoints that we wish to express. I do not believe in criticism just for the sake of criticism, especially at this time of national need. I am not, nor are the members of this group, concerned with political platforms. The attitude of the Conservative party is to endeavour to assist and cooperate with the government. We will criticize where we believe criticism is due, but we will approbate when we believe credit is due. We realize the

responsibility which rests upon the ministers of the crown. I want to assure you, Mr. Chairman, that we have a sincere desire to cooperate.

On the other hand, if we banish partisanship for the remainder of the war, we are asking that the government do the same, that there be no suggestion of partisanship in the administration of affairs connected with the war. Our attitude is not as the Minister of Munitions and Supply would have had the people of this country believe the other day. We are not criticizing or attacking him unfairly; our only desire is to see if we can be of assistance at this time. I have a number of suggestions which I should like to make in connection with certain matters and which might well be considered by the government at this time.

I realize that the minister has taken the attitude that Federal Aircraft shall not be dissolved. If Federal Aircraft is falling down, as the minister admits, if I understand him correctly; if it has failed to secure the cooperation and assistance of the other industries from which it secures its supplies, then there is something wrong, and there is some justification for the criticism which has been general throughout Canada. The minister singled out one paper, but I have before me an editorial which appeared in a paper which has consistently supported the government of the day. In reference to the failure of this government effectually to assure a proper flow of aeroplanes, the Saskatoon *Star-Phoenix* had this to say on January 29, 1941:

> It calls for complete and public enquiry into all circumstances and a direct placing of responsibility. And when responsibility has been placed it calls for penalties and assurances there will be no repetition for this affair gives a strong impression of something rather worse than incompetence and mismanagement.

That is the attitude expressed by the Saskatoon *Star-Phoenix* and many other papers throughout Canada.

Mr. HOWE: It is what one would call the long view, from Saskatoon to Montreal.

Mr. DIEFENBAKER: All across the dominion.

Mr. BLACK (Cumberland): Both Halifax papers, the *Chronicle* and the *Herald,* took the same stand. That is why the minister should have given this explanation earlier.

Progress reported.

On motion of Mr. Ralston the house adjourned at 6 p.m.

Monday, March 3, 1941.

The house met at three o'clock.

PRIVILEGE—MR. COLDWELL

REFERENCE TO EDITORIAL IN OTTAWA EVENING CITIZEN OF MARCH 1

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I rise to-day on a matter of personal privilege. It is, I may say, the first time in my seventeen years of membership in various public bodies that I have ever done so.

On Saturday last, March 1, the Ottawa *Citizen* devoted most of its editorial page to explanations of its attitude and to bitter personal attacks upon me in my capacity as a member of this house.

The first paragraph to which I wish to draw attention appears in the leading editorial on page 32 of the *Evening Citizen* of March 1. It states:

> For saying that the lads after this war, when they come home from overseas, "may know better where to shoot than Canadian veterans did in the years of debt and privation after the last war," the *Citizen* has been accused in the House of Commons of inciting men in uniform when they return from overseas to use force to obtain what they were after. This twisting of the *Citizen's* editorial, done by the C.C.F. member for Rosetown-Biggar, M. J. Coldwell, led Mr. Lapointe to say last Thursday that he agreed with Mr. Coldwell. Mr. Lapointe said:
>
> My honourable friend (Mr. Coldwell) sent me that article, not very long ago. It was a subversive article which was published by the Ottawa *Citizen* on that date, and I may tell him that they will have to answer for it before the courts of the country.

Now, Mr. Speaker, I am accused of dishonesty in this house by twisting the editorial in question and thus leading the Minister of Justice (Mr. Lapointe) to say that he agreed with me. As a member of this house, as the acting house leader of this group, the accusation thus made is a grave reflection upon my personal integrity.

To say that I twisted the editorial is a charge which the editor of The *Citizen* makes falsely in an attempt to escape the consequences of his written word. If there has been any twisting, surely it has been on the part of the *Citizen,* which is trying to wriggle out of the position in which it finds itself.

The leader of the opposition (Mr. Hanson) speaking also in this house last Thursday, said:

> I read the article and I thought it was more than a borderline case; it seemed to me that it was really an incitement to force.

The leader of the opposition, therefore, placed the same interpretation upon the article as scores of *Citizen* readers also did.

The article published on January 11 was the subject of press comment in other parts of the dominion. I have, for example, an article appearing in the Saskatoon *Star-Phoenix* of February 18, commenting adversely upon it.

During all this time no explanation, modification or withdrawal of the words appeared. To my mind, no other interpretation could be placed upon an editorial, the first sentence of which was:

The real business of the Bren gun is, of course, to kill—

—and the last sentence of which was:

—When the lads come home from overseas, after some years of service at the real business end of the Bren gun, they may know better where to shoot than Canadian veterans did in the years of debt and privation after the last war.

There appeared to be no possibility of misunderstanding such plain and simple English. I therefore, Mr. Speaker, under the rules protecting members of this house against libellous accusation, bring this to your attention. I do not propose to move for the attendance of the editor of the paper in question at the bar of this house, as I am advised I have the right to do; for undoubtedly the unfounded charge of twisting the editorial in question is a false and malicious accusation of personal dishonesty which infringes upon the rights of members of parliament.

On the same page, 32, of the *Evening Citizen,* there also appears a reprint of an editorial which appeared in the *Citizen* of January 22, 1941, and which was a scurrilous attack on my personal motives in public life. Its caption is, "Mr. Coldwell in good company." This reprint was introduced with the following words:

The *Citizen's* editorial on "The Business End of the Bren" (reproduced in an adjoining column on this page) appeared originally last January 11. The Minister of Justice, Mr. Lapointe, stated in response to a speech by Mr. Coldwell, socialist leader in the house, last Thursday:

"My hon. friend (Mr. Coldwell) criticized the inaction of the department with respect to the article in the Ottawa *Citizen.* My hon. friend sent me that article, not very long ago."

"Not very long ago" would perhaps mean subsequent to the publication of the following editorial in the *Citizen* on January 22, with reference to some of Mr. Coldwell's recent political activities.

The suggestion is made that I drew the attention of the Minister of Justice to the Bren editorial of January 11, subsequent to January 22, and from motives of revenge because of the bitter personal attack made upon me by the *Citizen* on the latter date. Again they accuse me of using improperly my influence as a member of this house to seek vengeance against the writer of the editorial in question.

Had I been governed by such motives I would not have criticized the suspension of the *Canadian Tribune,* which assailed me and our movement in the very last issue which I had read prior to making my speech last Thursday. Indeed, as reference to *Hansard* will show, in drawing the *Citizen* editorial to the attention of the minister I was endeavouring to secure a change in the regulations by requesting absolute impartiality in their administration. To infer that I was actuated by motives of revenge is a scandalous breach of the privileges of this house. It is obviously false; for the editorial appeared on January 11, and I drew it to the attention of the minister by letter dated January 13—which he acknowledged personally on January 18—nine days before the *Citizen's* attack on myself, which appeared on January 22. Thus my action was entirely unconnected with the *Citizen's* attack on my personal motives and integrity.

My object in raising the matter on Thursday last was not to secure revenge, or even to force the suspension or the prosecution of the Ottawa *Citizen,* but merely to compare the seizure of a pamphlet consisting mainly of extracts from speeches made in this house by the hon. member for North Battleford, and the suspension of a paper with a small circulation, the *Canadian Tribune,* with what I considered to be the inactivity of the department in relation to statements made by a widely-read Ottawa daily. The concluding words of my speech criticizing the defence of Canada regulations in several particulars clearly defined both my purpose and intention when I said:

If we are going to have regulations let them be administered impartially, without regard to who breaks the regulations. Then we shall feel that at least an attempt at justice is being made.

In conclusion, Mr. Speaker, I am prepared, as all men in public life must be, for editorial comment and criticism by newspapers that disagree with my views. But imputing unworthy motives goes beyond fair and proper comment.

In view of the statement I have just made I would expect that the Ottawa *Citizen* will give to it the same publicity which it gave to its unwarranted insinuations last Saturday.

EXPORT OF GAME

PROHIBITION OF SHIPMENTS OUT OF PROVINCE WITHOUT PROPER PROVINCIAL AUTHORIZATION

Hon. T. A. CRERAR (Minister of Mines and Resources) moved for leave to introduce Bill No. 16, to control the export of game.

Some hon. MEMBERS: Explain.

Mr. CRERAR: The explanation of this proposed measure is quite simple. Under our constitution the provinces have control over game within their own jurisdictions but they have not control over the export of game from one province to another. Difficulties have arisen in the control within certain provinces of game, especially fur-bearing animals illegally taken within the province, that cannot be disposed of within the province but are taken to another province and disposed of there. The measure seeks to provide remedies for that condition of affairs.

The bill is the outcome of discussions, going back over several years, between provincial and federal game officers. It provides that the legislation shall be brought into effect in any province on proclamation. All the provinces with the exception of Prince Edward Island have signified their approval; indeed several of them have asked for the passage of such legislation as is proposed by the present bill. Prince Edward Island raises no objection, but the government authorities there scarcely think it is required so far as that province is concerned.

Mr. HANSON (York-Sunbury): Does the bill follow the principle of prohibition, or only supervision?

Mr. CRERAR: It really introduces the principle of prohibition so far as furs illegally taken are concerned.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

CANADIAN ARMY—RECRUITING, TRAINING AND COMMISSIONING OF OFFICERS

Mr. BRUCE:

1. (a) How many men have received training under the 30-day plan; (b) were the men so trained given an opportunity to enlist for overseas service; (c) how many of said trainees have volunteered for overseas service?

2. Since the announcement of policy of the Minister of National Defence, to the effect that, in future, commissioned officers would be taken from the ranks, (a) how many officers have been enlisted in the Canadian forces; (b) how many of these so enlisted have been taken from the ranks?

3. How many, (a) officers; (b) warrant officers, non-commissioned officers and other ranks were enlisted in reserve units as of February 1, 1941; (c) has an effort been made to ascertain the numbers on the strength of the reserve units (i) officers; (ii) warrant officers, non-commissioned officers and other ranks who are prepared to enlist for overseas service?

4. Have calls for reinforcements (a) officers; (b) warrant officers, non-commissioned officers and other ranks been made since December 1, 1940, upon the following reserve units: Queen's Own Rifles of Canada; Toronto Scottish Regiment; Toronto Regiment of Royal Grenadiers; the Royal Hamilton Light Infantry; Irish Regiment of Canada; (c) what were the results with respect to each of said units?

5. Will the Minister of National Defence outline the methods of recruiting, (a) active army; (b) reserve units; (c) veterans' guard?

Mr. RALSTON:

1. (a) 81,986; (b) The names of those who were willing to enlist were ascertained; (c) Number of recruits of 1st and 2nd training periods who expressed a willingness to volunteer for overseas service is 13,736. Returns covering 3rd period not as yet received. Actual enlistments from said recruits not yet known.

2. (a) 581; (b) 344. The difference is accounted for by appointments in such of the specialist services as engineers, signals, Royal Canadian Ordnance Corps, medicals, dentals and chaplain services.

3. (On strength January 31, 1941): (a) 7,881; (b) 183,015; (c) yes.

4. Toronto Scottish Regiment; (a) Yes; (b) No; (c) All calls have been met.

Royal Regiment of Canada, previously designated the Royal Regiment of Toronto Grenadiers.

(a) Yes.
(b) No.
(c) All calls have been met.

Queens Own Rifles of Canada
Royal Hamilton Light Infantry
Irish Regiment of Canada.

(a) No.
(b) No.
(c) See answer to (a) and (b) next above.

5. Active Army

When a complete unit is required, an active unit is authorized to be mobilized from a suitable existing reserve unit, and the mobilized active unit will consist of those who volunteer and are accepted for service in active formations and units of the Canadian army, which includes service in and beyond Canada. Reinforcements for units of the active army are generally secured by a call on their counterparts, when there are such, in the reserve army. If not sufficient are secured, or when reinforcements are required for units which have no such counterpart, quotas are allotted to districts which call upon reserve units in the districts to supply this personnel. Should these reserve units not be able to supply sufficient personnel in time, the personnel is drawn from those not in reserve units who offer their services, and these are recruited through the district depots.

At times it is necessary to mobilize a special type of unit for which there is no counterpart in the reserve army and in such cases

the district which contains the particular type of personnel required is authorized to raise the necessary numbers.

In addition, recruiting of specialists and tradesmen is continuous, as generally there are vacancies for these in technical units. These, also, are obtained through the district depots.

Reserve Army

Units in the reserve army recruit the necessary personnel up to the authorized establishment by enlisting applicants with the necessary qualifications at their orderly rooms in various armouries throughout the country.

Veterans' Guard

There are two kinds of veterans' companies: (a) Active; (b) Reserve.

The Officers Commanding the active companies throughout the country recruit qualified veterans up to their various establishments.

The method of recruiting for the reserve veterans' guard is similar to that of the reserve army.

CANADIAN NATIONAL RAILWAYS—MONTREAL TERMINAL

Mr. JACKMAN:

1. What was the total cost of work done on the C.N.R. Montreal terminal during: (a) the three months' period ending March 31, 1940; (b) the three months' period ending June 30, 1940; (c) the three months' period ending September 30, 1940; (d) the three months' period ending December 31, 1940; (e) the one month period ending January 31, 1941?

2. Of the above amounts, how much was paid during each period for steel and other materials imported from the United States?

3. If work has ceased on the Montreal terminal will it be resumed during the war?

Mr. HOWE:

1. Work on the C.N.R. Montreal terminals was resumed in 1939 under a modified programme designed to meet the immediate requirements of the railway. Detailed information as to work performed during the last calendar year, and cumulative expenditures to December 31, 1940, will be tabled in parliament shortly, as required by the Canadian National Railway Montreal Terminals Act of 1929.

2. Due to the fact that the bulk of the work is being carried out under contract, the prices covering not only materials, but manufacture, fabrication and erection on the sites, the railway is not in possession of information as to amounts paid for steel and other materials imported from the United States.

3. Construction on this project has not been suspended.

DEBERT, N.S., AIRPORT

Mr. BLACK (Cumberland):

How many tons of coal have been purchased for use at the Debert airport and military camp, stating the quantity, price per ton delivered and grades, the total amounts paid or payable to each person or firm supplying such coal with unit prices delivered; also total cost of all coal so purchased?

Mr. HOWE:

Purchases of Coal—Debert Military Camp

Purchased by—Contractor	Grades	Total
Munitions and Supply, local pur. agent— Wilson Coal Co., Truro, N.S.	No. 5 shaft, bit. screened (bagged); Inverness, bit. screened (loose); Springhill, bit. screened (bagged and loose); Bit. screened coal (bagged); Coal, bit. screened; Bayview bit. screened; Bras D'Or bit. screened; Springhill screened (bagged)	$ 9,832 10
Munitions and Supply, local pur. agent— Crystal Spring Ltd., Truro, N.S.	Drummond bit. screened	225 00
Munitions and Supply, local pur. agent— S. Cunard & Co. Ltd., Halifax, N.S.	Springhill screened	3 15
Munitions and Supply, Ottawa— W. G. Rockwell, Truro, N.S.	Dominion 1¼ lump; Bras D'Or mine run	74,013 45
Munitions and Supply, Ottawa and local purchasing agent— Wilson Coal Co., Truro, N.S.	Acadia slack; Milford (Pictou) bit. egg; Milford bit. egg; coke	4,598 50
Total tonnage for military camp		8,824½ tons
Total tonnage for airport		640 tons
Total amount paid for coal, delivered, military camp		$ 84,073 70
Total amount paid for coal, delivered, airport		4,598 50

Re unit prices, please see minister's statement on page 461 of *Hansard*.

NATIONAL REGISTRATION—PROSECUTIONS AND PENALTIES

Mr. DIEFENBAKER:

1. How many prosecutions have taken place for failure to register under the national registration scheme?

2. In how many cases have the penalties imposed on conviction been remitted?

Mr. GARDINER:

1. 177 prosecutions conducted by the Royal Canadian Mounted Police in the provinces which are policed by them; no information with respect to prosecutions in provinces which maintain their own police forces.

2. Two of the above cases.

FOREIGN EXCHANGE CONTROL—JAPAN

Mr. REID:

1. Have any restrictions or regulations been put into effect by the foreign exchange control board in connection with Canadian funds or money to Japan, similar to that in effect to other countries?

2. If so, when were any such restrictions or regulations put into effect?

3. From January 1, 1940, and up to the time any such regulations or restrictions were made effective, what amounts of Canadian funds, moneys or credits were exchanged, bought or transferred into or for transference to Japan?

4. Have any requests been made since the regulations (if any), were made effective for the transference of credits, funds or moneys to Japan?

5. If so, (a) how many of such requests; (b) what number of these were granted; (c) the total value of the requests so granted or allowed; (d) the reasons given for the requests made?

Mr. ILSLEY:

1. The foreign exchange control order and the regulations of the foreign exchange control board apply to remittances to Japan in the same manner as remittances to other countries. With the exception of countries in the sterling area and countries of continental Europe, remittances to all foreign countries are on the same basis.

2. The foreign exchange control order came into effect on September 16, 1939. Since then there have been some amendments to the order and various regulations of the board but none of these refer specifically to Japan as distinct from other countries.

3. Answered by Nos 1 and 2.

4. Requests have been made by residents of Canada to make remittances to Japan from time to time since the inauguration of foreign exchange control in the same manner as requests have been made for remittances to other foreign countries.

5. With respect to (a), (b) and (c), no figures are available. With respect to (d), the reasons given for the requests are the usual ones, e.g., payment for imports, payment for services, remittance of interest and dividends, etc.

PURCHASE OF MOTOR VESSEL "TERRUS"

Mr. HAZEN:

1. From whom did the government purchase the motor vessel *Terrus* which was registered at the port of Saint John on May 28, 1940, under the new name of *General MacDonald*?

2. How much did the government pay for this vessel?

3. After the vessel was purchased, (a) were the repairs and improvements made on it; (b) were tenders called for these repairs and improvements; (c) what did these repairs and improvements cost; (d) when were these repairs and improvements made?

4. When was this vessel first put in commission by the government?

5. After the vessel was put in commission, (a) were further repairs made to it; (b) how often has it been repaired since; (c) who made these repairs; (d) how much did they cost?

6. What is the total cost of repairs and improvements to date?

Mr. HOWE:

1. Frank Leslie Anderson, Saint John, New Brunswick.

2. $4,100.

3. (a) Yes.

(b) Yes.

(c) $5,663. After the contract was let for this work, it was found that supplementary repairs were necessary, amounting to $2,645 and $357. This additional work was awarded to the same contractor without tenders being called.

(d) Approximately April 1, 1940.

4. June 2, 1940.

5. (a) Yes.

(b) Twice.

(c) J. Fred Williamson Limited, Saint John, New Brunswick, and Silvers Agency, Halifax, Nova Scotia.

(d) $8,495.

6. $21,260.

MUNITIONS AND SUPPLY—CONTRACTS AWARDED IN BRITISH COLUMBIA

Mr. HANSON (Skeena):

What was the total amount of contracts awarded in British Columbia, by the Department of Munitions and Supply, since January 1, 1939, to date, as follows: (a) seaplane bases, including purchase of property; (b) aeroplane bases, including purchase of property; (c) shipbuilding and repairs; (d) shells and ammunition of all kinds; (e) tools and accessories; (f)

minerals and mineral products; (g) lumber and forest products; (h) provisions of all kinds, including canned and fresh fish; (i) shoes and clothing, and (j) any other contracts?

Mr. HOWE: This is a blanket question which will involve a tremendous amount of research and typing, and it is of a kind that we have declined to answer previously. If my hon. friend could make his question more specific we should be glad to answer, but in its present form it would involve bringing down every contract that has been placed in British Columbia.

Mr. SPEAKER: Dropped.

Mr. HANSON (York-Sunbury): Well, the minister stated last Friday that if anyone wanted information about contracts from his department he would be glad to bring it down. I can understand the difficulty the minister has suggested about the question in its present form—

Mr. HANSON (Skeena): Might I ask the minister to give the total expenditure of the department in British Columbia?

Mr. HOWE: I shall be glad to give my hon. friend that in some detail. But his question as it stands asks for so many documents and details that I do not think we could have it ready in time for this session. We can give without much trouble the information for which he has now asked. It is not that I object to giving the information; it is simply the amount of mechanical work it involves.

Mr. SPEAKER: Dropped.

Mr. HANSON (Skeena): Well, if I could get the information suggested by the minister—

Mr. SPEAKER: Stand.

DAFOE, SASK., AIR TRAINING FIELD

Mr. WRIGHT:

1. From whom was the site for the Dafoe air training field purchased?
2. What was the total acreage purchased?
3. What was the total price paid?
4. Has a suitable water supply for this camp been found?
5. If so, at what distance?

Mr. HOWE:

1. T. H. Held, H. H. Kirchoff, W. J. Rossiter.

2. 640 acres.

3. $11,810.

4. Suitable water supply available but requires treatment.

5. Water supply located on aerodrome property.

STORAGE OF WHEAT IN BRITISH COLUMBIA ELEVATORS

Mr. REID:

1. What quantity of wheat is being held or stored in each of the elevators at Vancouver, New Westminster, Prince Rupert and Victoria?
2. Is the government bearing any of the costs on the storage of such wheat?
3. If so, what costs are being incurred, and what was the amount of same up to the end of January, 1941?
4. What is the monthly cost for the storage of wheat in these elevators?

Mr. MacKINNON (Edmonton West):

1. Stocks of wheat in store in elevators at Vancouver, New Westminster, Prince Rupert and Victoria as at February 20, 1941: Vancouver, 17,290,484 bushels; New Westminster, 682,342 bushels; Prince Rupert, 1,208,179 bushels; Victoria, 893,772 bushels.

2. Yes—on wheat stored by the Canadian Wheat Board.

3. Storage and drying charges. Accrued storage charges are not available at January 31, 1941. At February 15, 1941, they were as follows: Storage, $557,609.19; drying charges, $9,674.31.

4. For all elevators at Vancouver, New Westminster and Victoria—1/60th of one cent per bushel per day. For Prince Rupert—1/120th of one cent per bushel per day (special arrangement).

WHEAT BOARD ADVISORY COMMITTEE

Mr. DOUGLAS (Weyburn):

1. What is the personnel of the advisory committee of the wheat board?
2. Which members represent producers organizations?
3. What organizations do they represent?
4. What producers organizations were asked to make recommendations, whom did they recommend and were these recommendations accepted?
5. Were any other organizations asked to make recommendations? If so, whom did they recommend?
6. How many meetings have been held by the advisory committee, and how many reports have been submitted to, (a) the wheat board; (b) the Minister of Trade and Commerce?
7. What emoluments, by way of travelling expenses, etc., have been paid to each member of the advisory committee to the wheat board?

Mr. MacKINNON (Edmonton West):

1. Advisory committee of the Canadian Wheat Board:

Vancouver—Mr. Fred H. Clendenning, Vancouver, representing Vancouver grain and shipping interests.

Alberta—Lew Hutchinson, Duhamel, Alta. (chairman Alberta wheat pool), Alberta pro-

ducers. Mr. Paul Farnalls, Halkirk, Alta. (president Western Union of Municipalities), Alberta producers.

Saskatchewan—J. H. Wesson (president Saskatchewan Co-op. Wheat Producers), Saskatchewan producers. J. A. McCowan, Summerberry, Sask., Saskatchewan producers.

Manitoba—D. G. McKenzie (first vice-president United Grain Growers Ltd., Winnipeg), Manitoba producers.

Ontario—Fred Pettypiece, Auld, Ont., Ontario producers.

Quebec—Rosario Messier, Contrecoeur, Que., consumers; A. C. Reid (Western Grain Company), Winnipeg, line elevators; D. A. Campbell (former president St. Lawrence Flour Mills Co.), Toronto, millers; R. C. Reece, K. B. Stoddart & Co., Winnipeg, exporters.

2. Answered by question 1.

3. Answered by question 1.

4. None, except informally.

5. No.

6. Six meetings as follows: August 26 and 27, 1940; September 30 and October 1, 1940; November 18 and 19, 1940; December 18 and 19, 1940; January 13, 14 and 15, 1941; February 17, 18 and 19, 1941.

Reports—Minutes and a report of meeting for August, September and November were furnished; minutes only of the December meeting were furnished, as that meeting dealt with recommendations for the 1940-41 wheat policy, which were held over for further deliberation at the following meeting; minutes for the January meeting, together with the recommendations with respect to said policy were furnished; report of meeting of February was furnished, but the minutes will not be submitted until they are approved by the committee at its next meeting.

7.

	Honorarium	Subsistence	Travelling	Total
Campbell, D. A.	$	$380.00	$654.65	$1.034.65
Clendenning, F. H.	210.00	210.00	207.95	627.95
Farnalls, Paul	420.00	420.00	489.25	1,329.25
Hutchinson, Lew	310.00	310.00	358.71	978.71
McCowan, J. A.	290.00	290.00	146.75	726.75
McKenzie, D. G.	170.00	7.00	....	177.00
Messier, R.	120.00	120.00	407.50	647.50
Pettypiece, Fred	320.00	320.00	387.75	1,027.75
Reece, R. C.	160.00	....	....	160.00
Wesson, J. H.	150.00	150.00	149.35	449.35

NOTE: Mr. Campbell does not take his honorarium; Mr. Clendenning's travelling expenses do not include railroad fares as he travels on a pass; Mr. McKenzie and Mr. Reece draw honorariums only, although Mr. McKenzie had one small expense item for one of the meetings; Mr. Reid draws neither honorarium nor expenses.

INCOME TAX—WORKING CAPITAL AND RESERVES OF COOPERATIVE ORGANIZATIONS

Mr. DOUGLAS (Weyburn):

1. Has the income tax branch of the Department of National Revenue indicated its intention of treating as income any moneys retained by cooperative organizations as working capital or reserves?

2. Has any regulation or interpretation been issued to this effect?

3. If so, will this policy be retroactive and to what date?

4. Would the government indicate the purpose and intent of such a policy?

Mr. GIBSON:

1. No.

2. No.

3. Answered by Nos. 1 and 2.

4. Answered by Nos. 1 and 2.

[Mr. J. A. MacKinnon.]

BAIE DES SABLES, QUE., WHARF

Mr. ROY:

1. What happened to the materials for which a sum of $14,332.50, representing 50 per cent of their value, was paid by the government under the terms of the contract awarded in 1939 to Bertrand and Brother, L'Orignal, Ontario, for the construction of a wharf at Baie des Sables, Matane county?

2. Has the government received a part of these materials or been compensated or reimbursed for them?

Mr. CASGRAIN: This material has been taken over by the Department of Public Works and used in connection with various works carried out by the department in the province of Quebec.

LANCASTER MILITARY HOSPITAL

Mr. HATFIELD:

1. What was the cost of the annex to Lancaster military hospital at West Saint John?
2. What was the cost of the kitchen added to Lancaster military hospital?
3. How will the kitchen be connected to the hospital?
4. If by a tunnel, what is the estimated cost of the tunnel?

Mr. MACKENZIE (Vancouver Centre):

1. $85,904.50.

2. No kitchen added to Lancaster hospital. However, two small rooms were incorporated into the kitchen layout, one for vegetable preparation and one for maids' dining room.

The cost of preparing these rooms is not available as work carried out partially under utility staff. Additional equipment was added, however, to the main kitchen at a cost of $2,073.

3. Answered by No. 2.

4. Answered by No. 2.

If questions No. 3 and 4 are—How will food be transferred from the main kitchen in Lancaster hospital to the annex pavilion across the road?—The answer is, by truck in insulated containers.

ISOLATION HOSPITAL, MILITARY DISTRICT NO. 7

Mr. HATFIELD:

1. What was the cost of the isolation hospital built in connection with military district No. 7 at Saint John, New Brunswick?
2. How many beds are there in this hospital?

Mr. MACKENZIE (Vancouver Centre):

1. No information re isolation hospital built in connection with military district No. 7.

Isolation hospital in connection with quarantine services, Saint John, N.B., now under construction. Contract price, $40,838—awarded by Department of Public Works.

2. Number of beds for patients—seven (7), together with living quarters for two nurses and cook.

SAINT JOHN HARBOUR—FLOATING CRANE

Mr. HATFIELD:

1. Has the harbour commission at Saint John a floating crane under rental?
2. If so, who owns this crane?
3. How much rental does the harbour commission of Saint John pay for its use?

Mr. HOWE:

The following information has been furnished by the National Harbours Board, successors to the former Saint John harbour commissioners:

1. No. The national harbours board owns and operates a floating crane at Saint John.

2. Answered by No. 1.

3. Answered by No. 1.

FOUR-MONTHS TRAINING PERIOD—POSTPONEMENT FOR FARMERS' SONS

Mr. HATFIELD:

Will the government consider the exemption of farmers' sons for the next two 4-month training periods and call them up for the period after the harvest?

Mr. RALSTON: As announced by the Prime Minister, in principle there will be no exemptions, particularly in view of the limited age groups affected; but consideration is being given by the Departments of National War Services and National Defence to the feasibility of postponements where necessary to meet the requirements of essential seasonal occupations.

WAR MATERIALS—STAR MANUFACTURING COMPANY PLANT, DARTMOUTH, N.S.

Mr. ISNOR:

1. Was a survey or investigation made by the Department of Munitions and Supply or the Department of National Defence, in connection with the plant known as Star Manufacturing Company, Dartmouth, Nova Scotia, with a view to utilizing same for the manufacture of shells, munitions or other war materials?
2. If so, on what date, by whom and with what result?

Mr. HOWE:

1. Yes.

2. Inspection of the Star Manufacturing Works Limited, Dartmouth, Nova Scotia, was made by Colonel G. G. J. Ball, mechanical engineer, M.D. 6, of the Department of National Defence on March 18 and 19, 1937. The plant was again inspected by Colonel G. Ogilvie, Colonel G. G. J. Ball, and Major Bishop of the Department of National Defence on July 28, 1937. Inspection was made of the plant on August 12, 1940 by Mr. W. O. McDowell of the Department of Munitions and Supply.

The company is considered capable of supplying for war-time requirements bolts, nuts, rivets, ship's hardware, etc.

So far it has not been considered advisable to utilize this plant for the manufacture of shells or munitions.

CLASS "C" INTERNEES

Mr. NICHOLSON:

1. How many class "C" internees were transferred from Great Britain during 1940?
2. How many have been released?
3. How many have been returned to Great Britain?
4. How many British officials are in Canada in connection with releasing class "C" internees?
5. Are class "C" internees detained under conditions similar to those for dangerous interned aliens?

Mr. CASGRAIN:

1, 2 and 3. Since the internees in question were sent to Canada under an arrangement with the government of the United Kingdom, it is not considered in the public interest to divulge the information asked by these three questions.

4. The United Kingdom government sent a senior official of the Home Office to Canada. He is at present dealing with the cases of civilian internees who were sent by the United Kingdom for internment in Canada.

5. So far as has been possible, internees who have been definitely classified by the United Kingdom authorities as class "C" are not detained in camps with combatant prisoners of war or enemy aliens classified as class "A".

SOLDIER SETTLEMENT BOARD

Mr. NICHOLSON:

1. What were the total expenses in connection with the administration of the soldier settlement board during the past fiscal year?

2. What were the total payments made by soldier settlers to the soldier settlement board during the past fiscal year?

Mr. CRERAR:

1. $586,706.20.

2. $2,264,673.77, total receipts as follows: Soldier settlers loan accounts, $940,257.38; civilian purchasers loan accounts, $635,439.68; British families loan accounts, $130,028.61; receipts from rentals of real estate, $88,951.37; cash receipts from real estate sales and sundry items, $469,996.73. Total receipts, $2,264,673.77.

NATIONAL DEFENCE—ACQUIRING OF PROPERTIES IN TORONTO

Mr. CHURCH:

1. Has the Department of National Defence taken over the old Canada Life building, 46 King street west, Toronto, from the Canadian Bank of Commerce?

2. If so, for what purpose, and on what terms of lease or other contract?

3. Does the department call for tenders for such lease of space—so as to assure competitive bids?

4. What are the terms and conditions of lease of a building on Albert street, Toronto, taken for a recruiting depot?

5. What other leases are now in existence by this department in the city of Toronto, where and for what purposes?

Mr. RALSTON:

1. No.

2. Answered by No. 1.

[Mr. Nicholson.]

3. No. An officer with long business experience and capacity in real estate transactions was secured for special duty in connection with the acquisition of land and the negotiation of leases, and he has the benefit of the services of business men who are specially qualified to deal with such problems, to assist him when called upon.

4. Rented on a monthly basis commencing February 1, 1941, for so long as required by the Crown, at $175 per month; lessor responsible for taxes, insurance, water rates and heating, crown responsible for lighting and cleaning.

5. It is assumed that the enquiry has reference to the Department of National Defence (Army):

Lessor—Terminal Warehouses Ltd., Toronto. Leased Premises—15,000 square feet at 829 Richmond St. How occupied—Royal Canadian Army Service Corps Supply Depot, Military District No. 2.

Lessor—T. Eaton Co. Building. Leased Premises—280 Lansdowne St. How occupied—Veterans Guard of Canada.

Lessor—Hospital for Sick Children. Leased Premises—Chorley Park. How occupied—Convalescent Hospital.

Lessor—Northrop-Strong Ltd., 49 Wellington St., Toronto, Ont. Leased Premises—434 University Ave. How occupied—Ordnance Workshop Military District No. 2.

Lessor—C.P.R. Building, C.P. Railway. Leased Premises—Room 1403—14th floor. How occupied—Cable Censor.

Lessor—Toronto West Hospital. Leased Premises—Grace Hospital, Huron and College. How occupied—Toronto Military Hospital.

Lessor—Toronto General Trusts Corp., Bay and Melinda streets. Leased Premises—60 Atlantic Ave. How occupied—Royal Canadian Engineers Stores.

Lessor—Phi Kappa Pi Bldgs., Ltd., Toronto, Ont. Leased Premises—14 Willcocks St. How occupied—Personnel of Military Hospital Quarters.

Lessor—Purdy Mansell Ltd., 63 Albert St. Leased Premises—4th Floor of 63 Albert Street, Toronto. How occupied—Artillery lecture space and signal classes, 21st Medium Battery, Royal Canadian Artillery.

In addition to the above, accommodation has been leased on behalf of the Department of National Defence (Army), by the Department of Public Works.

BOUNDARY BAY, B.C., AIR TRAINING FIELD

Mr. MacINNIS:

1. From whom was the land for the airfield at Boundary bay, British Columbia bought?
2. What is the area in acres of the said airfield?
3. What was the price paid?
4. Were tenders called for the work of improving the grounds?
5. If so, what was the name of the successful tenderer?
6. Was the lowest tender accepted?
7. What was the total amount of the accepted tender?

Mr. HOWE:

1. Emma E. Paterson, F. R. S. Loney, Alex. Fisher.
2. 480 acres.
3. $69.200.
4. Work done by departmental forces by day labour.
5, 6 and 7. Answered by No. 4.

NATIONAL DEFENCE—RENTAL OF PROPERTY IN QUEBEC

Mr. ROY:

1. Has the Department of National Defence, or the Department of National Defence for Air, rented space in a building on St. Anne street, Quebec, known as the Morgan building?
2. If so, (a) what is the rent, and (b) the duration of the lease?
3. What is the name of the owner?
4. If owned by a company, what are the names of the directors thereof?

Mr. RALSTON:

1. Yes—for joint use of the Army and the Royal Canadian Air Force.
2. (a) From the 18th September, 1939, to 29th February, 1940, a total of $941, and from the 1st of March, 1940, at the rate of $325 per month; (b) monthly basis commencing 18th September, 1939.
3. Estate of the late E. R. Morgan.
4. Answered by No. 3.

*PUBLIC SERVICE—FRENCH LANGUAGE EMPLOYEES

Mr. LaCROIX (Quebec-Montmorency):

1. What is the total number of employees in each department of the dominion government?
2. What is the total number of French language employees in each department?
3. What is the total amount of salaries in each department?
4. What is the total amount of salaries paid in each department to French language employees?

Mr. CASGRAIN: This question calls for a great deal of information which is not on file in the various departments of the government. I am informed also that if the question is to be answered it will entail a tremendous amount of work, because each employee in the various branches of the service throughout Canada will have to be interviewed in order to get part of the information requested. I suggest that the question be dropped.

Mr. SPEAKER: Dropped.

FORT DE LEVIS MONUMENT

Mr. CASSELMAN (Grenville-Dundas):

1. By whom was the caretaking of Fort de Levis monument on the Dawson property in the township of Edwardsburg, in the county of Grenville, done during the year 1940?
2. What compensation was paid for the said work?
3. To whom was this compensation paid?

Mr. CRERAR:

1. Elmer W. White was caretaker during early part of calendar year. He informed the controller, national parks bureau, on July 8, 1940, that he had moved away from the district. New caretaker was appointed at beginning of 1941.
2. $6.25.
3. Elmer W. White.

SOURIS, MAN., CENSUS COMMISSIONER

Mr. ROSS (Souris):

1. Who has been made census commissioner for the federal constituency of Souris?
2. By whom was he recommended?
3. Is he a great war veteran?

Mr. MacKINNON (Edmonton West):

1. G. W. McDonald, Boissevain, Man.
2. By the Minister of Trade and Commerce after consultation with his colleague the Minister of Mines and Resources.
3. No information.

JOINT SWINE COMMITTEE

Mr. CARDIFF:

1. What are the names, addresses and occupations of the members of the joint swine committee as presently constituted?
2. By whom were they appointed?

Mr. GARDINER: I do not think there is any such thing as a joint swine committee. I would ask that the question be dropped and asked again in a form in which it can be answered.

Mr. SPEAKER: Dropped.

Mr. HANSON (York-Sunbury): The Minister says, if I understand him correctly, that there is no such thing as a joint swine committee. He should know. But the evidence is against him. If he will turn to page 933 of *Hansard* for February 24, just a week ago to-day, he will find that that point arose in connection with a question asked by the

hon. member for York East (Mr. McGregor) which had to do with the grading of hogs. In a reply brought down by the minister himself there is a distinct reference to "the joint swine committee". I refer to answer No. 8, which states in part:

In 1922 the premium on the select bacon grade was established by agreement between the department and the joint swine committee, the membership of which includes representatives of various producers organizations.

Mr. GARDINER: That is not a committee set up by the government.

Mr. HANSON (York-Sunbury): Oh, well—

Mr. GARDINER: I understood the committee referred to was a government committee.

Mr. HANSON (York-Sunbury): Any alibi will do!

Mr. GARDINER: If there is such a committee I will try to get the names, but I do not think we have them on the list.

Mr. HANSON (York-Sunbury): I think you have.

QU'APPELLE, SASK., CENSUS COMMISSIONER

Mr. PERLEY:

1. Who has been named census commissioner for the constituency of Qu'Appelle?

2. On whose recommendation was he appointed?

Mr. MacKINNON (Edmonton-West):

1. Jas. A. McCowan, Summerberry, Sask.

2. Upon recommendation of the Minister of Trade and Commerce in consultation with his colleague, the Minister of Agriculture.

QUESTIONS PASSED AS ORDERS FOR RETURNS

AIR FORCE STRENGTH—RACIAL AND PROVINCIAL ORIGINS

Mr. ROY:

1. What is the actual effective strength of the Royal Canadian Air Force at the present time?

2. How many English Canadians, French Canadians, British subjects from overseas, Americans and other nationalities are serving in the said force?

3. How many have volunteered for and enlisted in the air force in each of the provinces?

AID TO MAGDALEN ISLANDS FISHERMEN

Mr. ROY:

1. Were any representations made in 1939, and up to date in 1941, by the government of Quebec, that the dominion government should come to the aid of the fishermen of the Magdalen islands?

[Mr. R. B. Hanson.]

2. If so, (a) what was the nature of such representations, (b) what was the reply thereto, and (c) what action, if any, was taken?

AIRPORTS IN NEWFOUNDLAND

Mr. BLACK (Cumberland):

1. Has the government had responsibility for the construction of airports in Newfoundland?

2. If so, what has been the total expenditure and how much is payable by, (a) the Canadian government; (b) the British government, (c) the Newfoundland government?

3. Were such expenditures made directly under government authority or through contractors?

4. What are the names of each contracting firm, and, (a) the value of each contract when let; (b) the amount paid each contractor to date and the amount due; (c) the estimated amount required to complete each contract; (d) the total estimated cost when project is completed?

5. Who will have the ownership and responsibility for operating and maintenance of such airports when construction is completed?

MOSSBANK, SASK., AIRPORT

Mr. DOUGLAS (Weyburn):

1. What are the total amounts spent by the federal government to date on the airport at Mossbank?

2. What are the total commitments for this project?

3. What is the cost of erecting the electrical centrifugal pumps and what is the maximum daily supply of water available?

DOMINION CONTRIBUTIONS TO PROVINCES FOR RELIEF

Mr. DOUGLAS (Weyburn):

1. How much has been contributed by the federal government to the respective provinces, each year since 1935, for relief?

2. How much of this was for unemployment relief and how much for agricultural aid?

PRAIRIE FARM ASSISTANCE ACT

Mr. DOUGLAS (Weyburn):

1. What is the total amount that has been received from the one per cent levy under the Prairie Farm Assistance Act, during the present fiscal year?

2. How much has been spent in (a) administration costs; (b) bonus to producers?

3. How many awards have been made under this act during the present crop year?

Mr. CASGRAIN: Order for return.

Mr. HANSON (York-Sunbury): Oh, why?

FREIGHT RATES EASTWARD ON WHEAT

Mr. LACOMBE:

1. What is the average price per bushel paid to the producer of wheat?

2. What is the average price of wheat flour charged to the consumer in eastern Canada?

3. Has the government taken the necessary steps to secure a reduction in the transportation charges on wheat from the prairie provinces to the eastern provinces?

DARTMOUTH, N.S. AIRPORT

Mr. HATFIELD:

1. Who was the engineer engaged on the construction of the Eastern Passage airport at Dartmouth, Nova Scotia?
2. Was there any change in engineers during the construction period?
3. If so, why was there a change?
4. What was the price paid per yard for gravel, under the cost plus contract at this airport?
5. Was the rock crushing plant used on this cost plus contract?
6. If so, what rental was paid for the rock crushing plant?
7. Were there steam shovels used under the cost plus contract?
8. If so, how many steam shovels were used and how much rental was paid for them?

BUILDING OF STEAMSHIPS AND FREIGHTERS

Mr. ISNOR:

1. Has a report been made by any officer of the Department of National Defence for Naval Affairs or of any other department, regarding the building of steam ships and freighters?
2. If so, what locations were surveyed or investigated?
3. What is the name of the officer or official making such report?
4. Have the possibilities of building steel freighters in Nova Scotia been looked into and reported upon?
5. If so, what locations were surveyed or investigated, what was the nature of the report in each instance and what are the names of the officers or officials who made such investigations?

PATENTS AND ROYALTIES—ITALY, JAPAN AND GERMANY

Mr. REID:

1. In the countries of Germany, Italy and Japan, are the interests of Canadian citizens now being recognized in the matter of any patent rights issued by Canada?
2. In the matter of patents issued in Canada, have any steps been taken to make available to the government or to any Canadian citizen, patents, the patent rights for which may have been granted to citizens or nationals of Germany, Italy or Japan?
3. Are any royalties being paid either by the government or other citizens of Canada for the use of any patents the special rights for which may have been granted in Canada to citizens or nationals of Italy, Japan or Germany?
4. Are any royalties being paid or any payments being incurred to any agent or agents either in Canada or any other country for the use of patents in this country and for which patent rights may have been issued or granted to nationals or citizens of Germany, Japan or Italy?
5. Is the government protecting in any way the interests of any citizen or national of Italy, Japan or Germany for the use of any patent, the patent rights of which may have been issued to any such citizens or nationals by the Canadian government?

AIR FORCE—MANNING POOL, TORONTO

Mr. CHURCH:

1. Was an inquiry held respecting an outbreak of scarlet fever at Manning pool, Toronto?
2. Were any officers and men quarantined?
3. If so, how many of each rank?
4. How many cases of scarlet fever were there?
5. How many of such cases are now in the Toronto isolation hospital?
6. What steps are being taken to eradicate this disease?
7. What number of the R.C.A.F. at this pool have been laid up with sickness other than scarlet fever during 1940 and to date in 1941?
8. How many officers and men at this pool are taking the British empire training scheme courses, and how many are only for home duties in Canada?
9. How many civilians are serving at this depot?
10. Are the depot heads of this pool transferred or changed from time to time?
11. Has any revision been made in the number of Royal Canadian Air Force guards doing duty on the Toronto water front since the last reply on this question?
12. What length of time, on the average, does each recruit spend at this depot, and what new courses, if any, have been added?

TRADE AND COMMERCE—SUPERVISOR OF WEIGHTS AND QUANTITY STANDARDS

Mr. FLEMING:

1. Is there a supervisor of weights and quantity standards with the Department of Trade and Commerce?
2. If so, who is the present incumbent?
3. Does this incumbent function, what is his salary and what are his duties?
4. What action has he taken in the past three months?
5. What reports has he made in the last fiscal year?
6. Does he supervise short weights in coal?
7. What reports has he made since 1934 on short weights in coal?
8. What action was taken on these reports?
9. If action was not taken by the department, what were the reasons?

MOSSBANK, SASK, AIRPORT

Mr. COLDWELL:

1. From whom was the site for the airport near Mossbank, Saskatchewan, purchased?
2. How many acres were purchased and at what price per acre?
3. Was the grading, building and other work at this airport done by contract?
4. If so, who were the contractors and what were the respective contract prices?
5. What was the total of all contracts?
6. Where is water obtained for the airport, what distance is it hauled, who has the contract and at what price?
7. Who supplies the coal, and, (a) who hauls it from the town of Mossbank or other point; (b) what is the price per ton for hauling; (c) what is the price per ton for the coal at the station?

ELECTRICITY TAX—COLLECTIONS BY PROVINCES

Mr. BROOKS:

What amounts were collected from each province in Canada through the operation of the present tax on electricity?

DAFOE, SASK., AIR TRAINING FIELD

Mr. PERLEY:

1. What individual or firm has the contract for lighting the airport at Dafoe, Saskatchewan?
2. What are the terms of the contract?

PRAIRIE PROVINCES AIR FIELDS—TRACTORS FOR PACKING SNOW

Mr. PERLEY:

1. Did the government buy a number of tractors to be used to pack the snow on the air fields in the three western provinces?
2. If so, from whom, how many, and what was the total amount paid in this regard?

MOTIONS FOR PAPERS

EMPLOYMENT OF CIVILIANS AT ONTARIO AIRPORTS

Mr. SENN:

For a return showing, names and addresses, nature of employment and salaries of each civilian employed at the following airports, as of February 1, 1941, (a) Dunnville; (b) Jarvis; (c) Hagersville, and (d) Kohler. Also a statement showing who recommended the appointment of each of these persons.

PURCHASE OF LAND FOR ONTARIO AIRPORTS

Mr. McGREGOR:

For a return showing the names of persons from whom real estate was purchased to provide space for airports at Mount Hope, Jarvis, Brantford, Dunnville, Birch, Hagersville, Fingal and Kohler, the number of acres purchased from and the amount paid to each person.

ST. CATHARINES, ONT., POST OFFICE—STAMP VENDOR

Mr. LOCKHART:

For a copy of all letters, telegrams, recommendations, applications, reports and other documents in the possession of the Post Office Department, regarding the recent appointment of a stamp vendor at the post office, at St. Catharines, Ontario.

PRAIRIE FARM ASSISTANCE—AVERAGE CROP RETURN IN CERTAIN TOWNSHIPS

Mr. DOUGLAS (Weyburn):

For a copy of all correspondence, telegrams, reports and other documents in the possession of the board of review, set up under the Prairie Farm Assistance Act, regarding the average crop return in the following townships: 10-15-W. 2nd, 11-15-W. 2nd, and 12-15-W. 2nd.

For a copy of all available data gathered by the board of review, set up under the Prairie Farm Assistance Act, in computing the average crop return of township 14-20-West of 2nd.

[Mr. Coldwell.]

LETHBRIDGE SOUTHEASTERN IRRIGATION PROJECT

Mr. BLACKMORE:

For a copy of all correspondence, reports, memoranda and other documents exchanged between the Alberta government and federal government, since 1935, bearing upon the question of the Lethbridge southeastern irrigation project, and particularly with respect to the storage of run-off water in the St. Mary river, Alberta.

PRAIRIE FARM ASSISTANCE—SASKATCHEWAN CROP FAILURE AREA

Mr. DOUGLAS (Weyburn):

For a copy of all correspondence, telegrams and other documents exchanged between the provincial government of Saskatchewan and the federal Department of Agriculture, regarding a crop failure area being set up under section 4 of the Prairie Farm Assistance Act.

PORT WILLIAMS, N.S., PUBLIC WHARF

Mr. BLACK (Cumberland):

For a copy of all payrolls and accounts of expenditure by the Department of Public Works on the public wharf at Port Williams, Nova Scotia, for the year ending December 31, 1940.

Also a statement showing the amount of money paid to Gordon Gates as foreman, wharfinger, harbour master, or for any other services or materials supplied to the Department of Public Works at Port Williams, Nova Scotia, for the fiscal years ending March 31, 1936, 1937, 1938, 1939, and for the year ending December 31, 1940.

MOUNTED POLICE—CORPORAL ART REED

Mr. NICHOLSON:

For a copy of all correspondence, telegrams and other documents in the possession of the Department of Justice, dated during the years 1939 and 1940, with respect to the dismissal of Corporal Art Reed, formerly with the Royal Canadian Mounted Police at Pelly, Saskatchewan.

Mr. LAPOINTE (Quebec East): I am sorry, but I have to ask that this motion be not adopted, because it refers to a matter of internal discipline of the Royal Canadian Mounted Police. The correspondence and documents referred to are confidential, and it has always been the practice so to consider them. It is against the public interest that this matter be made public.

FORT DE LEVIS MONUMENT

Mr. CASSELMAN (Grenville-Dundas):

For a copy of all correspondence with the Department of Mines and Resources or any other department of government or branch thereof with respect to the Fort de Levis monument since the date that the land for said site was presented to the government of Canada.

Mr. CRERAR: I am informed it would take about two weeks to copy all the documents

asked for in this return. There is no objection to bringing them down; but if the hon. member has some particular point upon which he wishes to get information, or if it would be satisfactory for him to examine the files himself, it would save a very considerable amount of work. A blanket order of this kind involves all the correspondence which happened to come into the department in connection with this particular matter.

Mr. CASSELMAN (Grenville-Dundas): If I have the privilege of perusing the files, and, if I find what I expect, I have the privilege of taking copies, that will meet with my approval.

Mr. CRERAR: I would have no objection whatever to furnishing the hon. member with copies of whatever documents on the files he wishes to have. I had better, though, to keep matters regular, have my office make the copies.

Mr. CASSELMAN (Grenville-Dundas): That is quite satisfactory.

DOMINION PURCHASES OF COAL FOR USE IN NEW BRUNSWICK

Mr. BROOKS:

For a return showing the tonnage, price paid and source of all coal purchased by the dominion government during the past calendar year for use in the province of New Brunswick.

MUNITIONS AND SUPPLY—ELECTRIC POWER, NEW BRUNSWICK

Mr. HATFIELD:

For a copy of all correspondence exchanged between the munitions and supply board and any member thereof and the New Brunswick hydro commission or any member thereof, in regard to the furnishing of electric power and the amount of power available.

MUNITIONS AND SUPPLY—ORDERS FOR NEW BRUNSWICK FIRMS

Mr. HATFIELD:

For a copy of all correspondence exchanged between the munitions and supply board or any member thereof and the New Brunswick government in regard to securing orders for the firms located in the province of New Brunswick.

AIR FORCE—PURCHASE OF LANDS IN SASKATCHEWAN

Mr. PERLEY:

For a return showing the names of persons from whom land was purchased to provide space for airports, bombing schools or air training landing fields at Mossbank, Moose Jaw, Broadview, Wolseley and Moosomin, Saskatchewan, giving the number of acres purchased in each instance and the amount paid per acre to those from whom the land was purchased.

NATIONAL PARKS

PRINCE ALBERT—PROVISION FOR WITHDRAWING CERTAIN AREAS OF LAND AND ESTABLISHING NEW BOUNDARIES

Hon. T. A. CRERAR (Minister of Mines and Resources) moved that the house go into committee at the next sitting to consider the following resolution:

That it is expedient to introduce a measure to amend The National Parks Act for the purpose of withdrawing certain areas of land from the Prince Albert National Park as presently constituted, and for establishing new boundaries for the said park as a consequence thereof.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

AIRCRAFT PRODUCTION

REQUEST FOR TABLING OF INFORMATION CONTAINED IN PAGES DELETED FROM MACMILLAN REPORT

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): May I direct a question to the Minister of Munitions and Supply (Mr. Howe)? In view of the disturbed condition of the public mind in regard to aircraft production at this critical time will the minister lay on the table of the house the missing pages Nos. 5, 6, 7 and part of 8 of the MacMillan report, deleted on the ground that they contained confidential information? Were those pages marked "confidential", or is that the minister's own interpretation? Does the minister mean to imply that this information would be valuable to the enemy? If not, then on what ground has it been withheld? Will the minister give a statement setting forth the essence of all discussions which took place between him and Mr. MacMillan in relation to the latter's report? Will the minister relieve Mr. MacMillan of his oath of secrecy and prove he has nothing to conceal by asking Mr. MacMillan to make a statement and thus allow the public to judge who is responsible for the present dangerous and alarming delay in aircraft production?

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, the hon. member started out with the preamble, "In view of the disturbed condition of the public mind in regard to aircraft production," I must say at once that I am not aware of the disturbed state of the public mind. So far as pages 5, 6, 7 and part of 8 of the MacMillan report are concerned, these pages have nothing what-

ever to do with aircraft production and make no reference to it. The report itself was a highly confidential document which was prepared by Mr. MacMillan for submission to the Minister of Finance (Mr. Ilsley) and the war cabinet. It became such a subject of discussion that I offered in the house to lay on the table such portions of the report as could be laid on the table without disclosing military secrets which it is not the privilege of the Canadian government to disclose. We have been requested particularly by the British government not to disclose items in connection with small arms and gun production which are contained in the pages which were deleted.

When I made the offer to the house the hon. leader of the opposition (Mr. Hanson) said that he quite understood why the pages in question could not be laid on the table, and later in his speech he said he quite agreed with me that they should not be laid on the table. As to Mr. MacMillan being relieved of his oath of secrecy, as long as Mr. MacMillan is an officer of the Department of Munitions and Supply I am afraid he will have to comply with the rules governing the officers of that department as laid down by order in council.

Mr. HANSON (York-Sunbury): The statement I made was based upon the theory that the particular pages related to the production of guns. If there is anything else in them, that statement would not apply.

Mr. HOWE: There is nothing else in them. They related entirely to guns.

WHEAT

QUESTIONS AS TO PRICES AND QUANTITIES SOLD SINCE AUGUST 1

On the orders of the day:

Hon. JAMES A. MacKINNON (Minister of Trade and Commerce): A few days ago the hon. member for Qu'Appelle (Mr. Perley) asked certain questions in regard to the amount of wheat which had been sold since August 1 last, to whom sold, and the average price received. The sale of 100 million bushels (futures) to the cereals imports branch of the United Kingdom ministry of food was announced on August 8 last. Sales have been made to neutrals and Canadian mills, but a considerable portion of this business is being handled through the open market. In such cases the producer does not deliver his wheat to the Canadian wheat board. So far as the board sales are concerned it is thought inadvisable to give the prices at which the board wheat is sold or the amounts of board wheat sold in addition to that mentioned.

[Mr. Howe.]

INCOME TAX

REPORT AS TO PROPOSED APPLICATION TO COOPERATIVE ORGANIZATIONS

On the orders of the day:

Hon. C. W. G. GIBSON (Minister of National Revenue): I should like to refer to a question asked in my absence on Friday by the hon. member for Acadia (Mr. Quelch). The question was:

Has the Department of National Revenue requested that cooperative organizations throughout the dominion file income tax returns?

The answer to that question is, no.

PENSION ACT

APPLICATION TO CERTAIN MEMBERS OF CANADIAN AND UNITED KINGDOM FORCES

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health) moved that the house go into committee to consider the following resolution:

That it is expedient to amend the Pension Act to make its provisions applicable to certain members of the Canadian forces serving in the present war and to their dependents, to extend the benefits of the act to certain persons serving in the forces of the United Kingdom and also to make further changes and adjustments in the procedure and administration of the Pension Act.

Motion agreed to and the house went into committee, Mr. Bradette in the chair.

Mr. GREEN: How many men have been discharged from the different forces in the present war, and how many of them have been discharged as physically unfit?

Mr. MACKENZIE (Vancouver Centre): I have not that information at hand, but I shall be glad to give it to my hon. friend to-morrow. I have had the information brought up to date, the number discharged and the number medically unfit, but I did not anticipate that this question would be asked on the resolution.

Mr. GREEN: Can the minister give an approximate figure?

Mr. MACKENZIE (Vancouver Centre): The approximate figure is 20,000.

Mr. HANSON (York-Sunbury): Will the minister make a general statement as to the necessity for this legislation?

Mr. MACKENZIE (Vancouver Centre): This resolution will be followed by a bill to amend the Pension Act. The main portion of the bill will give statutory form to orders in council passed in the last fifteen or sixteen months dealing with questions of pension legislation and administration. Certain new

principles will be enacted in the legislation, and there are other amendments dealing with administration and procedure. Provisions are being made for Canadians serving with the imperial forces, which provisions will be in accordance with the terms of an order in council passed already. When the bill passes the second reading it will be referred immediately to the committee appointed the other day by the house. This committee is now being organized and every part of the bill will be carefully considered by it.

Mr. GREEN: How many men in our new forces have been granted pensions already?

Mr. MACKENZIE (Vancouver Centre): The total number is 484, made up of 148 on account of disability, 273 to dependents for death, and 63, gratuities in settlement for disability.

Mr. GREEN: That is, 484 out of approximately 20,000 men who have been discharged?

Mr. MACKENZIE (Vancouver Centre): That is all the Canadians who have been discharged up to date, those serving overseas and in Canada.

Mr. GREEN: Of those who have received pension, what number served in England and what number in Canada?

Mr. MACKENZIE (Vancouver Centre): I have not that information before me.

Mr. GREEN: Will the minister have it to-morrow?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. BROOKS: Are there any in addition to that 20,000?

Mr. MACKENZIE (Vancouver Centre): Pension adjudication is fairly well up to date. It takes from forty to forty-five days after a discharge is given to get a decision.

Mr. GREEN: How many applications for pension have been rejected?

Mr. MACKENZIE (Vancouver Centre): In the early stages there were several thousand rejected. I shall get the exact information and give it to my hon. friend later.

Mr. GREEN: Is there any difference as to the qualifications for pension between the man who has served in England and the man who has served in Canada? I understand a different principle is applied when a man has served overseas.

Mr. MACKENZIE (Vancouver Centre): There is a section in the bill which repeats in statutory form the provisions of the order in council passed on May 21, 1940, which dealt with those who served overseas. The principles are the same as those that governed the award of pensions to those who served in the great war. In reference to those who served in Canada, after the passing of the order in council of May 21, 1940, the insurance principle was departed from and pensions are awarded for disabilities incurred on service. In other words, the disability must be due to service as such.

Mr. GREEN: Just what does that mean? Suppose a man is injured in one of the military camps; under what condition would he be given a pension?

Mr. MACKENZIE (Vancouver Centre): If the injury or disability is incurred while he is actually on service, while he is carrying out the ordinary duties of his service, he would be pensionable, but if he were accidentally injured while doing something apart from his ordinary military service duties, he would not be pensionable. This is a contentious provision and it will be thoroughly discussed by the special committee.

Mr. GREEN: Is it the principle that he must be, for example, actually drilling or firing a rifle the time of injury to qualify for a pension?

Mr. MACKENZIE (Vancouver Centre): He must be on duty. A certain amount of latitude and discretion is left to the pension commission in the administration of this provision, and instructions have been given to place the fairest possible interpretation upon it.

Mr. ROSS (St. Paul's): The minister says that it takes about forty-five days before the pension is granted or refused. What happens to the man in the interim? What has he to live on?

Mr. MACKENZIE (Vancouver Centre): Some of them are undergoing treatment in the hospitals of the department. Under an order in council passed last year treatment allowances can be continued up until the award of pension, or, if pension is not awarded, up to seven days after the decision has been made. With regard to other cases, provisions have been made in regard to the various committees throughout Canada, and the civil service commission is appointing very shortly welfare officers to consider perfecting the liaison between the different departments to provide for the thorough after-care of these men.

Mr. HANSON (York-Sunbury): With regard to the principle underlying the pensions to be granted those injured in Canada, does the minister mean to imply that it is the

principle followed in the old employers' liability insurance scheme, which provided compensation for those injured within the scope of their employment? Is that what the minister is trying to tell the committee?

Mr. MACKENZIE (Vancouver Centre): Yes—but not for overseas service, of course.

Mr. ROSS (Souris): Are the young men who are taking the thirty days' training in the training depots, or the four months training as it is now to be, considered to be on active service? If so, if one of them is taken ill at a training depot and is sent to hospital and dies there, will his dependents be eligible for a pension?

Mr. MACKENZIE (Vancouver Centre): Yes, if he incurred his disability as a result of his duties.

Mr. NEILL: I am thinking of a particular case—I know that is always unwise—of a man who was in the military service but not overseas, and in the course of his duties he was ordered to go on parade and play football. That was an order. He went on parade and was told to play football. He played football and got a severe injury to his head while playing. Somebody kicked him. They will not recognize that as entitlement to pension. I think he should be entitled to a pension.

Mr. MACKENZIE (Vancouver Centre): Yes, if he was ordered to perform duties in connection with his service and was injured in the course of those duties I should say he would be entitled to pension. That would be a matter for interpretation by the commission, and they are disposed to be fair in their interpretations.

Mr. HANSON (York-Sunbury): How does that come within the scope of his employment?

Mr. MACKENZIE (Vancouver Centre): If he was ordered to do it, it would be a duty.

Mr. NICHOLSON: I understand that married men with the forces are granted an allowance for two children. In the event of a pension being granted, how many dependent children would qualify for pension, assuming there are four children left?

Mr. MACKENZIE (Vancouver Centre): They would all be entitled to pension if they are eligible under the act and are under sixteen.

Mr. SENN: Is there any provision for pension for aggravation of a disease while on service? I have in mind a man who after being in the service for some little time was found to have tuberculosis, but the doctor stated he must have had the disease before he entered the service. There is no doubt that it was very greatly aggravated while on service. What happens in a case of this kind?

Mr. MACKENZIE (Vancouver Centre): My hon. friend is referring to one of the most difficult questions in pension administration, the aggravation of a condition such as he has mentioned. Under the old act, if aggravation took place, he would be entitled for the aggravation. There have been cases in Canada of men who have been only two or three months in the service and have developed chest or lung trouble. It is very difficult indeed to establish aggravation when the period of service has been short.

Mr. ROSS (Souris): The minister stated that approximately 20,000 men have been discharged and about 400 pensioned. What has been done to rehabilitate those who have been discharged and not pensioned?

Mr. MACKENZIE (Vancouver Centre): In my statement to the house on December 6 I gave an analysis of what we were endeavouring to do to rehabilitate these men. We have six or seven committees meeting every week to discuss this very problem and we trust that the new organization that is being set up of veterans' welfare officers, in cooperation with various other bodies, will ensure effective steps being taken. As my hon. friend knows, employment is the greatest difficulty. These men are already given preference in work on all government contracts in the departments of Munitions and Supply and Public Works, and facilities are being provided in the Department of Labour to give them preference in training. In every possible way we are doing what should be done so far as we can. This is also a question for further consideration by the special committee.

Mr. NEILL: Just one more point with respect to another class of dependents—mothers. It has been laid down by the government, and quite properly, that a wife shall receive $35 a month, and if there are any children, $12 for each child. She may be a young woman capable of doing all her domestic chores and perhaps a little outside work, which she is not prevented from doing by the regulations. That is the wife. She gets $35 a month for herself. But if the dependent is a mother she is entitled to get only $20 a month. You may say: The wife has children to support. But I answer that the married woman gets an allowance of $12 a month for each child, and if she is to receive $35 a month for herself I maintain that the aged mother, not perhaps able to do

her own chores, and possibly bedridden, should also get $35 if she was wholly dependent on her son's support.

Mr. MACKENZIE (Vancouver Centre): She would be entitled to a pension of $60 if he was her sole support.

Mr. NEILL: Yes, if he were killed, but I am talking about the dependent's allowance. I am not particular which department answers my question so long as the mother is granted more than $20 when her son is her sole support. The married woman gets $35, and it is no use telling me that she may have children to support because she gets paid extra for that, and if she is a young and able woman she can go out and do work, and she is able to do her own chores. But the aged woman, who is perhaps unable to do her own chores and may need medical attention, gets only $20.

Mr. LOCKHART: I associate myself with what has been said on this point by the hon. member for Comox-Alberni (Mr. Neill), and I believe that little latitude should be allowed under this resolution.

I rose particularly to ask the minister for further information with respect to the man who, having been accepted for service overseas, went to England, developed certain disabilities and was returned to Canada and discharged. His wife has been receiving his assigned pay and the allowance. The soldier is discharged as physically unfit and is unable to take his place in industry. His physical condition prevents him from following his former occupation. No committee seems to be able to deal with that kind of case. I could cite one or two cases of this kind in my own district where the family has had to go on relief. Will provision be made under this resolution or in amendments to the act to take care of men who have served for a considerable time in England and have then been returned to Canada and discharged and who are not eligible for pension? Some of them received one month's pay and then had to go on relief.

Mr. MACKENZIE (Vancouver Centre): There will be no provision here.

Mr. LOCKHART: No provision at all?

Mr. ROSS (Souris): What is the percentage of the 20,000 discharged soldiers who were actually medically unfit when accepted for service? It seems to me the percentage is very high.

Mr. RALSTON: What is my hon. friend asking?

Mr. ROSS (Souris): The percentage of men now discharged who were not medically fit when accepted.

Mr. RALSTON: I have not the figures here. I can give the number who were discharged as medically unfit after a certain time.

Mr. ROSS (Souris): Would not the minister have a record showing whether they were medically fit at the time they were accepted into the army? I mean, unfit from the standpoint of present standards.

Mr. RALSTON: The point is that they were accepted as medically fit at the time but were afterwards found to be unfit.

Mr. ROSS (Souris): How many of those are there?

Mr. RALSTON: I have not the figures here but I can make an estimate. I believe it would be about nine or ten thousand, about half. I can get the figures.

Mr. ROSS (Souris): Does not that seem a large percentage?

Mr. RALSTON: It did to me, and I have a report from the director general of medical services.

Mr. HANSON (York-Sunbury): It suggests that the initial medical examination was, I will not say negligent, but inadequate.

Mr. RALSTON: I received a report and there were a number of reasons why the initial medical examination did not detect certain disabilities. I myself did consider the percentage a rather large one. There may have been some causes for it. The reasons are given in the director general's memorandum and I shall be glad to refer to it when the war appropriation bill is before the committee.

Mr. POWER: I know something about this. I believe it would have been a crime if we had had the same number of invalids enlisted in the Canadian expeditionary force as there were in the last war, and I think the hon. member for Parkdale (Mr. Bruce) will agree with me. The matter was looked into. People with one eye and one leg often came back and received pensions at the expense of the country. Representations were made to the military medical boards and they investigated them. The medical boards in this war are one hundred per cent better than they were in the last. There were very many men who came in for a week or two and were discharged. They should not have been let in; they were waiting to be X-rayed.

Mr. HANSON (York-Sunbury): If I understand the regulations rightly, these young men who were drafted for thirty days' training—now four months—were ordered to report to the nearest medical practitioner. Every registered medical practitioner was authorized, for a small fee, a dollar I believe, to examine these young men. What is the record in this regard? I have heard of some astonishing cases. I heard of a man who was examined by a local medical doctor and who was so blind that when he came to the training centre he had to be helped out of the orderly room. That is of course an isolated case. I would not suggest for a moment that there were many such cases. Perhaps the Minister of Fisheries heard of that one.

Mr. POWER: If that is so, it is a reflection upon the medical men of Canada.

Mr. HANSON (York-Sunbury): It slams somebody, whoever it may be. I understand there is some truth in the report. The second case was a man with a club foot who was brought into the military training centre.

Mr. POWER: Under the pension act he would not get a pension for so obvious a disability.

Mr. HANSON (York-Sunbury): Is it suggested that the indiscriminate use of everybody in the medical profession in the examination of these trainees before they are brought in is a proper course to pursue? We ought to tighten up on it, and we cannot do it too soon. It costs something to transport these men to the training centre and send them home again.

Mr. POWER: The Minister of National War Services is not here, but I would ask the leader of the opposition this question: Would he choose doctors in any community, including his own?

Mr. HANSON (York-Sunbury): I am not under cross-examination. There are good doctors and poor doctors and those in between.

Mr. POWER: Would the hon. member like to choose them?

Mr. HANSON (York-Sunbury): I would certainly set up a board in every case. It is the duty of the military authorities or of the department to set up a board to ascertain who is medically fit.

Mr. POWER: So far as the military medical authorities are concerned, we chose the Canadian Medical association; but as regards examining men who came as trainees, the department did not have time to choose as between one doctor and another in any given community. I will wager that if my hon. friend had to choose doctors in Fredericton, if he were running a non-partisan government, he would be in a bit of a hole.

Mr. HANSON (York-Sunbury): I do not think so. That only proves that the whole thing was an improvisation.

Mr. RALSTON: Oh, no. My hon. friend always gets to that stage before he is through. These doctors were chosen on the recommendation of the Canadian Medical association and it was thought that it would be convenient for a man to be examined in his own home town rather than to be transported miles and then sent back. I do not know of the case the hon. member has cited, but there were cases in which there was exceedingly slipshod work.

Mr. McCANN: What was the percentage?

Mr. RALSTON: I cannot give the percentage. There were cases in which they were caught when they came to the training centre because there was a doctor there who understood more clearly the military regulations with respect to the examination of men who were to engage in military training. There is nothing slipshod about it there. The doctors were selected under the department of the Minister of National War Services. The Department of National Defence did not take the men on and had no responsibility for them until they reached the training centre. When they reached the training centre they were examined by the doctors there. Their sheets were gone over and any that indicated the necessity for further looking into the condition of a man were immediately attended to. There were men who had been passed who obviously should not have been. I have sent a note to the director general of medical services to obtain the percentage. This examination was for the benefit of the recruit himself. The selections were made partly on the basis of medical opinion, and medical opinion evidently went wrong in the selection of some of these gentlemen.

Mr. HANSON (York-Sunbury): But there was no selection. Every registered medical practitioner was qualified and authorized to make examinations. No one was selected by the department, no one was designated—

Mr. POWER: Nobody was selected by the Department of National War Services, but when they came to the training camps the men were selected by the military medical men. Of those selected by the war services—I am guessing—I would say that about ten per cent were not fit for C1—that is, the man who could walk five miles with a pack on his back.

Mr. LOCKHART: Apparently there is no provision in the act for rehabilitating such of these men as are unable to take up any vocation. The minister said that committees are being set up to try to rehabilitate them. Has he any idea when men such as four or five whom I have particularly in mind may expect some assistance in obtaining light employment so that they may help themselves and their families?

Mr. MACKENZIE (Vancouver Centre): I shall be very glad to look into the cases to which my hon. friend has referred. This resolution deals only with questions of pensions, not questions of reestablishment.

Mr. LOCKHART: Has the minister any idea when these committees will function?

Mr. MACKENZIE (Vancouver Centre): They are functioning now and have achieved some definite results. If my hon. friend will get in touch with me about the cases he has in mind I shall be glad to do what I can.

Mr. McCANN: Before there is any attempt on the part of the leader of the opposition or the minister to castigate the whole medical profession of Canada with reference to rejections for training service—

Mr. RALSTON: If my hon. friend will permit me, there was not the slightest suggestion of castigating the whole medical profession; I expressly said that there were cases in which it seemed that a slipshod examination had been made.

Mr. HANSON (York-Sunbury): Will the hon. member permit me to say the same thing? I was not castigating the whole medical profession, only some members of it.

Mr. McCANN: I think both hon. gentlemen are taking a little backwater now. Anywhere in Canada members of the medical profession who are licentiates either of the dominion council or of the council of any province are perfectly competent to make the type of examination for which the department asked. It is only a cursory examination, and they are allowed a fee of one dollar. There is no objection on the part of the medical profession to making the examination at that fee; and let me say that the medical profession have co-operated with the Department of National War Services one hundred per cent. The fact that there have been some slipshod examinations should not be taken to cast a reflection on the medical profession in general.

When these men go into camp there is a competent board that makes an examination, and they have facilities that are not extended to the ordinary practitioner when he is making his examination. They have X-ray facilities, they are called upon to make certain analyses, and it is much easier for them to pass judgment than for a medical practitioner in examining a man who comes into his office probably during office hours or any time he happens to be in town or in the vicinity. Compared with the number of rejections there have been among draftees for the United States army, the results of the medical examinations made by the profession throughout Canada are very good.

Mr. ROSS (Souris): Do I understand the minister to say that on arrival at the training depot every recruit was reexamined by an authorized medical official before commencing training?

Mr. RALSTON: I understand that is so.

Mr. GREEN: This discussion has brought out a point which is of the utmost importance in connection with Canada's war effort, namely, the treatment of the men who are being discharged from the forces. The manner in which those men have been discharged is both unfair and unwise. I do not know whether it is the fault of the Department of Pensions and National Health or of the Department of National Defence—I rather suspect the latter; or it may be because of lack of cooperation between the two. But it comes out clearly from the facts given to us to-day. The Minister of Pensions and National Health says already about 20,000 men have been discharged from the Canadian forces. He says that out of that 20,000, only 484 have received pensions and there are practically no applications pending. The Minister of National Defence says that between 9,000 and 10,000 of those 20,000 have been discharged because they were medically unfit.

Mr. RALSTON: My hon. friend must not pin me down to that, because I have said I will get exact figures.

Mr. GREEN: I do not blame the Minister of National Defence in person but I do blame the medical officers in his department.

Mr. RALSTON: I say, do not blame us on figures until we get them.

Mr. GREEN: Another figure was given by the Minister of Pensions and National Health, who said that 4,000 to 5,000 men have applied for pension and been refused. I am afraid the situation is that the Department of National Defence have been discharging these men just as fast as they can; as soon as they decide that a man will not get back to health and make a good soldier or air man or sailor he is discharged summarily from the force. That is not good enough.

Mr. RALSTON: What does my hon. friend suggest that the department should do? Keep them on?

Mr. GREEN: Now may I continue? Practically no plans have been made to aid those men in the convalescent stage. Convalescent homes should be set up in Canada, and the men should be nursed back to health instead of being thrown out on their ear. The medical examination when they were enlisted was far more severe and thorough than the examination in the last war, yet thousands of men are found unfit and simply thrown out. I know no more effective method of making communists than by treating in this way men who have enlisted for active service. Since Christmas I have had about a dozen men come to my office all of whom were treated in that way.

As a rule I do not believe in going into individual cases in the house, but there is one in Vancouver which illustrates the point so clearly that I will give both ministers the name and number so that they can check up and reply. It is the case of Private A. A. Stewart, of the army service corps, No. K 79092. This man was an imperial in the last war. He enlisted in the non-permanent active militia and went to camp with them in May 1940. In June he enlisted in the active service force. In August while on leave in Vancouver from Esquimalt he took sick, was put in the small hospital at Seaforth armouries, and then sent to Shaughnessy military hospital. There it was found he had a bad kidney which would have to be removed. He was kept in Shaughnessy hospital three months while letters passed and attempts were made to get instructions from a department at Ottawa, presumably the Department of National Defence, as to what should be done—whether or not they could remove the infected kidney in that hospital. Finally word came through that he was to be discharged from the army. The doctors in Shaughnessy hospital felt so badly about the case that they arranged for the man to be taken into the general hospital in Vancouver and given his operation.

Mr. MACKENZIE (Vancouver Centre): It was arranged from here.

Mr. GREEN: At any rate even the departmental doctors in Vancouver were greatly exercised about the case. The man was turned out of Shaughnessy hospital in that condition on November 2, as a walking case. Fortunately he was able to get a lift down to the general hospital, where he was put in the relief ward with orientals and people on relief although he was in the uniform of the Canadian active service force. Two days later he was discharged from the Canadian army, and of course the general hospital authorities had to take care of that operation. When he was discharged the allowances to his wife and children were cut off.

This sort of thing must be stopped. As I have said, in my opinion the Minister of National Defence personally is not to blame; I know he is just as sympathetic as any of the rest of us. But apparently there is a policy in the medical services at headquarters here that is entirely too hardhearted and unreasonable under existing conditions. Provision should be made so that these men who have been willing to offer their lives could be nursed back to health so far as that may be possible, by some government department. Every man who is discharged as medically unfit should be transferred to the Department of Pensions and National Health; his pay and all his allowances should be continued until he has received treatment and has had a chance to recover, or until his claim for pension has been ruled upon by the pension commission, which I understand takes at least six weeks and, in many instances much longer.

Mr. HOWDEN: How long was this man in the army?

Mr. GREEN: This man enlisted in the active service force in June. There is another feature to the question. When a man who has been discharged as medically unfit tries to get a job, his prospective employer asks, "Why were you discharged from the army?" The answer is, "I was medically unfit"; and the result is that this man simply cannot get work. The whole question of the treatment of these discharged men should be looked into by the government immediately, and steps should be taken to see that they are dealt with fairly.

Mr. MACKENZIE (Vancouver Centre): The hon. member for Vancouver South (Mr. Green) referred to a particular case. I think in fairness he might have concluded the record of that case, which is that as soon as the matter was brought to my personal attention I took it up with the medical services, and it was adjusted immediately on the basis of fairness and equity.

Someone has referred to the number of discharges. I should like to give the figures, and I hope the Minister of National Defence (Mr. Ralston) will forgive me for having obtained this information from his department.

Out of a total of 18,109 discharges, 7,244 have served for less than ninety days and 14,147 have served for less than six months.

Out of the total discharges, only 3,133 were discharged as medically unfit according to existing standards after more than six months' service, and only 608 of these have had more than 365 days' service. Of the total, 4,067 have been discharged as unlikely to become efficient soldiers or because they failed to qualify, and of these a great majority had under six months' service. There are only 909 with overseas service, and of these, only 246 have had more than one year's service.

I have these figures broken down into military districts. The reasons for discharge are in five groups, as follows:

(A) Medically unfit.

(B) Under age.
Irregularly enlisted.
False answer on attestation.
Attestation not approved (K.R.O. 371 (1)).
Excessive dependents.

(C) Misconduct.
Civil conviction.
Refusal to sign forms.
Refused vaccination or inoculation.

(D) Return to civil employment.
Compassionate grounds.
Return to N.P.A.M. status.
To non-effective list.
Resigned commission.
To corps reserve or permitted to retire.
Relieved from special duty or appointment at own request.
Ceases to be employed or surplus to establishment.

(E) Appointed commission other forces.
To enlist other forces.

(F) Not likely to become efficient.
Failed to qualify.

Mr. BROOKS: Could the minister give us the number under each of these categories?

Mr. MACKENZIE (Vancouver Centre): With pleasure. The figures are as follows:

Period of service—	
Less than 30 days	2,059
Less than 90 days	5,185
Less than 183 days	6,905
Less than 365 days	3,219
More than 365 days	741

Under category (A), the first one I mentioned, the figures are as follows:

Period of service—	
Less than 30 days	876
Less than 90 days	2,568
Less than 183 days	4,252
Less than 365 days	2,525
More than 365 days	608
Total	10,829

Does my hon. friend want the figures broken down by military districts?

Mr. BROOKS: No. All those not likely to become efficient soldiers would not necessarily be medically unfit?

Mr. MACKENZIE (Vancouver Centre): No; those are separate categories. Under category (B) the number is 1,073, and under category (C) it is 520.

Mr. REID: Perhaps the minister could put the whole table on *Hansard*.

Mr. MACKENZIE (Vancouver Centre): The remaining figures are: category (D), 1,289; category (E), 331; category (F), 4,067. The grand total amounts to 18,109.

Mr. ROSS (Souris): I think this statement by the minister is further proof that the medical inspection has been terribly slack. The government has had the experience of the last war to guide it, and the fact that the percentage is still as large as has been stated by the minister is ample proof that there has been carelessness somewhere in connection with these medical examinations.

Further, Mr. Chairman, I think this is very unfair to many municipalities throughout the country. As hon. members know, the Minister of Labour has informed the provinces that after the end of this month the federal government will make no further contribution towards the cost of relief. These men, as the previous speaker pointed out, are under a great handicap in seeking employment. They become a direct charge on the municipalities, which is most unfair both to the municipalities and to the discharged soldiers. I would strongly urge upon the government, in the first place, that they tighten up their medical inspection and, following that, that some system of convalescent care should be developed under which these men would be nursed back to health when they are discharged as medically unfit. I think it is the duty of the federal government to do everything in its power for these people who find themselves in this position.

Mr. MACKENZIE (Vancouver Centre): In the three services: the total number of applications for enlistment in the army was 192,415. Of these, 28,316 were rejected as being permanently unfit and 7,949 as being temporarily unfit, a total of 36,265. These combined figures represent a ratio of 188·47 per thousand. Subsequent to attestation, 3,492 were rejected up to June 1, 1940. This would represent 1·2 per cent of the whole, which, added to the 18·8 per cent before attestation, would amount to 20 per cent.

In the air force the total number of examinations made in twenty recruiting centres from August 1 to September 30, 1940, was 21,311. As a result of these examinations, 5,244 were rejected, or 24·6 per cent. These are the

comparative figures. In the navy there were 149 rejected after attestation as medically unfit, or 12·4 per thousand.

Mr. McCANN: Is it not a fact that applicants for both the navy and the air force are examined by a board?

Mr. MACKENZIE (Vanceuvor Centre): Yes.

Mr. McCANN: The only applicants who are examined by individual doctors are those for the training camps. I think that should be understood. If they were rejected, that was done by a board; and surely when a board of three medical men is set up, it is an added protection both to the department and to the individual.

While I am on my feet I should like to ask the minister one other question. In the changes in the act is it proposed that a pensioner may be able to avail himself of local hospital facilities instead of having to go all the way to what we might call a regional hospital, as is the case under the present system? My understanding is that when a pensioner develops some disability that requires hospital treatment, he is not entitled to enter a local hospital and receive treatment at the expense of the department; he must proceed to a regional hospital—in the Ottawa valley it would be to either of the hospitals here in Ottawa—where he receives treatment the cost of which is paid by the department. I would suggest, as I have suggested previously, that the law could well be changed to permit pensioners to avail themselves of the privilege of taking treatment in any of the modern hospitals which now exist in a great many of the smaller communities, provided the pensioners can get competent hospitalization and treatment in their own localities.

Mr. MACKENZIE (Vancouver Centre): There is no such provision in the proposed amendments, but I will see that the matter is brought to the attention of the committee.

Mr. NEILL: Would the Minister of National Defence be kind enough to waive etiquette and answer a question which the Minister of Pensions and National Health says does not come under his department; that is, why the dependent mother gets only $20 while the dependent wife gets $35?

Mr. RALSTON: I cannot answer my hon. friend with regard to the amount. I may say however that the whole matter was dealt with by a committee at the time provision was made for dependents' allowances. The matter was gone into last year, as hon. members will recall. The situation is this:

[Mr. I. A. Mackenzie.]

A mother has never been recognized as being entitled to pension or allowance, as of right. That principle begins away back with the pensions connected with the last war. The provision then placed in the Pension Act, and the provision there to-day, is that pension is allowed only if it is shown that the soldier was supporting his parents, and then it is allowed only to a limited amount.

A wife is entitled to pension, as of right. Even if she has a private fortune in her own right, she is entitled to pension. The mother is not so entitled. A case of need and the fact that the soldier has been supporting the parents must be shown, in order that the parents may qualify. That applies to the father and to the mother.

At the time of the last war there was no provision whatever for pensions to parents. Assistance given to parents was taken care of through the patriotic fund. Perhaps I should not put it that strongly, because as I speak it comes to me there was one provision respecting a parent, and I would have to look that up. Generally speaking however the patriotic fund was the source looked to.

In this war, under the provision for dependents' allowances we have introduced the same sort of provision which appears in the Pension Act, namely provision for a parent in need. That need must be shown, and, if shown, the parent who has been supported by a soldier is entitled to a limited amount. The amount is less than the amount allowed a wife. I cannot tell my hon. friend why that is so, except that possibly it was felt that primarily there was no entitlement at all, and a limited amount was regarded as all the country should undertake. It is obvious to anyone who looks at our pension laws that a parent is not considered in the same position as a wife, and has never been so regarded. That principle is the one which is carried into the dependents' allowance regulations.

As I have said, the amount was laid down by the committee which dealt with the whole matter of dependents' allowances about a year and a half ago, and the amount was adopted at that time. The matter was fully discussed in the house. At that time the question did come up as to whether a parent should not be entitled to some allowance, when the son was liable for that parent's support and was unable to contribute because of circumstances beyond the parent's control. An amendment was made to make provision for such a case. The whole distinction is that one is in the nature of a compassionate allowance, and the other is an allowance as of right.

Mr. HOMUTH: The fact of the matter is that in this war we have done away with the patriotic fund. It does not exist, as it did at the time of the last war.

Mr. RALSTON: That is correct.

Mr. HOMUTH: I want to associate myself with the hon. member for Renfrew South. In the last two years we have had many cases such as those cited by him. The nearest military hospital to my constituency is in London. There have been cases where soldiers have become suddenly ill and have had to have operations immediately. The doctor in charge could not wait until he got that soldier admitted to Westminster hospital. In such circumstances the patients have been taken to local hospitals, and because of that fact have been refused hospitalization.

Mr. RALSTON: Is my hon. friend right about that? He is speaking about a soldier who is actually serving?

Mr. HOMUTH: A soldier of the last war.

Mr. RALSTON: Oh, I misunderstood. The Westminster hospital is that of the Department of Pensions.

Mr. HOMUTH: Yes. This is a serious matter, and much hardship has been caused because of the condition I have described. I suggest the committee might very well recommend that if in the opinion of a doctor from the Department of Pensions and National Health a man should be taken to a local hospital, he might be so taken and the doctor's advice accepted.

Mr. PERLEY: In the first instance, when the department was calling up trainees, did it not send out a notice that such trainees were to go to the nearest practitioners to receive preliminary examination? Were not those practitioners or doctors provided with certain forms to be filled out? Then did not the trainee take the form to the training centre or to the camp when he came before the board. If after that procedure the trainee developed pneumonia and died, or his death resulted from any other injury or disease, what claim, if any, would his parents have upon the department? Possibly we should not discuss dependents' allowances on this resolution.

Mr. RALSTON: I have no objection. Perhaps I am treading on the ground which should be covered by my colleague the Minister of Pensions nad National Health, but I might reply in regard to such a case as that described by my hon. friend, in which a soldier takes cold, or incurs some disability during his service at a training centre—

Mr. PERLEY: After he has passed the preliminary examination.

Mr. RALSTON: This is a case which has to be dealt with by the pension commission. But of course if the soldier can possibly be made well, we endeavour to do it. I do not think the hon. member for Vancouver South was quite fair when he said, to use his own expression, that the country would just throw him out on his ear. The department is just as anxious as anybody else to see to it that the man is restored to health if it is possible to do so. But naturally the Department of National Defence cannot take the responsibility if it is shown that the man has no chance of qualifying within the physical qualifications set out in categories A and B. After that he has to go to the Department of Pensions and National Health, if he has a claim that his disability was "attributable to service as such". Those are the words of the act. The answer to my hon. friend, in short, is that the board of pension commissioners and nobody else—I say this advisedly—can decide definitely whether a case is one in which pension should be allowed.

Mr. POULIOT: If we look at the estimates for the Department of Pensions and National Health we see that the amount for the pensions branch has decreased from $56,378,553 to $53,921,407. I presume that reduction is due to the fact that many veterans of the world war of 1914-18 have been enlisting in this war. But what has surprised me very much since I have been a member of the House of Commons is that no check-up has been made by the department of the pensions granted throughout this country. I know of cases where soldiers who were unworthy have received pensions, and other cases of well-deserving veterans who did not receive pensions. For a time I complained of the board of pension commissioners, saying that the members of it were not qualified to sit on the board because they had had no medical experience. The answer given to me by the department was that they had fine military records. That seemed to cover everything. One of them is a high-ranking officer, a very fine man—and the Minister of National Defence may listen to me; I am not making what he calls an attack on him. I have nothing to say against this man personally, but I do say he is not qualified to sit on the board of pension commissioners because he knows nothing about medicine.

I shall refer to some specific cases. There is the case of regimental number 897, one of the first to enlist in the last war. He was a husky fellow, a lumberjack, well-built

physically. He looked quite strong. He spent four or five years over there sleeping in the mud and facing all sorts of difficulties. No one can say that a man who lived that sort of life for four or five years would be normal physically when he came back. Such a case is worthy of consideration. I have another case of a man who enlisted in the first year of the last war. He was a barber. He received a bullet through his right hand and was granted $100. I made many complaints for this man; I have a thick file of correspondence but that is all he got.

On the other hand, there are many men who received pensions and who do not deserve them. There should be a check-up. I admit that this would be a most unpopular measure, but it is necessary. This country is not rich enough to be able to afford to pay pensions to men who do not deserve them, when there are, on the other hand, deserving cases in which pensions should be granted.

I have many other cases about which I have written to the Department of National Defence. I know of one young man who enlisted voluntarily and who, I believe, went to Valcartier. Last fall he suffered an attack of bronchial pneumonia. He did not receive the attention he should have received, according to what a medical doctor, a member of the department, said in Quebec city. Since Christmas I have been corresponding with the Department of National Defence in an effort to get some satisfactory answer.

This man has been sent from pillar to post. He was not looked after as he should have been, and I am always told that the Department of National Defence has received no answer from the Department of Pensions and National Health. I do not blame the minister for this; I blame the Tory asses who are under him and who will not give a satisfactory answer when a soldier is suffering. That is shameful. I do not want to see anyone suffer unjustly, especially a soldier who has defended or is defending this country.

This is my first point. I have never written the minister about this, but as soon as I am through I shall send him the name of this man and I want an answer to-morrow. I want to know who is guilty in this business. Of course, sometimes this chamber is a pink tearoom, we cannot say anything, we have no freedom of speech. We are making what is called an "attack" on the great medical geniuses of the Department of Pensions and National Health. Most of them are asses, yes, asses; a-s-s-e-s. No satisfaction is given to the soldier by these people who get such fat salaries. It is a great scandal and I hope the minister will clean out this Augean stable.

[Mr. Pouliot.]

I mean the Department of Pensions and National Health. The manure has become health. It is a shame, and no one can defend it. I shall have more to say about this in due course and will give names. I suppose no answer will be given, or it will be said that the industrious leaders, the asses, have decided that this fellow was not deserving of a pension. I want to speak freely and there is no one in this committee to prevent me from saying what I am here to say. My people are satisfied with me. They are proud of me and they want justice.

There is something else, perhaps on a different line. This has to do with certain absurdities in the statute, one being the preference granted, not only to the returned men who served in the Canadian forces but to those who served in the allied armies, that is, the armies of Italy, Japan, the United States, France and so on. This preference is granted to those who served in the forces of those countries which signed the Versailles treaty on the same side as Great Britain. With one exception, Canada is the only country which has granted such a preference. The only exception is the state of Maine in the United States, where certain preference was given to Canadian veterans. But that preference was repealed long ago; it exists no more.

Some years ago I was the sponsor of a bill to repeal the "allied preference" given by Canada. I did not insist upon the bill being considered because a member of the government told me that it was the intention of the government to dispense with this so-called preference. But what happened? A civil service committee sat during one whole session and one of the conclusions reached was that this preference should be taken away from the veterans of the allied armies, if they had not resided in Canada before the war of 1914-18. I see in this committee certain members who sat on that committee and they will remember that no action was taken. Another committee met the following year and made exactly the same recommendation, but that recommendation is still on the shelf exposed to dust or moisture, depending upon whether the weather is dry or damp. That is what happened.

The first thing to be done is to repeal this preference. But there is another thing also. Why was this preference granted to the returned men of the last war? It was granted because the Borden-Bennett government did not keep their promises to the soldiers. A lot of foolish promises were made by Sir Robert Borden and his colleagues to the returned men. They were told

that when they came back they would be given everything, the country would be theirs. These promises were not kept, so that a preference in the civil service was given to the returned men. If there is any member of this committee who does not know what this means, I will explain it to him.

According to the statute, in applying for a civil service position the returned man is given a preference over the civilian provided that he has the necessary minimum marks to pass the examination. There is a second preference given which was not asked for by the returned men but which was placed upon the statute book by the profiteers of the last union government who wanted to sell their bacon overseas. This is a preference to the disabled man. This preference was supposed to be given to men who were wounded, but that is not the meaning which has been given to the word "disabled." It is taken to mean a man who has a pension; therefore, a man who was not wounded but who has a pension is given priority or preference over the man who was wounded but who has not been able to secure a pension. It is really a double preference. The man with a pension has a preference over the other returned men provided he has the necessary minimum marks.

In that matter, too, all governments were afraid to take action. They left it at that, although the standard of the civil service has been lowered because of the fact that in several cases the very best men available were not accepted and the positions were given to returned men with minimum marks.

Mr. CRUICKSHANK: Oh, you are talking nonsense.

Mr. POULIOT: That is all right, but I want my hon. friend to listen. I am not speaking of him, and I should like him to listen and pass judgment after I am through. He may say anything. Everybody is accustomed to his outbursts, but I should like him to read the law, and if he does not understand it, I shall be glad to put my finger on it, or he can put his nose on it and smell it.

Mr. CRUICKSHANK: Are you a returned man?

Mr. POULIOT: No, but I am working for all, and I do not want any interruptions. If anybody wants to shout back at me, Mr. Chairman, will you please tell him to wait until I am through and then we shall all be charmed to hear his eloquence.

Mr. CRUICKSHANK: I shall be delighted.

Mr. POULIOT: This is a most important question, Mr. Chairman. I am not attacking the returned men, I am not attacking those who have been wounded—not at all. I am simply placing facts before the committee on which I as a member of parliament want action.

The committee probably will agree with me that the preference granted to the soldiers of the allied armies is ridiculous. It was a gesture of fake patriotism, to make us look more patriotic than even the king himself. That question I leave for the moment.

There is a second military preference which was granted to the soldiers, who were promised a lot by the government. It was awarded to them so that their military merit should gain something for them in a very different field. I have no objection to a pension being granted according to the law to any soldier who deserves it according to the law, but I do not see why some men should be discriminated against and others given better chances. I think we should get the very best, the most able men in the civil service, and I want to see equality and everyone treated with justice. I do not want to deprive any soldier of his rights, I do not want to deprive any veteran of his legitimate rights, whether the war in which he fought was the Boer war or the great war, or any other war. I repeat, I do not want that at all. But what I do want is justice in every department, and when there is an injustice somewhere and I know it, I shall denounce it bitterly so that the wrong can be redressed as soon as possible. I am not afraid of anyone. God is my master, and I am afraid of him and nobody else.

The Borden government promised everything to the returned men, but they did not deliver the goods. Afterwards they introduced the military preference in civil service appointments, and now it works against the sons of the very men who served in the war of 1914-18. My hon. friend the member for Fraser Valley (Mr. Cruickshank) will probably meet many of his constituents who will complain of the fact that although they fought in the great war, their children are now deprived of appointment to the civil service just on account of legislation that was passed in 1919 by the union government.

But there is something else. We now have conscription for youth. In the Civil Service Act the war is defined as the war of 1914-18, the great war, and the preference there granted to returned soldiers means that a young man who is fully qualified for appointment to the civil service and has passed the necessary examination, even though he be the son of a returned man and has obtained the highest marks in the examination, is completely deprived of the right to be appointed to a

position in the civil service if a returned man, who is much older, has secured the minimum number of marks. And no one knows how many classes of young men will be called up during this war. Conscription applies to all. Those who are exempted are exempted because they are medically unfit, or because, in a very few cases, they are required in industry necessary to winning the war. Therefore all our young men are coming under the same military law, and I do not see why now, twenty-two and a half years after the conclusion of the great war, we should maintain this preference in the Civil Service Act which is applicable only to the veterans of the last great war. I cannot understand why that principle should be maintained. If a young man is wounded in this war, he enjoys no preference in appointment to the civil service. If a young man is rejected because he is not physically fit, does that mean that he will be deprived of equality of status in appointments by the civil service commission?

It is not my duty to decide this question, but it seems to me that it will be the duty of the pensions committee to study these questions from all angles with a view to seeing whether it is not time now, the veterans having enjoyed this preference for twenty-two and a half years, that the preference should be withdrawn so that the civil service may be improved by the appointment of the very best men. When I asked Mr. Bland, the chairman of the civil service commission, if the standard of the civil service was not lowered by the fact that at times appointments were made of men who had obtained the minimum number of marks instead of the maximum, his answer was in the affirmative. And the truth is self-evident. I hope that the present government and this House of Commons will not repeat the folly of the last government and decide everything upon sentiment. You must decide it upon reason. You must not discriminate against anybody. Give everybody in this country a fair chance. I leave it at that, for the members of the committee to discuss this matter thoroughly when the time comes.

Mr. MACKENZIE (Vancouver Centre): Just one or two references to the statement which has been made by the hon. member for Témiscouata (Mr. Pouliot). In the first place we are supposed to be discussing amendments to the Pension Act, which has nothing to do with the civil service preference for ex-service men. In the second place it is within the knowledge of every member that the present legislation is the result of the conjoint and concerted efforts of all parties in the house over a period of more than twenty years.

[Mr. Pouliot.]

There has never been the slightest trace of partisan feeling, so far as my knowledge goes—and I know something about it—in the several pension committees that have sat from 1919 down to the present time. After a study of pension legislation in other countries I am convinced that we have in Canada, with the exception of one or two anomalies here and there, the finest pension legislation in the British empire and possibly in the whole world. That has been the result of the unfettered judgment and hard application of hon. members of this house in previous years working in committee, just as this committee will be working for the next few weeks.

In regard to the gentlemen administering the act, they are as fine a body as you will find in the Dominion of Canada, and I personally resent on their behalf any attack upon their integrity, their motives or their ability. Derogatory language was used also with reference to some of the medical officers connected with the administration of pensions. In my judgment such remarks do not worthily reflect upon anyone who utters them. These men belong to one of the noblest professions in the world and they are doing their best to serve the department and the country, as we in this chamber are endeavouring to serve the country. I have found on their part nothing but a desire to render the best service possible and I absolutely repudiate any suggestion of unfairness or of inability in the administration of the work which has been entrusted to them.

I will not discuss at this stage the question of preferences. That question can be discussed if the committee deals with the matter of rehabilitation. I suggest that we should not be given to extreme or extravagant language at this juncture in view of the fact that a committee representing every group in the house will have an opportunity during the next few weeks to study the whole question of pension legislation, veterans' allowances, administration and general problems of rehabilitation.

Mr. MacNICOL: I am very glad indeed to hear the closing remarks of the minister and the assurance that the purpose of the committee is to study all angles in connection with any changes that may be contemplated in the pension act. What I rose to say is this. When I had first heard that the Pension Act was to be amended I had hoped that it would embrace something with regard to the widening of the regulations pertaining to the widows of deceased pensioners. The first part of the resolution reads:

That it is expedient to amend the Pension Act to make its provisions applicable to certain members of the Canadian forces serving in the present war and to their dependents.

I especially wish to direct my remarks to the words "their dependents". Under the present act, if a pensioner receives less than 50 per cent pension and he dies, his widow generally speaking receives nothing. There are some regulations with regard to temporary assistance but she gets nothing in particular. I wonder if such a matter will come up before the pensions committee. If it does I should like to appear and to present arguments in favour of widening the regulations under the act somewhat after the manner of Australia or the United States. In Australia, I believe, when a pensioner dies his widow receives the pension that he enjoyed in his lifetime. If he received ten or fifteen per cent the widow gets the same. If such a matter does come before the committee, then I am satisfied with the resolution and I want to support it.

I should like to ally myself with the remarks made by the hon. member for Vancouver South (Mr. Green). In the riding I represent there are as many enlistments as there are in any other constituency, if not more. In the great war the part of the city of Toronto which I represent was one hundred per cent old country stock, and these men enlisted en masse. Many regiments were raised there. During the last twenty years, therefore, I have had a good deal to do with pension matters relating to soldiers, and since the outbreak of the present war I have come in contact pretty much with the same conditions as have been brought to the notice of the hon. member for Vancouver South. Soldiers not long in the army have been discharged for one reason or another—illness and so forth—and most of them are out of work. On telephoning headquarters at 159 Bay street I have been told on numerous occasions to send to headquarters men who had been discharged and were out of work, and I gather that the department is making an effort to rehabilitate discharged soldiers. I hope so. I trust that anything the department can do in that regard will be done. One man I sent to an employer to look for work was not taken on because he had been discharged from the army as medically unfit. I have every confidence in the minister and I know that he will do what he can towards rehabilitating men in jobs and making adequate provision for medical attention so as to enable them to be rehabilitated.

I wish to associate myself with what the minister has said with regard to the pension department. As I said, during the last twenty years I have had to do with thousands of cases and I have nothing but praise for the administration of the pension department. I have found the present head, General McDonald, most sympathetic, most considerate and most courteous. I have nothing but praise for him and no complaints. I have also come in contact with many other members of the department; at least, I believe I have had dealings with as many of them as any other hon. member has had. I can say the same for them as I do for the head. I have taken every opportunity that has presented itself to say that, so far as I can see, the Canadian Department of Pensions is trying to do the best it can under the regulations. If the regulations are not wide enough that is the fault of the House of Commons, and I hope that the committee to be set up will work out something along the line I have suggested, so that there will be more consideration for widows whose husbands in their lifetime received less than fifty per cent. I trust also that something will be done with regard to rehabilitation and medical attention for those who are being discharged.

Mr. POULIOT: I hope that every official of the pensions department will have the words of the Minister of Pensions and of the hon. member for Davenport (Mr. MacNicol) illuminated in gold on parchment and framed, and hang it in the living room for the edification of posterity, so that it will be known that on this 3rd day of March they have been highly praised by the Minister of Pensions and at the same time by our genial and smiling friend the hon. member for Davenport.

Mr. HOWDEN: In connection with pension legislation there are one or two points which I think are worthy of consideration. It has been my lot for the last fifteen years to be a medical doctor and federal representative at the same time, and I can assure the hon. member for Davenport that if a great many persons have interviewed him with regard to pension troubles, I have been interviewed too. I agree with the hon. member for Témiscouata in this, that I have seen a great many men who deserved pensions and who did not get them, while I have seen quite a number who did not and do not deserve pensions who still have them. But I am not going to discuss that now because I fancy it is hopeless. We have to let it go.

There is this point, however. At this late date there are still men who were in the great war, who served faithfully and were not awarded pensions because apparently they were not severely wounded or anything of the kind. But they are in a deplorable condition, and only pensioners are entitled to consideration from the pension hospitals. Where these men are broken down and in failing health, whether as a result of their service overseas or not, the mere fact that they went overseas and offered their service at the risk of their lives entitles them to consideration

at the present time from the pension hospitals. We see these men all the time; they are desperately in need of hospital treatment; they are honest; they are not drunkards; there is nothing against them morally; but their health is broken; they are eking out a miserable existence, and they get no help from the government in the way of hospital treatment.

Another point worthy of consideration by the department is that a pensioner whose pension is in any way adequate to maintain his family and himself while he lives, leaves his wife without anything when he dies, because then the pension ends. If the family have a hard time to get along while he lives, they have a much harder time after his death, with no pension.

These two points ought to be seriously considered by this committee; namely, pensions for men who have done good service overseas but are not able to maintain themselves, and pensions for widows of pensioners.

Mr. ROSS (St. Paul's): First, I wish to say a word with regard to non-pensioned widows. The pensionable disability necessary now to entitle the widow to a pension is 50 per cent. I would ask the committee and the minister to consider lowering that still further. I do not think it would cost the country a great deal. We must remember that these women took care of these men when they were sick and had a very small pension, and just because the disability was not over 50 per cent they do not get anything. I think that extension could quite easily be lowered to, say 10 per cent pensionable disability, or something around that, because they are all getting older and no doubt the worry they have had in connection with taking care of these men has done much to age them. I hope the committee will take that into consideration.

I have received from the department nothing but the greatest courtesy and consideration in connection with any pension case with which I have had to do. General McDonald has been most courteous, as has the former minister and the present minister also. I have many of these old soldiers in my riding and it is a pleasure to look after them when there is such a department to deal with. The pension advocates at Christie street hospital also deserve a word; they are fine men and very sympathetic.

With regard to the case of the disabled man, I understand the Department of National Defence turns these men, all the seriously ill men of the active service forces, over to the Department of Pensions and National Health for treatment. That department proceeds with their treatment, and the men are not discharged from the departmental hospital until the treatment is complete and they need no further hospital treatment. But the point is, are these men discharged from the army; are they in hospital without pay and their dependents without pay? There is a difference between the serving officer or soldier receiving treatment and one retired or discharged to the Department of Pensions and National Health for treatment; the former is in receipt of pay while the latter, in certain circumstances, might not be. No man should be discharged from the army while he is undergoing treatment. His family is dependent upon him; he must have something to support them.

It must be remembered that the treatment given is good treatment and tends to lower his degree of pensionable disability; that means that by good care he may be discharged perfectly well or so improved in health that his ultimate pension will be much lower. Some provision certainly ought to be made for his family while that is taking place. Then, when he gets out of hospital, he is convalescent or a walking case; he is not fit to go right back to work. It is a disgrace if we send that man out with just a suit of clothes; he should be continued on pay for some time until he is able to get a job. One week's pay is not sufficient; he should receive at least a month's pay. Then, as the minister said, certain committees are being set up to try to take care of him after his discharge. I hope these matters will be looked into and have the minister's favourable consideration.

Mr. CRUICKSHANK: I would not want the committee to think that the opinion expressed by the hon. member for Témiscouata is that of hon. members from British Columbia or of the returned soldier members. He dealt with the civil service but forgot to mention a man called Bennett. I hope every returned soldier member of this committee will insist that the preference to returned soldiers in the civil service be maintained. I would go further and have it increased. I assure the hon. member for Témiscouata that, instead of decreasing the value of the civil service, the fact that there are so many returned soldiers in it has been a good thing for Canada, and it would be better if we had more.

I congratulate the government upon having set up this committee to study this problem. On this committee are many returned soldiers, irrespective of party, and surely they should know what the veterans of the last war or the

next war need. I am not depreciating the sincerity of any hon. member, but that is only common sense. Surely medical men know more about medical matters, and we returned men should know more about the mistakes made after the last war. I am not so much interested in whether they were made by Sir Robert Borden or anyone else, so long as we profit by experience and do not make them again.

I must say that in my experience the officials at the Department of Pensions have always been very courteous and fair to me. But I do not agree with the act as it exists to-day, I do not think any returned soldier can. Every member of this house should appear before that committee, because we all know of inequalities. I remember that a day or two before the 1935 election the present Minister of Pensions and National Health appeared on the platform with a famous Canadian winner of the Victoria Cross, and they were both absolutely in favour of giving every returned soldier hospitalization. Of course I realize that it is much easier to say such things two days before an election than two days after, but I sincerely hope the minister is still of that opinion. No soldier, whether wounded or not, could possibly serve overseas either in the last war or in this war without suffering some physical disability, and I believe that every veteran should be entitled to hospitalization. A great many have never applied for pension and never will, but surely they should be entitled to hospitalization, and certainly they are not getting it to-day.

The act has done a great deal for the returned man, but it does not go far enough. A widow's pension is cut off when her child reaches sixteen years of age. Where a woman with a child seventeen years old can get a job in British Columbia is something I do not know. I do not know if there has been any recent change, but three weeks ago men were being discharged from these compulsory training camps suffering from pneumonia, and had to be cared for by private citizens immediately on their discharge. That is not good enough; there can be no excuse for that sort of thing being done by this or any other government. My personal opinion is that at the Vernon camp they have no medical men; they have only a bunch of veterinarians. One man at Vernon camp was in hospital for twenty-two days, and the day he was discharged he went to bed with pneumonia. When that sort of thing happens, it is time the man in charge of that camp should be interned. That is what should happen to him. We must accept responsibility for these men. Just in closing, I want to tell the hon. member for Témiscouata that I hope every returned soldier in this house will take good care to see that the preference is not taken away but rather increased, if anything.

Mr. GREEN: The resolution states that the benefits of the act will be extended to certain persons serving in the forces of the United Kingdom. Just what classes is that meant to cover? For example, would it cover Canadians who enlist in the Royal Air Force?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. GREEN: Or Canadians who enlist in the Royal Navy?

Mr. MACKENZIE (Vancouver Centre): Yes; all Canadians serving with the imperial forces.

Mr. GREEN: Would it cover any firemen who might be sent over to London, let us say?

Mr. MACKENZIE (Vancouver Centre): That has not been decided as yet in connection with this legislation. That would be a question for future consideration.

Mr. GREEN: The other cases I have mentioned would be covered?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. GREEN: Is the government giving any consideration to establishing convalescent homes or hospitals for unfit members of the active service force before they are discharged?

Mr. RALSTON: Yes; some convalescent homes have been established. Of course my hon. friend understands that convalescent homes operated by the army medical services are for purposes of convalescence, to bring a soldier back to the physical condition which will permit him to reenlist in the army. They are not for the purpose of improving the health of a soldier if it is clear that he cannot again qualify physically. If he is in this position, of course he comes under the Department of Pensions and National Health.

Mr. GREEN: Between the two departments would it not be wise to have some provision under which, before these men were discharged, they would be cared for and nursed back to health as far as that was humanly possible?

Mr. RALSTON: All I want to say is that as far as the Department of National Defence is concerned there is no desire whatever to draw a sharp line, except to have the house and the country realize that our job is to deal with those who are fit to take their places in the armed forces. When men are disabled

and are not likely to be able to qualify physically in future, we maintain the closest liaison with the Department of Pensions and National Health. When such a man is discharged, an officer is present for the purpose of instructing that man as to what he should do and to whom he should apply, if it happens to be a case that is not to be sent to hospital; otherwise he goes to a pensions and national health hospital, where he is cared for. Under the provision made in order to help bridge the gap, notwithstanding the fact the soldier has been discharged he still receives thirty days' pay.

Mr. GREEN: I suggest to the government in all seriousness that it would be well to look into the situation and see if some further arrangement could not be made in order that these men may be restored to health before they are discharged from the army. At the moment, in many instances they are leaving the army in poor physical condition and are forced on relief. I have had such cases happen in Vancouver time and again.

Mr. RALSTON: My hon. friend and I might as well understand each other. My hon. friend says we should see that they are restored to health before they are discharged from the army. I realize the difficulties which confront a man after he has served in the army, and I do not make this statement harshly at all, but I do not think it is the duty of the army medical services to look after a man after it has been demonstrated that he cannot be restored to the physical condition which will enable him to serve. That is properly the function of the Department of Pensions and National Health, which looks after the ex-service men. The service men are looked after by the army hospitals. I will agree with my hon. friend that between the two departments all cases should be covered, and I will be only too happy to maintain a close liaison in order to see that the man does not fall between the two departments. I want to add that long before my hon. friend spoke—and I know my hon. friend will believe this—my colleague and I had many conferences with a committee, which has already been set up, in an endeavour to establish the best possible working plan in order that the soldier may be cared for at all stages.

At the same time the relative responsibilities of the two departments are recognized. It is no use for me to try to run the Department of Pensions and National Health. It is no use for me to run hospitals for the purpose of helping to restore men to a better state of health if they are not going to be soldiers in the end. My hon. friend will understand that. All the facilities of the medical services of the army are required in connection with men who will be fit for active service; and when we have a Department of Pensions and National Health with hospitals and medical officers all over this country, it does seem to me that we have to look to that department to take the responsibility for those men. But with regard to getting the soldier into one of these institutions, assisting him to get there, advising him as to how to get there and seeing that he is not harshly treated in any way, I am one hundred per cent with my hon. friend. I can assure him that anything that has not been done in that respect will be remedied, if I can possibly do so. I think, however, there is less than he believes in the way of harshness as far as the Department of National Defence is concerned. If we believe a man is going to be fit in the end, we will treat him; we will provide convalescent homes and do anything else that may be necessary. If it is demonstrated that he is not going to be fit, then it seems to me, from the point of view of both the man and the country, that there is no use in keeping him on the strength of the army. He does not belong there. He becomes an ex-service man, entitled to the protection and the benefits to which ex-service men are entitled under the regulations.

Mr. GREEN: It does not make much difference which department is responsible, as long as the responsibility lies somewhere.

Mr. RALSTON: It makes a difference to me.

Mr. GREEN: That may be, but from the point of view of the Canadian people it does not make much difference which department has to do the work. These men certainly should be given as much treatment as possible before they are sent back to civilian life.

Mr. RALSTON: Now my hon. friend has said something.

Mr. GREEN: That is really what I have been trying to say all the way through. I think the whole governmental policy in that regard should be reconsidered, because the present practice is unfair, and I am afraid it is going to do a great deal to discourage recruiting.

Mr. HOWDEN: Would such ex-service man be entitled to treatment in a pension hospital, without himself having a pension?

Mr. MACKENZIE (Vancouver Centre): In many instances remedial treatment has been given for many weeks, with the definite purpose of reconditioning men who are medically

unfit. My hon. friend's point is that this treatment should be extended, and made more comprehensive. That might well be a matter for discussion by the committee. But a great deal is now being done in the direction mentioned by the hon. member for Vancouver South.

Mr. GLADSTONE: I should like to pursue further a question asked by the hon. member for Vancouver South with regard to young Canadians who enlisted in the British forces. I have in mind the case of a young man from the city of Guelph who, a year prior to the outbreak of war, worked his passage overseas in a cattle boat, and enlisted in the Royal Air Force. A month or two before the outbreak of war, and during practice manoeuvres, while he was connected with an attacking force approaching the English coast his bomber was lost, and to this time has not been heard of again. It is presumed, therefore, that he was lost with it.

Many young Canadians worked their way to England and, prior to the outbreak of war, enlisted in the Royal Air Force. Will such young men be entitled to benefits under the Pension Act?

Mr. MACKENZIE (Vancouver Centre): The provisions are limited to those domiciled in Canada at the commencement of the war.

Mr. GILLIS: I should like to ask a question concerning men who have been discharged from the forces during the past few months. Has there been any attempt on the part of the department to classify the disabilities and the causes for them, or for weeding out of the army at the present time the large number of men who have been weeded out? Is it a fact that a large percentage of the men being discharged to-day are men who entered the army suffering from malnutrition and were victims of prolonged years of depression prior to the outbreak of the war? Has the department made a check along those lines?

Mr. MACKENZIE (Vancouver Centre): Yes, a definite check. I have not before me the exact results obtained, but I would be pleased to give them at another time.

Mr. WRIGHT: Has the department made any arrangements to give these men training in the technical and trade schools, before they are discharged? Many of these men had no training before the war. If they are now to be discharged into civilian life, I suggest that they should be given preference in our technical and trade schools, and then given preference in our war industries.

Mr. MACKENZIE (Vancouver Centre): That is true in both cases; they are given preference.

Mr. WRIGHT: How many are now being given this particular training?

Mr. MACKENZIE (Vancouver Centre): I cannot give the figures for the present time.

Mr. GLADSTONE: I understood the minister to say that the benefits of the act are confined to those who were domiciled in Canada at the outbreak of war.

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. GLADSTONE: That would exclude the young man to whom I referred, who left Canada and enlisted in the Royal Air Force before the outbreak of the war. I should like the minister to bring this point before the committee, with a view to having an amendment made whereby such men would receive the benefits of the act.

Mr. FAIR: Would the minister place on record the percentage of rejections in the various provinces, and the average rejections in the dominion of the young men who offered themselves for examination?

Mr. MACKENZIE (Vancouver Centre): Earlier this afternoon I mentioned the six categories. The following table will show the rejections, by military districts:

Category	Military district No. 1	Military district No. 2	Military district No. 3	Military district No. 4	Military district No. 5	Military district No. 6	Military district No. 7	Military district No. 10	Military district No. 11	Military district No. 12	Military district No. 13
A.....	901	2,219	976	1,390	1,018	665	786	774	828	439	833
B.....	82	161	111	129	85	35	76	110	58	64	162
C.....	35	77	67	36	47	48	50	32	33	35	60
D.....	54	120	205	211	146	65	177	66	115	48	82
E.....	27	48	21	27	10	33	6	23	108	20	8
F.....	360	856	425	585	121	478	181	355	332	88	286
Total.....	1,459	3,481	1,805	2,378	1,427	1,324	1,276	1,360	1,474	694	1,431

Mr. BROOKS: Did the minister say that men called up for training, under the training scheme, who were permanently injured, would receive a pension under the Pension Act?

Mr. MACKENZIE (Vancouver Centre): Yes, if they were injured on service, or if their injuries were attributable to or incurred on service.

Mr. BROOKS: They are not on active service. They are attached to the non-permanent active militia units, and are in a different category.

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. WRIGHT: Has the minister the number of the men placed in trade schools and technical schools?

Mr. MACKENZIE (Vancouver Centre): I shall have to get that information.

Mr. NICHOLSON: When amendments are being considered, there is another category to which I believe the minister's attention ought to be directed. For a considerable time I have had correspondence with a man who served with a forestry unit during the last war. He enlisted in 1916, and is now sixty-seven years old. According to information I have received, he was a first-class technician, carpenter, bridge-builder, millwright and lumberman. He built and ran a mill as a millwright. He offered his services, but on account of the valuable work he was doing in Scotland he was not allowed to go to France.

I understand that on account of his not serving in an actual theatre of war he is not entitled to a pension. Would the minister consider including in the eligible group those men with the forestry division who served in Great Britain, and could it be considered that they served in an actual theatre of war, and should be entitled to pension upon reaching the age of sixty years?

Mr. MACKENZIE (Vancouver Centre): That would involve an amendment to present legislation, and might very well be discussed in committee.

Mr. HAZEN: I realize it is difficult to make the provisions of the act cover fairly and equitably all deserving cases. I have in mind a case where I believe a hardship was suffered by a young man who enlisted. He enlisted in the medical corps, and after he had been there some months--

Mr. MACKENZIE (Vancouver Centre): In this war?

[Mr. I. A. Mackenzie.]

Mr. HAZEN: Yes. He took the medical examination and was accepted. After he had been there for some time he came to the conclusion that if he were going to be in the armed forces of Canada it was his duty to be in a fighting unit. Therefore he applied to be transferred to an infantry battalion. When he joined this battalion he had to undergo another examination, when it was discovered that he had a perforated eardrum. As a consequence he was discharged. He found himself without work because he could not take up his old line of employment. He was out on the street, as it were, without work. He tried to get employment in the income tax branch, but without success. It seems to me that the committee should keep cases of this kind in mind.

I would suggest also that there be closer cooperation between the Minister of Pensions and National Health and the chairman of the civil service commission. I am not familiar with the act and there may be some cooperation at the present time, but I think there should be more. As I understand the regulations, a man who has seen service overseas is given preference in his application for a civil service position. The time will come when there will be many returned men looking for employment and I was wondering whether it would not be possible to keep open a number of positions in the civil service so that they would be available to men who have volunteered their services.

Mr. MACKENZIE (Vancouver Centre): The chairman of the civil service commission is giving attention to that very point at the present time.

Mr. HAZEN: During the last session we were told that about 3,500 new civil servants would have to be taken on in Ottawa under the Unemployment Insurance Act. Might it not be possible to keep open many of these positions, not fill them permanently until these soldiers return from overseas?

The minister may know more about this particular matter than I do, but I have been told that during this winter the Lancaster military hospital near Saint John has been understaffed and overcrowded. I should like him to look into this complaint to see whether it is correct. The second part of the resolution states that it is expedient to make further changes and adjustments in the procedure and administration of the Pension Act. Would the minister give us some idea as to what these changes will be?

Mr. MACKENZIE (Vancouver Centre): They are minor routine changes. For instance, it is proposed to change the quorum of the

board from three to two, and there are about five or six minor changes, mostly in connection with routine matters.

Mr. MacINNIS: The debate on this resolution has been fairly wide in scope. From my experience with the pension board over a number of years, I feel that they do their best to administer the act as fairly as possible. When they do not accede to demands or requests, it is because they cannot go beyond the act. There are thousands of people in Canada who are not returned men, who did not serve in the armed forces but who find themselves to-day in the same position as many of those who did serve in the last war. The extent of economic need is the reason why we have such difficulty in dealing with veterans' problems. It is a wide economic question and we cannot deal with it through the Pension Act. It can be dealt with only by a social security act which would make provision for the economic needs of all affected. I do not want to take anything away from those who have served in the armed forces, but the man who is a casualty of industry should be provided for in a way similar to the means by which we provide for men who have served in the armed forces. We cannot deal with this question or with the disabilities that affect our returned men without improving general economic conditions. We must make the social conditions of the country better for those who have not served in the armed forces as well as for those who have. They must be made better for all the civilian population. When we start doing that, we shall be making a beginning of dealing with the problems of the returned men in a way that will be more satisfactory than that now followed.

Mrs. NIELSEN: I am glad to hear that there is a possibility that the committee will discuss the matter of widows of veterans. I have come in contact with numerous groups of these women, and it would appear that a great injustice has been done during the last few years. In many instances these women have had to go on relief, and they regard this as charity. They feel they have every reason in the world to expect the government to take care of them without their having to resort to charity. They feel they are entitled to a just reward for having willingly sent their husbands to serve during the last war.

There is another question I should like to put to the minister in connection with children of ex-service men. Suppose a man is receiving pension and dies, and then after a time his widow marries. Would the young children still be eligible for pension?

Mr. MACKENZIE (Vancouver Centre): Yes, but certain amendments are proposed to meet other situations affecting children.

Mrs. NIELSEN: That will be considered by the committee?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. O'NEILL: Mr. Chairman, I have listened with a great deal of interest this afternoon to the discussion which has taken place in connection with matters having to do with returned men. There is one matter which has not been called to the attention of the committee. I refer to dependents' allowances for men who volunteer to serve in the reserve army and who may become injured. These men report for duty, say on Tuesday and Friday nights, and with the streets in the slippery condition they are now in, it is quite possible for one of these men to fall and break a leg or an arm. As I understand the situation, the regulations at present provide that the man would receive hospitalization and his pay allowance. In an extreme case it is possible for a man to be laid up for as long as four months. If he is a married man with two or three small children, he would be entitled to only his pay allowance of $1.20 a day.

Provision should be made that, until such time as that man resumes his position in civil life, his dependents will be paid the same dependent's allowance as if he were on active service. A great many of the men in the reserve army are making less than $125 a month and it is impossible for them to have anything laid by to provide for a lay-off of three or four months. Some consideration should be given to that phase of the question. There would not be very many to look after, probably half a dozen in any one military district in the course of a year. Has the minister given any consideration to that matter?

Mr. MACKENZIE (Vancouver Centre): I shall be glad to see that it is brought before the committee.

Mr. MACDONALD (Halifax): Is it the intention under the proposed legislation to extend the benefits of the Pension Act to groups who are not serving in the armed forces, to the dependents of men, for example, who are serving in Canadian ships and who may lose their lives at sea, not necessarily through enemy action but in the carrying-out of their duties in essential war services? I understand that provision is made by order in council for the dependents of those who lose their

lives on Canadian ships through enemy action. They are taken care of under the Pension Act. I assume that one of the purposes of this legislation would be to deal with cases of that kind, and that the legislation itself will be retroactive. But I had in mind particularly cases of a little different kind, of men who have been injured and disabled or have lost their lives, while serving on ships doing necessary war work, but not necessarily through enemy action. In the port of Halifax a year ago the pilot boat *Hebridean* was sunk in a collision in the harbour, and a number of the crew and several pilots lost their lives in consequence of the collision. Under the law and orders in council that existed at that time no compensation or allowance could be or was given to any of the dependents of the pilots and members of the crew, and I was wondering whether the present legislation would take care of cases of that kind or whether it is a matter that could properly come before the special committee.

Mr. MACKENZIE (Vancouver Centre): The legislation as drafted does not cover the classification referred to by my hon. friend, but there is no reason why the committee should not give the matter every consideration.

Mr. MACDONALD (Halifax): It could be covered by the special committee?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. QUELCH: All returned men will welcome the fact that this committee is being appointed to deal with amendments to the Pension Act and the War Veterans' Allowance Act. I recall that in 1936 we had a thorough investigation into the Pension Act and we were continually running up against one main obstacle. The minister admitted quite freely that there were many problems which the soldiers had the right to expect us to deal with, but invariably when the question came up, the government did not have the money to deal adequately with the problem. In view, however, of the fact that to-day we are spending hundreds of millions of dollars compared with millions of dollars then, I hope that when these problems come before us, we shall not be met with the same response as then. I hope that we shall be prepared to deal with these problems on their merits. It will not be a question of generosity. The former leader of the opposition once said that we had been generous to the returned men. It is not a question of generosity. We have a debt, and until that debt is paid in full, there is no question of generosity. Therefore, when these problems come up, I hope we shall be prepared to deal with them on their merits and not be told that we have not the money to deal with them properly.

Mr. ROSS (Souris): I should like to ask the Minister of National Defence and the minister in charge of this legislation how the medical requirements for recruits for the reserve army compare with the requirements for the active service army. How does a pensioner from the last war in one of the lower categories build up his category so that he can eventually qualify for active service? Would the minister mind explaining, to begin with, the difference between the medical requirements in the active service forces and those in the reserve forces in Canada?

Mr. RALSTON: The category of the reserve forces can be "C". "B2" is the lowest category for the active service forces.

May I just before six o'clock supply a bit of information which I promised to the committee on a matter not directly concerned with the resolution but to which reference was made, and that was the discharge, on medical grounds, of a very large number from the active service forces. I had a lively recollection of the whole matter because I had to deal with it myself when a return came to me.

I want to say first that I did regard 10,000 discharges for medical unfitness out of the total number enlisted as being too large, and I am bound to say that I still regard it as too large. Having looked the matter over, I would say that the recruiting medical boards, particularly during the first six months of the war, did not categorize with the efficiency which we hoped for, and I say that quite frankly. There was too large a number of men found physically unfit following what was hoped to be a complete and effective medical examination by medical boards composed of three officers.

I think it must be remembered that nearly 200,000 in all were examined, and we are talking about the discharge of something like 10,000 after being accepted. Of those 10,000 more than 3,000 were discharged within the first three months, indicating that very soon their physical unfitness was discovered.

The reasons for it—and there are reasons which have been put before me—are, in the first place, that the medical boards were new at the start. They were not army medical men, but were civilian boards and they did not have the training in army requirements which was necessary.

Obviously, civilian medical personnel would be unfamiliar with the standard of army requirements. Second, wastage, that is to say,

physical unfitness, occurred among men who had not been in army service before, and a large percentage of whom were from urban centres. If one compares these figures with any permanent army figures generally, he will find that the latter have regard to personnel composed of more or less seasoned troops.

It must also be remembered that the figures of enlistment and the number of those discharged include the enlistment of twenty-nine companies of veterans home guards and eleven provost companies as well as numerous others which were included in the active army, but who might be in category "C1" and "C2," among whom the wastage was a good deal higher than under normal circumstances. It is asked what we are going to do. Some time ago we gave instructions for the establishment of schools for these medical boards and that men were not to be taken on the boards unless they showed themselves fully equipped and understood the army requirements.

Another thing was that the ad hoc boards, the boards set up just from time to time as necessary, were reduced in number as far as possible, and we now have standing medical boards which do nothing but examine these men and therefore can be expected to become expert at this work.

Another thing which has been done is that instructions have been given to the district medical officers that when any medical officer, be he civilian or be he army, is found lax in his examinations, his services are to be dispensed with. His examinations can be quickly checked at national defence headquarters, because arrangements have been made that all the documents come before the officer there, with even a photostat copy of what we call page 3 of the examination. A close check is being kept at headquarters, and instructions have gone out to district medical officers that they themselves must certify that the medical officers functioning in connection with recruiting have received a definite course with regard to army medical examinations and having to do with physical standards necessary in relation to the categorization of records.

I ask permission to put this on the record because the matter has been mentioned to-day, and it ought not to go abroad that medical examinations are being made carelessly.

One other point is with regard to the discharge of those who it was thought would become inefficient soldiers. There were about 5,000. Steps have been taken with regard to them. In the first place, the regulations have been changed so that the authority for the discharge of personnel rests now not with the commanding officer but with the district officer commanding, so that there will not be any chance of a commanding officer who simply does not like a chap, or just feels that he does not fit in with the fellows around him or is not as bright as others, allowing him to go as an inefficient soldier. He has to come before the district officer commanding.

Second, instructions have been issued that more care shall be taken in connection with the enlistment of personnel. We enlisted 40,000 in six weeks last June and July, and naturally there was a good deal of crowding in connection with these enlistments. The same care could not be exercised by recruiting officers. Instructions, however, have been issued to recruiting as well as medical officers to ensure a better inquiry into fitness and efficiency in connection with the enlistment of personnel.

Third, district officers commanding have been instructed not to discharge personnel for inefficiency until every effort to make soldiers of them has failed. In the past, too many discharges have taken place because commanding officers felt they knew a better man who could take their places and naturally they were anxious to have a pukka unit, one just a bit above the average.

Mr. GREEN: Will the minister give the figures of those discharged from the forces in the different categories?

Mr. RALSTON: The Minister of National Defence gave them. Discharged as medically unfit, I gave as between nine and ten thousand. The figure is 10,829.

Mr. GREEN: Does that include the air force and the navy?

Mr. RALSTON: No.

Mr. GREEN: What about them?

Mr. RALSTON: I have not those.

Mr. GREEN: Can the minister get them?

Mr. RALSTON: I am sure the Minister of National Defence for Air and the Minister of National Defence for Naval Services will have them. My coming into the discussion at all is irregular.

Mr. GREEN: We should have that figure too.

Mr. RALSTON: My colleague gave the figures for the army. Those discharged, medically unfit, 10,829; enlisted under age, 1,073; discharged for misconduct, 520. Then there are those discharged for a number of special reasons, the chief of which is, I think, returned to civilian employment. The number is 1,289. Those discharged as not likely to become efficient soldiers number 4,067; those who were appointed to commissions in

the forces and who enlisted in other forces, 331. The grand total is 18,109. The Minister of Pensions and National Health gave all those figures and classified them, showing the period of time they had been in the service before they were discharged. I said that nearly 3,400 had been in the service for less than ninety days—

Mr. GREEN: Can we get the figures for the air force and navy at eight o'clock?

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. MACKENZIE (Vancouver Centre): In reply to a question asked by the hon. member for Mackenzie before recess with regard to training courses, I have at present only partial information but will get some further information later on. I am informed by the Department of Labour that applications are received by principals of technical schools as representing the provincial governments. Requests for reports showing the number of returned soldiers accepted for training have been made to all provinces. Some provinces have not shown this fact in the reports received. A figure taken out by the youth training administration showed forty-two ex-soldiers among the 6,000 men now in training schools. This is known to be quite incomplete. The veterans' welfare division had one report from the Edmonton veterans' assistance committee that twelve men had been placed in courses.

The veterans' welfare division has instructed all districts and honorary committees to urge men of appropriate types to apply for courses, but has no returns to show the number applying and the number accepted.

Then the hon. member for Vancouver South asked a question with reference to those medically unfit. I gave those figures earlier in the afternoon. For the army the total number of applications for enlistment from September 1, 1939, to September 30, 1940, was 192,415, of whom 28,316 were rejected as permanently unfit and 7,949 rejected as temporarily unfit.

Mr. GREEN: That is, they were not taken into the army at all?

Mr. MACKENZIE (Vancouver Centre): That is right. The combined figures represent a rate of 188·47 per thousand, or 18·8 per cent. Subsequently to attestation 3,492 were rejected; that is up to June 1, 1940. This represented 1·2 per cent of the whole.

[Mr. Ralston.]

Mr. GREEN: By rejection, does the minister mean that they were discharged after they had been taken into the army?

Mr. MACKENZIE (Vancouver Centre): Yes, as medically unfit, this small number, 3,492.

The air force took twenty recruiting centres to get the percentage. From August 1 to September 30, 1940, the total examined was 21,311, of whom 5,244 were rejected, or 24·6 per cent.

With regard to the navy I gave some figures earlier in the day. Their figures are concerned with rejections after the men were enlisted. For the period September 1, 1939, to September 30, 1940, thirteen months, the total number discharged as medically unfit was 149, or 12·4 per thousand, of a total strength of 11,973.

I have here two or three tables which show the disabilities—

Mr. GREEN: Before the minister goes on to that, I asked for the number that had been discharged from the navy and the number discharged from the air force. Can he give those figures?

Mr. MACKENZIE (Vancouver Centre): I do not have them.

Mr. GREEN: Is it not possible to get those figures?

Mr. MACKENZIE (Vancouver Centre): Oh, yes, later on. I shall be glad to ask my colleague for them.

Then it might be of interest to show the various disabilities for which they were discharged.

Mr. HANSON (York-Sunbury): Before the minister goes into that, if he has not already done so would he be good enough to give the number discharged after having been taken to England?

Mr. MACKENZIE (Vancouver Centre): I gave those figures earlier in the afternoon. There were 909 altogether.

Mr. BROOKS: Up to what date?

Mr. MACKENZIE (Vancouver Centre): That was up until last week.

Mr. HANSON (York-Sunbury): That would be what—less than 2 per cent of those who went overseas?

Mr. MACKENZIE (Vancouver Centre): I should like to place these tables on *Hansard*.

Table "A"

C.A.S.F.

Applicants Rejected as Medically Unfit (Cat. "E") Before Attestation
(For period 1/9/39 to 30/9/40—13 months)

Diagnosis	Permanently unfit	Temporarily unfit	Total unfit	Rate per 1,000 of total strength
Digestive system	743	911	1,654	8·6
Tuberculosis	976	6	982	5·1
Ear conditions	2,873	333	3,206	16·66
Eye conditions	4,176	2,122	6,298	32·73
Respiratory system	1,006	122	1,128	5·87
Mental conditions	462	2	464	2·41
Feet conditions	841	116	957	4·97
Heart conditions	2,401	126	2,527	13·13
Injuries (old and new)	695	105	800	4·16
Hernia	1,100	1,244	2,344	12·18
Arthritis and rheumatism	598	20	618	3·21
All other conditions	12,445	2,842	15,287	79·45
Total	28,316	7,949	36,265	188·47

Total applications—192,415.

Table "B"

Air Force

Applicants Rejected at Recruiting Centres as Medically Unfit (Cat. "E") Before Attestation
(For period 1/8/40 to 30/9/40—2 months)

Reason for rejection	Fitness for flying or aircrew Permanently unfit	Temporarily unfit	Reason for rejection	Ground personnel Permanently unfit	Temporarily unfit
Poor previous history	37	11	Below minimum height.	43	6
Generally below physical requirements	61	114	Below minimum weight.	28	291
Underweight	7	195	Visual acuity less than 6/18	39	130
Blood pressure outside of standards set	54	217	Visual acuity less than 6/30	72	82
Cardio-vascular inefficiency	109	439	Visual acuity less than 6/60	71	35
Visual acuity less than 6/18	71	78	Other eye defects	19	13
Visual acuity less than 6/30	71	2	Defective colour vision.	21	3
Visual acuity less than 6/60	62	6	Hearing and other ear defects	110	52
Other eye defects	45	55	Cardio-vascular disease.	94	161
Defective colour vision.	247	31	Nervous system disease.	12	6
Defective hearing	34	12	Skin disease	4	18
Other ear diseases	39	34	Locomotor defects (varicoscities)	28	85

Dental	2	92			
Other causes	105	243			
Total	1,039	1,631	Total	773	1,394

Complete total..... 4,837

Mr. GREEN: Will that show how many have been discharged after enlistment in the air force or the navy?

Mr. MACKENZIE (Vancouver Centre): In the air force, yes.

Mr. MARSHALL: I think a great problem which confronts this government at the present time is the rehabilitation of those men, discharged from the army, who have not yet been absorbed into employment. This problem was engaging the attention of the government as far back as November of last year. According to order in council P.C. 4068½, dated December 8, 1939, there was constituted a special committee of the cabinet whose object was to

give full consideration to and report upon problems which will arise from the demobilization and discharge of members of the forces from time to time during and after the conclusion of the present war, and their rehabilitation into civil life. The problem was a serious one in November of last year, and is becoming more serious as time goes on. A special advisory committee which was set up by the cabinet recommended that a division be created to be known as the veterans' welfare division, the functions of which should be to advise and assist former members of the forces in matters pertaining to reestablishment in civil life, and to perform such other duties as might be prescribed by the Minister of Pensions and National Health relating to the welfare of such former members of the forces. These were the duties which devolved upon the veterans' welfare division:

1. To establish subdivisions at such points throughout Canada at which the Department of Pensions and National Health maintains offices and/or where the establishment of such subdivisions is deemed to be advisable;
2. To interview, advise and assist former members of the forces;
3. To become conversant with all the regulations relating to pensions, allowances, medical treatment—

I need not list all these various duties. The fact remains that they are so vague as to be of no real value, and consequently this problem of the rehabilitation of the ex-service man is not being given the attention it deserves.

I am suggesting that the problem can be dealt with in two ways. There is the long view of the problem and then there is the short view, or what should be done immediately. I should like to have the reaction of the minister to some recommendations appearing on pages 62 and 63 of the report of the veterans' assistance commission of 1937. On page 62 I find this paragraph:

There is a general feeling throughout the country that unemployed war veterans should be accepted as the responsibility of the dominion government. Particularly is this view prevalent amongst provincial and municipal authorities, and among responsible veteran organizations who have to deal with the class of veteran included in this report.

During the recruiting period in Canada many war-time promises were made to the troops by men in public life, no doubt in all sincerity at the time, but it would not be correct to say that all of the promises had been fulfilled.

While I agree that this refers more particularly to the men who were demobilized after the war of 1914-18, it can also be applied to the situation which presents itself at the present time. Then at page 63 of this report I find this very fine recommendation:

After giving the matter considerable thought and bearing in mind the representation made by organizations throughout the country, by honorary local committees, and information obtained from various sources, the commission has come to the conclusion that it can do no less than recommend that the dominion government accept responsibility for all indigent unemployed veterans who were domiciled in Canada at date of enlistment and who saw service in a theatre of actual war.

In this recommendation the commission suggests that these be dealt with in two groups:

1. The War Veterans' Allowance Act to be amended to take in a larger number who can prove unfitness, et cetera;

I do hope that when the committee comes to discuss the War Veterans' Allowance Act due consideration will be given to this recommendation.

Mr. MACKENZIE (Vancouver Centre): That has been carried out to a certain extent since the report was written.

Mr. MARSHALL: Yes; but the second recommendation to which I now come is the one to which I have particular reference:

2. The remaining number to be taken care of while unemployed by the payment of an allowance to be known as provisional economic allowance.

The minister would not for a moment suggest that this recommendation has been carried out. It was endorsed by the Canadian Legion at one of its annual conventions only a couple of years ago, but thus far no steps have been taken to implement it. To me it is the most important recommendation of all. It goes on:

The basic rate of the provisional economic allowance to be:
Single men, $18.75 per month;
Man and wife, $30 per month.

That is a long range view of the problem, but what should we do with regard to these men at the present time or until this committee meets and brings in definite recommendations? There came to my desk this week a recommendation which I believe is the best I have heard or read thus far. I pass it on to the minister for his consideration, as a method of dealing immediately with the problem of caring for the unemployed discharged men of this war.

I would suggest that each military district set up immediately (and this can be done by telegram in twenty-four hours) a special service company into which would be transferred all men in the category of those being discharged to-day, to remain on strength for some disposition (medical treatment, pension, vocational

training) or to be placed in a lower category where they could be used for military non-combatant service. This set-up would relieve the pressure for the moment and the committee could then deal with future problems at their leisure—

To me that is a constructive suggestion, and I earnestly commend it to the attention of the minister because there is an emergency at the moment. The municipalities, both urban and rural, are not able to cope with the situation as well as they would like on account of these men being returned to the municipalities without any possible means of support. Therefore I would ask the minister if these matters are being considered by his department at the present time and if he intends to take any action in connection therewith.

Mr. MACKENZIE (Vancouver Centre): I can assure my hon. friend that every single problem he has mentioned is being fully considered and discussed by one or more of these sub-committees at the present time, and I trust a full description of their activities will be given before a special committee of this house within the next week or two.

Mr. CASTLEDEN: I notice that the resolution extends the benefits of this act to certain persons serving in the forces of the United Kingdom. Whom has the minister in mind in that regard? Are there any particular persons or groups? And would he enumerate those included?

Mr. MACKENZIE (Vancouver Centre): That again was discussed this afternoon. It applies to all Canadians serving with the imperial forces who were domiciled in Canada at the time of the outbreak of the present war.

Mr. CASTLEDEN: The resolution also refers to dependents. I believe our experience with the Pension Act in the past would lead to the conclusion that one group of dependents has been seriously neglected. I am referring to the widows of war veterans of the last war. It seems to me that unless some change is made in this regard, the whole thing will be largely an empty gesture. A large part of the suffering it should alleviate will have been neglected. I hope, when the bill deals with the matter, those people will not be forgotten. If it is possible to change existing legislation so as to bring in those who are suffering because they have been excluded from pension schemes of the past, I trust those changes will be made.

Mr. HOMUTH: Is there any intention of amending our Pension Act so as to take care of imperial pensioners who are domiciled in Canada, or whose people are domiciled here? A great many imperial pensioners are living in this country. It is most difficult to get any action from the imperial pension board. The application must come to Ottawa, and then must go forward to London. In my constituency there are some of these men who, in my opinion, have been unfairly treated. Their cases are, however, very difficult to handle. Surely there ought to be some way of setting up a joint board which might act in circumstances of this kind. We are in this war; we are partners with Great Britain in this war.

Many of our boys who, before the war, went overseas on cattle boats and lumber boats enlisted in the Royal Air Force on the outbreak of war. They have built up a fine name for themselves, and incidentally for Canada, because they are looked upon as Canadians. I wonder whether something could not be done to coordinate the work of the imperial and the Canadian pension boards, so that consideration might be given to those men, upon their return to Canada, better than was given to those who returned after the last war. Our standard of living is higher; our living costs are higher, and wages are higher. I believe something should be done to work out a scheme between the two countries whereby these men, upon their return, may be a little better off than they would be were they to receive only a pension from the old country.

Mr. MACKENZIE (Vancouver Centre): The question raised by the hon. member was raised this afternoon. I said at that time the committee would be glad indeed to discuss the whole situation with reference to imperial soldiers. Of course my hon. friend knows, if there is to be a coordinated arrangement there must be consent of both British and Canadian governments.

Resolution reported, read the second time and concurred in. Mr. Mackenzie (Vancouver Centre) thereupon moved for leave to introduce Bill No. 17, to amend the Pension Act.

Motion agreed to and bill read the first time.

Mr. SPEAKER: Mr. Mackenzie (Vancouver Centre) moves that the said bill be now read the second time.

Mr. HANSON (York-Sunbury): No, no; just a minute; not so fast. No one has asked for that.

Mr. MACKENZIE (Vancouver Centre): Next sitting.

Mr. SPEAKER: Next sitting of the house.

Mr. HANSON (York-Sunbury): Have a little care. This is not the last session, you know.

Mr. LAPOINTE (Quebec East): Seeing that the bill is going to be considered by a special committee, it would be just as well to send it to the committee right away.

Mr. HOMUTH: It is nice to see the child before it is given too much light.

Mr. HANSON (York-Sunbury): The bill has not yet been distributed.

DEFENCE OF CANADA

APPOINTMENT OF SPECIAL COMMITTEE TO CONSIDER AND REVIEW REGULATIONS AND NATURALIZATION AND DEPORTATION LAWS

The house resumed from Thursday, February 27, consideration of the motion of Mr. Mackenzie King for the appointment of a committee to consider and review the defence of Canada regulations passed under the War Measures Act, and the naturalization and deportation laws.

Mr. H. C. GREEN (Vancouver South): The resolution now before the house provides for the appointment of a special committee to consider and to review once more the defence of Canada regulations. It also provides for the consideration and review of the law relating to naturalization and to deportation. This evening I intend to confine my remarks to the two last-mentioned subjects, namely, naturalization and deportation.

Last year, too, a special committee was appointed, but it was empowered to deal only with the defence of Canada regulations. May I say, before I proceed further, that I believe every member who served on the committee thoroughly enjoyed the work. It was carried on in a non-partisan way, and, I believe, the committee accomplished good results. All the members came out of the committee very good friends.

In considering the defence of Canada regulations, time and again we encountered questions concerning deportation and naturalization. That is shown by the report brought to the house, a portion of which reads:

> Consideration of the defence of Canada regulations relating to enemy aliens raised certain questions which affect the operation of the Naturalization Act and the Immigration Act relating to the naturalization and deportation of aliens.

For example, the provisions of our Immigration Act are such that if the war were to end next week we would have no power under that act to deport a person who had been an enemy alien; no power to deport such a person even if he were a sworn member of the nazi or the fascist party and planted in Canada for the purpose of acting as a Canadian Quisling, provided he had been in Canada for a period of five years. The reason is that under our Immigration Act he would be considered to have acquired Canadian domicile when he had been in the country for that length of time.

A senior officer of the immigration branch who appeared before the committee admitted this fact, and went on to tell us that at the time of the last war special provisions were made whereby enemies within Canada might be dealt with at the conclusion of the war. He recommended that some such provision be brought into effect at the present time, and I believe every member of the committee agreed that this would be the proper course to pursue. The situation is obviously unsatisfactory, and in the end, last year's committee recommended that the subject of deportation should be considered by another special committee to be set up in 1941. The resolution now under consideration in my opinion quite properly gives the proposed committee power to consider that subject.

Similarly, the question of naturalization arose in several ways. For example, evidence was given to the committee that enemy aliens had been naturalized in Canada after the outbreak of the war, and had actually received certificates of naturalization, despite the fact that war had broken out between their country and our own.

Then there were cases where certificates of naturalization had been withheld by the Secretary of State but the enemy aliens had been allowed to file applications for naturalization and appear in our naturalization courts to have these applications approved by the naturalization judges. The Canadian public became greatly disturbed over the appearance of enemy aliens in the naturalization courts, believing that this meant that they were to get naturalization certificates. Eventually the senior officer of the Department of the Secretary of State was called before the committee, and from him we learned of what had happened with regard to the naturalization of enemy aliens after the outbreak of the war. Apparently, when the war first broke out, some naturalization judges refused to hear applications for naturalization and some naturalization clerks refused to accept applications. On October 11, 1939, about five weeks after Canada declared war, an order in council was passed which contained this provision:

> . . . that applications for naturalization filed by enemy aliens should be received and con-

sidered in accordance with the regular practice prescribed by the Naturalization Act and that the fact that the applicant may be an enemy alien is not in itself to be regarded as a reason why the application should not be entertained, since all applications from enemy aliens will be specially and carefully considered in the Department of the Secretary of State before the issue of a certificate will be sanctioned.

I think that was before the government and perhaps the people of Canada realized the type of war we were facing. At that time Canada was unaware of the menace of the fifth column. Subsequently came the blitzkrieg. On July 15, 1940, the Secretary of State (Mr. Casgrain) explained the situation in these words, to be found at page 1643 of *Hansard* of that year:

When I assumed my present office on May 10, the invasion of the Netherlands and Belgium had just taken place. The reports which reached us as to the conduct of the so-called fifth column in these countries led me immediately to make a study of the situation in Canada in relation to naturalization.

He went on to say:

I felt it my duty to direct that, for the time being at least, no further certificates of naturalization should be issued to applicants of enemy origin.

In other words, on May 10, there was adopted the policy of withholding naturalization certificates, although applications for naturalization were still being heard. The members of the committee which sat last year felt that this action was creating considerable misapprehension across Canada, and apparently the officials of the Department of the Secretary of State agreed with us. The department drew up the recommendation in that regard, which will be found in the report of the committee to this house. This report reads:

It is of the opinion that considerable misapprehension has been occasioned by the fact that, although in recent months certificates of naturalization have not been issued by the Secretary of State to aliens of enemy origin, there is no provision which prevents the hearing before the courts of applications from applicants who are of enemy origin.

The report went on to recommend that there should be no further hearings of applications for naturalization by enemy aliens except in cases specifically authorized by the Secretary of State. I find now, however, that this recommendation has not been followed; apparently it has been ignored entirely although, when we left here last August, we understood that all the recommendations of the special committee which sat last year were to be adopted and carried out. Further, it was agreed by officers of the Department of the Secretary of State and by all the members of the committee that our naturalization procedure was inadequate and should be revised. We recommended that there should be greater solemnity in connection with naturalization hearings.

Mr. HANSON (Skeena): With regard to naturalization, was not the recommendation of the committee which sat last year that the Secretary of State should deal with each individual application on its merits and issue certificates to those who were entitled to get them?

Mr. GREEN: The complaint of the committee was that applications by enemy aliens were being heard in the naturalization courts. This really did not mean anything, because naturalization certificates were not actually being issued by the Secretary of State, but we felt that for the peace of mind of the Canadian people, instructions should be sent out to the naturalization courts that no further hearings be held of applications by enemy aliens except where the Secretary of State recommended that a hearing be held. Does my hon. friend understand that?

Mr. HANSON (Skeena): Applications by Italian and Japanese subjects should be dealt with on their merits.

Mr. GREEN: This recommendation applied only to Germans and Italians. I was just about to quote the recommendation which was made in connection with naturalization procedure. It was as follows:

That measures should be taken to invest the important step of naturalization with greater solemnity and to impress upon those who apply for the privilege the importance of the obligations which they assume as British subjects.

In addition to making that recommendation, we felt that on the broader ground of national policy the whole question of naturalization was well worthy of consideration by a special committee. We recommended accordingly and the government has seen fit to accept that recommendation. I think it will be admitted by everyone in this chamber that our method of naturalization is far from being the best that could be devised. I believe everyone will admit also that the parliament of Canada has given the subject of naturalization scant consideration in recent years. I know all members will admit that naturalization is and will always be of the greatest importance to Canada because so many of our people have become Canadian citizens and British subjects by way of the naturalization courts. Some of our best citizens and, indeed, some of the leading members of this house are naturalized Canadians. The 1931 census showed that at that time there were in Canada 614,971 naturalized Canadians

Mr. HANSON (Skeena): Including myself.

Mr. GREEN: Yes, and the hon. member is an ornament to this House of Commons. I have great respect for the hon. member for Skeena. He is a good Canadian and I think he deserves great credit.

The census of 1931 shows that we had 507,724 aliens resident in Canada, making a total of more than 1,000,000 foreign-born residents in Canada, the exact figures being 1,122,695. Each year the number is increased. The Canada Year Book for 1940 shows, at page 1070, that in the fiscal year 1938 we acquired by naturalization 27,455 new Canadian citizens, and in the fiscal year 1939, 21,418. As I have said, naturalization is of the greatest importance to Canada.

I think every member of the house will admit that by our methods of naturalization we set for the applicant our standard of citizenship. If our standard is low—I repeat that—if our standard of citizenship is low—and I suggest that judged in this way it is low—how can we expect the applicant for naturalization to place a high value on Canadian citizenship?

I am convinced that there are different ways in which our naturalization methods in Canada could be improved, and I propose to suggest several ways for the consideration of the committee which is to be set up this year. Of course, I do not pretend that these are all the ways or the best ways, but I think they are worthy of consideration.

My first suggestion is that the Canadian government should provide for naturalization schools and for naturalization textbooks. This would have to be done in collaboration with the provincial governments, and I think it could be done if the federal government made up its mind that such a step was necessary. If it were done, applicants for naturalization could learn something of the history of Canada, something of our institutions, something of the ideals of the Canadian people. Let us make such knowledge the basis for granting citizenship in this nation of Canada. At the present time all the knowledge that an applicant must have is an adequate knowledge of English or French, and that provision is interpreted in such a way that he does not even need to be able to read either English or French. All he has to do, according to the memorandum issued by the department, is to be able to make himself understood in either language. That is our present standard of citizenship in this country.

Next I suggest that naturalization judges should be given wider powers. At present they can ask only perfunctory questions. Everyone practising law will admit, I think, that the naturalization courts are really naturalization mills. Applicants are crowded in and go through in a jam. There is not the slightest possible chance given to a judge to get down to the real merits of whether or not an applicant is entitled to our citizenship. Give to these judges across Canada, who, after all, are the best people to decide the question, power to question the applicant thoroughly. Make arrangements so that the evidence taken can be kept on record. It is not even kept on record at the present time. Let the judges have a copy, in advance of the hearing, of the confidential report of the Royal Canadian Mounted Police.

As a third suggestion, should we not provide for a more definite declaration of the intention of the applicant for naturalization? Let us investigate most carefully the question whether he has a dual loyalty, whether he is going to be not only a citizen of Canada but also a citizen of some other nation. In other words, is he giving up his former nationality when he assumes our nationality? In some of the provinces, in my own province of British Columbia certainly, that is a most important question.

Another suggestion I would make is that we have a dignified ceremony before a judge when the oath of allegiance is taken by the applicant. After he has been approved by the judge and after his application has been approved by the Secretary of State, let us have a dignified ceremony before a judge in the community in which the applicant resides and in the presence of the leading citizens of that community. Let the oath of allegiance be taken under such conditions, and let the naturalization certificate be presented to the applicant at that ceremony.

How do we carry out the procedure at present? We could not do it more in mail-order fashion than we do at the present time. The Department of the Secretary of State sends a blank oath of allegiance form to the applicant after he has been approved for citizenship. The applicant then goes to the nearest notary public, commissioner or justice of the peace, writes out the oath of allegiance, signs it and swears to it before the official, and sends it back to Ottawa. Then, by post also, he gets his naturalization certificate, which is his admission to citizenship in Canada and to citizenship in the British empire. I suggest that this is a most out-of-date method of doing things.

Mr. HANSON (Skeena): If my hon. friend will allow me, before the Secretary of State

sends out to the applicant the oath of allegiance form, the Royal Canadian Mounted Police make an investigation of the fitness of the applicant to become a Canadian citizen.

Mr. GREEN: I realize that there is an investigation by the Royal Canadian Mounted Police, but even in that connection there is this further defect, that the judge before whom the applicant appears never knows the finding of the Royal Canadian Mounted Police. No provision is made for passing their report on to him.

If the suggestions I have made or some such methods are adopted, I am convinced that applicants for naturalization will place a far higher value on Canadian citizenship; so will the Canadian-born people, and so will the members of this house. We too would learn more of the history and of the institutions and ideals of our country. We would think more of just what Canadian citizenship means. But, most important of all, those of us who are already Canadian citizens would take far more interest in the applicants for naturalization—and that is where the people of Canada have fallen down.

I was very much impressed to read in the last issue of *Saturday Night* an article entitled "New Canadians and Democracy". It referred to a speech made in the Saskatchewan legislature by one of its members of Ukrainian birth, Mr. Orest Zerebko. Among the things he said in that house last year was this.

> Loyalty is begotten in the way you treat us, in the way you say "hello" and shake hands on the street.

Another clipping which I cut out of the Ottawa *Citizen* of June 9, 1938, reported a gathering of new Canadians in Montreal. The occasion was Canadian Allegiance day, when new Canadians previously of other nationalities gathered together; the president of that gathering asked Canadians to be more understanding and to pay more attention to the new Canadians. The report went on to say:

> He urged Canadians to extend a "hand of friendship" to "those who simply want the opportunity of making an honest living and to raise their children in a peaceful atmosphere that they might have faith and respect in Canada's future."

We need the help, we need the friendship of these new Canadians at the present time as we have never needed it before. Let us see what steps we can take to get that help and friendship.

I believe that the government could interest many of the clubs across Canada in this subject. It could interest the service clubs. It could interest the Canadian clubs, because I know that the Canadian clubs of British Columbia have already submitted resolutions for consideration by the special committee which is to be set up to-night; the whole subject of naturalization and of the working out of new methods in respect thereto would appeal to clubs of this type. We could get the greatest help from them. I suggest that the government make an attempt to get that help.

Let me say this in conclusion. The war has focused the attention of the Canadian parliament and of the Canadian people on many aspects of our national life which before were rarely considered. One of these is Canadian citizenship, which includes the question of naturalization. Our people are on the lookout as never before for ways of improving our national life. We in the House of Commons have, therefore, an unusual opportunity to improve our laws and our methods. We have an unusual opportunity to chart new courses for Canada on this and many other subjects. If we approach this question of naturalization in such a spirit, if we have the foresight and the courage to make the necessary changes, I am sure that we shall thereby greatly strengthen the Canadian nation.

Hon. PIERRE FRANÇOIS CASGRAIN (Secretary of State): At the present time I shall confine my remarks to the question of naturalization. My hon. friend who has just resumed his seat (Mr. Green) made reference to certain applications for naturalization which had been granted after the outbreak of war to persons of enemy alien extraction. If such persons were naturalized after the outbreak of war, the explanation must lie in the fact that applications for such naturalization were made prior to the declaration of war, and in due course, the applications having been examined by the judges, the reports would be submitted to the department and the certificates handed out.

Since I took office I have confined myself exclusively to the application of the law as it stands. As has been quoted from the debate that took place last year, on July 15, as reported at page 1643 of *Hansard*, I stated on that occasion exactly what the policy of the department had been since my assumption of office on May 10, and since that time this policy has been adhered to quite strictly.

As regards applications which are filed before the courts and which in the opinion of certain people should not be granted at the present time, I think the law will have to be amended if we are to cope with the situation. As the law stands now, any one has a right to make application before a court. The application is considered by the judge and persons appear before the court and testify to the qualifications of applicants to become Canadian citi-

zens. If the judge finds all the requirements complied with, everything in order, the report is sent to the Secretary of State; and according to the terms of the act, section 4, subsection 3, it is within the power of the Secretary of State either to grant or to refuse a certificate of naturalization. The law reads:

> The grant of a certificate of naturalization to any such alien shall be in the absolute discretion of the minister, and he may, with or without assigning any reason, give or withhold the certificate as he thinks most conducive to the public good, and no appeal shall lie from his decision.

I may point out that after the report of the judge is received, even if there is a recommendation for consideration by the minister, an investigation can be carried out under the auspices of the Royal Canadian Mounted Police. Whenever such investigations are held, the reports are submitted to the department, and on the basis of those reports it is decided either to withhold or to grant the certificate.

With regard to the recommendations made last year by the committee which inquired into the defence of Canada regulations, it would have been necessary, had we decided to put them into force at once, to make certain amendments to the law. Take, for example, the recommendation that the Secretary of State be empowered to notify clerks of courts and judges that certain cases should not be proceeded with. That would have necessitated an amendment. As regards the other recommendation, that in special cases the Secretary of State should be empowered to impose conditions requiring advertisement of the application in the newspapers, here again an amendment to the law would have been necessary.

As regards solemnity in the granting of certificates of naturalization, so far as I am concerned I am of opinion that possibly later on, when the law is being amended—and this will be done only after the committee has considered the whole subject—the question might be considered of investing the procedure with more solemnity in order to impress new citizens with the obligations they assume on becoming Canadians. I give this as my personal opinion.

All these questions, however, would have involved amendments to the law, and the reason why no amendment was made at the time was that as soon as the committee had concluded its sittings, towards the end of the session, an interdepartmental committee was formed comprising the under-secretary of state, officials of the naturalization branch, and officials of the departments of external affairs and justice. This committee has had a few sittings and has considered the recommendations of the parliamentary committee. In fact, in the report of the parliamentary committee at the last session, it was recommended that a special committee be appointed "at the next session" to consider and review the law relating to naturalization; and it was thought advisable at the time to wait until this session, when a new committee would be set up, as in fact one is being set up now for review of the regulations with respect to the defence of Canada, to have the whole matter fully discussed by members of all parties and without party politics. It was felt that this would enable us to ascertain the prevailing opinion in the country and to determine exactly what is needed for the proper amendment of the law so as to make it a really Canadian enactment.

Another question must be considered. In all these matters, whenever it is necessary to amend an important law such as naturalization, we should not lose sight of the fact that there is a similar law in the United Kingdom, and we might consider the advisability of bringing our own enactment into conformity with the law there. All this takes time; at the present session a committee will investigate the whole subject, and we shall be able then to proceed with such amendments as may be necessary to make our law more useful to the country and more Canadian in itself.

This resolution should pass as quickly as possible and we should set to work and amend the law as necessary in the interests of all the people of Canada.

Mr. T. C. DOUGLAS (Weyburn): This is the first opportunity most hon. members have had of saying a few words about the defence of Canada regulations. I for one am very glad that a special committee of the house is going to have them under consideration during this session.

I begin by saying most categorically that I am opposed to these regulations in their present form. I am also opposed to the manner in which they have been administered.

Mr. HANSON (Skeena): For what reason?

Mr. DOUGLAS (Weyburn): That is just what I am going to speak about if the hon. member will be patient.

The other day, speaking on this resolution, the Minister of Justice (Mr. Lapointe) asked the question: "Are regulations necessary?" I begin by answering that question in the affirmative; regulations most certainly are necessary. Anyone who has made even a small study of the nazi system of infiltration and what is commonly known as the fifth column knows that a country at war with

the nazi and fascist powers must take every necessary step to prevent itself from being honeycombed by those inside who would cause our people to lose faith in themselves and in one another and in our democratic way of life. We in this group have never at any time objected to there being defence of Canada regulations. The Minister of Justice knows that quite well. What we have objected to is, first, that the procedure set out for taking steps against persons who are enemies of the state is not such as to safeguard and protect the civil liberties of our people; and, second, that these regulations are so vague in their terminology as to make it possible, as I think I can show, for discrimination to be shown against innocent persons.

The minister made an impassioned speech the other day. He said that he was only doing his duty and that as long as he holds the position he now holds he would do his duty according to the regulations given to him by parliament. I suggest that parliament has never had an opportunity to review those regulations. It is true that a small committee of parliament went over them last year and made some recommendations as to changes, but even that report was not a unanimous one, and parliament itself did not pass those regulations and has had no suitable opportunity to discuss them or place them on the statute books as representing the opinion of the people of Canada in general.

Our objection is not to the regulations but to the fact that the procedure is not clearly outlined and that there are loopholes so that the people are not properly safeguarded. Those regulations lend themselves to being used, and have been used sometimes, to repress criticism, to put out of the way people who perhaps were a nuisance to someone, and to take steps against people who perhaps were not popular in certain quarters.

I enjoyed the speech made by the minister the other evening on the appropriation bill. He gave three reasons why this country was fighting; I think every hon. member agreed with him. The first was individual freedom; the second, freedom of national groups to develop their culture and traditions, and the third, that we were fighting for the liberty of Christian faith. May I, however, suggest to the Minister of Justice that we are in danger of undermining some of these things right here in Canada. We cannot defend those things abroad unless we exercise eternal vigilance in preserving them at home.

Take the first, the freedom of the individual. Under these regulations we have taken from the private citizen of Canada something that has come to him or her down through the centuries under British institutions, namely, the right of habeas corpus. We have taken from individuals the right to know why they are being detained; we have taken away the right of a newspaper to know why it is suppressed, the right of an organization to know why it has been declared illegal and banned. Even in Great Britain, where they were much closer to the vortex of the war last summer than we, where the danger from the large number of refugees who had filtered in from the European continent was much more real, they have not gone as far as we have in taking away the right of habeas corpus. May I read part of regulation 21 and compare it with the analogous British regulation:

> 21. (1) The Minister of Justice, if satisfied that with a view to preventing any particular person from acting in any manner prejudicial to the public safety or the safety of the state it is necessary so to do, may notwithstanding anything in these regulations make an order—
>
> (c) directing that he be detained in such place and under such conditions as the Minister of Justice may from time to time determine.

The British regulation corresponding to that is No. 18B. This is a regulation which the British parliament insisted upon. Although they had had a regulation similar to the one we have, they would not stand for it. Their regulation reads:

> 18B. (1) If the Secretary of State has reasonable cause to believe any person to be of hostile origin or association or to have been recently concerned in acts prejudicial to the public safety or the defence of the realm or in the preparation or instigation of such acts and that by reason thereof it is necessary to exercise control over him, he may make an order against that person directing that he be detained.

In other words, they have there a regulation by which those ordering a man's detention must show cause why he is detained, and he must have done something, recently, prejudicial to the state or must be of alien origin or association.

This is a most serious matter. I do not know to what extent the Minister of Justice is familiar with just how this is applied in some parts of the country, but on November 28 last, I drew the attention of this house to the case of a man named Florian Stephan of Regina. Since it is on *Hansard* I shall not go back over the case in detail, but there have been some developments since. This man was a member of the executive of the relief recipients' organization. The relief committee of the Regina city council offered to meet the executive of the relief recipients. They met in a room, just a committee from the council and a committee from the relief recipients and a couple of representatives from

the provincial government. The relief recipients stated their case and their grievances. There is already on record, I placed it there, the verbatim report of what this man Stephan said. I pick out the only sentence to which the crown objected and on which the whole case was predicated. He said:

I know, and everybody knows, that since this war we—

Meaning the common people, the relief recipients.

—have been pinched, and millions made by certain people in the war.

On the basis of that statement two members of the Regina city council made a charge against this man under the defence of Canada regulations; he was arrested, thrown into gaol, finger-printed, tried, found guilty and fined.

Mr. DUPUIS: Good.

Mr. DOUGLAS (Weyburn): My hon. friend says "good". Of course that is exactly the type of mentality which gave Hitler his support in Germany.

Mr. DUPUIS: The hon. member would not talk that way if Hitler were here.

Mr. DOUGLAS (Weyburn): No, but I am prepared to talk that way to anyone here; I shall be prepared to go and talk to Hitler as soon as I get a chance, and I hope my hon. friend will be with me.

This man's case was appealed. I read very carefully the evidence presented at that appeal. In summing up, the judge could not find a single statement of a subversive character made by the man; he could not find anything that had been said which might be calculated to cause disaffection. But he dismissed the appeal and left the charge against this man because, he said, "It has been known for some time that he is an agitator." An agitator! This man is convicted because somebody says he is an agitator, without a shred of proof or of evidence. If that is to be true, any person can be branded by merely labelling him an agitator. I remember that in the last war certain people called the Minister of Justice an agitator, but no one suggested that he should be arrested and put in a concentration camp. Any person in this house might be labelled an agitator by some opponent or any one who had reason to disagree with him. If we allow a man to be convicted merely because someone has labelled him an agitator, then we have started along a very serious path in the Dominion of Canada.

The other day the hon. member for Rosetown-Biggar (Mr. Coldwell) raised the question of a newspaper, the *Canadian Tribune*. I understand that this paper was suppressed, and that when the editor made application to learn why it had been suppressed, what particular thing it had said to which objection was taken, there was no answer. He was not allowed to learn why it had been suppressed; it was just suppressed. I do not agree with the *Canadian Tribune*. Its last issue contained a most scurrilous and false editorial against the group with which I am associated; but I agree with Voltaire, who said, "I disagree most heartily with what you say, but I will fight for your right to say it." I submit that no regulations and no minister of the crown shall have the right to incarcerate an individual or to suppress a newspaper without showing cause why that step should be taken.

I noticed that in his eloquent speech the other day, the Minister of Justice did not reply to some of the questions asked by the hon. member for Rosetown-Biggar. One question, for instance, was why the pamphlet containing speeches by the hon. member for North Battleford (Mrs. Nielsen) had been seized by the mounted police; and our acting leader read a receipt given by the mounted police for the pamphlets that had been seized.

Mr. DUPUIS: The hon. member for North Battleford is able to defend herself.

Mr. DOUGLAS (Weyburn): I am not defending the hon. member for North Battleford; she certainly does not need it. I am dealing with an infringement of the civil liberties of the people of Canada, particularly with reference to a member of this house; and as yet no explanation has been given by any minister of the crown as to why these pamphlets were seized. Probably every member of this house has seen one of these pamphlets.

Mr. CRUICKSHANK: It was so terrible!

Mr. DOUGLAS (Weyburn): When the hon. member for Fraser Valley (Mr. Cruickshank) can produce a better one, I shall be glad to see it.

Mr. CRUICKSHANK: I will when the hon. member has finished.

Some hon. MEMBERS: Oh, oh.

Mr. DOUGLAS (Weyburn): It is no laughing matter, Mr. Speaker, when a home can be raided and a pamphlet containing speeches, all of which can be found in the records of the Canadian House of Commons, are seized as though it were some piece of vile or salacious literature. Surely this house has a right to some sort of explanation, but so far none has been forthcoming.

Mr. MACDONALD (Kingston City): I should like to ask the hon. member if he is

endeavouring to argue that because a thing may be said in this house, with all the privileges that attach to parliamentary statements, the same thing may be repeated outside this house with the same privileges.

Mr. DOUGLAS (Weyburn): The minister knows perfectly well that is not what I was arguing; but every speech contained in this pamphlet was delivered in this house, and neither the minister who just spoke nor any other hon. member opposite took particular exception to them. If in this house anything was said that was so subversive that some person's house had to be raided in order to procure copies of it, certainly some objection would have been advanced in this house by the government, but no objection was raised. Nothing was said; yet the police break into somebody's house to collect these harmless pamphlets. One may not agree with what is in them, but certainly some reason should be given for their seizure.

The Minister of Justice says we are fighting for the freedom of the individual. We are; but most certainly we have no right to ask individuals in Canada to give up those liberties which have come down to them through the centuries, some of which most certainly are being infringed upon at the present time under the administration of these regulations.

The second thing for which the Minister of Justice said we were fighting was the freedom of national groups to develop their culture and traditions. That is true. Those hon. members who had the privilege of seeing the two or three motion pictures put out by the national film board last Thursday, must have been impressed by the picture called "The People of Canada," showing as it did the different racial groups which have come from all parts of the world to make up the Canadian people. They must have been impressed by the fact that these heterogeneous groups have been welded together by two things—freedom and tolerance. That is what we want in Canada; yet I would point out that we have denied to some of these groups the very thing for which the minister says we are fighting, the right to develop their culture and traditions. I refer, for instance, to the Ukrainian labour group. There may be among the Ukrainian labour group unpatriotic leadership of which I do not know; there may be some men or women in that organization who are not acting in the best interests of Canada, and if there are such persons they should be dealt with. But I am familiar with a great many branches of the Ukrainian labour organization, which constitutes for the Ukrainian people a cultural home, a place where they meet together in order to keep alive their culture, their language and their traditions. I submit that we are not helping the cause of Canada by declaring that to be an illegal organization.

The third thing for which the minister said this country was engaged in war was the liberty of Christian faith, and surely we will all agree with him there. But the liberty of what Christian faith? I took it to mean the right for the minister to worship his Creator the way he thinks fit and best; and my right to do the same in the way I think right and best. But in this Dominion of Canada, almost before the war was on its way, we declared to be an illegal organization a sect known as Jehovah's Witnesses.

Mr. BRADETTE: And rightly so.

Mr. DOUGLAS (Weyburn): I do not agree with either the theological or the eschatological views of that sect; but because I do not agree with their particular religious views, I do not see why I must deny those people the right to worship their Maker in the way they think He ought to be worshipped. Yet that is what we have done, and not only to Jehovah's Witnesses. It has been done to an organization known as Technocracy Incorporated, having in its membership thousands of people with whose views most of us do not agree. No reason has, however, been given why that organization should be declared an illegal one.

Mr. MARTIN: Incipient fascists.

Mr. DOUGLAS (Weyburn): The hon. member says they were incipient fascists. Perhaps they were. But has that ever been proven in any court of law? Has any evidence been presented? Was that organization permitted to go into a court of law and present its case? Has any evidence been presented before the Canadian people? Certainly not.

The communist party was banished. Few organizations have suffered more at the hands of the communist party than the group with which I am associated.

Mr. BRADETTE: Not always. I have seen them parading together in northern Ontario—Cooperative Commonwealth Federation and communist. Yes, I have.

Mr. DOUGLAS (Weyburn): Many of us have seen you and the fascists pretty close together in your section, too.

Mr. BRADETTE: I have seen communists and C.C.F.'s. together.

Mr. HANSON (York-Sunbury): You must have a funny country up there.

Mr. DOUGLAS (Weyburn): That is the country where they try to get Italian fascists out of the internment camps.

Mr. BRADETTE: They do that because they are innocent. I wish the hon. member to withdraw what he has said. I went before the courts of this country, and the man was proved to have been innocent. I ask the hon. member to withdraw that statement.

Mr. DOUGLAS (Weyburn): I made no charge, and I do not propose to withdraw my statement.

Mr. BRADETTE: The hon. member imputed motives.

Mr. SPEAKER: I did not hear the statement; but if the hon. member did impute motives, then he will have to withdraw his statement.

Mr. DOUGLAS (Weyburn): I imputed no motives and made no charge.

Mr. BRADETTE: Yes, the hon. member did. He said I went before the courts fighting for some people who I knew were fascists.

An hon. MEMBER: No; he did not.

Mr. BRADETTE: I want those words to be withdrawn. I am just as good a Canadian as is the hon. member.

Mr. DOUGLAS (Weyburn): I think *Hansard* will support what I say.

The point I was making was this, that at the time we profess to be fighting a battle in the interests of Christian principles, we are allowing organizations and sects which may not be popular in this country—

Mr. HANSON (Skeena): I doubt very much if the hon. member is a Christian, although he preaches Christianity.

Mr. DOUGLAS (Weyburn): It may not be a very large section of our public; but we are banning these organizations, without giving them any opportunity to defend themselves. We are merely saying to them, "You are illegal organizations," and we say to the individual, "If you continue as a member of this organization you render yourself capable of punishment by law."

We believe the regulations ought to be altered so as to give those people an opportunity of appearing before some judicial or quasi-judicial body, so that they may state their case and have a hearing. That is the very least we can give to any organization or individual.

I have one further word to say, and it has to do with money belonging to organizations which have been declared illegal. I made reference to one of them the other day.

I understand the money in such an organization is turned over to the custodian of enemy property. That seems to me a most unfair procedure, particularly if some of the funds of such an organization happen to belong to the rank and file of the people. I have in mind a man who some years ago lent a considerable sum of money to the sect known as Jehovah's Witnesses.

Mr. LAPOINTE (Quebec East): He made a poor investment.

Mr. DOUGLAS (Weyburn): The loan was made long before that sect was considered an illegal organization. They were paying him back at the rate of so much a month, or on what might be described as an annuity basis. Along came the war, and the organization was declared to be illegal. Its funds, amounting to $75,000, were seized and turned over to the custodian of enemy property. What is the position of that individual? What crime has he committed?

The Minister of Justice said a moment ago that he made a poor investment. Probably he did make a poor investment; but why is he to be punished because the organization—

Mr. LAPOINTE (Quebec East): That was not a statement for publication.

Mr. DOUGLAS (Weyburn): I am sorry.

Mr. CASSELMAN (Grenville-Dundas): It was under your breath.

Mr. DOUGLAS (Weyburn): Why is this man to be punished because the organization to which he lent money has been banned by the Minister of Justice? Surely that is most unfair. That money goes to the custodian of enemy property. But the man who lent the money is not an enemy; he is a Canadian citizen, born in Canada. He must, however, wait until the end of the war to get the money which he lent in good faith to an organization which had given him a written guarantee that it would pay him back at the rate of so much a month.

Mr. HANSON (York-Sunbury): He will know something about the law of delays before he gets his money.

Mr. DOUGLAS (Weyburn): And he may know some privation before he gets it, too.

I submit that in studying these regulations the committee ought to give serious consideration to matters of this kind. Ever since the war began, we in this group have insisted not that the laws of this country be made easier for saboteurs and fifth columnists, but that they should be made harder for such people. No country can be too hard on any man or woman who, having accepted the pro-

tection and benefits of that country, seeks to undermine it. At the same time, however, we demand that steps to be taken under these regulations shall be defined so clearly that they cannot be abused, so that next week a man like Florian Stephan cannot be arrested because he said something an alderman did not like, so that pamphlets cannot be seized because someone does not like what is inside them, whether it is subversive or not.

We in this group contend that freedom is precious, and we know that down through the years men have given their lives to pass it on to us. We know that even to-day in various parts of the world men are shedding their blood to keep freedom alive. We in this parliament cannot treat lightly our responsibility to see to it in this country of ours that freedom shall not perish from the earth.

Mr. J. G. TURGEON (Cariboo): Mr. Speaker, I am sure every hon. member rising to speak respecting the defence of Canada regulations must do so only after hesitation. Upon rising to address you to-night, I am worried lest any words of mine might unintentionally add fuel to the fires of discontent which since the commencement of the war have been in process of creation in Canada.

I intend to deal frankly with statements made respecting the defence of Canada regulations and the manner in which they have been administered by the Minister of Justice (Mr. Lapointe). First of all, like every other hon. member I listened to-day to the speech of the hon. member for Rosetown-Biggar (Mr. Coldwell), and noted the strong emotions he displayed because a newspaper in this city had questioned his motives. Every hon. member sympathized with him, as we would sympathize with any hon. member whose motives are questioned. But almost every man, whether from his seat across the floor at that angle, or speaking outside, in connection with the defence of Canada regulations, questions the motives of the right hon. Minister of Justice. By word of mouth the public are being told that the Minister of Justice is an honest man, a man in whom everyone has confidence. Yet from the Atlantic ocean to the Pacific, charges have been made time after time that not only are these defence of Canada regulations abominable in themselves, but they have been administered by the right hon. Minister of Justice in such a manner as to inflict hardship upon men who cannot defend themselves.

I intend to return to this matter later on, but as one who was a member of the defence of Canada regulations committee which sat last session may I pay tribute to every individual who was on that committee? I listened to the hon. member for Rosetown-Biggar when he spoke the other day, as I did to the hon. member for Weyburn (Mr. Douglas) when he spoke this evening. I should like to deal first with what the hon. member for Rosetown-Biggar has said. Let me repeat that the members of this committee worked as no other committee of which I have been a member ever worked. The members tried honestly in every possible way to reach conclusions. I firmly believe they were trying to reach conclusions which would prove to be of benefit to the people of this country. May I point out that every suggestion for a lessening of the severity of the regulations did not come from members of the new political groups. On nearly every occasion a member from some party wanted to lessen the severity of these regulations.

Speaking a few days ago, the hon. member for Rosetown-Biggar directed nearly all his remarks to one fact. He found fault with the Minister of Justice because out of twenty-four cases where the review committee had recommended release, in nine cases the recommendation had not been accepted by the minister. The hon. member felt that this action was an imposition upon the people of Canada. The defence of Canada regulations committee dealt for many hours with section 22 which provides for the setting up of these review committees. This section also provides the means by which a person detained under section 21 or by order of the Minister of Justice may make his objections heard and secure his release if release is coming to him. The committee recommended certain changes, and these were all carried out and made the law of the land by an order in council passed under authority of the War Measures Act.

In all its discussions, no member of the committee suggested that responsibility should be lifted from the Minister of Justice and placed upon the review committee. This matter was not even debated, and yet the hon. member for Rosetown-Biggar bases almost the whole charge that he made against the administration of the defence of Canada regulations upon the fact that some of the recommendations of the review court were not put into effect by the Minister of Justice. As a matter of fact, one of the features of the defence of Canada regulations most severely

condemned by some of the members of the parliamentary committee was this setting up of a review committee of one man. We were told with some degree of justice that no one-man committee, even though the member held a high judicial position in the past, or was a justice at the moment, could properly investigate and render judgment in connection with men who were interned under these regulations. Yet we are told to-day that the Minister of Justice, a member of the government of Canada, should divest himself of responsibility and give it to this one-man committee, which was perhaps the most severely condemned of all the defence of Canada regulations.

I noticed the other day when the Minister of Justice followed the hon. member for Rosetown-Biggar, he complimented that hon. member upon the fact that at no time had he put forth the thought: Why should we fight for democracy abroad when we are losing democracy at home? The hon. member for Rosetown-Biggar made no such reference. I have here, however, a Vancouver paper dated January 6 in which is to be found an article by a member of the Cooperative Commonwealth Federation, a member of the legislature of British Columbia. I may say this is not the same member referred to the other day by the hon. member for Comox-Alberni (Mr. Neill). Perhaps I may be permitted to digress for a moment and say that this legislator would not make the type of speech exposed in this house the other day by the hon. member for Comox-Alberni.

Mr. HANSON (Skeena): Who is he?

Mr. TURGEON: Mrs. Jamieson. In commenting upon the defence of Canada regulations, she completed her argument with these words:

> Why does the Canadian government not follow suit? Because it fears that by its own policies it has lost the loyalty of these men; and so they are lost to Canadian industry and the Canadian war effort. And as the public sees more arbitrary internments, more convictions on flimsy charges, and intimidations of labour unions, men ask themselves: "What is the use of fighting for democracy abroad, when we are losing it every day at home?" This attitude, induced by Canadian war regulations, loses the war abroad, and is dangerous both to democracies and to Canada.

She was referring to what had taken place in Great Britain, and I shall have a word or two to say about that in answering the hon. member for Weyburn. The hon. member made reference to the communist party and he got into somewhat of an altercation with the hon. member for Cochrane (Mr. Bradette). The other day the hon. member for Rosetown-Biggar made a similar reference to the communist party, but he said that he held the communist party in contempt. Mind you, Mr. Speaker, I believe him when he says that he holds them in contempt, but I am dealing with an argument and as it was applied to public opinion in this country. He gave as his reason for holding them in contempt the fact that in spite of the attitude which the communist party had taken with regard to the war against Germany prior to the actual outbreak of the war, after Great Britain was at war, instead of participating in the effort of the people of the British isles and the British commonwealth, the communist party stated that this was a war of imperialism abroad brought about by capitalism.

Unfortunately, we have heard those very words in Canada. Unfortunately, we have heard them in British Columbia, and in spite of the fact that my hon. friends across the aisle say that no political party is a greater target for the communists than they, it was prominent members of the Cooperative Commonwealth Federation party who made statements with regard to this being an imperialistic war and one brought about naturally by acts of capitalism for many years before the war started. I mention that not for purposes of recrimination, but because I notice that every time some people in Canada make an attack on the defence of Canada regulations, they immediately start to dissociate themselves from the communists and to say that the whole object which the Minister of Justice and those associated with him have in the administration of these regulations is the coercion of labour, and they immediately say, as the hon. member for Weyburn said to-night, that they are a target for the communist party.

May I digress to suggest first of all that if my hon. friends over there are at outs with the communist party, if the communist party is taking pot-shots at them, it is, I feel certain, only the natural instinctive reaction of one group that is angry at another group whose objectives are the same as its own but who are taking a different path to reach those objectives; and that animosity exhibited by the communist party towards my hon. friends over there is in complete alignment with the animosity expressed by my hon. friends themselves towards the Unity reform party composed of the hon. member for North Battleford (Mrs. Nielsen). The hon. member for Weyburn to-night and the hon. member for Rosetown-Biggar the other day stated that the *Canadian Tribune*, on whose behalf both these hon. members raised a word of protest in this house, had attacked the Cooperative

Commonwealth Federation party and that, in spite of that, they were defending the *Canadian Tribune*.

Mr. DOUGLAS (Weyburn): Not defending the *Canadian Tribune,* but objecting to its being suppressed without a hearing.

Mr. TURGEON: If my memory serves me aright, the hon. member for Weyburn said to-night that the *Canadian Tribune* had made a scurrilous attack upon his particular group. So far as I know—of course there may be some editorials I have not seen—that scurrilous attack of the *Canadian Tribune* upon the Cooperative Commonwealth Federation party was because of the alleged neglect with which the Cooperative Commonwealth Federation party were treating the hon. member for North Battleford. That editorial said, for instance, that some professor or other whose name I forget, had expressed sympathy with the *Canadian Tribune* but could not understand its attitude towards the Cooperative Commonwealth Federation, and the editorial in question went on to refer to the meeting held by the hon. member for North Battleford in the city of Vancouver and asked why it was that the *Federationist,* the Cooperative Commonwealth Federation organ in Vancouver, had paid so little attention to the meeting of the hon. member for North Battleford.

I have here, Mr. Speaker, a sort of Christmas and New Year's message given to the people of Canada last December by Mr. Lewis, secretary of the Cooperative Commonwealth Federation National Council. I took it from the *Federationist* of Vancouver, which carries the message under a heading reading as follows:

"United Farmers, Workers, Would Preserve Democracy"—"Reports C.C.F. Organized Labour Unity in Montreal City Council Campaign" by David Lewis, Secretary, C.C.F. National Council.

Then follows the message:

Canadian Reaction Exploits War

The past fifteen months have shown that in our country the war is being exploited by reaction for its own needs. Our democracy is threatened by the defence regulations; a determined anti-labour drive is under way; monopolistic interests are being handed even more complete control of our economic life.

I have here—and I know I am not the only member who has seen it—the report of the proceedings of the fifty-sixth annual convention of the Trades and Labour Congress of Canada. It is quite probable that my very good friend the hon. member for Vancouver East (Mr. MacInnis) was present at this convention. I wish to take a minute or two for the purpose of commending to the people of Canada the stand taken by the Trades and Labour Congress of Canada with regard to the defence of Canada regulations and the manner in which they are being administered by the right hon. Minister of Justice. At page 47 of the report of the proceedings at their annual convention in 1940, I find under the heading "Defence of Canada Regulations," an expression of complete approval of the defence of Canada regulations and of the manner in which they are being administered. I cite this paragraph from among others:

The officers of the congress have sought assurances that no action taken has been because of membership in a trade union or the carrying out of legitimate trade union duties. So far we have failed to find any evidence of this having been done and it would be contrary to labour's principles to claim that any person should receive preferential treatment in the application either of the defence of Canada regulations or of any law of Canada merely because he is a member of a trade union or any other group or class of society.

Another part of the report says:

In all countries at war it has been found necessary to sacrifice personal liberty to some degree as the price to be paid for national security. The defence of Canada regulations, which follow closely those put into effect in Great Britain at the outbreak of war—

These are not my words but those of a formal resolution of the Trades and Labour Congress of Canada.

—give wide powers to proceed against persons or associations without resort to ordinary peace-time procedures of the laying of charges and formal public trial. The denial of these long cherished liberties is held to be essential to enable government authorities to act with promptitude and secrecy.

All through their discussions will be found arguments made before the Trades and Labour Congress of Canada similar to those which have been made in this house and made by some members of this house outside it; and in the report of their proceedings I find every such argument answered, argument for argument, by the leaders of the Trades and Labour Congress. The report also carries the formal resolution of approval by the congress of the defence of Canada regulations and expressing confidence in the administrator of those regulations, the right hon. Minister of Justice—all of it indelibly impressed by means of a formal resolution of approval by the congress.

Yet ever since then, public men—and naturally I am not saying anything against men in public life—state day after day that the whole purpose of the regulations and their administration is the coercion, economic, social and political, of labour and other classes

in Canada. The hon. member for Rosetown-Biggar, the other day, addressing the Minister of Justice, said: "If you are looking for subversive elements, don't keep always in the gutter". Let me ask hon. members who are denouncing the regulations and their administration: Do those things that have been done, things which are known to us here to-night, indicate that the Minister of Justice and those working with him are looking in the gutter? Was it in the gutter that they found Mr. Camillien Houde, a member of the legislature of Quebec, a former leader of a political party in that province and, at the moment of his detention, mayor of the largest city in Canada? Was it in the gutter that they found the great Italian patriot Mr. Franceschini when he was put in the internment camp? Petitions have been signed, I understand, asking for the release of this gentleman. My hon. friends should talk about looking in the gutter or above it to those who are making these demands upon the Minister of Justice asking him to release some people who are detained purely because those who are responsible for administering the regulations, those who are responsible for the safety of Canada, feel that it is in the interests of the country that these men should remain in detention.

I am going to deal now not with the regulations themselves but with the nature of the attacks made upon the regulations. I have here the speech mentioned to-night by the hon. member for Weyburn. He said that nobody in this house had ever taken exception to any of the speeches made by the member for North Battleford. I have here a speech on the budget delivered at the last session on July 2. It will be found at page 1263 of *Hansard*. The hon. member for North Battleford spoke on that occasion and I wish to give one or two quotations.

Mr. DOUGLAS (Weyburn): Did the hon. member attack them at the time as subversive?

Mr. TURGEON: I never did. My hon. friend says that this particular group has never opposed the defence of Canada regulations.

Mr. DOUGLAS (Weyburn): I did not say anything of the kind. I said that we have never opposed the idea of having regulations.

Mr. TURGEON: I say that the Cooperative Commonwealth Federation did oppose the idea of having defence of Canada regulations, that they opposed the idea of the proclamation of the War Measures Act; and the Cooperative Commonwealth party in British Columbia—

[Mr. Turgeon.]

Mr. DOUGLAS (Weyburn): Two different things.

Mr. TURGEON: The defence of Canada regulations find their very root in the War Measures Act. My hon. friend knows that; and yet that group, he says, have never opposed the regulations in principle. I say that they have opposed the regulations in principle and opposed the statute upon which they are based.

Mr. DOUGLAS (Weyburn): I must correct the hon. gentleman. At no time have I said that we never opposed the defence of Canada regulations. My party never at any time opposed the idea of having regulations for the defence of Canada, but we contended that they should be passed by this parliament and not by order in council under the War Measures Act.

Mr. TURGEON: I do not like to do this, but I have here a copy of the *Federationist*, which my hon. friend will admit is the organ of the Cooperative Commonwealth Federation in British Columbia. It is for March, 1940, and it is headed, "Cariboo Edition". On the front page there is an article by William Irvine who is a member of the national council of the Cooperative Commonwealth Federation. Under his own by-line on the front page of the Cariboo edition of the *Federationist* he says: "A vote for Mr. Turgeon is a vote for the padlock law"—I do not know where he got that—"and for the War Measures Act". What has my friend to say about that?

Mr. DOUGLAS (Weyburn): Opposition to using the War Measures Act whereby orders in council can be brought down putting into effect regulations that parliament has never seen is totally different from being opposed to any type of regulation to defend the realm.

Mr. MACDONALD (Kingston City): The defence of Canada regulations were passed when he made that statement.

Mr. DOUGLAS (Weyburn): Yes, and they were passed by order in council under the War Measures Act and this parliament never saw them except indirectly.

Mr. TURGEON: The hon. member and other members of his group, time after time, rise in their places and state that the whole objective of the regulations is labour. They sometimes apply it to the British Labour party, and then they talk of labour in general. I have just read to the house a formal resolution passed last September by the Trades and Labour Congress of Canada with regard to the defence of Canada regulations, and

they had not been discussed in this house, though they had been thoroughly discussed in that committee. May I speak a word of approval of the Minister of Justice. I say that every single recommendation of that committee relating to the defence of Canada regulations was accepted and carried out by the government of which the right hon. gentleman is Minister of Justice. Without exception, every recommendation that committee made was carried out. The hon. member for North Battleford, speaking on the budget, after calling attention to excess profits tax and that sort of thing, and people who have money, said:

> But of course that capital is something in the nature of a golden calf set up in our country, something we are forbidden to touch. That is a precedent which has been created, one which even in this time of crisis the government is going to continue to protect. Our men must suffer; they must give their lives. Our people must toil unremittingly. They will be forced to accept wages set for them. They will be forced to accept conditions, under the defence of Canada regulations. Yet at the same time the conditions I have described will go on.

Is that a proper criticism to make and to scatter broadcast throughout the country against the defence of Canada regulations?

Mr. DOUGLAS (Weyburn): Is it subversive?

Mr. TURGEON: Let the hon. member ask himself that question.

Mr. DOUGLAS (Weyburn): I say it is not subversive.

Mr. TURGEON: I am not saying it is subversive. I am not saying anything about any action against the hon. member for North Battleford. As a matter of fact, I would sincerely hope that no action would be taken against the hon. member. I am talking now about appeals to the people of Canada in this time of stress, this time of war, based upon such things as the defence of Canada regulations.

There is no one in this house who is more anxious than I am to see people who are distressed, particularly the farming population of western Canada, relieved from their position.

An hon. MEMBER: The hon. member's works do not prove it.

Mr. TURGEON: There is no man who has been a more forcible and consistent advocate of those distressed farmers than I have. The difference is that I am not trying to exploit their distress. I am not looking for publicity simply because in this country there are people in distress. I am doing as a member of parliament everything that I can to see that those who, after all, have the right of initiation of measures in this house, do proceed along lines that will bring relief to those in distress. But if I had to depend for political success upon a race for supremacy in the leadership of the exploitation of that distress, then I would wish to retire from this parliament.

One more quotation I should like to make from the speech of the hon. member for North Battleford in the budget debate. It is this:

> In my opinion there is no reason why the people should have to believe these things any longer. I wonder how long it will be before the people really realize the unnecessary burden which the government has put upon them. I cannot think it will be very long. I believe the government realized months ago that during this war crisis the people's wisdom and natural understanding of things would come to their aid and that they would rebel against unjust legislation and the unjust burden of taxation which might be placed upon them. This government had the defence of Canada regulations prepared which are instruments of coercion to be used in the future upon our Canadian people.

Is that taking active steps to relieve the distressed people whose position is pitiful as well as tragic, telling them from this parliament that the defence of Canada regulations have been devised and designed and are being administered for the purpose of coercing them into accepting policies of this government which they have just been told are the cause of the unfortunate condition under which they live?

I do not intend to take any more time. I said at the beginning that I hesitated to speak lest any words of mine should add fuel to the fires of discontent which have been started since the beginning of the war. I wish to end with an appeal to those who have been dealing with the defence of Canada regulations in the manner which I have described. Nothing is perfect; God knows this administration is not perfect; there are many acts of the government which can and should be criticized. But why must every criticism of the government be tied up to the defence of Canada regulations? Why must every deplorable condition existing among the people be brought back to some design of this government anxious—not to win the war—anxious only, they tell us, by means of these regulations, to perpetuate economic and social distress among certain portions of our people?

What I ask is that from now on, those who speak of distress should deal with it without mentioning the defence of Canada regulations, and they should deal with the defence of Canada regulations in the manner in which they would deal with any other matter that was the subject of discussion. To-night, for example, the hon. member for Weyburn dealt

with the regulations in effect in Great Britain. He mentioned some parts of section 18. But he did not read one part of that section. He spoke of the banning of societies. In Canada, while the governor in council has the right to declare an organization illegal, neither the Minister of Justice nor anyone else has the right to detain a person purely because he was at some time a member of a banned organization. Before a person can be detained under our regulations, he must continue to be a member of the association that has been banned. In Great Britain, on the other hand, the Home Secretary, corresponding to the Minister of Justice here, may pick up an individual in the British isles simply because, no matter how many years back, he had been a member of an organization that since then has been banned.

Mention was made the other day of the detention of a member of the British House of Commons. It is true that member was a fascist, as those who have been picked up in Quebec were fascists. If the defence of the realm regulations permit the Home Secretary to detain a member of the House of Commons, on what is the argument based that those regulations are less onerous than those in effect in Canada?

Mr. DOUGLAS (Weyburn): Because the minister must show cause.

Mr. TURGEON: They act in the same way. The one case with which the hon. member dealt particularly to-night was that of a man who had been taken to court, and the hon. member was criticizing the judgment of a court, not an act of administration. He may have been right; I have no knowledge of the facts; but the man was tried, not in a special court, but in the ordinary court of justice.

Mr. DOUGLAS (Weyburn): I was criticizing the vagueness of the regulations that permitted a conviction on such flimsy evidence.

Mr. TURGEON: I suggest that the hon. member study the regulations a little further.

It is no use hiding facts from ourselves; it is true that under the defence of Canada regulations some of our liberties are impaired. Is there any hon. member who will say that some of our liberties should not be impaired, having before us what has taken place in various countries in Europe? But this I say, that constitutional parliamentary government will never lose its supremacy merely as a result of deliberate parliamentary action. I say further that those sacred liberties which have come down to us, bought by the blood of our forefathers, particularly of those who come from the British isles, will never be lost to us simply because of our voluntary giving up of a little of that liberty to-day until the war is won and Canada, Great Britain, Greece and those allied with us stand as victors.

Mr. J. G. DIEFENBAKER (Lake Centre): In rising to speak briefly on this resolution, I do so because this year I shall not be a member of the committee that is being set up to consider what changes, if any, should be made in the defence of Canada regulations as recommended last year by the committee set up by parliament in that behalf.

I have listened with attention to the address just delivered by the hon. member for Cariboo (Mr. Turgeon), but I do not intend to follow him in the controversy in which he became engaged. The position I take in reference to the defence of Canada regulations, and the spirit in which I think they should be considered in this house, is to seek to ensure that maximum freedom is assured and maintained to British subjects consistent with the safety of the state. Having regard to what took place in France, Belgium, Holland, Denmark and Norway, all are agreed that strict regulations are necessary in order to ensure that subversive elements within this country shall not be permitted to carry on their nefarious work of undermining the state from within during the war.

That is one consideration which must be kept before us at all times, irrespective of any diminishing that may take place so far as those rights are concerned that are considered inalienable, namely, that the safety of the state shall be paramount. No one can deny that many of the rights which are and have been ours as British subjects for generations have, by reason of the exigencies of war, been curtailed in the interests of the safety of the state. Much is made of the fact that the right to the issue of a writ of habeas corpus is now denied, and that the prerogative right of a certiorari has been taken away. Both of these are extraordinary remedies designed to assure the rights of the subject, but it must not be forgotten that in time of war the safety of the state is of first importance.

Having approached the subject from that point of view—and on that I think we are all in agreement—the question naturally arises as to what changes can be made in the defence of Canada regulations which, while assuring the safety of the state, at the same time will assure the rights of the individual. I am not entering into the argument so often raised, that in this dominion to-day men are being imprisoned without

due process of law or that the rights which ordinarily British subjects heretofore possessed have been taken away. But I do point out, Mr. Speaker, that all over this dominion fears are being expressed by loyal and patriotic British citizens and subjects that certain persons have been interned who ought not to have been interned. In making that statement, I am merely expressing an argument that is being advanced on every hand to-day. I do not suggest in the least that the Minister of Justice (Mr. Lapointe) is not fairly discharging the responsibilities of his position. The point I make is that the argument is being advanced that all is not well. That sort of thing engenders fear, and fear results in disunity within the country.

Some argument has been advanced that these regulations, not having been passed by parliament or debated by parliament in detail, as a consequence have been foisted on the people of this country, if I may use that expression. In my view, that argument is not well founded. Last year the government brought before parliament a resolution calling for the creation of a committee of parliament to look into the situation and determine what regulations, if any, should be instituted or what amendments should be made. The committee that was set up, composed of members of all parties in this house, in the main agreed on the recommendations that were brought in. The committee's recommendations were brought before parliament by the Minister of Finance (Mr. Ilsley), who acted as chairman of the committee. A debate took place in the house with reference to these regulations in general, and particularly with reference to the question of the liberty of the subject being infringed upon.

There is only one section of the regulations with which I intend to deal this evening, and I am doing this only with a view to placing before the committee a suggestion which I think will remove a major portion of the objections which are being advanced to-day against the defence of Canada regulations as they now exist. Section 21 provides:

> The Minister of Justice, if satisfied that with a view to preventing any particular person from acting in any manner prejudicial to the public safety or the safety of the state it is necessary to do so, may, notwithstanding anything in these regulations, make an order:
>
> (c) directing that he be detained in such place, and under such conditions, as the Minister of Justice may from time to time determine.

I see no objection to this section as it stands. The discretion is vested in the Minister of Justice and he has given his explanation as to the circumstances under which that discretion is exercised.

I come now to the section which I think does cause considerable difficulty, section 22, which reads:

> For the purposes of the preceding regulation the Minister of Justice may appoint one or more advisory committees, each such committee to consist of a person who holds or has held high judicial office.

Section 26, which deals with the recommendations made from time to time by the committees so constituted reads:

> Nothing in the preceding regulations shall prevent the Minister of Justice from ordering the release of any enemy alien from arrest, detention or internment, or from ordering the arrest, detention or internment of any enemy alien.

I am not now discussing the question of enemy aliens; I am discussing the question of British subjects. I think much of the alarm that has been aroused among certain people throughout this country against these regulations would be entirely allayed if provision were made for the setting up of a committee of review consisting not of one judge but of three judges, two superior court judges and the county or district court judge presiding over the court in the judicial district within which the internee was living at the time of his internment. A certain discretion must rest with the Minister of Justice; and I say here without equivocation that in my opinion no one in this dominion has anything to fear so long as the present Minister of Justice remains the incumbent of the position which he now occupies. I think it only fair to make that statement. Many people, however, believe that there is too much power concentrated in the hands of one man in the determination of the incarceration of British subjects in custody under the regulations.

The last speaker referred to the fact that there were some who said the defence of Canada regulations were to be exercised for the purpose of coercion. That I do not believe. I suggest, however, that many of the objections thereto would be done away with, in so far as British subjects are concerned, by setting up this judicial committee of three persons. It was said the other day that judges are not overworked, and that they have more leisure time than they used to have because of the falling off of litigation in recent months and years. Judges are available therefore to undertake this work, and by utilizing their services we would do away with unnecessary delays which sometimes occur before the hearing of appeals of interned persons. To-day one man exercises the dis-

cretion of determining whether or not one British subject shall remain incarcerated and another shall be discharged.

I realize, too, a court could not be set up within the ordinarily accepted meaning of the term, and that the ordinary processes of litigation would have to be done away with, in so far as this committee is concerned. It could hear the evidence of not only the accused man but also of those who would support him in his defence; and it could have access to the confidential records of the Department of Justice. To those who say that we should set up in Canada an appeal court similar to the other courts in our land, I reply that such a procedure would be impossible to-day. Such a procedure would endanger the activities of the secret service men who make the investigations, and would destroy the efficacy of the operations of the Royal Canadian Mounted Police. In a very few months the secret agents would be known to all those who would destroy this nation from within.

That argument would not apply, however, to a judicial committee. Such a committee could listen to the evidence and would review the secret documents which are to-day reviewed by the Minister of Justice. The committee would make a decision. If the decision were not unanimous, then the discretion of determining release or continuation of incarceration for the appellant would remain in the Minister of Justice. If the three judges are unanimous in their findings, then in the interest of the safety of the subject such person, if found innocent of any offence by such a judicial tribunal, should be discharged. That would be a proper procedure in the interests of justice to the person concerned, and would be consonant with the freedom for which we are fighting.

I am not going to discuss the matter at greater length, but I would point out that in my opinion the setting up of such a judicial committee would go far toward removing the objections heard to-day against the regulations as now constituted, and would restore confidence. What is more important, it would act as an effective answer to those who suggest that to-day there are British subjects in labour unions and other organizations who are being held in custody unjustly and without trial.

I realize that many of the regulations are not more acceptable to the Minister of Justice than they are to other lawyers. But they are necessary. Someone has said that they are not definite enough and that they are not sufficiently direct. In my opinion, all the regulations are clear, direct and definite, and are not capable of being misunderstood. They are necessary in the interests of the safety of the state, because unless such regulations are in effect, all that we have and all that we are may very well be destroyed from within.

I cannot believe that the Minister of Justice would be averse to the setting up of such a tribunal of judges. In his speech delivered last Thursday, he made no suggestions as to the changes which ought to take place, but he did point out the difficult duties and responsibilities imposed upon him in carrying out the regulations. He used these pertinent words:

> I shall accept the new regulations if changes are made, and apply them with the same force and vigour and circumspection as I do to-day, using my best discretion in their application.

If such a change is made by the setting up of judicial tribunals with the powers I have suggested, I believe that the major cause of complaint to the present regulations will disappear.

Mr. BROOKS: Mr. Speaker—

Mr. CRUICKSHANK (Fraser Valley): Pardon me, I think I have the floor. My hon. friend the member for Cariboo (Mr. Turgeon) and I got mixed. We wanted somebody from British Columbia to contribute some intelligence to the house to-night, but we did not know we were both going to speak.

It is rather embarrassing to follow that excellent orator friend of mine from "Chipso", or some such place, in Manitoba. I agree with most of what he said, and I certainly agree with most of what the hon. member for Cariboo has said. But I sincerely disagree with what the hon. member for Weyburn (Mr. Douglas) has said.

I was not fortunate enough to get one of those pamphlets. I hope the hon. member for Weyburn will see that that is looked after in my mail to-morrow morning. I can readily understand the arrangements made in some of those places. I believe I am in order in quoting, if I state what I am quoting from. I hold in my hand the *Evening Journal* of Ottawa for Monday, March 3, 1941. Of course I could not quote that pamphlet to which reference has been made, and I could only see it from a distance, when the hon. member for Weyburn held it up.

On the front page of the *Journal* is a beautiful picture of Jimmy Stewart and Ginger Rogers. Possibly my hon. friend cannot see it, and I could not see the picture on the pamphlet he held up. I do not know what was in it. I am sorry the hon. member for Weyburn has apparently never been in British Columbia.

Mr. DOUGLAS (Weyburn): I have.

Mr. CRUICKSHANK: He must have passed through very quickly, and he certainly never stopped in the Fraser Valley.

I am not speaking disrespectfully, and I do not wish it to be so understood when I refer to the organization known as Jehovah's Witnesses. We can say to them, however, that we can thank God we have the Minister of Justice (Mr. Lapointe). Owing to the fact that it is a religious organization, I shall have nothing more to say about it. But I should like to say a word or two about the technocrats. That is an organization defended by the hon. member for Weyburn.

Mr. DOUGLAS (Weyburn): No, no.

Mr. CRUICKSHANK: Pardon me; the hon. member had his time, and I shall have mine.

Mr. BRADETTE: And he had plenty of time, too.

Mr. DOUGLAS (Weyburn): I refuse to have words put in my mouth. I merely said this was an organization which had been banned, without having been given an opportunity to make a defence on its own behalf.

Mr. CRUICKSHANK: I am glad to be charged with putting words in my hon. friend's mouth. I would rather have words put in my mouth, even by a member of my hon. friend's group, than have them put in my mouth by Mr. Howard Scott of New York. That gentleman attempted to tell the Prime Minister (Mr. Mackenzie King) how to run Canada, what we should do in connection with the war. Then my hon. friend wonders why they are barred. I remember hearing the Minister of National Defence for Air (Mr. Power) refer to a member last year and saying that if he were the Minister of Justice, the member would be interned. That is just what I should like to do with Howard Scott and with anyone who is a supporter of Howard Scott. Hon. members are entitled to their opinions and I am entitled to mine. I know my hon. friend means well. If he would let me put more words in his mouth before he makes his speeches, they would be much better.

I have no particular complaint to make about these defence of Canada regulations, nor have I any broad suggestions to make in that connection. I am in favour of some of the suggestions put forward by my hon. friend, but I should like to tell him how we do things in British Columbia. In Canada some 3,000,000 out of a population of 11,000,000 are of foreign extraction. There is one member in this house from my province who came out here as a poor immigrant forty years ago. I shall not mention his name because he would not like it if I did, but I can tell the house where he comes from—he comes from Skeena. He tried to enlist in the last war but he was turned down. He has a son serving in the air force in this war and a son-in-law in the army. He has a record which no member of that group can equal. He invested $40,000 in non-interest bearing bonds in this war. That is a record of which any Scandinavian family could be proud.

An hon. MEMBER: Where did he get it?

Mr. CRUICKSHANK: He got it by hard work hewing ties. If we had a little more of that spirit in this country, we would not need the defence of Canada regulations.

An hon. MEMBER: Hear, hear.

Mr. CRUICKSHANK: I am going to have my innings. I have risen in my place only twice this session, but the hon. member has risen to speak eleven times. One of the most necessary things in Canada is unity. Everyone should know that who is aware of the tremendous French-Canadian population. There is one man in this country who, in my humble opinion, has contributed more than anyone else to unity, particularly at this time. I refer to the Minister of Justice. If we did not have unity we would not be able to continue to function as a dominion. We would need to have more severe regulations. If I remember his remarks correctly, the other day the Minister of Justice said that he did not care particularly what regulations were brought down, but as long as they were the law of the land, it was his duty to enforce them.

There were no objections raised last year to the recommendations which some hon. members made in connection with these regulations. Surely everyone realizes that there must be restrictions during war time. Surely every hon. member realizes that we cannot have everyone getting up and saying exactly what he feels like. I do not know what the hon. member for North Battleford (Mrs. Nielsen) said, but anything she says will be all right with me if I agree with it. There are, however, certain members of the provincial house with whose remarks I do not agree. Anything that one member in particular would say would be all wrong with me. That member has been preaching pacifism for the last twenty years, and it is because of such preachings that we are in the position in which we find ourselves to-day.

I shall not try to equal the remarks of the hon. member for Cariboo because he is one

of our Canadian orators. Then we heard from the hon. member for Lake Centre (Mr. Diefenbaker). We do not need these defence of Canada regulations in British Columbia. Out there we obey the laws, at least most of them. Instead of trying to preach disunity, certain hon. members should try to preach unity. If they have any suggestions to make, they should place them before the committee. This action would probably save hon. members a great deal of time. I get forty circulars a day about papers being suppressed, when in fact these papers should never have been allowed to be published. I got an anonymous one the first time to-day. The leader of the opposition (Mr. Hanson) said the other day that he gets plenty of anonymous letters. This had a supposed picture of me, but they had me wearing a little toupee. That would have been all right, but they also had me with a little moustache and a band with a swastika on my arm. I was accused of having sold land to the Japanese. I do not know where they got that idea. I never gave the Japanese the vote, and I certainly never gave them any land. If my hon. friends over there would pay more attention to preaching unity and less to preaching disunity, we would find less need for the defence of Canada regulations.

Mr. A. J. BROOKS (Royal): Mr. Speaker, at this late hour, it is not my intention to deal at any length with the defence of Canada regulations, and I do not propose to discuss them from either the legal or technical point of view. Having, however, been a member of the committee which made the recommendations last year, I felt that I should make a few remarks this evening. I want to say at the outset that I agree entirely with the statements made by the hon. member for Vancouver South (Mr. Green) with reference to naturalization and the necessity for our paying greater attention to this phase of our national life. We have too many hyphenated people in Canada. I am sure that all hon. members would rather have our people called Canadians than called German-Canadians, Italian-Canadians or some other form of hyphenated Canadians. What we want is a Canadian people, and I think that if the suggestions made by the hon. member for Vancouver South are carried out, they will go a long way toward realizing that end.

I was particularly impressed with what he said was necessary to nationalize the older generations of people who come to this country, but I think we should pay more attention to the younger generation as well. As the hon. member said, this should be done through our schools. Too little attention is paid in our schools to trying to make these young people good Canadian citizens. I think we could take a leaf from the book of our United States friends. That country is often spoken of as the melting pot. That is what we need in Canada. Our foreign-born residents should be taught Canadian ideals and what the country stands for. I do not intend to say more in this connection at present.

I attended practically all of the twenty-five meetings of the committee dealing with defence of Canada regulations and I heard most of the evidence. I wish to say that after hearing the evidence of the Royal Canadian Mounted Police and that given by officials of the department administering this act, I was fully convinced of the necessity for tightening these regulations. I was one of the majority which supported them right from the start. Since joining the army, I have been more than ever convinced of this necessity.

Anyone who knows of the dangers against which we must guard in our factories, in our military camps and all over this country and of the necessity of defending ourselves against subversive elements, must realize that we cannot be too careful in the enforcement of the defence of Canada regulations. It was only the other day that I read in one of the Montreal newspapers a report that an inspector found, on his inspection of the fire-fighting equipment of a factory, that the liquid in the fire-extinguishers had been removed and replaced with gasoline. We know, too, that in our military camps we must exercise the utmost vigilance to see that fires and other forms of destruction do not occur. For these reasons I am firmly convinced that our regulations are none too stringent and that they should be enforced to the utmost.

I think it is generally recognized in this country that in time of war we must be prepared to suspend some of our democratic liberties in order to preserve democracy for the future. That is a principle recognized by the great champions of liberty in the United States, particularly by President Roosevelt, and also by Mr. Churchill, Prime Minister of Great Britain. There is a saying that in peace time it is better that ten guilty men should go free than that one innocent man should suffer, and that may have been the principle upon which some hon. members who have spoken in this house to-day have based their arguments in this and in the previous debate. But you and I, Mr. Speaker, know that principle does not apply in time of war. While I should not like to see any innocent man suffer, I believe that if a man is under suspicion and there is ground enough for such

suspicion, he should be interned for the safety of the state. He may be suspected, for instance, of blowing up a railway or setting fire to a camp or causing destruction to other property thus endangering the lives of a great many people. Proof may be impossible, yet the strongest suspicion points to him, and he should be interned.

The proof of the good administration of these regulations is in the result. One can take any criminal law upon our statute books and show this house that abuses have taken place under that law, but I have not heard very much in this house to convince me that the defence of Canada regulations have not been properly carried out. The names of two or three people have been mentioned, and it has been stated that some injustice has been done them, but I do not think that in any case this has been proved. As I said a moment or two ago, it is perhaps better that one or two men who have been indiscreet, perhaps, in their talk, if not in their actions, should suffer rather than that we should allow great damage to be done to this country in war time by allowing suspicious and dangerous men free for lack of proof.

With the hon. Minister of Justice (Mr. Lapointe) I do not agree in a great many things. As a matter of fact, his ideas and mine in some matters are as far apart as one pole is from the other.

Mr. LAPOINTE (Quebec East): Oh, I did not think it was as bad as that.

Mr. BROOKS: I am sure he is not going to worry very much over that. But with regard to his administration of the defence of Canada regulations, if he can preserve this country from the dangers of subversive elements, if he can see that Canada does not suffer in war time from the activities of these people, so far as I am concerned I am prepared to assist and support him in every way I can.

Mrs. NIELSEN: I move, Mr. Speaker, that the debate be adjourned.

Mr. LAPOINTE (Quebec East): I should like to oblige my hon. friend, but really this resolution to appoint a committee has been before the house for two days and we were hoping to have it carried to-day so that the committee might be appointed. Of course, if my hon. friend insists and the house wishes to accommodate her, I personally have no objection.

Mr. HANSELL: Mr. Speaker, the hon. member for North Battleford (Mrs. Nielsen) has been referred to several times during the debate this evening and she has not really had an opportunity to prepare an answer.

Mr. SPEAKER: If the hon. member continues, he will be making a speech and will be out of order. The motion before the house is that the debate be now adjourned.

Motion agreed to and debate adjourned.

On motion of Mr. Lapointe (Quebec East) the house adjourned at 10.50 p.m.

Tuesday, March 4, 1941.

The house met at three o'clock.

PRIVILEGE—MR. HARRIS

ORDER FOR RETURN SHOWING PURCHASES OF LAND IN PICKERING TOWNSHIP

Mr. J. H. HARRIS (Danforth): I rise to a question of privilege. On February 24 last an order was passed for a return answering the following questions:

1. Has the government bought land in Pickering township, Ontario county, during the last two years?
2. If so, how many acres?
3. For what purpose is the land to be used?

The return has been duly filed, but it is incomplete. To use a common expression, it sidesteps the question entirely, in that the Minister of Munitions and Supply (Mr. Howe) brought down a long tabulated report of expenditures being made in Pickering township. Through his department lands have been bought or expropriated, at any rate they have been entered upon; fences have been taken down, and at present there is work going on on these particular lands in that county on account of the department.

Mr. HOWE: What does the return say?

Mr. HARRIS (Danforth): The return says nothing—that is my complaint, and that is why I am raising the question of privilege. Surely an hon. member is entitled to have a proper return rather than a nebulous one of this kind. The return goes on to say that the Department of Justice has not bought any land, the Secretary of State has not bought any land, and so on and so on.

I make one further observation. Immediately that question is put on the order paper, before the printer's ink is dry, the minister's department knows all about it; they are just like watchdogs, knowing everything that happens —and quite rightly so; but to my mind there is an utter lack of frankness in imparting information to hon. members of this house when it is asked for in a straightforward way.

Hon. C. D. HOWE (Minister of Munitions and Supply): I am perhaps responsible for the return; it may be a return from the

Department of Transport. The only explanation I can think of is that it is quite possible that property has been expropriated but has not been paid for. Unless my hon. friend is prepared to give me the answer given by the Department of Transport I cannot comment on it at this time.

Mr. HARRIS (Danforth): There is no answer from the Department of Transport.

CEREALS IMPORT COMMITTEE

QUESTION AS TO PRESENT REPRESENTATIVE IN CANADA

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): Would the Minister of Trade and Commerce (Mr. MacKinnon) state who is the representative in Canada and on the Winnipeg grain exchange of the cereals import committee of the United Kingdom ministry of food?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): It seems to me I have answered the same question by the hon. member for Qu'Appelle on former occasions.

Mr. PERLEY: A year ago. There might be a change.

Mr. MacKINNON (Edmonton West): The answer a year ago was that as far as we know the cereals import committee of the British ministry of food has no representative in Canada.

WHEAT

REFERENCE TO PRESS REPORT OF DISCUSSION IN SASKATCHEWAN LEGISLATURE

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): I wish to ask a question based on a report appearing in the Regina *Leader-Post* of March 1, copy of which I hold in my hand, stating that the premier of the province of Saskatchewan moved the adjournment of the house on Thursday last to discuss a matter of urgent public importance, and the house discussed the wheat policy of the federal government, or proposals the province were making to the federal government. During that discussion the minister of agriculture made this statement, having suggested 85 cents as a set minimum price:

> An objection that the price was too high was not valid because Great Britain was already paying that figure for Canadian wheat now and was willing to continue paying it.

Would the minister state what authority the provincial minister had for making that statement, and whether 85 cents is the agreed price?

[Mr. Howe.]

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I presume the hon. member for Qu'Appelle is referring to the minister of agriculture of Saskatchewan?

Mr. PERLEY: Certainly.

Mr. MacKINNON (Edmonton West): I have no idea on what he bases his statement.

INQUIRY AS TO POLICY FOR 1941-42 CROP YEAR

On the orders of the day:

Mr. T. C. DOUGLAS (Weyburn): In view of the lateness of the date I would ask the Minister of Trade and Commerce (Mr. MacKinnon) when we may expect a statement from the government regarding its policy for the handling and marketing of the 1941 wheat crop, and when legislation will be brought down to make that policy effective.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, I am very sure that the hon. member for Weyburn (Mr. Douglas) is anxious to be helpful. I am very sure also that he is well aware of the immense amount of time that my colleagues and particularly I as Minister of Trade and Commerce have been giving this question, and how anxious we all are to arrive at some finality with regard to the wheat policy for next year.

Mr. DOUGLAS (Weyburn): But spring seeding cannot wait.

Mr. MacKINNON (Edmonton West): Even in the most favoured parts of the west, in the province of Alberta from which I come, seeding will not be under way for some time yet. In any event, we are quite aware of the importance of the matter, and a statement will be made as soon as possible with regard to the 1941 wheat policy. Two or three days ago I stated that I hoped to make at least a partial statement within a few days. I hope to make that statement this week or, if not, the first of next week at the very latest.

JOINT SWINE COMMITTEE

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): Has the Minister of Agriculture (Mr. Gardiner) ascertained whether or not there is a joint swine committee, and if so, will he tell us who are its members?

Hon. J. G. GARDINER (Minister of Agriculture): I notice that the question was dropped following my first request yesterday. I had understood that as a result of the discussion which followed, the question would remain on the order paper. I wonder if I might ask that it appear on the order paper

the next day questions come up. I find that there is a swine committee; I can get the names of the members, and I will give them.

DEFENCE OF CANADA

APPOINTMENT OF SPECIAL COMMITTEE TO CONSIDER AND REVIEW REGULATIONS AND NATURALIZATION AND DEPORTATION LAWS

The house resumed from Monday, March 3, consideration of the motion of Mr. Mackenzie King for the appointment of a committee to consider and review the defence of Canada regulations passed under the War Measures Act, and the naturalization and deportation laws.

Mrs. DORISE W. NIELSEN (North Battleford): Mr. Speaker, I am very glad indeed that the debate was adjourned last evening in order that other hon. members might have the opportunity to take part in it. During last session some of us thought hon. members should have been given greater opportunity to express their opinions with regard to the defence of Canada regulations. Since we have that opportunity now I feel that each of us should make the most of it and discuss all these regulations very thoroughly and from every angle and every aspect. I certainly hope the debate will not be closed before more hon. members have taken advantage of this chance to express their opinions, because I believe the country itself is very anxious to know more of what hon. members of this house think with regard to the regulations. I also hope that in particular hon. members on the government benches will take part in the debate, because it is far better to speak and risk being a goat than to say nothing and be a sheep.

Theoretically I am in agreement that there is a need for protection in this country not only against the ideology but against the spreading of the ideas of fascism in any practical manner, because we as a nation undoubtedly are fighting the spreading of that ideology among our own people, who are democratic. I feel that we are in disagreement with the ideas of fascism, which call for the supremacy of the state and so on. We must remain opposed to them, and we must do everything possible to prevent the spread of those ideas among our own people. But I do not agree that in practice these regulations are having just that effect. In some instances, of course, we have had the arrest of people supposed to be fascists, but I feel that in other cases under these regulations we have done just the contrary. Just recently I have noticed two formulations; perhaps they may be accidental, but I happened to notice them. One appears in a little pamphlet which I believe has been mentioned in this house previously, published under the direction of the Minister of National War Services (Mr. Gardiner) and called "The Two Ways of Life." In the introduction I notice this statement:

> Our way of life is the civilized way of life. It is the civilized way because under it every citizen enjoys the right to worship as he please—

That is correct. Then it goes on to say:

> —to select his own rulers, to help make his own laws—

And so on. Then I notice that, speaking on February 24, the Minister of Justice (Mr. Lapointe) is reported in *Hansard* as having said:

> In a democracy the designation of the rulers of those who are to be governed is and must be made by the vote of the people.

I do not like that word "rulers"; I intensely dislike the idea. Perhaps this idea of the government being the ruler of the people comes from the fact that within the last year this government has taken to itself unusual and enormous power. We are fighting against the idea of the supremacy of the state over the individual. We are fighting against the idea of rulers over the people. We who are democratic must always insist that the duly elected representatives of the people maintain the status of servants of the people, not their rulers.

I notice also, very happily, that on February 27 the Minister of Justice assured this assembly that the defence of Canada regulations would last only for the duration of the war. According to *Hansard* the minister said:

> They are operative in a state of emergency, and they will disappear as soon as we have peace and victory, as we hope to have some day.

I believe the minister was very honest and sincere when he made that statement; I have no reason to believe that he would be otherwise. Yet I would suggest that the Minister of Justice of to-day may not be minister of justice when this war is over. He may be retired; he may be in another office; we may have another minister of justice who is not of the same mind. The people of this nation have no other guarantee, so far as I know, than a statement by our present Minister of Justice, that these defence of Canada regulations will disappear as soon as the war is over. I do not know myself whether we should be willing to accept such a flimsy guarantee. We have no legislation upon which we can rely.

During the time of the trial of the seaman Sullivan, I believe it was, Mr. Justice Hope said that during war time we people of Canada

should be willing to put our civil rights and liberties in pawn. I must confess I do not know very much about pawnshops. I have always said that in northern Saskatchewan we have not had many social services, and this was one we did not have—the pawnshops. And I think perhaps in the past I might have been pleased to avail myself of that service. Now, when an article of any value is placed in pawn, a ticket is given in exchange, and through that ticket the borrower may redeem the article of value. Where is that ticket the Canadian people should have to-day, with which they may retrieve their freedom and certain of their rights and liberties which under these defence of Canada regulations are being taken from them?

Several hon. members have said on different occasions in the house that the government has a mandate from the people. Would it perhaps not be wiser to say "has had"? We live in a time of swiftly moving events, let us never forget that. During the last year events have moved very swiftly, possibly more swiftly than at any other time in our history. People who a year ago viewed certain things with a measure of complacency to-day view with alarm and with growing apprehension the tide of affairs within our country.

During the last year we have seen the application of the defence of Canada regulations, of which at the time of the election we had not become aware to any great extent. We have seen numbers—I do not know exactly how many—of our ordinary citizens interned without, as I say, the usual process of law and guarantee of trial. We have seen certain groups in this country called illegal. We have seen certain measures of compulsion with regard to the war effort. Undoubtedly there is in Canada to-day a certain amount of compulsion upon people who are working in factories or in various businesses in connection with the war savings campaign. Undoubtedly —and I do not believe this can be denied— unequal sacrifices are being made in this war. During the last year we have witnessed an enormous spending programme and the creation of a vast debt, a debt greater and more stupendous than the people of this nation have ever had to accept before. We have seen a serious situation in western Canada, one which so far seems almost impossible of solution; this government apparently has no solution to offer. We have seen rule by order in council. That, again, is a dictatorial and not a democratic procedure. We have seen various orders in council directed against organized labour in Canada.

I say now emphatically that many Canadians, who a year ago viewed these regulations with more or less complacency and were willing to leave them in the hands of the government, are to-day viewing them with apprehension. The regulations have not the support of the people. I say without hesitation that among many groups of people there is the growing belief that these defence of Canada regulations are being used deliberately to stifle the apprehensions of the people and the expression of their apprehension and discontent. The government is trying to silence the protests of the people. It is asking for unity, but it is trying to enforce unity of opinion. The fact that the government is using these regulations to enforce conformity of opinion is, in the view of some of us, an indication that it is well aware that the people are not unanimous in their agreement with the policy of the government and the legislation it has enacted. Moreover, I would go so far as to say that the very fact that the government is forced to put certain of these regulations into operation is an indication that it fears the expression of the people's will. There is growing discontent, and yet the government does little or nothing to eliminate the causes of discontent among our people. Rather it seeks to suppress the discontent by arbitrary rulings under these regulations. It acts as the ruler of the people, not as their servant.

Already we have heard a great deal about Mr. Meighen, and what he is reported to have said some time ago. At least he was honest. In effect he said that if an unregulated and unrestricted profits system were to be finished by this war, then he did not see what there was to fight for. I believe if any ordinary person, a member of a farmers' organization or a trade union, or a member of a relief recipients' association, had stated publicly that he did not see what there was to fight for, he would be in an internment camp cooling his heels. I believe I am safe in saying, however, that the government has at no time even thought of arresting Mr. Meighen. For one thing, the government does not fear the loss of Mr. Meighen's support, or the support of people like Mr. Meighen, and those he represents. The government can take that position because it is doing nothing, and does not intend to do anything, to limit or to restrict power, privilege or the profits system in Canada. In a time of war it is allowing—and there is not a shadow of doubt about it—a condition of profitable patriotism. We see, too, how clear it is that they need not fear people like Mr. Meighen, because legislation passed in the house and orders in council have declared protected areas for certain industries owned and controlled by monopolies in this country. We find that as an advisory com-

mittee the government has brought in business executives of some of the greatest monopolies and corporations in the country.

We know there has been no endeavour to conscript wealth. We are continuing to pay the interest on the loans we make from the great banks. All these things assure people like Mr. Meighen and his representatives that there is nothing to worry about. Therefore this government does not fear any expressions by Mr. Meighen. Well, that is all right. It is quite all right for Mr. Meighen to express himself in that way. But if Mr. Meighen is free so to express himself, then let us all be free to express our opinions.

It has been stated that roughly from one-third to one-half of all the people in Canada are earning less than $1,000 a year. Among that group of low-income people a certain amount of opinion is being expressed, not openly at public dinners, as Mr. Meighen is able to express himself, but among themselves. The people are saying many things. Some of them are saying: "If we are going to have conscription, conscription not only by legislation but by economic pressure, instead of being permitted freely to support the war effort; if we are to have compulsory saving introduced into this country; if our farmers are to be the neglected people and to suffer unduly from the burden of this war through no fault of their own but from loss of markets; if we are to be taxed so that we cannot even maintain health and strength in our families while corporations and monopolies are making greater profits during this time; if the banks are to get enormous interest, thereby hanging a burden of debt over our children in the years to come greater than we have had before, and if we are to lose our civil rights and to have no guarantee that they will be returned to us," is it any wonder that they say, "we can hardly see what we are fighting for?"

But the government does fear expression of these opinions. It does not intend to allow opinions of this kind to have expression because the government intends to continue the things about which the people would like to express their opinions adversely. It is clear that the government does intend to tax the low income groups. It is encouraging compulsory saving and it is allowing interest on debts to accumulate. It is not enforcing by legislation equality of sacrifice. By various orders in council it is impeding the trade union movement in this country. It has offered no constructive policy to agriculture. The government knows that as long as it conducts this war there will be a greater number of Canadian people who will want to express themselves as being against the government policy. Therefore I have no hesitation in saying that these regulations are being used to suppress the free expression of the people's will.

With regard to my own pamphlets, I have very little to say. I have noticed that various hon. members of this house have been a little interested, maybe a little amused over these pamphlets. Personally I have not thought a great deal about the matter. In fact the government has never intimated to me in any way, shape or form why they did what they did. I have formed my own opinion about why that action was taken. I regard the thing which the government did as being somewhat of a little blunder on their part. I refer to the taking of the pamphlets by the police. I think that was done deliberately in an attempt to intimidate not only me but the rest of the people of this country who were interested enough to want to read what a member of this house had said. After all is said and done, the best laid schemes of mice and men and governments gang aft agley. The attempted intimidation was not successful. In fact I feel I should thank the government for some good advertising.

In return I may say that I have done my best to advertise the government's little pamphlet. All hon. members know it. On various occasions I have spoken to the people of Canada about this twenty-five cents' worth of good information and told them that they should read it. But I have also told them that if these regulations are not amended to protect in essence the people of this country from the things from which they should be protected, the new edition should have across its front a different title; it should be called, "Defence of Capital Regulations."

There has also been intimidation of our working people. Theoretically this may not have been intended, but in practice it has taken place. I believe certain members of the trade union movement have been arrested. The other day the Minister of Justice said that they had been arrested because they were communists. Not long ago I came across a copy of an address which had been made by the lawyer who defended Pat Sullivan of the seamen's union. This speech was delivered to the Civil Liberties association, of Toronto, at Emmanuel college, university of Toronto on November 1, 1940. This lawyer had had access to far more material than had hon. members of this house or the general public. I should

like to quote briefly a few of the things he said about the arrest and internment of these trade union leaders. I quote:

Is the existence of regulation 21, administered by the policy, illustrated in the Sullivan case, of denying the detained person any particulars of the things held against him, forcing the accused to assume the onus of accusation and proof without knowing what he is expected to establish or refute, designed to assist our social effort at this moment? Does it rather encourage at least suspicion that the use of this arbitrary power may be associated, at least in part, with class or economic or political interests?

Let us examine two or three of the cases and see how they work out in actual result. Let us take the Sullivan case again to begin with.

Sullivan's arrest took place in June, just as the seamen's conciliation board was emerging from the first stage of its public sessions and was about to enter into private conference with the officers of the union and with representatives of the major companies for the purpose of trying to effect an agreement between the parties.

In point of time Sullivan's arrest seemed to fit in with the particular interests at the moment of the employers. The Department of Justice asserts that this was "the long arm of coincidence." I, personally, accept this assurance in good faith. But I am not a seaman, relying upon the union and the aid of its executive officers for concrete results in the matter of my livelihood. If I were, and found myself directly and injuriously affected by Sullivan's arrest just as he is to step up to bat for the winning run, I might feel differently. So might you, if you were such a seaman.

Again he goes on to say:

Let us take the case of one David Sinclair, also connected with the seamen's union. Sinclair was editor of the union's paper. He appeared with executive officers of the union at some of the conciliation board's hearings. He was arrested in Montreal, taken into detention under order of the Minister of Justice and sent to an internment camp early in the month of September. The grounds disclosed in his case are merely that representations have been made that he is (a) a member of the communist party, (b) a communist agitator.

A day or two before Sinclair's arrest, ballots had been counted in the Department of Labour at Ottawa of seamen employed in one fleet of shipping vessels, some 38 or so vessels in number, as a result of a vote ordered by the conciliation board, to determine whether or not these men desired to be represented by the union. The company had insisted that the men had no such desire. The result of the vote was that some 95 per cent or 97 per cent voted in favour of union representation—this, incidentally, several months after Sullivan's arrest and detention.

On the day before Sinclair's arrest he filed with the Canadian Press in Montreal, as publicity director for the union, a statement announcing the result of the vote, which would be followed by negotiations with the company for an agreement. The press announcement did not appear the next day, but neither did Sinclair.

There are probably as good reasons for the non-appearance of one as for the disappearance of the other, and reasons quite independent each of the other. I do not know them. You do not know them. The seamen and their friends do not know them. The advisory committee will, but Sinclair and his counsel, so far, do not and probably will not. What conclusions, however erroneous, would you arrive at if you were a seaman or the friend of one?

If only these people were given the right of trial where truth could be brought forward there would not be the feeling of suspicion which exists in the minds of our people that these arbitrary regulations are being used in certain cases, not in favour of the people but rather in favour of a group in this country which has power and affluence.

Considering again other minority groups, one might mention the case of the Ukrainian people, the Ukrainian labour temple association. That group of people have carried on in this country a marvellous work. They brought with them from Europe some of their handicrafts and their dances. Their musical festivals have been one of the finest things they have been able to give to this country. I heard one time the cultural work of this Ukrainian group described as "an oasis of beauty in the arid desert of Canadian culture." And yet to-day that group is declared illegal! About a hundred of their buildings scattered across this country, built by themselves, by poor working people with their nickels and their dimes, have been taken over by the custodian of enemy alien property. These people are not enemy aliens. They are Canadian citizens, some of the finest we have in this country. How can you expect unity when you treat a minority group in such a way? For years they have been fighting against fascism and fascist tendencies, not only in Germany and Italy, but wherever they show themselves, and they have some experience from the past to guide them. These people have some of their property to-day in some cities rented to another organization which right up until before the beginning of this war was openly in support of Hitler. How these things must hurt! This government is asking for unity amongst all our people while at the same time it is doing the very things under the defence of Canada regulations which must absolutely preclude the possibility of unanimous support.

Again there is the *Canadian Tribune*, a paper which has been mentioned in this house before. I feel sure, and I repeat, that in the suspension of this paper there is a desire to intimidate those who have been reading it by trying to make them believe that the paper itself is a subversive organ. The Secretary

of State (Mr. Casgrain) when he mentioned this paper said to the house—I quote from *Hansard* of February 27 of this year:

I have in my hand one of the last issues of this newspaper, dated February 1, 1941. I need not read it to the house, but it contains references to certain speeches and utterances of a member of the British House of Commons.

How terrible! Fancy any Canadian paper publishing a speech made by a member of the British House of Commons! What an excuse! Of course I know that the minister went on to say he thought this paper was subversive because it was promoting the ideas of the communist party. But hon. members who are conversant with the rise of fascism in Italy, in Germany, and more recently still with that terrible arising of fascism in France, will know that those who had the power used the same old Red bogy. They brought it out of the cupboard to scare the people. The Red bogy—that was the thing that mattered. As long as the Red bogy was there the people would be afraid to do anything but what the people in power wanted. In Italy and in Germany this Red bogy was brought out to scare and intimidate the people, and here in Canada you find the same thing happening. In France recently by arbitrary decree we saw, because of this Red menace which was supposed to be there, the imprisonment of thousands of French people. There may have been a proportion of communists among them, but there must also have been hundreds who were simply the leaders of the working people, in their farmers' groups, trade union groups and others, men and women who had been fighting fascism. But they too were imprisoned—the very people who if they had had their freedom would have defended France to the very last ditch. But they were imprisoned, and it was the government, and big business control behind the government, which imprisoned them and then turned around and betrayed France into the hands of Hitler.

Mr. THORSON: Will the hon. member permit a question?

Mrs. NIELSEN: No, I will permit a question afterwards but I have not very much time left.

We have the same kind of thing beginning to spread in this country. Attempts are being made to scare us. Reference was made a while ago to an article by Commissioner Wood in which he stressed the Red menace. I say to you, Mr. Speaker, and hon. members, there is far more need for us to fear that the powers that be in this country are not under the proper supervision of the people but are allowed, at the expense of the people, to dictate to this government, whose profitable patriotism may lead this country into very severe and very terrible consequences.

I would urge that this committee which is to be set up consider in great detail the few things which have been brought to its notice and do what is possible to amend such of these regulations as restrict the expression of view of the people.

When the minister was mentioning the *Canadian Tribune* there was one thing to which he took exception, and that was that the *Canadian Tribune* gave some publicity to a large conference of the British working people which was held in England, in January of this year I believe. The Daily *Mirror,* one of the large newspapers of England, described the people who went to that conference as ninety per cent honest-to-God British citizens. If we in this country have not the right to know what honest-to-God British citizens are saying, well, I think perhaps we have not the right to call ourselves a democracy. I have every reason to believe that there is in this country a large body of thought which perhaps I might call honest-to-God Canadian thought, far removed from the reds, and which to-day is seriously criticizing these arbitrary regulations. The *Canadian Tribune,* although its circulation was not so great, might have linked up this feeling of the people from the east to the west of Canada. It might have helped to organize the protest of these honest-to-God citizens of Canada against this government, and that is possibly one reason why the *Canadian Tribune* has been suspended. I see no reason why we should neglect to consider these things in their various aspects.

In war time there is always a certain amount of hysteria which is purposely spread among the people to keep up their enthusiasm, and I know that there are many people in Canada today, and possibly some members of this house, of whom it might quite easily be said that under the pressure of war hysteria they are more or less prepared to let the government go ahead and do as it will. But I would say to you that in times like these we have every reason to think deeply and to think well. We must not let ourselves be carried away by emotional appeals. The British working man has a little saying which will perhaps give you some idea of what he means. Of course the British working man is not very careful of his language and I hope, Mr. Speaker, you will excuse me for repeating it. The British working man says: "You must never let your bleeding heart run away with your bloody head." I feel that many people to-day under the influence of war hysteria are allowing themselves to be

carried away. They are not looking at these regulations and observing their effect upon our people. If these regulations continue as they are now, where is the right of the ordinary citizens to express themselves, the right of the ordinary citizens to defend themselves against what they believe to be injustice? If these regulations continue in their present form I for one feel that this government will no longer have any right to call itself a democratic government of the Canadian people.

Mr. W. R. McDONALD (Pontiac): Mr. Speaker, during the course of the debate on this resolution reference has been made to the suppression of certain newspapers and pamphlets on the ground that they were subversive of Canada's war effort. In speaking to the resolution I wish to refer to a newspaper or pamphlet which, while I do not go so far as to say it is subversive of Canada's war effort, is, I do say, subversive of national unity in Canada. I refer to a pamphlet or paper entitled "The Gospel Witness," edited by the Reverend T. T. Shields who, I understand, is pastor of a church in the city of Toronto.

I do not know how I come to be favoured with the receipt of these copies, except that, the contents of it being of a very insulting nature to the Catholic faith and the members of that church, the reverend gentleman thought he was privileged to add injury to insult and forward copies to the Catholic members.

It would take me all afternoon to read all the articles contained in these several copies that I have before me, with their insulting references to the Catholic church and its members. I will not take up the time of the house except to give one or two excerpts so that hon. members will have some conception of what is contained in this sheet, published by a clergyman belonging to a religious denomination which I respect, as I respect the members of every denomination throughout this country. That respect which I give to the members of other denominations and to the religious belief of every other, I expect to be given to mine. Consequently it is not in anger but rather in sorrow that I shall give these excerpts.

In the issue of this journal of January 2, 1941, there is an extract from a sermon preached in Jarvis street Baptist church, Toronto, on Sunday evening, December 29, 1940. One clause reads:

> So is it of that religion which makes a man only a part of a great church. That is Roman Catholicism. Roman Catholicism is religious totalitarianism. Salvation is in the church. Everything is to be sacrificed for the church: the individual does not count. That is not Christian; and that view, whether applied to the state or to religion, is essentially pagan and anti-Christian.

In another issue the same gentleman, this time giving a title to his sermon—"The Protestant Samson and the Papal Delilah"—writes:

> I shall never advocate any degree of appeasement anywhere at any time with popery. It is a religious racket, an organization which exists to make merchandise of the souls of men. The more I know of it the more I am driven to the conclusion that its officers must either be suffering from some terrible delusion or otherwise they must be outright knaves. It seems impossible to me to believe that any reasonable man can seriously believe the burlesque of Christianity that calls itself Roman Catholicism. I know how vicious it can be. I know very well that its agents sometimes reckon they are doing God service when they actually kill. The bloody history of the Roman church proclaims that fact.

Speaking in this house as a humble member of that church, and, I believe, speaking in the names of four million Roman Catholics throughout this country, I protest with all the vigour of my manhood against the publication and circulation of such material. Thus the reverend gentleman throws his gratuitous insults into the faces of the Catholic population of this country. This is his conception of his duty as a religious leader to preach the doctrines of unity amongst all classes and creeds who so ardently desire the unity of our people during the most critical period in the history of our country.

I should like to ask the members of this house and the people of the country whether, in their opinion, such expressions and statements as I have just cited tend to bring about the unity which we so strongly desire in Canada in this most critical time of our history. It is not for me to pass judgment upon the reverend gentleman, but I would respectfully remind him of the words of the Master: "A new commandment I give unto you, that you love one another." I would ask that he respect this commandment and preach this doctrine of love instead of hatred.

Mr. JOHNSTON (Bow River): Does that apply to Jehovah's Witnesses?

Mr. McDONALD (Pontiac): I am not speaking of Jehovah's Witnesses. I am dealing with these articles which are before me at the present time. I know nothing about Jehovah's Witnesses and I have nothing to say against them.

Mr. JOHNSTON (Bow River): It should surely apply to everyone.

Mr. DUPUIS: They have just as much love for Catholicism as the others.

Mr. McDONALD (Pontiac): After all, this church of which the reverend gentleman speaks so derogatorily has weathered the tempests and storms of two thousand years, and not in this year of grace 1941 can this reverend gentleman, doughty warrior though he may be, hope to make her rock upon her foundations or bring about her destruction. Feeble indeed will be his efforts to blast this rock of ages.

Since the beginning of this war, on divers occasions, especially over the radio, our beloved king, the President of the United States, the worthy Prime Minister of Canada, have pointed out to the peoples of their respective countries that in this time of crisis we need divine help, that it is our duty to pray for divine assistance. With that idea in mind—and these sentiments, might I say in passing, are worthy of the men who uttered them—an invitation to prayer on the part of the Canadian people for themselves and our allies in this war was issued. The lieutenant governor of Quebec a few weeks ago issued a proclamation setting aside a certain Sunday as a day of prayer throughout that province. The great service in the province was held in Notre Dame cathedral in Montreal. The worthy Minister of Justice (Mr. Lapointe) was an invited guest there and also was invited to recite a prayer. This prayer I have before me. The reverend gentleman about whom I have been talking must even criticize that attitude on the part of the lieutenant governor and the clergy of the province of Quebec. I quote part of the prayer which the Minister of Justice read on that occasion, and I ask hon. members and the people of this country if there is anything in it which might not be said by any member of any denomination in Canada to-day. The portion I read is this:

> We humbly beg of Thee, O God of mercy, to have pity on us and to give us victory. Especially give to humanity the victory of right over might, the victory of justice over injustice, the victory of charity over egotism, the victory of Thy divine rights over sacrilegious usurpations.

That is part of the prayer recited by the Minister of Justice on behalf of the Catholic lay population of the province of Quebec. Yet even that has been held up to ridicule by this distinguished clergyman in the city of Toronto. Nothing that can be done from the Catholic point of view but must be criticized and held up to ridicule. And we, numerous body that we are in this country, are supposed to do like the ostrich, hide our heads in the sand and take this abuse from him.

In sermons and speeches of this kind it is also the habit and the custom to speak of the loyalty of the province of Quebec. That must be always brought up. It would seem to me that this question has been before this house on divers occasions, speeches were made reflecting on Quebec's loyalty and answers given thereto; and the answer made was clear and distinct enough. If to-day from the flagstaff of these buildings there flies the union jack it is because on two historic occasions the French-Canadian population of the province of Quebec stood loyally by and saved Canada for the British empire. Nevertheless the old bogy of French Canadian disloyalty must be trotted out to serve the purpose of selfish individuals.

Again this distinguished gentleman, in an article appearing in the same paper, entitled "The Religious Aspects of the Sirois Report," writes as follows:

> But the indisputable fact is that the Roman Catholic church, like a malignant parasite, has fastened itself upon the body of Quebec and is draining it of the last drop of its blood, reducing it to something little better than an emaciated political skeleton, if the report is to be believed.

That is, the Sirois report.

> And then this same malignant parasite stretches out its tentacles, and through a "handful of French Canadians led by Mr. Ernest Lapointe" seeks to wrap itself about the vitals of the whole dominion—including this province.
>
> And on what grounds does Quebec demand these exceptional favours? Her superior loyalty? Her unusual service in peace or in war? The report tells us she was against us in the last war, and implies she is against us in this. The report tells us she was against us in the last war on religious grounds: on the same grounds she is against us in this. In the last war she was against republican France because of its "anti-clericalism". . . . She was behind in enlistment in the last war: she is behind in this. I can only assume that French-Canadians, left to themselves, would be as loyal as other Canadians of other racial origin. . . .

That is a gem, Mr. Speaker. "French Canadians left to themselves would be as loyal as other Canadians of other racial origin." The French Canadians of this province are as loyal as Canadians anywhere and have not to blush for their loyalty in comparison with any others. The article continues:

> . . . and in the insistence of Premier King's chief, Mr. Lapointe, that this report should be considered now, there is an attempt, under a specious plea for national unity, to fasten a blanket mortgage on the whole dominion in the interests of the church of Rome; thus to compel non-Romanist taxpayers, whether they like it or not, indirectly to contribute to the propagation of Romanism.

We in the province of Quebec, Mr. Speaker, admit that there is a certain element there that are probably not as anxious to do their bit in connection with the war as others. But also we know the history of these few people,

we know what brought about the increasing numbers of that nationalist body some years back. I do not want to go into political matters, but in order to get the background of an argument sometimes it is necessary to bring out these things. A certain body in the province of Quebec, whose attitude at the time Laurier was in power was one of opposition to the naval bill, were encouraged by the then Conservative body in Quebec to fight against the Liberals. In order to attain victory in 1911 the Conservatives financed these men, who were preaching a doctrine of rather less than loyalty to the British empire. What happened? In the election of 1911 victory was achieved by the Conservatives chiefly because of the number of seats gained in the province of Quebec, and ever since that day we have had to fight this nationalist body. It will be recalled that only a year ago last fall the Minister of Justice took his political life in his hands when he went out and fought that nationalist body in the provincial campaign. The result is well known; the Liberal party came back to power. Only last spring, in the federal election, the Minister of Justice, together with the other ministers and all members from Quebec, fought the same fight. The result is well known to-day; a majority of the voters in sixty-five constituencies out of sixty-five in Quebec returned Liberal members, supporting this administration, the party of unity which is carrying on the war. That was the answer of Quebec at that time; that is her answer to-day. I said a majority of the voters in sixty-five constituencies supported the Liberal party. There is a single exception, but that does not prove my statement to be incorrect. The gentleman who represents the nationalist body in this house is here by virtue of a decidedly minority vote.

It was only after very serious consideration, sir, that I decided to bring this matter to the attention of the house, realizing as I do how difficult it is to discuss these issues without having wrong motives imputed, as well as the danger of causing divisions among our people. Nevertheless in the interests of national unity I felt it my duty to do so. No racial or religious difference divides the gallant men who are serving in our army, our navy and our air force; and it is my humble opinion and belief, sir, that the people of Canada desire to constitute themselves a solid unit behind those gallant men in a coordinated effort to prosecute this war to ultimate victory. Could my words reach the ears of the reverend gentleman whom I have been discussing this afternoon I would respectfully submit to him that in the interests of peace and harmony in our country, and for the sake of the cause which he claims to have at heart, he should refrain from the publication of these articles. In the event of his refusal to do so I would suggest to the Minister of Justice, who is charged with the enforcement of the defence of Canada regulations, that the *Gospel Witness* be suppressed for the period of the war, on the ground that the articles published therein are subversive of national unity.

[Mr. W. R. McDonald.]

Mr. ANGUS MacINNIS (Vancouver East): Mr. Speaker, it was not my intention to take part in this debate, but because of certain statements that have been made since the debate began, I feel I should say a few words.

I wish to refer particular to statements made by the hon. member for Comox-Alberni (Mr. Neill) when he spoke on this question last Thursday. The hon. member quoted from a newspaper statements alleged to have been made by Mr. Cameron, one of the Cooperative Commonwealth Federation members of the British Columbia legislature, concerning the war savings certificates campaign. By means of insinuations the hon. member for Comox-Alberni tried to leave a number of impressions with hon. members. First, he tried to leave the impression that in his opposition to this form of war financing Mr. Cameron was speaking for the Cooperative Commonwealth Federation. I wish to say most definitely that this is not the case. Our position on that question has been stated by the hon. member for Rosetown-Biggar (Mr. Coldwell), and also by myself. Our position is that we are not opposed to the war savings certificates so long as only people who can afford to contribute are asked to subscribe, and so long as no one is coerced. In order to show what I mean in that regard, I should like to quote about half a dozen lines from an editorial which appeared in the Montreal *Gazette* of February 26:

> An elderly woman in Regina, Saskatchewan, last week signed a pledge to purchase one war savings certificate every month. Her income is $20 a month, a sum she receives on a pension. To the canvasser who supplied the pledge form she said she could buy one certificate each month by doing without one meal each day.

We can admire that kind of sacrifice, but it is the sort of sacrifice that is not doing anyone any good. It is only when pressure is brought to bear to get such people to subscribe, that we are opposed to this war savings campaign. Our position on the question is also indicated by the fact that when the campaign started, our British Columbia executive appointed two of its members to cooperate with the provincial war savings committee.

I hold no brief for Mr. Cameron; indeed, we differ in our views on many questions, although I doubt if our differences on these matters are very much greater than those which exist between the members of the various other parties represented in this house. In the Montreal *Gazette* of yesterday, Mr. Cameron replied to the strictures placed upon his remarks by the hon. member for Comox-Alberni; and I think that since Mr. Cameron is not here to state his position for himself, it would be just as well to put it on record:

I oppose them—

That is, war savings certificates.

—because they set a precedent for financing the war by loans instead of by taxation. I object to married loggers and miners and other low income groups being badgered to contribute, while the government allows others to enjoy lavish incomes. For instance a single man with no dependents with a $5,000 income pays only $615 dominion income tax.

I think that is correct, with the exception that the national defence tax is not included. He continues:

The government tells us that the national house is on fire, and we must all help to put it out. I have no objection to doing that. I did it once before, which is more than many of my critics did. But I object strenuously to paying rent to enterprising fellows who have managed to corral all the available buckets, and to paying royalties on every gallon of water we need to put the fire out, to the patriotic gentlemen who have a stranglehold on the wells of finance.

Personally I think that is a position with which it is difficult to find fault.

The second impression the hon. member for Comox-Alberni tried to leave with the house was that there was a close relationship between the party to which I belong and the communist party.

Mr. NEILL: Hear, hear.

Mr. MacINNIS: The hon. member for Comox-Alberni is noted for always being able to bring a debate down to his own level. If that close affinity exists between ourselves and the communist party, I would ask, as it has been asked many times before, why the most violent vituperation of the communist party is reserved for the members of this group. I believe I have the distinction of being the only member from British Columbia in the house who was opposed by a communist party candidate in the last election. That is a distinction I have held in every election in which I have been elected to the house. It happened in 1930, 1935 and 1940; and may I tell the hon. member for Comox-Alberni and other hon. members that it has not come about because of any friendship or any identity of interest with the communist party.

That party has always considered social democrats more inimical to its growth than the more orthodox parties, such as Liberals and Conservatives. Social democratic parties favour social reform, and the communist party desires revolution and dictatorship. Because of that, at the time of an election we always find them supporting the candidates of the old parties, when a candidate of the Cooperative Commonwealth Federation is in the field.

Mr. TURGEON: That is not true of British Columbia, apart from the hon. member's seat.

Mr. BRADETTE: That is not true of northern Ontario, either, I may tell the hon. member.

Mr. MacINNIS: It is true everywhere. I have seen instructions which have gone out, proving that it is true.

Mr. BRADETTE: In Kirkland Lake and Timmins I have seen the communists parading with supporters of the Cooperative Commonwealth Federation party.

Mr. MacINNIS: Communists would rather have a government formed by the party of my hon. friends opposite than by the group to which I belong. The party opposite stands for the status quo, and the status quo cannot be long maintained without the inevitable explosion which would lead to revolution. As a matter of fact, that is not only the situation as it applies to Canada, but the situation in every other country.

Four or five years ago I visited Europe and met representatives of the various social democratic parties there. In each of those countries I confirmed what I had learned from reading, namely, that the communist party was more opposed to the social democratic parties than to the capitalist groups.

Mr. REID: Would the hon. member answer a question?

Mr. MacINNIS: Yes.

Mr. REID: Is it not true that while in 1933 the communists in Germany had been opposing the social democratic party, when they saw the rise of Hitler in progress they joined forces with the social democratic party with a view to defeating the other groups?

Mr. MacINNIS: I was going to touch on that point, because the opposite is the truth. The communist party has been consistently opposed to the British Labour party, and has consistently vilified it. It has been consistently opposed to the Labour party and Labour government in New Zealand, and the Labour party in Australia. It has always opposed the social democratic party in Sweden; it

was always in opposition to what was formerly the Labour party in Norway and to the social democratic party in Denmark.

I come now to the question raised by the hon. member for New Westminster (Mr. Reid). The same thing was true in Germany, prior to the coming of Hitler. There the slogan was, "After Hitler, we come." It is a matter of history that the communist party joined with the nazi party in the reichstag to defeat the social democratic party, and it joined, too, in the general strike.

Mr. REID: That was earlier.

Mr. MacINNIS: No. Hitler came in in 1933, and it was not until 1935, when the Moscow line changed, that there was any attempt by the communist party to bring about a united front with other parties. Personally I have consistently opposed them, not only in recent years, but for the past twenty-two years. I have done so because I felt we did not have anything in common.

In the debate which has taken place, hon. members, particularly those from British Columbia, having had no effective answer to the criticism of the defence of Canada regulations offered by the hon. member for Rosetown-Biggar and the hon. member for Weyburn (Mr. Douglas), stoop to insinuation, and attempt to confuse the issue by suggesting that we have been criticizing the Minister of Justice (Mr. Lapointe). Such is not the case. I have stated in public and in the house my high regard for the Minister of Justice. I have said that so long as we are going to have the defence of Canada regulations administered in the way in which they are now administered I do not know of any other man in Canada I would rather have administer them. But—

Mr. HANSON (York-Sunbury): "But"—

Mr. MacINNIS: —freedom is a precious thing. Freedom is too precious a thing to leave in the custody of any individual, no matter how honest he may be or how great his virtues and moral integrity may be. The Minister of Justice is human, like the rest of us, and we would be making a mistake if we took the position that everything was all right so long as he was administering the regulations. It is not a change in the person of the Minister of Justice for which we are asking; we want a change in the defence of Canada regulations themselves, and a change in the procedure by which they are administered. That is a simple matter. Whether or not it can be done is another question. I said a moment ago, and with this I have finished, that the hon. member for Comox-Alberni had the faculty of bringing all debates in which he takes part down to his own level, which is not very high. Leaving the question under discussion, he concluded his remarks with these words:

> The picture is like this—pro-Jap yesterday; anti-Canada to-day; pro-nazi to-morrow!

Such remarks come with poor grace from the hon. gentleman who, in 1936, praised the agreement between this country and Japan at a time when I proposed a resolution providing for the exclusion of orientals. Two years later, in 1938, he denounced this same agreement in the most violent language. If those are his principles, of course that is his own business.

Mr. TURGEON: The hon. member just said that in 1936 he moved an amendment to exclude orientals. My recollection of his resolution is that it was to permit orientals to vote, but that if we did not permit them to vote they should be excluded. The right hon. Prime Minister (Mr. Mackenzie King) interpreted the resolution as being one to exclude orientals. The then leader of the Cooperative Commonwealth Federation, the hon. member for Winnipeg North Centre (Mr. Woodsworth), took exception to the interpretation of the Prime Minister and stated that it was a resolution of the party to give votes to the Japanese.

Mr. DOUGLAS (Weyburn): The hon. member's recollection is not very good.

Mr. MacINNIS: It is fortunate that these things are on record. My resolution was definitely one for exclusion. It is true that it was worded in such a way as to show that exclusion was on the ground that, because of race or religious belief, we did not give them all the rights and privileges of citizenship; that for those reasons they should be excluded from the country. It was a resolution for exclusion, and if the Prime Minister considered it in that light I think he was right.

Mr. TURGEON: What about the leader of the party for which the hon. member was speaking?

Mr. MacINNIS: That does not matter. It is the resolution that matters. I do not know what he said; I have not the record before me. My hon. friend has not quoted the record. He has given us his recollection of the resolution. If that recollection is wrong, I can only assume that his recollection with regard to what was said by the hon. member for Winnipeg North Centre is equally wrong.

I was going to finish by saying that if the hon. member for Comox-Alberni has no higher

principles than those to which I have referred, that, of course, is his business, but in the circles in which I move such somersaults as he is able to make are known as political opportunism.

Mr. ANTHONY HLYNKA (Vegreville): Mr. Speaker, I had not intended to speak on this resolution, but after listening to the remarks of the hon. member for North Battleford (Mrs. Nielsen) I feel I should say a few words. The hon. member made some serious accusations against one of the Ukrainian organizations in Canada. I regret having to be the one to correct her, but perhaps she has insufficient information about the organization and has based her accusations upon false or ill-advised information from groups in whose interest it is to belittle this Ukrainian organization so that its members cannot help Canada in her war effort as effectively as they are doing at the present time.

The hon. member has travelled from coast to coast, speaking in different centres of Canada, and she has made similar accusations against this organization. She has said that until recently it supported Hitler. That is a serious thing to say, either on the floor of this house or on the public platform, during a time of war. It tends to discourage the members of this organization when they know that members of the House of Commons do not take the trouble to find out the facts and get their information straight. I assume that most of those interested in the statement made by the hon. member will read *Hansard* and see exactly what she has said.

I do not intend to take up the time of the house to explain the stand of each of the Ukrainian groups in Canada. On some future occasion I hope to be able to give hon. members the facts with regard to their ideologies and the courses which they have pursued in the past and are pursuing at the present time. At the moment I should like to leave the matter as it stands. I can only say to the hon. member for North Battleford that she would be well advised to get her facts straight. I suggest also that she try to be fair to all organizations regardless of the fact whether or not they openly support her.

I hold no brief for any one particular Ukrainian organization, but I could not remain in my place and hear such reflections being cast upon them without making a reply. I believe that among all such organizations in Canada this organization actually had the highest percentage of enlistments in the Canadian forces at the beginning of the war. Such accusations cast in its direction are absolutely false and ill-advised.

Mr. D. G. ROSS (St. Paul's): Mr. Speaker, this resolution provides for the setting up of a committee to consider the defence of Canada regulations and the law relating to naturalization. The qualifications for naturalization in Canada are not as strict and exacting as they should be. They require at least a year's residence in Canada with the previous four years in the British empire. The applicant for naturalization is supposed to have an adequate knowledge of the English or French language, but it is not necessary that he should be able to read or write. I suppose he must be a decent man, have no record of crime, and so on. It is a great privilege to become a naturalized citizen of Canada and a subject of the British empire. The qualifications should be more than an adequate knowledge of English or French. There should be some way of finding out whether an applicant recognizes the responsibilities involved in becoming a British subject and a Canadian citizen. He ought to know something of the history of this country and of how the benefits which he is obtaining have been won and handed down, of how hard it has been for the people of the British empire to obtain the privileges they enjoy to-day. He should be willing to accept and should be impressed by the necessity of accepting the obligation which goes with the privilege of becoming a British subject. If he has not got that thoroughly in his mind, there should be some way of educating him so that he will recognize that obligation fully. We do not want people to become naturalized British subjects or Canadian citizens simply for the benefits they are going to get out of naturalization. That reminds me of the man who was seeking naturalization in one province and, when asked by the judge why he wanted to become naturalized, said that he wanted to get a game licence. Naturally his application was turned down, but undoubtedly there are people who want to become British subjects for the privileges that go with our citizenship, and who do not want to accept the responsibilities of the citizenship which they assume.

Another thing. I think more instruction should be given in the schools in the history of the fight for the rights which go with citizenship in the British empire and Canadian citizenship. If more instruction were given along this line the fathers and mothers of the children who are attending school to-day would realize better the obligations and privileges of Canadian citizenship.

I feel strongly—this has been mentioned before but I think it will bear repeating—that naturalization should be more of an impressive ceremony that it now is. The applicant should not simply have to go into some back office, stand up and raise his right hand and

say "I swear," and that be the end of it. Naturalization should take place in the form of a ceremony which would impress the candidate and make him realize that he is assuming the obligations of citizenship. Not enough of them do recognize that, although they recognize clearly the benefits which they are obtaining.

Just a word with respect to the defence of Canada regulations. I have in my riding in Toronto, and there are also in the adjoining riding and in fact all over Toronto, a great many new Canadians. They are fine citizens. There are, I suppose, in Canada altogther some 2,000,000 new Canadians of foreign birth or descent. Not the slightest shadow of doubt should be cast on the loyalty of these new Canadians as a group, because as a class they are just as loyal as any other class of Canadians. They have been the first fighters against subversive influences in their own groups. They have been the first to recognize the danger, they have fought it, and in some cases their blood has been spilled in the fight against subversive elements in their own groups. I know how loyal are the new Canadians in my riding and in the adjoining ridings, and I must say that they resent not being used to a greater extent than they are as guards and other work of the kind. We should extend the hand of friendship to them wherever we can and do our best to make them feel that they are not outsiders.

It has been suggested that there should be a three-man tribunal to hear appeals from those interned under the defence of Canada regulations. The hon. member for Lake Centre (Mr. Diefenbaker) has suggested that it would be advisable to have two judges of the superior court and a judge of the local district adjudicate on these appeals. It is not at all that we have not faith or confidence in those who are hearing these appeals at the present time. It is simply a question of putting too much power into the hands of one man. If you have three judges hearing the appeals you will get a fair judgment; perhaps what one of the three overlooks the other two will not, and there will be argument in that connection. I have the greatest admiration for the Minister of Justice, but the feeling of the people is that we are putting too great a power into the hands of one man. I know that we can depend on the minister to do the job well and fairly, but so long as it is done by one man there is suspicion and unrest among the people with respect to any decision he may make. Therefore, Mr. Speaker, I urge that the appeals should be decided by a body of three judges, and where they disagree the minister could make the final decision. I mention this simply because I feel that we must get away from the suspicion that there is in connection with the internment of some of these people.

The committee which considered the defence of Canada regulations last year did a wonderful job. Naturally we all hate to see our privileges taken away from us—habeas corpus, the right of free speech, and all those things. But we all recognize the necessity for some curtailment of our liberties in time of war. I believe that if action is taken along the lines I have indicated, the people of this country, especially the new Canadians, will be much better satisfied and have far more confidence in the administration of the defence of Canada regulations.

Mr. LAPOINTE (Quebec East): Mr. Speaker, I have already taken part in this debate because I had to initiate it, but some points have been raised on which I have a few words to say. Unless I have the consent of the house to speak again on the main motion, I will ask one of my colleagues to move an amendment of no consequence, just to give me the right to speak.

Mr. HANSON (York-Sunbury): Go ahead.

Mr. LAPOINTE (Quebec East): Thank you.

Mr. SPEAKER: With the permission of the house.

Right Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, I must congratulate the house on the tone of this debate, and I am grateful to hon. members for many of the things that have been said. There is no doubt that the committee which will sit on the defence of Canada regulations will keep in mind the suggestions that have been made in the course of the debate. The most critical speeches have been one by the hon. member for North Battleford (Mrs. Nielsen) and, to some extent, one by the hon. member for Weyburn (Mr. Douglas). I am sorry that my hon. friend the member for North Battleford is not at present in the chamber because I have to refer to her remarks and also to something that she said outside the house in recent months.

First, I should like to clear up a matter which was discussed last year and again in the course of this debate with regard to the alleged confiscation of copies of speeches of the hon. member for North Battleford in Saskatchewan and elsewhere. I regret that when this question was raised a few months ago, I was absent by reason of an indisposition that lasted for some time, and I could not give the explanations which I desire to make to-day.

In the first place, it was not the speech delivered by the hon. member for North Battleford that was seized, but a leaflet, a copy of which I have in my hand, entitled "Why I Opposed the Budget". It is substantially a reiteration of the hon. member's speech with a few changes which later, when that speech was inserted with others in a pamphlet published by the *Canadian Tribune,* were eliminated. For instance, the words:

> You have been told by press and radio that this budget was patriotic, that it ensured equality of sacrifice and equal participation in the war effort. That is a lie, and this war budget is instead the greatest hoax ever perpetrated on the nation.

"That is a lie" was not said in the House of Commons, and I congratulate the hon. member that it was eliminated from the copy of her speech which is now in a pamphlet which I have here with other speeches printed and published and distributed by the *Canadian Tribune.*

Mr. HANSON (York-Sunbury): Was there anything subversive about it?

Mr. LAPOINTE (Quebec East): That is a question of opinion. It was considered such. The question did not come to us at the time. As my hon. friend knows, in Saskatchewan, as in many other provinces, the Royal Canadian Mounted Police act under the direction of the attorney general of the province. These were not pamphlets, I may say, because the last pamphlets have never been confiscated. These were leaflets. They were taken over by the police and were studied by the law officers of the government of Saskatchewan. They considered that perhaps it was better not to proceed, and the leaflets were returned to those from whom they had been taken. That is the whole situation.

In the city of Edmonton there is a gentleman—I do not know whether I should give the name—who has been under observation for a long time. He is the distributor of communist literature in that city and has been selling copies of the Moscow *News,* published in Moscow, a publication which has been prohibited in Canada since August last. During the latter part of August that man was seen with a certain quantity of leaflets and a search warrant was issued by the authorities in Regina. Four hundred copies of the leaflet "Why I Opposed the Budget" were found in his place. They were referred to the attorney general's department for decision. No action was taken and the leaflets were subsequently returned to the man.

The same thing happened in Regina, too. On my memorandum here there are two other names of people who have been handling communist literature. The leaflets were found and were surrendered by these men and they did not wish to take them back, so they were not given back to them. They did not want them.

The same thing happened with regard to an organization called the Regina Workers' Protective Organization. There also they handed the leaflets to the police and did not wish to have them back. It was found that these leaflets had been printed by Eveready Printing and Publishing Company of Toronto. At the premises of the Canadian Tribune Publishing Company, a few proofs and five copies of the pamphlet were seized, but following examination and reference to the Attorney General of Saskatchewan, they were returned to Mr. Macleod on November 25.

A summary of all this—and I think the house will realize that too much noise has been made under the circumstances—is this: (1) The investigation centred around the leaflet "Why I Opposed the Budget," not around the speeches in the House of Commons or the pamphlets which were subsequently published. (2) The leaflet was not a speech made in the House of Commons. (3) No individuals were arrested. (4) No persons were intimidated. (5) The leaflet and pamphlet were not suppressed. As a matter of fact, the pamphlet has already had its third printing since then, the second and third issues omitting the open letter to Canadians. (6) The investigation differed in no way from any other similar inquiry.

I must say to my hon. friend the member for North Battleford that really she has not been treated as terribly as she would like us to believe. She certainly has not been hampered in her activities. As an hon. member has just stated, she has gone throughout the country making speeches, and I must say that her language this afternoon was very mild compared with what she has been stating on the platforms. It is true she has said that the defence of Canada regulations should be called the defence of capital regulations. But that is far less than what the hon. member has been saying all over the country. I have here reports of her speeches throughout the land; they are about the same everywhere.

An hon. MEMBER: Let us hear them.

Mr. LAPOINTE (Quebec East): For instance, at Nanaimo she said:

> In nearly every instance you will find that it is the leaders of trade unions that have been arrested by the police and sent to internment camps, and in some cases no reason or trial has been given or had.

She has stated at many places that seventy members of trade unions have been interned. I am afraid I have to say that this is

absolutely contrary to the facts. A few men who were members of some trade unions have been interned, but not because of their membership in any trade union but because they were communists.

Mr. COLDWELL: Can the minister tell us how many?

Mr. LAPOINTE (Quebec East): Just a few, but the information will be given to the committee, of which my hon. friend is a member. I may say that the hon. member did not do justice to herself in her speech this afternoon when she denounced fascism in the most violent way but said never a word about communism. Let me quote further:

> The defence of Canada regulations have caused fear to be instilled in the hearts of the people. Look back a number of years and remember how so many immigrants came to this country seeking freedom of religion, but now such is not the case. Jehovah's Witnesses are now an illegal organization, they cannot now gather together to worship as they please.
>
> If we are going to call ourselves democrats we should not deny ourselves the privileges we want to enjoy. The same thing happened in Germany. Take for instance Pastor Niemoller.
>
> As the war goes on not only our privileges are cut down by the defence of Canada regulations but monopoly has taken steps through the medium of prices, wages, et cetera.
>
> The trade union movement was trying to prevent these things but they are now being prevented.

She then quoted from a letter supposed to have been received from a member of the United Electrical and Radio Workers in Toronto which quoted an article giving details of labour conditions in Germany in 1940, and the writer compares them with conditions in Canada. At Winnipeg she quoted from an article in a Toronto paper which outlined the long hours and hardships which the German people had to endure, and she said that these very things, "which we are fighting against", existed in Canada.

Of course, as far as the government is concerned, in her view it is very bad. She repeated everywhere that we are a few Charlie McCarthys sitting on the lap of big business; "no more democracy in Canada"; "democracy destroyed"—and she said that this afternoon. Is the hon. lady member fair to her country of adoption? I believe she has been treated pretty fairly by Canada.

Mr. HANSON (York-Sunbury): With some exceptions—one exception.

Mr. LAPOINTE (Quebec East). Is this fair? The mere fact that a lady member can make the speech she made this afternoon, and can speak as she did throughout the country during a war as is the situation at present, shows that we still have democracy. Does the hon. lady member believe that she could say that in Germany and get away with it? Does she think she could say that in Italy and get away with it? Does she think she could say that in Russia and get away with it? No. We still have democracy.

Mr. HANSON (York-Sunbury): Limited democracy.

Mr. LAPOINTE (Quebec East): Yes; we must have limits. She says that these defence of Canada restrictions may continue after the war. She did pay me the compliment of saying that she thought I was sincere, and as Minister of Justice would see that they are removed, but she is afraid that some other minister of justice may come. In this she is not like some newspapers who seem to hope that some other will come. But she forgets this: the defence of Canada regulations are enacted under the authority of the War Measures Act, the last clause of which provides that the act ends with the last day of the war. Therefore my hon. friend need not have any misgivings about that. All these restrictions are essentially temporary, for a time of emergency, and end with the emergency.

I should not like to say anything that might offend the hon. member in any way. If, however, the police have searched for those leaflets, of which search she complained so strongly, it is because my hon. friend keeps bad company, very bad company indeed.

Mr. HANSON (York-Sunbury): Be careful.

Mr. LAPOINTE (Quebec East): Yes; I have to be careful. But were I at liberty to say what there is on the files of the Royal Canadian Mounted Police! I absolve my hon. friend from any bad intention in the matter, but some of those with whom she associates are claiming things that I am sure my hon. friend would not like to claim herself, as far as her activities are concerned. For instance, in the city of Regina a young lady has been arrested for an offence against the defence of Canada regulations, and all the papers and documents which were found have been seized and confiscated. Among those papers there was a circular letter addressed by a communist leader in Saskatchewan, who is himself interned now, in which he claims that the hon. member has the same ideas that he has.

Mr. HANSON (York-Sunbury): That is not evidence.

Mr. LAPOINTE (Quebec East): I cannot give this information to the house, but I will gladly show this part of the file to my hon.

friend if she wants to see it. Having that information; having these things on the file, surely the police were justified in looking into the documents which may have been distributed at the time, and having the legal authorities in Saskatchewan pronounce upon them. I am sure, however, my hon. friend would repudiate any association with those people and would rather associate with other members of the house in order to give help to those carrying on the war effort of Canada, to help us all achieve victory and peace.

May I make one other observation. This morning I was reading the report of a lecture given yesterday in Montreal by a European woman who stated that in Germany and other fascist countries women are barred from all public activities and have no rights except that of raising families. When my hon. friend says we have destroyed democracy in Canada, I do not think she is being altogether fair to Canada. Here ladies like my hon. friend can exercise all their rights; they are free in all their activities, and certainly my hon. friend is using that right to the limit of her capacity.

I have nothing more to add, except that in fairness to the Royal Canadian Mounted Police I thought I ought to give the facts with regard to this matter. The police have also asked me to answer a certain statement made in the Toronto *Saturday Night* of March 1 in an article by Politicus, headed "Mr. Lapointe, What do you Say?" Of course, I cannot say anything, because I did not read it. This is an extract from that article:

> Politicus knows of two cases of newspaper people of the highest loyalty and integrity whom the R.C.M.P. are investigating and on whom they have a dossier. And in neither of those cases, both journalists being people whom Politicus knows well, is there the slightest doubt of their anxiety, perhaps over anxiety, if there can be such a thing, for Britain to win this war, and of their responsibility.

The commissioner tells me that he has made inquiries and is able to say that he knows of no one, male or female, connected with newspapers, whom this force is investigating or has investigated since the outbreak of war, with the possible exception of Harry Binder, who is now serving a sentence. Why should these statements be made, creating disaffection and nervousness among the public? Some days ago a letter, written by a Toronto lawyer who represents communists who are interned, was drawn to my attention. In that letter he attacked me personally, saying that of course I could not do justice to trade unionists because I am from Quebec and in Quebec people are against labour syndicates. In this statement there are two falsehoods. First, Quebec is not against labour unions; far from it. Quebec was the pioneer in labour legislation. Second, as far as I am concerned, if that man knows me he knows I have been fighting for the trade unions all my life. I have been fighting against those employers who have been reluctant to permit the establishment of trade unions in their factories. I have been fighting for the right of labour to bargain collectively. So why say these things? Of course I am not surprised. I have a difficult task; I am doing it to the best of my capacity. I have been told in persuasive fashion that I should do things in a certain way; I have also received threats, and I may say that I have been advised indirectly that if a certain gentleman were not released I might expect a newspaper campaign. Neither sweet inducements nor threats will have any influence on me. I will do what I think is right whatever may be the consequences; and if the committee changes the regulations and I still have something to do with them, I will apply them as I think they should be applied. Again, neither inducement, blackmail nor threats will have any influence.

Mr. HANSON (York-Sunbury): Does the minister not think the government itself has some responsibility with regard to laying down the principles upon which the committee should report, instead of leaving the matter entirely to the committee undirected by the government?

Mr. LAPOINTE (Quebec East): Of course the committee will have the help of officers who have had experience in these matters. They will have the help of officers of the Royal Canadian Mounted Police, who obviously will consult with the minister before giving the committee their advice.

Mr. HANSON (York-Sunbury): Of course the inference is all right.

Mr. LAPOINTE (Quebec East): In conclusion, Mr. Speaker, I again thank hon. members, and I hope we shall all cooperate in trying to have the regulations what they ought to be. We should have all confidence in one another and try to do the work as best we can.

Mr. GREEN: Before the minister takes his seat, may I ask him if he can now give us the information with regard to the number who have been interned? I asked him that question the other day, and he promised to give the information during this debate.

Mr. LAPOINTE (Quebec East): I had it here, and I forgot to give it to my hon. friend. There are at present a total of 870 persons detained under the provisions of regulation 21. My hon. friend also asked me concerning the number of women. The answer is that there are ten, at the present time. The women are all transferred to Kingston.

Mr. GREEN: Is the minister in a position to give the numbers of different classifications —that is, German, Italian, communist, national unity party, and any other classification?

Mr. LAPOINTE (Quebec East): No; I believe that should be given to the committee. If the committee decides it should be made public, it will be.

Mr. J. T. THORSON (Selkirk): Mr. Speaker, before the motion carries, I have just a few words to say. The hon. member for North Battleford (Mrs. Nielsen) spoke in laudatory terms of a certain organization, the Ukrainian farmer labour temple association. She described it as being a representative Ukrainian organization. I entirely agree with the views expressed by the hon. member for Vegreville (Mr. Hlynka). When the hon. member for North Battleford described the Ukrainian farmer labour temple association as a representative Ukrainian organization, she insulted the vast majority of Canadian Ukrainians. The association she referred to in such laudatory terms is the central holding company for all the communist halls throughout Canada. I can say this, Mr. Speaker, that the vast majority of Canadians of Ukrainian origin are absolutely opposed to this particular organization and to communism, and are the most bitter opponents of communism to be found anywhere in Canada. I should like to associate myself in these remarks with the hon. member for Vegreville. I asked the hon. member for North Battleford, when she was speaking, whether she would permit a question, but in accordance with her rights she refused that permission. If the permission had been accorded, it was my intention to ask her whether she would be good enough to declare in this house what her attitude toward communism was, because to the best of my recollection she has never declared that attitude here.

Motion (Mr. Mackenzie King) agreed to.

WAR EXPENDITURES

APPOINTMENT OF SPECIAL COMMITTEE

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That a select committee be appointed to examine the expenditure defrayed out of moneys provided by parliament for the defence services, and for other services directly connected with the war, and to report what, if any, economies consistent with the execution of the policy decided by the government may be effected therein, and that notwithstanding standing order 65 the committee shall consist of twenty-four members, as follows: Messrs. Abbott, Bercovitch, Black (Cumberland), Bradette, Chevrier, Cleaver, Diefenbaker, Fournier (Hull), Gladstone, Golding, Graham, Gray, Green, Harris (Danforth), Macdonald (Halifax), MacInnis, Marshall, Mayhew, McGeer, Picard, Pottier, Ross (Moose Jaw), Sissons, Thorson, with power to send for persons, papers and records; to examine witnesses and to report from time to time to the house.

He said: At the outset may I explain the significance of the reference in the motion to the expression "notwithstanding standing order 65". No doubt hon. members are familiar with that standing order, but I might say in a word it is to the effect that no special committee may, without leave of the house, consist of more than fifteen persons. Hon. members will notice that provision is made in this resolution for a committee of twenty-four persons.

It may help to place the motion in its true light were I to review the circumstances which have led me to present it to the house in the form in which it appears upon the order paper. At this stage of the session, after a long adjournment, we are apt to forget that the session itself began on November 7, continued until December 6, and that we reconvened on February 17. I mention this because before the adjournment had taken place there had been an agreement on the part of the government to introduce the motion which is now before us—at least, this motion, with a slight alteration.

Hon. members will recall that shortly after the session began, the leader of the opposition (Mr. Hanson) suggested that the house should consider the appointment of two select committees, one which, from a factual and objective point of view, would have to report upon the fighting forces, army, navy and air, and another which would be concerned with questions of supplies and deliveries of equipment, munitions and the like.

At the time he suggested consideration of the appointment of two such committees, my

hon. friend said that he recognized the implications, and that he thought perhaps it would be preferable, before any steps were taken, to have a conference between himself and some members of his party and myself, as leader of the government, and some members of the government.

That conference took place, and it was, I believe, in part as a result of it that, when my hon. friend the leader of the opposition returned to the subject in this house, he brought forward what he termed a concrete suggestion, one which he said he believed was constructive. It was an invitation to the government to consider the appointment of a committee for the control of national expenditures, which would be on all fours with the similar committee in the United Kingdom. My hon. friend read to the house the order which set forth the powers and terms of reference of the committee in the United Kinggdom, and stated that he had in his possession copies of the reports of that committee, that he believed its work had been very useful, and that, for these reasons, he would recommend to the government the appointment of such a committee.

Very shortly after he made that announcement, or proposal, I told my hon. friend that the government would accept it, and that we would be prepared to appoint a committee along the lines of the committee in the United Kingdom with respect to the control of national expenditures. Within a day or two before the house adjourned I gave the definite assurance to the house that, as soon as parliament reassembled, I would introduce the motion, and that the committee would be appointed.

Since the recess, I believe on the first day of the reassembling of parliament, the leader of the opposition asked me, as the record will show, what decision had been reached with respect to the setting up of the committee on the control of national expenditures. I said to my hon. friend in reply that I was prepared to bring in the motion at once. The only reason I was not doing so at that time was that the motion required notice, and that, before introducing the motion, I wished to get from the whips the names of the members who would compose the committee. The leader of the opposition then suggested it would be well if we should have a further conference before the motion was introduced. He thought that the terms of reference were as important as the membership of the committee, and said that he would like to have a further conference with me. I agreed to that immediately and my hon. friend did have a further conference, at which time I thought we had reached complete agreement as to the terms of reference, and I so reported to my colleagues in the cabinet.

Subsequently, however, my hon. friend met me in company with one of the members of his party and suggested consideration of a change in the wording of the resolution. At that time I gave him my reasons for feeling that the resolution should not be changed. It was agreed, however, to have a further conference between my hon. friend and one or two members of his party and myself along with one or two of my colleagues, and that further conference was held. To-day I bring in the motion as it has been modified as a result of the first conference I held with my hon. friend immediately after parliament reassembled.

It is most important that the circumstances which have led up to the appointment of this committee should be carefully reviewed and understood because I regret to say that within the last few days there has been a great deal of misrepresentation concerning the purpose of the government in proposing this committee. The fact has been completely forgotten that the proposal was made by the leader of the opposition himself and that it was accepted in full by the government. As I have said, we had reached agreement on the matter before parliament adjourned in December last. An entirely different construction has been placed upon the motion from that which was intended, I believe, by my hon. friend at the outset or by myself in accepting it. The government's whole position in the matter has been so completely misrepresented and misconstrued—

Mr. HANSON (York-Sunbury): By whom?

Mr. MACKENZIE KING: I am coming to that—by what has appeared in a section of the press within the last few days—I am not saying that my hon. friend has misconstrued it—that I think it is most important that the whole matter should be carefully reviewed. I would remind hon. members that when parliament is in session, political battles may be fought in two places, either in parliament or throughout the country. When we are being told that the opposition in the House of Commons is anxious to cooperate with the government and to do all that it possibly can so to do, we rather expect that the opposition press throughout the country will adopt a similar attitude or at least that it will withhold criticism of a measure, and above all misinterpretation of a measure, until it has been fully discussed on the floor of the house.

Because I recognize that this is a very important measure I purpose going rather carefully into the different steps which have led to the motion being presented to-day in the form in which it is by the government. First, I would refer to what my hon. friend the leader of the opposition said with regard to the appointment of committees of this house which might serve the purpose of giving the public more information on the manner in which our war effort is being carried on, and more in the way of control of expenditures in connection with the war effort. Page 43 of *Hansard* of November 12, 1940, sets forth the first reference which my hon. friend made to the advisability of establishing select committees of the house to deal with war effort matters. My hon. friend is reported as having said:

. . . . I am impelled to propose to the government that it cause to be set up immediately two select special committees which will be charged with the responsibility and the duty of investigating and reporting to this house factually, objectively and truthfully, without bias and without partisanship—and I have no doubt that is possible—what is our exact position (a) with respect to our fighting forces, military, naval and air; and (b) with respect to the production and delivery of all the important materials, equipment and supplies necessary in our war effort, so that the Canadian people may know the truth. Before such committees ministers could appear and be subject to questioning.

A little further on, my hon. friend said:

The government may hold the view that it is not in the public interest that the facts and figures for which I am asking be disclosed. I know the matter is not free from difficulties. When I make the proposal I visualize many of its implications,—

And a little further on:

I am willing with some of my colleagues to meet with the Prime Minister and some of his colleagues so that we may consider the whole proposal, in an honest effort to arrive at a conclusion.

That was the first suggestion made in this house for the appointment of special committees to deal with the war effort. May I say a word as to the manner in which that suggestion was received? A conference between my hon. friend and some of his colleagues and myself and some of my colleagues took place shortly after. The subject came up again in the house on December 3. At that time the leader of the opposition made reference to the former occasion on which he had suggested the appointment of these two committees. At pages 615 and 616 of *Hansard* of December 3, 1940, my hon. friend the leader of the opposition is reported as follows:

So far, such committees have not been set up. I indicated that I knew there were difficulties, and I would ask the Prime Minister, if he can and will, to tell the house what the attitude of the government is with respect to that. If the difficulties are such as cannot be surmounted then I have another concrete suggestion which I desire to lay before the house and the country. It is, in brief, that the government cause to be set up a select committee on current expenditure defrayed out of moneys provided by parliament for the defence services, for civil defence and for other services directly connected with the war, and instruct such committee to report what, if any, economies consistent with the execution of government policies may be effected therein.

Now, it is all very well to say that we can get all this information on national expenditure through the public accounts committee. Theoretically that is correct. But the information which will be obtained through the public accounts idea will not be on current expenditure. It will relate only to the expenditures that have taken place in the previous year and as covered by the auditor general's report. Practically all the national expenditure for the war effort has taken place since March 31 last—or rather the great bulk of the contracts relating to national expenditure for war effort have been let since March 31, and inquiry before the public accounts committee will not be possible. That committee may examine only such things as are submitted to it. I am impelled to make this request for various reasons, but more particularly because what I suggest has been done in England and, I am advised, with good results.

I hold in my hand a series of reports of a select standing committee of the British parliament which was set up under the authority of an order of reference made on December 12, 1939, while Mr. Chamberlain was still Prime Minister and while there was an official opposition. The order of reference contains this:

My hon. friend then goes on to quote from the order of reference. If hon. members will keep in mind the wording of the motion which is before the house at the present time, they will see that the two references are identical except for a word or two. My hon. friend goes on to quote the order of reference as follows:

That a select committee be appointed to examine the current expenditure defrayed out of moneys provided by parliament for the defence services, for civil defence and for other services directly connected with the war, and to report what, if any, economies consistent with the execution of the policy decided by the government may be effected therein.

Continuing with the words of my hon. friend the leader of the opposition:

Then it goes on and appoints a committee of twenty-eight members—and not one of them is a member of the government; they are all private members, and so far as I read the list of names, none of them are of international prominence. The committee has the usual power to send for persons, papers and records,

and to sit notwithstanding any adjournment of the house, and to adjourn from place to place. It was to be in effect a continuous working committee to examine current expenditures for war purposes having regard to the announced policy of the government. It had the power to appoint subcommittees and to refer to such subcommittees any of the matters within the jurisdiction of the committee. Such subcommittees so appointed were empowered to send for persons, papers and records, to sit notwithstanding any adjournment of the house, and to adjourn from place to place. This select committee has been sitting almost constantly since it was set up. Its first report was made in January, and the last I have was made on August 21, 1940. Any hon. gentleman who peruses this report will see, I am sure, that it is serving a great national purpose—not in opposition to government policy, not to the detriment of government policy, but to assist government policy, and to see what if any economies can be attained by suggestions.

My view is that we ought to have something like that here in Canada. It is a way in which private members could contribute to the war effort. I have heard dozens of members who support the government bewail the fact that they could not do anything to help, and saying that private members ought to be in a position to do something to help.

Then my hon. friend, a little further on, says:

I submit this to the government as a constructive proposal to which they should give some attention. I submit it in the utmost good faith, not by way of criticism but by way of being helpful to the government. We know that war is wasteful; we know there is great waste in this war, though I do not say intentional waste. I do believe, however, that a committee of private members of this house, sitting day in and day out during sessions and between sessions, could perform a very useful function in assisting the government at this time, and I commend this suggestion to hon. members. It will provide an outlet for the energies of the private members who are anxious about the war, who want to make a contribution, who were sent here by their constituents to make that contribution but who find themselves frustrated—yes, that is the word—because they have no outlet for their abilities and their capabilities.

My hon. friend goes on:

I do hope that the Prime Minister will acept this suggestion, and before I leave the topic may I say to hon. gentlemen who will accept positions on the committee, if it be set up: There is not only a real job to be done, but a job which will tax your capabilities to the utmost. You will have to make substantial sacrifices in serving the state in this way, but it is a patriotic duty which I think some of you ought to perform. I believe a real contribution can be made in this way by private members.

May I pause again to remind the house that the motion before it which I have presented to-day is an acceptance in full, and going somewhat further, as I shall indicate a few moments later, of the proposal of the hon. leader of the opposition, made, I assume, after consultation with members of his party and with his party solidly behind him in making that proposal.

What were the grounds on which the leader of the opposition put forward the proposal for this committee on the control of national expenditures? First of all, he advanced it as a concrete suggestion, as a constructive suggestion. He commended it and presented it to the government and asked its acceptance more particularly on two grounds: on what had been done in England, and done there with good results, and as serving a great national purpose, namely, to assist government policy, to effect economies and to avoid waste. There was the further purpose, to enable private members to contribute to the war effort, to afford an outlet to the energies of private members to perform a patriotic duty. Let me draw attention to the wording of the resolution which the leader of the opposition proposed. The first point in it is that the government cause to be set up a select committee on current expenditure defrayed out of moneys provided by parliament for the defence services, for civil defence and for other services directly connected with the war.

It was a request for a committee to deal with current expenditures. Second, such committee was to be instructed to report what, if any, economies consistent with the execution of government policies may be effected therein.

The motion as presented by my hon. friend the leader of the opposition or which he was asking me to present was that the committee should report with respect to economies, to avoid waste and the like, and to report with respect to economies which would be consistent with the execution of government policies. It was not for any other purpose.

I do not think there can be any doubt, Mr. Speaker, about the leader of the opposition having made the proposal, or about the exact nature of it, the scope of it, the purpose of it, and of his having strengthened his position by saying it was precisely the same motion that had carried in the United Kingdom, under which a committee in the United Kingdom was operating to-day.

What attitude did I take towards the suggestion? My reply to my hon. friend will be found in *Hansard* of December 3 at page 633. Speaking in reply to the leader of the opposition, I said:

A few days ago my hon. friend spoke of the desirability of the house appointing two standing committees. I believe he made that suggestion on November 12, when he first spoke in this debate. His words were as follows.

Then I quoted the words which I have already given the house to revive its memory. I mentioned also my hon. friend having suggested that there should be a conference between himself and his colleagues and myself and certain of my colleagues. Then I continued as follows:

May I say that since making that statement, my hon. friend and two of his colleagues have met with me and two or three of my colleagues to consider the matter there referred to. I wish to say to him and to the house—

I ask hon. members to note the manner in which I as leader of the government sought to accept the suggestion made by the leader of the opposition:

I wish to say to him and to the house that no approach to the subject could have been more helpful or could have been better in every respect than that which he and his colleagues made in confidence with the government in this matter. We spoke quite frankly to my hon. friend and his colleagues with respect to the difficulties which surrounded the procedure of dealing with war expenditures, questions of production and distribution—deliveries, I believe, was the word he used—in any standing committee of the house which might be holding its proceedings in public and which during part of the time might have to ask that the proceedings be held for some time in camera. We particularly pointed out the difficulties of imparting to parliament or to any committees certain information.

I will mention to the house just what one of those difficulties is. We have been asked by the British government—and this is a request they have made to governments in all parts of the British commonwealth; it is not one which has been made to us alone; it is a matter of which the British government itself has taken full account—to avoid, if possible, the disclosure of numbers, the disclosure of amounts, the disclosure of quantities, the disclosure of anything in public which would help to give the enemy an appreciation of the strength or lack of strength of the forces opposing him.

I think every one can see the reasonableness of a position of the kind. But it does raise a very difficult situation for the government. If we are not on the horns of a dilemma, we are at least in the matter of information sailing between Scylla and Charybdis all the time. We are either too near the rock of Scylla in giving more in the way of information than we should, or we are drifting to the other side toward the whirlpool of Charybdis and are being accused of withholding from the people of our country the information they are entitled to have.

I can only put the situation as it is in its clear light before members of this house and before the country, and trust to the soundness of their judgment. That is the position we are in with respect to the disclosure of information that might prove to be harmful.

A little further on, I said:

It is for that reason and for that reason only that the government hesitates to say to this house that it is prepared to have standing committees before which will be placed the exact position with respect to our fighting forces, naval, military and air.

[Mr. Mackenzie King.]

And further:

I agree with what my hon. friend has said about the position of private members in this house. Every member is anxious to become more actively interested in Canada's war effort.

And further on:

Hon. members are right in feeling that they would wish, that the house itself would wish to make its own contribution to the war effort in some way.

And later on:

I can assure hon. members that we desire their fullest cooperation.

Having given, as my hon. friend had asked me to do, the reasons why we felt that it would not be wise to accept the suggestion of the two committees he had spoken of, I then gave my acceptance of the proposal which he made, and I did so in the following words:

This afternoon my hon. friend made a suggestion which appeals very strongly to me for more reasons than one; first of all, because of the proposal itself, and also because it is the procedure which on this very perplexing matter has been adopted at Westminster. In the parliament at Westminster the government has been faced with exactly the same situation we are faced with here. They have of course a much larger number of private members than we have in this House of Commons and their private members are as anxious to make their contribution as are our private members.

Then further on:

The British government are making expenditures on a much vaster scale than we are, and human nature is the same in the United Kingdom as it is in Canada with regard to all classes and conditions of men and how they may act in respect of government contracts and large quantities of money and supplies at a time of war. They are just as anxious as we are to see that whatever is done is done openly, honestly and above-board and to bring to time summarily anyone who seeks to profit by opportunities which war conditions may afford. But they have not thought it advisable to set up standing committees of the character which was originally proposed by the leader of the opposition. They have, however, established a committee on national expenditure which has been given certain powers and which has been functioning now for almost a year, having been set up on December 12, 1939.

I then read the motion, which I have already repeated several times, setting forth the powers which are given to the committee on national expenditure in Great Britain; and having quoted the resolution which had been proposed by my hon. friend, I said:

. . . . may I say that after careful consideration of the whole matter the government is prepared to introduce a similar motion into this house and to follow the procedure which has been adopted by Westminster with respect to war expenditure.

That was a full acceptance of my hon. friend's proposal—full with respect to all the terms of reference, going, indeed, a step further by declaring that we were prepared to follow, with regard to the procedure of the committee itself, the example which had been set at Westminster. That acceptance was given without reservation, mental or otherwise. It was given in a whole-hearted, open and frank manner, deeply appreciative of what, at that time at all events, I believed was the desire on the part of the opposition to cooperate with the government in this matter and which I believe to be still the desire that actuates my hon. friend the leader of the opposition.

I come now to a very important point, namely, what in the mind of the leader of the opposition and my mind as leader of the government, and having the responsibility I have in this time of war, was to be the exact character of this committee, whether it was to be a committee, as its terms set forth, to help to control national expenditure, to give to private members of the house their opportunity to make a contribution towards Canada's war effort in the manner therein indicated, or whether it was to be an instrument of party political warfare, that this house was to give to some committee a general warrant to search for scandal.

Mr. HARRIS (Danforth): A fishing committee.

Mr. MACKENZIE KING: Yes, a fishing expedition, a roving committee. I thought it was important to make the purpose clear in the interests of both the opposition and the government; also that it should be perfectly understood by the country in this time of war what the motive was that lay behind the proposal and what was to be its purpose when the committee was formed. In doing so I used the following words:

I want to add that whoever is appointed to such a committee ought to take his responsibilities very seriously. Great care will have to be taken in the selection of the personnel. If there is a genuine desire to do the thing that is helpful, I am sure that great good can come out of the existence of a committee of the kind. If, on the other hand, the committee is to be made an instrument for party warfare, I cannot conceive of anything that could be worse.

That is on page 635 of *Hansard*.

Mr. Hanson (York-Sunbury): May I interrupt my right hon. friend to say that nothing was further from my thoughts.

Mr. Mackenzie King: Quite so. I have not said that my hon. friend—

Mr. Hanson (York-Sunbury): I am not looking for scandal.

Mr. Mackenzie King: I believe that my hon friend is wholly sincere in what he says. I would not have made the remark I did had I thought that he was not. But I repeat that if a committee of the kind were to be used as an instrument of party political warfare, I cannot conceive of a way of working greater injury to Canada's war effort. But a committee which takes its responsibilities seriously, and will assist the government in exercising a control over the expenditures which are being made, keeping on the government the responsibility for policy, but being free to make suggestions that will be helpful and constructive, should be of the greatest possible service. It was that kind of committee which on December 12 last was set up at Westminster, and this is the motion under which action was taken.

I then read the motion, and I went on:

I propose, Mr. Speaker, as soon as parliament reassembles after the adjournment, to introduce a motion in those words in this House of Commons.

I said that the reason for waiting until after parliament reassembled was that I thought it would be a better time to select the members of the committee, and I concluded with these words:

I hope this assurance will meet with general acceptance.

May I conclude before recess by quoting one article which represents, I believe, the impression that was left at the end of the session as to the satisfactory nature of the proceedings between the opposition and the government. The opposition were getting a good deal of credit for having put forward a constructive proposal; the government on its part was being commended for having accepted the proposal, and the country generally seemed quite satisfied with the action which was to be taken. I shall read but this one article. It is from the Toronto *Globe and Mail* of December 5, 1940, being an editorial headed "Will Ensure Confidence":

The Prime Minister's acquiescence in the suggestion of Mr. Hanson for a parliamentary committee to inquire into war expenditures will be approved in the country as it was in the Commons. The select committee to be set up when parliament reassembles on February 17 will be composed of representatives of all parties in proportion to their strength in the house. If the committee follows the precedent of Westminster it will hold some of its sittings in camera. The quality of its membership should be high if the inquiry is to ascertain whether the country is getting full value for the whole of its expenditure.

Sheer fault-finding is not an indulgence for which there can be any patience or excuse when the nation is fighting for its life. Any attempt to make political capital which would retard the war effort will be severely condemned. What the public wants to know is whether economies can be effected without slowing up preparations for the defeat of Hitlerism. The committee should have ample power to examine expendi-

tures for the defence services and for other services directly connected with the war. If it can suggest economies which will in no way hamper the war effort it will do well.

There may be a disposition to exploit the opportunity to discredit the government, but Mr. Hanson was prompt in giving assurance that there was no such thought in his mind. The supreme concern should be to accomplish something that will promote efficiency and economy without impairing the nation's striking force.

The government's decision to create a parliamentary committee to examine expenditures and to suggest what, if any, economies can be made will in itself inspire public confidence.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. MACKENZIE KING: Mr. Speaker, when the house recessed, I had concluded discussing the resolution now before us as respects what had taken place during the period of the session before adjournment. I pointed out that the resolution at present before the house is almost identical with the one which the leader of the opposition (Mr. Hanson) suggested should be adopted by the government; I indicated the steps which had led the government to accept the resolution in substantially the wording presented by the leader of the opposition, and stated that when parliament adjourned I had thought both sides of the house were in complete agreement as to the resolution and its terms of reference. What I believe justifies that view is the fact that, as I have indicated, the press of the country generally seemed to entertain it. I think it was a logical view to take having regard to the emphasis which my hon. friend the leader of the opposition placed on the practice at Westminster and the emphasis which I personally am inclined to place upon that practice as an example in matters of procedure here.

I wish now to say a word or two about what has happened since parliament reassembled. The leader of the opposition referred to the matter of this committee on Monday, February 17, the first day the house met, and his remarks will be found at page 789 of *Hansard*. Speaking on the business of the house, the leader of the opposition said:

> May I also ask the Prime Minister if he will be good enough to let us know when the proposed committee on national expenditure will be set up.

I ask the house to note those words, "will be set up." I think the question of my hon. friend makes quite clear by itself that in his mind at that time there was agreement on the committee and that the committee would be set up. I omitted to reply to that question at the time, and at page 863 of *Hansard* my hon. friend is reported as follows:

> Mr. Hanson (York-Sunbury): There was the question of the setting up of a committee on national expenditure.
>
> Mr. Mackenzie King: I am sorry I omitted to refer to that. I hope to introduce the motion this week. I would have introduced it at once, but I thought it desirable that the whips should first confer as to the personnel of the committee. It is also necessary under the rules of the house that notice shall be given in the *Votes and Proceedings* . . .
>
> Mr. Hanson (York-Sunbury): May I interject that I think it would be very desirable that we should confer on the terms of reference to the committee. That I think is just as important as the personnel of the committee.
>
> Mr. Mackenzie King: I shall be very happy to confer with my hon. friend. I may say I had in mind in drafting the motion what he himself had expressed before the adjournment, namely, that we should follow as closely as possible the motion as introduced in the British House of Commons. I have had the motion prepared, but I shall be pleased to confer with my hon. friend further with regard to it.

The leader of the opposition made one other reference to the matter on February 19, appearing at page 835 of *Hansard,* when for the first time there was a new feature introduced. This is what he said:

> I hope that the committee on national expenditure, when set up, will examine and criticize all expenditures for war purposes, past, present and future, and award praise or blame, as the case may be.

You will observe, Mr. Speaker, that my hon. friend's motion had dealt with current expenditures; but now for the first time this new feature was introduced.

> . . . will examine and criticize all expenditures for war purposes, past, present and future, and award praise or blame, as the case may be. But the government must not evade or seek to evade responsibility because of the existence of this committee, and the powers of the committee must not be limited to reporting on methods of controlling expenditure. The committee must have power to report on expenditures already made, and the responsibility of refusing to go that far in the order of reference will be upon the government, and upon the government alone.

Apparently this widening of the terms of the resolution was an afterthought, the result evidently of discussion between my hon. friend and some of his followers.

In accordance with the promise I gave my hon. friend at the time, I met him in conference. With him was his colleague the hon. member for Yale (Mr. Stirling), and I had with me my colleague the Minister of National Defence (Mr. Ralston), who is with me at the present time. If I am not mistaken, this was on February 19. We discussed the resolution, and during that discussion I had in my hand the document which I have before me

at the present time. These conferences are supposed to be confidential. I am prepared to have them so regarded, if that is desired; or I am quite prepared to have everything that was said at the conferences made public here, if that is thought to be preferable. But I would point out to the house that I am in an embarrassing position, in this respect; that while confidence apparently is being kept between the leader of the opposition and myself with regard to what has taken place at certain conferences, the press of the country has been told of all sorts of happenings and discussions. They have begun to base their editorials on this hearsay and have found reason to take exception to the government's alleged action.

Mr. HANSON (York-Sunbury): Does the Prime Minister not think what has appeared in the press has been a perverted idea of what has occurred?

Mr. MACKENZIE KING: I do, most certainly.

Mr. HANSON (York-Sunbury): I mean to say it does not seem to be correct; I will put it in that way.

Mr. MACKENZIE KING: I thank my hon. friend for drawing attention to the fact that the reports that have appeared certainly were perverted, I would say, and utterly lacking in justification.

I hope my hon. friend will not object to my referring to the terms of reference of the resolution as discussed in conference with him and the hon. member for Yale, because that will enable me to clear up one matter which I think is most important, inasmuch as it is one which has given rise to most of the discussion outside. I refer to the term of reference which was agreed to at the first conference between my hon. friend the leader of the opposition and myself, and which the cabinet subsequently approved. The resolution proposed by my hon. friend to be presented to the house read as follows:

> That a select committee be appointed to examine the current expenditures defrayed out of the moneys provided by parliament for the defence services, for civil defence and for other services directly connected with the war, and to report what, if any, economies consistent with the execution of the policy decided by the government may be effected therein.

My attention was drawn in the conference to the use of the word "current" which appears in the resolution. It appears in the order under which the British parliament is proceeding. The leader of the opposition said he thought the word "current" might be misunderstood, that it might give rise to the impression that the government was trying to draw a hard and fast line, that it wished only to examine into current expenditures, and that other expenditures would be found in the auditor general's report, which would be referred to the committee on public accounts. He thought the word "current" ought to be eliminated.

I wish to make perfectly clear, first of all, that the British government have maintained a hard and fast line between current expenditures, which are being inquired into by the committee at Westminster, and past expenditures which, it takes the position, can be looked into only by the public accounts committee.

I agreed with my hon. friend the leader of the opposition that leaving the word "current" in might lead to some misunderstanding, or might create some suspicion, and I said that I would be agreeable to striking it out; that so far as I was concerned I was quite prepared to have the committee clothed with power to inquire into all expenditures which related to the war, going back to the commencement of the war, if they so desired and believed it to be in the public interest so to do. I made that very clear, and agreed with him then and there, without conference with my colleagues, to strike out the word "current." But I said I would wish to get approval of the cabinet before giving any final word in the matter to the house.

There were one or two other words we also thought might as well go out. I refer to the words "for civil defence" in the clause "provided by parliament for the defence services, for civil defence and for other services." The words "for civil defence" which appear in the British resolution we did not think were necessary in the resolution to be put before this parliament. In the British resolution I believe the term "civil defence" has reference particularly to A.R.P. personnel and to the registration they have in England of persons offering technical and professional services in connection with the war effort. At any rate the words "for the defence services and for services directly connected with the war" we felt would cover all that could be included in "for civil defence."

Therefore it was agreed at that conference on February 19 that the resolution would read:

> . . . committee be appointed to examine the expenditure defrayed out of moneys provided by parliament for the defence services, and for other services directly connected with the war, and to report what, if any, economies consistent with the execution of the policy decided by the government may be effected therein.

I shall come in a few minutes to what has taken place by way of criticism of the government by a section of the press of our country,

in advance of the presentation to-day of the resolution I have in my hand. But before taking up that aspect of the matter, I wish to point out why the government feels the resolution we are now presenting, in the broad terms to which I have just referred, should be accepted—and accepted as it is, without subtraction and without addition.

In a word it is this: We believe at this time of war it is advisable to follow the practice at Westminster with respect to all matters of procedure affecting the war, unless we have the best of good reasons for departing therefrom. If there is any reason why we should adopt in this parliament with regard to this matter a resolution different from that which has been adopted at Westminster, and if such reason is a material one, I shall be the first to be prepared to consider the re-wording of the resolution now before us. But I would not take upon myself the responsibility in this parliament, knowing of the zeal and care taken by the British parliament in connection with all matters respecting its public expenditures, of taking any step in some unforeseen direction at this time. It is for that reason that my colleagues and I feel that, having before us a resolution on which the British parliament is acting to-day, we are justified in presenting that resolution to this house, and that we would not be justified in making a material change in its terms.

But there is a further reason, and it is this: The resolution in the British House of Commons governing war expenditures is not one which has been presented to the British House of Commons for the first time either this year or last year. To all intents and purposes this resolution follows one which was passed in the British parliament in 1917, at the time of the last war. I would point out that on that occasion the war had run on for three years before in the British parliament any committee was appointed to deal with war expenditures. I might at this point refer to the action—or lack of action—in this parliament at that time. There was no committee appointed during the last war such as is being granted by this government under the resolution now before the house. No such committee was granted during the whole of the war period. But in Great Britain in 1917, after three years of war, the government did agree to the appointment of a committee along the lines set forth herein.

At that time every argument which could be put forward either for or against the resolution was, I believe, presented in the British House of Commons. The matter was fully discussed. The question of whether expenditures should be current expenditures or all expenditures, the question of whether the terms of the resolution should be broadened in any particular, the question of whether there should be a restriction as to matters relating to economy, and restrictions with respect to action being in accord with the policy of the government—all of these matters were carefully examined and discussed, by question and answer, by the opposition and the ministry, and at the end of it all the committee was appointed, without any division.

I have in my hand some of the statements made at that time. I believe they throw light upon the work the committee was intended to perform, and the reasons why the terms of reference are drafted as they are. At that time Mr. Herbert Samuel, now Lord Samuel, was leader of the opposition. Mr. Lloyd George was leader of the government, and Mr. Bonar Law was leader of the House of Commons, and spoke for the government in the house. The British *Hansard* for July 6, 1917, reports Mr. Samuel's observations. In the same issue will be found the words of the other gentlemen whom I have mentioned.

Mr. Samuel, speaking as leader of the opposition, said:

> This motion is not intended in any way by any member as a censure either upon the government or upon any government department. It is simply the desire of those who feel themselves to be the representatives of the taxpayers of the country to get information as to how the taxpayers' money is now being spent, and to get real information in an effective way.

Mr. Bonar Law who, as I have said, was leading the House of Commons, and speaking for the government, is reported as follows:

> We feel that the expenditure is so large that even from the point of view of satisfying the country, apart altogether from the House of Commons, that everything is being done to keep it down, it is desirable that further examination by the House of Commons should take place.
>
> It must be clearly understood that reference must be of such a nature as to cut a hard and fast line, if it is possible, in the reference, between criticism of policy and an attempt to control expenditure. That is what we desire.
>
> I propose we should appoint a select committee for two purposes, first of all—I am not attempting to give the exact terms of reference—to consider whether additional control can be obtained and in what way it can best be obtained as a permanent arrangement, and in addition to that we should authorize the same committee to do at once what was done by those cabinet committees of which my right hon. friend spoke, and go into the department to examine the method of expenditure, and make recommendations either to the House of Commons or to the department.
>
> That is my proposal. It is not a shelving motion in any sense, and it only carries out what is certainly my own view, that we ought

to do something more to satisfy not merely the House of Commons but the country—that we are doing all we can to get value for the money we have spent.

In concluding his statement Mr. Bonar Law used these words:

But if the House of Commons only desires—and I am sure it does—not to appoint a roaming commission to seek out grounds of criticism and attack upon the government—to effect some more real control over the vast expenditure, then that is what is desired by the government also, and my proposal gives it the opportunity.

I think the words of Mr. Bonar Law just quoted are similar to those which I used in this house on December 3 when I said:

. . . a committee which takes its responsibilities seriously, and will assist the government in exercising a control over the expenditures which are being made, keeping on the government the responsibility for policy, but being free to make suggestions that will be helpful and constructive, should be of the greatest possible service.

After the committee had begun its work the matter was again discussed at different times in the British house. Mr. Herbert Samuel, speaking for the opposition and referring to the work of the committee, made the following statement:

It approaches its investigations not in any spirit of hostility—as the chancellor of the exchequer has very kindly acknowledged—for we recognize, heaven knows, how heavy and how difficult are the tasks of those charged with the duties of administration during this war—but in a spirit of what I may call friendly vigilance, and with a single-minded desire to make such practical suggestions as commend themselves to us for effective saving; and in order to promote what is the most essential thing of all, an atmosphere of economy pervading the whole of the spending departments of the state.

Speaking on behalf of the government, and also referring to the work of the committee, Mr. Bonar Law said:

I must say that when the committee was set up, the government not only assented to it, but, I think, welcomed it. It was understood that the object of that committee would be not to harass the government departments, not to worry about mistakes which have been made in the past, except so far as they have a bearing on the future, but to devote themselves to helping the country, if possible, in keeping down the expenditure. I am glad to say that not only from their report, but from all I have heard about this committee, that it is in that spirit they have undertaken their work.

I give those passages to the house as indicating the spirit which governed the committee in its work and as indicating also the nature of the work and its scope. That was in 1917 and 1918. When the present war broke out, the British House of Commons had the experience of that committee to guide it, and it had all the discussions that had taken place in the committee as well as the reports. There were members of the British house who had served on that committee and who knew the value of its work. For that reason, when the present committee was proposed in the British house, every one was more or less familiar with its purpose, its method of carrying on its proceedings, its value, and the like. The result was that there was little or no discussion and no division when it came to the appointment of a committee.

May I draw attention to another fact brought out by my hon. friend the leader of the opposition. The committee in England was formed when Mr. Chamberlain was still Prime Minister and when, as the leader of the opposition said, there was an opposition party in the British House of Commons. I suppose there will be some who will say, "Oh, well, they have a union or a national government in Great Britain and that makes all the difference." I may deal with that, if necessary, a little later on. I would now point out that when the committee was functioning in 1917 there was an effective opposition, of which Mr. Herbert Samuel was the leader. The opposition in the British house at that time was made up of Liberals and Labour members.

I would also point out that when the present resolution was adopted in the British house it was at a time when the Labour party was in opposition, under Mr. Attlee, Mr. Bevin and other gentlemen. At that time there was in Great Britain no national government in the form in which it is at the present time. I have just been reminded that it was Sir Archibald Sinclair, the leader of the Liberal opposition in the British house, who asked for the appointment of the committee. He was supported by the Labour opposition and the Liberals, and both oppositions were joined by the government in a unanimous agreement to appointing a committee. So far as I have heard or know, there has never been any occasion to challenge the wisdom of the decision that was reached at that time.

I come now to a further reason why we feel it would be desirable to adopt the resolution in the form in which it is. Not only have we the example of the British house to guide us in its terms and method of proceeding, we have the advantage of having before us reports of the committee itself. When the leader of the opposition proposed this committee he said that he had in his hand copies of the reports of the committee which had been appointed. I have here the reports of the select committee on national expenditure. I

have used the phrase "committee to control national expenditure" because that is the designation used continually throughout the reports. The committee is known as the select committee on national expenditure. I assume that will be the name of this committee to deal with war expenditures.

I should like to go through these reports and indicate to the house what they contain, but that would take considerable time. I shall, however, give to the house from the reports themselves some particulars with respect to the British committee and its work, because this information will serve to indicate the scope of the committee that it is proposed to set up here, and the extent of the work it will have to undertake. I venture to say that hon. members will be amazed when they learn how wide is the latitude which the government has given to private members to investigate matters of expenditure pertaining to the war.

The first report of the committee was dated January 16, 1940. It outlines the organization. The committee of Great Britain had twenty-eight members, and it was divided into seven subcommittees which dealt with the following subjects:

1. Army services.
2. Navy services.
3. Air services.
4. Supply services.
5. Home defence services.
6. Trade, agriculture and economic warfare.
7. A coordinating subcommittee composed of the chairman of the whole committee and the chairman of each subcommittee.

I intend to read two or three paragraphs of the proceedings of the committee in Great Britain because I think they will throw a little light upon the nature of the proceedings and possibly guide our committee when it undertakes its duties.

The second report points out that the committee "conceive it to be more their duty to prevent or check waste before it occurs than to conduct enquiries into past events." At this stage four more members had been added to the committee and an additional subcommittee on transport services had been set up. The subjects upon which specific recommendations were made in this report were:

1. The coordination of procedure in the letting of government contracts.

2. The design, specification and supply of warlike stores with a view: (a) to get, if possible, an equally serviceable article at lower cost; (b) to get an equally serviceable article with quicker delivery; (c) to ensure that specifications include no superfluous quantities, qualities, or frills; (d) to exclude imported materials which are not essential; (e) to exclude domestic materials of which the supply is short.

3. The building programme.

4. The selection of sites for government buildings.

5. Competitive bidding for skilled workmen.

6. The consideration of the prevention of waste and salvage by a fact-finding survey.

In connection with the committee's report I have noted this particular paragraph which I think is of interest:

> The efficacy of your committee's investigations will perhaps never be fully obvious, either to the house or to the public at large, from their published reports alone. Not only do considerations of public interest preclude them from stating certain facts and figures, but also it has been found that the investigations themselves have led to immediate action by departments which might normally not have been taken till a formal report of the committee had been brought to their notice. Sufficient instances of this kind have occurred to convince your committee that this is one of the most valuable results of their activities, since their discovery of waste, actual or potential, brings immediate action with a view to its removal. This prompt contribution to efficiency and economy is, your committee submit, more vital to the national interest than the formulation of reports of a sensational or spectacular character.

The third report is an amended report from the subcommittee on army services. The subcommittee had, by April 10, 1940, held twenty meetings and heard twenty-eight witnesses. One of the chief subjects of inquiry was the army programme of building. The committee found that the necessity of speed in camp construction had inflated costs both of materials and of labour.

I wish to make clear to the house that the committees investigating these matters have gone very thoroughly into their work and have not hesitated to make very clear, wherever they found evidence of wasteful expenditure, just what the circumstances were. Here is one case and I give it as an instance because I have heard others commenting on the existence of similar situations here. The committee also found that not enough attention had been given to using small contractors in this work of camp construction and that delays which might have been avoided had existed in making plans available to contractors.

The committee also found deficiencies in the army methods of requisitioning land and buildings for military use.

The fourth report dealt with trade, agriculture and economic warfare. I do not know that I need to go into the details of that.

The fifth report dealt with air services. Here I pause to give the house a reference to the contents of that report:

The report is not concerned with the general activities of the Air Ministry but with two particular matters: (1) the site of a repair depot in Scotland and (2) an aerodrome in Kent.

Following the fifth report, the committee issued a special report, on May 28, 1940, dealing with its own procedure.

I shall take occasion to refer to this special report when I have concluded what I have to say about the other reports, because it contains mention of some things which I think will be helpful to hon. members in appreciating considerations of which full account must be taken.

The sixth report deals with the subcommittee on supply services and goes into questions of specifications of supplies; coordination of purchases; overtime for labour; salvage of waste products; the extension of the field of production through using all possible firms, large and small, for government orders.

The seventh report deals with the subcommittee on navy services. This report is concerned with the letting of contracts, the repair and construction of ships, and Sunday work on ship repairs.

The eighth report deals with home defence services.

The ninth report deals with transport services; the tenth report with priority organization; the eleventh report with replies of the departments to the first eight reports of the committee; the twelfth report with army services, and the thirteenth report with government films.

So far as I can learn, when the British house adjourned, the committee ceased to function but was reappointed as soon as the house reassembled on November 26. Before November 26, the committee had prepared one further report, the fourteenth. I have not been able to get the actual report itself. The fourteenth report was made on October 15, 1940. The committee, which was reconstituted at the beginning of the new session on November 26, issued its third report in January. This report dealt with labour waste in contracts and was reviewed by the parliamentary correspondent of the London *Times* on January 16.

I have not thus far been able to secure any other report, but what I have read, Mr. Speaker, indicates the very wide scope of activity for such a committee and will let members of the house see the nature of the service which it is possible to render to the government in assisting to control expenditures, to avoid waste and to prevent misdoing of any kind in connection with government contracts.

The special report of the committee was clearly made with a view to giving to the British house and to the public information which the committee felt it was important for the house to have in time of war. I quote from this special report:

1. Your committee concluded their second report by observing that the efficacy of their investigations might never be fully obvious from their published reports alone. In some cases, as they pointed out, their investigations had led to immediate action by the departments —a result which renders formal recommendations unnecessary—and in other cases they were precluded from stating certain facts and figures by considerations of public interest.

2. Your committee feel bound to revert to the difficulty caused, in time of war, by considerations of the latter kind, in that they inevitably hamper the procedure of reporting to the house. In normal times, a select committee discharge their duty by reporting their views to the house, usually with the evidence on which these views are based. The order of the house for the printing of the report and the evidence (if reported) is presumed to have been made as a matter of course, and publication duly ensues. On this the house, whether or no a formal debate takes place, can form its own judgment. In time of war this unrestricted publicity is incompatible with considerations of public interest, since nothing can be safely published which would give valuable information to the enemy. The difficulty, therefore, with which your committee is faced is how to fulfil their duty of reporting criticisms of departmental action or disagreements with departmental views, when the publication of their findings might endanger national security.

3. Your committee find themselves in this dilemma: considerations of national safety may preclude them from publishing certain recommendations and the arguments on which they are based, while the normal practice of the house prevents them from communicating their report to the members of the war cabinet who alone can take executive action to compel the departments to adopt your committee's recommendations. They feel bound to inform the house that, in order to carry out the task imposed upon them, the chairman of the committee and the chairmen of subcommittees, with the authorization of the committee or of the subcommittee in question, have considered it essential to approach ministers for direct discussions on matters arising from their inquiries and on the advisability of publicly stating certain facts and figures. This method of informal approach, however, though highly valuable, does not solve the whole problem.

4. Your committee are mindful that their duty is to the house. But, in war, the supreme consideration is to secure efficiency and swiftness in executive action, while preventing the disclosure of vital facts. Procedure must be moulded to fit these circumstances.

5. Your committee, therefore, recommend that when, in their opinion, a report should not be presented, their coordinating subcommittee

(which consists of the chairman of the committee and the chairmen of the subcommittees) should be empowered to address a memorandum to the Prime Minister for the consideration of the war cabinet, with a request for a considered reply thereto; and that your committee do report to the house on every occasion when this power shall have been exercised. They ask the house to give them this power.

In making these quotations I do not wish for a moment to have it assumed that the government proposes to put any restrictions on the committee that is appointed beyond those that are set forth in the terms of reference itself. But I feel it is only right and fair that at this stage, so that there may be no doubt hereafter as to whether or not a wise course is being pursued, that I should bring to the attention of the house some of the reasons why the British committee, when it was appointed, proceeded in the manner in which it did. I took occasion a day or two ago to telegraph to the high commissioner to ascertain whether what I had gathered from its own reports, namely, that the proceedings of the British committee had been for the most part in camera was correct or not. His reply to me was that the committees in England have held their proceedings in camera.

I can see at once wherein that circumstance is capable of being grossly misconstrued. Someone may say, "Well, we do not do business in that way as a rule." Of course we do not as a rule; but what I wish to emphasize to this house is what Mr. Churchill himself has had to emphasize over and over in the British parliament, namely, that we are now at war, and that things which can be done in certain ways in peace time cannot always with wisdom be proceeded with in the same manner in a time of war.

I have in my hand the report of the debate that took place in the British House of Commons on the 27th of last month. Hon. members will no doubt have noticed it. It was a debate that arose out of the appointment of the Right Hon. Malcolm MacDonald as high commissioner to Canada. The government had introduced a bill to permit members who received appointments from the government in connection with the war effort to retain their seats in parliament. Sir Samuel Hoare, Sir Stafford Cripps, who was at Moscow, and one or two others had received appointments and would in the nature of things have vacated their seats but for the special act that was being passed. Mr. Churchill said that he felt that in a time of war it was absolutely necessary that the ministry should have the right to make certain appointments from among members in the house, and he added that he would regard any vote against his motion as a vote of want of confidence in his government. I do not propose to take such a stand in this parliament, but what I wish particularly to direct attention to is what appears to have taken place in the debate to which I have referred. Let me read from the dispatch:

> In the same session Mr. Churchill, declaring impatiently that "I really must emphasize that there is a war on," turned down a request for a debate on the leasing of western hemisphere defence bases to the United States.

There, surely, was an apparently innocent enough subject for the House of Commons to discuss, one in which the British public was vitally interested—the leasing of certain British property to the United States. Yet Mr. Churchill would not allow a debate to take place on that subject in the British house, where members are so careful to have their property and other rights fully respected.

Why did Mr. Churchill not wish to have that debate? Because he knew that the minute a debate took place it might disclose in the House of Commons a difference of view which would be a great comfort to the enemy and might sow seeds of difficulty between Great Britain and the United States. He said, therefore, that in this time of war, when the nation is struggling to preserve the security of the state, this being its first consideration, he could not allow a debate to arise upon a question of that kind.

It is for similar reasons that in matters that involve the disclosure of facts, figures, as would give rise to situations which would be of aid or comfort to the enemy, it has been thought desirable to have these committees proceed in the way in which their own best judgment dictates. That is the reason. It is not that the government has anything to hide, or wishes to hide anything. It is because in a time of war, knowing the great responsibilities that rest upon the ministry and that the ministry must retain the confidence of the country if its war effort is to succeed, that this procedure is necessary. I say that without any hesitation. If confidence in the government is undermined or destroyed, that is going to have its effect upon the war effort of the country. Let the House of Commons give its confidence to the government or withhold it; but so long as we have the confidence of parliament, let us carry on our war effort in the best way we possibly can. If there is any reason why we should lose that confidence, let the reason be stated. But in the meantime I suggest, in the interests of what is best for the country in a time of war, that it is

desirable that confidence in government should be maintained in the eyes of the people.

May I come now to what I said of an effort being made to create the impression that the government has something to hide or is seeking to conceal something. That reason was put forward by my hon. friend, not as his belief but as the way in which many people would interpret the resolution if the word "current" were left in, the committee being appointed to examine current expenditure defrayed out of public moneys. Leaving in the word "current" might make it appear that the government was trying to hide something that had been done in the past which was not covered by current expenditure.

Mr. HANSON (York-Sunbury): I do not think I ever suggested that as the reason for taking the word out.

Mr. MACKENZIE KING: What did the hon. member suggest?

Mr. HANSON (York-Sunbury): I will speak about it later on. I do not recall having given that reason; I will put it that way.

Mr. MACKENZIE KING: If that was not the reason, a section of the press has not been slow in trying to have it appear that there is some reason of the kind existing. I have in my hand an editorial that appeared in the Montreal *Gazette* of March 1. The leader of the opposition a day or two ago advised members of the house not to attempt to enter into controversy with the press; he said that whoever took that task upon himself might expect the press to have the last word and would fare worse in the end. As a member of parliament, I feel that the rights of parliament are supreme over the press or any other institution in the country; and if I find the press of the country misrepresenting the position as it affects the government or its war effort, I intend to take exception most emphatically to what the press says. The press is one power in the country, but I hope the day will never come when the press supplants the place that parliament is supposed to have in upholding the rights of the people. There is one other power that is supreme over press and parliament alike, namely, the people of the country; and the people of this country, on more than one occasion, have shown what they feel with respect to a press that represents a point of view contrary to that which they themselves entertain.

May I read a part of this editorial dated March 1. I would have the house keep in mind that February 19 was the date on which it was agreed between the leader of the opposition and myself that the word "current" would be dropped out of the resolution and that the resolution that I would submit to the house would be to appoint a committee to examine expenditures defrayed out of public moneys, without any limitation by the word "current." The resolution having appeared on the order paper, the Montreal *Gazette* of March 1 said editorially:

> The wording is significant inasmuch as it binds the committee in advance by whatever construction the government may put upon the words "consistent with the execution of the policy."

That is the first effort to undermine confidence in the purpose of the administration in submitting this resolution in the form in which it is, including the words "consistent with the execution of the policy." My first answer to that criticism is that these words appear in the resolution of the British House of Commons in the order to its committee. But they appear there, and they appear here for the reason that the government is responsible to parliament for policy, and no committee of the House of Commons has the right under any procedure known to parliament to intervene between parliament and the administration. The question of policy is a question for the government to decide, a question to be debated on the floor of the house. It is not the business of a committee appointed by the house to decide whether policy is correct or incorrect; that can be discussed between the government and hon. members on the floor of the house.

But the editorial goes on:

> The phrase is restrictive, and as such it reveals a disinclination on the part of the government to allow the committee the free scope which some of its members may deem desirable and even necessary in the public interest. If the work of the committee is to be directed in accordance with the interest of the government if and whenever that interest appears to be in conflict with the interest of the taxpayer and of the national war effort, it follows that the results must be incomplete and therefore unsatisfactory.

Is that fair comment? Could anything be more unfair than that, for a responsible journal to challenge the intent and purpose and motives of the government in giving members of the House of Commons the right to investigate to the extent this motion does, in saying, "if the work is to be in the interest of the government"? I wish it to be understood that the work of this committee is to be, and I believe it will be, in the interest of the public and in no other interest. The government is here to serve the public interest and is asking for this committee to help in that effort.

The editorial goes on:

Unfortunately, there is other evidence justifying an apprehension as to the government's attitude.

Notice that word "evidence". There is "other evidence". We have not had any evidence thus far. No evidence has been adduced up to the present, only misrepresentation, unfair comment. But:

Unfortunately, there is other evidence justifying an apprehension as to the government's attitude.

This in a time of war when we are told that the Conservative party—and this paper certainly represents what is left of the Conservative party—is trying to cooperate with the government in the matter of Canada's war effort. Note this following sentence:

The scope of the committee's labours was discussed on Monday between the Prime Minister, the leader of the opposition and some of the latter's colleagues, and reports from Ottawa are that the deliberations were not amicable.

That reference is to Monday, February 24. It was on February 19 that a decision was reached to omit the word "current" from the resolution. The meeting of the 24th dealt with a still further enlargement of this proposal, but it did not alter that question of the agreement of the government to allow the word "current" to come out.

The editorial continues:

They were, on the contrary, heated and acrimonious, assuming the correctness of information obtained by the Canadian Press. The substance of the story is that opposition members tried to insist upon the committee's right to examine all war expenditures incurred since the commencement of the conflict whereas the Prime Minister was prepared only to permit examination of current outlays as is done in Britain. The Conservative retort was that the British committee has been at work since the war began and therefore has knowledge of all expenditures and what was got for them.

I leave hon. members to reach their own conclusion as to where the *Gazette* got its inspiration. Certainly it was not from anyone on this side of the house.

Mr. HANSON (York-Sunbury): Does the Prime Minister suggest that it came from me or my colleagues? I deny it absolutely.

Mr. MACKENZIE KING: I will say to my hon. friend that I do not believe it came from him; I do not believe it came from the hon. member who sits to his left. I will not say anything more.

Mr. HANSON (York-Sunbury): I think the Prime Minister can go the whole length. As far as I know, he can go the whole length.

[Mr. Mackenzie King.]

Mr. DIEFENBAKER: Does that leave the inference that it came from me? If it does, I ask the right hon. gentleman to withdraw the inference that I ever gave any information to any press man.

Mr. MACKENZIE KING: The three hon. members who were present at the conference have all spoken and I accept their word, that not one of them gave any kind of intimation of what took place at the conference to any member of the press. I say the same with respect to all my colleagues who were present. Nevertheless, we get this interesting account. Perhaps there was an intermediary. Let me read a little further.

The inference is that Mr. King is afraid of a full investigation.

All this is based on the assertion that I would not allow the word "current" to go out. And I had stricken it out ten days before. It goes on:

Rightly or wrongly, that is how his position will be interpreted by the people of Canada. They will conclude that he has something to hide and they will have ground for believing that it is something exceedingly grave.

And this is interesting:

This ground is supplied in the amazing statement that the Prime Minister threatened to resign if he could not have his way. Surely this country, at this time of all times, is entitled to something better from the head of its government than the behaviour of a temperamental prima donna.

I think this is the first time, it is as far as I am aware, that I have been credited with being a temperamental prima donna. I rather thought the criticism was that I was far too colourless, that I did not give the press anything for headlines, that I was not spectacular enough, that I did not say nasty things about other people and gain special prominence for so doing. Then it goes on to say:

This is not war leadership, if it is leadership at all, and the greatest war in history is reaching its most critical stage, as critical for Canada as for any other country. The whole situation in regard to this war expenditure committee looks wrong, about as wrong as it could be, and it leaves a very bad taste in the mouth of the public.

I ask hon. members if that is fair criticism. Are not all these not only false insinuations but false statements? Are they not malicious statements? I go so far as to say that that article is libellous; first, because it is false, and, second, because it is malicious, and it bears the stigma of both these things on its face. I go further and say it infringes the privileges of this house.

I come now to another paper. Just before six o'clock I read to the house how strongly the Toronto *Globe and Mail* eulogized the administration for its stand before adjournment in agreeing to accept the motion put forward at the suggestion of the leader of the opposition, and for undertaking to introduce the motion being put forward to-day. But what is said in an article that appears in the *Globe and Mail* to-day on the same resolution? Hon. members will notice that these articles have been appearing before the subject matter has been discussed in this house. In other words, fill the public mind with all the prejudice you possibly can before there is any opportunity for the government to say a word, and then in the next editorial say that the government found itself on the defensive and that Mr. King spent most of the afternoon trying to defend himself against some accusations that he must know are only too true.

The editorial I read just before recess was headed something about confidence being established. This one is headed "The First Billion Dollars." It not only misrepresents motives as the editorial I have read from the Montreal *Gazette* did, but it also misrepresents the facts. It begins, by speaking of:

> . . . the reported determination of the Prime Minister to prevent examination of the first billion dollars spent on the war.

In other words, leading the public to assume that I am preventing inquiry into "the first billion dollars", being the first year's war expenditure. It goes on to say that I have precluded the committee on public accounts from meeting, and goes on to say:

> The right of the public accounts committee to examine the accounts of the past year has been recognized for more than half a century.

It quotes at length from Sir Richard Cartwright, Sir John Thompson and others to show that the public accounts committee have a perfect right to examine accounts relating to the past, and it leaves the impression that I have been and am preventing the public accounts committee from meeting and am also determined to prevent this committee from going into the public expenditure for more than a year.

What are the facts about the public accounts committee? The committee was set up in this house on November 22, if I am not mistaken.

The committee is there; it can meet at any time any hon. member wishes to have it called. The auditor general's report was tabled in this house, I have forgotten on what date. If it has not been referred to the committee on public accounts, that has been due to an oversight, and I would ask the Minister of Finance (Mr. Ilsley) to see that it is referred to the committee to-morrow. The public accounts committee is there, as it always has been, and this government is not trying in any way to prevent that committee from functioning, going into any matter into which it may wish to inquire. Any hon. member has the right to request that this should be done. But let me read the conclusion of this editorial:

> Ministers may argue speciously that rules which might apply to the regular public accounts committee of the commons and be faithfully observed in its proceedings are not applicable to a special committee on war expenditures, but the argument will not hold water. It is no credit to governments or parliaments that the public accounts committee has not functioned for years, but the special committee on war expenditures has under the strong pressure of public opinion been conceded by the government as a substitute for it in order that popular disquietude about certain features of the ministry's war programme might be allayed.

I say that statement is an entire falsehood. The committee which is being set up, if this house accepts this resolution, is not in substitution for the public accounts committee; it is in addition to the public accounts committee. This is a committee that can go back over ground which should be confined to the public accounts committee, and which in Great Britain is so confined. Then the editorial concludes:

> It will be farcical and something worse if the government, having conceded the committee, reduces it to partial impotence by debarring it from inquiring into the first billion dollars of expenditures, and the opposition will be derelict in its duty if it does not insist upon the withdrawal of any limitations upon the investigation.

I do not think I need say more about that article. Why are these editorials put forward at this time? When the opposition in this house profess that they are cooperating with the government, seeking to help in the war effort; when they are being praised by the Montreal *Gazette* and the Toronto *Globe and Mail* for that patriotic attitude, why do these papers attack this administration, not on anything we have done but accusing us of something we have not done and have never thought of doing, and then condemn us on that specious charge? If that is cooperating in war effort, I have still to learn the meaning of the word "cooperation."

I am not going to take the time of the house to go over other press comments, but there is one with which I wish to deal because it reflects on every member of this house.

Before I do so, I think I might read to hon. members one or two citations from "Beauchesne's Parliamentary Rules and Forms," relating to the privileges of members of this house. Citation 157, under standing order 16, reads:

Interference with or reflections upon members have been resented as indignities to the house itself.

Then citation 162:

Scandalous charges or imputations directed against members of a select committee are equivalent to libellous charges brought against the house itself, while a letter complaining that a member who had been nominated upon a select committee would be unable to act impartially upon it has been adjudged a breach of privilege.

I think the sooner it is understood both inside and outside this house that any charge that members being appointed to committees of this house cannot act impartially is a breach of the privileges of this house, the better it will be. Any charge of partiality, or assumption of partiality, on the part of a member of the house serving on a committee is a reflection upon the member and also upon the house itself; and, as the one who is more responsible than any other in this house for maintaining the rights of members and the privileges of the house, it is part of my duty to bring that matter prominently at this time to the attention of hon. members and of some of those who control the press in the country. I find as the heading of an article which appears in the Toronto *Globe and Mail* of February 22, 1941, "Impartial Probe Desirable." Then I read this statement:

In another column on this page we publish a pertinent letter from Mr. Harry R. Jackman, M.P. for Toronto-Rosedale, in which he makes the point that the maximum effectiveness of the special parliamentary committee on national expenditures is not likely to result unless there is on the committee adequate representation of the opposition.

I have before me the letter referred to; I shall not read it. The hon. gentleman is one of the new members of the house, and I am prepared to believe that he wrote the letter without realizing the extent to which it reflected upon every member of this house. I will go on and read what is said in this editorial appearing in the *Globe and Mail:*

It is not to be expected that the ten Liberal members will bestir themselves to expose the shortcomings of the government; consequently the task of ferreting out information will devolve upon the handful of Conservative and leftist members.

This editorial is a reflection upon every hon. gentleman on this side of the house, without exception, and is a reflection upon this house itself.

[Mr. Mackenzie King.]

An hon. MEMBER: Do not forget this corner.

Mr. MACKENZIE KING: And on hon. gentlemen sitting in that corner as well.

Mr. JACKMAN: If I may interrupt, I would point out that the paragraph which the Prime Minister has quoted was incorporated in a letter from myself to the *Globe and Mail,* but was taken from an editorial appearing in a previous edition of that newspaper. If I have cast any reflection upon any member of this house who may have been nominated to that committee, I certainly express to such hon. member and to the house my sincere apologies, and suggest that no reflection was intended.

Mr. MACKENZIE KING: As I have already said, knowing the hon. gentleman I am sure he would be the last to wish to do anything contrary to the rules of this house, and particularly anything which might constitute a reflection upon his fellow members.

I wish to say just a word as to why the committee has been made so large. In the first place, that has been done in order that hon. gentlemen immediately opposite may have on the committee a larger representation than they would have if the committee were smaller in number. If this had been a committee of fifteen, their representation would have numbered three. On a committee of twenty-four the Conservative representation numbers four, with one member from each of the two other parties. There was the further desire to interest a large number of members in this work of helping to control war expenditures. Let me read the names of the members of this committee and as I read them I will ask hon. members whether they believe any of these hon. gentlemen, regardless of which party they support, are likely to discharge their duty to this committee in a partial manner; or whether they are not all honourable and patriotic members of this house who can be trusted to perform their duty as their constituents would expect them to.

Mr. McGREGOR: Why not ask the little boys to stand up as their names are called?

Mr. MACKENZIE KING: The little boy who is speaking just now evidently wishes to be heard but not seen.

Mr. McGREGOR: No.

Mr. MACKENZIE KING: The names of the Liberal members on the committee are as follows: Abbott, Bercovitch, Bradette, Chevrier, Cleaver, Fournier (Hull), Gladstone,

Golding, Graham, Gray, Macdonald (Halifax), Mayhew, McGeer, Picard, Pottier, Ross (Moose Jaw), Sissons, and Thorson.

I ask members of this house if there is exception to be taken to the name of any one of those members on the ground that such hon. member named is not likely to do his full duty on the committee, if he is placed there.

These are the names of the Conservative members on the committee: Black (Cumberland), Diefenbaker, Harris (Danforth), and Green.

Then there is the name of Mr. MacInnis of the Cooperative Commonwealth Federation and Mr. Marshall of the Social Credit group.

Mr. HANSON (York-Sunbury): The Prime Minister would not give them a certificate of credit, would he?

Mr. MACKENZIE KING: Yes; I am prepared to give them a certificate of credit with respect to the integrity with which they are bound to and will, I believe, discharge their duties.

There is one word with which I should like to conclude. In the course of our conversations together, the leader of the opposition asked me if I would give him, in the form of a memorandum, what I had said to him I felt to be an essential consideration in connection with the appointment of the committee. I sent my hon. friend the memorandum he requested, in the form of a letter, and I believe he will take no exception to my reading the letter to the house because it expresses what I believe ought to be present to the mind of each hon. member who serves on the committee, and in fact to the mind of every hon. member in the house.

In these days, when one has reason to know a good deal about the possible trend of the world situation, when one faces from hour to hour the possibiltiy of having to make some announcement to the house about a development which will fill the minds of all with immediate concern, it is not an easy burden, may I say, to have one's motives continually misrepresented to the public as being those of a person who is considering only what he can hide or what he can conceal, a person having ulterior motives in everything he does. I believe I have been long enough in this House of Commons for hon. members to know where I stand on questions of public integrity.

Some hon. MEMBERS: Hear, hear.

Mr. MACKENZIE KING: I believe, too, that I can let my life record speak for itself in that regard. But if I say to this House of Commons that there are some considerations which make it impossible to-day, in a time of war, to proceed as we would ordinarily proceed in times of peace, I hope it will be understood that I have the very best of reasons for so saying. I do not think I need to state them for hon. members to appreciate their importance. It is not only Canada's war effort that is at stake in this war. Anything which affects adversely Canada's war effort is going to affect adversely the war effort of the British empire. It is going to do more than that; it is going to affect adversely the war effort of all those forces fighting for freedom against tyranny, against world domination.

I have striven as best I could to prevent things from being said in this House of Commons which might make us responsible for some aspect of the war for which none of us would care to be responsible. I have been chided for that. I have been chided because I have said, "Let us be careful what we say here. It may not be understood in other countries in the way it is understood here." But at least my conscience is clear in that I have uttered no word I know of which could provoke any situation, or make a bad situation worse. I believe I am equally clear in my own conscience when I say that I have asked nothing of this House of Commons from any motive other than that of what I considered to be most necessary to make our war effort as effective as possible, and to prevent anything from happening which might at a time of crisis make a bad situation worse.

It was that which I had in mind when I sent this letter to my hon. friend, in answer to his request. Upon reading the letter I shall have concluded what I wish to say. It is as follows:

Ottawa, February 20, 1941

The Honourable R. B. Hanson, P.C., M.P.,
Leader of the Opposition,
House of Commons,
Ottawa.

Dear Mr. Hanson:

You have asked me to let you have, in the form of a memorandum, the consideration of which I mentioned full account should be taken in the terms of reference of the committee on national expenditure.

In a word, what I mentioned was that I thought the United Kingdom was as concerned about the control of expenditures in time of war as Canada; that unquestionably the government and parliament of the United Kingdom had considered the matter from every possible angle, and that I thought there must have been the best of reasons for the terms of reference of the select committee of the British House of Commons being in the words they are, both as regards what they contain and what they do not contain.

I suggested that, having read the reports of the United Kingdom select committee on national expenditure, you yourself would be

wholly familiar with the reasons which, at a time of war, had caused the British parliament to proceed with respect to national expenditures in the manner it had, and that I hoped you might find it possible to explain these reasons to members of your party who might be conferring with you concerning the terms of reference of the committee to be appointed by our own House of Commons.

The war effort of the British commonwealth of nations is a united effort. Whatever affects that effort in one part has its effect upon all. I should feel I was assuming a very grave responsibility if, in a matter to which the United Kingdom parliament had given every consideration, and had adopted a procedure respecting national expenditures which it deemed imperative at a time of war, I were not to point out to all concerned the responsibility which our own House of Commons would be taking upon itself in departing from the procedure followed at Westminster, particularly where that procedure had been adopted with special reference to war-time expenditures.

You will have observed that the select committee on national expenditure of the British House of Commons drew the attention of the house in a special report to the difficulties caused by considerations of public interest in following ordinary procedure in time of war.

The following appears in the report of the committee:

"In normal times, a select committee discharge their duty by reporting their views to the house, usually with the evidence on which the views are based. The order of the house for the printing of the report and the evidence —if reported—is presumed to have been made as a matter of course, and publication duly ensues. On this the house, whether or no a formal debate takes place, can form its own judgment. In time of war this unrestricted publicity is incompatible with considerations of public interest, since nothing can be safely published which would give valuable information to the enemy."

Another section of the same report is as follows:

"Your committee are mindful that their duty is to the house. But, in war, the supreme consideration is to secure efficiency and swiftness in executive action, while preventing the disclosure of vital facts. Procedure must be moulded to fit these circumstances."

It was these aspects of the matter which I felt placed a responsibility upon every party and member in the House of Commons, not less than upon the government, and which I was anxious, as leader of the opposition, you should have particularly in mind.

You will, no doubt, recollect that these were matters carefully considered at a conference which was held in my office prior to adjournment, at which the question of the nature of the committee to be appointed to deal with national expenditures was considered between yourself, Mr. Stirling and Mr. Green and some of my colleagues and myself.

Yours sincerely,

W. L. Mackenzie King.

[Mr. Mackenzie King.]

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I am sure we have all listened with the most intense interest to the two-hour address of the Prime Minister (Mr. Mackenzie King) which he has just concluded. I confess I am surprised that he took so much time to defend a position which, so far as I am aware, has not been the subject of intense attack at least by us on this side of the house, whatever it may have been in the country.

I am bound to say that the first impressions on my mind are that he has proved, beyond peradventure, the value of the suggestion which I made to the house and the country on December 3. Second, he has taken the opportunity to battle with his friends the press in connection with the attitude they have taken with regard to this subject. May I say that so far as his engaging in that combat is concerned, I leave him to his friends of the press. They are quite able to take care of themselves, and no one has asked me to constitute myself as their champion.

Mr. POULIOT: It is just as well.

Mr. HANSON (York-Sunbury): Further, I should like to say that never at any time have I communicated to the press any of the proceedings of the confidential conferences that were held from time to time with regard to this matter. I have been amazed at the crossing of wires which seems to have occurred and at the stories which have been published in the press with respect to what is thought to have taken place. I will just say to them that they appear to have mixed up two things. I am going to leave that matter right there.

At the risk of taking a little time—I promise the house that I shall not take up one-half the time taken by the Prime Minister—I should like to take the house back to the date when I first brought up the question of the examination of war expenditures. Speaking in the debate on the address on November 12, 1940, I made the following observations, which were referred to in part by the Prime Minister, and which will be found at page 34 of *Hansard:*

We on your left, sir, hold the view, and I believe it is well founded, that it has been the deliberate policy of the government, during the past session as well as during the interval since we adjourned in August, to endeavour to create the impression that all was well with our war effort. In our view the government has sought to lull and soothe the Canadian people into a false sense of security, and continues to do so. It has sought to convince the people that we are living in the best of all possible worlds.

Those who are alive to the situation know the dangers that lurk behind such a position, and they are alike alarmed and anxious. Knowing of this feeling, I am impelled to propose to the government that it cause to be set up immediately two select special committees which will be charged with the responsibility and the duty of investigating and reporting to this house factually, objectively and truthfully, without bias and without partisanship—and I have no doubt that is possible—what is our exact position (a) with respect to our fighting forces, military, naval and air; and (b) with respect to the production and delivery of all the important materials, equipment and supplies necessary in our war effort, so that the Canadian people may know the truth. Before such committees ministers could appear and be subject to questioning. Progress reports in the form of speeches in the house by ministers are not good enough. You can never elicit the naked facts in that manner. Only the time-proven method of cross-examination by question and answer will suffice. The process should be free from anything in the nature of propaganda. The public has been fed that until it is nauseated.

Then I go on to say:

The government may hold the view that it is not in the public interest that the facts and figures for which I am asking be disclosed. I know the matter is not free from difficulties. When I make the proposal I visualize many of its implications, but I am convinced that the method I have suggested is the only real way in which the government may satisfy the public. I am willing with some of my colleagues to meet with the Prime Minister and some of his colleagues so that we may consider the whole proposal, in an honest effort to arrive at a conclusion.

That was the proposal which I laid before this House of Commons on November 12 last. That proposal related to two distinct matters, namely, an investigation into the armed forces of the nation and one into production and expenditure. In ordinary peace times I would never have made any such suggestion; in ordinary peace times it would not have been necessary; in ordinary peace times there would be available the usual procedure and methods to investigate these matters. But because we were at war, because there was questioning in the hearts and minds of the Canadian people as to the government's war effort, I thought this should be done. Why should there not be such questioning? I am not going to traverse with respect to this matter the ground I have covered on previous occasions.

The Prime Minister knows the charges made against his government with regard to the war effort during the first twelve months of this war just as well as I do. The fact that the charges are true is why we are so far behind to-day after eighteen months of war. I am not, however, going into that matter to-night. I felt impelled to make that request of the Prime Minister because this nation was at war, and I think I made it in reasonably moderate language. At all events no exception was taken to the manner or the method that I suggested. I suggested a conference and the Prime Minister was good enough to give it to me. We met, and I am bound to say that my understanding was that at the conference we agreed that it would be confidential in nature. I understood that we were to speak freely, and I tried to observe that from A to Z. We did speak freely.

I did not go into details of what I had said in the house, because the Prime Minister and his colleagues knew that without my telling them. My colleagues knew it without my speaking about it. I do not intend to go into the details of my conversation with the members of the government, but I will say that the government would not accept the proposals which I made. The Minister of National Defence (Mr. Ralston) gave the reasons for not accepting one proposal. I shall not go into those reasons, but I want to be quite frank in what I say. The Minister of National Defence stated that in a time of war it would be impossible for his headquarters' staff to be at the beck and call of a parliamentary committee. I am bound to tell the house that I agreed with him. That was the spirit in which I met them. I shall not elaborate on that statement, but if he desires to do so he is at liberty. I shall free him from anything. I was impressed with his statement as to the undesirability at this critical time of having his officers delegated to wait upon a parliamentary committee appointed to investigate the position of our fighting forces, military, naval and air.

With regard to the investigation of questions relating to the production and delivery of all the important materials, equipment and supplies necessary in our war effort, there was not so much unanimity. I could not get the consent of the government to investigate those matters. Until last week the attitude of the government with respect to giving information relating to the production of equipment and supplies was quite apparent. We have been deluged with promises and expectations, but we have been told nothing factually as to what the government's effort was in terms of production and delivery. We never got that until the Minister of Munitions and Supply (Mr. Howe) gave it to us last week in connection with the war appropriation measure. The government had taken that attitude and I had no power to compel them to do otherwise. I did not try to compel them after that conference. We failed in our

initial undertaking, but that initial undertaking was made in the utmost good faith in an effort to ascertain for the Canadian people just what this government had been doing along the lines of the two subject matters involved in the suggestion that I made. We failed in that, and for that failure I am sure the Prime Minister will assume responsibility. He has already anticipated criticism here to-night in that regard.

Having failed in that direction, I turned the matter over in my mind. I still felt that something ought to be done; if I could not get a full measure of the story that ought to be told the Canadian people, I thought that possibly I could get something like a halfway measure, and therefore I did not let the matter die. On December 3, having heard what had taken place in England, I came back to this house, and in the course of a debate I made a proposal which will be found at page 615 of *Hansard*. At the risk of wearying the house, but in order that it may be on the record, I propose to read what I said on that occasion with regard to this matter. I quote:

> Speaking on a former occasion I requested specifically that parliament be informed as to what results had been attained with respect to production and deliveries, because we held the view, and I believe it is well founded, that it was the deliberate policy of the government, during the past session as well as during the interval since we adjourned in August, to endeavour to create, by general statements of what we are going to do in the future, the impression that all was well with our war effort in the way of production and deliveries.

Then I went on to say:

> Therefore I felt impelled to ask the government that it cause to be set up immediately two select special committees, charged with the responsibility and the duty of investigating and reporting to this house, factually, objectively and truthfully, without bias and without partisanship, what our exact position is to-day (a) with respect to our fighting forces, military, naval and air, and (b) with respect to the production and delivery of all the important materials, equipment and supplies necessary to our war effort, so that the Canadian people might know the truth.

There was no suggestion of scandal there. What I was asking for was facts, information—information which I declared the Canadian people were entitled to get and which up to that time had been specifically denied them. That was the position I took on the first occasion, and it was the position I reiterated on December 3. Then I went on to say:

> So far, such committees have not been set up. I indicated that I knew there were difficulties, and I would ask the Prime Minister, if he can and will, to tell the house what the attitude of the government is with respect to that.

I knew what the attitude of the government was with respect to it. They had told us, and in my own mind I had practically abandoned the effort which I had undertaken and the objective I had in view, namely, the whole or one hundred per cent of what I asked for. But I had not abandoned the idea that the Canadian people should be taken into the confidence of the government, to some degree at all events; and I never shall. War time or no war time, the people who are paying the taxes to the government are entitled prima facie to know what is being done with their money, and there are just two restrictions on that. These are, that the safety of the state shall not be endangered by reason of the divulging of such information, and that no aid or comfort to the enemy shall thereby be given. Save for these two limitations, there is no valid reason in the world why the Canadian people should not know what is being done with the money wrung from them by taxation and lent by them to the government.

After all, a point was made by the lady member of the house to-day, that the government of the country are not our rulers but our servants. Do not let us for a moment forget that. I think the Prime Minister, flushed as he is with the result of the voting on March 26 last, has forgotten for the moment that he is the servant of the Canadian people; and if he is not in actual name a dictator, he is rapidly approaching that point of view. Make no mistake about that; the government of this country in war time as in peace time is still, under our democratic system, the servant of the people. Do not let this government get away from that point of view for one instant. As far as I am concerned I intend to iterate and reiterate that point of view.

Mr. MacNICOL: It is a long way from it now.

Mr. HANSON (York-Sunbury): I am afraid we have departed a long way from that principle. Having in mind what had occurred, knowing the attitude of the government, and being impressed, as I said before, with the reasons advanced by the Minister of National Defence (Mr. Ralston) responsible for the conduct of his staff, responsible for their time and labours, and their direction of our war effort, I realized it was impossible to get the government to accede to the request I had made. I yielded readily on the one point; I did not yield as readily on the other point; and so I turned the matter over in my mind. I had read about what is being done in England. The Prime Minister has indicated to-day

that this was not a new thing in 1938 when the present committee was set up over there, that it went back as far as 1917. That is a matter of historical interest; it does not add to the value of the thing at the moment.

He said that such a thing was never suggested in Canada before. The Prime Minister was not in parliament in 1917; neither was I. He was not here in 1915; neither was I. But there was a war on in 1915. Sir Robert Borden was Prime Minister, and there was the greatest drive that this country has ever seen against the government of that day in connection with war contracts. What we have attempted to do here is a pacifist movement compared with what Frank Carvell and others did in 1915. What did Sir Robert Borden do? Did he give a limited liability committee? If hon. gentlemen are interested in the historical aspect of this matter, to which the Prime Minister has adverted, I would suggest that they look up Sir Robert Borden's Memoirs, which have had a great interest for me. Certain expenditures had been made with respect to the purchase of arms and munitions, implements and materials and other supplies for the purpose of the war, and they were being questioned by the then opposition; and in June, 1915, Sir Robert Borden, as stated in his Memoirs, page 492, thought it—

> . . . desirable and necessary to establish a commission for the investigation of purchases by the government during the ten months which had elapsed since the outbreak of war.

That goes far beyond anything I have ever asked to have done. These purchases had been quite considerable and the expenditures were investigated by the public accounts committee, but it seemed expedient to continue and enlarge the investigation. What did he do? He appointed Sir Charles Davidson, retired chief justice of the supreme court of Quebec, on June 2, 1915, as a commissioner—what for?

> To inquire into, investigate and report upon the purchase, by and on behalf of the government of Canada, through whatever agency the purchases may have been effected, of arms and munitions, implements, materials . . . etc. . . . for the purpose of the present war and as to the expenditures and payments made or agreed to be made therefor.

That is what Sir Robert Borden did, and that went far beyond anything the British government has ever done. That went far beyond anything that this government is now offering to do or even asking us to do. I hold in my hand a copy of order in council, P.C. 1287, approved by His Royal Highness the Governor General on the 2nd day of June, 1915, setting out the scope of the proposed commission, and it is as wide as language can make it. There were no restrictions.

Following the passage of that order in council, a royal commission was issued to Sir Charles Davidson under the provisions of the Inquiries Act. Not only that but the government appointed at public expense eminent counsel to carry on an investigation on behalf of the public or any member of the public who wanted to make a single appearance before that commission on any matter of war expenditures. In other words, Sir Robert Borden opened the door wide to anybody who wanted to walk in. He was not afraid of public opinion. He was not afraid of any breach of privilege. He was not afraid of the Canadian people. They did walk in; the inquiry was held, and evidence was taken under oath. Eminent counsel were appointed; the commission made its report, and as a result of that report certain people were punished. That was something new in the constitutional history of Canada.

When my right hon. friend attempts to convince the people of Canada that what he is accepting or proposing to do is something new or something that is important, I say to him that he had better read his history over again. I say it is not new and it is not nearly as important as what Sir Robert Borden did. Sir Robert Borden followed the proper course. It was the course I failed to convince the Prime Minister in my first conversation with him, based on the statement I made on the 12th of November, should be adopted. I would not have mentioned that, had not the Prime Minister suggested, in order to bolster up his position, that nothing like what had occurred in England had ever occurred in Canada before. Nothing similar had occurred in Canada before, it is true; but I repeat, something far better in the interest of the taxpayers of Canada had been offered and had been put into effect here before. That is enough for that.

Having arrived at the conclusion after my interview with the Prime Minister and certain of his ministers that I could not get anywhere with part (a) of my proposal, and not feeling confident that I could get anywhere with part (b), I made another statement to this house on the 3rd of December, and this is what I said, in addition to what I have already quoted:

> So far such committees have not been set up.

That was referring to the committees I had asked for. I went on:

> I indicated that I knew there were difficulties, and I would ask the Prime Minister, if he can and will, to tell the house what the attitude of the government is with respect to that.

That was not indicating a quarrelsome or querulous mood, was it? I went on:

If the difficulties are such as cannot be surmounted, then I have another concrete suggestion which I desire to lay before the house and the country.

Then I made the suggestion which the Prime Minister has read here to-day, the setting-up of a select committee to deal with the question of expenditures on war account. I made that suggestion. I have never sought by word or intimation or anything else to convey the impression that I did not make the suggestion. But I wish to say this in all candour to the house and the country. When I made that suggestion I never realized the implication that such a committee, if set up, could not make any report to the people or to the country. I did not visualize that. I ought to have had brains enough to see it, but I am sometimes stupid and I make no apology for that. When I read that into the records of the house on the 3rd of December, I did not visualize that such a committee, while they could investigate and examine, could not make a report to the country. What would be the good of such a committee, to my mind, without power to report?

Therefore I went back to the Prime Minister and we discussed this matter. I am bound to say for the most part these discussions were carried on in the friendliest manner, with the greatest candour on both sides. I wish to say to the Prime Minister that when I suggested on one occasion—I think it was on the 24th of February; I am not quite certain but I have the date upstairs although not here—the elimination of the word "current", he agreed almost immediately. For that I desire to give him credit. He certainly did agree almost immediately, and he agreed of course to the elimination of the words "for civil defence" for the reasons which he has explained at some length. We did not think they would be appropriate in the circumstances here, he having explained that the words referred to certain services that were not germane to the inquiry or to the matters we had in mind, and that they might well be eliminated. We were of one opinion on that.

As a matter of fact, there were only two points at issue between us all the way through. I raised them after having discussed these matters with my friends on this side of the house, who pointed them out to me.

First, the committee had no power to report on any expenditures.

[Mr. R. B. Hanson.]

Mr. MACKENZIE (Vancouver Centre): On a point of order may I ask my hon. friend a question? He is aware that the committee in England has already made fourteen reports, is he not?

Mr. HANSON (York-Sunbury): Oh, yes, I am coming to that. Will my hon. friend please allow me to proceed?

By the terms of the order of reference, strictly interpreted, if I understand the English language, the committee would have no power to report upon its examination into any expenditures at all, past or current, if the word "current" were left in there. I thought that was too restrictive, and that is the point of view I put before the Prime Minister.

Mr. MACKENZIE KING: May I ask my hon. friend what is the meaning of the words "with power to examine witnesses and to report from time to time to the house"?

Mr. HANSON (York-Sunbury): My right hon. friend took almost two and a half hours or two hours to put forward his point of view in this whole thing, and I am not controverting a large part of what he had to say. I think, as a matter of fact, that the factual history he gave, with some slight discrepancies according to my memory, is fairly accurate. There are just a few points on which we differ. Our point of view differs on this, that I do not agree that it would have anything like the effect he says it would have if we had this inquiry wide open and we were able to make a report upon our examination to the house.

The two points at issue were these. The first was that under the terms of reference as I interpret them, while the committee may examine into expenditures, and as the resolution is now amended, into past expenditures as well as current, into all expenditures, it has no power to report to the house with respect to these matters under examination. All it has power to do, if I read the order of reference aright, is to report to the house what, if any, economies may be effected consistent with the execution of government policies. I will read it:

. . . and instruct such committee to report what, if any, economies—

Not to report all the expenditures which have been under examination, but:

. . . to report what, if any, economies consistent with the execution of government policies may be effected therein.

Those are the limited powers which this committee has, and my friends pointed out to me that this was altogether too narrow and restrictive. I endeavoured, with all the

powers of persuasion that I had at my command, exercised in a decent way—I am sure he will acknowledge that—to induce the Prime Minister to agree that the committee should have power to report on the expenditures, and also on what, if any, economies might be effected in future expenditure. Let me pause here to examine certain words that are interpolated in that part of the proposed reference.

Mr. MACKENZIE KING: First, may I ask my hon. friend if I am correct in saying that this resolution as presented to-day is identical with the one presented to the British parliament?

Mr. HANSON (York-Sunbury): With certain exceptions I think it is. I have not controverted that. But I would point out that this report on any economies that may be effected in government expenditure must be consistent with the execution of government policy. Never at any time have I suggested that this committee should be authorized or empowered to investigate, or should investigate, government policy with regard to the war, because, as the Prime Minister has stated here to-night, the government must take the responsibility for policy. I never for a moment suggested; I never asked; I never contemplated that any change should be made in what perhaps is one of the most important clauses in the whole reference; that is to say, I never suggested that government policy as such, as distinguished from government expenditure, should be the subject of investigation. I do not think it would be proper for me to ask for a committee to investigate that. If I am opposed to government policy—and in many respects I am—right here on the floor of the House of Commons is the place for me to make that attack. If I can succeed, well and good; if not, I have the satisfaction of having made the attempt to put forward the views of people opposed to certain matters of government policy. That is the course I have pursued right along. In respect of that, the whole thing boils down to a very narrow compass.

There is one other circumstance to which I desire to refer. On the question of the order of reference, the only thing on which we were not in agreement when we last met was this question of the power of this committee, having examined expenditure past and current, to make a report thereon. That is the only thing as far as I know in respect of the terms of the order of reference about which there is any disagreement at all. I do suggest to the Prime Minister that if he has nothing to hide—and I do not suggest that he has—my objection is well taken. I could tell him some things about government war expenditures that would make him blush; I am dealing them out from time to time to certain members of the government or their deputies, so that they can investigate them, rather than air scandals on the floor of the house. I told that to the Minister of Munitions and Supply—

Mr. HOWE: Has the hon. gentleman ever found one yet that stood up?

Mr. HANSON (York-Sunbury): Yes; ask your colleague about the Dartmouth airport.

Mr. HOWE: I am talking about—

Mr. HANSON (York-Sunbury): Will the minister kindly keep his seat? I have the floor now. I do not mean to be impolite, but I do not like that interruption.

There is one other aspect of this matter. There is not one iota of evidence in the order of reference which has been read here and which I have read many times to suggest that this should be a secret committee; not one iota of evidence to suggest that the British parliament in setting up this select committee, whatever may have been their motives in setting it up, ever intended that it should hold its meetings in secret. But the committee itself decided on certain lines of procedure, and among others was the setting up a number of subcommittees. They went back and got authority from parliament to set up these subcommittees, and certain of these subcommittees, not all, met in secret. That was, I suggest, on their own motion. That is a fair inference from the fact that there is no specific closing of the door in the order of reference itself. I suggest to the house and the country that that is an inference which I am entitled to draw, that on their own motion these subcommittees or some of them met in secret at times. There is no conclusive evidence that they always met in secret.

Mr. MACKENZIE KING: I agree with what my hon. friend says.

Mr. HANSON (York-Sunbury): Then we are not so far apart. But the Prime Minister said that this committee must meet in secret.

Mr. MACKENZIE KING: No, I beg pardon, not "must". I said here to-night that I cabled to the high commissioner to ask him to find out whether the committee had as a matter of fact held its meetings in secret and he cabled back that they had. But I said to-night that I was not binding the committee in any way; it is entirely for its members to determine their own procedure.

Mr. HANSON (York-Sunbury): All right; with that understanding I will proceed. If the high commissioner said that the meetings of the subcommittee were held in secret, I think he is misinformed. But neither the Prime Minister nor myself can settle that question, because whatever evidence we have is in the nature of hearsay. There is no record, and that is the only thing that is evidence to me.

I am as certain of this as of anything I can say, that it was intimated to us on more than one occasion, and on the very last occasion, that the meetings of this committee must be held in secret.

Mr. STIRLING: Hear, hear.

Mr. HANSON (York-Sunbury): My hon. friend here, whose word any hon. member would take, and I am sure the Prime Minister would be one of the first, agrees entirely with me on that, and I am sure my other colleague will corroborate it. We were told that this committee must meet in secret, and I never agreed to that.

Mr. MACKENZIE KING: May I say that I cannot recall the word "must" having been used at any time. I was telling him how the British committee met, and I said that I presumed that for similar reasons the committee here would follow a similar method.

Mr. HANSON (York-Sunbury): It may be true that the Prime Minister on one occasion used language such as that. I have no dictaphone record, and I cannot remember everything said in these long conversations. I have never committed the substance of them to writing. But I am as certain of this as of anything that happened in the course of these negotiations, and I am borne out by my colleague to my left, that the Prime Minister, on one occasion at all events, made this a "must" order. We left the meeting with the clear conviction that this committee must meet in camera, and that at no time would the committee's proceedings be public. Most respectfully but as distinctly and firmly as I can say it, I disagree with that point of view; with this limitation however, that if it develops that information is about to be produced which in the judgment and common sense of the committee would bring aid or comfort to the enemy, then of course the proceedings of the committee with respect to that particular topic should be held in camera. I will add to that a second consideration: where the safety of the state may be involved. I make those two exceptions: when in the view of the committee the information, if divulged, would be a source of comfort to the enemy, and where the safety of the state may be involved. Those are analogous; they are not coterminous. With those two exceptions I suggest to hon. members that this committee should operate with open doors in order that the public may know what is going on. I warn the Prime Minister that if he refuses to heed this word of advice, if this committee is to meet in camera, the public will be entitled to draw any inferences they wish to draw. The public are suspicious now; why make them more suspicious?

The Prime Minister has already made some concession with respect to one aspect of the matter, and I am going to close my remarks with a plea to him. He says the government has nothing to hide. I have never suggested that there was anything to hide, although I think there is ample evidence of gross extravagance in this war effort. I am bound to say, as I have said here before, that to a certain extent this is inevitable in war time. You just cannot get people to spend money in war time as properly as they would spend it in peace time. There are not the safeguards and the surrounding circumstances in war time that would compel them to be more careful. Then there is the question of haste; time won't wait and things have to be done to-day that cannot possibly be put off until to-morrow, or so they will tell you. Of course usually that is ninety-nine per cent wrong, but it all costs money and there has been great waste.

I close with this plea to the Prime Minister, that if he will not allow this committee to report to the House of Commons on past and current expenditures—and I am not going to fight for that principle any longer—I do suggest to him that he should not let it be said that this committee must meet in secret, save and except for the two considerations I have mentioned.

Hon. J. L. RALSTON (Minister of National Defence): Mr. Speaker, my name has been brought into the discussion, and perhaps I should say a word. My hon. friend the leader of the opposition (Mr. Hanson) speaks of the Prime Minister (Mr. Mackenzie King) having taken two hours. I may say to him—

Mr. HANSON (York-Sunbury): I am not objecting.

Mr. RALSTON: —that perhaps he was not as long as the Prime Minister, but certainly he was as loud.

Mr. HANSON (York-Sunbury): That is my privilege, is it not?

Mr. RALSTON: Yes. I have experienced a great deal of difficulty in really arriving at what my hon. friend is arguing about. The

Prime Minister has introduced a resolution. My hon. friend has taken a good deal of time telling us about the history of it, but what is it he wishes to know which the resolution does not cover? My name was brought into the discussion with regard to an interview in November. Perhaps I could well leave the matter as my hon. friend left it, when he said I had convinced him that the suggestion he made in that interview would not be in the public interest, but that suggestion was not just as he put it. I know he did not intend to leave a wrong impression, but the suggestion being made then was that matters of policy and matters of administration in the department would all be the subject of discussion with a parliamentary committee.

Mr. HANSON (York-Sunbury): Not policy.

Mr. RALSTON: Matters of policy as well.

Mr. HANSON (York-Sunbury): I deny that.

Mr. RALSTON: The suggestion was that a parliamentary committee should be set up, to be called a defence committee or something of the kind, which would have the right to send for officers of the Department of National Defence at any time—I know the committee would endeavour to meet their convenience as far as possible—and discuss with them matters of policy and administration being carried out in the department at the time.

That was the suggestion. We had a rather busy summer and fall; we were looking forward to a busy winter, and I felt and told my hon. friend and his friends that he would be seriously hampering Canada's war effort if he asked the staff officers of the Department of National Defence to meet and discuss matters of that kind with a committee of this house. I know that from time to time officers have been asked to come and discuss matters with committees, and they have endeavoured to do so; but it meant that these men had to work night as well as day, and that the work of the department was to that extent retarded. I would very much prefer that hon. members, if they would, might discuss these matters with me. I would endeavour to put any suggestions they might have into practice; and if they did discuss these matters with me, I would be glad to put them in touch, as far as I could, with the officers conducting those particular branches of the administration.

But the thing we were talking about at that time was not at all what my hon. friend is talking about now. What we were talking about was the general matter of administration in connection with the defence services; the matter of training; the matter of equipment; the matter of overseas services; the nature of our defences in Canada and of our defence measures overseas. Those were the larger matters which were supposed to be discussed with the officers of my department. I felt that I could ask my hon. friend to agree that those were not matters in connection with which I could afford to spare the officers of the department unless I handed over to a committee the administration of the Department of National Defence, and my hon. friend and his friends did not want me to do that. That was what was discussed by me, and in connection with that matter my hon. friend is quite right when he says he agreed with my point of view, but that really had nothing to do with the motion which is before the house to-night.

I should like to say a word with regard to the motion itself and the presentation which has been made by the Prime Minister. Really I do find it difficult to know in what respect my hon. friend is taking issue with regard to this matter. He says there is no valid reason in the world why the Canadian people should not know the facts in connection with expenditures, and I say to him he is perfectly right, provided the rules which he has laid down are observed; that is, exceptions with regard to the safety of the state and the matter of making information available which might be useful to the enemy. That is perfectly right, and that is provided by this particular resolution.

Mr. HANSON (York-Sunbury): Oh, no, it is not.

Mr. RALSTON: It seems to me that since occupying his present position my hon. friend has acquired some sort of suspicious nature which makes it difficult for him to comprehend the English language. This resolution provides that a committee be appointed to examine the expenditure defrayed out of moneys provided by parliament—not just the current expenditures—for the defence services, and for other services directly connected with the war. That sounds pretty nearly broad enough for anything. The committee is to report what, if any, economies consistent with the execution of the policy decided by the government may be effected therein. "Therein" refers to the expenditures which they are to investigate and report upon. I do not know what more my hon. friend wants, unless he wishes some sort of scandal-hunting investigation, which he absolutely denies and repudiates.

The hon. gentleman says there has been gross extravagance. He is fair enough to add that extravagance sometimes does occur when there must be haste in connection with great war projects, and that in war time there is not the same opportunity for consideration as there is in ordinary times. But if there has been gross extravagance, that is exactly what this committee is being set up for, to investigate those expenditures. If there has been gross extravagance, it means that the committee can report on economies which may be effected in those expenditures in order to prevent such extravagance, and I understand that is really what my hon. friend wishes. So what is there at issue?

My hon. friend refers to the question of whether or not the proceedings of the committee shall be kept secret. The Prime Minister has told him that no one has put a ban on it. What has been stated is that the committee will sit; it will have the conduct of its own proceedings, and it will determine whether those proceedings are such that they should be conducted in secret or in public. If my hon. friend has read, as no doubt he has, the reports of the British committee to the House of Commons, he will know perfectly well what they contain. For instance, I remember the case of an aerodrome in Kent. It was alleged that too much was paid for that aerodrome, and criticism was made in that respect. It was reported upon, and the report was laid on the table of the house.

That is the sort of thing on which the committee reports, and the sort of thing about which the public is told in those reports. Therefore I do suggest that my hon. friend is adopting an unduly suspicious attitude with regard to the wording of this resolution, and quite without justification. I should have thought he might give the government some credit for the fact that it prefers to empower the committee to deal with past expenditures, contrary to what was intimated in the editorial read to-night by my leader. It is expressly provided that the committee may examine not only current expenditures, but previous expenditures as well, notwithstanding that the British committee has not that power. But my hon. friend gives no credit for that. He seems to think that is something which should be granted, anyway. He should realize that, as my leader has pointed out, this committee is not in substitution for but is in addition to the public accounts committee. The Prime Minister refers me to the fifth report of the select committee on national expenditure. Here is the sort of report tabled in the house, and made available to the public. This is what is said with regard to "the Scottish repair depot":

> Though with modern engineering knowledge and appliances it would be wrong to say that any site is impossible for the erection of a building, it would be difficult throughout the length and breadth of this country to find any site which was likely to prove more difficult and expensive than the site here selected.

Certainly there is no pulling of punches in that report. Yet that report was published and laid on the table of the house. It was placed on the table under an order of reference in the exact terms of the order of reference before this house to-night. The report on the Scottish report depot continues:

> It seems clear to the subcommittee that at least £250,000 has in the result been wasted. In addition to the £278,000 a further sum of £160,000 has been spent in respect of sheds, drainage and other matters connected with the aerodrome site itself.

There is a report which deals with the wasting of a couple of million dollars. There is no secrecy about it. No one is saying that the public cannot know about it. And that, as I have pointed out, is done under an order of reference such as the one we have before us to-night.

My hon. friend has referred to Sir Robert Borden. He said that Sir Robert Borden granted an order for a commission in 1915. But that was in 1915. The British people were going through the war in 1915. This is another war, that of 1940; and the British House of Commons, having considered those very principles of which my hon. friend has spoken, namely, the safety of the state and the undesirability of giving information to the enemy, decided not for an order in council or a reference such as Sir Robert Borden gave in 1915, but for an order of reference in the terms of the order presented by my leader to-night, an open order of reference, so that matters not only of current but of past expenditures as well might be examined.

As the one who is in charge of the department which has the largest amount of expenditures in connection with our war effort, and who is responsible for those expenditures, I say to my hon. friend that so far as I am concerned he need have no fear that every possible facility will be given the committee to get information regarding any expenditure it may desire. The committee can then decide whether or not it is in the public interest to disclose that information. I say to my hon. friend that I expect the committee will operate in the way in which he himself has indicated he desires it to operate, namely, for the purpose of assisting, for the purpose of helping us to save money, and for the purpose of

preventing waste and extravagance. I say we will welcome any assistance the committee can give in that respect.

I close by saying to you, Mr. Speaker, and to the house that with the public accounts committee as it is set up, and the machinery it affords, plus the provisions of this resolution, I see no reason why the committees of this house should not have all the information it is possible to get, and why the public interest should not be fully satisfied in respect of the examination in the fullest possible way of all the expenditures—and I say that advisedly—"all" the expenditures which have been made by this government and on its behalf in connection with our war effort.

Hon. GROTE STIRLING (Yale): Mr. Speaker, as one of those who accompanied the leader of the opposition (Mr. Hanson) in the conversations which took place with the Prime Minister (Mr. Mackenzie King) and his colleagues, there are one or two observations I should like to make.

In the long statement made by the Prime Minister descriptive of the incidents in the order in which they occurred, so far as I could follow them—and without reference to notes—I should think he was accurate. But where he appeared to me to be endeavouring to lay blame on the leader of the opposition for having altered his ground and for having modified the wording of the reference which was being discussed, I would offer this suggestion, that right up until the last meeting in the Prime Minister's office my impression was that the words contained in the reference were still being discussed. The Prime Minister takes the view that at the meeting of February 19 a set of words was discussed and agreed upon. That is the only difference I have with the Prime Minister in connection with that phase of the matter.

I left that meeting under the impression that the matter was not closed, that he would be having further discussions with his colleagues, and that the leader of the opposition would have further discussions with his colleagues. I did not take it that that set of words had been adopted or agreed upon by both sides.

The Minister of National Defence (Mr. Ralston) has pointed out that he did not advance the matter of policy in the earlier conversations when he was pointing out the difficulties which would attend the constant appearance of his senior officers before the committee.

Mr. RALSTON: My hon. friend has misunderstood what I said. What I said was that my hon. friend's leader had indicated that the matter of policy was not mentioned. I said it was my recollection that it was mentioned, and that that was one of the matters with which it was suggested the committee should deal.

Mr. STIRLING: The Minister of National Defence disagrees with the leader of the opposition in saying that that policy was discussed.

Mr. RALSTON: I am saying that policy was discussed as a subject for discussion by the committee.

Mr. STIRLING: That is not my recollection. Is this not an instance of the difficulty of discussing matters of policy which have been carried on in secret? Let me say this with regard to the whole matter connected with the committee: I have never been entirely favourable to the idea of such a committee, and I should like to give my reasons. My reasons are that the work of the committee would be seriously circumscribed from the very beginning. It would be circumscribed because, by the wording of the reference anything relating to government policy is ruled out. In the second place, the government's conception of what should be secret is what will rule.

For those two reasons it seems to me doubtful whether real good, for the sake of Canada's war effort, will develop from the work of the committee. It is quite true that in the discussions the leader of the opposition had with his colleagues I put forward my views. They are but mine. I am convinced, as time goes on, that as soon as you introduce the element of secrecy into these matters you raise difficulties which can hardly be overcome. There are to be twenty-four members of this committee, eighteen of whom are supporters of the government and six who are members of the opposition parties. If these discussions are to have any usefulness, matters which should be kept secret will have to be brought before the committee. We shall then have twenty-four different ideas as to what constitutes secrecy. We shall have twenty-four individuals who, after all, are human. These hon. gentlemen will have to tie their tongues in the conversations which they may have with friends, and in the speeches which they may make when matters in connection with the war are raised. When suggestions are made by those in opposition which an hon. member feels should not be made, an hon. member will have to remember whether a certain piece of information which he desires to use has been received by him in secret. To my mind that will be very hampering.

Mr. RALSTON: Is it not true that any public servant, any public official, any staff officer or any one else always must remember whether or not a particular matter is something which should not be disclosed? Further than that, the proceedings of this committee will be a matter of record and there can be no misunderstanding as to what takes place there.

Mr. STIRLING: My reply to the Minister of National Defence is that a member of this house is elected to represent a certain set of people. Those people can rightly come to the member to discuss such matters. If they should go to the higher officials of a department, those men have a good reason for not going into matters which should not be divulged.

Mr. RALSTON: I am talking about meeting a man on the street.

Mr. STIRLING: So am I. To my mind this will be circumscribing the work of the committee and it will make it extremely difficult to carry on the work to a point of usefulness.

In connection with the discussions which took place, the Prime Minister gave his recollection of what had happened, and the leader of the opposition gave his. There was some small difference of opinion as to whether this was discussed or that was discussed. The right hon. gentleman has referred to the question of secrecy. I left that meeting with a clear understanding that even though the word "must" may not have been used, it was the intention of the government that the meetings of this committee should be secret.

Mr. MACKENZIE KING: Did I not refer to a telegram which I had sent to the high commissioner? I repeated the telegram and the reply to my hon. friend. Perhaps he would not mind my reading it now. The telegram to the high commissioner was dated February 18 and it reads:

Please advise at earliest possible moment whether proceedings of select committee on national expenditure of House of Commons are conducted in camera.

The reply was:

Proceedings of select committee on national expenditure are conducted in camera.

That is what I gave to my hon. friend and I did not mean to convey anything more than that.

Mr. STIRLING: There is a question of a difference of recollection. My impression is that on the occasion when secrecy was referred to, the right hon. gentleman said that he would cable, and on the next occasion that we met he showed us the answer. My memory may be at fault, but that is what it is.

Mr. MACKENZIE KING: I think that is right. May I say that before the leader of the opposition had spoken at all, I was careful to say that while this was true with regard to the proceedings of the British committee, I was not placing any restrictions upon the committee here. I was leaving it to its members to settle matters for themselves.

Mr. STIRLING: I think I have little to add to what I have said. Our methods in the conduct of government in Canada are similar to those which obtain in the United Kingdom, but a set of circumstances with which we may have to deal are quite likely to be entirely different from a set of circumstances facing them. It has always been my habit to look upon their methods of government with considerable interest, but in no sense have I considered them as a necessary guide in what we should do. I think that is the situation with regard to this matter. Canada has developed her own methods of government, and in my opinion has done so admirably. We can draw a lesson from what they do in the United Kingdom, but I certainly am not one who is ready to accept what they do there as being applicable here in all cases.

Mr. J. T. THORSON (Selkirk): Mr. Speaker, it is with considerable diffidence that I take part in this debate because I am one of those mentioned as being a possible member of the proposed committee.

Mr. MacNICOL: Is the hon. member at liberty to take part in the debate?

Mr. THORSON: I think so because I do not propose to discuss anything that will take place in the committee. What I propose to discuss is the method of approach to the subject matter of the inquiry and my opinion as to the manner in which the inquiry ought to be conducted. I do not think there is anything to prevent my taking part in this debate although, as I said a moment ago, I do so with some diffidence.

The Prime Minister (Mr. Mackenzie King) has indicated that the reference to this committee is considerably larger than the corresponding reference to the committee at Westminster. The committee set up in London has been restricted to the investigation of current expenditures, but the word "current" does not appear in the present reference to this committee. I assume that there is an essential difference between the public accounts committee and the special committee

which is proposed to be set up by this resolution. The public accounts committee is in the nature of a postmortem to determine what has happened and the causes of that happening. This committee has a much wider function to perform. It may look into past expenditures, but the purpose of looking into such expenditures would be to eliminate waste and extravagance in present expenditures.

May I say to the hon. member for Yale (Mr. Stirling) who has just spoken, that I would be the last person in this house to say that we in Canada should follow automatically what is done in the British house. I think we all agree with him in that statement. I suggest, however, that the British parliament is an excellent model to follow in the present case. The British House of Commons set up a committee during the first great war to investigate current expenditures with a view to avoiding waste and extravagance. Immediately upon the outbreak of the present war, a similar committee was set up in London. I think that we in this country might well follow the lead of Great Britain, not only in the present war but in the last war. Both committees, the committee of the great war and the committee of the present war, accomplished excellent results and saved the people of Great Britain, I think it may safely be said, millions of pounds by the close scrutiny which they gave to current expenditures with the object of effecting economies and avoiding extravagance.

I said a moment ago that the model of the British committee was an excellent one to follow, and I am strongly of that opinion in spite of the fact that there may be differences between our system of government and theirs, although such differences are really more on the surface than in reality. The British committee, both in the present war and in the last one, sat always in camera. It has made, during the present war, fourteen reports to the British House of Commons. It has made a large number of recommendations, some to the government itself and some to individual departments of the government. Most of these recommendations were accepted. Some were not accepted; some were rejected. But the committee made its recommendations after careful inquiry and with a definite purpose to find out the real facts. I submit to every member of this house that a committee sitting in camera can conduct a more thorough and more careful inquiry than can any public accounts committee, where one sees on both sides persons making speeches for the purpose of publicity. If a committee sits in camera, and if the members of that committee are properly seized of their responsibilities, they will be concerned with ascertaining the real facts and will not be in the least concerned with making speeches or attracting publicity to their utterances.

The British committee resolved itself into several subcommittees. Each subcommittee was charged with specific and definite responsibilities. The chairmen of these subcommittees, together with the chairman of the committee, constituted a coordinating committee which guided and controlled the several activities of the subcommittees. The subcommittees worked collaterally and at the same time, according to the rules that each laid down for the conduct of its inquiry. The subcommittees listened to witnesses, visited plants, visited public works, visited military sites, conducted such inquiries as they thought were advisable for the purpose of discharging the responsibilities that were cast upon them, and periodically reported their findings back to the general committee, and the committee made its reports from time to time to the house.

The British committee made, I think, a fair and thorough inquiry with regard to all the matters that were brought to its attention. Its investigations of officials were brief and to the point. The members were actuated by the desire to find out the real facts and were not concerned with publicity for any of the individual members of the committee. If the British committee could perform its functions in the admirable manner in which it has performed them then I resent the suggestion that Canadian members of parliament cannot do likewise. I am convinced that if members of the British house can discharge the very heavy and onerous responsibilities that have been cast upon them, then members of the Canadian House of Commons, whether they are on the government side of the house or the opposition, can equally discharge the equally difficult and onerous responsibilities that are placed upon them. I know that this committee can serve a useful public purpose.

We are asking the Canadian people to give to Canada's war effort all that they can spare out of their savings. I think it is our duty as members of parliament to assure the Canadian people that every possible safeguard is being taken to make certain that every dollar contributed by them shall go as far as possible in our war effort.

I believe that every member of this house is committed to an all-out war effort on the part of Canada. We want the support of every Canadian in this country, and I think we owe it to Canadians throughout Canada that they should be certain, so far as it is within our power as members of parliament to make it so, that every possible economy shall be put into effect and every possible safeguard taken against extravagance in expenditures.

That, I believe, can be done by a thorough and careful inquiry without regard to publicity. We will not be concerned in the committee as to what the public thinks; we will be concerned with the knowledge within ourselves, as members of the committee, that we are doing an honest and thorough job of investigation. That will be the important thing, and I think that in that regard the committee might well enlist the support of every member of the house. The British committee did that. The British committee addressed a circular letter to every member of the House of Commons asking the members to indicate the lines of inquiry which they thought the committee should follow and the various matters which, in the opinion of the members, should be brought to the attention of the committee. That might be done.

Then, too, I have no doubt that when the committee is set up, suggestions of one kind and another, from one end of Canada to the other, will come to the committee, and these suggestions will be explored and investigated. They will be sorted out and sent to this or that subcommittee for careful investigation and exploration, and I think, if we as members of the House of Commons approach this very difficult and onerous task with a full appreciation of the great responsibility that is cast upon us, we shall be performing a truly national and patriotic service. Every member of this house who is named on this committee is a Canadian, concerned with the Canadian war effort and with its success, and I believe I may safely pledge in their name every member of this committee to an honest, fair and impartial inquiry into all the matters that are referred to the committee.

The committee has power to make reports from time to time to the house. It is not circumscribed in its other activities. It may from time to time report informally to the head of the department concerned or to the Prime Minister with a view to bringing about economies, with a view to eliminating waste, with a view to the avoidance of extravagance. Not the least useful function of this committee will be its very existence and the knowledge on the part of the spending authorities in the state that this committee is in existence and will be supervising and considering and inquiring into their expenditures. That alone will be worth the establishment of the committee.

There is nothing in the present resolution as to the powers of the committee to adjourn from place to place, nor is there anything in the resolution to empower the committee to sit during a recess of the house, nor is there anything to empower subcommittees of the general committee to have the powers of the general committee, but all of these matters can be dealt with as the necessity for them arises.

I will close with this remark, Mr. Speaker, that if we approach this committee with the same attitude of mind that actuated the British committee, I see no reason why we should not serve a very useful purpose; and if members of the British House of Commons can discharge their responsibilities in a manner becoming to the best traditions of the British house, I see no reason why members of the Canadian House of Commons should not do likewise.

Mr. H. C. GREEN (Vancouver South): Mr. Speaker, the hour is getting late, and I think the subject has been very thoroughly canvassed. Whether or not the discussion that has taken place will help the work of the committee, I am not quite so sure. Perhaps it was as well that these details and the past should have been gone into so thoroughly.

I have been very much interested for many months in the setting-up of a committee of this type. I had the privilege of being present at the two conferences which were held before the house adjourned in December. They were quite harmonious and I think everyone present understood that the matter had been settled.

The Prime Minister stated in the house on December 3, as reported at page 633 of *Hansard:*

> I wish to say to him—

He was speaking of the leader of the opposition (Mr. Hanson).

> —and to the house that no approach to the subject could have been more helpful or could have been better in every respect than that which he and his colleagues made in confidence with the government in this matter.

Unfortunately the problem has not been worked out since that time with so much unanimity, but I suggest to the house that we forget all about that and make a fresh start. After all, we all make mistakes and we all say foolish things. Therefore let us forget the past and let this new committee get on with its job. Let it start with the blessing of this house. It can be of such great importance and of such great help, subject to one proviso, namely, that every man on this committee goes into its very first meeting and into every other meeting, leaving his politics outside. If that is not done—and the Prime Minister said words to the same effect last December—it is impossible for this committee to succeed. But if partisan politics are left outside, I am convinced that this

committee will do a great work for Canada and will greatly strengthen the war effort of our nation.

Here we are facing the fight of our history, with young Canadians by the thousand exposed to sudden death this very night, with thousands of wives and mothers at home wondering what to-morrow may bring for their loved ones, with thousands of children in Canada wondering what is going to happen to their daddy. Surely at such a time this house can forget politics on this one question and the members of this committee can go into its meetings with their minds made up that they will do their very best not only to cut down expenditures and find where money is being wasted but also to suggest ways in which our war effort can be improved. That, as the hon. member for Selkirk (Mr. Thorson) has so well said, has been the result in the British House of Commons. I know the private members of this house well enough to know that the same thing can be done here.

As I have said before, I hold that the private members are the back-bone of this parliament. They are the men who really count in this house, with all due deference to the ministers. This is the chance for the private members of this House of Commons to show what they are made of. I am certain that they will do that job and do it well. I am named on the committee and, like the others, I intend to do my part to the very best of my ability and as a Canadian first, last and all the time. I would ask the hon. members not on the committee to be behind us in this effort; give us a chance to prove to the Canadian people that the Canadian parliament can really get results without becoming involved in partisan political quarrels.

Mr. M. J. COLDWELL (Rosetown-Biggar): The hon. member (Mr. Green), who has just taken his seat, has expressed in much better terms than I could have found some of the thoughts that have been in my mind this evening. It is a pity that in the setting up of this committee we have had a long discussion based upon a difference in recollection of what took place at a certain conference. We know nothing of that conference, but we welcome the appointment of this committee.

It seemed to me it was a very simple matter. The resolution is short and to the point. It says that the committee is appointed—

. . . to examine the expenditure defrayed out of moneys provided by parliament for the defence services, and for other services directly connected with the war, and to report . . .

And so on. I am hoping that this committee will sit in the spirit in which the hon. member for Vancouver South hoped it would. After all, the time is so serious that there should be no hope in anyone's mind that any scandal or anything of that sort may exist to be uncovered. In fact, we all trust that nothing of that sort will come out of the deliberations of this committee. Indeed, if I may say so, a few scandals out of our war effort would jeopardize democracy in our own country almost as much as if we sustained some reverses overseas.

I know that the British committee has done a splendid job. I am not to be a member of this committee; only one member of our group is a member of it, but I hope that it may have the success the British committee has had.

With regard to the inquiry into past expenditures, if it is felt necessary it seems to me the public accounts committee can sit also, to examine any other phases of our expenditures that need investigation. I regret that it has not been the custom of this parliament to have the public accounts committee sit at each session and for a considerable number of meetings. I believe that we would gain much if that were done.

I do not intend to speak at any length. All I want to do is to place our position before the house. We agree that this committee ought to be set up; we agree that the powers given to it ought to be extensive enough that it can investigate all the expenditures of moneys appropriated by this parliament for our war effort, and we agree that from time to time reports should be made to this house and to the Canadian people. I can quite understand that there may be some matters which might have to be withheld for the public interest in relation to the conduct of the war, but I am hoping that they will be very few and will not involve any large expenditures.

So, Mr. Speaker, we are hoping that the committee when appointed will sit regularly, and that we shall not have anything in the nature of a repetition of the kind of wrangle that we had when the Bren gun matter was sent to the public accounts committee. Perhaps in some minds in this house there is the fear that we might again find hon. members going into that committee all worked up and prepared to act as counsel for one side or the other. I hope no hon. member will go into the committee as counsel, as it were, for any party or person. I do not think they will. As I said, the time is serious; this is not a scandal hunt at all, and I trust the committee will fulfil all that we expect of it.

Mr. T. L. CHURCH (Broadview): The war was only a few days old when I asked for the appointment of a similar committee to the one set out in the text of this resolution, and to consider Canada's war effort in general. In my opinion the resolution does not go far enough; it is just a postmortem and an inquest and a grand assize held into only one feature of the war effort that is gone and gone forever beyond recall, namely, Canada being too late all along the line.

The text of the resolution does not provide for what the people of this country are demanding. I do not speak in a partisan sense, far from it, because I know no politics in this house except the effective conduct of the war. Those who want to conduct politics can do so, but in the last war and in this war I know no politics.

For over one hundred years there was civil war in England to get control of expenditures. The House of Commons here, since this war started, has been the forgotten agency in our constitutional system of government. We in this house have been the forgotten men; the private member has no rights; he can object to nothing, because these expenditures are made under the War Measures Act. Many outside boards have been created which were never in existence in the great war, with authority over the head body, the House of Commons of Canada; we never had them when we had our five allies. We have no control over the expenditure or over what is being done.

The text of the resolution does not go far enough. It is just a resolution to appoint a committee. The public accounts committee has always acted, in matters like this, in all the wars in England and the dominions, but here the public accounts committee has never been asked to sit. The money has been spent and we have an auditor general. It is spent for defence services; but what are defence services; what are foreign services; what are external services? No one knows.

Some hon. MEMBERS: Eleven o'clock.

Mr. CHURCH: I can conclude in five minutes. I do not want to prevent the adoption of the motion.

Mr. SPEAKER: Is it the sense of the house that the debate shall continue?

Some hon. MEMBERS: No.

Mr. CHURCH: Then I move the adjournment of the debate.

Motion agreed to and debate adjourned.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

[Mr. Coldwell.]

Wednesday, March 5, 1941.

The house met at three o'clock.

PRIVILEGE—MRS. NIELSEN

REFERENCE TO CERTAIN STATEMENTS MADE IN HOUSE OF COMMONS ON MARCH 4

On the orders of the day:

Mrs. DORISE W. NIELSEN (North Battleford): Mr. Speaker, I rise to a question of privilege. I regret very much that yesterday afternoon I was required to leave the chamber because of a previous engagement and therefore was unable at that time to reply here to those hon. members who spoke after I had left. With your permission I wish to make a statement in that connection now.

Yesterday the Minister of Justice (Mr. Lapointe) insinuated that I had some connection with the communist party. There were subtle insinuations regarding the company I had kept, which I think the majority of people will agree proves absolutely nothing. I have spoken many times, on many platforms, together with people of various political and religious views. In my view the fact that these subtle suggestions have been advanced proves the contention I have put forward, that those who oppose this government are branded, if possible, by any means. It is a case, I think, of giving a dog a bad name. Others have been branded before this; even the Minister of Justice himself has complained in this house that he has been so treated. A few years ago the Prime Minister (Mr. Mackenzie King) went to Germany, where he had conversations with Hitler and was lauded by the German press. But how indignant he would be if I or anyone else were to insinuate that he was a fascist.

I am in this House of Commons as a free and independent member, not belonging to any political party. The people of my constituency sent me here, and they drew up a programme for my instruction. I think it is only fair both to them and to myself that this house should know the programme which was outlined for my guidance here, so that hon. members may be able to see how consistently I have advocated these things.

Some hon. MEMBERS: Order.

Mr. SPEAKER: May I call the attention of the hon. member to the fact that she has risen on a question of privilege in order to deny or reply to some statements made yesterday. I do not think she should now read the platform on which she was sent to this house but should deal only with what was said here yesterday.

Mrs. NIELSEN: If that is your ruling, Mr. Speaker, I shall be forced to accept it; but really I see no reason why I should not be able to place that programme on *Hansard* in order that hon. members may read it. I think it very necessary that I should do so, because I would like hon. members of this house, after hearing this programme, to tell me if there is anything in it which advocates communism. Have I your permission to do so?

Mr. SPEAKER: I have already ruled that it would not be proper to read the platform on which the hon. member was elected to this house, but that she should express herself as to the matter of privilege with which she has risen to deal, in regard to what was said yesterday.

Mrs. NIELSEN: Very well, Mr. Speaker; I have to bow to your ruling. I was not able yesterday, for the reason I have stated, to reply to the question asked by the hon. member for Selkirk (Mr. Thorson), who asked me to declare my attitude towards communism. This should not be difficult. As long as we have real democracy in Canada I feel that there will be no danger of communism. It is when democracy ceases to function that communism grows. That has been apparent in many instances and that is why I am fighting to-day to prevent any restrictions being placed upon our democracy in Canada. I do not wish to see conditions in Canada such as these—

Some hon. MEMBERS: Order.

Mr. SPEAKER: I am sorry, but I have to call the attention of the hon. member to the fact—

Mrs. NIELSEN: Mr. Speaker, I am only answering certain charges which were made against me yesterday, as I believe I have a right to do.

Mr. SPEAKER: Order. May I ask the hon. member to resume her seat.

Mrs. NIELSEN: I am sorry, Mr. Speaker; I cannot hear you.

Mr. SPEAKER: I would ask the hon. member to resume her seat. I understood the hon. member to rise to a question of privilege, with regard to some statements which were made in this house yesterday. The hon. member is entirely within her province in dealing with those matters which were referred to yesterday, but she is not entitled to enter into an argument now based upon the stand which she has already taken. Therefore she must address herself simply to the utterances made yesterday, as being something she wishes to deny or reply to on a question of privilege.

Mrs. NIELSEN: That is what I am doing, Mr. Speaker, to the best of my ability. Charges were made yesterday that I was keeping company with people with whom it was not wise for me to keep company. It is very necessary in reference to this question that I read to the house a letter from my constituency, dated February 25, which I received only yesterday.

Some hon. MEMBERS: Order, order.

Mrs. NIELSEN: It comes from a person in my constituency, and says—

Mr. SPEAKER: Order. Some hon. members have taken objection to the reading of a letter addressed to the hon. member from a constituent. If it has a bearing on what was said yesterday, in justification of the hon. member's attitude, she is entitled to read it.

Mrs. NIELSEN: I think it has a bearing on what was said yesterday. The letter says:

> I had a long confidential chat with our local R.C.M.P. yesterday. He is surprised at the attitude you take regarding the war regulations. He thinks you are very foolish to proceed as you are doing, and said "Can't she see that that same law will put her behind the wires, whether she believes it or not, and believe me she'll be there before long if she keeps up the pace she's hitting, for they'll frame up something somehow, either under the fifth column or as agitations against the war effort, or disloyalty."
>
> We have a young police officer here relieving while our regular man is on holidays, and he stated that while in training they were all instructed to keep their eyes and ears open for anything on Nielsen, watch the papers and be on the alert always, because they were sure she would be interned before long.

An hon. MEMBER: Who signed that?

Mrs. NIELSEN: There is no need for me to give the name of the man who signed that letter.

Some hon. MEMBERS: Oh, oh.

An hon. MEMBER: Oh, no.

Mrs. NIELSEN: There is no need for me to give the name of the man who signed it. For one thing it would jeopardize the position of a young police officer, and it also may lead to discrimination against the man who wrote it. If the letter is required by the committee which is set up to go into the defence of Canada regulations, I will give it to them.

Mr. LAPOINTE (Quebec East): She is a law unto herself.

Mr. MACKENZIE KING: With regard to the reading of communications, I think my hon. friend must know it is the rule that one is not entitled to read from communications unless prepared to place them on the table of the house.

Mrs. NIELSEN: Very well; I shall place it on the table of the house. I feel myself that it is only right that the members of this house should know that these things are going on; and if this Canadian version of the Gestapo continues I think this government will have to answer to the Canadian people before long. In the past history of our country—

Some hon. MEMBERS: Order.

Mr. THORSON: I should like to speak to the question of privilege.

Mr. HANSON (York-Sunbury): She is not through yet.

Some hon. MEMBERS: Order.

Mr. THORSON: On the point of privilege raised by the hon. member I would say—

Mr. HANSON (York-Sunbury): She is not through yet.

Mr. LAPOINTE (Quebec East): Give her a chance. Go ahead; tell us all about it.

Mr. MACKENZIE KING: I should think the last thing hon. members would wish would be to have the impression go out that in any way the House of Commons had sought to deprive the hon. member of the opportunity of making the fullest possible statement with respect to any allegations she may feel were made against her. For that reason I would think that perhaps as a matter of agreement on the part of hon. members, the house on this occasion might allow her to say whatever she wishes to say on this occasion.

Mr. HANSON (York-Sunbury): Mr. Speaker, if I may be permitted a word, I have watched the latter part of this incident with a great deal of interest. It may be that the lady has not kept within the rules. I think most of us will agree on that. But I do suggest that as a matter of expediency and propriety she should be allowed to make her statement so that the public will know what she has to say. The cries of "order, order" on the part of private members might be well left in the hands of your honour.

Mr. THORSON: Mr. Speaker, in support of the suggestion made by the leader of the opposition, and in view of the fact that my name has been referred to—

Mr. HANSON (York-Sunbury): Has it?

Mr. THORSON: —may I say that I stated yesterday—

Some hon. MEMBERS: Order.

Mr. THORSON: Just a minute.

[Mr. Mackenzie King.]

Mr. HANSON (York-Sunbury): The lady has not finished yet.

Mr. THORSON: I am supporting the right of the hon. member to speak.

Mr. SPEAKER: Order.

An hon. MEMBER: Sit down.

Mr. SPEAKER: There is no motion before the house and therefore no subject for debate. In view of the fact that the house seemed to agree that the hon. member should be allowed to make her statement I of course accede to the intention of the house. I take it that that is the sense of the house.

Mrs. NIELSEN: Mr. Speaker, I intend to take only a few minutes—

Mr. LECLERC: If it requires the unanimous consent of the house, then for one I will object to hearing any more of the kind of communist talk that we heard yesterday from the hon. member.

Mr. FRASER (Northumberland, Ont.): Following the hon. member—

Mr. SPEAKER: Order. I do not think unanimous consent of the house is required. What is required is that the sense of the house shall be ascertained. My interpretation is that the house wishes the hon. member to continue her statement, and therefore I would ask her to do so now.

Mrs. NIELSEN: Mr. Speaker, I would say that if this Canadian version of the Gestapo continues to operate in Canada—

Some hon. MEMBERS: Order.

Mrs. NIELSEN: —and if material is collected, as it is apparently being collected and brought up, some time this government will have to answer to the Canadian people.

I shall continue to do the things which I think are correct and I could do no better than to quote with equal sincerity the words of the Minister of Justice (Mr. Lapointe) himself, who is reported in *Hansard* of yesterday to have said:

I will do what I think is right, whatever may be the consequences.

And again:

Neither inducement, blackmail nor threats will have any influence.

Mr. SPEAKER: I must call the hon. member's attention to the fact that the letter which she has tabled does not contain the name of the writer.

Mrs. NIELSEN: I have the rest of the letter in my office. It will be brought down and tabled immediately.

HOUSE OF COMMONS

CLASSIFICATION OF CERTAIN POSITIONS FOR PERMANENT APPOINTMENTS

Mr. SPEAKER: I have the honour to lay on the table of the house a report of the civil service commission classifying certain positions to which employees on the temporary staff of the House of Commons are to be appointed on a permanent basis.

PUBLIC ACCOUNTS

REFERENCE OF REPORT OF AUDITOR GENERAL TO STANDING COMMITTEE

Hon. J. L. ILSLEY (Minister of Finance) moved:

That the auditor general's report for the fiscal year ending March 31, 1940, be referred to the standing committee on public accounts.

Motion agreed to.

THE WAR

SEVERANCE OF DIPLOMATIC RELATIONS WITH BULGARIA AND ROUMANIA—PROSCRIBED TERRITORIES

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should like to make a brief statement to the house on the present situation in the Balkans, as it affects nationals and citizens of certain of those countries.

Acting upon instructions from the government of the United Kingdom, His Majesty's minister at Sofia has broken off diplomatic relations with Bulgaria to-day. There is no Canadian diplomatic mission in Bulgaria and there are no Bulgarian diplomatic or consular representatives in this country. There was, therefore, no occasion for any action by the Canadian government with regard to the severance of diplomatic relations.

The breaking off of diplomatic relations does not necessarily bring about a state of war. On the other hand, in breaking off diplomatic relations the United Kingdom felt it could not overlook the action of the Bulgarian government in aligning Bulgaria with the axis powers and in permitting German forces to enter Bulgaria and to use that country as a base from which to conduct hostile operations.

Action has been taken and is being taken by the Canadian government to protect Canadian interests during the period that may intervene between the breaking off of diplomatic relations and actual hostilities should such take place. Action has already been taken by order in council making Bulgaria proscribed territory which means that all transactions with Bulgaria will be subjected to the regime of the trading with the enemy regulations. In this manner it is made unlawful to conduct any transactions involving, directly or indirectly, economic aid to the enemy. Precautionary action is being undertaken to prevent any transactions that might result in assistance to the enemy.

Police action that is necessary to preserve the security of the state is, of course, being undertaken. While this is so, Bulgarian nationals and persons of Bulgarian descent will not be disturbed so long as they show by their conduct that they are rendering loyal obedience to the laws and institutions of this country.

The action taken to make Bulgaria proscribed territory extends also to Hungary. Hungary is a country with which diplomatic relations are maintained by the United Kingdom. On the other hand it is not possible entirely to overlook the fact that Hungary is contiguous to territory under German domination, and Hungary's alignment with the axis and the according by Hungary to the enemy of privileges which are not consistent with neutrality. Hungary maintains a consulate general in Montreal and a consulate in Winnipeg. The action taken in making Hungary proscribed territory has subjected transactions with that country to the regime of the trading with the enemy regulations and makes it possible to prevent transactions that might be of advantage to the enemy. The measures taken are precautionary and consistent with the continuation of existing regulations.

Diplomatic relations between the United Kingdom and Roumania were broken off on the 10th of February of this year. Subsequently the consul general of Roumania in Canada received instructions from his government to close the consulate general in Montreal, and this action was taken on the 15th February of this year. The consul general and his staff have withdrawn. Roumania was made proscribed territory and other precautionary measures were undertaken similar to those which are being adopted with regard to Bulgaria. In the case of Roumanian nationals, and persons of Roumanian descent, the same position is maintained as in the case of Bulgarians. They will not be disturbed so long as their conduct conforms to our laws, and is consistent with the allegiance which, under the laws of Canada, is due from all residents, irrespective of their national status or racial origin.

Hon. R. B. HANSON (Leader of the Opposition): In his statement with respect to Bulgaria the Prime Minister (Mr. Mackenzie King) said that steps had been taken to protect Canadian interests in that country. I should like to know what steps have been taken to protect the lives of Canadian nationals who may be there. There is

at least one Canadian in that country, a lady from New Brunswick who, for a number of years, has been residing at the Imperial hotel in Sofia. She is about seventy years of age and her sister has communicated with me and asked me to do what I could through the government to safeguard her life. I wrote to the acting Under-Secretary of State and asked him if he would be good enough to cable or do what he could, but I have had no reply. Is the Prime Minister conversant with what action might have been taken?

Mr. MACKENZIE KING: I am sorry that I cannot answer my hon. friend's question as to what action has been taken, although I can say a word about what action in all probability has been taken. I shall make certain as to what has been done and give my hon. friend an answer later. I would assume that the communication would be sent immediately to the British ambassador or minister and that the British embassy or legation would give all assistance possible in protecting any British citizen who might be in Bulgaria and with respect to whom representations had been made.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

PERMANENT FORCES—OFFICERS' PAY AND ALLOWANCES

Mr. ROSS (Souris):

What additional pay and allowances, if any, are officers of the permanent force in Canada, according to rank, now receiving which they did not receive at the declaration of war?

Mr. RALSTON: The following table shows the addition in pay and allowances to which officers of the permanent force in Canada are entitled, as compared with those to which they were entitled at the declaration of war:—

Rank or Appointment	Increase per diem	
	Single	Married
Staff Officers		
Chief of the General Staff	$2,000 per annum	
Adjutant-General, Quartermaster General, Master-General of the Ordnance. (Master-General of the Ordnance actually receiving no pay and allowances..	$0.45	2.45
District Officer Commanding and Brigadier..	1.40	2.00
Director..	2.10	2.90
Assistant Adjutant and Quarter-master General and General Staff Officer 1st Grade..	2.20	3.00
Regimental Officers		
Colonel..	0.60	0.20
Lieutenant-Colonel.	0.60	1.40
Major..	0.15	0.55
Captain..	0.30	1.05
Lieutenant..	0.90	1.60
Lieutenant, from Ranks..	0.50	1.20
2nd Lieutenant..	1.15	1.85

NOTE: (a) Figures underlined denote decrease.

(b) The above figures include dependents' and subsistence allowance but do not include children's allowance of $12 per month up to a maximum of two children. Dependents' allowance and children's allowance are not paid on behalf of the appointment of the Chief of the General Staff. A consolidated rate of $10,000 per annum has been authorized for that appointment for the duration of the war. From 1933 to 1935 Lieut.-General A. G. L. MacNaughton received $10,000 per annum as Chief of Staff.

BACON BOARD

Mr. SENN:

1. Did the bacon board deduct an amount of money from the proceeds of pork products shipped to Great Britain in the years 1939 and 1940?
2. If so, what amount was deducted per hundredweight?
3. What was the total amount so collected?
4. What disposition has been made of this fund?
5. Is any percentage of this fund still held by the bacon board?
6. If so, how much?

Mr. GARDINER:

1. Yes.
2. 76·65c per 100 pounds.
3. $2,258,760.63

Refund from packers on product shipped prior to the date the board commenced operations..	$ 300,575.60
Money accumulated on product shipped by the board..	1,958,185.03
	$2,258,760.63

4. U.S. freight and exchange..	$ 29,559.36
Storage charges..	640,065.58
British ministry of food 5 shilling rebate on 22,400,000 pounds (estimated)..	221,500.00
British ministry of food deductions for shrink loss, salt bags and adjustment account..	24,886.30

Storage charges on cured product..	18,592.60
Miscellaneous charges.. ..	4,334.43
Difference in the amount received from the British ministry of food for bacon purchased by the board during the period October 14 to November 16, 1940, for shipment on and after November 1, 1940, under the new contract and the amount paid for such bacon by the board pending completion of the new agreement	923,663.14
Total..	$1,862,821.41

5. Yes.

6. $395,939.22 of the money accumulated under the 1939-1940 contract.

NATIONAL WAR SERVICES—MISS HELEN DOHERTY

Mr. CARDIFF:

1. Is Miss Helen Doherty employed in the Department of National War Services?
2. If so, in what capacity?
3. When was she appointed?
4. What salary or other remuneration is paid to her?
5. Was she assigned to this position by the civil service commission?
6. If so, on what date was the assignment made?
7. If no assignment was made by the civil service commission, by whom was the appointment made and under what authority?
8. Was any request made to the civil service commission for the appointment of Miss Doherty to such position?
9. If so, what action did the civil service commission take thereon?

Mr. GARDINER:

1. The department has had the benefit of the services of Miss Helen Doherty since September 12, 1940, for which no payment has been made.

2. General assistant.

3, 4, 5, 6, 7, 8 and 9. See number 1.

JOINT SWINE COMMITTEE

Mr. CARDIFF:

1. What are the names, addresses and occupations of the members of the joint swine committee as presently constituted?
2. By whom were they appointed?

Mr. GARDINER:

1 and 2.

Particulars concerning Members of Joint Swine Committee

Name—Occupation	Address—By whom appointed
W. A. Amos—Farmer	Palmerston, Ont.—Canadian Council of Agriculture.
F. M. Baker—Western representative, Industrial & Development Council of Canadian Meat Packers	501 Kensington Bldg., Winnipeg, Man.—Industrial & Development Council of Canadian Meat Packers.
J. D. Brien—Farmer, secretary, Eastern Canada Live Stock Union	Ridgetown, Ont.—Eastern Canada Live Stock Union.
C. M. Learmonth—Sup't. Institutional Farms, Sask. Dep't. Public Works, secretary, Western Canada Live Stock Union	Regina, Sask.—Western Canada Live Stock Union.
A. Morin—Deputy Minister Quebec Dep't. of Agriculture	Quebec, P.Q.—Quebec Department of Agriculture.
R. McPhail—Managing sec'y., Canadian Live Stock Sales Agency	Room 313, Union Stock Yards, St. Boniface, Man.—Canadian Council of Agriculture.
S. E. Todd—Sec'y. Industrial & Development Council of Canadian Meat Packers	200 Bay street, Toronto, Ont.—Industrial & Development Council of Canadian Meat Packers.

Particulars concerning Members of Joint Swine Committee—*Concluded*

Name—Occupation	Address—By whom appointed
L. W. Pearsall (Committee Chairman)—Chief, Live Stock and Live Stock Products Div. Marketing Service	Department of Agriculture, Ottawa, Ont.—Deputy Minister of Agriculture.
A. W. Peterson (Committee Secretary)—Chief, Live Stock and Poultry Div. Production Service	Department of Agriculture, Ottawa, Ont.—Deputy Minister of Agriculture.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MOUNTED POLICE—COMPARATIVE INCOME

Mr. WINKLER:

1. In the five-year period, 1933-1937, inclusive, what was the average annual income in Canada of (a) farmers; (b) members of the legal profession; (c) members of the Royal Canadian Mounted Police?
2. In that period, at what age was the youngest member of the Royal Canadian Mounted Police superannuated?
3. At what rate is the abovementioned superannuation?
4. Have members of the legal profession been admitted to the Royal Canadian Mounted Police in that period?
5. If so, how many?

PURCHASE OF LAND IN RED DEER CONSTITUENCY

Mr. SHAW:

1. How many parcels of land were purchased by the government in the federal constituency of Red Deer, Alberta, between September 1, 1939, and February 28, 1941?
2. What is the acreage of each parcel so purchased?
3. From whom was each parcel of land purchased and upon what date or dates were the purchases made?
4. What was the total purchase price of each parcel?
5. Were all purchases made direct from the owner in each case? If not, what agency, agencies or other individuals were involved?

MOTIONS FOR PAPERS

NATIONAL DEFENCE—HITCH-HIKING BY MEN ON LEAVE

Mr. CHURCH:

For a copy of an order issued to the heads of military camps in Canada by the Department of National Defence, or any officer thereof, prohibiting what is known as "hitch-hiking" on the highways, by men on leave, said order to include an order issued at camp Borden to the same effect and a statement as to what has been done by the department to get cheap fares for those on leave from the railways.

TORONTO TRANSPORTATION COMMISSION—CUSTOMS DUTIES ON PARTS FOR CARS

Mr. CHURCH:

For a copy of all applications and replies thereto, in the possession of the Department of Finance, made by the Toronto Transportation Commission, asking exemption from customs duties, by order in council, of new car parts from the United States for the building of fifty new cars. Also a copy of any reports made in this regard by officials of the department.

[Mr. Gardiner.]

RED DEER, ALTA., POST OFFICE

Mr. SHAW:

For a copy of all communications, letters, telegrams, correspondence and other documents exchanged between the Postmaster General, the Post Office Department and any official thereof, and any person, firm or institution, from October 1, 1940, to February 28, 1941, with respect to the service rendered by the post office at Red Deer, Alberta.

RULES OF THE HOUSE

INTERPRETATION OF STANDING ORDER 41 RESPECTING THE TABLING OF LETTERS QUOTED

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I would ask if your honour would kindly take into consideration standing order 41 and give an interpretation particularly of paragraphs 315 and 316 of Beauchesne's Parliamentary Rules and Forms which have a bearing on the tabling of letters. We have had a discussion of this point on previous occasions in the house but I cannot find any definite ruling. I cite paragraph 316 under standing order 41:

> It has been admitted that a document which has been cited ought to be laid upon the table of the house, if it can be done without injury to the public interest. The same rule, however, cannot be held to apply to private letters or memoranda.

The preceding paragraph puts another limitation upon the same matter. Paragraph 315 says:

> A minister of the crown is not at liberty to read or quote from a dispatch or other state paper not before the house, unless he be prepared to lay it upon the table.

It goes on to say:

> This restraint is similar to the rule of evidence in courts of law, which prevent counsel from citing documents which have not been produced in evidence. The principle is so

reasonable that it has not been contested; and when the objection has been made in time, it has been generally acquiesced in.

And now I read the last part of paragraph 316:

On the 18th May, 1865, the attorney general, on being asked by Mr. Ferrard if he would lay upon the table a written statement and a letter to which he had referred on a previous day, in assuming a question relative to the Leeds bankruptcy court, replied that he had made a statement to the house upon his own responsibility, and that the documents he had referred to being private, he could not lay them upon the table. Lord Robert Cecil contended that the papers, having been cited, should be produced; but the Speaker declared that this rule applied to public documents only.

If we could get a ruling on this point, Mr. Speaker, I think it would be helpful.

Mr. SPEAKER: The only objection I have to giving a ruling is that there is nothing before the chair and the Speaker is really not called upon to give advice to hon. members unless the question is brought up in the course of discussion or debate. At the moment I am not in a position to give a ruling, but if the question arises in the course of debate or some proceeding of the house, then of course I would be prepared to give a ruling.

Mr. COLDWELL: I would respectfully submit, Mr. Speaker, that the question did arise a little earlier this afternoon, and I should like to suggest that you take the matter under consideration and give a ruling at some future time.

Mr. SPEAKER: I shall be glad to consider the matter and decide whether I should give a ruling. Hon. members will understand that the Speaker does not give advice. All he does is to judge and interpret the rules of the house in the course of debate or of its proceedings. What has happened to-day is past. We are not on that now. Nevertheless I shall take the remarks of the hon. member into consideration and decide what to do.

Mr. QUELCH: Mr. Speaker, I would point out that the Prime Minister himself stated that it was the rule of the house that the letter had to be tabled. The letter was therefore obtained under false representations.

MINTO-CHIPMAN COAL MINES

REFERENCE TO ARTICLE IN SAINT JOHN TELEGRAPH-JOURNAL ANNOUNCING APPOINTMENT OF COMMISSION OF INQUIRY

On the orders of the day:

Mr. A. J. BROOKS (Royal): Mr. Speaker, I should like to direct a question to the Minister of Labour (Mr. McLarty) based on an article appearing in the Saint John *Telegraph-Journal* of March 3, announcing the appointment of Mr. Justice M. B. Archibald of the Supreme Court of Nova Scotia as a commissioner "to inquire into causes of lack of capacity production in the coal mines in the Minto-Chipman district of New Brunswick." Will the minister make a statement setting out the reasons for the appointment of this commission, and may we have the production of the order in council making the appointment?

Hon. N. A. McLARTY (Minister of Labour): Mr. Speaker, the hon. member for Royal (Mr. Brooks) was kind enough to give me notice of his intention to ask this question. I received it shortly before coming into the house. The statement contained in the paper that he mentions is correct; Mr. Justice Archibald has been appointed. On the other hand I would ask my hon. friend to be kind enough to allow his question to stand as a notice of question to which I will reply to-morrow, because to give the reasons for the appointment might, unless it were carefully done, prejudge the issues. I should like, therefore, to give a prepared statement rather than an impromptu one such as I would have to give to-day.

WAR EXPENDITURES

CONTINUATION OF DEBATE ON MOTION OF PRIME MINISTER FOR APPOINTMENT OF SPECIAL COMMITTEE

The house resumed from Tuesday, March 4, consideration of the motion of Mr. Mackenzie King for the appointment of a committee to examine the expenditure for defence and other war services, and to consider possible economies consistent with government policy.

Mr. T. L. CHURCH (Broadview): Mr. Speaker, I should like to say a few words with reference to the text of the resolution of the right hon. the Prime Minister (Mr. Mackenzie King), and first as to the functions and powers of the committee.

What is the object of having a select committee if it is going to have its hands tied behind its back through the failure of the government to give it the power which any committee should have in order to function properly regarding war expenditures, manpower, recruiting, munitions, and overseas policy as to the battle of Britain, the Mediterranean and other theatres of war, and other important matters?

I notice by the explanation which the Prime Minister gave of the resolution last night, that the committee has no power to

go into any question of government policy. So far as this war is concerned the committee will have its hands tied behind its back because it has no power to deal with any question of government policy regarding the war. What is the object, then, of constituting this committee?

My second point is this. The government has decided that it is to be the tutor, custodian and guardian of the committee. The committee is not to be allowed to do anything but what the government allows it to do. The government will decide, so far as its war effort is concerned what information shall be kept secret and what not. No member of this house wants to give the enemy any information that would aid it or hurt the state.

Six months after the Munich agreement, I raised the question of the appointment of such a committee as is now proposed. I brought the question up in this house on March 21, 1939, on a motion to go into supply. On that occasion I raised the question that the people were not being given the facts regarding the disastrous war then approaching. Rearmament was being refused and we were depending on many peace agencies, even when war was in sight, to preserve the freedom we enjoy in democratic countries. At that time some information should have been given the people of Canada as to the real facts and the grave danger of the crisis which then confronted the empire and freedom and civilization. I said on that occasion, quoting the words of the then Prime Minister of Great Britain, the late Right Hon. Mr. Chamberlain, that if the people are not given the facts, if they are to be given only so much as their rulers and the government of the day allow them to know, that people are embarking on a course which will presently lead to war and be fraught with grave consequences for freedom and civilization. That has proved to be correct.

The history of courage has been gloriously rewritten in this war on land, sea and in the air by the enlisted young Canadians and by Canada's man-power contribution, and it should be the function of the House of Commons to back up that effort to the limit. The Prime Minister said the other evening that it is hard to separate defence and external affairs and foreign affairs, because they are all one picture. What he said is wholly correct. Canada wants the whole picture and not part of it.

On the government side of the house there are a number of private members—I have known them for a great many years—also many in the opposition and in the two parties to the left, who have splendid ability. Quite a few are returned men. They have executive capacity, technical knowledge, and skill, and their services would be of great value if they were used as they properly should be at this time to promote war work for the good of Canada.

In my opinion the text of the resolution should be amended to give the committee power to look into the question of why, with the war going into its nineteenth month, everything in Canada is just about as usual. The committee should find out the reason for this, and the effect of it upon our war effort. Canada is not yet awake to the grave danger which confronts her. The gravity is great, but the people do not realize it. This war is going to be a war to the finish; it affects the very existence of Britain and of our empire, and we do not yet know what the fate of Canada will be or to whom this country will belong at the end of this war.

For these reasons, I object to this resolution as not going far enough. A committee of this kind should not be, as the Prime Minister and the Minister of National Defence (Mr. Ralston) suggest—one has only to read to-day's *Hansard* to see what they said—a government committee; it ought to be a committee of the House of Commons, representing not a party but private members of parliament. Burke, in his address to the sheriffs of Bristol in 1777, gave a description of the functions, powers, privileges and duties of a member of parliament. He said that, once elected member for Bristol, he became a member of parliament and ceased to be only a member for the city of Bristol; he became a member of parliament for the whole empire and for Great Britain. That is the principle which should be followed in this house.

If we are to have a committee on the war effort, let it be a real war-time committee, and give the public the whole picture. It should not be restricted to the present time, or to the period since the war started; its scope should refer back as far as the Munich agreement.

The committee should be free to deal with government policies, one of the most important of which relates to man-power. Man-power is going to decide the war. It is all right to talk about mechanization; but if the committee is not to have the right to inquire into public policy on man-power, the raising of an army by the circuitous route through which, under the Mobilization Act, we have to go in order to get an army together; if it cannot go into the subject of conscientious objectors, recruiting methods, soldiers' training camps and other problems vital to the conduct of the war, I do not see the use of having a com-

mittee. If, however, the committee is properly constituted and given adequate functions and powers, it may allay a great deal of public criticism of the present government. I do not think the government should object to reasonable criticism; if founded on fact, it is a tonic; it stirs governments to action. The people of Canada want to know the facts. The denial of information rightly due to the public was one of the causes why France fell. If the government of the day will, whether through this committee or otherwise, tell the people of the grave danger and inform them of the true state of affairs, and insist that certain things shall be done, I believe the people of Canada will make any sacrifices which are necessary for the safety of the realm.

As regards the proposal that the meetings shall be secret, let me say that no one desires information to get to the enemy, but it annoys a great many people to find that the enemy know most of our secrets, and that much confidential information appears to be known also by a certain committee at Washington and a joint defence board; yet this House of Commons is not given facts which are known elsewhere. The committee might as well not meet at all if they are to meet in secret. Canada is part and parcel of the British empire, and that empire, in which Canada is a link, has the right to know what is our general war policy, what is the nature of our war effort, and how it is to be co-ordinated with and support the efforts of the rest of the empire. That information will be lacking unless the committee has a free hand to find out the facts and meet in public. Our people are entitled to know what has been our war effort from the start, what has been its effect, and what it is going to be, so that he who runs may read; and the press should be enabled to publish the facts so that the people may know we are secure. After all is said and done, security is better than opulence.

As members of parliament we are not fulfilling our trust if we consent to hand over all these questions to a select committee and surrender our powers to others. We are not doing our duty if we avoid discussion in this chamber and delegate our responsibilities to a select committee, with the limited functions entrusted to it. I do not intend to let this resolution pass without a protest, because I believe that the appointment of this committee will have the effect of prohibiting discussion in this house of the estimates of the departments concerned and preventing anything further being done until the very end of the session.

I have very little faith in the committee system. I entered this house as long ago as 1921, and all the time I have been here I have had very little reason for confidence in the appointment of select committees or their findings. I recall the principles on which, under the rules of the house, these select committees are appointed. The proposed committee is supposed to go into the war effort, to look into the past, to investigate current activities and, indeed, as I understand, although it is limited by some proviso, to review anything which has happened since the war began. I am not reflecting on the committee system, but I desire to point out that under our British constitution committees are usually appoined with a text of reference. In the past we have had committees appointed to consider the estimates of the Canadian National Railways, without discussion and without notice, empowered to go into the question of ways and means on railways and shipping to examine estimates and expenditures, with the result that the house divested itself of all power to deal with such questions until the committee brought in its report, usually in the dying days of the session. In consequence, under the committee practice, not a question was asked or answered in the house when the report of the committee was being concurred in. Moreover, three-fourths of the members of a committee are supporters of the government, and the government members, as the practice has shown, will write the report and decide on the findings, the question of secrecy, and can rule out any discussion on government policy as outside the scope of the reference.

With regard to these particular matters, I have already expressed the hope in this house that this committee will not be in any sense a whitewashing committee but will deal thoroughly with Canada's war effort. I hope it will consider the whole war effort, not from any partisan point of view but for the purpose of letting the people know the real facts with regard to what Canada is doing, and be in effect a fact-finding committee. If the committee is intended to be a business committee, appointed to go over all expenditures incurred since the war—expenditures past and current—in connection with defence and all that sort of thing, very well and good. But I hope that the committee when appointed will cover all the ground and will see to it that the Canadian people are given the real facts about our war effort.

In a democracy like ours, the opposition on this side as well as the other two parties to my left must share responsibility with the government for the appointment of this committee; for, after all, the opposition is

the next government, and the policy of this opposition is to see to it that the government functions efficiently and exercises its powers in such a way as to disclose exactly what has been done. If the opposition makes an appeal, the government must grant certain concessions, revisions and provisoes with regard to the matter, and in general does so; but the people want to get the real picture of our war effort. Who are the persons responsible for our war effort; what public men in all parties are responsible for the utterly defenceless position, on land and sea and in the air, in which Canada found herself when war broke out? This committee should have access to all documents exchanged between Canada and Great Britain dealing with the war before and after Munich.

As regards the expenditures of his department, the Minister of National Defence (Mr. Ralston), for whom I have a great deal of respect, submitted to the house on November 15 last the expenditures made by the dominion in connection with home defence, the expeditionary force, and so on, and the figures and facts will be found at page 146 of *Hansard* of November 15 as follows:

There are, however, a good many other military establishments. Active army (C.A.S.F.) training centres are at the following places, and I think it is worth while to read them because I do not think the house appreciates the extent and diversity of the training which is being done. These are the training centres—not training by individual units at their headquarters or training in the units, but places to which men may be sent from all the units across Canada in order to receive training in connection with the army:

For infantry (rifle)—Camp Borden, Valcartier, Aldershot, Winnipeg and Calgary.
For infantry (machine gun)—Three Rivers and Dundurn.
For small arms—Kingston and Lethbridge.
For artillery—Winnipeg and Petawawa.
For engineers—Petawawa.
For signals—Barriefield.
For mechanized cavalry, armoured car and tank—Camp Borden.
For army service corps—Camp Borden.
For Medicals—Ottawa.
For ordnance—Kingston and Petawawa.

Then we have district depots including staffs and reinforcements at the various headquarters of the military districts, with a number of sub-depots.

During the winter months there will be units stationed at many other points across the country where winter accommodation is obtainable and where there are facilities for training. Some idea of the magnitude of the work that has been done to prepare winter quarters for the troops can be realized from the following table showing the amount in round figures which has been or is being spent in accommodation for men, for vehicles and for administration and training facilities at some of the camps:

[Mr. Church.]

At Debert	$6,000,000
At Nanaimo	1,365,000
At Sussex	1,800,000
Coast defences	2,500,000
Camp Borden	4,100,000
Petawawa	2,750,000
Valcartier	1,720,000
Newfoundland	670,000
Nova Scotia	2,290,000
Saint John area	432,000
Militia training centres (thirty-nine centres)	8,950,000

The figures for Nova Scotia and the Saint John area are since the beginning of the war.

I admit that a great deal of good work has been done, but I think it is a tragedy that all these expenditures had not been more carefully looked into, because I do not believe in the present camp policy, under which soldiers are sent all the way across Canada, from one place to another. The officers are not to blame.

Take Camp Borden, for instance. There is in General McCuaig an able general there as commandant, and also at the present time commanding district No. 2, is a splendid soldier, one of the best in the dominion, General Constantine. I do not believe that these Camp Borden expenditures were undertaken before the present minister became head of the department and before the two generals came there. I do not wish to be unfair either to the government or to the minister personally, because, so far as these matters are concerned, I know no politics. My sole concern is to see the war carried on to a successful conclusion, and I have no desire but to offer helpful criticism. Indeed, I wish to support the government, because, after all, the government of the day is a government of Canadians in Canada. The members of the government have been elected to carry on the war and the trust is theirs. They have been entrusted with the conduct of the war. That responsibility is the government's, so long as they are the government of the day; and they have been elected for the period of the war by the people of Canada by a very large majority.

Regarding this particular camp, Camp Borden, I should like to know how it came about that some twelve or fourteen or fifteen thousand soldiers belonging to Toronto were taken to that part of the country? Why were they moved to Camp Borden? When the Conservatives were in power in 1916—and I mention this to show that I was not actuated by any political considerations—I described that camp as a hot-house in the summer and an ice-box in the winter. I say that because I have visited the camp. The city of Toronto, which has done so much for the government in both wars, has an investment of $24,000,000 in grounds, buildings, permanent exhibits and

so on in the Canadian National exhibition site. Is there any reason why Toronto troops should not be housed at the exhibition grounds, as in the last war in the winter months, instead of being sent to Camp Borden where conditions are such that there should never be a winter camp? I am opposed to the expenditures there because, as I say, I have visited the camp, and it is not a good location, especially in winter.

Let me add, so far as the minister himself is concerned, that this was done before he was in office. I therefore exempt him from any responsibility. But whoever the officer of the department was that recommended a vote of nearly five million dollars there, it should have been vetoed by the government. Some of the other camps are in the same position. Soldiers are taken from Toronto, leaving their families, and are moved across Canada as far west as Vancouver. I do not believe that this is in the interests of military objectives of any kind, of economy, of training or of anything else. I have received dozens of letters complaining about it and I wish to protest against this state of affairs. These are all questions which a really live committee should take up.

After all, it is our bounden duty to protect the soldiers and their families. They are getting only $1.30 a day. May I also say to the leader of the opposition (Mr. Hanson) that our party gets its support from Ontario; that is where four-fifths of our membership comes from; and I am protesting, as a humble representative from that province, against the conditions that I am pointing out. Sometimes, on soldier matters, I am bound to say, after all is said and done I am my own leader. I do not need leading in this house when it comes to urging upon the government any action that is for the benefit of the soldiers of this country. I have often in the past before the war stood alone on many questions—rearmament and many other defence subjects. I believe that these expenditures should be submitted to the committee.

Mr. RALSTON: The expenditures in connection with the items referred to by my hon. friend will be before the committee if it desires them, and I imagine many of them will be asked for.

Mr. CHURCH: I admit there is a public accounts committee, and questions can also be asked when the minister's estimates are under consideration.

Mr. RALSTON: If my hon. friend will permit me, I think he is under a misapprehension. The expenditures will be before the committee if the committee desires them, and I think it will desire many of them.

Mr. CHURCH: I wish to bring up a matter which was referred to the other day by the hon. member for Mackenzie (Mr. Nicholson). I protest against the charges that are aimed at the business men of Toronto and, for that matter, business men throughout the country. I do not believe for a moment that the business men of Canada are "resting on their oars." Those in Toronto are working night and day to speed up Canada's war effort, some of them losing money. Some are not able to get parts, and others are waiting for extensions of plants. If there is any district that is making its contribution in men and munitions, it is military district No. 2. What I say of the business men of Toronto is true, I have no doubt, of the industrialists of the country generally.

Some reference has been made to farmers' sons. I am glad to hear the minister's assurance that the committee can deal with these matters. I am sure he never has anything to hide in his hard work. Let me assure the house that the sons of farmers in Ontario are not asking to be exempted. May I say to the Minister of National War Services (Mr. Gardiner) that had it not been for him and his useless department, we should have had 800,000 soldiers trained by now on the voluntary system of recruiting instead of the cumbersome machinery of the mobilization department.

Yesterday the funeral of a great Canadian, Sir Frederick Banting, was held in Toronto. He was born on the farm, but look what he, a patriot in peace and war alike, did for his country. Speaking in this house on May 16, 1923, I mentioned the patriotism of the farmers of Ontario when the issue of protection was raised. The farmers of Ontario have never failed to stand for their country in the polling booths; and when war has threatened the existence of this dominion, the farmers of Ontario—the actual farmers—have never failed to go themselves or to send their sons to defend their country on the battlefield.

This resolution speaks for itself. I do not see why hon. gentlemen in another place, as they are called, should not have their services utilized in this war effort. The senate at Washington and the House of Lords in England are not, like ours, on holidays. The government might very well give the other chamber more work to do, coordinated and cooperated with the work of this house, particularly in this time of war, because they have some very valuable business men and war leaders there. How will Britain be able to take the offensive unless the dominions do their duty with regard to men and munitions?

This committee should have the power also to go over the expenditures of the joint defence board which has been set up. That board proposes to spend a large amount of money, and we do not know what it is all about. Not long ago we had an announcement made by the deputy minister of the naval department, the minister himself, and officials of the joint defence board, involving an expenditure of hundreds of millions of dollars, without this House of Commons knowing anything about the matter.

What about our arms programme, which is still in the preparatory stage? Will the work of this committee hinder or help our war effort? Is the committee to act on party lines, or is it not? Should the party principle not be eliminated? Many young soldiers who have enlisted to fight Hitler would not have done so voluntarily if they had known they were going to be sent to the West Indies, or Iceland, or Greenland's icy mountains. Hitler cannot be fought there; those are secondary areas. In our whole war effort we seem to be ignoring the danger to Great Britain, particularly in the Mediterranean, where England is doing so well against the Italians. If Britain loses the war, however, the Germans will make these same Italians fight against Britain, and Britain has to feed them and take good care of them.

If this committee is simply to conduct a postmortem on what has been done in the past, it had better not be appointed. It should have power to go over and review the work of outside boards as well. Many men in Canada have been lulled into a false sense of security. They might have known that unless those countries desiring peace were stronger than those desiring war, there would be no peace. I define collective security as a doctrine that leaves to others the task of defending freedom and civilization on land, sea and in the air, while they look on as spectators.

In conclusion, I fail to see how the appointment of this committee will help. We do not want a whitewash repetition of what was done once before in another committee on railways and shipping; we want to get some real action. The press has a right, as I see it, to carry on free discussion and criticism. The press has an important duty to perform. All the information given out through the government information bureau might just as well be dropped. It has been a cardinal principle of the nazi regime, and one of its proudest accomplishments, to take away the freedom of the press. In Canada I think the press are measuring up to their duty splendidly, particularly in connection with the war loans campaign. If the press is to fulfil these functions adequately, there must be a large number of independent newspapers, each representing a particular viewpoint. The national press should provide a medium for the expression of opinion. A democratic press reflects public opinion, and the right of free discussion should not be taken away. In a double sense the press is an intermediary between the government and the public. It provides a channel by which ministers can keep the electorate informed of their activities, and it also serves as a sort of barometer, by means of which the government can gauge the feelings of the country. These are the views of a great newspaper man, and patriot, Mr. Arthur Mann, the brilliant editor of the Yorkshire *Post*. He says:

> In this connection the establishment of the ministry of information by the present government betrayed, in its original form, a lack of confidence in the ability of the press to fulfil its proper functions.

I believe that something should be done now to establish the freedom of the press and to protect it for the period of the war. This committee may meet until doomsday, but unless it is given proper powers and functions, I do not believe any good will flow from it, and the people will continue to be just as much in the dark with regard to Canada's war effort.

Mr. J. A. MARSHALL (Camrose): Mr. Speaker, I find that my name appears in the list of members who are to constitute a committee to examine the expenditures defrayed out of moneys provided by parliament for the defence services and for other services directly connected with the war. At this time I desire to make a few remarks with respect to this resolution.

When the group with which I am associated was asked to name a member to this committee I was chosen for the task, for two reasons: first, because I have a knowledge—limited, it is true,—of accountancy, and second because I was a member of that public accounts committee which wrangled over and discussed the famous Bren machine gun contract. For these two reasons I was asked by my group if I would allow my name to go forward as a member of this committee. I consented to do so, on the distinct understanding that I would be relieved of the responsibility resting upon me as a member of some other important committees. Last year I was a member of the committee set up to consider the defence of Canada regulations. This year I requested that I be taken off that committee. That request has been acceded to, and my place is being taken by my very good friend and colleague from

Macleod (Mr. Hansell). I want to say that I enjoyed the deliberations of that committee, and in large measure I concurred in the recommendations which it made to this house.

It is the belief of our group generally that this committee on war expenditures should function, first, for the most part between sessions rather than during sessions of parliament; and, second, that it should function during the whole life of this parliament. In other words we feel that a committee of such great importance as this one should not die, as committees usually do, on the expiration of the session.

We find ourselves in complete agreement with the Prime Minister (Mr. Mackenzie King) when he says that the committee should work for the good of the whole of Canada, that our deliberations should be divorced entirely from all party considerations, and that it should not be used as a sort of fishing expedition. We agree wholeheartedly with those sentiments. We do not believe however that this committee should be used as an occasion to enhance political prestige. We do not believe that the members of this committee should try to obtain some advantage, or that they should use the committee as a means of whitewashing acts of omission or commission either by government officials or by ministers of the crown. If we are going to conduct the deliberations of this committee in the manner I have described I shall most certainly resign from the committee and have nothing more to do with it.

We as a group believe that the work of the committee should be carried on between sessions rather than only during the session, because, as all hon. members know, it is quite impossible for any body of men to carry out such an immense and important task simply by meeting occasionally during the session. The Prime Minister and members of parliament, and particularly members of the committee, know quite well that this is really a full-time task, and it would be futile to expect us to do it justice by sitting only occasionally while we are here in Ottawa, during the session. In my opinion we must devote a great deal more time to it than that.

I desire to discuss briefly another matter. I must confess that the committee does not impress me very favourably. Rather, it has the opposite effect. I have the feeling that it is more of a political set-up than appears on the surface. May I give a few particulars with respect to the gentlemen who are to serve on the committee?

Mr. HANSON (York-Sunbury): Before the hon. member proceeds, does he suggest or intimate that I made the suggestion for political reasons?

Mr. MARSHALL: No, I would not impute such a motive to the leader of the opposition (Mr. Hanson).

Here are the members of the committee:

Abbott, lawyer, Liberal
Bercovitch, lawyer, Liberal
Black (Cumberland), director, Liberal-Conservative
Bradette, merchant and farmer, Liberal
Chevrier, lawyer, Liberal
Cleaver, lawyer, Liberal
Diefenbaker, lawyer, Conservative
Fournier (Hull), lawyer, Liberal
Gladstone, manufacturer, Liberal
Golding, machinist, Liberal
Graham, lawyer, Liberal
Gray, lawyer, Liberal
Green, lawyer, Conservative
Harris (Danforth), manufacturer, Conservative
Macdonald (Halifax), lawyer, Liberal
MacInnis, motorman, Cooperative Commonwealth Federation
Marshall, municipal secretary, Social Credit
Mayhew, manufacturer, Liberal
McGeer, lawyer, Liberal
Picard, lawyer, Liberal
Pottier, lawyer, Liberal
Ross (Moose Jaw), farmer, Liberal

A welcome change.

Sissons, lawyer, Liberal
Thorson, lawyer, Liberal

Mr. JOHNSTON (Bow River): That is a lawyers' committee.

Mr. MARSHALL: Making a further analysis of that set-up we find that the Liberal membership of the committee is divided up as follows:

Lawyers	13
Machinist	1
Manufacturers	2
Merchant and farmer	2
Total	18

The Conservative membership is divided as follows:

Lawyers	2
Manufacturer	1
Director	1
Total	4

The Cooperative Commonwealth Federation has one member, who is a motorman, and the Social Credit party is represented by one, who is a municipal secretary.

I do not have to point out to the house that the personnel of this committee is composed preponderantly of lawyers. It is a matter for argument whether a committee consisting of such an overwhelming number of lawyers is the proper kind of committee to estimate what "economies consistent with the execution of the policy decided by the government may be effected therein."

My personal view is that more time will be spent arguing the legality of this or that section of the contracts than will be devoted to a discussion of the economic values of the

products covered by those contracts. I fear that the high and noble purpose for which the committee has been set up will never be achieved. I do not think the Prime Minister is taking any chances on the deliberations of the committee being used for political advantage. I am of the opinion that his appeal for close cooperation among members of the committee is not needed. Eighteen members out of the twenty-four will always cooperate, no matter what the other six may do. It would have been a real patriotic act on the part of the Prime Minister if he had given a larger quota to the opposition groups.

Some question has been raised as to whether the deliberations should be held in camera. At the moment I believe that most of these meetings could be thrown wide open to the public. It is true that there will be times when meetings should be held in camera, but those occasions can be decided best by the committee as it pursues its investigations. The committee on the defence of Canada regulations which sat last year held all its meetings in camera. Looking back I am of the opinion that at least ninety per cent of those meetings could have been held in the open. Having that experience in mind, I think it is best to leave this matter entirely in the hands of the committee.

As a member of one of the minority groups I wish to register a protest with respect to the conferences which were held between the Prime Minister and some members of his party and certain members of the official opposition regarding this question. It does seem to me that representation from the minority groups should have been invited. It would have been a fine gesture on the part of the Prime Minister to issue such an invitation. The Prime Minister will find that the members of the minority groups are just as much interested in these important matters as are the members of either of the majority groups. The Prime Minister in my opinion missed an excellent opportunity to practise that virtue of cooperation which he professes to admire.

We as a group are fully conscious of the tremendous task which lies ahead for Canada in the successful prosecution of this war effort. We realize too that all groups must cooperate to bring victory to the British commonwealth of nations in this struggle. We renew our pledge to work whole-heartedly toward that goal. Naming and commenting upon the personnel of this committee, the Prime Minister said:

> Then there is the name of Mr. MacInnis of the Cooperative Commonwealth Federation and Mr. Marshall of the Social Credit group.
>
> Mr. Hanson (York-Sunbury): The Prime Minister would not give them a certificate of credit, would he?
>
> [Mr. Marshall.]
>
> Mr. Mackenzie King: Yes; I am prepared to give them a certificate of credit with respect to the integrity with which they are bound to and will, I believe, discharge their duties.

I thank the Prime Minister for those kindly sentiments. I assure him that I deem it my duty as a Canadian citizen to cooperate in the fullest measure possible, and I have no doubt that the hon. member for Vancouver East (Mr. MacInnis) has the same feeling in the matter.

Mr. D. C. ABBOTT (St. Antoine-Westmount): Mr. Speaker, I do not wish to delay the passage of this resolution, but being one of the few new members of the house selected to serve on this committee, and one of the thirteen Liberal lawyers to whom the hon. member who has just taken his seat referred, there are a few matters which I think I should bring to the attention of the house.

When the committee was first proposed in November or December last, I was delighted at the suggestion. I was not too much concerned about who should get the credit; I felt that it was a constructive move which would enable private members of this house to render real public service. I have heard it said that the activities of private members were limited, that their hands, particularly those of the large government majority, were more or less tied. That suggestion has been put forth by some of my hon. friends opposite. Let me say at once that I have not found that to be so. So far as this committee is concerned, if I find, as someone has suggested, that I am to act as part of a whitewashing operation, I shall ask to be relieved of my duties on the committee.

I cannot for the life of me see why the work of this committee should be looked at from a partisan point of view. It seems to me that its work can be carried on in a perfectly non-partisan way. I was delighted to hear the hon. member for Vancouver South (Mr. Green) say last evening in no uncertain terms that he hoped that when the members went into the first meeting of the committee and every subsequent meeting they would leave their politics behind. Unfortunately that view does not seem to be held by all, and certainly not by certain sections of the press. The debate which occurred last evening did not entirely convince me that it was shared by all hon. gentlemen opposite.

I do not propose to enter into a discussion as to whether the meetings of this committee should be secret or open. Personally I can think of many reasons why the meetings should be held in camera. I can see no good reason for holding them in public, unless it is to afford an opportunity to some one to display his ability, or lack of

it, as a cross-examiner. I cannot help feeling that behind the criticism which has been voiced in the press, and to a certain extent by the leader of the opposition (Mr. Hanson), there is a belief that the representation of the Liberal party on this committee is too large. Personally I resent the implication, if implication there be, that because I sit on that committee as a Liberal member I am not going to do my duty.

May I be allowed to make a personal reference? I was elected in the last election as a Liberal, but I believe it is fair to say that I received possibly as many Conservative votes as some of the hon. gentlemen opposite. My opponent was a gentleman who had sat in this house for many years. I think I can say without fear of contradiction that he had the respect, admiration and affection, not only of the members of the house but of his constituents. I refer, of course, to Mr. R. S. White. Mr. White was elected in 1935 with a large majority, something over 5,500. I was elected last year with a slightly larger majority. I am not under the delusion that that was due to any special ability on my part; it was due to the fact that the electors preferred the policies offered by the present government to those put forward by Doctor Manion. I like to think that the size of my majority was due in some measure to the confidence which a large number of the electors, both Conservative and Liberal, had in myself. I like to think that they felt that if I came here I would do what I could to ensure that our war effort would be the maximum of which we are capable. For that reason I have been particularly disturbed at the suggestion that was made—I do not say that the suggestion was made with respect to myself—that Liberal members as such will not act on this committee in a non-partisan way. I feel that criticism of that sort, if sincere, is going to produce exactly the opposite effect from that intended.

I know there is a good deal of nonsense talked about criticism. Criticism, of course, is an absolutely necessary part of our democratic system. It cannot function without it. I am not very much concerned about all this talk of the distinction between constructive and destructive criticism. To me it is too hard to tell what the difference is. What I am more interested in is whether the critic is sincere and what the motive is which actuates him in putting forward his criticism. I cannot help feeling that a great deal of the criticism which has been put forward in the press and in this house as to the way in which this committee will function, while perhaps sincere, is not motivated solely, if at all, by a desire to see that a thorough and proper investigation be made into our war expenditures.

The other day I read the report of a speech which was made in Toronto by the mayor of Hamilton in connection with this question of criticism. It is reported in the Hamilton *Spectator* of the 27th of February, Thursday last, and I should like to read one or two extracts from that speech:

> Mayor W. A. Morrison, K.C., of Hamilton, speaking as a "known Conservative" told the Ontario Good Roads Association in an address to-day that "we must cast out suspicion and carping and bitter criticism" to build up confidence in Canada's government, her public men and war effort.
>
> "The man who destroys confidence in Canada and its leaders to-day is playing the game Germany has often played in other countries of undermining confidence in administrations."
>
> "Rumour is a terrible weapon in the hands of one's enemies—rumour stealthily sown and cultivated by enemy agents has preceded the collapse of every country that has come under the German yoke. Let us be on our guard in these critical times against rumour and the wise guys who keep sniping at Canada's war effort with criticisms and comments based on rumours which have little solid foundation in fact."

Continuing, he said:

> Nobody can accuse me of ever having pulled my punches when I have had to mix it in peacetime politics with the Liberals either at Queen's park or at Ottawa, but let me tell you this, when this country is at war I am a Canadian and a Britisher before I am a Conservative party man and, like a lot of other people, I am getting damned well fed up with this constant yapping at the government about the inefficiency and ineffectiveness of the war effort.

I do not know his worship the mayor. He perhaps did not couch his language exactly in parliamentary terms, but he was speaking straight to the point, and I think he was expressing views which are shared by a good many people in this country including, I may say, myself.

I, in common with a good many other members of this house, served overseas in the last war. It is just twenty-four years ago this month that I landed in France as a private soldier in a battery of which the second in command was my hon. friend the member for Queens (Mr. Macmillan).

I was thinking yesterday as I heard my hon. friend the Minister of National Defence (Mr. Ralston) referring to these category "C1" fellows who can walk five miles with a pack on their back, that perhaps I could not even qualify for that to-day. But when I was elected as a member of this house less than a year ago, I felt that in this particular field I might be able to make some contribution to

the prosecution of this war and I hope to do so. I did feel when this committee was suggested and my name appeared as a member of it that it would accord an opportunity of doing a really constructive job. Frankly, it has been a little discouraging to me to have the discussion of the formation of this committee, both in the press and to a certain extent in this house, put on a partisan basis. Therefore I want to endorse with all the sincerity at my command the views which were so ably expressed last night by the hon. member for Vancouver South (Mr. Green), and to suggest that we get this resolution through so that the committee can get down to work just as soon as possible.

Mr. J. H. HARRIS (Danforth): I think, Mr. Speaker, that we are all seized with the great responsibility we have during these difficult times, and I believe that members on all sides will address themselves to any task that is given us, with energy, zeal and industry, with the single purpose of trying to do something on behalf of Canada and the empire. The situation abroad is to-day perhaps even more serious than at any other time. We are seeing an attack upon our ideals and our way of life, only the remnants of which are left in some countries of Europe, and it is not difficult for us to echo the sentiments which the hon. member for St. Antoine-Westmount (Mr. Abbott) expressed a moment or two ago and which were so admirably expressed last night by the hon. member for Vancouver South (Mr. Green).

Before addressing myself to the question before the chair I wonder, Mr. Speaker, whether we are quite in order in this discussion. Would it not have been sufficient for the purposes of this resolution if the Prime Minister (Mr. Mackenzie King) had simply made his statement, followed by the leader of the opposition (Mr. Hanson), and then perhaps let it go at that? I felt disposed to rise to a point of order when the hon. member for Selkirk (Mr. Thorson) rose in his place, but I suppose he wanted to help out in laying the groundwork for the committee over which he may have the honour to preside.

Frankly, I was disappointed with the statement of the Prime Minister as to the functions of this committee. The evidence his statement gave of faltering, of not being just sure of what the committee might be able to do, not laying down the principles which should govern the committee, leaving the impression which he did last December that the committee would proceed on much the same lines as the committee at Westminster, neglecting to act last December on this tremendous job of work, of which now we can touch only the fringe, and allowing that work to lie untouched from then until now—all this showed a definite weakness.

Among the names of members whom it is proposed to appoint to this committee, I have the honour to notice my own. I did not ask to be placed on this committee. Without any suggestion from myself, I was asked to serve on it, and I assume that responsibility, realizing that I shall have a free hand and that the sole purpose of our deliberations shall be the helping of our war effort. Many of our forefathers are buried overseas; our children are willing to spill their blood in the cause, and many of them are already over there. From the point of view of the people themselves, we must exert ourselves to do everything we possibly can.

Then, on the material side, be it noted that our industries are connected and closely allied with British empire industries. The possibilities of our earning a living in the days to come are tied up with our membership in the empire. No matter from what point of view we look at the problem, we are forced to the conclusion that this must be an all-out effort.

To my mind this effort, since the inception of the war, and even before it, has been narrowed and circumscribed through the attitude of the government that it is their responsibility and theirs alone. Press and public rise indignantly to assert that the government must broaden the effort. So it chooses executives from industry, from the schools of learning and from institutions of public service, and appoints them to assist in this and that way. That is all to the good, and I am thoroughly in accord with it. But when restrictions are placed upon those who come to serve, when they find themselves circumscribed and inhibited by political necessities, it is difficult for them to function. We are now to have a committee which is to lay all party and partisan considerations on the doormat before it enters upon its deliberations. That is a fine objective, and if I am honoured with a place upon the committee, everything in my power will be done to try to reach that objective. But all we have to go on is the experience of days gone by. I address myself particularly now to those who will be privileged to serve on that committee, and since some of them have not been here during the whole of the last two decades, we will restrict our observations and merely look fairly in the face what has occurred in the last ten months with regard to committees which have been reviewing expenditures.

What do we find? The one example which stands out above all others, of a committee

anxious to do work on behalf of Canada, is the one which reviewed the accounts of the railways. The close of the calendar year coincides with the closing of the books of the Canadian National Railways. A committee was set up to examine into expenditures and the budget for the coming year. I believe that its report was tabled in February a year ago, and in that report a vote of $15 million was asked in connection with the budget for the coming year. Then we had an election. The report was not considered. The months of March and April went by, and in May parliament reassembled. In the meantime, expanding revenues on all our railway lines, the result of increased car loadings week by week and other items of that kind, pointed to the fact that $15 million would not be needed. When the committee reconvened, this was brought to its attention. I challenge any member of that committee to assert that that money was needed. They knew in their hearts, when they were sitting last June, and it was brought to their attention that that sum would not be required, that there was no necessity, in view of the experience of the months which had intervened, for any such sum. Yet the committee examining expenditure and budgeting for future expenditure drew a party line when the vote was taken and, to a man, the partisan group, led by a minister of the crown, voted to provide $15 million in case they might want to spend it.

I say to those who may serve on the present committee, let us have no approach of that kind to the problem which now faces us. I here and now give notice that any such approach will find me, if I am honoured with an appointment, withdrawing from the committee.

Here is another example of the like kind. Two-thirds of the revenue of the Trans-Canada Air Lines comes from the Post Office Department. Its rates, and of course necessarily so, are far in excess of what obtain on air lines in other countries, but the excess has enabled them to finish their business for the year with a substantial surplus. All sensible men know that, in starting projects of this kind, one does not look for substantial surpluses, and if they occur, it is natural to examine whence they come. In this case they came out of one department and went into the other. I do not complain so much about that, provided the fact is admitted.

Coming to the partisan side of that picture, what do we find? We find in the report a statement to the effect that they had earned their interest charges, they had earned their depreciation charges and showed this surplus. The real fact of the matter was—and the members of that committee knew it—that these were bookkeeping figures, that sixty cents per flight mile was paid for the carriage of mail whether mail was carried or not, when the service was worth no more than nineteen or twenty cents. The money which made that showing possible came by reason of a contract which was not sound and, as regards the amount of money used to subsidize that project, would not bear investigation. Yet members of that committee rose in their places and voted to a man on party lines to endorse a statement in the report which was not borne out when the examination was made.

We can go back to other days. I do not use the word "whitewash" which was employed by my hon. friend (Mr. Church) a few minutes ago. It describes rather well, however, what happened in the days of the customs investigation, what happened in the price spreads investigation, yes, and what has happened in every committee that has sat on any special problem in the last twenty years to my own knowledge.

I do not feel disposed to prejudge a case which we might be asked to sit on. I am surprised that the hon. member for Selkirk, a learned gentleman, should rise in his place and try to indicate what is going to happen when the committee convenes. I will therefore reserve any remarks with regard to the conduct of the committee except to say that I am in accord with what my hon. leader had to say. I was in accord with his original idea that there should be perhaps two committees or two sections of this committee, namely (a) a section having to do with the men themselves, our soldiers, sailors and airmen, and (b) a section having to do with the material side. I rather concur in his admitting the view expressed by the Minister of National Defence (Mr. Ralston) and I will let it go at that.

In the view expressed by the hon. member for Yale (Mr. Stirling) I concur. I do not see how we can go into a committee that sits in camera on a project of this magnitude. It is quite true they sat in camera at Westminster and brought down some fourteen reports. The Prime Minister knows and this house knows that many of the deliberations, or parts of the deliberations, of these secret subcommittees found their way into the press of the country from time to time. Hon. members well know that if such a committee sitting in camera convenes in this House of Commons, leaks will get into the press. Did we not have an example of that within the last two or three days? The Prime Minister occupied most of his time in finding fault

with what had leaked out from a very small group, much smaller and much more subject to questioning than the one proposed to be set up. But men charged with this responsibility are not going to give out facts or figures, or quantities or information that will be of any comfort to the enemy. If we do, we are not worthy to sit on the committee. If members of this house do such a thing, they are not worthy to sit in the house. We are studying the problem with a view to assisting in every way possible.

A great deal of time is wasted in discussing the word "current." We know what the word "current" means, and we know that the impression has prevailed in the country since the house adjourned in December that the inquiry was only going to be from this time forward, instead of going back to what had happened before. But it will be very difficult to examine even current expenditures. We do not know what they are and we are not getting statements which are frank enough. We are not getting statements which are sufficiently up to the minute to give us an opportunity to examine even into current expenditures.

On several occasions during the last two sessions I had the privilege of rising in my place and asking the Minister of Munitions and Supply (Mr. Howe) to lay on the table contracts awarded months previously. Just yesterday the minister laid on the table contracts awarded for the month of November, 1940. Are we to be able to examine anything that has happened since November? Of course we must be able to. After all, this department only requires clerical help and management to bring the information up to date. Some business institutions close their books on Thursday and a statement of their affairs is on the desk for Saturday. That obtains in four or five industries in which I am interested. They are small—a matter of a couple of hundred men—but it can be done. Business houses mailed their statements of accounts for the month of March last Friday evening at five o'clock, that being the last day of the month previous, and they were in the hands of their customers on Saturday morning, March 1. It is being done. One of the largest institutions in Canada closes its books at five o'clock on Friday night and on Saturday morning there is the financial statement for the week's business on the desk of every executive. I know that to be a fact. I say, it can be done, and in this case it must be done, so that we shall have an opportunity to be up to the moment.

I mentioned the word "frankness" and I will mention it again. Perhaps it is not a lack of frankness so much as a lack of attention, on the part of the organizations in our government which are spending money, to what is being said in the House of Commons. Perhaps some civil servants do not realize that this parliament is supreme. Perhaps, from some of the discussions that go on here, they come to the conclusion that we do not know what it is all about, and they have no intention of letting us know. I do not know. At any rate, I would refer to two returns which came down in the last couple of days, one of them with regard to the purchase of lands in the township of Scarboro for the building of some munitions enterprise or other, involving a matter of some three or four hundred acres. The return comes down, "No information". The contractors are building on that land now. The land was expropriated and taken over months ago. In like manner a return was brought down, which I asked for in my own name, with regard to the township of Pickering—"No information". They entered on these lands in October last and tore down fences and buildings. I made the inquiry for the reason that certain persons wanted to see whether they could help on that job. Trucks are out there to-day clearing off the buildings and getting ready for a considerable expenditure, which I notice runs into as much as $2,000,000, one-eighth for Canadian account and seven-eighths for United Kingdom account. Yet the return comes to the house, "No information".

Mr. RALSTON: What did my hon. friend ask?

Mr. HARRIS (Danforth): I do not have it here.

Mr. RALSTON: The hon. member said the return was asked for in order that some people who wanted to help—

Mr. HARRIS (Danforth): I asked whether land was purchased in the township of Pickering.

Mr. RALSTON: Yes, and the answer was, "No information".

Mr. HARRIS (Danforth): Yes.

Mr. RALSTON: I wondered what that had to do with people helping.

Mr. HARRIS (Danforth): I do not see that that has any point.

Mr. RALSTON: My hon. friend gave the impression that, from some high-minded motive, he had asked a question in order that people might help. I find the information asked for was, "How much land was purchased?" And the answer was, "No information". All my hon. friend is saying is that people are on the land. Land is being taken

and occupied by the defence services, outside munitions and supply, in respect of which negotiations have not been completed.

Mr. HARRIS (Danforth): I wanted to lay the basis for information, and if land was entered upon and occupied, we desired to know. It is the General Engineering company who have entered upon the land, and there is an expenditure of $2,250,000 for filling fuses, primers and so on, at Pickering, Ontario; yet we get back the reply, "No information".

Mr. RALSTON: No information with regard to what question?

Mr. HARRIS (Danforth): No information with regard to the purchase of the land on which this work was going to be done, although they have been working on it for six months. My whole point is that in the matter of the current expenditures, if we are going to be dragging four, five and six months behind all the time we are not going to be able to do the job of work we would like to do. The other point is that if, as we go along, we do not get frank statements from those charged with responsibility, we shall be circumscribed more and more in our effort to do something along this line. I do not say that it is going to be all cluttered up with blind partisanship, but I do say that if blind partisanship in connection with this committee does not cease, then the committee will not function properly and will not be able to do a real job of work.

Mr. RALSTON: I suggest that my hon. friend is tilting at windmills.

Mr. HANSON (York-Sunbury): No, he is not; not about Pickering. Why in the world did you not give the information?

Mr. RALSTON: It is not my department at all—

Mr. HANSON (York-Sunbury): I appreciate that.

Mr. RALSTON: —but I was pointing out that "no information" did not necessarily mean that anything whatever had been withheld. My hon. friend was asking about the purchase. I understand that at the time the land was not purchased, and therefore the answer was "no information."

Mr. HARRIS (Danforth): I still have the floor, Mr. Speaker, and I have disposed of that question. I repeat what I said previously, that there is a lag in giving information to this house. That lag must be removed if we are going to be able to do a job and do it properly.

Mr. RALSTON: I still say that my hon. friend is tilting at windmills.

Mr. HARRIS (Danforth): I do not admit that for one moment.

The hon. member for Selkirk, in discussing the appointment of this committee, made the suggestion that when we oppose the idea of its being a secret committee, we are just scratching the surface of the matter and not getting down to realities. I suppose the group who will surround him in that committee will follow through on his suggestion that, in part at least, it must be held in camera. When the hon. member took that attitude he was following the lead that was given by the Prime Minister, but yesterday the Prime Minister removed that restriction. I ask now that all members of the government do likewise. There is still on *Hansard* a statement by the Minister of Munitions and Supply that this committee will sit in camera. Before the debate concludes, I should like the Prime Minister to say that when he withdrew that restriction he did so on behalf of all the members of his cabinet; otherwise I do not see how I can serve on such a committee. I will not serve on a committee that is sitting in camera.

We are faced with a very difficult problem. The magnitude of these expenditures is such that we may be able to touch only the fringe of the job of work ahead of us. Matters will have to be taken up largely on general lines. I hope we shall approach the problem remembering that our country and our empire are facing a ruthless, almost furious enemy, ambitious for power; fanatics who have come to power by crushing and impoverishing smaller nations, with the backing of a youthful mob who seem to be seized with the idea that the old order of things is not good enough, who wish to establish a new civilization and destroy the old. We British people, slow to anger, have built up over the last thousand years a civilization held together not by force but by unwritten laws and codes of ethics. We have been a great agency for good during that time, and we should continue to be a force for good. That should be the star at which members of this committee should look all the time. They should not be circumscribed by partisanship—and I couple the name of the Minister of Justice (Mr. Lapointe) with the circumscribing of our effort—and should see if it is not possible for government members of a committee not to be leopards but to change their spots for once. I hope they can do so; I hope it may be possible to make this miracle work.

Mr. LIGUORI LACOMBE (Laval-Two Mountains): (Translation) This resolution is timely: Its very introduction will prevent many abuses. Therefore, I wish to bring to the attention of the house some facts that are quite unusual, to say the least. We find that the dominion agrees to hand money to industrialists for the manufacture of munitions. In the fulfilment of most contracts, the expense is borne by the Canadian government, except perhaps, for a contribution from the United Kingdom. These contracts are awarded to this or that firm, very often without public tenders having first been called. In many cases, the firm which secures the contract does not fulfil it itself, but entrusts the work to sub-contractors. Why should there be any middlemen? Whenever a third party comes in, the expenditure invariably increases, costly transactions take place, with all that is entailed by the transfer of negotiable instruments that are part of the contracts from a legal standpoint. Yet we have in Canada a large number of industries able to offer the dominion every necessary guarantee in addition to assuming themselves if not all at least a substantial part of the advances. Moreover, the financial position of this country, as well as the public interest, would be better protected if the tender system once again was resorted to in the award of all contracts. Besides, would not such a procedure best ensure fairness and honesty? It is important that the government should eliminate middlemen by entrusting the direct fulfilment of contracts to well-established firms, whose responsibility and solvency could not be questioned. The committee provided for in this resolution should seriously examine the matter and give special consideration to what I am about to say.

At this time, I am keeping in mind the urgent necessity for the government to hound down everywhere those who contrive to reap a harvest through patronage, through an odious exploitation of munition factory workers whereby the latter are sneakily deprived of wages sufficient for the support of their dependents with the result that they receive little in return for their work. The government must by every means at their command destroy those despicable and vile scoundrels, as they must also remove shameless financiers and histrionic politicians from the scene where not only our future but our very existence is now at stake. At this time when we are required to make very heavy sacrifices, let war be waged upon combine-advocating politicians, responsible for almost all the abuses that exist to-day. Party lobbyists should not be allowed to gain the upper hand in this country, whose debt is piling up from day to day. Public interest, nay the very safety of our nation makes it a duty for true statesmen, for political men worthy of that name, to restrain that swarming mob which may jeopardize the success of the most commendable policies. Men engaged in that racket, in that organized, or I should rather say industrialized crime, since it is taking nowadays alarming proportions, are endeavouring to operate, through the hiring of workmen, even in munition plants. Have we not seen an aftermath of their activities in proceedings taken before courts of justice in Montreal? The people who pay have a right to demand every necessary precaution against the plots of those people who are truly sabotaging the defence and the war effort of Canada.

Let us forestall the baneful intrigues of robbers who are so unconcerned about the people's welfare that they have repeatedly betrayed the nation for the furtherance of their petty interests. As a means of rooting out the evil, I would suggest to the right honourable the Minister of Justice (Mr. Lapointe) to have all armament factories in Canada watched by the Royal Canadian Mounted Police. Nobody would have any complaint to make on that score. It would be in the mutual interests of industrialists and workmen, and greedy foremen would find it impossible to exploit wage earners.

A short time ago, the public information office released to editors of religious news an article entitled "By Whom is Right Upheld," which I wish to quote:

> One merely has to compare the nazi traditions and war aims with those of England and her allies to ascertain who is upholding right in this conflict wherein the fate of the world is at stake. Let us recall a statement of principles, similar to the one made by His Holiness the Pope, which has recently been published by English churchmen, one of whom was His Eminence Cardinal Hinsley, archbishop of Westminster and Roman Catholic primate of England. They made five suggestions:
>
> Excessive inequality in wealth should be abolished.
>
> Every child, of whatever race or condition, should have an equal opportunity to secure an education commensurate with his talents and needs.
>
> The family must be maintained as a social unit.
>
> The sense of a divine mission must again inspire man in his daily work.
>
> The world's resources must be used as a gift imparted by God to all men, according to the needs of the present and future generations.

Is that not a complete program of social regeneration? One of the war aims of the allies is the defence and preservation of democracy. Of course, all forms of govern-

ment are handicapped by imperfections inherent in their contingent and human nature. For that very reason should they not ever strive after justice, honesty, and sound and true freedom, which cannot possibly be derived from the favouritism and ambition of exploiters, who invariably subordinate the welfare of the people to their own interests? Those who shed and will shed their blood in upholding the principles stated in the war aims of the allies have a right to demand that their sacrifice shall not have been made in vain. All those whom the nation is mobilizing in their persons, their life, their industry, their home, their work, their income, demand that necessary action be taken against traitors, saboteurs, monopolizers and supporters of financial imperialism. The first duty of the government is to afford such protection to the utmost of their unlimited powers.

Mr. R. W. MAYHEW (Victoria, B.C.): Mr. Speaker, with regard to this committee I should like to express an opinion which, up to the present time, I believe has not been brought to the attention of the house. I am not going to say whether I would or would not serve on a committee which sat in camera, or otherwise. In my opinion that would be a wrong basis on which to start. When one goes into a committee he should try to do the things the majority believe to be in the best interests of all. Therefore I would not say I would not serve on a committee if it chose to do thus or so.

I believe the committee may do a great deal of good. In the first place it will serve as a warning to those who would prosper on the misfortunes of others, or those who would not conduct their affairs on an ethical basis. Second, in addition to the good effect it will have on the people, and the impression it will leave in the minds of those people that the interests of the taxpayers are being looked after, there is another feature to which I believe consideration must be given. In thinking of it we must first say to ourselves: What is the job we have in hand at the present time? Is it the job of retarding the war effort, or that of promoting the war effort?

I now ask the house to consider for a moment whether a committee of this kind will actually promote, facilitate or speed up the present war effort. That in my opinion is paramount. What is going to be the effect on those people who are constantly having to make decisions with regard to war contracts, the purchase of lands, the types of aeroplanes or boats to be built, if they think that every move they make is going to be brought before a committee of the house for examination? In peace time I believe every move they make should be watched. But in a time like this, when speed is necessary, I would question the wisdom of the appointment of a committee which would make such examinations. If it is appointed, then I say the committee must be very careful that by methods of obstruction it does not add to the cost of the war effort more than the few dollars or even the few thousands of dollars it might save. If criticism of this house is justified, more than anything else it is because we have failed to get quick decisions on a number of matters. I am not condemning the war effort or the work of this government, but I do say that decisions are vital in the interests of this country. I doubt if we shall be able to get decisions quickly if those who are to make them have to wait to wrap up everything in a blue parcel, tie it with red ribbon and put a seal upon it.

Mr. DOUGLAS G. ROSS (St. Paul's): Mr. Speaker, it is not my intention to delay the passage of this resolution or to speak at great length, but there are one or two observations I should like to make. I agree with what was said by my colleague, the hon. member for Vancouver South (Mr. Green), when he suggested that the House of Commons should give its blessing to this committee so that it could get on with its work. I feel also that the success of this committee depends upon the extent to which the members of the committee are willing to leave their politics outside the door of the committee room. The members of that committee will have practically to forsake their politics for the duration of the war, both in and out of this house. Anything I may say to-day I do not want to be taken as casting reflection upon any hon. member. It is of the utmost importance that this committee should work in the greatest harmony possible, and there should be similar harmony in connection with the setting up of the committee. Yesterday the Prime Minister (Mr. Mackenzie King) made a few remarks which I do not think were altogether fair. He quoted an editorial which had appeared in the *Globe and Mail,* as follows:

> It is not to be expected that the ten Liberal members will bestir themselves to expose the shortcomings of the government; consequently the task of ferreting out information will devolve upon the handful of Conservative and leftist members.

I am prefacing my remarks with this quotation because it will have a bearing upon what I have to say later on. I do not think it was the intention of this newspaper to cast any reflection upon any member of this

House of Commons. Is there not cause for the opinion expressed in this paper? Have not hon. members on the government side given the people of Canada the impression that they are nothing but what might be termed "yes" men? Rightly or wrongly, that is the impression given to the Canadian people. There is no doubt that all hon. members have a duty to support the government when they think it is right. But there is also a duty to criticize the government when they think it is wrong, more especially in times like these. That is the attitude I have taken. I have been impressed with the fact that Liberal members have not indicated any independence of mind in their criticism of the government. The hon. member for St. Antoine-Westmount (Mr. Abbott) says that their hands are not tied. If that is so, why do they not rise in their places and criticize the government when they think it is wrong? What else can the public of this country or members of this house think but that they are just "yes" men?

I have heard hon. members of the opposition criticized severely because they had the audacity to differ with the government of the day. Some hon. members have been called saboteurs and accused of hindering Canada's war effort because they have criticized the government or have tried to obtain information which belongs rightly to the people of this country and to members of this house. We have our duty as members of this house, and I intend to carry out my duty.

There has been very little criticism on the part of Liberal members. I have listened to political harangues which have been made, not only by hon. members but by some ministers in an endeavour to discredit opposition members who have attempted to criticize the government.

Mr. RALSTON: Does my hon. friend mean during this debate?

Mr. ROSS (St. Paul's): No; I am talking about the past. This particular editorial and other editorials which have appeared are merited to some extent by the past performance of private members on the Liberal side. As I said before, I mention these things which have gone before simply to preface what I am about to say.

There is no doubt in my mind that this committee can play a very useful part in the prosecution of our war effort. If the committee does not think that the powers given it are wide enough, it can come back to the house and ask for wider powers. As to sitting in secret or in public, I think it should be left to the committee to decide when it is necessary to sit in camera. There will be a few times when it will be necessary for the committee to sit in camera, but on every possible occasion I think the meetings should be public. Any decision in this regard made by the committee should not be influenced in the slightest degree by politics. It may be difficult for hon. members to forsake their party politics in connection with this committee, but any effort to play politics there will be open to censure and should be made public to the country. Every hon. member who acts in this way should have to answer, not only to the public but to his own conscience.

Last evening the hon. member for Selkirk (Mr. Thorson) expressed himself quite forcibly. I agree with much of what he said, but I take exception to his remarks as reported on page 1248 of *Hansard:*

> That, I believe, can be done by a thorough and careful inquiry without regard to publicity. We will not be concerned in the committee as to what the public thinks; we will be concerned with the knowledge within ourselves, as members of the committee, that we are doing an honest and thorough job of investigation.

A few moments ago the hon. member for St. Antoine-Westmount said that he could see no reason why any of the meetings of this committee should be held in public. The committee will certainly be concerned over this inquiry being an honest and thorough job of investigation, but it must also be concerned as to what the public thinks. One of the main reasons for the setting-up of this committee is that the public will get all the information. The usefulness of the committee will be lost unless the public are thoroughly informed, and suspicion will be cast upon the committee unless proper publicity is given to its labours. I do not mean publicity by way of propaganda; I mean real, honest publicity. The committee must be fearless.

I should like to express this hope, too, that the press of the country will be restrained in publishing reports and facts and criticisms brought out by the committee. If these points are kept in mind and a course such as I have outlined is followed I feel that a new wave of confidence will sweep over the public.

I wish now to say a word about the membership of the committee. I have in my hand the membership of the select committee on national expenditures of the British House of Commons, taken from page 1136 of the British *Hansard* of December 12, 1939, and I should

like to put the names on *Hansard*. I do not know whether hon. members wish me to read all the names. They are as follows:

Select Committee on National Expenditures
(Great Britain)
Membership—28

Member—Party
Mr. C. G. Ammon—Labour
Sir Charles Barrie—Liberal National
Sir Ernest Bennett—National Labour
Mr. A. C. Bossom—Conservative
Mr. H. Brooke—Conservative
Lady Davidson—Conservative
Mr. J. C. Ede—Labour
Mr. Alfred Edwards—Socialist
Sir Geoffrey Ellis—Conservative
Sir Ralph Glyn—Conservative
Sir Percy Harris—Liberal
Mr. M. R. Hely-Hutchinson—Conservative
Mr. Walter F. Higgs—National Conservative
Sir William Jowitt—Labour
Col. Sir Charles MacAndrew—Conservative
Sir Adam Maitland—Conservative
Sir Assheton Pownall—Conservative
Mr. Leslie R. Pym—Conservative
Sir George Schuster—Liberal National
Sir John Shute—Conservative
Mr. Lewis Silkin—Labour
Sir John Wardlaw-Milne—Conservative
Sir Harold Webbe—Conservative
Mr. Graham White—Liberal
Miss Ellen Wilkinson—Labour
Sir Herbert Williams—Conservative
Mr. Arthur Woodburn—Labour
Sir Robert Young—Labour

The committee was composed of fourteen Conservatives, one Socialist, seven Labour, two Liberal Nationals, two Liberals, one National Conservative and one National Labour, a total of twenty-eight members. Out of that total of twenty-eight members, fourteen were government members. I would ask hon. members also to note the high calibre of the membership of that committee, and I might say the same of the membership of our own committee of this house. To my mind the confidence which the public have in the committees of the British House of Commons is due to its opposition members. There was evidently a great desire on the part of the government there to ensure that there was a good representation of opposition members on that committee.

I should like to say one word more with respect to the composition of our own committee here. The degree of confidence which the public will have in our committee will be measured by the party representation from the House of Commons on the committee. Our committee is composed of twenty-four members—eighteen Liberals, four Conservatives, one Cooperative Commonwealth Federation member and one Social Credit member. There will probably be seven or eight subcommittees, and as the committee is at present constituted it is difficult to see how a representative of the opposition can be placed on each of these subcommittees. I think public confidence in our party system would be greater if there were a larger representation of opposition members on this committee, regardless of the size of its representation in the house, and I commend that thought to the government. May I remind them that the opposition members of this House of Commons represent in the neighbourhood of 44 per cent of the people of Canada.

I have spoken on this resolution, Mr. Speaker, only because of the anxiety in my mind that the committee should be an outstanding success and of the greatest possible service both to the government and to the country in carrying on the war effort of Canada.

Mr. BROOKE CLAXTON (St. Lawrence-St. George): Mr. Speaker, I shall delay the house for only a moment to make one or two observations which may be of some interest. Yesterday we adopted a resolution to appoint a committee to study the defence of Canada regulations. That committee follows the one which was set up last year, and in view of the discussion which has taken place to-day, the experience of the members of the committee which sat last year on the defence of Canada regulations may be of interest to the house. We met twenty-five times under the chairmanship of the Minister of Finance (Mr. Ilsley). Many members have testified to the interest and pleasure of the work of that committee, and I subscribe to all that has been said in that regard, but no one so far has pointed out that during the whole sittings of that committee we did not have a single vote taken on a party basis. I would suggest that this example might well be followed in the committee that we are considering setting up to-day.

These two committees on war expenditure and the defence of Canada regulations, all members will agree, are designed to do some of the most important work of the house this session. The committee on the defence of Canada regulations, I suggest, may well follow along the lines of the concluding paragraph of the main part of the report of the committee last year, and may I observe to the hon. member for Weyburn (Mr. Douglas) that that paragraph was unanimously agreed to. It read:

> In making the recommendations for amendments to the regulations as above set forth and in considering amendments suggested but not included above, it was the unanimous view of the committee that all measures should be taken which were considered necessary for the safety of Canada but that the maximum amount of liberty under the law should be maintained consistent therewith.

That was the principle on which our committee worked, and I think its report bears out my statement. I might add that the government, as the Minister of Justice (Mr. Lapointe) said, adopted without a single change every conclusion and recommendation of that committee.

These committees will be valuable, only in so far as we approach their work in the spirit which has been so well described by the Prime Minister (Mr. Mackenzie King) and all speakers, practically without exception, who have followed him. Our object in these committees is to strike at the enemy and not at each other.

Mr. G. H. CASTLEDEN (Yorkton): The work of this committee has been delayed already much too long, far too many months, for us to wish to delay it any longer, even for five minutes. But there are a few points which I should like to make at this time.

First, I would draw the attention of the house to the enormous job which is facing this committee. Canada has been at war for well over a year and a half. The public accounts committee did not sit at all last year; I think the last time it met was when the Bren machine gun contract was under fire. Canada is paying the bill. The Canadian people have a right to know completely and thoroughly what is being done with the money, where it is being spent, and the types of contracts which are being let.

Going down the street the other day, I saw an exhibit of war material, indicating the prices which had been paid for parachutes and tommy guns. The people of Canada should have had that information a long time ago. The veil which has shrouded the details of expenditure has been left far too long. I hope that the committee will carry out its responsibility in seeing to it that this house and the whole of Canada know how this money is being spent.

Many people in the west are denying themselves necessities in order to buy war savings stamps—people who can ill afford to live on the lower standard which is now demanded of them; people who have very little left; some of them people who have been living on relief for a number of years. While making these sacrifices, they wish to know, and they have a right to know, what is being done with the money; how it is being spent, and where. I hope that the committee will keep this house thoroughly informed.

I do not see how the committee can get through the pile of work which is ahead of them unless they sit continuously from now on, and if we take into account the other contracts which will be coming in—almost as long as the war lasts. Their work should be thorough; that much they owe to the Canadian people. Everything they find out should be placed without hesitancy before this house and the facts published to the Canadian people. As a democracy, we demand that everyone shall know what is happening.

Motion (Mr. Mackenzie King) agreed to.

SUPPLY

AGRICULTURE—STATEMENT OF MR. SENN ON MOTION OF MINISTER OF FINANCE

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee of supply.

Mr. M. C. SENN (Haldimand): Under our present system of responsible government as it exists in this country, it is the privilege—the time-honoured privilege—of representatives of the people to ask for redress of their grievances and to discuss matters of public importance when parliament is being asked to vote supply. I intend, therefore, to bring to the attention of the house, and more particularly to the attention of the government, the plight in which our great primary industry of agriculture finds itself throughout the Dominion of Canada; and before I resume my seat—or at least before I conclude my remarks, because I see that the time from now until six o'clock is short—I intend to move an amendment to the motion which is now before the house.

That conditions surrounding agriculture in this country to-day are unsatisfactory needs no proof. Perhaps it is difficult for people who are not acquainted with farm life, and who see, as they do, the pleasant environment which surrounds agriculture in many parts of the country, to understand that agriculture is experiencing these difficulties. Mother Nature, in her bounty, has accorded ample opportunity to the farmers of this country to be prosperous and to live happy and contented lives. Living as we do in this northern zone, she has provided for us a climate which, though somewhat rigorous, is healthful and exhilarating and which for a good many months in the year is conducive to the growth and development of plant and animal life. Moreover, she has planted within Canada vast areas of the most fertile soil which can be found anywhere in the world, areas of soil which provide for the production of a great variety of crops, ranging all the way from hardy cereals to sub-tropical fruits and vegetables. Science and invention, on the other hand, have provided the equipment for the farmers of Canada whereby they can produce almost anything

which can be produced anywhere in the world —equipment in the line of implements of production, motor cars, radio, hydro appliances of different kinds, so that the farmers are in a very happy position even to the extent of comparing favourably with their city cousins.

The great difficulty which surrounds agriculture to-day can be sized up, I think, in one sentence. It is this, that the income or the revenue of the average farm in Canada is not sufficient to-day to provide for costs of production and at the same time to maintain a reasonable standard of living for the farmer and his family. During the past twenty-five years a great change has come over agriculture throughout the dominion. In the years just prior to the great war and all through the great war, farmers of Canada enjoyed a modicum of prosperity, which has completely vanished at the present time. During the years which have followed that time, they have found that their reserves have been largely dissipated, and land values in this country have dropped perhaps 50 per cent or more. Anybody driving through the country will readily see that the buildings, the fences, the equipment of the average farm are sadly in need of paint and of repair. Indeed, although I hesitate to say it, it is undoubtedly true that a very large proportion of the farmers of this country to-day are insolvent. Many others have their holdings heavily encumbered and are in an unfortunate way so far as their finances are concerned. The reason for that is not difficult to find. During the past twenty years farmers have found a great increase in their production costs, an increase in their labour costs, an increase in the cost of implements of production and a great increase in taxation, while during that period farm prices and farm revenues have not advanced to any degree and in many instances, have been reduced from what they were previously.

In proof of what I have been saying with regard to farm revenues, I would refer to a document which most hon. members will recognize by looking at it. It is part of what is known as the Sirois report. I am referring to appendix 4 dealing with national income. On page 59 I find some interesting figures. There we have a report of the net income of the farmers of Canada after allowing for depreciation of buildings and equipment. The years that are given are from 1926 to 1937, twelve years, and the national income for those twelve years amounted to $5,261,000,000, or an average, during those years, of $439,000,000 per annum. When we remember that in the last census it was shown that there are some 730,000 farmers in the dominion, it will be seen that the yearly income of the farmers of Canada for those twelve years amounted to $600.50. Taking the first eight years of the depression, from 1930 to 1937, hon. members will find that the average income of the farmers was only $290,000,000, and dividing that among all the farmers of Canada, they will find that the yearly average income of the farmer was only $400.50.

Let me carry that further. That total amount of income for the twelve years, as given in this table, shows that the farmer received for those twelve years only 11·3 per cent of the total national income, and for the eight years I have mentioned he received only 8·67 per cent. Yet the farmers of the dominion represent between 35 and 40 per cent of the population.

I wish to go a step further. I find that the farmer is charged in this table, for income in kind for the house in which he has been living, $80 a year on the average; so that it will be found that, instead of receiving $600 on the average for that time, he had only, in cash, some $520, and for the eight years, $320. Why that was added to the farmer's income it is difficult for me to understand.

I think I have said enough and quoted sufficiently from this table to convince every hon. member present that the farmers have not been receiving a fair share of the national income. They have been trying all through the years to maintain a reasonable standard of living which would induce their families to stay on the farms, and in the attempt they have been dissipating their reserves until to-day they find themselves, in altogether too many instances, in a very unfortunate position indeed.

The outbreak of the great war brought many new problems to the dominion, and all these problems have only served to accentuate and bring into bolder relief the problems which agriculture is facing at the present time. The government of necessity has been forced to purchase huge quantities of war materials of all kinds, and has made contracts amounting in the past year to over three-quarters of a billion dollars. All these contracts, so far as I know, have been based on cost of production plus profit. In addition, the government has seen fit in its wisdom to ensure that labour will receive the same scale of wages as it received between the years 1927 and 1929, with the added provision that, if cost of living rises, wages will also rise. I want to make it abundantly clear that I am not finding fault with that. It was the only course the government could follow, and I am sure the farmers of Canada themselves would not say anything else; for the reason that they know that, if industry

and labour are prosperous, they will be ready and willing to buy more liberally of what the farmer produces.

On the other hand, the farmers cannot help feeling that an injustice has been done to them when war prices have to a certain extent set the prices of other industrial goods while farmers are not enjoying an equilibrium or a level of prices comparable with that enjoyed by industry and business. Indeed, the smouldering discontent under which, for some time past, farmers have been labouring, broke into open flame recently when they learned of the action of the war-time prices and trade board—which is of course a body created by this government—in pegging the price of butter. I think I am justified in making the statement that there is in the minds of farmers in many parts of the country a deep-seated resentment against the present administration. If anyone doubts that, let me say that I recently attended a meeting of farmers in the city of London gathered together to discuss prices, and I do not think I have ever seen a more hostile crowd than that faced by the Minister of Agriculture (Mr. Gardiner) at that time.

Mr. GARDINER: The hon. member went home too early.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, March 6, 1941.

The house met at three o'clock.

MINTO-CHIPMAN COAL MINES

TABLING OF ORDER IN COUNCIL APPOINTING COMMISSIONER

Hon. N. A. McLARTY (Minister of Labour): Mr. Speaker, I should like to lay on the table order in council 1347, dealing with the appointment of Mr. Justice Archibald as commissioner in respect to the Minto-Chipman district situation in New Brunswick.

I believe the hon. member for Royal (Mr. Brooks), who yesterday asked the question, will find a complete explanation in the order itself as to the circumstances leading up to and the reasons for the appointment. If, however, after he has had the opportunity of perusing the order he desires any further information, I shall be glad to give it.

Mr. BROOKS: Thank you.

[Mr. Senn.]

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

NATIONAL REGISTRATION

Mr. DOUGLAS (Weyburn):

1. What was the total cost of the national registration conducted under the National Resources Mobilization Act?

2. How soon will the data collected be classified and made available?

3. What was the total number of persons registered, (a) males; (b) females?

4. How many workers suitable for war industries were located, and in what trades?

5. How many of these workmen have been placed in war industries as a result of the national registration?

6. How many persons were found capable of driving a tractor, (a) males; (b) females?

7. How many persons were found capable of milking a cow, (a) males; (b) females?

Mr. GARDINER:

1. Expenditure to date, $806,988.12; Department of Public Printing and Stationery accounts still awaiting payment, $111,745; total, $918,733.12.

2. The data for reserved occupations, etc., are already available, and part of the statistical data. The latter will be completed before the end of March.

3. (a) 3,988,760 males; (b) 3,871,710 females.

4. Approximately 1,800,000 in 1,250 trades.

5. No record available. Department of Labour is presently engaged in extracting from lists prepared, names and addresses of unemployed persons, and these lists are being sent to employment agencies for the use of industry. Industry may secure complete lists of names and addresses of all persons with special qualifications for the doing of any type of work in respect of which they desire men or women. It is expected that this type of information and service will be increasingly required as demands of industry for men and women develop.

6. In Ontario, 636,400 males; 20,210 females; other provinces not yet available.

7. In Ontario, 556,500 males; 318,880 females; other provinces not yet available.

ARMY BAKERIES IN MILITARY CAMPS

Mr. COCKERAM:

1. Has consideration been given to the establishment in all military camps, of army bakeries?

2. What would be the saving, if such bakeries were established?

Mr. RALSTON:

1. Yes.

2. Nil. The estimated loss per 1 lb. of bread per day is 00·03 cent.

CALGARY HIGHLANDERS PAYMASTER

Mr. JOHNSTON (Bow River):

1. Is Mr. Andrew Davidson of Calgary, Alberta, paymaster of the Calgary Highlanders?

2. If so, what pay and allowances does he receive in this capacity?

3. (a) Does the appointment permit of other civilian activities or (b) is it a full time job?

4. Is the said Mr. Andrew Davidson mayor of the city of Calgary and member of the Alberta legislature?

Mr. RALSTON:

1. Yes—of the 2nd Battalion, Calgary Highlanders (reserve formations).

2. Pay and allowances of rank, viz., $5.20 per diem while undergoining training with his unit.

3. (a) Yes. (b) No.

4. Yes.

NATIONAL DEFENCE HEADQUARTERS STAFF

Mr. COLDWELL:

1. What are the names, ranks, (a) present pensions, (b) last position in the Department of National Defence, and (c) reason for retirement of all commissioned officers at national defence headquarters who have been retired since July 1, 1939?

2. What are the names and what is the present relation to the Department of National Defence of all holders since July 1, 1939, of the following posts: (a) chief of the general staff; (b) adjutant-general; (c) quartermaster-general; (d) master-general of the ordnance?

Mr. RALSTON:

1. Colonel (Honorary Brigadier) J. L. Potter, R.C.A.M.C. (a) $4,219.40 per annum. (b) Director General Medical Services. (c) Age limit.

Major (Quartermaster) J. W. White, R.C.A.M.C. (a) $2,489.21 per annum. (b) Quartermaster, Central Medical Stores. (c) Physically unfit.

Lieut.-General E. C. Ashton, C.B., C.M.G., V.D. (a) $6,891.50 per annum. (b) Inspector-General for Central Canada. (c) Physically unfit.

Captain R. R. D. Day, R.C.O.C. (a) $2,465 per annum. (b) Branch of the Master-General of the Ordnance. (c) Physically unfit.

2. (a) Major-General H. D. G. Crerar, D.S.O. (Present holder of appointment).

Major-General T. V. Anderson, D.S.O. Inspector General of the Military Forces in Central Canada and in addition to the duties of the appointment will carry out such other inspections as the Minister of National Defence may require.

(b) Major-General B. W. Browne, D.S.O., M.C. (Present holder of appointment).

Major-General H. H. Matthews, C.M.G., D.S.O. Died

Major-General H. F. H. Hertzberg, C.M.G., D.S.O., M.C., Commandant, Royal Military College.

(c) Major-General E. J. C. Schmidlin, M.C. (Present holder of appointment).

Major-General H. F. H. Hertzberg, C.M.G., D.S.O., M.C. Commandant, Royal Military College.

(d) Mr. V. Sifton. (Present holder of appointment).

Major-General W. H. P. Elkins, C.B.E., D.S.O. General Officer Commanding-in-chief, Atlantic command.

Mr. P. A. Chester. No longer with the department.

CHARLOTTETOWN, P.E.I., GRADING AND PURCHASING DEPOT—CANNED LOBSTER

Mr. HATFIELD:

1. How many cases of canned lobster were handled during the 1940 season through the government grading and purchasing depot at Charlottetown?

2. How many cases were passed in each of the following grades: (a) grade A; (b) grade B; (c) grade C; (d) grade C minus?

3. What was the total cost of operating this depot?

4. What were the names of each person employed in the operation of this depot?

5. What was the amount of salary, allowance or other remuneration paid to each such person?

Mr. MICHAUD:

1. Total number of cases received, 2,556. Acceptances, 250; Graded, refused by packer, 880; Rejections, 1,426.

2. Grade "A", nil; Grade "B", nil; Grade "B minus", 100 cases; Grade "C", 100 cases; Grade "C minus", 50 cases.

3. $1,774.63.

4. W. H. Tidmarsh, Depot manager, R. L. Huestis, Warehouseman. Peter McAleer, Labourer. Clara Shaw, Clerk.

5. W. H. Tidmarsh, $1,025.81. R. L. Huestis, $346.67: Peter McAleer, $58.45. Clara Shaw, $4.50.

ALASKA HIGHWAY

Mr. HANSELL:

1. Has the route of the proposed United States-Alaska highway been decided?

2. If so, through what province will the highway mainly run?

Mr. MACKENZIE KING:

1. No.

2. Answered by the answer to No. 1.

QUESTIONS PASSED AS ORDERS FOR RETURNS

SENATE AND HOUSE OF COMMONS—MEMBERS IN ACTIVE SERVICES AND RESERVE FORCES

Mr. MacKINNON (Kootenay East):

1. How many members of the Senate and of the House of Commons are serving, (a) in the active services overseas; (b) in the active services in Canada?

2. How many members of the House of Commons are serving in the reserve forces in Canada?

3. How many members of the House of Commons and of the Senate saw service in the last war?

EMPLOYMENT OF HALES ROSS

Mr. SHAW:

1. Is one Hales Ross of Edmonton, Alberta, employed by the Department of National Defence or any other department of the government?

2. If so, in what capacity is he employed?

3. What rate of salary or commission does he receive?

DENTURES FOR CANADIAN FORCES

Mr. BOUCHER:

1. How many sets of artificial dentures have been ordered for or on account of the Canadian Dental Corps since the outbreak of war?

2. What is the total cost of such artificial dentures?

3. From what firm or firms have these dentures been ordered?

4. On what dates were such orders given?

5. How many such sets have been supplied to members of the Canadian forces, army, naval and air?

Mr. RALSTON: Stand.

Mr. CASGRAIN: Order for return.

Mr. HANSON (York-Sunbury): Well, when one minister says "stand" I submit another should not give some other direction.

Mr. RALSTON: In this particular instance I believe my colleague the Secretary of State is right. Information would be required from three different ministers.

Mr. SPEAKER: Order for return.

PURCHASE OR LEASE OF BREWERY PROPERTIES

Mr. McGREGOR:

1. How many properties formerly used for brewery purposes have been purchased or leased by the government of Canada since the beginning of the present war?

2. From whom were they purchased or leased?

3. For what purpose were they purchased or leased?

4. What was the purchase price or lease-rental for each property?

5. Who are the officers of such companies who made the sales or leased any such properties?

BUSINESS OF THE HOUSE

INQUIRY AS TO LEGISLATIVE PROGRAMME FOR THE SESSION

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): On February 17, the day on which we met, in reply to a question of mine the Prime Minister promised to indicate to the house in the course of a day or two the measures which were likely to come up at this session. So far as I have been able to observe the Prime Minister has not done this. I should like to ask him if he would take an early opportunity to set forth in some detail the proposed legislative programme for this session. This information is not important to myself, but I am sure it would prove helpful to a lot of the members in making future plans.

Right Hon. W. L. MACKENZIE KING (Prime Minister): I shall be only too pleased to give my hon. friend the information he has asked for at as early a moment as it may be possible to give it with a completeness likely to be of help to hon. members. The reason I have not replied up to the present is that I did indicate at the time the question was first asked that I anticipated that the measures to be introduced this session would be confined almost exclusively to financial measures having to do with the war, the War Appropriation Act, the budget and supply. Outside of these I do not know of any other measures of importance likely to be proceeded with beyond those already appearing on the order paper.

It is possible that there may be some legislation with respect to the St. Lawrence waterway project, but up to the present time no agreement has been finally reached. Therefore, I am not in position to say when that particular measure will come before the house. Perhaps this will answer my hon. friend's question immediately, parliament has before it at the moment, so far as I am in a position to know, with the exception mentioned, the legislation of importance for this session.

PRAYER FOR VICTORY AND PEACE

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): I note that His Majesty the King has proclaimed March 23 as a day of prayer for victory and peace. Will the Prime Minister (Mr. Mackenzie King) indicate whether a similar proclamation is to be made in Canada?

Right Hon. W. L. MACKENZIE KING (Prime Minister): On a previous occasion when I saw that His Majesty the King had made a proclamation for a day of prayer in the United Kingdom, I thought it would be most appropriate if a similar proclamation were made here. I shall be only too happy to recommend to my colleagues that a similar course be adopted in Canada with respect to his majesty's present proclamation.

BUSINESS OF PARLIAMENT

REDIVISION OF WORK OF COMMONS AND SENATE TO MEET WAR CONDITIONS

On the orders of the day:

Mr. T. L. CHURCH (Broadview): I should like to inquire of the Prime Minister (Mr. Mackenzie King) if the government will consider, in view of the gravity of the war and the present financial situation, appointing a committee of this house to meet Their Honours of the other chamber to consider a reallocation or redivision of the work of the two houses. The other house has adjourned for a further two weeks, and yet we have an extensive legislative programme to consider. In Washington and London the other houses are cooperating and doing a great deal in connection with war work. I brought up this matter in 1940, as reported on page 1918 of *Hansard* of that year, and before that in 1939, as reported on page 1471 of *Hansard* of that year. On both occasions the Prime Minister said that the matter would be given consideration.

I realize how busy the members of the government have been, but there are many learned gentlemen in the other house as well as former members of this house and I am sure that that house could relieve the Commons of a lot of work. Last session the other house could have handled the questions having to do with subversive elements and enemy propaganda and all that kind of thing. There are many fine members of parliament in the other place, and I ask the Prime Minister to consider this matter and give us a reply.

Right Hon. W. L. MACKENZIE KING (Prime Minister): The question asked by the hon. member for Broadview (Mr. Church) has been asked on previous occasions by himself. As he said, I previously replied that the government would carefully consider the matter to which he has referred. The government has considered this matter repeatedly. The leader of the government in the senate has brought up the subject time and again in meetings of the cabinet. He did so only a few days ago with regard to the work of the present session. The answer which I have just given to the leader of the opposition (Mr. Hanson) as to the legislative programme for this session answers at least in part the question the hon. member has asked. The important measures to be considered this session are all financial measures, the War Appropriation Act, the budget and supply, and in the nature of things all of these measures must originate in this house. They cannot reach the senate until this house has disposed of them.

If there were other measures contemplated I would say that the government might consider having them introduced in the senate, unless there was some special reason why they should first be introduced here. For this session the government is refraining from bringing down many measures which ordinarily we would wish to bring down simply because we desire to have the attention of the house concentrated as exclusively as possible on matters pertaining immediately to the war.

There is nothing to prevent the Senate taking any course with respect to its own proceedings which it may deem advisable. I agree with the statement of my hon. friend that there is great talent in the membership of the other house, but it is for the hon. members there to control their own business and to decide in what way they can through their membership render the greatest service to the war effort. My hon. friend has suggested a conference between the members of the two houses. I doubt that that method of procedure would be helpful at this time, for the simple reason that the government itself must decide how its business can best be advanced. Having carefully reviewed the situation we have felt that for the present session at all events we must hold to the particular course outlined, without placing restrictions either on this house or on the other, in order to make the most rapid headway we can with government measures.

TRANS-CANADA AIR LINES

ACCIDENT AT ARMSTRONG—QUESTION AS TO AIRPORT PERSONNEL

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): Mr. Speaker, I should like to address a question to the minister of transport, as to whether Emil Kading, a German enemy alien who, according to the Canadian press dispatch, was on duty at the airport at Armstrong, Ontario, on February 6 when a Trans-Canada Air Lines plane crashed killing twelve persons, is still in the employ of Trans-Canada Air Lines.

Hon. C. D. HOWE (for the Minister of Transport): Mr. Speaker, I consider this to be an unnecessary question. If my hon. friend has read the report of the coroner's jury he will have seen that it was amply demonstrated, and was in fact stated by the coroner, that Mr. Kading had nothing whatever to do with the accident. Mr. Kading is a naturalized Canadian, and to bring his name up in the House of Commons in this way is I think very unfair to that gentleman, who has been a loyal and efficient officer of the Trans-Canada Air Lines for a considerable period.

Mr. BRUCE: He has been naturalized only four years.

THE WAR

POSITION IN THE BALKANS—PROTECTION OF CANADIAN NATIONALS IN BULGARIA

On the orders of the day:

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, yesterday my hon. friend the leader of the opposition (Mr. Hanson) referred to a lady from his province of New Brunswick who for a number of years had been residing in Sofia, Bulgaria. He asked that some steps be taken, if possible, to protect the interests of Canadian nationals in that country. As my hon. friend said, he had personally mentioned the matter to the Under Secretary of State. The course taken by the Under Secretary of State was the one which I indicated I thought would have been taken. A communication was sent to our high commissioner in London to bring the matter to the attention of the foreign office with a request that the foreign office would communicate with the British minister at Sofia asking that particular attention be paid to the circumstances in Bulgaria of the lady he has referred to. May I say to my hon. friend that I have also ascertained that great efforts have been made for some months past to have this particular lady leave Bulgaria as it was known that she was an important person and it was feared that her finances might suffer if she remained there, but apparently it has been very difficult to persuade her to leave.

MUNITIONS AND SUPPLY

PURCHASE OF LANDS IN SCARBORO AND PICKERING TOWNSHIPS

On the orders of the day:

Mr. J. H. HARRIS (Danforth): Mr. Speaker, I should like to ask a question or make a suggestion to the Minister of National Defence (Mr. Ralston). In view of the fact that the return made to an order of this house with regard to the purchase of certain lands stated that the department had no information and that a supplementary return subsequently filed contained the information that the land had been acquired, would the minister feel disposed to amend the interjection he made yesterday, at page 1269 of *Hansard*, at the bottom of the page, that the hon. member for Danforth was still tilting at windmills?

Hon. J. L. RALSTON (Minister of National Defence): No, Mr. Speaker; my hon. friend is wrong about that. My suggestion that he was tilting at windmills was with regard to his statement that no information of any kind was being furnished. My hon. friend is quite right in stating that the return to which he referred indicates that the department concerned—not my department—had purchased land, but I still suggest to my hon. friend that that one particular instance does not indicate that there is any general attitude on the part of the government or anyone on this side of the house to refrain from giving any information.

Mr. HARRIS (Danforth): And no indication that the member for Danforth was tilting at windmills.

SHORTAGE OF NATURAL GAS IN WESTERN ONTARIO FOR DOMESTIC USE

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): May I draw to the attention of the Minister of Munitions and Supply a situation that is serious in some parts of western Ontario and ask whether something cannot be done about it. Representations have been made to me over the week-end and during this week with respect to the very low supply of gas in

many municipalities of western Ontario, attributed to the fact that munitions factories are taking such a large supply. The situation is really serious. Is the minister in a position to make representations to the industries which are increasing their demands for gas, with a view to getting them to substitute coal or artificial gas? I bring the matter to his attention in order that he might have consideration given to it by his department.

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, I wish to thank my hon. friend. The subject to which he referred has been giving us a good deal of anxiety for some time. A good many processes in the munitions plants, particularly annealing processes, are dependent on a supply of natural gas. We have tried to meet the situation as best we could. We have, for instance, relaxed the regulations on the use of fuel oil, and are using fuel oil as much as we can to replace gas in these manufacturing processes. I have also been in consultation with the provincial government on the matter for some months. It is a difficult situation but we are trying to deal with it as fairly as we can for the benefit of the domestic users.

PENSION ACT

APPLICATION TO CERTAIN MEMBERS OF CANADIAN AND UNITED KINGDOM FORCES

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health) moved the second reading of Bill No. 17, to amend the Pension Act.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, before the motion carries would the minister be good enough to make a statement covering the whole bill—this is by way of a question—and is it his intention to refer the bill to a committee? I think he said so the other day, but I should like to have that made clear.

Mr. MACKENZIE (Vancouver Centre): I did make a statement on the first reading with reference to the general principles of the bill and stated then that it was the intention immediately after the second reading to refer the bill to the special committee of the house which was appointed the other day.

In general the amendments contained in the bill place in statutory form certain orders in council which have been passed by the government during the last twelve or fourteen months. There are also certain changes with reference to administration and with reference to Canadians serving in the imperial forces, and other changes of minor importance. Every section of the bill will be carefully examined by the special committee of the house; therefore I do not think it is necessary at this stage, when we are concerned with the general principles of the bill, to make any further explanation.

Mr. H. C. GREEN (Vancouver South): Mr. Speaker, the Minister of Pensions and National Health has just stated that it is the intention of the government to refer this bill to the special committee which was appointed the other day to consider questions of interest to ex-service men. If Bill No. 17 were merely a bill containing more or less routine amendments to the Canadian pension law, perhaps there would be no need to discuss it further at this stage. But it is of more importance than that, of more importance than the minister himself has just indicated, because it lays down principles to be followed in the treatment of men of the new fighting forces who suffer disability, and the principles to be followed in the treatment of their dependents.

The approach to this whole question on the part of the Canadian people and the members of this house certainly is that at least as much consideration as the men of the last war received should be shown to the men who are serving in the present fighting forces of Canada; and that any changes in the Pension Act should be of a type which will give these new soldiers, airmen and sailors at least as much consideration as the fighting forces of the old war have received at the hands of different parliaments of Canada.

I was astonished, on receiving this bill yesterday for the first time, to find that, while in some respects it gives additional consideration to our fighting forces, in most respects it restricts their rights. It is tightening up not only on the soldiers of the last war but on the men who are in the fighting forces at the present time. To me it smacks of officialdom. Throughout it I can see in different sections the deft touch of departmental officials, and I think that the house should realize that fact before this bill is sent to committee. I propose to-day to give several instances supporting the statement I have made.

For example, if hon. members will look at page 5 of the bill, at the top of the page they will find subsection 2 of section 11 of the Pension Act. The amendment is a departure in Canadian pension law, something entirely new, and something which restricts in a great degree the rights of these fighting men. It provides that men serving in Canada cannot receive pension for disability, nor can their dependents receive pension in the event of their death, unless the injury or disease "arose out of and was directly connected with such military or war service." In practice this

means that it is almost impossible for a member of our forces who is serving in Canada, not having yet got overseas, or his dependents, to obtain a pension, because it must be shown that the injury or the disease was caused directly by the service; it must have been directly connected with the performance of military duties. The proof of my statement is found in the small number of men who have been able to receive pension. The minister told us the other day that 10,829 men of Canada's fighting forces, exclusive of the air force—for which he promised to get me the figures; I do not know whether they are yet available—have been discharged from the fighting forces as physically unfit, and of that number only 484 have been able to establish claim for pension. This includes, of course, dependents receiving pension in the case of the death of the fighting man. That works out at a percentage of about 4·4 of the number of men who have been discharged as medically unfit. In other words, only 9 men in every 200 have been able to qualify for pension. This is largely because of this restrictive provision which we now find in the Pension Act and which has been used, in the shape of an order in council, for the last nine or ten months.

Mr. CHURCH: What about the fifty-four soldiers who have been killed on the highways by hit-and-run drivers?

Mr. GREEN: I will leave my hon. friend to deal with that. He has spoken of it before, and spoken very well.

This situation shows that there is something wrong with the pension provision for men serving in Canada. They have been given a far more thorough medical examination than recruits in the last war, and yet we find that only 4·4 of those discharged as medically unfit are able to qualify for pension. I suggest to the house that this change in the basis of awarding pensions to Canada's fighting forces must be given careful consideration, because if we carry on under the new provision which the government now proposes, great hardship will be suffered, as the years go on, by the men who are disabled in the fighting forces and by their dependents.

Another instance of restricting the rights of the men in the forces will be found on the same page of this bill, in section 7, which enacts a new section 13 of the Pension Act. That section deals with what we call the dead-line. Hitherto, at least since the special committee met in 1936, the position has been that if a man served in the last war in Canada or England only, he or his dependents could not apply for a pension after the first day of July, 1936. There was a further provision

that, in the case of a man who served in an actual theatre of war, application could be made up to the first day of January, 1942. Originally, I believe, the date was January 1, 1940, but it has been extended until now it stands at the first of January, 1942. Time and again returned soldier members in this house have asked that the government remove that dead-line entirely, so that a man who served in a theatre of war would be able to apply for a pension whenever he broke down, regardless of whether it was before or after the first day of January, 1942. One reason for the demand was that thousands and thousands of Canadian soldiers who were wounded in the last war are not yet in receipt of pension; as they grow older many of them break down, and it was felt that there should not be a dead-line with respect to applications by such men. However, the government insisted that the dead-line stand as the first of January, 1942, and now, in this bill, the dead-line remains at that date.

The provision regarding men of the new fighting forces is even more drastic. It will be found on page 6; it provides that in the case of a man serving in the present war, no application for pension will be received after seven years from the date of his discharge. If that same provision had been in the Pension Act after the last war, men would have been cut off in 1925; under this provision, seven years after a man is discharged he will be out of luck, he will not be able to apply for a pension. There is not even a proviso to that subsection such as partly protects the man who served in an actual theatre of war in the last war; in his case the pension commission have discretion to hear the application after the dead-line is reached, but under this new provision for the men of the present fighting forces, the pension commission have no discretion to grant such special leave.

This new provision is copied from the pension legislation of Great Britian. As every member of this house who has had anything to do with returned soldier problems knows, the British are far more strict in their pension laws. It has been a great deal more difficult to get a pension there than in Canada. They have many more men to consider, men scattered all over the empire, and they have been hard-boiled in dealing with their veterans. Under this section the Canadian government proposes to be just as hard-boiled, and that, I suggest, is contrary to the wish of the Canadian people, contrary to the wish of the members of this house. It should not be embodied in our pension legislation.

Another example of hedging in these men will be found in the treatment of widows under this amending bill. Hon. members will

find it at page 11 of the bill. There has been a demand from all parts of Canada during the last few years for an extension of pensions to various classes of widows, and I think a great deal can be said in support of the contention that these women should be receiving more consideration. But we find that there is nothing in this bill to give them that further consideration. There is no extension whatever of their rights; and as for the widows of men who lose their lives in the present war, they are further restricted in that they can get a pension under the provisions of section 16 of the bill only if they were married to the pensioner before he was granted a pension. Otherwise they cannot qualify. That is a narrower clause than we have in our Pension Act as it stands at present.

There is also a good example of tightening up on the part of departmental officials to be seen in subsection 4 on page 11 of the bill, where it is provided that if a woman has been separated from her husband she can get a pension upon his death only if she has been receiving alimony. Previously the law said, if she had been awarded alimony. There are many cases in our courts in which a woman is awarded alimony but does not receive it. In other words, she gets judgment but cannot collect. This section has been changed so that although she may have been awarded alimony she cannot get a pension on her husband's death unless she has been actually receiving it. It is an example of departmental tightening up.

At the bottom of page 11 there is the provision dealing with pension to a widow whose husband has died of his pensionable disability. At the present time the widow of a pensioner who was wounded in the last war can get that pension provided she was married before he was granted pension or before the first of January 1930, which of course was twelve years after the war. Under this bill the widow of a member of our new fighting forces cannot get the pension unless she was married to the pensioner at the time he was granted pension; in other words, no provision is made for the case of marriage within a period of years after the war.

The sum and substance of the provisions for the widow of a pensioner is this, that if the pensioner marries after he has been granted pension and then dies, upon his death his widow will be cut off. The result will be that in a few years' time there will be hundreds of widows of men now serving in our fighting forces coming to us and asking for more consideration and they will be quite right in doing so. Provision should be made for them in this bill. At any rate, discretion should be given to the pension commission to award a pension to the widow even though she was married to the veteran after he had received his pension.

Another restriction has reference to the wife. From time to time each one of us gets complaints about these cases, and as hon. members know, there is no allowance payable for the wife of a soldier who served in the last war, if they were married after May 1, 1933. That was introduced in 1933 as an economy measure. It was unjust at that time but it has been continued ever since. Complaints have been made in the house but nothing could be done about it. The bill introduces a provision, to be found at page 16, that unless the new soldier and his wife have been married within a period of ten years after the termination of the war no allowance will be paid for the wife. There is the same restriction with respect to children. In other words, the children of our fighting forces who are lucky enough to be born within ten years of the war will receive an allowance. Any children born after that date will not. That is unfair. There is no reason for it. All the children of a pensioner should be entitled to the allowance, and none should be cut off at a date which is arbitrarily set.

This morning I had a letter from a veteran of the last war living in Manitoba, in the riding of the hon. member for Dauphin (Mr. Ward). He says:

> Can there not be some provision made so that an honest man can be provided for to the end that all married pensioners or veterans are afforded the same benefits of the pension act?

There is another restriction to be made in the act in the change that is being brought about in the appeal board. Hon. members will find it at page 15 of the bill. When soldier questions were considered by the special committee in 1936, the veteran at that time had the right to apply first of all to the pension commission, then to be heard by a quorum of two members of the pension commission—they sat in different parts of the country, saw the man and heard evidence—and finally he had the right of appeal to the pension appeal court, sitting in Ottawa and consisting of three men. Subsequently that was changed and to-day the veteran applying for a pension has the right, first of all, to what is called a first hearing, which is really not a hearing at all but a first consideration by the pension commission in Ottawa—all done by correspondence. Then, if his application is rejected, he has the right to a second hearing, which again is merely consideration given at Ottawa. Then he has the right of final appeal, to an appeal board, which sits in different parts of the country, for example in

Halifax or Vancouver. The veteran can go before that board of three men, take his witnesses with him and have a proper hearing; and he derives great satisfaction from being able to tell his story to those three men. Now under section 22 of this bill the government proposes to cut that final appeal board down from three men to two; and section 23 goes on to provide that in case of a split verdict, in case one member of the new board is for the soldier and one against him, the decision will be made by a man sitting here in Ottawa, a commissioner appointed by the chairman of the pension commission.

Mr. HANSON (York-Sunbury): Who did not hear the appeal or see the witnesses.

Mr. GREEN: Who did not hear the witnesses at all and did not hear the ex-serviceman's story, but who sits here in Ottawa and looks through a file. That is not good enough. Certainly it is one of the provisions of the bill which should not be retained. Nothing will do more to stir up the veterans across the country than to have some man here in Ottawa given the power to throw out their application for pension on a final appeal.

There are some provisions of the bill which are helpful. One in particular will be found on page 13: I refer to the provision for extending the Pension Act to cover Canadians who serve in the Royal Air Force or the Royal Navy. But it also is too restricted. The hon. member for Wellington South (Mr. Gladstone), when the resolution which preceded this bill was under consideration, brought out the fact that those young Canadians who enlisted in the Royal Air Force before the war broke out cannot get pensions under the act. Under these amendments the only airmen who can benefit are those who have enlisted in the Royal Air Force since the war started; it does not cover those who went to England in 1939 or 1938, or the other years preceding the war. I suggest that the bill should be extended to cover those cases.

I mention these instances in the hope that consideration will be given to them not only by hon. members who happen to be on this special committee but also by all other hon. members. I say that this bill is fundamentally wrong, because the whole tendency is to be "tough," to be just a little tougher than before on the men in the fighting forces. That means that if parliament enacts this bill in its present shape it will be "tough" with the very Canadians who should be receiving the most consideration at the present time.

Mr. J. G. TURGEON (Cariboo): With some of the statements made by the hon. member for Vancouver South (Mr. Green) I am in agreement. I refer especially to the sections of the bill which deal with widows, and to certain features of section 5 with regard to men injured in service after May 21 last.

It is not my intention to deal with these matters now on the motion for second reading, because I think they can best be discussed in the special committee that has been set up. After the bill returns from the committee with any recommended amendments, the house can better deal with it.

I think this country is fortunate in having as minister in charge of pensions one who for many years before he came to this parliament was dealing with the matter of pensions on behalf of soldiers, or their wives and dependents, because of injuries received during the war. I commend this bill, on general principles, to the house, on the understanding of course that favourable consideration will be given to any amendments which may be proposed by the special committee.

Mr. CLARENCE GILLIS (Cape Breton South): In view of the fact that a special committee has been appointed to go into this question it may appear to be a waste of time to discuss just now the matters brought up by the hon. member for Vancouver South (Mr. Green). I do wish, however, to take this opportunity of saying that I have had some experience with pension matters during the past twenty years and I am entirely in agreement with the statements just made by that hon. member. There is no need for me to repeat what the hon. member has said. I agree that the select committee will have a certain duty to perform, but the bill contains certain provisions and principles with which I am not in agreement, and if it is given second reading as it stands and goes to the special committee, we can be reasonably sure that it will come back in the same form.

I see the bill in this light, that it is an indication of the considered policy of the government as to the manner in which pensions should be dealt with at the present time; and the committee will naturally be guided by the Minister of Pensions and National Health. In addition, the members of the government party constitute a majority of the committee.

I am assuming that the bill embodies the policy of the government, otherwise it would not be here in this form; it is reasonable therefore to suppose that that is exactly what will come out. What I am concerned with at the moment is that it is clearly shown by the amendments that the insurance principle, or "incurred during service" principle, is being

practically eliminated in several clauses, and that the man who enlists for service in Canada only is discriminated against. In the last war the man who saw service in Canada only was included in the pension provisions and had exactly the same opportunity to qualify as the man who served overseas, if he incurred a disability while on military service. The bill as amended very definitely sets out in clause after clause, and underlines it, that the disability must have been incurred on war service. The trainees who are being called up at the present time find themselves in this position: They have the option of volunteering for service overseas. Many perhaps will not feel inclined to volunteer; they may believe that their service can be better rendered in this country. As the bill stands it may be construed as a lever to induce a man to volunteer for overseas service. This principle, the insurance principle or "incurred on service" principle, was dealt with exhaustively in 1921 under a commission headed by the present Minister of National Defence (Mr. Ralston). After considerable inquiry by that commission it was held in 1921 that the original intention of parliament was to protect all members of the forces with respect to any injury or disease incurred during the period that they wore the king's uniform. Those with service in Canada only received the benefit of this protection during the great war. There is no valid reason why any discrimination should now be introduced against those who serve in Canada only.

There are many things I should like to see included in the bill. Among all the grievances with regard to pensions which in the past twenty years have been aired there is one which, in my opinion, should receive special consideration in the bill before the house. I refer to the service of nursing sisters. In the last few months I have carried on a correspondence with the Department of Pensions and National Health concerning a nursing sister who saw service in France from 1917 to 1919. To-day, completely disabled, she receives only a small stipend under the provision for war veterans' allowances. This sister considers herself as a recipient of charity. She feels she is entitled to a pension by virtue of her service. But because her documentation or her files are not as they should be, or because they do not agree with her version of her disability, it has been declared that she is not now eligible for pension. Arrangements have been made to have her case heard by a tribunal.

In my opinion the act should deal specially with nursing sisters. Any girl who volunteers her services to her country and serves her time in hospitals overseas, any girl who serves in an actual theatre of war, who goes through bombing raids and all the horrors connected with surgical operations performed under difficult circumstances in military hospitals, regardless of whether she has been actually wounded or seriously ill, in my opinion suffers shock to her nervous system. The fact that she has gone through a couple of years of that kind of life has left its mark on her. The fact that she volunteered her services and actually served in a theatre of war should entitle her to pension, regardless of whether or not she has the required documentation. The fact that she did her work and that she is not now in a position to earn a livelihood ought to be sufficient to entitle her to the pension. Many of the women who served during the last war sacrificed practically everything that a woman values in life. Many of them continued their services in military hospitals after the war. Many of them never married. Specific provision should be made in the Pension Act for women who render service of this kind.

The Minister of Pensions and National Health will recall that about a month ago I wrote him respecting a man who had gone from Sydney, Nova Scotia, to England, on a convoy ship, leaving a family in Glace Bay. Shortly after landing at Liverpool he was killed during a bombing raid on that city, and his wife was left destitute. The landlord threatened to throw her out on the street. I went to see her; she explained the circumstances, and I telegraphed the minister. Let me say right here that the minister acted promptly, and did everything he could, within the regulations. But in my opinion because of those regulations that woman is suffering hardship.

The minister explained to me that any man serving on a convoy ship of Canadian registry is protected by the Pension Act, and that under these circumstances there would be no difficulty in obtaining a pension. The procedure of convoying is undoubtedly one of the most essential in our war services at the present time. It is also very dangerous. A large percentage of the ships plying between England and Canada to-day are of British or foreign registry. Only a small minority are of Canadian registry. In the instance to which I have called attention the ship was of British registry. The minister has communicated with the British representative in Canada, and is carrying on negotiations with a view to having the woman pensioned. However, this condition developed two months ago, and the woman is now receiving relief from the city. So far there has not been any pension adjustment. In my opinion it is not fair to those

who are suffering that they should have to depend on the British government, under present circumstances, to take care of such cases. While I have mentioned only one, we know that more may arise at any time. Regardless of a ship's registry, any Canadian operating on a convoy from a Canadian port should receive the protection of the Canadian government, and his dependents should be in a similar position. This is not a British war; it is an empire war, and we are all engaged in it. The government of Canada should accept the responsibility of caring for the dependents of men who have been fatally injured in any phase of our war effort.

I know the minister has been working in the matter. He has done all he can toward making an adjustment, under present regulations. But in order to take care of matters of that kind the regulations should be extended. As the hon. member for Vancouver South pointed out, there are many widows in Canada to-day. Petition after petition, resolution after resolution come to us every day from different organizations asking that the regulations be extended to take care of the widows of ex-service men who cannot now be provided for.

Any man who went through the last war will agree that practically all who came back after being in the line for any considerable time returned with a certain percentage of disability. The life of any man who was in the line was shortened because of his service there. Many are widows to-day because their husbands are in premature graves. Had the proper documentation been on record, many of them would be eligible for pension. But we know that during the first year or two of the war in France records were not kept as scrupulously as they should have been, and as a result many men have been denied their right to pension.

I should like to see a provision in this measure which would take care of the situation I have described. With all due respect, I am reasonably sure the committee will recommend what is in the minds of the sponsors of the bill. We may go into committee, talk, make recommendations and all the rest of it; nevertheless I do not believe that in any material respect the bill will be changed. I should like to have the principle to which I have referred understood by hon. members before deliberations by the committee take place.

Every man who puts on the king's uniform, and who is on military service, engaged in the war effort, should receive the protection of the state while he is wearing that uniform. This is a classic example of what might happen under the legislation as it now stands. A man who meets with an accident while on leave, and not connected with his military duties, cannot claim pension. For example, let us suppose that the leader of the opposition and I are in the same unit. I am going on leave, and I am not subject to the performance of military duty while I am on leave. The leader of the opposition, we will suppose, is driving me to the station. There is an accident and we are both killed. The widow of the leader of the opposition would be entitled to pension, and mine would not. Because I was off duty and going on leave, my wife and dependents would be deprived of pension, under the regulations as I understand them. This is a condition which should not exist. While one is wearing the king's uniform he and his dependents should be entitled to the protection of the state. Many things may happen to one who is on service which may not happen to one who is not on service.

I am interested in this matter because in the past I have had some experience with pensions. At the moment that is all I have to say.

Mr. A. G. SLAGHT (Parry Sound): Mr. Speaker, in my view a number of the matters brought to the attention of the house by the hon. member for Vancouver South (Mr. Green) should receive most careful study in committee. I am not a member of the committee and in my view this is not the time to go into details, particularly since my colleague, the hon. member for Cariboo (Mr. Turgeon), has expressed to the house the exact views which I entertain in regard to this matter.

Mr. P. E. WRIGHT (Melfort): Mr. Speaker, I agree with the hon. member for Vancouver South (Mr. Green) and the hon. member for Cape Breton South (Mr. Gillis) that this bill is very restrictive in its nature. I think there will have to be a few changes made when it is in committee.

Another point which I should like to bring to the attention of the house is this. I refer to a principle which is being carried forward from the old act. At this time I think we should have an equalization of pensions. Under the old act, men with the rank of lieutenant or under receive $900 for a total disability, while a brigadier-general receives $2,700 for a total disability. The widow of a man of the rank of lieutenant or under receives $720 while the widow of a brigadier-general receives $2,160.

This war is entirely different from the last war. Our forces have been highly mechanized and many of the non-commissioned officers and other ranks must have mechanical exper-

ience. I believe such men are entitled to a pension equal to that paid to higher ranks. This principle was agreed to by the former Minister of Pensions and National Health (Mr. Power) in 1936. A question was asked with regard to hospitalization and the then minister replied as follows:

> That is to say, a private soldier was placed on pay and allowances approximately equal to those which he received as a private soldier in the army, and a general or colonel was placed on the pay and allowances of the rank which he held in the army. The divergence has always appeared to me to be pretty wide, and after considerable study the officers of the department and myself came to the conclusion that perhaps at this time, twenty years after the war, we should not perpetuate the system of pay according to rank which existed during the war.

This difference in pensions paid to the different ranks was a carryover from the British system. I believe we could very well change the legislation to provide an equalization of pensions to all members of the forces. I do not mean that there should be a reduction in the total amount paid, because the saving achieved could be used to raise the schedule of the lower pensions. A pension of $900 for total disability is quite small. The cost of living in this country has been rising continually and will continue to go up after this war. This is something which the house should decide and give instructions accordingly to the committee. Most of those from the higher ranks go into protected occupations after serving where their disabilities are not of as great disadvantage as similar disabilities suffered by men who have served in the lower ranks. For instance, a man who is a bricklayer by trade and who loses his leg finds that disability much greater than a man who works in an office and is suffering from the same disability. We should consider seriously this matter of the equalization of pensions.

Mr. VICTOR QUELCH (Acadia): Mr. Speaker, as this bill is to be referred to a committee I shall be very brief, especially in view of the fact that the last time we considered such a bill it was dealt with most extensively. I have no fear that we shall not be given the fullest opportunity to make what we consider to be essential amendments to this bill. If I remember correctly, we practically rewrote the last bill in committee. The hon. member for Vancouver South (Mr. Green) raised a number of important points. He pointed out that we were changing the whole principle of certain clauses of the act in such a way that the benefits accruing to soldiers will be restricted rather than expanded. I believe that public opinion to-day is almost unanimous in demanding that the benefits of our pension legislation shall be expanded rather than restricted in any shape or form.

For instance, reference has been made to the fact that a soldier will not be eligible for pension unless he has been actually engaged in war service. I can visualize a man being given two or three days' leave and taking ill, or suffering some form of disability on the second day of his leave. Under this bill he would not be able to get a pension. I do not think the people of Canada will agree with that. No provision is being made in this bill to provide pensions for the war widow whose husband does not have a 50 per cent war disability. Ever since the last war an effort has been made to obtain some consideration for these widows. We must realize that we are not fulfilling our obligations to the men in the forces until every man who enlists is assured that when he dies his widow will get whatever pension he may have been receiving.

When a man is entitled to pension, he receives a larger pension if he is married. We thereby recognize a certain responsibility for the man's wife. Yet we say that should he die we will not assume any responsibility for his widow unless he is in receipt of a pension for a fifty per cent disability or over, or unless the widow can prove that he died as a result of a war service. Five, ten or fifteen years after a war a widow may find it impossible to furnish such proof. I have no doubt that every hon. member has a file of cases in which he has been trying to get pensions for widows and has been turned down because they have not been able to furnish this proof.

I have one reason to hope that we may be able to get more for the soldiers in this committee than we were able to obtain in the last, in that while in opposition the present minister took a very broad stand on the question of money. I have read a number of statements made by him prior to 1935 in which he took a very broad view.

Mr. GREEN: He has changed since then.

Mr. QUELCH: We will have plenty of opportunity to remind him of the stand he took. There is no excuse for saying that we cannot make these payments because there is no money available. It was admitted in the last committee that it was not a question of deciding what was due to the soldier, it was simply a question of deciding how much money we had available. It was admitted freely that we were not prepared to assume our full responsibilities to the returned men because the nation was bankrupt. The word "bankrupt" was actually used. I hope a

similar state of affairs will not obtain in this committee. When we are spending millions upon millions of dollars daily and weekly I hope we are not going to be told that we cannot find the paltry few thousand dollars necessary for this or that because the country is bankrupt. I do not think we should expect our soldiers to make sacrifices unless we are prepared to assume the responsibility of looking after their dependents after the war. We have not taken care of their dependents, and we know it.

This bill is going to a committee and I sincerely hope we shall be given every opportunity to deal with all phases of the Pension Act and the War Veterans' Allowance Act. I shall not say any more at this time.

Mr. J. A. ROSS (Souris): Mr. Speaker, as has been pointed out, we expect to be given ample opportunity to discuss this bill in committee. As the previous speaker (Mr. Quelch) has said, I trust that we shall be given an opportunity to rewrite this bill to some extent, but candidly I am not as hopeful as he is in that respect.

There are two or three things I should like to point out. First I am disappointed that in framing this bill consideration has not been given to providing for war widows and for the widows of pensioners.

Secondly, I am of the opinion that provision should also have been made for the dependents of those who die on active service in Canada. I can visualize a young man, with a young wife and a family of small children, giving up a good position to serve in our armed forces at a rate of remuneration one-third less than he received in civil life. Should he become a casualty I do not think it is fair that the whole family should become a charge on the local municipality, which in some cases would be their only recourse.

With reference to the appeal board, as was pointed out by the hon. member for Vancouver South (Mr. Green), I think it is a retrograde step that we should be appointing a board of two members instead of the three that we have had in the past. In case of disagreement the case is referred for decision to a third party who has not even heard the evidence. Surely that is a retrograde step. I trust that we may have ample opportunity in committee to rectify it, as well as many other deficiencies in the bill.

Since we are going to discuss the bill in detail in committee, I shall not take up more of the time of the house now.

Mr. A. W. ROEBUCK (Trinity): Mr. Speaker, one of the great military hospitals is located in my riding, and I suppose few members of the house have more appeals made to them on behalf of veterans or their dependents than I have. Were there any public benefit to be gained by a discussion of this bill in detail now, I should wish to be heard extensively at this stage. But the bill is going to a committee, and the subject matter is largely one of detail rather than of general character.

Somebody has said that the people of Canada do not desire a tightening-up in this matter. I think I may say that the people of Canada desire neither the one nor the other, neither a tightening-up nor a broadening-out. If there is any public opinion at all on this matter it is that the Pension Act must be not generous, not mean, not niggardly, but just. The people of Canada are prepared to discharge their responsibilities with respect to the dependents of our soldiers abroad or in Canada, but the job of making the bill just and accurate is a job for a committee and not for the house in general. Therefore, sir, I join with others in saying that we should give the bill second reading and reserve details for discussion in the special committee.

Mr. D. G. ROSS (St. Paul's): Mr. Speaker, I shall take only a few moments but I wish to say a few words about that small group of Canada's permanent army who retired prior to 1919 and were pensioned. In 1919 the government at Ottawa realized that in view of the increased cost of living the pensions being paid to long-service men of what was then known as the Royal Northwest Mounted Police and of the permanent army were inadequate, and accordingly the pensions to these men were increased in the neighbourhood of 500 per cent. I have spoken on this matter in the house before. I do not think it comes directly under this act, but undoubtedly something should be done about it. I am sure that a great many members have had this particular matter brought to their attention.

Mr. ROEBUCK: May I ask the hon. gentleman a question? Does he know that I have already applied to the prospective chairman of the special committee on this bill to have the veterans heard by the committee, and that they will be coming to Ottawa to make their representations?

Mr. ROSS (St. Paul's): They have been asked to come to Ottawa a great many times since 1935 when they had this matter up, and they have had some very pleasant things said to them. I have here extracts from letters they have received from Ottawa, and if my hon. friend wants to get into a controversy about this thing I am ready. Here is a letter from, I think, the Minister of National Defence at that time, in which he states:

In my opinion your claim is based on complete fairness. I fully sympathize with you.

Here is another letter from Mr. MacLean, of Prince Edward Island, and I have dozens more here. Here is one from the Postmaster General (Mr. Mulock). They have received all these letters but nothing has been done for them, and something must be done because the present situation is unfair to them. Let me state what some of the pensions of these men are.

Here is a man getting a pension of $17.93, and the present rate of pension for a similar case would be $93.00. Here is another one receiving $17.31, and the present pension would be $66.00. Here is another one receiving $9.99, and the present pension would be $48.00. Here is another receiving $20.60 and the present pension would be $41.81. I am bringing this matter to the attention of the house to get something done for these men. There is only a small group of them but their claims have been under consideration now for five or six years and it is time that action was taken if we are ever going to get any action at all.

There is another matter on which I wish to say something. When a soldier in Canada is on leave he is not supposed to be on duty, and if he is injured on leave he gets no pension. Under the present arrangements the only way in which many of our soldiers can travel from one place to another in Canada is by hitch-hiking. No free transportation on the railways is supplied to them, and it costs money to travel from place to place; therefore they travel in automobiles in which they seek rides. In some of the provinces, if a passenger is injured in a motor car accident he has no claim against the driver, and therefore he has no comeback. It seems to me that the government ought to do something about providing transportation for these men. Surely that could be done; or when they are on leave and travelling from one place to another, if they meet with an accident, they should be considered as being on duty. It is unfair that they should have no right to a pension if an accident happens on their week-end leave.

There is another appeal which we made in the house last year and again this year, and that is on behalf of widows. I spoke on their behalf the other day and I wish to add a few words to-day. I think the government in this bill could very easily reduce the percentage of pensionable disability so that the widow could qualify and get her pension. These widows are all getting older and many of them are in a very bad way financially. We could take this step now quite easily, and if the government do not feel like going the whole way we could at least meet the claims of these widows half way so that all of these widows might get some pension.

I am not a member of the committee but I hope the committee will make a great many changes in the bill as it stands at present.

Mr. D. K. HAZEN (St. John-Albert): A number of important suggestions have been made this afternoon concerning this bill, all of which no doubt will be given careful consideration by the committee to which it will be referred. I am not a member of the committee, and I should like to make one or two suggestions now, in the hope that they will receive attention.

The first is that this bill include a class of men who are not mentioned in it at the present time—the men who belong to Canada's merchant marine. These men face during this war, and up to the present time have faced perhaps as great danger, and probably more, than most of our fighting forces. Some recognition should be given of their services, by including them within the provisions of this bill. It could be done by amending paragraphs (i) and (j) of section 1. I do not want to elaborate on this matter, but I hope the committee will seriously consider the inclusion of members of Canada's merchant marine who have served on the high seas.

One other suggestion I would make; it has to do with section 5 of the bill, section 11 of the old act, namely, that at the end of paragraph (a) the following words be added: "while on or off duty." The last line of the paragraph would then read:

—attributable to or was incurred during such war service, while on or off duty.

Possibly after those words there might be added: "if not disobeying orders."

Mr. J. J. KINLEY (Queens-Lunenburg): I wish to say just a word or two with regard to pensions as they affect Canadian seamen. Nothing in this bill refers to Canadian seamen as such, but some time ago the government passed an order in council—a very generous order in council, I think—which says in effect that seamen and fishermen in the performance of their duties who suffer by reason of contact with the enemy shall be given the same privileges with regard to pension as are given to the active forces of the country. However, as has been brought out by the hon. member for Cape Breton South (Mr. Gillis), it appears that this refers only to Canadian seamen on ships of Canadian registry. Might I point out to you, sir, and to the house, that the number of ships of Canadian registry which travel overseas or are in the overseas trade is very

small indeed. Even the ships which are commonly called Canadian and operated by big Canadian companies are registered in Great Britain. The present limitation would restrict these benefits to a very small number of Canadian seamen and—what is worse—would leave out many who would be eminently qualified for pension.

I recall that soon after the *Jervis Bay* went down in her fight on the Atlantic, I met a young man of my town who was a member of that crew. A great many seamen along the coast of Nova Scotia are on oil tankers and on ships of every register. We must recognize that service upon the sea is a common service to all countries. Whether you are on a British ship or some other ship, you are still working for the cause of the empire; it is, as it were, a universal service which extends beyond the boundaries of any one country. Furthermore, those who were so anxious to serve that they joined a foreign ship or a ship outside of Canadian registry are in most cases serving aboard an empire ship; for do not forget that the shipping of Norway, the Netherlands and some other countries is controlled by our own empire, so that these men in reality are working under the direction of the central authority of the empire that is carrying on this war. It will cause a great deal of trouble and much suffering in my part of the country if these brave Canadians who are serving on ships on the high seas are debarred from the privilege of receiving pension from the country which they so well serve.

I am not a member of this committee, but I hope that the minister, and through him the government, will see to it that the generous treatment which they have accorded to seamen—a new departure in the statutes of this country—will be further amplified in the direction I have mentioned. Such treatment will be well deserved, and will acknowledge a service which is most vital at the present time, when a Macedonian cry has gone out for more ships, a call by the head of the British empire. We must have crews to man those ships, and those men must have the very best treatment we can give them.

Mr. THOMAS REID (New Westminster): With many of the statements and suggestions made this afternoon in connection with this bill I am in hearty accord; but, realizing that the bill can be better and more fully discussed in the committee, it is my intention to devote only a few minutes to it at this time.

I have one suggestion to make to the government. It has not been touched upon by any other speaker, and I doubt whether it has been brought forward before. We all realize that, no matter how good the bill or what fine words we place in it, unless we have, in charge of the administration of it, those who will carry out the spirit and intent of parliament, it will not operate as fully and effectively as it should.

Perhaps my suggestion will not meet the approval of many of the commissioners, or of the officer class of the army, but, as one who has taken an active part in the affairs of returned men, I say this after many years' experience. I am not casting any reflection on the present personnel of the commission; to my mind many of its members have at heart the entire interests of the ex-service men, but I am offering this suggestion to the minister, that he change somewhat the personnel of the commission and place upon it at least one private soldier. I know that in days past, when the act was being administered by men who had been generals and other high officers, they still carried with them that class distinction. I say that in all sincerity. I am of the opinion that it would help the returned man to know that his appeal was being heard by a board at least one of whose members had held a rank similar to his, a man who had been one of the rank and file. I say that without casting any reflection whatever upon any member of the present commission or of the war veterans' allowance board. I make the statement in all sincerity after an experience of something like sixteen and a half years with ex-service men's affairs.

Hon. R. B. HANSON (Leader of the Opposition): I have no intention of delaying the house with respect to this measure, but I desire to make one or two observations. The bill is necessary at this time because of certain general principles that are incorporated—the extension of "theatre of actual war" to the British isles, for instance, as contained in the section dealing with definitions; the question of the extension of "war service", as contained in paragraph (p) of the same section, and other matters. There are other features that are really objectionable, and since the bill is to go to a special committee, not to be dealt with in committee here, at least until it returns from that special committee, I take this opportunity of calling the attention of hon. members to section 4, which amends the present section 9 of the act as enacted in 1932-33, then section 10B.

Underlying that section is a pernicious principle. It is legislating a pension to a man who otherwise is not entitled to it and who—I do not know who he is or what the amount of the proposed pension is, but it must be quite substantial—has probably been

in receipt of a substantial salary for a long period of years but not quite sufficient to qualify him automatically for a pension as the law now stands.

My mind is not unduly suspicious, but I think I am right and the minister should make a statement with regard to the matter. I desire to call attention to this situation. It is exactly on all fours with a provision that appeared in the estimates of last session with respect to a high salaried official of the government who retired from the public service. The principle is exactly the same. Hon. gentlemen will recall what happened to that item in the estimates in the dying days of last session. Hon. gentlemen to my right, in what is sometimes called the rump, are entitled to a good deal of credit for what they did on that occasion. When I read the discussion I was sorry that I had gone home because I should like to have heard it.

I warn the House of Commons of Canada that this is special legislation in the interests of one individual who by law to-day is not entitled to it.

Mr. NEILL: Put it in the estimates.

Mr. HANSON (York-Sunbury): That would be coming out into the open and telling who he is and how much he is to get.

An hon. MEMBER: Who is he?

Mr. HANSON (York-Sunbury): Ask the minister; he will tell the hon. member better than I can. I have only a suspicion, but I think I know. I am not an authority; he is. Ask him. I have said enough on that to call attention to the situation. That is my duty and no more.

I assume as a matter of principle that when a bill of this sort is brought down by a member of the government, it ordinarily represents the considered policy of the government. I am disturbed to think that this is a bureaucrat's bill, as suggested, though not in those terms, by the hon. member for Vancouver South (Mr. Green). It is the settled policy of the government, for which of course it takes responsibility. Pension measures in days gone by have, of course, always been brought in in that way, but it was well understood that when they were referred to a special committee, as has been done as long as I can remember, the committee was not bound by the terms of government policy as expressed in the bill and was at liberty to make other recommendations. I was disturbed to hear the hon. member for Cape Breton South (Mr. Gillis) suggest that the committee would not be at liberty to propose, or at least that the government would not listen to, recommendations that might be brought in with regard to a change in the bill. I should like the minister to reassure the house that this is not so, that the government will give heed to recommendations of the special committee. Having regard to the responsibility which the government has, as the custodian of the public purse, the treasury, at the present time—with that limitation—I think the minister might give consideration to the suggestion that I make, that when the special committee reports on matters of principle and matters of detail, the government will give favourable consideration as far as possible within certain limitations which I will not attempt to define at present.

Mr. DANIEL McIVOR (Fort William): Mr. Speaker, my advice is that perhaps more consideration be given to the findings of the local doctor than possibly has been given heretofore. I will cite one case—I do not mind giving the doctor's name. He is an honour graduate, a gold medallist. This doctor found his patient not fit for work. He felt that there was something wrong and discovered afterwards that there was shrapnel in the man's liver. The man, however, could never get a pension. He died, and I should like to see his wife get a pension.

I must say that I have had the heartiest cooperation from Brigadier-General McDonald and his staff, and I expect good results in this case, but I suggest that the local doctor's findings are most important.

Mr. T. C. DOUGLAS (Weyburn): I do not think the statement of the hon. member for Cape Breton South (Mr. Gillis) should be misunderstood, or the attitude he took. It is generally understood that when a bill is given second reading, it means that we are accepting the principle; and while the committee who will take this bill under consideration have it within their power to suggest changes and amendments, the general principle contained in the bill will remain after it has been given its second reading in this house.

In our view that should not be the situation, because there are embodied in this bill principles which we believe should not be accepted. Not only the details and terms of the bill but also some of the principles ought to be referred to the committee. We have particular reference to the removal of the principle of insurance. Up to the present time it has been understood that from the time a man donned the king's uniform until he was demobilized he was insured with regard to becoming disabled or being killed, that there was definite protection for himself and for his dependents should anything happen to him, irrespective of where or how it happened. What we are proposing to do under this bill is, as I understand it, to draw a line, by which,

if his accident happens in Canada, a man will have to show, or his widow will have to show in the event of his death, that his injury came about as the result of his military duty. That is going to raise a great many difficult points, and there will be many borderline cases.

I have in mind a young man who was in the active service force for something over a year; he joined in September, 1939, and was discharged in December, 1940. He was fit and a good soldier. He slipped while taking a shower bath, fell and injured his spine. He was brought back to Weyburn and discharged with a month's pay. What is that man's position under this legislation? In this particular case the returned men in the district rallied round him and he was given a job in the local mental hospital, and has been able to support himself and his family.

But multiply that case by many hundreds that we are bound to have, and the department will find itself faced with innumerable difficulties. This bill does away with the covering principle of insurance and the sense of security of men in uniform. The committee should give this matter serious consideration. There may be many cases like the one I have mentioned, and that is not good advertising. Young men contemplating entering the service, particularly married men with dependents, are going to view with some trepidation the removal of the insurance principle and the bringing in of a principle which requires a man to show that his injury, or his widow to show that his death, was directly due to his military service. What the hon. member for Cape Breton South had in mind is, I think, valid, that in allowing this bill to go to the committee we are not accepting the principle of removing the insurance principle that has always existed, but we want the committee to give the matter most careful consideration and, if possible, bring in something more satisfactory.

Mr. J. H. BLACKMORE (Lethbridge): To all realistic, right-minded people this bill is positively disgusting. The principle of the bill is the principle of scarcity, under which we have worked for a hundred years. It is a niggardly, cheese-paring and restrictive measure. This government asks for a total war; it asks the people to give their all. The risks involved are tremendous. Surely the government ought to be prepared to take the risk along with the men and their wives and children. This bill is conceived and modelled in the atmosphere of reaction; it looks backward instead of forward. It ignores two fundamental facts. The first is that what is physically possible must be made financially possible; if not in this generation of blindness and lack of vision, it must in the next generation. The second fact ignored is that we are progressing into an age which will be even more an age of plenty than that in which we now live; consequently there will be more unemployment, fewer markets, heavier taxation, greater restrictions on everyone engaged in an effort to make a living. If it was next to impossible for men to make a living before they joined the forces; if they had to be content with meagre pittances such as $7.50 a month for working on a farm, how on earth are they going to support themselves when they come back from this war?

There is plenty of money to equip these men for war. There must be found money to support them as well as their dependents after the war. There are at the present time many widows of soldiers who fought in the last war who cannot get work. They are efficient women, capable of doing good work. I could name one here in Ottawa who is thoroughly qualified to take as fine a position as can be found in the civil service, and that woman cannot even get a hearing. She is only one of thousands. Nevertheless we have ministers of the crown prating about lack of men and lack of help in this country. It is disgusting. It is disgraceful. As long as we allow ourselves to be hoodwinked by such plausibility, such specious reasoning, we are unfit for the positions we hold.

There are in Canada veterans by the ten thousand who cannot get work, not because they are not qualified but because they happen to be a few years too old. What is going to be the situation twenty or thirty or forty years from now? Surely we are not going to ask people rising out of the mire of misery and poverty to risk their all, to fall back afterwards into a similar mire. There are in this country returned men's children by the ten thousand who can get no work. Under provincial laws, when a widow's child becomes fifteen or sixteen years of age the widow's allowance is cut off, the assumption apparently being that a child of fifteen or sixteen can immediately get work and thereby contribute to the support of the family. Under the present circumstances that is utterly absurd, and every hon. member knows it. Then why not face facts as they are?

To-day there are countless returned men engaged in production who cannot sell their product for enough to yield them a living. We have farmers by the ten thousand—not all are returned men but many are—who are in that state. There are thousands of manufacturers; tens of thousands of tradesmen, such as carpenters, blacksmiths, builders of

various kinds; thousands of professional men, such as lawyers, doctors, teachers and the like, returned men, who cannot by any possible means make enough to support themselves in a decent, respectable manner. They are on the verge of bankruptcy all the time. Yet this bill is apparently designed to perpetuate these abominations into the next generation. When one considers the number of provinces in this dominion which put such licence restrictions around men that it is virtually impossible for a tradesman to go out and get work, unless he happens to be able to qualify for a licence, utterly disregarding the possibility of the man's making a living, in the event of his not being able to get work at his trade, it is a disgrace to the house and to the country that in the presence of such a situation we calmly contemplate a measure like this.

If the condition has been so bad up to the present time, then I ask any hon. member: What do you suppose it will be when the men come back? Let us be realistic. Why not give a pension to all the men who go into the forces, all the men who serve? Why not remove them from the competition in work and production, unless they choose to go into that competition? This thought may startle people, but there has to be something that will startle people, something widely different from anything which has been conceived in high places thus far, and widely different from anything which has been made to prevail in this country thus far.

The question we need to ask ourselves is this: Is this Canada of ours able to produce enough food, enough clothes, enough shelter, enough education, enough culture and enough recreation to provide for the men who don the king's uniform, both while they are in that uniform and afterwards, with all the food, clothing, shelter, education, culture, and recreation they need? If that question is asked, then the answer simply must be yes. I would defy any man in this house successfully to controvert that statement.

If then it is physically possible—and it is going to be physically possible, provided we are able to defend this land—to give those men the standard of living we all know they ought to have, then why not seriously contemplate it now?

After the war we should be able to do a great deal better than we are doing to-day. If it is possible for us to produce all these goods now, what will be the condition after the war? I ask this: What are we going to do with this great amount of bacon we now are gearing ourselves to produce and to supply to Great Britain, when no longer the British people are able to take it, or when they are able to produce their own? What are we going to do with the butter, the cheese and the great amount of clothing we are now enabling ourselves to produce? Are we going to stop producing them, and let men suffer? What a piece of monstrous nonsense even to think of! What are we going to do with the great amount of manufacturing power we are building up in the production of ammunition? Are we going to dismantle the ammunition plants, and turn the men on the streets, saying to them, "We have no further need for you; go and ride the rods"? Are we going to tell them, "Go out into your cities and go on relief, so that the municipalities may keep you"? Why in the name of common sense can we not put those men to work producing food, clothing, shelter and other things, and distributing them among the people of Canada, and thus give the returned men something like a proper standard of living?

What are we going to do about the many devices being perfected during this war to speed up production? What are we going to do with the aeroplanes we shall have in such great abundance when the war is over? Are we going to use them for the betterment of our people? Are we going to use them for the betterment of the people of the world, or are we going to take them out and scrap them? Can any one contemplate the latter proposal with equanimity? If we are going to use them, then we are going to use them for some purpose of production. What are we going to do with the production? We must set ourselves to discover a new system, a new economic order, which will enable us to distribute our goods among our people. Once that is done we shall never have any more worry about supplying men with a fair standard of living. If this government cannot discover a system of distribution, then I say shame on the government, shame on every single man who occupies a cabinet position and shame on every man who sits in support of it.

Mr. MacNICOL: That is surely shame enough.

Mr. BLACKMORE: I am merely saying what is going to be echoed by the generations of the future, and what is being echoed to-day by hundreds of thousands in Canada, from end to end of the land.

This bill is a digrace to Canada. It is an insult to this house. Every member is ashamed of it. I know that, from talking with the members individually; I know the attitude they take. They are just as anxious as I am to see the returned men have a fair chance; that means they must be ashamed of this bill.

Every private member, every minister, must be mortified to contemplate this bill. If the government could not do better than present legislation such as that we now have before us, then let everyone in Canada know it, and know it now.

Let us in this house, all of us, sir, be worthy of the trust conferred upon us. Let us for once not betray Canada. Let us demand what we want. Let us be realistic. Let us decide what is physically possible in Canada, and then let us insist on what is physically possible being made financially possible, for our fighting forces.

If the present financial system be such that it must say it cannot be done, that system thereby declares its own condemnation, insufficiency, impotence, and ineptitude. It gives notice that it is no longer worthy of the respect of any intelligent community. I ask the committee to give us a bill fit to appear in a modern British legislature. I then ask the house to demand that the government make the implementation of that bill possible.

Mr. G. S. WHITE (Hastings-Peterborough): Mr. Speaker, I should like, first, to deal with the remarks of the hon. member for Vancouver South (Mr. Green). He brought out many valuable suggestions with which I am sure the committee will deal fully. I should like, too, to associate myself with the observation of the hon. member for New Westminster (Mr. Reid) to the effect that, after the bill is passed—and I think it will be a fine one when it is completed, despite the violent speech of the previous speaker—in the administration of the act, over which we as members will have no control, there should be on the board at least one man who during the war served as a private soldier.

At the last session the Minister of National Defence (Mr. Ralston) laid down the principle that all future officers in the army must come from the ranks, thereby indicating that at this late date the army recognizes the fact that the most efficient officer must come from the ranks because of his first having served as a private, having become a non-commissioned officer and having later on been promoted to the rank of an officer. Every officer who began service as a private and then served as a non-commissioned officer always understands the private's point of view. One of the great faults in connection with the administration of the Pension Act is that practically all who are in charge—doctors and other officials—never served as privates or non-commissioned officers, and therefore do not understand the viewpoint of the private soldier.

I have dealt with the pension board for twenty years. Since this war began, a battalion left

from my riding for overseas. Quite a number of men have been returned home because of illness or injuries received through bombings and things of that kind. I have made various applications to the pension board and I regret to say that, despite what the hon. member for Vancouver South (Mr. Green) has said, I have received little satisfaction, the board is already tough; quite frequently a letter comes back with two excuses: first, that the injury complained of is not due to military service and, second, that the injury complained of has not been aggravated by military service. Yet in 1939 these men passed a strict examination by a board of three doctors. They were X-rayed and accepted in category A. They went to England and within a few months or a year were returned home and placed in category D or E. Yet these men cannot obtain pensions. That is why I agree with the hon. member for New Westminster when he says that it is in the administration of the Pension Act that we are perhaps falling down.

Unfortunately, when a private soldier or a non-commissioned officer goes to the pension board, he finds that there still clings to that board a trace of the old military discipline. A distinction is made between the private and the officer. I should like to outline one case briefly. This occurred two years ago in my riding. This man, a private soldier, suffered a recurrence of a serious wound which he had received over twenty years ago. The local medical doctor in the pension department sent the man to the Kingston general hospital, where a small number of rooms are reserved for military patients. He was attended by one of the leading physicians in Kingston; he was dangerously ill and it was a question whether he would live. The doctor in charge gave instructions that he should be placed in a private room and be provided with a private nurse because he was delirious much of the time. He was moved to a private room and furnished with a private nurse, but when it came time to pay for this service he found that he had to pay the money out of his own pocket. The total amount paid to the Kingston hospital was $79.50.

I took up the matter with the pension board, and the administrator told me himself—this is not hearsay—that under the regulations as they stood at that date there was no provision for a private soldier to be furnished with a private room in a hospital and a private nurse. I asked him if he considered that a private soldier was not of sufficient importance to Canada to be entitled to a private nurse when his life was in danger, but the administrator said that he

was sorry, the regulations contained no provision for that. To date that man has never been reimbursed for the money he paid to the hospital. The disability from which he suffered was 100 per cent due to the effects of his war wound. We may pass the finest act under the sun and yet have it fall down in administration. If we had a few private soldiers active in the administration of this legislation, much of the present trouble would disappear.

Hon. IAN A. MACKENZIE (Minister of Pensions and National Health): Mr. Speaker, I think the house will generally agree that we have had a most vigorous debate upon the second reading of this bill. I am not going to endeavour to reply to the extremely extravagant, and to my mind unjustifiable language used by the hon. member for Lethbridge (Mr. Blackmore) with regard to this measure. I venture to suggest to my hon. friend that he has not given a wide study to the terms of this bill. If he had, he would have been more conscious of his definite responsibility as a member of this house than to use such extreme and extravagant language.

As I said the other day, there is a tradition in this house with regard to measures dealing with pensions. In days gone by, that tradition has always enabled the house to deal with such measures on a strictly non-partisan basis. During the course of this debate many hon. members seem to have forgotten the terms of reference to the select committee which was agreed to the other day by this house. Not only is this particular measure to be referred to that select committee, but the general provisions of our pension legislation as well as the War Veterans' Allowance Act are also referred to the committee. That committee will have complete jurisdiction, not only to consider and pass upon the adequacy or otherwise of the present measure, but to discuss other provisions of the Pension Act or phases of the pension administration. If hon. members had been mindful and conscious of that fact during the course of this debate, many of the statements which were made would not have been made.

I can say that it was not necessary for the government to introduce this bill at this time, from the point of view either of authority or of administration. We could have functioned until the end of this war. As a matter of fact, it was thought better that this bill should be submitted or that the basic principle should be submitted to the attention of parliament at this time so that a free and unfettered judgment could be passed thereon. Could anything be more fair than that? Yet the hon. member for Lethbridge uses the words "disgraceful and disgusting."

Mr. BLACKMORE: That the bill is.

Mr. MACKENZIE (Vancouver Centre): Can my hon. friend tell me a single instance in which this measure is either one or the other?

Mr. BLACKMORE: People from end to end of Canada are saying it.

Mr. MACKENZIE (Vancouver Centre): The hon. member for Vancouver South (Mr. Green) made a most intelligent analysis of the measure. He has a deep knowledge of pension matters, but he pointed to only one principle in this measure which could be criticized. There is not a single removal of any right or privilege enjoyed by the ex-service man of the great war, with the possible exception of that reducing the quorum of the pension board from three to two. Is there any one in this house who disputes that statement? There is not a single right being taken away from the ex-service man.

Mr. BLACKMORE: What about the—

Mr. MACKENZIE (Vancouver Centre): Would my hon. friend kindly maintain silence?

Mr. GREEN: If the minister wants a particular case, I would say that all the points I raised are restrictions.

Mr. MACKENZIE (Vancouver Centre): There was not a single point raised by my hon. friend. He dealt only with requests made in years gone by, which were not granted, or with provisions affecting those serving in the present war. He cannot show me one paragraph in this bill which takes away a single right enjoyed by the ex-service man to-day.

Mr. BLACKMORE: Does the minister consider that the legislation we have had during the last five years has been adequate?

Mr. MACKENZIE (Vancouver Centre): I have never considered that any pension act was adequate. During my private and public life I have done far more to make our pension legislation adequate than has the hon. member for Lethbridge. We cannot improve legislation by extremism. We can improve it only by cooperation, by working together as Canadian citizens. It cannot be improved by introducing the elements of weird finance into the debate. I understood the hon. member for Vancouver South to say, in reply to an interjection by his leader, that the appeal board heard evidence away from the individual.

Mr. HANSON (York-Sunbury): No.

Mr. MACKENZIE (Vancouver Centre): I am glad to be corrected. My hon. friend must know that the final stage of the hearing is held in the presence of the applicant.

Mr. HANSON (York-Sunbury): It was suggested that with the quorum being reduced from three to two, the third member might be called upon to make a decision when he had not heard the evidence or seen the witnesses.

Mr. MACKENZIE (Vancouver Centre): If there is substantial objection to the number of the quorum, I shall be glad to leave it as it is. The leader of the opposition referred to another section as giving a pension to somebody. May I assure my hon. friend that we are doing nothing of the kind. If there is objection to that section, I shall have no hesitation in having it removed. An attempt is being made to make the period of service in another body count as service under the terms of the Pension Act in qualifying a man for pension. If there is objection to that section, let us strike it out. Not a single right is taken away from anyone by this bill.

With reference to the points that have been raised by the hon. member for Vancouver South, every one of them was discussed in years gone by in other committees of this house and every one of them was rejected.

With regard to those serving in the present war, a committee has been set up to consider this very question of service within Canada as against outside. An important question of principle is involved. It is, I might say, the only important question involved in this measure, apart from the extended benefits that are given to every Canadian serving with the imperial forces. That question will be thoroughly discussed by the committee. I can assure my hon. friend that no restrictions whatsoever will be placed on the committee's deliberations. There will be the fullest, freest, frankest discussion of the Pension Act generally, of war veteran allowances generally, and of all other measures which are necessary to effect a real rehabilitation of our ex-service men.

May I suggest in closing, Mr. Speaker, from what I have seen of the committee, that I know the spirit of the committee will be better than that which has been displayed by some members of the house this afternoon. I am sure the committee will meet in a spirit of cooperation and helpfulness and with an earnest desire to bring back into this house a measure which will do justice and fairness to our men who are doing so much not only for Canada but for the empire, the world and Christianity itself at the present time.

Mr. MacNICOL: May I ask the minister, following the excellent statement which he has made on this measure, if the subject of widows' pensions will be brought before the committee?

Mr. MACKENZIE (Vancouver Centre:) Not only that, but it is my intention to ask my hon. friend himself to present their case.

Motion agreed to, bill read the second time and referred to the select committee on the Pension Act and war veterans' allowances.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, February 28, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Macdonald (Kingston City) in the chair.

Mr. DIEFENBAKER: Mr. Chairman, since I started to discuss the matter of aircraft production, events have happened which have made great changes in Europe and brought home to us the fury that may well sweep over Europe within the next few weeks. The Prime Minister (Mr. Mackenzie King) said this afternoon that, so far as he knew at the present time, this session would be devoted in the main to a discussion of the war appropriation bill and the budget, that all our ideas would be directed to one matter, that of winning the war.

The attitude which we on this side of the house take is that we owe it as a duty to those whom we represent to do everything we can at this time and during this discussion to remove the veil of secrecy which to-day conceals from any of our people the gravity of the situation in this country and in the empire. Apathy must be swept aside because for too many people in this dominion the war is yet but a daily radio programme of changing events.

The attitude we take on this side of the house is that one of the things that will be of paramount importance in determining the outcome of this war is air power and aircraft production. We have heard from the Prime Minister himself that Canada's contribution to the air training scheme may well be the determining and decisive factor in this war. Churchill has called for planes, and still more planes.

I make these explanations for the reason that they accord me an opportunity of saying why I intend to devote some time this afternoon to a discussion of the speech delivered the other day by the Minister of Munitions and Supply (Mr. Howe) and to the MacMillan report, and also to a discussion of the Breech report, be it written or be it verbal.

Let me say that my reason for suggesting the return of the former Prime Minister of this country to head a committee or commission to look into aircraft production in Canada was to assure the people of this dominion that there would be placed at the head of an investigation of our aircraft situation a man whose patriotism will never be doubted, a man whose industry and capabilities have meant so much in the past to this dominion.

We have business men in Canada to-day who are devoting their best talents to assisting this country at this time. I am not one of those who cast ridicule on men who are serving this country for one dollar a year. They are men whose aim is to contribute something to our war effort at this time, and I think one of the finest examples is Mr. H. R. MacMillan, chairman of the war-time requirements board, who in a speech delivered the other day in Vancouver epitomized the situation as he saw it as a result of the experience he had had. This is what he said in part:

> In this case the balance sheet of Canada is the war. Nothing else matters. If we find that our capacity for making an effective war performance—say in the supply of ships and guns and aircraft and munitions—is defective, then it should be our duty to make the needed change without delay, and we should make it with one single motive, to increase the efficiency of our war effort.

Having regard to what has taken place and the objections that have been made by business men who have assumed positions of responsibility, naturally the question suggests itself to all of us: Are the efforts of these business men being emasculated by controls exercised by government officials?

What of the aircraft situation? I have indicated the views of the Prime Minister and of Mr. Churchill on the importance of air power. Is the aircraft production situation in Canada to-day what it should be? The Minister of Munitions and Supply himself admitted that it was not, and he was quite frank in that regard. We have the right to know what the situation is. We have a responsibility not to sit by in silence and condone the failure of the government to organize properly the aircraft industry of this country.

Take the other side of the picture. What is the position in the United States of America? William Knudsen was appointed to take charge of aircraft production. What has happened? In December, 1940, it was expected that only 700 planes would be produced; the production was 799. In January, 1941, that production had increased to 1,306 planes, and it is ever on the increase, because the government of the United States realizes that only through an ever-accelerated aircraft production can the United States properly defend herself and assist this empire.

What of the situation in so far as Federal Aircraft Limited is concerned? The minister has stated that it was organized by the government to assure the production of fuselages for twin-engined Anson bombers, and to coordinate the industry throughout the dominion. It has failed to date. I say that, not in an attitude of gloating over that failure. The minister was optimistic last July when he spoke in this house, but he did not tell us it was optimism; at that time he indicated that the situation was such, with the organization of this particular corporation, that all would be well. These are his words on July 30, 1940, as reported in *Hansard* of that date at page 2116:

> Early in 1941, we expect to have a production of 360 planes per month, or about 12 planes per day, Sundays and holidays included, on the basis of production now arranged for.

Those were his words. Production was arranged for; the expectation was placed before the house. Then he went on to say this:

> In order to coordinate the work of these nine firms—

That is, those who were producing aircraft.

> —and to ensure a supply of raw materials, engines and instruments, as required, a wholly

government-owned company, Federal Aircraft Limited, has been formed to take over the responsibility of the government for the production of aircraft of this type. It is anticipated that Canadian production of Ansons will commence before the end of this year.

That was the promise. The performance is that the promise is being carried into effect only in a very small measure. Why, even in November last, the minister asserted that all was well. According to *Hansard,* page 263 on November 20, he said this:

With regard to aircraft production, our aircraft industry is expanding rapidly and is producing planes to meet the requirements of the joint air training plan, and is also building operational aeroplanes for Great Britain and Canada. The output of planes is expanding each week in this new Canadian industry.

And then, a little further down:

The industry is in process of being reorganized on a production line basis.

That was the interim report. To-day the admission is that we are not producing sufficient planes for training purposes in Canada, and that it has become necessary to import such from the United States.

What does Mr. MacMillan say in his report? His report on this matter appears on page 7 of the appendix to the *Votes and Proceedings* of February 27:

(L) Aircraft:

(1) (a) Anson's—Production might not start until after July, 1941, and might reach only 200 to 300 in 1941—

Compare that with the promise, the expectation in July, 1940. Mr. MacMillan continues:

—but if carefully reorganized at several key points, and if time lost by failure of subcontractors can be recaptured, 1941 production might be doubled—

And so on. I ask the minister when he replies to tell the committee whether the "careful reorganization at several key points" has been proceeded with; if so, what was the nature of the reorganization, and what were the key points? Second, who are these subcontractors who are to-day retarding the aircraft production of this dominion? I further ask him this, what reorganization is taking place to enable these qualified promises of production to become actualities? What assurance has parliament and this country that the record of failure established since the set-up of Federal Aircraft Limited, six months ago, will prove a foundation for success in the next six months?

[Mr. Diefenbaker.]

I now refer the committee to an interview given by the Minister of Munitions and Supply, as reported in the Windsor *Daily Star* of February 1, 1941.

Mr. MARTIN: That makes it an accurate report.

Mr. DIEFENBAKER:

Commenting on reported aircraft production delays, Mr. Howe said that the Avro Anson bomber programme to provide machines for the empire air training plan would be at least three months behind schedule.

In November last he said that there would not be any falling behind schedule, but that Canada was able to produce these planes in sufficient numbers to meet the need.

Mr. HOWE: Can the hon. member quote my remarks to that effect?

Mr. DIEFENBAKER: I have just quoted them.

Mr. HOWE: But they are not exactly what the hon. member said the second time.

Mr. DIEFENBAKER: I will quote them so that there will be no misunderstanding:

The output of planes is expanding each week in this new Canadian industry. Existing plants have been extended and new plants have been, and are being, constructed. The industry is in process of being reorganized on a production-line basis. Canada is now building complete aeroplanes—

And so on.

With regard to aircraft production, our aircraft industry is expanding rapidly and is producing planes to meet the requirements of the joint air training plan.

Does the minister say now that in November sufficient planes were being produced to meet the requirements of the air training scheme then?

Mr. HOWE: Yes.

Mr. DIEFENBAKER: Then I ask the minister when he replies to tell us what happened during the interval between November, 1940, when he gave the interview, and February 1, 1941. It is not the minister's responsibility, I know, because during part of the time he was away. What happened during the time from November 20 to February 1 to cause a falling away in the production of Anson trainers? I go on from there in referring to the interview:

He said he had not decided whether production could be speeded up by taking supervision of this project away from Federal Aircraft Limited, a company set up by the government last summer to handle the Anson job. "At the present moment I cannot see any guarantee

that we could get planes more quickly if we upset the applecart and took this job out of the hands of those we organized to handle it" he said. "But we are still studying the situation. Our only object is to get the planes in the quickest way."

I now ask the minister to tell the committee whether the matter is still being considered, whether the continuation or discontinuance of this particular corporation is now being considered, or whether a final decision has been arrived at. I refer further to a statement that the minister made on his return from overseas, as reported in the press:

Federal Aircraft is in no worse shape than the rest of the aircraft industry in Canada.

Was that statement made as an excuse or as an indictment, because, when I read Mr. MacMillan's report, I find that the Noorduyn company, the Fleet, and the de Havilland are all on a smooth running basis and that their orders are being completed. They are commended for their efficiency?

Mr. HOWE: It does not say they are up to schedule, though.

Mr. DIEFENBAKER: That is the information which the committee wants, whether or not these companies are up to schedule.

Mr. HOWE: If the hon. member will read a recent *Hansard* he will get pretty much all the information he wants. He is sort of beating the air, it seems to me.

Mr. HANSON (York-Sunbury): That is a provocative statement.

Mr. DIEFENBAKER: The minister gave to the house before, in July and November, information that has not been justified by subsequent events, and we accepted those statements then. We are asking to-day to be assured that in the coming months the promises and the expectations of to-day will be the realization of to-morrow There were delays from July until now, delays until the 1st of July, 1941. The people of the country have a right to demand that these delays shall no longer be tolerated. If these machines are not turned out as they should—and the minister has been frank in that regard in saying that they have not been—then what the committee and the country want to know is, what changes will be effected that will ensure that such a condition shall not continue until the march by Hitler against the British empire commences?

The minister says that, because of the fact that we are able to secure supplies from the United States of America, our air training plan is not suffering. Yes. But if, perchance, that country went to war and it became necessary, in consequence, to assure a supply of these training planes for the United States, where would this nation be?

The MacMillan report says that the subcontractors have been to blame. Who they are we do not know; where they are we do not know. The committee wants to know, too, why it was that Federal Aircraft, set up as a designing corporation, went into private manufacture and acquired premises for factory purposes in the city of Montreal within the last few months. Who made the decision to alter the set-up of Federal Aircraft in that regard? Was it the company, or was it the minister himself? The minister has made the statement that all the plants in Canada are operating to capacity, and his explanation for delays is the fact that the industry is a new one and that it is not properly developed. I ask him, then, why it is that the de Havilland Corporation to-day is finding it necessary to reduce its shifts and hours. I ask why the Cub Aircraft Corporation in Hamilton, Ontario, which I am informed is able to produce Avro parts, is not being utilized. I ask why National Steel Car at Malton is not being operated to full capacity. Is it the subcontractors? Have they fallen down? If they have—and the evidence seems clear that they have—then I suggest to the minister that under the powers contained in the National Resources Mobilization Act the government act now and take over these corporations that are delinquent. Last June this legislation, the National Resources Mobilization Act, was put through the house, and we were told that it was necessary to ensure its early passage so that something could be done without delay. Here are the powers:

Subject to the provisions of section three hereof, the governor in council may do and authorize such acts and things, and make from time to time orders and regulations, requiring persons to place themselves, their services and their property at the disposal of His Majesty in the right of Canada, as may be deemed necessary or expedient for securing the public safety, the defence of Canada, the maintenance of public order, or the efficient prosecution of the war, or for maintaining supplies or services essential to the life of the community.

The power is there. It was not put there for no purpose. It has not yet been used.

We now come to one other report, the Breech report.

Mr. HOWE: Does the hon. member know anything about a Breech report? I am sure I do not. What information has he on it? Is there such a report?

Mr. HANSON (York-Sunbury): That is what we should like to know.

Mr. HOWE: I know of none.

Mr. DIEFENBAKER: The minister says he knows nothing about the Breech report. Is there such a report as the Breech report? At page 922 of *Hansard* of February 21 the minister is reported as follows:

I can say to my hon. friend, however, who believes, as does the leader of the opposition, that the Breech report recommended that the Anson programme should be taken away from Federal Aircraft, that it recommended nothing of the sort. It recommended that it be not taken away from Federal Aircraft. It made one or two recommendations in connection with the organization of Federal Aircraft, but said the programme was rapidly rounding into shape. That shows how far afield we can sometimes get.

I now ask the minister to tell the committee about this Breech report; what were its recommendations? He has stated that it recommended that the Anson programme be not taken away from Federal Aircraft, and made one or two recommendations in connection with the organization of aircraft. Therefore, I now ask the minister to tell us something about that report. He told us a few minutes ago that it does not exist. On February 21 he told of its existence. Then he went on to say:

Perhaps I can lay on the table the part of the report referring to aircraft, but I am afraid that hon. members would then ask for the rest of it. . . .

And then he said:

So far as the report of Mr. Breech is concerned, I have never seen it.

Mr. HOWE: Let me read the context of what my hon. friend is now reading. Before that, I said:

I should like to give the house the report from Mr. Breech, but unfortunately that was made orally to the wartime requirements board.

Mr. HANSON (York-Sunbury): There was a report, written or verbal.

Mr. HOWE: It was, I presume, in Mr. MacMillan's report to myself. That is just what I said. My hon. friend just passed my words by in reading the statement to the committee.

Mr. DIEFENBAKER: As the hon. gentleman said, "That shows how far afield we can sometimes get."

What is the nature of the recommendations? Further, with reference to what the minister has stated, I ask him, what information did he get from Mr. MacMillan and Mr. Henry as to the contents of that report? He said:

So far as the report of Mr. Breech is concerned, I have never seen it. It was made orally I think. I have questioned Mr. MacMillan and Mr. Henry, who accompanied Mr. Breech—

Mr. HOWE: I said Mr. Carmichael, I notice it is misreported in *Hansard*.

[Mr. Howe.]

Mr. DIEFENBAKER: Then it should be Mr. Carmichael.

—and I have every reason to believe that the views of Mr. Breech are reflected in Mr. MacMillan's report.

There is only one way in which the minister would have reason to believe that, that is, if he knew what Mr. Breech's views were. I ask him to elucidate that and explain it for the benefit of the committee.

The minister seems loath to disband Federal Aircraft, and I am not saying that he is not justified in his view. But what we want to know is, what are the reasons why a company that to date has been unsuccessful should be continued in existence.

I also wish the minister to advise this committee whether the Breech report recommended a reduction in the number of aircraft types to be built in Canada; also whether it recommended that R. P. Bell, the present director-general of aircraft production, should have wider powers and be free to make his decisions in connection with aircraft production without interference of any kind.

There were certain suggestions that I placed before the house the other day. In addition to those, I should like to ask the Minister of Finance as well as the Minister of Munitions and Supply to inform the committee whether a decision has been arrived at on the part of the government that the major portion of Canada's war effort should be restricted to the army or to the air force, because I notice that during the year ending January 31 some $141,000,000 more was expended upon the army, upon the militia, than upon the air force. Yet we have been given to understand from time to time that aircraft production, personnel, et cetera, were considered one of the most important contributions that Canada could make.

With regard to Federal Aircraft, I would ask him to advise whether in his opinion its failure has been due in part to divided control. In England the government has set up no such corporation. Their efforts have won the admiration of the world. Each service is under the direct responsibility and supervision of a minister, aircraft production being under Lord Beaverbrook who is a member of the war cabinet and makes his report direct to parliament.

There is another phase I wish to take up, with a view to suggesting to the government that efforts be made and sanctions be adopted with a view to assuring that maximum efficiency shall characterize the expenditure of the moneys that are to-day being raised by both loan and taxation. The committee on war expenditures that was set up in Great

Britain studied this question at great length and came to conclusions that might very well be adopted by this parliament. I am not going into the matter in detail, except to refer to one recommendation that was made:

> Your committee desire to record their emphatic opinion that no industry should be exempt from obligation to submit its costs to investigation by government accountants for the purpose of determining the prices to be paid under non-competitive contracts with government departments together with more supervision of costs where contracts are let on a cost-plus basis.

I am suggesting the adoption of a like principle for the consideration of the minister, in order to allay any suggestion of suspicion or concern in this country that will in any way undermine our war effort, because uncertainty and fear and suspicion will breed apathy in this nation and will result in a slackening of our war effort.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. DIEFENBAKER: Mr. Chairman, when the committee took recess I was dealing with the recommendation of the committee in the United Kingdom. I now pass on to another phase, and suggest that the government use the national registration to secure the labour categories which in course of time may become scarce, particularly with a view to ensuring that all technical men shall be mobilized in the service of the state.

I, too, add my plea to that made by other hon. members that more effective use be made of smaller plants located throughout the dominion. I am more than pleased with the action of the government, taken with a view to securing stricter control of expenditures and to make possible the recommending of economies, in setting up the committee on war expenditures.

I was pleased to hear the Prime Minister (Mr. Mackenzie King) state yesterday, if I understood him correctly, that so far as he was concerned the government was not going to demand that the committee sit in secret. In my opinion the only occasions upon which it should hold secret meetings would be those when the national safety might be jeopardized. I believe, if the meetings throughout are held in secret, suspicion will be aroused in the minds of some people that politics are being played. On the other hand if, for the most part, the sessions of the committee are held openly, the people of Canada will be able to judge as to what members of the committee are endeavouring in any way to play politics, whether they be on the side of the government or of the opposition.

There must be stricter control of expenditures; the people have asked for it. I was pleased with the attitude displayed by the hon. member for St. Antoine-Westmount (Mr. Abbott) and the hon. member for Selkirk (Mr. Thorson). Their attitude was that taken by this party, namely, that it will be our desire to enter the committee in a sincere spirit of patriotism. We will approach the work, not with a desire to search out picayune faults, but with an honest desire to help the war effort, and to make recommendations, general as they must be, to speed up the tempo of the war effort. We will endeavour to ascertain what, if anything, is holding up the production of munitions, if indeed there is such a hold-up; and, in particular, we will inquire into the hold-up in aircraft production and have an opportunity to suggest remedies.

The people, however, must not expect too much from the committee. If we are to sit until the end of the session, a matter of only two months and a half, at the outside, in view of the fact that to this date 85,000 contracts have been awarded and 1,500 new contracts are being awarded each week, it must be realized that all the committee can do is to generalize. It will not and cannot, as I conceive the situation to be, enter into consideration of individual contracts.

The attitude of Conservative members on the committee, as it has been in the house, will be to subordinate party interests to the public good, just as the blueprint of this party since the outbreak of the war has been to couple fair criticism with honest cooperation with the government in a national war effort.

In conclusion, I would say that, before this debate is concluded, we want action with regard to the matter of aircraft production. The country must be assured that the failures of the past will be rectified. It must be assured that anyone who to-day is hampering production in any of the departments, either through inefficiency or negligence, must go. After eighteen months of war, the period of trial and error should be over. We do not wish to criticize only for the sake of advancing arguments to injure the government. Far be it from us to take that attitude,—although the government has shown signs of being allergic to all types of criticism. Our attitude is that aircraft production must be speeded up. In this life and death struggle there will be no second chance for our empire. Excuses for non-production of aeroplanes or other munitions of war will avail nothing when the test with Hitler arises.

To-day people are making demands. They are asking us—and that is why we are here—to get assurance that the maximum war effort of which this country is capable shall be given. They are asking for a maximum, measured not in terms of amounts but rather in amounts coupled with effectiveness and efficiency. The people of Canada want to help. They want the facts. They are prepared to face those facts, and if mistakes have been made they want to know that those mistakes have not been and will not be condoned.

Let us all in a spirit of cooperation and calm deliberation meet this challenge to our very liberties and our lives; and when a course is decided upon or when changes must be made in the interests of the safety of the state, let us proceed to carry out those plans ruthlessly and with determination.

Mr. McIVOR: Mr. Chairman, I had hoped not to say anything in this debate, because I know the minister is quite capable of taking care of himself. I would, however, be derelict in my duty if I did not say that we are thankful to the Almighty that he is here to-night and is able to come bubbling up over the top of all this fighting just as safely as he did when that boat was sunk on the other side of the Atlantic. I feel it is the duty of hon. members to show up any weak spots, but when the hon. member for Weyburn (Mr. Douglas) was dealing with the aircraft industry I was sorry that he stopped short of Fort William.

Fort William is alive. A writer in a magazine stated that no Hurricanes were being made in Canada, but Hurricanes are being made at Fort William. Fort William is in Canada; therefore the logical conclusion is that they are being made in Canada. Some have said that no Hurricanes are being made, that they are just being assembled. We admit that the engines come from the other side; but if hon. members could see, as I have seen, the piles of raw material, of long pipes, of large sheets of metal, all of which are to be cut and filed into shape and fitted to the proper spot on the plane, they would realize that a great deal is being done there. When it is said that no Hurricanes are being made in Canada, they should think of Fort William. I know that all planes made in Fort William or any other place in Canada are made either for the dominion government or for overseas under the control of the dominion government. It is impossible for a plane to be shipped out of Canada without the authority of the government of Canada through the Department of External Affairs.

The factory at Fort William is increasing its production all the time. It is expected that it will be producing twenty-five or more planes a week. Judging from the present results, I know the number will be more. For the week ending February 8, they produced seven planes, or one a day; for the week ending February 15, they produced fourteen; for the week ending February 22, they produced thirteen and for the week ending March 1, they produced fifteen. The small production in the first week of February was due to a shortage of material. Much of this material was being procured from Great Britain and perhaps Germany was able to prevent some of this from reaching Canada. The minister, however, made some trips to the United States, and he has found a way for us to get engines and other material. I think we have a right to be grateful for that.

I should like to say a word about the management. The management of this aeroplane factory at Fort William is as efficient as the management of any other concern in Canada. Generally speaking, the foremen and inspectors are locally trained, although there are some exceptions. Young men who went to school in Fort William and Port Arthur were taken on and trained in the making of an obsolete plane called the Grumman. At that time this plant could not obtain permission to make a more up-to-date or modern plane. One of these young men is the general foreman, and I would say that there is no better man in Canada. He has considerable sense because when he found a young lady he liked, he had a member of this house help him tie the knot.

Mr. HANSON (York-Sunbury): Does the hon. member know that the Hurricanes being manufactured at Fort William are on British government order entirely?

Mr. HOWE: Just to clear the record, they are being manufactured on contract between the Dominion of Canada in the right of the Department of Munitions and Supply and the Canadian Car and Foundry company. Let us have the record straight.

Mr. HANSON (York-Sunbury): But for the British government entirely. Mr. MacMillan's report says that.

Mr. MACKENZIE (Vancouver Centre): But for the same war.

Mr. McIVOR: All I know is that when the Canadian Car wanted to send planes out of Canada, they had to get the permission of the former Minister of National Defence, the present Minister of Pensions and National Health (Mr. Mackenzie). I do not think there is anything that goes out of Canada to Great Britain, or even out of the United States to

Great Britain which is not known to the Minister of Munitions and Supply and Mr. Purvis.

I was speaking of the staff when I was interrupted. The staff is well balanced because there are about 500 girls working in the plant. That shows that in this plant there is the making of a future great industry which will go far beyond its present capacity. Then, again, this plant is staffed by men and women who honour the right of men to organize. They have one of the best trades unions at the head of the lakes, one which is second to none in Canada. They had a terrific job organizing this union because employment increased so rapidly. I should like to pay my tribute to the trades union executive. These men have the milk of human kindness in their hearts. When a man passes on or someone suffering from sickness must go away for treatment, they pay the bills. I do not know of any other organization in Canada which does that sort of thing.

This organization has banded together and has donated one and perhaps two Hurricanes. The Montreal plant is donating the material and the men and women at Fort William are giving two days' pay, which ranges from about $8 up. These Hurricanes will not cost the Canadian or the British government one cent, and we hope the British government will accept them, as I think they will, in the spirit in which they are given. There is another thing about this splendid plant at Fort William which I should like to mention. "All work and no play makes Jack a dull boy." That proverb lives because it is true. The men of this plant organized their athletics with the same energy that they give to their jobs. Last summer they won the hard-ball championship of the Thunder Bay district and they played so well that the big league scouts were up there looking for talent for the coming season.

They entered a team in the hockey league this winter. Against keen competition they have topped the league. They are ready to go through a stone wall to secure a goal or make a home run. They are putting into their games the same energy as they put into their work. I ask the hon. member for Lake Centre (Mr. Diefenbaker) to note this. If all other organizations are like this one, there is nothing to worry about. Then the production will be like that wheat which they used to raise in Manitoba in the early days, and sometimes yet, known as No. 1 hard.

There has been no sabotage in this plant because the man in charge of maintenance showed great sense by appointing a real Irishman as a policeman in charge of the guard. They know they are being taken care of. This all-round industry is very sensitive, and so am I when members in this house say that it is not functioning with efficiency. It is functioning far better than I ever expected it would function, and I visit the plant regularly. If all war industry in Canada were functioning as efficiently as this one plant, I am sure that Hitler would soon find himself in the place where he hoped to send the Minister of Munitions and Supply when his boat was torpedoed.

I should like to congratulate the hon. member for Lake Centre upon one suggestion that he has made. He thought it would be a good thing to invite the Right Hon. R. B. Bennett to come back to Canada. I am sure that if he came back and spent six months under the leadership of the Prime Minister (Mr. Mackenzie King), he would never sit among my hon. friends to my left on this side of the house but would blossom out as a real Liberal so that wherever he might be he would have honest Liberal action.

There is one thing more I should like to say about the plant at Fort William. I believe that it will lead the rest of Canada, just as it is leading it now in production, in efficiency, in harmony among the workers, and in kindness and courtesy between the management and the staff, and I resent anybody in this house saying one word against the minister who fathers an organization of that kind. He has given gladly of his time. I have invited him out of the house on several occasions to meet the executive of the Canadian Car, and he has always surprised me by accepting the invitation. Sometimes we would meet in room 16 and sometimes upstairs, and the knowledge he had of aeroplanes and the aeroplane industry in those early days was a revelation to me. He showed the executive of the Canadian Car that he knew far more than they did, and I gladly pay my tribute to the minister. I get a little bit hot when anybody blames him for insufficiency or shortcomings. He has always been honest and fair and has conducted his department in such a way that the government and the people of this country can take off their hats and say: "Thank God he is living."

Mr. MacNICOL: Mr. Chairman, I am sure that we all feel refreshed by the address of the hon. member for Fort William (Mr. McIvor), but I wish he had told us just where he thinks the minister would have gone had Hitler succeeded in sending him on his way. For fear there may be any misapprehension as to the region the hon. member had in mind, I am sure that he meant the minister would have gone to heaven.

In view of the bitterness of the remarks of the Minister of Munitions and Supply (Mr. Howe) when he spoke earlier in this debate and the bitterness of the Prime Minister's remarks in reference to anyone who might offer any suggestion that might be construed as criticism, I hardly know how far I should go. However, I was sent here to speak on behalf of my constituents and I am going to present my arguments as I see fit. But, before doing so, I should like to repeat to the minister, for whom I have a warm feeling as one business man for another, a verse that I quoted once for the benefit of the Minister of Pensions and National Health (Mr. Mackenzie) when in former years he would get hot under the collar and say something that perhaps he did not intend. I must say that he has greatly improved since he took to heart this ancient verse which I am now going to quote for the Minister of Munitions and Supply, with the hope that he, too, will not get so hot under the collar from now on, because, after all, when a man gets heated he loses control of himself.

Here is an ancient Brahmin proverb which I found in a very old book. It reads like this:

> Proceed not to speak or act, before thou hast weighed thy words, and examined the tendency of every step thou shalt take: so shall disgrace fly far from thee, and in thy house shame shall be a stranger; repentance shall not visit thee, nor sorrow dwell upon thy cheek.

From what the hon. member for Lake Centre (Mr. Diefenbaker) said this afternoon, it would appear that the minister, being heated perhaps, has on one or two occasions given different answers to the same question, but if he keeps before him the verse I have just quoted I hope he will be able to control himself from now on.

For my part, I admit that every member of this house is just as sincere as I am in trying to plan to win this war. I do not think there is in this house any man or woman either who is anything but sincere in doing what he or she can to win the war. So I grant all sincerity to the minister in what he has done.

At the same time I hope that the minister and the Prime Minister will admit that the press is also sincere. I cannot for the life of me understand why any bitter words should be heaped upon the press. They have a number of highly paid men on their staffs, although not anything like as highly paid as they should be. To be a successful journalist a man must have a love of writing and digging, and they never get paid for that. But they do write and dig, and give advice; and whenever I have seen in the press what might in some quarters be interpreted as criticism of the efforts of the minister or of the government, I take it that it was advice honestly given to urge the government towards further improvement. I am quite satisfied that the journalists and the press of this country are as sincere as any of us in this house in our desire to win the war. Then why criticize them bitterly as they were criticized earlier in this debate for what they wrote for the benefit of this dominion?

Similarly I believe that every member of this house is sincere in what he says. We may not agree, but we are all sincere in what we have said.

I should like now to refer to a few of these press articles to see if they are guilty of the insincerity that was attributed to them earlier in this debate. On February 5—that was pretty early, just about the commencement of criticism of a strong nature—there appeared in the Toronto *Telegram* an editorial entitled:

> Fumbling on vital matters painfully apparent at Ottawa.

The minister and the Prime Minister may have been annoyed at the heading of that editorial, but it is absolutely true. The editorial reads:

> Critics of the compulsory thirty-day military camps who held that these brief periods of training were useless in making soldiers out of civilians, and therefore a waste of money, find confirmation for their opinions in the announcement by Prime Minister King that draftees will now be given a minimum of four months' instruction.

The editorial goes on to quote the reason which the Minister of National Defence (Mr. Ralston) gave for the thirty-day training plan, namely, that so many more men could be trained. Further on, it refers to the fact that the longer period will ensure that the men will be much better trained, and that is admitted by the government. Therefore the press were not in any error in saying that. They were right, too, in saying there was fumbling, because there certainly was. Consequently, Mr. Chairman, I am convinced that we often fly off with no sound ground for doing so.

I remember what the Minister of National War Services (Mr. Gardiner) said about the manufacturers, that if they were not big enough to do such and such and let their men get away for the thirty days training, they were not big enough to run industries, or words to that effect. Later on, however, the Prime Minister approved an extension of time so that industry would not be injured in that way by the thirty-day training plan. The press was not wrong in that instance.

Mr. HOWE: Sometimes it is right.

Mr. MacNICOL: I beg pardon?

Mr. HOWE: I did not say they were always wrong.

Mr. MacNICOL: No, I know the minister did not. I come to the *Telegram* of February 6. It says:

Lack of competent direction is paralyzing Canada's war effort.

Perhaps the government and the minister were annoyed at that.

Following the recent statements of air minister Power and supply minister Howe the government can no longer cloak the fact that its aeroplane production programme is in a terrible tangle.

The editorial makes reference to the air minister having said that the necessity to use three planes in training where he should have had four, was not his fault. But, being a really courteous minister, he did not care to elaborate on that. In fact, if I might digress for a moment, I regard our air minister as one of the best members of the cabinet. He has backbone, and I admire a man with backbone.

Here is another editorial, written in Ottawa by the editor of the *Journal* and commented upon in the *Globe* of February 6, entitled "The Part Canada Plays". Perhaps the minister, or the government, or both, might be annoyed by the tenor of the editorial. A comparison is there made between the results of the programmes in Australia and in Canada. The Australian programme does show up pretty satisfactorily. I am not going to denounce or belittle Canada's war effort, but it could be better. I have criticized what has been done, but I am not going to decry Canadians.

The next item is one of February 7 in the *Globe,* entitled "King Ministry Misled Public, Hepburn Says". The minister and hon. members have read what Premier Hepburn said about the government's war effort, and there is no reason why the press should be denounced because of what the premier of Ontario said.

The Montreal *Gazette* had an article on February 17 entitled, "Equipment Lack Bars Volunteers", and quotes the Minister of National War Services as having said this:

Canada has not been able to use all those who have volunteered for military service since the beginning of the war "because we haven't had the equipment."

That is what the rest of us say; that is what the press says; and therefore there is no reason why either an individual or a journal should be denounced for that.

Then, on February 22, the *Financial Post,* under the heading "Claims Federal Aircraft Suffers Basic Weakness", says this:

Failure of Federal Aircraft, Limited, to maintain its production schedule is not the only reason why the company should be condemned to the "scrap heap" in the view of *Canadian Aviation,* recognized authority on aircraft in Canada.

And so on; one article after another. I have read many of them, and I cannot see any reason whatever for heat on the part of the minister or the Prime Minister. The Prime Minister was particularly bitter the other evening when he denounced criticism.

Mr. RALSTON: My hon. friend has mentioned that before. If he will permit me to say so, I do not think the Prime Minister bitterly denounced any criticism except criticisms by two newspapers. I think he welcomed criticism of a constructive nature.

Mr. MacNICOL: Perhaps I had better read just what he did say. I will do so later, when I come across it.

Mr. POULIOT: Hear, hear.

Mr. MacNICOL: I want to get right down to fundamentals in one matter in particular, and that is, who called the conference which met in Ottawa at the end of December or early in January?

Mr. LaCROIX (Quebec-Montmorency): Nobody knows.

Mr. MacNICOL: My leader, in making his address, did try to ascertain exactly who called the conference. He said this, as reported in *Hansard,* page 1060.

I asked whether early in the year he did not request an opportunity to discuss aeroplane production problems with manufacturers interested in Anson bombers.

The minister of munitions was away. The Minister of National Defence for Naval Services (Mr. Macdonald), who was acting Minister of Munitions and Supply at the time of the conference, replied:

In answer to my hon. friend's question, there was a discussion between the manufacturers of component parts of Avro-Anson bombers, on the one hand, and myself on the other. Whether I requested it or they requested it I am not sure. They came to Ottawa and requested to see me and I spent an hour or two with them.

To me, who called the conference is an important matter, because that is the beginning of the so-called criticism, or of what resulted in the so-called criticism. It is a fact that the Minister of National Defence for Naval Services, then acting Minister of Munitions and Supply, did invite the manufacturers here to Ottawa. There is no question about it.

Mr. HOWE: Has the hon. member seen the invitation?

Mr. MacNICOL: He requested them to come to Ottawa—and rightly, in my judgment. When I got full confirmation of that I said to myself, "the minister of naval services must be a business man, because that is just what a business man would do." Not knowing, perhaps, much, if anything, about aeroplane production, what would a man do who really wished to inquire? He would send for the men who knew. After having a discussion with them, he asked them to send a report, which they did. I am not going to deal with the report particularly; it was dealt with fully by the hon. member for Lake Centre. But one of the clauses asked for the dissolution of Federal Aircraft. That is very plain. After reading the report and observing that the principal request was for the dissolution of Federal Aircraft, the acting minister likely concluded, in my judgment quite rightly, "Now this is a big matter; I will wait until the minister comes home; he will soon be here."

When the minister came home and had the report put before him, he exhibited immediately, I think, a little bit of heat, for the letter which he wrote to the aircraft manufacturers is not in my judgment the most courteous letter that could have been written. Probably he was hurt at the request to dissolve Federal Aircraft. I would not have acted in that way. I myself was employed in big business for a quarter of a century—a business employing well on to a thousand men—

Mr. HOWE: What was discourteous about the letter?

Mr. MacNICOL: —and in operating a big business a man learns to control himself. He must do so, or the business will go to pieces.

Mr. HOWE: What is there discourteous about the letter?

Mr. MacNICOL: I will read the part which I think is discourteous.

Mr. POULIOT: How interesting!

Mr. MacNICOL: It may not be interesting to the hon. member for Témiscouata, but it is interesting to people who understand business. Perhaps he does not know very much about business.

Mr. POULIOT: What I mean is, it was interesting when the hon. member did not speak.

[Mr. Howe.]

Mr. MacNICOL: The minister wrote, on January 31:

On my return from the United Kingdom my attention has been called to the document signed by yourself and several others. . . .

Recommendations signed by six firms with some experience in the manufacture of aircraft—

They are the only people in Canada who had any experience. They are all big manufacturers.

—or components must, of course, receive careful consideration.

Then he asked questions, of which No. 3 is:

As one of the contractors holding a subcontract for this production, what guarantee can you and your group give as to the date when substantial deliveries of Anson planes will be made, provided your recommendations are adopted?

What would I have done? I would have sent for the manufacturers and talked to them across the desk as big men. The minister himself is a big man. He was a business man building big things such as docks, elevators, harbours and so on in his time, and that is what he would have done in his own business. It is also what he should have done in this instance. He should have sent for these men and said, "Let us talk over the table so that I can get your views. I am as anxious as you are to produce aeroplanes in large numbers to win this war".

The first step was the calling of a conference; the second step was asking for the report, and the third step was the return home of the minister and the writing of the letter to the manufacturers.

I should like to go back to the minister's own statements. They were given this afternoon, but it will not hurt to repeat them now. They will be found at page 263 of *Hansard* of November 20. The minister said:

The industry is in process of being reorganized on a production line basis. Canada is now building complete aeroplanes except for the engines, and, for the present, engines are being purchased either in the United States or in Great Britain. Production covers practically every type of training plane in use in Canada and several types of operational planes.

From that I would gather that at the time that statement was made on November 20 last, production was pretty well under way, but earlier, in the month of July, the minister had made this statement. On July 30 he said:

Federal Aircraft Limited has been formed to take over the responsibility of the government for the production of aircraft of this type. It is anticipated that Canadian production of Ansons will commence before the end of the year.

It is almost eight months since that statement was made, and yet Ansons are not being produced in Canada. There is one plane that is being tested and examined, and I presume that in due course the engineers in charge of that plane will arrive at a conclusion as to how the plane should be finally constructed.

Recently the minister said that it would be next April or May before Ansons would be ready to fly, but the MacMillan report, referred to earlier to-day, staves off the time until next July or August; and it is still problematical. The question is, exactly when are these planes going to be constructed? Apparently they are very necessary for training. They are good bombers and good fighters, and in my judgment they should have been turned out before this.

Something was said to-day about the cutting down of hours in these plants. The reason why hours are being cut down is, as I understand, the shortage of skilled mechanics in Canada. The shifts have been reduced from three to two, two ten-hour shifts. I would point out that trained, skilled mechanics cannot be turned out in two or three months. Any business man knows that. An executive is not trained in two or three months, and therefore, by reducing the shifts, they are able to cut down the demand for such men. I am not sure that they will not produce as much, because where a plant operates in three shifts the machines do not go on immediately on each eight-hour schedule. It takes some time for one shift to step out and the other to come in.

In my opinion the government deserves some censure or blame for the fact that in Canada there has been a shortage of skilled mechanics and trained executives to operate machine plants. I remember, after I returned from England in 1937, I told the government in 1938, in the course of the session that year, that, according to the figures I had obtained from the immigration department in England, Canada had already lost from 25,000 to 30,000 skilled mechanics. I warned the government on that occasion that the time would come when those mechanics would be required here. I say, therefore, that the government deserves some censure for the fact that all those skilled mechanics left the country. That was a large number of skilled men to leave this dominion.

I also warned the government that it was necessary for us to get into aeroplane production. I will not read from *Hansard* what I said at that time, but in 1937 I had made a close inquiry into aeroplane production in continental Europe, particularly in Germany, and during the course of the debates that took place then—the present Minister of Pensions and National Health (Mr. Mackenzie) was Minister of National Defence at the time—I strongly recommended that Canada get into aeroplane production; because, from my observations in Germany, I was of opinion that everybody would fly—well, not everybody; that is an exaggeration. Certainly, however, there were very large numbers of aviators passing through the stations in Berlin. I sat in one of the stations there for hours and mentally counted aviators getting on and off trains, and I estimated that in that one station there were about 1,500 men that I observed. There are twelve stations in Berlin and I remember calculating at the time, multiplying 1,500 by twelve, that Germany when she was ready would fight in the air, because there were thus probably 18,000 aviators in Berlin alone. In view of this I warned the government that they should get into aeroplane production.

The same with regard to machine tools. Look at the trouble we are in to-day in this respect. That is one of the troubles in connection with the aeroplane business. I am told on good authority that a large number of machine tools were purchased in Chicago, by the machine controller I presume, and that a goodly number of machines are unsatisfactory for the work for which they were acquired—shapers, planers, slotters, drills and so forth. We are partly to blame for that. After I returned from my last visit to Britain, I made a statement in this house that I had met different manufacturers in England who were ready to build branch plants in this country. I was more or less laughed at for making that statement, but no less a man than the Minister of Munitions and Supply himself gave out a statement that plants would move to Canada, as can be verified by reference to an article headed "Howe Reports British Firms to Move Here." I felt at the time that Canada should be the arsenal and manufacturing plant for Great Britain if at all possible, if and when war broke out.

Mr. REID: What year was that?

Mr. MacNICOL: That was in 1938. I made a statement to the house. In the opinion of anyone travelling through Great Britain as I did, surveying factories by the dozen, large factories, some with as high as 35,000 to 40,000 men, and additions being made, it would have been only sound business on Canada's part to induce some of those new branch plants to come here, because those large bombs would blow some of those plants that I have in mind, off the map. If we had those plants in Canada

now, we would be in much better shape to produce aeroplanes and other equipment required to win this war.

The minister said, I believe a year ago more or less, that it would take about eighteen months to build an aeroplane engine plant in Canada. Well, they built them in Australia; they manufacture their engines in Australia to-day; in fact, they manufacture everything pertaining to aeroplanes except magnetos and carburetors.

Mr. MACDONALD (Kingston City): They are not manufacturing every kind of engine there.

Mr. MacNICOL: They are exporting planes from Australia, and their Wirraway is an extremely fine aeroplane. In an editorial in the *Citizen* of March 4, it is stated:

> Aircraft engines have been imported from the United States to Australia, but the Commonwealth Air Corporation last December celebrated the delivery of its 200th Wirraway war plane entirely designed and manufactured in Australia, with the exception of magnetos and carburetors.

We can do the same thing in Canada. No country in the world has better mechanics than Canada. I say, go to it and try to develop an engine manufacturing plant in Canada, because this war will last more than another eighteen months; and if we have another eighteen months of slaughter in Europe, it may be necessary to manufacture thousands of engines as well as entire planes in Canada.

This is the criticism I would offer to the minister as one business man to another. When it became necessary to develop the aircraft business and build up the manufacture of aeroplanes, instead of setting up the Federal Aircraft corporation with some very good men —I have nothing but good to say about any of them, but what would the minister have done had it been a question of building grain elevators and docks? He would certainly have surrounded himself with men who knew something about the erection of elevators and docks. What would I have done if it were a case of the manufacture of boilers and radiators? I would have surrounded myself with men who knew something about them, and about the rolling of steel and the melting of iron.

The same thing should have been done with regard to aircraft. I would have gone to one of these big aeroplane companies and said, "You do all the pilot work for the manufacture of the Anson plane in your plant." In that way only one group of technicians and executives would be used to develop all that is required to make an Anson plane, whereas if three or four different plants, including Federal, which is a small business, were all engaged, that would increase the number of executives and technicians and experts required. It strikes me as a much better thing to use one of the big plants, any one of them, to develop and complete all that is required to produce the Anson and then say to all the other companies "There, gentlemen, there are the designs and the tools; there are all the particulars in connection with the manufacture of this type of plane; now go to it." One plant would have been the pilot plant and all would do the manufacturing.

I was interested to read this morning about the German bombers now arriving on the borders of Greece. The article said that the fourth German squadron, which is now on the borders of Greece, has apparently about seventeen hundred planes and bombers. That bears out what I saw in Germany. I looked to the future with a good deal of fear—temporary fear—I have no doubt we shall win when we once get organized; we have always won before and we will this time. But at the moment, if the fourth bomber squadron has 1,700 planes, it bears out what I saw in Germany, that there are many thousands of them. We must do the same thing here.

If I were the minister, and I thought for one moment that by calling in the present aeroplane builders or anyone else who could give advice, a better way could be found, I would forget all I had done, if by doing so I could improve for the future. It is absolutely necessary to forget all bitterness or recrimination; that is of no value; it is all water gone under the mill. What we must do now is all to get together with the best we have in the country and produce the most we can to win this war, all of us; for, if we lose, we all go down. That is my parting word.

I have the best of feeling towards the minister. As one business man to another I say: I know your problems; I have been through them; all big business has its problems, and many times I have had to retrace my steps, wash out everything that was behind and commence over again. Many times we have spent money in making preparations that we thought were right, have spent a hundred thousand dollars, perhaps more, found we were wrong, washed it out and started over again, and we finally won. Some people may have lost confidence in the minister. I have not; I feel sorry for him. I say to myself, to whom in the cabinet can he go for advice?

Mr. HOWE: The Minister of Finance (Mr. Ilsley).

Mr. MacNICOL: The Minister of Finance is a financial man and a bright lawyer from Nova Scotia, but the minister wants business advice, technical advice, advice from capable, brilliant manufacturers who have had many years of experience. They do not grow like mushrooms, it takes years and years to develop a capable administrator. I have nothing but the best to say about the cabinet. There has been a good deal of talk about changing the government; that is all past as far as I am concerned; but if the government is to be improved, I should say there should be taken into it some big business executives upon whom the minister could call.

Mr. REID: What about labour?

Mr. MacNICOL: And labour too, a good labour man, a real labour man, an experienced man who perhaps has worked from the bottom to the top. I would trust him; I would not seek advice from a man who had had no executive experience. But what the minister wants is help; he is carrying too big a load to do it alone. As an hon. member said, I, too, thank God the minister came back safely, because he is a big man—yes, I will say this further; I believe it was an act of Divine Providence that he was saved though others were taken; his ability and experience were required here. I am a great believer in God Almighty and His divine direction.

I say to the minister: Retrace your steps. These big executives have said, dismiss Federal Aircraft. That is no criticism of Federal Aircraft; they are good men; in their own line they may be all right. But the manufacture of aeroplanes is a highly specialized business. We must win the war, and if I were the minister I would set an objective of 50,000 planes. If I were Minister of National Defence for Air, or whatever it is he is called—there are getting to be so many ministers I am getting mixed up, myself—I would set an objective of 50,000 aviators and bombers. I would fill the skies over Germany with bombers. There are no better aviators in the world than the Canadians. The Australians are good, and so are the New Zealanders. But none are better than the Canadians. It may be that they have not yet had an opportunity to show what they can do. But I would blacken the sun out over Germany with aeroplanes!

But to do that you have to build them in Canada. Start your engine plant. Even if it takes eighteen months to build it, you can do it. I know you can. Build the engines. I know we are told there would have to be several kinds. No matter how many kinds are needed, let us remember that this is an all-out war. We have to stake all! We have to win! If it requires planes and plants and executives and men and munitions, the minister can do it. But retrace your steps. Let him surround himself with big, successful, executive men, who will back him up when he encounters difficulties, and then manufacture, manufacture, manufacture more planes!

Mr. FLEMING: Mr. Chairman, I am afraid I cannot agree with the hon. member for Lake Centre in his views respecting dollar-a-year men. I find it difficult to follow the hon. member for Davenport. Whether or not he was trying to criticize the government, I was unable to say. But I think he was offering the same old criticism we have heard day after day from the official opposition.

The war appropriation bill now before the committee of the whole contains figures so enormous that sometimes one is likely to conclude that such figures are beyond the human resources of this nation. In the early days of this debate the hon. member for Trinity explained forcefully how these figures mean very little. He pointed out that, after all, only goods and services really matter, and that it is goods and services which constitute the real wealth of this nation.

The staggering amount mentioned in the bill will be accepted by the House of Commons and by the Canadian people, and still more staggering amounts will, in years to come, be accepted by the house and by the Canadian people, because as many hon. members have said, we are in this war to defend that very freedom which was handed down to us by our forefathers. It is difficult, of course, for many people living in the quiet countrysides of western Canada and on the peaceful prairie lands to think that this dominion would ever see the ravages of war. We know that things have happened in other countries, and it is not beyond the bounds of human possibility that such things may happen in our own country.

In discussing the few points which come to one's mind in connection with this appropriation bill I find it difficult to know, in these days of tragedy and tears, whether it is in the best interests of Canada to offer praise or criticism of the administration. After all, they do deserve a certain amount of praise. I do not for one minute believe there is one minister who is not doing everything within his power to make this war effort as efficient as possible. Constructive criticism has, however, been the very cornerstone of our parliamentary form of government.

There is one criticism I should like to reiterate, one which has been made in the

house before, and one which is heard to-day throughout the country, and that has to do with the status to which members of parliament have come in this house. Once upon a time a letter of recommendation from a member of parliament meant something. But to-day, to be recommended by a member of parliament, even for a country post office position, or as to fitness to receive foreign exchange, would immediately lead to the possibility of being turned down. It would be a handicap. The only thing a member can do is to recommend that the applicant go to some police officer or someone of that kind, because we realize that a member of parliament cannot give letters of recommendation to any of his constituents. Who should be more qualified than members of parliament, those who have been elected by the will of the people, to give letters of recommendation? Who should be more qualified than those who have been placed in positions of public responsibility, regardless of their party affiliations, to recommend residents of the districts in which they live?

During this debate there have been various types of criticism. I wish first of all to say that, although I may disagree with many of the policies of the present administration, I will never engage in any personal criticism of a particular minister. I believe attacks against the Minister of National Defence (Mr. Ralston) are completely unwarranted, because no man either in or out of this house has a more enviable reputation for honesty, ability and devotion to duty. The very fact that a suggestion was made that he should be leader of this country, irrespective of the political hook the opposition intended to place upon him, indicated the high regard in which he was held throughout the country. The opposition group would never have suggested his name, had his ability not been known throughout the length and breadth of the dominion.

Then, we remember the abuse which was heaped upon a great western Canadian newspaper, the Winnipeg *Free Press*. Throughout the years that paper has become almost the western farmers' Bible. It has attained that reputation over a long period of time, and it certainly deserves the position it holds. For a long time Doctor Dafoe was its guiding hand, a man who is recognized as a great journalist, probably the greatest Canada has ever produced. The breadth of his vision, the soundness of his background, his knowledge and his public-spirited Canadianism are known from ocean to ocean. The newspaper to a considerable extent has taken on the character of the man. Although it does speak its mind freely when it believes the party is wrong, or when it is misguided, it has been the bulwark of progressive thought throughout the years on western Canada's plains. Although Clifford Sifton did break with Sir Wilfrid Laurier in the famous election campaign of 1911, the Winnipeg *Free Press* did not. It carried on its fight for lower tariffs and reciprocal trade relations with the United States. In that campaign the people who forsook Sir Wilfrid Laurier were his own French-Canadians, the nationalists from Quebec.

Of course, Mr. Chairman, there are so many high-ranking Tories in key positions in this country that the present opposition is able only to tap at any criticism it wants to make. It will never say anything about any departments of government. Every time we meet here they throw up their old smoke-screens asking for a union government or a national government, or for a change in the leadership. This is just a replica of the same old story that their former leader, the Hon. Doctor Manion, carried on throughout the length and breadth of Canada. But when the present Prime Minister asked him to name some of the men about whom the hon. member for Danforth has been talking, those great brains in the country, he was never able to name any.

The only person who has ever been named here was named by the hon. member for Lake Centre. He mentioned that great man, the Right Hon. R. B. Bennett, and suggested that the Liberal government should return him to power, or return him to Canada. This was the man who in a peace-time crisis was discredited by the Canadian electors. The Conservatives virtually threw him overboard, and that is why he is not in this country.

I sometimes wonder whether it is going to be possible for us to continue on this non-partisan government basis. When this part of the session opened, the Prime Minister pointed out that it was more than ever necessary that we steel our hearts and minds to the magnitude of the effort and the sacrifice that would be demanded of us over a considerable period of time. In special measure throughout the next few months the government, because of its party affiliations, will be faced with criticism which is not justified. This government has certainly divested itself of all partisanship, but it is difficult for the public mind to grasp that fact. As the gravity of the war situation grows more intense, it will not be difficult to see what may happen with a non-partisan government. The war is bound to be long and we must do our utmost to promote the best war effort possible. Even though members of this administration may think they are doing everything possible, yet this may not be good enough, it may not be broad enough. It is either freedom for free

men, or medieval slavery. There is no in-between measure; there is no half way measure in the new order that has been set up by the dictators of the totalitarian states.

It is our duty to eliminate from all branches of the service all intrigue and ineffectuality that are seething underneath. These are the things that interfere more than anything else with our war effort. Some of us wish to bring them into the open. If they are brought to the light of day, incompetency, inefficiency and unethical practices will not long remain. There is no use in protesting that they do not flourish and exist in certain places. Of course they do. One of the reasons for this is the fact that Tory magnates from all over Canada are being placed in high positions of authority. Then what do we find? They immediately surround themselves with their Tory heelers. Since the government became non-partisan, we have had grow up a system of bureaucratic patronage that is far more dangerous than any system under which a government appoints its own supporters.

A government must defend its actions in parliament. These dollar-a-year men do not have to stand up in this chamber to defend their actions. That is why none of them would go into the government or assume any position in parliament. They knew they would then have to stand up to defend themselves. At present they defend themselves behind their offices. One does not have to go far afield in this city of Ottawa to see them. They are all over the place and they are working to the detriment of the administration in power at this time. It is an extremely dangerous practice to appoint as controller of a commodity or industry a person who has a large stake in that particular industry. The natural human tendency is to use such control, which amounts almost to a dictatorship, for private interests. We can see many cases of this on all sides. Take this MacMillan affair. Mr. MacMillan should have given an explanation immediately to the press. But no; the people were kept in suspense.

Pick up almost any Ontario newspaper and you will find how the heads of these large organizations throughout this province are criticizing members of parliament or anyone else who offer any opposition by way of constructive criticism. I have looked a number of these men up and checked over the contracts they have. One that is in my mind at the moment is the Otis-Fensom Elevator company. The president of this company is Mr. W. D. Black, and this gentleman was most severe in his criticism about those who had anything to say about the government. Here is what he said:

> There is no evidence that a protracted campaign of minority criticism at the present time can contribute anything to our war effort. There is conclusive evidence that it can seriously impair it, by confusing and distracting the public, at a time when solidarity and a deep sense of common responsibility are absolutely indispensable.

I checked things over, and I found that this company had received capital assistance totalling $9,000,000 from this country and Great Britain. It is easy to understand why this gentleman can say that there should be no criticism. All of these chaps who have these large contracts are against criticism. That is one of the reasons why the Tory opposition dare not criticize these parties. I realize that in a war emergency an excellent case can be made out for increasing cabinet or executive authority. I am not saying that I do not approve that action in a crisis, but executive authority should be employed to fuse all the elements of the country into cooperative enterprise. When it simply becomes an appropriation of the functions of government by a few, then it takes on all the worst features of a dictatorship with little of the redeeming advantages. Democracy is a testament of man's faith in man, but I can find but little faith being placed in members of this house by the administration in the last few months. One member of the government who has taken this House of Commons more into his confidence than any other member of the government is the Minister of Agriculture and Minister of National War Services (Mr. Gardiner). He has done this in connection with the national registration and again in connection with the national salvage campaign.

He has been criticized in both eastern and western Canada. In western Canada they say that he has not done enough for western agriculture, but he has been responsible for every progressive piece of legislation on behalf of agriculture that has been put upon our statute books, such as the acreage bonus, the minimum price of wheat and the active administration of the Prairie Farm Rehabilitation Act. I disagreed with him in connection with the minimum price of wheat, because I thought the price of 70 cents a bushel was too low. He has not tried to wiggle out of facing the difficulties in which agriculture finds itself. He has met these questions face to face, whether in Saskatoon or in London, Ontario. Wherever he has been, he has made out a splendid case for himself. He has told

them straight from the shoulder what the situation was and has not tried to paint any glorious picture for agriculture. He has not advised people to go into the production of pork products or some other commodity, but has explained to them the situation as he saw it. When he returned from England he told the people the exact situation that had been presented to him by the British government. He told the people the details of the wheat situation that existed. He did not rise in his place in the house and advise the farmers of the country to go into the raising of this or that commodity.

The minister has been criticized by the industrialists of the east because he had the courage to rise in his place in this House of Commons and defend his leader when he was being attacked. It was being said that our leader was not a good war Prime Minister although he was all right in peace time. When the minister told the industrialists that the young men in their employ would have to take military training, he was taking the long view of this situation. I think in a year or so the minister will be vindicated. After all these guns are manufactured, there will have to be someone to shoot them. What will these particular factories do when the young men go into training? They will have to change their system and employ older men. That is exactly what the minister was advising them to do, and yet there was a storm of protest in the eastern press.

Everyone wishes to do his or her part in this great war effort. When the minister initiated this national salvage campaign he left it to the members of the House of Commons to do their part. Yet we have one hon. member rising in his place and using most unparliamentary terms when he said that we were supposed to collect bones and scrap-iron. It must be remembered that those particular commodities are made into explosives and guns which will be placed in the hands of our fighting forces. In 1920, Doctor Charles F. Horne, editor of The Great Events of the Great War said:

> The war could no more have been avoided than an earthquake or any other cataclysm of nature's unknown forces. On the one side loomed the German character of strength and patience, of selfish caution in adversity and vain and reckless arrogance in power. On the other, glowed the sunlight of democratic civilization, which has taught all people to aspire to equality, and to prefer death to slavery. Given these opposing forces, and their clash was inevitable. The marvel now is only that we were slow to see the ominous approach to the disaster.
>
> "The war that shall end all war!" Has the human race passed through that stupendous final experience of the great tragedy, the terror and the splendour and despair of destruction and devotion? We may all hope so, but mere hope will do little to change the future. Until the great majority of mankind have been educated into the true democracy, until each one has grown to say in his heart, "I want the same rights and opportunities as my neighbour, and no more", until that altruistic day arrives, strong and selfish men will still somewhere continue banding together in ever broader and craftier conspiracies to snatch the pleasant richness of life from those who seem too feeble or too ignorant to resist.

These words were uttered twenty odd years ago, and I am sure they are as true now as when they were uttered. I realize, of course, that the government has a difficult time in converting Canada into an arsenal. There have been differences in specifications as between this country and the rest of the empire; frequently more difficulties and delays through the changing of specifications, and other difficulties no doubt through a desire not to set up in Canada rivalries in trade.

There have been domestic problems, the difficulty of obtaining tools and skilled mechanics. Yet the impression has spread abroad that there has been too much officiousness in this country and not enough efficiency. Of course we have these high-priced Tory dollar-a-year men like MacMillan and the rest of them who are such characters that no one will ever say a word until the minister first makes a statement, and in that way they allowed controversy to develop throughout the country, with reflections being cast on the aircraft industry. I admit, however, as the minister says, that we are a young nation. We are "in the mushroom stage", he said, but it will be necessary for us to harness all our human resources to our natural resources if we are in the years to come to be strong enough to break Germany's war machine.

Until now we have had the ministers rising in their places and making formal statements out of which one can take any meaning at all. I was sitting on the other side of the house one day and I heard one minister say to another as he sat down, "Well done, you told them nothing."

We must educate public opinion, and in that regard we have failed badly. Before the Minister of Munitions and Supply (Mr. Howe) made his statement in the house concerning the aircraft industry, there was a terrible feeling throughout the country. Yet when the minister gave his explanation of the aircraft situation he showed that the aircraft industry was not in such a bad plight as we thought it was. We had thought we were in a very bad spot in this particular branch of production. This could have all been cleared up if members of the house had been given the information.

There was a splendid address given by Mr. Carmichael over the radio to-night. He showed the production of aeroplanes in the United States and how our production was going, and he gave a satisfactory explanation to the Canadian people. That explanation, however, should have been given long, long ago, before the public mind had become unsettled. If members of the house had had any information, they could have given it out to the public, but of course they would never get any information!

People need inspiration to produce their utmost war effort. Propaganda has become one of Hitler's most important weapons in this new type of war. As J. B. Priestley pointed out in a recent radio address, Hitler tries to sap our resistance by telling us of the horrible things he is going to do to us with the aid of secret weapons and secret machines. What we should be doing is telling him and the Germans of all the horrible things we may have in store for them.

One of the most important changes that we could have in the administration would be to have a ministry of enlightenment. I realize that some of the ministers would not want that because they do not want to disturb too greatly the ordinary methods of gathering the news, but I am sure that, with the situation as it is to-day, even the newspapers cannot give accurate information any more than we can unless they are supplied with it.

The bureau of public information! If anybody ever tried to get information from that bureau, he would soon find out that it was not a bureau of information but a propaganda bureau.

Mr. HANSON (York-Sunbury): Hear, hear.

Mr. FLEMING: A propaganda bureau in the best sense of the word, not in the sense that the leader of the opposition takes it. I do not see why we should be afraid to call it a bureau of propaganda. Mr. Lash, the director of the bureau of public information, in its assigned task of propaganda, is doing an excellent job. But it has not gone far enough.

Mr. DUPUIS: Is he a Tory?

Mr. FLEMING: I do not know, but I suppose so. After all, a ministry of enlightenment could serve in peace time as well as in war, and we might include in that propaganda bureau a legitimate bureau of information, the archives, the national gallery, the national film board, the Canadian Broadcasing Corporation, the historical section now working in the national defence department, and possibly the censors, although I do not think any of the newspaper men would expect to get much enlightenment out of the censors. All of these different activities are now being carried on under a wide range of departments among which in many instances it is difficult to see any relationship. With the tremendous sums of money that are being and will be spent on our war effort, there is no reason why this information should not be gathered and given out to the public and why members of parliament and the newspapers should not have it.

Eastern Canada, and especially the central provinces, are to-day enjoying a measure of prosperity, and of course it is odd for us from the west to rise in our places in this house and say that agriculture and the primary producer were never in a worse plight than to-day. But wheat is a drug on the market. Farmers are unsettled in their opinion as to whether they are rendering any war service by trying to produce commodities and food products of various kinds. Mortgage companies are still collecting their interest.

With this oversupply of foodstuffs in this country we see at the same time the people of Britain on rations. It often occurs to me, why should we haggle about the price Great Britain is to pay for the commodities they buy from us? When there was overproduction in the United States during the depression they dumped their surplus products, their coffee and so forth, in the rivers, and ploughed under a great deal of their wheat. I do not see why we could not get some of this money that we seem to get so easily now for destructive purposes and use it for constructive purposes and pay our farmers for any surplus wheat or other war products that they might produce for this greatest of all causes. In the old days it was impossible to get any money, but now we can get all we want without any difficulty for destructive purposes.

"Oh," some one may say, "we have no ships." But Lord Beaverbrook said, "Go to the ends of the earth and get them." Members from British Columbia say that shipbuilding is not going on in that province to any marked degree, and members from the maritimes tell us the same thing. There are shipbuilders walking around with no work to do. I heard over the radio a few days ago that every shipbuilder in the United Kingdom had been conscripted for war service. Why do we not do that in Canada?

"A nation cannot exist half slave and half free," said Abraham Lincoln, and there is such a thing as economic slavery. A nation cannot continue half rich and half poor.

In Saskatchewan in the pre-war depression years, with no crop in the drought areas, we went through the worst period that any province ever went through. Now, when there

is an opportunity to do something for those people on western Canada's plains, those plains which in more peaceful times have been called the "bread-basket of the empire" and the "granary of the empire," has any effort been made to establish industry in western Canada? No. Hundreds and hundreds of people are walking the streets looking for work. They are skilled workmen. What do they do? They come from Saskatchewan to Ontario and try to secure work in some of the munitions plants. What are they told? That they are too old; "what we want are boys out of the technical schools"—boys who should be in the armed forces of the country and not taken into these places and provided with positions which should be given to these older people. Industries should have been established in Saskatchewan, and established long ago. In Saskatchewan another matter of grave importance with regard to which we have been discriminated against is the training of young tradesmen under this scheme of the labour department. The lowest vote which was allocated for this work of training young chaps was to that province. After all the hardship which our people have gone through, schools have been established only in the larger cities, although in every place throughout that province where there were sufficient applicants those schools should have been put into operation immediately. A few years ago we in the town of Humboldt had marked success with these new training schools; they did a splendid piece of work. The schools which have been sponsored by the Department of Labour would have excellent results. The young men who would be trained there would be fitted to go into the factories if they were not physically fit for the army, or, if they joined the armed forces, they would have some trade available to them upon their return to civil life when this struggle is over.

If we forsake these people on the western plains we shall be doing a grave injustice. We know that when an opportunity arose of establishing our economy on a healthier basis, certain interests sabotaged the Rowell-Sirois commission report; and that fact may yet become a stain upon our national conscience.

Citizens in every walk of life, in every province of Canada, wish to do their part in this, the testing hour of the nation. Let the government take the people of Canada into its confidence. Let them take the members of parliament into their confidence; after all they, just as much as the ministers, are representatives of the people. Let them do something to establish industry on these western plains. The people of our province will meet every financial call which may be made upon them. They will accept every defeat that comes to us, and they will accept final victory and peace in a truly Canadian spirit. I cannot see why we should have prosperity on the banks of the Rideau and not upon the banks of the Saskatchewan.

Mr. BRUCE: I wish to make some observations in connection with the questions I asked the minister of munitions earlier in the day.

First of all, I should like to congratulate the minister upon his safe return to Canada, and particularly to congratulate the government upon his safety, because we recognize him as one of the ablest and most efficient members of the cabinet.

The hon. member for Humboldt (Mr. Fleming) has suggested a reason why we on this side of the chamber have not criticized the government sufficiently, namely, that so many dollar-a-year men are Tories. Therefore, if I indulge in a little criticism this evening, I hope it will be regarded as constructive, and it will be remembered that I have been invited especially to make it by the hon. member who has just spoken.

I was sorry that the minister of munitions did not lay on the table of the house this afternoon the missing pages—Nos. 5, 6, 7 and part of 8—of the MacMillan report, giving as the reason that they contain highly confidential matter about guns. The refusal to produce those pages has aroused public suspicion that the minister has some other reason for withholding them, and that he has something to conceal. I think, therefore, that it would be better for the minister himself if he did as I asked him to do and set this suspicion at rest at once.

Will the minister tell the committee if there was any subject dealt with in the deleted portion of the report in addition to the production of guns?

Were any details given as to the various types of guns being produced?

Have we developed a new secret weapon to use in this war?

Mr. HOWE: I should tell the hon. member about that, should I not? That would not be a secret.

Mr. ILSLEY: Lay it on the table.

Mr. BRUCE: The hon. member for Humboldt has suggested that we have; and, if so, I think it would be a good thing to let the enemy know about it. Are we afraid that Germany will discover our methods of producing guns, when she has been making guns for generations past, and that it would assist her in the production of some new gun to use in this war?

Does the minister seriously think that the facts given about guns in the pages which he has deleted would help the enemy? Was there anything in those suppressed three and a half pages critical of the present method of administration or of the minister's proposed set-up for the future?

What about that portion of the report dealing with tanks "K," under the heading of "Mark III Cruiser Tank"? Would it not give much more comfort and information to the enemy to reveal our utter inability to produce tanks of the Mark III type until towards the end of the present year, as indictaed in this report from which I will read in a moment, than to withhold from them the knowledge that we can produce guns efficiently?

From page 6 of the appendix to *Votes and Proceedings* of the house for February 27, under "tanks," I quote:

(a) The problems are:—

(i) Armour plate to come from Steel Company of Canada—plant to be completed May/June 1941. May be delayed by equipment from U.S.A.

Mr. HOWE: I would remind my hon. friend that that is not my report. I was not in the country when it was prepared, and I may say for his information that the report is quite incorrect, in that the Steel Company of Canada are not making and will not be making armour plate. It comes from another Canadian firm entirely, and they are already supplying it.

Mr. BRUCE: Where is this plate being made?

Mr. HOWE: It is being made in Canada.

Mr. BRUCE: It is the Dominion Foundries, I assume. I may remind the minister of the fact that I told him in June last that these plates could be made in Hamilton at the Dominion Foundries plant.

Mr. HOWE: I told the hon. member that, as he will find if he refers to *Hansard*.

Mr. BRUCE: I believe, if the minister refers to page 570 of *Hansard* of June 6, 1940, he will see that I gave that information to the house and to him at that time.

Mr. HOWE: If the hon. member has it, let him read it.

Mr. BRUCE: I do not have it under my hand at the moment, but I believe that upon reference to *Hansard* the minister will find that the statement I have made is correct.

The next items are:

(ii) Engines—not yet purchased.
(iii) Transmissions—not yet purchased.
(iv) Suspension unit—not yet purchased.
(v) No drawings yet received for gun mountings.
(vi) Machine tools not yet all ordered.
(vii) If cast steel to be used instead of armour plate for hull, which seems likely, drawings are not yet complete.

(b) The contractors are excellent and if above delays are removed will make good time. Present estimates are to begin October 1941 and produce 60 by December 31, 1941 and 150 January to March 1942.

Then, with regard to Valentine tanks, the statement is:

(a) The problems are:—
(i) Slow delivery armour plate.
(ii) Slow delivery steel castings.
(iii) Some necessary components not arranged.
(iv) Machinery will be slow in arriving.

(b) This operation has gone slowly to date. Production is estimated to begin with 20 or more April to June 1941, reach 75 monthly by December 1941, a total of 550 by March 31, 1942.

(3) The slow progress in tank production is not necessarily an indication of what can be done when production of all components has been established and organized. If tanks are found to be necessary in larger numbers, production can be considerably increased, subject to taking labour, equipment and raw material from other uses.

Then on page 8 under paragraph (f) the following statement is made:

The situation therefore is: Canada already has surplus aircraft production capacity but requires some planning to arrange to use it economically.

From what I have just read, it will be seen that the production of tanks is in a hopeless muddle, and yet this information is published. Surely it will help the enemy more to know that we have fallen down badly in the production of such a vital arm as tanks than to know that we are making good progress in the production of guns.

Although the attention of the house was called to the importance of tanks in June last, particularly where the component parts could be made, I am very much disappointed that after a period of eight months more progress has not been made. I should like to read from an article in the Ottawa *Journal* of to-day's date by Ross Munro, a correspondent living in England, as follows:

These armoured units are Britain's ace weapon to counter-attack an invading force, and every reliance is placed in the tanks. The Canadian army tank brigade and armoured division, coming overseas this year, will be a welcome addition to this fast-growing branch of the army.

He quotes a colonel in England as saying:

This war is going to be tanks, tanks, tanks, and I maintain the Canadians, from what we have seen of them here, will be probably the best tank fighters in the world.

From the MacMillan report it will be apparent that there will be no cruiser tanks, Mark III, available until the end of this year. May I ask the minister whether this tank brigade will be sent overseas in spite of this, and whether they must again rely on Great Britain for their equipment? On page 1124 of *Hansard* the minister is reported as saying:

I offer the problem of aircraft production to anyone who cares to take it.

This would seem to indicate a degree of despair, futility and frustration. The minister indicates that the responsibility now vested in him is very onerous and he has given us a lengthy description of the principles of organization. If the situation is as the minister states—and I have no doubt about his sincerity, that he is anxious to do everything to further Canada's war effort—then I suggest to him that the best immediate contribution he can make is by divorcing the production of munitions from all types of politics. Why does he not do as the Ontario government did in the case of the hydro-electric system—name a commissioner and delegate full authority to him, including the selection of the required personnel to enable him to carry on efficiently and get results.

It is generally understood that Mr. MacMillan, after some months' experience as chairman of the war-time requirements board, recommended to the minister a scheme for the complete reorganization of the munitions and supply production department. May I ask the minister whether he agrees with the scheme outlined by Mr. MacMillan? If so, does he consider Mr. MacMillan sufficiently competent to be put in full charge of this scheme?

I do not happen to have the privilege of knowing Mr. MacMillan personally, but I know him very well by reputation, and, in common with the Canadian people generally, I have great confidence in him as a high-minded patriotic citizen who is unselfishly trying to do a great public service and who, they believe, is being hampered in his work by partisan interference.

In order to give the committee an idea of the kind of man Mr. MacMillan is, I should like to quote, from the Vancouver *Daily Province* of February 25 last, parts of a speech which he gave at a public banquet given in his honour in the city of Vancouver. I quote:

Mr. MacMillan said that in his own private organization, as in every well-run business in the country, the whole staff worked to the balance sheet. When there was anything wrong with that balance sheet the weakness was soon discovered and the correction made—in personnel or in method.

"It should be the same in our national life," said Mr. MacMillan.

"In this case the balance sheet of Canada is the war. Nothing else matters."

"If we find that our capacity for making an effective war performance—say in the supply of ships and guns and aircraft and munitions—is defective, then it should be our duty to make the needed change without delay—and we should make it with one single motive to increase the efficiency of our war effort."

"We should make it our business to see that our machinery for waging war is running smoothly, and in our effort to attain that objective we shouldn't be sidetracked by political, racial, geographical, religious or any personal considerations. All those relatively petty things should be swept aside ruthlessly. They simply don't count."

And further on:

Every person in Canada to-day should adopt this creed—to strengthen the national war spirit and avoid destructive criticism; to develop a true war spirit, to speed war production, to follow our constitutional form of government, to maintain the strongest possible government which in turn demands a strong opposition. We are not saturated yet with the critical value of the time factor. . . .

We have been too tolerant, too tolerant of mistakes and incompetence. . . .

If the state fails in this fight or if it fails to maintain balanced intelligent government—all is lost.

I think it is fair to conclude from the quotation which I have just read that something has interfered with the operation of the department that has to do with the securing of supplies. Is it not fair also to assume that it may be on this rock that the minister and Mr. MacMillan split before the latter left for the west some weeks ago? May I again urge that the atmosphere of suspicion be cleared away. I appeal to the minister, with all the force at my command, to make a frank statement himself and ask Mr. MacMillan to do the same, covering all the questions asked by me on Monday last, and thus relieve the public anxiety and suspicion that something is being hidden and that there exists a sharp conflict of opinion as to policy and administration between Mr. MacMillan and the minister.

I wish now to quote from an editorial in what we all have regarded as a Liberal newspaper, the *Globe and Mail* of March 4, 1941.

In speaking of the aircraft industry and the minister's published statement, it concludes in this way:

> There is reason to believe that craftsmen, executives and civil servants who are directly concerned with the production of needed equipment are profoundly dissatisfied with the manner in which the government is administering the Canadian war effort. The time has come when it is their duty to make public whatever information they may have of culpable neglect, political patronage, logrolling and sabotage.
>
> The defence of Canada regulations are not intended to suppress the free expresison of honest convictions, nor to protect a political party from the consequences of maladministration. An empire is at stake, and thousands of Canadian lives. We have entered the lists as champions of democracy. Who is to tell us that the basic principles of democracy shall be denied?

When Canada and all parts of the British empire are giving their blood and treasure, they have a right to demand that there shall be no delay in the production of guns, aeroplanes and other munitions of war with which to protect them and upon the speedy supply of which our very existence depends. There is a widespread demand that all supply and munition activities be divorced from politics, and that the administration, selection and control of all personnel concerned be vested in a non-political body. I warn the minister that there is a limit to the public's patience, and that limit has been almost reached.

Mr. HOWE: I do not wish to interrupt the type of criticism we are getting now, but I wonder how constructive it is. After all there has been a good deal of mention of newspaper comment about the way in which the Department of Munitions and Supply is being conducted; I should like to say that there is also a good deal of criticism of the way in which the opposition is being conducted. I think it is as fair to discuss one as the other. Hon. gentlemen opposite are free to discuss my conduct of my department, and I suppose I am free to discuss their conduct of the criticism.

What have we had from hon. gentlemen opposite? We have had the reading from *Hansard* of old remarks that I made months ago. The hon. member for Lake Centre (Mr. Diefenbaker) constructed his speech almost entirely from quotations from *Hansard,* of what I said last July and subsequently. This is committee; he is free to ask any questions he likes, but he picks up every forecast I have given and attempts to pour ridicule on it because the performance has not come up to the forecast. Is that constructive? Any forecasts I gave were my opinion at the time, formed after careful analysis of the situation as we saw it then. Subsequent developments in some instances—not many—have produced a different situation. Is it constructive to throw that up, read it two or three times over, make much of it and say "Ha, ha!"? Hon. gentlemen wanted a frank statement of the present position and I gave it to them as well as I could. Then I said I had a confidential report from Mr. MacMillan. Someone said, "Lay it on the table." Well, I laid it on the table. It was not my report; I had nothing to do with its preparation; some parts of it I did not agree with; it was made in a short time; possibly if more time had been available, a more accurate report could have been made. When asked, however, I laid it on the table. I did reserve one section, the section on guns, because the dominion's office in Great Britain had cabled this government to ask us not to give out any information about guns. I explained that before I laid the report on the table; I said I was prepared to lay the rest on the table if it were understood that the gun information in it was confidential. The leader of the opposition (Mr. Hanson) agreed to that at the time; he repeated that he understood the situation and did not expect me to go further.

We have also had speeches quoting editorials almost continuously. Even the leader of the opposition followed my statement with a speech which I have had compared with extracts from the *Financial Post,* and I find that both the contents and language of his speech were taken almost wholly from *Financial Post* editorials. Editorials from the *Telegram* and the *Globe and Mail* have also been quoted. Everyone has read these editorials. We can at least say this for the press, that they do attempt to get information, accurate information, and expend some effort in doing so.

Mr. HANSON (York-Sunbury): If I quoted from an editorial in the *Financial Post* I was quoting facts. I have no ghost writer; I can tell my hon friend that.

Mr. HOWE: Would my hon. friend like to see the two paraphrases? At any rate I think he will not dispute the statement that his speech came from that paper. Let me ask this question: did any member of the opposition ever go into a munitions plant? I admit you are likely to get your clothes a little soiled, but it might be interesting to any hon. member who desires to criticize the efforts of this government to go and have a look.

Mr. BRUCE: I have gone through two.

Mr. HOWE: Which ones?

Mr. BRUCE: The National Steel Car plant at Malton and at Hamilton, and the Dominion Foundry plant at Hamilton.

Mr. HOWE: The hon. member has not said anything about them here. Does he not think it would have been enlightening if he had said he saw this and that, instead of reading editorials from newspapers? I wonder whether any other hon. member has ever been inside a munitions plant. After all, any hon. member who cares to visit any plant can get permission to do so from our department, and I suggest that if they wish to be constructive in their criticism—and I am sure they do—it might be just as well to go and see what they are talking about before making random statements here. I doubt if it is profitable simply to dig up old statements of mine, and to repeat them again and yet again. I am certainly not going to give any more forecasts; hon. members may be sure of that. I think intelligent forecasts are to the benefit of members of the house; they are some help. But I do not care to give them, to be taken up six months hence with the remark, "Instead of having this Tuesday it came on Thursday"—or perhaps Friday. Why should I? After all, you get what you ask for.

I do not like to lecture. I like to be lectured, and I am enjoying myself very much. Nevertheless I offer that to hon. members opposite. Why not be a little bit constructive, if you are attempting to help us win this war, and give us something that is of use to us, instead of turning over a lot of old straw for the fifth, sixth or seventh time?

Mr. HANSON (York-Sunbury): Would the minister like me to answer that?

Mr. HOWE: Yes.

Mr. HANSON (York-Sunbury): I thought I answered it fully and truthfully two days after the minister made his statement. After the minister had, on Thursday, given us the information with respect to these things, I said that had it been given earlier, much of this criticism would have been avoided. I offered that with the utmost good-will.

Mr. CRERAR: Why continue, then?

Mr. HANSON (York-Sunbury): I am not going over it. But these hon. gentlemen are just as free to rise in their places, in opposition, and say anything they like, as was the hon. member for Humboldt, who gave a burlesque in this house to-night.

Mr. HOWE: I just wish to say this. This is the one opportunity probably in this session when hon. members may ask any questions they like about the munitions programme in this country, and get the best answers I can give. I do not think another opportunity will come. Well, why not use that time intelligently, instead of using every old editorial, and old *Hansards*? I offer that suggestion in all good faith.

I have been accused of losing my temper. Perhaps I have a manner which gives that impression. But I do not recall that I have been heated at all in this debate, and I am not heated now. I am rather tired of hearing editorials. I have a clipping bureau, and I think I see most of them, in my odd moments. I am tired hearing them read to me over and over again. We have heard the statements that appear in the old *Hansards* which have been read. But let us, please, have a little of a fresh type of criticism.

Mr. HARRIS (Danforth): I do not feel disposed to take this lecture lying down. I do not think it is necessary, and I do not think it is in the best form. After all, we are a democracy, or are supposed to be.

An hon. MEMBER: We are at war.

Mr. HARRIS (Danforth): And we are not going to take any form of dictatorship, no matter who the minister is.

While I am on my feet I should like to make one or two observations along the lines of those I made at the last session. I am greatly concerned with the manner in which the department sees fit to spend money as capital expenditure for new buildings, when so many first-class buildings are available. To a large degree, in many of the large centres buildings are under construction, with steel work completed, which could be taken over by the department, or by those who are accepting contracts, or who are accepting moneys for working capital in connection with carrying out the contracts they have in hand.

I would place on record facts respecting three premises of real magnitude in an area within one or two miles of the John Inglis plant at Toronto, a plant in which large sums are being spent by way of capital expenditure. When I have recorded these facts I shall resume my seat.

First, I should like to mention a building which will soon be completed and which is owned by the Dominion of Canada. I refer to the post office building at the corner of Fleet and Yonge streets in the city of Toronto. Acres of floor space are available in that building. The building is completed. It is not yet occupied. At this point let me digress for a moment. If buildings of this kind were taken over by the Department of Munitions and Supply and put into production

for war purposes, our people would be seized with the idea more and more that we are at war. They would tend to give more thought and more energy and would subscribe to more war savings certificates—and I ask the Minister of Finance to take note—if the department would take over buildings of the kind I have mentioned.

The second building I have in mind is at the corner of King and Bay streets. This is a large bank building, the steel construction now reaching the ninth and tenth floors. Several acres of floor space are available. Foundations are laid down to bedrock thirty-five feet below the ground. Work to complete that building has been stopped. Perhaps it is not the exact type which would be required for the work being done so extensively by the John Inglis plant. But we do know that new buildings not nearly as well constructed as the one I have mentioned are being built, from the ground up, and that there is delay in having them built. Here is a building the main structure of which is completed. The ministry should take charge of it, brick it in and have a war industry right at the corner of King and Bay streets in the heart of Toronto. Would the people in that area not be seized with the idea that there is a war on? Would they not give more and more attention to the war effort?

The third building I have in mind is one operated under a lease by the National Stone company on Logan avenue, in Toronto. It is a building 300 feet by 300 feet, and is equipped with a total of eight cranes, some of which will lift loads of fifty tons. The siding is constructed, and would lend itself admirably to some of those contractors who are using some of the working capital we are voting, to build new structures. They need not spend that money for new structures when a structure of the kind I am describing is available, and lends itself admirably to the job of completing war contracts, and to speeding up and getting on with war work.

What obtains with regard to those three large structures I have mentioned, one of which is controlled by the government, one by a banking institution and the third by an estate, obtains elsewhere in the same city. I have mentioned just those three. I have in mind, of course, the non-practicability, as it were, of doing jobs of work on a smaller scale, and having different operations separated one from another. But I bring to the attention of the department, many, many, many contracts which could be completed in buildings already available.

I see the Postmaster General (Mr. Mulock) wishes to tell us about the post office in Toronto.

Mr. MULOCK: I should like to ask the hon. member a question.

Mr. HARRIS (Danforth): I will just finish my sentence—oh, all right, go ahead.

Mr. MULOCK: I should like to ask if the hon. member is referring to the city delivery building in Toronto?

Mr. HARRIS (Danforth): Yes.

Mr. MULOCK: Then I may tell him that the end of the tunnel, between the post office building proper and the city delivery part, has been bricked up, and it is now under the control, I understand, of the Department of National Defence. I do not know how long, in view of the increase in volume of business in Toronto, it will be possible to let them have it; but the hon. member will be glad to know that the government thought of that, long, long ago, made the necessary arrangements, and completed it for the purpose of assisting in this war effort.

Mr. HARRIS (Danforth): I am very glad to hear that deposition from the Postmaster General. Inasmuch as that gigantic building is more than half idle at the present time, let us get on with it, and see to it that the Department of National Defence is in there and is doing a job, and letting the public know about it. Let them know that the department is commandeering idle buildings across the country and getting on with the war effort.

Getting back to the general theme I had in mind, let me say that what obtains in respect of those three buildings, undoubtedly obtains across Canada in like measure. For instance, I have in mind the Smiths Falls plant, and buildings of that kind. That plant was reconstructed, and is now entirely idle. It may seem sensible to separate the units of manufacture, and I agree with the engineers and the department that if this were a long term twenty-year job, then that should be done. But I pray to God that this war will be over soon. In the meantime let us use every building available and be careful not to dissipate our resources by making capital expenditures which in the course of time will prove to be extravagant.

As the Postmaster General has indicated, other departments of the government would be glad to turn over their buildings. The Ontario college of agriculture has stated its willingness to turn over its buildings. I am satisfied that the banking institutions would be willing to do the same. I would refer to the one gigantic building in Toronto already

in steel. If they did not feel so disposed, one move of the hand by the Minister of Finance (Mr. Ilsley) would put them in the right frame of mind. There is the other building I mentioned with the cranes already on the ground, yet similar cranes are being purchased for the fitting up and equipping of the plant of the John Inglis company. Similar cranes will also be purchased for the fitting up and equipping of the plant at Pickering, which did not exist but now exists. Similarly with the plant at Scarboro.

I admit that, taking the long range view, it might not be the most desirable thing to do, but we are facing an emergency. The Minister of Finance is asking the people to subscribe for war savings certificates. The people should be gripped with the idea of the magnitude of this job of work. Every opportunity should be taken to bring it to their attention and to demonstrate that there is economy in our outlays of capital expenditure. The people must be made to realize that we are commandeering building and space; they must be made fully conscious of the spot we are in. Every move in that direction will be of benefit to this war effort.

Mr. GARDINER: The discussions so far on this resolution which was before the house and which is now before the committee have been largely with regard to expenditures having to do with munitions and supply. I think it was February 25 when the discussions began. Since that time I have been waiting for an opportunity to make a few remarks with regard to the particular part of the war effort charged up to and coming under the Department of National War Services. I desire to make these remarks at this time partly because of certain information which is available now and which neither the house nor the public know of at the moment and partly because of certain criticisms which were made prior to the meeting of the house with regard to the reasons for the registration, the method by which it was carried out, and the results obtained.

It will be recalled that when the Department of National War Services was set up, there was assigned to it the task of making a registration of the human resources of Canada and, in due course, of making a survey with regard to the material resources. The department was asked also to take charge of the bureau of information, which has been referred to from time to time during the debate. We were asked to bring about, if possible, the coordination of the efforts of those who were engaged in collecting from the people of Canada funds with which to carry on voluntary services.

The task given to the department in connection with the registration had for its objective two different results. The first was to obtain men for the training camps. The initial desire of the Department of National Defence was that these training camps should be operated for thirty days and that something between 25,000 and 30,000 men should be obtained for six weeks in order to fill the camps. Before a call could be sent forth to the young men required for these camps, it was necessary to have a registration in order to know where they were. In addition to that, it was thought wise to make a registration of all persons from sixteen years upwards in order that we might know something of the capabilities of the general population of Canada and also have a better check upon that population. I think some of the remarks made in the House of Commons at the time, most of them by hon. members of the opposition, which I intend to quote in a few moments, indicate as clearly as anything else the feeling with regard to the registration itself.

Before going on to deal with the registration, I should like to add my protest to the protests made by other members of the government, including the Prime Minister (Mr. Mackenzie King). I do not protest because criticism of the government has been offered or because there has been criticism of this particular department or of the registration; I protest simply to draw attention to the nature of the criticism which has been offered by certain sections of the press across Canada. I have no objection at any time to criticism; as a matter of fact I invite it, provided it is based upon facts and not upon statements which are not facts. I admit that criticism, particularly in war time, is helpful. It has been said that ministers in the government have too much to do, and yet many times those who say that have been adding more to the tasks of these ministers than any other group or organization in the Dominion of Canada. This criticism has appeared in newspapers across Canada with large circulations. They have published what are not the facts and have made criticism which was not based upon things being done in the different departments of the government.

When criticism of that kind is offered it requires more effort and uses up more nervous strain and delays the activities of the particular department more than anything else being done, either inside or outside the dominion. When once wrong information is given to the people of Canada by the press of the country, it is necessary for the department and the minister involved to clear up such criticism before the effort being put forth by the department can be carried on to

a successful conclusion. There has been much criticism of members of the government as to why this or that has not been done, as to why there has been delay in doing this or that. Those who were criticized should be and, I think, are expected to make answers to the criticisms, and probably to criticize those who made the criticisms. My criticism of the press, more particularly a certain section of the press, would be this, that there is no organized group in the dominion that has done more since the fall of 1939 to delay the war effort of this country than certain sections of the press in Canada. That effort started even before war was declared, and it has been carried on since.

I agree with my hon. friend the leader of the opposition (Mr. Hanson) when he says it is a mistake politically to get into a controversy with the press because experience has shown that they always have the last word and that if you start an argument with them you are starting something which you cannot end. Nevertheless I believe at times it is necessary that the facts with regard to criticisms of that kind should be stated and that someone should say what he considers to be the effect of that kind of criticism upon the war effort.

In times of war none of us is so much concerned about the political effect of his remarks as he is in times of peace, and if it is necessary to dispute the opinions and expressions given through the press in war time, we must do so despite the political effects it may have.

Some criticisms have been made with regard to the method by which the registration of man-power or the human resources of Canada was carried out. In order to clear up any misunderstanding there may be with regard to the registration itself, either as to the reasons for it, or as to the methods by which it was done, or as to the results obtained, I wish to give a review of what took place in that connection.

Mr. HANSON (York-Sunbury): Does the minister suggest that we at any time criticized the national registration? On the contrary, will he not say that we assisted in every way? The only criticism that I ever made was that it came too late. I remember saying that.

Mr. GARDINER: I think the leader of the opposition will agree that up to the moment I have been talking of criticisms from the press.

Mr. HANSON (York-Sunbury): Then I have nothing to say.

Mr. GARDINER: Anything I have to say with regard to the question just raised I shall say as I go along.

The government of Great Britain conducted a national registration either immediately after or immediately prior to the outbreak of war. Australia, New Zealand, south Africa, and I think most other parts of the empire did the same thing immediately after the outbreak of war. It was suggested in this country by some—I do not think by any members of the opposition—that since we were going to have a census taken in 1941, a registration in Canada perhaps was not as necessary as it otherwise might have been last year. But there is a difference between a national registration and a census. In a census you secure information, and that is the end of your contact with the individual from whom you secure the information. But a national registration is a continuing process in that it involves each individual registered carrying a national registration certificate, and records of changes of address, changes of marital status and death being continually kept.

Following the collapse of France, there was an insistent demand both within and without parliament that there should be a national registration in Canada. I have taken the trouble to go through *Hansard* and obtain from it the requests by different members that a national registration be made. There are quite a number of them, making up some seven pages of extracts of a few sentences from the speeches of different members. I shall read only one or two to indicate that these requests came from different parts of the house. The hon. member for St. Paul's (Mr. Ross) said, speaking in the house on the 24th of May last:

> In my view we should have a national registration of every man and woman in Canada; if we do not, I wonder how we are going to find out about subversive influences?

The hon. member for Waterloo South (Mr. Homuth), speaking in the house on May 27 last, said:

> The general feeling among the people to whom I spoke is that one way of overcoming this trouble is to have a national registration of the men and women of the country with a view to having a list of those available for war work.

Then the hon. member for Peterborough West (Mr. Fraser), who in commenting the other day upon the salvage campaign had the kindly thought to add to his remarks with

regard to it that we might term the Ministry of National War Services the Ministry of Garbage, had this to say:

> The hon. member for Waterloo South suggested that we have national registration. With that I wholly agree, and I do not mean that we should have it in 1941.

I think that is sufficient to indicate that there was a request for national registration from the opposition side of the house; I could cite remarks made by members in each of the other groups as well as by members on this side to indicate that the request was made generally throughout the house, and finally it was agreed that a national registration should be made.

My hon. friend the leader of the opposition called my attention to the fact that an appeal was made to the members. That appeal was made first by the hon. member for Danforth (Mr. Harris), that all the members of the house should be asked to assist in the making of this registration, and that appeal was answered from this side of the house with consent to do so. As members of the house know, to that end each member was asked to take charge of the organization in his own constituency, and the voluntary effort that was put forth as a result of the efforts of the members of this house was something of which every member can well be proud.

The only further reference I have to make to the remark of the hon. member for Peterborough West is this, that the second effort we have made to enlist the support of all members of the house was when we appealed to them to assist National War Services in connection with its salvage campaign, and there again, so far as I know, the greater part of the members are participating in this voluntary effort in the same spirit as that in which they undertook to help in the work of national registration.

But I would say this, that it is not particularly helpful or encouraging to the minister who appeals to members to do that kind of thing when we have the type of criticism that we have had from one or two within the house with regard to that particular campaign.

Mr. FRASER (Peterborough West): Mr. Chairman, may I say a word?

The CHAIRMAN: The hon. gentleman can put a question, but he cannot interrupt the minister.

Mr. HANSON (York-Sunbury): Let the minister proceed.

Mr. GARDINER: I only wish to point out again that members from all parts of the house, including the hon. member for Peterborough West, were anxious that the registration should be made and that we should have the assistance of all the members in making it.

Next, a committee representative of all departments of the government which would be concerned with the information to be procured from the national registration was set up in June last, under the chairmanship of Doctor R. H. Coats, dominion statistician. This committee prepared a questionnaire which was subsequently submitted to the Canadian people. Only one addition thereto was suggested by the government, and that was question 17 which was added to those on the questionnaire and which asked registrants if there was any special training they would like to receive in connection with industry.

The government decided, as a matter of policy, that the national registration should be conducted under the direction of a new Department of National War Services, and the registration was conducted under my direction as minister and under the deputy ministers who were appointed for that department.

Then the committee, under the chairmanship of Doctor Coats, recommended that the actual registration should be done on an electoral division basis, as nearly as possible in the manner of an enumeration for a dominion election, and through the instrumentality of the chief electoral officer and his staff. This recommendation was accepted; the chief electoral officer was appointed chief registrar, and the actual registration was carried out under his direction.

General supervision of the registration was carried on by the associate deputy minister of the department, that is, Mr. Justice Davis.

The said committee, under Doctor Coats, further recommended that, when the registration was completed, the information secured thereby should be compiled by the dominion bureau of statistics. This recommendation was likewise accepted by the government.

I wish at this point to explain that there have been no staffs in the Department of National War Services associated with the compilation and recording of these statistics. Those staffs have been entirely in the bureau of statistics in the Department of Trade and Commerce. The staffs have been supplied by moneys secured under the vote which we are now discussing in the house, as a result of an appeal made to the government by the minister in charge of war services.

It was necessary to provide a new building for the housing of the equipment and staff necessary to do the compiling of this information. This building was completed on

or about the 30th of September, 1940. This, I would like to comment, was not bad, considering the fact the department was not established until the month of July. The registration was under way, and the building was completed in time for the information to be taken to that building and the staff to be employed in it.

The dominion bureau of statistics completed moving into the building and the setting up of all necessary machinery about the middle of October; the hundreds of tons of registration cards which accumulated between this date and the completion of national registration were taken over by the dominion bureau of statistics, and the actual work of compilation was started.

The first job which confronted the dominion bureau of statistics was as follows: It was the duty of the deputy registrars in the various polls to copy the cards of the single men, 19 to 45, so that copies could be used for military purposes. When the cards came in, it was found that some constituencies had made copies but sent them here. In other constituencies no copies had been made. The bureau of statistics had to get busy at once to straighten this out and furnish the divisional registrars with missing cards.

The next job undertaken was the compilation of the material with respect to Doukhobors and Japanese. This latter was urgently required for consideration by a committee dealing with the Japanese problem on the Pacific coast.

Prior to the national registration, consideration had to be given to the problem of priority in the matter of compilation of accumulated material, and a decision had to be reached as to whether or not the first job would be to get the statistical picture of the human resources of Canada, namely, the number of males and females of different ages, classified into provinces, according to occupations, nationality, condition of health, et cetera.

This information could be used only for the purpose of deciding broad matters of governmental policy with respect to the utilization of man-power in Canada. You would know from these statistical studies, for instance, how many plumbers there were in Canada, what provinces they were in, information with respect to their experience, age, nationality, et cetera, but you would not know who the actual plumbers were or where they were.

A different method of compilation was necessary in order to procure the last mentioned information. That is, it was thought that it was more important for the time being that we get statistical information which would show the name of the individual, where the individual was living, and what that individual was able to do, than it was to get the broad statistical picture first in order to formulate government policies upon it.

Prior to the outbreak of war, a committee, representative of several departments of government, had been formed to prepare a list of what might be termed "reserved, preferred or specialized occupations". It was not the intention that they should be reserved in the sense that these persons would not be available for war service, but it was intended that they should be persons who were prepared for work in some industry which would be essential to the carrying on of the war. This means a list of occupations which would be directly or indirectly connected with industries necessary to war and in respect of which consideration would have to be given to the wisdom of withdrawing persons therefrom to permit them to enter the armed forces.

This list, as enlarged by the dominion bureau of statistics, contained approximately 1,250 occupations. That is, the bureau of statistics divided these different industries which might be considered essential or preferred into 1,250 different groups. It should be pointed out that this list was prepared on an occupational basis and not on the basis of industries. For instance, a man might be working in an occupation in a war-time industry, which occupation itself would not be a specialized or trained occupation, and his withdrawal from such industry would not prevent or interfere with the proper functioning of the industry. The case of the common labourer would be an instance in point.

It was decided on the advice of a committee, headed by Doctor Coats, that the first job to do was to get out a list of persons engaged in these "specialized, reserved or preferred occupations", and that the procuring of the general statistical picture should await the preparation of this list.

As soon as the national registration cards in the possession of the dominion statistician were in a position to be used, they were gone through. Incidentally, the dominion statistician received about eight million cards as a result of the national registration. From these eight million cards there were extracted approximately 1,800,000 cards of males and females who belonged to these "specialized or reserved occupations".

This group was then broken down into three categories, which were made up from the answers to these three questions: No. 14, occupation or craft; (a) present occupation (b) what is your regular occupation? (c) what other work can you do well? Through those three questions there were selected the persons that constituted these different groups,

although they did not take in all the persons who answered those questions. Some of the answers did not show them to belong to these specialized groups.

As I have said, this group was broken down into three categories or three lots as follows:

(a) A list of persons trained in these specialized or reserved occupations and presently engaged therein.

(b) A list of persons whose regular occupation was a specialized or reserved occupation but who were not at the time of registration working in their regular occupations. They might be temporarily engaged in some other reserved occupation but, at all events, not in their regular occupation.

(c) A list of persons who had training in a specialized or reserved occupation but were not presently engaged in such occupation, or whose regular occupation was not the occupation in which they had special training.

These lists—three in number, as above indicated—also show persons with training in any of these reserved occupations who were unemployed. I may say that I have before me that list with regard to the province of Ontario, and the figures on that list illustrate very well the situation existing in that province. Very shortly, figures will be ready for all the provinces of Canada upon this basis. Just to illustrate the nature of the information which is available with regard to these 1,800,000 persons, may I call attention to this: In Ontario there are about 1,350,000 males of the ages that we are concerned with here in that province among whom these cards have been selected, and in dealing with those specialized classes to which I have referred, we find that 444,496 persons are at present engaged in the industry for which they are best qualified. There are 170,856 in the second group I spoke of; that is, they are not engaged in the industry for which they consider themselves best qualified, although they may be engaged in some other war industry. Then there are 289,948 who are engaged at something else, but who stated that they had had experience in doing work in some of those activities that are necessary to the carrying on of the war.

Turning over a number of pages, and coming to a group that might be of interest, let us look at miners and see how the group that have had experience or are properly qualified to be miners are divided up in Ontario. There are 15,136 persons specially qualified to work in mines and who are working in mines; 5,293 qualified to work in mines are not working in mines but are working at some other industry which might be important in connection with the war, for which they do not consider themselves quite as well qualified; 3,998 persons in Ontario have had experience in working in mines but are not working in mines now.

That will give some idea of the nature of the information available in connection with all these different 1,250 occupations spoken of in connection with these services.

Coming down to electrical apparatus, an employment in connection with which there is great importance as related to the war effort, we find that 6,909 persons in Ontario are working at part of the job for which they are best qualified; 2,664 are working somewhere but not where they think they are best qualified; 5,950 have qualifications to work in that industry but are not working in it. They are engaged, probably, in some other effort that may be made in connection with the war, but not in that one.

Then, coming to electrical repair men and service men, we find there are 1,950 men working where they think they are best equipped to work; 1,799 in the second class; and 4,242 in the third class. The third class, which is the one from which persons could be drawn and moved into an industry that they feel they can do a better job in than they are doing now, is more than twice as great as the number regularly working in that particular employment.

That is sufficient to indicate the nature of the information which is available now with regard to Ontario and which will be available very shortly with regard to all the provinces.

To give a little more detail as to what can be obtained as a result of that class of information being registered, may I say the result is that we have a list of all persons at present engaged in these reserved occupations, those engaged in other occupations but capable by training of being used in these reserved occupations, and those unemployed, capable of employment in these reserved occupations—that is, unemployed in these particular occupations.

To emphasize the vastness of the job which was required to be done, I am told that there are twelve miles of these names—that the sheets, with the names on them, could be piled from the floor up to the ceiling of any of the rooms where these documents are stored. I am told that you can go into the statistical department to-day where the lists are completely made up, as they are in Ontario, and, by tests up to date, inside two or three minutes a clerk can get you the name of any person who is on the list. He will get you information to show the address of that person, what he is working at, what he thinks he is capable of working at and not working

at. In other words, these lists are available. They have been made available to all the departments of government and are being used by the different departments.

These lists are now available for the industries of Canada and are being used by some of them. Let me give a concrete example to show how they can be used in a direct way. A manufacturing firm desire to know where they can find a list of persons with that particular type of training. For instance, they may want to know where they can locate tool makers. From these lists the dominion bureau of statistics can furnish to the industry the names, addresses, age, nationality, birthplace, years of experience, et cetera, and whether or not now employed, of all tool makers in Canada or in a given province or district in Canada. This applies to each of the 1,250 specialized or reserved occupations.

That last remark will apply within the next few days, when the statistical information is completed, to all the provinces. At the present time it covers a very considerable part of Canada and is entirely completed for Ontario.

In this way any industry seeking men to be engaged can be given the names, addresses and locations of such individuals and can be advised whether or not they are working in that trade or in any other trade, and whether they are employed or unemployed. This was a tremendous job and was completed at the end of January. As soon as it was completed, steps were taken to procure the same type of information in connection with agriculture, and these agricultural lists will be available very shortly for the provinces of Canada.

On completion of this work, the dominion statistician then turned attention to the preparation of the statistical tables necessary for the use of the government and the departments of government—that is, for the formulation of general policy. The first series of statistical tables being prepared gives statistical information with respect to the lists of specialized or reserved occupations which I have mentioned. It gives us a statistical picture of the numbers at present employed in these specialized or reserved occupations, those whose regular occupation is a specialized or reserved occupation, and those who have had training in such specialized or reserved occupation.

These are broken down by sex, age groups and occupational status. Then a statistical study is being made of the registration as a whole—that is, a statistical study of the entire 8,000,000 cards. I have here certain information, again with regard to Ontario, which I am not going to go over except to say that if the house would permit me to do so I should like to have this short table put on *Hansard,* because it gives simply the total population of Ontario over sixteen years of age, dividing it into age groups, into males and females.

The table is as follows:

Table 1—Ages

	Total	Males	Females
Total.....	2,731,580	1,355,240	1,376,340
16-19.....	268,180	130,460	137,720
20-29.....	601,780	286,670	315,110
30-39.....	539,990	270,770	269,220
40-49.....	471,700	239,670	232,030
50-59.....	398,960	208,870	190,090
60-69.....	266,520	132,910	133,610
70	182,970	85,570	97,400
N.S.	1,480	320	1,160

Then there is another short table that would be most interesting if placed on *Hansard,* giving as it does a set of figures that would be very helpful. It shows the nature of employment in Ontario. This is what is called table No. 14, occupational and employment status. It again gives the total population, dividing it into males and females, and gives the number of employers, the number of wage earners, the number employed, the number of homemakers, the number retired, students, those who have never worked and those who are invalid. If the committee will permit, I should like to have that group placed on *Hansard* for the benefit of hon. members. It will show some very interesting information, including figures like this; unemployed in Ontario,—that is on their own statement—males 73,010, and females 32,020.

The table is as follows:

Table 14—Occupational and Employment Status

	Total	Males	Females
	2,731,580	1,355,240	1,376,340
Employer	103,640	97,590	6,050
Own account...	234,210	217,010	17,200
Wage-earner ..	1,153,680	845,760	307,920
Unemployed ...	105,030	73,010	32,020
Home maker...	845,060	....	845,060
Retired	119,080	82,120	36,960
Student	63,960	27,630	36,330
Never worked..	100,400	8,300	92,100
Invalid	6,520	3,820	2,700

That is the nature of the information which is being made up with regard to the whole population, the eight million people in Canada. This statistical picture will show the number of males and females, with emphasis on the following break-down: age, conjugal condition, birthplace, birthplace of parents, year of immigration if an immigrant, year of naturalization, racial origin, official languages spoken, other languages than English and French spoken, educational status, condition of health, disabilities, pension status, occupational and employment status, weeks since last employment if unemployed, weeks worked in twelve months prior to August 1, 1940, farm back-

ground, experience with horses, tractors and machinery, experience in milking and other farm work.

This will be followed by an industrial classification together with statistics as to numbers of dependents, family occupations, complete details as to occupations et cetera. These statistics for the province of Ontario I intend to file. I do not think I have a copy here to-night, but I will file it to-morrow.

The same information for all the other provinces of Canada will be completed shortly and will be duly filed.

Arrangements have been made with the various departments of the government that any department wishing to procure information with respect to name, address and location of persons, whether employed or unemployed, with any particular type of training will requisition this information from the dominion bureau of statistics, and lists will be immediately furnished.

It is interesting to note that tremendous use is being made of this national registration by the police forces of Canada. I remember one hon. member, I think it was the hon. member for Waterloo South, who made reference to that in the house when advocating that this registration should be made, that these lists would be most useful, and hon. members will recall that on the first day after the registration was made one of the German prisoners who had escaped from the camp was captured going across a bridge, because he did not have a registration card. In other words, that information is most valuable, as was stated by hon. members and others at the time. A staff of clerks is engaged continuously in getting out information for the police authorities.

It was decided to procure lists of all citizens in Canada of the Netherlands, Belgium, Denmark, Norway, Poland, Czechoslovakia, showing the names, addresses, marital relationship, ages, et cetera. This information was to be used for the military purposes of these governments. That is, these governments, as hon. members know, are practically all being conducted now somewhere outside their own countries, and when they wish to get the names of their nationals living in this country they are able to do so and communicate with those nationals if they so desire.

Mr. HARRIS (Danforth): Before the minister completes his statement, would he be good enough to indicate whether this information is sufficient for a census for the time being, while we are at war?

Mr. GARDINER: I said at the beginning of my remarks, when I think the hon. member was not in his seat, that there is a difference between a census and these statistics. The census is not my responsibility, and I prefer that the minister who is responsible should make his own statement in regard to it.

This information has already been put to use by the governments of Belgium, Poland and Holland.

The national registration was conducted on a constituency basis. When the registration cards came in, they were kept separate by constituencies and polling subdivisions. We are now engaged in rearranging these cards on an alphabetical basis, using the system known as the "soundex" system, which has been adopted from that used by the census bureau of the United States. As soon as this work is completed, if the name of a given individual is handed to the dominion statistician he can at once get out the card of such individual, thus permitting a constant check on the entire population of Canada.

I had the intention of dealing to-night also with a reference to the information bureau, but I see that it is now two minutes to eleven, and I do not think I shall undertake to make that statement to-night. I shall leave it for another occasion, either while we are discussing this resolution in committee or when we are discussing the individual estimate. But I wish, on behalf of the staff of the statistical branch, and the staff that was got together to assist the chief electoral officer, and on behalf of every member of the staff of the Department of National War Services, to thank each and every hon. member for the willing and effective cooperation which they gave to make a registration of this kind possible in the very short time in which it was done. I do not think the credit for it is due to the department or the minister or the deputy minister, or to any individual anywhere. It is due, first, to those who advocated the matter in this house and consented to its being done. In the second place it is due to the hon. members who cooperated in seeing that we got the greatest degree possible of cooperation in setting up voluntary organizations to help in the work, and also to the whole-hearted way in which all the people from one end of Canada to the other went into these registration booths in such numbers that in some places we had to get the police to regulate the passing of the people into the booths. In other words, the job was not to get them there but to handle them in the numbers in which they came, and the only reason why that was not an impossible job was that every booth was manned—or "womaned," if I may so express it—by staffs capable of doing this registration

in such a way as to make it possible to put all the information down in such form that I am able to refer to it to-night. I had the privilege of going into half a dozen or more of these booths at widely scattered points across Canada during the days the registration was being done, and when I recall the number of young girls between the ages of nineteen and twenty-two or twenty-three—

Mr. HARRIS (Danforth): School teachers.

Mr. GARDINER: —school teachers, and young boys who were engaged in this work, and then see the records that they made, I think there is a word of appreciation coming to two different groups in Canada, one being the teaching profession, and the other the young people of Canada to-day. The manner in which they assisted in carrying out that registration is worthy of comment, and I am sure will receive the full thanks of every hon. member.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 7, 1941.

The house met at three o'clock.

RULES OF THE HOUSE

INTERPRETATION OF STANDING ORDER 41 RESPECTING THE TABLING OF DOCUMENTS CITED AND LETTERS QUOTED

Mr. SPEAKER: On Wednesday last, March 5, I was asked by the hon. member for Rosetown-Biggar (Mr. Coldwell) to take into consideration standing order 41 and give an interpretation particularly of paragraphs 315 and 316 of Beauchesne's Parliamentary Rules and Forms, which deal with the question of the reading of documents and whether these documents should be laid on the table. When the hon. member made the suggestion I indicated that it was not the function of the chair to give advice to hon. members but rather that the Speaker was required to judge and interpret the rules of the house on any question raised in the course of a debate or in its proceedings.

The hon. member had in mind the discussion which took place that day and which had just been completed, on the question of privilege raised by the hon. member for North Battleford (Mrs. Nielsen), in the course of which she read a letter received from a correspondent. It might be well to state to the house the rule governing questions of privilege. It has been well stated in May's Parliamentary Practice, 13th edition, page 317:

> The house is always willing to extend its indulgence when an honourable member wishes to clear up any misrepresentation of his character: but that indulgence ought to be strictly limited to such misrepresentations, and ought not to extend to any observations other than by way of correction.

It was not necessary for me to give a decision during the discussion for the reason that the hon. member for North Battleford agreed to lay on the table the letter which she read.

There is no doubt as to the parliamentary rule which requires a minister of the crown who refers to a public document in the house and upon it bases an argument or assertion. That document, if called for, must be produced. The principle involved in such a proceeding is so obvious and reasonable that there does not seem to be any room for argument. It is the principle established in courts of law which prevents counsel from quoting documents which have not been produced in evidence. It has however been held that a demand for production and filing of any document should be made immediately and not at a subsequent sitting of the house.

There is no standing order which governs the quoting of private communications and we are guided mainly by custom and precedents. I have no doubt in my mind as to the decision I would have rendered with regard to the portion of the letter which the hon. member for North Battleford read into the records on Wednesday last. The contents of that letter are so serious that unless the hon. member, as such member, assumed responsibility for it, then, as Speaker of the house, I would have asked the hon. member to lay the letter on the table of the house or, alternatively, I would have sought the consent of the house that it should be laid on the table. However, the hon. member took the proper course in laying the letter on the table.

It will be noticed that in the letter there is a serious statement concerning an officer of the Royal Canadian Mounted Police, one of the departments of government; that it refers specifically to a function of government of a most contentious and delicate character in these war years, namely, the question of internment, and by reason of the publication of the portion of letter in *Hansard*, it may be properly considered of the nature of a public document. That is all the more reason why it should have been laid on the table and it might have been retained as a parliamentary paper.

It may not be, in other cases of a like nature, so easy to interpret the rules of the

house. For instance, an unsigned letter should not be read in the house. Mr. Speaker Lemieux so decided on May 16, 1928. Or a member may desire to summarize information contained in a communication, but the member giving the summary must take the responsibility, as a member of this house, for the correctness of the information he or she seeks to give. If an hon. member proposes to read a communication in its entirety, or even a portion, without divulging the name and address of the sender and the member refuses to take the responsibility for the truth and accuracy of the contents, I am clearly of opinion that such a communication should be laid upon the table, and particularly if so desired by any member of the house. In the present case I agree with the Prime Minister (Mr. Mackenzie King) that an hon. member is not entitled to read from communications unless prepared to place them on the table of the house. The principle upon which this is based is that where information is given to the house, the house itself is entitled to the same information as the hon. member who may quote the document.

HOUSING

ESTABLISHMENT OF GOVERNMENT-OWNED COMPANY TO PROVIDE ACCOMMODATION FOR MUNITIONS WORKERS

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I desire to ask a question either of the Minister of Finance (Mr. Ilsley) or the Minister of Munitions and Supply (Mr. Howe) or both—I am not sure to whom the question should properly be directed.

I have observed in the press a number of dispatches relating to the institution of a large-scale housing project to meet the serious housing shortage existing in certain districts of Canada. This house has not been given any information respecting the government's proposals in this regard. Time and again I have emphasized that when this house is in session announcements of important proposals such as this should be made by the responsible minister in this house rather than communicated directly to the press.

I would ask the minister responsible for the proposed housing programme to give us at once or as soon as reasonably possible a full and detailed statement of the government's plans in this matter.

Hon. C. D. HOWE (Minister of Munitions and Supply): For some weeks it has become apparent that in a certain few localities the work of the department is being seriously handicapped by a lack of housing accommodation. In one or two cities it has become utterly impossible to attract the required number of workmen on account of the housing shortage. To meet that situation it has been decided to establish a housing corporation, a wholly owned government company, and Mr. Joseph Pigott has been appointed president of the corporation. Associated with him are six other directors whose names I have not before me at the moment. This corporation has taken over the studies which have been made by officers of the Department of Finance with respect to the housing problem, and it is expected that the corporation will make recommendations to the government shortly as to the best methods of meeting the most urgent situations.

I should like to emphasize that this is not a general housing project but is confined solely to housing that is found necessary for the successful prosecution of the munitions programme.

AIR FORCE

QUESTION RESPECTING DARTMOUTH, N.S., AIRPORT CONTRACTS

On the orders of the day:

Mr. P. C. BLACK (Cumberland): Mr. Speaker, I desire to ask a question of the Minister of National Defence for Air (Mr. Power), who I am sorry is not in his seat at the moment. Has an investigation been made into the situation with respect to the Eastern Passage airport contracts, where over $3,000,000 is involved? If so, has a report been made to the minister or to the government, and will a copy of the report be tabled?

I may add that this is in relation to certain questions which were asked early in December and regarding which a return was brought down in February. It is important that we have this information while the war appropriation measure is before the house.

Hon. J. L. RALSTON (Minister of National Defence): As my hon. friend has mentioned, the Minister of National Defence for Air is not in the house at the moment, and I would therefore ask my hon. friend to let his question stand as a notice.

Mr. HANSON (York-Sunbury): Until Monday?

Mr. RALSTON: I would expect so.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, March 6, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Hon. J. G. GARDINER (Minister of National War Services): Mr. Chairman, at the close of the proceedings last night I stated to the committee that I had dealt with the greater part of what I wished to say with regard to the registration of the human resources of Canada. There were one or two activities with which I did not deal at any length, merely mentioning them, on which I should like to say a few more words to-day.

First, there is the matter of the national registration of the young men who were afterwards called up or are being called up as recruits under the national war services regulations of 1940. Under these regulations, established under the authority of the National Resources Mobilization Act, all male British subjects between the ages of twenty-one and forty-five years inclusive, who are unmarried or widowers without child or children and who have been ordinarily resident in Canada since September 1, 1939, are liable during the continuation of the state of war now existing to be called out for military training for the purpose of the defence and security of Canada. The period of military training and the age class or classes to be called out are determined by proclamation of the governor in council.

For the purpose of calling out men for military training, Canada has been divided into thirteen administrative divisions, corresponding approximately to the military districts of the Department of National Defence. A board of three members, the chairman of which is a judge of the court of the district in which the administrative division is located, is entrusted with the application of the regulations in each administrative division.

The official immediately concerned with the actual calling-out of men is the divisional registrar. Upon receipt of a requisition from the Department of National Defence indicating the number of men required for military training in each administrative division, divisional registrars proceed to notify men for medical examination who are in the age class or classes rendered subject to call by proclamation. The selection of such men is made proportionately from all parts of the division. Men so notified may report to any duly licensed medical practitioner, which means that any man may go to his family doctor if he so desires. The appointment of all qualified doctors as examining physicians under the regulations was decided upon after consulting with the Canadian Medical Association. May I say here that the medical profession of Canada has responded whole-heartedly to this call for national service and that the examining physicians have performed their duties conscientiously and efficiently.

In order to obtain the number of men required to attend the several military training centres of the Department of National Defence, it is necessary for the divisional registrars to notify a number substantially larger than the one called for, in order to take care of those who are categorized as temporarily and permanently unfit for military training, and also of those who, for reasons of seasonal occupations or essential employment in war industries, cannot be called out for a particular period of training. For the first three periods of military training, the number of men categorized lower than C.1 averaged 23·1 per cent of the total number of men called out for medical examination. This ratio is well within the percentage of medical rejections to be normally expected in such a large scale medical examination.

I recall that in the discussion which took place in the house a few days ago it was indicated that a considerable number of the men who did report to camp were afterwards found to be not physically fit, a larger number than probably would have been expected had we had some experience in matters of this kind.

The second step in bringing men to the training centres is to select from the thousands of medical reports received from the examining physicians in each administrative division the men who come within the medical categories accepted for training by the Department of National Defence. The men selected are then notified by the divisional registrar to report, on a stated date, to the officer commanding a stated training centre.

The divisional registrar encloses with the "notice—military training" warrants for transportation, meals, and/or lodging as may be required. Upon arriving at the training centre the men are again examined by the military doctors and, if found medically fit, are accepted for military training. From the moment they are accepted at the military training centre, the men cease to be under the jurisdiction of the Department of National War Services, because they are enrolled in the reserve of the Canadian army.

It is important that this should be understood, because continuously we have inquiries from hon. members and others with regard to matters which really come under the Department of National Defence. The men are more or less under the Department of National War Services from the time the call goes out to them to report to the physician, until such time as they have been accepted in a military training camp; from that time on, they are under the control of the Department of National Defence.

That, I think, is all that it is necessary for me to say with regard to the activities of the Department of National War Services in connection with the calling up of men. Any questions which hon. members may have with regard to costs and all matters of that kind can be dealt with when we are in committee on the amounts estimated as necessary during the coming year.

Mr. SENN: There recently appeared in the press a notice that farmers' sons of certain categories would have their training postponed until the fall months. Will it be necessary for these young men to be called up and then go before the board for exemption, or will they be called up at all until the end of that period?

Mr. GARDINER: I would prefer not to answer that question to-day. Probably I can answer it on Monday. The regulations have not been finally reviewed by the Minister of National Defence and myself as Minister of National War Services.

Mr. HANSON (York-Sunbury): In that same category is the question of students in universities. The minister may not be able to answer at the moment with respect to that, but I think it ought, if possible, to be answered at the same time.

Mr. GARDINER: Yes. They are in exactly the same category; and as soon as the regulations are passed by the Minister of National Defence and myself, they will be laid on the table so that everyone can see them.

Mr. DUPUIS: Another class consists of those who, being skilled workmen, are now employed in war industries. Would some delay or some kind of exemption be allowed to them?

Mr. GARDINER: My answer to the other two questions applies also to that of the hon. member. All these matters will be covered in the regulations, which, I expect, we shall be able to bring down early in the week.

One other matter to which I wish to refer, and which is under the Department of National War Services, has to do with voluntary services. It will be recalled that when the department was set up there were five organizations which were doing auxiliary work for the Department of National Defence, and it was stated at that time that instead of having five different appeals for funds made to the people of Canada, attempts should be made to have these appeals made all at one time and in one organized effort. At the time it was suggested this should be done, some of these organizations had already set out to make their appeal to the public, that was at the end of last year. One of them, the Red Cross, had gone so far with their preparations that it was not thought wise then to attempt, in the short time left, to get these organizations all working together in a common effort, and it was finally decided that the Red Cross should go ahead with their drive. Later on, it was thought wise that the other organizations should combine in one drive in the spring of this year, and that has been arranged for the 24th of March next.

I should like to give the committee an outline of the activities in that regard up to the moment.

Administration of the War Charities Act. The object of this act is to provide a measure of control and regulation of the voluntary efforts of organizations throughout Canada, in their desire to raise money for war and charitable purposes. Any organization which makes an appeal to the public for donations or subscriptions in money or in kind, or any war charity fund which attempts to do so by sponsoring a bazaar or any other entertainment for that purpose, must be registered

under the act. From the time the act was assented to on September 13, 1939, up to February 25, 1941, some 907 central funds have been so registered. In addition to these, 739 branch funds have been registered under the central fund. This means, for example, that the national Imperial Order Daughters of the Empire, is registered as a central fund, and many of its branches are also registered. The great majority of applications come from responsible groups or organizations. Upon investigation, certificates are issued to such organizations. Unfortunately some of the applications come from individuals or groups whose main object seems to be to gain some advantage—perhaps it is a financial one—by doing a certain job, possibly in a good way, but with the result that too great a part of the funds will go to an individual rather than to the charity. Such applications, after investigation, are refused. Every effort has been made to prevent the commercializing of war charity efforts. In a few instances it has been necessary to cancel the registration of organizations because their work was unsatisfactory in that regard.

We are trying to show organizations that in planning their work great care should be exercised so that the cost of raising funds may be kept to the minimum. The national war charities funds advisory board, under the chairmanship of Mr. C. L. Burton, was set up, and it is rendering a service to the country by checking up the budgets of the larger organizations that make application for the right to collect funds, and by passing on advice to myself as minister, and through the minister to the government, as to what is thought advisable in connection with funds of that kind.

Investigations of that sort have been carried on in relation to the drive which will start on March 24 next, and five of the larger organizations have united in order to make a combined appeal to the people of Canada for $5,500,000. They are going out to make that appeal with the endorsation of the government, and the government has, through them, made an appeal to the people to support these efforts in view of their relationship to the general war effort.

Mr. HOMUTH: That does not include, then, the Red Cross?

Mr. GARDINER: This particular drive does not include the Red Cross. But the matter of future drives is now being considered with a view of having all future collections made in one drive.

Mr. HOMUTH: I do not want to interrupt the minister, but in our district the larger towns have done that from the very inception of the war, and we found it to work out exceptionally well. Each organization got its quota. We included also the Red Cross; and I wondered whether the Red Cross would be included in this drive.

Mr. GARDINER: It was thought at one stage, I believe quite early in the war, that it might be best to allow the practice which is operating in the section of Ontario referred to and many other sections of Canada, to develop until such time as by voluntary action all these organizations would be making their collections in one. In view, however, of the greatly increased expenditures in connection with the war and the necessity for increased activities on the part of some of the auxiliary services, it was thought well about two months ago to speed them up by getting these organizations together and having them make one drive for funds rather than wait on the voluntary efforts growing out of these separate activities. In many of these cities the work was speeded by having the organizations agree to that effort. I may say in passing that I think the organizations were very fortunate—we did our part in arranging it—in securing the services of a man who, I know the committee will agree, has had wide experience in this kind of activity. I refer to Senator McRae, who has been placed at the head of the organization which is going to make this collection of funds. A board has been set up which will hold these funds in trust when they are collected and see that a proper division is made of them to the different organizations for the purposes intended.

Mr. STIRLING: Will this change have the effect of stopping one-collection efforts in certain districts such as have taken place in the past—one appeal to the public over a certain district?

Mr. GARDINER: No, it is intended to promote that. It is intended to make it nation-wide instead of having it apply to certain areas that have already been following that procedure.

Mr. HANSON (York-Sunbury): Has it been found that the Red Cross object to this collective drive? There was a good deal of discussion in the press about this at the time it was started. I understand that some officials of the Red Cross have taken the view that they cannot be bound within the limitations or circumscription of one drive because of the peculiar necessities that may arise in connection with their work. Are they

in agreement with the principle or are they standing out? I think in justice to them that ought to be made clear.

Mr. GARDINER: Three or four conferences were held and the discussions that took place were similar to those that take place at any conference of the kind. In the earlier stages you will find some persons putting forth certain arguments and taking a certain position very strongly, and you will find these same persons later on, in a subsequent conference, turning around and taking a position which perhaps those opposed to them at the earlier stage had adopted. It is true that certain arguments were advanced to the effect stated, but I may say that as a result of the conferences held all of the organizations that are going into the drive on March 24 are going in under an agreement finally reached among themselves, and in entering into that agreement they have one hundred per cent the support and cooperation of the Red Cross. As the house knows, the Red Cross is an organization that has been built up right across Canada, having a very good reputation and a long period of service, and it is thought wise to allow that organization at least to consider the matter in their own national meetings before making any announcement as to what they think, or anyone else thinks, with respect to what they ought to do. It is considered better to leave it that way. There has been the greatest degree of cooperation among these people in meeting from time to time and discussing one another's problems and trying to come to a common conclusion.

Mr. HANSON (York-Sunbury): Will this drive on March 24 cover a definite period of time?

Mr. GARDINER: It is the only drive to be made in 1941.

Mr. HANSON (York-Sunbury): That answers the question.

Mr. GARDINER: The Red Cross have agreed that they will not put on another drive in 1941, so that there will be no further drive by that society or any one of the other organizations during the year 1941. The question what is to happen in 1942 will be finally settled among them before the end of the year.

Mr. COLDWELL: I have been asked whether the funds raised by this central organization will be audited by public audit, and, secondly, whether any organization receiving funds from the central body will also be subject to audit. There is a belief in some quarters that some of the money raised in the past has not been spent economically, that the organizations have been paying high salaries, and so on. In a letter in my office at the present time there is a question along these lines.

Mr. GARDINER: I think there is even better than a mere audit. In the first place, these organizations now—they have already done so, so far as this year is concerned, and will be required to do it in the future—submit budgets to the committee that is headed by Mr. C. L. Burton, of which I spoke. These budgets are all gone over carefully by a group of men who are quite competent to examine them,—

Mr. HANSON (York-Sunbury): A very valuable committee.

Mr. GARDINER: —and they have eliminated many things which in their judgment were not required to be done for the time being at least, whatever may happen in the future. They have attempted to cut down organization expenses, more particularly when the five were coming together and it was not necessary to have the amount submitted in five organization expense accounts in order to carry on. All that kind of work is done in advance, the expense being cut down to the limit; and when they make appeals for those things about which there is some question in the minds of the committee, they have insisted on the amount of money set aside for that particular purpose—say, $100,000—being put into a reserve fund, and even after they have collected it that reserve has to be passed upon again by the committee before the organization can use it for the purpose for which it was intended at the time they submitted their budget. In addition there has been set up a board to whom these funds are turned over in trust after they are collected, and that board is not composed of members of the different organizations. I have not the names before me at the moment, but the board will be composed of prominent and well known business men across Canada. The money has to be turned over to them and then revoted, so to speak, by that trust board to the organizations that are to spend it.

I am not prepared to say definitely that it is provided for, but I should expect that these business men would require a careful audit of everything that has been done, and I am sure the department will require, when the organizations are submitting their budgets next year, a careful audit as to what was done with the money this year and what will be done with moneys next year.

Mr. SENN: Can any contributor allot the money to a particular organization, or will the distribution be made entirely by the committee in charge?

Mr. GARDINER: I understand that the cards used, and the different methods of subscription followed, permit a person to state to which organization he desires his money to go. If no stipulation is made, then it is divided among them.

There is one other matter which I mentioned last night to which I wish to return this afternoon. It has to do with what is known as the information bureau. Probably before dealing with one or two matters in particular I should give to the committee some idea of the organization of the information bureau. I believe it has already been indicated in answer to questions in the house that the organization was first set up by order in council P.C. 4073 on December 8, 1939. On January 3, 1940, Mr. Thompson, who was the first director of public information, was forced by ill health to resign. Mr. G. H. Lash, of Montreal, Mr. Thompson's assistant, was appointed acting director and since that time he has been made director. On February 23 there was appointed as a director Mr. Claude Melancon, previously joint press censor for Canada. On July 19 the office of the director of public information was transferred to the Department of National War Services and since then has been operated under this department. There has been some discussion in the house since the opening of the session, and in the press before the opening, as to the activities of this bureau in connection with press releases. I merely want to make the practice known so that hon. members will all be familiar with the facts in discussing matters having to do with it.

In the first place, after careful consideration of the whole matter with representatives of the press and with those who are prominent in the press association across Canada, and after consultation with many who had had previous experience in connection with the matter, it was decided not to attempt to appoint under this bureau a publicity agent who would gather together all the information obtainable from different departments of government and hand that out as one piece of information to the press of Canada. Certain reasons were put forward why that should not be done, one being that the representatives of the press could gain that information in Ottawa as readily as any individual could gather it for them; and with a score or more of representatives of the press gathering information around Ottawa and expressing their views through their own papers, the public were more likely to get the type of information which they ought to get while we are conducting a war, or under any other circumstances. Whether that is the correct procedure to follow or not, it is the procedure which has been followed up to the present time. The papers all have their representatives in Ottawa, as they have in the press gallery at this moment; they can get whatever information is available, and as a result of obtaining that information, I assume they write their articles.

It was arranged that in order to expedite their efforts to get information we should have as many ministerial press conferences as possible. When the press is anxious to have them we try to arrange them, and when ministers have something in particular to give out they arrange for a press conference. As a matter of fact, the ministries concerned with war effort decided upon certain days that they would be prepared to meet the press if the press desired to meet them and discuss with them matters having to do with war services.

That, generally speaking, is the method by which the information is given out to the press. In addition to that, there are in the different departments of government, more particularly in the war services department, information organizations or publicity organizations, which from time to time issue statements having to do with the affairs of their particular departments. Those statements do not always go directly to the press, although some may do so. The greater part of them go to the bureau of information. All the bureau of information does with press releases from the different departments is to mail them to wherever they are intended to go. That is, we do not edit them; we do not change anything that is in them; we simply take them as they come to us and send them out. In other words, the only responsibility in connection with the distribution of press releases of that kind, that can be charged up to the fund which we are now discussing in relation to the war services department, is the cost of distribution, and nothing more. The work of writing and compiling of them is all done in the other departments.

In addition to that, we may put out some press releases, but practically all of the press releases which are put out by the department itself simply give background; that is, they are not intended to go into to-morrow's daily paper as news, but are intended to give the editorial writer or anyone in the newspaper office information to which he can go at any time and obtain what were presumed to be the facts at the time when this particular information was sent out. Or it may be that it covers a period of time about which there has been some discussion over the country, and information is sent in order to indicate what may have been the facts in connection with it. It is not always used in the press, but, I assume, is put away on files to be referred to from time to time as needed.

That explains largely what is being done by the information bureau in relation to press releases.

In addition to that, we have illustrated material. I should like to read to the committee some particulars regarding the sending out of illustrated material.

The photographic branch of public information was not established until May 1, 1940, that is less than a year ago. From then until January 31, 1941, the branch has distributed 75,714 pieces of illustrated material, as follows:

30,739 Canadian photographs, of which 3,655 were supplied in finished form by the photograph section of the Royal Canadian Air Force.

23,478 mats, illustrating the Canadian war effort;

4,729 photographs supplied by the British Ministry of Information;

7,184 photographic broadsides from the same source;

9,584 ebonoid plates used by papers which cannot use mats, coming from the same source.

Travelling photograph displays are on exhibition at three points in Canada: one in the windows of the Hudson's Bay stores in western Canada; one in store windows of Tip Top Tailors and one in the National Museum at Ottawa. All these pictures, totalling about one hundred enlargements, reflect various phases of Canada's war activity.

Until the photographic branch of public information was organized, few Canadian war effort photographs were appearing in Canadian daily papers that did not have their own camera men, none in the Canadian weekly newspapers, and they appeared only rarely in publications outside Canada. That condition has been changed completely by this service, and the considerable number of photographs that are appearing in the press across Canada have been supplied by this information bureau.

With regard to printed material, posters and so on, until the autumn of 1940 public information did not undertake a poster campaign but, instead, arranged the distribution of some 50,000 posters provided by the British Ministry of Information. These were warnings, received in the English language only, against indiscreet talking. Some ten thousand plain printed posters in the French language were produced to complement those received from Great Britain. Since November, 1940, the office has produced and distributed the following quantities of posters:

	English	French
November, careless talking....	20,000	10,000
December, careless talking....	20,000	10,000
January, industrial poster....	5,000	....

[Mr. Gardiner.]

Other posters are now on the presses and will be put out from time to time.

The next activity has to do with booklets, pamphlets and leaflets. Under that I could give some figures, but I think I shall give only a few to indicate the scope:

	English	French
Canada Carries On.....	50,000	20,000
Let's Face the Facts, leaflet.	1,500,000	100,000
Let's Face the Facts, booklet	450,000	....
Two Ways of Life.....	1,250,000	....

I think I heard in the house since it opened a criticism of the last publication. I am told, however, that there has been a greater demand across Canada for that particular publication than for anything else that has been put out by the department. Probably wider use has been made of it in different parts of the country.

With regard to the radio, public information's first radio programme, "Carry on, Canada," will celebrate its first full year on the air on February 16. In that period it has achieved first-rank rating, and in the New York *Times* recently, Mr. Frederick Birchall, suggesting that the United States networks ask for it, described it as the best programme of its kind in radio.

On July 21 the office inaugurated a radio series called "Let's Face the Facts," which ran for twenty-four consecutive weeks and brought to the microphone the radio world première of the famous play "There Shall Be No Night," and the most distinguished procession of eminent men and women in the history of radio in Canada. The British publishing house of John Lane, the Bodley Head, is bringing out these speeches in book form. That programme was succeeded by another speaking programme called "We Are Not Alone," in the course of which representatvies of each of our allies told the story of their country's participation. Most of the speakers in that series were, I assume, heard by hon. members. A new programme, "Canadians All," which only opened last week and which, I believe, had a fine reception from one end of Canada to the other, will be on the air for thirteen consecutive weeks, during which period representatives of various nationalities settled in Canada will give of their folk music and also tell of the experiences of those of their number who have already joined the armed forces of Canada. There are several other programmes to which I need not refer, which are being put on from time to time. This will indicate some of the work that is being done in the radio section.

I come now to motion pictures. In March, 1940, public information, in cooperation with the national film board, planned a series of one and two-reel theatrical motion pictures. The series was given the general carrying title "Canada Carries On." I have already referred briefly to that series, so I need not say anything further with regard to it.

As another activity we are building up a reference library. In November, a newspaper reading branch and a reference library were established to meet a demand for general reference material relating to the war and Canada's participation in it. I am not going into particulars with regard to that activity, but the library is there and when we are discussing these matters in connection with expenditures I can give any information that may be desired.

There is also a public speaking programme which has been sponsored more or less in cooperation with the Canadian Clubs of Canada. In general, we are doing many other things that are of interest and at the same time, I believe, are promoting Canada's war effort.

I have reviewed these matters rather hurriedly in order to emphasize something I said last night with regard to information.

I have before me a copy of a question by the hon. member for Macleod (Mr. Hansell) which appeared on the order paper on December 6, 1940, and which has been answered since the opening of this part of the session. The hon. member asked:

1. When, how and by what authority was the bureau of public information established?

I have given much of that information already.

Mr. HANSON (York-Sunbury): Has the minister the reference in *Hansard*?

Mr. GARDINER: The question appeared on December 6. I have forgotten when it was answered, but it was not long ago. The question goes on:

2. Under what department of the government is this bureau, and to what minister is it responsible?

I have dealt with that already.

3. How many press releases were made by the bureau to the end of November, 1940, in what papers were they published and how many in each?

That is the part of the question to which I refer particularly. The answer was 772, with regard to the number of press releases, and as to the newspapers in which they appeared the answer was "No statistics available." Another part of the question was:

7. What has been the total cost of operating the bureau to the end of November, 1940, including news service, communication services, radio and moving picture services and printing?

The answer was, $202,672.42. That is definite information with regard to the bureau of information. I wish to call attention to the fact that editorials right across Canada have been written with regard to this matter; and I mention this in order to bear out what I stated last evening, namely, that when editorials are written about our war effort they should be based at least upon facts, more particularly when they already have been given in the house. I should like to read an editorial which appeared in the *Globe and Mail* under date of February 20:

Newspapermen, as a rule, are pretty hard-boiled, but we venture to say there is not an editor in Canada who was not shocked by the revelation that dominion government press agents cost the country $202,672 last year.

This frightful waste of the taxpayers' money might be defended if the government was getting any return for it, but the fact is that most of the propaganda prepared by these men goes straight into the wastepaper baskets of newspaper offices from coast to coast.

I will just ask hon. members to recall what I have already said was done for that $202,672.

According to Hon. J. G. Gardiner, Minister of National War Services, who tabled the return in parliament, no statistics are available to show in what papers the press releases issued by the government were published.

If hon. members will recall the figures I gave a few moments ago as to the number of releases that went out, they will realize that it would be difficult to follow through all the newspapers of Canada, even with the clipping bureau we have established, in order to see just how many of these releases appeared in the press across Canada, and how many might have been published even in newspapers outside Canada. But the criticism of one of these hard-boiled editors is that we should have known that most of these releases went into the wastepaper basket. As a matter of fact, we have records showing that a great many of these releases have appeared in the columns of the newspapers that know the facts and use the facts in writing editorials; and these releases have been printed right across Canada ever since this bureau was set up. But listen to this:

Yet these press releases cost an average of $262 each.

Do hon. members know how this editor arrived at the amount of $262? He took the 772 press releases and divided that number into $202,672, the amount spent for all the radio activity, all the motion picture work, all the posters to which I referred, all the pamphlets that were sent out and everything done by the information bureau; these were all made charges against the press releases, and it was stated that these cost $262 each. The editorial goes on:

> The $202,672 paid out of the national treasury for government propaganda is roughly twice the combined salaries of the forty correspondents who cover the proceedings of parliament for the press of Canada.

I would hope that was so, because all the activities associated with the bureau, including those I have outlined, are covered by that $202,000.

> But what is much worse from the taxpayers' point of view is that the shocking waste of public funds in government publicity is symptomatic of what is taking place in nearly every department of the public service.

This editor states what is obviously incorrect, if not untrue—and I distinguish between the two terms because I cannot understand any newspaper as prominent as the Toronto *Globe and Mail* having an editor who could not read that return and understand it. I suggest that it would appear to be an intentional misrepresentation. At a time when the Minister of Finance (Mr. Ilsley) was appealing to the people of Canada for subscriptions in connection with his drive for funds, this paper tells the people that one of the departments of government spent $202,000 on 772 press releases, or $262 per press release. It then goes on to say that other departments are being run in exactly the same way. I quote:

> If the taxpayers had the faintest conception of how their money is poured down a dozen different sewers on parliament hill there would be a rebellion.

I do not think that we have to take advice from the Toronto *Globe and Mail* about money being poured down sewers. The Toronto *Globe and Mail* used to be published in a building which suited its purposes very well, but one has only to go and look at the building in which it is published to-day to understand how they pour money down the sewer. For an organization of that kind to be criticizing, even though their criticism were right, is I think drawing the long bow in connection with matters of this kind.

[Mr. Gardiner.]

Mr. GLADSTONE: One of the great dailies published in Ontario carried a leading editorial in December stating that members of parliament were paid $66 a day. This amount was arrived at by taking the number of sitting days and dividing it into the indemnity of $4,000. The newspaper did not take into account the fact that most hon. members work almost 365 days in the year in the service of the government.

An hon. MEMBER: Of the country.

Mr. GLADSTONE: There is a continuous stream of people to the homes or offices of members, with legitimate requests of every description. Because of the demands made upon his time it is almost impossible for a member of parliament to look after his own business. As a result of that editorial a number of letters were written to the paper which published it, citing the editorial and repeating the statement that members of parliament are paid $66 a day. These writers simply took the editor's figures at their stated value, but it was unfair criticism of the work being done by members of parliament. Members look after the interests of their constituencies not only while they are attending sessions of parliament but practically every day in the year.

Mr. GARDINER: The next statement was to this effect:

> According to the return tabled by Mr. Gardiner, twelve departments of the dominion government have a total of 86 employees engaged in publicity work, who draw annually $164,460 in salaries. Included in these will be stenographers and office boys. But in addition to salaries there will be offices, furniture, filing cabinets, stationery and other material, and telephones, the cost of which is not taken into account in the return brought down in the house. On top of all this is the department of public information, which pays 43 publicity employees $61,279 a year. In fairness to the director of that branch we are bound to say that the "let's face the facts" series which he arranged for the radio was an excellent piece of work.

That statement emphasizes the fact that the editor of this paper knew something about what he was writing. He knew that many other costs were included in the $202,000; he knew that the costs of all the other activities of this organization were included in that figure. Yet he puts out to the people of this country the suggestion that that amount

covered only press releases. In so far as the activities of this and other departments are concerned, the press releases entailed only the postage and stationery costs in connection with them. As a matter of fact the total cost is not a considerable amount of money. In view of the editorial I think I should place the exact figures on *Hansard* showing expenditure and commitments from the time the department of public information was set up, to November, 30, 1940.

Mr. HANSON (York-Sunbury): That would be how long—three and a half months?

Mr. GARDINER: December 8, 1939 to November 30, 1940. The figures are as follows:

Details	Expenditure	Commitments	Total
Salaries and allowances	$45,202 27	.....	$ 45,202 27
Travelling expenses	4,439 01	.....	4,439 01
Motion pictures	1,990 71	$ 68,000 00	69,990 71
Photographs and mats	8,285 12	284 13	8,569 25
Pamphlets	4,557 80	33,841 57	38,399 37
Posters and art work	65 74	1,590 77	1,656 51

Telephone, telegraph, postage	$ 1,767 29	.....	.....
Sundry	6,491 60	.....	.....
Total miscellaneous	$ 8,258 89	.....	$ 8,258 89
Total	$82,432 59	$120,239 83	$202,672 42

Those are the details making up the total of $202,672.42. The three largest items in that total are—giving round figures—salaries, $45,000; motion pictures, $70,000, and pamphlets, $38,000. These three items, which make up the greater part of the $202,000, have no relation to press releases. If the house desires, I could place on *Hansard* a similar table bringing the expenditures up to date. The table is as follows:

Department of National War Services
Public Information

	Expenditure to Feb. 28, 1941	Commitments as at Feb. 28, 1941	Total to Feb. 28, 1941
Salaries	$ 62,922 83	.....	$ 62,922 83

Mr. HANSON (York-Sunbury): Before the minister leaves that, would he tie in all the publicity costs of the other departments which have publicity agents or publicity bureaus for the same period, for those twelve or fourteen months?

Mr. GARDINER: I am afraid the leader of the opposition will have to get that information from the ministers of the different departments.

Mr. HANSON (York-Sunbury): The point is that this is only one feature of the publicity work.

Mr. GARDINER: It is one feature. It is the public information bureau to which is usually attributed the whole cost of activities in connection with publicity.

Mr. WARREN: What amount of money is paid to the newspapers of Canada for advertising across the country, and would the minister suggest that this portion of the taxpayers' money might be saved?

Mr. ILSLEY: The hon. gentleman has reference perhaps to finance advertising of which there has been a great deal lately. That advertising is well worth while. It would be impossible to carry on the great financial campaigns we are conducting without spending a good deal of money in advertising. I am very well satisfied not only with the advertising itself but with the results.

Mr. GARDINER: In conclusion, when this matter is before us again and the actual expenditures are being considered, I shall be pleased to give any additional information that is required.

Mr. HANSON (York-Sunbury): I should like to ask the minister a few questions at this time. What has the minister to say to the suggestion made by one of his own followers last night, a suggestion to which I myself gave expression when I spoke on this matter a few days ago, that this is not a ministry of information but a ministry of propaganda. I term the publication, for example, of the series of speeches by members of the cabinet, government propaganda at the expense of the people of this country.

Mr. POULIOT: What about the publication of the speech of the hon. leader of the opposition at the expense of the country?

Mr. HANSON (York-Sunbury): I did not ask for it.

Mr. POULIOT: It shows how broad-minded the government was. It was not afraid of propaganda even from the hon. gentleman.

Mr. GRAYDON: They know a good thing when they see it.

Mr. GARDINER: The word "propaganda" has been given different meanings. Used in the best sense of the term, propaganda is, as I think every hon. member will agree, worth while; that is, propaganda based upon facts. The efforts of the bureau in the matter of publications may properly be termed propaganda if the putting-out of a picture indicating, for example, exactly what is being done in some part of the empire or in Canada can be termed propaganda. Radio broadcasts—it may be fiction; nevertheless fiction that illustrates something that is actually going on—I would also consider legitimate propaganda, and something which is not only legitimate but really ought to be done.

I would not altogether agree with the hon. member who suggested last night—it may not be the same member as the one to whom the leader of the opposition just referred—that we needed a ministry of enlightenment. The conclusion I have arrived at after serving for twenty-seven years either in the legislature or in the House of Commons, is that if you want to be enlightened you must enlighten yourself. There are a great many sources from which you can get information, but I do not think any ministry of any kind could really enlighten the people in general because they must get the information and then study it and arrive at their own conclusions as a result of their studies.

Mr. HANSON (York-Sunbury): People like to have things done for them.

Mr. GARDINER: Yes, but sometimes that is impossible. I would suggest that a ministry of information is quite possible. A ministry of publicity is possible, and even a ministry of propaganda is possible. There may be some question as to the lines one should follow in trying to give information to the public in relation to our war effort. But so far as a ministry of enlightenment is concerned, I am afraid that we shall have to continue to put forth our own efforts if we want to be really enlightened.

Mr. STIRLING: Would the minister enlighten us with regard to certain phases of the results of the registration? Last evening he gave to the committee an interesting account of the actual work of registration. He has now described how the results of the registration are being worked over, and I think he said that within the next few days or a week or two the results would be complete. I should like to know to what extent the government has already made use of that information. I have in mind particularly the

work which has been started in British Columbia, and I want to know whether that is being done all across Canada, collecting youths and teaching them how to use tools, using the workshops of the technical schools for that purpose. I took a great interest in the work that I saw being done. I should like to know whether that is Canada-wide and how many people have come forward to do it. Particularly I should like to pass on to the minister a certain amount of anxiety which I have met with in these schools as to what the next step was going to be. Within a certain number of weeks these lads will be turned out of the schools with a really extraordinary amount of knowledge which they have picked up quickly in the use of tools to fit themselves for openings as mechanics in munitions plants. What is being done in that direction and in other directions in which the results of the registration are already being used?

Mr. GARDINER: I think the hon. member will recall that the Department of National War Services was set up to gather information and, so far as the registration is concerned, to make the information gathered available to any department of government and to any industry or individual in Canada who wished to make use of it.

The schools which are training young people in the different areas are being operated under the Department of Labour, and when the estimates of that department are before the house I am sure the minister will be able and willing to give all the information that is desired with regard to that activity.

I mentioned last night that the governments of certain of our allies have asked for lists of those who are still nationals of certain allied countries. Those lists have been supplied. Industries have also asked for and been supplied with lists of people skilled in various trades, such as electricians and so forth. Applications have even come from England for skilled workers of different types. In certain cities in Canada, lists were made available and persons were able to go round from door to door asking young men whose names were on the lists if they desired employment at certain kinds of work. In that way young men were employed by the thousand. Some of these activities I am not free to discuss in the house, either with regard to the number of men engaged, where they work, or what they are doing, but the information is there and it can be given out from time to time.

In addition, we have power under the act to go to other departments of government and gather information that may be required, to put along with the information we have received through the national registration, with a view perhaps to seeing if there is a possibility of an industrial development where there are unemployed people. Information of that kind is all available.

Mr. STIRLING: I understand that no training of young people is being done in any direction under the minister's department, but that the results of the registration are passed along to those who require it. Then I would ask the minister if he has informed himself as Minister of Agriculture upon certain shortages of labour on farms in various parts of Canada.

Mr. GARDINER: Yes, Mr. Chairman. Whether I have done so or not, I have been informed from all across the country, from the areas where there is a shortage of farm labour. I have no further comment to make upon it except to say that perhaps that is more or less natural at the present time, and there will have to be an effort made. Again, it is a labour matter which will be dealt with in cooperation with the labour department from time to time as it can be dealt with.

Mr. GRAYDON: May I draw to the attention of the committee a matter which has assumed considerable importance in our part of the dominion, particularly in Ontario? I raise this question at the moment because the Minister of National War Services has under his jurisdiction a division which has to do with material resources in connection with our war effort. My conception of the department over which he has control and jurisdiction is that, to some extent in any event, there shall be planning in a systematic way in respect of our war effort. I realize every difficulty with which he is confronted, and I am sympathetic with him in that regard. But so far as our material resources are concerned and the plans which are being effectuated for the national mobilization of industry as it fits into our war effort, I believe the matter about which I am going to speak deserves immediate and special consideration.

On the 1st of March, the farming population of Ontario received a considerable shock when they heard that the Ontario agricultural college, one of the centres of agricultural technical and practical training, was to be closed and that the premises would be occupied by No. 4 wireless school of the empire air training scheme. In justice to the agricultural population, many of whom I represent, I ought to make it clear that I have not heard one farmer suggest that anything he can give or any action whereby he can cooperate should not be freely given to the cause of Canada and the empire. When I raise my voice in

connection with this matter I want to make it abundantly clear that the attitude of the farmer in this matter is not based on any narrow ideas as to his own particular future.

May I, however, point out to the minister that we have now been at war for something like eighteen months, a time sufficient, surely, to give the government some opportunity to plan our effort on comprehensive lines. The government may fairly be forgiven for whatever mistakes were made when the war first broke out and during the cataclysm which followed shortly afterwards. After all, this government is as human, or perhaps almost as human as the rest of us; at any rate it should receive that degree of consideration. But when plans are being laid for the continued prosecution of our war effort, it seems important that, in taking over buildings for these purposes, care should be exercised that peace-time institutions are transformed to war-time uses, not that war-time institutions are changed to other types of war-time endeavour, because I believe I voice the opinion of many agriculturists and others when I say that part and parcel of Canada's war effort is the production of foodstuffs and the extension of educational and technical advantages in so far as that production is concerned. It is along that line that I wish to bring this matter to the attention of the government.

It has been suggested in some newspapers—although, as the Minister of National War Services has said, their information may be wrong—that it is doubtful whether the officers of the Department of National Defence were wholly in agreement with the taking over of Guelph agricultural college for No. 4 wireless training school. I am in no position to say whether that is so; but in any event it seems to me that, with 600 male students and 200 female students at the college, and a large staff, built up in a selective way, of some of the best agricultural experts in Canada to-day, the institution should not be suddenly disbanded in order that another type of war-time activity may take its place unless it is absolutely essential to our war effort.

If it is a fact that No. 4 wireless training school can find no more suitable place, or no place equally suitable, there will not be from me the slightest complaint about the taking over of the building. If, however, there be any possible substitute, it seems to me that the present choice shows a lamentable lack of planning. If we ever needed a plan so far as our general war-time activity is concerned, now is the time to start it if it has not been started before.

Further, it is my recollection—and I have been on that model farm many times—that the property includes nearly 800 acres devoted to experimental purposes. Those experiments have been carried on at great cost, and farmers all over Canada, particularly Ontario, are very much interested in the work going on.

Mr. GOLDING: It will still be carried on.

Mr. GRAYDON: I am glad to hear the acting minister of agriculture make that remark. I accept his statement, and I urge that the benefits of this experimentation be not lost to agriculture at this time. As a matter of fact, so far as I know, there has not been any definite official statement as to the carrying-on of these experiments. Whatever is done, whether or not any change is made in the plan for the use of the college, we must not deprive the farmers of Canada of the technical advantages which they are enjoying as a result of these experimental activities.

When this war is over and the period of rehabilitation begins, it will cost much money and take a great deal of time to put these technical experiments in agriculture back where they were before. I am trying to emphasize to the minister, in all fairness, that, if there be any other way of providing for the wireless training school, whereby the empire air training plan will not be hampered or hindered, I trust he will use his influence to leave in operation our agricultural college at Guelph.

We talk a good deal in this chamber about agriculture, but it must be realized that, in so far as the interests of the farmers are concerned, the county agricultural representatives who get much of their information and practically all of their early training from the agricultural college at Guelph are able to render a tremendous service to the people of the province. They have technical, theoretical and practical experience. I wish to say a word this afternoon on their behalf. If the proposed change is absolutely necessary for the prosecution of our war effort, I am all for it, regardless of the consequences. May I, however, ask the minister to see whether a plan cannot be adopted so that we shall be able, as far as possible, to avoid changing from one important war-time industry to another, but rather so that the peace-time industries of the country may first be converted into and form a part of our integrated war effort before those which are already in war work. I make this appeal to the minister on behalf of agriculture, not by way of carping criticism of the government, because I have every sympathy with them in their difficulties; but it would be regarded as a good move on behalf of the agricultural communities who are struggling to-day if their college facilities

could be restored without in any way injuring or hampering or interfering with the general war effort of the nation.

Mr. POULIOT: In answer to what has been said by the hon. member for Peel (Mr. Graydon), the premier of Ontario should be praised for having the Guelph agricultural college used as a school for training for war purposes, and since they are apparently so zealous in their war aims, I do not see why Conservative members are critical about the matter. I live in a district in which there are many farmers. Many of them have been attending agricultural schools and have been doing very well, but they understand that during the war it is right to make sacrifices in order to defend the country.

I must say that I do not feel very comfortable about what I said yesterday when the hon. member for Davenport (Mr. MacNicol) was speaking. I interjected some remarks in the middle of his speech and since then I have read his speech *in extenso* and found it a most interesting one. Turning to page 1141 of *Hansard* of Friday last, I note what was said by the hon. member for Lake Centre (Mr. Diefenbaker) about bringing back that great windbag the Right Hon. R. B. Bennett. There is probably no one in the house who was more intimate in using him as a punching bag when he was prime minister and also leader of the opposition. He was a complete failure from every point of view, so much so that the Conservative party vomited him, and I do not see why they want to have him back. I am sorry to say that, but I must give an exact description of what happened when the right hon. gentleman was leader of his party, when he was called humbug by Mr. Thomas in England, and so on. We had enough of him. Besides, he wanted to leave us, and he has gone. Let him be alone and happy. But he was a failure as head of his party and as head of his government, and I do not see what use he would be here during the war. The joke of it is here:

> I suggest that, with a view to preventing the possibility of failures such as have occurred in the last six months in the matter of aircraft production, we have set up at this time a committee composed of representatives of the aircraft industry in Canada, and that we get in touch with the Right Hon. R. B. Bennett, acquainted as he is with requirements in Great Britain, and experienced as he must be in consequence of the assistance he has given Lord Beaverbrook, and have him come to Canada and head a committee or, if you like, a commission, to investigate the whole situation with regard to the failure of our aircraft production, to the end that further failures will not have to be admitted in this chamber.

The word "failures" is repeated several times, probably in order to describe Mr. Bennett himself. But I do not see how failure can be prevented by bringing another failure to Canada. My hon. friend the member for Lake Centre is too bright a member to continue along such a line. He must change his mind, and he must remember also that not only did the Tory party reject Mr. Bennett but that when he left Ottawa there were only two or three members of the party, one of whom has died, to accompany him to the station. Mr. Bennett was so sorry about it that he shed tears on that occasion. We do not need him any more, and that is the opinion not only of the member for Temiscouata. It is the general opinion in Canada. The Canadian people do not want him. My hon. friends are most illogical. The people of Canada gave a large majority to the King government at the last election, and yet my hon. friends say that this government has no mandate from the people. What mandate has Mr. Bennett now since leaving?—and he left after he was defeated. He had only a handful of followers and they changed him for another leader and again changed that other leader, so that now they have a temporary leader. I do not know how long he will keep that seat.

But coming to that very gentleman, the present leader of the opposition (Mr. Hanson) I want to go back a little further to page 903 of *Hansard*, of February 21, when he tried to give me a lecture. I will stand for no lecture from the leader of the opposition. I will not refer to a dead speaker but to one of the previous speakers to witness the fact that I have no lesson in dignity to learn from the present leader of the opposition. The best way for him to preach dignity is by example. There is something else I find in *Hansard* at page 901, where the word "vicious" is added to the remarks of the Minister of National Defence (Mr. Ralston). When he spoke in answer to me he said that I had made an attack upon him. That was his view. Afterwards, when I read *Hansard*, I saw that the word "vicious" was added in pencil, and I do not know whether it was done by Major Leighton, who is now press liaison officer of his department, formerly managing editor of a Ku Klux paper and also former editor of the Bennett Regina *Star*, which is dead now. I find it unbelievable to discover unparliamentary words in *Hansard* when they have not been uttered in the house, and I would make a suggestion in virtue of which all members would be equal. It is that the corrections in *Hansard* be made in the house at the opening of the afternoon sitting, and then people would know what the report is

that we have before us, and there would be no possibility of change. I have seen one member redrafting whole pages in his own handwriting, like a boy's composition. It is absurd. What is said in the house is what people would know. They are not interested in academic write-ups but what is said in the house, and if a correction has to be made it is very easy for a member to bring it up at the beginning of the sitting. Then people would have a true picture of what had taken place, and if there were something wrong then members could do what I have done with regard to the hon. member for Davenport—express regret. But people would have the real picture, and *Hansard* would not be like the mirrors we see in fairs. If the mirror is on the side the man looks wide, if he looks on the other side he is just as high—he is a giant. It is a farce, and it seems to me that if we are to have *Hansard* it must be true and accurate. If people have the liberty to change anything they say in *Hansard* and put unparliamentary words in their speeches when they are afraid to use them in the house it is just as well to stop *Hansard*.

There was something else said, and on that I congratulate the Minister of Munitions and Supply. I complained about some foolish expenditure that was made at St. Paul l'Ermite. I have learned with satisfaction that after these remarks were made in the house about fifty men were suspended at that place. This is the way things should be done. That the matter was not brought up by the leader of the opposition is probably because they are milk brothers of R. B. Bennett who are heads of the concern operating at that point, and he wanted to protect the Tories there. He was afraid of them, and I know that the leader of the opposition will never bring up a thing like that because he would expose his own friends. The hon. member for Humboldt (Mr. Fleming) yesterday said something which was absolutely true; he said that by the appointment of Tories—not all of them, but some of them—in responsible and strategic positions the Liberal party is suffering from their extravagance and foolishness. If I denounced it at times it is not only to defend my party, it is to prevent foolish expenditure. We have every right to get all the information about it.

There is a difference between strategic information and information on expenditure. My contention is that we should have all information about expenditure; nothing should be secret. Of course if one looks at the estimates we find there the job and the salary, but without any name. If we look at another book, the report of the auditor general, there is the name of the civil servant and the salary, but no mention of the job, except in a very few cases. Then in the departmental report everything is anonymous except the deputy minister who submits the report to the minister; there is no name, no job and no salary mentioned. Of course the branches are mentioned, but I do not see them mentioned in the report of the auditor general except in a very few cases.

Now we have this war appropriation bill. It is not only during the war that we have the Department of National Defence; we have it also in times of peace. During that time the whole thing was in the main estimates; now we have nothing in the main estimates for the Department of National Defence, the Department of National Defence for Air and the Department of Munitions and Supply. All the names and jobs and salaries of everyone employed here in Ottawa in any department should be there; whether the functions of those departments are temporary or not does not matter. We have to render account of the moneys expended by the treasury and therefore must be in a position to give all information to our constituents when they ask for it. That seems only reasonable.

This year the report of the auditor general is entirely different in form from what it was in other years. There are important amounts of money that are not mentioned. I do not know where we should go to get information on them. Yet when any elector comes to see an hon. member and asks him about the expenditure for the salary of so and so, if we do not find it in the report of the auditor general where can we find it?

Besides that the government complain they have to answer too many questions about salaries. It is their own fault; we should have that information in the proper place. One may say it would mean a certain expenditure for printing. It is the old excuse given to me by Mr. Dunning when he refused to print the report of the civil service committee. I had to fight with him to get the report printed and afterwards there was no reprint.

Now I bring to the attention especially of the Prime Minister and his colleagues this report of the auditor general for the year ended March 31, 1940. It is most incomplete; it is worthless. Every cent of expenditure should be shown in it. They say a few dollars are saved by not printing all salaries in full. It is the first time in my long career as a parliamentarian that it has happened and I denounce it. The auditor general should be very careful. I had something to say about him some years ago and I was stopped. I

could tell the whole story—the trouble that was then made about a messenger who was employed here and who had been recommended by me. Someone tried to make him suffer because I complained about certain people. The auditor general should be censured by this house for not giving us full information about expenditures in all departments. The ministers have no reason to complain that there are questions about salaries and expenditures; we cannot get the information in the proper place. I am sure that by mentioning that I express the views of a large number of Liberal members and members belonging to other groups.

The appropriations or estimates for the headquarters of all war departments should be in the main estimates, including not only mention of the job and the salary but the name of the individual. It would not cost so much to do that. To try to find some information we have to look at the report of the auditor general, which does not contain complete information, and we have to look at the estimate. In the report of the department there is nothing about what is paid the various individuals. That report should mean something, but it is an example of the vague information that I complained of some time ago. We have a great deal of paper but we cannot find anything in it; everything is mixed up—it is like a waste-paper basket. It is not worthy of the House of Commons and the parliament of Canada.

The estimates should contain information about the headquarters staff for each war department and staff salaries. Speaking of staff, I mean everyone from the deputy minister to the last appointed stenographer, mentioning the name, position, salary and allowances paid to each. If that were done it would facilitate the work of the war expenditures committee.

But there is something else. It is the fact that here in Ottawa the staff is part civilian and part military. The men are military and the women civilian. It seems strange at times; I do not see why a clerk whose duty is to file papers, or a messenger whose duty is to carry letters from pillar to post should wear a uniform and be entitled to allowances besides his salary. Of course there is a certain snobbery in that. During the war it is a consideration to wear a uniform, even if one is not doing any military duty. Many men are wearing uniforms who are not fit for military duty. For instance, here I have a list of the ranks in the air department. It starts with pilot officer, then goes on to flying officer, flight lieutenant, squadron leader, wing commander, group captain, air commodore, air vice marshal, air marshal, air chief marshal and marshal of the Royal Air Force. There are some pilot officers who are only piloting files, some flying officers who only fly to the door to take the salute; and I could continue at great length. On the other hand we have a girl, a stenographer, who hears very confidential information but who is in civilian clothes, buying her dress at Murphy Gamble's or some other store. There is nothing military about her. The other man is in uniform, and in addition to his salary he is paid an allowance about which we do not know, although both do the very same work. These are foolish expenditures, and the ministers concerned should bring these fellows to their senses. I do not see why a man should wear a uniform when he is performing duties that were performed yesterday by a young girl in civilian clothes, duties which might be performed to-morrow by that same young girl. This is not the army at all; this is just a parade, which is absurd in times like these.

The other day I suggested that the government should look into the expenditures at St. Paul l'Ermite, and I also mention Valleyfield, where the expenditure, which was supposed to be $5,000, has gone to $16,000 or $25,000, or some very high figure. I hope the ministers concerned will get in touch with the proper authorities in order that some investigation may be made. Moreover, investigation should be made into the qualifications of the inspectors. I know of one leather inspector in the Department of National Defence who was formerly a truck driver, and in addition I believe he is an Italian, a spaghetti eater. Another inspector was in a hospital for a time performing the duties of a he-nurse; then he was a packer and now he is a leather inspector receiving a salary and a living allowance. I am told that very few of the leather inspectors were previously qualified as saddlers, harness makers or leather workers. If we want our money to be well spent we must have duly qualified inspectors rather than men appointed because of their friendship with a great man, though friendship with a great man is a godly thing.

As another suggestion, I want the government to be very careful about soldiers travelling on trains, to see that they are not given an opportunity to buy hard liquor when on ordinary passenger trains. I might mention some instances that were very bad. One night the maritime express arrived in Montreal with one car full of soldiers. All the windows of that car were broken. On another occasion the conductor complained of the way some soldiers had behaved. When he went into

the car the lights were all out. He turned the lights on again and told the soldiers to leave them on. When he returned later all the lights had been unscrewed and thrown away, and the car was as dark as a cave. These things have been passed over in silence for a long time, but a stop should be put to conduct of this kind. Of course some officers—I do not know of what branch—are supposed to be on the trains to police the cars, but what I have mentioned should be stopped in order that the Canadian people may retain their high regard for the army. There are times when soldiers can have a drink without causing any trouble. I do not wish to cast any slur on the army; when young men are left without control this sort of thing is bound to happen. I am all for order in the army; I am for the hierarchy, but we know very well that the hierarchy cannot work from side to side, that it works from top to bottom.

I could make reference to many other matters, but I shall conclude by mentioning only one. Each of us realizes that war is a most serious thing and that probably we will have to stand by our soldiers, our sailors and our airmen for more than a year or two before we reach the turning point and achieve victory. We are told that many sacrifices are ahead; but there is one class of preacher to which I object. I have before me a dispatch that appeared in the Ottawa *Journal* of December 12, 1940, as follows:

> Canada Urged to Reduce Home Consumption.
> Stoke-On-Trent, Staffordshire, England, December 11.—Canada and the other dominions are urged by Lord Stamp to join with the United Kingdom in tightening their belts and reducing home consumption so that the war effort may be increased to the utmost peak.

That was none of his business. He may speak to Englishmen, but we have no lesson to learn from Lord Stamp. Members of the government may speak to us, but it does not help our cause for a man in England to tell us to tighten our belts. That is our own business; it is none of his. These speeches are very dangerous; they may arouse the Canadian people.

There is one other matter, Mr. Speaker. Everyone in this country wants to know what protection we are getting as a result of the expenditures that are being made. We hear of billions of dollars being spent for Canada. We may see trains loaded with shells. We may see trainloads of soldiers. We are ready to vote all the money necessary to win the war. That is right; everyone is for that, but we want that money to give a certain definite amount of protection to the Canadian people. Of course there are two schools of thought on that point. There is the school that believes everything should be sent to Great Britain, overlooking the defence of Canada. There is the other school that does not want to do anything for Great Britain but wants all the war expenditures to be made for the benefit of Canada. I believe it is best to follow the middle course. We must help Great Britain as much as we can; but we must not overlook the defence of our own country. While the Prime Minister did not accept my suggestion, I suggested that every hon. member should go to his constituency and recruit a full battalion, a thousand or twelve hundred men, from the day labourers, the farm hands and the lumber jacks—the very best type of soldiers—who would enlist for the defence of Canada. At that time it was not accepted.

It seems that we should try to restore the confidence of the Canadian people in the ministry by seeing that the country is well defended. St. Martin was a very charitable man. When he was asked for some help by a poor man he cut his cloak in half, gave him one-half and kept the other half for himself. But he did not give his underwear. In these times there is no one who admires Churchill more than I do, but I do not place Lord Beaverbrook upon the same pedestal. That is my own point of view and it is just as reasonable as the views put out by those paid by him to say that he is a great man. And Lord Stamp comes to this country to give us a lesson, I have a perfect right to tell him my views.

If we are to help England, let us do so, but let us at the same time defend Canada. We should organize our defence in case of the sudden attack which may come at any time. We do not know what may happen in the future. We hope that the future will be bright; that is the hope of everyone, but we must protect ourselves. I hope that in the money included in this vote there will be a large amount provided to organize the defence of Canada. We need to be defended, because we are a large country with a small population. We are, as the Prime Minister has said repeatedly, envied by many countries in Europe. We must be ready to repulse any attack.

When the government takes that fact into consideration and acts accordingly it will find out that the Canadian people are satisfied and ready to do more than ever for England. But first let us organize the defence of Canada. The Minister of National Defence and the other war ministers will be surprised at the extent to which I am ready to help, provided that they take the members into their confidence and do not treat them as strangers. If they are occupying the treasury benches, it is not by

a mandate of God but by the will of each member who supports the government. That should not be forgotten; that is something that deserves consideration and I hope it will not be ignored.

The press which is paid by the profiteers who are the scum of the world can say anything. I do not care about that. The press has lost a lot of influence by using stupid language about some important matters. Very few people read the editorial pages of a paper. When they want to know the news they listen to the radio. They are not interested in the papers except to make parcels with them.

In conclusion I insist upon the defence of this country and I hope it will not be forgotten by those whom it may concern.

Mr. DOUGLAS (Weyburn): I should like to make a few remarks with reference to the statement made by the Minister of National War Services (Mr. Gardiner) and to ask him a question or two.

First, I think the minister should be commended for the work being done by the bureau of public information. I am not suggesting for a moment that that work cannot be improved, and I do not think the minister would suggest that. This is a new branch. To organize the propaganda—I use that word advisedly in its proper sense—of a nation in a few short months is a herculean task. Some of the work being done in this connection is extremely commendable. I think all hon. members who have listened to the series "Let's Face the Facts" will agree with me when I say that that was one of the finest series ever put on the air. I have heard many persons who are in a position to know say that the address by Hendrik Van Loon was a classic, probably one of the greatest things ever sent over the ether waves. The same is true of many other radio programmes. I think they have done most excellent work.

The posters and pictures put out have had a very telling effect right across Canada. I should like to pay a tribute to the work done by the national film board. I am sure that most hon. members saw the picture at the Capitol theatre a week ago yesterday. I went to another picture theatre a few nights later when the same picture was shown and I tried to get the public reaction from the audience. Everywhere this picture is being shown it receives the most satisfactory ovation. I doubt if the people who put out the March of Time and who received an award for it could have done a better job. I hope that whoever is responsible for this type of work in the department will be kept at it. By having pictures like this shown in the theatres across Canada we help to build up public morale. I doubt if public morale can be built up as adequately in any other way. The radio and the moving pictures are important media for this purpose, and I think the minister is making fairly good use of them.

As I say, I am not suggesting that this work cannot be improved. For instance, the minister has said that the material sent out by the director of public information is sent out just as it is received from the different departments. I think that is what is wrong with it. It would be much better if some newspaper man in the bureau wrote it over again in the style which newspaper men know the public considers readable. A lot of this information could be rehashed and condensed. There is such an avalanche of it that a lot of it does find its way into the waste-paper basket. It could be boiled down; many of the statistics could be eliminated and the interesting facts put into the leading paragraphs.

Hon. members appreciate the thanks expressed by the minister for the part they took in the national registration last year. I believe all hon. members cooperated to the best of their ability. But I should like to say this to the minister, and I say it in the best spirit: Last year the minister wanted a national registration and he wanted it quickly, so he called upon hon. members and asked them to give of their time and services. They did that gladly and willingly and the registration was a success; indeed it is a monument to the way in which public men can cooperate when they want to. In every constituency where I had the privilege of looking into the organization work I found people of all political faiths and religious beliefs cooperating; they were freely giving their services and giving them gladly. The result is that that registration cost less than a million dollars.

Now the minister has started a salvage campaign and the members are again being asked to give of their time and services. They are doing it gladly. They are endeavouring to show how they can be of service to the country and to the minister who is responsible for this work. The Minister of Finance (Mr. Ilsley) wanted cooperation in connection with the war savings certificate drive, and I think he got it from all hon. members. But this is how the picture looks to some people in the country. They say: When you wanted a national registration, you came and asked for a voluntary effort; when you wanted to conduct a salvage campaign, you asked for a voluntary effort; when you wanted assistance in the war service certificate campaign you asked for a voluntary effort, but now when you are going to take the census, which will cost in the neighbourhood of $2,500,000—the Minister of Trade and Commerce (Mr.

MacKinnon) will know—when there is some money to be expended, the work is being done on a partisan basis. The Minister of Trade and Commerce shakes his head, but I am not going to get into an argument with him about it. Every question which has appeared on the order paper in connection with the census commissioners who have been appointed shows clearly that this is being done on a partisan basis.

I know that no hon. members on this side of the house have been consulted with reference to the carrying on of the census. Since we have been doing these other things so successfully on a voluntary basis, I think the minister might well consider the advisability of taking the census, if it is to be proceeded with at all—and that is debatable—on the same basis as the national registration was taken. It could be done that way for very much less money. The minister would have the cooperation of members in all parts of the house, and it would help the people throughout the country who gave their voluntary services last year to feel that they were not merely being used in a pinch and then cast aside when they might have an opportunity to receive something for their services. I throw that out as a suggestion for the minister because I am sure that it will not be as easy to get the voluntary cooperation of these people again if we drop this precedent we established in connection with national registration and have the census taken purely on a partisan basis, as it would appear it is going to be taken.

I have a question to ask of the Minister of National War Services (Mr. Gardiner). I understand that there are no estimates for his department unless they are brought down in the supplementaries, and that consequently this is the only opportunity we shall have to get a picture of the expenditures of the department for the past year and an outline of the budget for the coming year. I would therefore ask the minister if he will be kind enough to break down the expenditures of his department for the past year up to the most recent date available. I should like to know the total amount spent by his department during the past year and what will be spent this year.

We have the item of $918,000 for the registration. I should also like to know the total amount that was spent in calling up the trainees for training and the total amount that was spent in organizing the voluntary services. The minister has already given us the amount spent by the information bureau up to the end of November. Could we have the expenditure brought up to the latest date available? I would also ask the minister to break down these expenditures into their component parts and to give us the corresponding amounts that will be spent for the same purposes in the coming year. If the minister would give us these items now, it would be helpful.

With reference to the trainees, when the Minister of National War Services has finished would the Minister of National Defence (Mr. Ralston) give us, if not now, at all events later, what it costs the country for the pay of the trainees, their equipment, the training facilities required in their thirty days' training, the cost of the medical examinations, et cetera.

Mr. RALSTON: A return that was brought down gave the amount in toto, but I do not think the expenditure was broken down. There is, however, on the order paper a resolution which I am looking into, with respect to the training camps.

Mr. DOUGLAS (Weyburn): Does the return show the break-down for equipment?

Mr. RALSTON: I do not think it does, but I shall endeavour to see if that cannot be done.

Mr. GARDINER: I have the total of the estimated expenditures, the amount set up for last year and the succeeding year, but it comprises quite a volume and it would take a considerable time for me to go through it and give it all. But if there is any particular item on which any hon. member wishes details, I shall be glad to answer any questions.

Mr. HANSON (York-Sunbury): On that point, for peace-time expenditures we are provided with a printed book; the estimates are laid on the table with a message from his excellency. But for war-time expenditures, which are several times larger and much more important, and which call for much greater sacrifices on the part of the Canadian people, we are given only driblets of information from time to time. I am not complaining of that so much as I am complaining of the system. Here is $1,300,000,000 to be spent. The government must have the break-down of that. Then why not put it in the form of estimates and lay them on the table of the house so that we can study them. That is the only intelligent way in which we can proceed. The minister may say that there is nothing definite about these expenditures. I think I anticipate what the Minister of Finance is going to say.

Mr. ILSLEY: Also some of them are secret.

Mr. HANSON (York-Sunbury): All right. Those that are secret, if the minister gives us his word that they are secret, I am not

going to ask to have divulged. But the cost of military training, emphatically that is not secret.

Mr. ILSLEY: That is quite right.

Mr. HANSON (York-Sunbury): Those expenditures and estimates should be laid on the table in printed form so that we can have an opportunity to study them.

While I am on my feet I should like to say this. At the last session of parliament we were asked to vote a war appropriation of $700,000,000, the details of which expenditure are presently under review. We facilitated the passage of that resolution as no other resolution was ever facilitated in the whole history of the House of Commons, and when I hear hon. gentlemen on the treasury benches criticize us for what they consider to be destructive criticism under this measure they are entirely oblivious of the fact that we facilitated the passage of that other resolution to help the war effort and with hardly a word of information about it. That is just in passing.

In that same session of parliament, because of the tragedy of the events then occurring and because of the nature of the times, we did not ask, except in a brief and very general way, as to the war credit that had been voted at the preceding session of parliament. Was that not cooperation? It was cooperation of a kind that I do not think ought ever to occur in parliament again, and I promise the ministry that as long as I am at this desk that sort of thing will not occur again. The people of Canada want to know, and they never can know unless the government give us some detailed information in advance for study. The ministry must have anticipated, when this $1,300,000,000 appropriation measure was brought down, that there would be discussion and that naturally we would want information. The Minister of National War Services himself, in the course of his statement, made it clear that he anticipated that we would ask and would receive the break-down of all the expenditures in his department. How can any opposition, no matter what its desire may be, ask intelligent questions about any department of war expenditures unless we have placed in front of us some picture that we can study?

With respect to the question of the thirty-day training I got a certain number of figures from the Minister of National Defence and a number of figures from the Minister of National War Services, but they are by no means complete. As the opportunity arises, I propose to ask to have them broken down, but I did not want to bring that up this afternoon because my colleague wants to ask the Minister of Munitions and Supply about another matter, and I do not wish to occupy his place too long because his question is important.

I am making a plea now for the ministry to take into consideration over the week-end breaking down by departments, and under suitable and proper headings, every dollar of the $1,300,000,000 that they are asking for now, save and except such as they say are secret, and I certainly shall never ask for that. I am prepared to take the word of the minister that they are secret and that details cannot be published. But with respect to those that are not secret with respect to those on which it is our duty to the country to get information, I do ask the ministry, and it ought to have been done by the Minister of Finance quite a while ago as soon as he brought down his appropriation, that we be given the information for which I have asked. I know that we have been given general figures which are on *Hansard*, but we have not been supplied with a printed statement showing the expenditures by the various departments and under proper headings. I should like to have that information, broken down as far as would be reasonably necessary for intelligent examination and discussion. I do plead with the Minister of Finance, the Minister of National Defence, the Minister of National War Services and all the other ministers who are spending this huge sum of money to give this information to the house and the country. I do not think it is very difficult. If the Minister of National War Services were to allow me to see that portfolio in front of him, I venture to say it contains a break-down of every dollar of proposed expenditure.

Mr. GARDINER: I will give it if the hon. member will let me.

Mr. HANSON (York-Sunbury): Why cannot we get it in the form of a pamphlet? It would involve only the cost of the printing. I asked the other day, in addition to the figures that were given, for the cost of transportation of the trainees to the camp. That is an important item. It goes into the cost of training these young men. It is part and parcel of the equity we have in these young men for future war services in Canada. That has not been given to us yet, and it is over a week since we asked for those figures. I communicated with the deputy minister; he told me they were not available. I cannot quite understand that. These men were called up first in October. The transportation cost must have been heavy. All the bills for the October camp, for taking the men home, and for bringing up the next group must have been submitted and paid before the end of

the year. I should like to get that information. I should like to get the cost for the January camp and, as far as possible, down to date. I want the total cost of the thirty-day training plan. I believe that when the house and the country get the figures on this plan they will be astonished at the cost.

Mr. GARDINER: How much does the hon. member think it will be?

Mr. HANSON (York-Sunbury): I have an idea, but I want definite data. I do not want any guesswork about it.

Mr. GARDINER: It is right here.

Mr. HANSON (York-Sunbury): The government has it, and they have never given it to us. I ask that it be given, as a matter of right, to the membership of this house.

Mr. ILSLEY: If the hon. gentleman will permit me, I will tell him just what we expected would happen when we brought this in. We supposed that the opposition would ask me, as Minister of Finance, how the sum of approximately $1,450,000,000 was made up, and that I would tell him. I would give that in lump sums; such sums, for example, as six hundred and sixty-six millions, some hundreds of thousands, some odd dollars for the army; whereupon, I expected, in all probability some member of the opposition, probably the leader of the opposition, would say, "How is that made up?", and the Minister of National Defence would tell him in so far as he could, without divulging military secrets or giving information to the enemy. I thought that possibly the opposition would go through the whole sum in that way.

Mr. HANSON (York-Sunbury): Well, we are going to do so.

Mr. ILSLEY: We were prepared to give that information. I made it very clear at the outset that these were not ordinary estimates and that there would not be anything definite about them—as there is in ordinary estimates—nor were we bound to spend not more than the sums which we would mention. There is a certain amount of vagueness and looseness about the amounts which enter into a war appropriation bill. But we have not been withholding a single thing. We just wanted to know what the opposition required, and we would give it in so far as it was possible.

Mr. HANSON (York-Sunbury): Our minds are coming together very rapidly. In other words, the minister was saying that it was not the duty of the government to give these figures at all; it was our duty to pry them out of the government.

Mr. ILSLEY: Oh, no.

[Mr. R. B. Hanson.]

Mr. HANSON (York-Sunbury): I do suggest that, as trustees of the people of this country, as guardians of the public treasury, as tax-collectors of the people of this country, it is their duty to give an accounting without being asked to do it. Any trustee is bound to give an accounting to his *cestui que* trust.

Mr. ILSLEY: An accounting!

Mr. HANSON (York-Sunbury): I understand the implications of the minister's statement. I understand his implication is that the opposition has been derelict in its duty. I deny that absolutely.

Mr. ILSLEY: I believe they have been.

Mr. HANSON (York-Sunbury): All right. I thought that was exactly the position the minister was taking. Well, better late than never.

Mr. ILSLEY: Well, go ahead.

Mr. HANSON (York-Sunbury): We want the detail of this, and we will ask to have it given to us.

Mr. ILSLEY: How much?

Mr. HANSON (York-Sunbury): The whole thing.

Mr. ILSLEY: No, sir.

Mr. HANSON (York-Sunbury): Except those with respect to which I have already suggested that I would be quite agreeable to the reservation the minister made. If it is a secret fund—and yet I can scarcely imagine such a situation—how far is this matter of secrecy to go? I should like to think over the implications of that. What is the necessity for secrecy? In what respect? I assume it applies to $655,000,000. I deduce that from the statement of the Minister of Finance, and I do not know enough about it to know what would be secret and what would not. But we will find out before we are through.

How can we know if the thing is not given to us? I resent the suggestion that, in order that these details may be given, we must ask for them. That is not a principle of responsible government. That is a denial, a negation of the principle of responsible government. It is fascism in an incipient form.

Mr. GRAYDON: It is a waste of time, too.

Mr. HANSON (York-Sunbury): Certainly it is a waste of time. I would not wish to hold up this resolution if I thought that to do so would delay the government's war effort. If delay would bring any aid or comfort to the enemy, if it would help Hitler to lick England or to invade Canada, I would say "Pass the resolution this minute." But nothing like that is going to happen, and no

argument can be based upon that supposition. I see now that it is based on the theory that there is to be non-disclosure of fact unless it is pried out of the government. That is the theory of the government's war appropriation resolution. Mr. Chairman, that is not good enough for the Canadian people. It is not only not good enough for the people's representatives who sit on this side; it is not good enough for hon. gentlemen who sit opposite or who sit in the corners of this chamber to my right and left. Let us have an end of this attempted suppression of the facts.

Mr. ILSLEY: Mr. Chairman, all this language is quite unwarranted and quite unjustified.

Mr. HANSON (York-Sunbury): I do not think so.

Mr. ILSLEY: It is a histrionic display which surprises me very much.

Mr. HANSON (York-Sunbury): I hope the minister liked it.

Mr. ILSLEY: I certainly did not experience any feeling of uneasiness or discomfort as it proceeded.

Mr. HANSON (York-Sunbury): As long as the minister has a crowd behind him, he is as brave as a lion.

Mr. ILSLEY: I was not thinking about that aspect at all. The leader of the opposition said, why does the government not come forward and account? In the speech with which I opened this debate I stated exactly how much money had been spent to the end of January and how much money we anticipated would be spent by the end of the fiscal year; and, with regard to the coming year, I gave a total. It is only the total which we are asking the committee to vote; we are not asking the committee to vote any particular items.

Mr. HANSON (York-Sunbury): All the more reason why we should have the items.

Mr. ILSLEY: Perhaps it was no more the opposition's duty than it was that of any other hon. members—although that is what they are there for. But if the opposition, instead of launching this curious campaign of editorial writing and attacks on my colleague the Minister of Munitions and Supply, had exercised a little bit of judgment and applied a few business principles to the examination of these amounts, they would have had this information long, long ago. When was there the time to give this information before this loud onslaught was delivered? When have we been asked for the information? We have been giving the information in large sums, totals, and we have not been asked for anything else. When the hon. gentleman speaks about suppression of facts and the government waiting till the facts are pried out of them, he is dealing in old-line stuff which does not fool a single member of this committee a single minute.

Mr. HANSON (York-Sunbury): You ought to know. Between 1930 and 1935 that is the sort of thing you fellows put over every day.

Mr. ILSLEY: There wasn't a war.

Mr. HANSON (York-Sunbury): Yes, there was an economic war just as serious as this.

Mr. ILSLEY: The conditions were not like the conditions now.

Mr. HANSON (York-Sunbury): Pretty bad.

Mr. ILSLEY: If the opposition had told us a week or ten days ago what detail they wanted I would have tried to supply it, and if I could not I would have got my colleagues, the service ministers, to do it. But instead of that we have been listening to speeches. We have not been asked questions until this afternoon, and now we are not being asked questions but are being treated to a display of attempted parliamentary eloquence by the leader of the opposition, in which he says he is going to ask questions. What is the information the hon. gentleman wants?

Mr. ROSS (Souris): Far from the facts bearing out the minister's suggestion as to what we should be doing, I would point out that I have had on the order paper since February 24 a question which his colleague the Minister of National Defence could answer:

1. How many regiments are now included in the reserve army of Canada?
2. What is the annual cost to Canada of pay and allowances of reserve army who are on full-time pay?

That had a distinct bearing on the matters under discussion now, and I have been keen to get an answer. In view of the fact that this question has been on the order paper since February 24, I cannot see how the Minister of Finance can say that we have not asked for information.

Mr. ILSLEY: I meant in the debate.

Mr. GARDINER: I should like to answer the question asked by the hon. member for Weyburn (Mr. Douglas), which started all the discussion. I believe I stated as I sat down that I was prepared to answer questions now or later, and the first question with reference to the matter came from the member for Weyburn. It was a proper one. He asked whether I had information and whether I could give it now or would prefer to give it at some other time. I have consulted with

the Minister of Finance and he states that this is the proper time to deal with it. It could be dealt with again on the bill but now is the proper time to take it up.

So far as general information is concerned, I think it would be well to put the figures on *Hansard* this evening so that hon. members might have it before them between now and Monday.

The amount expended in my department is very small as compared with the total amount, but it will give some idea of the information in a part of the service in which I do not think there are any items that are secret. I believe that all the items in my department can be given to the members and to the public. I will read the general figures which will give an outline of the expenditures.

Taking departmental administration, the expenditures to January 31, 1941, amounted to $24,083.35.

Mr. HANSON (York-Sunbury): The minister is giving the figures since the department was set up?

Mr. GARDINER: Yes. The amount expended was the sum I have just mentioned and the estimated expenditure to the end of the financial year, March 31, 1941, is $16,245.94. The total expenditure for 1940-41 is $40,329.29 and the estimated expenditure for the next year is $65,290.

For human resources, the first item is national registration, the amount expended to January 31, 1941, being $792,480.41. The estimated expenditure to the end of the year is $128,007.41. The total is $920,487.82. The estimated expenditure for the next year is $1,000. It is just a matter of keeping the records up to date.

Next is the bureau of statistics. As hon. members know, the bureau is in the Department of Trade and Commerce but it is doing work for us. It is not the intention of this department to set up any new branches where there is a branch already in existence which can do the particular work, and we use the bureau of statistics for all statistical work. This year the expenditure up to January 31, 1941, was $193,069.94 while the estimated expenditure to the end of the year is $153,454.49. The total is $346,524.43. For the next year the estimate is $129,360, which will again be only a matter of keeping up to date those records which I produced last evening.

The next item is recruiting. The expenditure to January 31, is $217,770.57. The estimated expenditure to the end of March 1941, is $498,472.90.

Mr. HANSON (York-Sunbury): Does that include transportation?

Mr. GARDINER: Yes.

[Mr. Gardiner.]

Mr. GRAYDON: Does it include transportation both ways, to and from the camp?

Mr. GARDINER: No. After they go to the camps the national defence takes care of it. The total for recruiting for 1940-41 is $716,243.47, and the estimated expenditure for 1941-42 is $547,040.

With all due respect, I would venture to say that these figures are smaller than my hon. friend thought they would be, so far as our department is concerned. The next item is human and material resources. The expenditure to January 31, 1941, is $3,809.88. The estimated expenditure to March 31, 1941, is $34,445.82. The total is $38,255.70, and the estimated expenditure for 1941-42 is $63,210.

Next we come to voluntary services. The expenditure to January 31, 1941 is $8,434.99. The expenditure to the end of the year is $12,343.17. The total for 1940-41 is $20,778.16, and the estimated expenditure for 1941-42 is $27,080.

The last item is publicity. The expenditure to January 31—that is to say, the actual moneys paid out—amounted to $105,173.30. The estimated expenditure to the end of the year is $334,000.33. The total for 1940-41 is $439,173.63, and we estimate for next year a little more than double that amount, $956,420.

The total expenditure, 1940-41, is $2,521,792.50, and the estimated expenditure for 1941-42 is $1,789,400.

Mr. DOUGLAS (Weyburn): I wish to thank the minister for the break-down. I must say, however, that he is hardly fair in the statement he made. As I remember this procedure last year, when a similar resolution was brought down providing for $700,000,000, he first of all presented a general break-down of that figure and then each minister whose department was involved gave a statement of general policy and a break-down of the figure as it related to his department. If I remember correctly that was the policy followed last year.

Mr. ILSLEY: I was not the minister then.

Mr. DOUGLAS (Weyburn): By the present Minister of National Defence.

Mr. RALSTON: Let me answer my hon. friend. This year I expected to have made a statement somewhat similar to those made in July and November. I discussed the matter, and I remembered particularly a remark made by my hon. friend the leader of the opposition with regard to statements of that kind being eyewash. Therefore I decided I would not make a statement but would rather leave it to the committee to ask any questions they saw fit. At the same time I have some notes here, so that when my turn comes—my hon.

friend the Minister of Munitions and Supply has rather had the spotlight the last week and my hon. friend the Minister of National War Services got into it a little last night—I might be allowed to make a statement but in such form that hon. members can quickly ask questions if they so desire and I shall give the best answer I can. That is the reason why there has not been a long statement made as on the other occasions.

This method will not give as connected a picture of the war programme, particularly the army programme, but it may be more informative and more convenient for members of the committee; it certainly is a good deal more trouble for the minister because it means he has to be on the qui vive all the time. Day after day I have a folder full of details of various subjects on which someone might ask questions. We are not in the same position in this committee as generally in committee of supply, when one has an estimate book in front of him and a particular item in his department in respect of which he can bring an officer of the department who knows of that particular item and can sit here for two hours and assist him in answering questions. Here we have no detailed estimates at all; we have to deal with the sum as a whole. One minute an hon. member may be asking about military training centres; the next, another hon. member about some equipment for overseas, and the next something about the Royal Military College. Therefore it is impossible for the minister to have it all in the customary order. Perhaps it is as convenient for the committee; but at any rate they have an opportunity for a much more roving commission. That is the situation, and I am here endeavouring to do my best to give such information as may be possible in connection with the administration of the department.

Let me say further that my hon. friend has never, and this committee has never, had before it any memorandum of any kind or description that I know of as to past expenditure. Past expenditures have had to be elicited from the minister when the item has been up for discussion. For example, if there is an item for the Royal Military College and someone wants to know how much was spent last year on a particular service at that institution, he has to ask for it; there is no pamphlet, never has been. When my hon. friend talks about putting this in pamphlet form he is asking for something that has never been done before in peace time, let alone war time. There has been in connection with the item a certain breaking down in general headings under each department, but even those are pretty large and general and would not, I think, give a great deal of information. They are useful to the minister because they enable him to prepare to give information more quickly on that particular subject. As the Minister of Finance has said, we cannot put a book of estimates before the committee; that is impossible because they are not estimates, they are, as he intimated, the best approximation which can be made and are subject at all times to variation by reason of the course of the war.

In England, what does my hon. friend get? Do they get any break-down of the services? All they get is £10 or £100, a token vote in connection with each item.

My hon. friend talks about suppressing figures—

Mr. MacNICOL: He certainly got under the skin of the government.

Mr. RALSTON: All right, I am glad. I am supposed to be one of those meek people who take it lying down. I say that there is no suggestion of suppression. It is not a fair statement to make such a suggestion. I understood my hon. friends wanted to get on with this resolution. They are entitled to all information possible as to past expenditure; as to the future we can tell them as best we can what the programme is, what we are trying to work out, but I think that is all. When you come to hang up the dollar sign in front of it, it is much more difficult than they think. Therefore I am here ready to give all the information I can in connection with any particular function, unless it is something secret, and there is not much that is, but it is subject to so many factors and events that it is not much use. There are so many unknown factors which one cannot take into account beforehand, and which must be considered as constituting conditions and reservations that it is difficult to give accurate information.

The hon. member for Souris said he had not received any answer to his question. I say to my hon. friend that I personally called him no less than three times on the telephone at his room with reference to that very question. I should have written him a letter or rose in my place in the house; I am sorry. But the form of my hon. friend's question makes it difficult to know just what information he wants.

Mr. ROSS (Souris): I am sorry. But I was in the house each time the minister asked that the question stand.

Mr. RALSTON: He asks:

What is the annual cost to Canada of pay and allowances of reserve army who are on full-time pay?

I think my hon. friend is asking for the pay and allowances of those of the reserve army who are working in connection with the reserve units. The question of pay and allowances of those in the reserve army involves much more than that, because many are on a camp staff somewhere else altogether. They may be in England. I wanted to ask my hon. friend just what he wanted, and that is why he has not been given the information before.

Mr. ROSS (Souris): I wanted the estimated cost of the reserve army in Canada.

Mr. RALSTON: That is not what the question says at all. The only people who are on full-time pay are the officers who are working with the units, it might be a quartermaster sergeant or some sergeant at headquarters. There are those of the reserve office who are on full-time pay and allowances who are not working with and whose duties do not concern the reserve army at all; they are working in connection with some staff duties. I have the information in two ways; I thought my hon. friend was really concerned with the reserve units, but I did not want to give an answer and have him say I gave the wrong information.

Mr. ROSS (Souris): With regard to what the minister has just said, is it necessary that those officers or non-commissioned officers so employed be of a category which would take them into the active service army?

Mr. RALSTON: It depends upon what the job is.

Mr. HANSON (York-Sunbury): Will the Minister of Finance give us for the other war departments a statement and break-down similar to the one that has been placed on the record by the Minister of National War Services? These figures are large; they are numerous; I have a pretty good head for figures, but I cannot remember them; I certainly would like to investigate and examine them. I think that by consent we could eliminate discussion about a good many of these items, if this were done. Certainly I do not want to go through the whole array.

Mr. ILSLEY: I will give, and put it on *Hansard* so that hon. gentlemen can have it for Monday, a list of the amounts which make up the total—I said approximately $1,450,000,000; it is almost exactly $1,460,000,000. I will put them on *Hansard* now.

Mr. HANSON (York-Sunbury): Or we could take it as read, and save time. If the minister has a spare copy and could send it to my office, I should be greatly obliged.

Mr. ILSLEY: I can get a copy for my hon. friend but I do not have it here. This will not give the kind of break-down that the Minister of National War Services just gave the committee; this will give much larger items.

Mr. HANSON (York-Sunbury): We can get the break-down afterwards.

Mr. ILSLEY: My hon. friend can get that from the respective ministers. Here are the figures:

Amounts Submitted by Departments to January 31, 1941

National Defence—		
Departmental administration	$ 746,660	
Army services	666,574,659	
Naval services	181,000,000	
Air services	386,000,000	
Internment operations	8,232,697	
Censorship	207,636	
Dependents' allowance board	342,240	
Royal Military College	434,492	
Northwest territories and Yukon radio	177,500	
Inspection board—United Kingdom and Canada	3,510,640	
		$1,247,226,524
Munitions and Supply—		
Administration	$ 2,750,000	
Expansion of industry	177,928,100	
		180,678,100
		$1,327,904,624

Amounts Submitted by Departments to January 31, 1941—*Concluded*

Other departments—		*$1,327,904,624*
Agriculture	$ 7,877,550	
Auditor General	72,000	
Civil service commission	126,822	
External Affairs	288,500	
Finance	2,108,893	
Fisheries	603,000	
Justice	79,260	
Labour	4,878,404	
Mines and Resources	657,245	
National Revenue	5,600	
National War Services	1,948,252	
Pensions and National Health	3,664,400	
Post Office	413,500	
Prime Minister's office	11,500	
Privy Council office	6,380	
Public Works	4,183,100	
Royal Canadian Mounted Police	4,045,691	
Secretary of State	231,134	
Trade and Commerce	308,015	
Transport	888,362	
		$32,397,608
Government-owned enterprises		100,000
		32,497,608
		$1,460,402,232

Mr. HANSON (York-Sunbury): Those are the figures the minister gave before, are they not?

Mr. ILSLEY: I do not think I gave them all. I think I spoke very generally when I introduced the resolution.

Mr. HANSON (York-Sunbury): Is that $603,000 for fisheries in connection with the war?

Mr. ILSLEY: Yes. I shall have to leave it to the minister to explain.

I will ask hon. members to recall that the general picture indicated by these figures was presented at the beginning of the debate, and at that time I added certain qualifications. For instance, there is the matter of duplication in respect of the proposed vote for munitions and supply. It is not just clear to what extent this will be true, but it may be that this $180,000,000 is to some degree a duplication of amounts voted for the defence services.

Mr. HANSON (York-Sunbury): The minister is not able to say to what extent?

Mr. ILSLEY: No; it is impossible. I dealt with that in the speech I made at the beginning, and I said why it was not possible. Then, as I recall, there were two other considerations I wanted the house to have at the time the figures were given. One, of course, was with reference to the uncertainty about deliveries. That always would have to be taken into account. I think the other uncertainty was as to the nature of the developments in the war.

Mr. HANSON (York-Sunbury): I think that is very reasonable.

Mr. ILSLEY: Those are the qualifications; and with those three considerations these are the figures. It was because of the qualifications that I did not want to ask the house for $1,460,000,000. I thought that to ask for $1,300,000,000 was a reasonable thing to do under the circumstances.

Mr. RALSTON: The hon. member for Cumberland (Mr. Black) asked a question to-day with regard to Eastern Passage airport contracts. The hon. member is not here; I have inquired and found that he has left, but I spoke to my hon. friend the leader of the opposition about the matter and I wish to say that I have been in communication with the staff of the ministry for air and that Mr. W. N. Tilley, K.C., was asked by the minister to examine into the matter referred to and to give the minister a report. That report is expected shortly.

Mr. WRIGHT: I should like to ask the Minister of National Defence if he will break down the figures for the army into the amount spent last year for the non-permanent active militia; the amount spent on the active service force; the amount spent on the trainees; the amount spent on the administration of general headquarters; the amount spent on the administration of the different districts; the amount spent on ordnance and stores; the amount spent for construction and repairs, and the amount spent for transportation. I should also like a break-down of what it is expected will be spent during the coming year under the same divisions.

Mr. RALSTON: I am not sure that I have the expenditures for the coming year in that form. The way I have them here is in formations or functions, but I shall endeavour to see if the information can be put in the other form. My hon. friend has given us quite an order there.

Progress reported.

BUSINESS OF THE HOUSE

Mr. CRERAR moved the adjournment of the house.

Mr. HANSON (York-Sunbury): What will be the business on Monday?

Mr. CRERAR: The business on Monday will be a continuation of the discussion on this resolution. If we get it out of committee, and the house is agreeable, we would like to proceed with the bill. Should that not be possible, we will take up the resolutions on the order paper in the name of the Minister of Munitions and Supply, the Minister of Mines and Resources and the Minister of Public Works, also the second readings on the order paper. None of them is very contentious, and probably they will pass quickly. I do not wish to imply that this necessarily will be the order in which these matters will be taken up.

Mr. HANSON (York-Sunbury): But generally speaking?

Mr. CRERAR: Generally speaking.

Mr. MacNICOL: Is this all the auditor general's report we are going to have to help us look into these matters? If so, it will take a long time to get through.

Mr. ILSLEY: There is only the one report for the year.

Mr. MacNICOL: I am asking if this is the only report we are going to get from the auditor general with reference to expenditures for the year ending March 31, 1940. There really is not anything at all in this report. If we are compelled to ask all the questions we may find necessary, I can see us sitting here until next Christmas.

Mr. GARDINER: I am pleased to hear there is nothing in the report.

Motion agreed to and the house adjourned at six p.m.

Monday, March 10, 1941.

The house met at three o'clock.

THE LATE JOHN HALL KELLY

TRIBUTE TO MEMORY OF CANADA'S FIRST HIGH COMMISSIONER TO EIRE

Right Hon. W. L. MACKENZIE KING (Prime Minister): I have to-day received the following cable from Premier de Valera of Eire:

> I wish to express my sincere sympathy with you and the Canadian government on the death of Mr. Hall Kelly, your distinguished representative in Dublin. He has endeared himself to all who knew him, by his personal qualities, and by his zeal and devotion in fostering close and cordial relations between Canada and Ireland.

I am sure that hon. members of this house will have learned with deep regret of the passing of Canada's first high commissioner to Eire. The career of Mr. John Hall Kelly is a record of industry, charity and devotion to the public interest. With few early advantages, Mr. Kelly gained for himself a high place in his chosen profession of law and success in the businesses in which he was engaged. As a member of the legislature of the province of Quebec, as an appointed member of the legislative council, and as minister without portfolio in the government of Quebec, he gave to his native province long and unselfish service. In him were joined the traditional eloquence of the Irish race and an ever present and kindly interest in the welfare of his fellow men.

Since his arrival in Dublin Mr. Kelly quietly and effectively worked for Canadian-Irish good will. His reports to the government have been of much value and it has been a great satisfaction to myself and my colleagues to note how warmly he has been welcomed by the people of Eire. The tribute which has been paid by Premier de Valera to his personal qualities, his zeal and his devotion is, itself, an indication of the loss which both countries have suffered by Mr. Kelly's passing.

Hon. R. B. HANSON (Leader of the Opposition): I desire to associate myself with

the words of the Prime Minister (Mr. Mackenzie King) with respect to the sudden, I might say the shockingly sudden death of Mr. John Hall Kelly. I knew Mr. John Hall Kelly for more than thirty years and had somewhat intimate relations with him extending over that period. I learned to value highly the many good qualities which he possessed, not the least of them being his fine Irish sense of humour.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

*CANADIAN ARMY (RESERVE)

Mr. ROSS (Souris):

1. How many regiments are now included in the reserve army of Canada?
2. What is the annual cost to Canada of pay and allowances of reserve army who are on full time pay?

Mr. RALSTON: If the hon. member will permit me, I should like to make a verbal answer to this question, because I conferred with him and I want to give him the information I have at the earliest possible moment. I have not all the information which he asks for.

To the first question, the answer is as follows:

493, composed of regiments of cavalry, batteries of artillery, engineer and signal formations, battalions of infantry, army service corps, medical corps, dental corps, ordnance corps and postal corps units, and Canadian officers training corps contingents.

The answer to the second question is that there are personnel of the reserve army who are employed outside the unit, for instance, on full time duty on staffs of training centres and on district staffs. It is assumed that the inquiry relates to personnel who are performing duties in reserve army units. I have consulted with my hon. friend, and I understand that that is what is desired. There is no fixed annual cost, because the number employed is constantly fluctuating. Information is not available at national defence headquarters without reference to each military district where the pay of officers and other ranks employed full time in reserve units can be segregated from pay and allowances of those otherwise employed and those of the active army. In order to afford some idea of present payments, the military districts were asked to compile the amount of pay and allowances paid to such personnel in the month of January, 1941. This aggregated $242,400. It would require monthly compilations by each district to make up the aggregate amount paid for the calendar year 1940. If this is required, telegrams will be sent to the various military districts asking that these compilations be made, and the results will be tabled as soon as received.

I should like my hon. friend to take into consideration the answer to the question, and if he will let me know, I shall be very glad to comply with his wishes, whatever they may be, with regard to additional compilations.

MUNITIONS AND SUPPLY—SOREL PLANTS

Mr. ROY:

1. Who are the owners of the plants engaged at Sorel in carrying out contracts for the Department of Munitions and Supply?
2. Did the government buy, lease or pay a grant in connection with the letting of these contracts and the operation of these plants, either on behalf of the British or Canadian governments?
3. What are the conditions imposed by the dominion government or by the British government, and what moneys have been disbursed by the dominion government?
4. Has Mr. MacMillan of the Department of Munitions and Supply, after inquiry, recommended the closing of these plants and the transfer of the contracts to other establishments for completion?
5. If so, for what reason?
6. Was the awarding of these contracts to the Sorel company recommended by a member of the dominion government? If so, by whom?

Mr. HOWE: There are two main industries in Sorel, Quebec, engaged in contracts for the Department of Munitions and Supply and for the British government. The Marine Industries Limited are building corvettes, and the Sorel Industries Limited are engaged in work jointly required by the Canadian and British governments. We presume the questioner refers to the latter.

1. The Sorel Industries Limited is a privately owned company operating under a control committee, of which two members represent the Canadian government and two represent the original private company.

2. No.

3. The original contract was entered into by the Sorel Industries Limited with the British government before the Department of Munitions and Supply was organized. The contract has since been revised to take care of Canadian requirements by the Department of Munitions and Supply, and further British requirements. Because of the joint nature of the contract, details as to its terms cannot be given.

4. No.

5. Answered by 4.

6. No. The original contract was a British government contract. The revised contract is a Department of Munitions and Supply Canadian government contract.

BUILDING OF CARGO SHIPS IN CANADA

Mr. BRUCE:

1. How many keels have been laid down in the various shipbuilding yards in Canada since September 3, 1939?
2. How many cargo ships have been completed since September 3, 1939?
3. How many of the said ships are in service?

Mr. HOWE:

1. Steel ships, 104; wooden ships (from 16 feet to 112 feet), 380.
2. None.
3. Answered by 2.

NEW BRUNSWICK TRAINING SCHOOLS—COST OF CONSTRUCTION

Mr. BROOKS:

What has been the total cost of construction of, (a) training centre, Fredericton, New Brunswick; (b) training centre, Edmundston, New Brunswick?

Mr. RALSTON: (a) $253,244.95, as of January 31, 1941; (b) $191,712.59, as of January 31, 1941.

SUSSEX, N.B., MILITARY CAMP

Mr. BROOKS:

1. Is it the intention of the government to purchase more land in the vicinity of Sussex military camp (a) for training purposes; (b) to provide for an airport?
2. What has been the total cost to date for the construction of the Sussex military camp since January 1, 1940?

Mr. CASGRAIN:

1. (a) Under consideration—no decision arrived at. (b) No.
2. Amount committed to March 6, 1941: $2,074,000, of which $1,474,733.56 had actually been disbursed up to January 31, 1941.

*COST OF THIRTY-DAY TRAINING

Mr. LACOMBE:

1. What did it cost the dominion government for each period of the thirty-day training under the Mobilization Act?
2. What was the cost of each camp in Canada used for such training?

Mr. RALSTON: As regards the cost for each period of thirty-day training, in the system of bookkeeping in the department we have no records which would show the complete cost for each period of thirty-day training. What we have is the amount of pay and allowances for each thirty days' training, which is probably what my hon. friend has in mind.

In the matter of food, the hon. member will realize that food is purchased for a much longer period than thirty days, and there is no specific account as to just how much food goes into each day of the thirty-day period; the contracts may run over six weeks or two months. The same applies to clothing. As my hon. friend knows, most of that is capital expenditure. The same answer applies as regards construction. I am going to refer my hon. friend to *Hansard* of February 21 last, page 908, where he will find the combined statement of all the costs for the three months. If he desires pay and allowances separated for the thirty-day periods, that will be done.

With regard to the cost of each camp, I now have figures for most of these camps, but some of them were built by contract and the material and supplies for those were purchased in bulk. The department of my colleague the Minister of Munitions and Supply is now at work calculating the cost for each camp, having regard to the shipments to each camp out of that bulk purchase.

TIMBER CONTROL—EXPORT OF FIR LOGS FROM BRITISH COLUMBIA

Mr. REID:

1. Are the regulations still in effect prohibiting the export of fir logs from British Columbia?
2. Have any regulations been put into effect prohibiting the export of logs from British Columbia of other varieties of wood including spruce, hemlock and cedar?
3. If not, and in view of the importance of these for war purposes, is the government or the timber control board giving any thought or consideration so as to prevent logs of spruce, hemlock and cedar from going to countries at war or not friendly to that of Great Britain and her allies?

Mr. HOWE:

1. Yes.
2. No.
3. The whole question of export of logs is receiving very careful consideration by the timber controller.

MUNITIONS AND SUPPLY—VALUE OF CERTAIN CONTRACTS

Mr. NICHOLSON:

What is the total value of contracts awarded to each of the following firms by the Department of Munitions and Supply and/or the Department of National Defence, since September 1, 1939, (a) Dufferin Paving and Crushed Stone, Limited; (b) Quebec Paving Company; (c) Dual Mixed Concrete and Materials, Limited; (d) Colprovia Roads (Ontario) Limited; (e) Dufferin Paving and Construction (Maritimes); (f) Montreal Dual Mixer Concrete; (g) Natural Quarries, Limited?

Mr. CASGRAIN:

(a) $34,530.
(b) to (g) None.

TRADE BETWEEN CANADA AND JAPAN

Mr. HANSON (Skeena):

1. What was the total value of all imports from Japan during each of the years, 1937 to 1940, inclusive?

2. What was the total value of all exports from Canada to Japan during each of the years, 1937 to 1940, inclusive?

Mr. MacKINNON (Edmonton West): Canadian external trade with Japan, during the calendar years 1937 to 1940:

Calendar Year	Imports entered for consumption	Exports
1937	$5,874,940	$25,807,048
1938	4,642,762	20,782,259
1939	4,864,090	28,177,023
1940	5,887,330	11,366,892

SHIPMENTS OF PULP LOGS AND LUMBER TO JAPAN

Mr. TUSTIN:

1. What quantity and value of pulp logs have been shipped to Japan since September 1, 1939?

2. What quantity and value of all other kinds of lumber have been shipped to Japan during the same time?

Mr. MacKINNON (Edmonton West):

1. Exports to Japan, during the period Septemper 1, 1939, to January 31, 1941:

	M. ft.	Value
Logs, Douglas fir..	3,226	$ 92,326
Logs, hemlock..	32,810	528,430
Logs, spruce..	66	1,018
Logs, other softwood.. ..	7,279	100,393

2.	M. ft.	Value
Planks and boards..	86	$ 1,035
Timber, square..	1,202	20,664

OIL CONTROLLER

Mr. HOBLITZELL:

For what special purpose was the oil controller appointed?

Mr. HOWE: P.C. 2818, paragraph 2, sets out the purpose for which the oil controller was appointed as follows:

"And Whereas it is deemed necessary to conserve, co-ordinate and regulate the oil and petroleum resources and industry of Canada, in order to fulfil the present and potential needs of Canada and her allies and for such purpose to appoint an oil controller."

See also minister's statement regarding controllers, page 268 *Hansard*.

NON-INTEREST BEARING WAR LOANS

Mr. NICHOLSON:

1. How many individuals have subscribed to interest free war loans, (a) under $1,000; (b) between $1,000 and $5,000; (c) over $5,000?

2. What totals were subscribed in each of the above?

3. How much has been spent by the government in popularizing voluntary non-interest bearing war loans?

Mr. ILSLEY:

1 & 2.	No. of applications	Amount
Up to $1,000.. ..	5,903	$1,098,394.78
$1,000 to $5,000..	191	271,290.77
$5,000 and up.. ..	84	4,639,500.00
	6,178	$6,009,185.55

3. $667.45.

PUBLIC DEBT

Mr. RAYMOND:

1. What was the gross debt of Canada on, (a) September 1, 1939; (b) March 1, 1941?

2. What was the net debt of Canada on, (a) September 1, 1939; (b) March 1, 1941?

Mr. ILSLEY:

1. Gross debt of Canada:
   August 31, 1939.... $3,763,645,202 13
   February 28, 1941.. 4,815,107,164 63

2. Net debt of Canada:
   August 31, 1939.... $3,126,946,251 96
   February 28, 1941.. 3,536,514,901 59

*INTEREST RATES

Mr. TUCKER:

1. Will the government give consideration to the advisability of introducing into parliament, as an emergency war measure, an amendment to the Interest Act providing for the compulsory reduction, for the period of the present war, of all interest rates on all mortgages on and agreements for sale of land entered into prior to the war, to 5 per centum per annum?

2. Alternatively, will the government give consideration to the advisability of putting farmers in Saskatchewan, who in previous years obtained proposals under the Farmers' Creditors Arrangement Act (which proposals usually provided for interest rates of 7 per cent per annum and later of 6 per cent per annum on land mortgages), on the same basis as farmers recently obtaining proposals (which recent proposals now provide for the interest rates of 5 per cent per annum) by an amendment to the Interest Act, reducing such interest rates on all proposals heretofore made to 5 per centum per annum?

Mr. ILSLEY: This question relates to policy. It is not the practice of the government to disclose matters of policy in giving answers to questions.

QUESTIONS PASSED AS ORDERS FOR RETURNS

TUG "HELENA"

Mr. GILLIS:

1. From and through whom did the Department of Public Works purchase the tug *Helena*, at Sydney, Nova Scotia, and at what cost?

2. To what use has the said tug been put during the past five years and what are her earnings?

3. What has the tug *Helena* cost the department during the past five years for maintenance, repairs, wharfage and watchman or ship's husband?

4. To whom were these amounts paid and how much to each person?

5. Can any department of the government make profitable use of this craft? If so, why has this not been done?

6. Why has this craft not been disposed of by the government?

7. Have any craft of similar build, tonnage and power been acquired or chartered by the government for any purpose while the *Helena* was idle?

Mr. CASGRAIN: Return tabled.

OIL CONTROLLER

Mr. HOBLITZELL:

1. Who has been appointed as oil controller?

2. What previous experience did he have in the oil business before appointment?

3. What remuneration or expenses have been paid to date to the oil controller, and what are the total expenses of the oil controller's department since it was set up?

4. Is the head office of this department located in Ottawa? If not, where is it located, and for what reason?

5. What are the names of the persons employed by the oil controller and what were the previous occupations of each of them?

6. Are all appointments to the staff made by the said controller? If not, by whom?

7. What is the salary paid to each and what are their respective duties?

8. What office rent is being paid for the head office, and from whom is the space rented?

9. What solicitors has the oil controller employed, and what are they being paid?

10. How many applications have been made for new service stations or retail gasoline outlets since the appointment of such controller, and by whom?

11. How many applications have been approved of and to what individuals, company or companies were permits issued?

12. How many applications have been rejected, and what are the names of the applicants in each case?

13. How many retail outlets have been erected since applications have been approved, how many have yet to be started, as of this date, and to what individuals, company or companies were these permits issued?

14. Have applications been made by any oil company on behalf of any applicants? If so, by what company, and have any such applications been granted?

15. Have any arrangements been entered into between the government and any individual or any oil company or companies whereby financial assistance would be provided by the government?

Mr. HOWE: Return tabled.

IMPORTS OF CANNED BEEF

Mr. LEADER:

1. How many pounds of canned beef were imported into Canada during each of the fiscal years 1939 and 1940?

2. What was the country of origin, and the number of pounds from each?

3. Who were the consignors and to whom was this canned beef consigned?

4. Is any of this canned beef being served to our military forces in Canada or overseas? If so, how much?

[Mr. Gillis.]

PURCHASE OF CALGARY PROPERTY FOR OFFICERS' QUARTERS

Mr. HANSELL:

1. What was the total amount paid for the Shaver funeral home on First street east, Calgary, now used as officers' quarters?

2. What additional amount has been expended on alterations of this building?

VESSEL "DOROTHY AND FRANCES"

Mr. HAZEN:

1. From whom and through whom did the government purchase the vessel *Dorothy and Frances* which was registered at port of Saint John on May 28, 1940, under the new name of *General Biggar*?

2. How much did the government pay for this vessel?

3. What was the age of the vessel when purchased?

4. What was its size and tonnage?

5. After the vessel was purchased, (a) were the repairs and improvements made in it; (b) were tenders called for same; (c) who made these repairs and improvements; (d) what did they cost; (e) when were they made?

6. When was this vessel first put in commission by the government?

7. After the vessel was put in commission, (a) were further repairs made to it; (b) who made these further repairs; (c) how often has it been repaired since; (d) who made these repairs; (e) how much did they cost?

8. What is the total cost of repairs and improvements to date?

COMMEMORATIVE AND HISTORICAL POSTAGE STAMPS

Mr. BLACK (Cumberland):

1. What special commemorative and historical postage stamps have been issued since 1900 by the postal department of Canada; stating subjects or occasions, denominations, year and whether there was a reissue?

2. What list of men, explorers or events were specifically honoured on Canadian historical or commemorative postage stamps, giving date and denomination of such issues?

3. Have special postage stamps been issued in honour of: Sir Charles Tupper, Sir J. S. D. Thompson, Sir Robert Borden, Honourable Joseph Howe, Sir Sanford Fleming, Sir Samuel Cunard, Sir A. G. Archibald, Honourable E. Whalen, or of John Cabot, Sebastien Cabot, Champlain habitation at Annapolis Royal or Citadel at Halifax?

4. Has any Nova Scotia man or woman been honoured by special issue of Canadian postage stamp?

Mr. MULOCK: Return tabled.

SALES TAX ON RAW LEAF TOBACCO

Mr. FERLAND:

1. What quantity of raw leaf tobacco, exclusive of flue cured tobacco, was produced in 1940 and 1941, (a) in Canada; (b) in Ontario; (c) in the province of Quebec?

2. What approximated quantities of this raw leaf tobacco are still unsold and in the possession of the growers?

3. What was the average price per pound paid for this type of tobacco to the producers, since the month of August last, (a) in Ontario; (b) in Quebec?

4. Is it a fact that the tobacco producers of the province of Quebec can hardly sell their tobacco at five cents per pound and without profit?

5. What was the amount of taxes collected by the national revenue department from the sale tax of ten cents per pound on all Canadian raw leaf tobacco?

MOTIONS FOR PAPERS

OIL CONTROLLER

Mr. HOBLITZELL:

For a copy of all orders in council, reports, memoranda and correspondence between the Minister of Munitions and Supply or any officer, clerk or employee of the Department of Munitions and Supply and the oil controller, his officers, assistants and employees and associates and consultants in his own or any department of government having reference to the constitution of the oil controller and of his office, or the control of oil or the oil production and supply business or having reference to the maintenance and carrying on of the office of oil controller and the various policies to be pursued by him, or acts, matters and things proposed, done or to be done by him during the years 1940 and 1941 to the present time.

Mr. HOWE: As I understand the rules of the house, correspondence between a minister and one of his officers is privileged, and therefore this order cannot be complied with.

TRENTON, ONT., AIRPORT

Mr. STOKES:

For a return showing, names and addresses, nature of employment and salaries of each civilian employed at Trenton airport, as of February 1, 1941. Also a statement showing who recommended the appointment of each of these persons.

WHEAT—PROCESSING LEVY

Mr. SHAW:

For a copy of all letters, telegrams and other documents exchanged between the government or any department thereof or any government board or any official thereof and any person, persons or firms, in respect to the processing levy on wheat products in the provinces of Quebec, New Brunswick, Nova Scotia and Prince Edward Island.

Mr. MacKINNON (Edmonton West): We are ready to furnish all the information required, but it would be very helpful to have this motion particularized.

Mr. SPEAKER: Dropped?

Mr. MacKINNON (Edmonton West): No, not necessarily.

Motion stands.

VICTORIA COAL COMPANY

NOTICE OF CLOSING OF BRIGHT-LITE MINE, NOVA SCOTIA, ON APRIL 30 NEXT

On the orders of the day:

Mr. CLARENCE GILLIS (Cape Breton South): I wish to direct a question to the Minister of Mines and Resources (Mr. Crerar). Men employed by the Victoria Coal company in the mine known as the Bright-lite at River Hibbert, Nova Scotia, employing 110 men, have been informed by the company and the provincial department of mines that that mine will be closed on April 30 next. In view of the demand for coal at the present time, is there any possibility of keeping the mine operating in this area?

Hon. T. A. CRERAR (Minister of Mines and Resources): I do not know of any action which the federal government could take to compel a mine to operate in the province of Nova Scotia. As my hon. friend knows, the mines of Nova Scotia are under the control of the provincial government.

Mr. HANSON (York-Sunbury): But you have taken authority under the War Measures Act to do this very thing. What is it for?

Mr. CRERAR: I might refer to the observation of the leader of the opposition, who has hastened to the rescue of the hon. member for Cape Breton South. I do not know anything about the particulars of this mine. I should assume that if the provincial government, who are familiar with the operations, thought it was not advisable to maintain the mine in operation, their judgment would probably be sound. In any case I do not think it will affect the volume of coal that will be moved from Nova Scotia to other parts of Canada, whether the mine remains open or is shut down. There is plenty of coal available to meet the requirements that can be moved at the present time.

UNEMPLOYMENT RELIEF

QUESTION OF FEDERAL AID TO PROVINCES BY WAY OF GRANT OR LOAN

On the orders of the day:

Mr. A. H. BENCE (Saskatoon City): May I ask a question of the Minister of Labour (Mr. McLarty). Has the government under consideration the question of assisting, by way of either grant or loan, provinces which have indicated that they are unable to provide sufficient funds for their relief requirements? If so, when may we expect to have a statement with respect to the matter?

Hon. N. A. McLARTY (Minister of Labour): I shall have to get some information to answer the question, because so far as I am aware, unless they might have come to the Department of Finance, no representations of that kind have so far been made to the Department of Labour. I shall be glad to inquire whether they have or not, but that is about the only answer I can give to-day.

WHEAT

INQUIRY AS TO GOVERNMENT POLICY FOR CURRENT CROP YEAR

On the orders of the day:

Mr. ROBERT FAIR (Battle River): May I ask the Minister of Trade and Commerce (Mr. MacKinnon) whether the government has formulated a wheat policy for 1941?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I am hoping to be able to make a statement on wheat very shortly.

Mr. PERLEY: Will the minister, before he makes that statement as to policy, table any recommendations that have been made by the advisory committee to the wheat board, either to the board or to the government, since September 1 last?

I can hardly consider a shake of the head as an answer by the minister to the question asked. Will he tell us whether the advisory committee has made any recommendations, and if so will he table them?

Mr. MacKINNON (Edmonton West): I shall take the hon. gentleman's question under consideration.

PROVINCIAL BOUNDARIES

REFERENCE IN SPEECH FROM THE THRONE IN ALBERTA TO EXTENSION NORTHWARD

On the orders of the day:

Mr. M. J. EDWARDS (Calgary West): In the speech from the throne, delivered at the opening of the legislature of Alberta on February 20, there appears the following:

The government—

That is, the government of Alberta.

—is pressing strongly for extension of the province's boundaries to include the rich mineral areas of the northwest territories in order that orderly development may be speeded up. We have received with great satisfaction the assurance of the federal government that there appears to be no reason why this should not be done.

I should like to ask the Prime Minister, or the appropriate minister, what and when the alleged representations, if any, were made by the provincial government to the federal government for extension of the boundaries of Alberta, and what assurance if any the federal government has given to the province of Alberta with respect to this matter.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Before attempting to reply to the question which my hon. friend has just asked, I think I should say to him and to hon. members that the answer will depend upon the interpretation placed upon the clause which appears in the speech from the throne of the Alberta legislature, more particularly upon the meaning to be attached to the word "this" as it appears in the text. My hon. friend gave me a copy of his question as I came into the house. The clause quoted reads.

The government is pressing strongly for extension of the province's boundaries to include the rich mineral areas of the northwest territories in order that orderly development may be speeded up. We have received with great satisfaction the assurance of the federal government that there appears to be no reason why this should not be done.

If "this" refers to the Alberta government's pressing strongly for an extension of the boundaries, the statement is wholly correct; but if the word "this" is to be interpreted as meaning that there must be an immediate extension further northward of boundaries of Alberta or of any other province, I cannot say that any such undertaking has been given.

What I recall at the moment is this. At the time of the conference between the provinces and the dominion, held a month or two ago, the premier of Alberta and one of his colleagues called upon me to speak about the possible extension of the boundary of Alberta further northward, and wished to know whether this matter could not be taken up at once. Having had one experience with the conference between the dominion and the provinces, my first reply was that I questioned the wisdom of attempting anything of the kind just at this particular time. I had been reminded that there were more pressing matters connected with the war than some of the domestic issues that might be raised. I stated that I doubted whether it would be possible to take up the question of the extension of the boundaries of Alberta to the north without also taking up at the same time, with the governments of Saskatchewan, Manitoba and British Columbia, the question of the extension of their boundaries further north.

I did say that the government at different times had had this matter under consideration but that we had reached no final conclusion with respect to it. However, it was pointed out to me that, in the minds of our friends in Alberta, the addition of the northern lands to the province might be a means of furthering the war effort because of some of the resources that existed there, and I was asked whether I would not arrange to have the matter looked into from that point of view. I replied that

I should certainly be only too pleased to do so, and after the conference I met my colleague, the Minister of Mines and Resources (Mr. Crerar), and asked him to have the officials of his department look into the question of resources to the north of the province of Alberta with a view to considering whether at the present time it would be desirable to take up further with the Alberta government and the governments of other provinces the possibility of an extension of their boundaries to the north. That, I think, accurately represents what was said at the time. As I say, the clause that appears in the speech from the throne is capable of different interpretation. This may be the one that is meant.

TRANSPORT COMMISSION

JUDGMENT AS TO DISCONTINUANCE OF BEISEKER-LANGDON, ALTA., RAILWAY LINE

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): I wish to direct a question to the acting Minister of Transport. I am informed that the board of transport commissioners handed down a judgment last week authorizing discontinuance of the railway which runs between Beiseker and Langdon, Alberta, and removal of the tracks. In view of the fact that there is already a serious wheat storage situation, would the minister think it desirable in connection with our war effort to have this road continued in view of the fact that its discontinuance will put out of use five different elevators along the line?

Hon. C. D. HOWE (Minister of Munitions and Supply): As acting Minister of Transport I have to say that I have no knowledge of this situation. But I may point out that a decision of the board of transport commissioners is not subject to review by the Minister of Transport. The only authority that could answer the question is the board of transport commissioners itself, which is a judicial body responsible to no one.

Mr. HANSON (York-Sunbury): Well, there is an appeal to the governor in council from any order of the board of transport commissioners, so that that is hardly a fair statement.

Mr. DOUGLAS (Weyburn): What about the National Resources Mobilization Act?

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, March 7, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Hon. J. L. ILSLEY (Minister of Finance): On Friday last I placed on *Hansard* a detailed statement of the amounts submitted by departments making up the sum of $1,460,402,232. Those were the amounts submitted by departments to January 31, 1941; they will be found on pages 1352-3 of *Hansard* of March 7. There have been some revisions of those amounts since, and I should like now to place on *Hansard* a statement of the revised amounts submitted by the departments to March 10, 1941. The total will be $1,450,426,059, a reduction of approximately $10,000,000. There are increases in five departments or branches totalling $2,586,433 and decreases in four departments or branches amounting to $12,562,606. If the committee would like me to give now the increases and decreases—

Mr. HANSON (York-Sunbury): Could the revised table not be put on *Hansard*? That would be much preferable.

Mr. ILSLEY: Yes, I will put it on *Hansard*. The statement is as follows:

War Appropriation, 1941-42

Revised Amounts Submitted by Departments to March 10, 1941

National Defence—			
Departmental administration		$ 746,660	
Army services		666,574,659	
Naval services		169,640,304	
Air services	$421,619,348		
Less—			
Recoverable	35,000,000		
		386,619,348	
Internment operations		8,232,697	
Censorship		207,636	
Dependents' allowance board		342,240	
Royal Military College		434,492	
Northwest Territories and Yukon radio		177,500	
Inspection board—United Kingdom and Canada		3,510,640	
			$1,236,486,176
Munitions and Supply—			
Administration		$ 3,500,000	
Expansion of industry		176,958,422	
			180,458,422
			$1,416,944,598
Other departments—			
Agriculture		$ 7,877,550	
Auditor General		72,000	
Civil Service Commission		126,822	
External Affairs		288,500	
Finance		2,034,513	
Fisheries		603,000	
Justice		79,260	
Labour		4,878,404	
Mines and Resources		657,245	
National Revenue		5,600	
National War Services		1,789,400	
Pensions and National Health		3,804,900	
Post Office		495,085	
Prime Minister's Office		11,500	
Privy Council Office		6,380	
Public Works		4,183,100	
Royal Canadian Mounted Police		4,045,691	
Secretary of State		231,134	
Trade and Commerce		308,015	
Transport		888,362	
		$ 32,386,461	
Government-owned enterprises		1,095,000	
			33,481,461
			$1,450,426,059

Reconciliation

Estimates—January 31, 1941			$1,460,402,232
Add—Items increased over original estimates—			
National Defence—Air		$ 619,348	
Munitions and Supply—administration		750,000	
Pensions and National Health		140,500	
Post Office		81,585	
Government-owned enterprises		995,000	
			2,586,433
			$1,462,988,665
Deduct—Items reduced under original estimates—			
Finance		$ 74,380	
Munitions and Supply—industry		969,678	
National Defence—navy		11,359,696	
National War Services		158,852	
			12,562,606
			$1,450,426,059

Mr. HANSON (York-Sunbury): On February 18 the minister gave a statement, found at page 823 of *Hansard,* of the payments, the actual cash outgo, amounting to $538,804,000. He said:

For the full fiscal year it is now estimated that our total war expenditures will approximate $875,000,000. That is the closest, the most accurate estimate that can be made now.

I suggest that the minister put on *Hansard* now a table—the figures are so large that we cannot follow them—showing the breakdown of this sum in somewhat the same form as the one he gave on Friday—that is, the amount spent by the three branches of the Department of National Defence, the Department of Munitions and Supply and the other departments that are doing war work.

Mr. ILSLEY: Yes, I can do that at once. Would the hon. gentleman like to have it all together, coupling it with the actual expenditures to January 31, 1941?

Mr. HANSON (York-Sunbury): Yes.

Mr. ILSLEY: I find in connection with these statements that two or three weeks afterwards officials come and say that slight corrections have to be made, but these never affect the picture substantially. It runs in my mind that in one or perhaps more of these figures of actual expenditures to January 31 there were corrections made and brought to my attention in the middle of February. But they do not amount to anything in the total.

I will put on *Hansard* now the estimated war expenditures by departments and services for the fiscal year 1940-41, with actual expenditures to January 31, 1941. They will be subject to slight corrections in respect to the actual expenditures.

Estimated war expenditures by departments for fiscal year 1940-41, with actual to January 31, 1941

	Estimate 1940-41	Actual to Jan. 31/41
Agriculture	$ 5,828,000	$ 3,499,000
Auditor General's Office	60,000	36,000
Chief Electoral Officer	5,000	5,000
Civil Service Commission	135,000	79,000
External Affairs	379,000	218,000
Finance	1,656,000	1,218,000
Fisheries	173,000	158,000
Justice	47,000	24,000
Labour	1,610,000	645,000
Mines and Resources	364,000	207,000
Munitions and Supply	120,770,000	61,176,000
National Defence:	Estimate	Actual
Administration	$ 1,186,000	$ 926,000
Dependents' Allowance Board	242,000	188,000
Military Services	404,714,000	268,687,000
Censoring	185,000	149,000
Internment	3,957,000	2,521,000
Radio Services, N.W.T. and Yukon	146,000	93,000
Royal Military College	360,000	279,000
Naval Services	85,460,000	58,266,000
	$496,250,000	$331,109,000
National Defence—Air Services	230,000,000	127,481,456
National Harbours Board	250,000	200,000
National Research Council	542,000	302,000
National Revenue	5,000	4,000
National War Services	2,522,000	1,418,000
Pensions and National Health	3,519,000	2,280,000
Post Office	685,000	155,000
Privy Council	6,000	4,000
Public Works	5,540,000	3,799,000
Royal Canadian Mounted Police	2,759,000	2,023,000
Secretary of State	181,000	123,000
Trade and Commerce	22,000	18,000
Transport	1,260,000	504,000
Totals	$874,568,000	$536,685,456

Mr. MacINNIS: Before this resolution is reported I want to refer to a matter that has not received very much consideration so far. I refer to the great discontent that is prevalent among workers at the present time and to the unsatisfactory employer-labour relations in our war industries. One of the important factors operating against efficiency in our war industries is that neither the government nor employers of labour have tried to secure the confidence and cooperation of organized labour. I have never known of so much discontent among working people as prevails at this time. It arises from the fact that too many industrialists have looked upon war contracts as a lucky bit of business and have failed to realize that they are engaged in a business which concerns not them alone but every Canadian. War contracts are often looked upon as an addition to the ordinary business turnover rather than as a challenge to our industries to organize the country's resources in an all-out endeavour to destroy the menace to our democratic way of life. After all, I am not so very much surprised that employers look at things as they do. Certainly their outlook and actions at the present time are not democratic. Indeed now in Canada we are seeing a repetition of those things that have been either fatal or nearly fatal to the war effort of our allies in other parts of the world. It was this same attitude on the part of British industrialists, until after the fall of the Chamberlain government, that proved nearly fatal to Great Britain. It was this attitude on the part of the French industrialists that brought about the fall of France; and indeed it is not likely that there has been any change since.

The great majority of the workers in Canada are not only willing but anxious to do their bit in this struggle, but in doing it they want to be considered and accepted as partners in the fight we are engaged in. They want to be consulted on policy and on organization. They object to being considered only good enough to be ordered about. A great deal of time and energy is being frittered away in labour disputes that could be used to better advantage in organizing our industries for a successful conclusion to this struggle.

It is almost unbelievable that at this time, when united effort is demanded of everyone, employers should refuse to recognize and cooperate with their employees on a basis of equality. It is even less understandable that the government's policy in planning and organizing the country's war effort should have almost completely left out organized labour. Earlier in this debate, when the matter of conditions in the Malton plant was discussed, the Minister of Munitions and Supply was asked if he could give any reason for the high labour turnover in that plant, and he said he could not. I asked if he had consulted the workers in the plant, and he replied that he had not, that he had enough grief consulting with the management. It seems to me that in this reply is summed up the whole attitude of both the employers and the government towards the hundreds of thousands of workers in this country who perform the actual labour necessary to our war production. The dissatisfaction in the Malton plant, where in six months there was a labour turnover of from seventy-five to ninety per cent, is not exceptional, but for the turnover figures.

Discontent is rampant in the war industries throughout the country. In the aircraft industry, one of the most important in the war effort, and in this particular plant, there is admittedly a high labour turnover. Yet it never occurred to anyone—not even to those giants, the dollar-a-year men in the Department of Munitions and Supply—to approach the workers in the plant and ask what was the cause of their discontent. It seems to be the studied policy, both on the part of the government and on the part of employers, not to consult labour. The attitude seems to be something like this: Oh, you must not consult labour. It is dangerous. They might get an inflated idea of their importance. Labour must be kept in its place. You give the workers orders; you post notices for them to read, and of course you ask them to subscribe to war savings campaigns, but you must never consult them in regard to the work they are doing, or ask if they have any ideas as to how efficiency and output might be improved.

That seems to be the whole attitude, and before I sit down I am going to prove it. Employers and members of the government must get away from that point of view, otherwise we may very well lose the war; and if we should win it under such policies certainly we will lose the peace. We will have gotten so far away in practice from the principles for which we are supposedly fighting that when peace comes with its own problems we will still be fighting on the labour front. We must realize that to-day efficient production depends upon harmonious labour relations in industry just as much as it depends on efficient management in other directions.

In Great Britain labour is consulted at every turn. If similar conditions prevailed here, there is no reason to doubt that organized labour would act as a check on managerial inefficiency, as it has done in Britain. In my opinion it is necessary to give this recogni-

tion to labour for two reasons. First, it will improve the general morale so necessary for efficient production, and in that way greatly accelerate the war effort. Second, the democratic objectives of the war make this recognition imperative. Some little time ago we had as a visitor to our country an outstanding labour representative from Great Britain, Sir Walter Citrine. He spoke in many cities across Canada, including Ottawa. I quote a few words from the report of his speech in Ottawa as it appears in the *Canadian Congress Journal* for February:

> The development of collective bargaining in Great Britain is so complete that all but the tiniest fraction of disputes are settled between the employers and the trade unions without any government intervention of any kind.

Then he continued:

> After all is said and done before you can have order in industry you must have organization in industry. Before trade unions can control large masses of people those large masses must be members of the unions. In other words, you cannot speak and act for and control a constituency you do not represent.

How impossible it would be for a labour representative from Canada to go to the old country or anywhere else and make a similar statement in regard to Canada!

The situation here is bad from every point of view. Lack of organization is responsible for bad working conditions, and is responsible indeed for the inefficiency prevalent in our war production. I have under my hand dozens of letters complaining of conditions in war industries. Among them I find one from workers in a Montreal plant working on a war contract—The Montreal Construction Supply and Equipment Limited. The chief complaints are, first, that the sanitary conditions in the plant are bad. They say the floors are continually covered with water. To absorb that water sawdust is spread, and the men have to stand in that wet sawdust during the whole of their working time. The second complaint is that at that time the plant was running seven days a week, with considerable overtime—this at a time when many men are idle, and when men are being laid off in other plants engaged in war work.

Then, not only do they work seven days a week, but they work eight-hour shifts, with only fifteen minutes off for lunch. It is claimed that the bolting of meals, unavoidable under these conditions, is having a bad effect on the health of the workers. Furthermore, government wage scales call for 40 cents an hour as a starting wage, increasing to 50 cents an hour after twelve days. But the company, it is said, pays no attention whatsoever to these regulations. Some men have worked in the plant as long as four months before receiving the stipulated increase.

This company will not tolerate any attempt at labour organization in the plant. I am informed that one of the Catholic trade unions held meetings to which workers in this plant were invited. The company had its stool pigeons at the meeting, and the workers who attended were dismissed the next day. After this episode, the superintendent of the plant, Mr. Lemieux, called the men together as they came off shift and warned them against unions, saying that such unions were made up of crooks and thieves.

We have thousands of police watching for subversive activities among workers and others. But it is treatment of this kind which causes workers to listen to subversive talk, and to take action which in many cases must ultimately be detrimental to themselves. We will abolish discontent and strife in industry only as we accept the policy, and act upon it, that workers are not just a part of the industrial raw material, but that they are human beings with hopes and aspirations, and they must be considered as such. If we are to have peace and harmony in industry, if we are to have the highest degree of efficiency in production, employers must not only concede the right of the workers to organize but must recognize that because of such organization the workers shall have some say in setting up the wages and the conditions under which they are to work.

Mr. CRUICKSHANK: Will the hon. member permit a question?

Mr. MacINNIS: Yes.

Mr. CRUICKSHANK: What is the hon. member reading from?

Mr. MacINNIS: I am reading from a report I have prepared from letters received from employees of the company to which I have referred. I say that ultimately they must be given a voice in the management of industry; for in that direction only lies peace and progress.

By order in council P.C. 6286, employees upon leaving the employment of an employer must have a clearance card from such employer before they can obtain employment in another plant engaged in war work. I have complaints from employees in a number of plants that this regulation made by the government is being used by employers to blacklist men they do not like. I am told that on each card there is a number, and that No. 1 may mean one thing, No. 2 means something else, and No. 3 something else again. For instance, No. 1 may mean that

a man is a poor worker; No. 2 may mean that he is an agitator, that he is a member of a trade union. Because of this information it may become impossible for men released from one job to get work anywhere else.

Then, there is continual intimidation and discrimination against union workers.

Mr. HANSON (York-Sunbury): Does the hon. member say that that is universal throughout Canada, or is he taking an isolated case?

Mr. MacINNIS: Do I say it is universal?

Mr. HANSON (York-Sunbury): Yes?

Mr. MacINNIS: If my hon. friend means to ask whether I suggest that every employer in Canada acts in this way, I will say no. But it does happen in a large number of cases.

Mr. HANSON (York-Sunbury): Is it general?

Mr. MacINNIS: I would say it is fairly general, particularly in the war industries.

When parliament reconvened after the recess, on February 17, I drew to the attention of the Minister of Labour (Mr. McLarty) certain dismissals in the Biltmore Shirt company's factory at Montreal because of union activities. I have been told unofficially that the Department of Labour is satisfied that discrimination has taken place in that plant. Despite that recognition the men who were dismissed have not yet been restored to their jobs.

Dismissals take place for trade union activity despite the government's order in council expressing the desire that employees and employers get together in a scheme of collective bargaining to settle grievances. Collective bargaining is absolutely impossible unless opportunity is given the workers to organize.

At the present time employees of the National Steel Car Corporation of Hamilton, a company which has received many war orders, have two cases pending in the courts under section 502A of the criminal code, which has to do with the dismissal of employees because of trade union activities.

I have in my hand a number of "application for employment" forms now used in many industries. I am told they are approved by the government; on that point, however, I have not had verification. One in particular which I hold in my hand was given some publicity a short time ago. It is a form which was handed the employees of the International Metal Industries Limited at Vancouver. Incorporated with this company is the Canadian John Wood Manufacturing Company Limited; Service Station Equipment Company Limited; Canadian John Wood, Vancouver, Limited, and Fess Oil Burners of Canada Limited. This application calls for the name and address and other necessary details of that kind, which is all right. Then it proceeds to ask these questions:

Have you previously been in the employ of this company?
In what capacity?
Reason for leaving?
Nationality?
Are you naturalized?
What is your religion?

Why should an employer of labour be interested in the religion of his employee? Is not a man's religion his own private business? He may have a religion or he may have none. What has that to do with employment? Then follow the questions:

Married, single, widow, widower, separated or divorced?
Number of dependent children; respective ages.
Other dependents—specify.
What is your height?
Weight?
Physical handicaps?
Have you a hernia?
Any chronic ailment such as tuberculosis or silicosis?
Are you willing to submit to a physical and medical examination?
Are you drawing a pension?
Reason?
Amount?
Are you buying your home, renting, boarding, or living at home?
How much life insurance do you carry?
Are you in debt?
Are you, or have you ever been a member of any labour organization? Specify.
Date?
What interests or hobbies have you?

What is the object of asking a man if he has ever belonged to a labour organization? There can be only one object, and that is to refuse him employment if he has.

Here is something else he must sign. I ask hon. members to listen to this. This is an agreement giving the company right of search. It reads as follows:

I agree that the company, at any time and from time to time, by and through its officers and/or duly authorized agents of the company or any of the officers of the company (hereinafter called "officers or agents") may, and shall have the right, to search through my clothing or any box, locker, container or conveyance of mine while on the company's property for any chattel or other property of the company and in so doing may apply force to my person. Such search may be made at any time and from time to time whether or not there be any suspicion or any good or valid ground for suspicion on the part of the company or its said officers or agents that any chattel or other property of the company may be in my possession or may be found as a result of such search. Should any chattel or other property

of the company be found as a result of any such search the company may then by and through its officers or agents enter any residence or place of abode of mine and may and shall have the right to search for any chattel or other property of the company and, in connection with any such entry and/or search, may break or remove locks and may force open windows and/or doors. I declare that the above rights and powers are terms of and are incidental to my employment. I specifically release and agree to release and waive any and every claim which I may ever have for damages or otherwise resulting from the exercise of any of the above rights and powers or from any force, assault or other action in connection with the carrying out or enforcing of the foregoing provisions or from any force, assault, trespass or forcible entry in respect of any of the matters herein set out. Should no chattel or other property of the company be found in my residence or place of abode which has been entered under the provisions hereof the company will make good the damage done to locks, doors or windows in effecting any such entry as contemplated hereby.

There is a whole lot more he is asked to sign.

Mr. HOWE: What company is that?

Mr. MacINNIS: International Metal Industries Limited, at Vancouver. The men and women who work in these plants have no access to the means of life other than through the sale of their labour to those who are willing to buy it. Through force of circumstances they are compelled either to sign a document like this, or refuse and go out to look for work somewhere else where they may have to face the same kind of thing, or apply to the relief authorities for the means of sustenance.

This is not the only company in connection with which the condition I refer to prevails. Here is another one mentioned in the Saskatoon *Star-Phoenix* of February 14, 1941—the Richardson Road Machinery Company Limited, which has a contract for the manufacture of war supplies. In this case the applicant is asked what is his religion; then, "Have you carried a union card?" "Do you believe in a competitive system of work or business?" Then they want to know the man's political preference. They ask: Are you a socialist? Here we find the dirty snout of political patronage entering into the situation. It seems that this company is particularly opposed to one kind of political preference. I ask the government what they are going to do about this sort of intimidation.

Mr. HOWE: What does the hon. member recommend?

Mr. MacINNIS: I would recommend that under the War Measures Act freedom should be given to the working classes of Canada. If the workers carried on in this way I would not have to tell the Minister of Munitions and Supply what to do, nor would he ask me for my advice as to what should be done. He would jolly soon find out how to deal with them.

Mr. HOWE: The labour laws are provincial.

Mr. MacINNIS: The War Measures Act is the constitution of Canada until the end of the war, and the minister cannot get out of it with a remark like that.

I should like to refer to the application form which is placed before those seeking employment with the Fairchild company of Montreal. Not only do men applying for work in this plant have to fill out an application form of this kind, but they are finger-printed as well. I am told by the employees that this is done with the connivance, if not with the consent of the government. It is felt that eventually these finger-prints will be in the custody of the Royal Canadian Mounted Police. A letter which I have in my hand contains the following:

> Our immediate danger, as I see it, is from these new application forms which delve rather deeply into a person's ancestry, immediate past, and spare time activities, since one of the questions asks the applicant to give the names of any clubs, associations, et cetera to which he has belonged within the last ten years.

Mr. GLADSTONE: I understand that all employees in munitions works in the United States are finger-printed.

Mr. MacINNIS: All employees in munition works in Germany may be nose-printed for all I know, but that does not say that that is good enough for us here. If the government thinks it necessary to finger-print the employees of any Canadian industry, why not consult with the officials of the trade union movement? Put the case before them, tell them what is required, and I am satisfied that they will be found to be reasonable and ready to give their consent to anything that may be necessary in this emergency. If they give their consent, I am sure that the rank and file of the labour movement will agree to what is necessary when they understand it.

There are a number of other matters to be considered. There is the question of the recognition of trade unions, the applications for conciliation boards, and the taking of the votes which are necessary before such boards are granted. I am told that in a number of cases the employers have interfered with the taking of the vote and have attempted to intimidate the employees. I am informed also that the government No. 1 pet contractor, the John Inglis company, have stated their intention to run an open shop. An

open shop is a shop where there is no dealing with the workers through a labour organization I should be much surprised if a vote were taken of Canadian workers and it were found that they agreed that we are fighting for anything like that in the present war.

Again, the fair wage clauses in the contracts—that is, if they contain fair wage clauses—are not lived up to, and we find that wages and working conditions which the workers have laboriously built up over the years are going by the board, without any reason whatsoever being given.

I have here a letter from an old trade union organization, possibly one of the oldest in Canada, a local of the United Brotherhood of Carpenters and Joiners, Vancouver. They call attention to a contract whereunder the government is furnishing assistance to the West Coast Woollen Mills Limited, for the building of an addition to the plant of this company. The contract amounts to $21,000, and the building is being erected by non-union men, working for a contractor who refuses to recognize trade unions. This is what they say, in part, in connection with this work:

> We have been assured very often since the commencement of the war, that the conditions and wages established by the trades unions would be guarded and respected, yet firms such as the above can get contracts, proceed to erect and extend their factories, and totally disregard the conditions and wages established by agreement and recognized by the government in the dominion Fair Wages and Hours Act.

I have received to-day a letter from another trade union in Vancouver, complaining about the same sort of thing. I have also a number of complaints regarding the operations of order in council P.C. 7440. Most of these complaints deal with the delays in getting a board after application is made. I believe section 20, the Industrial Disputes Investigation Act requires that immediately the second party to a dispute receives a copy of the application made for a board, they must "without delay"—that is the wording of the act—prepare their reply. As far as I know there has never been a definition of that phrase "without delay", but I believe it is generally accepted that the reply must be made within fifteen days. I have a case under my hand where a board was applied for by some of the employees of the National Steel Car Corporation, Hamilton, on February 3. The Department of Labour has, I understand, been continually considering this application, and no word has yet been received by the department from the National Steel Car Corporation.

Mr. McLARTY: Mr. Chairman, I do not want to interrupt the hon. member, but his statement of the facts is entirely wrong.

[Mr. MacInnis.]

Mr. MacINNIS: Very well; I will read a copy of a telegram which was sent to my hon. friend last Saturday, and if I am wrong, then there must be something wrong with the telegram. I am reading from a copy of a night letter to the minister from Mr. Millard, March 8:

> Am advised by Representative Dalrymple that management National Steel Car Corporation at Hamilton now refuses to allow Mr. J. S. McCullagh, representative of your department, to conduct ballot which was arranged to meet company objection to establishment of conciliation board. This arbitrary and irresponsible action by Mr. Hart removes last possible objection to your announcement of board constitution. Urge you act without further delay. Please advise.

Mr. McLARTY: Again may I say that Mr. Millard's information—he was not there—is inaccurate. The machinery to take the vote was not set up in sufficient time to take the vote on Saturday. It was not a refusal.

Mr. MacINNIS: I have this information in Mr. Millard's own words. We will go step by step over the proceedings which were taken since the application was made on February 3. On February 3 the dominion Department of Labour received the request. On February 14, eleven days after the application had been received, Mr. Ainsborough, of the Toronto branch of the department, visited Hamilton. He made no attempt to meet the workers or the union representatives, but he went to the plant and was refused an appointment by, I believe, Mr. Hart. I understand that the Department of Labour, after waiting fifteen days, can appoint the board without regard to the attitude of a company. But on February 19, sixteen days afterwards, no reply had been received from the Department of Labour, and the employees at that plant supposed that the board would be appointed.

A few days afterwards Mr. Howard Chase, of the labour relations branch of the Department of Munitions and Supply, went to Hamilton. The union was assured that when he went there he would have with him a copy of the company's reply, but when he reached Hamilton and met the employees he had no copy of the reply. On March 1, in a letter to Mr. Millard, Mr. Brown, the assistant deputy minister, stated that Hart, that is, the manager of the National Steel Car Corporation plant, had been given until March 3 to return an answer. Mr. Millard said that Brown indicated that he could see no reason why a board should not be appointed. Now, March 3 was exactly one month after the original application had been made. On March 7, Mr. McCullagh, also from the Department of

Labour, arrived in Hamilton, and an attempt was made to take the vote at the plant. The management refused to allow the vote to be taken. Following that—

Mr. McLARTY: That is not correct. The management did not refuse. The machinery for taking the vote could not be set up in time to take it on Saturday.

Mr. MacINNIS: Well, according to my information, he was there at eleven o'clock in the morning.

Mr. McLARTY: Yes, but they had to prepare the lists.

Mr. MacINNIS: They had to get the lists, but Mr. Hart was insisting on the lists of the employees who had come into the plant since February 3.

Mr. McLARTY: Yes, there was some dispute about that.

Mr. MacINNIS: Of course there was some dispute. A dispute had been going on since February 3, but the Minister of Labour did not do anything about it. As a matter of fact I advised the minister as long ago as, I believe, last July, to be master in his own house. The trouble is that the Minister of Labour cannot settle any labour dispute without asking the Minister of Munitions and Supply what to do.

Mr. McLARTY: That is not correct, Mr. Chairman. I do not believe that on one single occasion I have asked the Minister of Munitions and Supply to settle a dispute—not on one occasion.

Mr. MacINNIS: I am convinced that the labour question cannot possibly be satisfactorily settled until the government takes into its confidence and consults at every step the representatives of organized labour; and organized labour has been asking for this ever since the war began. I have here the *Canadian Congress Journal,* the official organ of the Trades and Labour Congress of Canada, for February, in which the following statement appears in an editorial:

> Organized labour would like to see the government give a little more tangible evidence that it believes that labour is entitled to be treated as an equal partner in industry. The Prime Minister has demonstrated both in his writings and public statements, and by pre-war practice, that he personally supports this principle, and it therefore makes it all the more difficult to understand why, during the past year and a half, practically no effect has been given to it.
>
> In the framing of the Unemployment Insurance Act, labour representation both on the commission and the advisory committees to be appointed by the commission is provided for, as it was in the previous measure of 1935. It is also true that a halting step has been taken to give labour some place in the war effort by the establishment of the national labour supply council.

Mr. McLARTY: But my hon. friend knows it is not a halting step. Labour has fifty per cent representation.

Mr. MacINNIS: Yes, but what is the use of a board if there is never consultation? I will give the minister another indication of the way in which the labour supply council is consulted. In any case, these are not my words. This is what has been said by the oldest and largest central labour organization in Canada:

> Labour has also been invited to give its services in the work of the national war charities funds advisory board, a request which has been gladly complied with. It is also equally true, however, that in no case where labour's particular interests are involved, such as in the management of the twenty-eight or more government financed and owned companies set up for war production, on the committee established to advise the director of ship construction and repairs, or on any of the numerous control boards, has labour been given any recognition whatever.
>
> The weakness of the national labour supply council is that it has not been allowed to function as a planning body, but instead merely called upon to give an advisory opinion, many times at extremely short notice, on measures already prepared by others. To be of real use, workers representatives should be placed in a position where they can contribute from their experience toward the shaping of policies and not be called into consultation only after the course of action had been decided upon.

I am not saying that. The editor of the journal, with the approval of the president of the largest labour organization in Canada, is saying it. I have the memorandum submitted to the dominion government by the Canadian Congress of Labour on February 14, 1941. The Canadian congress has this to say:

> The congress believes, however, that a greater willingness on the part of the government to consult and cooperate with bona fide labour organizations, in all matters of primary concern to the workers, is imperative, in the interests not only of the workers but the people of Canada. While representatives of the organized workers have been appointed to the national labour supply council, the unemployment insurance commission, and the unemployment insurance advisory committee, there are a number of bodies dealing with various phases of the war effort on which labour is not represented, and this inevitably tends to make the workers feel that they are not being given the consideration to which, because of their importance in the field of production and distribution, they are justly entitled. The government is therefore urged to provide adequate representation of labour on existing boards or commissions and on any which may be established in future.

In the Montreal *Gazette* of March 8 there was a report of a board or advisory committee or something of that kind being set up. I got into touch this morning with a representative of the national labour council and he told me he had never heard of it. I quote from the Montreal *Gazette* of March 8:

> Canada is being organized into industrial zones, each with a chairman and committee to work in conjunction with the munitions and supply department "to harness all possible industrial resources to war needs," munitions minister Howe announced to-night.

As I read further down the item I find that this committee, or whatever it is going to be, is carried on by the Canadian Manufacturers' Association and the Canadian Chamber of Commerce with "the approval and support of the Department of Munitions and Supply." I quote further:

> In addition, the Canadian Manufacturers' Association and the Canadian Chamber of Commerce will accompany the organization work with a national survey of industrial resources. This survey, to begin this week, will be conducted by a war production committee under joint chairman, L. L. Lang of Kitchener, Ont., and J. D. Johnson of Montreal. Mr. Lang is first vice-president of the C.M.A. and Mr. Johnson is vice-chairman of the executive committee of the C.C.C.
>
> The survey will provide information on labour available, machine tools and other equipment in existing plants.

The national labour supply council was not considered. The member to whom I spoke did not know that such a thing had been contemplated; yet the important factor in a survey of industrial resources is labour. What those who are carrying on this kind of work think of the position of labour is clearly indicated in the phrase, "will provide information on labour available, machine tools and other equipment". Evidently they do not think that labour should have any more place on a committee of this kind than "machine tools and other equipment." Let me tell my hon. friends that this is not the way to build the new social order which the Prime Minister referred to at the time of the ill-fated conference which met in Ottawa on January 14. We shall have to have more cooperation with those who are doing the real work in this war effort, both from the government and from employers, than we have had in the past. Otherwise we are simply riding into trouble.

Mr. GREEN: I have no desire to interrupt this discussion on labour questions, but I understand that the minister is not replying at the moment; therefore I am making bold to bring up another subject. This debate jumps so frequently from one subject to another that it is difficult to keep the questioning in order. Last week the Minister of Munitions and Supply suggested that the opposition should ask him questions rather than make speeches. I wish to ask him one to-day. It is a question which affects also the Minister of National Defence for Naval Services; perhaps it is more a suggestion than a question.

At this moment nothing is of greater importance in Canada's war effort than shipbuilding. It is of the greatest importance that the government should adopt and announce without further delay a policy with regard to merchant shipping. Perhaps they have that policy ready, perhaps not, but I suggest there should be no further delay in adopting and announcing such a policy. I understand that in Canada we have placed contracts for twenty merchant ships—the minister will correct me if I am wrong—all of them to be built for Great Britain; none to be built for Canada. I understand that none of the twenty keels has been laid.

I doubt whether any hon. member will dispute the importance of shipbuilding. The minister himself clearly indicated the emphasis which he placed upon it when on his return from Great Britain he said in Washington on January 25:

> The most important development immediately will be a decided emphasis on merchant ship production and the building of bombing aeroplanes. In one instance we are building transportation and in the other producing machines that can carry themselves over the Atlantic to service. We hope to step up the capacity of all Canadian shipyards. This is one of the first things that must be done.

A month later Lord Beaverbrook made his appeal to Canada. He closed with these words:

> Gather together every kind of transport by sea, which will enable us to continue the defence of this island. Seek the whole world for ships; make our sea paths safe during the battle of Britain.

Yet in spite of that appeal no announcement has been made to the Canadian people as to what is to be done. Last week a famous United States-European correspondent, Mr. Percy J. Philip, of the New York *Times*, speaking in Ottawa, as reported in the Ottawa *Journal* of March 6, said:

> Mr. Philip deplored the failure of Canadian authorities to act quickly toward helping to fill Britain's marked need of more ships.
>
> "When I came to Canada I expected to see every shipyard and many new ones just bustling with activity building ships. I was mortified to find that such was not the case.

Mr. HOWE: Where did he say that?

Mr. GREEN: That is from a speech delivered in Ottawa at the Chateau Laurier on March 6.

Mr. HOWE: Are those Mr. Philip's exact words?

Mr. GREEN: It is in quotation marks in the newspaper report. I was not at the meeting.

Mr. HOWE: I do not think he said it at all.

Mr. GREEN: I cannot vouch for the accuracy of the report.

Mr. HOWE: I think the hon. member should vouch for the accuracy of a statement he quotes.

Mr. GREEN: To-day we find in the morning papers a report of a statement made by the Labour minister for Great Britain, Mr. Ernest Bevin. The report says:

The labour minister emphasized the importance of shipping in the war, and warned that the "decisive struggle in the Atlantic may soon begin."

Further on he said:

British troops must be supplied with food, and that means shipping.

In the United States there is great activity on both coasts in the shipyards. They have under way a huge shipbuilding programme. A press dispatch from Sydney, Australia, quoted in the Ottawa *Journal* of February 24 says:

It is learned the government intends building its own merchant ships which will be chartered to shipping companies for operation.

Then Mr. MacMillan, in the report which appeared in *Votes and Proceedings* of February 27, had this to say with regard to the building of ships:

(1) Volume of orders now placed does not exceed existing plant and management facilities. Technical problems all surmounted. Performance is good.

(2) Progress henceforth will depend upon: (a) Organization of expanded facilities which can be done.

And I repeat those words, "which can be done."

(b) Deliveries of plate and other ship components from U.S.A., or expanding plate production in Canada, which requires one year.

Mr. HOWE: I wish Mr. MacMillan would be a little more consistent, because I have a report on my desk from him to-day declaring that labour cannot be found to operate the shipyards to anything like capacity.

Mr. GREEN: He goes on:

(c) Deliveries from U.S.A. of machine tools for expanded programme involved in 18 cargo vessels already ordered and other orders that might be placed.

(d) Finding trained personnel without interfering with ship repair plants necessary to prevent delays to naval and merchant vessels now operating in Atlantic.

Mr. HOWE: That last sentence is the whole thing.

Mr. GREEN: It is impossible to emphasize too strongly what shipping and the shipbuilding industry mean to Canada. We have a great export trade which before the war was practically all carried in ships belonging to other nations. We had practically no merchant fleet. Adequate ocean shipping facilities would be of the greatest importance also in carrying freight between the east and west coasts. For some years before the war a steamship line ran a ship a month to the east and west coasts via the Panama canal, but this service was discontinued when the war broke out, with the result that freight rates have been raised by the railways and a situation has developed which to say the least is very unfair to the provinces on either coast. I suggest to the minister that if we entered into a really large shipbuilding programme, making not only the hulls but also the engines and boilers and auxiliary equipment, on either coast—wherever it may be decided to build the ships—there is no reason why we could not build up a great shipbuilding industry for Canada in the maritime provinces and British Columbia for the years after the war.

So far as British Columbia at any rate is concerned I am assured that there is no shortage of ship workers; many of them in that province are out of work. For instance, I received to-day the Vancouver *Sun* containing a press dispatch of March 5 from New Westminster which says that the deputy minister of trade and industry for British Columbia told representatives of the metal trades industry there that there were two thousand skilled mechanics unemployed in British Columbia. He is reported as saying:

. . . the provincial government has completed a confidential survey of skilled workers in the province which showed that two thousand skilled mechanics are out of work.

He added that the provincial government is forwarding the information to Ottawa to-day.

Mr. MACDONALD (Kingston City): Were there some shipwrights in that number?

Mr. GREEN: Yes, I understand there is no scarcity of shipbuilders on the Pacific coast.

Mr. HOWE: Will my hon. friend take an order for a thousand of them to-day? I can place a thousand shipyard workers at once.

Mr. GREEN: That is not my business. It is up to the minister to talk to the people concerned.

Mr. HOWE: The hon. member is talking very loosely.

Mr. HANSON (York-Sunbury): What is the good of making a statement like that?

Mr. HOWE: What is the good of making a reckless statement?

Mr. HANSON (York-Sunbury): The hon. member is asking the minister to declare a policy. He says that according to a statement made by a member of the government of his own province, there are skilled workers in British Columbia who are idle. The minister comes back and tries to browbeat the hon. member by asking whether he will take an order for a thousand men. That is not worthy of the minister.

Mr. GREEN: May I say, Mr. Chairman, that neither this minister nor any other one can browbeat me. I should like to see him try it. I have before me a dispatch which appeared in the Vancouver *Province* of February 19, 1941, as follows:

A survey recently made by employment services in Vancouver showed that there are at least 1,000 skilled men in British Columbia available for employment in shipyards; that if the labour supply is diluted to include unskilled craftsmen the number of men ready to take shipyard jobs is almost unlimited.

Now I have a word for the Minister of National Defence for Naval Affairs, who gave us a very hopeful and promising—and perhaps optimistic—statement when he spoke in the house on November 19 last. This is what he said, as reported at page 207 of *Hansard:*

But, Mr. Speaker, we intend to go further. It is our hope that in the Canadian yards we shall be able to build destroyers and perhaps cruisers as well. The building of these craft requires a high degree of skill; they have never before been built in this country. In the early stages of this development we shall require the assistance of skilled men from admiralty dockyards or from private yards in Britain, and we have asked for that assistance.

That was the last the house or the Canadian people heard about this proposal to build destroyers and possibly cruisers. I suggest that the time has now come when the minister should tell us all about it; whether this is another case of the wish being father to the thought, or whether we are in a position to commence building these warships in Canada. I think we must face the fact that it will be impossible for us to have destroyers built in Great Britain at least during the war and probably after the war. We cannot get started too soon on a policy of building our own destroyers and perhaps our own cruisers. It may be that steps in this direction have been taken, but I think the minister should let us know without further delay.

Summing up my question—or suggestion, whatever it may be called—I think the government should set an objective that will arouse the enthusiasm of the Canadian people in connection with this matter of shipbuilding. Let us go all out on this question. Perhaps the government have an objective now. I suggest that no matter what that objective may be, the government should give consideration to doubling it, because at this time we cannot build too many ships in Canada.

Mr. HOWE: Perhaps I should reply to the hon. member. It sounds so easy to say we should expand our shipbuilding indefinitely, as the hon. member states, but we have done a very considerable job of expanding shipbuilding up to this time. At the beginning of the war one of the first things we did was to fill every shipyard with work to its capacity. It has taken us a great deal of time to build up the shipbuilding organization we have to-day. We started with less than 1,500 men employed in our shipyards. We have been able to bring that figure up to about 20,000 men, and we hope to expand it still further. But to-day, while I do not know about the west coast, I do know about eastern Canada, and I know that every shipyard could use more skilled men if it could get them. The situation is particularly acute in Halifax and Saint John. We have been trying to get the Saint John shipyard on a twenty-four hour basis since the beginning of the war, but we have not been able even to approach that objective. The same is true in Halifax; we are working on short time there. That is the bottleneck of the shipbuilding industry. I could follow the suggestion of my hon. friend, go out to British Columbia and start three or four more shipyards; I know there are promoters ready and anxious to sell stock to the public, in fact are just waiting for that very opportunity, but it would only mean a drain of employees from existing shipyards.

Our shipyards are doing a good job and we have ample work in sight to take care of them for a very long period. If it is considered to the advantage of any existing yard to have a further contract, we are in a position to place that contract. At this very time our director of shipbuilding is on the Pacific coast, where he will explore every proposal we have had for additional shipyard

capacity, in order to determine whether or not in fact we can step up our production of ships by starting additional yards there. I was particularly warned in England about the folly of doing that if it would mean a drain of skilled workmen from other yards. I was told that from their experience it was not wise to start a new yard if the trained personnel had to come from other yards. They expressed the opinion that any yard in Britain could do more work if it had more skilled men, and that unless and until they were sure they had the trained personnel with which to start additional yards, it was not their intention to start them.

I do not think there is a shipyard in Canada, large or small, that has not been offered all the work it can do. The work each yard has taken has depended a good deal on the courage of the operators. We have had some small yards that did not wish to take more than one boat at a time. They wished to take one and finish it before taking a second. We have had others willing to take almost an unlimited number of orders, but there again we see no purpose in placing orders ahead of the time when the yards can actually transform those orders into something more than sheets of paper. In other words, if it is possible to order steel ahead, if it is good business to order steel ahead, they can go ahead and do it. If it is possible to lay a keel, that keel is laid; but, as I say, we are trying to develop more shipbuilders here, more skilled men. Steel ships are not things that can be built by men without experience. Shipbuilding is probably one of the most highly skilled businesses we have on hand here at the present time. We are working as hard as we can to develop shipbuilders; we intend to continue doing so, and if the number of shipbuilders available warrants starting additional yards, my hon. friend can be sure that it is our intention to do so.

A word as to the question of destroyers. We have not been idle in this matter. I may tell my hon. friend that we have now obtained our detail sheets; our plate specifications are here, and our plate sizes are here. We have explored the equipment market, and we know exactly where to place orders for equipment. We have been able to obtain a few experienced men from England; the British government was reluctant to spare them but they are on their way here now. We are pushing along the destroyer programme just as quickly as we possibly can, but these things have to be taken up in an orderly way. It would be quite possible to disorganize this whole industry. We could do that; we could encourage everyone to start yards, but we would reach the position where we would be simply churning labour around and building nothing. We are very actively engaged in stepping up the shipbuilding industry of Canada, and just as rapidly as we can step up the ability to construct we will start new projects to be constructed.

Mr. GREEN: Is it not possible to have merchant ships fabricated in the steel construction plants and then assembled by shipbuilding companies? I understand there have been discussions as to whether or not that could be done. If it could, it would mean that it would be possible to construct many more ships. Then the minister did not say whether Canada is to have merchant ships built for her own account. Are they all to be for Breat Britain, or is Canada to have merchant ships built for herself as well?

Mr. HOWE: Well, Mr. Chairman, I think the fact that will interest the committee is that we are going to build all the ships we can. Whoever owns them, they are engaged in the same sort of traffic.

Mr. GREEN: It makes a difference who is going to own them after the war.

Mr. HOWE: We owned a good many after the last war, and I took a hand in liquidating a few of them.

Mr. HANSON (York-Sunbury): Too bad you haven't got them now.

Mr. HOWE: Too bad?

Mr. HANSON (York-Sunbury): Yes.

Mr. HOWE: I think it is a grand thing we haven't got them now.

Mr. HANSON (York-Sunbury): All right; we will agree to differ about it.

Mr. GREEN: What about the other point?

Mr. HOWE: That is what we are exploring at the moment. My hon. friend must remember that not only the hull but the machinery and all other components of the ship must be arranged for. We build these ships complete in Canada. As I say, if it is possible to build them faster than we are building them, we hope to have that information in a week or two, and we will take steps accordingly. My reason for making that statement about ships built in the last war is that those ships have a very small carrying capacity. It has never been found possible to operate them with an even break in expenses. Whether or not it could be done now, under present abnormally high charter prices, I do

not know. But I doubt very much whether they would be profitable, even under the present price condition.

Mr. GREEN: Has the government adopted the policy of having engines, boilers and other auxiliary equipment built in the district in which the ship is being built? Is it not possible to adopt a policy of that kind?

Mr. HOWE: We have done everything we can to follow that policy. The reason it is not always followed out is that the shipbuilders themselves believe it is better business to have the equipment built in another part of Canada. I may say that we tried to do a good deal for Vancouver by paying them a considerably higher price for ships than the price at which we would have built them in eastern Canada. In spite of that fact, much of the equipment and machinery for those ships was ordered by the people in Vancouver from eastern Canada and was shipped out to Vancouver.

Mr. GREEN: Of course if they would pay decent wages in eastern Canada the costs would be more nearly equal.

Mr. ROSS (Calgary East): Mr. Chairman, the object of the motion before the committee is to raise money for our war effort. That money will have to be raised by taxation or by borrowing. Many members of the house and many persons throughout the country are saying that our financial system is all wrong. They point to Germany, and they suggest that if we would finance the way Germany is financing we would get along without taxation and without borrowing, or at least with a great deal less taxation and a great deal less borrowing.

The leader of the Social Credit group in the house has said that if we financed in the Social Credit way we could do so "without additional debt; without additional taxation." The leader of the Cooperative Commonwealth Federation made a speech in which he said:

> The allies have money, but failed to produce the goods; the Germans had no money, but did produce them.

He added "we ought to pay some attention to methods other than those we have been using to finance our war effort."

Mr. COLDWELL: May I correct the hon. member? I did not say that. I was quoting Dorothy Thompson.

Mr. ROSS (Calgary East): The hon. member quoted it with approval, and commented favourably upon it.

Mr. COLDWELL: I did, but I want to have the record straight, that is all.

[Mr. Howe.]

Mr. ROSS (Calgary East): And the hon. members sitting behind the leader of that group approved what had been said.

Mr. COLDWELL: That is right.

Mr. BRADETTE: The secretary of the All-Canadian Congress of Labour.

Mr. ROSS (Calgary East): It met with the unanimous approval of the members of the Cooperative Commonwealth Federation. So that they, too, see magic in German finance.

Mr. COLDWELL: No.

Mr. BLACKMORE: By his observations the hon. member implies that the Social Credit group have defended the financial methods of Germany. That is absolutely wrong. At no time has this group advocated German methods.

Mr. ROSS (Calgary East): I am glad that they are seeing saner methods of financing than they have been advocating in the past.

Mr. BLACKMORE: Mr. Chairman, the hon. member is imputing to us things he has no right to impute. At no time has the Social Credit group advocated Germany's methods of financing. Now, will my hon. friend get that into his head and keep it there?

Mr. ROSS (Calgary East): They have been looking to Germany as if Germany had a magic way of financing. Hon. members in the house have referred to it, and Social Credit speakers in the country have also referred to Germany's method of financing.

Social Credit's latest recruit, Premier Hepburn of Ontario, is telling the people of that province that Germany is financing with "rubber money." He apparently envies the accomplishments of Hitler in seizing great slices of Europe," and credits that success to rubber money financing. "With rubber money, Hitler built an army and seized control of nine capitals of Europe," Mr. Hepburn is reported to have said. And we have other funny money theorists throughout Canada, each with a theory of his own. What is there about German financing that appeals to these people? I have read a number of books and magazine articles and newspaper clippings on German financing. The writers are all pretty well agreed as to Germany's method of financing. Let us consider it for a few moments, but before doing so I should like to picture the background, so that their method of financing may appear in its proper setting.

After the great war Germany issued money so freely that inflation set in. Money became very cheap, and prices of goods very high.

The disparity between the two eventually became so great that it took 4,200,000,000 marks at their official value to buy goods to the value of a single mark. In the year 1924 the old currency was discarded and new currency was set up in Germany. Savings accounts created prior to 1924 were practically wiped out by the inflation. All domestic debts and all debts payable in German currency that matured prior to the introduction of the new currency were practically wiped out. Contracts expressed in the old currency were extinguished. Debts payable in gold or foreign currency as well as unmatured debts payable in German currency were greatly compromised.

Mr. QUELCH: What is the hon. member quoting from?

Mr. ROSS (Calgary East): So that in 1924 Germany had a fresh start, almost completely free of debt.

Mr. QUELCH: What is the hon. member quoting from? Evidently he is quoting from some authority?

Mr. ROSS (Calgary East): I am making my own speech.

Mr. BRADETTE: That is something you cannot do.

Mr. ROSS (Calgary East): Germany was not overrun during the first great war. Her factories were not damaged; her industry remained intact. Other warring nations had to rebuild much that was destroyed in their countries by the war. Such was not the case in Germany. Her economic activity had been in a measure suspended during the war. After the war she was permitted to carry on as before.

Germany's present military and industrial power is in considerable measure due to the huge loans made to her, largely by the United States, and to some extent by Great Britain, after she stabilized her currency in 1924. Industries proceeded to incur new debts, and to equip their old plants and build new ones with most modern and up-to-date machinery. These borrowings amounted to almost three times the reparation payments Germany was making during the period of prosperity which followed the introduction of the new currency.

Mr. NICHOLSON: Exception has been taken to the reading of speeches. I wonder if this ruling applies to the hon. member who has the floor?

Mr. BRADETTE: The hon. member for Vancouver South read his speech.

Mr. ROSS (Calgary East): The great depression of 1929 struck Germany very hard. Unemployment became severe, more severe in proportion to population than in any other European country. The standard of living was reduced to extremely low levels. The standard of morals was lower still. During the course of the depression Germany obtained the benefit of the "Hoover moratorium" on United States and other foreign loans to Germany. When Hitler came into power Germany declared a moratorium on all foreign debts. This enabled her to buy greatly depreciated German bonds at a few cents on the dollar.

On obtaining power on January 30, 1933, Hitler set out to mobilize the military and economic resources of the reich for the purpose of waging war. He developed an organization designed to produce as quickly as possible all that the German people could possibly produce. All this had to be financed. Thorough and far-sighted rearmament is of crucial importance in preparing for a mechanized war. Plans should be laid and the building well under way years before they are used. This has been recognized by all countries in respect of navies which have always been mechanized forces. No country waits until the outbreak of war to build its navy. They build it years before it is needed so as to be ready when war breaks out. The nazis extended this principle to their air and land forces.

With the advent of Hitler, Germany began her rearmament on the basis of a small army of 100,000 men allowed her by the Versailles treaty. Secret rearmament was under way in 1934. It became open and acknowledged in 1935 and began to hit its stride at that time. Flying clubs were formed throughout the country and she became active in building up her air force. At the same time she commenced to mechanize her army for the second world war, so that Germany has, in effect, been on a war economy since 1935 when rearmament got under way on a large scale. Hitler was also preparing for war by striving to make Germany independent of supplies which might be cut off by enemy activity. In other words, he was striving to make Germany blockade-proof in case of war.

The intensity of the depression created economic conditions for rearmament unparalleled in normal times. When the nazis came to power they found production machinery largely idle and 7,000,000 to 9,000,000 workers unemployed. In the following years it was possible to increase armaments rapidly be-

cause idle plants and idle men were available in large numbers. As the reich credit society declared in its report for 1936:

> Whereas four years ago there were huge reserves of capacity lying idle in the fields of production and investment, to-day the productive possibilities of many industries are not only being utilized to the full, but there is an urgent need for the construction of big new plants.

Hitler regimented agriculture, manufacturing and labour on a national scale. He controlled raw materials and production; he fixed wages and prices; he placed Germany's whole national economy under the direction of military officers whose commands were and are enforced by fines, imprisonment and firing squads. According to an article by Peter F. Drucker in a recent issue of the *Saturday Evening Post,* there are "2,000,000 persons engaged full time in controlling the economic activities of other persons" in Germany.

As to agriculture, in 1934 elaborate marketing boards were set up. These boards undertook to make Germany self-supporting in agricultural products so that she would not have to import products of the farm. They fixed prices on all agricultural products; compulsorily reduced principal and interest rates on farm mortgages; reduced taxes on farms; compelled farmers to sell their products at fixed prices; required farmers to farm in an efficient manner (if a farmer failed to do so they took his farm from him and gave it to someone else who would work it efficiently); required a farmer to pass his farm on to his eldest son or other heir. As a consequence, a farmer could not sell his farm or mortgage it to raise money to buy up-to-date machinery. Restrictions were also placed on farm labourers getting work in towns. Labourers were taken from towns and forced to work on farms for little or no wages.

The nazi farm programme has not been a success. There is not a plentiful supply of bread. There is a shortage of butter, eggs, cheese, meat, milk and fat products. They had to kill off much of their breeding stock because they lacked feed for it. In the subdued countries Germany confiscated large fodder supplies and shipped them to Germany. Holland and Denmark always import quantities of fodder for their live stock. Owing to the looting by Germany and to imports of fodder being cut off by the blockade, Holland and Denmark were short of fodder and had to slaughter the greater part of their dairy herds. Germany then confiscated the carcases. Some of the smaller countries which have since been overrun anticipated a long war in which they had hoped to remain neutral. They built up reserves of food. The Dutch built up reserves to last them for four years. The Germans swiftly confiscated and used up these reserve stocks. As a result of Germany's looting, there is a real lack of farm products in the German-controlled countries.

As to industrial control, only those things are produced which the government thinks are necessary and in the quantities deemed necessary. Prices are frozen at the 1936 level. Dividends are limited at from 6 to 8 per cent. Dividends in excess of the authorized limit must be deposited in the reichbank where the funds are held for the account of the shareholders. The funds cannot be withdrawn by the owner but are invested for him in government securities or otherwise under government direction.

The cost of government control and the salaries of the staff required in setting it up and carrying it out are paid by the industry itself. The cost hits small businesses much harder comparatively than it does large businesses. Many small businesses are thus being ruined. Large business, too, has been ruthlessly dealt with. Germany's largest steel enterprise was confiscated by the government and reorganized into the Hermann Goering works. The reason given for confiscating it was that August Thyssen, head of the enterprise, was not cooperating satisfactorily with the nazis. In the countries overrun by Germany she forced the banks to give their money in exchange for reichmarks at a price fixed by the Germans. She is now taking over control of their banks and manufacturing plants.

At a nazi congress held on September 9, 1936, Hitler announced a four-year plan designed, in these words:

> In four years to make Germany wholly independent of other countries in all those materials which German capacity, our chemistry, our machine industry, and our mining industry, can produce at home.

Her ambition was to be blockade-proof in case of war.

Germany proceeded to build up new industries by the creation of synthetic ersatz. Without Lorraine, she had to import 84 per cent of her iron ore; as a result of experiments carried out under the four-year plan, a great expansion of production was provided from poor domestic ores. She built up synthetic oil plants, distilling oil from coal; at the commencement of the war more than 50 per cent of her liquid fuel demands were produced from coal. Her leaders say she is now producing 5,000,000 tons of synthetic gasoline a year. This is probably an exaggeration. She

is believed to be producing a little more than one-half this amount. These plants are favourite targets of British bombers. From coal and lime she produces sufficient synthetic rubber known as "buna" to supply more than one-third of the needs of the army. She produces textiles on a large scale from lumber, straw and other plants as well as from coal, lime, glass and fish. These and other ersatz enterprises were financed in many instances by their competitors in existing industries.

With regard to labour control the economic life in Germany is severely controlled. By reason of this control the nazis are able to carry out effectively, but ruthlessly, their agricultural and rearmament programmes, the four-year plan and the war itself. This control involves the loss of individual freedom and initiative to an extent as great as, if not greater than, that involved in soviet Russia, even though Germany retains the formal capitalistic organization.

Mr. GILLIS: May I ask the hon. member a question? I did not follow that document. He said something just now with relation to labour control. Is what he is giving us a description of labour control in Germany, or in Canada?

Mr. ROSS (Calgary East): In Germany.

One of the first major actions of the nazis on gaining power was to destroy completely the trade unions and all they stood for. At that time the trade unions were very strong in Germany. Their funds were confiscated; their leaders were killed, imprisoned or driven into exile, and the organizations destroyed.

The unions were replaced by the labour front, which is not a labour organization as we understand labour organizations in this country. The workers have no voice in labour matters. The labour front is a branch of government. Labour trustees appointed by the government are all-powerful officials dealing with labour matters. All workers must belong to the labour front and pay dues to it.

The average worker must pay 16 per cent of his wages for compulsory insurance in the labour front. The labour front also collects sufficient dues from the workers to pay the salaries of 16,000 instructors to train men for jobs requiring skilled workers. They also have to provide winter relief and other funds for the workers.

Wages of workers were reduced to and frozen below the low level of the lowest depression year, 1932, and increases are forbidden, subject only to minor adjustments. Dismissal of workers was prohibited in order to stabilize employment. Food rations have been reduced to the workers since the commencement of the war. German scientists say a man can do a full day's work on 70 per cent of the food which he consumes under normal conditions. Hence in Germany food is rationed and cut down to 70 per cent of the pre-war level.

The worker under nazi rule is not free to move from one district where there is a scarcity of labour to another where he thinks there is a chance to get better employment. He is not free to give up one job to accept another that will pay him better. An employer is liable to a penalty of $500 if he offers higher wages or otherwise attempts to attract a worker already employed; newspaper advertisements for skilled labour are banned. Hiring and firing are both to a large extent under the control of the government. All skilled workers are registered and are allocated to those jobs which the government deems most necessary.

By the spring of 1938 all employable persons in Germany were mobilized and put to work. Further labour was needed on the Siegfried line. Skilled craftsmen were needed in their factories. As soon as Poland was overrun, the Poles were driven like cattle into Germany and have since been forced to work like slaves. According to the London *Economist* there have been sent to forced labour in Germany more than 1,000,000 Poles, 100,000 Dutch and 80,000 Slovakians. Mr. John Wheeler-Bennett in an article in *New Europe* quoted in a recent editorial in the Winnipeg *Free Press,* says:

> German official figures place the number of workers conscripted from the enslaved areas for forced labour in German agriculture and industry at 950,000, including 340,000 from Poland, 160,000 from the low countries, 107,000 from Bohemia and Moravia, and 17,000 from Denmark. These figures are exclusive of prisoners of war, of whom nearly a million are employed, chiefly on the land, but some in activities directly contributing to the nazi war effort, and it was added, somewhat significantly, that a further million conscript workers would be required. According to reports from neutral sources the standards of living of those engaged in forced labour in Germany is so low that many cannot survive, without receiving additional food from home.

The people in the subdued countries are systematically starved in order to increase the surplus that Germany can wring from her conquests. These foreign helots in German factories and on German farms have been driven from their homes by the spectre of starvation. They must work for Germany or starve.

According to German economy, Germany is to be the industrial hub of Europe after the war. Positions which demand initiative and leadership will be reserved for Germans; the more menial tasks will be left to the lesser breeds.

The Winnipeg *Free Press* editorial to which I have already referred, further quotes from Mr. Wheeler-Bennett's article in *New Europe,* from a speech made by Walter Darre, Minister of Agriculture in the reich administration, to nazi officials last May, when a complete nazi triumph for nazi arms appeared to the Germans to be only a few weeks off. Here are Darre's words:

Before autumn sets in we shall be the absolute masters of two continents, with the exception of soviet Russia. It will then be our duty to organize economically the territories gained, which gradually will be included in the German area. We will introduce into our "living space" completely new methods. All soil and industrial property of inhabitants of non-German origin will be confiscated without exception and distributed primarily among the worthy members of the party and soldiers who were accorded honours for bravery in this war. Thus a new aristocracy of German masters (herrenvolk) will be created. This aristocracy will have slaves assigned to it, these slaves to be their property, and to consist of landless, non-German nationals. Please do not interpret the word "slaves" as a parable or as a rhetorical term: we actually have in mind a modern form of mediaeval slavery which we must and will introduce because we urgently need it in order to fulfil our great tasks. These slaves will by no means be denied the blessings of illiteracy; higher education will, in future, be reserved only for the German population of Europe. We have selected this form of slavery for several reasons. The most important reason is that we are abolishing the gold standard and replacing it by work. This work must be as cheap as possible in order that our economic conquest may spread extensively and rapidly. Our future generations must, even in peace time, be educated in such a manner that, in case of necessity, they may be fit to defend strongly and energetically what we acquired. Here too the form of slavery mentioned above will prove its worth. German masters, accustomed to command, and, in case of necessity, to strike inconsiderately where striking is necessary, will be fine pillars to uphold Germany's rule of the world.

From Mr. Wheeler-Bennett's comments on the text supplied by Doctor Darre, the *Free Press* quotes:

Here in the terse, direct phraseology of nazi rhetoric is the blueprint for that brave new world which Adolf Hitler plans to build upon the ashes and debris of European civilization. This is not the thought of a single man; it is the kind of doctrine currently discussed by the inner circles of the nazi party.

Last Wednesday's Lethbridge *Herald,* in an editorial, tells of the cruelties and indignities to be visited upon the British if Hitler wins. It quotes a nazi agent who writes:

As soon as we beat England we shall make an end of you English once and for all. Able-bodied men and women will be exported as slaves to the continent. The old and the weakly will be exterminated.

All men remaining in Britain as slaves will be sterilized. A million or two of the young women of the Nordic type will be segregated in a number of stud farms, where, with the assistance of picked German sires, they will during a period of ten or twelve years produce nearly annually a series of Nordic infants to be brought up in every way as Germans.

These infants will form the future population of Britain. They will be partially educated in Germany, and only those who fully satisfy nazi requirements will be allowed to return to Britain and take up permanent residence. The rest will be sterilized and sent to join the slave gangs in Germany. Thus in a generation or two the British will disappear.

The editor then makes this comment:

You may think that no nation would do such a thing as this—not even Germany. But remember it is actually being done in Poland to-day.

So we know what is in store for us, if Hitler wins the war.

At the end of 1940 the national debt of Germany was 79,000,000,000 reichsmarks. Germany has been spending on her war effort 5,000,000,000 reichsmarks a month, or 60,000,000,000 reichsmarks a year. According to a dispatch in this morning's Ottawa *Citizen,* nazi war spending for the current year will be 6,000,000,000 reichsmarks a month, or 72,000,000,000 reichsmarks for the year, compared with an annual income rate of 100,000,000,000 reichsmarks. Where is the money to come from? Germany is raising a very considerable part by taxation. In the year 1939 she raised by taxation 23,600,000,000 reichsmarks. During the present fiscal year ending 31 March, 1941, she expects to raise by taxation 30,000,000,000 reichsmarks.

In Germany, tax collections take about one-third of Germany's total national income, according to Mr. G. F. Towers, governor of the Bank of Canada, in his annual report to the finance minister tabled on February 11, 1941. He makes this statement:

In Canada, during the same period, dominion government revenues will be about one-sixth of total national income. In the United Kingdom the proportion will probably be something more than one-fifth. Including the levies of the states (or provinces) and local governments, the German people are paying in taxes at least one-third more, in relation to their income, than are the people of Canada. In addition to formal taxes, Germans have also to make substantial direct payments to their government in the form of party dues, winter relief fund donations, and other special "contributions" which are just as compulsory as taxes.

Apart from taxation, most of Germany's financing has been done by borrowing. Up to 1935, borrowing was mainly done by the issue of short-term bills. From 1935 to 1938, financing mainly took the form of long-term loans. Since then, they have been experimenting with short-term delivery certificates

and "tax certificates," but since the commencement of the war, almost entirely with five- and ten-year notes.

Everyone in Germany who has money is compelled to lend it to the government whether he wishes to or not. Most of the borrowing is done from the financial institutions. The borrowings are spoken of as loans, but they are really taxes, because nazi leaders openly admit that the loans will never be repaid.

To build up her war effort Germany has, by means of controls, greatly lessened consumption. Interest rates are much higher in Germany than in Canada. In 1933, the interest rate on high-class government securities was 6 and 7 per cent. It has been reduced from time to time so that the general rate now paid by the German government is 4 per cent. The reductions were made not by agreement with the creditors, but by government decree. Germany also adds to her treasury by levying on the Jews and other unfortunate minorities, and by looting the overrun countries and selling the loot.

According to an article by Frederick T. Birchall in yesterday's New York *Times*, speaking of Germany's finances:

> Every invaded country, whether it resisted or not, has been systematically ransacked for all that was valuable in it. Its stores of gold, its currency reserves, its arms and military equipment, the rolling stock of its railroads and a large part of its industrial plant have been removed to Germany.
>
> Working for reich
>
> By the hundreds of thousands, labourers and skilled workers have been sent to the reich to do Germany's work and leave her man-power free for military service. Hundreds of thousands more are working for Germany, producing military equipment and supplies, in their home factories. Unless they work for Germany they and their families cannot eat. It has been estimated that already nazism has enlisted 2,500,000 conscript labourers in the conquered countries, that they have contributed $1,275,000,000 to German national resources and are producing probably $400,000,000 worth of supplies annually for the war.
>
> Every occupied country pays an amount far in excess of actual cost for the maintenance of the German armies of occupation that hold it in subjection. The French are assessed 144,000,000,000 francs (about $2,800,000,000) annually for the German occupation. Norway pays $1,870,000,000, more than a third of her national income, to her military jailers. She is being bled white, but so are the other countries From the resources of all combined, Germany is paying a large part of the cost of her war. The nazis even make a source of profit. Fines are laid upon communities which show a tendency to resist domination. Only last week disorders in Amsterdam were punished by infliction of a fine of $8,000,000 against the city.
>
> Of all the conquered countries Poland is admittedly in the most wretched plight. A million Poles have died in concentration camps and prisons and of starvation and exposure outside them. Thousands have been deported to hard labour in Germany. Mass arrests and deportations take place constantly without apparent cause. Labour is compulsory for all, under pain of being sent to concentration camps, and all Poles without exception must surrender thirty per cent of their meagre wages under pretext of contributing to the "reconstruction of Poland".

Germany has also been forcing the smaller nations to deliver goods to her and is paying for them in reichsmarks. Germany issued Rm. 10,000,000,000 of "printed money" plus billions of special credit bills and IOUs to finance in conquered countries. These reichsmarks and IOUs are offered for sale in the stock markets of the world, but they are almost worthless. A person cannot legally buy reichsmarks abroad and take them into Germany and use them there. These are the only novel financial methods carried out in Germany.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I must remind the hon. member that he has spoken for forty minutes.

Mr. BROOKS: I wish to associate myself with the remarks made a short time ago by the hon. member for Vancouver South, (Mr. Green) with reference to shipbuilding. At the outset I may say that if the minister should ask me to produce one thousand ships, or one ship, I should not be able to do so, or to tell him where to get them. I also recall that over a year ago when the matter of tanks was being discussed, the minister told us that it was practically impossible to manufacture tanks in Canada. But we are now told tanks are being produced in Canada.

An hon. MEMBER: We hope so.

Mr. BROOKS: And I believe they are being produced in substantial numbers.

Mr. HOWE: This is the first time I have ever heard anyone on that side admit it.

Mr. HANSON (York-Sunbury): Is it true?

Mr. BROOKS: We have been told by the government that it is so, and I am not doubting their word for the present. But the minister tells us that with regard to ships we cannot do any better than we are doing at the present time. I have no data upon which to contradict that statement. The minister tells us there are no further shipbuilding experts to be obtained in Canada. But we all know that in all our war effort, whether in the building of aircraft, the manufacture of munitions or even the training of our men, there were not sufficient experts at the beginning of the war; these experts had to be developed. No doubt it

takes time to do this; but the war has been going on now for eighteen months, and if we made any criticism at all I think one criticism we can make would be that this work should have been started eighteen months ago. I am satisfied that if a definite shipbuilding plan had been commenced at that time, we should now have in Canada more experts, more shipyards and we should be launching more ships at this time when they are so urgently needed.

Mr. HOWE: May I remind the hon. member that we started a programme eighteen months ago and have turned out a considerable number of large ships up to this time.

Mr. BROOKS: Well, they sink fifty and sixty a month, so one hundred is not a very large number in comparison with the need. One hundred ships now would certainly be much better than five hundred or a thousand when the war is over. Ships are as important as food and guns. We all realize this. Under the terms of the United States lease-lend bill which has just been passed, this principle has been recognized. The hon. member who spoke a few minutes ago mentioned Lord Beaverbrook's appeal. Lord Beaverbrook stressed this in a broadcast to the empire a few days ago. He said that we in Canada should procure ships wherever they can be obtained.

What policy the government has in this matter I do not know, but I presume every effort is being made by them at the present time to procure ships. Where these ships can be built is the problem of the Minister of Munitions and Supply. It is also the great concern of the Canadian people and the people of the British empire. The minister has told us on different occasions that with regard to production he is interested only in results and proposes to obtain supplies where they can be obtained most readily. I have no quarrel with that statement of the minister. But in carrying it out I would ask that he make no mistakes and that he use his very best judgment as to where these supplies should be obtained.

We in the maritime provinces feel that the minister and his department have more or less overlooked us. I contend that more ships should be built in the maritime provinces and particularly in my own province of New Brunswick. I have not heard the minister say whether wooden ships are suitable for use. I have seen comment in the press and heard statements that wooden ships would be useful and should be produced. If that is the fact, I point out to the minister that the maritime provinces are the logical place in which to build wooden ships as well as steel ships. It is not necessary for me to say here that at one time the maritime provinces were the largest producers of ships in the world. I am told that some years ago 57 per cent of the ships of British registry sailing out of Liverpool had been built on the bay of Fundy between Nova Scotia and New Brunswick. I also remember that during the last war many ships were built on the bay of Fundy and other sections of the maritimes. We have a tradition and background of shipbuilding; we are a maritime people, and if any industry is suitable for the maritime provinces, surely the shipbuilding industry is the outstanding one.

The minister spoke about building ships in the city of Saint John. I know they have been built there and that, as the minister stated, they are trying to extend their facilities in order to do more.

Mr. HOWE: Trying to get some men.

Mr. BROOKS: Well, there are lots of men in the maritime provinces, and I am not satisfied that the minister's statement that men cannot be got to build ships is accurate.

Another advantage in building ships in the maritime provinces, as well as on the Pacific coast, is that we are not icebound for five or six months of the year. If a ship is built on the great lakes or the St. Lawrence early in the winter, it is held up there until the spring. A ship built in the maritime provinces or British Columbia is already on the seaboard. There are also other advantages which might be mentioned.

Then there is the matter of financial assistance, which is a sore point in the maritime provinces at the present time. I should like to call attention to the treatment we have received in New Brunswick, and I refer to page 923 of *Hansard*, where there is a digest of Canadian and British capital assistance to industry, including some 220 items, with a capital expenditure of some $307,000,000. Of the 220 plants throughout Canada which have received assistance, only one is in New Brunswick. That is in the town of Campbellton, and the amount involved is less than $200,000. We have not been fairly treated in this regard, and I think it is time that at least some consideration should be given our part of Canada. I do not think one plant in Prince Edward Island has received any assistance, although I believe it has been given help in other ways. In this connection I should like to refer to an article which appeared recently in the New Glasgow *Evening News*. This article speaks of the assistance given to industry in other parts of Canada, and says:

But by and large, the maritimes are producing nothing.

That, of course, is an exaggeration; but their production does not compare with that of other parts of Canada.

That in spite of the fact that Ottawa on behalf of the Canadian and British governments, has authorized the construction of far more than 100 new plants.

It is more than two hundred.

This is a tremendous development, costing many hundreds of millions of dollars. But its net result when the war is over will be only to increase the industrial disparity of the rest of Canada and the maritimes.

That is a true statement.

Yet we do our share of supporting war loans (better than other sections), Red Cross and other drives, as well as all types of recruiting.

Mr. HOWE: Is my hon. friend not aware that we have given capital assistance amounting to three and a half million dollars to New Glasgow and Trenton? What do they think is their share?

Mr. HANSON (York-Sunbury): It took them months to get that much.

Mr. BROOKS: I know that assistance has been given. We get a little hand-out once in a while; we do not deny that; but I am speaking of the broad principle. I do not think we have received our share. We have over a million people in the maritime provinces, and if we received our share in proportion to the rest of Canada it would not be three and a half million dollars but a great deal more. Then this article goes on to ask this question:

What's wrong? Is it our fault? Have we lost the ability to become industrialists?

We were industrialists years ago.

Or are we forgotten?

I sometimes think, Mr. Chairman, that we have been forgotten, sadly forgotten. Just to show the mentality of the people in the central part of Canada in this connection, I would refer to a picture which was shown at a local theatre a short time ago, entitled "The Story of Canada's Growth." That was a beautiful picture; I enjoyed seeing it; but what did we find as far as the maritime provinces were concerned? One of the highlights was a Dutchman driving an oxcart through the village of Lunenburg. Another scene a Scotsman trying to squeeze the last inch of soil out of a barren hillside, although we have thousands of acres of good, fertile land in the maritimes. A further scene pictured a tarpaper shack with some lumbermen emerging from it. That is the sort of advertising we received as far as this picture was concerned. There was only one bright spot in it, the part showing the building of ships; that was the only instance in which the maritime provinces were shown in a good light.

What was the situation with regard to Ontario? Factory after factory was shown booming; the wheels of industry were turning to capacity. We were shown the great offices of the leading businessmen of Toronto. One man called up Edmonton and said that certain goods would be shipped by airmail. Another man was shown telephoning his representative in Vancouver that he would look after certain matters. That is the sort of comparison which leads us to believe that we are a forgotten people. In war all sections bear their full share. I was very glad to see in a recent article that the Minister of National War Services has become interested in the further development of industry in Canada.

Mr. HANSON (York-Sunbury): Is he taking a hand in this, too?

Mr. BROOKS: Evidently he is. The article to which I refer mentions the appointment of a committee of three representatives, under a policy designed not so much to decentralize future war industry that Canada may create, although this will be part of its function, but rather to distribute as widely as possible across the dominion the new industries that are expected to settle in this country as a result of the disturbances in Europe. The representative for the maritime provinces is Mr. Matheson, of Moncton. I know Mr. Matheson; I believe he is an energetic man, and no doubt if he is allowed to do so he will be of great help to the maritime provinces and eastern Canada. I think this is a sound policy; I hope it goes beyond sound, as far as the minister is concerned, and that something will be done along the line suggested. Canada cannot be a great country while the central part does all the manufacturing and the extremes, such as the maritimes, have no share in industry.

We have been told that one reason why there is not more industry in New Brunswick is that we have not the power. I know that our power in New Brunswick is limited; but since we are spending millions of dollars in other parts of Canada, why could not a few million be spent in order to produce more power in New Brunswick? At Grand Lake we have a large power plant, which could be expanded. We have plenty of coal, and I have been given to understand that power can be produced from coal as cheaply as from water. We are told that the development of the St. Lawrence is to be proceeded with. That also reacts against us in the maritimes. We will get no advantage from the development of the St. Lawrence, although we will

help pay for it. The excuse being used is that more power is required in the central provinces. The power development in the St. Lawrence river will not have been completed until the war is over. I believe the people of Canada realize that fact. Nevertheless we are asked to spend money from eastern Canada to develop more power in Ontario. In other words, more industry is taken away from us, and we must pay for it.

That policy is not fair. I pick up my Montreal paper each morning and I see in it pictures depicting the distance the icebreaker has moved up the St. Lawrence river. Perhaps I cannot criticize those pictures, because they arise through a practice which has been established over many years. But I wonder if hon. members realize that again, in connection with the operation of that icebreaker in the St. Lawrence river, we at Saint John and Halifax are helping to pay for something that is taking work away from those ports and our workmen.

We are told it is in the general interest. We have no great objection to helping anything which is in the general interest, but we do suggest that there should and must be a limit to this sort of thing. We are not looking for hand-outs or special concessions. We are seeking an opportunity of throwing our full weight into Canada's war effort.

Another point is that an equal burden in our war effort should be borne by all people. Anyone who will look over the list of recruits from one end of Canada to the other will find that we in New Brunswick have done as well as, if not better than, any other section in Canada. Our young men are still looking for a chance to enlist. Why? Because there is no industry in which they may take part. If in that province we have no industry in which they may be absorbed, if there is no outlet for young men, except on farms where we produce at a loss, we are again handicapped. However, I shall say nothing further about that now. There is only one outlet for our young men, so far as the war effort is concerned, and that is for them to enlist. Anyone who will tell me that a young man working in a factory is doing as great a service for his country as the man who takes his life in his hands is telling me something I cannot believe and I know hon. members will not believe.

This is a serious matter, and I would ask that the government give it careful consideration. We cannot keep this great Canada of ours united if one section of the country is prosperous, and another section is struggling for its very existence. What we need in Canada to-day is men of vision, men who can see beyond the narrow confines of their own provinces, men who will work for the good and interests of the whole dominion. We want to have established in Canada a great country—not a great country in the centre, but a great country from the Atlantic to the Pacific.

Mr. POTTIER: I cannot allow a discussion on shipbuilding, and particularly the building of wooden ships, to pass without at least taking some small part in it, particularly in view of the fact that I come from what I believe is or should be the banner shipbuilding constituency in Canada. I think it was around 1870 or 1880 that we had in my constituency more registered ships of the type then in use than any other place in the world.

I listened with keen interest to the observations of the minister when he explained his difficulties in connection with mechanics. I know of shipyards in my constituency—

An hon. MEMBER: Where is that?

Mr. POTTIER: If the hon. member who has just interrupted does not know enough geography to know where the constituency of Shelburne-Yarmouth-Clare is situated, then I suggest that his constituents should elect someone else to the riding he represents at the present time.

Mr. BLACKMORE: Tell us about it.

Mr. HANSON (York-Sunbury): They build some very fine boats.

Mr. POTTIER: I know of two shipyards in my constituency which have turned down orders offered to them by the government. Someone may wonder why that has taken place. I am going to give some of those reasons, briefly, and make a suggestion as to how the condition could be remedied, to the benefit of the shipbuilding industry. One of the reasons for the turning down of offered contracts is that our shipyards have turned out smaller and less expensive ships than those mentioned in the government tenders. They have turned out schooners valued at say $10,000 or $15,000, whereas the ships mentioned in the government contracts were of a type which would be valued at $50,000, $60,000 or $85,000. That would be a type of ship, the building of which some of the shipyards in that constituency would find it difficult to finance. It is not a type of ship beyond their powers of construction, nor a type for the construction of which they do not have the necessary mechanics or material.

Mr. HANSON (York-Sunbury): It was beyond their financial capacity.

Mr. POTTIER: Yes; their financial capacity was lacking. When those orders were turned down there were men in the vicinity who

could have been hired to do the work of carpenters. They had material sufficient to complete the ships; but they lacked the credit, and I suggest that is one of the factors which has brought about the condition to which the minister has referred. It appears to me that some method must be adopted which would remedy this difficulty, so far as the construction of wooden ships is concerned. I do not know if the remedy would lie in guaranteed credits to the banks, or some other method, but I do suggest that something along that line must be done.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. POTTIER: When the committee took recess at six o'clock I was discussing the difficulties being faced by some of the shipyards in my constituency. I would not want it to be thought that I am talking about all shipyards in western Nova Scotia. There are some about the financial standing of which I have not full particulars, and I have never had an opportunity to discuss this matter with those in charge. To finance a ship costing $50,000 necessitates a deposit of 10 per cent, or $5,000.

Mr. MacNICOL: What kind of ship can be built for $50,000?

Mr. POTTIER: A mine-sweeper.

Mr. MacNICOL: They cost $550,000.

Mr. POTTIER: I am sorry to differ with the hon. gentleman who has just interrupted me, but I know that the hulls of wooden mine-sweepers are being built for $50,000. The shipyard must put out another $10,000 or $12,000 for material and there will be labour costs of $5,000 or $10,000 before they can get a cent from the government by way of an instalment payment. If a yard is building four or five ships of that type it would need capital or credit of between $75,000 and $100,000.

In the last fifteen or twenty years wooden shipbuilding in the maritimes has suffered a slump. The result has been that many family shipyards have gone down and their credit has been used up. To-day many of these shipyards find it difficult to finance to the tune I have indicated. At the risk of repeating what I said before recess, may I say that the trained labour to do this work is available and the necessary material can be found in the vicinity; yet orders for wooden ships are going past our door simply because in some instances credit is lacking.

Many of the shipyards are equipped to build only one or perhaps two ships at a time; they cannot build four, five or six at once. If they were given proper encouragement by the government, the tonnage could be increased a great deal. Then the government is often quite tardy in making the instalment payments under contracts which have been let.

Mr. HANSON (York-Sunbury): The government is slow pay.

Mr. POTTIER: The government is good pay, but it is sometimes slow. This affects the production of tonnage to a certain extent. Many of these yards have had to wait for their money and sometimes they hesitate to take another contract. Something could be done by way of rushing payments. Another reason for the falling off in tonnage is the long period which seems to elapse between the calling of tenders by Great Britain and the awarding of contracts. In order to bring about increased production of tonnage, some improvement might be made in this connection. If the four things to which I have referred were taken care of, I think we would have an increased production from our wooden shipyards.

Last fall I spoke about wooden shipbuilding and urged that we adopt some policy which would bring about a greater production of cargo ships. I realized at the time that there was some difficulty in connection with gross tonnage of wooden ships as well as in connection with getting the necessary speed for convoy service. I have since discussed the matter with sea captains, shipbuilders, designers and the like, and I have come to the conclusion that what we should do in Canada is to build what was known in the last war as composite ships. In the last war, as at the present time, Canada built both steel and wooden ships, but we did not build any of the composite type.

During the last war the United States built ships of this type with tonnages of from 3,000 to 4,000 tons. The beams, frame and ribs were of steel, the rest of the ship being of wood. I have in my hand a blueprint of a ship of 3,500 tons. Its length is 269 feet, its breadth 45 feet and its depth 24 feet. These ships could be built with a speed sufficient to take part in convoys, and they would take care of the shortage of tonnage which we seem to be approaching quite rapidly.

Many of our shipyards could build these ships. We have the wood necessary to build them and they could be built to last for from fifteen to twenty years, long enough to

get through the struggle now facing us. We have the wooden shipbuilding mechanics available to do the work and it would not be necessary to train new men. By building this type of ship, considerable steel would be saved. In the last war I think we built between 150,000 and 200,000 tons a year of wooden ships. If we in Canada were to make an effort to construct wooden and composite ships, we could reach the same tonnage. If we consider that in Great Britain, for example, the output is only about a million tons a year, in the United States between two and three million tons a year, and that the world tonnage is but little more than twenty millions, an additional production in Canada of two or three hundred thousand tons would be of great importance and value in these days of short tonnage and of the urgency of supplying transportation in convoys. While perhaps this is in some degree a new venture so far as Canada is concerned, it must not be forgotten that in the last war we built wooden ships, steel ships and even, I believe, cement ships. I have discussed this matter in my own constituency with captains who served on these composite ships in the last war. They told me they were fine vessels, having a speed of twelve or thirteen knots; one captain had a ship of 3,200 tons, and I gathered, in our discussion, that the boat was well suited to convoy work.

I suggest, therefore, that the minister and the government consider seriously the advisability of developing a programme of building composite ships. If those parts which are composed of steel or iron could be fabricated according to a standard in some of our steel plants, probably they might be sent to different yards and the boats constructed by the builders of our wooden ships. That, in my opinion, is the proper and the best way to utilize the wooden shipyards for cargo tonnage ships, and it is a thought which I desire to emphasize at this time.

In conclusion, it seems to me that we should arrange to provide credits for the development of the wooden shipyards, through the provision of both working capital and additional equipment and machinery. If, by using the materials and the men available, we can produce a wooden ship which will operate efficiently under convoy conditions, I believe we shall have done all we can as Canadians in wooden ships in this struggle for ships, ships, and yet more ships.

[Mr. Pottier.]

Mr. JOHNSTON (Bow River): I desire to say only a few words before the conclusion of this debate on the war appropriation bill. From all parts of the chamber has come a great deal and a great variety of discussion. Of course, we of this group realize how tremendous is the appropriation which we are invited to vote under this bill, and we well understand that ministers have a great deal of work to do in connection with the war programme. It is a tremendous job, but this is also a tremendous war, so I think every hon. member should be entitled to criticize the government constructively in order that the greatest amount of effort shall be put behind the prosecution of the war.

I have just been reading a reported statement by Mr. Bullitt, former United States ambassador to France, to the effect that no country can really get down to business in the matter of war preparations until a few bombs have been dropped on them, and I have often thought that it might stimulate our war production if a few bombs were dropped here in Canada; we would then begin to realize that a real war is going on. I am convinced that we are not exerting our maximum effort. I do not say that the government is not doing its best, but that best is not good enough under present conditions.

Criticism of the government by hon. members, no matter where they sit, should be regarded as intended, not to hinder but rather to stimulate the government's war effort. The government takes decidedly the wrong attitude, therefore, when ministers become peeved at the criticism which is offered from the opposite side of the chamber. Some of them seem to have almost reached the point of mental break-down; they become slightly hysterical, and certainly irritable, at some of the criticisms. This attitude was evident the other day in ministerial references to the press. I have not found, in any criticism which I have read in the newspapers, any evidence of a desire to interfere with or hinder our war effort. To my mind it is the duty and the right of the press to criticize any government when it believes that that government needs criticism. I am quite aware of the attitude which ministers have taken towards some of their critics, but I assert that it is the duty, the privilege and the right of everyone in a democratic country to criticize when in his opinion the occasion calls for it. I believe everybody is most desirous of assisting this government in every way possible. That is certainly true of some of the provincial governments. Alberta has probably received the greatest amount of criticism and

has suffered more than any other province from discrimination, especially at the hands of the present dominion government. Yet here is what Alberta, through its legislature, said the other day:

War savings drive given endorsation in Alberta house.

In the face of solid opposition by independent members, a resolution endorsing the federal government's war savings campaign and urging upon the federal government "the necessity of adopting effective methods of financing the war and preparing for the post-war period by the national control and issue of money without inflation" was passed in the Alberta legislature to-day.

The resolution also urged that "every citizen of Alberta should cooperate with the dominion government in the winning of the war in every reasonable way possible."

The division was 35-18.

What did the provincial government ask the people of the legislature and the province of Alberta to do? First, to endorse the federal government's war savings campaign. Surely this dominion government is agreeable to that. Yet the opposition in the legislature of Alberta, instead of showing the same spirit of cooperation that the Social Credit members of parliament in this house have displayed towards the federal government, divided on that issue and voted solidly against endorsing the dominion government's war savings campaign. The vote on the resolution was 35 to 18, and the minority consisted of independents. Who are the independents in Alberta? They are made up of Liberals and Conservatives, and so far as I know, the only thing they are independent of is the people.

The second point was the necessity of adopting effective methods of financing the war. Who in the world could honestly and sincerely oppose the federal government's adopting effective methods of financing the war? I cannot understand any sane, intelligent people voting against such a thing.

The third was the issue of money without inflation. Surely those Liberals and Conservatives in Alberta do not advocate inflation; yet that is what they did when they voted against that.

The resolution further urged that:

Every citizen of Alberta should cooperate with the dominion government in the winning of the war in every reasonable way possible.

Can you understand, Mr. Chairman, any people voting against that? Yet Liberals and Conservatives in Alberta, did so. That may be their idea of cooperation, but I am sure this federal government would not appreciate cooperation like that from the opposition in this chamber. There was a division of thirty-five to eighteen in the Alberta legislature. May I point out that no other organization in all the dominion has given this federal government the support that the province of Alberta has given, in every way possible, as far as this war is concerned. The only thing they are concerned about, the only thing we are concerned about in our criticism of this government, is that we should be doing more, not less, and our suggestions have always led to that.

This government, however, whether intentionally or not I do not know, seem to be critical of any criticism that may be offered; and, as I pointed out a moment ago, they took exceptional objection to the criticisms offered by the press. The Minister of Munitions and Supply (Mr. Howe) even said, referring to one newspaper, that it was the No. 1 saboteur. That is a very strong statement, and if it is true, then I think the minister should do something about it. The Minister of Agriculture (Mr. Gardiner) the other day had this to say with reference to the press, as reported at page 1321 of *Hansard:*

My criticism of the press, more particularly a certain section of the press, would be this, that there is no organized group in the dominion that has done more since the fall of 1939 to delay the war effort of this country than certain sections of the press in Canada. That effort started even before war was declared, and it has been carried on since.

Mr. HOMUTH: Who said that?

Mr. JOHNSTON (Bow River): The Minister of Agriculture and Minister of National War Services. He said that they had done more to interfere with the war effort. That must be subversive, certainly against the defence of Canada regulations. If that is true, the Minister of Agriculture should do something about it. Let us see what the Prime Minister (Mr. Mackenzie King) said. At page 1231 of *Hansard* he is reported as saying:

As a member of parliament, I feel that the rights of parliament are supreme over the press or any other institution in the country; and if I find the press of the country misrepresenting the position as it affects the government or its war effort, I intend to take exception most emphatically to what the press says. The press is one power in the country, but I hope the day will never come when the press supplants the place that parliament is supposed to have in upholding the rights of the people. There is one other power that is supreme over press and parliament alike, namely, the people of the country; and the people of this country, on more than one occasion, have shown what they feel with respect to a press that represents a point of view contrary to that which they themselves entertain.

These are strong terms, but he goes further. Mind you, I am not saying that the Minister of Agriculture was not right, nor am I implying that the Prime Minister is not right;

but what I want to know is, what they will do about the matter. The Prime Minister went on to say, as reported on page 1232 of *Hansard*:

I ask hon. members if that is fair criticism. Are not all these not only false insinuations but false statements? Are they not malicious statements? I go so far as to say that that article is libellous; first, because it is false, and, second, because it is malicious, and it bears the stigma of both these things on its face. I go further and say it infringes the privileges of this house.

One minister says the press is the No. 1 saboteur; another minister says it has done more to interfere with our war effort than anything else in Canada; the Prime Minister says that these statements are malicious, libellous and false, and infringe upon the rights of the members. What is the Prime Minister going to do about it? Let us go back and see —in the statement I first read to the committee. He said: "I intend to take exception most emphatically to what the press says." Take exception! They do not care whether he takes exception to it or not.

An hon. MEMBER: Why should they?

Mr. JOHNSTON (Bow River): Why should they? He is going to take exception to it. I could not help thinking, from the way in which the Prime Minister guarded his remarks, that the insinuation all the way through, as I understood the speech, was a direct threat to the press. Yet he adds that he will take exception to it.

I am not saying that the Prime Minister is not right, but I wish to compare the attitude of this government to criticism from the press with the attitude which they took towards the Alberta government when it had something to say about the press. The Alberta government never at any time refused the right of criticism to the press. It never called them saboteurs. It may have said that they misrepresented the facts, but this is what it had to say with regard to the act to ensure publication of accurate news and information:

Why pass:

First, because the control of news and the control of credit are both exercised by the financial interests.

Second, because "the freedom of the press" has become licence to distort news—

I do not think the Minister of Munitions and Supply would contradict that statement.

—misrepresent facts—

I think he agrees with that.

—and withhold essential information from the public.

[Mr. C. E. Johnston.]

I said, "essential information"; that is, truthful information. I think the Minister of Munitions and Supply agrees with that.

Third, because this anti-social aspect of the press, under inspired direction, is being used to thwart the people of Alberta in their struggle against finance.

What happened? Assent was withheld by the lieutenant-governor, a Liberal appointee of this government. The measure was declared unconstitutional by the Supreme Court of Canada, and on an appeal by the province of Alberta from the decision of the Supreme Court of Canada, the privy council refused to hear Alberta's argument by counsel.

What it would have done:

First, it would have ensured that all newspapers in Alberta would publish all the facts in their news reports of governmental matters, so far as this was possible—

No restriction whatever.

—and if, from any cause, false statements appeared, equal space would be given for authoritative correction.

Is that unreasonable? Had that passed, had that practice been carried on throughout Canada, I wonder if this Liberal government would have appreciated it right now.

Second, would have ensured that the same information that every publisher demands from correspondents to his columns, that is, the names of contributors of articles, would be available to the people when demanded by their representatives.

This, briefly, is all the Press Act meant. It was widely misrepresented by the press as a muzzling act; actually it was the reverse. It did not prohibit the press publishing anything it wanted; it merely provided that the public be told all the facts, not merely what a particular newspaper saw fit to publish. I wonder whether the Minister of Munitions and Supply agrees with that. I wonder whether the Prime Minister agrees with that. Yet the opposition to the Social Credit government were the very ones who opposed that Press Act. The federal government is now complaining most bitterly when the press criticize it. I think the press should have every possible privilege of criticism; but they should not be allowed to publish misrepresentations and false statements, and if they should do it under any circumstances, by intention or otherwise, then the correction should be made and given the same publicity.

The Prime Minister overlooks one fact—if he does not know it now he soon will—that the press in this country under organized finance is much stronger and more powerful than he is.

Mr. HANSON (Skeena): Stronger than the government?

Mr. JOHNSTON (Bow River): Yes, stronger than the government.

Mr. HANSON (Skeena): That is a broad statement.

Mr. JOHNSTON (Bow River): It is, but it is proving to be true. The government is quite concerned, and perhaps rightly so, about the criticism that is being offered about it from time to time. That is a privilege of members of parliament, and I do not see how the government can expect the people of Canada to have confidence in it when the members of this house have no confidence in it. I am not saying that in an unduly critical spirit, because there is no one in this country more anxious than I am to see this war carried on successfully. Never have I done anything that I know of to hinder this war effort.

I have, however, been greatly concerned by reason of our lack of effort. Why? Maybe it is because I do not know all the facts, but I certainly have been trying to find them out. I look at the newspapers and see great headlines about the quantity of munitions pouring off the line. I see pictures of a fleet of aeroplanes, giving the impression that we are putting out aeroplanes faster than the British can use them. One goes to a movie and sees, as we were shown in Ottawa the other day, a row of tanks and these aeroplanes going round. That is propaganda, and probably rightly so, to indicate what we are doing, but the impression is being given that we are doing everything that is humanly possible. I do not think that is true. It may be good propaganda, and I do not think that should be neglected, but it is definitely wrong to lull our people into false security, because it will work against us in the long run.

We are told on the radio time and time again that this is an all-out war effort. If it is I say, let us go at it; let us do it in that way. But I very much doubt that. I had an illustration which shows why I have not the confidence in the government that possibly I should have. On one occasion I went into a manufacturing plant in eastern Canada and the management told me they were then working on contracts which the government had not signed. I asked, "How do you know the government are going to accept your tender?" He said, "We do not know, but we cannot wait on this government." When a manufacturer tells you that—

An hon. MEMBER: What was he making? Moonshine?

Mr. JOHNSTON (Bow River): I do not have to tell the hon. member, because he probably would find it if it was. One cannot expect people to have confidence in the government when they find such things as that. The other day I saw in a newspaper this statement by Mr. Macaulay when he was speaking at a banquet in Toronto, I think it was on February 28 last, with the premier of Ontario:

> When I know that not ten miles from here there is a great aircraft plant working at only twenty per cent capacity and know at the same time it is touch-and-go if Britain will have enough aircraft, I then wonder if Canada has wakened up.

Mr. Macaulay is a responsible member of the Ontario legislature. I do not think any citizen in his position would make a statement like that if there were not some truth in it. No matter what the government say, I cannot bring myself to believe that, when such conditions exist, we are putting forth an all-out war effort.

I have travelled over western Canada a good deal and have visited many plants in Calgary, Edmonton, Lethbridge and Macleod, and these establishments which were manufacturing war materials in the last war are not doing anything now. I ask myself, if we are having an all-out war effort, why are not these plants doing something?

The other day the minister stated that we are something like three months behind expectations. That, I think, shows that the minister is not satisfied. He may be doing all he possibly can, but it leads me to believe that there is something wrong somewhere. It is up to the government to find out what and where it is. It certainly cannot be said that the people are not anxious to do everything that can be done, because everywhere I go I find that one of the most talked-of questions. Men say, "Why cannot I get a job?" I heard the minister talking about experts to-day, saying they cannot get sufficient skilled labour. Only yesterday I got a letter from a man, and I know this personally because in the early part of last winter I myself told him to write to the government. He is a trained blacksmith with years of experience, an expert electric welder and an expert acetylene welder, but he cannot get a job. When I was going home on the train last year I met a man coming from Quebec, a young French fellow, who told me he had spent seven years working on a lathe. He could not get a job; he was going out to British Columbia to see if he could get work with a private concern. He told me that he had waited for three weeks in Montreal trying to get a job with a firm having a government contract, but he could not get employment with them. Nevertheless the government say now they cannot get experienced workmen. When I see the conditions that exist I can hardly bring myself to believe that statement.

The other day I received a resolution passed by the city council of Drumheller and signed by Mr. Harold A. Brown, city clerk and treasurer. These people are greatly concerned about our war effort. Sometimes I think it would do the members of the government good if they would just travel around among the people and find out what they are thinking. After all, it is the people who must be behind our war effort, and if we have not their confidence we cannot get very far. This is what the city of Drumheller has to say:

> The mayor and members of the council of the city of Drumheller hereby go on record of their support of the efforts which have been made to date by the Drumheller board of trade, the Drumheller junior chamber of commerce and other organizations in this community to obtain location at Drumheller of some of these war-time enterprises.
>
> And further go on record in their submission that the city of Drumheller and district is not receiving fair and reasonable consideration in this regard and request the government of the Dominion of Canada and its proper ministers and officers to take under consideration the claims of this city and district to have established here one or more of the schemes created for the furtherance of Canada's war effort.
>
> And that the field army workshop No. 6 R.C.O.C.R.A. be established as a permanent force with headquarters at the said city.
>
> This council hereby undertaking on behalf of itself as a corporate body, its members and the citizens of Drumheller and district as a whole to continue their whole-hearted support of the government of this dominion in the prosecution of the war and in particular undertaking to cooperate and assist our dominion and the various departments thereof with reference to making available the facilities of this community in connection with the establishment of any war-time undertaking here.

In view of that, no one can tell me that the people of Drumheller are not greatly concerned; and as they see the hundreds of unemployed, they ask themselves the very same question I am asking: what is the matter? Is this an all-out war effort? We go around and see plants idle; we see aircraft factories not working to capacity. What is the matter? Surely something must be wrong. The other day the Minister of Munitions and Supply suggested that hon. members should visit these factories, and I think he was quite right. He should, however, make it possible and convenient for members to visit these munition plants, gun and aircraft factories, military centres, barracks and air-training centres. It is the duty of hon. members to make these visits, but I believe the government should issue blanket passes to all members of parliament to enable them to gain admission to these places. Hon. members should visit these Bren gun and aircraft factories; they should talk to the management and see what is going on, in order to know whether or not everything possible is being done.

An hon. MEMBER: How many private members would know whether or not a factory was doing a good job?

Mr. JOHNSTON (Bow River): I do not think it takes a great deal of intelligence to know whether or not a factory is working full time; and I for one will never be satisfied that we are making our maximum effort until every able-bodied citizen in this country is at work, until every factory that is capable of production is working twenty-four hours a day. Then I will admit that we are making our maximum effort.

The other day I think it was the hon. member for Weyburn (Mr. Douglas) who said there was a great deal of politics in this war, and I am inclined to agree with him. He mentioned the great work done by the people of Canada in the past, referring to the national registration, the war savings campaign, and so on. It is said that we are going to have a census taken, which will cost in the neighbourhood of $3,000,000. I believe it will be a bad thing if, after asking the people to do all these other things voluntarily, the government begins now to conduct the census on a patronage basis. The other day the Minister of Trade and Commerce (Mr. MacKinnon) told us definitely that this was not going to be a patronage affair. I understand that in my constituency the government asked the defeated Liberal candidate to recommend a commissioner, and this gentleman recommended himself. He is the commissioner, and people must apply to him if they want anything to do in connection with the census.

Mr. DUPUIS: Name him.

Mr. JOHNSTON (Bow River): It was Mr. Claypoole; I have no hesitation in naming him. I hope the hon. gentleman is satisfied.

Mr. DUPUIS: Is he a good citizen of this country?

Mr. JOHNSTON (Bow River): Well, he is a Liberal.

Mr. DUPUIS: That is a good recommendation.

Mr. JOHNSTON (Bow River): I would not go any further than that. I do not think that sort of thing is right, nor do I believe it will help to create unity in the country. As a matter of fact, I think it will work in the opposite way. I believe it would be decidedly wrong for the government to carry on this census under these conditions.

I should like for a few minutes to refer to the salvage scheme. I do not think any section of Canada has contributed more to

our war effort than have the prairie provinces. When one considers what the farmers have contributed, are contributing and are expected to contribute, with absolutely no profit but rather a loss to themselves, no hon. member can say that western Canada is not doing its share and possibly more than its share. Now we are asked to support a salvage campaign. I have no objection to that; if it is necessary, it should be done, but one thing about it surprises me. In a letter we received some time ago from the Minister of National War Services we were urged to collect scrapiron. and were told that it was one of the most essential things at the present time. Perhaps he is right, but on February 26 we received a letter signed by Mr. Justice T. C. Davis, associate deputy minister of the Department of National War Services, in which we find this statement with regard to scrapiron:

> Scrap cannot be economically moved at the moment from Saskatchewan, Alberta or British Columbia owing to the fact the point of consumption is largely in the Hamilton area, in Ontario, and the freight rate on these commodities from these provinces to this point is such that it is practically impossible to economically move this material.
>
> At the moment negotiations are under way with the railway companies to try to get them to reduce the freight rates on material of this kind, gathered in these provinces by voluntary organizations, created according to the terms of my letter of February 5. We are also in consultation with the steel controller and expect to be in consultation with the steel companies to see if we cannot get an increase in the price of scrap gathered in these provinces by organizations created in accordance with the terms of the said letter.

This is the thing which, if it were not so serious, would be funny. The government pleads for scrap iron. Then Mr. Justice Davis tells us that scrap iron cannot be economically moved from Saskatchewan, Alberta and British Columbia. If that movement is essential to our war services, why bicker with the railway companies to see whether or not we can get reduced freight rates? Why not tell them what you want to do? That is what you are doing to the labourer; that is what you are doing to the farmer. Why not tell the railway companies what you want to do, and not deal with them as the Minister of Transport tried to deal with me a short time ago in connection with the matter of elevators in western Canada, when he placed the blame on the board of railway commissioners.

The course taken by the government is not a serious war effort. Let us get down to realities. Let us merit the confidence of the people. Not by such acts as I have mentioned will the government merit it. It is stated that movement cannot be made economically because the only place where the scrap iron can be used is in Hamilton. Some time ago a request was made that the government open the rolling mills in Calgary. Those mills operated at the time of the last war, and the machinery used at that time is there to-day.

Mr. DUPUIS: Good for scrap iron.

An hon. MEMBER: Does the hon. member use scrap iron?

Mr. JOHNSTON (Bow River): It might be necessary to spend a little money on them, or to add a little more machinery, but if those rolling mills were opened again, we would not have to ship the scrap iron to Hamilton, Ontario. We could take care of it right in Alberta. No one can tell me that we are doing our maximum war effort when that plant is lying idle. Those rolling mills in Calgary could supply materials for places such as Macleod, Medicine Hat and Edmonton. They could use all that scrap iron, and Mr. Justice Davis would not have to write a nonsensical letter such as this saying that scrapiron cannot be economically moved to Hamilton. We could process it right in Calgary.

When I see these places not working, I question the sincerity—possibly I should not say the sincerity—the action of the government. I do not for one moment believe the government is not sincere, but I think there is something lacking in the organization, and that there should be a change.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I would remind the hon. member he has spoken for forty minutes.

Mr. HANSON (York-Sunbury): May I say a few words?

Mr. HOWE: Have I not the right to reply? We have heard two opposition speeches.

Mr. HANSON (York-Sunbury): I wish to say something about shipbuilding.

Mr. HOWE: I wish to speak about the same subject.

Mr. HANSON (York-Sunbury): Who has the floor?

The ACTING CHAIRMAN (Mr. Fournier, Hull): I saw the leader of the opposition first.

Mr. HANSON (York-Sunbury): I promise the minister I shall be exceedingly brief. I wish to deal with two topics, both of which are germane to the resolution before the committee. One arises directly from this evening's debate with respect to shipbuilding.

I shall ease the minister's mind at once by telling him that I am not in a critical mood this evening. Rather would I hope with regard to this particular matter to make some con-

structive suggestions. I heard with a great deal of interest, and subsequently read with equal interest the progress report made by the Minister of National Defence for Naval Services (Mr. Macdonald) last November at the opening of the session. I was particularly interested in that part of his speech which dealt with naval construction in Canada, when he told us that the government had been making certain types of naval vessels, such as corvettes and mine-sweepers, and in which he visualized the building of destroyers and cruisers in Canada.

I recall that when the Minister of Munitions and Supply (Mr. Howe) returned from England he made an announcement, first, I believe in the United States before he reached Canada, and subsequently amplified in Canada, that the Canadian government for the account of the British government would undertake the construction of a substantial number of freighters, due, of course, to the losses in British tonnage which had been sustained through submarine warfare. All of this was heartening. But when one comes to analyse the statements which have been made, he will see at once, and become convinced that all these are directly attributable to the war effort, and to the war effort alone.

Not for one minute do I condemn that. It is absolutely as it should be, and in so far as the government has gone I desire to commend it. Just how far it has gone in the construction of various types, the minister will perhaps inform the house at a later time.

In this connection I am reminded that last evening over the radio we had the pleasure of listening to a speech by the president of Vickers in Montreal, in which he dilated for fifteen minutes—I assume under the auspices of the bureau of information—upon the programme of construction of war vessels and freighters—all of which was heartening. I would suggest to the ministry to-night that it take a little longer view of this question of shipbuilding. We have heard a good deal to-day about loss of industry in the maritime provinces. May I point out to the committee and the country that if there is any part of Canada constituted favourably for the development of steel shipbuilding, it is the maritime provinces, where we find the conjunction of coal and steel. I am not as old as some hon. members, and perhaps a good deal older than others, but I recall the days when the Dominion Iron and Steel company was first established on the island of Cape Breton. That huge plant was established at that point because the relationship of the natural resources of Cape Breton to the iron mines in Newfoundland stood in a particularly happy position, so far as the export trade of Canada was concerned.

I believe Mr. Fielding was Minister of Finance at that time, and I remember how he endeavoured by a policy of bonusing to establish the steel industry in Nova Scotia. That industry has had its ups and downs, fortunes and misfortunes; but to-day I believe, if we view it in the light of what it is doing in connection with the war effort and for the British government, it must be recognized at once that no matter what may have been the cost to the country in days gone by, it is a good thing for Canada and for Great Britain that to-day that huge industry operates in the bluenose province of Nova Scotia.

May I impress this point upon the ministry: The maritime provinces have suffered industrially and geographically. I have never disguised from myself the fact that geography has been against New Brunswick and Nova Scotia from the point of view of interprovincial trade. If I needed any reminder of that fact, all I would have to do would be to read the report my hon. friend the Minister of National Defence for Naval Services published some years ago when he first became premier of Nova Scotia, and when I thought they overplayed their hand a little bit too much.

I do not want to make anything like a political speech to-night and I shall come immediately to the point. We have in this government some important men; there are a number of key men, members who are endeavouring to do their duty to the country and to the nation. They are doing their duty as they see it in connection with the war effort. I often think, however, that this is not the only duty that devolves upon them as occupants of the treasury benches.

From time to time we have been reminded in this house that there will be a post-war situation in Canada. Unless we take time by the forelock and endeavour to develop some new ideas, that period is going to be a sad time for this dominion. I should like to make a constructive suggestion to the commitee and to the country. I should like to impress upon the ministry, especially those members who are from the maritime provinces, that they begin now to visualize a future for the maritime provinces by the recapturing of our industrial position. I can see no greater scope for the effort of the government than in connection with steel shipbuilding.

During the past summer I had the honour to address the Commercial club of Halifax, and I outlined at considerable length to the merchants, manufacturers and business men of Halifax there assembled the opportunity which would come once more to the maritime provinces by recapturing and rebuilding

the position which had been lost, largely through our own inertia. I put to them this alternative: Shall the business men of the maritime provinces seek to take advantage of the opportunity which will present itself presently to rebuild the industrial status of our provinces, or shall they continue just to sit down and draw their bank and other dividends, as they have done in days gone by, rather than exert themselves to build up for the future?

I am optimist enough to believe that there is an opportunity in Nova Scotia and New Brunswick to build up a steel shipbuilding industry that will carry us on to new adventure and new profits in the post-war period. We have heard, in days gone by, that in times of peace we cannot compete with England in the building of steel tonnage because our costs are too high and perhaps we have not the skilled labour. These offer a challenge to our people. In days gone by, the government has spent substantial sums of money upon dry docks and shipbuilding plants in the maritime provinces. These dry-docks and plants are now occupied to capacity, but largely on repair work.

As soon as I read that the Minister of Munitions and Supply had returned to Canada with a programme for the construction of 9,000-ton freighters, I thought immediately of the possibilities with respect to the plant at Saint John. I was told that without a substantial capital expenditure it would not be possible to lay keels for 9,000-ton ships. But if given the opportunity, which I believe they will be given, they could lay keels for 6,000-ton, 5,000-ton and 4,000-ton ships which would be of great advantage to Great Britain at the present time, as well as in the post-war period. There are enough men with enterprise and ambition to take up this matter, and there is still capital in the maritime provinces.

I suggest to my hon. friends from the maritime provinces who are in the ministry that, no matter how engulfed they are with their war work—and I know they are so engulfed—they get together and bring into consultation the best brains available with marine knowledge to see if a plan cannot be mapped out for the establishment of a steel shipbuilding industry in the provinces of Nova Scotia and New Brunswick. If they do that, a generation down there will rise up and call them blessed. I have lived a good many years in that section of Canada and I have seen one old family company after another fold up and pass out of the picture. This has been one of the most distressing experiences in my whole life.

Fifty years ago, those provinces were teeming with small industries. I think we made a great mistake in Canada when we failed to support the maintenance of small industrial units. We have been so imbued and impressed with the example of our friends in the United States; we have felt that everything must be done on a huge scale, that there must be great mass production, and we have lost sight of what to me is a most important factor to the community and to the nation. We should maintain as far as is economically possible small industrial units throughout the country. I throw out this suggestion to the ministers in the utmost good faith and ask them to give it consideration.

There is a large dry dock at Saint John and another at Halifax, both built with government subventions. These dry docks do intermittent work during peace time, but a programme of steel shipbuilding would give them the necessary backlog to retain their artisans and skilled workers. They are not as scarce as the Minister of Munitions and Supply thinks they are. I was told that the Saint John company had stepped up its personnel from 400 to 1,200, and they may take on still more. It may be necessary to train some men. I believe that the genius of our people and their desire to see a rehabilitation of this industry in the maritime provinces is sufficient to overcome what are insuperable difficulties in the minds of some persons, but which fade into insignificance when one gets down to realities. I feel sure that once more the people of the maritimes, with the vision they have had in days gone by, will be able to come forward and regain, in part at least, the position which they occupied in older days.

What part of Canada is more favourably situated for export trade than the maritime provinces? Why have we not the export trade we ought to have. I know it is the custom to blame everything upon central Canada, but that is not the whole story. Part of the story is the fact that after the civil war in the United States, after the good times that came then to our seaports, our exporters were content to consolidate their gains, to sit down and invest their money in bank stocks and things like that; in other words, to rest upon their oars. The maritime provinces should have seized their opportunity and built up a sound industry of steel shipbuilding. Where would we be to-day? Therefor I say to the members of the government, those who are charged with the responsibility to-day: Do not be so engulfed in your duties in connection with the operation of the war, important though they are; have a little vision and let all of us get together,

perhaps round a table, and see if we cannot do something to further that which is so dear to my heart, at all events.

There is just one other observation I wish to make. In the very much abbreviated statement, covering as it does less than four pages of *Hansard,* which the Minister of Finance (Mr. Ilsley) made on February 18 when he introduced this resolution, he, having announced this huge expenditure, omitted—and I am not saying this in a critical sense—to tell the people of Canada and this house how he proposed to get this money. Before this resolution is reported out of the committee, I invite him to do so. How much of this money is to be raised by taxation? I do not suggest for a moment that he should tell us what, if any, new taxes should be imposed; that, of course, would neither be proper for me to ask nor for him to disclose. But what I should like to know is, just how much of this $1,300,000,000, or if it is now to be $1,460,000,000, are the Canadian people to be asked to pay in taxation, and how much are we to be asked to lend? I think that is a reasonable request, and if the government has arrived at a conclusion we should be told.

Mr. ILSLEY: That would be anticipating the budget.

Mr. HANSON (York-Sunbury): I do not think so.

Mr. ILSLEY: Oh, yes.

Mr. HANSON (York-Sunbury): I disagree entirely with that. This is a credit. All may be borrowed.

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): I do not for a moment anticipate that all will be borrowed. I anticipate that a certain amount will be raised from taxation, based upon the returns received from the taxation which is already imposed. The Canadian people have a right to know if they are to be asked to pay so much more in taxation for the next fiscal year than they are paying for this year. I think it is the duty of the minister, and I invite him to tell the committee and the country, just how much more we are going to have to pay in taxes, and how much is to be raised by way of loan.

Mr. JOHNSTON (Bow River): All of it.

Mr. HANSON (York-Sunbury): No, not all of it.

Mr. JOHNSTON (Bow River): The resolution says so.

Mr. HANSON (York-Sunbury): We are in this war, and this resolution will be passed. It will be passed in this chamber unanimously, I imagine. At all events it will have behind it the unanimous support of our party in this house; it will have behind it unanimously the government's supporters, and I hope it will have the unanimous support of my hon. friends in the far corner, although I cannot speak for them. Our Canadian people are thoroughly behind a maximum war effort, but we want to know. We want to know everything which can be told to us, save and except those things which might bring aid and comfort to the enemy or which might be detrimental to the war effort; and to assert that a statement that so much is to be raised by taxation, so much by loan, would be detrimental to the government's war effort is, I submit, an absolute *non sequitur.* We should be told in advance of the budget.

The government is now making preparation for the next loan. It will take the united effort of every class of political opinion in Canada to put this loan over. I am not unmindful and I am sure the minister is not unmindful of the last loan. That condition must not happen again. And there must be no forced loans in Canada. That would not be creditable to the Canadian people, and I am sure it will not be necessary. But in order to achieve the maximum in connection with loans, I suggest to the minister that he will have to get the united and undivided support of every class and every species of public opinion in Canada.

I tell him this, just one final word before I sit down, that he cannot get that if the government is to continue to be carried on in a partisan manner.

Mr. HOWE: I am very glad that my hon. friend took the floor before I did, because what I have to say might have rather spoiled his eloquent address.

In considering the remarks of the hon. member for Vancouver South (Mr. Green) and the hon. member for Shelburne-Yarmouth-Clare (Mr. Pottier) it occurred to me that I could have gone somewhat further than I did in saying the government of Canada has approved a Canadian programme of shipbuilding. I often think it is not wise to go too far into the details of that sort of thing until one is able to say just exactly what he can do and how fast he can do it. I have been criticized for making an announcement and having a time lag before we carried it out. But we are examining the situation closely to see how far that programme can succeed. We are hopeful that we can get out some additional capacity, but I am perfectly certain that it must be done in an orderly way. We had an example in the last war of a government rushing in, late in the third year of war, with a shipbuilding

programme which was put out helter-skelter; almost any sort of plant which would undertake a job or accept government assistance took a contract. The result was that they got some very badly and uneconomically built boats, and they had a post-war problem which lasted for the next twenty years. We hope to be able to build in an orderly way a Canadian fleet of boats, and, of course, we shall distribute that work as widely as circumstances will permit.

My hon. friend the leader of the opposition has spoken for shipbuilding in the maritime provinces. I agree with him that from its history and its geography that section of Canada should be an ideal place to carry on a shipbuilding programme. We must nevertheless face the situation as we find it. At the time that the first corvette programme was placed, we ordered three corvettes from the St. John shipbuilding company. Those corvettes are not built yet, although other yards have turned out many times the number. I am not criticizing the St. John yard, because it has been using every man it could employ, and has searched Canada for men. I know that the company has searched the prairies and every other part of Canada in an attempt to bring shipbuilders to St. John. The fact remains that they have not been able to man their yards sufficiently to work twenty-four hours a day on the repair of ships. We refrained at that time from placing orders for new ships in Halifax, for the reason that we knew the capacity of that yard would be taxed to the limit on the overhaul of ships, and we wished all the manpower that could be collected there to be concentrated on that particular work.

After all, to obtain ships to be of use in this war, by far the most efficient method is to give a quick turn-around to the ships that are in service, and that is possible only if we have entirely adequate repair facilities at the turn-around port. I am sorry to say we have not been able to do that entirely. We have been bending every effort towards it. We have been trying to attract manpower to those ports. We have put in additional facilities and we are still building additional facilities in the hope of being able to bring that about. But I wish to make it clear that until we can have completely adequate repair and overhaul facilities for the turn-around of the boats now in service, it would be folly to attempt a large-scale programme of shipbuilding that would in any way cope with the situation affecting the present shipyards.

Another fact that stares us in the face is that a factor in the efficient use of ships is rapid loading, and there again we have not up to this time been able to organize the waterfront of Halifax on a twenty-four hour basis—again, for lack of man-power. We hope to do it. Until recently the docks closed at eleven in the evening and did not open until eight next morning, and Halifax, I believe, was working with only one shift of stevedores, who were working a long day.

Mr. ISNOR: That has been changed.

Mr. HOWE: Yes. If we can attract sufficient man-power we hope to have a twenty-four hour operation at Halifax which will greatly improve the situation there so far as the efficient use of shipping is concerned.

These are the immediate problems and they must be fully overcome before we can do very much in a merchant shipbuilding programme. However, we have the programme; we are undertaking it and we are going to press it as rapidly as we can. How many ships we shall be able to build in our own programme, in addition to present and future demands from Great Britain, I cannot say, and of course no one can say at this time. We are going to do the best we can, but I must point out that the building of steel ships does not lend itself to the upbuilding of small communities in the same way that the building of small wooden ships did in days past. That cannot be expected. We must also face the fact that at the present time the cost of building merchant tonnage in Canada is about double the cost of building the same tonnage in Great Britain. I have a feeling that we can better those costs, and at least by the end of the war we shall have developed some skill in that direction which will make us better able to compete in the building of ships as a peace-time operation.

Everything that can be done will be done in that direction, and I sincerely hope that as the days go by we can attract more and more men into the shipbuilding industry and have them trained to be skilful mechanics in that industry, so that our shipbuilding industry will grow stronger from month to month.

Mr. BLACKMORE: What device is being used to attract men to the shipbuilding industry? What advertising facilities are being used so that a man in my constituency, for example, would know that there was a job, what he would get, and how he could get there?

Mr. HOWE: I have seen advertisements in most of the prairie papers. I do not know that I have seen them in the Lethbridge *Herald* or other Alberta papers, but I have seen them in several prairie papers stating that experienced shipbuilders were required and that the company would advance the railway fare to the place where work was available. That is, experienced shipbuilders.

Mr. BLACKMORE: Do they advance the railway fare back again so that men would know they were not going on a wild-goose chase?

Mr. HOWE: I do not think they would want to pay for a round trip.

Mr. BLACKMORE: That is where the difficulty lies. If a man goes to Saint John and is not accepted, and if there is no opportunity for him to be examined beforehand, it is a serious matter.

Mr. HOWE: If they cannot work in the shipyard there is plenty of work. They would have to work until they earned their fare back.

Mr. GREEN: Can the minister say what sized ships will be built?

Mr. HOWE: We are studying the situation.

Mr. GREEN: Is it considered possible to build wooden ships?

Mr. HOWE: Naturally we should like to build 10,000-ton ships if possible; if not, we are studying such other sizes as can be built which are economical in operation. We have no demand for wooden ships.

Mr. KINLEY: The building of ships in Nova Scotia seems to have dominated the discussion in committee to-day. I know of nothing that will capture the imagination of the people of Nova Scotia more than this question, but I am sorry to say that in recent years it has been mostly imagination. The practical application has not been as good as it should have been. I believe, however, the time has arrived for a revival, for several reasons. The first is the great need of the country; second, the situation at tide-water on the eastern coast of the country; and, third, the fact that we have as Minister of Munitions and Supply (Mr. Howe) a gentleman who is eminently fitted for the position and who has knowledge of conditions in Nova Scotia. The Minister of Munitions and Supply bears the illustrious name of Howe, and I believe he is of the same blood as that great tribune of the people of Nova Scotia, the great Joseph Howe, who is still to-day considered Nova Scotia's greatest statesman.

The hon. gentleman has been Minister of Munitions and Supply in this government for some time; and as one who is interested in industry, having some little knowledge of industry in the country, I have been watching his performance. I have also seen what the press had to say, and while they have criticized him—and much of that criticism, I think, is light thinking and subtle and shows a lack of knowledge of the mechanics of the situation—I have yet to see a newspaper that has questioned his integrity, ability or industry.

[Mr. Howe.]

For some years the minister lived in Nova Scotia, having been a teacher in our university of Dalhousie. He therefore knows the background of Nova Scotia and I believe that when we appeal to him, as we have done to-night, with the leader of the opposition (Mr. Hanson) backing us up in our desire for more shipbuilding in Nova Scotia, we can look to this minister with confidence that he will do something more in the near future.

This talk about delay in getting on with the war effort from a mechanical point of view suggests that many people do not appreciate what it takes to turn out a new product in the mechanical field. I recall that Henry Ford, a great mechanical genius, perhaps the greatest on the American continent, closed his plant for a whole year in order to change the model of his car; yet we want the minister to take on new products and overnight produce them so that they will be sent forward, without all the thought, work and planning which it takes to bring a new product into existence in the mechanical field.

The hon. member for Royal (Mr. Brooks) this afternoon painted a very blue picture of Nova Scotia, so much so that I would hate to live in a country that is as bad as he painted Nova Scotia. I think he was talking euphemistically when he said he saw Nova Scotia in pictures in Ottawa—

Mr. BROOKS: Did the hon. member not see the things I mentioned?

Mr. KINLEY: Just a minute. I do not know much about New Brunswick, but I happen to know Nova Scotia and Prince Edward Island. As the hon. member says, I did see the picture of Nova Scotia, and to my great delight the two things he referred to were in my own riding and my own home town. He talked about a Dutchman driving an oxcart. Let me tell him that when I see a farmer with a good fat pair of oxen in my county I know he has money in the bank. I also wish to say that there are no Dutchmen in my county. Many people in my riding are Hanoverians whose ancestors came to this country about two hundred years ago; they were followers of Louis, Prince of Lunenburg, who became George, King of England. They are Nova Scotian and later Canadian citizens for two centuries, loyal, industrious and progressive.

Mr. BROOKS: I would be the last to say otherwise.

Mr. KINLEY: Strange to say, the shipbuilding activity my hon. friend spoke of was in the same town. Lunenburg in prosecuting the fisheries has been able to keep up shipbuilding as an efficient industry without

getting government aid. The shipyard in my town is now busy on private work and it is not looking to the government for work at the present time. Does the hon. member know that the government of Nova Scotia in the last year had the biggest surplus in its history? No business in Nova Scotia? This week-end I went to Toronto and was the guest of a man who is the head of a national industry with branches all across Canada, and he told me that Nova Scotia in the last two years has the best percentage of increase of any part of Canada. Business has increased twenty per cent in the last year. Surely that is not bad. Coming along in the train, I was talking to the conductor; the train was late, and he said, "Ah, well it is pretty hard to be on time"; between Moncton and Truro—I think it is about 120 miles—there are 27½ miles of cars either rolling or on sidings. That looks like good business in Nova Scotia.

To-day Halifax is the greatest maritime port in America, perhaps in the world. The population has greatly increased. Halifax has the greatest war activity of any part of this country. It is the centre of the shipping of the world. It has one of the finest harbours in the world, and if I could go into detail—which I shall not on account of giving too much information about the war—I could amaze the committee regarding what is going on in Halifax.

In Nova Scotia we have concentrations of troops and extensive military camps that create a good deal of business. We have many air fields. At Sydney there are the great steel works, also steel works at Trenton, engaged in war industry, and all in all the province of Nova Scotia is receiving some benefit from this artificial war-time prosperity. There are poor spots in the province, for instance, the Annapolis valley where the apple-growing industry is a war casualty, but the government has appropriated $2,500,000 to relieve this situation. While we in Nova Scotia are an aggressive people and want things for the province, I do not like to come here and tell this committee that we are an inferior people, not able to look after ourselves and not willing to take our part as citizens of Canada.

Let me now say a word about shipbuilding. In the Sirois report one will find as good an historical record of the early days in Nova Scotia as one will find anywhere. It is splendidly written and contains a great deal of information. They refer to our conditions in Nova Scotia years ago as the economy of wind, wood and water. That is, we had the wood to build the ships, nature provided the wind to sail them—

Some hon. MEMBERS: Oh, oh.

Mr. KINLEY: —and the ocean was the road they travelled to every country in the world, to bring back the products of all quarters of the world, that brought prosperity and made life so pleasant in Nova Scotia. The days of the wooden ships were Nova Scotia's halcyon days. Nova Scotia ranked fourth in the world in shipping; it had more ships upon the seas per capita than any other country in the world. In those days the wooden sailing ship was the world's best method of ocean transportation, and Nova Scotian ships were the best. By its shipping Nova Scotia developed banks and allied industries; it had an economy that was almost perfect, and everyone now speaks of those days as the great days of Nova Scotia. But as the day of the wooden ship began to pass, Nova Scotia began to slip and they have blamed it on confederation ever since.

The wooden ship has survived in the fishing industry because in the smaller units wooden ships have advantages over the steel ship. The wooden ship is not a conductor of heat and cold and will be freer from ice. It is better for coastal navigation because if it runs into the shore it is not apt to be damaged so much, and it is cheaper. Therefore, in the smaller units the wooden ship has advantages over the steel ship. I am told also that it has an advantage with regard to the magnetic mine.

Some years ago we thought the fishing industry was doomed because the wooden sailing ship was beginning to be a thing of the past. But then came the diesel engine which has revived wooden ships, making the small wooden ship an economic unit, cheaper and I think for some purposes better than a steel ship. What the government is trying to build to-day in Nova Scotia are small wooden ships, most of them propelled by diesel engines; they are good; they are economical and, when the war is over, there will not be as much to scrap as with a steel ship.

We are having some difficulty about getting a full effort on wooden ships at present. Shipbuilding had gone down. The yards were more or less in a state of decay. To start building wooden ships at this time is a hazardous business. A man knows that, when the war is over, whatever he has invested is a total loss. Therefore, to put money into wooden shipbuilding to-day, with the income tax situation as it is whereby he is allowed to earn only about ten per cent a year and can only expect to go two or three years, is

not justified from a financial point of view. But there is provision in the income tax act whereby a man in a business of this kind can get a special depreciation allowance, and that might be the salvation of the wooden shipbuilders.

Some of the men who are in this business are short of capital. There are many good artisans in Nova Scotia who have men who can build ships, but they are short of funds. When we see the hundreds of millions of dollars that have been lent to industries in upper Canada, surely these builders of small wooden ships might very well be helped over the hurdle. They are going to produce a ship for you; their security is good. That situation does not prevail in my own county, but I know that it does prevail in other parts of Nova Scotia.

We should do some missionary work in this connection. These men are frightened by the specifications. The departmental officers have naval specifications obtained from England, where in days of peace they brought teak-wood from the east, and there are other points that do not apply to this country at all. These officers go to a builder in Nova Scotia, a man who is not experienced in business but who is a good ship carpenter. They say to him, "You must have this ship finished in a certain time." Well, he gets scared at once. Then they come along with a great long specification, made out for the purpose of protecting officials, and they say the ship must be built to that specification.

I know that at the present time ships are being held up because they demand keels of oak larger than we grow in the maritime provinces. A birch keel is just as good under present circumstances. The shipbuilders tell them that, but the officials do not like to change. Then they demand teak-wood in the superstructure. Teak is a very expensive wood, while the spruce we have in Nova Scotia is tough and just as good for their purpose under present conditions. I do not know why they quibble over these details instead of going ahead man fashion with the building of these wooden ships; it is hard to understand. It simply means that officialdom is protecting itself instead of going ahead and doing those things necessary in the interests of the country.

Mr. HANSON (Skeena): They even want copper rivets in the life-boats.

Mr. KINLEY: Canada is not marine minded. Once we had a man who was marine minded, who had vision. They said he was extravagant, but whatever else might be said of him at least he had vision. I refer to Sir Henry Thornton, who put Canada into the business of carrying on ocean trade. He had a fleet of ships that carried Canada's products all over the world, to Australia, the West Indies and elsewhere. For years those ships showed a deficit. He put them on at a time when the wooden ship was passing out, and there was some criticism because it was felt that he was perhaps shoving the wooden ship out a little faster than it should go, but still it was a step forward. It was progress in ocean-going traffic, and for years these ships carried on until finally they got out of the red and showed a profit. Then we had a railway problem in this country. The railway was hopelessly in debt; between 1930 and 1935 we had hard times in Canada, and the government sold anything they could in order to realize some ready money. So they conceived the idea of selling these ocean going ships, the only part of the Canadian National system that anyone would buy. They sold these ships in order to realize a little money with which to make the railway situation look better.

If these ships had been retained they would have been worth a great deal to-day; as a matter of fact, they went up in value very soon after they were sold. Most of the ships were taken over by English shipping companies. When we speak of vision, what sort of progressive country is it whose efforts stop at the shore? No country ever became great without having commerce upon the sea, and Canada should have a great overseas trade. These boats did the missionary work, and do not forget that when your products go to a foreign country in your own ships you can control the freight rates. As soon as these ships were bought by the shipping ring the freights went up. No private industry in this country can compete with the shipping ring; it requires a government for that. The ring watched the situation closely, and as soon as they could do so they bought our ships. Then, when we wished to send our goods to foreign countries under such conditions that we could overcome the tariffs and other obstacles facing us, we found that one of the most necessary facilities for the transport of our goods was in other hands, and Canada's effort was circumscribed by the freight rates charged by other people.

It was a mistake to sell Canada's merchant marine. The greatness of Nova Scotia came from the sea, and Nova Scotia never will become great again except through service on the sea. Our merchant ships, although they were not built in Nova Scotia, were important to my province because Nova Scotia crews could man them; our young

men could become seamen, and that is the activity we desire in that province. To-day many of our young men are in the navy.

Therefore I say, in later years there has been no incentive to build ships in Nova Scotia. The government did not want ships; the minister told us that England could build ships much more cheaply than we could. I recall that concurrently with the signing of the statute of Westminster, there was passed the merchant shipping agreement, which left our coastal shipping open to practically the whole world, with no protection for our own nationals. Why, even the great United States below us, with a wealth of shipping, restricts her coastal trade to her own ships. I am not going to blame any government for disposing of these merchant ships, although I believe they were sold before this government came to power. I believe it was felt that this would bring in some easy money to help out the national economy.

I have said that this is the time for a revival. I believe we should now press forward and, even though the wooden ship is passing away, we should be building iron ships at tide-water in the province of Nova Scotia. The other day I read an editorial in the Montreal *Gazette,* commenting upon the fact that someone had intimated that iron ships should be built on the great lakes. There is no doubt that this would have certain advantages, principally cheap power. All the rain that falls in western Canada comes down the great lakes and through the Niagara gorge, and because of that act of God we have cheap power in this part of Canada. But it must be remembered that central Canada is frozen up for six months of the year, and it must be remembered also that our canal system connecting the great lakes and the St. Lawrence is extremely vulnerable in war time. If you destroy one part of it you cripple the whole structure. In Nova Scotia, while we are on the Atlantic coast, I think we are much more protected from the point of view of shipbuilding.

There is still plenty of labour in the maritime provinces. A few months ago a man came into my office seeking men to go to Montreal to build boats. There was quite a little excitement in Nova Scotia with regard to this man coaxing people to go to Montreal to build ships. I said, "If the men are not employed you cannot complain, because they should be employed. If they are employed in building ships, the order in council will not permit him to take them away, so we have not very much room for complaint." There is no reason, however, why we should not be busy in Nova Scotia by the construction of wooden ships for a few years to come. But when this war is over, let us be building iron ships in Nova Scotia.

When I hear about spending money to help stimulate industry in other parts of Canada, I think we are justified in asking that in the maritimes we should have some stimulation and help from the government of Canada in a scientific, and perhaps in a financial way. Let us have this help to establish shipbuilding plants, so that Nova Scotia again may seek the destiny which should be hers in Canada, namely, that of a truly maritime people.

Mr. ROY: Mr. Chairman, it is after some hesitation I rise to take part in the debate. Hon. members will recall the speech delivered on December 3, by the Minister of Justice (Mr. Lapointe), following my address on the same day. In his observations the right hon. gentleman said that I was not speaking for the county of Gaspé because I had been elected by grace of a minority vote. The other day the hon. member for Pontiac (Mr. McDonald) in his turn reproached me because of circumstances which had brought about my election.

You may understand, Mr. Chairman, my hesitation. However, I took the trouble to make an incursion into that precious source of information concerning the political performances of hon. members in this august house. I refer to the Parliamentary Guide. It seemed only proper to begin my study of the results of the last general election with a survey of what happened in the constituency contested by the revered leader of this chamber, the Prime Minister (Mr. Mackenzie King). This is what I find at page 319 under the heading "Prince Albert, Saskatchewan":

General election 1940:

King (L)	8,310
Manville (NU)	7,534
Strelive (CCF)	1,993
Campbell (Comm)	243

These figures indicate that the Prime Minister of Canada was elected by grace of a minority vote of 1,460. I deemed it unnecessary, therefore, to carry my incursion further. I was satisfied to be in the category with the Prime Minister, even if we were only two of a kind.

I am sorry the Prime Minister and the Minister of Justice are not at the moment in their seats. I sincerely hope the Prime Minister has not found too bitter the judgment given on the weakness of our mandates by that great specialist in the art of making statements who sits at his side as his right arm and closest friend. I am sure no one would dispute my right to speak in the house

on behalf of the electors of Gaspe, and of a large number of those in Quebec who by their votes opposed the government.

The shock caused by the speech of the Minister of Finance (Mr. Ilsley) when introducing his war appropriation bill of tremendous proportions, to which measure we are asked to give our approval, has occasioned many interesting speeches in the house, and has revived in the press and throughout the country the campaign toward the formation of a non-partisan cabinet, or a so-called national or union government. In his courageous speech of February 21 the hon. member for Témiscouata (Mr. Pouliot), denounced in no uncertain way some newspapers of his own party. He made a vigorous attack on three members of the cabinet, namely the Minister of National Defence (Mr. Ralston), the Minister of Munitions and Supply (Mr. Howe), and the Minister of Mines and Resources (Mr. Crerar), a unionist of 1917, charging them with being party to the scheme to form a union cabinet.

If one does not ignore the fact that the Liberal government has 185 followers out of a house of 245, and an absolute majority of 125, it follows that a union cabinet cannot be substituted for the present administration unless pressure comes from within its own ranks.

It so happens that a great number of believers in such form of government are found in the very midst of the Liberal party, with the support of the most influential English Liberal newspapers which, during the election campaign of 1940, were vigorously opposing the principle of national government as advocated then by Hon. Doctor Manion. May I mention here that at a certain conference the Prime Minister, according to a report published by the British *United Press,* threatened to resign if the lack of confidence persisted.

Moreover, following the hon. member for Témiscouata, the Minister of Justice, speaking in the house on February 24, said, as reported at page 962 of *Hansard:*

> I do not feel that I could sit in such a government if I were asked to do so and represent my province.

If one compares this statement with the minister's past declarations, he will observe that the minister does not now say that he would fight such a government. Why this sudden neutrality? Since the formation of national government or its equivalent is inevitable—I dare say we will have it within six months—the Minister of Justice is simply preparing his way out. He brandishes before the population of his province this scarecrow of union government, but he refrains from telling the dangers against which he was prone to warn us.

What are these dangers? Could it be the danger of the St. Lawrence waterway project? That danger has disappeared, and cannot, because it is almost a *fait accompli,* be expected from a union government. Is it the danger of sabotage of provincial autonomy through the adoption by a union government of the recommendations of the Sirois report? If the dominion-provincial conference failed, surely no credit for this failure can be given to the present government; and the danger is not removed if this government is kept in office.

Could it be the danger of unification of railways? The hon. member for Témiscouata gave a pertinent answer to that when he pointed to the special appropriation of $400,000,000 to be provided for later, to redeem Canadian securities held in England. The Minister of Justice abstains—and the purpose is clear—to mention any of these things he said in the past would come about under a union government.

In this respect, let me quote again his own words. He said:

> This mere mention of the name "Union government" brings forth painful memories which it is almost a crime to resurrect at this time.

Here, if I may, I wish to extend to the hon. Minister of Mines and Resources my most sincere sympathy for having received such a hard blow.

What are these things? First, there is the expeditionary force overseas. Three army divisions have already left our shores, and more are to follow. Then there is the national registration. The Houde incident reminds us that we have had it. Then follows conscription. We have had it, too; and I submit that the act providing for the present mobilization of men and resources far exceeds anything done by the union government of 1917. Extravagant expenses? We have a war emergency appropriation of $1,300,000,000, with other commitments foreseen by the Minister of Finance (Mr. Ilsley) in the budget to be submitted. This will make an approximate total of $2,500,000,000. This parliament will have provided since July, 1940, the unbelievable sum of $4,000,000,000. It is proper here to insist on the fact that, contrary to the usual procedure, we are now having two of these heavy budgets yearly. No one dares to inquire as to the size of the national debt because we all dread the answer. Even before the Minister of Finance submits his budget, our taxes have reached almost the point of saturation.

We have had war profiteering and squandering. The people are alarmed and their suspicions are aroused by the government's refusal to allow a public investigation into these vast expenditures. This short analysis brings one to the conclusion that no other government, no matter by what name it might be called, could have gone further. Even with all his eloquence, the Minister of Justice cannot make us forget that. We realize fully that a free, voluntary and moderate war is much more expensive than an ordinary war.

Let me tell the committee the minister's reasons for his pretence of opposition to a union cabinet. They are threefold. The first is that the phantom of union government conveniently serves the minister as a reason for retiring from public life. He knows full well that he cannot hold out any longer against public opinion in his province, nor can he escape the judgment of the trend of events which are turning against him.

The second reason is the fact that a union government would take away from the Liberal party the precious benefits deriving from the exclusive control by the party of radio, the bureau of information and censorship. It would prevent the government from extending its patronage to a certain press in exchange for the praise now showered on the Liberal party. It would put a stop to scandalous patronage in the granting of contracts of all sorts and on such a large scale.

The third reason is: In recalling the union government of 1917—that is the crime, to use the expression of the Minister of Justice—the Liberal party of Quebec is trying to shirk its responsibility. In the face of the inevitable result of their own acts they are preparing to throw the blame upon a union government which they would have themselves already created. In other words, by exploiting the prejudices of 1917 they expect to make the people forget their broken promises and engagements. These are the three true reasons why the Minister of Justice says that he will never be a member of a union government.

The newspapers of the country are justified in trying to end the squandering which shocks public opinion and which is the result of patronage running wild in the granting of war contracts and the distributing of subsidies to jobbers.

Mr. DUPUIS: To Tories.

Mr. ROY: I think the Tories are more sincere and logical than the Liberals from Quebec have ever been.

If we keep in mind the supreme object of our war effort, from the state of affairs I have described comes the suggestion of a cabinet so constituted that it would stop leakages, prevent ruin and ensure a judicious spending of the huge sums which are being exacted from our people for the defence of democracy and liberty. The incompetency and inefficiency of the present government in making good use of public funds are so obvious that I would welcome any change did it not imply the abandoning of the principle of responsible government, the very foundation of the political doctrine we are defending.

Furthermore, it is only right that the party which declared war should see it through and should not be relieved of any of its responsibilities. A few months ago it received a renewal of the expression of confidence of the people, which at the same time was a disavowal of that form of national government. Although the so called King-Lapointe government had never bothered much over whether it had a mandate, had respected or disregarded it, I agree with the Minister of Justice when he says that on account of the unequivocal answer it received to its appeal from the people, the government cannot run away from its responsibilities by consenting to form a union government. However, I condemn the attempt of the Minister of Justice to predispose the province of Quebec against that form of government which may come before long. These tactics of his are dangerous and are bound to destroy national unity. In doing this, the minister who likes to pose as a good apostle of bonne entente and unity is really not giving a good example. This is not the first time this has occurred. Let me quote another instance. During the discussion on national unity on December 3, the Minister of Justice said:

> I am not saying anything against Conservatives in the province of Quebec. Heaven knows I would not do that, because they voted for us. They were ashamed of those who were opposing us. That is the reason why my hon. friend, alone, of his clan, is here in the house to-night.

Some hon. MEMBERS: Hear, hear.

Mr. ROY: As the Minister of Agriculture and Minister of National War Services (Mr. Gardiner) and the Prime Minister are in the same position, hon. members should not say "hear, hear" too loudly.

Mr. GARDINER: Conservatives voted for me.

Mr. ROY: Since this declaration of the Minister of Justice is injurious and libellous for all the candidates in the last election who opposed Liberals, I ask him to state in what respect gentlemen like Messrs. Dupre, White, Larue, Cahan, Turgeon, Duguay, Robinson and all the others are unworthy and dishonourable and why their

compatriots should be ashamed of them. Such insults ought never to come from the lips of a man who pretends to be a statesman and the champion of national unity.

Yet there is one statement of the right hon. gentleman that I wish to commend. I realize that the first condition to Canada's unity and happiness is the respect of one for another. Speaking of those in one province who stir up ill feelings against their compatriots in other provinces, the Minister of Justice said on February 24:

> I pledge myself to employ the years which remain to me in fighting any diabolical conspiracy of malicious, narrow and despicable microbes, whenever and wherever they may be found, in order that they may not defile the work of beauty that is Canada.

May I ask, Mr. Chairman, if those, whoever they may be, who throw insults at their political opponents, respectable, distinguished and loyal citizens, belong to that category of common microbes?

Mr. DUPUIS: Does the hon. member take that category for himself?

Mr. ROY: The hon. member should know who I mean.

Mr. REID: We have listened this evening to considerable discussion with regard to shipbuilding. After sitting here all evening I can quite agree with a remark made in a speech over the radio yesterday by, I believe it was, Mr. Bird, of the Winnipeg *Tribune,* that the people of the United States were more alive to the fact that there are two oceans, the Pacific and the Atlantic, than were the people of Canada. In an endeavour to bring an important phase of this subject before the government and other hon. members, I wish for a moment to speak about the Pacific ocean and British Columbia.

Sometimes I think that we of the Pacific province are so far away that if we were attacked from the sea it would create no more concern around the city of Ottawa and elsewhere in the east than if the attack were upon Norway or Timbuctoo. When I heard the leader of the opposition, speaking on behalf of his province, mentioning that ships had been built there of four and five thousand tons, I could not but remark to myself, why are we in British Columbia being neglected when we can build and have built ships there up to 12,000 tons? It may be that during the last war we built ships somewhat hastily, but I agree with the hon. member for Queens-Lunenburg (Mr. Kinley) in deprecating the sale, prior to the war, of our Canadian National vessels, which at the present time would come in very handily and serve a most useful purpose.

In the last war we did not commence to build ships until 1917, but during the brief remaining war years we constructed in British Columbia something like 135 ships representing a total programme of between 80 and 88 million dollars. It can readily be understood, therefore, that the people of that province are wondering what has happened during this war, when most of the orders for ships have been placed in eastern provinces.

We must take note of both coasts, but I want to touch for a moment to-night on a larger aspect of the subject which was only briefly mentioned by the hon. member for Queens-Lunenburg; that is, the fact that this country of ours is more dependent than any other nation on her export trade by water. Before coming down this evening I looked up some statistics, and it may astonish many hon. members, as it surprised me, that over 60 per cent of Canada's export trade is carried on sea-going vessels; yet to-day and for some years past, Canadian traders who wished to send products abroad must perforce charter ships belonging to foreign nations, and not those of Canada itself.

I am going to leave with the Minister of Finance (Mr. Ilsley), who, I am glad to see, is in his place to-night, one thought with particular relation to foreign exchange, and I believe I cannot do better than cite what is taking place at the present time as regards shipping on the Pacific coast. We have developed considerable trade with south Africa. Ships running there from the Pacific coast of British Columbia make something like four trips a year. For each trip those vessels take, in freight charges alone, some $200,000, all of which must be paid for in United States funds. I am told on fairly reliable authority that all the costs of our freight on ocean-going ships to-day have to be paid in United States funds. That, it seems to me, is a great loss, and indicates that we are not taking the broad view that we as a nation should with such a gigantic export trade. Sixty per cent of our export trade represents in value well over 600 million dollars' worth of freight a year by water; yet to-day there is not one Canadian ship carrying that freight. Our merchants have to make bargains and charter vessels under foreign flags.

The hon. member for Queens-Lunenburg spoke about the extra added costs. Not long ago we in British Columbia had an example of the control exercised by foreign shipping boards. The poultry producers of British Columbia wanted to ship eggs from that

province to Great Britain via the Panama canal. Looking around for ships to carry those eggs, they found a vessel of Norwegian ownership which was willing to take the eggs for about $1.85 per hundred pounds. Immediately the "shipping combine" shall I call it, with headquarters at San Francisco, notified the owners of that Norwegian vessel that they would not be allowed to take the eggs at the freight cost they had quoted; that their charges would have to be something like $2.85 per hundred pounds instead of $1.85. Naturally we lost that order for eggs. The merchants and the shippers of this country are in the hands of foreign shipping combines and so have to pay a great additional charge for the carriage of our products to countries overseas.

I fear that, as time goes on, the scarcity of shipping will greatly cripple our trade. Only a short time ago, I understand, the British government requisitioned for her purposes a considerable number of merchant ships which would ordinarily be used in the Canadian trade.

I hope that members of the government, and particularly the Minister of Finance, will view this matter from the broad angle of making this country of ours a maritime nation, not forgetting that we have two oceans, the Pacific as well as the Atlantic. I sometimes think that even in matters of defence we are somewhat like the French, who relied entirely on the Maginot line, forgetting that there were other ways of entering their country and that they should be guarded. The United States is spending hundreds of millions of dollars south from the tip of Alaska, and I do not believe that we are spending as much as we should.

Before I resume my seat I will mention just one other matter which came up in the course of the debate this afternoon. It was referred to by two other hon. members, one of the Social Credit group and one connected with the Cooperative Commonwealth Federation. They were recommending to the Minister of National War Services (Mr. Gardiner) that the forthcoming census be taken on the same basis as that of the national registration, and I gathered the inference was intended that the national registration, done as a voluntary effort—and a splendid effort it was—was done without cost to the government of Canada. If I am wrong in that I am sorry, but that is the impression I got. I find, from looking up the figures, that the cost of the registration will astound even some members who, I know, when speaking privately, express the belief that the national registration last year cost this country but very little, if anything.

Mr. NICHOLSON: The hon. member for Weyburn (Mr. Douglas) is not here, but I understood him to say that the national registration cost $900,000. He was aware that it cost a considerable amount.

Mr. REID: If we are to do the work on a voluntary basis, then I suggest that it should be entirely voluntary, involving no cost whatsoever. I know that in my riding—and I suppose other members have had the same experience—there were certain groups who, when the proposal was made to them with regard to assisting, suggested that they be paid for the work called for. The result was that payment was made in one quarter of the riding, while work was done voluntarily in other parts of the constituency, and I know from experience that this gave rise to a great deal of criticism after the registration was finished. I am one of those who believe that if you are going to have the work carried out voluntarily, then the whole thing should be on a voluntary basis. But if you pay some, then you should pay all. I am expressing the feelings of many people in my own constituency, after the experience with the national registration of last year.

Just one word further and I will resume my seat. I have heard it stated on many occasions, and I have heard it again tonight, that there has been political patronage in the matter of contracts. Hon. members who rise in their places and make such statements should be prepared on their word as members of parliament to lay a definite charge or to make a definite statement as to political patronage. I say that in all seriousness. I have heard it time and again, and I know that the inference has gone abroad throughout the country that the government is ladling out political patronage in the face of a very serious crisis of war. I believe every member on this side of the house can say that we are finding it almost a detriment to be on the government side so far as making any approach is concerned, and I can say in all seriousness, from experience, that I have never made a statement on the floor of the house since I came here in 1930 which I was not prepared to substantiate, by naming the particular case. I do not think hon. members should rise in their places and say that the government is handing out political patronage, contracts and positions, for I maintain it is not. I can go further. I do not want to have to do this, but I could do it if called upon. A survey of all appointments which have been made, either in a military way or in connection with the war effort, would show, I believe, a great

preponderance of those belonging to the Conservative party. I say that in no mean sense for why should they not be called upon to help with the war effort? But I say, in order to controvert statements which some hon. members have been endeavouring to put over, that appointments are not political and that contracts are not being handed out to political favourites.

Mr. HARRIS (Danforth): I should like to make one or two observations in view of the fact that there has come to our desks to-day correspondence marked "urgent." Before doing so, however, might I refer for a moment to the observations of the hon. member for New Westminster (Mr. Reid) with reference to the taking of the census. Is it really so urgent now that war is on? If the national registration did cost money, and if on the other hand we are resolved among ourselves that we will do away with the census for the time being, then it would not cost us anything. At least we would save the cost of taking the census.

After all, what is the census and what is its relationship to affairs as we find them in Canada? The Minister of National Defence (Mr. Ralston) could tell us how many hundred thousand men are overseas. Will that fact obtain five years hence? We had a census ten years ago. What figures did we use during the interim, in the last ten years? We arrived at our statistics by addition and deduction, and we felt we were reasonably accurate. We have an efficient bureau of statistics, which has received the compliments of similar bureaux the world over, and that department gives us accurate figures. If that is so, if it has been so for the last three or four decades, will not the same condition obtain until such time as this war is over? And would not those figures arrived at in that manner be just as accurate as the figures obtained by a census, should we take one at this time, in view of the ebb and flow of our man-power not only as far as our men going overseas are concerned but internally as well. There is a change in vocation of men and women into different kinds of work, moving from one point to another. City dwellers were asked whether they could milk a cow, and some will go and milk cows; but many more will see these advertisements that the Minister of Munitions and Supply (Mr. Howe) spoke of to-night asking for shipbuilders in the maritime ports, and many will leave the farm. Where will the census be, then, from the point of view of accuracy, in the course of another year or two?

Let us save this $3,000,000, I say to the hon. member for New Westminster. Let that provide 120 Spitfires; let us rely on our efficient bureau of statistics to give us the statistics we require by addition and deduction; and then, for the man-power we need, let us study the reports that have been tabled by the Minister of National War Services (Mr. Gardiner) and find out where the required artisans are and what is being done so far as their activities are concerned. In the national registration, I say to the Minister of National War Services, we have valuable and vital information. We have that now. Some of the other information we get in a census is only comparative, but comparisons do not hold any longer, because the scene has changed fast since war was declared, and will change much faster while the war is on, from now on, so much so that I am of opinion that it is impracticable, over and above the question of economy, for us to take a census until the Canadian and the world situation settles down a little more than the position of things to-day indicates.

I wanted to say a word or two with regard to the observations of the Minister of Munitions and Supply in connection with shipbuilding. Frankly, I was shocked when I came into the chamber this evening and heard the minister say that the twenty-four hour day has not been employed by artisans in the building of ships since the war started. Not a week goes by when the press does not remind us that Britain's tonnage is some 18,000,000, and that from three to four million tons each year are lost. Indeed, the question is, in view of the strong enemy submarine campaign that is being carried on, how long can we keep up a supply to replace those ships that are being lost? Britain is doing a wonderful shipbuilding work, and has more shipping on the high seas to-day, I understand, than she had at the beginning of the war. But she will continue to do this great work only as we in Canada, Australia and New Zealand, helped by the lease-lend bill which I am happy to know has passed the United States congress, replenish and help her to keep that dominant position which she has had for so many years.

Comparisons are not welcomed by the minister, but I think of that island outside Sydney, Australia, with a six-inch air pipeline twenty miles long all round it with air pressure on ready to serve that greatest of dockyards and shipbuilding yards south of the equator, operated under the direction of the commonwealth of Australia, turning out not only merchantmen that we are speaking about to-night but destroyers, and I think I am right in saying cruisers, as well as aeroplanes, and the men of Australia schooled to take their place in the shipyards doing a real job of work on behalf of the British empire at this time. Where are our schools? Where

have they been these last five years, that should have been training young men from the farms in the art of shipbuilding?

I had the pleasure of riding into Ottawa to-night with a gentleman who left California last night at nine o'clock, and landed in Ottawa to-night at eight-thirty. He knows the aeroplane industry in California and the conditions in it. Are they closing aeroplane factories at eleven o'clock at night, as I heard the minister say they have been closing the shipyards because personnel to keep up three shifts was not readily available? No. His deposition to me within the last two hours, coming in on the plane, was that they are working twenty-four hours a day seven days a week. And the personnel is being supplemented by young men trained within the last three years in schools so that the aeroplane business can carry on. I do not use that illustration of what is going on in a country that is not a belligerent as showing that they are any better than we are; there are no better people in any line of business than the Canadians. The Minister of Munitions and Supply was told by the hon. member for Queens-Lunenburg (Mr. Kinley) that he had the blood of a Howe. The Canadian people have the blood and brawn. The hon. member who just took his seat said that in that chart laid on the table here last week by the minister we had a great number of men who were Conservative in thought, and I notice quite a number who are Liberal in thought, but whether they be Liberal or Conservative we have in Canada the brains to do this work. So we have the four Bs, the brains, the brawn, the blood and the bone. Let us then get on with the job.

I do not make this next statement in too critical a sense, but if the administration as at present composed cannot take hold of these virtues of the Canadian people and the great desire in the heart of Canadians to do everything they possibly can in an all-out war effort, then they should sit down round the table and search their hearts in order to see why it was necessary for the Minister of National War Services to rise in his place and say, with regard to the census, "It is not my department; that belongs to the Minister of Trade and Commerce and I do not know about it." Why should this debate go on the way it is doing?

Mr. CRERAR: Hear, hear.

Mr. HARRIS (Danforth): The hon. Minister of Mines and Resources says, "hear, hear." In that regard I will not take lying down any criticism with regard to holding up this debate. Forty hon. members have risen since the Minister of Finance (Mr. Ilsley) gave any sort of a summary of what this vote is about. Even one of his own colleagues who, I understand, should come after him, intervened in the debate; I refer to the Minister of National War Services, the minister of a much junior department and certainly of a much lesser category in respect of the money being spent. His statement came in advance of that of the minister charged with the responsibility of this vote of $1,300,000,000. I should like to have heard, before I participated in the debate, a great deal more from the Minister of Finance. True, he said this should be a matter of question and answer to give him an opportunity to discuss the matter. But when one of his own colleagues rises ahead of him and sets out in detail what he has in mind, and another minister, the Minister of Munitions and Supply, takes the brunt of the debate, what runs through the minds of those of us who have been observing the panorama here for a couple of decades is that it is all lopsided; we seem to be out of order in dealing with this bill.

Another matter which is brought to our attention to-day and which, to my mind, should be at the bottom of the list although it is nevertheless important, is the national salvage campaign. Inasmuch as I have only a few minutes left, I shall reserve my other remarks to another occasion and place a few suggestions on the record with regard to this urgent circular which has just come to our desks. It urges us to think nationally. Of course we should do so, and most of us do. It says we should talk scrap, find scrap, get scrap, help win the scrap and so on. They go on to say that they are going to have a national outdoor billboard appeal, a national newspaper advertising appeal, a supply of leaflets for distribution—

Mr. HOMUTH: More waste of money.

Mr. HARRIS (Danforth): Yes, a waste of money—a supply of posters for display by local committees, a selection of mats, newspaper advertisements, et cetera, all available in English and French. There is still time to do what I am going to suggest, but the time is short. First, I make a general observation, that the cart is before the horse in this campaign. Large municipalities are not headed up with the municipality taking charge. The only way that those in the large centres of population can handle salvage properly is by having the municipality take the leadership and the responsibility for the campaign; then let your propaganda come behind them when they are organized and ready. I will give an instance before I finish. When they are ready, let this propaganda come along and let all these public-minded

bodies of citizens who are so anxious to do something, such as the daughters of the empire, the local council of women, the veterans' organizations, and so on, across Canada, not do the actual work, which belongs to the street-cleaning departments in large cities, and the health departments in other cities, but urge the citizens to salvage the waste.

An hon. MEMBER: You should qualify for that.

Mr. HARRIS (Danforth): I can qualify; and, if necessary, I could call a witness to that effect. Let them be properly organized before this propaganda goes out.

I said I would cite an example; that was why I was anxious to take part in this debate to-night. In Toronto we have a very fine body known as the local council of women, who are anxious to help with this work. One gentleman gave them office space; another firm paid for the four or five telephones they had installed. These women, who are familiar with every neighbourhood, set themselves up in their office and received telephone calls from thousands of home owners. But they had no direction. Can hon. members not see how ineffectual it was for them to attempt to operate without some direct contact with the municipality beyond the mayor and board of control saying, "Yes, ladies, we will help you in every possible way. What do you want?" Should the direction come from organizations that are not quite sure of what they want, or should it come from the government to the municipality and then to the organizations?

Before going on with that, let me state what actually happened. Hundreds, yes and thousands of telephone calls were received. The ladies were asked to go to the far end of the city to pick up an old fur coat; they were asked to go somewhere else to pick up a brass ornament, and so on. They hired trucks, picked up all sorts of material, put it in a shed and sorted it. No one knew exactly what they had; no one knew just what to do with it. Another call came in to pick up papers in another section of the city, and one of the girls who were volunteering to drive the trucks, which were hired at so much a day, went to the address and found fifty pounds of old papers. They were brought to the shed, which has been made available by the Toronto transportation commission, and thrown into a corner with other old papers. Then a dealer comes along and offers $3 a ton for everything in that corner, which cost $10 a ton to collect. In this regard I should like to pay tribute to the International Harvester company of Hamilton, which lent a truck for three months.

All through this recital I want to pay tribute to the women who are trying to carry on this work. Their services should be used to encourage people to support this campaign, even as this pamphlet is used for the same purpose; but those who should be charged with the responsibility of doing the actual work are the departments of street-cleaning, which have all the necessary equipment available. How can that be done? In the city of Toronto there are sometimes two hundred trucks on the streets making collections. It would not be difficult for these trucks to carry various receptacles, one for paper, another for scrapiron, another for bones, and so on. The balance of their loads would be taken to the incinerator or the dump, as the case might be, and these receptacles could be taken to the city yard. Then these various commodities could be contracted for and picked up in loads or by the ton, and in that way the work could be made to pay. I think I have made that point clear.

How are we going to take advantage of the enthusiasm of these women to see that this job is done? This is my suggestion: zone the city. Let the women sit in their office, use the telephone and see to it that all the people in a certain zone are apprised of the fact that collections will be made the following day, and that they will be expected to put their paper in the paper receptacle, their iron in the iron receptacle, their bones in the bone receptacle, and so on. Then, when the collection is made, there will be no delay.

Following that a little further, hon. members must remember that the women who do this work, whether through the local council of women, the daughters of the empire or any other organization, want to get credit for it. Give them that credit. It is a small concession to make in return for the work they will do. They do not want money; they simply want some recognition of the energy and enthusiasm they are putting into this work. I am sorry the Minister of National War Services (Mr. Gardiner) is not in his place, but no doubt he will be made aware of what I have said. I suggest that he get in touch with the heads of municipalities at once. In the larger centres do not ask our public spirited men and women to become collectors of rags, bones, bottles, scrap, and so on, at a collection cost far in excess of the value of the material. So much for the situation as far as Toronto is concerned.

I should like to make another observation with regard to the whole country. The great difficulty across Canada is that commodity freight rates are not available on the commodities being collected in order to bring them to the point of consumption. Some fifteen

or sixteen years ago there were commodity freight rates which permitted the movement of many low priced commodities, particularly from the western prairies, to the centres of consumption in Ontario, and that applied also to the products of the maritime provinces. That situation, however, does not exist to-day, and that is one of the difficulties which must be overcome.

Before resuming my seat, I should like to make one further observation. I think the Minister of Finance has an idea of my views in this matter, which he may convey to the cabinet. The matter of salvage in Canada has to do not only with the civilian population but also with every industry. After all, if industry could cash in on its by-products, very few balance sheets would have red figures. What applies in business also applies to this expenditure of $1,300,000,000. In the organization chart which was given us by the Minister of Munitions and Supply, I looked in vain for any individual charged with the responsibility of looking after the by-products of the industries which are spending this great amount of money. When I think of cost-plus contracts on clothing, shells and what-not, I wonder who is looking after the by-products of those industries; I wonder who is looking after the salvage of scrap metals, borings, scrap aluminum, scrap copper and all the other things coming back from those industries. I wonder whether the cost-plus basis for the sheet of metal which finds its way into an industry also applies when that sheet is punched out and the scrap is left over. I wonder whether we are getting for the Department of Munitions and Supply a full return of the money for the scrap which forms the by-product, coming back from the industry which made the expenditure of the government money in this vote. So much for that class of expenditure.

I come now to the Department of National Defence. I wonder whether the salvage branch of that department is coordinating its efforts with the Department of Finance as much as should be done. I believe, if I asked the Minister of National Defence (Mr. Ralston) or the Minister of Finance to make a statement, we would get the admission that there are some difficulties in connection with getting branches of the Department of National Defence to cooperate to the full in seeing to it that we receive returns from the by-products originating from the heavy expenditures in the Department of National Defence. The salvage branch of the defence department is necessarily a vital one, and what applies to that branch should apply to the whole organization.

To my mind, the revenue from salvage in the Department of National Defence must in its entirety find its way to the exchequer of Canada. I know that is being partly done now, and that it was not done at the time of the last war. I hope the degree of efficiency with which the work is being carried on—and I could elaborate at greater length on that point—has reached a fairly high percentage. But do we know? Is anyone charged with the responsibility of making sure that he knows? Is that person who is responsible definitely answerable to the Minister of Finance who, in the main, is responsible for all moneys coming to the Receiver General of Canada.

Has the Minister of National Defence broken down that right which the army assumes it has, namely, of assuming that what once comes to them is theirs? Is the revenue from by-products derived from stores of second-hand clothing, second-hand boots, shoes, metal, tanks and so on, the property of the unit involved? That condition obtained in England, and I say it should not obtain here. The revenue derived from that source running, as the minister will admit, to an amount of almost $1,000,000 a year, should find its way into the coffers of the Minister of Finance.

I am asking the committee to endorse the idea so that we may reinforce the Minister of National Defence and the Minister of Finance with our view that that which belongs to the government of Canada does not belong to an individual unit. What obtains in that particular should also obtain in connection with all manufacturers doing work for the government. Somewhere within the organization there should be someone coordinating these efforts. The Minister of National War Services should not be left to run his department all by himself, nor should the Minister of National Defence. What is needed to-day—and I am going to suggest it now—is a war-time prime minister who will more and more coordinate the efforts of these hard-working ministers in all departments of government.

Mr. CRUICKSHANK: It is now eleven o'clock.

The ACTING CHAIRMAN (Mr. Fournier, Hull): Not quite.

Mr. RALSTON: Perhaps I might take a minute or two to deal with the last remarks of my hon. friend. He appears to believe that the remedy for all this is a war-time prime minister to coordinate the work of the ministers.

Mr. HARRIS (Danforth): To see if we could not coordinate.

Mr. RALSTON: This gives me an opportunity just to mention to the committee—and I believe I can do so in two or three minutes—some points which, it seems to me, are not too well understood in the house. I refer to coordination of the war effort.

Let me say this: First, we have a war-time Prime Minister as president of the privy council and chairman of the war committee of the cabinet. On the war committee of the cabinet we have the ministers of the three defence services, the Minister of Munitions and Supply, the Minister of Finance, the Minister of Justice, the Minister of National War Services, the Minister of Mines and Resources, and the Hon. Senator Dandurand. That body is the body coordinating governmental effort in connection with this war.

May I just in a minute, if I can, indicate to the committee of the house how the committee to which I have referred operates. In the first place we have the three defence services. To some extent those three services are naturally competing in connection with their requirements. The army needs small arms ammunition; the navy needs small arms ammunition, and the air force needs it. So with uniforms, clothing, armaments—so with everything that goes to the fighting forces.

Mr. MacNICOL: But is the Minister of National Defence not the head of the three?

Mr. RALSTON: The Minister of National Defence, under the act, is in this position: It is provided that where a particular project affects more than one service the Minister of National Defence, in consultation with the minister or ministers of the other service or services concerned shall make a decision.

But suppose we have a situation wherein the three defence services are in competition. That is ironed out and coordinated first by an inter-service priorities committee. That is a committee composed of representatives of the staffs of the three services, which meets and functions and makes recommendations to the ministers.

The ministers meet in the defence council, which is composed of the three ministers, the three deputy ministers and three chiefs of staff. I do not think there is much difficulty about coordination of the work of the three services. That is one branch of the service. Next comes the ministry of munitions and supply. In munitions and supply you find the whole purchasing power, not of one service only, as in England, but of the three services—for the navy, the army and the air force. In England we find the minister of munitions and supply purchasing only for the army, and certain raw materials for the other services. The navy does its own purchasing, and the ministry of aircraft production does purchasing for the air ministry.

Coordination is effected in Canada by means of the Minister of Munitions and Supply, who not only purchases for all three Canadian defence services, but also purchases on British account as well. So he has in his charge the full range of the organization of industry in Canada to meet these combined requirements, and has the authority to deal with the raw materials which are needed in connection with that industry.

How is that dealt with? It is dealt with by means of controllers within the Department of Munitions and Supply. There are controllers for the various commodities, who with some controllers in the Department of Labour meet together and form a committee of controllers who coordinate the whole matter of supply and production of raw materials. That is the Department of Munitions and Supply. First we have the defence services; second, supplies, and then third, man-power is to be dealt with.

That is done in the Department of Labour where we have the labour coordination committee, a committee headed by the deputy minister of labour, and composed of representatives, first, of labour; second, of the national labour supply council, which is an advisory body, as everyone knows, representing industry and representing labour, a representative of the Department of National War Services and a representative of the defence services. That brings about a complete coordination and integration among the services in which man-power may be required.

Every demand which can be made upon man-power in Canada is looked into by the labour coordinating committee, and along with that is the national labour supply board, of which I spoke. In the result we have, first, the defence services; second, munitions and supply; third, labour; and, fourth, finance, all tying up in the war committee of the cabinet. With this tie-up in the war committee of the cabinet, headed by the war-time Prime Minister, the blueprint of the war effort of Canada is worked out to the

highest degree we possibly can; nobody claims perfection because the work to be done changes from day to day and almost from hour to hour.

Before this committee is through, I hope to be able to give hon. members some idea of how the army programme has worked out. My hon. friends of the other two services will give the same for the navy and air. In the war cabinet committee is also tied up the work of the joint defence board. I should have said that the Department of External Affairs is also represented on that committee by the Prime Minister. That department deals with Canada's affairs in so far as they relate to the United Kingdom and foreign countries. I think this is a fairly complete tie-up, a fairly complete integration, a fairly complete coordination of Canada's war effort under men who at least ought to know something about what is being discussed and who are able to bring to this problem first-hand knowledge of the difficulties, the needs and the requirements of the particular services they represent.

Mr. HOMUTH: The inspection departments are still under the three branches of the defence department.

Mr. RALSTON: The inspection department has now become a separate board, entirely under the inter-governmental inspection board which is made up of both Canadian and British personnel who give their efforts in connection with whatever may be required. A Canadian may possibly inspect a British requirement or a Britisher may inspect a Canadian requirement. If we have a particular man who can do a certain job on a certain gun, then he does that particular job; if the British have a better man in connection with textiles, for instance, he does that. But it is all done under the one board.

Mr. HOMUTH: Segregated from the department.

Mr. RALSTON: Not at all.

Mr. HOMUTH: It does not come under the Minister of National Defence; it comes under this joint board?

Mr. RALSTON: Not directly under the Department of National Defence, but under the inter-governmental inspection board, on which there are personnel who were formerly on the department's inspection service.

Progress reported.

On motion of Mr. Crerar the house adjourned at 11.05 p.m.

Tuesday, March 11, 1941.

The house met at three o'clock.

SPECIAL COMMITTEES

WAR PENSIONS—SECOND REPORT OF SPECIAL COMMITTEE ON PROBLEMS OF EX-SERVICE MEN

Hon. CYRUS MACMILLAN (Queens) presented the second report of the select committee on the Pension Act and the War Veterans' Allowance Act, as follows:

Your committee recommends that authority be granted:

(1) to consider and report upon all matters relating to ex-service men of the last and the present war, including matters relating to provision for medical, hospital and convalescent treatment, grants, gratuities and allowances, upon or after discharge, and provision for their rehabilitation.

(2) to consider and report upon the desirability of enacting legislation in respect of persons injured in the course of duty during the present war, or in respect of dependents of such persons losing their lives in the course of such duty.

(3) to appoint subcommittees to examine witnesses, to send for persons, papers and records, and to report back to the committee from time to time.

DEFENCE OF CANADA REGULATIONS AND PENSION ACT—CHANGES IN PERSONNEL

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the name of Mr. Bence be substituted for that of Mr. Ross (Souris) on the special committee on the defence of Canada regulations; and that the name of Mr. MacKinnon (Kootenay East) be substituted for that of Mr. Brooks on the select committee on the Pension Act and the War Veterans' Allowance Act.

Motion agreed to.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, March 10, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Mr. STIRLING: Mr. Chairman, I should like to take the opportunity, before the Prime Minister has quitted the chamber to attend

to other duties, and during the presence here of the three ministers of defence, to ask the government if it would state its position with regard to the question of decorations. Upon inquiries which I have made in various directions it has been stated to me on more than one occasion that the government takes its stand on the incident which happened in the House of Commons in 1919. Hon. members will remember that a select committee of the house was appointed to examine into the question of titles and to report. The committee so reported on May 14, 1919, and a debate ensued some days later in which the recommendations of the report were supported by a majority in the house—I think the figures were 96 to 43. As a result of the adoption of that report a humble address was presented to his majesty making reference to two points. The suggestion was made, first, that no more titles should be granted to British subjects domiciled in Canada, and, secondly, that in the case of hereditary titles they should lapse at the death of the then holder.

That humble address was duly sent to his majesty, but that was by no means the only content of that report. There was a further paragraph which I should like to read to the house. Immediately after the reference to the address, the suggestion was made that the titles of both "Right Honourable" and "Honourable" be discontinued, but the suggestion did not meet with the approval of the committee. The report then states:

> Your committee, however, do not recommend the discontinuance of the practice of awarding military or naval decorations, such as the Victoria Cross, Military Medal, Military Cross, Conspicuous Service Cross and similar decorations to persons in military or naval services of Canada for exceptional valour and devotion to duty.

It seems to me therefore improbable that what I have been informed is correct, that the government takes its stand upon what happened in the House of Commons—not parliament—in 1919.

The question of decorations has been one of some difficulty, but for generations, so far as Great Britain is concerned, recognition of deeds of valour has been accepted almost as a household word. There may be some who think there is but little value in it, but I am sure I am voicing the opinion of members of the fighting services, members of the services which are connected with the fighting services, yes, and indeed of a large proportion of the population, when I say that a recognition for valour is something far above recognitions of other descriptions. It has the effect of strengthening the morale of the services.

The other day in this house I mentioned my own personal opinion that I am not more than interested as a rule in the manners and customs of public and governmental life in Great Britain. I prefer to be guided by what I consider the points which count with regard to Canadian public life. But there is a difference in this matter. Our sailors, soldiers and airmen are more than allies with those of other dominions; they are brothers. They are so closely associated with them that it would seem to me something in the nature of a common policy that might well be the directing course with regard to this question of decorations.

Just recently the Canadian No. 1 fighting squadron has been fighting with the Royal Air Force squadrons and with Polish squadrons, and as a result of what was accomplished by these various squadrons recommendations for decorations have been made and decorations have been granted not only to pilots but to ground personnel, recognition thus being given to the fact that a plane in the air must be kept in perfectly fit flying condition by those who do good work on the ground. I am told also that recommendations went forward with regard to personnel connected with No. 1 fighting squadron, but decorations were not granted.

It appears to me it would be of very great interest not only to the services in Canada but to the general public if the government would be good enough to make known what policy actuates it in this matter.

Mr. CRUICKSHANK: Last night I attempted to adjourn the debate but apparently I was out of order. I made the attempt for the reason that I wished to be the first speaker to-day, but it has not worked out so well. The only reason I am speaking to-day is that there has been so much misrepresentation with regard to the problems of British Columbia, and that is what I want to correct.

The principal reason for dissension in our war effort is the fact that we as members do not know Canada as we should. I venture to say that at least seventy-five per cent of the members have never had the privilege of visiting British Columbia and the other

western provinces. That is not good for Canada or for us as members of parliament, and I am taking this opportunity to invite each member to visit the glorious west at the conclusion of this session. I shall write to each member individually in this regard. I have no authority to speak either for the provincial government, for the municipal authorities, boards of trade or any other organization, but I think I can assure hon. members, on their behalf, that we shall give all visitors a true western welcome and I hope they will let me know how many are coming. All have passes, and most are of Scottish descent, and it would be an excellent chance for hon. members to show their wives what good fellows they are. I suggest that you bring your families with you.

In my opinion, we have not yet put into effect a full war-time effort and in this connection I may refer to the question of ship-building. It may sound strange for me to discuss this subject as a rural member, but it was under consideration last night, and I wish to point out that we in British Columbia have many year-round harbours. Our climate cannot be surpassed, and notwithstanding any information to the contrary that may have been given to the minister, who I regret is not present at the moment, we have between one and two thousand skilled labourers out of work. That is not in the best interests of Canada at a time when the empire is calling for ships and more ships. A short time ago the representatives of the international machinists union, covering railroad employees, approached the Canadian Pacific Railway with the request that the employees of that system be put back upon a six-day week, and the answer given was that to put these men on the six-day week would throw five hundred skilled men out of work. If you are going to throw five hundred skilled men out of work in British Columbia or elsewhere by adopting a six-day week, then I say we have plenty of skilled mechanics.

I should like to quote from the Ottawa *Journal* of March 11, which in an editorial quotes the following Canadian press dispatch:

> Ottawa, March 7.—(CP)—The possibility that Canada's war-time cargo boat construction might be doubled was seen to-day by officials of the munitions and supply department.

That is from the Canadian Press. The editorial continues:

> Who are these "officials"? And who authorized them, whoever they may be, to give out such an announcement? Such statements, clearly, should come only under the name, and with the authorization and responsibility, of the minister.

The Canadian Press dispatch, enlarging on the statement of the "officials", went on to say:

> "At present the dominion is engaged in building 20 cargo boats, and it was understood the authorization for the building of anything up to 20 more has been received within the past few days from Britain."

And further:

> "The cargo boats under construction are merchantmen of the ten thousand ton type. . . ."

Hon. members may wonder why I want this in *Hansard,* but my friends to the left will not wonder so much when they hear the rest:

> Are these statements true? We are afraid they are not true. To begin with, the *Journal's* information is that Canada is not "engaged in building 20 cargo boats"; that no cargo boats are "under construction".

A little further on in the same editorial we find this:

> But why not say so? Why instead have some unnamed "officials" putting out information that is inaccurate and misleading? It is precisely this sort of thing that has caused Mr. Howe no end of trouble, and which, in addition, has made for a lot of public confusion. . . .

And further down it says:

> . . . although we think it could be strengthened greatly in its efforts by calling in men to its councils outside of mere party lines. . . .

At the outset the editorial says that these officials, these dollar-a-year men—ninety per cent of them Tories—are giving out misleading information, but further down it asks us to bring these same men into a so-called national government. It would be a fine government! The editorial says they give out misleading information, and I want to tell the Minister of Munitions and Supply (Mr. Howe) that in my opinion any bottle-necks we have had have been due to that very fact that he has not been given accurate information, certainly not from British Columbia. And this misleading information comes from a group of officials who are responsible to no one.

In this connection I would commend the government for having appointed a committee to investigate war expenditures. This is a very wise decision and will serve to reassure the public. But I would strongly urge upon the Prime Minister that he appoint another small committee consisting of five to seven private members of this house to tour Canada right away and view the different projects now under construction or in operation. The private member is responsible to the public by whom he is elected. When these so-called official experts give the minister misleading information, as they have unquestionably done, and subsequently it is found to be incorrect, they merely resign. If a small

committee went around and viewed these projects, for example in Hamilton, they could give the people a true picture.

Let me give one instance of the foolish criticism that is prevalent. This criticism came to me from two of the most prominent Liberals in British Columbia, at Liberal headquarters. A certain project was said to have cost $32,000, which if true would be ridiculous. That story was going round the streets of Vancouver, and if anything ever does go round the streets of Victoria it possibly went there. I took it up with the Minister of National Defence, which is what I think any hon. member should do, to check the veracity of such rash statements, and I found that the actual figure was $490. The hon. member for New Westminster heard the story and I am sure that every hon. member from British Columbia heard that it cost $32,000. Things like that do not help Canada's war effort.

Mr. MAYHEW: We stick closer to the truth than that in Victoria.

Mr. CRUICKSHANK: Well, I correct myself; Victoria City has at last wakened up.

Much has been said, in connection with our war effort out there, about geographical difficulties. It is possible that shipbuilding costs and some other costs in our war effort may be greater out there owing to our geographical conditions. But offsetting that we have climatic advantages. We have never disputed the fact that some of the air-training camps should be in the east where you have anywhere from one to forty feet of snow for six months in the year. But our main geographic disadvantage is freight rates. As I see it the government under the War Measures Act have it in their power to overcome that disadvantage. As soon as the railroads saw that we were short of ships they increased our freight rates. The board of transport commissioners may have control of freight rates, but when the poor farmer for the first time in ten years began, not to make money, but merely to break even, the government pegged the price of butter. They could just as well peg freight rates.

There is another matter in respect of which the Pacific coast is not under a handicap. It cannot be disputed that we have skilled labour available as well as eighteen thousand unskilled labourers in Vancouver and the surrounding district. We are not in an all-out war effort while there are two thousand skilled and eighteen thousand unskilled labourers without employment in British Columbia.

It has been stated here that we in British Columbia have certain war orders. But we sold approximately as much lumber before; the only difference is that we sold it to the four corners of the earth. Now we are selling it, and correctly so, wherever the war effort requires us to sell. We have heard much about the ten million dollar plant that we are building for Consolidated Smelters at Trail, but before the war we sold those metals, even —to our everlasting shame be it said—to Germany and Japan. But we sold them.

We have men unemployed in British Columbia. We should put them to work. If it is to the advantage of the war effort that the money be all spent in Ontario we are patriotic enough to agree. But our patriotism leads us to the belief that no matter where ships are built they should be built speedily, and when we have shipyards that are not working to capacity we expect the people of Ontario and Nova Scotia to be equally fair in their consideration of us.

We resent strongly the suggestion made yesterday that there are not these unemployed men in British Columbia. I and, I presume, other hon. members from British Columbia receive letters every day from skilled men seeking employment. We get letters every day from our constituents asking why we are not going full-out in our war effort. I believe the government have done excellent work; in my opinion the Minister of Munitions and Supply is the best qualified man in this house to hold the position he does, but at the same time in fairness to the minister I say he has not been properly advised by some of the so-called officials that he has around him. After the last war the United States found that their most expensive luxury was these dollar-a-year men. The labourer in any line is worthy of his hire. The government should pay a little more attention to the advice of members from the various parts of Canada, who know what is going on. I am citing this particular case simply because the minister does not and could not possibly know what has been going on, with these so-called experts advising him.

On January 28, at the Boundary Bay elementary training school under the empire air training scheme, there were from two to four inches of water nearly all over the six hundred acres of that project. On the same day, at five o'clock in the afternoon, three men were engaged in shingling the roof. With five hundred carpenters unemployed in British Columbia, the province which produces ninety per cent of all the shingles made in Canada, only three men were working. That is not good enough. I know of five men from my own riding who went to this school five times to apply for work. They did not go with letters from their member, either; but they

could not get work, though they were fully qualified carpenters. Is that an all-out effort? Of course it is not.

There is one expression I do not like to hear in connection wtih our war effort; that is, "up to schedule." As I see it, if a particular project is two months ahead of schedule it is our duty and responsibility as members to see that it is brought four months ahead of schedule. Remember, Hitler is not going to run this war on schedule. If we are two months ahead of our schedule let us work until we are four months ahead of it, and we are not in that position when the conditions I have described exist at Boundary Bay, where they have had to lay down three feet of solid gravel, hauled at great expense, in order to permit access to the very cabins where the young aviators are going to live. Is that an all-out effort? I am not blaming the minister for that; no fair-minded person would blame him. He cannot know every detail, but, fortunately or unfortunately, he has to rely upon his experts, ninety per cent of whom are Tories.

Mr. HOMUTH: You might as well blame the whole thing on the Conservative party.

Mr. CRUICKSHANK: No, I do not blame it on the Conservative party, because at times the Conservatives show intelligence.

An hon. MEMBER: Then why blame it on the Tories?

Mr. CRUICKSHANK: I am referring to the old-fashioned Tories, those who want to be in this national government. I do not consider members of the Conservative party as Tories. I do not think good Conservatives want to be in a national government, because good Conservatives took their chances about a year ago, when the people said whom they wanted to run Canada during this war.

I do think the minister should call in private members a little oftener in order to get their advice with regard to the conditions that exist in their ridings. Again I would strongly urge that a small committee of this house go around and see what actually is going on. If these conditions exist I know the government want to know about them; the government do not want these stories going around, discrediting Canada's war effort. The members from the west have to travel over a large part of this country in order to reach Ottawa, and they know something of what is going on. It would be a good thing if the Prime Minister would amend the British North America Act in order to provide that members would have to cross Canada at least once a year.

Mr. MACKENZIE KING: Perhaps the hon. member for Fraser Valley will pardon me if I do not refer to the questions of which he has just been speaking but rather answer the hon. member for Yale (Mr. Stirling) who brought up the question of the government's attitude with respect to decorations.

The hon. member correctly stated that when Sir Robert Borden's government was in power, in 1919, I think, what has been known as the Nickle resolution was introduced by Mr. Nickle and unanimously adopted by this house.

Mr. STIRLING: Surely it was not unanimous; the vote was 96 to 43.

Mr. MACKENZIE KING: I have erred in saying that the resolution was passed unanimously; what I should have said was that the resolution was adopted at that time. When the Liberal administration came into office in 1921 our party considered the matter, and I understood was unanimous in its view that this resolution should govern in the matter of the bestowal of titles and decorations. All the administrations of which I have been head have consistently held the view that the resolution was one passed by the House of Commons, and that until it was amended or rescinded by this house, the government should consider itself bound by the resolution. It is true that when the Right Hon. R. B. Bennett was in office he did not take the same view. He contended that the resolution was passed by only one branch of parliament, and that the resolution of the House of Commons of one parliament did not necessarily bind the Houses of Commons of succeeding parliaments. Nevertheless the view taken by the present administration has been and is that until the resolution respecting titles and decorations adopted by the House of Commons of Canada is amended or rescinded by the House of Commons itself, we should consider ourselves bound by it.

I should add that on one or two occasions motions were presented from the other side of the house to have the resolution reconsidered. Speaking offhand, I cannot recall the years, but, if I am not mistaken, there were two occasions. In one instance Mr. Ladner, one of the members from British Columbia, moved that the house should reconsider the resolution on titles and decorations. At another time Hon. Mr. Cahan brought in a motion asking for the appointment of a committee to consider the whole matter. My recollection is that neither of these motions was entertained by the house, and for that reason, among others, this administration has felt that it was right in believing that the general sense of the House of Commons

reflecting that of the country was against reopening the question of titles and decorations.

The hon. member for Yale has been careful in his remarks to distinguish between what is involved in the conferring of titles and what is involved in the conferring of decorations. I think he has been wise in so doing. I do not believe there possibly can be in the public mind the same objection to the conferring of decorations that there is to the conferring of knighthoods, which tend to create class distinctions which certain decorations certainly do not. So I shall confine my remarks at the moment, as my hon. friend has, more particularly to the question of decorations.

Decorations fall into two classes; those in the nature of awards for gallantry, the recognition of valour, and those given in recognition of other services. The latter decorations are associated with certain orders of chivalry. As hon. members are no doubt aware, the orders of chivalry have different classes. The orders and classes constitute a sort of hierarchy of recognition. I might illustrate by referring to the Order of St. Michael and St. George. The lowest class of this order is the C.M.G. decoration, companion of the order of St. Michael and St. George. There is next a higher class, the K.C.M.G., which makes the recipient a knight commander of St. Michael and St. George. There is also a still higher class in the order, the G.C.M.G., which makes the recipient a grand commander of the order of St. Michael and St. George. The K.C.M.G. carries with it a right to the title "Sir". The wife of the knight is known as "Lady". There are also in the orders of chivalry the Order of the Bath, the Order of the British Empire, the Royal Victorian Order, and others that do not come to my mind at the moment, and which for the most part are specifically restricted.

What I have said will, I believe, help to illustrate that there is a distinction between decorations belonging to orders of chivalry and decorations belonging to orders of valour.

The awards for the recognition of valour and gallantry are the M.C., the military cross; the D.S.O., the distinguished service order; the D.C.M., the distinguished conduct medal; the M.M., the military medal; the D.F.C., the distinguished flying cross; the D.S.C., the distinguished service cross and, of course, the V.C., the Victoria cross, the most distinguished of all decorations. There may be one or two others which I have not noted.

What I would say to the house in reply to the hon. member's question is that so far as awards for gallantry and recognitions of valour are concerned, this government has never taken any stand against such awards being made. I am glad my hon. friend has raised the question, because I have seen in the press the criticism that the administration has prevented Canadians in the field, who have proven themselves equally as gallant as those of other countries, from receiving recognition. As a matter of fact the government has never thought of in any way depriving members of the fighting forces from any recognition for gallantry, or from receiving any of the decorations I have mentioned as conferred for valour.

So far as the decorations in the orders of chivalry are concerned, we have felt that by the terms of the resolution of this house they were ruled out. As to the others, I can only repeat that I am sure the last thought in the minds not only of members of the government but of all hon. members would be that at this of all times we should deprive any one of any right or privilege of recognition for gallantry or valour, but rather that we would be pleased to see that recognition accorded to anyone who might be recommended for such distinction.

Mr. HANSON (York-Sunbury): It is not my intention to participate in any lengthy debate with respect to this matter. Certainly I am not going to revive the discussion on titles, or decorations for chivalry. All hon. members have their opinions respecting these matters. Personally I have never been able to understand why a citizen of Canada should be debarred from receiving the same recognition from his sovereign that a citizen of Newfoundland, New Zealand or Australia may obtain. However, that is only by the way.

The point immediately under discussion comes from the suggestion that the government itself or some department of it has laid down a rule whereby no decoration for valour may be given to any member of the Canadian armed forces, except it be for valour in the face of the enemy. I understand that is the distinction which has been put forward. I am very glad to hear from the lips of the Prime Minister this afternoon, if I understood him correctly, that the government has taken no action at all in regard to this matter, and that the position is as it was.

Mr. MACKENZIE KING: Absolutely, yes.

Mr. HANSON (York-Sunbury): Yes; that is a fair statement and a fair understanding, and I believe it will bring substantial comfort to the men in our forces. The sailor, soldier or airman who has performed a gallant service, whether in the face of the enemy or in some other sphere of his activity, values far more the testimony of his sovereign in the form of

a decoration than he would a gift of money or anything of that kind. There is a psychological effect in such decorations which more than anything else one could imagine lifts the morale of the fighting forces. I believe it will be a matter of profound relief to the men in the armed forces when they understand that the position to-day is exactly as it was in previous wars. The Prime Minister's statement has cleared up the point and will allay much of the suspicion, uneasiness and unrest which has developed.

I cannot understand how the question could have arisen unless there was an intimation from some source that the position was to be altered; there must have been some basis for the story. For the moment I am content to allow the matter to rest where it is, on the assumption that the Prime Minister has described the exact position. Had it been otherwise I should have felt it my duty to protest against any change in the matter of granting decorations for valour.

Mr. WHITE: Mr. Chairman, I should like to make a few observations dealing with certain military matters which, I believe, would fall under paragraph (b) of the resolution, which reads:

(b) the conduct of naval, military and air operations in or beyond Canada.

I should like to deal first with the plan known as the thirty-day training scheme. The Minister of National Defence announced some time ago that this scheme would be changed from a thirty-day scheme to a four months' scheme.

I have no doubt many hon. members have taken the opportunity to inspect first-hand one or several of the thirty-nine training centres at different points across Canada. Any hon. member who has done so will have seen the fine sets of buildings, the nature of the equipment, and the facilities available for the training of troops. These training centres are served by an efficient permanent staff of qualified officers, non-commissioned officers and instructors. It has appeared to me most unfortunate, and possibly something in the nature of a tragedy, that these staffs of qualified officers and men, these facilities which have been set up at the cost of millions of dollars, should have been used only for the training of recruits for a period of some nineteen days for service only in Canada.

My contention is that this highly trained personnel which makes up the permanent staffs at training centres should be used for the training of men in the active forces. It seems unfortunate that such facilities should be available and such sums of money spent only to train men for service in Canada. I hope that in the near future the Minister of National Defence will make an announcement to the effect that these training centres will be used only for the training of men for overseas service.

Some time ago I asked the Minister of National War Services if the regulations then being revised, and relating to the conduct of these camps, would be submitted to the house for debate. He replied that they would not, and that they would be placed on the table after they were agreed upon.

Mr. RALSTON: To what regulations did the hon. member refer?

Mr. WHITE: Regulations for the training centres.

Mr. RALSTON: Does the hon. member refer to the regulations for the calling up of the men?

Mr. WHITE: Yes; they are being revised.

Mr. RALSTON: I thought the hon. member referred to the conduct of the camps, and I would point out that that would come under my department.

Mr. WHITE: That is right.

Mr. RALSTON: Well, I should like to know what the hon. member wants. There are two sets of regulations. One set is provided by the Minister of National War Services, and has to do with the calling up of recruits. The other is a set of regulations which affects the recruits after they reach camp, and is under the direction of the Department of National Defence.

Mr. WHITE: The ones to which I refer are those affecting the calling up of classes of recruits. I believe they are passed upon by the Minister of National War Services. The point I wish to emphasize is that under the present set-up the regulations will affect anywhere from 100,000 to 200,000 young men. Hon. members will agree that any regulations affecting that number of citizens of Canada are of sufficient importance to warrant being brought into this house for debate. Anyone who has taken the time or the trouble to examine the set of regulations issued last fall will find many flaws and defects in them. I shall point out just one. The first regulations provided that at the end of the thirty-day training period the recruit would be attached to a reserve force unit. The recruit was not obliged to continue his training. It is quite true that he was requested to continue his training, but no provision was made for his transportation, nor was he to be paid for the time spent undergoing training. I think everyone will agree that any such regulations are absurd. It must be remembered that the average recruit works during

the day and we can hardly expect him to take training at night without pay and to pay his own transportation costs.

I have noticed in the press that under the new set-up the recruit will be attached to a reserve force unit at the end of the four months period. Whether this will be changed, I do not know. I know of one unit which got 400 recruits from men who trained in the first two classes of October and November, and yet a check-up in February reveals that only six are now taking training. I say again that the men are not to be blamed because they must provide for their own transportation, and they receive no pay. I think I am quite safe in saying that if the 85,000 or 90,000 men who were trained under the first, second and third thirty-day training schemes were called up again for training, they would have to start at the beginning.

Mr. RALSTON: Does my hon. friend really think that?

Mr. WHITE: Absolutely. Those recruits had only nineteen and a half or twenty days' training.

Mr. RALSTON: But only three months have passed.

Mr. WHITE: Only three months have passed, yes. I would point out also that if men are only attached to reserve force units at the end of the four months period and do not keep up their training, they will slip back. Everyone realizes that with the way war is carried on to-day there must be continuous training.

I should like to refer to one other matter in connection with this training scheme, namely, the exemptions. I do not know just what exemptions or postponements are going to be allowed, because the rules have not been brought down. Certain statements have been made in the house that postponements will be granted for farmers' sons. Under the present regulations applications for postponement are made in writing to the divisional registrar. A recruit may live from 150 to 200 miles from the point where the divisional registrar is located. I know of many cases where little if any consideration has been given to the applications. I suggest to the minister that in connection with the next training period he consider having these appeals heard by the county judges. It would be a simple matter for a county judge to sit at two or three different places within his jurisdiction and hear the appeals of farmers' sons or any others who wish to apply for exemption. A recruit would thus be given the opportunity of appearing in person. I am satisfied that if some such arrangement were worked out it would do away with much of the dissatisfaction that exists to-day in connection with the hearing of appeals.

A number of young farmers have been placed in awkward positions because their appeals have received little or no consideration by the registrars. It is difficult for a farmer to get help to-day, and the reason is quite apparent. The average man can come to the city to work and get much higher wages. In the riding which I represent the Ontario hydro have been carrying on a great deal of construction work and men are very scarce. Many of the young men who have been called up for training have suffered real hardship because in some cases they were unable to get proper help to look after their stock. Some of these men were living with elderly or ailing parents and they had milch cows and other stock that needed daily attention. I hope the minister will give some heed to the request that these appeals be heard by the county judges.

Replying yesterday to a question asked in regard to the cost of the training centres, the Minister of National Defence referred the hon. member asking the question to page 908 of *Hansard* of February 21, 1941, where a statement is set out giving the cost of certain details in connection with the training centres. Upon examining this table I find that it is far from complete. I should like the Minister of National Defence to place on *Hansard* during this debate as complete a statement as possible of all costs to date in connection with the three months' training scheme.

Mr. RALSTON: Will the hon. member specify what he has in mind, what he thinks is omitted?

Mr. WHITE: There are a few details I should like to have, if they can be obtained. First, the cost of constructing and equipping each of the thirty-nine training centres.

Mr. RALSTON: Is not the construction cost in that table?

Mr. WHITE: It is given in a lump sum.

Mr. RALSTON: How does my hon. friend want it?

Mr. WHITE: Some centres were constructed by private contract and others were constructed by the government.

Mr. RALSTON: Replying to the hon. member who asked the question I stated that the cost of the contract camps had still to be allocated because many of the materials had been purchased in bulk by the Department of Munitions and Supply. I have on my desk, but not before me, a statement of the cost of the other camps.

Mr. WHITE: I noticed what the minister said yesterday. The third item is the number of the permanent staff at each camp. Fourth, the amount of pay and allowances of the permanent staff up to the date of the end of the third training period. Fifth, cost of training equipment. Sixth, cost of clothing and other articles issued to trainees.

Mr. RALSTON: I think that is there.

Mr. WHITE: Seventh, cost of food supplies. I notice the minister dealt with that yesterday. Next, cost of transportation of trainees to and from camps.

Mr. RALSTON: That is there.

Mr. WHITE: Ninth, the amount paid to trainees. Tenth, the cost of medical care for permanent staff and trainees. Next, any other incidental expenses in connection with the training camps.

Mr. STIRLING: All of it camp by camp.

Mr. WHITE: By separate camps.

Mr. RALSTON: Did my hon. friend say "by separate camps?"

Mr. WHITE: Yes.

Mr. RALSTON: There may be some difficulty.

Mr. HANSON (York-Sunbury): We had two of the items of construction yesterday.

Mr. RALSTON: As I understand it, my hon. friend is asking the cost of medical care and other particulars. Some of these items can be given by separate camps, but others cannot. I know my hon. friend does not want to be unreasonable.

Mr. WHITE: If they cannot be separated, I shall be quite glad to have them as they can be given. With the information in regard to these eleven items before us we shall be able to get an accurate picture of what the three months' training period has cost to date.

Shortly after the Minister of National Defence returned from England he made an announcement through the press that there would be some increase in the size of our armed forces. But so far these increases have been very small, and I wonder if the minister realizes what a serious damper has been put on the enthusiasm of the youth of this country in their attempts to enlist. Many young men have tried for months and months to join certain branches of the service, but have been unable to do so. Perhaps a very small quota would be called for at a certain depot or for a certain battalion. Many men would travel miles and miles, hitch-hike their way, and on their arrival find that the quota had been filled. Naturally a man who has had some connection with a military unit is attached to that unit. He has some choice as to the branch of the service he would like to join. I suggest to the minister, having regard to the difficulty of getting recruits at the present time, that if he would seriously consider the question of calling up the reserve force units as active force units and allowing these reserve force units to retain their identity, he would get all the recruits he wants.

With regard to these reserve force units, they were mobilized in June, 1940, at least eight full months ago.

Mr. RALSTON: Not "mobilized." My hon. friend does not mean that. I think my hon. friend gives the impression that they were mobilized for the purposes of overseas service. We use the expression "mobilization" in that connection. They were authorized to recruit up to full strength as reserve units; they were not mobilized.

Mr. WHITE: Quite right; they were authorized to recruit in June, 1940, and in a a very few weeks those units were up to full strength. All recruitment for reserve force units ceased on the 15th of August, 1940. In the eight months which have passed these units have completed thirty days' training. Of that thirty days fourteen days, or fifteen days in some instances, were put in at a military camp. So that in the remaining seven and a half months these units have trained only fourteen or fifteen days.

Much of this training has been carried out under most discouraging circumstances, on account of lack of training equipment. But the point which I wish to emphasize is that, at this critical juncture, when the time feature is so essential, these units have trained only thirty days in eight months.

What is the reason? Are we still short of training equipment? Surely this is not possible when you consider that we are in the eighteenth month of the war. We are constantly assured by the propaganda agency at Ottawa that we are up to schedule; in fact, the hon. member who spoke a few minutes ago mentioned that certain things were two months ahead of schedule. The Minister of Munitions and Supply loves to talk in this chamber about the output of Bren guns. I should like to ask the Minister of Munitions and Supply to explain to the house why active force units are so very short of Bren guns for training purposes; why active force units are short of gas-training equipment, anti-tank guns, grenades, and many other items.

Another point I should like to mention to the Minister of National Defence is the number of very fine armouries in eastern

Ontario which at the present time are being used only for reserve force units. To quote just two: in the town of Picton is one of the finest-equipped armouries in eastern Canada. In 1939 there was quartered in that armoury a complete battalion which is now in England. Yet to-day less than a hundred men are using it, and they belong to a reserve force unit. There are fine armouries at Belleville, Napanee, Trenton, Picton, Madoc, and Norwood, all being used by reserve force units. I hope the Minister of National Defence will announce that in the future these armouries will be used only for active force units.

I well remember being in this house the day the mobilization bill was passed, and how the Prime Minister, in a most pleading voice, stated that he wished that his government had the necessary powers that night to act. Well, in a very short time that bill was passed, and what was the result? From the mobilization bill so far we have this farce of a thirty-day training scheme. It is beyond me how any government with a general staff such as they profess to have at Ottawa, with full knowledge of what is going on overseas, could conceive of and put into execution such an utter farce of a training scheme, calling for only thirty days' training; and now, after months of delay, the scheme is to be changed to provide four months' training. I say to the minister that even four months' training does not meet the needs of this country.

Recently the government had a series of radio talks which they called, "Let's Face the Facts." Why not face the facts right here in this house? Let us as members of parliament show, for once, a little backbone, and face the facts and admit that conscription of all man-power for service anywhere in the world is the only answer to the present situation. Any young Canadian who will not fight for his country is not fit to receive the benefits that this country gives to him. Why is recruiting at the present time so slow? We have to-day two systems; on the one hand a voluntary system, and on the other a half-baked idea of compulsory military training, attempting to work side by side. In addition, this government has seen fit to set trainees in a preferred class. Speaking in this chamber last November, I pointed out to the Minister of National Defence that certain articles were not issued to members of the non-permanent active militia, as they were called at that time. When he replied he stated that I should know that the members of the non-permanent militia did not receive underwear, socks and other similar articles. But all trainees are members of the reserve forces, and they receive socks, boots and all the rest of it, and in addition, when they leave the training centre they take their socks, boots, underwear and other articles with them to keep.

Mr. MACDONALD (Brantford City): Does the hon. member suggest that the boots should be left?

Mr. WHITE: Not at all, but what I do suggest is that if you give these things to one part of the reserve force units you should give them to all. Why give them to the trainees and not to the reserve force men? Because the reserve force men enlisted of their own free will and accord; they were not forced in any way to take the training.

As one of the results of this, you find in these reserve force units feelings of resentment and confusion, and there is a growing bitterness between these two factions.

While as yet the training programme for 1941 has not been announced, it is reported that the training will consist of ninety days—sixty days at home and thirty days in some central camp. If there is any truth in this rumour, such a programme will not meet a very happy reception, because the majority of men in these reserve force units have had one taste of training at nights and on Sundays, and it is neither practical nor popular with the men. If it is the intention of the government to put into effect such a scheme of training this year they will have the greatest difficulty in obtaining officers, non-commissioned officers and men.

Last November I drew to the attention of the Minister of National Defence the increasing number of men who are absent without leave, and in particular I mentioned the camp at Petawawa. The minister must know that there is the greatest feeling of unrest among the men at this camp. I have no wish to elaborate on the conditions that exist, but I do wish again to bring to the attention of the minister the fact that such conditions have the worst possible effect on the morale of the troops. It tends to discourage recruiting, causes distress and dissatisfaction among the families and friends, and in the end tends to slow up our war effort.

I would also bring to the attention of the minister most forcibly the recent instructions that have been issued as to men absent without leave, and the granting of passes. I doubt if the general public have grasped the significance of these regulations. I will explain them briefly to hon. members in case they are not familiar with them. Before a soldier goes on leave it is necessary for him to purchase a railway ticket to the destination shown on his pass. That railway ticket is taken to the orderly room and must be shown to the orderly room staff before he can

obtain his pass. The number of that ticket is endorsed on the back of the pass. If the soldier is going to a destination that does not call for a railway ticket, that is endorsed on the pass.

That simply means that unless a soldier can produce money for a railway ticket he does not get his pass. If he goes without a pass he is absent without leave. In plain language, it means that soldiers can no longer hitch-hike home. In Ontario thousands of motorists have willingly given lifts and free rides to soldiers because they realize that there is an obligation on this government to provide free transportation. But that day is gone. Only a few days ago in this house, when the matter of the pension bill was before the house, members of all parties in the house expressed the desire—and I am sure they were quite sincere—to do all that they could to provide just and equitable pensions for soldiers and their dependents. And now we have to-day this very serious condition. If these men have not the money to go home they are denied the right to hitch-hike. What is going to happen? We shall find that there will be more men absent without leave. It will be harder to enforce discipline, and it is scarcely necessary to state in this house that Canadian soldiers do not take kindly to discipline. But, with proper handling, any body of soldiers will develop a remarkable loyalty to their own battalion. There is created esprit de corps in the unit. I warn the government, however, that any such strong-arm methods as they are now adopting in this matter will only make the soldiers grouse and grouse. It is quite true that all soldiers grouse; that is one of their ancient privileges, and in this case I feel they have something to grouse about.

This government can find millions and millions of dollars for anything they wish. They can spend almost $3,000,000 on taking a census, but they cannot provide one cent for free transportation for soldiers. And money spent for free transportation for soldiers will be returned a thousandfold in increased morale and the esprit de corps that is created in the units. Esprit de corps is simply the loyalty and devotion a soldier has for his unit. You can ask any member in this house about his own battalion and he will say to the very last that his unit was the only unit, the best unit in the last war.

Why cannot this government realize that soldiers will take any risk to get home to see their families and loved ones? I strongly condemn them for these new rules that they have passed prohibiting soldiers from hitch-hiking on the highways. If any hon. members wish to get the popular reaction to these new regulations let them pay a visit to the active force unit in this city. You can read the regulations on the bulletin board. And then let them have a talk with some of the men. Let them interview some of the men who were unable to go home last week-end when their pass came through because they did not have the necessary funds to purchase a railway ticket.

Mr. DUPUIS: Will the hon. member suggest how much it would cost this country if free passes were granted?

Mr. WHITE: No, I cannot say, but it does not matter how much it costs; this country can provide the money for it. Everyone says that these soldiers are heroes and should have the best of everything. They are only here a short time before they go overseas and the one thing that means the most to them is denied. If hon. members want to know the popular reaction let them visit the active force unit in this city. Let them browse around among the men and they will perhaps get some idea of the magnitude of the storm that is brewing at the present time.

Surely the time is long past when this government should dwell, as they do continually, on the result of the last election. We all know that the Liberal party received more votes than any other party in the house. But it is not votes that count to-day; it is bullets, machine guns, tanks, aeroplanes and all the other implements of war.

You expect the finest young men in Canada to enlist, and they are willing to risk their very lives. The government is asking the people to save and to lend every cent. The government is asking the people of Canada to make the supreme war effort. Is it not only fair and just, then, that in the administration and direction of the war effort all shades of political opinion in this dominion should be represented?

I would appeal to the members of this house who are veterans of the last war and who now support the Liberal party. I say to them: You know better than anyone else what war means, because you have seen it with your own eyes. Then take a look around your own riding and investigate the conditions of the reserve force and the active force units. Consider the folly of the thirty-day training scheme we have been following. Inquire as to the shortage of equipment in all units. Investigate the endless red tape that seems to delay and tie up everything that the government controls, and then just think back a few years when you were soldiers in France. Think of some of the days when you were on the Somme, at Ypres, or at

Courcelette, or that Easter morning at Vimy Ridge. In those days we had very definite objectives and those objectives were gained only by careful planning and full cooperation with all branches of the service. At Vimy there was the greatest barrage that had ever taken place up to that time, and yet when we crossed over that ridge we saw the advantage of the barrage because it had paved the way for the victory that followed. Any members of this house who were at Amiens on August 8 will recall the perfect clockwork timing of the whole British army in every detail. The result was that the German army was simply rolled back in utter confusion.

I mention this simply to illustrate the need of unity and complete cooperation of all to win victory. When we were in France every soldier some time or other was in a tight spot. At that time it did not matter very much to the soldier what religion or politics his comrades professed. He did not care whether they were interested in party patronage or in the survival of any political party; if anyone had dared to suggest such a thing to a soldier in France he would have been branded as a traitor to his country. At that time the soldiers in France looked to the government and the people of Canada to bury and forget all such considerations, and to supply them with all needed reinforcements and implements of war. In those days hon. members who were in France saw the need of unity in the country. But great as that need was in 1914-18, to-day the need is far greater. We who are returned soldiers and now elected members of this parliament, which is the only legal constituted authority in this country, have grave responsibilities. Is history to recount that we, the members of this parliament in the year 1941, were more concerned with political patronage, with the survival of our party, and things of this nature; that we placed these things before the urgent need of Britain and the immediate mobilization of all the man-power in Canada for service overseas?

Mr. MacDIARMID: Will the hon. member permit a question?

Mr. WHITE: When I shall have finished.

I want to make just a few remarks about a speech delivered in this house by the Minister of Justice (Mr. Lapointe) in which he stated that the province of Quebec is opposed to a national government, and that his province would not have national government. His speech brought forth great applause, including applause from the Prime Minister. I should like to say to the Minister of Justice that there are other parts of Canada besides the province of Quebec. It is about time for the Dominion of Canada to realize that this country is no longer going to be governed by the dictates and whims of the province of Quebec.

Some hon. MEMBERS: Shame!

Some hon. MEMBERS: Hear, hear.

Mr. WHITE: Are you so blind in that province that you cannot see what is coming? Are you concerned only with votes and the result of the next election? I warn the Minister of Justice that his remarks in this house will do more to create distrust and disunity and to hinder the war effort than any remarks made here since the war began.

The cry of conscription is again brought up. Well, your government introduced a measure of conscription, and when the vote was taken every member present in this house, except two, voted for it. I ask the Minister of Justice, who has stated that he speaks for the province of Quebec, and who apparently spoke for the Prime Minister, what he proposes to do in the event of reverses to our forces overseas making it necessary to supply a large number of reinforcements—yes, even to have conscription? Does he intend to continue to bury his head in the sand, or does he intend to face the realities of 1941? Members of this government are quite fond of referring to the number of votes their party polled in the last election, but I notice that they carefully refrain from making any reference to the soldier vote overseas. The soldiers overseas did not approve of the war effort of this government, and I am sure the boys overseas will be highly pleased when they read the remarkable speech of the Minister of Justice. Will that speech convey to them that Canada is united behind them?

I wonder whether this government fully realize what is going to happen when the people of Canada fully apprehend the truth about the muddle in aeroplane production, the truth about the shortage of army equipment after eighteen months at war, the truth about the thirty-day training plan. I warn the Prime Minister and his government that the day of promises is long past; the people of Canada in 1941 want results and not promises. And let the Prime Minister not forget what he has often stated in this house, that the will of the people of Canada is supreme over parliament. When the people of Canada realize the whole truth as to how our war effort has bogged down they will tear your government to pieces, just as Mr. Churchill said the armies of Britain would tear Mussolini's empire to shreds. Let the Prime Minister continue talking about the mandate he received at the last election; let his ministers keep on crying "saboteur" and "fifth columnist" in reply to justified criticism

and keep hurling charges at responsible newspapers whose only desire is to win the war; let the Minister of Munitions and Supply continue making remarks about hon. members digging in the sewers and hon. members who wear uniform, and they will reap the full fury of the storm when it breaks.

Mr. CLEAVER: The hon. member promised he would answer questions when he was through.

Mr. BRADETTE: Do not take him too seriously.

Mr. CLEAVER: I would ask the hon. member whether he thinks he is adding anything to the strength of the war effort or the morale of the Canadian people in regard to that effort by making the statements he made in regard to Quebec.

Mr. WHITE: Absolutely.

Mr. CLEAVER: All right. Then in regard to the province of Ontario, from which we both come as members of parliament, has the hon. member forgotten that Ontario voted just as strongly against national government as Quebec did?

Mr. WHITE: I said that the people of Canada are not concerned to-day with votes; they are concerned with bullets, machine guns and aeroplanes, and we have very few.

Mr. CLEAVER: The hon. member has sidestepped the question.

Some hon. MEMBERS: Order.

Mr. CLEAVER: I repeat that the hon. member has sidestepped the question.

Mr. HANSON (York-Sunbury): I rise to a point of order. This is all out of order. In the first place the minister had the floor to reply. We should conduct these proceedings in an orderly way.

The ACTING CHAIRMAN (Mr. Fournier, Hull): The minister sat down.

Mr. CLEAVER: Does the hon. member not accept the expressed wishes of the people of Ontario at the polls in regard to national government, leaving Quebec out of the picture?

Mr. WHITE: If the hon. member wants to make a speech, he can do so. I only say again that the people are not concerned with votes; they want action.

Mr. CLEAVER: How can the people express their wishes except through their votes?

Mr. HANSON (York-Sunbury): This is all out of order.

Mr. MacDIARMID: Did our soldiers have free transportation in the last war?

An hon. MEMBER: They did in England.

Mr. RALSTON: I had intended this afternoon to put on the record some statements which might be of interest to the committee in connection with this resolution. Contrary to what the leader of the opposition has supposed, I shall not take very much time in replying to the hon. member who has just taken his seat (Mr. White). I propose to make a statement to the committee with regard to some matters relating to the army programme in order that the committee may have that information for consideration and as a basis for asking further questions if they so desire. But as a member of this house I cannot allow to go unnoticed some of the things which my hon. friend has said. I do not propose at the moment to deal with the thirty-day training period; I shall come to that in its proper order.

I do want to say most emphatically, Mr. Chairman, that a member of the house who speaks of unity and the complete cooperation of all, and who delivers himself as the hon. member has this afternoon, to say the least certainly is not entirely consistent, and I am sure that is a very weak phrase. Listening to some speeches in this house, including that of my hon. friend, I have sometimes felt that in this country there are some people who are never satisfied unless they are putting a burr under the saddle or creating some difficulty, instead of endeavouring to cultivate unity. My hon. friend was the follower of a gentleman who pledged that there would be no conscription in Canada; my hon. friend was elected on that platform, yet to-day he rises and speaks about the province of Quebec leading this country. I say to my hon. friend that this is unworthy of a member of this house, and I submit that it is unworthy of a gentleman who wears the king's uniform, as he does at the moment. When the hon. gentleman talks about party patronage I tell him he had better adduce some instances of that patronage in connection with this government's war effort before he talks about it. I invite him at any stage of the game, at any stage of this committee's proceedings, to produce any evidence of party patronage in connection with the administration of military affairs. I shall be happy indeed to examine it very fully.

My hon. friend is an officer, wearing his majesty's uniform. If I may presume to offer the suggestion, one of his duties is to endeavour to see to it that the men under his command, the men who salute him, are given a reasonable amount of consideration

and are not incited to find fault with their lot. It seems to me that one of the things an officer has to do is to take care of his men and endeavour to give them as much assistance and comfort as possible. My hon. friend knows that the reason we have so many men in these camps in Canada to-day is the fact that, thank God, there have not been casualties overseas, and we have not had to send men over as replacements. Knowing that, when he states that there is a feeling of unrest, that there is absence without leave, that there is distrust and dissatisfaction among the men, and that there is a storm brewing, I submit that he is not doing himself justice, nor do I think he is doing justice to the armed forces of this country.

I suggest to my hon. friend that he and I, and everybody in this house, ought to endeavour to see that these men are as fully satisfied as they can be; but I suggest to him advisedly that I do not think the way to do this is to provide free transportation for a soldier when he wants to go on week-end leave, and I say that very frankly. I believe there are other ways of doing it. Those other ways are to look after our men; to explain to them the situation which exists in this country, instead of endeavouring—as my hon. friend would do—to place some sop before them in the way of free transportation in order that they may be satisfied. If I know the men of this country—and I think I know something of them; I had some experience in the last war—they do not want to be coddled. These men are not particularly asking for these things; they just want to know what is going on. It is up to officers such as my hon. friend to explain matters to them instead of talking about distrust, dissatisfaction, unrest, storms brewing, and things of that kind.

I suggest to my hon. friend that we should get down to a discussion of what is before this house, namely this war programme. My hon. friend is perfectly justified, or at least has a perfect right, to say all he wants to say against the training scheme. He has a perfect right to find fault with lack of equipment, if he wants to do so. That is his privilege, if he thinks that is helping in connection with the war effort. He has a perfect right to find fault as he wishes; but to say there is dissatisfaction and unrest when as a matter of fact the men are in Canada instead of overseas because of the fact I have mentioned, the fact that there have not been casualties and they have not been required, is not performing the duty which I think an hon. member should perform in this house.

Now may I deal with some of the matters which have been brought up, and I will deal with them in the course of what I have to say as to the army programme generally. I feel sure that my hon. friend is sound at heart as a Canadian, but I do not think this talk of party patronage, following an attack on a particular province, comes with very good grace from him. I suggest to the hon. gentleman that he ought to clean his own house before he starts attacking other people.

May I now deal with some of the matters in connection with the army programme in which I hope the committee may be interested. I will deal with the thirty day training plan when I come to that part of my remarks having to do with Canadian activity. My hon. friend referred to the headquarters staff rather slightingly and said that if we had a staff anything like the staff we talk about surely we never would have commenced the thirty-day training scheme, which he called a farce. The staff at national defence headquarters, in whom I have the fullest confidence —and I hope my hon. friend will come to have that confidence also, if he does not have it now—prepared an appreciation of the situation as it existed late last fall, just before we went overseas. In that appreciation they assessed as well as they could the possible eventualities in connection with the need for armed forces. That had to take into account not simply Canada but also the United Kingdom and Europe. In fact the world has become exceedingly small these days, and an appreciation of this kind practically has to cover the globe. That appreciation was not simply the work of the army staff. It was gone over by the chief of the naval staff and the chief of the air staff; it was concurred in by all those officers and submitted to defence council. Defence council went over it and then submitted it to the war committee of the cabinet, together with the measures it was thought should be taken by the navy, the army and the air force in order to prepare as best we could for half a dozen eventualities which might arise.

My hon. friend speaks about Vimy Ridge and the planning at Amiens. I am not contending that we had any such timed planning as that, but I do say we had the best plan that could be devised under the uncertain and unpredictable circumstances which faced us, drawn up by the men best qualified to do this planning. That plan was submitted to the war committee of the cabinet, where it was gone over very carefully. It was approved in principle, but it was thought wise—and I think the country approved—that we should go overseas and consult at first hand with those with whose plans we wanted to integrate ours. As has been said time and again—and it cannot be said too often—at the present

time our front line is on the English channel, and it was the effort over there with which we were endeavouring to match up. We studied the possibility of other services taking on activities which the army proposed to undertake; of the army taking on some of the activities which the navy might propose to undertake in connection with coast defence, of the army and navy taking on some of the activities which the air force proposed to undertake. The plan submitted finally was one which was regarded as a balanced plan, not balanced in dollars but balanced, so far as effort and equipment were concerned, among the three services.

Just let me say here that I really fail to understand certain criticism that every service is not matched up on the dollar sign, so far as appropriations are concerned. One might just as well say that the fire brigade and the police force in this town ought to have exactly the same number of dollars. They are two different services. One might as well say that the artillery and the infantry ought to have exactly the same number of dollars.

The minister is asking for an allotment for each service, having regard to the programme which each service has worked out, not alone, but in conjunction with the others, and in coordinated effort, under the war committee of the cabinet—and, as I shall show in a moment, in full consultation with the British authorities—in order that in all three services our effort might be most effective.

Mr. HANSON (York-Sunbury): To what criticism is the minister referring?

Mr. RALSTON: I do not think my hon. friend has referred to it, but I have noticed the criticism in the newspapers, and I believe once or twice in this committee. There has been the suggestion that because the army happened to ask for $666, the air force, $421 and the navy, $180—or $190, I am not sure which—something was out of balance.

Mr. HANSON (York-Sunbury): That has not been voiced in this house.

Mr. RALSTON: I thought it had. It certainly has in the newspapers.

Mr. HANSON (York-Sunbury): I never saw it.

Mr. RALSTON: That is what the minister had to do, and it represents a balanced programme, having regard to the facilities, having regard to the duties and having regard to the potentialities of the three services.

We went overseas. I have not before given the house or this committee any account of what happened, and perhaps at this time I might be pardoned for indicating, and the house might be interested in knowing, what was done over there. I went over there accompanied by the chief of general staff, by Colonel Magee and by Captain Malone. We went over there in order, if we possibly could, to clew up—if I may use a sailor's term—our army programme with the army programme over there.

We had the chief of staff's appreciation of what we over here believed would be the possible eventualities and possible happenings in the relatively near future. We had, in addition, our plan which had been approved in principle—that is, measures which we thought should be taken. There was no makeshift about it. These had been approved in principle, and our armed programme was developed on the basis of that appreciation.

Our visit to the United Kingdom was first, to set out what we were doing; second, to see if our programme was in step with their own, and, third, to get their views on how our contribution might be made most effective. What we were bent on attaining was the maximum useful army development in aid of the common cause. To do this required an informed appreciation of what might possibly happen, of when our forces might be needed, or what the likely or possible course of the war might be during the present fiscal year.

As hon. members can understand, a definite knowledge of future events is not given to mankind. That appreciation had to be based on probabilities, and those probabilities were to be deduced from the most up-to-date information we could get, and by making the most intelligent use of it.

I had the privilege, I believe it was on four different occasions, of being received by the British Prime Minister and discussing our problems with him, particularly the larger issues and longer views. Then the first conference was arranged with the three service ministers and their staffs. They met and gave us two hours. During that time not only was there discussion but we were given information as to what their forecasts were, what the possibilities might be, and what they were doing in connection with events which were going on in the world generally and which affected the war. They answered many questions. Our discussions were frank; we hid nothing and they hid nothing, and as a result we were able to get a clearer conception of what the job really was.

The second conference we had was with Mr. Eden, who was then Secretary of State for War, and with his staff. There the matter of Canada's participation was fully discussed. We had worked out from the plan which I had mentioned what we thought might be a

useful contribution, having regard to the information we received with respect to the needs. We were prepared to discuss in detail that contribution, or any modification of it.

Mr. Eden was accompanied by Sir John Dill, the chief of general staff, General Haining and General McCready. We there had a long discussion with regard to Canadian participation, and things we might do. We received a very clear idea what the situation was, and I think almost at that meeting arrived at the conclusions with respect to what might be our most effective contribution.

We had the third meeting with Mr. Eden, and some of his staff, with regard to the formation of a Canadian corps. Then we had a fourth meeting with Captain Margesson, who was the new Secretary of State for War, just after he had assumed the position, particularly in regard to armoured formations, and—

Mr. STIRLING: Was that confined to the army, or to the three services?

Mr. RALSTON: The first conference was with all three services. There were the three service ministers,—Mr. Eden, secretary of state for war, Mr. Alexander, first lord of the admiralty, and Sir Archibald Sinclair, the secretary of state for air. In each case there were the staffs. There were Sir Dudley Pound, first sea lord, Sir John Dill, chief of the imperial general staff, and Sir Charles Portal, chief of the air staff, and their staffs.

We had a meeting then with Captain Margesson which was most informative and instructive. Then I had two or three discussions, one particularly instructive one with Sir Allan Brooke, commander in chief of the home forces, who, hon. members will recall, was on the Canadian corps staff in the great war. That conference left no doubt in my mind as to the effectiveness of the contribution which we had discussed in the previous conference. We found that our plans were fully in keeping with the views of Sir Allan Brooke, who, I believe, had been present at two of the conferences, but with whom I had the additional conference.

Mr. HANSON (York-Sunbury): These plans, of course, were secret.

Mr. RALSTON: I will be able to announce the programme. We reached a complete agreement as to what would be the most useful and effective army contribution from Canada.

Despite the doubts of the hon. member who has just spoken, we told them our object was a full-out contribution with everything Canada has, and as fast as we could give it. And I want to say, also, that they expressed

[Mr. Ralston.]

appreciation not only for the Canadian contribution which had already been given, but for what we were about to do. And when we were talking to them, too, we assured them that we did not come in any spirit of giving charity, but in the spirit that Canada was in this war at the side of Great Britain.

The programme which we had submitted involved some adjustments in nature of formations and in timing, but it was admittedly a heavy programme in its demands on production, man-power and economic resources. Having settled tentatively on the programme which our friends over there believed would be of the most help, and would be the greatest contribution Canada could make, I did not wait until I got home to communicate that information in full to the Prime Minister and my colleagues, but I cabled them in advance. The result was that within one week after I returned home the programme was endorsed, and was announced by the Prime Minister of Canada, to the letter. That was the programme which had already been discussed and arranged tentatively and provisionally with our friends overseas.

What was that programme? It involved the dispatch in 1941 of four major groups. Hon. members must realize that men are being sent constantly. A new flight of several thousands of men arrived in England only last week. The group put on the priority list to be dispatched in 1941 was the balance of the troops for the Canadian corps. I cannot give hon. members all the details, but I can say to-day that we have in mind a definite arrangement as to the probable occasion on which the movement of these various formations will take place. Hon. members will understand that I am not in a position to give that to the house and the public.

The movement of the third division was discussed also and we agreed on the principles governing the timing of the movement of that division. We had the frankest exchange of opinion with regard to the United Kingdom equipment position and our own. We both sat down to work out a definite date or at least a definite date to be worked to on certain principles which we both understood and which have been agreed upon. I think it is clear that we will not equip the third division in whole from this side; I am speaking particularly of field artillery. This for reasons which will perhaps appear obvious to the committee, but of which I cannot give further details other than to say that the third division will be equipped.

I was present with the Prime Minister, Mr. Churchill, at a meeting with Sir Andrew Duncan, Minister of Munitions, General McCready and other staff officers in connection with equipment, and I was given the

benefit of a good deal of information respecting just what their equipment position is. There are certain understandings with regard to equipment which we both regard as satisfactory.

Mr. STIRLING: And secret?

Mr. RALSTON: Yes, with regard to equipment. Then with regard to the army tank brigade, the committee may be interested in knowing just what that formation consists of. I do not propose to give it in detail, for reasons which hon. members will understand. The army tank brigade is often confused in the public mind with the armoured brigade corps. The army tank brigade is a formation which we hope will be working with the Canadian corps. It is an armoured formation which works with the infantry and is an adjunct or supplement to these forces.

There are three tank battalions in the brigade. This formation was strongly recommended by the general officer commanding the Canadian corps and by the chief of the general staff as well. We have a joint arrangement with regard to equipment which I am sure will be satisfactory from the point of view of both sides. There is provision in the estimates for certain portions of the issue of equipment which is being communicated to our friends on the other side. This army tank brigade should prove most valuable to the Canadian corps.

Perhaps hon. members would be interested in knowing what units go to make up this brigade. The leader of the opposition has suggested that as far as possible information should be given in committee. One tank battalion will be made up of the Ontario regiment; another tank battalion will be made up of the Three Rivers regiment and another will be made up of the Calgary regiment. Then there are nine other detachments or sections:

First, 1st Army Tank Brigade Company, RCASC, made up of the 2nd Reserve Corps Troops Company, RCASC, Calgary.

Second, No. 2 Light Field Ambulance, RCAMC, made up from No. 2 Field Ambulance, Toronto.

Third, 1st Army Tank Brigade Workshop, RCOC, made up from No. 3 Reserve Army Field Workshop, Montreal.

Fourth, 1st Army Tank Brigade Ordnance Field Park, RCOC, made up from No. 1 Reserve Ordnance Store Company, Ottawa.

Fifth, No. 59 Light Aid Detachment, RCOC, made up from No. 3 Reserve Army Field Workshop, RCOC, Montreal.

Sixth, No. 60 Light Aid Detachment, RCOC, made up of No. 3 Reserve Army Field Workshop, Montreal.

Seventh, No. 61 Light Aid Detachment, RCOC, made up of No. 3 Reserve Army Field Workshop, RCOC, Montreal.

Eighth, Intelligence Section.

Ninth, Signals Section.

That is expected to be the formation of the army tank brigade.

Mr. STIRLING: Is the minister going to be able to make a statement with regard to the equipment, both present and in the immediate future, of those units?

Mr. RALSTON: Had it not been for the discussion in the house which seemed to make it necessary to lay the MacMillan report upon the table, I should have preferred not to give that information, because I think it gives valuable information to the enemy. I do not mean to be sarcastic when I say that my hon. friend can consult the MacMillan report and see the possibilities. We have an arrangement with our friends in the United Kingdom with regard to supplying any equipment which may be necessary in the event that the army tank brigade goes over before it is fully equipped, and for the replacement of equipment when the time comes.

Mr. HANSON (York-Sunbury): The minister is saying that this corps will be equipped.

Mr. RALSTON: Yes.

Mr. HANSON (York-Sunbury): Either here or in Great Britain, but he is not willing now to give us the breakdown? I am not pressing for that.

Mr. RALSTON: That is right. Now comes the armoured division which, as I say, is a vastly different thing. Hon. members will recall that last fall there was mention of forming an armoured corps. There was actually organized an armoured brigade group, which was one unit of that corps. In order that hon. members may have the terminology clearly in their minds, I may say that an armoured division consists of three brigade groups. As I say, last fall an armoured brigade group was formed. Hon. members will recall that it trained under Colonel Worthington at Camp Borden, using in part the tanks which had been obtained from the United States.

We are now forming an armoured division as a whole. This will consist of something like forty units, including signals, engineers, ordnance and all the rest. There will probably

be about 13,000 personnel. The same arrangement exists with regard to equipment. We have in mind a definite period during which that formation will be in Canada. There is a pretty good idea, as things stand now, as to when it is desired that it should go overseas. The arrangement with regard to equipment is quite satisfactory to both sides, and also the arrangement as to when it is likely to be in the field. This formation differs from the army tank brigade. It will be an armoured division which will work on its own and which will be equipped with cruiser tanks. These tanks have been mentioned in the house from time to time by my colleague the Minister of Munitions and Supply. The army tank brigade, on the other hand, is equipped primarily with infantry tanks, the mark III tanks which have been talked about. This unit is regarded as most desirable by our friends over there, and they expressed themselves as extremely gratified that we were able to make the arrangement which was made.

I do not wish to take up unduly the time of the committee, but one has to make the statement some time, and perhaps now is as good a time as any, because I am sure hon. members will be wondering whether their particular units are incorporated in the formation. I shall not mention all the units.

As I said a moment ago, there are three brigade groups. In the first brigade group, it is expected that Lord Strathcona's Horse will be one of the armoured regiments. Another will be the 1st Canadian Cavalry Regiment; another (the 3rd Armoured Regiment) will be the Fort Garry Horse. Another unit (the motor battalion) will be the Westminster Regiment.

In another armoured brigade group will be, it is expected, the 2nd Canadian Motorcycle Regiment, the 4th Canadian Motorcycle Regiment, the 5th Canadian Motorcycle Regiment, and the Perth Regiment. Just to give the locations: Lord Strathcona's Horse is at Listowel, Ontario; the 1st Canadian Cavalry Regiment and the Fort Garry Horse are at Camp Borden; the Westminster Regiment is at Vancouver; the 2nd Canadian Motorcycle Regiment, at Toronto; the 4th Canadian Motorcycle Regiment, at Sussex; the 5th Canadian Motorcycle Regiment, at Esquimalt; the Perth Regiment, at Hamilton.

In the third brigade group will be included the Cape Breton Highlanders, now at Saint John; the Royal Canadian Artillery, at Petawawa; and another unit, the selection of which has not yet been made; the 41st Light Anti-Aircraft Battery, at Petawawa; the 47th Light Anti-Aircraft Battery at Kingston, and the 87th Light Anti-Aircraft Battery, at Woodstock.

[Mr. Ralston.]

I have here two more sheets of—I was going to say, details, but they are much more than details, of anti-tank batteries, engineers, signals, field ambulances, army service corps, armoured workshops, ordnance field park, field security section, provost company, bath unit, divisional salvage unit, and divisional postal unit. This is the composition of the armoured division.

That was the programme which was arranged with our friends over there; which, as I say, involves an extremely heavy contribution in equipment, in men, and economically, and which was announced by the Prime Minister a short time after we returned home.

If the committee does not mind, I will digress for a minute to complete my remarks with regard to our overseas trip. We had other tasks over there. One, perhaps the most important and certainly to me the most pleasurable, was the visit to our troops, to see them in training, to watch them in operation, and to meet the officers. Another occupation consisted of visits and conferences, some of which I have described, with members of the government, officials of the war office, and representatives of the services, to ascertain the present position and future plans and tell them of our effort and see whether we could help, and to get an appreciation of the battle of Britain so far. I may add that my colleagues entrusted me with a number of special errands for their particular services which I endeavoured to carry out.

With regard to the troops, I have already mentioned to the people of Canada the very happy experience which I had. I spent four days visiting the Canadian troops. The first day I was with the corps troops, the second day with the first division, the third day with the second division, and the fourth day was with the holding units. I will not take the time of the committee to describe my experiences in any detail, but I wish the members of the committee could have shared in some of them. Naturally it was an attractive and interesting thing to see the troops at work, in training on the roads, in billets, and elsewhere in connection with operations. I saw our mechanical transport, the reconnaissance squadrons flying past at top speed, the field park companies on the roads with their bridging gear and that sort of thing, the units—in one place, it may be, in the trees, in another place out on a broad field—doing their training. I met many old friends and made new ones. It was naturally an exhilarating experience.

I watched the tunnelling company at work, and the so-called "pipe pushers" operating their special apparatus. I saw two fine French-Canadian units on the same afternoon, on

separate parade grounds, along with the French-Canadian brigadier who is in command, as I remember, of the Calgary Highlanders, the Regiment de Maisonneuve, and the Black Watch. I saw the Canadian Engineers, who have done such an excellent piece of work in building a by-pass road in order to relieve traffic congestion and particularly for the purpose of providing for future operational contingencies. I saw the ammunition and petrol companies on their different grounds and at their particular jobs, with their motor vehicles and transport. Naturally I had a soft spot in my heart for the infantry units of the various brigades, some of whom I saw actually on parade, others—most of them—doing their training. I had an opportunity to ride around one training ground on a universal gun carrier in order to visit all the different training operations which were going on with that battalion, scattered over a field which was probably three-quarters of a mile each way. Also the medical units struck me as particularly efficient. Altogether, the show was one which would have gladdened the heart of any Canadian.

The men over there realize the seriousness of the job ahead of them. As I told the people of Canada a while ago, our men are not over there on any adventure. Always they are looking three ways. Whatever their immediate occupation, whether it be training or marching, or perhaps some recreation, they are looking at the sky and they are looking at the coast. The training experience which I and my hon. friend who preceded me had in the old days, of being on a parade ground without fear of any interference by sea or land, is entirely different from the conditions of to-day.

We may well be proud of the men who compose our armed forces, who to-day are holding the front line in the battle of Britain. I brought from them greetings to their friends in Canada. They are determined to see the job through. They know that the time of trial may come at any time, and they are on their toes, prepared to meet it. If anywhere one could sense the slightest disappointment or any sign of downheartedness, it was because they have not so far been able to get to grips with the enemy, but they realize that the time will not be much longer delayed.

I had of course the pleasure of meeting General McNaughton and the divisional commanders, and of being with them. What I said in that regard to the people of Canada I want to underline here; that is, that no country can be more favoured than Canada in the character of the representatives which we have in our high army command overseas. General McNaughton, General Odlum, General Pearkes, and the brigadiers and battalion commanders and the others right down to the junior officers, are men we can trust and rely upon, men in whose care the honour and glory of Canada and the cause of democracy in the world are, in my humble opinion, entirely safe.

I did see at the same time the representatives of the air force. I had the good fortune to meet the officers of the first fighter squadron the first day I was there—not in London but in another town—and naturally one could not help being struck with the appearance of these clean, fine looking young men who were just at that moment out on rest but who had done their full share in defending England against the Hun and in bringing down boche planes in numbers out of proportion to their own.

I did not see the second fighter squadron, although I should have liked to. I also had the pleasure of seeing three out of four commanders of the destroyers over there. Theirs is a job, the greatness of which I think people do not fully realize, that is being done for Canada and for the empire. I talked with three of these young men. There is nothing spectacular about their work. They are out three or four days each way, exposed to wave and wind and cold, with submarines under and enemy planes over, out with one convoy and back in with another. They were in fine heart. They realized that they were doing an important job, and I think the silent service is entitled to a particular word of credit and of commendation for the splendid work which is being carried on.

I did not intend to take up so much time with a recital to the committee of what took place overseas. There were some other matters which I dealt with and in which perhaps the committee will be interested, because they have to do particularly with army activities. There is, for example, the matter of exchange of officers. Perhaps the committee does not know that we have arrangements for exchanges of officers between our Canadian forces overseas and Canada in order that Canadian officers may go overseas to get experience and officers from there may come back to this country and give us the benefit of what they have learned overseas. The other day someone was complaining about our training not being in line with Canadian corps training. We had overseas for two months the director of military training who visited all the formations and got into touch with the training staff, obtaining the best and most thorough information he could as to requirements, so that this might be translated into action when he came back.

Some of the things to which my hon. friend has referred—the four-month training and the

matter of training officers, for example—are the results of visits of the director of military training at that time, followed by what my associates and I learned while there. We have a staff school overseas, and as soon as the young men who are at that staff school have finished their training we propose to move the school back to Canada in order that young men here may be trained for staff work which will be necessary overseas. In that same connection, in the programme which I have, and which I am placing before the committee, with regard to training, there is provision for the training of between four and six thousand new officers in the coming year at the officers training centre. There will be quite a number of staff officers who will be needed.

At the same time we had the deputy master-general of the ordnance over there to go fully into the question of the provision of motor vehicles, design, the use of them, convenience, how they were standing up, and so on, and he went around seeing the different units and making his examinations with a view to ensuring the very best service that can be given from this side.

I saw the forestry corps; I saw the tunnelling companies, and I also visited the First Lord of the Admiralty in connection with some errands which my colleague the Minister of National Defence for Naval Services (Mr. Macdonald) had asked me to take on, and particularly in connection with what the Minister of Munitions and Supply (Mr. Howe) mentioned last night, namely, the provision of personnel to assist in starting destroyer construction in this country. I had many jobs and made many visits at the air ministry in connection with a number of matters, one particularly being the identification of pilots under the air training scheme. Special matters were discussed, many items of supply. Those were considered before my colleague the Minister of Munitions and Supply arrived, and after he got there I was happy to hand these things over to him.

We had several opportunities, in connection with air matters, of meeting Lord Beaverbrook and attending the experimental stations where aircraft are tested and tried out, where aircraft are adjusted, where research is done, and of learning of the aircraft supply over there and the development of new types of machines.

I really did not intend to take so long, but that is just a brief resumé in a conversational way of what was done overseas. I came back with this programme to which I have referred, feeling that it was a programme which our friends over there desire to see put into effect. On this side, I do not propose to go into details, in numbers or anything of that kind. Hon. members know that if we really had a bird's-eye view of Canada we should see this country literally seething with military activity from Halifax to Vancouver. As hon. members know, there are district activities. I had the pleasure only a few weeks ago of having in the district officers commanding in order that we might give them the benefit of what we had learned overseas and that they might understand our plans and have their district activities integrated with those at headquarters. We have camps from Nova Scotia to British Columbia, at Sussex, Aldershot, Valcartier, Petawawa, Barriefield, Borden, Shilo, Dundurn, Sarcee, Nanaimo and other places which perhaps I have missed. In all these camps military activities are going on, where men who would like to get overseas and into this war are stationed for the present, unable to go because of the fact that the situation over there has assumed the static position it has up to the present time.

We have, as hon. members know, coastal defence units, security guards, guards at internment camps and guards at vulnerable points. We are inaugurating in Canada a system of training both for military and for trades vocations which I feel sure will be of undoubted advantage.

That brings me to what my hon. friend has mentioned with regard to recruiting. If my hon. friend is sincere—and I accept his sincerity fully with regard to the matter of recruiting—he will realize that recruiting in Canada at the present time is not the most glamorous affair, not anything like recruiting in the last war. In the last war we had battalions which prominent men in various communities were authorized to raise, and a recruiting campaign was put on. I happened to be a member of a unit which was recruited in that way, with an extremely fine commanding officer. A brigade was recruited with all the glamour and fanfare of a recruiting campaign and an evangelistic meeting. But the situation was that when we got overseas, three battalions of the brigade which had been recruited with all that fanfare and who had been promised that the boys would eat and sleep and fight together, were broken up to form reinforcements of other battalions. This was necessary because of the military situation.

While we may not have the same glamour in connection with recruiting that we had last time, this is not by any means a glamourous war. I do not know anything that is more grim, more drab than the people of Great Britain having to sit down as they do

night after night with bombers flying over them and without being able effectively to strike back, waiting for the time when they may be able to join issue. We in Canada should be thankful that the situation is as it is, that we are comparatively safe, that we have freedom of action, that we are able to train without all these difficulties which the men overseas have. I ask my hon. friend who spoke last and talked about men having distrust and suspicion and unrest and all that sort of thing, to preach the doctrine of trust and content and determination to prepare and to serve this country when the time comes.

In this matter of recruiting which my hon. friend has stressed, because he is, I think, a member of a reserve unit himself, and this matter of reserve units, does he realize that we have to-day in Canada no fewer than 175,000 men in reserve units, in addition to over 200,000 that we have in the active service forces? I have made it plain to this committee time and time again that we have not all the equipment we want; does he think that at this time we could possibly equip and train all these units? I ask him to give the staff at national headquarters credit for doing a little planning. What we are endeavouring to do at the present time is to put first things first. We have an active service force recruited in Canada, and we have many who would like to go overseas but are not able to go yet. We have these reserve units.

My hon. friend says he does not like the way in which recruiting is being done. If he is a true member of a reserve unit and trying to do his duty as a Canadian, let me say that reserve units have two roles. One is that if they happen to have a first battalion mobilized overseas—I do not know whether his unit has or not—their first role is to provide recruits as wanted to fill up the ranks of that battalion. The time may come—God forbid that it shall—when that unit may have all it can do to do so, if the battle of Britain strikes as we think it may. Their second role is to do their share in providing the number of recruits which is asked for or allotted to the particular district in which the reserve unit is, to ask these men if they want to enlist, to enlist them and send them to join their battalion.

It is a wonderful thing to be able to go over with your own unit if you can; I know how it broke our hearts to have the Highland brigade broken up, but it had to be. We are in this war to win it, and the only way is by trained man-power equipped with weapons, and with some planning being done. We cannot possibly mobilize 175,000 men in units and send them overseas. I know what the needs are overseas, I know what is told me by the staff there, and I am giving the committee the programme as it is given to me. I say to my hon. friend, his job in a reserve unit is to see that their active unit, if they have one, is kept up to strength; second, to furnish its share of the quota of recruits which may be asked for at any time from the particular district, and, third, to keep his unit in as good shape as he can, so that if the time does come when it is needed as a unit it may be mobilized just as these other units that I have mentioned this afternoon. That is not a job that should make anyone in a reserve unit downcast. I grant it is not spectacular; it means hard work, but no man in a reserve unit need get discouraged and go home and say he does not want to train any more. I know men who are training now and have been for eighteen months and do not know whether they will ever get overseas, but they believe that this job is bigger than the individual, and bigger than the battalion, and they will do what they are told is the best to do in order that our cause may be successful.

That is the situation with regard to recruiting. A call may come for recruits. My colleague the Minister of National Defence for Air needs a number; as I have said, probably between forty thousand and eighty thousand may be needed for the army this year; but many will not be raised by mobilizing battalions, many will have to be raised by the reserve units in numbers as may be required from time to time by battalions which are already mobilized, or new formations. I say to my hon. friend and every hon. member—because there are a good many hon. members who have come to me with regard to reserve units in their constituencies which would like to be mobilized as a whole—there is no man in this house who knows better or realizes more sincerely than I the value of esprit de corps. I know what it means in a unit, and I know what it is to have it broken. At the same time, when that esprit de corps was broken by having the unit broken up we did not sit down and suck our thumbs, we went to work and endeavoured to help build an army out of what was left. I know that my hon. friend's unit and every other unit will do the same. As far as military exigencies will permit I will do everything I can to see that a unit is mobilized as a whole rather than simply sent as reinforcements. More than that I cannot say, and hon. members would not expect me to say more.

That recruiting method, while it may seem drab and unspectacular, is the only method we can adopt at the present time having regard to the demands on our man-power in this country. The reserve units of this

country have been recognized as they never were before, are being mobilized many of them as a whole or made the back-bone of our recruiting organization, and I believe the reserve units will respond to the call to maintain that role and do their very best in whatever capacity they may be called upon to help win this war. That is the true spirit of patriotism, and that is the spirit of these reserve units which we used to call the non-permanent active militia.

Now a word regarding training activities in Canada. My hon. friend referred to the "farce" of the thirty-day training plan. I take issue with my hon. friend. I believe there have been some valuable lessons learned in connection with that plan. I believe as a whole the training camps have been extremely useful in teaching men their responsibilities as citizens. We have had ninety thousand men, many of whom probably did not think of going into military life at all but who have had an opportunity to see what a military camp is like and have had training of an intensive kind. My hon. friend referred, I think, to only twenty-two days' training; he may be a little off in that connection—

Mr. HANSON (York-Sunbury): Not far off.

Mr. RALSTON: Let us see. I suppose he will admit they would not train on Sundays; so take away four Sundays. Then there are four Saturday afternoons; I do not know whether he wanted them to train Saturday afternoons. That is two more days off. On Saturday afternoons they had recreation. There was also a day in and a day out. That is why there are twenty-two days of actual training. I say to my hon. friend, to any man in this house and to any man in Canada who knows anything about military training, that this twenty-two days of training was the most intensive and the best twenty-two days of practical training we have had in this country since confederation. I know there are some hon. members on the other side who will agree with that. I have no hesitation in saying that it was a training scheme splendidly conceived and splendidly worked out. There was no opportunity for men just to go to camp and do nothing. Those camps were places where they went and worked hard, improving themselves physically, learning something of the spirit of discipline which should pervade a military camp. That is good for citizenship and good in after life. We have had the benefit of that in connection with those ninety thousand men.

Already it has been said that the thirty-day training was all we could give, but we did not turn down the plan and do nothing because we could give only thirty days. We did the thirty days training, and did it well. I have no apology whatever to make in connection with the thirty days training; I think it has been a remarkable success. I want here to publicly congratulate the officers who had charge of working out the syllabus, the officers at the camps who so efficiently carried it out, the staff who were able to put up the buildings in the short time available, and those who planned and procured clothing, equipment and rations. These thirty-nine camps were started only in the late summer, and they had to be ready for October in order to get on with the plan.

That was the thirty-day training plan. I am not going to say more about it. I had some other points with regard to it, but I am not going to take up the time of the committee with them just now. Let me go on to what we have planned. I said we were planning for four months training. I said one of the things I had to do overseas was to ascertain the situation over there with regard to training. When I got over there I went into this matter of training thoroughly; and contrary to what some people and some newspapers have said, that training at military training centres is regarded as the greatest development in this war as far as training is concerned. There has been a great deal of talk about why these men did not train with their units, that it was so much better for men to train together. The point is that you have to give a man a certain amount of physical training, a certain amount of discipline, a certain amount of the rudiments of soldiering, before he is able to work in a formation at all; and with all due respect to the officers of the various units, who have given freely of their time, they have not the opportunity to do the intensive work that is done by the men who for the time being are put on the permanent staff, taken outside of Ottawa to the Connaught ranges and given special courses and special instructions, who are given a syllabus which must be rigidly lived up to, and who are provided with instructors who know their jobs. That is what makes the thirty-day training scheme; that is what makes the value of military training centres as compared with training in units. I can say to the committee that I have the highest military authority for stating that training in training centres far surpasses training in units for elementary and basic work. That is why the thirty-day training was done in that way. That is the way in which basic training is done in England, and that is the way in which it is being done in the United States at the present time, in order that they may get the most for their money in the shortest possible time.

Mr. HANSON (York-Sunbury): Not thirty days; twelve months.

Mr. RALSTON: I am talking about the value of training centres vis-a-vis training in units. I have spoken about the thirty days and told what instruction the men received in that period. Training in training centres far surpasses training in units, and I hope everyone will accept that statement because, as I say, I have the highest military authority for it, and it is not military authority confined to Canada by any means.

I come now to the four months' training. I found over there that they felt it desirable that, for basic and specialist training, the period should be four months; that is, two months for basic training and two months in specialist training in whatever arm of the service the man might desire. So we came back and announced the plan. The hon. member who preceded me mentioned farmers and suggested that they should be exempted. We announced what we thought was a modest plan—

Mr. HOMUTH: I do not want to interrupt the minister, but I do not think the hon. member suggested that farmers should be exempted. He said they should be given consideration.

Mr. RALSTON: I heard what the hon. member said. He did speak about farmers and he asked that some exemption or some postponement or something of the kind should be extended.

Mr. HOMUTH: That is different.

Mr. RALSTON: I am not at all criticizing my hon. friend for that. So far as the farmer is concerned, in due time my colleague the Minister of National War Services will announce the regulations; probably they will be announced to-morrow or the next day, and I think they provide sufficient latitude with regard to the farmer occupation.

As I said, we came back and said we had a modest plan for four months' training. How will we do it? We will combine the training centres of the active service force with the militia training centres; we will put them together. We propose to establish, and we are establishing in Canada at the present time joint training centres; that is to say, the basic training centres plus the additional training centres which will be formed, probably about sixty in all. In a moment or two I shall give the committee a list of the centres and where they are being established. We found that we could do this by taking only the twenty-one year old class, for the time being. That would do away with a great deal of the difficulty which industry contended it was experiencing with regard to the exemption of men who were in the trades class. That would mean that industry would not be seriously troubled, or at least we felt that would be the situation. It would mean the same thing with regard to the farming class; only the twenty-one year olds would be affected, and therefore exemptions or postponements with regard to farmers would be fewer.

We found that we had in Canada in these active training centres and the militia training centres total accommodation for 44,000 men. We expected that accommodation for 4,000 would be required for the special training of officers, non-commissioned officers and instructors in small arms, and proposed that the accommodation for the remaining 40,000 should be divided into basic and advanced training centres, with 20,000 in each. The training centres under the National Resources Mobilization Act are to be converted into these basic training centres, while the present active service training centres plus a few of the training centres under the mobilization act are to be converted into the advanced training centres. From the capacity and locations of these camps we estimate that when the plan is running fully, we shall be able to accommodate between five and six thousand each month, so that at the end of four months we shall be turning out each month from five to six thousand of these men called up under the mobilization act, in addition to men of the active service force.

My hon. friend thinks we have not had any plans in view. That means that in addition to the reserve units we have in this country aggregating, as I said a moment ago, something like 175,000, we will have in the year, or let us say in six months, about 30,000 to 35,000 four-months-trained men, in addition to the reserve units, in case they should be needed for service in the defence of Canada.

These training centres are being established all across Canada. Hon. members know now where the basic training centres are, but possibly it would be well if I were to place a summary on record.

Mr. GREEN: Before the minister proceeds to that point, may I ask him if the figure of 183,015, which I find at page 1144 of *Hansard*, and which refers to the number of men in the ranks of the reserve army, includes the 90,000 who have already been through the compulsory training camps, but who are not actually in the reserve army?

Mr. RALSTON: I believe it does, but I would have to check on that point. The summary of active training centres is as follows:

Artillery	4
Engineers	2
Signals	1
Armoured Corps	2
Infantry	7
Machine guns	2
Army Service Corps	2
Ordnance Corps	1
Army Medical Corps	1
Total	22

This tabulation shows a total of 22 advanced training centres. In addition to that there is a unit area training centre, two officers training centres, the 29 basic centres to which I have referred, and two others, making a total of 34 basic training centres, which, added to the 22 active training centres, make a total of 56. In addition to that there are two instruction schools, making 58 in all.

What we propose to do is this—and I might as well put it on record: We are allotting the training centres in this way:

Petawawa—
(1) The present artillery training centre.
(2) A second advanced artillery training centre.
Winnipeg—An advanced artillery training centre.
Brandon—An artillery training centre.
Petawawa—Engineers.
Dundurn—Engineers.
Barriefield—Signals.
Borden—
(1) Armoured corps.
(2) New training centre for reconnaissance battalion.
(3) Two infantry training centres.
St. Hyacinthe—Infantry training centre.
Valcartier—Infantry training centre.
Aldershot—Infantry training centre.
Winnipeg—Infantry training centre.
Calgary—Infantry training centre.
Three Rivers—Machine gun, forestry wing.
Dundurn—Machine gun training centre.
Borden—Army Service Corps training centre.
Red Deer—Army Service Corps training centre.
Barriefield—Ordnance corps.
Ottawa—Army Medical Corps.
Long Branch—Small arms school training centre.
Nanaimo—Small arms school training centre.
Brockville—Officers training centre.
Victoria—Officers training centre.

These are advanced training centres. There are two training centres for coast defence and anti-aircraft, and there will be two officers' training centres for Canada.

Mr. HANSON (York-Sunbury): How many of these will be new camps?

Mr. RALSTON: I have not read any that are new camps. I do not anticipate that there will be any new ones.

Mr. HANSON (York-Sunbury): I rather gathered that they were new camps.

Mr. RALSTON: No; they are new training centres, but not new camps. By "new" my hon. friend probably means new establishments?

Mr. HANSON (York-Sunbury): Yes.

Mr. RALSTON: The following is a list of the basic training centres:

Kitchener	Chicoutimi
Chatham	Megantic
Woodstock	Levis
Brantford	Montmagny
North Bay	Rimouski
Newmarket	Yarmouth
Cornwall	Charlottetown
Peterborough	New Glasgow
Farnham, district school	Fredericton
	Edmundston
Huntingdon	Portage la Prairie
Joliette	Fort William
Sherbrooke	Vernon
St. Jerome	Regina
Sorel	Camrose
Valleyfield	Grand Prairie
Valcartier (unit area)	

These will be the locations of the training centres. As hon. members will see, we have combined the militia training centres, in most instances using them as basic training centres, with the advanced training centres which are in camps such as Petawawa, Borden, Barriefield, and so on.

Mr. CASSELMAN (Grenville-Dundas): Is it the intention of the government to stay within the 21-year class in calling out the men?

Mr. RALSTON: As was intimated in the Prime Minister's announcement, it just depends on what the needs are.

Mr. CASSELMAN (Grenville-Dundas): But what happens when you run out of the 21-year-olds?

Mr. RALSTON: We will not run out.

Mr. CASSELMAN (Grenville-Dundas): In the second or third year.

Mr. RALSTON: I am not looking to the second or third year yet.

Mr. CASSELMAN (Grenville-Dundas): I meant to refer to the second or third class called out this year. Will the department then take the 22-year-olds, or turn to those who have just reached twenty-one?

Mr. RALSTON: We are advised on the numbers available that there will be sufficient; we anticipate there will be sufficient.

Mr. HANSON (York-Sunbury): The minister has indicated that it is anticipated that only men of the 21-year-old class will be

trained under this plan. How does that jibe with the statement given to the house and country by the Minister of National Defence for Air to the effect that everyone from twenty-one to forty-five years would be training?

Mr. RALSTON: The hon. member would not take them all at once, would he?

Mr. HANSON (York-Sunbury): No; but that is what the minister told the country.

Mr. RALSTON: But the hon. member would not expect to have them trained all at once?

Mr. HANSON (York-Sunbury): No; I did not believe it at the time, and I do not believe it to-day.

Mr. RALSTON: I am advised by officers in whom I have the fullest confidence that, having regard to everything we can foresee, this plan will take care of our needs for the defence of Canada provided recruiting—and in spite of what the hon. member who preceded me has suggested—keeps up to a reasonable degree. I have not the doubts and fears entertained by my hon. friend in that respect. If the call comes, I think the men of Canada will answer.

Mr. HOMUTH: The minister has continually used the term "defence of Canada"; to what extent does that go?

Mr. RALSTON: It means exactly what my hon. friend understands it to mean. Under the National Resources Mobilization Act men are liable to be called out for service in Canada or within the territorial waters thereof. That is what it means.

Mr. HANSON (York-Sunbury): And the front line is in the English channel.

Mr. RALSTON: My hon. friend served under a leader who declared exactly that.

Mr. HANSON (York-Sunbury): That does not mean a thing to me to-day. I am not static, if the minister is.

Mr. POWER: The same would apply to my statement respecting men of 18 to 45.

Mr. RALSTON: Possibly the committee will not be particularly interested in the details of officers' training in those training schools. I have a full statement with regard to it.

Mr. HANSON (York-Sunbury): That is a syllabus?

Mr. RALSTON: It sets out the number of weeks which are spent in the ranks, the number of weeks spent studying certain subjects common to all arms, the number of weeks spent in studying organization, tactics and equipment and the number of weeks spent upon advanced training.

Mr. STIRLING: Does that cover all ranks?

Mr. RALSTON: This is for officers.

Mr. STIRLING: Second lieutenant up?

Mr. RALSTON: Second lieutenant, then captain, then major and so on.

Mr. STIRLING: Does it provide for a major to prepare for promotion?

Mr. RALSTON: Yes.

Mr. ISNOR: I believe the minister stated that an infantry unit would be trained in Nova Scotia, but that coast defence units would be trained in central Canada or other portions of Canada. Why is such a system being put into force?

Mr. RALSTON: My hon. friend is wrong. I stated that two coast defence units and anti-aircraft units would be formed, but the locations are not given on the sheet. Let me go back to the thirty-day training for a moment and put on record what I have with regard to the usefulness of this scheme. Apart from racial, religious, economic, occupational and language differences between the young men of this country, I would divide them into two main groups:

(a) Those who have not had the opportunity of belonging to a unit, navy, army or air, in peace time either by reason of the exigencies of schooling or occupation, or by reason of their geographical position;

(b) Those who may have had an opportunity for military service but who have had no family connection with military life, therefore know nothing about it, and would be naturally hesitant to take part in something which must necessarily be foreign to their normal life.

The thirty-days' training has produced the following results:

(a) Young men of the first group have had an opportunity to undergo military training and are now enrolled in reserve units. In many instances, individuals who live in small towns and villages and in the country have, upon returning from training centres, organized classes unofficially in their own localities; physical training, shooting, and drill, based upon the instruction they themselves have received;

(b) Young men of the second category have learned the camaraderie and the interest of military life, and that service of one form or another is incumbent upon the individual in time of war.

(c) Training centres have impressed recruits with their individual responsibility to serve whether their service is in agriculture, the armed forces or in business. Many young men who have never thought of anyone other than themselves have, through barrack room life, learned the lesson that in a democracy one man's happiness depends to an increasing extent upon another man's actions.

(d) Young men of widely differing religious, racial and economic groups have lived, worked and played together for a month and they learned that "the other fellow is really a very good lad." An experience such as this cannot fail to have a lasting effect upon each recruit.

The standard of training laid down to be achieved by each recruit is one which has been highly beneficial, from the point of view of both physical training and discipline. I do not know whether the hon. member who preceded me referred to the fact that young men have returned home from training centres and organized physical training, shooting and military drill based upon the instructions they themselves received. Such instances have been brought to my attention.

Mr. ROSS (Souris): Just what does this enrolment with reserve units imply? Do the young men take any further training, or do they report every so often?

Mr. RALSTON: I think it was provided in the regulations whereby those in the reserve units are entitled to take training and be paid if the others are. Such men are to be entitled to the same privileges as those already in the unit. The hon. member who preceded me stated that there was no incentive for these men to attend, but there is the same incentive for them as there is for the original members.

Mr. ROSS (Souris): There are large areas without any reserve units. Will that mean that these names simply appear on paper?

Mr. RALSTON: I suppose that must be the case if there is no reserve unit.

Mr. HANSON (York-Sunbury): In the rural areas, like in my own county.

Mr. RALSTON: There are reserve units not very far away in that locality. I may say that in connection with the present plan, instead of having them placed on the reserve units, provided they apply to be put on the rolls, it is contemplated to have them placed on a general roll. They would then be members of the militia.

Mr. HANSON (York-Sunbury): They would be in the reserve army to be called upon for the defence of Canada.

Mr. STIRLING: Is the practical difficulty not the fact that so many of them live such long distances from their reserve units that they find it impossible to attend to keep up their training?

Mr. RALSTON: There may be some who live long distances from the reserve units, but these units are spread pretty thickly throughout the country and most young men would have a reasonable opportunity to attend.

Mr. CASSELMAN (Grenville-Dundas): I should like to know the number of officers who will receive training in these two officers' training centres that are being set up, where those officers will come from and whether they are officers now on the strength of the reserve unit.

Mr. RALSTON: As I suggested when I was speaking, there will be probably between 4,000 and 6,000 altogether. These men will be recommended by their officers commanding as cadets to take the course. The requirement for men from the active force is that they shall have served four months in the ranks. Then, if they are of the calibre which the officer commanding thinks could be usefully used in connection with officer work, they go to the officers training centre. For the first four weeks they are given subjects common to all arms. For the next six weeks they are given organization, tactics and equipment according to the particular arm of the service to which they want to go, be it infantry, artillery or any other arm. For two weeks they are given platoon training or training in equipment or tactics, depending upon the nature of the particular unit to which they belong.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. FULFORD: I am sorry that the hon. member for Hastings-Peterborough (Mr. White) is not in his seat, in uniform, to-night. When he spoke as reported in *Hansard*, I was sorely tempted to answer him. I refrained, however, because I felt that his accusations were too petty and too ridiculous to deserve any answer. Those of us who were at Petawawa at the same time as he was know that conditions were entirely different from those he related. I happened to have been in lines not very far from his.

He complained of the dampness. I admit that we arrived under particularly unfavourable auspices at Petawawa, and that the men

complained during the first day. We reached the camp in what was almost a cloudburst; but by noon of next day we were completely dry, we got our lines in order, and from then on I did not hear a single complaint from any of our men.

One reason why I did not answer the hon. member for Hastings-Peterborough was that I am not in uniform; but, Mr. Chairman, I want to tell you that I am just as much a member of the reserve army in Canada as is the hon. member for Hastings-Peterborough. If I do not choose to wear a uniform in the house, that is my business.

I have often heard it said that for the most part dissatisfaction in a regiment can be traced direct to the doorstep of the adjutant. I believe it is unnecessary for me to tell this committee who is the adjutant of the second battalion of the Prince Edward-Hastings regiment.

He complained that there was lack of equipment. Mr. Chairman, I assure you that the Brockville Rifles, of which I had the honour at that time to be a second lieutenant, was well equipped. We did not have all the service unit, but we had Lewis guns, and a rifle for each man. We had fifty Ross rifles. Incidentally, the Ross rifle is a good Tory product of the last war.

Mr. DIEFENBAKER: And this.

Mr. FULFORD: And a better target rifle, I believe, has not yet been designed.

Mr. HANSON (York-Sunbury): I thought Sir Frederick Borden brought in the Ross rifle.

Mr. FULFORD: Sir Robert was, as I remember him, a good Tory.

Mr. HANSON (York-Sunbury): If the hon. gentleman's other statements are as correct as that, I am sorry for him.

Mr. FULFORD: "Sir Robert", I thought the hon. gentleman said.

Mr. HANSON (York-Sunbury): No, I did not say "Sir Robert".

Mr. FULFORD: The Ross rifle was manufactured under the Tory regime of the last war, at any rate. As a target rifle, the Ross rifle was unexcelled. As a service rifle, it was no good. But that is apart from the subject; and I intend to be very brief.

I have been informed that military district No. 3 would provide equipment if given sufficient time. Our adjutant gave sufficient time, and we got the equipment. Therefore I think, before the hon. member for Hastings-Peterborough rises in his place and makes any more accusations, he had better take stock of himself and realize that the statements he makes in this chamber should not be taken any more seriously than, apparently, he is taken, by his own men.

Mr. HANSELL: The debate so far has almost covered the universe. We have discussed more than anything else, perhaps, the Department of Munitions and Supply and the Department of National Defence. I am wondering whether we might not get back to "the more weighty matters" of the resolution.

The resolution stands in the name of the Minister of Finance (Mr. Ilsley), and primarily, I believe, involves his department. For that reason I do not think the resolution should pass without the minister answering one or two questions which to my mind are important.

We are asked to vote authority to raise by way of loan an amount which somebody said the other day was almost equal to the entire debt of Canada since confederation. The resolution calls for the borrowing this year of the tidy sum of $1,300,000,000. Whenever I write that figure down in my notes I do not know where to stop writing the noughts; I I have to go back and count them all to see if I have inserted enough of them. Our national debt for this young country, with the population of only around 12,000,000 people, has begun to reach figures of an astronomical proportion, and it is doing so without much hope, if any, of this country ever paying off its debt. The other day I did a little browsing in the year book, and I discovered that at the end of the last war our debt stood at $1,191,884,062.50. At the beginning of this war our national debt stood at $3,101,667,570.25, which is an increase in the debt in peace time, between the close of the last war and the beginning of this, to the tune of $2,009,783,507.75. During these twenty years of peace we paid interest on the first great war debt, and during that period we had thirteen years of deficit and seven years of surpluses. I think the minister will have to admit that he has departed from his pay-as-you-go policy.

With regard to paying off this debt, it must be realized, I think, that the time will come when this vast debt will have to be paid off. If we could not at least reduce our debt during years of peace and, in part, of prosperity, how on earth shall we be able to do so if the debt grows even higher, and that by leaps and bounds? The minister should tell the committee and the country exactly how he proposes to pay off this debt when the war is over. I ask this question in all honesty because I have been asked the same question myself, and I must confess that by orthodox methods; under our present financial policy I am stuck for an answer.

Some weeks ago I received from the Minister of Finance a telegram, which I have no doubt all hon. members received, asking us to get behind the war savings certificates campaign. As a result of this, I had the privilege of addressing a number of public meetings and I urged people to buy war savings certificates. But I do say that more than one person asked me if I could tell how this mounting debt would be paid off and how these certificates would be honoured.

I might have replied in any one of several ways—I believe I did—but I did not reply in a way that would conscientiously satisfy myself. I could have replied that our first responsibility is to win the war. I believe I did answer one man in that way, and I think that is our first and primary responsibility. Nevertheless, that does not answer the question. I could have replied that Canada always pays her debts, but that does not answer the question. I might have replied in a third way, namely, that the business of paying off the debt will be the problem of the government that is in power at the time. But none of these replies really answers the question, and I have reason to believe that people are asking themselves this question. If they ask me the question they are certainly asking it of themselves.

One man came to me and said: "You cannot borrow your way out of debt; therefore, in order to raise money to pay off the debt, under orthodox methods, the people will have to be taxed. If you tax people you reduce purchasing power. If you reduce purchasing power you reduce business. If you reduce business you reduce manufacturing and production. If you reduce production you reduce income. If you reduce income you reduce the people's ability to pay taxes. So where will you end?" It is the same old vicious cycle. The people have a right to know some of these things.

Last night I was interested in the speech by the leader of the oppositilon (Mr. Hanson); I thought he more or less went to town. He got back to some of these things. He asked the Minister of Finance some pertinent questions, which should be answered, relative to how much of this huge amount will be raised by taxes and how much by loan. He said that the minister should tell the people of Canada and this house how he proposed to get this money. A more pertinent question should be answered. The minister should tell the country how he proposes to pay off this huge debt. I think we should know how much will be raised by public subscription—and I mean by that, how much will be raised by subscriptions of the people out of direct savings—and how much may be expected to be raised by the direct action of the banks. In saying that, I wish to interject this observation, that the banks do not lend their depositors' money. That is certain. If they did, then we could not call upon depositors to buy war savings certificates out of savings.

Some days ago, on February 20, the hon. member for Lethbridge (Mr. Blackmore) made a statement to which the Minister of Finance replied. The hon. member for Lethbridge said:

> It must, however, be apparent to everyone in Canada—and that the minister should frankly acknowledge—that this great sum of money is not going to be taken from the people entirely by taxation or by borrowing from the people's savings but that a very large percentage of this great levy is going to be obtained by the direct creation of new money.
>
> Mr. Ilsley: I do not agree with that at all.

That will be found at page 869 of *Hansard* of February 20.

When the hon. member for Acadia (Mr. Quelch) asked the minister a question concerning borrowing since the outbreak of the war, the minister kindly brought down a statement, and I discovered in it that the issues which were sold to the chartered banks amounted to something like $490,000,000, which is nearly a third of the total borrowings. There seemed to be some conflict between the minister's statement that he did not agree with the member for Lethbridge, and the table that was brought down. I think the table is correct, and it is only right to point out that nearly a third of our borrowings since the outbreak of the war has been by the direct action of the banks.

We should be frankly told how much of this $1,300,000,000 is to be created by the chartered banks of Canada, and I would ask the Minister of Finance to give consideration to this, because it is a question that is in the minds of many of our people: If the chartered banks can create, as they have done in this way, $490,000,000, why cannot the government-owned Bank of Canada create the money and lend it to the government without interest?

There is a danger or, shall I say, a possibility of the chartered banks eventually buying up all government securities or bonds by direct action in the creation of fresh credit. I am going to make a suggestion, because I believe the people of Canada have a right to know some of these things. I suggest to the minister that he send the bill to be founded on this resolution to the banking and commerce committee, so that experts can be called to submit their best advice as to possible repercussions of borrowings in such huge proportions as this. The people have a right to know how private enterprise will function and what

liberties these institutions may enjoy during these war years when credit expansion of this sort goes on.

In the last war some startling things happened in the field of finance. I am speaking particularly of Great Britain, and I do not think the financial policy of the two countries is any different now. I have been reading lately an interesting volume. If I quote from it, some hon. member is bound to ask me what I am reading from, so I will tell him now. This book is in the parliamentary library, the title is "The Financiers and the Nation." It is written by the Right Hon. Thomas Johnston, privy councillor, ex-Lord Privy Seal. I believe he is at the present time connected with the British government; if I am not mistaken, he has been appointed Secretary of State for Scotland. I think he should be an authority. With regard to the manipulation of finance in the last war he calls attention to certain advertisements that were published in the British papers by the banking institution. Here is one that appeared in March, 1916. The Bank of England, without any apparent sense of shame, issued press advertisements reading:

If You Cannot Fight.

If you cannot fight you can help your country by investing all you can in five per cent exchequer bonds. . . . Unlike the soldier, the investor runs no risk.

The author goes on to say:

Yet all these efforts surely paled before the shameless greed of the third great war loan in January, 1917. No foreign conqueror could have devised a more complete robbery and enslavement of the British nation. The rate of interest on war loan was jumped to five per cent (or at the option of the investor, four per cent free of income tax until October, 1942) and the holders of previous war loans and treasury bills and war expenditure certificates were invited to come in and convert their old stock into the higher rates of booty, and for each £100 of stock in the new loan only £95 had to be subscribed, so that the rate of interest really had been raised to 5⅓ per cent. Into this five per cent war loan tumbled the holders of £820,000,000 of the 4½ per cent loan, thus securing an extra half per cent, or £4,000,000 in addition to the increases which many of them had secured when the rate of interest was previously jumped from 3½ per cent to 4½ per cent. And not only were the 4½ per centers permitted to convert into the five per cent war loan, but the holders of £130,000,000 of treasury bills and £280,500,000 of exchequer bonds also converted. The new five per cent loan of £2,075,750,000 secured only, in fact, £844,750,000 of new loans, the balance being paper conversions from old lower interest stocks, whereby the converters were enabled to dig deeper into the national pocket than they had hitherto done.

But that was not the sum total of the iniquitous ramp which the lackeys of the money interest imposed upon us with the five per cent loan of 1917. The investors were made exempt from all British income tax upon their interest payment if they chose to go and live abroad. Mr. Lloyd George has himself testified that this five per cent loan was raised at "a penal figure".

And he quotes from the "War Memoirs" of David Lloyd George, as follows:

The same rate governed subsequent borrowings, which by the end of the war had added a further £4,000,000,000 to our national debt. It cost the country a dozen years of remorseless deflation and concomitant depression to bring interest rates down again to a level that would enable this vast sum to be reconverted to 3½ per cent. Throughout the interval, not only was the country taxing itself to pay a sum ranging at one time as high as £100,000,000 a year more than it would otherwise have done, but the high yield of a gilt-edged government security kept up rates all round, and made money dearer for all enterprises, industrial, commercial and national. It would be hard to estimate the sum total of the price paid by the nation in every department of affairs for the decision of Mr. McKenna in 1915 to increase the rate of interest paid by the government on its war-time borrowings. His action had, no doubt, the fullest authorization from the leading circles of banking and finance. But the country has since then had ample evidence that these circles are by no means to be reckoned as infallible advisers.

Then, again, in the magazine The Nation of June, 1917, we find this:

A huge proportion of the money loaned to the government is inflation representing no real savings on the part of the bankers and financiers who have manufactured it themselves. This means that when the war is over . . . the propertied men in this country will be several thousand million pounds the wealthier.

I could continue with these quotations. Perhaps I might here refer to some results of this type of war financing. The writer is referring to the summer of 1921. He says:

By this time saner elements in the city had come to the conclusion that the limits of interest raising and capital conversion into increased plunder of the national debt had, at last, been reached. The public would stand no more of it. Yet new vistas of profit opened up to the rentier class when Wall street and London city agreed to begin a policy of price deflation. The idea was that the bankers were to call in loans and overdrafts: they were to compel manufacturers to throw their goods hurriedly upon the markets so as to raise cash for the repayment of their bank loans. At the same time the government were to throw their surplus war stores in clothing, etc., upon the markets, thereby intensifying the glut in the markets and making a fall in prices inevitable. As the prices of consumable goods fell, wages were to be broken.

One more quotation and I shall have finished. These quotations are, to say the least, startling.

Doubtless there were many millions of money lent patriotically to the state, money whose owners were disturbed and ashamed at the profiteering in finance which made riot during and after the war. The Right Hon. Stanley

Baldwin, for example, who was financial secretary to the treasury, and saw at first hand the roguery and ravenous greed of finance while the nation was *in extremis*, anonymously handed over £150,000, representing twenty per cent of his fortune, to the state to clear his conscience, and to set an example.

But the controllers of the money power, the men who cold-bloodedly raised their demands upon their fellow countrymen with every German advance in the field and with every German U-boat campaign at sea; the men who organized the creation of hundreds of millions of unnecessary debt, the men who inflated rates of interest; the men who, as the price of providing credits to free us from the threat of German slavery, enmeshed us in an interest burden of a million pounds per diem—it is they whose war-time plunderings I have sought to record in the foregoing pages. The machinations of the organized money power during the stress of war surely provide the most convincing of evidence that the nation must be the sole creator of money, and the guardian and banker of the savings and thrift of its citizens, if well-being and security are ever to be the common lot of men.

Therefore, Mr. Chairman, I think the Minister of Finance should tell this committee that in order to avoid anything like that in Canada the bill to be founded on this resolution will be sent to the banking and commerce committee, which will be able to call before it any men the members may choose to interview, in order that we may have on record the possible repercussions of this financial policy, which will enable us to take steps to avoid anything serious that may result by the time we win this war. The people have a right to a full investigation into the possible dangers that may come in future because of economic principles over which the people themselves have no control but of which they will be the unconscious victims.

Perhaps it will suffice if I ask the Minister of Finance those two simple questions. First, will he tell the committee and the country by what method this huge debt will be repaid? Second, will he take steps to have the measure sent to the banking and commerce committee for a wide-open, public airing?

Mr. ILSLEY: A little later in the debate I will answer the first question asked by my hon. friend, which I think is a reasonable one. As to whether I will send or move to have this measure sent to some committee, as at present advised at least, I should not like to agree to do that.

Mr. RALSTON: I am sorry I was not in the chamber when you called order, Mr. Chairman; but, if I might, I should like to finish what I have to say in connection with the general matters affected by this resolution.

The hon. member for Vancouver South (Mr. Green) asked if the figures I had given for the reserve units included those who had been trained under the National Resources Mobilization Act. I told him I thought the figures given did include those men, and that is correct; but the number is not 90,000. The number under the National Resources Mobilization Act and supernumerary is 76,000, and the total in the reserves, excluding them is 102,119.

When the committee rose at six o'clock, I was speaking of the establishment of the two training centres for the officers' training corps, at Brockville and Victoria. I really hesitate to trouble the committee with the details in connection with the course of training which is proposed; but, if I may, I should like to put on record the two alternative courses which presented themselves. We felt—and this was, partly at least, as a result of the visit we paid overseas—that more attention should be paid to the training of officers. The two possible alternatives which presented themselves were to establish officers' training wings at the various active training centres now in existence all over the country, or to centralize the officers training in two convenient locations, or at least two locations which would be as convenient as possible.

Mr. HANSON (York-Sunbury): And you have adopted the latter course.

Mr. RALSTON: We have adopted the course of locating these two centres at Victoria and Brockville. The plan of locating them at these two centres is adopted for the following reasons. It gives more centralized control of training, administration and the flow of officer reinforcements. It gives greater uniformity of officer selection and centralized control over the standards required for a commission. We have training centres from Aldershot to Nanaimo, and hon. members will see that naturally there would be some difference in standards at different places. As a matter of fact, one of the hon. members of this committee the other day mentioned to me what I thought was a glaring case of lack of uniformity in connection with the setting and marking of officers' examination papers, which gives rise to dissatisfaction and does not promote efficiency.

Another reason was the uniformity of training and of instruction generally. What seemed desirable was the logical division of an officer's education into (1) experience in discipline and being led; (2) general academic and practical education in those subjects required of all officers, and (3) specialization. Another reason was that staffs can be more carefully selected and trained having regard to their special aptitude for officer's duties if you have them at two officer training centres instead of perhaps thirty-nine or even half that number.

Another reason is that candidates will gain experience by mingling, studying and working with junior officers of all other arms of the service; that is to say, artillery officers, infantry officers and officers of other arms who all go to these officer training centres for the purpose of getting their basic training.

I could give the committee a statement of how an officer qualifies. For the active force an officer has to be in the ranks for four months. Having been in the ranks, if he is considered suitable officer material he is recommended by his commanding officer to take a course at the officers training centre. In that way he is on the road from a cadet to a second lieutenant.

Mr. STIRLING: Is he recommended only by his officer commanding?

Mr. RALSTON: Recommended by his officer commanding, but I think it would be passed on, also, by the district; and it would be passed on also by the commandant of the school.

Mr. HANSON (York-Sunbury): That is the procedure, I believe.

Mr. RALSTON: My hon. friend is perfectly right. We could not have each officer commanding deciding on his own.

Mr. HANSON (York-Sunbury): It goes on up, higher, for official approval.

Mr. RALSTON: Yes. At the officers' training centre he takes, for the first four weeks, subjects common to all arms; for the next six weeks, organization, elementary tactics, equipment, et cetera, in the particular arm in which he proposes to qualify; then, for two weeks, in platoon or equivalent tactics.

Then, if considered desirable, he goes to an advanced training centre, to be qualified from second lieutenant to lieutenant. His period there depends upon the arm of the service for which he is qualifying. That is done at the advanced training centre. Then, from lieutenant to captain, promotion is carried on by selection.

Mr. HANSON (York-Sunbury): That is, by the officer in command of the unit.

Mr. BROOKS: Is there no seniority?

Mr. RALSTON: There would be seniority. But I, for one, must say that I am afraid I am a little unorthodox in that respect.

Mr. STIRLING: Perhaps the minister is modern.

Mr. RALSTON: I do not feel always that seniority is the final test.

Mr. HANSON (York-Sunbury): The minister would not do in a trade union, then.

Mr. RALSTON: Seniority is a factor; that is as far as I should like to go. From lieutenant to captain is by selection. Then, from captain to major there is a three months' course at an advanced training centre or the Royal Military College. I believe hon. members know that we are using the Royal Military College for the purpose of giving these advanced courses to the more senior officers. We are making that an advanced training centre. From major to lieutenant-colonel there is another three months' course at the Royal Military College. All this is for the active service force.

I was asked about the officers qualifying for the reserve force. The person wishing so to qualify has two alternatives. Under alternative A, he serves the first period in the ranks. He serves in the ranks for one year. He really serves about thirty days; that is to say, if he goes to camp. But that thirty days' training counts on his service for the first step.

Then he takes a course and examination on subjects common to all arms. By taking the course for the officers training corps, his thirty days' training is concurrent. Then he may be recommended as a cadet. On his trip from cadet to the rank of second lieutenant he goes to the officers training centre, and is there for six weeks, taking a course in organization tactics and equipment, et cetera, in the arm which he has selected.

From the rank of second lieutenant to lieutenant he is at the officers training centre for two weeks, taking platoon or equivalent tactics. Then from lieutenant to captain is done by selection, and by attachment to the advanced training centre, if that is practicable, for a period, the length of which depends upon the arm of the service to which he belongs.

I now turn to alternative B. I mention these alternatives now, because the information may be useful to hon. members, and perhaps to officers as well. Under alternative B he is in the ranks for one year, and does training for thirty days. He takes a course and examination common to all arms, and a special examination respecting his own arm of the service. Then, to go from cadet to second lieutenant he spends two weeks in the officers training centre. Then he goes from second lieutenant to lieutenant, under the provisions of K.R. and O. In the examination from lieutenant to captain he takes an examination on subjects common to all arms, and also in subjects special to his own arm, and takes a two weeks' course at the officers training centre or advanced training centre.

Then, from captain to major he goes to an officers training centre or advanced training

centre, and from major to lieutenant-colonel he goes to the Royal Military College for four weeks. I could put on record the present system. The leader of the opposition asked me once before, I believe it was last year, respecting the present method of qualification of officers. I have in my hand a long statement with regard to that matter. I do not, however, think it would be useful at this time because this replaces it.

Mr. BROOKS: What is the situation with regard to the hundreds of young men at the universities who are taking the Canadian officers training corps course?

Mr. RALSTON: I want to tread warily on that, because I have not the statement respecting the C.O.T.C. before me. But with regard to the reserve, I may say there is a provision here for a course and examination common to all arms of the service and an examination in his special arm. As I understand it, his work in the C.O.T.C. is concurrent.

Mr. HANSON (York-Sunbury): There is a special situation with regard to the C.O.T.C. They have worked it out so that they can get on their way.

Mr. RALSTON: I understand that the C.O.T.C. qualifies them for officers. Before the commission is granted, they come up in the regular way.

I should like to give the committee a statement with regard to the alternatives. Possibly I could put on record something which would be useful to officers in the reserve. Reasons are given here why the first alternative I suggested may be preferable. The member of the reserve force who elects to qualify under the first alternative method, for the rank of lieutenant, may follow the same course as for the active force second lieutenant, if he intends to join the force at once; or, if for personal reasons he wishes to spread his qualification over a longer period, he may do so in this way: For the first four weeks at local headquarters, passing an examination, the standard of which would be such as to ensure that those who qualified would be capable of taking up work at the officers training centre at the end of the fifth week. The remainder of the course can be taken in two parts, one of six weeks and one of two weeks, both at an officers training centre. At the conclusion of this he would be qualified as a second lieutenant in the active force. Then it goes on to show the advantage of taking the first alternative for the rank of captain and the rank of major.

Mr. HANSON (York-Sunbury): How long has this been in effect?

[Mr. Ralston.]

Mr. RALSTON: Just authorized now. We could not authorize it until we had decided to amalgamate the advanced training centres and the basic training centres for recruits for the active service force, and to establish out of these, two officers training centres, one at Brockville, which is now a basic training centre, and the other at Victoria.

Mr. HANSON (York-Sunbury): The whole thing is concurrent.

Mr. RALSTON: Yes; that is correct, or perhaps it would be more correct to say alternative so far as the officers' training is concerned. I have not the figures here, but I think I am correct when I say it is expected that between 4,000 and 6,000 officers will be handled this year, having regard to the formations to which I referred this afternoon. and to the probable reinforcements which will be needed. Therefore hon. members will see that these officers training centres will be busy this year.

Members of the committee would perhaps be interested to know that there will be some necessity for construction. The turning of the reserve training centre at Brockville into a junior officers training centre will involve the construction of something like twenty-one buildings. At the western training centre, which is really not an officers training centre, at Red Deer, there will have to be a conversion of an existing reserve training centre to provide an advanced centre for the army service corps. This will involve the construction of eleven buildings.

Further, with regard to activities in Canada, we have had very much in mind, as I intimated when I spoke to the house at the last session, the necessity for the army doing everything it possibly can to avoid a drain on industry with respect to skilled men. I said then. and I repeat now, that we are anxious that the militia training under the National Resources Mobilization Act should not interfere unduly with industry. Second, we are prepared to assist by giving leave to men who are in the army and have special training and are needed in war industry. Third, we wanted to be on our own as much as possible by training our own men in connection with the motorized and mechanized corps. An army trades school is being started on May 1 where about 2,000 men can be trained at a time. The actual course will take from three to six months. This will not interfere with the courses in the civil technical institutions. We shall be training our own tradesmen. In addition, there is a diesel engine course being conducted at the Dominion Engineering company. I wish it understood that I am not mixing this up with what is being done by the Department of Labour.

As hon. members know, that department is fostering the organization of plant schools in different industries. These schools are being used for vocational training in connection with war industries. The department has, I think, used, in whole or in part, the facilities of the youth training plan, and has mapped out a rather comprehensive system of technical training right across Canada for the purpose of meeting the necessities of our war situation.

Mr. HANSON (York-Sunbury): Will that involve any change in the regulations set up under the mobilization act? Will the selective principle be brought into effect?

Mr. RALSTON: I am afraid I am infringing upon the jurisdiction of my colleague, but I think it will be found that, as far as industry is concerned, the regulations will be similar to those which were passed before. That is to say, industries will not be cut into, as I have already pointed out, to the extent they were before because only one age group will be affected. That will make it much more limited than under the previous call. With regard to other courses, there is a cooks' course conducted at Camp Borden. I have already mentioned the junior staff course. This course will be removed from England to Canada in the near future as soon as it has completed its work and has put the first pupils through. The Canadian officers training corps have adopted a standard training course to help to build up a reserve for the army and personnel for the navy and the air force.

It just comes to me now, and I hasten to mention it to the committee. that I should express in the most unreserved terms of which I am capable the appreciation of the department, and I am sure of the people of the country, for the cooperation given by the universities of Canada in connection with this matter of training. Not only have they kept the officers training corps going, but they have put into effect a system of compulsory training in order that those young men who may be called up will have served a certain portion of their compulsory training at the university.

Mr. HANSON (York-Sunbury): That was done in the face of some opposition.

Mr. RALSTON: Many universities have difficulties with regard to revenues, and anything that discourages the attendance of students makes it that much more difficult for them to carry on. In that part of the country from which the leader of the opposition and I come, they have not too much money. But the universities have cooperated magnificently.

Mr. MARTIN: And the colleges, too.

Mr. RALSTON: Yes, and the colleges, too. They are all universities down our way. More than that, the department has had the most whole-hearted and unreserved cooperation from the universities and the colleges. I know the national research council will join with me in this in connection with all sorts of research matters. These universities and colleges have been more than ready to lend their facilities and staff for the purposes of assisting in scientific experiments of various kinds which were necessary to perfect certain articles of war utility and to pursue lines of research which would give to our troops the equipment which they need and which is necessary in order to make them efficient. The presidents of the universities and colleges came here only two weeks ago in a continued effort to ascertain how they could help in order to throw themselves even more whole-heartedly into helping to win this war.

Mr. BROOKS: In many instances they have given up their sports activities.

Mr. JACKMAN: In connection with the Canadian officers training corps, it is suggested that these young men will qualify at the university and then receive their appointments in the regular way. I was wondering what was meant by "regular way." Will they have to serve a certain length of time in the ranks, or will they be appointed immediately?

Mr. RALSTON: They get their certificates after having qualified.

Mr. JACKMAN: How do they get their appointments?

Mr. RALSTON: I mean their appointments in the units.

Mr. JACKMAN: How do they get their commissions?

Mr. RALSTON: They get their certificates of qualification, and then they get their commissions in the corps or unit, or in the reserve unit.

Mr. JACKMAN: Without serving in the ranks?

Mr. RALSTON: My hon. friend is referring to the new regulations?

Mr. JACKMAN: Yes.

Mr. RALSTON: I am not able to say that.

Mr. HANSON (York-Sunbury): The training is the equivalent.

Mr. RALSTON: I did not think it would be the equivalent of four months.

Mr. HANSON (York-Sunbury): Four years' training is equivalent to four months.

Mr. RALSTON: I shall be glad to give my hon. friend an answer when I have it.

Mr. MAYBANK: The minister has said that certain training is carried on in the universities, and many of these young men will be in the age group to be called up for four months' training. I do not know how it is in the maritimes, but students in the universities in my part of the country have not very much money. Perhaps there is a similarity between the students on the prairies and those in the maritimes whom the minister has described. A large number of students work their way through college by going out on survey parties and doing similar work. Unless they are to be exempted from this training they will not be able to do much work. How will the minister take care of that situation?

Mr. RALSTON: The matter was fully discussed with the presidents of the universities and colleges who were here. It has been the subject of conferences between the officers of the Department of National Defence and the Department of National War Services, as well as between the ministers themselves. I think the regulations which will be announced by the Minister of National War Services will be found to meet the situation fully.

Mr. HANSON (York-Sunbury): They have agreed on a plan?

Mr. RALSTON: Not with the universities, although it may be that the plan as outlined has been talked over with them. I can only say at the moment that the Minister of National War Services and the Minister of National Defence have agreed on a plan. I do not speak for the universities and colleges; I do not know that they have agreed, but I think it will be found to be satisfactory. At least I hope so, and I am sure there will be an opportunity to discuss the matter.

Somebody was speaking about not being able to discuss the regulations. There will certainly be an opportunity to discuss them. I expect they will be down in the next day or two, in connection with the bill to be founded on the resolution which is now before the committee, because part of the vote which is being asked by the Minister of Finance is for national war services with regard to this matter.

I should say that the two officer training centres to which I have referred will accommodate about 1,700 officers, who will be recommended for commissions after completing service in the ranks of the active and the reserve units.

I believe that I have dealt with about all that I can usefully discuss at this stage. I thought it might assist the committee if I spoke to some extent on the activities of the department, and particularly I wanted to say a word or two with regard to what we found overseas and the plans we made as a result.

I will conclude by recalling that the money which is asked for here, and which, as the Minister of Finance has indicated, amounts to something like $660,000,000, is for an army programme which is very, very heavy in its implications. If the programme is carried out as envisaged, we shall have overseas a corps of three divisions, corps troops aggregating many thousands more; we shall have an army tank brigade; and we shall have an army division—extremely expensive, if I may use that expression in terms of dollars, as also is the army tank brigade—we have troops in Iceland, Newfoundland and the West Indies, and we shall have in this country the troops for our Canadian defence services, coast defence, guards and internment camps, mobile troops for operations, and in addition to these we have the bases and the organizations and the establishments for recruiting and equipping and training reinforcements and supplying other formations which may be needed from time to time. It is a big undertaking; and, as head of the branch of the department which has particularly to do with the army, I realize the responsibility one has in asking that this large sum of money be voted.

Mr. HANSON (York-Sunbury): The minister does not care to give us any more extended statement than he has already made with respect to the equipment of these two new armoured formations?

Mr. RALSTON: I do not think I can go any further than that.

Mr. HANSON (York-Sunbury): I will not press for it.

Mr. McCANN: What progress, if any, is being made in the development along special lines or by special training of the army medical corps, and are separate units being set up for the air force, the navy and the land forces?

Mr. RALSTON: This year, as I have no doubt my hon. friend knows, although he would like to have it on record, there was a separation of the medical services of the army and the air force, and Group Captain Ryan of the Royal Air Force was appointed in charge of the medical services there. If I am not mistaken, quite a number of officers from the army found their way—

Mr. POWER: Were enticed away.

Mr. RALSTON: —as my hon. friend says, were enticed away to the air force medical corps. The naval medical services are still under the director-general of medical services.

Mr. McCANN: What is the explanation of the necessity for two separate services? When people are ill and their uniforms are taken off, they are pretty much the same.

Mr. RALSTON: I would really have to ask the doctors to answer that.

Mr. McCANN: The minister is speaking for them.

Mr. RALSTON: It may be that to some extent two different sorts of branches of medicine are involved, air force medicine and army medicine.

Mr. McCANN: Two separate branches of authority.

Mr. RALSTON: It was after consideration by medical authority that the agreement was arrived at. I believe the air force felt that there were certain situations where an officer without special training would be at some disadvantage in treating men with disabilities resulting from flying operations. I think I am correct in saying that, but I would have to refer my hon. friend to the medical officers rather than to the ministers.

Mr. HANSON (York-Sunbury): Are there not special diseases arising out of avocations in the air? Is that not what Sir Frederick Banting was investigating when he lost his life?

Mr. RALSTON: It is said that there are certain diseases peculiar to air operations.

Mr. POWER: Not so much diseases as certain risks inherent in being in the air.

Mr. McCANN: That is, if you will, a specialized line of medicine. My question, however, was, what progress is being made in developing men along those special lines, or is any progress being made?

Mr. POWER: As far as the air force is concerned, no medical officer enters the air force without undergoing a special course in medicine as related to the air.

Mr. McCANN: That is what I wanted to know.

Mr. ROSS (Souris): In the case of instructions being issued to infantry or cavalry units of the non-permanent active militia for mobilization, what basis is chosen? I speak of this because, with regard to the attachment of these trainees to even second reserve regiments, we have not organized a unit in all of rural Manitoba; that is, other than in Winnipeg, Portage la Prairie and Brandon and along the main line. I wondered if seniority is followed when instructions are given for mobilization in the case of cavalry or infantry reserve units.

Mr. RALSTON: My hon. friend means by "seniority," I suppose, which unit has been formed the longest, having regard to the history of the unit. I cannot say that seniority is followed absolutely, but I can assure my hon. friend that it is taken into consideration. This is a wide-open invitation, but if any hon. member feels that there is any unit which, because of its military efficiency, he wants to bring to my attention as desirable to be raised as a unit, as a whole, I shall be very glad to see him, talk the matter over with him and put it before the officers. The ground on which units are picked is, I really believe, that of efficiency. I am certain that there has never been a single case which has come to my attention of a unit having been selected on any other ground than that the officers concerned believed it was the unit which could most efficiently and properly serve the purpose which was suggested for it. If there is any case where two units have an equal chance, and my hon. friends bring the matter to my attention, I will see that the officers consider the matter.

I was saying that there is the army programme for 1941 as we see it. An army programme these days has to be taken, as my colleague the Minister of Finance has said, on an "if, as and when" basis, because, sitting here to-night, we have no idea what is ahead of us in the next year. We are trying to plan so that any reasonable exigency can be met. We have had to make plans in the light of the best information we could get, and to get that information we have gone where we believed the information was most likely to be correct. We have made the plan. We are trying to lay the foundations solidly. The responsibilities are very great in their extent having regard to man-power, materials and money. I came home feeling that there was need for these units and therefore recommended them to my colleagues, and they have accepted the recommendation. So much for the overseas programme. In addition, we have, outside Canada, our troops in Iceland, Newfoundland and the Caribbean.

In Canada, as indicated, there are about 102,000 on the reserve, apart from recruits under the National Resources Mobilization Act. In addition to that, we have in Canada at the moment something over 100,000 in the active service force. As hon. members will see, there will be some change in that figure

when the formations to which I have referred go overseas; but we have a very heavy army programme. In that connection we have had to build establishments to provide for the housing since April, 1940, less than a year ago, of nearly 100,000 men altogether. We have provided for the officer training centres of which I have spoken. We have provided for additional coast defence construction, and there is more now under way. We have provided over 2,000 beds in all in various hospitals. We have provided and are providing at the present time for the housing and maintenance of motor transport vehicles. There are twenty-two storage buildings which will house about 2,000 vehicles. We have in immediate prospect additional magazines, additional coast defence work and additional batteries, and we are also providing an army training school at Hamilton. I have given a very general indication of our programme.

My last word will be to my hon. friend who spoke before I did. This year we have not only a programme in the way of materials and money, but a programme which requires that we keep up the morale both of the men in the army and of Canadians at large. I really do not know of anything that is more important in this war than morale. Regardless of what may pass across this floor, I do hope, I wish to believe, that we are all one in the endeavour to see to it that the men who are in uniform are encouraged and heartened and that they have explained to them why this war is so different from the last. It should be explained to the people of the country why we have not the glamour, the music, the flags and all the things which were so common then.

We are having the regulation of man-power, the regulation of money, the regulation of materials, the regulation even of food, the regulation of everything in these days in an endeavour to make the fight tell and to achieve victory. It means that it is quite different from going ahead and spending and saying, "Let the morrow take care of itself." We are trying to emerge successfully from the war without having our economy completely shattered.

It is a hard thing to do. It is hard for the people of the country, hard for the men in the ranks and for the officers themselves to keep going, without the excitement of actual warfare, which always, though it brings its injuries, its wounds and its deaths, has at the same time some excitement about it. I for one have felt that it was almost harder, in the absence of activity, to keep the armed forces in the shape in which they should be than if casualties, a great many of them, were taking place.

There is that difficulty, and I do ask members of this house and the public generally to help to look after the men in our armed forces and to see that they understand the situation.

We try to see that personal visits are paid to camps and, that everything possible is done to show that we have an interest in our soldiers. I wish to pay a special tribute to the auxiliary services—who by the way are putting on a campaign in a week or two—comprising the Young Men's Christian Association, the Knights of Columbus, the Salvation Army and the Canadian Legion, who are doing magnificent work all through the camps in Canada, in order to keep up the morale of the men, and doing the same thing as well under bombing conditions in England. I believe that job of helping to keep up the morale, both of the soldier and of the civilian, at this time, is about as great and important a task as men could undertake, and it is being done well.

There is the general outline for the army. As regards the overseas forces, I have indicated what is being done. In this country men are training constantly to furnish reenforcements—and one would not believe what a large number of reenforcements we have to furnish even when conditions are comparatively static. If the time comes when there is so-called glamour, when there is the activity of warfare, demands upon the country for reenforcements will certainly try us to the utmost.

As regards this matter of morale, nothing could be finer than the example which I saw overseas of the men and women and children of the islands of Great Britain. It has almost become trite, but it can never be trite, to comment upon the way in which these people, day after day, stand up and take it—the nonchalance, almost, with which they go about their daily work in the face of constant danger; the way in which they set about repairing damage which is done, just as if it were an every day occurrence; the way in which they show their determination, not only by their indifference but by their active preparations for what they believe is coming, namely, invasion. All this is something which would inspire any man or woman and is a great challenge to us all.

We have a lot to be thankful for in this country, and very little to grouse about after all; and I do feel that the best way for us to get hold of the situation, the best way for us to cultivate the spirit and the morale which is necessary to win the war, is to look

across the seas to those people in Great Britain and to think of what they are undergoing every day and night, yet remaining indomitable and doughty under the leadership of that valiant man, Mr. Churchill, whom I had the pleasure of meeting on a number of occasions—their faces towards the sun, their chins in the air. Nothing finer could be said to show their unconquerable spirit than that characteristic expression of theirs, "We can take it."

I think we can take it in this country if it comes to bearing the grimness and drabness of the absence of active warfare. I think we can take it in this country if it comes to paying taxes. There is no question about the people of this country being prepared to do anything they are asked so long as it will help to win the war. It has been a great heartener to me to find how the programme which has been announced has been accepted by the Canadian people, even though they know it is a very heavy one.

So, Mr. Chairman, with that very brief review I invite hon. members to ask any questions they desire and I will endeavour to answer them or to get the information if I do not have it here.

Before I resume my seat, perhaps it would be useful to the committee if I endeavour to break down to some extent the figure of $666,574,659 which my colleague the Minister of Finance gave the committee for the army programme. This has been done in consultation with the general staff. There may be one or two instances in which I could give a further breakdown; if I cannot, it is because I am advised by the general staff that they think it unwise. As a matter of fact, I know men on my own staff who can figure from the amount of money for a certain formation when that particular formation is going overseas, knowing what is allowed for wastage, having regard to the number of months training here and the general costs. Therefore there has been a combination of functions, and I trust the committee will accept that. The figures are as follows:

Estimated Expenditures of Canadian Army by Functional Groups
(Fiscal Year 1941-42)

Definition	Non-recurring	Recurring	Total costs 1941-42
Canadian formations and functions, presently overseas, including increments to same	$ 6,382,382	$246,725,792	$253,108,174
Canadian formations and functions to be sent overseas during the fiscal year 1941-42	72,607,777	107,581,658	180,189,435
Coast defence, guards for vulnerable points, and other active functions in Canada of an operational nature	4,351,785	63,941,763	68,293,548
National Defence Headquarters and district services, and miscellaneous active army units in Canada.	2,365,200	26,919,270	29,284,470
Training and reinforcement functions in Canada, active army and National Resources Mobilization Act	5,322,496	50,316,874	55,639,370
Reserve army, C.O.T.Cs. and reserve units of Veteran Guard of Canada	9,716,645	9,470,318	19,186,963
Civilian personnel	.....	2,330,000	2,330,000
Contingencies, items not covered in other functions.	8,150,000	3,320,000	11,470,000
Revotes of funds already committed	35,997,699	10,750,000	46,747,699
Training equipment not provided elsewhere	170,000	155,000	325,000
Totals	$145,063,984	$521,510,675	$666,574,659

Mr. HANSON (York-Sunbury): When the minister uses the term "recurring", is that analogous in a measure to capital expenditures?

Mr. RALSTON: No, it is the other way about; the "non-recurring" would be capital. "Recurring" would be pay and allowances and maintenance and things like that.

That, Mr. Chairman, is the part of the total of $1,300,000,000 which it is suggested may be needed for the army services during this year. As I have said before, and as my colleague the Minister of Finance has repeated, it is made up on the basis of an estimate; it is the best we can do; all sorts of things may happen between now and next year to change it, but I have endeavoured to give an outline of what we have planned for this year provided eventualities which we cannot foresee do not take place overseas.

Mr. HANSON (York-Sunbury): That is an illuminating and informative statement, and I thank the minister for the information he has given. To make it complete, I would ask his colleague the Minister of National War Services to give us, if he can at this time, the position with respect to university students.

Mr. GARDINER: The regulations having to do with the calling up of the men for training are, as I said the other day, in course of preparation. I went over them for the last time this afternoon, and I hope they will be in the house very shortly.

Mr. HANSON (York-Sunbury): They are not ready to-night?

Mr. GARDINER: They are not ready to-night, but, generally speaking, the position in relation to university students, as I remember the regulations, is to this effect, that university students will be admitted to the universities for courses that are being prepared by the authorities in cooperation with the Department of National Defence, and will be given approximately 110 hours training during each term of their university course. The students will be required to take two weeks training during the summer months. That period will be considered as equal to one month of training; in other words, if a man is at the university for three years he would get three months training while in the university and would be required to take another month outside the university to make up his four months.

That would be for the type of student who will probably stay at the universities throughout a considerable period of the war for the purpose of finishing courses considered necessary in connection with war activities. Other students will, of course, make the choice whether they will take their four months training in the summer months; some will prefer to do that.

Mr. HANSON (York-Sunbury): They will have the right to choose?

Mr. GARDINER: They will have the right to go to camp provided they can be called at that time as part of the age group. Some will perhaps be over-age and would not be called in any case, but will continue to take their university training. The universities are putting on compulsory training in connection with the courses just as at the time of the thirty-day training.

I think in general terms those are the provisions, but the regulations will be brought down in a few days.

Mr. MACDONALD (Kingston City): This afternoon there was some discussion in the committee as to titles and decorations in the services. I think some hon. members expressed the view that many people felt that Canadians in the Canadian fighting services were not as happily situated with regard to the receipt of decorations for gallantry as their comrades from Australia, New Zealand and Great Britain herself.

I should like to read to the committee a dispatch that has just come in, for which I am indebted to the Canadian Press. This serves to illustrate the point which I think the Prime Minister endeavoured to make. The dispatch states:

> Lieutenant Commander Herbert Sharples Rayner, Canada's youngest commanding officer of a destroyer, who has spent nearly half his thirty years at sea, was awarded the distinguished service cross to-night for "courage and enterprise in action against enemy submarines."
>
> Commander Rayner was one of six Canadian naval heroes honoured in the latest list of awards published in the London *Gazette*.
>
> The distinguished service cross was also awarded to Lieutenant Robert Philip Welland, Royal Canadian Navy, for the part he has played in attacks on nazi submarines.
>
> The other Canadians honoured received the distinguished service medal: Stoker G. Beaman, R.C.N.V.R., for courageous conduct on H.M.S. *Jervis Bay* in her gallant losing battle against a convoy raider; Petty Officer Samuel Archibald Ridge, Able-Seaman Edgar Réné George, Able-Seaman George Fowler Bowditch, R.C.N.

These last three were decorated for anti-submarine work.

I read this dispatch because I am sure hon. members will be delighted to have the news and also because it illustrates that in the matter of awards for gallantry in the face of the enemy there is no distinction between one part of the empire and another.

Mr. RALSTON: If I might, I should like to join with the minister in congratulating all these young Canadians who have received these awards. I was particularly happy to hear of the award to Lieutenant Commander Rayner, who, I think, was the last naval officer I saw before embarking for home. I saw him, as they say, at a northern port, and had a delightful experience with him. He was one of those who told me some of the experiences to which I referred in the house this afternoon. I am sure he is a most gallant officer.

The hon. member for Rosedale asked for information with regard to the Canadian officer training corps, and I have been given some information with respect to at least one part of his question. He was really asking, I think, how the cadet in the officer training corps got that training, while this information has to do with what is accepted as training in the ranks, but it all goes to the question of the qualification of a cadet in the officer training corps. A Canadian officer training corps cadet serves in the ranks of his O.T.C. unit usually for not less than six months before being permitted to qualify for a commission, through examination, which includes from two to six weeks at the eastern or western officer training centre. What is

being said here will apply when these officer training centres are established. This also qualifies him for taking a commission in the active army provided he has taken the full six weeks' course, or equivalent, at the officer training centre. Those already holding certificates of qualification for officer rank may be exempted from the above conditions. Perhaps this last sentence will answer my hon. friend's question.

Mr. STIRLING: May I make a brief reference to what was just said by the Minister of National Defence for Naval Affairs. It is extremely gratifying to us all, of course, that his majesty has been pleased to decorate the officers and men to whom the minister has referred, but the point I was endeavouring to make this afternoon has not been met by the statement of the Prime Minister or that just made by the naval minister, in that these awards were made to those who had exhibited bravery in the face of the enemy. This afternoon I drew attention to the fact that the personnel of Royal Air Force and Polish squadrons did receive recognition for work done, not in the face of the enemy but in the preparation of the machines that have to go out and meet the enemy. Is there any difference between the methods adopted in Great Britain and those adopted in Canada and the other dominions in that regard?

Mr. POWER: If my hon. friend will permit me, after looking through my files I think perhaps I can give him some kind of reply, although I do not want to take up the time of the hon. member for Davenport (Mr. MacNicol).

Mr. MacNICOL: That is all right.

Mr. POWER: Perhaps I am the only man in the house at the moment who was present during the debate in 1919, when the whole question of honours, awards, titles of chivalry, knighthoods and so on was thoroughly canvassed in this house. The matter was brought before the House of Commons by Mr. W. F. Nickle of Kingston, who was supported strongly by the then Liberal-Unionist member for Springfield, Mr. Richardson. That matter was referred to a committee, and I have before me its report, including the recommendation to the house that there should no longer be any awards carrying with them titular distinction. Another specific recommendation, which as I recall it was adopted, was this:

Your committee are of the opinion and recommend that an address be presented to His Most Excellent Majesty the King, in the following words—

I do not want to read it all.

—to refrain hereafter from conferring any title of honour or titular distinction upon any of your subjects domiciled or ordinarily resident in Canada, save such appellations as are of a professional or vocational character or which appertain to an office.

The committee also recommended that appropriate action be taken by legislation. The suggestion also was made that the titles "right honourable" and "honourable" be discontinued, but that suggestion did not meet with the approval of the House of Commons.

Mr. HANSON (York-Sunbury): That was put on record this afternoon.

Mr. POWER: The report goes on:

Your committee, however, do not recommend the discontinuance of the practice of awarding military or naval decorations, such as the Victoria Cross—

And so on. This practice was followed up to 1934, when the government of Right Hon. Mr. Bennett declared that the resolution of the House of Commons was not binding. On April 9, 1940, order in council P.C. 1430 was passed, respecting awards to members of the armed forces of Canada. The order in council states:

1. The question of awards and decorations, medals and commendations, to Canadians, in respect of war services, was raised in certain communications from the high commissioner for the United Kingdom in Canada. . . .

Immediate action needs to be taken to extend the instruction dated the 22nd December, 1939, with respect to Canadians serving as members of United Kingdom forces so as to include all awards of decorations, medals and commendations, including those which are made while not in contact with the enemy. . . .

Mr. HANSON (York-Sunbury): That is Canadians with the Royal Air Force.

Mr. POWER:

4. Immediate action is necessary to make provision for awards to members of Canadian forces temporarily attached to United Kingdom forces.

Those are two categories.

5. It is expedient that provision should be made for dealing with the general position of members of Canadian armed forces, including attached personnel, along the general lines set forth in the report of the committee, to which reference has been made.

The Minister of National Defence at that time, the late Mr. Rogers, therefore recommended:

(1) That the government of the United Kingdom be informed that, in the case of Canadians who are members of the United Kingdom armed forces and not, at the same time, members of the Canadian forces—

They would be covered.

—and, in the case of individual members of Canadian forces, temporarily attached to United Kingdom forces—

(2) That in the case of members of Canadian armed forces, including personnel of other forces attached thereto, a submission should be made through appropriate channels—

That is, for awards.

(a) All awards of medals and decorations are to be made by, or in the name of, the king.

Then we go on:

(a) C.A.S.F. (including attached personnel) serving in France and acting in combination with United Kingdom forces—

They get immediate awards upon recommendation of the commander, and also periodical and operational awards. In the case of the R.C.A.F., including attached personnel, serving in France and acting with the R.A.F., the same procedure is followed.

(c) C.A.S.F. (including attached personnel) serving in United Kingdom, but not acting in combination with the United Kingdom forces. In the case of both immediate awards and periodical and operational awards, recommendation would be transmitted by the officer commanding the Canadian troops in the United Kingdom through Canada House to the Minister of National Defence for decision by council.

(d) R.C.A.F. (including attached personnel) serving in the United Kingdom, but not acting in combination with the R.A.F. . . .

(e) C.A.S.F. and R.C.A.F. (including attached personnel) serving in the United Kingdom and acting in combination with the United Kingdom forces. . . .

(f) Canadian Active Militia and R.C.A.F. (including attached personnel) serving in Canada.

Therefore almost every category, so far as I have been able to judge by a rapid examination of this order in council, is covered to a certain extent.

Mr. HOMUTH: But there was a limitation.

Mr. POWER: Yes; certainly there is a limitation. There is a limitation on orders carrying titular distinction.

Mr. HANSON (York-Sunbury): Under the term "awards for valour" it would seem that they have to be referred to Canada.

Mr. POWER: Yes. The difficulty appears to be—and I believe it can be readily clarified—in finding the proper channel, whether on the other side or here, through which these recommendations would be made. So far as I am aware, however, there is not at the present time anything to prevent a person serving in Canada, who performed a meritorious service, from obtaining, for instance, the George Cross for gallantry. Where I think possibly there is a difference—and I am not quite clear in the matter, and would not like to make a definite statement, is in respect of awards for meritorious service not in the face of the enemy, which awards might carry with them one of the lower titles, or a title to a lower order of chivalry. Possibly I might describe it as a lower grade title in one of the orders of chivalry.

Mr. STIRLING: Such as O.B.E.?

Mr. POWER: I imagine an O.B.E. could be granted in Canada.

Mr. HOMUTH: I do not wish to interrupt, but in view of the fact that these awards are made by his majesty, how would someone earning a meritorious award in Canada get that award from his majesty, unless there was some means of communication or recommendation from Canada?

Mr. POWER: I think that means of communication exists, although possibly we have not gone through the procedure.

Mr. HANSON (York-Sunbury): We have not exercised it.

Mr. POWER: I have no doubt at all that if it were decided by a commanding officer or a general officer commanding or a chief of staff that someone should be recommended for recognition for gallantry in Canada, some deed which normally at this time on the other side of the ocean would bring the George Cross, that recommendation would come through the usual channels to the minister, then to council, and then from council through External Affairs to the proper authorities on the other side.

Mr. HANSON (York-Sunbury): It would be only a matter of procedure.

Mr. POWER: Yes; to my mind it is only a matter of procedure.

Mr. HOMUTH: Why could Canada not establish her own orders?

Mr. POWER: I am glad my hon. friend has brought that up. I thought the information in connection with that point might be of interest to the committee. I had to look it up on one occasion, and I came across information which I believed would be of interest at this time. Away back in 1866 Viscount Monck in a dispatch to Lord Carnarvon, discussing the state of loyalty or otherwise of the provinces, suggested that it might be a good thing to found a Canadian order of chivalry. I should like to quote:

The want of the material in a new country for creating an hereditary aristocracy is one of the great difficulties in the way of applying the institutions of the British constitution to our colonies, and yet, without this or some substitute for it, we are in fact training up the minds of our colonists not to the ideas of monarchy but of republicanisms.

Then he goes on to discuss the whole matter, and concludes:

The plan which I would suggest for your lordship's consideration to meet the want to which I have referred would be the institution

of an order of knighthood for British North America on the model of the Order of the Star of India, to be called "the Order of St. Lawrence."

This matter was still further discussed no longer ago than during the course of the last war. Some of my hon. friends will recollect that there was in England a sub-militia council set up under the jurisdiction of the minister of militia of that day, Sir Sam Hughes. The members of that council were:

Major-General J. W. Carson,
Major-General J. C. MacDougall, C.M.G.,
Brigadier-General F. S. Meighen,
Colonel George P. Murphy,
Colonel Frank A. Reid,
Lieutenant-Colonel James G. Ross,
Major G. D. Oulster, Secretary.

Colonel McRae appears to have been a member of it at one time, also.

We also find here a minute from the meeting of the acting sub-militia council for overseas Canadians, held at Cleveland House, St. James square, London, on September 8, 1916. It reads:

Correspondence in connection with creating a Canadian order along the lines of the Order of the Star of India was brought up and discussed at the meeting, and it was moved by General Carson and seconded by General MacDougall that General Carson should write the Hon. the Minister of Militia and Defence, Canada, stating that the sub-militia council would recommend that he, the hon. the Minister of Militia and Defence, consider the question of creating a Canadian order after the style of "The Star of India" and with just as strict regulations and rules. This order to be known as "The Order of the Beaver and Maple Leaf" or, "The Star of Canada."

Therefore I am glad my hon. friend gave me an opportunity to put on *Hansard* what has happened before with respect to the desirability of establishing in Canada an order of chivalry. I have not any doubt whatsoever but that means will be found to reward gallantry while in the face of the enemy, or in the course of active duty. With regard to the matter as to whether or not Canada should recommend to his majesty that we have orders of chivalry, I must say that I believe that this is a matter of higher policy to be settled probably in this house.

Mr. MacNICOL: I, too, wish to congratulate the Minister of National Defence on the comprehensive report he has given to-night. I am sure all hon. members will read it with a great deal of interest, and perhaps after reading it they will be in a position to ask for further information, which I am sure the minister will give.

I was also pleased to hear the remarks of the Minister of National Defence for Naval Services, and the Minister of National Defence for Air.

An article which appeared in the newspapers to-day relating to shipping prompts me to attempt to take the debate back to the discussion of a subject which was discussed at great length yesterday, namely, the subject of shipping. The article to which I refer stated that some twenty-nine ships, approximately 150,000 tons, had been sunk during the last week. To give an idea to hon. members of just what a colossal loss that is—and perhaps it is not greater than the loss we may suffer in the future—I would point out that in Canada to-day we are producing daily about 1,500 net tons of pig-iron, all in Ontario. A loss in one week of 150,000 tons is equivalent to the pig-iron that could be produced in this country in one hundred days. This gives us an idea of the menace we must provide against in these shipping losses.

Mr. MARTIN: That is a compelling illustration.

Mr. MacNICOL: I think it should take us all back to the subject before the committee, that is, what we can do to prosecute this war and to maintain the empire. Our shipping is of vital importance. The question is what we can do in the way of building ships in Canada. Yesterday we heard a number of good speeches on shipbuilding, one by the hon. member for Vancouver South (Mr. Green), one by the hon. member for Shelburne-Yarmouth-Clare (Mr. Pottier), one by my leader (Mr. Hanson) and one by my desk-mate, the hon. member for Royal (Mr. Brooks).

I am not competent to speak upon the matter raised by the hon. member for Shelburne-Yarmouth-Clare. He referred to ships built partly of steel and partly of wood, and he states it is practicable to build this type of ship. If that is the case, then here is one way whereby ships can be built in large numbers on both our east and west coasts. There timber is available. My leader referred to a rolling mill in Nova Scotia which is not now in use. I assume this is due to the fact that all the steel production is under contract to the British government and is being shipped there just as rapidly as it is produced.

I do not know whether the Nova Scotia Steel company is able to obtain all the iron ore they require from Bell island, Newfoundland. I have been at Bell island and have seen how they take out iron ore from under the sea. They have good equipment for loading and are able to turn out many thousands of tons. If there is not sufficient iron ore available from this point, there are said to be ample supplies in the Hamilton river district in the Labrador. These are some of the best

deposits to be found in the world but they are still undeveloped. If the war continues for years, as it may, it may be found necessary to reopen the plate mill in Nova Scotia. If there is not sufficient ore available from Bell island, I would advise the government to consider obtaining supplies from the Hamilton river deposits.

Something has been said about building ships on both east and west coasts and numerous references have been made to Ontario. I see no reason for conflict between the east and the west and Ontario. We are nine provinces all united to do our best for Canada, and through Canada for the empire. It is quite true that steel plate is rolled only in Ontario, in one mill in the city of Hamilton. That mill has two large rolls and it is able to turn out steel in large quantities. I take pride—perhaps I should not—in the fact that in 1930 or 1931 I advocated in this house a duty on steel above 40 inches. This was to encourage the Hamilton mill to roll steel up to 78 inches. I believe the government of the day did protect steel up to 66 inches, and the Hamilton mill itself undertook to roll up to 78 inches. Later on, I believe they considered rolling up to 120 inches.

I am sure the fact that this steel is rolled in Hamilton has been of great help in our shipbuilding programme. There will soon be another mill opened in Hamilton, I believe in May. This mill will roll 40 inch plate, but this is the material used in constructing the smaller steel ships such as corvettes and so on. The minister has announced that some eighteen or twenty cargo ships are to be built in Canada, and then we have the statement in the press to-day that twenty-nine cargo ships were sunk in a week. I am convinced that this government should undertake to build, not eighteen cargo ships but 100 or 200. If the war lasts, as it apparently will, it will be imperative that we have ships. So far, the shipyards in England have not been destroyed. Most of them are located on the Clyde, Humber and Tyne, in the south of Scotland and the north of England. Perhaps it has been difficult for planes to fly that far with a heavy enough load, but it will be a sad day when they are able to do so and perhaps destroy these shipbuilding yards. Therefore it is all the more imperative that Canada should get into the shipbuilding business of both coasts. There are shipyards at Vancouver. Much of the steel used in these yards is shipped from Chicago, the plate rolled in Ontario being used there, too, and elsewhere. When the new Hamilton mill is in operation, I assume that a lot of plate produced there will be shipped to Vancouver.

[Mr. MacNicol.]

Mr. GREEN: There are yards at Victoria as well.

Mr. MacNICOL: I should have said British Columbia, because there are shipbuilding facilities at New Westminster and Burrard. The government should consider what has been said by hon. members for Nova Scotia and New Brunswick as well as by the hon. member for Vancouver South. Efforts should be made to build ocean cargo ships in both the east and the west. I might be asked, "Why not Ontario?" I do not believe that ocean cargo ships can be built economically in Ontario, and I have never advocated anything which was not economically sound. During the great war I understand a number of cargo ships were built in the vicinity of Detroit, then taken apart, shipped overland and reassembled, I believe in Florida. That would not be economical. If the government is planning to build cargo ships, they should be built in the east and the west. These ships can be built there and these provinces should be given something. I am not at all in accord with the idea of concentrating everything in one part of Canada.

I think the Ontario industrialist deserves unstinted praise for what he has done in this war by way of providing plants to build the equipment required in these ships as well as to produce other war munitions. Engines for ships are being built mainly in Montreal. At the present time the government is building three types of ships for war purposes, and it is now contemplating constructing ocean cargo boats. I repeat that these ocean cargo boats should be built on the Atlantic coast and on the Pacific coast. At least part of the steel will be rolled in Ontario and a lot of the other equipment can be provided by that province. In Ontario, as well as in other parts of Canada, the government is building fast power boats to provide protection against submarines and for other purposes. Quite a number of these will be built in the towns of Muskoka. Some will be built, I believe, on the western coast, at Prince Rupert and other centres, and perhaps some on the eastern coast. These are power boats, I understand, about 110 to 115 feet long.

Mr. MARTIN: There is some development at Owen Sound, is there not?

Mr. MacNICOL: These power boats go very fast. Then, in Ontario we are building corvettes and mine-sweepers. I have made a careful investigation in connection with mine-sweepers. Although the Minister of Munitions and Supply is not in his seat—he is working about twenty-four hours a day, doing several men's jobs, and we cannot expect him

to be here every minute—no doubt he will read what I am going to say and will, I believe, appreciate that for the building of mine-sweepers, steel is rolled about 54 and 56 inches wide, but upon arrival at the mine-sweeper plant it has to be sheared to 51 inches. I would suggest that if it is necessary that the government ship mine-sweeper steel, which is for the sides of the ships, east and west, it be sheared to the right length and width right in Ontario, because the extra freight is a big item to-day, and every possible dollar should be saved in construction and equipment. This is an all-out war. Not only will it take all our man-power, but it will take all our money besides.

I am glad to see that the Minister of Munitions and Supply is coming into the chamber. I have said, that I had not expected him to be here because he is doing so many men's jobs, and he cannot be here all the time, but I am pleased that he has come in to hear something which I have been thinking. Even in the building of cargo ships, but more particularly in the building of corvettes and mine-sweepers, if the plates were shaped and drilled according to templets instead of one at a time, if the government would say to a particular producer of ships, "we want you to erect fifty corvettes and fifty mine-sweepers", that would mean that in each case a large number of plates for the sides of these ships could be produced much more rapidly than is possible with only small contracts. I know, because I was for years in the boiler business, manufacturing boilers using steel of large dimensions, and in my time the individual plates for six boilers would be punched and drilled at the same time, very rapidly, and another six put on the same machines and so drilled. Perhaps 200 holes for rivets, more or less depending on the size of the plate, were made in this manner.

What I have seen of present production is not being carried on in that way, and I thought that in the reshaping of the minister's programme, as will probably be done when it is realized that the war will last for years, the minister should say to some one of these builders, "here is an order for fifty corvettes," or, "here is an order for fifty mine-sweepers," so that the producers could make them for less money than would be possible if they had just a few orders; they could so organize their production as to manufacture plate for the sides in multiple production. It could be done.

In like manner if, instead of a long time being taken to bend and shape the plate around, they could make the templets and the dies to produce the plate also bent in shape, as is desirable for multiple and rapid construction, considerable economies could be effected, but we could not expect them to do that if their plant received an order for not more than four or five ships; it would cost too much to make the necessary templets and dies. I have confidence in the minister to this extent, that if and when he decides to build ships in large numbers he, understanding thoroughly the production of these appliances, might induce the companies to manufacture under conditions of multiple production, as was done in the last war. In the United States ships were turned out almost as rapidly as sardine cans. All plates for particular parts of ships were made at the same time for scores and scores of vessels; and we shall have to get into that system too. That would apply to corvettes and mine-sweepers, and to other equipment.

I have heard some people condemn our shipbuilding programme as being behind schedule. I have heard the Minister of Munitions and Supply and the Minister of National Defence for Naval Services say that it is ahead of schedule. I doubt if it is, but I am not going to blame either minister on that account, because everybody who studies these things knows that after the battle of the Mediterranean it was necessary to make considerable changes in the designs of ship fittings.

The dropping of bombs by the German Stuka dive bombers alongside the ships rocked the *Illustrious* as though it were a cork in the water, and the effects were discovered when it reached Malta. It was learned on examination of the *Illustrious,* and by the effects of bombing on the cruiser which was sunk by the British themselves, what would have to be done in future interior construction. I will not elaborate on the effects of the bombs which had dropped all round the ship as well as on top of it; but after these ships had been shaken as the *Illustrious* was shaken by these tremendous bombs, engineers made a careful survey and found it necessary to recommend some changes in interior construction. I am not going to ask the minister to say that such changes have been carried out here, but if there has been any delay in the production of corvettes—I know that some have been launched—or of mine-sweepers, perhaps that is one of the reasons. Such a reason would carry weight with me. I am not going to condemn the minister if production has been retarded because so many things have entered into the construction of ships for the sea since the war broke out, and since engineers have surveyed what has happened to some of the boats which have been exposed to enemy action, changes have had to be made. I am sure I am right in that regard.

But, changes having been made, production should proceed rapidly. I have not any doubt that in due course, with yards organized east and west, as well as in Ontario, production will increase. In any event, this house, I am sure, will support the government, because party politics is not worth a fig in war time. It is an all-out war; we here are all Canadians and all British to assist in fighting this war; and if 100 million dollars are required to equip the yards and the mills. I for one, and I am sure everyone else, would be glad to vote whatever is required, because if we win the war we save all, and if we lose the war we lose all. We might better lose a lot in winning the war.

I think that is about all I have to say, except for one thing of which I have spoken before; I should like to say a word about it to the minister again. Adjacent to Windsor there is a big plant. It has its blast furnaces; there is a railway from the river to the plant, and there is a canal alongside built by the company up to the steel plant. It is a huge plant; I have been in it and so have others. But it is now being used for a purpose for which it was not built; it is being used in part for small affairs connected, I believe, with machine guns of one kind or another. It is essentially a steel plant and a shipbuilding plant. I am not able to say who owns it, but I believe it is the Walkerville company—

Mr. MARTIN: No; it is owned by Dominion Steel. The hon. member is referring to the Ojibway plant?

Mr. MacNICOL: Yes.

Mr. MARTIN: It is an excellent plant.

Mr. MacNICOL: Yes, a huge plant with a great deal of good machinery in it which should not be used for the purpose for which it is now being used. It has its own blast furnaces. They may need repairing, because I do not know whether they are up-to-date blast furnaces. Changes are necessary from time to time. But I cannot see why that plant is not in operation for the purpose for which it was erected.

I hate to throw any further load upon the shoulders of the minister. He is already burdened with machine guns, aeroplanes and everything else; he is carrying a terrific, tremendous load, and I wish to help him instead of adding still further to his burden. I desire, however, to impress upon him the importance of building ships. I do not want to say it is the one vital problem before us, but we simply must get troops to England; we must transport vast supplies of war munitions—and as a matter of fact we are shipping trainloads of materials now. On Sunday I saw a trainload of shell lathes which would turn out nine-inch shells in either four or eight minutes. I believe the time is four minutes. A fourteen-year-old girl can turn out a nine-inch shell in that space of time on these new, high-powered, high-speed shell lathes, which had so much to do with saving England. Shell lathes are made in Toronto and elsewhere, but the one I have in mind was made in Toronto. I said a trainload; I believe there were ten cars of these great machines ready for export, and it is essential that they should reach England. It is essential that our guns and everything else, our pork, our wheat, our farm products, should reach England; and they must go in ships. In my judgment, therefore, the minister will find shortly that the whole shipbuilding programme will have to be revamped with the objective of perhaps making it one hundred times bigger than it is to-day. Yards for building ocean cargo ships at Saint John, Halifax, Sydney and anywhere else where plants of that kind can be erected—someone says Miramichi, but I presume any ships built there would have to be wooden ships—Vancouver, Burrard, Victoria and elsewhere, will be necessary to develop the plan. It is a big programme.

I want to do what I can to assist the minister, because we must win the war. All this material is urgently required, considering the rate of losses, twenty-nine ships last week. How long can we stand it? We could equip the country to build twenty-nine ships a month. They did in the United States in the last war, and perhaps we could do it now if we all got together and built the necessary plants.

I am sorry for the Minister of Finance, who has to endeavour to raise so much money, but Canadians will support him in raising whatever is demanded. There are no more loyal British subjects in the world than Canadians. They are all-out in this war and will go the limit; and, as far as I am concerned, I would sooner give all I have, whatever little it may be, for the honour of my country, and die if need be, than lose the war.

Mr. HOWE: It is always a delight for me to hear my hon. friend the member for Davenport (Mr. MacNicol) discuss matters of this kind. He is a well informed and practical man and he adopts a kindly tone. Unfortunately, I did not hear his opening remarks. I can hardly credit it, but someone told me that he made a slight slip when he compared tons of steel with tons of ships.

Mr. MacNICOL: Oh, no, I did not say that. I said that we are at present producing in Canada approximately 1,500 tons of pig-iron a day, produced by the Algoma plant,

the Helen mountain mines, and I pointed out that there are being sunk on the ocean ships representing a displacement of 150,000 tons a week, not a day. The article this morning said about 148,000 tons, but I said 150,000 had been sunk during the past week, so as to give round figures. With regard to building ships to take the place of those that are sunk, assuming that the ships themselves aggregated 150,000 tons, it would take one hundred days to produce the iron for the purpose.

Mr. HOWE: A deadweight ton, of course, does not take a ton of steel, but much less, depending upon the size of the boat. I just wanted to call attention to that fact, because I found my hon. friends equating tons of steel with tons of ships, and I am sure my hon. friend did not mean to imply that that would be done. He must, however, realize the position of the Department of Munitions and Supply when he speaks of an unlimited number of corvettes. We build to fill orders, and in the matter of corvettes, of course, I suppose the number of crews that can be furnished is the determining factor. We cannot go full-out on an unlimited number of corvettes unless either our navy or the British navy indicate that they require them. What we are going full-out on is the matter of cargo ships. They are a different story, and we can go full-out there and in the meantime fill all orders, having substantial orders for corvettes and mine-sweepers.

Our policy there is to plan a long-range programme for corvettes and mine-sweepers for the lakes, for the reason that we cannot get a cargo ship out of the lakes, and therefore these shipyards are not available as far as the larger boats go. We are, however, directing our efforts more and more to get a large boat programme for the lower St. Lawrence and coast yards. We intend to press that as far as we can. The difficulty then becomes a matter of man-power. It is not difficult to organize a shipyard. The capital cost is not large in comparison with output, but the matter of getting a skilled crew to man the shipyard is extremely difficult, and we were warned in England not to undertake that if it meant stripping other yards to get personnel, which is what it would mean in Canada to-day.

We are approaching cautiously, studying the problem to see how far the structural steel companies can assist us, and I can say that we are advancing in that just as rapidly as prudence will permit.

As far as the Ojibway plant of the Dosco company is concerned, that has been studied carefully. The blast furnaces are old. They have been out of use for about twenty years, and it was found that we would be better off if the furnaces were not there. They would have to be completely rebuilt. The capital cost is very high and the time involved is an important factor. The best estimate we have had on time is about two years.

It is a question how far we should go in extending the steel capacity of Canada. We had at the beginning of the war a theoretical capacity of about 2,200,000 tons of steel per annum. We have expanded that by 500,000 tons. Whether we should go further than that, I think is a matter that deserves careful study. We normally import in good times about one million tons of steel from outside Canada. From a study of the situation it would appear that for our present programme of war requirements we shall not require to import more than a million tons of steel a year in addition to our capacity. That may vary from time to time, but that is the present forecast. To arrive at that figure we planned a curtailment of the domestic use of steel, and we have been enforcing that curtailment for the last six or eight months. I see no harm in curtailing the domestic use of steel; in fact, I think our programme will more and more tend towards curtailment of domestic use of all materials that go into munitions of war; that is a logical development in putting the country on an all-out war basis.

We have determined that we are protected for one million tons per annum of steel from outside Canada. How far we should go in disorganizing the normal economy of Canada by expanding the steel industry beyond the point we have reached is a matter that is receiving careful study. There is a good deal of sound opinion in the direction of not expanding further at the moment.

As I said, however, we are going all-out on ships. We are going to build as many ships as we can build by reasonably sound economic methods. We are studying mass production methods in use elsewhere. They were developed to a small extent late in the last war at Hog island, but it did not continue long enough to bring the mass production theory into practice. It is being attempted again in this war and we are watching the procedure carefully to see to what extent it can be adapted to Canadian use.

I make these few remarks to indicate to the hon. member for Davenport that we are proceeding along the lines he suggested.

Mr. HANSON (York-Sunbury): I should like to ask the minister a question regarding costs. Unfortunately, I had to leave last evening before he finished his remarks. I gather that he said that the cost of construction of steel vessels in Canada is about double that in England. Is that substantially

correct? I had investigated that at one time, when we built the "Lady" boats for the West Indies service. The then Minister of Trade and Commerce, Mr. Malcolm, told me and I think he told the house that they gave consideration to the construction of those ships in Canada but found the cost would be about one-third more, and therefore they decided to have them built in England.

Mr. HOWE: On a 10,000-ton boat, a type which, of course, has been built in England for some time, they have a standard practice, and I suppose they have written off the overhead for getting into that style of production. The price which our shipbuilders here require to produce the same ship is at the moment about double the price in England. We hope to get it down. I am sure the next lot of ships will be cheaper; that is the history of all production.

Mr. MAYBANK: I wish to direct the attention of the committee to something of a quite different nature. We have for some little time been dealing with moneys heretofore spent. I want to deal with a question which I think may be described as one of present waste, serious waste and extravagance. I refer to one of the government's companies. I do not desire to leave the committee in doubt for a moment, so I say that company is Allied War Supplies Corporation. I am starting a conversation which will perhaps be rather in the nature of question and answer.

I remind the committee that near Winnipeg there is just now being brought into being a very large cordite plant. The expenditure, as has been mentioned several times, is in the neighbourhood of $10,000,000. As I understand the situation, the contract for the building of that contract is let by Allied War Supplies Corporation, and then the plant is to be operated by another company which we call D.I.L., Defence Industries Limited. That company, I understand, is simply Canadian Industries Limited, organized for convenience under the name D.I.L. Convenience, I say, because they are doing quite a bit of contract work and it is easier to have all that work carried on by this separate company. I am not sure if I have that exactly correct, but I believe it is very close to it.

That large cordite plant will require a great deal of steam. To produce that steam will require a great deal of coal. When they invited tenders they let it be known that they would need about fifty thousand tons of coal a year. Apparently at that time they were considering all kinds of coal.

We have in western Canada a certain field known as the economic field in which lignite coal can be burned. Roughly speaking, I believe it runs from Swift Current to Kenora. At any rate, whatever the area be, Winnipeg is certainly within it. No one would, I believe, suggest that Edmonton or Sudbury is. It is, as I understand it, a question of freight rates.

Allied War Supplies Corporation has had a number of prices submitted. It has apparently decided to take what it admits to be the more expensive kind of fuel rather than the less expensive kind. A variety of reasons have been given; I do not think any of their reasons are satisfactory, and they are not consistent one with another. I am not blaming the minister in this connection; I think most hon. members will agree that this way of handling government business is, generally speaking, pretty sound. At the present time, however, this organization is embarking upon a method of providing at that plant steam which will cost $100,000 or $200,000 more per annum than it should cost. There is no need to waste public money in that way. This organization is just as much a trustee of public moneys as is every member of this house, every member of the government and every other person engaged in our war effort. A very large part of the money to be provided under this legislation will be handled by this corporation, which I say is now embarking upon a wasteful plan of creating steam for that plant.

Perhaps I would not be quite so sure of this, were it not for the fact that they have given so many different explanations as to why they will not burn lignite coal. At one stage, for instance, they said the supply was not dependable. I talked with the engineer who made those recommendations. He boiled it down substantially to that one proposition, the dependability of supplies. Well, the one coal that they can get for about 75 cents a ton at the mine is only two hundred miles from Winnipeg, and there is rail connection by both railways. This engineer kept on talking about the dependability of supply, but he recognized and admitted that this coal could come in steadily, hour by hour and day by day. He tried to raise certain other objections against the use of lignite coal and then, after all that argument and after stating that he could not use lignite coal at all, he suggested the possibility of using 40 per cent of the cheaper coal. First, it was stated by this engineer and by other members of this corporation that they could not use this coal at all, that it was not a feasible proposition; but before very long they were saying they could use 40 per cent, and I understand that now they have increased that percentage substantially.

I might be willing to withdraw the first charge I made, that they were entering upon

this extravagance, if I could believe their statement that they are going to use a large percentage of lignite coal, but everything points to the fact that they are simply saying they are going to do this while they know full well the equipment they are putting in that plant will not permit them to do it. I charge that this organization, the creature of this parliament, is simply playing horse with the minister. These people are telling him they are going to do something which they really do not intend to do. I recall that this same organization undertook to install equipment in a large plant of the Winnipeg hydro for burning lignite coal. They have never burned an ounce of lignite from that day to this. They equipped our plant in Winnipeg for the burning of lignite coal, but they have never burned any of it, and they did that for the same purpose that I am protesting against now.

There has not been an important plant in that economic lignite area equipped in recent years to burn anything but lignite coal. No new equipment has gone into any plant except to burn this cheaper coal; but now in war time when taxes are heavy and are going to be still heavier, a creature of this government undertakes to do something in the more expensive rather than the less expensive way. I believe their plea now is that it is too late to change, that they have committed themselves. I do not think it is too late; I believe money can be saved if they will alter any decisions they have made heretofore. I should like to have on record any explanations there may be, and I want to serve notice that every undertaking given by this organization will be watched most carefully, not only every day of this year but every day they are out there. I do not believe they are going to do what they are promising. They are going to do what they originally intended to do; they are going to produce steam at a cost of $100,000 or $200,000 greater than it should be. That is what they will do unless they are prevented.

Mr. HOWE: Since D.I.L. and C.I.L. have been mentioned, perhaps I should explain the situation. I think the reason for the two companies will commend itself to the committee.

As hon. members know, firms engaged in the manufacture of explosives during the last war, such as du Pont, Hercules and perhaps Canadian Industries, were accused of profiteering. Those accusations became so numerous that they had quite an effect on the domestic business of these companies. Canadian Industries Limited, du Pont and the other companies which make explosives, also have very large peace-time businesses which, I think, are conducted on excellent business lines and which, I believe, they have a right to segregate from their war work. Canadian Industries Limited wished to make their explosives experts available to the government's war effort, and wished to do a real war job; but at the same time they wished to keep their peace-time industry separate from that war work. As a result, they formed a separate company called Defence Industries Limited, which takes and executes all war contracts drawing on the technical skill of Canadian Industries Limited. In this way, all war profits are in the one company, Defence Industries Limited, where they are subject to taxation, to examination and to audit, and are entirely under the control of the government, while on the other hand C.I.L. keeps entirely to its peace-time pursuits.

I think that is quite commendable, and I should like to make sure that the committee does not draw any wrong inference from the fact that Defence Industries Limited, a new company, is handling the war work. I may say that we have engaged Defence Industries Limited as our experts on explosives. We have drawn on their technical skill to design and also to operate explosive plants. Our explosives and chemical programme is, however, in the hands of Allied War Supplies Corporation, headed by Mr. Harold Crabtree, a chemical engineer with a wide business experience in Canada. He happens to be the president of the Canadian Manufacturers association, and a man in whom industry in Canada has a great deal of confidence. We have associated with him some seven or eight business executives, who also are highly respected in Canada for the efficiency of the operation for which they are responsible.

Mr. HANSON (York-Sunbury): Serving without remuneration?

Mr. HOWE: Yes, all serving without remuneration. Mr. Crabtree is giving his full time; in fact, I think he is giving about two days in one, and has been doing that since he received the appointment.

I believe the country will recognize the excellent work these men have been doing in working out our chemicals and explosives programme, which is a very large programme indeed. In the planning of the Winnipeg plant this company proceeded with Defence Industries Limited as their expert engineers to design the plant, as they have designed other explosives plants, two of which are now in operation. This is the third.

It was called to my attention some time ago that there was a strong feeling in Winnipeg that this plant should use lignite coal. I dropped a line to Mr. Crabtree, directing his

attention to the fact that lignite coal was being used to a great extent in Winnipeg for heating purposes in the larger plants, and asking him particularly to look into the situation to make sure that he was making a wise decision in providing the type of equipment for which he had provided, namely, an underfeed stoker. The lignite coal requires a different type of equipment. Mr. Crabtree wrote me on the subject, and later we had an interview in connection with it, on which occasion he brought the report of his engineers, estimated costs and other technical data. We spent sometime together going into that project. He pointed out that an explosives plant is built for operation only during war time. Of course there is no need for an explosives plant of that size in peace time, particularly as it is one of three plants, the other two being considerably larger than the one planned for Winnipeg. The question as to whether or not we were warranted in spending a considerable additional sum to put in equipment which would burn lignite coal efficiently, and only lignite coal, was studied by the engineers. They had to decide also as to whether the equipment would be disposable after the war. That is an important factor which must not be forgotten. This is large equipment, and so far lignite equipment of the size here indicated has never been installed in Canada. It is therefore unlikely that there would be a market for that type of equipment after the war. On the other hand, the underfeed stoker type is common in Canada, and probably would be marketable after its use in Winnipeg comes to an end.

Then the question as to the respective economies of the two coals was studied, and it was the considered opinion of Mr. Crabtree's engineers and of Mr. Crabtree, after making his own study of the matter, in the light of the reports he had received, that it would not be wise to go to the extra expense of putting in special equipment to burn lignite coal.

Mr. Crabtree believes that he would be able to burn a very high percentage of lignite coal in these boilers. I hope that is true, because we are finding it rather difficult to get supplies of bituminous coal from western Canada at the present time. The use of lignite coal at Winnipeg would have a balancing effect upon the coal situation in western Canada. Mr. Crabtree tells me that he will be able to use a considerable portion of lignite coal. He has studied the question, and I have a good deal of confidence in his statement in the matter.

All I can say to the committee is that having turned over the explosives and chemicals programme to Allied War Supplies Corporation, and having had ample demonstration that they are able to handle that type of work, as demonstrated by the plants they have brought into operation prior to this date, I have not found anything in the situation which would warrant me as the responsible minister in reversing the decision arrived at by the corporation.

Mr. ROSS (Souris): In the event of their not using lignite coal, from where would the other fuel have to be brought?

Mr. HOWE: As my hon. friend knows, bituminous coal comes chiefly from Alberta.

Mr. MAYBANK: The minister has made two observations to which I shall refer. In the first place he turned his attention to the organizations known as C.I.L. and D.I.L. and explained that that was apparently good business practice, under the circumstances, adding that he did not want the committee to get off on the wrong foot. We might as well have that point settled immediately. So far as I am concerned I entirely agree with that. I did not intend to make any suggestion to the committee that there was anything improper in the manner of organizing. In fact, in introducing my remarks I said that the division had been made apparently for convenience.

Since, however, we have mentioned C.I.L. and D.I.L., I might add to what I have already said, that when C.I.L. was putting in its own plant, the Allied War Supplies Corporation was not in the picture at all. Rather it was putting in its own plant, for its own commercial purposes and, like every other organization in western Canada, it put in a plant for the purpose of burning lignite. It is situated at Neepawa, Manitoba, where they have their salt industry. Therefore, for commercial purposes that is what they did.

But this other corporation, the one that is the direct creature of the government and of parliament, is the organization which is doing what I have been describing. They may be using the C.I.L. personnel and they may not. Certainly they are not using it entirely. One man they are using, and who had been very active, is a man who comes from the organization that sells this kind of equipment. I was not trying to convince him, because I do not profess to have engineering knowledge. Let me say in passing that I do not want to see $100,000 or $200,000 wasted each year. I was not trying to convince him, nor do I believe I was able to convince him. But his remark was, "They might be able to convince some people, but they will never convince me." This man comes from the organization which sells the equipment.

The same man was in western Canada for a long time, and by reason of the development

of the practice of burning lignite coal he and his company withdrew from that territory, because they did not make the kind of equipment that would burn that coal. I do not know when the interviews took place to which the minister has referred. I do know that about eight or nine days ago Mr. Crabtree stated to a colleague of mine in this house that this question was still an open one, that they would approach it with open minds, and yet within thirty-six hours this man Abbott sat in a room in this House of Commons with that same colleague and me and told us that it was a closed book, that it had been closed for months. He said, "I do not think Mr. Crabtree would misrepresent it, but that book is a closed book and it has been closed." Those are my words; they are not the precise words used, but I think they give an accurate rendering of the conversation I had with him.

Reference has been made to two or three different kinds of equipment. The authority which I have for anything I may offer in the way of describing the equipment is not a person interested in making a sale in opposition to these people; it is our own fuel laboratory experts here. They tell me there are two different ways of carrying coal into the furnace. One is to carry it in and sprinkle it on top, known as the "kicker" system. I do not profess to have any mechanical knowledge; I am simply trying to describe what I have been told, in words which make myself understood.

When the engineer finished talking to me I took the precaution of converting his statement into words such as I would use and asking him whether they covered the situation. When I talk to hon. members about equipment in the way I do, they will know the background for my statement. They will see how I came to get this particular description into my own mind. As I say, substantially there are two methods of putting coal into a firebox to be burned. One is the kicker system, and the other is the underfeed. The underfeed equipment is not suitable for burning lignite coal, and that is the system which these people put into the Winnipeg hydro. They have not burned an ounce of lignite coal. I might give a further authority for that proposition in the person of the engineer I told the committee about, Mr. Abbott. He is the man who has been behind this, who came to us from the company that makes this equipment. He agreed readily that underfeed equipment was not satisfactory for burning this coal.

As I say, I do not know when the conversation referred to by the minister took place, but I do know that I got this information from the department of the government as far back as January 13. These people were stating that it was a closed book because Mr. W. H. Wharton of the Allied War Supplies had said so. I am not talking about the D.I.L.; I am talking about an organization which is a child of this government and which is supposed to have all this authority. This man said that they had ruled against lignite coal. In spite of that, I want to repeat that Mr. Crabtree stated only a short time ago that they would approach this matter with an open mind. When one runs into two propositions which are so completely contrary, it is enough to make one suspicious. When within thirty-six hours another man from the same organization says in effect that it was a closed book, that it could not be approached with an open mind, one is justified in being doubly suspicious.

Before going any further, I should like to make this comment with reference to giving full authority to this organization. I agree that the right course has been taken in forming these companies in order to get the work of government decentralized. As soon as I saw the announcement by the government I felt that the right step had been taken, that it would afford a means of saving harassed and overworked ministers. No matter how vehement I may be at times, I think the government made a right move by turning over considerable responsibility to an organization of this kind. But there is a great difference between giving them considerable responsibility and completely abrogating in favour of them. No organization should be able to go out and spend the money of the people of Canada and not be subject to review. This sort of thing getting around the country is the worst possible thing one could have from the viewpoint of this department which is being so well administered by the minister of defence. Nothing in the world can hurt the idea of getting people to present their savings and being ready to accept taxes more than allowing it to be known that we have abrogated some function of government to certain commercial concerns. A number of fine gentlemen have been collected together to operate these organizations. With the exception of the one whom I have mentioned, I have no complaint to make about them, but they should not be considered as the government of this country.

Mr. HANSON (York-Sunbury): Could the ministers of the war services, that is air,

naval and munitions, give breakdowns of the moneys that have been expended for the present fiscal year, and then of the appropriation which we are considering? Then the non-war ministers could give their breakdowns of the $32,000,000. It seems to me, if those figures were on the record in some kind of orderly way, it would save time.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, March 12, 1941.

The house met at three o'clock.

LEASE-LEND BILL

EXPRESSION OF SATISFACTION AT PASSAGE OF MEASURE BY UNITED STATES CONGRESS

Right Hon. W. L. MACKENZIE KING (Prime Minister): I feel that the house would wish me to express on its behalf, and, I may add, on behalf of the people of Canada, the satisfaction felt at the word received last night that the lease-lend bill had passed the congress of the United States and had been signed by the president.

The signature by the President of the United States of the lease-lend bill, after its passage by large majorities in the house of representatives and the senate, will stand throughout time as one of the milestones of freedom. It points the way to ultimate and certain victory. The majorities given to the measure in congress are evidence that this law carries with it the overwhelming approval of the citizens of the United States. It is a declaration by the president, in the name of its government and people, that the United States is determined to supply such aid in the present war as will ensure but one end to the conflict. That end will be its successful termination by the defeat of the aggressor nations, and the preservation, restoration and expansion of freedom wherever the aggressors have substituted might for right, and national force for international justice.

Hon. members will recall that when the house resumed its sittings on February 17, I referred, in the course of my review of Canada's external affairs, to the change which had taken place in the attitude of the United States. At that time the change had already been reflected in the president's message to congress.

"The president's message," I said, " is more than a statement of principles. It deals with means as well as with ends. The new policy as laid down by Mr. Roosevelt envisages sending ships, planes, tanks and guns to beleaguered Britain, and to other nations resisting aggression. This aid is to be furnished in ever-increasing measure without the exaction of immediate payment and regardless of the threats of dictators. The precise form which assistance will take is now engaging the attention of the competent branches of government in the United States. It is a matter for the United States alone to decide. To the whole democratic world, however, the new policy has brought fresh hope and renewed resolution."

The policy recommended by the president in his message has now been accepted by congress.

Hon. members may also recall that, on June 7 of last year, at a time when the news from France was growing daily more ominous, and the entry of Italy into the war was expected at any moment, I said, in a broadcast to the Canadian people: "If new enemies oppose us, we may be sure that old and new friends will arise to help us. The world-wide significance of the conflict is being realized in every land."

That prediction has been abundantly fulfilled. The friendship of the United States, strengthened by old ties of sympathy, and new ties of practical understanding, has been organized and mobilized upon the side of freedom. This happy consummation has been achieved not by propaganda but by deeds—the brave deeds of the people of Britain, and the wanton and cruel deeds of the tyrants of Germany and Italy. As ruthless act has followed ruthless act, the issues of the conflict have become clear for all to see. The progress of hostilities has been marked by the growing apprehension of the United States. That great country now knows what nazi and fascist threats mean in terms of its own freedom, and the happiness of its own citizens. The growing apprehension and increased knowledge have been marked by the cumulative determination of the American people to spare no material effort necessary to help the triumph of the cause which has already commanded the support of their sentiments and their ideals.

What the passage of this bill means to Britain, and to the cause for which we fight, may well be the difference between prolonged and indecisive warfare, and the certainty of victory. The people of Canada have never doubted what the great-hearted people of the United States would do. Of their own free will, and by their own decision, the American people have spoken in words which tyrants and free men alike will understand. It is as though by one short enactment the

world's conscience has condemned the wanton aggressors who have placed freedom, Christianity, and civilization in jeopardy.

As the chairman of the foreign relations committee said yesterday in the House of Representatives, the lease-lend bill "is the voice of aroused America, sounding the trumpet call of victory for free government everywhere."

The courage, determination and fortitude of the people of Britain in the face of continuous and appalling danger have not only gained the ungrudging admiration of the American people, but they have proved, with inexorable logic, that the strength of Britain is the one great obstacle in the path of the aggressors. The American people know that the magnificent resistance of Britain has made her the main outwork of the defences of the United States. Canada's example, as a nation of the new world, actively participating to the utmost limit in the present struggle, has also had its influence in arousing the people of the United States to their present realization that freedom itself is at stake in this war.

It in no sense minimizes the magnificent effort of Britain and the nations of the British commonwealth to say that the aid, the cooperation and the limitless resources of the United States definitely ensure final victory.

We in Canada may feel more than a little pride in the share we have had in bringing about the closer relationship between the United States and the British commonwealth. It will, I believe, seal the spiritual union of free peoples everywhere, out of which we may hope to build an enduring new world order.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, the passage of the lease-lend bill by the congress of the United States and its approval by the great president of that republic constitute an event of great magnitude and importance at this juncture of world affairs. To Britain as the head of our beleaguered empire, and to Canada and the other dominions which stand at her side as belligerents, it may well be, as indeed I think it will be, a turning point in this war distracted world. In any event its importance cannot be overestimated.

We in Canada as good neighbours of the United States, along with our kinsfolk in Britain, should raise our voices in grateful acknowledgment of the effort of the president and his administration in pursuing the policy now adopted. In the days to come, with the abundant assistance which will be forthcoming, we and generations yet unborn will raise our voices and call their names blessed.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

MARITIME PROVINCES FRUIT AND VEGETABLE INSPECTION

Mr. HAZEN:

1. Was Richard Creed, supervisor inspector of fruits and vegetables suspended by the Department of Agriculture? If so, when?

2. What was the reason or reasons for his suspension?

3. Were any other fruit and vegetable inspectors suspended or expelled in the maritime provinces from 1933 to 1936, both years inclusive?

4. Was Richard Creed dismissed from his position? If so, when and what were the grounds for his dismissal?

5. What were the carryover charges due by the shippers for inspection fees on potato table stock and turnips for the years 1933 and 1934 in New Brunswick and Prince Edward Island?

Mr. GARDINER:

1. Yes; on December 1, 1934.

2. Unsatisfactory collections and remittances of inspection fees.

3. Yes.

4. Yes; February 1, 1936; unsatisfactory service in connection with the collection and remittance of inspection fees.

5. Prince Edward Island, 1933-34, $1,033.50; 1934-35, $390. New Brunswick, 1933-34, $9; 1934-35, $714.

ALBERTA AIR TRAINING SCHOOLS

Mr. HANSELL:

1. What type of air training schools are located at Macleod, Granum and Claresholm, in the province of Alberta?

2. How much money is allocated for the construction of each of these three schools?

3. How many regular officers and men are stationed at each of these schools as instructors, and what position does each hold?

4. How many trainees will each of these schools accommodate at any one time?

Mr. POWER: With respect to Nos. 1 and 2 of this question, there will be no difficulty in giving an answer. With respect to Nos. 3 and 4, I would prefer in the public interest not to make specific answers. I have on some occasions in the house stated in a broad and general way the number of persons who were employed at the various flying training schools and the number of trainees; but if the hon. member would permit, I would prefer not to specify exactly the number of such persons.

Mr. SPEAKER: Nos. 3 and 4 dropped. The remainder stands.

CANADIAN ARMY—REGIMENTAL BANDS

Mr. REID:

1. What is the number of the various regiments comprising both active service forces and that of the non-permanent militia, or non-active service armies?

2. What is the total number of regimental bands authorized and at present functioning, showing the number of pipe, bugle, brass and drum bands, respectively?

3. What, if any, consideration has been given to the matter of providing a greater number of bands for military purposes?

Mr. RALSTON: I spoke to the hon. member regarding this question and advised him that it would be difficult to give satisfactory information in answer to the first question as it stands, since the word "regiment" is usually regarded as applying to substantial formations of infantry and artillery, and it would be doubtful whether giving this information so far as the active forces are concerned would be in the public interest. The hon. member indicated that he was satisfied not to proceed further with this part of the question as far as the active forces are concerned.

I am therefore tabling the answer to the second part of question No. 1, and questions Nos. 2 and 3.

1. (a) Referred to orally.

(b) 493 units composed of regiments of cavalry, batteries of artillery, engineer and signal formations, battalions of infantry, including reserve companies of veterans guard of Canada, army service corps, medical corps, dental corps, ordnance corps and postal corps units and Canadian officers' training corps contingents.

2. As to the Canadian army, active and reserve formations in Canada:—

	Regimental bands	
	Authorized	Functioning
Brass	117	107
Bugle	45	41
Pipe	35	33
Drum	3	3
Trumpet	3	3
Fife	1	1
Total	204	188

3. Frequent consideration being given and action taken as is deemed advisable. The matter was recently discussed by the minister personally with the G.O.C. Canadian Corps, the senior officer at Canadian military headquarters, London, and the G.O.C's. 1st and 2nd divisions.

CANADIAN FARM LOAN BOARD—ONTARIO LOANS

Mr. McCUAIG:

1. How many loans were made in Ontario by the Canadian farm loan board in each fiscal year from the setting up of the board to March 31, 1940?

2. What was the total amount of the loans made in the said province during each of these years?

3. How many applications for loans in the province of Ontario were disposed of in the period from March 31, 1940, to December 31, 1940, and how many of these applications were granted?

4. What was the total amount of such loans made from March 31, 1940, to December 31, 1940?

5. How many persons were employed in connection with the Toronto office of the said board during the fiscal year ending March 31, 1940?

6. What was the total cost of the administration of the farm loan board in Ontario for the said fiscal year?

7. Is this cost in addition to the amount collected from farmers for inspection fees and other expenses collected from persons applying for loans?

Mr. ILSLEY:

The following reply is furnished by the Canadian farm loan board:

1 and 2.

Year ending 31st March	Loans granted in Province of Ontario	
	No.	Amount
1936.....	700	$1,380,200
1937.....	501	1,044,600
1938.....	418	885,800
1939.....	413	852,600
1940.....	437	934,400

3 and 4. During the period March 31, 1940, to December 31, 1940, the board disposed of 569 applications in the province of Ontario as follows: 247 granted loans for the amount of $529,400. 107 still pending as at December 31, 1940. 322 withdrawn, cancelled or rejected.

5. During the fiscal year ending March 31, 1940, 21 persons were employed in the province of Ontario on a salary basis. In addition, the board employed as and when required 25 part-time appraisers throughout the province on a daily fee basis.

6 and 7. The cost of operations in the province of Ontario for the fiscal year ending March 31, 1940, was $49,087.73 after crediting inspection fees retained amounting to $8,206.63. Included in the cost of operations is a proportion of head office expenses amounting to $10,251.74.

WHEAT—PROCESSING LEVY

Mr. HANSELL:

1. How many grist mills are there operating in each of the nine provinces?

2. What is the total amount collected to date of the processing levy on wheat products?

3. Is the processing levy as regulated by order in council P.C. 4387, September 3, 1940, still effective?

4. If not, in what province has the levy been discontinued and by what authority?

5. Have any refunds been made in any part of Canada, and, if so, what is the total amount refunded in each province?

Mr. MacKINNON (Edmonton West):

1. Number of grist mills reporting to the Canadian wheat board:

British Columbia	22
Alberta	62
Saskatchewan	63
Manitoba	43
Ontario	136
Quebec	28
New Brunswick	6
Nova Scotia	1
Prince Edward Island	4
	365

2. Total amount of levy collected to date is $2,995,741.85.

3. Yes, subject only to amendment contained in order in council P.C. 134/813, 1st February, 1941.

4. The levy has been remitted in the case of wheat grown in the provinces of Quebec, Nova Scotia, New Brunswick and Prince Edward Island, and taken to a mill to be gristed for consumption exclusively to the grower's own home (authority: order in council P.C. 134/813, 1st February, 1941).

5. Refunds amounting to $144.38 have been remitted in the province of Quebec for wheat grown in that province but gristed for the producer's own use.

In addition we anticipate receiving claims for refunds for wheat gristed for the farmer's own use, as follows:

New Brunswick	$473 15
Nova Scotia	39 90
Prince Edward Island	316 75
Quebec	92 22
	$922 02

CALGARY HIGHLANDERS PAYMASTER

Mr. JOHNSTON (Bow River):

How much pay and allowance has Mr. Andrew Davidson received up to date as paymaster of the 2nd battalion of the Calgary Highlanders?

Mr. RALSTON: $156 less national defence tax of $3.36—total received $152.64.

APPLE SURPLUS

Mr. ROY:

1. Is there a surplus of apples in Canada in 1940-41?

2. If so, did the government purchase such surplus and has it been disposed of?

Mr. GARDINER:

1. Yes.

2. The government has assumed responsibility for part of the apple crop and has been disposing of same through processing and the distribution of the processed product.

QUESTION PASSED AS ORDER FOR RETURN

UNIVERSITY PROPERTY USED FOR WAR PURPOSES

Mr. CHURCH:

1. Have any of our Canadian universities offered buildings to the government for use in the present war?

2. If so, which of them, on what terms and conditions and for what purpose?

3. What university property, if any, is now being used by the government for war purposes?

MOTIONS FOR PAPERS

WHEAT—PROCESSING LEVY

Mr. SHAW:

For a copy of all letters, telegrams and other documents exchanged between the government or any department thereof or any government board or any official thereof and any person, persons or firms, in respect to complaints relative to the processing levy on wheat products in the provinces of Quebec, New Brunswick, Nova Scotia and Prince Edward Island.

NATIONAL WAR SERVICES—EMPLOYEES FROM SASKATCHEWAN

Mr. NICHOLSON:

For a return showing, (1) the names of persons from Saskatchewan now employed by the Department of National War Services; (2) the duties of each of these persons; (3) salary paid to each; (4) value and source of any superannuation or other pay received by each of these persons.

TORONTO—FEDERAL REVENUE AND FEDERAL EXPENDITURES

Mr. CHURCH:

For a return showing what federal revenues have been collected from the city of Toronto, during the last year of record in (a) postal receipts; (b) customs; (c) excise; (d) income tax; (e) inland revenue; (f) sales tax; (g) other federal levies. Also a statement of the expenditures made in the city of Toronto by the federal government during the last year of record?

Mr. ILSLEY: Mr. Speaker, it would be impossible to obtain this information, at least without a tremendous amount of research, and I suggest that the motion be dropped.

Mr. SPEAKER: Dropped.

Mr. CHURCH: Would the minister give the information as far as possible?

Mr. ILSLEY: It is not altogether a question of possibility. Perhaps the hon. gentleman

will look at the motion. In connection with income tax collections from the city of Toronto, for example, it would be necessary to examine long lists of income taxpayers to ascertain whether or not they were residents of Toronto, and then reckon up the total amount of taxes paid by them. This is a task which a department of government should not be asked to undertake. The same applies, only in much greater degree I should say, to customs and excise.

Mr. HANSON (York-Sunbury): They give that information every month.

Mr. ILSLEY: That is through the port of Toronto—an entirely different matter. This motion has reference to the city of Toronto; apparently the hon. member is talking about residents of that city. What I have said applies to inland revenue, sales tax and other federal levies, and these amount to such a substantial part of the motion that I would suggest it be dropped.

Mr. HARRIS (Danforth): If the word "city" were changed to "port", would that meet the minister's objection?

Mr. ROSS (Moose Jaw): That gives a wrong impression.

Mr. ILSLEY: It could not be amended in that way. The port of Toronto would be the proper term with regard to customs and excise; but with regard to income tax, it would be the district office.

Mr. HANSON (York-Sunbury): Would the minister let the motion stand, and perhaps the hon. member can revamp it?

Mr. ILSLEY: Very well.

Mr. SPEAKER: Stand.

RADIO BROADCASTING

QUESTION OF COMMITTEE TO CONSIDER ANNUAL REPORT AND REVIEW POLICIES OF BROADCASTING CORPORATION

On the orders of the day:

Mr. GORDON GRAYDON (Peel): I should like to ask the acting Minister of Transport if it is the intention of the government at this session to appoint a committee to consider the annual report and review the policies of the Canadian Broadcasting Corporation.

Hon. C. D. HOWE (acting Minister of Transport): I suppose the standard reply would be that the intention of the government will be made known in due course. I can go further than that, however, and say that in a war session I do not think the affairs of the Canadian Broadcasting Corporation are sufficiently complicated to warrant the appointment of a committee this year.

WHEAT

STATEMENT OF THE MINISTER OF TRADE AND COMMERCE AS TO GOVERNMENT POLICY

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, at this time I wish to make a statement as to the government's policy with regard to the 1941-42 wheat situation. Before outlining the policy I wish to deal with the 1940 wheat quota system, and how it has worked out; the general 1940 deliveries and certain over-deliveries; the wheat position as we expect it to be on July 31, 1941; the wheat situation during the last war and the directly opposite situation in which we find the wheat problem to-day; our possible local wheat consumption and exports for 1941-42; our storage situation; the world wheat situation; the possibilities of wheat disposal, and the financial aspect of the wheat situation. Then I wish to outline the proposals as to our policy as it affects my department. I would appreciate it very much, Mr. Speaker, if I could proceed without questions until after I have made my statement.

On November 22 last I made a statement to the house dealing with the wheat position as at that time. On that occasion I reviewed the work of the government and the wheat board in meeting the unprecedented conditions which had arisen in the early part of the present crop year. It is my purpose to-day to review the main developments in the Canadian wheat situation since my report of November 22. Before doing so, I wish to point out to the house, Mr. Speaker, that my remarks deal with the marketing of wheat and matters relating thereto. The field of production lies within the jurisdiction of my colleague, the Minister of Agriculture (Mr. Gardiner), and policy references to production lie under his management. Because some of the members may not be familiar with wheat terminology, I would explain that the crop year runs from August 1 of one year to July 31 of the succeeding year. I would like hon. members to keep this in mind when I am speaking in terms of crop years.

Quota system. The most important development in connection with the handling of the 1940 crop was the establishment of a quota system intended to allow the equitable use of available storage by farmers throughout the three western provinces. This quota system was provided through amendments to the wheat board act in July last.

On November 19 out of a total of about 2,200 shipping points in western Canada nearly 1,600 points had quotas of 12 bushels per acre or less and slightly over 500 points had quotas of 15 and 20 bushels per acre. By the end of this week it is expected that every shipping point will have quotas of 15 or 20 bushels per acre. These increases were made in two ways. First, by increasing the general quotas at all shipping points in western Canada as soon as storage conditions warranted, and secondly, by increasing quotas at individual points, where local storage was available. The wheat board is making every effort to relieve the few points which remain on a 12 bushel basis. It may be said, therefore, that as far as the west as a whole is concerned a general 15 bushel quota is now in effect. In addition over one-half the shipping points in western Canada are now on a 20 bushel basis.

If every farmer wished to deliver all his remaining wheat up to 15 bushels per acre, local storage space at many points would at present be insufficient to house the wheat. However, many farmers are holding their wheat until spring or later to earn the farm storage payments. In addition the restrictions on shipments to the lake head are now being eased which will help to relieve pressure on country elevators.

The plan of payment for farm storage put into operation this year had the effect of slowing up deliveries which have, generally speaking, lagged behind the quotas established. I placed a statement on *Hansard* in November showing the basis on which farm storage is being paid. For example, wheat now being delivered to the board has earned 3 cents a bushel in farm storage. This plan has not only assisted a great number of farmers in a financial way, but has given an incentive to holding wheat on farms and has thus taken some of the load of the heavy delivery months usually experienced in the fall.

Up to November 19, as I pointed out to the house at that time, 221 million bushels had been delivered under the quotas then established. Since that time another 100 million bushels have been delivered so that the total receipts as at March 7 were 326 million bushels.

Before leaving the question of wheat quotas I would mention that in certain cases overdelivery of the established quotas has been permitted. Over deliveries were permitted to enable farmers to contribute to war service funds, such as the Canadian Red Cross Society, the Salvation Army Red Shield war service fund, the Young Men's Christian Association war services fund, the Canadian Legion war services fund and the Knights of Columbus Canadian army huts fund.

More recently the wheat board has permitted deliveries by producers who wished to buy war savings certificates or non-interest-bearing bonds. By permitting over deliveries in these particular cases, many of the farmers in western Canada have been able to contribute to these important causes.

In addition to these over deliveries under the quota which can be made without individual permission, the wheat board has in some cases upon special application issued special permits to allow of the delivery of low grade wheat over and above the quota established at the farmers delivery point, so as to relieve the feed situation in eastern Canada and British Columbia. It will be remembered that for the same purpose the board removed the quota on barley and oats early in the marketing season. In addition the board has facilitated the movement of feed grains and low grade wheat from country elevators.

On the basis of the present estimate of the 1940 crop, and after making allowances for seed and feed, we anticipate that approximately 472 million bushels of wheat will be delivered during this crop year. As I have stated, approximately 326 million bushels have already been delivered, leaving a balance of approximately 146 million bushels to come in during the next five months, an income of approximately 75,000,000 dollars in cash.

I said in November that it was the expectation of the wheat board that by the end of next July farmers would have had the opportunity to deliver the entire surplus production from the 1940 crop. I feel very confident now that that will be done. In connection with remaining deliveries, however, I would like to suggest to farmers to keep storage space at their local shipping points filled as far as possible in order to prevent an undue rush of wheat in the closing weeks of the crop year. I wish to stress this.

There is, I believe, no doubt that the quota system as it was applied this year by the Canadian wheat board has given general satisfaction, and in no small degree the successful working out of a quota system has been due to the splendid cooperation which the wheat board has received from wheat producers throughout Canada, from elevator companies and their country agents and from all those who have business interests generally in the prairie provinces.

When I say that, I am not in any degree minimizing the excellent work which has been done by the wheat board. I have received dozens of letters, entirely unsolicited, from individuals, farmers' organizations, business men, municipal organizations, and others, giving the highest possible praise to the wheat board for the way in which they tackled and

overcame the many difficult problems which they had to face. In the west there is a general realization that the wheat board throughout their activities acted in a completely fair, equitable and impartial manner in all their dealings with the 1940 wheat crop.

As to the expected position July 31, 1941, there are certain important factors, Mr. Speaker, which have had and are having a distinct bearing on our present wheat situation and although I do not intend to deal with them in detail, I am of the opinion that they should be brought to the attention of the members.

May I say first of all that in the last war the Canadian farmer was faced with a position which is definitely reversed in this war. Our wheat acreage then was little more than half the present level and the whole difficulty was shortage, not surplus. In this war the government had to intervene to prevent prices being radically reduced. Then the government intervened to put an upper limit on wheat. For part of the 1916 crop $2.40 per bushel was paid by the board of grain supervisors; for the 1917 crop $2.21 was paid and for the 1918 crop $2.24½. Finally in 1919-20 the then wheat board paid $2.63 per bushel. All these prices were on the basis of No. 1 northern Fort William and Port Arthur.

Since the over-running of Norway, Holland, Belgium and France, the United Kingdom has provided the only volume market for Canadian wheat in Europe and only very small shipments have gone to Eire, Portugal and Spain. At least as long as the war remains in its present phase, Canada cannot look forward to large exports of wheat. We expect exports during the present crop year will amount to about 150 million bushels, most of which will be taken by the United Kingdom. This, of course, will have a very definite effect on our wheat position at the end of the present crop year.

There are only two ways at the moment of disposing of Canadian wheat. We can either use it in Canada or we can sell it abroad. As far as using wheat in Canada is concerned we need about 50 million bushels for human consumption and another 77 million bushels for seed and feed, giving us a total domestic utilization of 127 million bushels. If in addition we can only export this year about 150 million bushels, it is apparent that we can look forward to the disappearance of only 277 million bushels of wheat during the present crop year. We started the year with 852 million bushels, by far the largest amount of wheat ever held at one time in this country. This means that on July 31, 1941, we will have a wheat carry-over of about 575 million bushels, and within a few weeks after that the 1941 wheat crop will be coming on the market.

I would now like to deal with the probable position in terms of the storage situation in Canada. The rated capacity of grain elevators in Canada is 521 million bushels including 84 million bushels of temporary annex space built in the last two years in the prairie provinces. After allowing for the storage of coarse grains and flax seed, a certain amount of Canadian wheat in the United States, wheat in transit, and space which for one reason or another cannot be used at particular times, it was obvious that additional grain storage would be needed in Canada prior to July 31, 1941, in order to take care of the balance of deliveries from the 1940 crop, and the government had given the wheat growers of Canada an assurance that they would accept from them the total deliverable portion of their wheat.

To meet this situation the government entered into an arrangement with western elevator companies for the construction of approximately 50 million bushels of temporary terminal storage space at Fort William-Port Arthur. The arrangements made were approved by order in council of February 19, 1941. I am assured a large part of this new space will be ready by July 31 of this year and the remainder in August and September. These facilities are being constructed by the elevator companies. The government has agreed to maintain all elevator tariff charges now prevailing without reduction until July 31, 1943, and to allow the companies to write off as depreciation for income tax purposes 50 per cent of the actual cost of construction in each of two successive years.

It is further agreed by the companies that after the 31st day of July, 1943, they will, upon request, each enter into agreements (upon the basis of payment of reasonable remuneration for each operation) as may be mutually satisfactory in the light of the operating experience gained during the period up to July 31, 1943, for the operation of its temporary facilities during the balance of the time such facilities are needed.

The following storage, it is expected, will be available at July 31, 1941, or shortly thereafter:

Statement showing approximation of storage as at July 31, 1941

Permanent storage, all classes	437,000,000	
Temporary country annexes	84,000,000	
Suggested new, temporary terminal	50,000,000	
		571,000,000

United States storage available for Canadian wheat	36,000,000
In transit, rail and water	15,000,000
	622,000,000
Allowance for working space and provision for coarse grains	40,000,000
Available storage for wheat	582,000,000

It is most likely that several million bushels of temporary elevator space will be erected in eastern Canada in addition to the above amount.

Another important factor is the increase in acreage which has taken place in the prairie provinces in the last six years. The Canadian Wheat Board Act has been on the statute books of this country since 1935. The passing of the act itself constituted national recognition of the wheat problem and national recognition of the fact that certain assistance must be given to the wheat industry especially in the direction of the maintenance of price. Paralleling this guaranteed price, there has been an increase in the wheat acreage in western Canada. In 1940, according to our statistics, there were 4,457,000 more acres sown to wheat than there were in 1935. I believe many farmers increased acreage this year despite the warnings that were given because they had in mind the situation which existed in the last war to which I have just referred—a great shortage of wheat with access to European markets. It is estimated that if wheat acreage had remained at 1935 levels during the past six years, we would have had 175 million bushels less wheat to deal with to-day.

Not only has there been an increase in acreage, but because of the tremendous advance which has taken place in developing rust-resisting varieties of wheat, we are now in the position that in years of good precipitation we may expect large crops such as those of 1939 and 1940. The reason is that rust damage had largely affected crops that otherwise would have yielded very well.

Another development has taken place in the west at the same time as the wheat industry has expanded and this has been the production of live stock, particularly hogs. This has secured for the western farmers a greatly needed source of farm revenue but it has not as yet brought about a compensating adjustment in feed grain acreages. If the west is to continue its present rate of live stock production, larger feed grain acreages are required to provide adequate reserves. I mention this fact because it is a matter which I am not sure is fully appreciated by all farmers in the west.

Having touched on these factors, which have a distinct bearing on our problem, I wish to deal with the situation which we must face in the crop year 1941-42. As I have stated, as at July 31 this year, the Canadian carry-over in all positions will be approximately 575 million bushels. In addition we will have the 1941 crop on our hands. We do not know how large that crop is going to be, but if we produce an average crop we will have to deal with about 1,000 million bushels of wheat in 1941-42—a supply of wheat greater than anything ever before contemplated and never before thought possible in Canada, and a supply which is beyond the immediate grain storage facilities of this country.

To emphasize further the seriousness of the wheat situation, I would point out that the United States will have a record carry-over this year, estimated at 400 million bushels. In addition, the winter wheat prospects are much improved over those of last year. Every effort is being made in Europe to increase wheat acreage. If this additional acreage is maintained after the war, possibilities of a large demand for our wheat are very much reduced.

The next question is how much of our actual and prospective supply of wheat can be disposed of in 1941-42. For seed, feed and human consumption an estimated total of 127 million bushels will be required. In addition we will export some wheat but our most optimistic estimate at the present time is that these exports will not exceed 180 millions. The maximum disappearance, therefore, will in our opinion be 307 million bushels.

On the basis of an average crop in 1941 we will have a carry-over at the end of July, 1942, of approximately 700 million bushels. Even on the basis of a very short crop (really a crop failure) we will still have a carry-over of over 500 million bushels. I do not need to stress to the house the seriousness of this position.

The financial aspect of the wheat situation is one which can only call for anxiety. The report of the Canadian wheat board for the year ending July 31, 1940, recently tabled showed a total loss of $67,401,986.33, sustained in the wheat board operations on the 1938 and 1939 crops. These losses do not include interest on outstanding bank balances in connection with the 1938 crop or carrying charges in connection with the 1939 crop accruing since July 31, 1940.

The dominion government, through the Canadian wheat board, will own the bulk of the estimated carry-over of 575 million bushels as at July 31, 1941. It is obvious that the obligation of the dominion government in respect of this wheat will be at least 400 million dollars. In addition it will require 50 million dollars to carry this wheat for

the ensuing 12 months. To these commitments already made must be added any additional commitments which we undertake in respect of the 1941 crop. It is in the light of these facts that we have had to reach a decision in regard to the wheat policy to be followed for the crop year 1941-42.

The government has been alive to the difficulties of the wheat situation and the whole wheat problem has been under constant and persistent study by various branches of the government and of the wheat board. The advisory committee, appointed last fall under the Canadian Wheat Board Act, has been giving a great deal of consideration to every aspect of the problem. From the many representations which have been made to me from people in all walks of life, throughout the west and throughout all Canada, I think I am safe in saying that no Canadian problem has received more careful attention and consideration than has the wheat problem.

I shall now outline the plans the government proposes to make effective this year in connection with the 1941 crop.

(1) To take such action as will ensure as nearly as possible that the visible supply of Canadian wheat on July 31, 1942, shall be no larger than on July 31, 1941. In other words we feel that we have reached the limit of the volume of wheat reserves which should be carried.

(2) To accomplish this a definite limit will be set on the amount of wheat which it will be possible to deliver either to the board, on the open market or otherwise, during the crop year 1941-42. The limit will be 230 million bushels—for the whole of Canada, an amount which it hopes can be sold in the domestic and export markets in 1941-42.

(3) The Canadian wheat board and the government have given the most careful consideration to an equitable plan by which deliveries of the 230 million bushels will be distributed among wheat producers. The quota system so successful this year will be maintained and these quotas will be based on the production from 65 per cent of the 1940 acreage. The first quota will be a general one and will allow the delivery of the same amount of wheat per acre from every farmer. The second and following quotas will be certain proportions of the 1941 yield for the farmer's shipping point; that is a high yield point in 1941 will have a higher quota per acre than a low yield point. I cannot at the moment give further details of the delivery plan but I can say that the plan will be equitable as between farmers and as between areas in the prairie provinces. This plan of quotas will operate only if total production provides a marketable surplus of wheat in excess of 230 million bushels. In the event of the crop being smaller than this the system of quotas will require to be varied to meet this condition.

(4) The dominion government through the Canadian wheat board will continue to guarantee an initial payment of 70 cents a bushel basis one Northern on wheat delivered during the crop year 1941-42.

(5) The Canadian wheat board will continue to pay storage to the producers on the same basis as in 1940-41, but only on the undelivered portion of the 230 million bushels.

(6) No change will be made in the amount or incidence of the processing levy as at present established.

My jurisdiction as Minister of Trade and Commerce covers the marketing of wheat. With this I have dealt. Agricultural production lies within the jurisdiction of my colleague the Minister of Agriculture. The restrictive measures I have outlined are deemed necessary. There must be compensations in view of these restrictions and the Minister of Agriculture will now deal with these compensatory measures.

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Speaker, as has been stated by the Minister of Trade and Commerce (Mr. MacKinnon), the minister of that department has, ever since there was a Canada Grain Act, been responsible for its administration, and on each occasion when we have had a wheat board act the minister has also been responsible for its administration. I think I can say without fear of contradiction that no minister of trade and commerce and no wheat board has ever had a more difficult year to deal with up to the present than the year 1940. I think I can say at the same time that the minister, his department, and the wheat board in particular, should be complimented upon the efficient manner in which they have handled that difficult situation.

We have just been given an outline of the activities of the year and of the difficulties facing us this year. As my colleague has already intimated, I desire to deal with that section of wheat policy which has to do with production and its relation to the statements that have been made.

The Minister of Trade and Commerce has stated to the house what will be available to provide handling facilities and advance upon the wheat which can be taken by the government this year.

It is considered by the government that only 230 million bushels of wheat can be delivered to the board on the open market or otherwise. In view of all the uncertain circumstances, the government is of the opinion that

the advance upon the amount delivered should not be increased. The outstanding reason for that conclusion is the opinion that production of wheat should be decreased.

The figure arrived at will suggest that farmers keep before them an objective of not more than 65 per cent of last year's acreage. It has also been pointed out that a certain farm income is necessary to the maintenance of western economy. It is generally agreed that this should be not less than 325 million dollars.

If this income is going to be realized it will be necessary for the farmer to obtain from the lands which were in wheat last year a net return at least equal to that of 1940.

The government has therefore attempted to set up a plan under which that may be accomplished, while at the same time securing a reduction of the acreage in wheat to an area which is not likely to produce more than 230 million bushels.

It is not our intention to pay farmers for not growing wheat or to compel them to reduce acreage. It is our intention to pay them to do something other than grow wheat, which we believe in the long run will improve western agriculture.

We intend to do this in a manner in which, if the happenings of the war or the after-war period require it, reasonable quantities of wheat may be produced.

But, most important for the time being, we will attempt to do it in a manner which will give the farmer a net cash return comparable with what he would have had if he had followed his pre-war methods of agriculture and could have disposed of his products in the usual way.

It is our intention, therefore, to make payments of certain sums per acre on all reductions made in wheat sowings in the prairie provinces in 1941 as compared with 1940, provided the farmer does certain specified things with the land.

1. If he summer-fallows the reduced wheat acreage or part of it, the government will pay him $4 an acre for the reduced wheat acreage which is black July 1, 1941; payments to be made as soon as possible after July 1, 1941.

2. If he sows the reduced wheat acreage or part of it to coarse grains in the spring or, in the case of rye, in the fall of 1941 on lands not summer-fallowed, the government will pay him $2 an acre in 1941 as soon as possible after proof of sowing is established.

3. If he sows the reduced wheat acreage or part of it to grass or clover during 1941 provided the land has not also been sown to coarse grain or summer-fallowed, the government will pay him $2 an acre as soon as possible after proof of sowing has been established and an additional $2 an acre if the same land is still seeded down to grass on July 1, 1942.

4. If he sows reduced wheat acreage or part of it which is also sown to coarse grain, or which is summer-fallowed in 1941, to grass or/and clover or to rye in 1941, the government will pay $2 an acre as soon as possible after July 1, 1942, provided the same land is in grass or/and clover, or rye, on that date.

The above payments are considered to be liberal allowances for the work necessary to utilize the lands for the different purposes outlined. The methods by which the money can be earned are intended to be varied enough to permit of the farmer adopting the one most suited to his farming conditions in order to obtain revenue which he has been denied because he is unable to deliver the amount of wheat he has been accustomed to market.

An estimate of the amount of money which can be earned is possible. If the entire 9,000,000 acres were removed from wheat as summer-fallow, the amount distributed would be $36,000,000. If 6,000,000 acres were utilized as summer-fallow and 3,000,000 for coarse grains and grass, the amount distributed in 1941 would be $24,000,000 for summer-fallow and $6,000,000 for coarse grains or grass, or both, whereas the farmer would have additional returns from the increased coarse grains in this latter case, and in 1942 could collect additional amounts if the grass and rye lands are still out of wheat. Any other combination can be estimated similarly.

Certain regulations will be necessary to prevent corporation farmers or those operating farms on the tenant plan from taking advantage of the plan to the detriment of their tenants. Other safeguards may be needed. Such regulations will be provided as soon as possible.

A distribution of the funds made available by these payments between seeding and summer-fallowing, and between cultivation and harvest should be even more helpful in this difficult year 1941 than funds distributed in an increased price spread over the latter five months of 1941 and the first seven months of 1942. With this suggestion I desire to leave with the house the statement of policy as set out, in the first part by the Minister of Trade and Commerce (Mr. MacKinnon) and in the second part by myself.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, March 11, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Vien in the chair.

Mr. ILSLEY: Last night the leader of the opposition (Mr. Hanson) asked if I would have certain figures broken down and placed on *Hansard*. I hope to be able to do that to-morrow. It was not possible to have it completed for this afternoon.

Mr. McLARTY: I do not intend this afternoon to engage the attention of the committee with a discussion of expenditures provided in the appropriation bill for the Department of Labour, nor is it my intention to deal with matters of general labour policy.

I propose to devote myself entirely to the remarks which were made on Monday afternoon last by the hon. member for Vancouver East (Mr. MacInnis). I regret I was not present during the earlier, in fact during the major portion of his remarks. When I entered the chamber, however, I found that he was in a rather critical mood.

I felt that when I read *Hansard* I would find that in the earlier part of his address he had unquestionably been kindly and fair. Imagine my disappointment when, after reading his remarks, I found that they had been equally critical in the first as in the concluding section of his address to the committee. He went so far as to suggest that the Department of Labour might well be fused with the department headed by my colleague to my left, the Minister of Munitions and Supply (Mr. Howe).

The hon. member went so far as to say that throughout Canada to-day unrest was rampant among labour organizations and among working people. I suggest that if the unrest were as great as the hon. gentleman's informants have led him to believe, there might be some definite and tangible evidence of that unrest; yet it is gratifying to know that throughout Canada, from coast to coast, notwithstanding the wide increase in industrial activity due undoubtedly to the war, there is not a single strike in Canada to-day—not one. The closest approximation we have had to a strike is to be seen in rumours carried in the press with reference to some unfortunate decision in a hockey game in Cape Breton, on the strength of which some of the coal miners of the district thought it might be their duty to go on strike. They did not, however, and the production of coal is still going on.

The hon. member attributed this suggested unrest to lack of cooperation between employers and labour and lack of cooperation between the government and labour. There are throughout Canada 12,500 employers of labour. I fancy it would not be difficult to find in that number some who do not cooperate in a proper way with the working people in their employ. It would be remarkable were the situation otherwise, and one of the difficulties which the Department of Labour has constantly to meet is the fact that some employers do not cooperate to the extent they should with their own working people. When, however, the hon. member suggests lack of cooperation on the part of the government, I should like to indicate briefly the extent to which that cooperation has been given since the war commenced.

In the first place, the very day that war broke out we appointed the war-time prices and trade board. What was its purpose? Its purpose was fundamentally to maintain real as against nominal wages and to keep the cost of living at a point where working people would not be penalized as they were in the last war by a rapid ascent in living costs. We went further and, at the request of labour, extended the scope of the Industrial Disputes Investigation Act. Let me make it clear that the extension of that act under order in council to all war industries was made at the specific request of labour.

On June 19 last we passed an order in council in which the government set out the principles they considered should govern the relationship between employer and employee in the war period. I know it has been suggested by the hon. member for Vancouver East that the order in council, not being coercive, not being mandatory, did not go far enough; but I would suggest to the committee that this order in council was approved by organized labour before it was passed by the government. Incidentally to that, we appointed the national labour supply council.

What was its purpose? It was to endeavour to maintain on an even keel the relationship between industry and labour in this country.

It was a unique experiment. For the first time in our history we brought together the three great union organizations of the country to sit round the same table—the Trades and Labour Congress, the Canadian Congress of Labour and the Catholic Federation of Workers. In addition to that, for the first time in the history of the country, on an advisory council industry and labour sat with their feet under the same table to deal with the problems which the war necessarily entails.

We went further. When it was suggested that the Fair Wages and Hours of Labour Act, in connection with the construction industry in so far as fixed rates were concerned, was not being observed we passed, at the request of labour, an order in council stating that in the event of employers not observing the wages fixed by the Department of Labour in the construction industry, the moneys thereby saved by the contractor would be paid into the consolidated revenue fund, and it would be the duty of the deputy minister of labour to see that the parties who could not possibly be found otherwise be located and the money paid to them. In addition to that, we passed an order in council, P.C. 7440, which was designed to help labour and to help our general economic structure. This order in council was passed after it had been given the unanimous approval of the national labour supply council. This was done in order to prevent repetition of the circumstances that arose in the last war, where in that general spiral, rise of wages and cost of living, the cost of living won. It was done with the purpose of stabilizing our whole economy in war time. But the point I want to make, having regard to the suggestion of the hon. member for Vancouver East as to lack of cooperation in connection with that order in council, is that the order in council before it was passed had the approval of the national labour supply council.

The hon. member suggested that in dealing with that council labour had only a small representation. When I pointed out to him that it had a representation equal to that of industry, in its origin five of each, later increased by two representing the railways and the running trades—fifty per cent representation—he said, "But they are never consulted." I do not think there has been a matter of major labour policy on which the national labour supply council has not been consulted since its appointment, and—what is more remarkable, and showing the results that can be secured when men of good-will get together—all their decisions have been unanimous. They were, for instance, consulted in connection with order in council P.C. 6286 dealing with the problem of bidding for skilled labour by war industries. They were consulted as to order in council 5922, which provided for the establishment of the labour coordination committee. They were consulted in connection with order in council 7440. I believe it is safe to say that there has not been a single measure of government labour policy on which they have not been consulted since the time the council was established.

In addition to that the government passed, with the unanimous approval of this house, the Unemployment Insurance Act, which it is hoped will come into effect at an early day. This was done in order to meet the wishes of labour plus the desire to establish sound economic conditions in the post-war period. In other words, I cannot see how the government could consult labour through the national labour supply council to a greater degree than it has done.

The hon. member mentioned representation of labour on boards. Let me deal with the boards of which the Department of Labour has the recommending. They are of course represented on the unemployment insurance commission; that, as he stated, is provided in the act. They are represented on the unemployment insurance committee, and their representation on that committee is greater than that of industry, because labour has a definite representation of three out of six members and in addition there is one very prominent social worker who is a woman. The commission itself will be setting up a national employment committee under the act, but I believe I can assure hon. members that labour will secure a fair representation. An offer of the chairmanship of that committee has already been made, to put it mildly, to one of the leading labour leaders of this country in the person of Mr. Tom Moore, and I believe he will be kind enough to accept it. In other words, so far as government cooperation with labour is concerned I should like to have any suggested failure stated, not in wide and general terms, but by pointing out specifically wherein cooperation has failed.

The hon. member dealt with certain specific instances in which he felt that injustice had been done. He mentioned the National Steel Car company at Malton, and he asked my colleague the Minister of Munitions and Supply why there was a labour turnover of seventy-five to ninety per cent in that plant. The figure struck me at the time as startling and requiring explanation. I took the matter up with the company and inquired as to the correctness of the assertion. The reply I received from the president of the company was this: "In last six months, the labour turnover at Malton has been approximately twelve per cent, of which about a third have left to join the services." Quite a wide difference, Mr. Chairman.

Mr. DOUGLAS (Weyburn): Can the minister give the total number of men who quit in 1940?

Mr. McLARTY: No, I have not that figure; I have simply the reply to my inquiry. I quoted the statement made by the hon. member for Vancouver East, and asked as to its correctness, and that is the reply I received. Even that may be a large turnover. But when we consider that the aircraft industry is a new industry; that at the beginning of 1939 the number of men employed in it was 1,000, whereas to-day it is over 18,000, is it not reasonable to expect that it will show some greater measure of turnover than the older and more stabilized industries?

The hon. member went on to refer to conditions existing at the Montreal Construction Supply and Equipment company. Notwithstanding what was said the other day about the federal government having the power under the War Measures Act to overstep provincial rights and assume provincial duties, the fact is that the inspection of sanitary conditions at a plant is a provincial responsibility. There can be no doubt about that, because if it were not so, apart from any constitutional difficulty there would be the practical difficulty of duplicating the services necessary to do that work. It is not unreasonable to assume that out of 12,500 plants in Canada there may be found some that are not living up to their obligations in regard to sanitary conditions. So far as the Department of Labour can deal with the matter—and the department can do so only when it is drawn to their attention—we are glad to do so.

The hon. member went on to point out that they are working seven days a week. I agree that that is extremely undesirable. Experience has shown that working seven days a week decreases rather than increases production in a plant, owing to the fatigue that results. That was the experience in Great Britain; when after the collapse of France they started to work seventy-two hours a week but found the fatigue was such that production really was impeded. The ministry of labour in Great Britain has suggested that the optimum hours of work in labour for maximum production are fifty-four to fifty-six a week.

The hon. member went on to refer to the Fairchild company of Montreal, aircraft manufacturers, and suggested that discontent and unrest existed in that plant. About two weeks ago the hon. member for Weyburn (Mr. Douglas) placed on *Hansard* a memorandum given to me by some employees of that plant, members of the union. It was sent to him by members of the union, and he assumed that he was within his rights in putting it on *Hansard*. I do not criticize him in any way for the action he took, because he had no reason to believe it was confidential. But the information he placed on *Hansard*, which was reinforced by the remarks of the hon. member for Vancouver East, was such as to indicate that unrest existed in that plant as between the employers and the employees.

Mr. MacINNIS: I would ask the minister to quote from *Hansard* anything I said with regard to unrest in the Fairchild plant.

Mr. McLARTY: The hon. member brought up the matter of finger-printing, and I was going to deal with that.

Mr. MacINNIS: I suggested something else.

Mr. McLARTY: You suggested the matter of finger-printing.

Mr. MacINNIS: That is something entirely different.

Mr. McLARTY: Oh, no; the suggestion was that it was creating unrest among the employees. The whole tone of the hon. member's remarks was that there was unrest among these men, and this was part of the evidence he produced to prove that contention. All right. The grand lodge representative of the International Association of Machinists, organizing department, who is residing in Montreal, read in *Hansard* the remarks of the hon. member for Weyburn, and as a result he wrote the hon. member. To be quite fair I must say that the hon. member for Weyburn sent me a copy of the letter, as did the writer. I should like to read it, in order that we may see the measure of unrest that exists at this plant. In the letter to the hon. member for Weyburn this gentleman states:

My attention has been drawn to *Hansard* of February 28, in which you are reported as quoting from a memorandum submitted to the Minister of Labour by a delegation of aircraft workers employed by the Fairchild company of Montreal.

The document from which you quote was intended for the Minister of Labour only, was considered confidential, and not for public ventilation. We are not aware of the source from which you obtained this memorandum—

Let me make it quite clear that I am not criticizing the hon. member for Weyburn. I know he did not realize that it was confidential.

—and beg to inform you that its publication was not authorized by this association, or any of its responsible officers.

Since the memorandum was submitted to the Minister of Labour we are happy to say that conditions in the Fairchild plant have greatly improved. Through the good offices of the Minister of Labour the management and the employees were brought together, the differences and misunderstandings that did exist have been composed, and a spirit of cooperation and good will now obtains which, we believe, will bring about what we all desire, namely, the smooth and efficient running of the plant without interruption.

While we are aware that you acted in good faith and in a public spirited desire to help the national war effort, we believe that no public service can be rendered by pursuing the matter further, in view of the good relations that now exist between our association and the company, and our mutual determination to work together to obtain the best results.

Mr. STIRLING: Would the minister say who signed that letter?

Mr. McLARTY: The letter is signed by Robert Haddow, grand lodge representative of the International Association of Machinists, organizing department.

Mr. FRASER (Northumberland): The hon. member for Weyburn should apologize to the house.

Mr. DOUGLAS (Weyburn): No, Mr. Chairman. The memorandum to which I referred was submitted to the Minister of Labour, it is quite true. The facts contained in it must have been correct, but the situation has been cleared up and good relations have been established, for which I am very glad. But surely I have no reason to apologize to this committee or to the house.

Mr. FRASER (Northumberland): You had no right to the letter, and you put your own interpretation upon it.

Mr. DOUGLAS (Weyburn): That is not true.

Mr. McLARTY: I must give the hon. member a clean bill of health in connection with this matter. He did not know it was confidential; it was sent to him by a member of the union. Had he known it was confidential I am quite positive he would not have used it.

To deal with the further matter brought up by the hon. member for Vancouver East, the matter of finger-printing, I had not heard of it until he made his statement. I took up that point with the manager of the plant, in order to determine just what had occurred. This gentleman stated that this finger-printing had been done entirely voluntarily, that there was no compulsion about it at all. The purpose for which it was done was this: in the event of a serious accident in the plant, or in the event of sabotage, this was the most convenient method of identification they could think of, but no one in the plant who did not wish it was finger-printed.

Then the hon. member went on to deal with a personnel application of the International Metal Industries of Vancouver. That application has been placed on *Hansard,* and I think every hon. member of this committee who has read it will agree that it is a harsh and conscienceless document; I do not believe anyone would think otherwise. But at page 1366 of *Hansard* I find this statement made by the hon. member for Vancouver East:

I am told they are approved by the government; on that point, however, I have not had verification.

It would have taken the hon. member two minutes to obtain that verification if he had so desired. Here is the point. He is suggesting that there is industrial unrest. Does it help to allay or assuage that industrial unrest to place on *Hansard* the suggestion that the government has approved a heartless document like this? Would it not have been better for the hon. member to endeavour to verify that statement before placing it on *Hansard?* Does it relieve industrial unrest or help our war effort to say, " I have been told the government approved of it?" In the first place, I think the hon. member probably realizes that there is no department of government which passes upon personnel applications in the matter of employment in private industry. In the second place, far from approving it, as soon as the matter was drawn to my attention I immediately wrote the company, and I should like to put the letter on *Hansard:*

There has been brought to my attention a reproduction of the "personnel record" form which you apparently are using in connection with the employment of your personnel.

I regard it as unfortunate that such a form should be used by any Canadian industry and especially at the present time when the success of the war effort so largely depends on effective cooperation between management and labour. The searching character of the information requested is resented on the part of labour. Its general effect is to hamper the effort of this department and of the provincial departments of labour to establish a greater conscious-

ness of identity of interests on the part of management and men in this period of crisis.

By order in council 2685 of June 19, 1940, copy enclosed, the government laid down certain principles designed to establish and maintain good relations between firms engaged in the execution of war contracts, and their work people. Whether a firm is engaged partly, exclusively, or not at all on war contracts, it cannot but be detrimental to the war effort as a whole if the principles laid down are disregarded as has been the case in connection with the use of the "personnel record" form referred to above. I hope you will see fit to amend this form and expunge that part of it which is provocative in character.

If the hon. member for Vancouver East had merely telephoned me I should have been glad to send him a copy of the letter. I think it is sufficiently clear that this letter, heartless as it is, never secured the approval of this government.

Mr. MacINNIS: What is the date of the letter?

Mr. McLARTY: March 3. That was a Monday, and the information came to me the previous Saturday. Incidentally, in connection with the Richardson Road Machinery Company Limited, to which the hon. member also referred in his remarks, I understand that the use of the form about which he complained has been discontinued also.

The hon. member for Vancouver East complained about delay in the appointment of boards under the Industrial Disputes Investigation Act. I should like to make my position clear with respect to the set-up of these boards. Once the applicants have satisfied the Minister of Labour that they have complied with the necessary preliminary conditions, the minister has no discretion in the matter; it is mandatory, and he must set up a board. But on the other hand it is necessary that he be satisfied that those preliminary conditions have been complied with.

An application came from some of the employees of the National Steel Car company at Hamilton. I believe the facts are that that company employs in the neighbourhood of 2,400 to 2,500 men. The number involved in this particular application—and I may point out that they were maintenance men—was about 70. The company stated that, contrary to the statement made in the application, there had been no negotiations, and that the application did not represent a majority opinion in that particular department.

I felt it was necessary to obtain information as to the correctness of the statement. I endeavoured, without success, to secure negotiations. My suggestion was that the only way to determine which statements were correct—and I am not suggesting that there were deliberately untruthful statements—was to take a vote of those particularly involved. That vote was to be taken last Saturday, and an officer of the Department of Labour went to Hamilton for the purpose of taking it. There was a dispute as to those who were properly on the list, and the officer was unable to take the vote on Saturday afternoon, as had been desired. However the company waived the question of vote, and the board was set up. I might point out that it had been set up before the hon. member for Vancouver East spoke in the house.

But the mere fact that the Department of Labour secures an application for a board does not mean that we immediately rush to our forms and endeavour to appoint it—and for this reason: We try to iron things out in every possible way without appointing a board. That we have been somewhat successful along that line is shown by the fact that out of 95 applications for boards received since the beginning of the war it has been necessary to set up only 47. In other words the conciliation service continues, even though the application for a board is there. I would make this further point: If in some instances there are delays beyond the period of fifteen days provided in the act, those delays are the result of endeavouring to compromise the difficulty rather than set up a formal board.

I believe I have covered all the points which have occurred to me, arising from the remarks of the hon. member for Vancouver East. He mentioned the name Sir Walter Citrine, one of the outstanding labour leaders of the world. We have had the opportunity, and the inspiration arising therefrom, of having Sir Walter Citrine in this country. He was tremendously generous of his time. While in Canada he addressed Canadian clubs and units of the Trades and Labour Congress. Wherever he went I believe he instilled confidence in the fact that the labour movement of Great Britain is sound. His visit afforded us an opportunity of paying in a small way a tribute to those who are working so hard in Great Britain. I believe that having him in Canada was a real help to our national effort.

When he returned to England it would appear that he did not report that there was that great measure of labour unrest which the hon. member for Vancouver East has found. In fact, within a short time after his return Mr. Hugh Gibson, chairman of the Trade Unions Congress of Great Britain, made some observations respecting the labour situation which were entirely complimentary to the government of Canada and to the Department of Labour.

I believe that no advantage is served by endeavouring to stir up labour unrest through suggesting that it exists. I believe, sir, that these small items of complaint might be

better handled by the Department of Labour than on the floor of this committee. I believe, further, that if we will all cooperate, not to disturb but to heighten the confidence of labour, we will do more by way of contribution to the war effort than we could do by any other method.

Mr. MAYBANK: Mr. Chairman, I had intended this afternoon to resume the discussion I initiated last night. It had been my intention to speak at the beginning of to-day's sitting, but I was made aware that the Minister of Labour (Mr. McLarty) desired to make a statement, as he has done, and consequently I deferred rising until now. I make this explanation because the two hon. members to my left rose immediately after the minister spoke, apparently with the idea of following up with further debate on that subject. This is the reason for my appearing to butt in, and, if necessary, I offer my apologies. I am really carrying on from the point I had reached last night. The speech by the Minister of Labour was what might be called a sweet interlude.

Mr. HANSON (York-Sunbury): It was not so sweet to some people.

Mr. MAYBANK: Last night I said the Minister of Munitions and Supply (Mr. Howe) had made a couple of statements to which at that time I wished to direct attention. The eleven o'clock adjournment interrupted my speech.

I have read over the statement made last night by the minister. The committee will recall that the only information he reported from Mr. Crabtree was that the equipment necessary to burn the type of coal they ought to burn was more expensive. He indicated that no other consideration entered into the matter; that the initial cost of equipment was the only one. If there are other arguments against the use of lignite coal, a coal which could be used economically in the war plant in question, I think we ought to have them. At the present time, however, there is nothing before the committee except the objection that the initial cost is the one bar to using the coal which could be used economically.

If one has available at the place he is going to burn it a coal costing $3.50 a ton, and if he has another coal at the same spot costing $8.15 or $8.75, then, of course, other things being equal, there cannot be very much argument as to which coal one ought to use.

Mr. HOWE: Would the hon. member give us the comparative British thermal units for each kind of coal?

Mr. MAYBANK: I will do that. The minister was just a little quick on the trigger that time. I did not suggest that the difference between these two coals was to be reckoned by the difference between $3.50 and $8.75. Other things being equal, it is clear which of the two is the more economical. Everyone knows that when you are going to buy coals you find out their heating values as expressed in the phrase just used by the minister. I think it is generally agreed that as far as thermal units are concerned, almost twice as much of the lignite coal is required as compared with the other type of coal. I may be a little generous in that statement because the quantity is hardly two for one. I think the B.T.U.s, run 74 and 140. Therefore the price is actually not $3.05, but twice that amount, or $6.10. That is what you must pay to get the proper calorific results at the place where you want to do your burning. You do not need to go any further than that to find out where there is a saving. Engineers have arrived at a great many findings with respect to this matter, and I may be able to give some to the committee. Anyone could figure out a saving of around $60,000 or $75,000 on the amount of coal that these people say they are going to burn. In the light of that, it seems to become necessary to lay out the information for Mr. Crabtree as to the cost of one kind of equipment as compared with the cost of the other.

I know full well that no matter what I may say, no matter what any person from Saskatchewan may say or no matter what industrialists in western Canada may say, the Allied War Supplies Corporation are going to put in equipment to use the other kind of coal. I am under no illusion as to what power there may be in the human voice, either mine or that of anyone else. I know full well that there will be no power in anything I may say. I know full well that the least economical job will be done. The decision was arrived at when the minister was away. I do not say it was arrived at because he was away; I say it was arrived at when he was away. When he took up this question, as he stated, he was beaten before he started because these people had reached their decision.

Hon. members know that if they want to burn a lot of coal, the wise thing to do is to decide what is the most economical coal to use and then get the equipment to burn it. Everyone knows that; one does not need engineers to figure that out. These people, however, chose the equipment and then said they could not burn lignite coal. That was the first statement. I am sure the minister will confirm what I am saying, and many other people will also confirm it. As I say, the first statement they made was that they could not burn lignite coal, and they gave

a number of reasons, although none of them has been introduced into this question so far. In recent times, when pressed for a statement, they have said they are going to burn a great deal of lignite coal, as much lignite coal as experience shows it will be possible to burn. The experience with the type of equipment that they have shows that not an ounce of lignite coal can be satisfactorily introduced into the furnaces. They know that, and they knew it last January when they dealt with this matter.

That is why I referred last evening to this organization which is not responsible to this parliament. It is just playing horse with the members of the government and the members of this parliament. As I have said, they first made their decision and then, after pressure had been applied, they said they would do something which at first they had stated was not possible. The same engineers said it was not possible; they could not think of it; then they said they would do it, although it would depend upon experience. That was done in an effort to shut up any argument against them; they had to do something to stop any talk that might come up.

I have no interest in this matter, such as some people might have. This is not something that impinges upon my constituency. It does not affect labour in my constituency one way or the other, as might other matters which would have to do with railroad labour. That question does not come into the picture, at least to any extent. With the greater bulk of coal which would be necessary, it is possible that more switching would have to be done, but that would be just a bagatelle. The situation, however, would be altogether different with hon. members from Saskatchewan where the people would be more directly affected.

There is not an industrialist in western Canada who would not be interested in the most economical type of fuel to use. When an industrialist is interested in this matter, doubtless those concerned with the burning of lignite coal speak to him. Many of these men have come and told me what they have done in their industries in order to carry on economically, and then they say, "Look at what the government is doing in this matter." I am put on the defensive immediately. I realize that it is not the government, although technically I suppose it is. In a sense the government is not doing it, but large powers have been granted to this corporation. Apparently what they do is not subject to review. That is how the matter originated with me. There is no doubt that any industrialist who was trying to run his plant economically, and who was placed in the same position in which we were in January, would make a decision in favour of lignite coal.

I should like to have definite information as to costs of equipment. We would then be in a position to know what the saving would be. The information now before the committee is not complete enough. The question as to the possible value of the equipment after the war may be raised. The minister said that Mr. Crabtree indicated that there was not as much salvage value in one kind of equipment as in the other. I suggest to the committee that they place this problem in front of a group of first-class engineers who have had experience in the use of lignite coal. They will say that by the use of lignite coal, there will be saved in one year a great deal more money than the whole additional cost of the comparatively more expensive equipment. I lay that down as a challenge at the present time, that if engineers of that sort, completely neutral, are approached and inquiry of them is made, they will say exactly what I have said, that in one year there will be saved more and much more than the additional cost of the equipment. If that is so, the question of salvage no longer matters. If the machine is paid for as a result of the first year's savings, the salvage question may be thrown out of the window.

Mr. HOMUTH: In the figures the hon. member is giving and probably about to give, is the whole cost of the equipment depreciated —obliterated?

Mr. MAYBANK: I get the point. I thought I was making that clear. Suppose you have two machines, one costing $10 and the other $20, for roasting peanuts. If, by buying the $20 machine, you can roast your peanuts so cheaply that you can make much more money than by using the $10 machine, you do not need to worry very much about the salvage question when your job is completed. That is exactly the picture of the lignite coal equipment. There is nothing to the salvage question; you do not need to consider it. There is, I am convinced, a greater saving. I see the Minister of Munitions and Supply smiling. All right. I would, however, point out to him that his statement last evening was just the vague one that Allied War Supplies take a different view. There is nothing in that statement of the minister except that we have a bunch of very good men and that we must leave the decision to them. The government should not abdicate. These people—Allied War Supplies—really usurped power long ago.

The first thing I want to know is this: What are the differences in cost? First, let

me point out to the committee that the minister himself stated that lignite coal requires a different kind of equipment. That sentence, taken with some other sentences in the statement, indicates clearly that the right equipment is not being put in; and if they are not putting in the right equipment, they are not going to keep their promise to burn a large percentage of lignite coal, as the minister said last night they would. On the other hand, if the equipment installed there is good for burning lignite coal, there is no argument at all for not using it.

Mr. HOMUTH: One hundred per cent.

Mr. MAYBANK: There is no reason why they cannot burn lignite 100 per cent, if they can burn it 80 per cent. The minister cannot have it both ways. He cannot say in one breath that the equipment is not suitable, and then say in the next breath that they will burn 80 per cent lignite. It does not take a logician to see that there is something wrong with that. I should like to have a definite answer to my question as to what the additional costs are, and furthermore I should like to know when these officials made their decision.

Mr. HOWE: This would seem to be a matter that might very well be referred to the parliamentary committee which has just been set up on economy in expenditures. It has power to call witnesses and will have all the machinery necessary to go into this subject thoroughly. If the committee cares to bring down a report to parliament that there has been wasteful expenditure in connection with this installation, I shall be prepared to accept the rebuke and take the responsibility.

Mr. COLDWELL: May I say a word in support of the point of view put forward by the hon. member for Winnipeg South Centre (Mr. Maybank). I would suggest that if the committee is to make some inquiry into the question, they inquire from the city of Regina regarding its experiences with the burning of lignite coal by special equipment. I was a member of the city council for a number of years and I know that all of us were a little diffident about introducing the new equipment for burning lignite coal, but in the Regina school of which I was principal for some time, the fuel costs when burning lignite coal were cut from $3,000—that was when oil was used—to around $800 in the same kind of winter. Lignite has been successfully used in the city of Regina.

Mr. HOMUTH: How about the delay if this question has to go before the committee?

Mr. COLDWELL: I said, if it were put before the committee, but I do not think that is necessary. The hon. member for Winnipeg South Centre can probably give the minister the information himself.

Mr. MAYBANK: I wish to make this further remark with reference to what the minister has said. It is all right to refer this question to a committee, but while that is being done, these gentlemen who made their decision a long time ago will simply go right ahead using what they are using now. Therefore I say that if there is any chance of effecting a saving, it should be done at once. I do not see why a matter of this kind should be taken out of the public eye and referred to a committee. It is, of course, a proper subject for a committee to discuss further, but do not let us understand by that that nothing is to be done here about it. I want to point out that the minister has not yet pledged his own independent belief that the right course is being taken. No. This company is being put up for the parliament of Canada to-day. That is what is happening.
