Mr. NICHOLSON: I would ask the minister if it is too late at this stage to make the necessary change in the equipment. The hon. member for Winnipeg South Centre has made what appears to me to be a very good case, and I should like to know from the minister whether the proper type of equipment for burning lignite could not now be installed.

Mr. HOWE: Such inquiries as I have made indicate that orders for the equipment have been given, but how far the manufacturer is advanced with them I cannot say. My hon. friend says that the hon. member for Winnipeg South Centre has made a case. May I suggest to him that the engineering reports obtained by those responsible seem to lead to a different conclusion. I hardly think a case has been made just by hearing one side. I saw the other side of the story as presented to me by officials of Allied War Supplies; it seemed to me they had a very strong case for doing what they did, and they did it with both sides of the case before them. It is not as if they did not know about lignite coal or had not a good deal of information about its use in western Canada. My hon. friend indicated that an engineer familiar with conditions in Winnipeg had been engaged in the case, because I think he told me or the house that the engineer had operated in Winnipeg at some previous time. If, however, the committee on economy is for any purpose whatever,

and can be helpful in the war situation, this is the type of case in which it can be helpful. It seems to me a proper case.

Mr. MAYBANK: How can they be helpful?

Mr. HOWE: They can advise whether a wrong decision has been made, after hearing all the expert evidence that can be produced before them, and being able to weigh that expert evidence. We in this house are speaking as laymen. I am not a heating engineer.

Mr. MAYBANK: There is no advantage in locking the door when the stable has gone.

Some hon. MEMBERS: Oh, oh.

Mr. HOWE: According to the hon. member's own statement, the stable has been gone for some time.

Mr. MAYBANK: Perhaps I should put that in completely Irish fashion and say there is no use in bridling the horse after the stable is gone, but of course hon. members understand what I meant. There is no use in locking the stable door after the horse has run away, and that is practically what we would be doing by merely referring the matter to a board to look into it after the fact. It is possible to get a complete examination now by neutrals. It is said that this organization has expert opinion. One of their experts is a man who was engaged recently in handling a particular type of equipment. I am not trying to suggest dishonesty.

Mr. HANSON (York-Sunbury): Did he get a commission on this?

Mr. MAYBANK: That is the point. The leader of the opposition says, "Did he get a commission on this?" Definitely, that is not the sort of thing I am suggesting; but this particular engineer, who jumped immediately to the use of a certain kind of equipment, had been selling that equipment for years. He tried to persuade us in Winnipeg to keep that equipment in one of the hospitals, but they switched to lignite equipment and the result of switching to that equipment was apparently twofold. In the first place, our bills dropped from $38,000 a year to about $16,000 or $17,000. When the bills were high in the first part of that period when we had his equipment and had to burn the other kind of coal, we did not have the hospital fully open; but at a later time, after we refused this engineer, our bills were around $16,000 and the hospital was fully open, more space being heated at less cost. That is the expert who to a very large extent has made this decision He told me so.

Mr. HOWE: Let us get one thing straight. Is any employee of Allied War Supplies Corporation interested in the sale of the equipment of which the hon. members speak.

[Mr. Howe.]

Mr. MAYBANK: I am making that clear. I am not making any charge.

Mr. HOWE: The hon. member is making the charge that an employee of Allied War Supplies Corporation is engaged or interested in the sale of particular equipment. Is that true or not? Yes or no?

Mr. MAYBANK: If the minister had really listened with his mind as well as his ears he would not be asking that question.

Mr. HOWE: It is a fair question. Is any employee—

Mr. MAYBANK: Just a moment now until I finish. I am not going to be whipped around, or down. I drew attention particularly to the fact that I was not making any such suggestion, and I did so in this way. The leader of the opposition called out to me, "Did he get a commission?" I drew attention particularly to the fact; I said, "That is just an illustration of the very thing I am not trying to charge."

Mr. HOWE: Mr. Chairman—

Mr. MAYBANK: Just a minute; let me finish.

Mr. HOWE: Who is this mysterious engineer of whom the hon. member is speaking, and who employs him?

Mr. MAYBANK: I have made that clear already.

Mr. HOWE: The hon. member has not made it clear to me.

Mr. MAYBANK: I will try to make it clear and draw a blueprint. The man I spoke of was, as I said, engaged in selling this equipment for a long time and was an engineer, one of the engineers that made this decision, and—

Mr. HOWE: Is he an employee of Allied?

Mr. MAYBANK: Just a moment.

Mr. HOWE: The hon. member says he made a decision.

Mr. MAYBANK: The minister cannot both listen and speak at the same time. His province at this moment is to listen. I do not wish to be in any way truculent or disrespectful or to get under anyone's skin; on the other hand, while I do not know all my rights, I know some of them, and they are not going to be just whipped away at the will of anybody else.

The CHAIRMAN: I would point out to the hon. gentleman that he should not suggest that anyone is trying to whip his rights away in any direction. He has the floor and he can

refuse to allow an hon. gentleman to ask him questions. He has the floor, but I do not believe he should use such an expression.

Mr. MAYBANK: Very well, Mr. Chairman, I am sorry. I withdraw that whole-heartedly without any mental reservations. I would make this observation, however, with reference to your own remark that I have the floor and may refuse to answer questions, or decline to be interrupted. I do not know that gets one anywhere sometimes when some people try to interrupt. One may decline to be interrupted but it does not necessarily work that way.

The CHAIRMAN: If the hon. member will request the privilege of not being interrupted, I will insist on the observance of the rule.

Mr. MAYBANK: It is all right; there is no harm done. I believe that, in my endeavour to answer the minister, who does not want to wait for the answer, I was at this point: I said that this man had been in the employ of a company which is selling this equipment. He is one of the engineers of Allied War Supplies Corporation and one of the important men who made this decision. I now want to make it clear that I am not suggesting any improper motive on that man's part, but I am suggesting that with his long experience of fighting for a certain type of equipment he naturally, in making his decision, gravitated in the direction of choosing that which for many years he had thought was a good thing. I would say that that in itself is something which ought to be guarded against. That is as far as I am going. I have already mentioned the gentleman's name. It is Abbott. I think I have made that situation clear.

Mr. FRASER (Northumberland): During the discussion before the committee, from time to time the matter of aircraft production has been mentioned, and mentioned on a number of occasions in rather disparaging terms. Yesterday when the hon. member for Hastings-Peterborough (Mr. White) was speaking, he made a statement, as I notice in *Hansard,* about the "muddle" in aeroplane production.

I should like to take a few minutes of the time of this committee to place upon the record some facts in connection with aeroplane production in Canada. Notwithstanding what has been said in the house, I believe there are still misgivings and misunderstandings in the mind of the public in connection with Canada's effort in the production of aeroplanes. I should like to deal with this matter in all fairness from the point of view of actual facts, and to place before the committee some reasons why aeroplane production in Canada is in its present state. And when I use the phrase "present state" I mean present state of production.

The other day the Minister of Munitions and Supply said that it would be a good thing for hon. members to visit industrial plants in Canada to gain some knowledge of what the government's war effort, or the country's war effort, is accomplishing in connection with the building of armaments. I have spent a great deal of my time during the last year in plants throughout Canada that are producing everything from ships to aeroplanes, including the Canadian arsenals. But I am going to confine my remarks to aeroplane production. I am going to give the reason why aeroplane production in this country has not gone forward at the pace that would please hon. members of this committee and would, I know, please everyone in Canada. That reason is that we could not get money voted in this house to build an aeroplane industry. Prior to the outbreak of the war the aeroplane industry in Canada was practically nil. During the years 1936, 1937, 1938 and 1939 it was impossible, as hon. members know—and I am not making this statement in any spirit of criticism—to get defence estimates passed through this house sufficient even to lay the foundation of an aeroplane industry such as is required in Canada at the present time.

In discussing the production of aeroplanes we must break that production down into two distinct classes. Class 1, as Mr. MacMillan has correctly stated in his report, includes fabricated or training planes such as were used in this country prior to the war and can be and have been constructed by labour accustomed to turning out that type of plane—the low-power training plane of the kind produced by de Havilland and Fleet. The technicians to develop these are not nearly as hard to train as those required for class 2.

In class 2 we have the all-metal plane which we started to develop in this country only after the outbreak of the war. I refer to the report of Mr. MacMillan tabled in this house by the Minister of Munitions and Supply some days ago and to the limitation he made in regard to every manufacturer except de Havilland and Fleet, that is, "unless unforeseen stoppages arise in supplies or component parts." In every case in discussing all-metal planes such as Lysander, Bolingbroke and even the Anson, Mr. MacMillan has made the limitation that construction would go ahead at a certain rate provided the component parts were available.

Prior to the declaration of war the development of the aeroplane industry in Canada

was limited by the amount of money voted in the defence estimates by this house year after year. I want to pay tribute to the then minister of national defence and the then deputy minister for giving, in two or three instances, pilot or educational orders for all-metal planes. But the component parts for these planes were not being made in Canada. The manufacturers in Canada until the outbreak of the war felt that these necessary parts would be available from England. The British government and the representatives of the air ministry in London were very insistent on this—perhaps I should say conservative—that they did not want pilot orders for building of planes in Canada to follow the design of United States planes, but they asked—and I do not think I am out of place in making this statement—that in the construction of planes in this country Canada should adhere to British design.

In an 8,500-pound bombing plane, excluding the engine, there are 50,000 different parts. Instruments were not made in Canada, neither were tires nor hydraulics. Most of these component parts had to be brought from England. Even in England, until Dunkirk, people did not realize that they would not be in a position to supply the component parts, or even the engines, for Canadian planes. The result, as Mr. MacMillan stated in his report, was that the progress in the production of aeroplanes in Canada depended upon obtaining component parts either from England or from the United States. But after the war broke out, and particularly after Dunkirk, that source of supply was absolutely eliminated. It was impossible to procure instruments in Canada, even to procure tires for the landing gear.

Another factor of which hon. members should take full cognizance is that no order was given to or available for Canadian aeroplane manufacturers which would justify any attempt at mass production methods. When a company like National Steel Car had an order for only twenty-two Lysanders, all-metal planes powered with British engines, they obviously could not organize mass production similar to that attained by Lockheed, North American, or other companies in the United States. They had to proceed on the basis of the orders they had in hand, with no promise of further business.

To my hon. friends on the other side I say with respect—and with pity—that in the interests of Canada and the British empire it is too bad that we did not year by year, particularly in 1938 and 1939, get sufficient money in our estimates to be in a position to build up an aeroplane industry in this country.

[Mr. Maybank.]

After Dunkirk Canada found herself in urgent need of machine tools and precision instruments, gauges, every type of precision machine and tool used in the production of munitions and armaments. Only last week on the floor of the house it was stated that Australia had got into the production of aeroplanes, and I think reference was made to a copy of *Life*. It is true that Australia is producing a training plane. It is true that in 1937 the Australian government procured the rights from the Pratt-Whitney company for the production of the Pratt-Whitney engine in Australia. There was perhaps greater reason for Australia doing that than Canada, on account of Australia's isolation from the large producing centres of the United States. But Australia is producing only training planes, and only one type of engine, the Pratt-Whitney 500-horsepower engine, which is being used in that training plane.

What were we in this country confronted with at that time? When proposals were submitted to the government of the day by the Pratt-Whitney company, the same company that built the plant in Australia with respect to a programme involving about $12,000,000 for a plant to build aeroplane engines in Canada, the money, as every hon. member who sat in the house in those days knows perfectly well, was not available. Neither hon. members of this house, nor I believe the people of Canada, in 1937, would have acquiesced in the expenditure of a large sum of money to build aeroplane engines in Canada. Last week some hon. member asked, "Why are we not building aeroplane engines in Canada to-day? Why don't we start now?" The answer is obvious; you could not procure technicians to put in an aeroplane engine plant in this country to-day and establish and equip that plant in less than four years. I make that statement on the advice of the best aeroplane engine manufacturers in the United States.

Let us be fair, Mr. Chairman. When the war broke out the aeroplane industry in Canada was simply a myth; it was nothing, and we had to start from scratch. I think at that time we had about 1,700 people employed in this industry. To-day we have close to 20,000 employees, each of whom had to be educated in the construction of all-metal rather than fabricated planes. I want to contribute something to this discussion, Mr. Chairman, so I say to you that in peace time, before this war broke out, it took two years, even in England, to produce a 10,000-pound all-metal plane from the time the drawings were completed. We in Canada were confronted with the situation to which I have referred this afternoon—lack of technicians, lack of space

to build planes, lack of machine tools, and lack of precision machines. At the time we entered this war Canada could not possibly produce more than twenty per cent of the precision equipment that was required. Every plant from the Atlantic to the Pacific that was or could be equipped for the production of precision machinery, and that could get technicians or apprentices from the technical schools or elsewhere, is working twenty-four hours a day to my knowledge. Obviously such firms as National Steel Car, Fairchild and others working on all-metal planes can be tied up very easily because of the failure of subcontractors to supply the necessary equipment.

Now I should like to say just a word or two with regard to the statement made this afternoon by the Minister of Labour.

Mr. HANSON (York-Sunbury): Before the hon. member leaves the question of aeroplanes would he be good enough to give the committee his opinion about Federal Aircraft?

Mr. FRASER (Northumberland): I should be delighted to do so, Mr. Chairman, if it were within the scope of my knowledge or capability.

Mr. HANSON (York-Sunbury): All right; we will excuse you.

Mr. FRASER (Northumberland): I am doing my best to cover what I know, not something I do not know.

Mr. HANSON (York-Sunbury): That is a very good answer.

Mr. FRASER (Northumberland): I am being honest with the leader of the opposition. Just for a moment I should like to refer to the letter which was read this afternoon by the Minister of Labour, and at the same time I should like to congratulate him upon the splendid presentation he made in connection with the difficulties with which he is confronted from time to time. I ask my hon. friend from Weyburn, who read into the record a paragraph or two from a letter he received from a certain person—

Mr. DOUGLAS (Weyburn): Not from a letter; I read from a memorandum submitted to the Minister of Labour by the representatives of a certain union.

Mr. FRASER (Northumberland): The representative of a union who was fired for sleeping in a fuselage.

Mr. DOUGLAS (Weyburn): The hon. member stated—

Mr. FRASER (Northumberland): May I proceed, Mr. Chairman?

Mr. DOUGLAS (Weyburn): No; I want the hon. member to correct that statement.

Mr. FRASER (Northumberland): I have the floor and I am going to stick on it until I am finished. I said my hon. friend read from a letter from a member of a union who was fired for sleeping in a fuselage.

Mr. DOUGLAS (Weyburn): I rise to a question of privilege.

Mr. FRASER (Northumberland): I want to make further reference to my hon. friend who is on his feet.

Mr. DOUGLAS (Weyburn): I rise to a question of privilege, to say that I did not read from a letter. If the hon. gentleman will take the trouble to look at *Hansard* he will find that I read from a memorandum.

The CHAIRMAN: The hon. gentleman has already made that statement.

Mr. DOUGLAS (Weyburn): But the hon. member is repeating his former statement, and I insist that he quote from *Hansard* in order to show what I was quoting from, instead of merely making up his story. If his facts in reference to aeroplane production are no better—

Mr. FRASER (Northumberland): I am not in a position where stories matter. I am a realist; I deal with facts. I am not a gold medal debater, nor am I academic.

Mr. DOUGLAS (Weyburn): That is quite apparent.

Mr. FRASER (Northumberland): Now, you listen to me. I do not want to get into an argument with my hon. friend; I want to appeal to him. He knows perfectly well, and if he does not he should, that we have the same conditions among members of labour parties or gangs, as we call them, that we have among the members of any other profession or vocation, including his profession, and even including the House of Commons. I may tell my hon. friend that I have handled labour for the last thirty-five years, and I am proud of the fact that in my employ I have three generations of some families. Just let us be fair, and not take only one side of the question. We are going to have labour problems in Canada, but the employer is going to be fair, and all I ask of my hon. friend is that he be fair also. I am not going into matters of affidavits and so on, but in the organization of an industry that has grown from 1,700 to 20,000 employees who were not previously unionists, where the unions are now walking in and unionizing these men, you

are going to have arguments. I have more faith in Canadian labour than the hon. member for Weyburn seems to have.

Mr. DOUGLAS (Weyburn): Oh, no.

Mr. FRASER (Northumberland): I have more faith and more experience. I can tell my hon. friend that in my thirty-five years of experience I have never had a strike, and that I have always been able to sit down at a desk with labour and figure out any problem man to man. In all kindness I say to my hon. friend: Please, as an hon. member of this house, make up your mind to cooperate. Do not, as the Minister of National Defence said the other day, put a burr under the saddle; cooperate and help the producers of munitions, aeroplanes, tanks and all the other war materials; help these producers, who are striving to do their best, as labour also is striving. Help the producers iron out their problems with labour.

Now I want to go a step further, and I say to my hon. friend in all kindness—

Some hon. MEMBERS: Oh, oh.

Mr. FRASER (Northumberland): Do my remarks confuse hon. members? I was going to say that you do have members of labour organizations who are not always fair. In a plant employing 3,500 or 3,800 men you will have members of a gang who are not fair. No one knows better than my hon. friend, in his profession, that people are not always fair; if that were not so he would not have a profession. We in industry have these problems. Let me go further. If given the opportunity I will be the first to sit down with the hon. member at his desk, give him all the facts, ask for his assistance, and work hand in hand with him in ironing out any difficulties that may crop up between labour and production in Canada's war effort.

I wish to make one or two further observations with regard to aeroplane production. In my opinion the most important chapter in Mr. MacMillan's report on the aeroplane industry—and it is a very fair report—is chapter C, which appears on the last page. It reads as follows:

> After the joint air training scheme and the Royal Canadian Air Force are stocked up, say by the middle of 1941, the annual Canadian demand will drop to something like:
>
> | | |
> |---|---|
> | Primary trainers | 150 |
> | Twin engine trainers | 150 |
> | Single engine trainers | 150 |
> | Fighters of all types | 300 |

I am sorry the Minister of Munitions and Supply is not in his seat; but this House of Commons and the Canadian people, with the prospect of a long war ahead of us, have to decide whether Canada is or is not going to be a factor in the production of aeroplanes. We cannot produce aeroplanes economically unless we design our operations to mass production. Mr. MacMillan very fairly sets that out when he mentions the man-hours necessary in Canada to produce a Bolingbroke. The original order for Bolingbrokes was for 18 planes. That order was finished about a year ago. There were weeks and weeks when no one—I say this advisedly—knew whether there would be sufficient money to go ahead with more planes, or whether conditions in Europe would be such as to demand a greater aeroplane production in Canada. The result was that aeroplane production in Canada has never been able, owing to the business it had ahead of it, to do anything like set up for mass production.

Mr. HANSON (York-Sunbury): That is true; it takes two years.

Mr. FRASER (Northumberland): Yes, it takes two years.

Mr. HANSON (York-Sunbury): Look ahead.

Mr. FRASER (Northumberland): I am glad the leader of the opposition mentions that. The final drawings for the Bolingbroke, which is the bomber being produced in Canada, were received only on February 1, 1939. The whole production of aeroplanes is in a state of evolution. Plans are being changed every day—well, every week, and sometimes every day. The plans for a certain plane being produced in Canada were changed 490 times from the time they left the original drafting board. If in dealing with the aeroplane industry in Canada we consider only the facts with which we are confronted I am quite sure there will be no rash statements about aeroplane production. I say that because every hon. member has the same idea. But we in Caanda must know whether there will be continuity of busines for those companies, whether it be National Steel Car, Fairchild, or any other.

I should like to refer again to the speech of the hon. member for Weyburn. In the quotation he placed on *Hansard* some time ago there was a sentence referring to mass dismissals, and another sentence dealing with tie-ups in plants.

Mr. DOUGLAS (Weyburn): Quote it.

Mr. FRASER (Northumberland): I shall enlarge upon it, and then the hon. member will understand it.

Mr. DOUGLAS (Weyburn): I have no doubt the hon. member would enlarge upon it; but I want to hear the original before he enlarges upon it.

Mr. FRASER (Northumberland): Let us suppose that you have a plant operating with a gang of 3,500 employees, and that you have a promise from subcontractors to supply component parts. Remember, the workers in your plant have been educated in aeroplane production; and in passing it might be well to remember that three years ago there was not one all-metal aeroplane mechanic in Canada—not one. Let us suppose that you have been held up for lack of component parts, although you have been promised day after day by the manufacturer that you would receive those parts. What would you do, Mr. Manager, behind your desk? You would have to decide this: Shall I knock these men off the payroll, and wait for those parts? Shall I take a chance of those men going somewhere else? Or, would you do your best to keep your gang together until the basic parts came in, particularly if you were dealing with rush work?

That is what occurred. It is a common occurrence in every industry. As I said a few minutes ago, every member of a union is not a good one. Every member of a gang is not a good one. Day after day in the modus operandi of industry these processes will go on. You know and I know that members of congregations must necessarily be excommunicated for the good of the whole. There is no argument about it. These are necessary actions.

All I ask, Mr. Chairman, in connection with this discussion on the production of aircraft in Canada is this: Let us deal with the facts.

Mr. HARRIS (Danforth): Is this a congregation?

Mr. McIVOR: I am sure that there are no excommunications from the church to which the hon. member belongs.

Mr. HOMUTH: What church is that?

Mr. FRASER (Northumberland): In conclusion may I make this statement, in all fairness. I have had something to do with aeroplane production in the last eight or nine years. Associated with other aeroplane enthusiasts we have tried to build up an aeroplane industry in Canada, and for that reason I believe I know something about it. I know something, too, about the difficulties respecting cooperation in the aeroplane industry. No one would have gone farther, had he had the authority, than did the Minister of Munitions and Supply to get ahead with the construction of aeroplanes in Canada. The minister, who brought in as his coordinator in the aeroplane industry of Canada Mr. Ralph Bell—who, regardless of what was said about him in a derogatory way, has thrown everything into the production of aeroplanes in Canada—has done a wonderful job. There is no question about it. The very heart and will of these men is in the production of aeroplanes for war. Mr. Ralph Bell ironed out difficulties—inter-departmental difficulties, difficulties which arose and have always arisen when a production programme has had to be dealt with; difficulties which every member in this committee knows perfectly well must be found in any business, including the production of aeroplanes.

That is the situation to-day. Mr. MacMillan has placed on record reasons why there may be more delays. This country had to be transferred from a peace-time economy, without any thought of war, to one in which a war was in progress. I am sorry to say it is my belief that there are still many people in Canada who do not realize the gravity of the crisis with which we are confronted. The fact remains that Canada had to be transformed from a peace-time country, where many people got too much for giving too little—and wanted more—into a country where all the people have to make sacrifices for war.

The manufacturers of aeroplanes in Canada will do their level best. All they ask is cooperation from labour, the representatives of labour and the members of the house. Again I extend to the hon. member for Weyburn an invitation to sit down with me and to discuss anything which he believes might be of mutual interest to both of us in helping to prosecute Canada's war effort.

Mr. CHURCH: Mr. Chairman, it is not often I have the great pleasure of reading and listening to the remarks of the hon. member who has just taken his seat. I might advise some hon. members that it is not always wise to interrupt the worthy admiral of the fleet. He comes from one of the industrial centres of Ontario.

The question of lignite has been raised, but I contend that this matter should be taken up by the provinces. First, it has a great value. This is not the time, however, with a war on, to dislocate business in war industries using coal, as was suggested by the hon. member for Winnipeg South Centre (Mr. Maybank). Furnaces would have to be changed. I have always believed in a national coal policy for Canada and have contended that all coal

should be mined and coked under the British flag, whether it is done in Wales, in the maritimes or in Alberta.

We are now in committee discussing a resolution of the Minister of Finance (Mr. Ilsley). In view of the proceedings at Washington last Friday and Saturday when the lease-lend bill was passed, I thought the minister would have, since then, made a statement as to the policy of the government of Canada with regard to that gesture, not only toward the mother country but toward the dominions, especially Canada.

With all due respect to the minister I think he is placing too many artificial barriers against trade, especially against the small business man. I come from an industrial district and the people there want to know something more about the resolution. As I have said, I contend that about 70 per cent of the appropriation should be charged to capital and 30 per cent to income. The city of Toronto is one of the largest taxpaying cities in the dominion, and I have figured out that it will contribute about $90,000,000 toward these particular annual current expenses of civil government. That city, while paying such a large share of the taxes, is not getting the recognition it should from the government. About three mills of its tax rate are pure federal burden imposed on it, and I hope there will be some adjustment, and an account taken of the city proper.

As far as I can see, there is no intention on the part of hon. gentlemen on this side to offer anything but constructive criticism of the government of the day. The Minister of National Defence (Mr. Ralston) made a splendid speech yesterday and he gave us a lot of information to clear the air. There is no desire on the part of any hon. member on this side to embarrass the government or to offer anything but useful suggestions. It is no disparagement of hon. gentlemen opposite to say that many of those who sit in the government may have been successful in peace-time affairs, but war time offers a totally different situation to deal with.

I know of no rule of the house that would prevent the hon. member for Hastings-Peterborough (Mr. White) from wearing a uniform in this chamber. I am sorry I cannot wear one myself; if I could, I would not be here. In the British house, when the naval, army and air force estimates were being considered, many members who were serving in the forces rose in their places to criticize the government severely. Many of those members were Conservatives; and of all parties they offered constructive criticism and no objection was made. As I say, there is no rule of the house that prohibits a member wearing a uniform in the chamber if he is serving in the forces, or to prevent his criticism of our war effort.

After all is said and done, a member of parliament has a duty to perform during war time as well as in peace. His duty is greater in time of war than it is in peace. As I said the other day, he does not derive his power and his functions from hon. gentlemen opposite or the crown. He has a duty to perform, and he should perform it. He is entitled to give his views as he sees fit. His mature consideration, his unbiased judgment, his criticism of all measures are his duty.

This resolution emphasizes the drain that is being imposed upon our national resources and man-power. It illustrates the awful cost of war. It shows how debts are piling up and gives us some idea of the gravity of the monetary problem that faces this country and that almost appals the people, and the seriousness of the present war situation.

Reference was made yesterday by the hon. member for Danforth (Mr. Harris) to the salvage campaign being conducted by the Minister of National War Services (Mr. Gardiner). The hon. member mentioned the National Council of Women who work hard. I received a letter the other day from the deputy minister, but I would direct the attention of the committee to the fact that last fall the city of Toronto conducted a similar salvage compaign from which was realized a large sum through the street department. There are three other agencies in the scrap and salvage patriotic business in Toronto; one, well organized, being the Poppy Day Fund; another, the Red Cross and the third, the Salvation Army, and others like the Imperial Daughters of the Empire. When I was chairman of the police commission, we received from ten to fifteen applications at each meeting for peddler licences. These peddlers make their living in that way. So there is no dearth of facilities to collect this waste material in all its forms in Toronto, at all events.

I am sorry there was not more activity displayed by the government two or three years ago, or at least since the war started. I moved for a return on January 25 and May 25, 1940, which was brought down on June 5 last, showing the tonnage of pig-iron, scrap iron, nickel and copper exported by Canada to Germany, Russia, Japan and Italy. The totals were appalling. If the government had been alert in the past they would have prevented these things. A number of ships which used to sail the lakes have been broken up, such as the *Chippewa,* the *Syracuse* and the *Rapids Prince.* These boats, when broken up, were sold for scrap; they were taken to lake Erie ports in

United States and broken up, and afterwards some of the material was exported to enemy countries. We were too late again.

The government seems to be too late in connection with everything it undertakes. We are always told what will happen in the future. We are being told all the time by minister after minister of what is to be done in 1942 and 1943. It may be too late then, notwithstanding what the Minister of National Defence said yesterday. Help may come to Britain too late. A year ago we were depending upon France to hold out, and the Maginot line to last, but we know now the futility of that. Promises were made that they would hold the fort and the line until Great Britain got an army together or until the dominions came up with support. We are being told what is being done by the government, or what they only hope to do, in the way of mobilizing man-power, food power, munitions and everything else next year and the year after. We are relying upon the United States and I hope that the failure of France will not be repeated.

Yesterday the minister referred to the question of transportation for soldiers. During the last war the railways voluntarily carried soldiers for single fares over the week-end. I do not believe half the people of this country will agree with the statement of the Minister of National Defence in connection with soldier fares. It is ridiculous to think that men who have enlisted even unto death should have to pay fares. In the last war, as I said, the railways voluntarily carried men for single fare on week-ends. Now they carry them every day at half rate. The Railway Act does not at present provide for any special concessions to soldiers during the war, nor has the board of transport commissioners power to order any. In view of the fact that so many camps are far away from railways and the distribution of troops for training spread all over Canada, it is desirable to give soldiers some form of free transportation because a large number have been killed on highways thumbing a ride in many places in Canada while in training.

I have a return, No. 167, which shows that fifty-four soldiers have been killed on the highways. The figures are as follows:

Military district	Soldiers killed
No. 1	6
No. 2	19
No. 3	7
No. 4	7
No. 5	0
No. 6	6
No. 7	0
No. 10	2
No. 11	5
No. 12	1
No. 13	1
	54

14873—94

An awful state of affairs.

I presented last December to the transport commission cases of discrimination by the railways against soldiers. You will see examples of it in excursion notices which appear in all the railway stations. In some cases the railways are charging soldiers more than one-third the rate they charge civilians to travel from towns and cities in the maritimes to central Canada. I brought this discrimination before the transport commission, but they declined to act. It was their duty under the Railway Act to find out if there was discrimination. But did they do anything about it? No. I have received a petition from some soldiers in camps in the maritimes complaining of this discrimination, and I wrote the transport commission, but they did nothing about it. They did not stop Lindbergh from getting a life pass on the Canadian National Railways. Imagine a country that has wasted as much money as Canada has on the railways not being able to afford to pay the fares of its soldiers who are fighting to the death in our defence!

The Duff report, at page 45, shows that a total of 555,298 railway passes were issued on the Canadian National and Canadian Pacific railways away back in 1930; 288,000 on the Canadian National and 266,000 on the Canadian Pacific, and the commission recommended that there be an investigation into that. They said:

> We are of the opinion that where the statute imposes an obligation upon the railways to provide free transportation . . . the state should bear the cost of the service involved. It is also suggested that the discretionary power in the matter of free transportation at present vested by law in the board of railway commissioners be reviewed. The Interstate Commerce Commission of the United States is permitted no such discretionary power.

Some of the military camps are so far away that it is almost impossible for a soldier to get home; his return home is practically prohibited unless he be given railway transportation. I saw the stream of motor cars last Thanksgiving coming in from Barrie and the people hitch-hiking along the road. There is no law except the Ontario Highways Act prohibiting civilians from hitch-hiking, and it is never enforced. Why are soldiers prohibited from hitch-hiking? Why this discrimination? By whose authority were they forbidden to hitch-hike? When free transportation is provided by the government for the soldiers, it will be time enough for the defence department to make hitch-hiking a military offence.

Mr. RALSTON: Would my hon. friend permit me? I do not know whether he got the return or not, but as I understand it, hitch-hiking, so-called, or soliciting rides, is

prohibited by the Ontario Highways Act. All that the Department of National Defence did was to send out a circular calling attention to that section and instructing that military personnel should comply.

Mr. CHURCH: I referred to the highways act. I do not wish to have any argument with the hon. gentleman because he will have ample opportunity to reply. Everybody in Ottawa seems to be afflicted with the virus of the disease of following the line of least resistance in everything, known as the parliamentarian's religion; and that includes the transport commission too. When I presented a case before the commission of discrimination between the railway rates paid by civilians and the rates offered to soldiers the commission refused to act, although under the law it is its duty to act of its own volition. They seem to be afflicted with that same disease.

Why should the soldiers have to thumb their way home when they are offering their lives for this country? Several hundred thousand passes are issued free by the two railways of this country, and the transport commission illegally say they are privileged. I say they are not privileged. By no law or statute or usage can the transport commission show that these passes are privileged and not subject to being produced and laid on the table of the house. Again I ask the minister, why should not our soldiers who are offering their lives for us travel free the same as these others? Why instruct the military pickets at Camp Borden to board these trains at week-ends, as they did last summer, to see if the soldiers have return tickets, and all that kind of thing? Necessity knows no law.

I have a clipping here from the *Globe and Mail* which says:

> Soldiers hitch-hiking to and from Camp Borden are thumbing their way because of their own preference for this mode of travel and not because adequate transportation facilities have not been arranged for them by the military authorities, it was declared at headquarters of military district No. 2 yesterday.

Notwithstanding what the minister has said I should like to find out who authorized the military authorities to make hitch-hiking a military offence, and I would ask whether soldiers who have enlisted for the country's defence have no civil rights. Do they lose their rights as private citizens because they enlist? If civilians can hitch-hike, why not soldiers?

The census shows that fifty per cent of our people are engaged in farming and kindred pursuits, and are exempt from serving in the army. Many farmers' sons in Ontario do not want exemption from military service and never claimed it in the great war. What has the minister done about conscientious objectors? They are not enlisting either. Certain exemptions were provided under the Militia Act and under the Army Act, and the result of it all is that about one-third of the eligible male population of Ontario is about all that is going to serve in this war under the Mobilization Act.

I challenge the right of any military officer to make hitch-hiking a military offence without the consent of the high court of parliament. You cannot show me a law or a statute that enables a military officer to do it.

I notice, Mr. Chairman, that it is almost six o'clock.

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, March 13, 1941.

The house met at three o'clock.

SPECIAL COMMITTEES

WAR EXPENDITURES—FIRST REPORT

Mr. J. T. THORSON (Selkirk) presented the first report of the special committee on war expenditures, as follows:

Your committee recommends:

1. That it be empowered to appoint subcommittees and to refer to such subcommittees as it may appoint from time to time any of the matters referred to the committee, and that any subcommittee so appointed have power to send for persons, papers and records, and to examine witnesses; to sit while the house is sitting; and to report from time to time to the committee.

2. That it be given permission to sit while the house is sitting.

3. That eight members of the committee constitute a quorum and that standing order 65 (3) be suspended in relation thereto.

4. That the committee have power to fix the quorum of the subcommittees it may deem expedient to appoint from time to time.

5. That the committee be empowered to print, as it may determine from time to time, five hundred copies in English and two hundred copies in French of its minutes of proceedings and evidence and that standing order 64 be suspended in relation thereto.

Your committee, realizing the desirability of securing the utmost cooperation from all members of the house, has authorized its chairman to address a letter to each member of the house requesting suggestions as to any subject matter that might usefully be inquired into by the committee.

WAR PENSIONS—CONCURRENCE IN SECOND REPORT

Hon. CYRUS MACMILLAN (Queens) moved that the second report of the special committee on the Pension Act and the War

Veterans Allowance Act, presented to the house on Tuesday, March 11, 1941, be concurred in.

Motion agreed to.

PRIVILEGE—Mr. ROY

On the orders of the day:

Mr. J. SASSEVILLE ROY (Gaspé): Mr. Speaker, I rise to a question of privilege. Certain newspapers, more particularly *L'Action Catholique* of Quebec, have misinterpreted the statements I made in this house in my speech of March 10th.

On that occasion I declared myself totally and categorically opposed to the establishment of a union or national government, or its equivalent.

Mr. GAUTHIER: It did not appear so.

Mr. ROY: I repeat that I am opposed to the establishment of any form of national or union government, no matter where the proposal may come from, as I stated quite clearly in my speech.

Mr. GAUTHIER: It did not appear so.

HOUSE OF COMMONS

CLASSIFICATION OF CERTAIN POSITIONS FOR PERMANENT APPOINTMENTS

Right Hon. W. L. MACKENZIE KING (Prime Minister) moved:

That the report of the civil service commission classifying certain positions to which employees on the temporary staff of the House of Commons are to be appointed on a permanent basis, laid on the table of the house on March 5, 1941, be now approved.

Hon. R. B. HANSON (Leader of the Opposition): When the report was laid on the table I gave some study to it, not with a view of criticizing it but in order to have one paragraph clarified. I had a very pleasant interview with the clerk of the house and I understood that one paragraph, I think near the end of the report, was to be redrafted so as to make certain things clear which otherwise might be open to misinterpretation. I have not heard that that has been done. If this is the same report that was first brought down I should like to be reassured on this point, namely, that the paragraph to which I refer has been clarified.

Mr. MACKENZIE KING: I am informed that the matter has been clarified in accordance with the wishes of my hon. friend and that the report as now presented meets with his approval.

Mr. HANSON (York-Sunbury): I did not see it. Could it stand until to-morrow, until I look at it?

Mr. MACKENZIE KING: Yes.

Mr. SPEAKER: Stand.

Mr. HANSON (York-Sunbury): In justice to the clerk I wish to say that I find he communicated with my office, and in the pressure of work the matter was not brought to my attention. There has just been a little slip there.

Motion stands.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

POSTMASTERS

Mr. BENCE:

1. Does the Post Office Department retire all postmasters at the age of seventy?
2. Are any postmasters given extension?
3. If so, how many postmasters, now in the service, are over the age of seventy years?

Mr. MULOCK:

1. (a) Staff Post Offices: Postmasters paid from parliamentary appropriation are retired at the age of 65 except in special circumstances where postmasters may be retained up to the age of 70. This is in accordance with order in council P.C. 1/1561 approved the 31st July, 1933, and order in council P.C. 23/2388, dated the 23rd November, 1933.

(b) Revenue Post Offices: In the case of revenue post offices where postmasters are paid out of revenue, consideration is given to the retirement of such postmasters who are of advanced age as cases come before the department.

2. (a) Staff Post Offices: Occasionally granted beyond 65 years of age but not beyond 70.

(b) Revenue Post Offices: Extensions in those cases which have been brought to the attention of the department are granted beyond 70 only where there are special or extenuating circumstances.

3. (a) Staff Post Offices: None.

(b) Revenue Post Offices: There are approximately 1,000 revenue postmasters over 70 who are still in the service.

MAPLE SUGAR PRODUCTS

Mr. LACOMBE:

1. What was the total value of maple sugar products produced in Canada in the years 1938, 1939 and 1940?
2. What was the value of exports of maple sugar products in the same years to (a) the United States; (b) the United Kingdom?

Mr. MacKINNON (Edmonton West):

1. Gross farm value of maple products in Canada, 1938 to 1940.

	Maple sugar	Maple syrup	Total
1938.....	$370,500	$3,479,400	$3,849,900
1939.....	420,700	3,023,200	3,443,900
1940.....	530,000	3,679,300	4,209,300

2. Canadian exports of maple products to the United Kingdom and United States during the years 1938 to 1940.

	Maple syrup		Maple sugar	
	United Kingdom	United States	United Kingdom	United States
1938....	$7,826	$ 10,465	$3,587	$1,190,766
1939....	7,653	236,269	4,294	1,193,411
1940....	4,072	444,341	1,451	432,044

WAR REVENUE TAX—COOPERATIVE AGRICULTURAL SOCIETIES

Mr. ROY:

1. How are reserves and working capital of agricultural societies, as well as the cash surpluses of cooperative agricultural societies affected by the war revenue tax?
2. Will the government consider the advisability of exempting such societies from this taxation?

Mr. GIBSON: The question in its present form is too indefinite to permit of an answer being given. I would suggest that the hon. member amend his question, specifying the tax to which he refers, and giving particulars as to the societies referred to. As it stands the question is too indefinite for me to answer.

Mr. SPEAKER: Dropped.

Mr. HANSON (York-Sunbury): Let it stand and he will amend it.

Mr. SPEAKER: Dropped.

ROYAL CANADIAN MOUNTED POLICE—OFFICES IN QUEBEC CITY

Mr. ROY:

1. Did the Royal Canadian Mounted Police have offices at No. 596 St. Jean street, Quebec, before April 1, 1940, and since 1937?
2. If so, who was the owner and what was the monthly or annual rental?
3. Has the Royal Canadian Mounted Police paid any money for rental purposes at Quebec, or any cash whatever?
4. If so, what sums were paid to whom and for what?

Mr. LAPOINTE (Quebec East):

(1) Yes.

(2) The owner was Mr. Louis-Philippe Picard, of 220 Grande Allée, Quebec City, P.Q., and the monthly rental was $200 until the 8th of March, 1940, when Mr. Louis-Philippe Picard sold the property to Mr. Joseph N. Roy, 271 St. Peter St., Quebec City; notice of the deed of sale was duly served on the R.C.M. Police on the same day; said deed of sale made the same monthly rental of $200 payable to Mr. Joseph N. Roy from the 1st of March, 1940. The building was rented anew from Mr. Joseph N. Roy from the 1st of April, 1940, the same monthly rental of $200 being paid to Mr. Roy.

(3) Answered by the above.

(4) Answered by the above.

BAIE DES SABLES, QUE., WHARF

Mr. ROY:

1. From whom and upon what terms did the government purchase lumber required on the construction of the wharf at Baie des Sables, Matane county? Was the sum of $14,332.50, representing 50 per cent of the value of the lumber, paid? If so, to whom?
2. What quantity of lumber was purchased?
3. What was the total amount paid for this lumber, less the amount so allowed?

Mr. HOWE:

1. (a) From Bertrand & Brother; (b) At actual cost to contractors; (c) Yes; (d) Bertrand & Brother.

2. 739,110 f.b.m. 10″ x 10″ B.C. fir at $42.00 per M..	$31,042.62
11,456 f.b.m. 4″ to 9″ wide spruce deals at $26.50 per M..	303.58
19,000 f.b.m. 10″ x 10″ spruce at $40.00 per M..	760.00
22,656 f.b.m. 4″ diameter x 7′ to 15′ long spruce at $27.00 per M..	611.71
5 spruce piles, 12″ diameter 17′ long, at $4.00 each.. ..	20.00
	$32,737.91

3. $18,405.41.

WAR SERVICES—DOLLAR-A-YEAR MEN

Mr. NICHOLSON:

1. Did the Department of National War Services ask for volunteers to serve in the department on the basis of one dollar a year?
2. If so, who are engaged on this basis in the said department?

Mr. GARDINER:

1. No.
2. See No. 1.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MUNITIONS AND SUPPLY—CONTRACTS AWARDED IN BRITISH COLUMBIA

Mr. HANSON (Skeena):

What was the total amount of contracts awarded in British Columbia, by the Department of Munitions and Supply, since January 1, 1939, to date, as follows: (a) seaplane bases, including purchase of property; (b) airplane

bases, including purchase of property; (c) shipbuilding and repairs; (d) shells and ammunition of all kinds; (e) tools and accessories; (f) minerals and mineral products; (g) lumber and forest products; (h) provisions of all kinds, including canned and fresh fish; (i) shoes and clothing, and (j) any other contracts?

MUNITIONS AND SUPPLY—TURNER VALLEY CRUDE OIL

Mr. HOBLITZELL:

1. Is the Department of Munitions and Supply satisfied that the maximum production of crude oil is being made available from Turner valley and elsewhere in western Canada to all the refineries of western Canada?
2. If not, what steps have the department taken to see that the maximum production of crude oil in western Canada is being used in the refineries there?
3. Why is it necessary to import crude oil into the provinces of Alberta, Saskatchewan and Manitoba when there is an abundant supply in Turner valley or in storage?
4. What quantities of crude oil were imported into western Canada: (a) for months of February, March, April, May and June, 1940; (b) for months of July, August, September, October, November and December, 1940?

SHIPBUILDING

REQUEST FOR TABLING OF FURTHER REPORT OF MR. MACMILLAN

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): At page 1371 of *Hansard* for March 10, 1941, when the hon. member for Vancouver South (Mr. Green) was discussing the MacMillan report, which appears in *Votes and Proceedings* of February 27 in relation to shipbuilding, the Minister of Munitions and Supply (Mr. Howe) made this statement:

I wish Mr. MacMillan would be a little more consistent, because I have a report on my desk from him to-day declaring that labour cannot be found to operate the shipyards to anything like capacity.

This statement indicates clearly that Mr. MacMillan made a second report to the minister, which was delivered to him on March 10. Will the minister lay that second report on the table of the house?

Hon. C. D. HOWE (Minister of Munitions and Supply): Under the rules of the house a report by one of my officers is privileged, and I do not intend to make a practice of laying Mr. MacMillan's reports on the table of the house.

BUSINESS OF THE HOUSE

WHEAT POLICY AND IMPLEMENTING LEGISLATION —WAR APPROPRIATION BILL

On the orders of the day:

Mr. E. E. PERLEY (Qu'Appelle): In view of the very important statements made yesterday by the Minister of Trade and Commerce (Mr. MacKinnon) and the Minister of Agriculture (Mr. Gardiner), will the government give the house an early opportunity of discussing this all-important question of the general policy of marketing our wheat crop, I would suggest not later than Monday next? Also, while I am on my feet, I would ask the Minister of Trade and Commerce and the Minister of Agriculture whether any legislation will be introduced to carry into effect the policy announced yesterday, and when we may expect such legislation.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Speaking for the government I would say that we regard the war appropriation bill as the most important measure to be brought before the house, and we intend to continue with a consideration of that measure until it is passed, after which other legislation will be taken up. As to whether or not there will be legislation based upon the statements made yesterday, as my hon. friend knows the intention of the government in these matters will be made known when the legislation itself is brought down.

I should like to make clear to my hon. friend and to other members of the house that the government naturally is anxious as far as possible to oblige hon. members with respect to the order of proceedings, as well as all else; but I should like the house to know why the government is anxious to dispose of this war appropriation measure as quickly as possible. I do not think I need say anything other than to remind hon. members of the situation with which the world may be faced at any moment. I would point out that the ministers who are particularly concerned with the war appropriation measure are the ones who are most responsible for the measures to be taken at a time of war, and that all of them are obliged to be continuously in the house while this measure is under discussion. The ministers include the Minister of National Defence, the Minister of National Defence for Air, the Minister of National Defence for Naval Services, the Minister of Munitions and Supply, the Minister of Finance and the Minister of National War Services. All these hon. gentlemen head departments which are immediately concerned with matters pertaining to the war, and except for the forenoon, when they are also obliged for part of the morning to attend meetings of the cabinet, they have no opportunity to discuss matters with their own officials. Moreover, they are all members of the war committee of the cabinet and are obliged to give their time to its proceedings as well.

The purpose of the government to continue the discussion on this measure until it is completed, without having discussion upon any other measure intervene, is actuated by our belief that the debate will conclude more quickly if we do not interrupt it to bring in other subjects for discussion, but rather continue the present discussion until the measure is passed. Then the members of the government I have mentioned will enjoy a little more freedom, and will be able to give the attention which is very necessary at this time to various matters in the departments with which they are immediately concerned.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I desire to make an observation with respect to the statement just made by the Prime Minister. It is apparent, I think, that the war appropriation measure is the most important measure on the agenda for this session. But may I point out to the Prime Minister and to the house that this measure is for the succeeding fiscal year. We have been told by the Minister of Finance that supplementary appropriations will have to be made for the current fiscal year. I am astonished that that was not brought in before this measure was introduced.

There can be no immediate need for the passage of this resolution and the bill to be based on it, because in any event it would not be available until after the first of April. May I point out to the Prime Minister that a suggestion was made to one of his colleagues that if the government would facilitate the discussion on agriculture it would have the probable effect of facilitating the passage of this resolution. I am advised that that offer was rejected. I think that is quite apparent, because the action of the minister has been to insist upon the passage of this resolution. I suggest to the Prime Minister and to members of the government, and ask them to take the suggestion into consideration, that if they will facilitate the discussion of the important matter of agriculture they will go a long way toward forwarding their own position with respect to this war appropriation resolution.

We cannot compel that. We ask it, as a matter of public convenience to members on this side of the house, as well as members on the other side of the house. There is not the pressing necessity for the passage of this war appropriation resolution that there was at the last session. It will be recalled that at the last session the resolution covering $700,000,000 was passed with little or no discussion. We did everything we could to facilitate it. That could not happen again, having regard to public opinion in this country. We would be derelict in our duty if we did not investigate the manner in which the money has been expended under that bill, and the moneys that are to be spent under this resolution. I suggest to the ministry that this is a world of give and take. We have facilitated the government's war measures on every occasion. We have arrived at the position now where the government say the opposition has no rights in this house.

Mr. MACKENZIE KING: The leader of the opposition has missed altogether the purport of my remarks. It is not a question of when the money will be needed under this appropriation measure. That is not the question with which the government is concerned at this time. What we are concerned with is that the house enable the ministers of defence, the Minister of Finance and others I have mentioned, and who are obliged to be here while this measure is being discussed, to reach as soon as possible a point where their minds may be free of the measure, and where they can devote their time to other very pressing matters.

We have been discussing this measure for a couple of weeks. To break the discussion at this point, have a debate on agriculture and then return to this debate would mean that in all probability we would have the same series of questions asked over again as are being asked in the present debate.

Mr. HANSON (York-Sunbury): I do not think so.

Mr. MACKENZIE KING: It must be apparent that the members of the government I have mentioned have very exacting duties in their departments, and they naturally wish to be as free as they possibly can to give their time to those very pressing matters just as soon as possible.

My hon. friend the leader of the opposition says, if I correctly understood the significance of his words, that unless we do this he is not going to do that. If that is the position he takes, then I can only say that the government must the more carefully consider its responsibility of deciding the order in which the business of the house is to be conducted. If under that responsibility we feel it necessary to get the measure through as soon as we possibly can, and my hon. friend is going to obstruct this measure, which is the most important—

Mr. HANSON (York-Sunbury): Oh, now, that is quite unnecessary.

Mr. MACKENZIE KING: —then he and his friends must take the responsibility for the obstruction which they make.

Mr. HANSON (York-Sunbury): I object to the term "obstruction".

Mr. HOMUTH: So does everybody else.

Mr. MACKENZIE KING: I leave it to the house itself to say whether the word I have used was or was not fair. I am not saying the hon. member is obstructing. We will judge the significance of his words by the action of himself and his followers in connection with the measure itself.

But what I would wish to point out to my hon. friend is this, that I do not believe he has any right, any more than I have, to seek to control actual discussion in this house on any matter. And when he says that he will undertake—

Mr. HANSON (York-Sunbury): The Prime Minister has already taken that right.

Mr. MACKENZIE KING: When he undertakes to say that the debate on agriculture is going to be restricted, I hope he has the authority of hon. members of the Cooperative Commonwealth Federation and the Social Credit groups—

Mr. COLDWELL: No.

Mr. MACKENZIE KING: —to say that they are prepared to restrict the time to be given to that discussion. Unless he is in a position to speak for the whole house, then what he has said now is wholly devoid of merit.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, certainly there has been no consultation with the group I represent in regard to this matter. But I should like to say this, if I may, while I am on my feet, that I believe to a large extent the government itself is responsible for this situation. Had the debate been organized in a different manner the ministers might have been relieved of constant attendance in this chamber. Had we had a break-down of the amounts of moneys to be appropriated, by departments, and gone into the amounts by departments, all the ministers would not have found it necessary to remain here continuously.

Let me say that in these days I sympathize with the ministers; I think it is just too bad that they have to sit in this chamber—all of them—each afternoon. I suggest that the Prime Minister again consider the system followed in the British House of Commons, that of having under-secretaries who may take the places of the ministers in dealing with matters such as these.

Mr. MACKENZIE KING: May I say to my hon. friend that I do not believe the house would be satisfied with answers from under-secretaries with respect to questions in connection with this measure. May I say further to him that from the point of view of the minister's time, and the giving of information to the house which the house wishes to have in an authoritative way, the minister is in a much better position to do this himself than he would be by trying to indicate to another member of the house what he should say in reply to the different questions which may be asked.

Mr. COLDWELL: Then the debate, I submit, ought to be organized in a different manner—if I may make that suggestion.

Hon. J. L. RALSTON (Minister of National Defence): With respect to what has been said as to the organization of the debate, may I point this out to the house. When the Minister of Finance introduced the resolution, immediately speeches started on aircraft production and continued for about a week and a half. In fact, the Minister of National War Services fairly had to force himself into the debate in order to make a statement as to the activities of his department. I had about the same thing the other day, in response to the speech made by the hon. member for Hastings-Peterborough. It was not a matter of organization at all. It has been a matter of the ministers having come on as rapidly as they could. And then, even after the statement from my department had been made, there was a reversion to the matter of aircraft production. I suggest that the members of the committee themselves are the ones responsible for the course the debate has taken.

Mr. KARL K. HOMUTH (Waterloo South): In view of what the Prime Minister has just said, may I ask him if it would not be possible, when ministers rise in the committee to explain the activities of their departments, to break down the expenditures which have been allotted to them in the appropriation bill? Only yesterday the Minister of Labour spoke; there is an amount here of over $4,000,000 for the Department of Labour, yet not one explanation was given the house as to why that money is needed. Certainly when ministers rise in their places they ought to give us a break-down showing what the moneys are wanted for.

Mr. MACKENZIE KING: I am afraid I cannot answer my hon. friend's question as to what each individual minister will do. I have no doubt that all my colleagues will be anxious to oblige both the hon. gentleman who has just spoken and other hon. gentlemen.

Mr. HOMUTH: Why not do it voluntarily?

Hon. J. L. ILSLEY (Minister of Finance): I want to add just a word about the matter

of the introduction of a supplementary to the appropriation bill. The leader of the opposition said he was very much surprised that it had not been introduced before this. The amount to be asked for in the bill will be substantial, and the nearer to the end of the fiscal year the bill is introduced, the more accurate the amount will be. It is for that reason that the introduction of the supplementary war appropriation bill for the current fiscal year is being left until we have disposed of this bill.

Mr. HANSON (York-Sunbury): I should like to direct the attention of the Prime Minister to a statement with respect to this matter which he made on Wednesday, February 26. We had been discussing the war appropriation measure, and at the end of the day I asked what would be the business for the day following, that is Thursday, February 27. The Prime Minister said:

> To-morrow Mr. Speaker leaves the chair without question put on going into committee of supply, so we will take up supply, I hope at an early stage in the proceedings, the supply being that of the Minister of Justice and later that of the Minister of Agriculture.
>
> Mr. Hanson (York-Sunbury): Will we not go on with this discussion to-morrow?
>
> Mr. Mackenzie King: No, I think we have had enough of this for a short time.
>
> Mr. Hanson (York-Sunbury): I thought this was very urgent.
>
> Mr. Mackenzie King: Well, perhaps it is less urgent than it was.

Mr. MACKENZIE KING: Yes. May I say to my hon. friend that I gathered from conversation with him that there would not be a disposition to prolong unduly the discussion on the war appropriation measure. My hon. friend speaks of what I said on February 26, but this is March 13 and from that date until to-day we have been dealing exclusively with this war appropriation measure, which had also been discussed some time ago.

Mr. HANSON (York-Sunbury): We have been in supply.

Mr. MACKENZIE KING: There has been very little supply. A day or two ago I asked the house if it would permit us to go into supply for a few minutes in order to call items in one or two departments so as to enable some other ministers to take up supply on Thursday or Friday and relieve my colleagues who are engaged on war duties for those days. What was the attitude of the opposition to that request? It was to move a motion on going into supply in the nature of an amendment. An amendment to the motion to go into supply is in the nature of a vote of want of confidence in the government. That would certainly occasion a prolonged debate. What my hon. friend the leader of the opposition is asking us to do is to set aside an important war measure and allow the opposition to say that it has no confidence in the administration, to introduce a vote of want of confidence motion in the house at this time. When it comes to a matter of precedence, I need scarcely say we are not going to give precedence to any measure that has to do with want of confidence in the administration.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, March 12, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Vien in the chair.

Hon. J. L. ILSLEY (Minister of Finance): On March 10, I placed on *Hansard,* page 1363, a statement of the estimated war expenditures by departments for the fiscal year 1940-41, with actual expenditures to January 31, 1941. On March 7, I placed on *Hansard,* page 1352, a statement of the estimates for the year 1941-42, by departments, the amounts being those submitted to January 31, 1941. That statement was later corrected and appears on *Hansard* at page 1362.

Two or three nights ago the leader of the opposition asked me to give break-downs, first, of the estimates for the year 1941-42 and, second, of the actual expenditures to January 31, 1941.

Mr. HANSON (York-Sunbury): As far up as it can be given.

Mr. ILSLEY: What I propose to do to-day is, first, to place upon *Hansard* a break-down of the estimates for the year 1941-42 by departments and services, with the exception of the three defence departments and the departments headed by my colleagues, the Minister of National War Services and Agriculture, and the Minister of Munitions and

Supply. After I have finished, these ministers will themselves place on *Hansard* the breakdowns for their departments. I have not had an opportunity of consulting with my colleagues, but I believe they will wish this done. Their estimates are short and I can give to the committee the figures they have given to me, but perhaps hon. members would like to question these ministers about their estimates, and they would be able to answer questions which I do not think I could do. I think it would make it more convenient for everyone if I covered all departments except the defence departments and the two others I have mentioned.

Mr. HANSON (York-Sunbury): It is understood that we shall have some time to study them.

Mr. ILSLEY: In connection with the breakdown I am giving all I can, and I think the leader of the opposition will find that it is adequate. Is it desired that I read this statement?

Mr. HANSON (York-Sunbury): I do not think it is necessary, unless the committee wants it.

Mr. ILSLEY: If the committee does not insist on its being read, I shall simply place it on *Hansard*.

Mr. HANSON (York-Sunbury): That would save a lot of time.

Mr. ILSLEY: The total is $23,814,511. To that there will be added the amounts to be given to the committee by the other ministers.

Mr. HANSON (York-Sunbury): Is that for the coming year?

Mr. ILSLEY: That is for the coming year.

Mr. HANSON (York-Sunbury): For the non-war departments.

Mr. ILSLEY: With the exception of what will be given by my colleague the Minister of National War Services and Agriculture. He is in charge of two departments and there is no reason why I should give one part of his figures and not the other, although part might be considered non-war. The term "non-war" is not quite correct. Certain matters may not be concerned directly with fighting, but they are concerned indirectly with the war. These amounts are proper charges against the vote provided by the war appropriation bill This is the statement:

War Appropriation

Estimates for 1941-42 by departments and services

Auditor General's Office—		
Auditing and checking war accounts		$ 72,000 00
Civil Service Commission—		
Supply of personnel for war services		126,822 50
External Affairs—		
Administrative and passport offices	$ 198,000 00	
Representation abroad	25,000 00	
Evacuation of staff	5,000 00	
Evacuation of offices	5,000 00	
Greenland—supplies and maintenance	5,500 00	
Miscellaneous—to cover items not specified in 1941-42	50,000 00	
		288,500 00
Finance—		
Comptroller of the Treasury	$ 1,967,212 50	
Royal Canadian Mint	67,300 00	
		2,034,512 50
Fisheries—		
Marketing of canned lobster	$ 600,000 00	
Wartime Fisheries Advisory Committee	3,000 00	
		603,000 00
Justice—		
Expenses in connection with the Prize Court	$ 50,000 00	
Expenses in connection with administration of the Defence of Canada Regulations	25,000 00	
Administration	4,260 00	
		79,260 00

War Appropriation—*Continued*

Estimates for 1941-42 by departments and services—*Continued*

Labour—		
Expenses in connection with the Wartime Prices and Trade Board	$ 298,704 00	
National Labour Supply Council	32,000 00	
Assistance to necessitous dependents of persons detained under the Defence of Canada Regulations	150,000 00	
Cost of living commission, district 18 United Mine Workers of America	6,000 00	
Payments to provinces on account of each trainee completing a course in aircraft mechanics or aircraft wireless operations who enlists in the R.C.A.F. or completes a course in wireless operations and enlists in any of the Empire Forces	480,000 00	
Payments to provinces for the training of individuals for skilled or semi-skilled occupations connected with war work	3,885,000 00	
Expenses of inter-departmental committee on labour co-ordination.	26,700 00	
		$ 4,878,404 00
Mines and Resources—		
Mines and Geology Branch—		
Enforcement of wartime regulations governing the sale of explosives	$ 17,120 00	
Lands, Parks and Forests Branch—		
Internment operations	25,350 00	
Forest products laboratories	24,150 00	
Immigration Branch—		
Expenses re British evacuee children	244,800 00	
For expenditures in connection with looking after Canadian interests in Germany and German-controlled territories	150,000 00	
For expenditures in connection with looking after Canadian interests abroad, apart from Germany or German-controlled territories	25,000 00	
Detention of alien seamen who refuse to perform their regular duties	147,000 00	
General expenditures in Canada and the British Isles	23,825 00	
		657,245 00
National Revenue—		
To provide for censorship of newspapers and other publications		5,600 00
Pensions and National Health—		
Treatment and pension examinations, members and ex-members, defence forces (present war)	$ 2,500,000 00	
Treatment—R.C.M.P.	120,000 00	
Pensions—defence forces, fishermen and seamen	500,000 00	
Air raid precautions	250,000 00	
Investigations—Dependents' Allowance Board	60,000 00	
Inspection of industrial plants	10,000 00	
Treatment of Canadian fishermen and seamen	5,000 00	
Laboratory of hygiene—bacteriological and biological—assistance to Department of National Defence	15,000 00	
Public health engineering—inspection of camps and airports re sanitation and water supply	10,000 00	
Food and drugs—examination of supplies for Department of National Defence	5,000 00	
Quarantine service	40,000 00	
Hire of boats—Halifax harbour	14,400 00	
Committee on demobilization	20,000 00	
Veterans' welfare division	112,500 00	
Processing, storage and distribution of blood for transfusion	140,000 00	
Immigration medical inspection overseas division—evacuation from England	3,000 00	
		3,804,900 00
Post Office—		
Postal censorship	$ 343,835 00	
Canadian postal corps	151,250 00	
		495,085 00
Privy Council Office—		
Registrar of orders in council		6,380 00

War Appropriation—*Concluded*

Estimates for 1941-42 by departments and services—*Concluded*

Public Works—			
Chief Architect's Branch—			
Ottawa—Jackson building taxes		$ 33,000 00	
Toronto—completion of city delivery building		200,000 00	
Furniture, etc., for new employees		500,000 00	
Repairs, alterations, operation and maintenance of new buildings		500,000 00	
Rental of new premises		400,000 00	
New construction		2,000,000 00	
Chief Engineer's Branch—			
Champlain dry dock—hoisting equipment, additional operating cost		113,000 00	
Lorne dry dock—additional operating cost		9,500 00	
Esquimalt dry dock—additional operating cost		27,600 00	
New construction and dredging		300,000 00	
Contingencies (telephone service and unforeseen)		100,000 00	
			$ 4,183,100 00
Prime Minister's Office—			
Additional expenditure due to the war			11,500 00

To provide payment of compensation to ships' crews for loss of personal effects due to enemy action	10,000 00		
Administration of pilotage—additional cost of operation and maintenance of pilotage vessel at Father Point	27,000 00		
		139,650 00	
			888,362 00
Government owned enterprises—			
Loan to Canadian Government Merchant Marine, Limited		$ 100,000 00	
National Harbours Board		995,000 00	
			1,095,000 00
Total of items to be dealt with by the Minister of Finance			$23,814,511 00

The second statement I have gives the actual war expenditures to January 31, 1941. These amounts are not accurate to the dollar. Some of them were estimated in the latter part of January and the odd figures are not given. But I think they are quite close to the proper amounts.

Mr. HANSON (York-Sunbury): That is understood.

Mr. ILSLEY: These are the amounts I obtained from the comptroller of the treasury up to January 31, 1941. The statement follows:

Actual War Expenditures to January 31st, 1941

Auditor General's Office		$ 36,000 00
Chief Electoral Officer		5,000 00
Civil Service Commission		79,000 00
External Affairs—		
1. Departmental administration, passport office and office of the Prime Minister	$ 123,000 00	
2. Repatriation of members of crews of requisitioned French merchant vessels	78,000 00	
3. Representation abroad	7,000 00	
4. Expenses re Permanent Joint Board on Defence	2,000 00	
5. Expenses in connection with evacuation of offices	4,000 00	
6. Sundry	4,000 00	
		218,000 00
Finance—		
Comptroller of the Treasury, Dependents' Allowance Office and outside establishments	$ 1,128,000 00	
Royal Canadian Mint	83,000 00	
Dominion-Provincial Conference	7,000 00	
		1,218,000 00
Fisheries—		
Canned Lobster Control		158,000 00
Justice—		
Prize Court	$ 10,000 00	
Defence of Canada Regulations	11,000 00	
War Measures Act	3,000 00	
		24,000 00
Labour—		
Wartime Prices and Trade Board	$ 125,000 00	
Assistance to dependents of detained persons	22,000 00	
Payments to the provinces for enlisted trainees under Youth Training Act	116,000 00	
Industrial training for war work	368,000 00	
Sundry	14,000 00	
		645,000 00
Mines and Resources—		
Government of the Northwest Territories—Greenland expedition	$ 27,000 00	
Dominion forest service—internment operations	13,000 00	
British evacuee children	37,000 00	
Relief of distressed Canadians in Germany, etc.	111,000 00	
Relief of distressed Canadians not resident in Germany	3,000 00	
Detention of alien seamen	8,000 00	
Sundries	8,000 00	
		207,000 00
National Harbours Board—		
Saint John—dredging—Courtenay Bay		200,000 00
National Research Council—		
Scientific and technical work	$ 261,000 00	
Additional facilities—new annex laboratories	41,000 00	
		302,000 00

Canadian Broadcasting Corporation radio censorship	7,000 00	
		504,000 00
Total of items to be dealt with by the Minister of Finance		$12,002,000 00

Mr. HANSON (York-Sunbury): The figures the minister is now placing on the record do not include the commitments for the balance of the present fiscal year?

Mr. ILSLEY: No. The estimated total expenditure on war for the present fiscal year is $875,000,000. These figures amount to $536,000,000. I want to make it clear, when we talk about expenditures, that this $536,000,000 is expenditure actually made—that is, the money has actually been paid out.

Mr. HANSON (York-Sunbury): It is payments?

Mr. ILSLEY: Payments, yes. I find to my surprise that "expenditures" is an ambiguous term. Some officials in the service consider expenditures as payments not yet made. But I mean that the actual payments up to the end of January, 1941, are about $536,000,000.

I think perhaps now the other ministers can speak for their departments. The Minister of National Defence pretty well covered his the other day so I do not think it is necessary for me to say anything more, but if the leader of the opposition finds when he looks at *Hansard* that there is something more he requires, we will get it for him.

Mr. HANSON (York-Sunbury): That is fair enough.

Mr. ILSLEY: Perhaps the other ministers will now speak in turn.

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Chairman, with respect to air, the estimate of money to be expended in 1941-42, that is the total amount to be asked for, is $421,136,185. But from that must be deducted $35,000,000, representing payments to be made under the joint air training plan by Australia and New Zealand, which brings the total estimate to $386,136,185. In addition there is a supplementary of $483,163, making a total estimate of $386,619,348. These figures are broken down as follows: overseas, $15,838,916; home war, $154,683,960; joint empire training plan, $250,613,309.

I have here in two different columns the expenditures made up to January 31, 1941, on each one of these accounts.

Mr. HANSON (York-Sunbury): That is the second category?

Mr. POWER: No, the expenditures under these same three headings—overseas, home war, and joint air training plan. In the words of my colleague the Minister of Finance, this is money actually paid out by cheque, money actually gone. That is shown in one column, and another column shows the amount which we expect will actually be paid before the 31st of March, 1941.

Mr. HANSON (York-Sunbury): That is not the payments, but the commitments?

Mr. POWER: It is not quite commitments; I make a distinction which the Minister of Finance perhaps will not agree with. I do not call it expenditure when the money is actually paid. That is payment, not expenditure. I call it expenditure when we have ordered the stuff and it is delivered. I call it commitments when material has been ordered to be paid for at a future date and it is not yet delivered. I make three categories. Will the leader of the opposition agree with me?

Mr. HANSON (York-Sunbury): I would not do it that way myself, but I understand it.

Mr. POWER: So there are payments, expenditures and commitments. Up to the 31st of January last, that is payments gone. Up to the 31st of March, all of this it is expected will be paid before March 31. Commitments are another thing altogether. They come into the next year's estimate. The expenditure up to January 31, 1941 for overseas is $772,496; for home war, $40,415,363; for joint air training plan, $97,833,758, a total of $139,021,617. We have received from our partners in the air training plan during that time $11,540,161, making a total outgo of payments of $127,481,456, which covers up to January 31.

Between January 31 and March 31, 1941, we expect to make payments to an amount as follows for overseas, and this is in addition to the $772,496 which I gave as having been spent up to January 31. We expect to spend, before March 31, $7,001,470, making a total expenditure for the fiscal year 1940-41 of $7,773,966. For home war, in addition to the $40,415,363 spent to January 31, we expect to spend $24,551,142, making a total for home war of $64,966,505 up to March 31. On the joint training plan, in addition to the $97,833,758 spent to January 31, we expect to spend $53,911,614, making a total for the year of $151,745,372.

The total expenditure in the three categories up to March 31, 1941, is $224,485,843, from which is to be deducted $26,800,000 which we shall receive, making a total final expenditure for the Department of National Defence for Air for the year 1940-41 of $197,685,843.

Hon. ANGUS L. MACDONALD (Minister of National Defence for Naval Services): Mr. Chairman, I should like to place on the record the break-down, as it is called, of the naval estimates for the coming fiscal year. The total amount to be asked for naval services as announced by the Minister of Finance is $169,640,304. That amount is made up of about fifteen main items which I shall now give to the committee:

War Appropriation—Naval Services
Breakdown, by Objects of Expenditure

Class of Expenditure	Estimates for year 1941-42
Salaries and wages	$ 1,317,210
Pay and allowances	33,609,000
Travel and transport	33,609,000
Operating expenses	400,000
Acquisition and construction of vessels	56,017,000
Repair and upkeep of vessels	4,902,700
Charter of vessels	699,141
Preparation of plans	100,000
Construction and repair of buildings	19,846,837
Allowance in lieu of stores	1,719,600
Victualling stores	7,821,003
Naval stores	14,284,818
Armament stores	14,549,000
Fuel	7,846,930
Miscellaneous stores	687,550
Printing and stationery	681,060
Harbour defences	1,840,294
Purchase and rent of buildings and lands	414,361
Sundries	1,547,800
Total	$169,640,304

Mr. HANSON (York-Sunbury): On the item of harbour defences, would the minister explain just what that is? I do not understand that that would come under his department.

Mr. MACDONALD (Kingston City): Without particularizing, it deals with such things as anti-submarine nets.

Mr. ILSLEY: Actual expenditures.

Mr. HANSON (York-Sunbury): No, that is the estimate for next year.

Mr. MACDONALD (Kingston City): Unfortunately the officials preparing this, in their endeavour to bring it up to date so far as possible, began to work out the actual expenditures to the end of February. I understand it would have been sufficient if we had got the expenditures to the end of January, but, with only twelve days since the end of the month, the work was naturally a little more difficult. However, I will place the figures on *Hansard*. The break-down of expenditures is as follows:

War Appropriation—Naval Services
Breakdown, by Objects of Expenditure

Class of expenditure	Expenditure to Jan. 31/41
Salaries and wages	$ 573,934
Pay and allowances	5,860,057
Travel and transport	473,742
Operating expenses	144,685
Acquisition and construction of vessels	28,525,293
Repair and upkeep of vessels	2,778,028
Charter of vessels	168,982
Preparation of plans	50,605
Construction and repair of buildings	3,198,082
Allowances in lieu of stores	300,186
Victualling stores	2,811,960
Naval stores	2,752,476
Armament stores	1,015,163
Fuel	605,092
Miscellaneous stores	340,253
Printing and stationery	205,581
Harbour defences	1,677,378
Purchase and rent of buildings and lands	144,799
Naval equipment division	31,748
Sundries	99,956
Various advance accounts	2,350,197
Various suspense accounts	4,157,803
	$58,266,000

Hon. C. D. HOWE (Minister of Munitions and Supply): Before submitting the estimates of my department, perhaps I should explain to the committee how they are made up.

As hon. members know, the Department of Munitions and Supply is the purchasing branch for the three service departments. We may receive an order for, we will say, a submarine net. We do not in our estimates provide the money to install that submarine net, but when the order is placed the appropriation is transferred by the department that has made provision for the net; in other words a financial encumbrance is raised to provide for the payment which we incur in arranging for the construction of the net.

Similarly with regard to an airport. We make the survey for the airport, and a recommendation; that is, we submit the facts. The choice is made by the Department of National Defence for Air, and if one site is approved we then receive a letter of instructions to proceed with the building of an airport, and we also receive a financial encumbrance which will provide the money to pay for the airport.

Similarly, if we have a cable from Great Britain to purchase an order of Bren guns, the British treasury here is instructed to issue cheques in payment as the guns are

delivered. Therefore we do not include in our own estimates any item to pay for purchases of that nature.

Mr. HANSON (York-Sunbury): That is, for requisitions?

Mr. HOWE: For requisitions, yes.

Mr. HANSON (York-Sunbury): That is the right principle.

Mr. HOWE: We do, however, provide certain sums for establishing facilities to produce the purchases required by the service departments. In other words, if it is necessary to build and equip a factory to supply a service department, in many cases, in fact in most cases, we go to the treasury direct for the capital sum involved in establishing that facility. Similarly, if a factory is built and requires working capital, we go to the treasury for an accountable advance in the nature of working capital, in effect a loan from the treasury and repayable as the operation proceeds.

With that explanation, I may say that our estimates for the fiscal year 1941-42 are as follows:

Administration of the department—salaries and operating expenses	$ 2,300,000
Capital assistance to government-operated companies	37,534,000
Capital assistance to private contractors	103,813,000

As regards direct expenditures, that is for items purchased direct by the department—mainly cloth, I think—we have made it a habit, in order to coordinate the manufacture of uniforms by enabling the mills to operate at full capacity, to buy cloth by direct expenditure from the department, and we do not recover that outlay by financial encumbrances from the Department of National Defence.

Mr. HANSON (York-Sunbury): The cost of the cloth for uniforms has not been included in the army, the navy and the air expenditures? The minister says they pay for the cloth of which he is now speaking. Is that item not included in the cost of the army, under the Minister of National Defence, the cost of the navy, under the Minister of National Defence for Naval Services, and the cost of the air force, under the Minister of National Defence for Air? Is that in addition to what they have given us here as the break-up?

Mr. HOWE: No. I was wrong there. The army, the navy and the air force give us financial encumbrances for the full cost of the uniforms, but we do buy supplies, such as cloth, in advance of any financial encumbrance, and so keep the mills running for a certain time. When they are set up to make a certain type of cloth, we keep them running on that cloth in anticipation of future orders. That is what is meant by direct payments in this case. As a matter of fact we purchase other things than cloth.

Mr. HANSON (York-Sunbury): But you are ultimately reimbursed for those moneys?

Mr. HOWE: The treasury is, yes. There is no way of getting it back into our estimates: if we spend the money it does not come back into our estimates.

Mr. HANSON (York-Sunbury): I want to know if there is duplication in this matter.

Mr. HOWE: Well, there is. I have pointed out, and I think the Minister of Finance agrees with me, that there is bound to be a great deal of duplication. It arises in several ways. The Department of Munitions and Supply will raise a financial encumbrance on what they think is a reasonable price for a gun. After we build the facility, have the plant in operation, it is very probable we will produce that gun for a good deal less than its current market price. For that reason there is probably a duplication; in other words if we had not built the plant we would have paid more for the gun and the full amount of the appropriation would have been required. Because we built the plant we get the gun cheaper, therefore the cost of the plant is amortized in the lower cost of the material.

The Minister of Finance and I have talked this matter over. I have expressed the opinion to him, and I think he more or less agrees, that perhaps fifty per cent of this estimate is a duplication—well, he does not think it is as much as that; nevertheless we must have certain funds at our disposal to meet current expenditures, and in most cases our expenditure for capital account reduces the drain for the purchase of supplies.

I will place on *Hansard* the complete statement of which I have already given a portion:

	Estimated cash requirements—fiscal year 1940-41	Expenditure to January 31	Expenditure to February 28	Estimated to March 31
Administration	$ 2,300,000	$ 1,529,000	$ 1,727,165	$ 2,300,000
Capital assistance to G.O. companies	37,534,000	16,703,000	22,218,268	28,218,000
Capital assistance to private contractors	103,813,000	42,297,000	53,979,453	65,979,000
Direct expenditures	3,300,000	647,000	814,793	1,814,000
Total	$146,947,000	$ 61,176,000	$ 78,739,679	$ 98,311,000

Notes: Column 1 represents an estimate made up in October, 1940, based on information supplied by contractors and companies, and it is evident they over-estimated requirements for the different projects for this year.

(b) Column 2 represents figures submitted to the House of Commons by the Hon. Mr. Ilsley, having been submitted to him by the Comptroller of the Treasury.

(c) Column 3 is the total of expenditures submitted to us to date of 28/2/41 by Mr. A. V. Franklin, Chief Treasury Officer.

(d) Column 4 represents our estimates as to the amounts that will be paid out up to 31st March, 1941, but we have no way of submitting this with any degree of accuracy. It should be mentioned that on 27th January last we advised treasury board that we anticipated our cash payments would be $119,820,849 for the current year, but it is obvious that we will not put out this amount.

Mr. HANSON (York-Sunbury): That totals only $146,947,000. The estimate is $180,000,000.

Mr. HOWE: That is the estimated requirement for the current fiscal year. The actual expenditure to January 31 was $61,176,000 and to February 28, $78,739,000; and the estimated expenditure to March 31 is $98,311,000. These are the draft estimates for 1941-42 for the Department of Munitions and Supply:

Capital assistance to private companies	$ 71,083,421 49
Capital assistance to government-owned companies	29,376,000 00
Direct expenditures by the government through the Department of Munitions and Supply	16,290,000 00
Dominion arsenals—Lindsay and Quebec	16,560,000 00
Administration expenses	3,500,000 00
Working capital in connection with production (Canadian production)	41,049,000 00
Working capital in connection with aircraft production	2,600,000 00
	$180,458,421 49

A list of projects covered by these items was placed on *Hansard* by myself two or three weeks ago.

Hon. J. G. GARDINER (Minister of Agriculture): I placed on *Hansard* some days ago the break-down for the Department of National War Services. I now have break-down of the expenditures for the Department of Agriculture this year out of this appropriation. The total is $3,498,773.70. The items are as follows:

War appropriation, 1940-41
Department of Agriculture
Expenditures, April 1, 1940, to January 31, 1941

	Actual expenditure
Disposal of Canadian apples, 1939 crop	$1,503,108 89
Disposal of British Columbia apples, 1940 crop	616,450 17
Disposal of Nova Scotia apples, 1940 crop	1,172,820 79
Advertising of apples	49,704 40
Purchase, storage and distribution of fibre flax seed	77,687 34
Bacon Board, administration	33,618 38
Dairy Products Board, administration	5,434 08
Soenens turbine scutchers	6,525 00
Purchase seed potatoes	9,818 37
Agricultural Supplies Board, administration	23,576 28
Root vegetable seeds	30 00
	$3,498,773 70

The estimates for the Department of Agriculture are as follows:

War Appropriation Estimates, 1941-42
Department of Agriculture

Agricultural supplies board—	
Administration	$ 31,000
Programmes to encourage production of essential war supplies	100,000
Purchase, storage and distribution of agricultural supplies	1,000,000
	$1,131,000
Commodity boards	50,000
Bacon board	71,300
Dairy products board	14,950
To provide assistance in disposal of agricultural products rendered surplus by war	6,610,300
	$7,877,550

Mr. RALSTON: The committee will remember that what I gave was an attempt to indicate by functions, as they call it in my department, the various items; that is, how much for overseas, how much for Canada and so on, having regard to the particular duties to be performed. I have here a tabulation made up in another way, under what they call objects of expenditure—that is, the aggregate amount estimated for travelling expenses, for clothing, etc., for all the formations and activities; the whole estimated expenditure by the army for each of the items shown. This might be useful to the committee. Some of my colleagues have been giving statements in that form. The committee will remember that the total amount of the break-down applicable to army services was some $666,000,000, as stated by my colleague the Minister of Finance. That amount is made up, in the estimates which have been made by the officers of my department, as follows:

Department of National Defence
Estimates 1941-42
Army Services

War appropriation—Summary of estimate by objects of expenditure

Salaries and wages—civilian personnel	$ 2,330,000
Travel and transportation	40,607,906
Operating expenses of properties	31,314,830
Mechanical and water transport, including upkeep	21,246,843
Supplies—food, forage; medical and dental stores and services	46,705,213
Construction and repairs	15,549,170
Ordnance stores	247,277,741
Pay and allowances—all ranks	253,029,972
Printing and stationery	5,338,854
Sundries — Telephones, telegrams, postage and other miscellaneous expenses not specially detailed	3,024,130
Training equipment not provided elsewhere	150,000
	$666,574,659

I wish to emphasize again what I said before with regard to the whole item, that these are the best estimates my officers have been able to put forward, having regard to the possibilities which can be foreseen. Of course not only the total but also the allotments among the various items may be changed considerably as the year goes by, depending on exigencies.

Mr. HANSON (York-Sunbury): The minister said the other day it was on an if, as and when basis, and we understand that.

Mr. RALSTON: Yes.

Mr. HANSON (York-Sunbury): Has the minister completed his statement?

Mr. RALSTON: Yes.

[Mr. Gardiner.]

Mr. HANSON (York-Sunbury): Before the minister retires from the scene I should like him to bring down and place on *Hansard* as soon as convenient a statement, in as much detail as possible and under suitable headings, with respect to the Debert military camp, giving: (a) total payments made, to as late a date as possible; (b) commitments made but not paid up to the same date, and (c) probable expenditures to complete, and also the same information with respect to the airport at Debert. On February 21 the minister gave an estimate of five and a half million dollars—

Mr. RALSTON: That was not the airport.

Mr. HANSON (York-Sunbury): No; the minister misunderstood me. I have asked for these details with respect to the military camp under three different classifications: payments, commitments and probable expenditures, and I have asked for the same information with relation to the airport. Then I was going on to say that on February 21, as reported at page 906 of *Hansard*, the minister said:

. . . from the information I get the Debert camp may cost $5,500,000.

The minister made it quite clear that this figure did not include the airport. On the same page the Minister of National Defence for Air is reported as stating:

The estimated sum required for the buildings at Debert is $829,517. I have not the figure in connection with the runways, but I would say they would cost probably another $150,000 or $200,000.

On those figures the total cost of the airport will be in excess of a million dollars, and the total cost at Debert will exceed six and a half million dollars. I should like to have the figures with respect to the camp itself and those with respect to the airport, under suitable headings, if the minister will be good enough to give them.

Mr. RALSTON: I have had in my desk for some time information on that point. I think I can give it to my hon friend readily in the form he desires, either to-night or to-morrow.

Mr. HANSON (York-Sunbury): Very good. I am not asking for it immediately.

Mr. RALSTON: It must be remembered that the figure of $5,500,000 was not even an estimate; it was given in response to the hon. member for Cumberland. I think I intimated to the hon. member that I could try to make a guess, which I hoped would be an intelligent one, and I think the amount is about right, excluding the land. I understand that there have been taken on land options amounting so far to something like $75,000. There are

forty-seven lots on which options have been taken, and it is possible that, in all, the land may amount to $200,000; that is, apart from the airport.

Mr. McNIVEN: The Minister of National Defence quoted the figure of $253,000,000 for pay and allowances. Has he a break-down of that figure by provinces or by military districts?

Mr. RALSTON: I think that is one of the break-downs I could give by districts. I believe the payrolls are made up by districts, and I shall be glad to get that information.

Mr. McNIVEN: Would the minister be able to give that break-down for the fiscal year 1940-41?

Mr. RALSTON: I think so.

Mr. CHURCH: We have heard a great deal about break-downs this afternoon. I am afraid that Britain is going to break down unless we act before it is too late. Let us think about Britain a little more. If she is waiting for Canada to act she will break down. Let us not forget that the whole future of the human race depends upon the battle being fought in Britain now, and we sit here carrying on in this way, with long government statements issued almost every day of the week. I fear for the health of the ministers with all these break-downs. I believe there is a large body of public opinion in this country that is not altogether satisfied with the war policy we are pursuing here, not only the policy of the government but also at times that of the opposition, the alternative government, because as I have said in the past the opposition is also responsible for what goes on in this house, unless it fulfils its functions, as our constitution provides.

I would refer to what happened on July 12 last. Many of us in this house celebrate March 17 and July 12 as the days of two patron saints. Last year we were told that the National Resources Mobilization Act would not be considered on July 12 while we were away, and over fifty soldier members went to Quebec for the week-end. But in the absence of many hon. members the measure was taken up and passed on a Friday, in a very short time. That is how the cumbersome mobilization act came in.

The most important thing in this country to-day is man-power, but as I said a year ago, it is almost as hard for a man to get into the army, the navy or the air force, as it is to get into the exclusive Rideau club. Recruiting is on again, off again and on again, but here we sit hearing essays by ministers, break-downs and all that sort of thing. There have been break-downs all along the line, and we have been too late in everything. Here we have a total of fifty-four men killed on the highways on account of the lack of free fares, because of the break-down of our railway systems, on which this country has spent hundreds of millions of dollars.

I said yesterday I intended to make only one speech while we are in committee on this matter, and I will conclude in a very few minutes what I have to say to-day. When I mentioned the situation at Camp Borden last week, I had reference to the last war, to 1917. I admitted that a great many improvements had been made at Borden, but I said I still did not agree with the general camp policy of the government, and this one as a winter camp. But neither then nor at any other time have I cast any reflections on any of the overworked officials or heads of these camps, or members of the cabinet. I realize that they are a government of Canadians in Canada and that it is our duty to cooperate with them to the best of our ability, as long as they are the government, if they get on with the war.

Just here I should like to pay tribute to the permanent officials of the government. I have had a great deal of experience in many spheres of activity, and since coming here in 1921 I have found that the success of any public enterprise and of federal administration depends very largely upon the courteous, able, painstaking, loyal, sincere but overworked public officials, who do their duty splendidly here, and often have to work long hours of overtime. During this war some of them have passed on unwept, unhonoured and unsung, and I wish to pay tribute to the great work being done by these splendid public officials.

Here we have estimates amounting to $1,460,000,000, yet we cannot find a quarter of a million dollars to provide free railway transportation for the soldiers. Here we are proposing to spend $4,000,000 a day on the war, and surely we should be able to devote two and a half hours of that cost, or over $400,000 to this objective of free fares. These boys are risking all; they may be sent to Europe or to Greenland's icy mountains, or as members of the R.C.A.F. they may be killed over Britain or over Berlin. Some of them will never come back, and we have a duty to perform on their behalf. Private members, as well as members of the government have their duties to perform. The only consolation a public man can have, in my view—and I have been in public life a long time—is the comfort in his own conscience that he has done his duty as he saw it to be. I do not want any thanks. As long as I have been a member of parliament I have endeavoured to do my duty, and in doing so I

have tried never to offend anyone knowingly. Since I have been a member of the House of Commons I have stood for the principles and maintenance of liberties, and I shall continue to do so for the time in the future I may happen to be here.

To-day we are facing the greatest war in the history of the world. I support in this war and the last the cause of those patriots, the private soldiers and men in all ranks, who are doing their duty for their country in this conflict. While I wear the party uniform, I will never wear its plush. I will do my duty in the ranks, but it will as in the past be as a volunteer, not as a conscript. In the past, prior to this war, I have had many differences of opinion with leaders regarding imperial and foreign affairs and defence policies. I am an imperialist. It was said that I was the only one in the house, because I believed that the future freedom, liberty and welfare of the world was in the hands of Great Britain, and depended upon the mother county, on those two little islands on the edge of Europe. The struggle for freedom, liberty and civilization has been made by them, and by them almost alone since France failed, save for the dominions and Greece. Up to this time they have paid on a cash-and-carry basis for all the munitions they have received.

Last year we were dependent upon that glorious country, France, which in the first great war did so much for civilization and freedom. We depended to a great extent upon that great nation and upon the patriotism of the people of France in that war and this. It was with deep regret to the people of the world that France went under. A year ago we were depending upon France to hold the Maginot line until Britain got an army and munitions, and until the dominions could give support with their armies and food and munitions. We found that poor France depended upon us against the dictators in vain. Help did not come in time, through no fault of the mother country. Neither country was ready for war owing to disarmament.

Out on the Pacific coast we are depending upon the United States to protect our western seaboard. We rejoice that they are with us, but I hope their help will not come too late. I have grave doubts about it myself. I fear help is not coming quickly enough. I do not believe the people of Canada realize the gravity of the situation, or know to whom this country will belong at the end of 1941. They do not seem to realize that when the war started we had no army, no navy and no air force. We were back to where we were in 1812, a condition of complete dependence upon the mother country for all the freedom of civilization and defence and protection we enjoy.

[Mr. Church.]

I should like to make three or four further observations on the subject I was discussing last night at the adjournment. I notice the responsible minister is in his seat to-day, and I am glad to see him because of an editorial which appeared in this morning's *Globe and Mail*. It is headed, "Help the Soldier Hiker", and states:

> But the soldier's uniform is his credential. He is in the king's service; offering his life if necessary for a cause. Military regulations are rigid. Discipline must be maintained. The man who enlists voluntarily in the defence of his country knows all this and soon becomes imbued with the esprit de corps that makes army life a happy memory. Such men do not want to thumb their way along the roads; and they should not fall under the suspicion with which habitual civilian hitch-hikers are regarded.

Then there is an appeal to the citizens to give these men a lift. That is all well and good, and is a good omen.

I may say, however, that on August 6 last I received from the Minister of National Defence a letter in which he uttered the same sentiments. He had a great deal of sympathy for the forces, and replied to me in part in this way in a letter dated August 6:

> It occurs to me that in connection with both of these matters there is scope for the activities of our many citizens who want to help in connection with war work, either by means of radio appeals to citizens who are out motoring to give a lift to men in uniform or by means of some arrangement for providing motors at camps or headquarters at certain times, the transportation being in charge of, perhaps, some of our service organizations.
>
> I think myself that this is a worthwhile suggestion, and that it might well be taken up by our citizens if it were brought to their attention. I know that people are most anxious to help and all they want is suggestion and direction.

I believe if the minister were good enough to let this matter go before the special committee, a programme might be worked out. The railways are making a great deal of money out of the war. This programme would involve only a small item of expenditure, and I believe the public who would have to make the payments would be prepared to do so.

Last October 12 to 15, which was the Thanksgiving week-end, I was on the highways. As a result of the condition which obtained at that time, the following editorial appeared on October 15 in the *Evening Telegram* of Toronto:

> Motorists travelling south from Barrie and Allandale last Friday and Saturday regretted that Premier King and his ministers could not see the hundreds of soldiers on leave from Camp Borden for the Thanksgiving week-end lining the highway and thumbing their way to their homes in Toronto and elsewhere. The sight of these boys who have volunteered to fight for their country begging rides might

have awakened the most stolid cabinet member from his complacency and convinced him of the necessity for providing decent, safe and free transportation for soldiers to the larger centres of population.

Even though soldiers can now travel round trip at single trip rates, the railway and bus fares are still beyond the purse of men who are earning only $1.30 a day and assigning part of it to their families. Between Toronto and Barrie the round trip fare for a soldier is $1.95. It is no cheaper for him travelling one way. Consequently he thumbs his way.

This is a cruel situation which might be rectified by a little generosity on the part of the government and some cooperation by the railways who must have idle railway coaches suitable for the short journeys between the military camps and the main transportation transfer points. From these latter the soldiers might be given transportation on the regular schedule trains. Whatever the costs arising from such arrangements they would be infinitesimal in comparison with the enormous expenditures which are now being assumed by the country.

The men in khaki have as good a right to free transportation on the railways as the thousands of other people who daily ride "dead head" on the trains. The government should give renewed consideration to this question of free transportation for soldiers on leave, not forgetting that the trains are operated anyway, most of them only one-third or one-half full. Railway passes for the soldiers would be an indication that their country appreciates the sacrifices which they are making for it.

I shall conclude what I have to say on this point by reading a telegram I received from Petawawa camp. I do not know why the soldiers write to me, because I do not know as many of them as I used to. Many members from Ontario, travelling on the trains from Ottawa to Toronto, two-thirds of whom are government supporters, have an opportunity to speak to soldiers who have been at the Petawawa camp. At the time of the great war an artillery camp was established at that point. It has always been my contention that a camp at Petawawa should not be operative in the winter months.

Here is the telegram which was sent to me yesterday, and which I shall be pleased to send to the minister:

Small group Petawawa troops arrested for false railway tickets being used for furloughs and leave. Canadian Pacific Railway pressing charges but only using few soldiers out of hundreds in camp as sole blame same being unfair owing to large scale of sources issuing tickets. Though investigation should strengthen your proposal of free transportation for troops and soldiers. Friend we are in dire need of legal assistance and advice. Can you represent us or assist. Answer collect.

I might say that I sent a return message saying that I was not in a position to appear for them. During the first great war, as the head of the greatest soldier city in Canada, I did appear for them on many occasions. That is the city to which even to-day they are coming from points as far away as Quebec and sometimes from the west and the maritime provinces to enlist and recruit soldiers and take them out of Toronto. They sent recruits to all parts of this dominion; yet when they asked the minister a year ago to set out the list of Toronto recruits, he could not do it. I wrote asking the number of men enlisted in Toronto, but, no, I could not get that information; it was not listed. I suggest that the department ought to have a proper index filing system which would show the soldier contribution from every municipality in Canada.

In the last war, when the Conservative government was in power, wounded soldiers were arriving in Toronto, and there was a scarcity of hospital accommodation for them or homes to go to. In the dark fall of 1917, during October and November, several hundred soldiers died of the awful flu epidemic, I remember several from Winnipeg and the west who died. I remember one who had been secretary to the late Sir George Bury, who joined the air force. The pool then was at the Jesse Ketchum school in Toronto. Where a man could join the Royal Air Force and be out of the pool in three or four days, now it takes one, two, three or four months as the case may be, at manning pool. This man arrived on Wednesday and he was dead in a week from the flu epidemic.

Having seen this lack of hospital accommodation, I insisted upon a coroner's inquest into this matter and into other cases. This was held and it showed that the government of the day had not made any arrangements for proper or adequate hospitalization. The suggestion was made that the old base hospital on Gerrard street, Toronto, the old Toronto general hospital, should be used. This was closed as not considered fit for civilians, but they wanted to turn the key in the door and open it up for soldiers. As a result of that inquest the government spent a large sum of money in providing proper hospitals in every military district. I use this as an illustration of what coroners' inquests can do to get action.

I urge the same thing in connection with soldier fares and this Petawawa case. I believe we should do this. I appealed to the attorney general of the province, Mr. Conant, to provide these young men with counsel so that the evidence might be brought out and we might have all the facts, but the attorney general replied that he could not do it because it was only done in capital cases. I suppose they all follow the parliamentarians'

religion of following the line of least resistance. I understand that these men are first offenders. It costs a soldier at Petawawa almost two weeks' pay to buy his fare and berth and meals to make a trip home to Toronto and back. I plead with the minister to consider this matter. He has been very sympathetic as I discovered when I first went to see him at his office on his first day as Minister of National Defence. He treated me most courteously. I urge him to have this matter taken up by the select committee which is to consider these expenditures. I believe they could arrive at a reasonable settlement of the question.

Another matter I wish to mention is in connection with guarding city property. I know the Minister of Munitions and Supply will appreciate the problem. Unless we have continuous current and power, these war industries will not be able to work full shifts and production will not be carried on. I believe the government of the day should pay for guarding public property, the same as was done in the last war. They should assume the responsibility of guarding federal, provincial and municipal property. The government is now assuming the responsibility of guarding the power plants at Niagara and other provincial properties and the same thing should be done for the municipalities.

We had a good example of what might happen with the storm of last Tuesday. This storm struck the industrial centres in central Ontario and many power plants were forced temporarily to shut down. For a time elevators were stopped, street-cars could not run and many other activities were shut down for a time because of the storm. The same thing could happen from other causes. The municipalities are not responsible for the war, nor is it their duty to maintain armed forces. In 1940 it cost the city of Toronto $325,000 to guard power plants and other public property. The government has agreed to protect provincial property, so why not municipal property? The municipalities have no more right to pay for the guarding of public property than they have to pay the militia for the defence of Canada. Under the British North America Act matters concerning militia and defence are exclusively within federal jurisdiction. There is no necessity for the government to act the part of what judges and lawyers refer to as dead-beats so far as the municipalities are concerned, in paying for guards to protect power plants which supply current to munition plants.

If these power plants are shut down; if power fails, even for a few hours, it will be impossible to turn out munitions. Why do the government not adopt the same principle for the municipalities as they have adopted in connection with the provinces? During the last war the munition plants of Ontario at one time turned out fifty-five per cent of the shells, owing to cheap hydro power, yet the dominion most unjustly and unpatriotically made the hydro pay over $1,500,000 in customs duties on factory and generator equipment for the building of the Chippawa plant, which took three years to build. To supply power for munitions, Ottawa should do its duty. At least some part of this appropriation should be spent in protecting these public plants. That would be far better than spending $378,000 upon our legations the world over, and $125,000 upon the League of Nations, when nobody knows where it is. It has been lost, strayed or stolen.

One power plant, the hydro-electric distribution system in Toronto, supplies all the munitions plants in the district with power. An interruption in supply of power from any one of the vital generating plants or transmission facilities will cut off a major block of power and shut down for many months essential industries engaged in the manufacture of war materials. The dominion government is already providing military protection to transportation works and to a large number of private industries. It would not only be more economical but just and necessary to extend this same military protection to the power plants and distribution systems which provide and will continue to provide if protected, electrical energy to those industries manufacturing war munitions and war materials so vital to Canada's best contribution in this present war.

I view with alarm the present extremely costly and inefficient methods of providing civilian protection to electrical plants, which duty has been forced upon the municipalities and the province of Ontario. I feel that more effective means of guarding these vital facilities can be effected by the dominion government using the militia now in training without any additional expense to the taxpayers, and with the added advantage of giving valuable practical experience to the militia. That would be far better than having sixty men guarding the Royal Canadian Air Force property at the foot of Yonge street. These men are on guard twenty-four hours a day, in all kinds of weather. Yet there is already triple protection for this property, by the city police, by the harbour commission and by the contractor. Anyone who is travelling on a train leaving Toronto can see this long row of buildings and realize that it would be far better to have only five or six guards.

The hydro commission respectfully urges that the dominion government immediately take over and supply all necessary protection

for all vital hydro electric and public utility plants and power distribution systems in the same way as they were guarded during the great war and as is now being done in many cases for private industry. This is a splendid statement from the local municipal system.

There is another matter I should like to bring up, one which I do not think has been mentioned before in this debate. How does it come that everything is as usual in this country? If this committee would visit some of the large cities during the week-ends, they would see that everything is going on as usual. A visit to department stores or various places of entertainment in any city will show no evidence that Canada is at war. All that can be seen is a few soldiers on the streets, otherwise everything is just as usual, in this country. How are we going to fight Hitler that way? Why are we always talking about break-downs and all that kind of thing? Let us admit now that unless we give more urgent aid to Britain, it is possible that Britain may break down. I hope the committee will visit different centres of population and see for themselves that everything is as usual.

I want to turn now to the question of national soldiers' insurance. This country has money to provide insurance for those civilians who stay at home, but it proposes to do nothing in the way of providing insurance for those who are prepared to give their lives in defence of this country. To them it gives $1.30 a day, and out of that they have to find their own pocket-money and fares. I appreciate the hard work which the war ministers and the leader of the opposition are doing. I have always found them courteous in replying to a private member of parliament and they are willing to give freely of their time when a member writes to them. I am glad to pay this tribute to them and the leader of the opposition. But I do say that when this country can pay to insure those who stay at home, it should be able to insure those who are risking their lives for civilization.

During the great war the city of Toronto insured every one of its soldiers for $1,000. I have here the report of George Wilson, commissioner of finance, dealing with the matter. He says:

In November, 1914, the city decided to purchase—at its own cost—insurance coverage for all citizens of Toronto who enlisted for overseas service. Under such plan, 9,609 $1,000 insurance policies were purchased during the period November, 1914, to May, 1915, at a premium cost to the city of $1,247,261. As the city in May, 1915, was unable to obtain further insurance cover from local insurance companies, provincial legislation was applied for and granted, under which the city itself became the insurer of all citizens who thereafter enlisted for active service. In all cases, whether the citizens were insured by companies or by the city under the legislation referred to, the city was appointed beneficiary with power to administer the losses under such policy. Under the plan, which became effective in 1915, approximately 35,400 citizens enlisted for active service overseas; all claims under such insurance scheme being paid by the city. The total number of death claims paid by the city was 4,904—which cost the city $4,378,020.

To be eligible for the insurance, a soldier had to have lived in the city two years, and a great many had not lived there that long and therefore did not qualify for the insurance. Another qualification was that they had to have someone dependent upon them. The report goes on to say:

The cost of guards for protection of city properties, that is, water works pumping stations, sewage disposal plants, et cetera, during the war 1914-1918 totalled $442,000. No contribution to such cost was made by the federal government.

Re protection of city properties since war was declared September 3, 1939. The expenditures from September 3 last to date—approximately 12 weeks—has cost the city approximately $88,000.

In this connection let me point out that if they had not enlisted for this war many of our soldiers who have been killed on the highways would have been alive to-day, and they get no pension at all when they are killed in an accident, even though they have a pass from Camp Borden and are on military duty. A moral responsibility rests on the nation to insure the soldier against road accidents. Insurance could be taken out for 25 cents a week. Some of the insurance companies in this country are trying to push the sale of insurance to soldiers, using as an argument that they may be disabled and prevented from purchasing insurance on their return from the war. After the last war insurance was made available to our soldiers, and I think the government should make a statement of its policy in this regard. Mr. Finlayson, superintendent of insurance, in a letter to me said with reference to my proposal for government insurance of enlisted men:

Our conclusion is that the government's obligation to returning men and to the dependents of men dying in the service can best be discharged through the provisions of the Pension Act, which deals with the claims of soldiers or dependents in accordance with the need and the facts of the particular case. Government schemes of insurance are necessarily of general application and result in unnecessary insurance in some cases and entirely inadequate amounts in others. The result is that, notwithstanding such insurance, the pension problem remains in practically undiminished importance and, since the needs must be met in part by the pension provision, it is preferable to deal with the whole problem in that way. The further arguments which

have seemed to us to inevitably lead to this conclusion need not be stated here, but I shall be glad to discuss them with you after you arrive in Ottawa, if you so desire.

We should have a national scheme of insurance for soldiers which would also provide for the soldier when he comes back from the war, provide against lack of employment, reconstruction days, disability and many other hazards. It would effect an economy.

The United States had a system of soldier insurance during the great war. I think the amount of the insurance was $5,000, and with the premium charge that was made for it, this scheme was found to effect a great economy in their pension bill. I have a letter here from Mr. Stimson, Secretary for War in the United States, enclosing a copy of their new national insurance scheme for soldiers. I have received a great many applications for copies of it and I would ask the minister to allow it to be placed on the record; it is only three or four short pages long. It shows the present national scheme of insurance for soldiers in the United States. Have the ministers any objection to allowing the members to see this national scheme of insurance? It is contained in circular No. 125 from the War Department, Washington, approved by the president, dated October 31, 1940.

Mr. ILSLEY: Mr. Chairman, I do not think that long documents of that kind should be placed on *Hansard*. If the hon. gentleman thinks he would like to have the members of the committee see it, I would have no objection to having it appear in *Votes and Proceedings*. Why not have it mimeographed for circulation among the members?

Mr. CHURCH: I have about concluded what I had to say. I want to refer in closing to some economies that could and should be effected in view of the large war appropriation that is now before the committee. First, I think a considerable economy could be effected by transferring some of the war staffs to accommodation available in Hamilton, Toronto and other cities. I raised this matter last year on two or three occasions.

I would also ask the Minister of Finance to consider a national moratorium under the War Measures Act.

Mr. ILSLEY: If I might interrupt the hon. gentleman, I think upon further consideration that to have the document he referred to printed in the records of the house is not the proper thing to do.

Mr. HANSON (York-Sunbury): It cannot be done in committee anyway.

[Mr. Church.]

Mr. ILSLEY: The hon. gentleman could, perhaps, have it mimeographed and circulated among the members. I think that is the best thing. I do not like to have a precedent created of having substantial documents like that included, unread, in the official records of the house. If we once started to do it, there would be no end to it.

Mr. CHURCH: I could give the Minister of Finance the letter which I got, the rules and regulations, and the whole proceedings, and probably he could have it published for the benefit of hon. members, apart from this speech altogether, if necessary, or move that it be printed, under the rules of the house. I have no help to do it myself. I do not want to ask any favours. I have never in my life asked for a favour except one, which was refused, and I said I would never ask for another. Others, even ministers, place pages on *Hansard*, and essays have been placed on *Hansard* to-day. I repeat that I do not want any favours, and if letting hon. members know what is done elsewhere is a favour I say no; I would rather not have it. I have no time to read it or help to print it myself.

As I was saying, I believe that the principle of the War Measures Act has been extended to rents. It should be extended to cover shark small loan companies, and their rates curtailed. The other day I was in a building where there were a number of soldiers, poor women and children complaining that this act had not been enforced. It should be enforced, and there should be a national moratorium all along the line on interest mortgage rates, as I proposed last June, to five per cent.

One other matter. I understand that the Minister of Munitions and Supply has established a national industrial commission, with offices and staff, no doubt, at a large cost. I should like to find out what are their functions and duties, and the estimated cost of the commission. Does it aim at decentralization of industry, and how, or regulation of location? Who is asking for such a board, and on whose advice has it been decided to establish it? Will all letters, correspondence and other data relating thereto be tabled? What are the factors which determine a proper plant location? Has the minister or have his officials passed any rules or regulations in this respect, and, if so, what are they? From the experience I have had, I may say that there are more than adequate sources of information and advice in this country to assist any competitive industry which seeks a location. Decentralization is a meaningless term as applied to industry. It has been proved in

the United States and in Canada that the simple laws of supply and demand of labour, materials and markets are constantly adjusting the location of competitive industry to its most advantageous area. When these laws are interfered with, nothing but trouble results.

The CHAIRMAN: Order. I would remind the hon. gentleman that he has spoken for forty minutes.

Mr. HOMUTH: Mr. Chairman, the hon. gentleman has not gone past his time. He has been interrupted, and under the rules he is entitled to that time.

Mr. CHURCH: I wish to read just two short sentences.

Mr. RALSTON: The hon. member has not been interrupted at all. Nobody has said a word. He asked a question of the minister. There is no reason why he should not go on, but do not say that he has been interrupted.

Mr. CHURCH: I will add only one sentence.

Mr. HANSON (York-Sunbury): Certainly.

Mr. CHURCH: A competitive industry which is mal-located can only exist through subsidy, and the problem of calculating that subsidy is so complex that it cannot be done accurately. If this organization plans to "direct" industry to certain localities, I may say that I do not believe in it. Anyone who has spent any time in this kind of work will testify that the factors which decide a proper plant location are so numerous and vary to such a degree between industries that wide practical experience is needed before even an intelligent opinion can be given.

Mr. MacINNIS: I want to say a very few words in reply to the criticism by the Minister of Labour (Mr. McLarty) of certain statements made by me in this chamber on Monday last. But before doing that, I will make two observations. First, I wish to tell the minister that in raising the points which I put forward on Monday I had no other thought than to help to promote the greatest cooperation among the various forces in the country, in order that victory may crown our efforts. Second, I wish to tell the minister that I did not by any means exhaust the resources I could draw upon to establish more firmly, if necessary, the points I raised on that occasion.

I think the minister's criticism of yesterday was exceedingly weak. The first point he raised was that I had proposed or suggested the amalgamation of the Department of Labour with the Department of Munitions and Supply. I did nothing of the kind. What I did suggest was that the Department of Munitions and Supply should keep its hands off the affairs of the Department of Labour, and I told the Minister of Labour that he ought to be master in his own house. If the information I have from various labour organizations is correct, it is there that the chief difficulty between the Department of Labour and labour organizations at the present time exists. If the minister had taken note of the criticism made in this regard at the trades and labour congress convention at Vancouver in September last, he would realize, as I believe he does, that strong exception is taken by organized labour throughout the country to the interference by the Department of Munitions and Supply in matters which are purely within the province of the Department of Labour.

The minister indicated a number of ways in which, in his opinion, the government is cooperating with labour. He first mentioned that the government had set up the war-time prices and trade board. What connection has that with cooperation with labour? We all know the purposes of the establishment of that board, and certainly it was not created just to benefit the labour movement.

He then referred to the number of positions given to labour under the Unemployment Insurance Act. Surely that has nothing to do with what we were talking about. The posts which were allotted to labour under that act represented merely the division of the administrative positions as between employers and labour. That is definitely provided for in the act; it was in the act of 1935; and it is irrelevant for the minister to bring up the matter at this time in order to try to throw discredit on the points I raised.

Then he went on to say that Tom Moore, president of the trades and labour congress, would be offered the chairmanship of the national employment committee which is to be created by the unemployment insurance commission. I am sure that I am as pleased as is the minister that such an appointment is intended for Mr. Moore, because I do not know of any man more capable than he is to discharge the duties of that office, and I hope he can see his way clear to take it. But it is a matter which has nothing to do with the questions I raised on Monday.

He then referred to order in council No. 2685, passed in June, in which the government laid down the principles which it maintained should obtain as between employers and employed. The position which labour takes in this matter is that employers do not pay any attention whatever to those principles, and even the government itself, when doing certain

works, forgets that it passed the order. As a matter of fact, last summer the government abrogated the Fair Wages and Hours of Work Act on a certain work after passing this order and without consulting in any way with the labour supply council. I pointed that out in the house last November. Last Monday I quoted from the *Canadian Congress Journal*, showing that what I was saying was not merely my own opinion but the opinion of those who were in a position to speak for labour. Let me read the last paragraph of an editorial in which reference to the national labour supply council is made. This is from the *Canadian Congress Journal* of February, 1941:

> The weakness of the national labour supply council is that it has not been allowed to function as a planning body, but instead, merely called upon to give an advisory opinion, many times at extremely short notice, on measures already prepared by others. To be of real use, workers' representatives should be placed in a position where they can contribute from their experience toward the shaping of policies and not be called into consultation only after the course of action has been decided upon.

Mr. McLARTY: Would the hon. member permit a question? How does he reconcile that statement with the fact that the national labour supply council on its own initiative and of its own volition called a meeting of the construction industry in Canada early in February of this year, if it is not a planning body?

Mr. MacINNIS: First, this is not my statement. Second, I would assume that the *Canadian Congress Journal* would know what it was talking about when it made this statement. If there has been a solitary case of consultation on their own initiative, the exception only proves the rule. I have been watching the relations between the government and the national labour supply council ever since it was set up; I have been more or less in touch with some of those who are on it, and if I may be allowed to use a homely simile to express what I think of it, the relation seems to me something like a number of gentiles inviting a Jew to lunch and giving him pork chops. He has to do the best he can in the circumstances; he has to cut off the fat and other things to make them as palatable as possible to his psychological stomach and then either eat them or throw them out of the window. That is the position of labour in fifty per cent of the cases with the national labour supply council. As the editorial states, they are called into consultation only after the course of action has been decided upon.

I have in my hand an article by A. R. Mosher, president of the Canadian Congress of Labour, on the government's wage policy.

This article appeared in the *Canadian Unionist* of January, 1941. There was so much criticism of order in council 7440, that the president of the Canadian Congress of Labour decided it was necessary to reply and show the position that labour was really in. He stated:

> I feel therefore that it would be desirable to explain why the order in council was approved, and why I believe that if properly applied it will be helpful rather than harmful to the interests of the workers. We should all realize that very great pressure is being used by certain interests in Canada at the present time to rob organized labour of its hard-won rights and to prevent it from extending its organization. It is therefore possible—

I ask hon. members to note this.

> —that had not this order in council been approved, something very much more severe and harmful to the interests of the workers might have been passed.

In other words, A. R. Mosher, who, I believe, is a member of the national labour supply council, was handed the pork chop and he realized that if he did not eat it he might be given dog.

Then reference was made to the question of the turnover at the Malton plant. I gave certain figures, the result of an investigation,—not official—made of conditions in the Malton plant. I am sure that if I read even half of that report, it would create a furore throughout the country. The point is, however, it is admitted that labour conditions in the Malton plant are such that they are interfering with production. That is something that the minister cannot gloss over. Speaking in this committee on February 28, the Minister of Munitions and Supply made some reference to the Malton plant, and he was asked these questions, as reported on page 1137 of *Hansard*:

> Mr. Coldwell: Does the minister not think that the big labour turnover in Malton is a factor?
>
> Mr. Howe: Certainly it is. It is a reflection on something.
>
> Mr. Coldwell: Can the minister tell us why there is such a large turnover?
>
> Mr. Howe: I cannot. We have been trying without success to find out the reason. In 1936, there was practically no aeroplane industry in Canada; I suppose it was employing less than one thousand men; to-day it is employing twenty thousand.
>
> Mr. MacInnis: Did the minister approach the employees at Malton to try to get their point of view?
>
> Mr. Howe: No, I have enough trouble approaching the management.

That, as I said the other day, gives an insight into this whole matter of employer-labour relations as far as the government's attitude is concerned. When the Minister of Labour wanted to get further information, he merely asked the company what the turnover was and they said so much per cent, but only for the last six months.

Mr. McLARTY: That is what the hon. member referred to, the turnover in the last six months.

Mr. MacINNIS: I beg pardon; I did not say the last six months.

Then the minister referred to the Montreal Construction Supply and Equipment company and my criticism of conditions at this plant. I pointed out that the employees had a number of grievances, regarding sanitary conditions, the seven-day week and the eight-hour day with only fifteen minutes off for lunch, the question of intimidation of workers because of trade union activities—

Mr. McLARTY: In connection with the hon. member's statement that he did not refer to the last six months, I refer to *Hansard*, page 1364. If he is not correctly reported he should correct it in *Hansard*. He is reported as saying:

> The dissatisfaction in the Malton plant, where in six months there was a labour turnover of from seventy-five to ninety per cent, is not exceptional, but for the turnover figures.

It is a specific reference to the six months, to which, in my reply, I in turn referred.

Mr. MacINNIS: I said "in six months".

Mr. McLARTY: I took that to be the last six months.

Mr. MacINNIS: The minister knows there is quite a difference; he would not let a thing like that stand against him for a moment in a court of law. There is quite a difference between "in six months" and "in the last six months."

Mr. McLARTY: Is the hon. member referring to another six months, rather than the last six months?

Mr. MacINNIS: I was referring to the information I had at the time. As a matter of fact, I had it before the house met in November, but the whole position was so serious that, in view of the situation, we decided to leave the matter for the time being, in the hope that perhaps it could be approached in some other way.

Then there was the question of the company entirely disregarding the regulations of the government *re* wages. The minister adroitly sidestepped all the major issues; he referred to the matter of sanitary conditions and said that that was under provincial jurisdiction, and of course this government could not do anything about it. I am getting rather tired of this buck passing with regard to what the government may or may not do. I wish to tell the minister and the government that they have complete control and complete power in the matter of war contracts and government contracts generally. They give a contract; they can stipulate the conditions and wages which must be observed under that contract. In the United States they are imposing upon industrial organizations as a condition of getting any contract, that the company concerned must live up to the provisions of the Wagner labour act. Just recently the Henry Ford company was refused a contract to supply $10,000,000 worth of equipment until such time as it would agree to respect the conditions imposed in the Wagner act.

Then the minister referred to the matter of finger-printing at the Fairchild plant. I have letters from employees in this plant, but I am not going to take time to place them on record because the matter has already been discussed. The minister said that the finger-printing had been done, all right, but that it was voluntary. Surely he is not so naive as to think anything remains voluntary when a man has to have a job in order to live. Just supposing that the minister and I, if we were capable of doing that sort of work, went to the Fairchild plant, filled out application forms, were accepted and told to go to work; then the person taking our application said, "Well, Mr. McLarty, Miss Jones will take your finger-prints."

Mr. McLARTY: I do not wish to interrupt the hon. gentleman again, but perhaps his remark is made as the result of a misunderstanding for which I do not blame him, because the report in *Hansard* was not one as complete as that I intended to give. The purpose of the finger-printing at the Fairchild plant, I am informed by the manager and I have not gone into it further, was that in the event of sabotage or accident, in connection with men badly injured or perhaps killed, this was the best method of their identification. Let me be fair about it. I do not think the hon. member would draw that deduction from my remarks as reported in *Hansard*, and in that event perhaps it is my fault; but finger-printing is for that purpose. It is not for any policing purpose; it is a purely voluntary undertaking, providing a convenient method of identification in the event of injury or death as the result of sabotage. I do not, however, blame my hon. friend for taking the meaning that he has taken.

Mr. MacINNIS: I am quite willing to accept the minister's explanation; and, although usually I do not like to see people hard-boiled, I am glad he did not take the other point of view. But suppose it is for that purpose; why have a voluntary finger-printing policy or system? If it is to be of

any value at all, it should be compulsory. After all, in the case of sabotage the man who intended to commit sabotage would refuse to have his finger-prints taken, while the man who did not care, the man whose heart and mind were open, would say, "I am quite willing to have my finger-prints taken; it does not matter." The voluntary idea does not really stand at all.

Then there was the matter of the application for the board at the plant of the National Steel Car Corporation. I am quite aware of the circumstances mentioned yesterday by the minister, and I believe and know that his department has done and is doing excellent work in settling difficulties that arise between employers and their working staffs. There is not the slightest doubt in the world that this is so. I think under the late Mr. Rogers great advances were made in that direction, and I hope and believe that the work done by him is being carried on under the present minister. But in order to support my point I should like to quote again from the memorandum presented to this government by the Canadian Congress of Labour on February 14, 1941. Under the heading "The Right of Association," section 5 of the memorandum states:

> The congress desires to commend the government for its action in setting forth in order in council P.C. 2685 a statement of principles for the regulation of labour conditions during the war. . . .

I am not completing that sentence; the remainder is not important. I want to point this out, however, so that I may not be accused of taking something from its context. That is perfectly satisfactory, and I am in agreement with it. Then the memorandum goes on:

> It is pointed out, however, that many employers, including those who have obtained huge war orders from the government, are refusing to respect these principles, and are using every means in their power to prevent the workers from being organized. They are unwilling to meet committees representing their employees, and endeavour in many instances to set up so-called "company unions" under their control, in direct contravention of the principles quoted above. At its convention in September last, the congress approved a resolution that the government be asked to use its authority under the War Measures Act to ensure that its labour policy be observed by all employers in their relationships with their workers.

Then section 7 goes on:

> The difficulties involved in enforcing the principles enunciated by the government upon recalcitrant employers are recognized, but so long as no action is taken to insist upon their acceptance, the order in council is of little or no value to the workers, who are themselves carefully observing it. The congress urges especially that the government enforce these principles in all government-controlled plants, and under all government contracts. It is obviously inconsistent that plants or industries which are controlled by the government should be permitted openly to disregard the order in council, and that contracts are awarded to notorious anti-labour firms.

There the minister has the attitude of organized labour with regard to the matters with which I dealt. This does not imply that there are not decent employers. I have worked for employers myself, not very many, and I never worked for one who did not treat me decently. But, as the minister knows, the manager of the National Steel Car Corporation used every means within his power to make the appointment of a board impossible. The minister said, when he was speaking yesterday, that even when I spoke on Monday the board had made the appointment. Let me draw to his attention the debate which took place on Monday, March 10, part of which is reported at page 1369 of *Hansard* as follows:

> Mr. McLarty: That is not correct. The management did not refuse. The machinery for taking the vote could not be set up in time to take it on Saturday.
>
> Mr. MacInnis: Well, according to my information, he was there at eleven o'clock in the morning.

I was referring to the representative from the Department of Labour.

> Mr. McLarty: Yes, but they had to prepare the lists.
>
> Mr. MacInnis: They had to get the lists, but Mr. Hart was insisting on the lists of the employees who had come into the plant since February 3.
>
> Mr. McLarty: Yes, there was some dispute about that.

The fact of the matter was that Mr. Hart would not allow the vote to be taken inside the plant.

Mr. McLARTY: Perhaps I ought to clear up that point. What the hon. member has said, and his quotation of my observations, are quite correct. I believe it was about noon on Monday when the company waived the taking of the vote, and when the registrar ordered the setting up of the board under the Industrial Disputes Investigation Act. There was a complete waiver; no vote whatsoever was taken. I cannot give the exact moment, but my recollection is that it was about noon.

Mr. MacINNIS: It is not of great importance whether or not the company had waived the taking of the vote at that particular time. But I spoke in the house about 3.30 p.m. on Monday, and at 6 p.m. of the same day the representative of the employees of the National Steel Car company was advised that the board was to be set up. On Monday morning the labour representative on the board

was advised of his appointment as one of the members of the board. Those facts I believe speak for themselves.

The minister then referred to the personnel application form which I had placed before the house on Monday. Surely that was something of sufficient importance to bring to the attention of the house and the country, to show the people of Canada what employers of labour were asking their employees to sign. As a matter of fact, they were asked almost to sign their lives away. The minister read his letter to the Richardson company—

Mr. McLARTY: No; to International Metal Industries, Limited.

Mr. MacINNIS: The minister is a kindly man, and I assure him I appreciate that fact. But I wish he had been a little more harsh when he wrote to these people. I should like to have seen him address them as he did me yesterday. Had he done so, I believe he would have met the situation very well. I should like to read the last paragraph of his letter to the company which was asking its employees if they believed in the competitive system, to what political parties they belonged, and whether or not they were socialists. This is what the minister wrote:

> By order in council 2685 of June 19, 1940, copy enclosed, the government laid down certain principles designed to establish and maintain good relations between firms engaged in the execution of war contracts, and their work people. Whether a firm is engaged partly, exclusively, or not at all on war contracts, it cannot but be detrimental to the war effort as a whole if the principles laid down are disregarded as has been the case in connection with the use of the "personnel record" form referred to above. I hope you will see fit to amend this form and expunge that part of it which is provocative in character.

I suppose I ought to cultivate that kindly spirit which the minister exhibits; but when he addresses a company which would place an application form of the kind I have described before its intended or present employees, then I say he should say something more definite and direct than "I hope you will see fit", and that he should tell them in no uncertain way that as far as he was concerned, as a member of the cabinet he would use his utmost endeavours to see that a contract would not go to a company which treated its employees in that way.

The minister suggested that the points I raised could have been discussed directly with the Department of Labour. There are times—and I take advantage of them—when matters can best be taken up with the departments. But there are other times when grievances must be raised in this house, and this is one of those times. If another such grievance should come to my attention, I shall place it before the house. The minister complained that I had not cooperated with him. He knows that if he brings to the house anything of a constructive nature, anything which will benefit the workers or the people of Canada, I will, as in the past, cooperate with him to the utmost limit.

I believe that is all I have to say. I am convinced employers in Canada are riding for trouble, unless they come to understand that the working class must have a definite part, an equal part, in the economic affairs of the country. Can they not see that the safety of the nation, the maintaining of democracy, depends upon the spreading of control and administration over as large a proportion of the people as possible.

A shattering revolution took place in Russia in 1917. That revolution came almost entirely because of the suppression of the common people in that country, the suppression of generations of peasants and workers by successive governments. In France the large employers of labour were hostile to their employees; the result was that communism was much more general in labour unions in that country than it was in Great Britain, where for generations labour organizations have been recognized. If we are going to have orderly political and economic development in this country—remember the world is moving and we have to move with it—then we must spread the administration and control of government from those at the top to the lowest person in the land. That is what I am interested in and that is what I am advocating in this house.

Mr. ADAMSON: Mr. Chairman, I should like to make one or two general observations on the military situation as it exists to-day in Canada. In doing so, I find myself in a rather delicate position. Some of the information in my possession is of a semi-official or official nature, but I believe it my duty as a member of this house to bring it to the attention of the country. Furthermore, as a member of the opposition I believe I have a specific duty to perform. I should like, therefore, to deal briefly with the statement made by the Minister of National Defence (Mr. Ralston) on March 11. The proposed method of training and the organization and establishment of the Canadian army for this year, 1941, have found almost universal support in the army. As far as I am concerned, the support is complete. I should like to mention one or two specific things which the army considers to be of advantage.

I shall deal, first, with the matter of training in training centres rather than in battalions. In a training centre it is much easier to give

intensified training with all the weapons necessary, even to train that lowly animal, the rifleman. The No. 1 and No. 2 infantry rifle training centres at Camp Borden are doing excellent work. I can assure the committee that the concentrated training received in these centres is much quicker and more intensified than any type of battalion training we have yet undertaken.

The formation of the armoured brigade and the armoured division has met with almost entire satisfaction. The minister was quite distinct when he mentioned the duties of the armoured brigade and the armoured division. The armoured brigade is to cooperate with the infantry and is to be an integral part of infantry operations. The armoured division is a completely separate unit. But there was one point which the minister did not bring out, and which I think should be brought out before hon. members. I refer to the magnitude of the task of bringing into being an armoured division. It has been estimated that the cost of supplying, training, equipping and paying the men of an armoured division, of making it a complete fighting unit, is in the neighbourhood of $100,000,000. I do not think the committee has really appreciated just what an armoured division means.

The minister also referred to the fact that the Canadian general staff had cooperated with the imperial general staff. I was in a position to see some of the minutes of those meetings. Because those documents were highly secret it would be most improper, in fact it would be a serious breach of discipline on my part to give any of their contents. In view, however, of the minister's statement, I think it is proper for me to tell the committee that the general staffs of the empire are in agreement, and that the plan for the Canadian army, with regard to both training and composition, meets with favour of the war office. That is a statement of which the country should be made aware. It is necessary for the morale of the country to emphasize the fact that what is going to be done will be done in conjunction with the general staffs of the motherland, Australia and New Zealand, and that it meets entirely with their approval.

I come now to a subject which has been brought up a number of times, hitch-hiking by soldiers. The number of soldiers who appear on the roads in the vicinity of Camp Borden and the other large centres of military activity has been a matter of grave concern to the authorities. The truth of the matter is that the soldiers do not have the money to pay for railroad transportation. As this is not official, I can say that we have tried to obtain the cooperation of the railroads. It was suggested that men going on leave would be given a pass and that transportation would be provided as an integral part of that pass. I think it is generally held that troops would sooner travel by train than hitch-hike. Before this idea was made mandatory, it was suggested that the railroads should reduce the price of transportation from the major concentrations of troops.

At no time did the military authorities consider free transportation for these fortnightly leaves. It was almost universally held that such transportation would be unwise at the present time. What we did suggest to the railway authorities before any mandatory scheme be put into effect was that they cooperate with us and accept the type of ticket which was proposed to them and reduce the return fare from Camp Borden to Toronto to $1 or $1.25. Many conferences were held, but it was impossible to come to an agreement with the railway companies because they always fell back on the argument that such a proposal would upset the price structure. I bring this to the attention of the committee for one reason only, and that is this: The military authorities are alive to the dangers, and they have tried to do everything in their power to alleviate the situation, but the situation remains as I have outlined it so far as the railways are concerned. We can get no reduction and no flexibility of thought, shall I say, in the railway managements with regard to the proposal.

I come now to another subject that has been brought briefly before the house, namely, the question of propaganda and the ministry of information. The ministry has been severely criticized, and criticized unwisely I think, on the ground that it has spent so much money. The ministry of information could be one of the most useful ministries we have. Propaganda is here and is an essential part of all government. What I do criticize and what I think is most disgraceful is the matter and type of information and propaganda that have been put out. It has been a tremendous wasted effort.

I make one or two suggestions. This year we are going to try to attract a great number of tourists to Canada. I believe there is to be an expenditure of half a million dollars on radio broadcasting time alone. I suggest that instead of putting that radio broadcasting time into the hands of the Canadian Broadcasting Corporation, we bring in Americans and ask them to look after our tourist propaganda for us, because they understand themselves and know what kind of propaganda will influence them. We may know the type of propaganda that will influence Canadians.

but we are trying to attract Americans, so let us use the money we are going to spend by getting the best experts available in that particular field.

I wish to speak for a moment or two about aircraft. I listened yesterday to the hon. member for Northumberland (Mr. Fraser) and was extremely interested in what he had to say. One of his statements was that we had no aircraft industry, or an almost negligible one, at the beginning of the war, and I think that is correct. On May 22 of last year I had on the order paper two notices of motion for the production of papers, which were passed as orders for returns. The first one read:

For a copy of all letters, telegrams and other memoranda between the Curtiss-Wright Aeroplane and Motor Corporation and the Director of Aircraft Supply, the War Supply Board and the Department of National Defence offering to manufacture aeroplanes and aeroplane products in Canada; also a copy of memoranda submitted to the Director of Aircraft Supply during December, 1939, in connection with the subject.

That return has not yet been tabled. My succeeding motion called for:

A copy of all correspondence, letters, telegrams and memoranda exchanged between officials of the United Aircraft Corporation or any of its subsidiaries in Canada, more particularly the Canadian Pratt and Whitney, and officials of the National Defence department and the war supply board during 1938 and 1939 in regard to the manufacture of aeroplanes, aerial motors and other aeroplane products in Canada by the said companies.

My information with regard to the first of these two motions is that the Curtiss-Wright company offered to come into Canada and build a plant costing $15,000,000 to produce aircraft and that this offer was not taken up by the government. My motion was passed last May, but no return has yet been made of the papers asked for.

With regard to the second motion, my information is that the United Aircraft Corporation—Pratt and Whitney division—offered to build in Canada a plant costing $5,000,000 to produce the Curtiss-Wright Whirlwind engines in Canada. Both these companies, I understand, represented to the Canadian government that we were going to have a bottle-neck in aircraft production, and they said: "If you accept our offer now we will produce, and all we ask is that you take so many motors a year and so many aircraft a year. Accept our offer now," they said, "because if this war develops as it may do we shall not be able to supply you with an adequate supply of aircraft and aerial motors from our American plants." I would be very much interested in seeing these papers tabled.

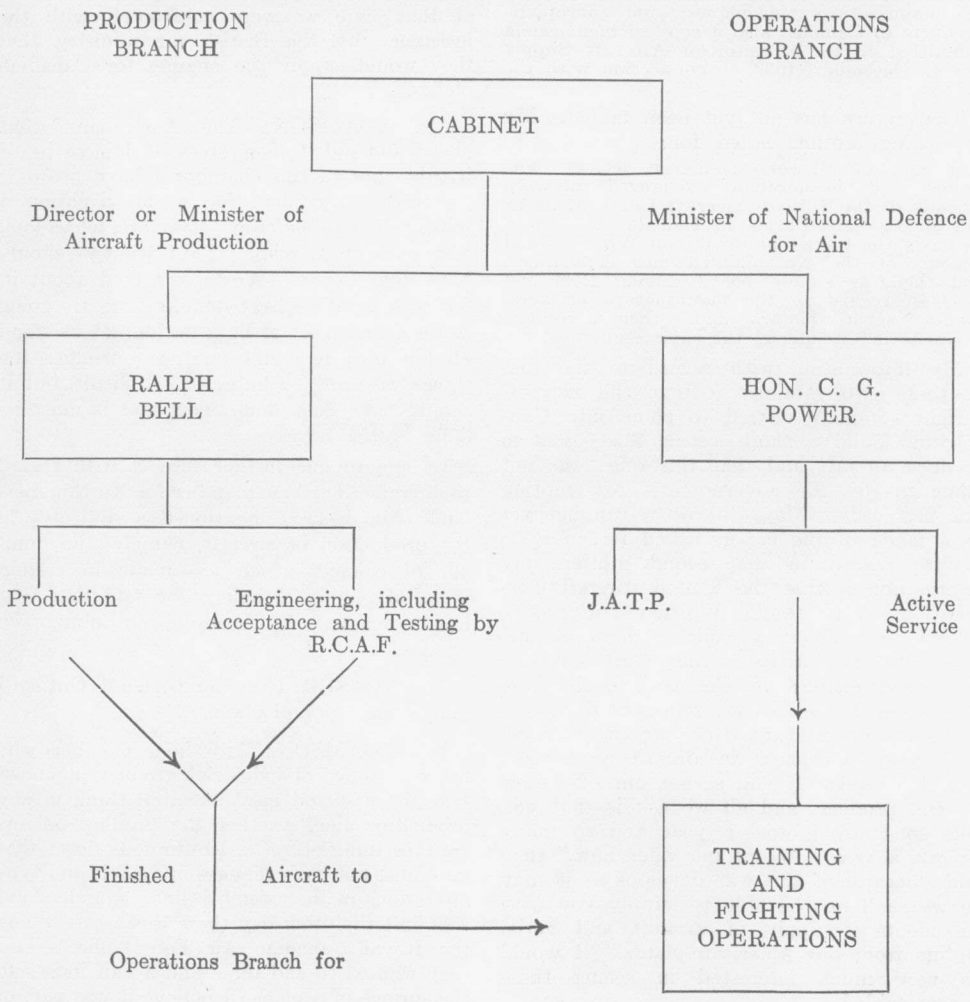
Mr. FRASER (Northumberland): If the hon. member will permit me, I made a statement yesterday with reference to the very thing he now mentions, but we could not get money voted through parliament to do those very things and that was the bottle-neck we were up against.

Mr. ADAMSON: But these offers were made in November and December, 1939, after war was declared. War was declared in September, and it was two months afterwards that these offers were made. We realized then that we were at war and certainly the Americans realized it, although there was still a tendency in the United States at that time to talk about a phoney war. But that was not our attitude in Canada.

Mr. FRASER (Northumberland): I dealt with that point yesterday, too, and said that at that time we were confronted with the insistency by the British air ministry that they would supply the engines for Canadian planes.

Mr. ADAMSON: The Australians went ahead and did it themselves. If I have heard it said once in this chamber I have heard it practically every day, that we are a nation, a self-governing dominion. If we are, let us look after our own supplies. That is what we should have done before. We have talked about it, but that is all we have done. If we are going to be a nation let us be a nation, let us stand on our own feet and produce ourselves the things we want. I know it is difficult, but it should have been done then, and it must be done in the future.

I come to one further subject with regard to aircraft. The hon. member for Northumberland (Mr. Fraser) mentioned a difficulty in the production of aircraft, namely, the number of changes which are made in certain types of planes. I believe he said that four hundred changes were made in the Bolingbroke bomber.



Mr. FRASER (Northumberland, Ont.): I said, in one type of plane.

Mr. ADAMSON: Any hon. member who has experience of industrial production knows that the first and most essential thing in any production line, whether the product be aircraft or mouse-traps, is continuous flow; that you must not have changes in models and type alterations in the assembly line. I understand that just the other day there was a case where the Royal Canadian Air Force officers said they wanted to add three and a half inches to the surface of a plane; I believe it was part of

the tail assembly. They had no idea of the difficulties which would be involved in that change.

Mr. FRASER (Northumberland, Ont.): They wanted to put nine pounds in there, too.

Mr. ADAMSON: I am glad that the hon. member is talking about the same thing. They have no idea what that means. I make this suggestion, and I should like to have the permission of the committee to put on *Hansard* a little chart to illustrate it. Before we can get substantial aircraft production in Canada, we must divorce production from operation. I suggest that there be created a director or minister of aircraft production. The man would have to be given authority. He could be made an air marshal and a brass hat put in his room or the necessary stripes pinned on his door, but he would have to be given authority in the air force over the testing officers. On the operations side, there is the Minister of National Defence for Air, my hon. friend who is sitting on the government benches now. I make the specific suggestion that Mr. Ralph Bell be appointed director of aircraft production, and that under him be a production and an engineering branch, the latter including acceptance and testing by the Royal Canadian Air Force. Under the Minister of National Defence for Air should be the joint aircraft training plan, and the active service branch. On the production side the aircraft are produced, and when they are produced they are handed over to the operations branch to operate. The chart follows:

What the operations branch must do is to advise the production branch, "We want so many aircraft; we want them of this type, and we want them to do this. You are the production branch, go ahead and produce them"—and leave it at that. Do not, halfway through the assembly line or part way through the maintenance say, "We want nine pounds more in the tail plane." Make your decision first, and produce that type of aircraft. The one really satisfactory unit of aircraft production that we have in Canada, the Canadian Car and Foundry company, are manufacturing aircraft for the British government. They were told, "We want this plane; you go and produce it," and they are producing it. We have not done that, and I suggest to the minister that production has lagged because of these changes and alterations in the course of manufacture; when production has got part way down the line the manufacturers are told that alterations are necessary, that something else is wanted.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. ADAMSON: I come now to a condition of expenditure. In my riding the largest industrial plant is the Anaconda American Brass company. They are, or were until a very short time ago, the largest and practically the only manufacturers of brass in Canada. Some time during the latter part of last year the Department of Munitions and Supply asked for tenders on a plant to produce 100 million pounds of brass sheet and rod a year. On this tender there were two bids, one from the Anaconda company and one from the Canada Wire and Cable company in Montreal. When the contracts were let, it turned out that the Anaconda company had made a bid of $1,500,000 less than the bid actually accepted. There is now a discrepancy of $2,300,000 because, after the original contract was let, the demand for brass increased to such an extent that the government had to ask the Anaconda company to build a plant of the same size as it originally intended to build.

The Anaconda American Brass company have offered to run this government plant entirely and absolutely without fee. I understand from the information I have received that the Canada Wire and Cable company is charging a fee for the operation of their plant. Further than that, the Canada Wire and Cable company had never made brass sheets and rods before. They had to go to the Anaconda company in New Toronto and ask them, first, to help them with their layout of plant, and, further, to train men in their private plant—not in the government plant—in the manufacture of brass sheets and rods.

When this information was presented to me I naturally investigated the matter, because this concern is in my riding, a company that is vitally important to the welfare of York West, and one on whose lists there are to-day the names of some four thousand men wishing for employment. Therefore I assumed with my constituents who are members of this organization that the reason why the contract was given to the Canada Wire and Cable company could not be lack of labour in York West, because there is plenty of labour available there. Then I said, perhaps there is a power shortage in York West, so I inquired of the Ontario Hydro-Electric commission and officials of the company and found that ample power was available. But one of the members of the company said to me: "Yes, we had lots of power, but I understand that the Canada Wire and Cable company were guaranteed power and that the deal was put through by a Mr. Henry"—I think the name was—"who said there would be opportunity to get plenty of power from the Beauharnois company, they had a surplus of power, and that they could build their plant in Montreal."

The questions being asked in my riding to-day are these: Here you have a plant in Ontario that makes an original bid $1,500,000 lower than the bid which was accepted; you have a company that offers to operate the government-owned plant without fee, and that, a company which knows the business. My constituents come to me and ask, "Is the government getting value for the money in this matter?"

Here is a discrepancy; when Anaconda company were asked to build a plant which they say will produce 120 million pounds of brass sheets and rods, they were held to their original contract, whereas the Montreal plant, I find in the minister's statement, bid for a plant of 100 million pounds capacity and are charging $2,300.000 more for approximately the same size plant.

This is a serious matter, and one which this committee and the special committee which is set up to investigate war expenditures should investigate. But another matter has been brought to my attention. The suggestion was made to a very high official of the Anaconda American Brass company that he should increase the price one cent a pound so that

the Canada Wire and Cable company would be able, or the government would be able, to write off this plant in Montreal.

Mr. HOWE: My hon. friend is making serious allegations. Is he able to prove what he is saying?

Mr. ADAMSON: This is a matter that has been given to me—

Mr. HOWE: I trust my hon. friend will be prepared to repeat his allegations before the committee he mentions. I will see that he is called personally.

Mr. ADAMSON: I shall be prepared. The information was given to me by a person whose name I am not prepared to reveal to this committee.

Mr. HOMUTH: The hon. member does not have to, either.

Mr. HOWE: My hon. friend made a suggestion as to who gave him the information.

Mr. HANSON (York-Sunbury): No; he said he had the information.

Mr. HOWE: He mentioned the source.

Mr. ADAMSON: My constituents, many of whom are employed at this plant—

Mr. HOWE: From my intimate knowledge of the whole situation I would say that the facts and information given by the hon. member are erroneous, and his innuendo about the Beauharnois company is wholly false.

Mr. ADAMSON: That is interesting, but it is not the information I have received from sources which I believe to be entirely reliable.

Mr. HOWE: The hon. member mentioned that he got the information from the Anaconda company, did he not?

Mr. ADAMSON: I am not speaking for the Anaconda company.

Mr. HOWE: I will communicate with the Anaconda company to-morrow and see just how much information my hon. friend got from it.

Mr. ADAMSON: I shall be very glad if the minister does so, and I should be interested to see the reply he gets.

In conclusion, Mr. Chairman, let me say this with regard to our war effort. At the present time we are in complete agreement with the British war office, which is a very happy state of affairs. Had we shown this same cooperation in the past, there is no doubt now what the results would have been.

[Mr. Adamson.]

Mr. ROSS (St. Paul's): I must say that this report by Mr. H. R. MacMillan contains a tremendous amount of meat and should give the Department of Munitions and Supply a great deal to think about. I wonder what has been done to implement this report up to the present time.

I was very much interested in the remarks of the hon. member for Northumberland, Ontario (Mr. Fraser) yesterday afternoon. He suggested, as did the Minister of Munitions and Supply (Mr. Howe), that it would be a good thing if members of this house visited some of the plants engaged in war work. I have visited several of these plants, but I have an idea just how much information an ordinary member would get, and how difficult he would find it to ascertain whether or not the plant was operating properly, whether or not it was doing its best, and so on. He would have a great deal of difficulty in finding out these things, I believe, unless he was given the information by the management, and in many of these plants the management is rather diffident about giving out such information. Hon. members here have to depend upon information which they receive from various people interested in certain industries.

To-night I should like to say a few more words about the aircraft industry, to the early difficulties of which the hon. member for Northumberland, Ontario, referred yesterday. He felt that the industry was entitled to some sort of defence, and I agree. When we consider the difficulties with which aircraft production in Canada has been faced; when we consider all that is necessary in order to produce aeroplanes, some of which have fifty thousand parts, the aeroplane manufacturers of this country are to be commended for what they have achieved. They should be praised also for their initiative and foresight in connection with various enterprises. We all know that this is a mushroom industry, with very little background, as the United States expert said, although some of these plants did have some experience.

Two or three matters come to mind in connection with the production of aeroplanes in Canada. We must give credit to Associated Aircraft for the vision, foresight and perseverance they showed as far back as 1938. We also know that the industry has been hampered because of difficulties in securing certain secret processes and patents and designs. I know that in 1937 one concern, having in mind that at some future time it might become difficult to obtain a certain alloy which was essential in the manufacture of aeroplanes, put experts to work and discovered

the composition of this alloy. To-day the whole industry is reaping the benefit of the work done by that company. I mention this incident in order to show that some firms in Canada have at least some little background along this line. Certainly they all have more background and more experience than Federal Aircraft. Considering everything, I believe these older firms have done fairly well, and it might be a good idea for the government to have a few conferences with them and follow some of their recommendations.

Most of us are greatly disappointed because the production of aeroplanes in this country has not been up to schedule, but there have been many difficulties in connection with designs, in getting parts, in obtaining machine tools, and so on. The minister said that in some instances the output of finished planes was very disappointing indeed. During the course of his remarks he said he thought they should have done better, and I believe he suggested that in certain instances the management was not all that it should be. While there may have been some faults on the part of the management, I do not think the minister has been quite fair. Is it not a fact that there is a multiplicity of control over supplies, over inspection and over the delivery of component parts, matters which are beyond the jurisdiction of the contractors themselves? It is directly the responsibility of some department of government to see that these things are delivered. Those are matters which are beyond the control of the contractors.

There are three separate authorities in the administration of aircraft construction. There are three separate authorities interested in checking costs. There were two separate goverment inspection organizations; I do not know whether that has been changed. There are three separate groups active in obtaining materials and equipment. All of the above are in addition to the organization of the contractor who, under any circumstances, must operate under each of the above sections.

I have in my hand a partial list of aircraft contracts in progress in Canada. This partial list illustrates clearly the question of control, and I should like to place it on *Hansard*. The list of aircraft, and the comments, are shown in the accompanying table.

It will be noted that in respect of the Noorduyn Aviation Company Limited, Mr. MacMillan said, in his report, that the manufacturing technique of that plant is the farthest advanced of any plant in Canada, and that unless they are held up by the non-receipt of ordered material or components, they will complete their contract. He gives them a good record. However, the multiplicity of control with respect to some of the others is easily seen in the list I have placed on record. It is apparent that in some instances production is not as good as it might be, and I am wondering whether that multiplicity of control has anything to do with that condition.

As I said earlier, it is at once apparent that where there was simple control there was good progress, but where control was complicated the progress was not as good. Is it not fundamental that the only service required from the aircraft industry is the reasonably economic production of aircraft, with all possible speed? Normal activities are necessarily divided into two main requirements: (1) the operation of aircraft production plants involving the fabrication of raw materials and their assembly with aircraft equipment and accessories into complete aircraft, by the use of labour and (2) an assured flow of all supplies required by the production plants. These supplies comprise raw materials, aircraft equipment and accessories, production equipment and labour sufficiently trained to be readily absorbed in the work. Then, to operate under wartime emergency conditions, a third requirement becomes essential, namely, the co-ordination of the industry to form a unit of production, in order to obtain and make possible efficiency in output.

Under normal conditions a contractor undertakes, as his function of management, the fulfilment of the first two requirements. But with the present demand for very rapid expansion if the contractor-management is permitted free access to the various markets involved, the industry will suffer from uneconomical distribution of supplies, leading directly to decreased gross production and increased gross cost. Also, a general scramble for contracts instead of allocation of work means overloading of the successful scramblers, and something less than full use of other facilities. The function of management can be fulfilled most efficiently by the operation of each plant on productive work for which it is best suited, and if the supply problem is undertaken by the government, the full energy of management can be concentrated on plant operation and supervision of labour.

With the present congestion of markets for all aircraft materials and production equipment, efficient operation is possible only by authoritative coordination and allocation of the available supplies, while training of labour can best be centralized and controlled by direct governmental action. It will be clear that a vigorous reorganization of the control of the aircraft industry is badly needed.

Partial List of Aircraft Construction

Federal—Federal Aircraft Limited.

There should be one strong central authority, such as a minister of aircraft production, to replace the various existing authorities. While I am on that point, if we are going to look into the future of Canada's aircraft production, now is the time to set up what I here recommend. From what I know of Mr. R. P. Bell, and what I have heard from the industry, I have the highest regard for him, and I believe him to be a very fine chap. He is well thought of by the industry in general and he probably would make a good man. I certainly think we should have something of this kind. This would result in the elimination of the Canadian Associated Aircraft Limited and Federal Aircraft Limited in their presently constituted forms. I do not think it would require any great change. It would probably involve moving the engineering division of the Department of National Defence for Air to the new ministry. I think we can easily understand the delay which has been caused by the Department of National Defence for Air. They want to have everything up to the last minute. As the hon. member for York West (Mr. Adamson) said a few moments ago, sometimes these changes may mean restressing the plane from head to tail. The closest coordination should exist in that respect.

What do we need most in Canada to-day? Pilots are what we want. Planes are what we need to produce them. The Minister of National Defence for Air (Mr. Power) is quoted by the *Globe and Mail* of February 5, as saying:

> We know exactly how many thousands we want and we know exactly when we want them, so we ask them to come forward and be assured they will be told when they are required.

He said that in some training schools three advanced training planes were doing the work of four because there had been delays in the Canadian production of these planes. The minister then went on to say:

> Unfortunately I do not know why it has not been possible to produce these planes on schedule and I am not in a position to judge the delays, but one exasperated officer did tell me the other day that there are some manufacturers who were either damn fools or damn liars.

Why was that statement made? The minister wanted to impress the people of Canada with the necessity for airmen. Then in his speech he warned the people against complacency. But this is the part I do not like—he tried to throw the blame for the lack of aeroplanes upon the shoulders of the manufacturers. The industry did not promise, or if they did they made the promise under certain conditions—they wanted an adequate supply of material and component parts.

What type of plane is it most necessary to have in Canada? Should we build fighters or advanced trainers? What is the necessity in this country at the present time? What is the policy? How can it be arrived at, unless by having some form of ministry such as I have just outlined? There should be some central control to study this problem from time to time. I am told that a great many of the delays which have taken place in the past are on account of the failure of government agencies to do their part. It is this failure which has caused so much anxiety in the industry, and which caused them to make the recommendations they did on January 7, at the request of the acting minister (Mr. Macdonald). It seems to me that drawings for the Anson should be prepared by now. They have had a long time to prepare them. It seems to me that some parts should be under way.

When the Minister of Munitions and Supply (Mr. Howe) returned from England he sent out to the industry a letter of which we all have heard. That letter contained three questions which it was absolutely impossible for the industry to answer fully in a letter. The only way those questions could be answered properly was in a conference, and they so stated. The first question was:

> Will the taking of steps recommended in your opinion accelerate the production of Ansons in Canada and if so, to what extent?

They replied in the only way they possibly could by saying:

> Our opinion is as expressed in our recommendations of January 7, that the Anson production can be expedited in the manner outlined.

As to the degree of acceleration which would take place, they said:

> We have not sufficient information before us to answer this question with a proper degree of accuracy and—

Mark these words:

> —further, complete study of the present production plans of Federal Aircraft Limited and the de Havilland Aircraft Limited would be necessary before the tempo of this acceleration could be ascertained.

They said there would be acceleration, but they could not forecast as to the tempo without a conference. It must be remembered that these men in the industry who replied in this manner were practical manufacturers who had been engaged in the industry for a considerable time. They were not representing a new company like the Federal Aircraft

That company was never intended to do anything but design, and it had not done that job at the time. I notice the hon. member for Northumberland (Mr. Fraser) carefully skated around the question which was asked by my leader last night as to whether he approved of Federal Aircraft. Much to my surprise he said that he did not know anything about it, and therefore he would not talk about it. How could a man who made the speech he made last night and who was in the industry not know more about it than he did? I am sure he did.

The CHAIRMAN: The hon. member cannot challenge the veracity of a statement made by another hon. member.

Mr. ROSS (St. Paul's): I did not intend to challenge any statement, and I beg the hon. member's pardon.

The CHAIRMAN: The hon. member for Northumberland, Ontario, said that he did not know and the hon. gentleman now says that he knows that the hon. gentleman knew. That is challenging the accuracy of a statement made by an hon. gentleman.

Mr. ROSS (St. Paul's): I did not intend to challenge the statement, and I apologize. As I said before, these men asked that a complete study be made. Was anything ever done toward having a complete study made? The third question was as follows:

> As one of the contractors holding a subcontract for this production, what guarantee can you and your group give as to a date when substantial deliveries of Anson planes will be made, provided your recommendations are adopted?

How could they answer otherwise than they did? No guarantee of delivery dates could be given by the contractors because no schedule had been supplied by Federal Aircraft Limited to show when raw materials, A.G.S. parts, proprietary articles, castings, forgings and finished parts which were to be supplied by Federal would be available. How could they reply otherwise? The minister is reported on page 1128 of *Hansard* as follows:

> . . . "it depends on a lot of things." Well, so it does, but at least in connection with Federal we know on what it depends; we know the situation; we know what we can do. We have had an expert look at it, and certainly he did not recommend upsetting Federal. Nor did our own men, who were charged with the duty of investigating the matter, recommend that the contract be taken away from Federal. Certainly I would have acted on very slender information if at that time I had proceeded, on the opinion of five firms, all subcontractors of Federal, to suspend Federal and put ourselves in the hands of these subcontractors.

Did the minister not stand on slender ground when he did not take the opportunity of having these round-table conferences for a full discussion of the whole matter and take, as a matter of fact, the advice of the people who were in Federal and see the difficulties as they appeared to them? Certainly the minister should have had confidence in them. He said he was not going to be ganged-up on by his subcontractors, that he had never allowed that before and would not now. But subcontractors can sometimes be of great assistance to any contractor, as I think the minister knows. These men knew what they were up against. They knew the difficulties they were experiencing. They were clear-thinking, far-sighted men who were anxious to speed up the air training plan, and I am sure there was absolutely no intention of effrontery on their part. Even at this late date I think the minister should call a conference of these men and get to the bottom of the matter.

The one thing that upsets us is that up to now performance has been bad. Can it be any better? Certainly that question should be looked into. I have been informed that there are certain parts of the Anson plane which are 10 or 15 per cent manufactured and possibly more, awaiting further plans, specifications and material. I am informed that certain plans go forward to the contractors, with a list of materials ordered for the construction of the parts. The contractors go over the list and find that many of the materials required have not been ordered. They write back asking for information as to whether these parts have been ordered and what delay may be expected. Sometimes they have not even received a reply to their letters, and in other instances they have been told, when they asked when they might expect delivery, "When you get it." That is a situation which must be corrected.

Another difficulty is that there is a lack of technicians. Why not utilize the experience and the facilities of people who have been doing this work for so long? The main criticism has not been lack of production of a great many planes. The main criticism has been by the industry itself as to the prospect of producing Ansons.

The Minister of Munitions and Supply has a great deal on his shoulders. He has, as I said last fall in this house, altogether too much on his shoulders. He has tried to do too many things. He is the cabinet's liaison minister. He is general manager, minister and policy-maker in the most gigantic industrial programme Canada has ever undertaken. The Prime Minister (Mr. Mackenzie King) is responsible for this situation continuing. The Prime Minister himself should take hold of this situation and insist that a great deal of the weight be taken off the shoulders of the Minister of Munitions and Supply. I am

not the only one who thinks this should be done, and the blame lies both with the minister himself for trying to do as much as he is doing, and also with the Prime Minister for not taking action in this matter.

Mr. BRUCE: Mr. Chairman, in view of the refusal of the Minister of Munitions and Supply to accede to the request of the leader of the opposition this afternoon to lay on the table of the house the MacMillan report to which he referred on March 10, I venture to make a few observations.

In his report appearing in *Votes and Proceedings* of February 27, Mr. MacMillan, under the heading of "Ships", and speaking of the progress being made in the production of ships, says:

> Progress henceforth will depend upon (a) organization of expanded facilities, which can be done.

When the hon. member for Vancouver South (Mr. Green) referred to this matter in the house as reported in *Hansard* at page 1371, and challenged the minister with regard to this statement of Mr. MacMillan's, the minister replied:

> I wish Mr. MacMillan would be a little more consistent, because I have a report on my desk from him to-day declaring that labour cannot be found to operate the shipyards to anything like capacity.

In view of the minister's statement and in spite of what he said this afternoon, I submit that, in fairness to Mr. MacMillan, and in order to allay public apprehension with regard to the unfair attitude of the minister, it is only proper that the report which Mr. MacMillan made to the minister on March 10 be laid on the table. Mr. MacMillan is accused of having made contradictory statements in reports submitted on January 27 and March 10 respectively. As the same time he is refused an opportunity either of defending himself or of having all of his reports made public.

May I suggest, with all respect, that it is the minister's duty to defend his own staff, who, by their oath of secrecy when a conflict of opinion arises, are not in a position to defend themselves. When the minister publicly chastises one of his chief executives in the person of Mr. MacMillan, chairman of the war-time requirements board, for inconsistency in reports which he has submitted to him—

Mr. HOWE: When did I do that?

Mr. BRUCE: —the minister is raising in the public mind the suspicion that all is not well in the relationship between himself and Mr. MacMillan. One year ago the public were totally ignorant of the government's intentions with regard to Canada's war effort. But to-day the public are aware not only of the issues involved but also of the fact that the government has fallen down badly in meeting the requirements of a total war effort. In addition, the result of the activities of the past year in relation to the vast sums of money expended and contracts let, has created a great deal of disappointment in the public mind. Is it any wonder, then, that there is widespread doubt and scepticism with regard to the efficiency of direction and the general effectiveness of the government's efforts?

The minister has raised the question of shortage of labour. May I call his attention to the fact that the present government was in power during the time when labour was rusting and rotting through lack of facilities which the government ought to have provided to enable these men to remain efficient. These men were not only unemployed, but forced by the complacency and lack of constructive measures of this government to become unemployables. Returned veterans in their forties and fifties are not the least among those compelled to remain idle during that period, and are now numbered among those who are termed "unemployable".

During this long period the government were lacking not only in inclination but also in vision, and made no effort, or no effective effort, to grapple with this problem. They contented themselves with providing mere sustenance for those hundreds of thousands who, through no fault of their own, were forced to accept charity, instead of the work they were eagerly seeking. The minister of munitions is now an apologist for the utter neglect of these unemployables by his own government during the three years before the war.

Now that they are looking for skilled men, the government have created machinery in the form of an unemployment insurance commission, having as its object the care of the unemployed during the period wherein there is an actual scarcity of skilled labour. May I recall the fact that a similar measure was enacted by the Bennett government in 1935. The present government, however, preferred to fight this act in the courts, even up to the privy council, to prove that it was unconstitutional, rather than do the obvious and proper thing which they should have done if they were sincerely interested in the welfare of the working man, namely, secure the consent of the provinces and the British government to make this act constitutional. At that time of unprecedented unemployment a measure such as this would have been of the

greatest value. In other words, the government are at least six years behind schedule—and we have heard a lot about "schedule" in this chamber.

There was also the problem of young men leaving school, for whom there was no vocational training adequate to fit them for a job requiring skill. What did the government do during this long period for these young men but allow them to walk the streets and become a social responsibility? I grant you, Mr. Chairman, that a slight effort was made in the youth training programme.

Does the national registration, recently taken at a cost of nearly one million dollars, give any assistance to the minister of munitions in his quest for persons who have had experience in shipbuilding? The national registration was taken after we had been at war for nearly a year.

Mr. GOLDING: Mr. Chairman, may I ask the hon. member what he is reading from?

Mr. BRUCE: I am using some notes which I prepared myself.

Mr. RALSTON: Since this afternoon.

The CHAIRMAN: The rule is well known that no speeches can be read to the house.

Mr. BRUCE: I am not reading a speech; I am following my notes connectedly and consecutively.

An hon. MEMBER: He is singing it.

The CHAIRMAN: I should, however, like to point out that great latitude has been allowed hon. members, and I think that, unless a point of order is raised, I will allow the hon. gentleman to continue.

Mr. GOLDING: So long as we know what he is reading from.

Mr. HANSON (York-Sunbury): A piece of paper.

Mr. BRUCE: I am reading from pieces of paper on which I have jotted down certain notes which I am following fairly closely so as not to waste the time of the committee.

I was speaking of the securing, through national registration, of the names of those who were capable of assisting at shipbuilding. Would this not be more important to us at this time than to have the names of those who can milk cows? I think it will be readily agreed as to which would be the more important.

In view of the great shortage of labour, what effort is the minister making to take care of this situation? Should steps not have been taken months ago to have young men trained for this purpose? Even now should not schools—technical schools—be opened where young men could be trained in shipbuilding and various other things, in connection with the manufacture of munitions, to qualify them in a few months time to take their proper place in war-time industry?

In its latest report, the dominion bureau of statistics gives a survey of education in Canada for 1938-40. According to that report there are sixteen degree-giving universities. In 1939, there were 35,087 men and 13,118 women students, or a total of 48,205 proceeding to a degree. The total number of students in 1939, however, including those taking full-time, part-time, short courses, and evening courses, was 79,143 men and 37,599 women, or a total of 116,742. Surely the government should see the necessity of speedily providing facilities for the technical training of as many as possible of these young men and women, and as many as are needed to make up the deficiency in labour for munition plants. I believe I can confidently assure the government of the cooperation of the universities in giving their laboratories and other facilities for this purpose. I would suggest to the government that they ask the universities to advance their examinations this spring by one month so that these young men and women would be available by the first of April; and then, if conditions are so serious as to require their services in the autumn when the universities open, that they ask the universities not to open until this crisis passes. To my mind it is much more important that these young men and young women should be employed to the fullest extent in industry connected with the war than that they should be proceeding to a degree.

There is another class of students in the high schools and collegiate institutes, boys and girls over fifteen years of age. I have not been able to secure the total number of these students.

Mr. POWER: I will give them: 119,000 for 1935-36 in the secondary schools, excluding Quebec.

Mr. BRUCE: Thank you. According to the Minister of National Defence for Air, we have 119,000 boys and girls who would supply an emergency labour market. They could all be given intensive technical education. I am told that the technical schools in Toronto and elsewhere have the facilities for training many more students than come to them; but they require more teachers, and these teachers could be secured by certain exemptions from taking part in the present four months training plan.

In conclusion, I wish to say a word of commendation to the Minister of Munitions

and Supply, and to congratulate him for having secured the services of Mr. Joseph Pigott of Hamilton as head of the new government-owned company known as War-Time Housing Limited. Mr. Pigott is president of a very large construction company and has had wide experience in building of all kinds; he has exceptional organizing ability and is a man of the highest integrity. No better man could have been found for the job. I only regret to learn from the minister that this building project will be limited to war-time requirements and will not include the low rental housing plan recommended in appendix E to the Purvis report on unemployment, as these houses are so urgently needed. I trust, however, that the government will see the necessity for implementing this report as soon as the immediate requirements of the war are satisfied.

Mr. ROSS (Calgary East): In addressing this committee last Monday afternoon, I undertook to set forth some of Germany's methods of financing the war. Many people throughout Canada, and particularly in my province of Alberta, have been urging strongly that we should look to Germany and adopt some of her methods. I have, therefore, undertaken an examination of Germany's methods and wish to make a few more observations on them.

At that time I pointed out that in Germany more than one-third of the revenue, nearly one-half, was being raised by taxation, and quite a large part of the revenue has been raised by borrowing. They get a great deal of revenue by selling loot from countries that they have overrun. They are printing money very freely for use outside Germany in buying goods from the small nations that are afraid to refuse to sell goods to them. Within Germany their currency is fairly stable owing to fixed prices and control.

I now wish to read from the last report made by the governor of the Bank of Canada to the Minister of Finance. It is dated February, 1941. In this report the governor of the bank says:

> The truth is that German monetary policy has not been unusual. It has been simply an easy money policy of the sort which has been followed in many countries during the past decade. In Canada, for example, between January, 1933, and August, 1939, the total volume of money (i.e. coin, notes and bank deposits) was increased by some $750,000,000. International comparisons of the volume of money cannot be pushed too far since the velocity of circulation is an important factor, but it may be worth noting that on a per capita basis, the increase in the volume of money was about the same in Canada as it was in Germany, over the pre-war period. As for the period since the war began, the available information suggests that the volume of money has been increased considerably less in Germany than it has been in Canada, on a per capita comparison.
>
> A realistic appraisal of nazi monetary policy must, of course, take account of the very complete and rigorous system of direct controls which the rulers of Germany have imposed upon their people. For example, nearly every article of consumption is rationed, wage levels and farm prices are rigidly pegged down, and the operations of private business are "supervised" in minute detail. With such controls in operation, the immediate danger involved in an unduly large increase in the volume of money would obviously be less than it would be if the controls did not exist. The fact that the nazis did not resort to issuing new money on an exaggerated scale is all the more significant in view of the margin of safety which they might have expected their elaborate direct controls to provide.
>
> The policies which have been described above are those followed within the reich. In the occupied territories, on the other hand, the nazis have used the printing press deliberately as a means of plundering those areas. Instead of seizing goods the Germans simply bought them, paying with newly printed notes, and the people were robbed of purchasing power by soaring prices. This refined method of looting tends to hide the nazis' responsibility for resulting scarcities, and bears most heavily on sections of the population least able to endure it, thus helping to disrupt the economy and destroy the unity of the conquered people.

Hitler and his economic advisers have been most careful to avoid anything in the nature of inflation within Germany. Observers who have visited Germany tell us that Germany is fearful of another inflation; the people remember only too well the great inflation of 1923 and are fearful of a repetition of it.

Nazi war economy is based upon two factors: one being efficient exploitation of German labour and industry, achieved through crushing taxation, forced loans and ruthless regimentation of labour and capital.

The people of Canada will stand for heavy taxation; they may stand for forced loans, but I doubt very much if they would stand for the ruthless regulation of labour and capital that prevails in Germany. The Minister of Finance, in discussing this matter on November 21 last, used these words:

> The whole habits of thought of the Canadian people, the dislike of intensive and general government intervention in their personal transactions and private affairs, would make a universal system of price fixing and rationing, even if it were practicable in Canada, far more odious, I am satisfied, than a system of taxation and borrowing out of savings, which is the policy of this government. Every detail of our economic life would have to be controlled by someone sitting here in Ottawa.

I do not believe the people of Canada would stand for such rigid control.

The other factor in nazi war economy is an equally efficient and systematic exploitation of conquered countries, achieved by confiscation of foodstuffs, military supplies, raw materials and industrial facilities by forced labour and disguised robbery practised by the circulation of worthless currency. Hitler's first method is open to us if we are prepared to make the sacrifice; but currency inflation and social credit remedies have nothing to do with Hitler's success and can contribute nothing to our effort.

Mr. KUHL: No doubt the hon. gentleman who has just taken his seat intended his remarks, the last time he spoke, particularly for the benefit of the group with which I am associated, and no doubt he is expecting some comment from this corner. I think, however, it sufficient to say that I do not believe his argument needs any comment. I believe he has done a perfect job of refuting his own argument; consequently it requires no refutation from this corner. For example, the hon. member in his speech the other day suggested that we in this corner have advocated financial methods which do not involve increased taxation and increased borrowing. Then he proceeded to prove that Germany has used practically nothing but taxation and borrowing methods, and he drew his conclusion in this sentence:

> Apart from taxation, most of Germany's financing has been done by borrowing.

I think it should be obvious to anyone that the hon. gentleman has refuted his own argument, and it requires no further comment. With regard, however, to the subject of the financial methods to be used in connection with Canada's war effort, if the hon. gentleman will keep his ears open I think I can supply him with all the information he desires as to the social credit point of view.

I dislike being critical, and I wish circumstances to-day were such that I would feel obliged to present the government with one verbal bouquet after another. I have, however, sat here patiently and have listened carefully to all the criticism that has been offered with regard to government policies, not only by the opposition but by supporters of the government as well; and I must say that, as a result, from the point of view from which I wish to discuss this measure, I cannot be anything but critical of the government's policy. I say that notwithstanding what was said the other night by the Minister of National Defence (Mr. Ralston) with regard to the duty of members of parliament to develop a war spirit and morale in this country of ours. At page 1442 of *Hansard* the minister made this statement:

> We have a lot to be thankful for in this country, and very little to grouse about after all—

I agree with the minister that we have a lot to be thankful for, and we are thankful. We in the opposition are just as thankful as the minister is, and I believe that applies to the people of Canada also. We admire the British people for the courage they have shown in meeting the dangers with which they are faced, and I am sure all the people of Canada will gladly make all the necessary sacrifices they may yet be called upon to make in this great struggle. Nevertheless I suggest to the Minister of National Defence that to compare conditions in Canada with conditions in Britain certainly is no answer to the criticisms that have been offered as to government policy. To say that we ought to be satisfied with unnecessarily unsatisfactory conditions in Canada because the British people are in daily fear of their lives is, in my opinion, illogical reasoning. To say that we ought to tolerate poverty and insecurity in the presence of not only potential but actual abundance in this country appears to me to be the height of inconsistency. I should like to tell the minister candidly that I think his basis of comparison is entirely wrong. What we should be comparing is the conditions that could obtain in this country as contrasted with those that do obtain to-day. I consider this the only fair basis of comparison.

The minister spoke of developing a war spirit and strengthening the morale of both the civil and soldier population of Canada. I agree entirely that this is essential; but surely it must occur to the minister that the most effective way of creating a stronger morale and war spirit is to see that the people of this country get justice. I am satisfied that if, in Canada, every available man-hour were being used, at remunerative wages, and if conditions were such as are physically possible, there would be very, very little by way of criticism of government policy, either from the people or from the opposition in this house.

So far as government policy is concerned, I believe there are some obvious inconsistencies in the statements which have been made by the various ministers, and I should like to draw attention to statements of policy by the Minister of Finance (Mr. Ilsley) and the Minister of Munitions and Supply (Mr. Howe). On several occasions we have heard

the Minister of Finance state that the only limit to be imposed upon Canada's war effort was the physical, mental and moral capacity of Canadians to bear burdens. I believe that is almost exactly the statement made by the minister. Personally I agree that this is the limit of what Canada can do. On the other hand we have the Minister of Munitions and Supply saying that we are unable to do certain things because we cannot afford the cost. As reported at page 916 of *Hansard,* when the matter of building ships on the Pacific coast was under discussion, in replying to the hon. member for Vancouver South (Mr. Green) the Minister of Munitions and Supply made this statement:

> No one is more anxious than I am to distribute plants, but when a study of plants is made, either for British account or for Canadian account, there are certain requirements that must be taken into consideration, and one of these is power—the source and the cost of power.

I am rather at a loss to understand what the Minister of Munitions and Supply means when he suggests that one point to be taken into consideration is "the cost of power." Surely he cannot mean that we are lacking in the physical cost required to set up power plants and to develop power. Obviously he must have had reference to the financial cost.

On the one hand, the Minister of Finance contends that there is to be no limiting in the financial realm, and that the only limitations to be imposed are physical; yet, on the other, we have the Minister of Munitions and Supply stating that we cannot build ships because of the costs involved. Obviously there is an inconsistency between the statements of policy of the Minister of Finance and the Minister of Munitions and Supply.

If we can judge from the last words in the recent speech of the British Prime Minister, upon which occasion he concluded with a plea for the tools of war, certainly materials are needed. If those materials are needed and we in Canada can provide them physically, surely we ought to provide them, regardless of how much effort and physical material go into their production. Yet the Minister of Munitions and Supply has said that we must consider the cost. I say to the government that unless Canada is making use of every available man-hour and every ounce of material, Canada is not making her maximum war effort. I challenge any of the ministers, including the Minister of Finance and the Minister of Munitions and Supply, to refute that contention. I believe very little examination and effort is required to find that Canada is falling far short of what she is capable of doing, either in her war effort or in her domestic effort.

We have corroboration from the government side of the house, as well as the opposition side, for the contention that there are thousands of man-hours available in Canada—yes, literally thousands of man-hours going to waste. Nevertheless the government has the effrontery through its ministers to contend in the House of Commons that Canada is making her maximum effort. Furthermore, much more training of unskilled labour could be done. If these labourers are not required in industries, certainly they should at this time be prepared to take their place in industrial occupations. If we should happen to run short of manpower, surely it would be a simple matter to obtain help from across the boundary line, where they have many thousands of idle men.

In addition, we have available an enormous number of man-hours in undeveloped water power. At a point later in my speech I shall place on *Hansard* some statistics to indicate our great potential resources of electrical energy which have not been put to use. In passing, however, may I point to some statements which have been made by hon. members on the government and opposition sides of the house which would indicate that we certainly can afford the real cost of making a great contribution to the war effort, and at the same time take care of our domestic requirements.

The hon. member for Trinity (Mr. Roebuck) is reported as follows at page 858:

> It seems to me that the nervousness over this proposed appropriation arises from the fact that we are talking in terms of money instead of in terms of goods produced. That is why fear grips the hearts of many people and why we are wondering whether this effort will be successful.

The hon. member for Humboldt (Mr. Fleming) made reference to the speech of the hon. member for Trinity, and made this further observation, as reported at page 1309 of *Hansard:*

> The war appropriation bill now before the committee of the whole contains figures so enormous that sometimes one is likely to conclude that such figures are beyond the human resources of this nation. In the early days of this debate the hon. member for Trinity explained forcefully how these figures mean very little. He pointed out that, after all, only goods and services really matter, and that it is goods and services which constitute the real wealth of this nation.

Then this point is made by the hon. member for Vancouver South (Mr. Green), as reported at page 918 of *Hansard:*

> I am told there is no reason why we could not be building at least fifty merchant vessels on that coast. At the present moment I believe there are contracts for eight.

Again, we have the hon. member for Shelburne-Yarmouth-Clare (Mr. Pottier), who, speaking of a company which had turned down contracts for building ships of larger proportions than they were in the habit of building said, as reported at page 1382 of *Hansard:*

It is not a type of ship beyond their powers of construction, nor a type for the construction of which they do not have the necessary mechanics or material.

Here, again, we find an hon. member on the government side of the house saying, in effect, "We have the materials; we have everything with which to build these ships." Yet the ships are not being built. If the physical resources are there, why are the ships not being built?

Then, at page 1409 of *Hansard* the hon. member for Fraser Valley (Mr. Cruickshank) is reported to have said:

. . . notwithstanding any information to the contrary that may have been given to the minister . . . we have between one and two thousand skilled labourers out of work.

Again, speaking of the city of Vancouver, he made this further statement, as reported at page 1410 of *Hansard:*

It cannot be disputed that we have skilled labour available as well as eighteen thousand unskilled labourers in Vancouver and the surrounding district.

Therefore, from the mouths of hon. members themselves it is indicated that much more is physically possible in Canada. It has been shown that after eighteen months of war endeavour, there are still thousands of man-hours going to waste, and millions of tons of materials not being used. Surely, so long as that position obtains, the government cannot contend that Canada is making her maximum war effort.

I said a moment ago that if we should happen to run short of labour we have, as a substitute, plenty of undeveloped water-power resources, and that there should not be any lack of power. In several of his speeches the Minister of Munitions and Supply remarked that one of the problems was to get a source of power. I have made a study of the statistics in the "Canada Year Book" to ascertain just how much potential electrical energy there was available to the people of Canada, if they chose to develop it. The figures are remarkable and I shall give a brief summary of my findings. According to the "Canada Year Book," the total turbine installation possible is 43,700,000 horse-power, but the development at the present time is only 18 per cent, or 8,740,000 horse-power. This leaves a remainder of 35,000,000 horse-power still to be developed. If we translate that into man-power on an eight-hour day basis, that would provide 1,050,000,000 man-power on an eight-hour day basis. If we developed only 25 per cent of our potential water power, it would provide an additional 262,500,000 man-power on an eight-hour day basis. That is something which should receive consideration. What arguments can be offered to prove that we could not have more electrical power in this country? We have hosts of unemployed people; we have the gravel and the cement; we have practically all the materials necessary to build power plants. Why are these things not being done? Why are power plants not being built? Why is this idle labour not being applied to the resources of this nation? I could go on to point out how in different provinces there are great potential reserves of electrical energy waiting to be liberated.

There is another thing which we cannot overlook in our production methods to-day. It is physically possible to produce at a greater rate and turn out more products per man-hour of effort than it was in the last war I have a few statistics on four branches of our economy. The number of units produced per man-hour has increased enormously since the last war. With one man-hour we can produce tremendously more to-day than we could during the last war. In the agricultural industry, for instance, there has been a 64 per cent increase in the unit production per man-hour; in iron and steel there has been a 35 per cent increase; in cotton goods, 27 per cent, and in boots and shoes, 25 per cent. We do not require the same number of man-hours in this war to produce the same amount of equipment as was required in the last.

There is nothing lacking in this country from a physical point of view to put forward a most energetic war effort, as well as to take care of our domestic requirements. I would say that the only thing that is lacking is some backbone on the part of the Minister of Finance and the government. I should like to give a few statistics from the "Canada Year Book" with regard to the physical resources of this country. There is no lack of them to take care of our part of the war requirements as well as our domestic requirements. On page 305, I find the following statement in connection with iron:

Iron ore occurrences are numerous and widespread in the dominion.

I find the following statement about zinc on page 304:

Domestic requirements normally absorb only a relatively small portion of the production. As the production can be substantially increased, the Canadian zinc mining industry can furnish large supplies for war purposes.

The following as to copper is found on page 303:

The Canadian copper mining industry is therefore in a position to make a major contribution to the copper needs of the overseas allies in addition to taking care of domestic requirements.

And on page 305, the following about nickel:

The Canadian nickel producers are, therefore, in a position to provide ample supplies of nickel, both in refined and unrefined forms.

Coal needs no comment, but I observe this statement on page 306:

Though possessing an abundance of coal reserves, Canada has always drawn a large part of its requirements from foreign sources.

Incidentally I understand that this amounts to about $20,000,000 in the case of bituminous coal. If we want to conserve exchange, I see no reason why we should not use Canadian coal to meet our bituminous requirements. The question of freight rates will come up, but what do we lack in this country from the physical point of view in order to transport coal anywhere in the country? Have we not enough railway equipment? If not, what do we lack in order to produce the necessary railway equipment? We have thousands of men who want work; we have thousands of tons of material available. Again and again the Minister of Finance has said that the only limits that will be imposed on Canada's war effort—and this must apply to her domestic effort as well—are physical limitations. Even though that statement represents an expression of the policy of the government, it is certainly not being carried out. That point is substantiated by a statement of the Minister of Munitions and Supply, as well as by statements of other members on the government side.

We must ask ourselves: Where is the hold-up? Why are men not being permitted to produce more materials, more ships, more guns, more of everything that is required in the war effort? Why are not the hours of labour which are not required in connection with the war effort being used to increase the supplies of our domestic requirements? If these man-hours are not required for war purposes, what reason is there for their not being employed for the production of domestic requirements? The only conclusion that I can reach is that, in spite of what the Minister of Finance said was the policy of the government, Canada's war effort as well as her domestic requirements are being held up because of our financial policy.

In order to show that this is the situation, I should like to quote a few statements which have been made by members of this house. I have indicated already that the Minister of Munitions and Supply has said that power plants could not be erected or steel could not be transported from the east to the west because of the cost involved. Surely he must be thinking only of financial costs. Surely he would not suggest that we have not the physical resources to ship steel to the western coast and bring it back in a manufactured form. On March 10, 1941, the hon. member for Shelburne-Yarmouth-Clare was pointing out how certain contracts had been turned down. He went on to say that this was not because these people did not have the men, the material or the equipment. He is reported on page 1382 of *Hansard* as follows:

It is not a type of ship beyond their powers of construction, nor a type for the construction of which they do not have the necessary mechanics or material.

Mr. Hanson (York-Sunbury): It was beyond their financial capacity.

Mr. Pottier: Yes, their financial capacity was lacking.

There is a definite statement by the leader of the opposition that there was a lack of financial capacity, that the financial side of it had failed. The Minister of Finance has said that the war effort is not going to be held up because of a lack of finances, but here are his own supporters saying that contracts were turned down because of lack of finances.

Yesterday the hon. member for Northumberland (Mr. Fraser) endeavoured to make some points in order to show why the aeroplane industry had not progressed more favourably, and he made this statement:

To my hon. friends on the other side I say with respect—and with pity—that in the interests of Canada and the British empire it is too bad that we did not year by year, particularly in 1938 and 1939, get sufficient money in our estimates to be in a position to build up an aeroplane industry in this country.

It ill becomes a member of the government to hold the opposition responsible for not providing the money with which to carry on an aeroplane industry. It ill becomes them to suggest that we are responsible for that position. If anybody is responsible, it certainly is the government side. If there was any objection at that time on the part of anybody to increased appropriations for setting up an aircraft industry in this country, it was wholly and solely because under the existing financial policy there could have been only one natural consequence, and that would have been a further reduction in the already too low standard of living. The only source of funds which the government had been using, and is still using to a large extent, is an increase in debt and an increase in taxation. I contend that if the government

had pursued the policy which they proclaimed to the people in 1935 they were going to adopt, an aeroplane industry could have been established at that time or even earlier without increasing debt or taxation, and I challenge any member of the government to refute that statement. There, again, was an indication that it was purely a lack of money, and not a lack of physical resources at all.

In summing up my argument, I should like to indicate briefly four reasons why I am opposed to the principle involved in this resolution. First, I want to make this comment on the principle. I am very much disappointed that so little attention has been paid to this extremely important matter of finance. I agree that the matters which have thus far been discussed, particularly those relating to the Department of Munitions and Supply, have all been important, but they have been discussed out of all proportion to the importance of the principle involved in this measure, which is the borrowing from a financial monopoly in this country, of money with which to finance the war as well as the domestic effort. This question should be discussed much more fully, and this debate should not conclude until this angle is given a thorough airing. I believe we ought to have government members as well as those on the opposition side taking part in a discussion of the principle of borrowing, and whether it is necessary. I believe that the questions which were put by the leader of the opposition (Mr. Hanson) the other night should be answered by the Minister of Finance so that we may know exactly how this money is going to be raised.

I am opposed to the principle involved in this resolution, first of all, because it still denies the government the right, which is a crown prerogative, to create in the first instance the money of the nation. I consider it, as I have stated in the past, a capital crime that a private monopoly should usurp and exercise as it is doing to-day this government prerogative. According to the statement made by the Minister of Finance in this house, the chartered banks of this country were permitted to create approximately $500,000,000 of brand new money. The money which was obtained from the chartered banks was not the people's savings. It was absolutely new money, additional supplies of money over and above what was already in existence. That, I maintain, is a usurpation of the prerogative of the crown. For that function the Bank of Canada should be used. All of the money asked for in this resolution over and above what is raised by taxation should be obtained from the Bank of Canada at cost.

The second reason why I oppose the principle of the resolution is that it prevents the Canadian people from making the maximum contribution to Canada's war effort. The sum asked for in this resolution, if it reflected the potential possibilities of this country, should be double or treble this amount. The thing I quarrel with is not the amount asked for, but the principle under which the money will be obtained. Further, I contend that there is no relationship between the government's financial policy and the productive capacity of this country—and there should be such a relationship. The purpose of a financial system and of a financial policy, so far as my understanding of it goes, is that the financial policy shall reflect the physical possibilities of a country to produce and consume, and the fact that we have thousands of idle people, thousands of idle man-hours, and thousands of unused tons of material, is proof that there is no relationship between the financial policy of the government and the physical facts of this country.

The third reason why I object to the principle of the resolution is that it demands of the people of Canada absolutely unnecessary sacrifices. I agree that if sacrifices are necessary to win this war we must make them; but I do not agree that we should call upon the Canadian people to make unnecessary sacrifices, and I contend that the government's policy is calling upon the people to make unnecessary sacrifices. Surely in a country which is so potentially wealthy as Canada, it is not necessary to reduce the standard of living of the people. Surely it is obvious that people can do their best only when they are at their best, when they have healthy bodies and healthy minds. We have resources enough to see to it that all our people have balanced diets and, as a consequence, are healthy in body and mind. To those who say we must sacrifice, sacrifice, sacrifice, I say: Stand up and name the things we should deny ourselves. What articles of food, what types of clothing should we deprive ourselves of?

Mr. CASSELMAN (Edmonton East): How about liquor?

Mr. KUHL: The hon. gentleman can probably speak with more authority about that than I can.

The leader of the opposition in one of his earlier addresses said that we should pare down the estimates more. I should like to know why, and particularly why we should pare down the social service estimates. I

suggest that they should be increased and increased to the point where the Canadian people are able to enjoy exactly what they are able to provide in the way of physical energy and material.

Lastly, I object to the principle involved in this resolution because it builds up a fictitious and unreal debt. The Minister of Finance has said that the policy of the government is a pay-as-you-go policy. I should like to know why, if it is a pay-as-you-go policy, there is any debt in connection with it. What do we owe and to whom do we owe it? The minister himself has said that the cost of the war is paid for substantially as the war progresses, and the statement has been made again and again that the cost of this war is blood, sweat and tears. These things certainly are provided from day to day as the war progresses. I know of no other costs that are involved in a war. The minister himself has admitted that these costs are met from day to day as the war progresses. Then, in the name of common sense and justice, I should like to be told and the people of Canada would like to be told, "What do we owe if we have paid for the war from day to day in blood, sweat and tears, and to whom do we owe it?" That is a pertinent question, and I should like to hear some members on the government side, and particularly the minister, discuss it.

So far as banking costs are concerned, are they not in the same category as physical costs? What is the cost of operating our money system? In the main it is paper, ink, clerical work and depreciation that is involved in operating the money system. What is cheaper to run than a banking system? I challenge any of the hon. members who smile, to indicate what more there is about running a banking system. Those costs are provided each day as the money system is conducted. Therefore, all costs in connection with the war effort, banking costs as well as physical costs, are met from day to day. What will hon. members suggest we owe when the war is finished, and to whom will we owe it?

In conclusion, Mr. Chairman, because this measure still denies the government the right to exercise the crown prerogative—

The CHAIRMAN: I am sorry to have to remind the hon. gentleman that he has exhausted his forty minutes.

Mr. KUHL: If the committee will permit me; I am just on my last sentence, and if I can have time to complete it I will sit down.

The CHAIRMAN: By unanimous consent.

Mr. KUHL: I was endeavouring to say—because this measure still denies the government the exercise of the crown's prerogative; because it does not permit a maximum war effort or domestic effort; because it demands unnecessary sacrifices; because it builds up fictitious debt, obliging the people to pay several times over financially for what they have already paid physically, I consider that the principle involved in this resolution, of borrowing our own financial credit from a money-lending monopoly to the point of national bankruptcy, is not only unpatriotic but extremely inimical to the best interests of the Canadian people.

Mr. GILLIS: I have sat here for the past two weeks listening to the measure now before the committee being discussed, and I have heard so many different financial theories advanced that, as an ordinary worker, I am left a little bit dizzy. Since the hon. member for Rosetown-Biggar (Mr. Coldwell), the acting leader of this group, has placed before the committee the considered opinion of this group on the financial aspects of the measure, about all I have to say on the matter is to extend my sincere sympathy to the Minister of Finance (Mr. Ilsley), whose job it is to juggle figures at the present time and run the finances of the country.

Mr. JOHNSTON (Bow River): Does the hon. member not think that the people need a little sympathy?

Mr. GILLIS: I am not going to occupy any more time this evening than I have to. First, I should like to comment on a question which I asked the Minister of Mines and Resources (Mr. Crerar) on Monday of this week, as set out in *Hansard*, page 1359. My question was based on a letter I received from a mine workers' union situate at River Hibbert, Nova Scotia, informing me that a mine operating in that section at the present time would be closed on April 30. That organization had sent a delegation to the provincial department of mines, asking if anything could be done to keep the mine in operation. There are 110 men employed; and at the present time, according to the letter I received, they are paying national defence tax, contributing to a Spitfire fund, and subscribing for war savings certificates—which means something financially to the country at this time. According to my information, the market for that coal is the railways, and that market has certainly not disappeared. In answering my question, the minister stated:

> I do not know of any action which the federal government could take to compel a mine to operate in the province of Nova Scotia. As my hon. friend knows, the mines of Nova Scotia are under the control of the provincial government.

The leader of the opposition (Mr. Hanson) then rose in his place and said:

But you have taken authority under the War Measures Act to do this very thing. What is it for?

The Minister of Mines and Resources replied:

I might refer to the observation of the leader of the opposition, who has hastened to the rescue of the hon. member for Cape Breton South. I do not know anything about the particulars of this mine. I should assume that if the provincial government, who are familiar with the operations, thought it was not advisable to maintain the mine in operation, their judgment would probably be sound. In any case I do not think it will affect the volume of coal that will be moved from Nova Scotia to other parts of Canada, whether the mine remains open or is shut down. There is plenty of coal available to meet the requirements that can be moved at the present time.

With respect to the minister's statement that the leader of the opposition hastened to my rescue, I do not think I was in any difficulties on that occasion, nor do I believe that there will be any necessity in future for anybody to rescue me; there has not been in the past. I endeavour to speak only about matters of which I have some knowledge, and I resent the minister's remark because it would lead anyone reading *Hansard* to suppose that I was floundering here and unable to take care of myself.

Mr. MacINNIS: It was the Minister of Mines and Resources who was floundering.

Mr. GILLIS: As to there being no market for coal, I believe that the reverse is true. According to an order in council set out in sessional paper 2208, in answer to a question placed on the record by an hon. member, it is stated in the second paragraph:

Owing to the large traffic movement to the Atlantic seaboard the annual coal consumption of the railways has greatly increased, and it is most desirable at this time that the railways shall be assured a supply of coal adequate to their requirements.

It goes on to state that an inquiry is being made at the present time at Minto, New Brunswick, to see whether there is not a possibility of stepping up coal production in that particular mining section in order to meet the requirements of the situation, and setting out that an adequate supply of coal must be maintained for the railways.

As I have said, according to my information, in the section I speak of their market is the railways. Therefore, in view of the fact that their market has not disappeared, and that the minister and the federal government have the authority under the mobilization act to continue the operation and to assume jurisdiction in this particular case, if the mines department of Nova Scotia are not prepared to accept their responsibility, why should the federal government not step in? According to the letter I received, that mine is down about 2,500 feet. It is only a matter of developing their slope to the next lift, drifting along probably 250 feet or 500 feet, tapping the seam lower down, and continuing the operation. If that is a true indication of the situation at the present time so far as coal is concerned, I see no reason why the federal government should not make at least some inquiries into the matter of preserving the means of livelihood for 110 men and their families in that section, who are making every reasonable contribution to the war effort. I leave that to the minister, feeling sure that he will do what he can with respect to that matter.

I listened here a couple of nights ago to several hon. members from Nova Scotia stressing the necessity for the creation of a shipbuilding industry in that end of the country. I join with them in that request. I have endeavoured on every occasion when I have had the privilege of addressing this house to bring to the attention of the government the necessity for the creation of some industry in Nova Scotia other than coal mining. I know that coal mining is on the wane in that province; the older mines are folding up; there has been no expansion of the industry for the past fifteen years, and I do not think there is going to be any. Something must be done to take up the slack in employment caused by the fall in the coal mining industry.

I would judge from discussion and press reports and resolutions that I am receiving from that part of Canada, that there is at the present time a well organized movement in Nova Scotia to bring forcibly to the attention of the government the necessity for something being done there. In that connection I received to-day from Mayor G. B. Slaven, mayor of Sydney, Nova Scotia, who is acting as chairman of an organization set up in Cape Breton island, a resolution, to urge that question upon the government. The resolution is lengthy, and I shall not read it all, but one of the paragraphs states:

Whereas a great number of industries are being established which are not classed as war industries and while being used to render assistance in this war, yet will remain as a permanent industry after the war—

It goes on to state that it represents the considered view at a meeting of that entire section at which every town on the island was represented, including representatives from the municipal councils.

I would assume from what I have heard that it is the intention of the government

to do something along this line in that part of the country. In that connection, I called the attention of the Minister of Munitions and Supply to something that I would again like to bring to his attention. On February 28 I asked him, as reported at page 1116 of *Hansard*, a question as to whether it was the intention of the government with the cooperation of Dominion Steel and Coal to utilize the plate mill that was built there during the last war at a cost, I think, of some $11,000,000, the government having subsidized it to the extent of $4,500,000. I do not think the mill ever went into production. Most of the machinery in that mill has been taken away, I presume moved to somewhere in Ontario; my information is that it went to Ojibway, but I cannot say whether that is true. The reply of the minister at that time was quite lengthy, but the latter part stated:

. . . but we are studying the question of installing additional primary steel capacity at Dosco—that is, more open hearth capacity—and I hope a decision on that question will be made early next week.

According to a press dispatch, the minister has not anything to hope for in that direction. A dispatch of February 27 quotes Mr. Arthur Cross, president of Dominion Steel and Coal company, as stating that the steel plant was operating at 100 per cent capacity, but that there will be no plant extension for the coming year.

I would judge from the minister's answer to me that it is necessary at this time to expand that steel plant in Sydney. Mr. Cross' statement, however, definitely says there will be no expansion. That question received some publicity. If Dominion Steel and Coal company are not desirous of operating that plant, and if its operation is essential to Canada's war effort, as was indicated by the minister's answer, there are other people who are interested in that plant and may make use of it. I have a letter here from the Anglo-French Development Corporation Limited of Montreal stating that they are interested in that plant, that clients of theirs from overseas are endeavouring to take over in this country plants that can be put into war production, and that they are interested in that plate mill in Sydney. I replied, referring them to the heads of that corporation, suggesting they get in touch with them. The date of this letter is March 1; it went to Sydney and was relayed back to me. To-day I had a letter from the same corporation thanking me for the information and addresses given and saying that they were immediately getting in touch with these people with the end in view of utilizing that plate mill. By virtue of the fact that the Canadian people have an equity in that mill to the extent of $4,500,000 given to the corporation during the last war, it should be the government's prerogative to do something with it. I trust the minister will think that over and endeavour to make use of that mill. If a steel shipbuilding industry is to be developed in Nova Scotia, that mill will certainly be needed. There is also a comment on that matter in the Toronto *Globe and Mail*. A statement by one of their regular correspondents reads:

Why not recondition the Dosco plate mill?

They go on at length to point out why that should be done. Therefore the general public is interested.

Commissions have sat from time to time examining the industrial life of that part of Canada and have reported on its economy, its place in confederation with relation to the development of the rest of Canada. I should like to quote a few excerpts from the submission made by the Nova Scotia government to the commission on dominion-provincial relations. The present Minister of National Defence for Naval Services (Mr. Macdonald) was premier of that province at the time. I think this brief was drafted by the late Minister of National Defence, Hon. Norman Rogers, and it sets out clearly the situation in which the maritimes, and Nova Scotia particularly, find themselves at the present time in relation to the rest of Canada. They certainly have not been treated as part of the Canadian family. The position is stated much better in this brief than I have seen it anywhere else. I shall quote just an extract here and there from this brief between pages 51 and 55. They say:

In the last decade between 1920 and 1930 the decline of manufacturing in Nova Scotia became more pronounced. In Ontario and Quebec (central Canada) capital invested in manufacturing increased from $2,696,000,000 to $4,158,000,000; the number of employees increased from 487,000 to 512,000, while the gross value of products decreased slightly.

Then further:

Ontario and Quebec are the most important manufacturing provinces of Canada. Their combined production in 1930 amounted to $2,735,000,000, or nearly eighty per cent of the gross value of manufactured products of the dominion.

Those figures are taken from the "Canada Year Book", 1933 Further it says:

Ontario and Quebec account for almost eighty per cent of the total capital invested in manufacturing in Canada.

That is also from the 1933 edition of the "Canada Year Book". Again it says:

Out of the total male wage-earners, numbering 431,463, and the total female numbering 120,033, 47·1 per cent of the former and 46·2 per cent of the latter were employed in Ontario.

Quebec manufacturers reported 30·4 per cent of the total males as compared with 39·6 per cent of the total females. As to earnings, Ontario firms paid out 49·5 per cent of the total wages in Canada, and Quebec 29·8 per cent.

Further on it states:

It will be seen that while manufacturing has increased in Canada as a whole by, say, twelve times since confederation, the increase in the maritimes has been about four times.

And further:

Between 1871 and 1931 the number of employees in manufacturing in Nova Scotia increased by only 580, or by 3·7 per cent. In the same period the number of employees in manufacturing in Canada as a whole increased from 187,942 to 557,426, or by 197 per cent.

This document goes on to set out some very good statistics. I have no intention of reading them, but I should like to read the concluding paragraph; coming from these people, I think it is very good. If I were to use it, or if it were to be used by the hon. member for Rosetown-Biggar, we would be considered socialists:

It is asserted as a general principle that industries in Ontario and Quebec have natural advantages of situation in relation to raw material, labour, force, and markets which enable them to take full advantage of the so-called economies of large scale production. We are asked to believe that these economies of large scale production will enable an industry to protect itself more adequately from foreign competition, and are passed on to the consumer, either in part or in full, through lower prices made possible by the lower cost per unit of the commodity manufactured. Whether such economies are thus passed on to the consumer in many cases is open to grave doubt. It will depend on the reality of internal competition, and the Canadian industrial field is so narrow as to raise serious misgivings as to the extent of true competition in many lines of manufacturing. The existence of monopoly, trade combines, and friendly price agreements within the shelter of a protective tariff, is not always capable of positive proof, but that it exists over a considerable range of manufacturing is scarcely open to question. Undoubtedly, a substantial proportion of the economies of large scale production are not passed on to the consumer, but render possible a higher margin of profit for the industry and go into the safety deposit boxes of company promoters or the pockets of shareholders. Certainly the proportion of benefit that is returned to the people of this province is not substantial.

With that statement I am in absolute agreement. I leave these thoughts, as set out by the experts who drafted the submission to this economic inquiry, with the Minister of Munitions and Supply.

Just recently, another discrimination as far as industry in that end of the country is concerned was brought to my attention by a submission presented to a tribunal that has just finished probing miners' wages in Nova Scotia; I refer to the McTague board. In making their presentation to that board, the representatives of the miners brought to its attention the unfavourable treatment received by manufacturers of steel in that end of the country in connection with the bounty paid on coal. I should like to give their own words. They say:

We feel convinced that Dosco should receive at least as favourable treatment as the upper Canadian companies, which receive a drawback of 74 cents per ton on coal used for metallurgical purposes as against the 45 cents bounty received by the Dosco. If the latter did receive the same treatment then they could easily pay more for their coal to the Dominion Coal Company, thereby benefiting the coal industry and increasing its earnings and also developing and strengthening the coal industry of Canada. In general we submit the proposition which we feel sure is almost axiomatic that Canada needs a strong fuel policy. We further submit that to bonus foreign coal 74 cents and Nova Scotia coal only 45 cents is not in line with a national fuel policy.

With that statement I am in absolute agreement. I made it my business to get in touch with the Department of Trade and Commerce and find out exactly how much money was paid to importers of United States coal used for metallurgical purposes during the years 1939 and 1940. I find that to December 31, 1939, there were 498,760 tons of coal imported and used for metallurgical purposes, on which $246,886.18 was rebated to the importers. During the year 1940 there were imported for that purpose 769,289 tons, on which the rebate amounted to $380,798.03.

The McTague board has completed its inquiry into the question of wages. I have seen a press release with regard to the findings of that board, but I am not going to comment upon them at the moment. Certainly they are not satisfactory to me, but it is the business of the union to make an analysis of those findings before I have anything to say about the matter. I believe that the treatment received by manufacturers of steel in Nova Scotia is a factor in keeping down wages in the coal mines. I see no reason why the steel company in Sydney should not receive the same treatment as the Ontario manufacturers receive, and in my opinion that is something which should be taken into consideration.

The hon. member for Vancouver East (Mr. MacInnis) made a thorough analysis of the position of labour and its relation to our war effort. I do not want to repeat anything he said in that connection, but I am entirely in agreement with his views. With regard to conciliation boards, the minister seemed to resent the statement by the hon. member for Vancouver East that often the machinery set up for conciliation boards is too slow. I am

in absolute agreement with the hon. member for Vancouver East on that point. I have been twenty years in the trade union movement; and it is my belief that while this conciliation machinery may have served the purpose in peace time, certainly it does not serve the purpose to-day. I have seen the mining industry wait months for the setting up of a board.

I do not believe the Department of Labour takes a sufficiently strong stand in these matters. When a board is appointed, by not agreeing as to the chairman an industry can hold up the functioning of that board for months. Two or three times last session I drew the attention of the minister to a board that was attempting to function in the Acadia section of the mining industry. Several months elapsed before anything was done. That sort of thing does not help to create a healthy frame of mind as far as the trade unions are concerned. Personally I think that if the operators of industry are as much interested in prosecuting the war effort as we are led to believe by some of the statements made in this house, there should be no need to carry on a poll in industry by sections. For instance, the Dominion Steel and Coal company controls twenty-six subsidiary companies across Canada. If the government is going to make an examination of that company, wherever a dispute arises, section by section, it will involve the setting up of twenty-six conciliation boards. The setting up of each board will involve considerable cost to the country, money which could very well be utilized in these days in other directions.

I believe if industry are as much interested in prosecuting the war as they should be—and certainly they have something for which to prosecute it—then there should be a general understanding that when a probe is made and a board is set up, such board should make a thorough examination of the complete industry, including all the subsidiaries. It should bring about an understanding, set wages and get on with the job of prosecuting the war.

Instead of that, we have the present position where application is made for the setting up of a board. There is a disagreement at once about the appointment of a chairman, and the battle wages back and forth. All are in a bad frame of mind. Then, when the chairman is appointed, an examination is made in only one section of the industry, and on restricted terms of reference, thereby leaving an advantage in the hands of those who have an understanding of exactly how much of an examination can be made under the terms of reference. I suggest that this machinery must be speeded up, and that we must come to some understanding.

The hon. member for Vancouver East discussed the question of intimidation. Comparisons are sometimes made in this chamber respecting the position in England, and the attitude of government over there. We hear much about the stand labour has taken in the prosecution of the war. There is, however, a vast difference between labour in Canada and labour in Great Britain. Labour in Great Britain, from the point of view of social legislation, is, in my opinion, at least fifty years ahead of Canada. It enjoys, many, many privileges that we have not. Labour in Great Britain is organized at least to the extent of 65 per cent, while labour in Canada is organized to the extent of only 15 per cent. The main fight of labour to-day is for the right to organize, and for the recognition by industry of that right.

For the life of me I cannot understand why those who are engaged in industry and who are prosecuting the war, those who have something to lose from a failure to win the war, and who must realize what the situation is in Europe, are not alive to their own interests, and do not seem to realize that the greatest medium to-day of stabilizing their industry and putting it into a state of 100 per cent production lies in the recognition of the rights of the workers to sit round a conference table and iron out difficulties, instead of setting up conciliation boards and hammering at ministers of the government, who have plenty to think about without spending their time ironing out quarrels between industry and labour.

It took Hitler on the English channel to awaken the ruling classes in England to the necessity for a full recognition of the value of labour in the prosecution of the war. I am in hopes that it is not going to take Hitler on the St. Lawrence to awaken the captains of industry and the operators of monopolies in Canada to the necessity for full cooperation. Labour produces the sinews of war; in the final analysis, labour fights a war. With a situation such as we have to-day, I cannot understand why those in authority do not realize the value of sitting round a conference table, getting down to business and thereby relieving members of the government, who are charged with the responsibilities of their departments, from refereeing disputes between industry and labour in Canada to-day. I believe that if industry is engaged in an all-out effort, which means

the complete organization of all the Canadian people for the prosecution of the war, it ought to have sufficient intelligence to cooperate with that group which, in my view, is the major factor in the prosecution of the war—those who produce, and those who fight.

The Minister of Labour (Mr. McLarty) took exception to some of the statements made by the hon. member for Vancouver East. As a worker, I get around among the workers, and from what I learn I agree absolutely with what the hon. member for Vancouver East has said. He will hear and I will hear stories from people who will not come to a minister of the government, who will not approach the Royal Canadian Mounted Police or any other law-enforcement body on matters affecting intimidation and persecution. In many sections of industry in Canada, there is to-day much unrest, and much of that unrest is on account of the question of organizing.

I would draw the minister's attention to a matter which for some time has been in the slings. I have heard it stressed in the house time and time again that the great requirement of industry at present is that of securing the services of trained men. If my memory serves me correctly, on November 7 of last year sixty-three skilled workers at the Chrysler plant at Windsor, who were engaged in disputes, were thrown out of employment. Forty-six of those men were arrested, and paid about $9,000 or $10,000 in fines. They paid for breaking the laws of society, and according to my information, at least half of those men—and they were skilled men—are still on the streets. They have no jobs. They made application for changes in their registration cards, but those changes were not made, and as a result they are still registered with Chrysler. No other plant will employ them until they are released by Chrysler, with the result that since last November those men have been out of employment. I have received from the regional director of the union in that section a copy of an eviction notice. It would appear that one of those men was ordered out, and an eviction notice served on him. Here is a man who is walking the streets, thrown out of his home, at a time when men are necessary to industry. These are men who have paid the penalty for breaking the law. They have paid in the courts of the country, but they are being further penalized by the captains of industry, and in my opinion their only crime was that of exercising their democratic right to form a trade union.

I understand that from time to time the Minister of Labour has ordered these men back to work, and has made recommendations along reasonable lines, all of which have been ignored. I do not believe the responsibility is his, but I do suggest that contracts with all industries engaged in war production should carry a clause stating that workers should have the right to organize and to bargain collectively. That matter has been discussed from time to time in the house. I say to the Minister of Munitions and Supply, who has the prerogative of creating these industries, that if we are going to win the war we are not going to win it with kid gloves. The kid gloves must come off. Anybody in Canada who stands in the way of a proper prosecution of the war should be dealt with as an enemy of the state. Any organization which keeps skilled workers on the road to-day and refuses to release them to other sections of industry is certainly not cooperating in the prosecution of the war.

There are many points upon which I should have liked to touch, had I had the time. I would, however, draw the attention of the Minister of Labour to one further matter. To-day at the shipping piers in Sydney, Nova Scotia, there are ten men who have been blacklisted by a company for exercising their rights as union men. To-day they are on the road, and they have been on the road for the past five or six weeks. On different occasions the miners' union have approached the company, but have not been able to straighten out the matter. I have before me a brief prepared by executives of the union to be submitted to an adjustment board which has been set up in that province for the purpose of adjusting the grievance. The men in question had absolutely nothing to do with some trouble which developed there and which was being negotiated by the Minister of Labour and his conciliation branch. On several occasions I have met with the minister and have endeavoured to iron out that grievance. The minister was sympathetic, and he sent a conciliation officer down there to go into the whole dispute.

Before the conciliation officer arrived in Sydney, the strike developed. This was not called by the union; it was something that arose spontaneously in the wash-house, and it could have been organized on the outside by people not connected with the union. It certainly did not serve the purpose of the men at that time in view of the fact that they had been negotiating for two weeks and had a well established case. The union itself had legislated against the strike, and there are men on the road to-day who voted against any such action. They were active union men and, as such, they are on the road to-day. This is something I should like the Minister of Labour to look into.

I do not want to exceed my time limit, but I did want to leave these few thoughts with the committee as to the necessity of establishing other industries in Nova Scotia and the necessity for recognition of the rights of the workers to organize. We had a complete statement by the hon. member for Vancouver East on this matter. I hope the ministers charged with the responsibility of going into these matters will pay some attention to what I have said.

Mr. TURNER: Mr. Chairman, as you well know I seldom speak in this chamber, and I did not intend to speak on this resolution. I should, however, like to draw the attention of the committee to a point or two. In the first place, the resolution now before the committee was first introduced into the house on February 19 of this year. Wide latitude has been given to hon. members, and many have spoken who do not know the first thing about tanks, aeroplanes, guns and other implements of war, and who know less about their manufacture. Yet they talk and take up the time of this committee when we have a real war on our hands and a job to do.

This is not a school; it is a House of Commons where we are expected to impart knowledge to the house and to the country so that all may benefit. Many questions have been asked which mean nothing to our war effort but which have just delayed the progress of this house at this critical time. In my opinion, much of this has been done for purely political advertising purposes at the expense of the country. Perhaps some hon. members have not realized just what harm has been done by this useless talk. I should like to point out that permitting all this baseless criticism to go on has not helped our war effort.

While we have been talking, President Roosevelt to the south of us has put through his lease-lend bill. He has it signed, sealed and delivered and has started off already with seven billion dollars. He has already given the United Kingdom ships and other help, while we are simply talking and doing nothing. The senate was summoned here, but had to go back home because there was no work to do, even in war time. This does not leave a very good impression upon the minds of the people and it certainly does not help our war effort. The President of the United States has stolen all the thunder and applause and the headlines, and he certainly deserves them. They were working there while we have been idle.

This performance of ours has had the kind of effect upon our people that one would expect. It has been much like this: They say, "they are just wasting their time and our money down there." This must be changed. All this may have a still more serious effect and become quite noticeable when the Minister of Finance (Mr. Ilsley) launches his loan for some billion dollars or less, made necessary by this very resolution which has been before the committee for nearly one month. I do not think this delay will help our war effort at all.

Therefore I sincerely ask all members of the committee to tighten up and get down to real business, to realize that there is a war on and get this House of Commons geared up to a war-time basis. After all, this chamber should be the very pulse of our nation at this time. Our people expect it, but they certainly are not getting it. This is all I have to say.

Mr. HAZEN: Mr. Chairman, I want to take this opportunity to ask the Minister of Munitions and Supply (Mr. Howe) and through him, the government to provide more industrial plants and allot more contracts for munitions and supply to New Brunswick.

I have received each week since June last from the office of the director of public information a circular setting out the contracts awarded for materials and supplies. These run into the millions of dollars. I have examined these statements and have been surprised and disappointed at the small number of contracts allotted to New Brunswick. The name of Canada Packers Limited appears frequently in the list of New Brunswick firms having received contracts, but this is not a New Brunswick company. In making a comparison between the contracts let in New Brunswick and those let in other provinces, the contracts given to this firm should not be considered. I ask that in future this error be corrected.

I receive also regularly from the director of public information another circular giving the construction contracts awarded by the Minister of Munitions and Supply. These also run into millions of dollars. I have examined these circulars and have been surprised and disappointed at the small number of contracts awarded to firms in New Brunswick.

Rightly or wrongly, and I believe rightly, the people of New Brunswick believe that they have not been treated fairly in the matter of these contracts. When they read week after week of the thousands of contracts that have been awarded by the dominion government and see that only a few have been given to New Brunswick, they are not at all satisfied.

The people of New Brunswick take pride in the fact that Canada is making a great contribution to our war effort as a member of

the British commonwealth of nations. But they get no comfort nor do they derive any satisfaction from the fact that, while the government is advancing the enormous sum of over $307,000,000 to companies in different parts of Canada in order that they may erect plants to manufacture the materials required in our war effort, the statement put on *Hansard* a few days ago by the Minister of Munitions and Supply shows that out of this enormous sum of $307,000,000 only $182,526 or a small fraction of one per cent, is being spent in New Brunswick. This amount is being provided for the McLellan Foundry and Machinery Works at Campbellton. We are all pleased that this firm is being assisted and that, in consequence, work will be provided for this part of the province where it is needed so badly. I am sure the company will make a good job turning out shells in the factory which this money will provide, and the minister has made no mistake in assisting this company.

We have been told that further sums will be advanced by the government for the purpose of erecting plants of various kinds. I think the figure of $177,000,000 was mentioned in *Hansard*. I would ask the minister to keep the province of New Brunswick in mind when it becomes necessary to erect such plants.

At the last session of parliament all the members from New Brunswick, both Liberal and Conservative, held a meeting and appointed a committee to interview the Department of Munitions and Supply. It was the opinion of this committee that work should be provided in the first place for all small plants in the province and that then, if it was possible, consideration should be given to erecting large new plants which would have a chance of surviving after the war, these to be built with government assistance.

The committee received a courteous welcome and had a frank discussion with the deputy minister of the Department of Munitions and Supply. I am not prepared to say that the efforts of the committee produced any noticeable results, but on the other hand I am not going to say that they produced no results. I do know this, that only recently the premier of New Brunswick came to Ottawa and endeavoured to get some plants started in the province, which is further evidence that the people of New Brunswick are not satisfied with what has been done for them by this government.

The Minister of Munitions and Supply stated in the house the other day that he knew "of no small plant which had not more business than it could do at the moment," that

"almost every small machine shop can get all the work it wants to do." His statement is found at page 1006 of *Hansard*. If that statement was intended to apply to all of Canada, I assure the minister it is wide of the mark so far as New Brunswick is concerned. There are small plants and shops in New Brunswick which want more work and I hope that this will be provided. The minister has told us that there is no one more anxious than he to distribute these plants, and that he is trying at the present time to place a plant in New Brunswick. This is good news, and I hope that he will continue his efforts and that they will be successful.

It has been pointed out that we have no great supply of electricity in New Brunswick. That is true, but it is also true that we have some electrical power. We have in the city of Saint John power available from three plants. The hon. member for Victoria-Carleton (Mr. Hatfield) tells me that there is power available in his constituency. I am informed also that some manufacturing plants such as chlorine plants, cordite plants and soda-ash plants do not require large amounts of power.

We have in New Brunswick men who want work. The hon. member for Northumberland, N.B. (Mr. O'Brien) told me that he had received word to-day that from four to five thousand men are idle in his constituency and vicinity. We have resources that need developing, and we have some power available. With all these factors at hand, with the minister anxious to distribute these plants, and with these enormous sums of money that are being spent by the government upon the construction of plants, I again urge the government to establish more of these plants in New Brunswick.

In my opinion a short-sighted policy is being followed by the government in continuing to place so many of these plants and war contracts in central Canada. I can appreciate the fact that earlier in the war when the extent of the war effort was not realized by many people, the policy of placing so many of these plants in central Canada could perhaps be justified on the grounds of sound business.

But in view of the enormous task that lies before us, in view of the all-out effort that we have to make, the time was reached some time ago when this policy should have been changed in the interest of national unity, in the interest of the financial and economic well-being of every part of Canada.

I should like to say that I am in agreement with a remark made in this house not long ago by the hon. member for Lethbridge (Mr. Blackmore), when he said:

> . . . I am not finding fault in any way with Quebec or Ontario. The people of those two provinces are good Canadians and are entitled to their full share of the good things available in this nation. But let it not be forgotten for one moment that the people of every one of the nine provinces of Canada have an equal right. If that is forgotten, then unquestionably the unity of this country will be threatened, or, if not the unity, at least the strength.

I want to draw the attention of the minister and the government to a fact which should be kept constantly in mind when we are considering the location of these plants, that when the people of New Brunswick and Nova Scotia agreed to enter into a federal union with the colony of Canada, that is with upper and lower Canada, they did so in the belief and on the understanding that they were entering into a partnership in which they would share the benefits. They entered into confederation in the belief and on the understanding that they were entering into a partnership that would be to their advantage. Unfortunately for them, confederation did not prove to be to their economic advantage. After a thorough investigation made by the royal commission on dominion-provincial relations, the Rowell-Sirois commission reported that:

> New Brunswick shares with Nova Scotia the unhappy distinction of the longest unfavourable economic history of any Canadian province.

That is not a pretty picture, but I think every one of the four members of the government from the maritime provinces will agree that it is a true picture; that New Brunswick does share with Nova Scotia the unhappy distinction of the longest unfavourable economic history of any Canadian province.

The Rowell-Sirois commission also in their report say that the "basic problem" before the commission "lay in finding a way in which the financial position of the provinces could be improved and assured without disastrous financial consequences to the federal government on whose efficient functioning the provinces are dependent." Although the conference held between the dominion and provincial governments in January last to consider the Rowell-Sirois report came to a sudden and, in my opinion, an unfortunate ending, the dominion government at the present time has a wonderful opportunity to solve, to some extent at least, this basic problem which the commission faced, though it cannot implement all its recommendations. It can solve the problem, to some degree, by a wise distribution of these plants.

The government can, if it will, have more plants erected in the maritime provinces. Perhaps at the present time we have too much centralization and too lop-sided an economy in this country. Wealth is not fairly distributed. I would ask the government, through the Minister of Munitions of Supply, in the interests of national unity and in order to improve the financial and economic position of New Brunswick, to establish more of these plants there. The plants we should like to have established with this end in view are plants which could have an opportunity of surviving after the war, such as modern shipbuilding plants, chemical plants, chlorine plants and soda-ash plants.

We are glad to learn that two merchant ships are to be built in Saint John. I hope this is only a beginning. Lord Beaverbrook, in his forceful address over the radio not long ago, urged our country to supply ships and more ships. It has been reported that the Germans plan to have 600 submarines engaged in attacking British shipping this spring. At present, I understand, our replacements are not keeping pace with losses. We have a critical situation to face. I know that the energetic hon. member for Northumberland, N.B., is endeavouring to get the government to establish some shipbuilding plants on the Miramichi. I would urge the government to build more ships in New Brunswick. They can be built. There is a pressing need for them, and where there is a will there is a way.

While I am speaking of shipbuilding, I would point out to the government that it is essential to make the best and most expeditious use of the tonnage which we now have at our command. There has been a great delay in handling ships. I want to call the attention of the minister to the fact that there has been a serious congestion of shipping at Saint John this winter owing to lack of wharves and water-front facilities for handling cargoes.

It has not been uncommon during the winter months to have all the berths occupied by ships, to have several ships anchored in the stream, and to have ten or a dozen ships waiting outside the harbour to get in to discharge and load cargoes. This is a serious situation in war time, when tonnage is limited and supplies are vitally needed overseas.

The officers of the national harbours board visited Saint John in January and conferred with the mayor and members of the common council, with officers of the board of trade,

and with local shipping and railway men about the congestion which they found there. At this conference the mayor presented the following recommendations which were considered necessary to improve the port so that it could handle the heavy volume of traffic:

(1) A shed for No. 8 berth, West Saint John.

(2) Passenger and immigration facilities.

(3) Reconstruction of McLeod and Pettingill wharves. This work had been arranged for and was ready to be proceeded with when war broke out. The Canadian National Railways have expressed particular need for this reconstruction.

(4) Additional wharfage facilities on the east side of the harbour for the handling of bulk cargoes such as lumber, coal, cars, et cetera.

Mr. Colin Mackay, president of the board of trade, is reported to have said at that conference:

There is no use in getting supplies manufactured in a hurry and sent to the seaboard in a hurry if they are going to be held up for a considerable length of time for lack of sufficient handling accommodations. We need more docks here, more facilities. Large sums are being expended on the war effort. Well, this is a most important link in that effort.

Mr. D. W. Ledingham, chairman of the port committee of the board of trade, is reported to have said:

There is no question but that we are in a jam. There is a "bottle-neck" here. Ships are having to wait outside and in the stream because there are no berths to take care of them. Traffic is going to American ports that should be going through here. The McLeod-Pettingill wharves could be constructed in seven months and be ready for the next winter shipping season. Every steamship line is suffering from cramped facilities.

Mr. T. C. McNabb, general superintendent of the New Brunswick district of the Canadian Pacific railway, spoke from the point of view of the railways. He is reported to have said:

There are not enough berths from the standpoint of the railways. We have never had so much tonnage as we have had this winter for export.

It was pointed out to the board that there were sufficient longshoremen to meet all needs. Councillor Skaling, who is president of the New Brunswick trades and labour council, informed the members of the board that the labour capacity existed and the port wanted the opportunity to use that labour to the utmost. Captain Oland, the naval officer in charge of the port, said that the best longshoremen in North America were to be found in Saint John.

Colonel S. A. Dubuc, a member of the national harbours board, is reported to have expressed the opinion that the only remedy seemed to lie in increasing lighterage facilities on a tremendous scale, loading ships in the stream and even from the harbour side while being loaded at the dock.

Mr. HANSON (York-Sunbury): Would the Minister of Munitions and Supply make a statement with respect to the construction of the new dock in Saint John which was announced some time ago by the national harbours board? I should also like to have the Minister of National Defence give the break-down of the cost of the thirty day training centres at Fredericton and Edmundston as soon as convenient.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 14, 1941.

The house met at three o'clock.

PRIVILEGE—MR. REID

REFERENCE TO ARTICLE IN "NEW CANADIAN" OF FEBRUARY 28

Mr. THOMAS REID (New Westminster): Mr. Speaker, I rise to a question of personal privilege affecting me as a member of parliament. On February 25 last, when the estimates of the Department of External Affairs were under discussion, in a speech expressing views concerning the Japanese in Canada differing from those expressed by the hon. member for Vancouver East (Mr. MacInnis), I made certain remarks which can be found at page 1020 of *Hansard*. In my remarks I pointed out that in my opinion the Japanese in Canada were an unassimilable race. Here are my exact words:

In answer to a question of mine it was admitted by Japanese that they owed allegiance first to Japan, and so long as every Japanese born here is registered in Japan and is looked upon as a Japanese national he cannot be truly a Canadian. Hence my objection to them as a class. They are not an assimilable race, and are different in their outlook from any other nationals in Canada.

This morning I received a copy of a newspaper called the *New Canadian,* published in Vancouver by the Japanese, in their own interests; and I am now going to read to the house an article which appeared in the issue of February 28, which contains a scurrilous personal attack upon both the hon. member for Comox-Alberni (Mr. Neill) and myself, which I do not intend to let go unchallenged. This is the statement:

Some rather caustic comments concerning Canadians of Japanese origin were bandied about in the House of Commons this week, in

a manner to suggest that several British Columbia members of the house are still unprincipled politicians, first, last and all the time.

Mr. A. W. Neill, the honourable member from Comox-Alberni, was once again the leading spirit in an attack upon the quality of our loyalty and our Canadianism. With due assistance from his companion in prejudice, Mr. Tom Reid from New Westminster, he sawed violently away at his favourite plank—one, by the way, that he has exploited to considerable advantage for many a year—"once a Jap, always a Jap."

With due deference to his prestige, his position and his fossilization, the editor of this weekly presumes to disagree. And with all respect to the honourable members, he publicly challenges Mr. Neill and Mr. Reid to an open debate to determine which proposition is the more valid: "Once a Japanese, always a Japanese," or "Once an oriental-baiting politician, always an oriental-baiting politician."

An agreement as to time, place or conditions may be deferred until the honourable members of the house have considered, with what means they have at their disposal, somewhat more pressing problems of Canadian unity and the Canadian war effort.

These statements are not only false; they are malicious, and I want to repudiate in the strongest possible terms this personal attack upon myself. At no time have I endeavoured to arouse hostile or racial feelings against the Japanese in British Columbia. It is true that I have endeavoured in this house to point out certain dangers which I believe exist in British Columbia or might exist if the franchise were granted the Japanese. I have also urged that control of our fisheries by the Japanese in British Columbia should not be permitted to continue. My statements, first that the Japanese are an unassimilable race and second that most if not all Japanese in this country, whether born in Canada or elsewhere, are registered in Japan as Japanese nationals, have never been refuted by anyone, not even the Japanese themselves.

Such a vilifying personal attack, Mr. Speaker, comes with poor grace from a race of people who have enjoyed, with the exception of the franchise, every phase of our Canadian social and economic life.

WAR EXPENDITURES

CONCURRENCE IN FIRST REPORT OF SPECIAL COMMITTEE

Mr. J. T. THORSON (Selkirk): By leave of the house, Mr. Speaker, I move, seconded by the hon. member for Cochrane (Mr. Bradette) that the first report of the special committee on war expenditures, presented to the house yesterday, be now concurred in.

Hon. R. B. HANSON (Leader of the Opposition): I do not rise for the purpose of dissenting from this report. Mr. Speaker, but there is one feature of it with regard to which I think some explanation should be given. I refer to the matter of printing. The report contains a recommendation that so many copies of the proceedings in English and so many copies in French be printed at the discretion of the committee, which is quite unusual. I should like some explanation from the chairman as to why the committee desires to retain this discretion rather than have the usual resolution put through—simply an order of the house that the proceedings be printed.

Mr. J. T. THORSON (Selkirk): Mr. Speaker, the committee reserves to itself the right to determine from time to time whether its minutes and evidence shall be printed. It has been decided, until the committee determines otherwise, that the sessions of the committee shall be open sessions. If the committee should decide that in the interests of the nation its sittings shall be in camera, then the committee reserves to itself the right to determine whether the minutes and the evidence shall be printed. I suggest that that is a very proper reservation to make.

Mr. J. H. HARRIS (Danforth): While concurrence in this report was granted by hon. members of the committee, nevertheless I think it ought to be pointed out that the motion for concurrence was carried on division.

With regard to the matter of printing, we know that a clause was inserted in the report now before the house providing that that matter should be left to the discretion of the committee. But I should like to reiterate the position I took on a previous occasion when the resolution was being considered, and to suggest that so far as possible all meetings of the committee should be general meetings, that the evidence not printed should be kept to a minimum and the maximum printed. I say this for the following reasons. The report asks concurrence in the proposal that the committee be empowered to divide itself into subcommittees, which subcommittees, in common with the committee itself, shall have power to call and examine witnesses, and so on. But, without thought of anything of a political nature—I am satisfied that no one serving on the committee is thinking of it in that sense at all—I must point out that the composition of the committee is such that it consists of only four members from His Majesty's Loyal Opposition, one member from the Cooperative Commonwealth Federation, and one from the Social Credit group. That leaves a committee on which there are eighteen members of the government party. In reply to an observation from the other side I will add "in charge of that committee." I hope, Mr. Speaker, that they realize they are in charge, and will not dominate the committee.

I hope they will leave their domination on the doorstep before they come in, and remember that while we are at war we are going to look at this matter from a big, broad point of view, to help the present situation.

But coming to the point I want to emphasize, those four members are anxious to study the problems which come before the committees—

An hon. MEMBER: So are we.

Mr. HARRIS (Danforth): —in common with their fellows on the committees. Four members cannot sit on five committees; therefore I suggest that the main evidence be taken and the main portion of the work conducted by the general committee. In like manner a maximum of the evidence should be printed, for the added reason that all hon. members will want to know what is going on, and the only way they can know is by their reading of the printed record. And, more important than the membership of this house, Mr. Speaker, the people of Canada will want to know what is going on.

With all due respect to those who have cast reflections upon some of the members of the fourth estate who occupy seats up above us, they are perhaps even better fitted than we are to inspire public confidence and to remind Canada that we are at war. We look forward to the press doing a real job of encouraging our people in their war effort, and of reminding those in Canada who are not thinking about a war that there is a war on.

Motion agreed to.

LOANS TO PROVINCES

UNEMPLOYMENT RELIEF—QUESTION OF REDUCTION OR REPAYMENT

On the orders of the day.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I should like to ask the Minister of Finance (Mr. Ilsley) if it is true that he, or one of his officials, has written to the provincial governments who have outstanding loans from the dominion government to ascertain whether they are in any position to reduce or to pay off such loans. I should also like the minister to tell the house what replies, if any, have been received. I base my inquiry on a press dispatch from Vancouver, British Columbia, which asserts that the premier of British Columbia has taken the attitude that his government is not obligated to repay loans granted for the purpose of providing relief for unemployment.

Hon. J. L. ILSLEY (Minister of Finance): Mr. Speaker, I believe the best way to reply to the question is to produce the correspondence which has passed between this government and one or perhaps more of the provincial governments. It is very difficult to summarize the correspondence.

Mr. HANSON (York-Sunbury): What the minister has suggested would be satisfactory.

Mr. ILSLEY: It would be difficult to summarize it in the way in which perhaps someone has attempted to summarize it in the newspaper article. If the leader of the opposition will place a resolution on the order paper, or permit this request to be regarded as a request for the tabling of the correspondence, I shall be prepared to table it.

Mr. HANSON (York-Sunbury): That is very satisfactory.

ROYAL CANADIAN MOUNTED POLICE

LETTER REFERRED TO BY MEMBER FOR NORTH BATTLEFORD ON MARCH 5

On the orders of the day:

Right Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, on Wednesday of last week, March 5, the hon. member for North Battleford (Mrs. Nielsen) read a letter, or part of one, which she had received from James L. Hatton, of North Battleford. Subsequently the letter was laid on the table of the house. In it there were statements which cast rather damaging reflections on the Royal Canadian Mounted Police—

Mr. HANSON (York-Sunbury): What about the latter part of it?

Mr. LAPOINTE (Quebec East): —and its work in that locality. In fairness to the force, and as the high repute of the Royal Canadian Mounted Police is one of the most valuable assets in Canada, I wish to lay on the table of the house a statement dated March 10, 1941, signed by the same gentleman, which has been given to the inspector in charge of the mounted police in that part of Saskatchewan. The statement is countersigned by the inspector.

Mr. HANSON (York-Sunbury): Read it.

Mr. LAPOINTE (Quebec East): I have no objection. It is as follows:

James L. Hatton, auctioneer, states as follows:

Inspector Spriggs has to-day shown me a copy of a letter which I wrote to Mrs. Dorise Nielsen, M.P., on the 25th of February, 1941. I recognize this letter as a true copy of the one which I wrote.

At paragraph (3) of this letter I stated that I had had a conversation with Sergeant Hill on the 22nd and that he had stated the following:

"The—

I am sure the house will excuse me if I do not repeat the two following words—

—can't she see that the same law will put her behind the wires, whether she believes it or not, and believe me she'll be there before long if she keeps up the pace she's hitting for they'll frame up something somehow either under the 5th Column or agitation against the war effort or disloyalty.

She should remember she's not a lawyer and she may leave a loophole somewhere and if she ever does in she goes. I'd imagine she should be able to see that she can do a lot more good by having her freedom than in an internment camp for the duration. Of course if she wishes to become a martyr to the cause she can be one by being interned, but I fail to see what she can ever gain by that. First thing she knows she'll be down there keeping Houde of Montreal company."

The foregoing statement in quotation marks embodies the full contents of what I had personally in my own mind and unfortunately, I quoted it as having been made by Sergeant Hill, believing it would have more weight and make a greater impression than it would have made on Mrs. Nielsen had I been expressing my own thoughts. The most important feature of the whole letter was to make her realize the seriousness of the attitude she is now taking towards the defence of Canada regulations during the war. This letter was absolutely a confidential letter and has been exposed to the public without the consent of the writer who had no intention in his mind of being disloyal or causing friction anywhere at any time other than between Mrs. Nielsen and himself. I deeply regret that my confidence has been betrayed, at a time when I thought I was giving confidential advice as to her better conduct in the future.

The actual conversation which took place between myself and Sergeant Hill on the 22nd of February, last, was dealing with newspaper articles in which Mrs. Nielsen had been reported as having taken up the part of persons who had been interned. Sergeant Hill was pointing out to me the impossibility of trial by jury in these cases, he said that such procedure would be applicable in peace time but not in war. However he did not make any definite statement such as I have embodied above in quotation marks. I personally considered Mrs. Nielsen to be going too close to the border line and taking too much of a chance of overstepping or making some statement under which she might be charged as a fifth columnist or as an agitator or even for disloyalty.

As a result of my conversation I thought this matter over very carefully for a couple of days and decided that if I could make Mrs. Nielsen think that these things came from some one in authority she might take them more seriously and perhaps change her attitude as a result, and put her support back of something that would be of vast importance towards the winning of the war or the relieving of distress where it was needed.

This statement has been given voluntarily by me without any pressure having been brought to bear from any quarter, and it is still my opinion that Mrs. Nielsen should change her attitude towards the war and the defence of Canada regulations.

J. L. Hatton.

Witness:

F. E. Spriggs,
Inspector.

REPORT AS TO QUESTIONING AND INVESTIGATION OF TWO JOURNALISTS

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to direct the attention of the Minister of Justice (Mr. Lapointe) to an article in this week's *Saturday Night*, which just by chance relates to the Royal Canadian Mounted Police and their activities, for which body I have the greatest respect. This article purports to have been written in reply to certain statements made in this house by the minister on March 4. In the article it is categorically stated that two journalists, whose loyalty is unquestioned, namely Miss Judith Robinson and Mr. Oakley Dalgleish, have been questioned and investigated by the Royal Canadian Mounted Police. It is suggested in the article that the purpose of this questioning and investigation was to intimidate these journalists who have been critical of this government's war effort. The freedom of the press is a matter of such vital importance that I believe this house is entitled to a full and complete explanation from the minister.

Right Hon. ERNEST LAPOINTE (Minister of Justice): I have not read the article in question and I have no knowledge of what my hon. friend alleges has happened. However, I shall secure the information.

TRANS-CANADA AIR LINES

MONTREAL-MONCTON-HALIFAX MAIL SERVICE—HALIFAX ON MAIN TRANSCONTINENTAL AIR ROUTE

On the orders of the day:

Mr. G. B. ISNOR (Halifax): Mr. Speaker, I desire to direct a question to the Postmaster General. In view of the important part that the port of Halifax is playing in Canada's war effort, may we hope at an early date for an improvement in the air mail service out of Halifax?

Hon. W. P. MULOCK (Postmaster General): The hon. member for Halifax (Mr. Isnor) was kind enough to give me notice of his intention to ask this question. I would advise him that with the concurrence of the Minister of Munitions and Supply (Mr. Howe) I have pleasure in stating that the Trans-Canada air mail service will be extended on or about April 15 from the former eastern terminal at Moncton, New Brunswick, to Halifax, and that the frequency of service between Montreal, Moncton and Halifax will be increased to two round trips daily including Sunday. This will furnish a direct air mail service between Halifax and Vancouver, and by eliminating the necessity of a transfer of

mails and passengers at Moncton will further reduce the elapsed time necessary to fly between the Atlantic and Pacific shores of this dominion. The inclusion of Halifax on the main transcontinental air route is the logical outgrowth, not only of the continually increasing volume of air mail destined for and originating in Halifax, but also of the progressive policy of the Post Office Department in furnishing Canadians the best possible air mail service, an air mail service second to none.

Mr. MacDONALD (Halifax): May I inquire as to the type of equipment that will be used in carrying out this extended air service?

Hon. ANGUS L. MacDONALD (for the Minister of Transport): May I say that it is proposed to put on the route from Moncton to Halifax the regular type of plane used in other parts of the Trans-Canada service; that is, Lockheed planes, each with ten seats. The Postmaster General has already stated that there will be two planes a day in to and out of Halifax. I might add that the exact date when this service will commence is not known at the moment to the officials of the Department of Transport because there are still certain works to be performed on the air field near Halifax, but there is every indication that the estimate given by the Postmaster General will prove correct. I think that before the end of the month of April this service will be in operation.

Hon. R. B. HANSON (Leader of the Opposition): Is it the intention that the regular Trans-Canada air liners shall continue to have their terminus at Moncton, or will they proceed to Halifax? Will there be what is known as a taxi service between Moncton and Halifax?

Mr. MacDONALD (Kingston City): I am not able to answer that question definitely. The objection hitherto from the point of view of Halifax has been that planes running from Moncton to Halifax were only six-seater planes and consequently there was a good deal of congestion. Sometimes as many as twenty to twenty-five passengers might want to take the plane, and with the six-seater plane making only one or two flights a day a number of passengers were unable to get accommodation.

The great desire of the people down there was not that Halifax should be the terminal but that some arrangement should be made whereby the congestion at Moncton might cease and passengers from Montreal and points west be assured of accommodation.

[Mr. Mulock.]

ROYAL CANADIAN AIR FORCE

STATEMENT WITH RESPECT TO RECENT FLYING ACCIDENTS

On the orders of the day:

Hon. C. G. POWER (Minister of National Defence for Air): Mr. Speaker, in view of the recent series of unfortunate flying accidents, I think it is advisable to make a statement to this house. The following particulars are available concerning the three fatal accidents which occurred yesterday at No. 8, Service Flying Training School, Moncton; No. 4 Service Flying Training School, Saskatoon and No. 31 Air Navigation School, Port Albert, in which eleven personnel were fatally injured, two seriously injured and one uninjured and six Anson aircraft were destroyed.

Moncton. Two aircraft on a normal formation flight practice interlocked at 2,000 feet. In one aircraft with a crew of three on board, two pilots were unable to abandon the aircraft and crashed with it, killing one and seriously injuring the other whilst the third pupil pilot abandoned by parachute and landed safely. The other aircraft broke away after collision and fell straight down killing the only pilot on board.

Port Albert. Two Anson aircraft took off at a fifteen minute interval on separate exercises approximately in the same direction. The weather was clear everywhere. They came into collision, and it appears one knocked the tail off the other and both aircraft crashed out of control. The aircraft were flown by experienced staff pilots. Seven of the occupants of the two Ansons were killed and the wireless operator, the only one to survive, was seriously injured. From evidence at hand it is considered that they may have been blinded by the sun on a turn. Why they were at the same place and height is unknown.

Saskatoon. Two Anson aircraft were on a normal formation flight. One overtook the other and collided. Both aircraft disintegrated in mid-air at 3,000 feet, killing both pilots. All the above accidents were on normal routine training flights. No evidence of mechanical failure is considered likely.

Accidents during 1940. The following accidents occurred during the first year of operation of the British commonwealth air training plan:

Fatal—25.
Injured—33.
Total—267.
Hours flown—233,056.
Total accident rate—1·19 per thousand hours.
Fatal accident rate—0·11 per thousand hours.

Only 32 schools were in operation during this period, that is from April 1 to December

31, but the 233,056 hours flown indicates the intensive training which was carried out. During this period the accident rate per 1,000 hours flown was:

Fatal accidents—0·11 per thousand hours.
Injured accidents—0·14 per thousand hours.
Uninjured accidents—0·94 per thousand hours.
Total accidents—1·19 per thousand hours.

Out of the total of 267 accidents which occurred during 1940, the major number was caused through normal errors of pupils during flying training, such as (a) not being able to correct a swing on landing; (b) carelessness in taxi-ing; (c) faulty manipulation of ancillary controls. Nine accidents occurred through collision in the air, which in most cases can be attributed to either bad weather or lack of vigilance by the aircraft crews.

No aircraft of any particular type used in training has revealed itself to be more prone to accidents than any other type, and in comparison with the flying hours carried out, the rate of accidents per hours flown was found to be not abnormal.

Accidents have increased during the first month of 1941, that is in January, as follows: total serious and minor accidents, 163 (18 deaths); flying hours carried out, 99,460; accident rate, 1·6 per 1,000 hours.

The flying time of 99,460 hours during the one month of January 1941 is very nearly 50 per cent of the total flying carried out during 1940 and the accident rate of 1·6 compares with the 1·19 of 1940.

I have not worked out the fatal accident rate for the month of January.

With respect to the action taken for the prevention of accidents:

1. Air regulations are promulgated by the Royal Canadian Air Force to cover regulations which affect all schools throughout the service and flying orders are promulgated by each station for local regulations affecting their own locality only. One copy of air regulations is issued to each qualified pilot and one to each two pupils. These regulations cover such things as: minimum altitude at which aerobatics are carried out, the operation of aircraft on cross country flights, forced landings, restrictions imposed on various types of aircraft, low flying, et cetera.

2. Courts of inquiry. Courts of inquiry are held on all accidents of a serious nature, the courts being composed of qualified officers who thoroughly investigate all circumstances surrounding the accident. The court makes findings and recommendations to prevent a recurrence. The findings and recommendations of the court of inquiry are fully considered by command headquarters and in turn by Royal Canadian Air Force headquarters who take the appropriate action on the recommendations and findings.

3. Analysis of flying accidents. Each command is required to make a summary analysis of each accident quarterly. This quarterly analysis of accidents is circulated within the command and all pilots must initial as having read and understood.

4. Syllabus of flying instruction. Pupils are given individual instruction in the air by their flying instructor in aerobatics and spinning, to enable them to be fully conversant with the methods of recovering from any unusual altitude which they may inadvertently get into. They are also given instruction in low flying which is limited to dual only, and the importance of keeping a continuous lookout in the air.

5. Syllabus of ground instruction. Syllabus of instruction at flying training schools require the chief instructor to give lectures based upon the analysis of flying accidents to all pupils under training. The chief instructor gives details of the causes of these accidents and explains in detail to the pupils steps which they should take to guard themselves against being involved in any accident.

6. Posters. All flying training schools are supplied with a number of posters to bring home forcibly to the pilots the serious effects which result from disregard of air regulations, which have been brought into effect as the result of many years' experience. New posters are in the course of production.

7. All possible steps are taken to prevent accidents, both in the air and on the ground, but in spite of these precautions accidents still occur. A large proportion of them are due to the human element for which it is impossible to legislate.

May I add that repetition of such accidents is far from making us callous. Indeed we view with the utmost anxiety the great loss of life involved in these accidents, and we shall continue by every means in our power to try to protect these young men not only against unforeseen occurrences but in many cases against their own carelessness.

Mr. JACKMAN: May I ask the minister whether the statement he has just made with reference to flying hours refers to plane hours or passenger hours? Was he speaking of how many hours the planes had flown, or of how many hours the passengers and pilots had flown?

Mr. POWER: I take it to be the plane hours. I would not assume that any one of our pilots had flown 200,000 hours.

Mr. JACKMAN: No, not one pilot.

Mr. POWER: May I take advantage of this question to place on *Hansard* a comparison with the training figures of the Royal Air Force in Great Britain? During the months of July and August, 1940, which are regarded as good flying months, there were 66 deaths in the Royal Air Force during 293,700 hours of flying. In the same two months, although conditions are not comparable, in the Royal Canadian Air Force there were 34,298 hours of flying, with no deaths. But an almost comparable figure with 66 deaths in 293,000 flying hours is 25 deaths in Canada in 233,056 hours.

Mr. JACKMAN: I do not believe that the minister quite understood what I was driving at. A plane which is up for an hour with five men in it represents an equivalent of five passenger hours as against one hour of flying time for the plane. I wish to be certain as to what the minister intended. It makes a very great difference in the percentages.

Mr. POWER: I take it that that is actual hours during which the aircraft was in the air.

REPORTED TRANSFER OF WESTERN COMMAND HEADQUARTERS FROM REGINA TO CALGARY

On the orders of the day:

Mr. J. G. DIEFENBAKER (Lake Centre): May I ask the Minister of National Defence for Air in consequence of a report I have received through the mail to the effect that the western command of the Royal Canadian Air Force now located in the city of Regina is about to be transferred to the city of Calgary, whether such a decision has been arrived at, and if so—

Hon. C. G. POWER (Minister of National Defence for Air): The answer is no, so that my hon. friend need not ask any more.

NATIONAL REVENUE

QUESTION OF EXEMPTION FROM INCOME TAX IN RESPECT OF BRITISH GUEST CHILDREN

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): Mr. Speaker, may I direct a question to the Minister of Finance with regard to dominion income tax exemptions? In the case of the hosts to all guest children in Canada, will exemption be granted on account of these children whether they are government-sponsored or not? May I remind the minister of his promise, when this matter was under discussion at the last session of the house, to take it into consideration?

Hon. J. L. ILSLEY (Minister of Finance): Mr. Speaker, the hon. gentleman is just as familiar with the provisions of the act as I am. He is aware that the act stands as it was passed at the last session. If his inquiry is directed to the question whether there is to be a change in that respect in this budget, it is an inquiry which it would be most improper for me to answer.

Mr. BRUCE: My purpose was to bring it to the minister's attention anyway.

UNEMPLOYMENT RELIEF

QUESTION OF FEDERAL AID TO PROVINCES BY WAY OF GRANT OR LOAN

On the orders of the day:

Mr. A. H. BENCE (Saskatoon City): Can the Minister of Labour give me any further reply to the question I asked on Monday last as to whether the government had under consideration assisting by way of either grant or loan those provinces which have indicated that they are unable to provide sufficient funds for their relief requirements?

Hon. N. A. McLARTY (Minister of Labour): Yes, I can, Mr. Speaker. So far as the Department of Labour is concerned I made inquiries and was advised that that department had received no such request.

Mr. BENCE: I wonder if the Minister of Finance could state whether any such representations as I have mentioned have been made to his department.

Hon. J. L. ILSLEY (Minister of Finance): I will get the information for the hon. gentleman.

ST. PATRICK'S DAY

SUGGESTED ADJOURNMENT AT 6 O'CLOCK ON MONDAY, MARCH 17

On the orders of the day:

Mr. ROBERT FAIR (Battle River): On Monday next, Irishmen and their friends throughout the world will celebrate St. Patrick's day. May I ask the Prime Minister whether the government has considered the adjournment of the house at six o'clock so that hon. members and their friends may celebrate in a proper manner?

Mr. MacNICOL: The answer is, no.

Mr. FAIR: May I ask the Prime Minister if he will answer my question, or at least take it under consideration?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I did not catch my hon. friend's question. What I gathered was, would I give an undertaking that the house would not sit on St. Patrick's day.

Mr. HANSON (York-Sunbury): No—in the evening.

Mr. MACKENZIE KING: Well, it would depend upon the condition of the house on that day.

Some hon. MEMBERS: Oh, oh.

CANADIAN FORCES

PROVISION OF VITAMINIZED FLOUR AND FLOUR PRODUCTS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I desire to address a question to the Minister of Agriculture. In view of the statement made last night by Major Tisdall, nutrition expert and adviser on nutrition to the Department of National Defence, as to the necessity of providing vitamin B-1 in flour as a means of preserving vitality, will the minister take the necessary steps to see: (1) that this type of bread only is supplied to our fighting forces, and (2) that only flour containing this vitamin is exported to Britain during the war?

Hon. J. G. GARDINER (Minister of Agriculture): I listened to the address last evening of Major Tisdall and also the address which followed, delivered by Mr. Newman, of the cereals branch of the Department of Agriculture. The information I gathered from the two addresses is that the result of investigations in connection with the elimination of vitamin B-1 from wheat through the present milling methods is to the effect that that vitamin is eliminated by present milling methods. But the information which has so far been gathered with regard to new methods of milling in order to produce the type of flour which would contain vitamin B-1 is still in the experimental stages, and I do not think it will be possible at the moment to carry out either of the suggestions which are made in the hon. member's question.

Mr. BRUCE: I was under the impression after reading the newspaper report that these mills could preserve vitamin B-1.

Mr. GARDINER: I might say that it is possible, but it requires a change in the present milling methods.

TRANSPORT COMMISSION

JUDGMENT AS TO DISCONTINUANCE OF BEISEKER-LANGDON, ALTA., RAILWAY LINE

On the orders of the day:

Mr. C. E. JOHNSTON (Bow River): The other day I asked a question of the then acting Minister of Transport with regard to the discontinuance of the railway and the removal of the tracks between Beiseker and Langdon, Alberta, and I would like now to direct this question to the Minister of Agriculture.

In view of the decision rendered by the board of transport commissioners to tear up that track, and considering that there is going to be a great shortage of storage space for grain, will the Minister of Agriculture do something, if necessary under the War Measures Act, to see that that road is continued and those elevators are kept open for storage?

Hon. J. G. GARDINER (Minister of Agriculture): Mr. Speaker, I am afraid the question has been directed to the wrong minister. The control or administration of anything having to do with elevators comes under the Department of Trade and Commerce.

Mr. JOHNSTON (Bow River): Well, then, may I direct it to the proper minister, the Minister of Trade and Commerce?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): I will take the matter under consideration.

Mr. JOHNSTON (Bow River): I understand that, if something is not done right away, this service will disappear, so that immediate consideration should be given to the matter.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Thursday, March 13, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Mr. HAZEN: Just prior to adjournment last evening I was speaking of the importance of making the best use of our available tonnage. I had pointed out that, owing to insufficient harbour facilities, there had been a serious congestion of shipping at the port of Saint John this winter, and that this was delaying our war effort. I had pointed out, further, that the national harbours board held a meeting in January in the city of Saint John when this problem was considered. I was about to say, when the house adjourned, that I had read in the press recently that the government proposes, in order to assist in relieving this congestion, to build a timber wharf, a trestle wharf I believe it is to be, about nine hundred feet long, this wharf to be ready when the winter port opens next autumn. That is a step in the right direction; it will improve the situation, but unfortunately it will not, in my opinion, fully meet the need. The representations made by the city of Saint John to the national harbours board should be carried out. I should like the Minister of Munitions and Supply or the government to tell us just what steps they have in mind to improve the situation at the port.

At the port of Saint John we have the wharves; we have the longshoremen and we have the railway connection. I understand that last summer some ports in the country were congested, but the port of Saint John was more or less vacant during the greater part of the summer. In order to prevent congestion in other ports in Canada and to facilitate the dispatch of cargoes of war materials and supplies overseas, I urge the government to consider the advisability of using the port of Saint John to a greater extent during the coming summer.

In conclusion, I would again urge the government to take a broad and statesmanlike view of the manner in which our war expenditures for manufacturing plants are to be made, and to take advantage of the opportunity that I believe is now presented to it of implementing, to some degree at least, the Rowell-Sirois report by improving the financial and economic position of the maritimes through the establishment this year in New Brunswick and Nova Scotia of war industries which will have a possibility of surviving as peace time industries after victory has been achieved. Out of the amount of $307,000,000 that is being advanced to build industrial plants in this country, the very small sum of $182,526 has been spent in New Brunswick. This is not good enough.

[Mr. Hazen.]

Mr. GREEN: In connection with the statement which was made to the committee earlier in the week by the Minister of National Defence (Mr. Ralston), I think it would be well if either he or the Minister of National War Services (Mr. Gardiner) would give us a more detailed explanation with regard to the calling up of young Canadians for training under the National Resources Mobilization Act, and also with regard to the whole compulsory training scheme.

There is much doubt, much uncertainty, and I think much bewilderment in the minds of the Canadian people about the present method of calling up our young Canadians and about the compulsory training scheme. The time has come when the ministry should tell the committee and the people the purpose of this compulsory training. Let us know the aim of the government in connection with this whole scheme. For example, is it to give all our man-power a short period of training, or is it to train men for the reserve army, or is it to obtain recruits for the active army, or is it for some other purpose? My point is that the government should make some clear-cut statement as to the purpose so that the Canadian people will know. There are thousands and thousands of these young men who are vitally interested, and more thousands of their relatives who are also interested, and there is great general interest across the country in the purpose of the scheme.

Last summer, when the blitzkrieg struck and France was falling the Canadian parliament enacted the National Resources Mobilization Act; a few weeks after its enactment we were told, if I remember correctly—and if I am wrong in any of my points I would ask to be corrected by one of the ministers as I go along—that the purpose of the compulsory training was to give all the man-power in Canada preliminary military training. I think we were told that about 300,000 Canadians ranging in age from twenty-one to forty-five years would be given training for a period of thirty days. I also understood that another purpose was to provide a force which could be used for the defence of Canada. There were to be practically no exemptions from this training with the exception of the Doukhobors, the Mennonites and perhaps one or two other classes.

When the house met in November Canada had had two or three months' experience with the plan, and I think it will be admitted

that it had then developed that there was no real tie-up with the fighting forces. For example, all the young men who received the training were posted to reserve army units, but merely by having their names included on the roster, in other words, the names were on the rolls, but the young men were not actually taking part in the work of the reserve army unit to which they were attached. Further, that reserve army unit could not recruit them into its ranks if it wanted to. I believe that until some time in January the reserve units were not allowed even to recruit the young men who had been posted to them.

Further there was no chance, or very little, given to these young men to join the active army; recruiting was not open; no facilities were provided for them to get into the active army if they wished to do so. I understand that they were asked whether they were willing to serve in the active army, but that was as far as it went. I believe, further, that the navy and the air force took steps to go into the camps, or set up recruiting stations near the camps, and did their best to persuade the young men to join their respective forces. The active army, however, refused to do that; it made no attempt whatever to get these young men into the ranks. Many of these young men who took the month's training went back into civil life.

The training was, of course, very short, and I think the house was unanimous in the belief that, to be effective, the training should be extended. In November, the Minister of National Defence announced that the period of training would probably be extended to four months. and that is now to be done.

But the position is far from clear. The government has decided that twenty-one year old men are to be called up, and I understand that the exemptions are to be wider than when the men were being called for the thirty days' training.

The present scheme is not entirely fair to these young men of twenty-one. During the period between the adjournment of the house in December and the reopening of the session in February, I heard many expressions of opinion to that effect. I think these young men feel they are being picked on. They find difficulty when they apply for work. Prospective employers ask their age; and when they find that the men will soon be twenty-one, the answer is, "Well, we don't want you. You are going to be twenty-one in a short time and you will be taken away from the job, so we will not take you on." Many of these young men are sons of men who served in the last war. It just so happens that setting this age at twenty-one means that a great many of the sons of men who served in the last war are included. The young men feel that if the call should come for men to fight, they, having been trained, will be chosen. I believe they are just as willing to serve as anyone else, but there is the feeling that the burden should be spread over a larger number of shoulders.

Will the Minister of National Defence or the Minister of National War Services explain whether the intention is that, after these young men have had their training, they should go back into civil life, or is it intended that they should go into the forces? I ask the ministers to inform us now as to the aim of the government in this regard. If the aim is to obtain as many recruits as possible for the active fighting forces, then I suggest that the government should go all-out to persuade these young men to enlist in the active army. Give them every possible facility for getting into that force. If it is also desired to build up an army for the defence of Canada, it does seem to me that other steps should be taken than those in contemplation at the present time. If the plan is to build up an army for the defence of Canada, why not put these men into the active army, for service in Canada only, after they are trained? Under the terms of the National Resources Mobilization Act they can be called only to serve in Canada. Why should they not be put into the active army on that basis? We need many trained men to defend our shores should such defence be necessary, and it is far better to have too many than too few. At the present time I doubt whether we have a sufficient number of trained men in Canada for our defence, should an attempt be made at invasion.

Mr. RALSTON: Does my hon. friend mean an attempted invasion of Canada?

Mr. GREEN: Yes. If some step such as I suggest is taken; if these men are put into the active army—I do not suggest that this should apply to the men now under call but rather it should apply to those who attend future camps—I think the government should choose from a much wider age group, and that such choice should be made by lot, by much the same method as is being followed in the United States at present. I believe also that much wider exemptions should be granted. Where men are needed in industry; where men are needed at home, they should be exempted from service. The main thing is that the government should announce whatever policy it has, now, or just as quickly as possible, in order that the people of Canada may see the picture and may know at what we are aiming. If

that is done, the government will get far more understanding and far greater support across the country than it is getting at the present time.

Mr. GARDINER: Most of the questions raised by the hon. gentleman have to do with the Department of National Defence, and, I am sure, will be dealt with by my colleague, but perhaps I might answer that part having to do with the Department of National War Services.

We are asked to call out the necessary number of men to make up the camps. It has been estimated that the twenty-one year old group, together with those who were called for the thirty-day training but had their training postponed for one reason or another, will be sufficient to cover at least a considerable part of the present year. For that reason the first call has gone out for approximately six thousand men of the twenty-one year old group; that is, those who have become twenty-one since July 1 last and those who were twenty-one before last July but who did not train in any camp during the previous year.

Mr. HANSON (York-Sunbury): That is, those whose training was postponed?

Mr. GARDINER: Yes. As has been indicated, the first call has been issued to these men, who will report to a medical practitioner for examination, just as the men did under the thirty-day plan.

Mr. HANSON (York-Sunbury): Before the minister goes on to deal with the medical examination, would he be good enough to enlighten me with respect to one point. Which department determines the category to be called? Is it his department or the Department of National Defence? That is to say, who determines whether only the men of twenty-one will be called? Is that the prerogative of his department or of the Department of National Defence?

Mr. GARDINER: The decision to call those of twenty-one years of age was based largely upon an examination of the records by both departments in order to obtain the number required to fill the camps that are being set up by National Defence, starting with those twenty-one years of age for the first call. Then the medical examiner determines whether the man is in a category which would require him to report to the camp. The individual has then the right to apply, not for exemption but for postponement, to the board at the centre of the military district, and, if necessary, the board may require the individual to appear in person to be examined in connection with his suggestion that his training should be postponed.

[Mr. Green.]

I do not know that it is quite correct to say that the groups whose training is to be postponed have been enlarged. It is just possible that reasons for postponement will be accepted now that were not accepted for the shorter course. At the moment I would not care to go further than that. Two or three days ago, I think, I said that the regulations would be laid on the table before the end of this week. The only reason why they have not been laid on the table is that they were referred to the Department of Justice, which just finished looking over them to-day. As a result, some changes in phraseology have to be made, but I am hopeful that we shall have them by Monday or, at the latest, Tuesday of next week. Therefore, at the moment I should prefer not to go into detail with regard to certain matters as to which I have not seen the final phraseology. Generally speaking, however, the postponements will be for reasons similar to those under the thirty-day training, giving consideration to the fact that persons will have to be away from home or from places of business for four months instead of thirty days. So far as agriculturists are concerned, or those who have seasonal employment, some concessions will be taken into consideration. For example, agriculturists will not be compelled to go to camp under the first call, or, I would say, under the second call; but they will be expected to go for the third four months' period, which will be in the winter months of next year.

Mr. HANSON (York-Sunbury): What is going to be done in the case of the dairy farmer?

Mr. GARDINER: A choice will be given. Of course it is not compulsory that one who is in one of the seasonal employments should remain out of camp in the summer months. If he desires to go to camp in the summer, in order to avoid having to go in the winter months, he will be permitted to do so. I should imagine there would be some divisions in families as to whether they prefer certain groups to come at one time or at another, although it is not likely there would be more than one in the twenty-one year old group. In that group, however, there might be a hired man as well as a member of the family.

Mr. HANSON (York-Sunbury): I have in mind an actual case which came to my attention. This was the case of a widow with only one son, who was twenty-one years old and had been called. As it happens, he was milking twenty-one cows. She and her son came to my office during the recess, and appeared to be greatly perturbed over the situation. I told her what I thought was the

position. I said that I believed he could get a postponement, but that sooner or later he would have to go, and that the mother would have to hire somebody to take his place. She then pointed out the difficulty of securing help on the farm, on account of the fact that so much labour was being attracted by the work going on at that season of the year in various communities in the province.

My point is that in a case like that there ought to be some provision for selectivity, and that that boy ought not to be called at all. I advised the young man, however, that I thought the four-months' period of training was approaching, and that he might be wise to go to camp. I believe he did so. I do not know whether the mother milked the cows, or what happened. Possibly this was an extreme case, but certainly it was one where the boy should not have been called, under present circumstances. That is one of the weaknesses of the scheme. There is no provision for selectivity, and I am reminded by my colleagues that the case I have described could be duplicated in many instances throughout the length and breadth of the land. The minister would not be doing any violence to the condition he has set up if that sort of thing were considered. Having regard to the number of twenty-one year old men available, I am satisfied that that young man ought not to be called, or, in any event, at least not until later.

Mr. GARDINER: Before the last call was made under the thirty-day plan, and at a time when the four-months' plan was under consideration, a letter went out signed by myself as Minister of National War Services, after consultation with the government, to the effect that in cases such as the one now described the board could give special consideration for the last thirty-day period, in view of the fact that the whole plan might be changed, in which event we would probably be giving consideration to regulations of a different kind. I imagine a number of cases were dealt with during the last period on that basis.

Under the new regulations, while it has not been provided that anyone can be exempted, it is set out that consideration should be given in cases of hardship. As I understand it, there is a hardship clause in the British conscription measure.

Mr. HANSON (York-Sunbury): And in the United States.

Mr. GARDINER: Yes, and in the United States. We have attempted to write the same principle into our regulations, despite the fact that our law is not a conscription law, in the sense that the others are. We are, however, having them appear before the board. That is, the individual must make application before the board, and indicate his desire that special consideration be given his case. Having made that application, while he would not be exempted his case would be postponed, and he would be subject to call from time to time, or as conditions might change. In that event he would probably be called up, or from time to time he would be asked whether his condition had changed. What happened would depend somewhat upon the circumstances surrounding any particular case.

So far as groups are concerned, it is the present intention that industrialists should make application in a manner somewhat similar to that in which they applied under the thirty-day plan, if they desire to have a group in their plant considered for postponement, either because they are keymen or because they are taking part in an industry where it is essential that, for the time being, the staff ought not to be disturbed. Again, in this instance postponements would be allowed.

But postponements under the present regulations are not limited to twelve months; they can be made for a longer period. The thirty-day plan postponements were all confined to the twelve-months period.

Mr. HANSON (York-Sunbury): Within twelve months.

Mr. GARDINER: Yes; within twelve months they were called again. But postponements made under the present regulations extend beyond that.

These men report to camps, and after they have reported and have passed medical examinations in the camps they are entirely in charge of the Department of National Defence.

Mr. DOUGLAS (Weyburn): As I understand it, since the training has been extended to a four-months period, under the present basis of utilizing man-power there will be a sufficiency of young men attaining the age of twenty-one years, and the call will never go beyond the twenty-one year old class. Am I correct in my understanding?

Mr. HANSON (York-Sunbury): That has been stated.

Mr. DOUGLAS (Weyburn): Yes, in the press.

Mr. GARDINER: There is not a sufficient number of young men of the twenty-one year old class—at least, I do not believe there is—when we take into consideration those whose participation will be postponed either on account of their connection with industry, or because of training they may be following

in universities, which may be considered of as much importance as other training, or for other reasons. Taking all matters into consideration, I would doubt that there would be enough young men in the twenty-one year old class to make up the 6,000 a month.

Mr. DOUGLAS (Weyburn): For four months.

Mr. GARDINER: Six thousand are called every month until we get to 24,000, and then 6,000 go in and 6,000 come out, which means that we call 72,000 over the year. I doubt very much if, in the result, there would be 72,000 available out of some 96,000 of that age group.

Mr. DOUGLAS (Weyburn): Is 96,000 the total number of the twenty-one year old class?

Mr. GARDINER: About 96,000 is the number in the twenty-one year old class. We must consider the percentage turned down because of physical condition, others whose cases may be postponed because they are engaged in certain important industries, others who have joined the forces voluntarily, and who are of that age, and others who are taking training in some acknowledged military school. Therefore it is just possible that there may not be enough in the twenty-one year old class to carry right through the year.

Mr. DOUGLAS (Weyburn): How many will become twenty-one years of age in each year?

Mr. GARDINER: Approximately the same number that are in the year age group called up. There may be a few more or a few less, but it would be about 96,000.

Mr. DOUGLAS (Weyburn): At the time the new programme was announced, it was stated in the press that enough men would be found in the twenty-one year old group, and that it would not be necessary at any time to go beyond that group. As a result of that press statement, there was a feeling in many quarters that some other basis for selecting these men ought to be found. It was considered that it was not fair always to insist that the twenty-one year old men must break into what they were doing and take their training, and that the men of twenty-two, twenty-three or twenty-four years should go scot-free for the duration of the war. It was contended that if there are sufficient young men in the twenty-one year old class to keep the training scheme in operation, then a hardship would be suffered by those in that age group, and that the result would be that no responsibility would be placed on other young men at other ages.

I suggest to the minister that if, as the programme progresses, he finds that only the twenty-one year old men are going to be called, and that the men in that class will be available in sufficient numbers to fill the requirements, the government ought to give consideration to working out some other basis of selection. It might be done by lottery, as it is done in the United States, or on some other basis. Otherwise only the twenty-one year old men in Canada will have training, and the other young men in other age groups will not be compelled to take that training.

Mr. GARDINER: If the war were not going on year after year and a system of this kind were established, we could say that probably only the twenty-one year age class would be called up. If we kept calling out the twenty-one year age class and then sent them home after four months, in ten years every one between the ages of twenty-one and thirty would have received training. I do not, however, anticipate that this will be the condition. I may say that the announcement made to the press was not to the effect that the twenty-one year age group would be the only group called; it was to the effect that if there were sufficient men in the twenty-one year age class, that would be the only class called; if it were necessary to go beyond that class in order to obtain a sufficient number of men, that would be done. The twenty-one year age class was the only one mentioned, but I think it will be found that the wording was sufficiently broad to cover what I am saying.

Men are enlisting continuously, and it is just possible that if 25 per cent of the twenty-one year age group should enlist, there would not be enough men to fill the camps. They might enlist in the air force, the navy or somewhere else. As we go on with the war, it may become more and more necessary to take in the higher age groups in order to fill the camps if we are going to continue to have four months training. I should not like it to be understood that it is definitely decided that we are going to call for training only those in the twenty-one year age group. The intention is to start with that group and continue calling them as long as we need men for the camps.

Mr. DOUGLAS (Weyburn): Is it the intention of the government to take a larger body of men? Are the facilities to be extended so that they can take more than 6,000 a month as time goes on?

Mr. GREEN: Is it the intention to train 72,000 men a year, or will there have to be deducted from that total those who are found to be unfit after having been called up?

Mr. GARDINER: I would rather leave those questions for the Minister of National Defence. As a matter of fact, our duty is to get the number of men asked for by the Department of National Defence. If they were to ask for more than the registration figures indicate we have, we would have to notify them, but so long as the request is within the number we have, we try to get the men for them.

Mr. GREEN: A minute ago the minister mentioned that there were some industrial training schemes which took men from under the National Resources Mobilization Act. What are those training schemes?

Mr. GARDINER: The Minister of Labour has some schools which are operating to train men for certain lines of work. There may be a limited number of those training for industry who would be engaged in something that might be considered part of the war effort. It was military training schools I had in mind a moment ago.

Mr. GOLDING: With further reference to the remarks of the leader of the opposition, I have had representations made to me in connection with cases which are similar to the one he quoted. I should like to give two illustrations. Just east of our town is a young man whose father is dead and who is working 150 acres all alone. He was called out for training, and I advised him to take the thirty-days training because there was a probability that it might be increased to four months. He had to hire someone to do the work of the farm. This boy is about twenty-four years of age and he put in his thirty days. Spring is now coming on; seeding will have to be taken care of, and then there will be the harvest later on. It seems to me that in a case like this it is just too bad to take this boy off the farm.

The other case I have in mind is that of a young man just north of our town. His father was in hospital for two or three months and has not been and will not be able to do anything because he has a severe case of diabetes. There are two boys, one twenty-one years of age and the other seventeen. They had to take the younger boy out of collegiate on account of a heart condition. The result was that there was only the one boy to work the farm. I took this case up with the department here and with Mr. Martin, the divisional registrar, and I must say that the case received kind consideration.

These two cases are representative of many others throughout the country. In these days when farmers are having a difficult time, when they can hardly get any labour, it seems a hardship that young men like these should be taken from the farms under the present trying circumstances. I am glad the leader of the opposition brought this matter to the attention of the committee, because I had intended to make representations when this question was up. Some provision should be made to look after cases of this kind.

Mr. SENN: I am in hearty agreement with the hon. member who has just taken his seat (Mr. Golding), as well as with the representations which were made by the leader of the opposition (Mr. Hanson). It seems to me that it would be a hardship for young men who are the only persons on farms to be taken at any time. There are large sections of Ontario where the work of the farm is just about as great in the winter as it is in the summer. This is true of dairying or any other type of farming where live stock is kept. The work of caring for live stock is increased in the winter when the stock must be kept in the stables. The minister should give serious consideration to providing complete exemption for these young men.

If they are taken away from the farm for any length of time, it will mean a serious loss in farm production. We have been told that farm production is necessary for the winning of the war, and I believe it is. The time is coming, and not far distant, when we shall need increased supplies of all kinds from the Canadian farmers. Again I ask the minister to give serious consideration to exempting all young men who are bona fide farmers and who are alone on farms.

While I am on my feet I should like to refer to the suggestion offered the other day by the hon. member for Hastings-Peterborough (Mr. White), that it might be wise to set up boards of exemption to be headed by county judges. If a number of these boys are called up on any particular date, there is likely to be congestion before boards sitting in the military districts. The boys from my particular locality will have to apply to the board in Toronto, and undoubtedly there will be a large number asking for exemption. If there is congestion, it will mean that the boys will have to wait for some time before their cases are heard. I cannot see why the county judge, who is impartial and should be fair, could not be vested with authority to say whether a postponement or an exemption should be granted. I leave this to the minister's discretion.

Mr. GARDINER: Under the regulations as now drafted it is not necessary that a man should appear in person. He may make his request in writing. In all probability, if a man has a bona fide case and presents it in

writing, his training will be postponed for the one call. He may be asked to prove his position before the second or third month, but the first call would likely be postponed.

Mr. SENN: It seems to me that a difficulty would arise there. There would still be congestion as each case would have to be considered on its merits. A boy might wait until the last day before he is to go to training camp in order to hear from the division where his case was being considered. He would not know whether to hire someone to take his place, if it was possible to hire anyone, and he might have to leave the next morning without having made provision to carry on the work of the farm.

Mr. BOUCHER: I had a case in my office quite recently. The minister will remember that within eight days of the call a young man is supposed to apply for exemption if that is desired. This particular young man had sole charge of a small farm, with a small herd of cattle. He was called for service and he got exemption. There were eight days within which, if his exemption was not granted, he would have to make arrangements for someone else to operate the farm. The uncertainty causes a great deal of hardship where there is only one man to manage the farm. He may be the only son of a farmer. I think advance notice of at least a month should be given so that a young man, if he is not granted exemption, can make arrangements for having his farm looked after while he is undergoing military training. I would urge that there be a little more certainty in this regard so far as calling farmers' sons is concerned.

Mr. HOMUTH: Are any of the exempted classes being called and used in other work than soldiering? I refer to the Mennonites, the Doukhobors and so on. Are they being called up and used in some war effort?

Mr. GARDINER: Up to date there has been no call other than the military one. This question came up during the thirty-day training period. The Mennonites, for example, had asked that some means be found whereby they could perform a service to the state, which they asked the privilege of doing, but it was thought best to leave that matter until the question of a longer training period which was then being considered had been decided. Now that this question has been decided, there are provisions written into the regulations making possible the setting up of other methods of training and other methods of service which may be helpful in the prosecution of the war in which these persons may be engaged. I cannot give the details at the moment because the matter is being worked out with these people at the present time, but later on we shall probably have something to suggest in regard to it.

With regard to the period of eight days within which the young man will know whether his training is going to be postponed or not, after all there are only thirty or thirty-one days in a month and 6,000 calls are being made each month, so the month is pretty well divided up between the time of notice for medical examination, the time after medical examination and the time they are supposed to apply for postponement. Therefore I do not see how we could extend the time very much beyond the eight days and be able to carry on from month to month.

I would, however, say this, that as soon as the terms of the regulations are known, every individual has an opportunity at least to find out what they are, and these discussions here from time to time will perhaps enlighten them more or less with regard to what is expected. One does not need to wait until he is called in order to get full information with regard to the whole matter. A man can apply for postponement immediately after his medical examination, or even before medical examination. I do not think there is anything to prevent that. At all events, immediately after the medical examination they can send in their application indicating their position. That would speed up the time within which a reply could be received from the board. I do not, however, see how we could extend the time very much beyond what is allowed now.

Mr. DOUGLAS (Weyburn): Could notice not be sent out sixty days ahead?

Mr. GARDINER: Everyone who is approaching twenty-one years of age has his notice now that he is likely to be called at any time. We call first those who were twenty-one last July. The next group is those who were twenty-one last August. The next group is those who were twenty-one last September, and so on. Therefore every young man who reads the newspapers or the regulations knows when he is likely to be called.

Mr. DOUGLAS (Weyburn): Could a man not get notice on April 1 that he was to report for training on June 1?

Mr. GARDINER: No. The young men who became twenty-one last July, and a sufficient number of those who became twenty-one last August to make up a total of 6,000 men, would get their notice to report on the 20th of March. The next group would begin

from there, going on through August, September and so forth, taking the different age groups.

Mr. BROOKS: I should like to say just a word about farmers' sons attending camp and the difficulties occasionally experienced. Out of some 2,200 men who went through my camp I had probably half a dozen to twenty cases which might be called serious ones. The trouble with most of them was that the men had not applied early enough for postponement of training. If they had applied for postponement as soon as they received their notice, it could probably have been arranged, but they left it until it was nearly time for them to report at the training centre and then it was too late for the board to arrange for substitutes to take their place. One department concerned has to supply a certain number of men for training and the other department has to train them. Therefore, when a man leaves his application for postponement to the very last minute, it is impossible for the board to notify other men to take their place and fill up the 750, or 1,000, or whatever may be the number required. I would suggest to the department that it might be well to send out their notices a little earlier and at the same time advise these men that if they wish to apply for postponement, they should apply immediately. In that way much of the difficulty would be obviated.

There are other cases that come up during training. The father, or a brother who has been left at home to look after the farm, may become sick and a request be made that the young man be released from the training camp and be sent home to look after the farm. That happens quite frequently. When the case is properly presented to the authorities, I can state that there is very little difficulty in having the man sent home. He is given credit for the time he has spent in training, and he will come back at some later date to complete his training.

I do not like to quote individual cases, but the most extreme one I had was that of a young man who had left his brother at home to look after the farm, with a housekeeper. His mother and father were dead, and the brother who was left at home had infantile paralysis. The housekeeper, who was not a young person, felt that she could not look after this invalid brother and the stock as well, and she left in the middle of winter. The chap with the infantile paralysis tried to look after seven head of cattle, some hogs and a couple of horses. I got word from a neighbour of his that this invalid man was dragging himself around on his hands, trying to get water for the stock and looking after the pigs and cows, and he wanted to know if something could not be done to release the brother immediately. I took upon myself the responsibility of releasing the man and notified military headquarters at Saint John, and they approved what I had done. There is not as much difficulty, when these cases are taken up, as sometimes we might think there would be.

Mr. SENN: I should like to ask the minister about one particular case I have in mind. He stated that the young men who were twenty-one last July or August are being called up in the first draft. He also stated that postponement will be allowed in certain cases where it is considered necessary. If those postponements go through the next two training periods, the man will be over twenty-one; he may be twenty-two or more before he is called up. What will happen in a case of that kind? Will he still be called after he reaches the age of twenty-two?

Mr. GARDINER: When once he is called, he is subject to call any time later. The postponement may be, in some instances for a definite time; in others, it may be with power to call him at any time. He may not be called for a year and a half if he is working in some particular industry, but he is always subject to call.

Mr. HANSON (York-Sunbury): It is not wise, I suppose, to generalize from isolated instances such as have been presented here to-day by myself or others. I wonder, however, whether the minister, in giving this matter consideration—and I know he and his officials must have given grave consideration to the principle upon which this draft is made—has definitely barred out the principle of selectivity. It seems to me that the door should not be barred to a change, having regard to the fact that the war effort, especially the industrial war effort, of the country is increasing in tempo all the time. I invite the minister and his advisers to give attention to incorporating in their regulations the adaptation of the principle of selectivity which obtains in other jurisdictions.

We have been dealing with isolated cases of farmers' sons, or where there is an only son, or where the son is head of the family, and so on. I suggest to the minister that some people should stay on the farm, and some people should stay in industry. Unless there is an invasion of Canada there are those who should definitely remain at their jobs, while others of a different category of age and so forth can much more easily be spared for the defence of the country and should take on this army training. I have thought that

the principle is too rigid, confined as it is to a particular class, and without any attention being paid to exceptions unless in cases where we are said to be under contract, if I may use that expression, with particular communities, communities of religious thought, or with conscientious objectors—and I include them in the same category. Would the minister say whether the principle of selectivity has been definitely abandoned? I think it is a fair method and it is followed in other jurisdictions.

Mr. GARDINER: If by selectivity the hon. member means the drawing of lots, or anything of that kind, as to what person should be called—

Mr. HANSON (York-Sunbury): No; I am not speaking of that.

Mr. GARDINER: —I would say that we are not making use of it. I would not say that it is not being considered or not being thought of. The same thing might be said to be true if the suggestion is that, let us say, all agriculturists engaged in a certain way in farming should be exempt. In that sense we have not accepted the theory that selectivity should apply. To the extent, however, that a person's time of training might be postponed because he is engaged in a certain industry, particularly in a seasonal industry, or that the time of service might be postponed because he is at present engaged in something essential to the prosecution of the war, that is some manufacturing industry, to that extent there is selection. That is, instructions are, through the regulations, being given to the boards which are sitting that certain things are to be done which would result in a selection being made, leaving some persons working at industries which are regarded as important, and taking others for training, for the time being. In that sense the selective element enters into what is being done.

Mr. HANSON (York-Sunbury): That is quite a limited sphere.

Mr. GARDINER: I would say it is limited.

Mr. DIEFENBAKER: With regard to choosing this number of 6,000 a month, will the choice be made in direct proportion to the population of the several provinces?

Mr. GARDINER: It is made in proportion to the number of twenty-one year olds, or whatever class is being called, that the registration shows to be in that district; that is, in relation to the number desired by the Department of National Defence. The department ask us for so many men for a certain camp in a specified military district. We then try to find the numbers there are in certain regions of that district, and divide up proportionately in those different areas.

Mr. DIEFENBAKER: I should like to know something with respect to these exempt classes to which reference was made some little while ago. I noted that, when the minister replied, he referred only to the Mennonites and to the willingness which they had expressed to be of assistance in the war effort in other phases than those which are directly military. I noted, however, that he made no reference to the Doukhobors, and they constitute a problem in Saskatchewan, as well as further west, which to-day is causing considerable unrest. Have the Doukhobors made representations to the minister's department that they will not serve under any circumstances, regardless of the call which may be given to them, even though such service be connected only with the construction of roads and work of that kind?

Mr. GARDINER: In making reference a few moments ago to the Mennonites, I did so because, before anyone, I believe, had made a suggestion that they should accept training, the Mennonites themselves intimated that they desired to have some sort of training provided for them. I believe they went so far as to say they were prepared to attend at camps and take training in first aid and ambulance work, indicating that they had no objection whatever to facing danger, that they were prepared to go into no-man's land or anywhere else and do a service for the country, provided they were not asked to kill. That is, they do not desire to take human life, or their belief is that under no circumstances should they take human life; but, short of that, they have no objections whatever to serving in any way the country desires them to serve, and they are willing to undergo any kind of training. They went even further than that; they said, "We are prepared to give free of charge to the state an equal term of employment." I believe they intimated, when we were using the thirty-day plan, that they were prepared to give two days for one, that is sixty days' labour to the state, in any work we liked to put them at, and that without any charge to the government. I mentioned the Mennonites because of the liberality, if I might use that expression, of the Mennonite people in making offers to do other things, since they object to military service itself.

Mr. HANSON (York-Sunbury): Has that offer been accepted?

Mr. GARDINER: We are trying to work out a plan. There is objection to having work done gratis for the government at a time

when some people are unemployed, but possibly there is not an objection to using these men to get the camps ready and do other work of that kind which is needed in connection with the training itself, and we are trying now to work out plans in that direction.

Mr. BROOKS: Would you organize labour battalions and give them the same pay as the soldiers?

Mr. GARDINER: They are not concerned about the pay. We probably would if we put them in, but they have not stipulated pay of any kind.

In dealing with the Doukhobors the problem is a little different; as far as I know, they did not come forward with an offer of that kind. Recently some inquiry has been made as to whether something might be done which would be satisfactory; whether the inquiry came first from the Doukhobors or began in our office I am not certain. There has, however, been correspondence between our office and the organization of Doukhobors along similar lines, that is, to find out what their attitude would be to service of that kind, and I am informed that a very considerable number of them are prepared to take part in similar training, or similar service. It is true there is a small proportion of the Doukhobor people, taking the numbers in western Canada as a whole, whom we shall probably find difficulty in getting to accede to any part of our regulations without some trouble. I do not know just what the final outcome will be, but at the moment we are negotiating in the hope that it will finally result in as nearly as possible one hundred per cent of both Mennonites and Doukhobors being satisfied to take on some kind of training.

Mr. HANSON (York-Sunbury): Are there any conscientious objectors in Canada apart from these groups that have been mentioned?

Mr. GARDINER: Yes, but the number is comparatively small.

Mr. HANSON (York-Sunbury): Are they being made use of?

Mr. GARDINER: Not up to the moment, but they would be subject to the same kind of thing.

Mr. GREEN: What are the provisions for dealing with conscientious objectors?

Mr. GARDINER: The regulations as drafted now are on exactly the same terms as the British. We did have different regulations for a time, but we found in practice that they do not work satisfactorily except in the form the British now have them drafted; that is, if a person claims to be a conscientious objector and can pretty well establish the fact, that is accepted.

Mr. QUELCH: When a boy is called up for a medical examination and is classed as C, would he be accepted? Can the minister state the basis of the classification?

Mr. GARDINER: I assume it is a matter of health. There is no one called for training below C1. Classes A, B and C are called up; we require them all in order to furnish the number necessary for the camp.

Mr. QUELCH: Exactly what state of health is indicated by class C1; how bad would a man's health have to be in order to be classified as C1? Would he have to be below normal in eyesight? Would a man who had to wear very strong glasses be called up, or would he be classified as C1?

Mr. GARDINER: I think I shall have to let some of the military men answer that question, either that or bring in the exact schedules on which the examinations are made. I am told that glasses are all right.

Mr. HANSON (York-Sunbury): Glasses are not all right in the navy.

Mr. GARDINER: I will place the exact schedules on the table.

An hon. MEMBER: Mennonites and Doukhobors have been mentioned; in what class are the Hutterites?

Mr. GARDINER: They are in a different group from the Doukhobors and Mennonites in that I do not think they have any legal rights to exemption in Canada, but they are conscientious objectors in the matter of military service, their beliefs being very much the same as those of the Mennonites and Doukhobors.

Mr. REID: I realize the difficulty the minister has in connection with the Doukhobors and Mennonites, but I trust the government, in their desire for unity, will not lean too far back and cause more unrest among our own people, because I can tell him that the Doukhobors in British Columbia are the only group I know of that successfully defied the laws of this country, and got away with it. When a law is passed and regulations are put into effect, those regulations and that law should be enforced, irrespective of who is concerned, even if it causes a little fuss.

Mr. LEADER: The statement of the minister regarding the attitude of the Mennonites should not pass without comment. Their offer to seek training in any line of military endeavour—except of course the necessity to kill—is deserving of commendation. They are willing to go to the front lines and serve as stretcher-bearers or in the medical corps, and for that they deserve credit, because

these people were admitted to Canada, I believe in 1873, under an agreed upon exemption from military service. We believe now that this was a mistake. I feel quite sure that the laws of Canada should demand of all her citizens that they be available for the defence of the country if the necessity arises. I feel confident that the younger generation of the Mennonites have the same idea and are willing to fulfil their obligations. We have quite a few Mennonites in my riding and quite a number of Hutterites, and I know a number of citizens of other races in my riding do object to seeing able-bodied men of this racial group who have come to Canada to make their home, staying at home and enjoying perhaps some increase of prosperity while other Canadians go and fight their battles. The very fact that the Mennonites have offered to do something in this war is a good omen and they should be encouraged to do more. I believe that the government should in future adopt the policy of not exempting any group from taking up the obligations that they owe to the state.

I was pleased to hear the minister say what he did for the sake of the Mennonites who reside in my constituency, and I wish to add my word of commendation that they have offered their services in this time of need.

Mr. McNEVIN: I wish to refer briefly to some remarks made by the hon. member for Peterborough West with respect to the operation and production of the munition plant at Lindsay. On two occasions I believe that the hon. member has spoken disparagingly with regard to the production and operation at this plant. The first occasion was in the first session of this parliament on May 30 last, as reported on page 384 of *Hansard* of 1940. I was reviewing the production there, and he remarked that at the Lindsay plant they were only producing brass sheets. I had to correct that statement and the point I want to emphasize is that the source of the hon. member's information at that time was unreliable.

Then, as reported at page 873 of *Hansard* of this session the hon. member referred to a statement by one of the aldermen of Lindsay, as reported in the Peterborough *Examiner,* and went on to say, "It is patronage of the worst kind." The only reference I desire to make to the statement of the alderman is that this plant has been in operation for approximately two years. In that time hardly a week has passed when I have not met or been in conversation with at least some members of the city council, and during that entire period I have not heard the slightest complaint from the council as a body, or from any member of the council, with regard to the operation of the plant. Further, at one council meeting which I attended the mayor was kind enough to say that I had not broken my word in connection with any pronouncement I had made regarding the production or the expected production at the munitions plant.

I want to emphasize that these suggestions of the hon. member reflect adversely upon two groups of officials. In the first place, they reflect upon the official in charge of the Lindsay office of the employment service of Canada. Hon. members who have given careful consideration to matters of this kind will, I am sure, agree that it is difficult to conceive of any position more difficult to fill than that of an employment officer, selecting men to be employed in any industry. That applies particularly where there is a large surplus of applicants for work; where, as in this case, few of those applying had any experience in the metal trades, which meant that a large number of applicants would come under the same classification. Perhaps there would be five or ten applicants for every job to be filled, and I am sure no official could administer work of that kind without disappointing someone. I should think that would be inevitable.

The other group of officials upon whom this suggestion reflects adversely are the superintendent and those associated with him in the administration and management of the plant. A great many of these men have been with the Department of National Defence for a long period of years, associated in various ways with the production and inspection of munitions. Latterly, of course, they have been in the employ of the Department of Munitions and Supply. These officials have had to perform a most trying and difficult task. In the first place, a government plant must do a certain amount of pioneering and experimentation with new machines and improvements on old machines. I am sure these officials have given freely of their skill, patience and perseverance and have put in very long hours, with a great deal of overtime, in an endeavour to produce munitions of the highest possible quality.

Just in that connection I should like to refer to the conferences I had with the senior officials of the Department of National Defence during the early negotiations leading to the reopening and putting into production of that plant. I am sure the present Minister of Pensions and National Health (Mr. Mackenzie), who at that time was Minister of National Defence, would agree that at those conferences and in those negotiations many difficulties were encountered in connection with this production. Some of the officials referred to the work done in that plant during the last war. I recall

one high ranking official who took no pains to hide his disgust, though that may be putting it too strongly, at the results obtained in that plant at that time. Another official went so far as to say that on an average the production of that plant had not been more than 50 per cent perfect; in other words, that 50 per cent of the production had been rejected.

From the beginning of the negotiations with regard to that plant it was my greatest desire, as I stated time and again, that the production should be of the highest quality, in order that our men at the front might be backed up with the very best type of munitions.

Mr. HANSON (York-Sunbury): Would the hon. gentleman permit a question?

Mr. McNEVIN: I should like to conclude first; then I shall answer any questions.

These officials went to the Lindsay plant with the idea in mind that they were going to make this a success, and I am happy to say on their behalf that I have known of much material that has gone through that plant that was 97 per cent, 98 per cent, and, in some instances, 100 per cent perfect. Therefore I do not think we in this house, or the senior officials of the Department of Munitions and Supply, can say too much in commendation of those employees who, under adverse conditions, have attained that measure of success.

I should like to make it abundantly clear that I do not bear the slightest ill will towards the hon. member who brought up this matter in the house. If anything further develops, he has only to telephone me and I shall be happy to come to his office, sit down at his desk and explain or answer questions freely. That is the best way to deal with some of these matters which perhaps are not as important as many other things with which the ministers have to deal. I have many warm friends in the riding of Peterborough, and I would not want to utter a word that might create the slightest conflict between that riding and my own. At all times, and particularly at this time, we must seek to develop the most friendly feeling and active cooperation not only between ridings, between members and between parties, but also between provinces and people of all classes, in order that we may put forth our very greatest efforts.

I might give an example of what I mean. Last summer officials of the civil aviation branch of the Department of Transport were searching for aerodrome sites, and it became known around the Peterborough district that they were having difficulty in finding a suitable site in that locality. The mayor of the city was kind enough to write me and we were able to arrange a conference so that I could meet with the mayor, the clerk of Peterborough, some of the aldermen and a number of the prominent citizens.

They said to me, "Mr. McNevin, if you are able to find a suitable location in your riding you can depend upon it that we will go down to Ottawa with you and back you up in every way, shape and form in order to assist you." That is a splendid spirit, and I want to foster and maintain it. The president of the Peterborough exhibition is a business associate of mine and a warm friend; I could go on and give further names. But I do wish to make it abundantly clear that I have nothing to hide and nothing to fear in connection with this matter; and, as on this occasion, I am going to defend fearlessly the management and those who are concerned with the matter I have discussed.

Mr. HANSON (York-Sunbury): Mr. Chairman, the speech to which we have just listened opens up a very interesting avenue. I would ask the hon. member what jurisdiction he has over the arsenal at Lindsay. He does not represent the people, in that sense. What jurisdiction does a member of parliament, situated as this hon. member represents himself to be, exercise over the arsenal at Lindsay? He talks like a proprietor.

Mr. GARDINER: The right to go in and look at it.

Mr. HANSON (York-Sunbury): You and I have the right to go into it.

Mr. GARDINER: It is not so convenient for us.

Mr. HANSON (York-Sunbury): The whole tenor of the hon. member's remarks was that this plant at Lindsay is being shepherded by him, that he has control of it, and that what he says goes. By the same token he undertakes to give a certificate of character to the Murphys over the Moriarities. He makes a comparison between production in this war and production in the last war, a comparison which may or may not be justified.

The speech to which we have just listened illustrates the contention which has been made from time to time from this part of the house that there is partisan participation in production in Canada. That ought not to be. If that sort of thing gets into the minds of the people of Canada, as I fear it has got in, what possibility is there of our having a united war effort? What possibility is there of having a united people behind the drive now in preparation to produce, we will say, a thousand million dollars for the war effort of Canada? I suggest to the ministry that they take this hon. member behind the curtain and say to him that he should have nothing whatever to do with the operation of the

arsenal at Lindsay. Would it not be presumptuous on my part if I went to Colonel Brooks, my colleague, and suggested to him how he should run the thirty-day training plan camp of which he has command. I think he would kick me out of the door, and he would be justified in so doing.

Mr. RALSTON: Not because of partisanship, but because you did not know anything about it.

Mr. HANSON (York-Sunbury): Oh, perhaps I know more about it than some people think. No, it would be because of interference on the part of a sitting member. That is what I object to, and that is all I am contending at the moment.

Mr. GARDINER: I thought the hon. member had suggested how the thirty-day camps ought to be run.

Mr. HANSON (York-Sunbury): No, I suggested how the training should be done—and by the same token I might as well deal with it right now.

I had intended to say something about the thirty-day training plan. I could repeat what I said on an earlier occasion, and in a moment I may revert to what I said in the house on November 22 of last year. First of all I would say that with respect to the number of men who have been trained it was the understanding of the people of Canada that large groups from 21 years to 24 years would be called. This afternoon we cross-examined the minister—and I believe we did so in a constructive way. We attempted to ascertain the facts, without introducing bitterness or anything of the kind. It is quite understood, I believe, that none of these groups is exhausted—not even the 21-year-old group. The purpose of this form of conscription—and notwithstanding what the minister or anybody else may say, it is a limited form of conscription—was primarily to train an army of men for the defence of Canada on this continent, and incidentally, as we have been told on more than one occasion, to acquaint young men in this country with army life. In this manner it was intended to give recruiting an additional impetus, if a larger army were needed immediately. Those were at least some of the objectives which were stated to the house and the country, and upon which the thirty-day training plan was predicated.

Furthermore, if I may be permitted to allude to the fact, the chief of the general staff was put up at the Canadian club of Ottawa last summer to introduce the subject to the people of Canada.

[Mr. R. B. Hanson.]

Mr. RALSTON: I denied that once before. Nothing of the kind happened. Will my hon. friend permit me to make a statement?

Mr. HANSON (York-Sunbury): Yes.

Mr. RALSTON: My hon. friend suggested the same thing before. I want to tell him that the chief of general staff was not put up at the Canadian club. The chief of general staff, without any knowledge of mine, was asked by the Canadian club to address the Canadian club, and I gave my consent to his doing so.

Mr. HANSON (York-Sunbury): I accept the minister's word, and I withdraw the words "put up." But the chief of the general staff did give at the Canadian club at Ottawa a statement of the government's position with respect to the thirty-day training plan. He could not have done it, in announcing a policy of that calibre and that character, without the full concurrence and consent of the government. And the people of Canada understood that he was speaking on their behalf.

Mr. RALSTON: He did not announce a policy at all.

Mr. HANSON (York-Sunbury): He did not?

Mr. RALSTON: No; he gave a statement as to what the policy had been.

Mr. HANSON (York-Sunbury): What the policy was to be.

Mr. RALSTON: And he said he recommended it.

Mr. HANSON (York-Sunbury): What the policy was to be, he said.

Mr. RALSTON: No, no.

Mr. POWER: There were two camps on the day he made that statement.

Mr. HANSON (York-Sunbury): No, there had not been two camps at the time he made that speech. The speech to which I refer was made at the Canadian club at Montreal, in the summer time.

Mr. RALSTON: No, no.

Mr. HANSON (York-Sunbury): Yes, it was made in the summer time.

Mr. RALSTON: The chief of the general staff made a speech at the Canadian club here in Ottawa.

Mr. HANSON (York-Sunbury): And it was a long time anterior to the first camp.

Mr. RALSTON: No.

Mr. HANSON (York-Sunbury): Anyway, he made a speech. One of the reasons he alleged that only a thirty-day training plan could be instituted was the inadequacy of the equipment then available. A further reason was that these young men had to be taught something of their national obligations—neither of which, I suggest, was a reason creditable to Canada or to the government. I will leave it there.

Offhand I cannot remember the date, but I am satisfied I am correct. Then, shortly after the scheme was put into operation it was found that the training was wholly inadequate for the primary purpose of the defence of Canada.

Mr. POWER: It was during the session.

Mr. HANSON (York-Sunbury): I overheard the Minister of National Defence for Air say that it was during the session. I made my speech here on November 12.

Mr. POWER: It was about that time.

Mr. HANSON (York-Sunbury): And the session began—

Mr. POWER: On November 7.

Mr. RALSTON: I can give the exact dates. As I remember, the first camp was called for October 9, the speech was made on October 23.

Mr. HANSON (York-Sunbury): All right.

Mr. RALSTON: And that is not an announcement of policy at all.

Mr. POWER: I will apologize to my hon. friend if he will apologize to me.

Mr. HANSON (York-Sunbury): I certainly will, in the interests of good fellowship and good feeling. That just shows how frail is the human memory, but it does not alter the course of my argument. In the speech which I made on November 12 I did not condemn the scheme. I pointed out what I thought were the weaknesses, but I pointed out also what I thought were some of the advantages. I did that on eye-witness evidence, and in the belief that I should bring it forward in this house. My colleague did the same thing. He did not condemn the plan in toto; he said it served a useful purpose and he was rather proud of some of the men and the advance that they had made.

I suggest to the minister that it must have been known to him soon after the scheme was put into operation that the training was wholly inadequate for the primary purpose of the defence of Canada. Upon trial it was found that the limited training period was not long enough to prepare these men to be put into the field against a well-trained and disciplined enemy. There were reasons for that. In the first place the syllabus was too crowded, being based upon a seven and a half hour day for twenty-two of the thirty days. The daily syllabus comprised ten forty-five minute periods. There was a total of 220 periods with a five minute rest allowed between periods. The syllabus provided for drill, gas, bayonet, rifle, field craft, road marches, military education, physical training and anti-aircraft work. Spare periods were also included, and all these items were taught within the short space of 220 forty-minute periods. In other words, each trainee was given about 146 working hours of instruction, less what he spent on fatigue or picket duty or in the hospital. That last item became very important during the last training period because of the prevalence of flu. This was nobody's fault, of course.

It was found that the average recruit or trainee could not properly absorb all the material in the short space of time allowed. To spend more time on each subject would cut down the period of training and consequently fail to achieve even an approximate basic training. Therefore, there was no alternative but to lengthen the period of training. When the defects of the crowded training period became apparent, I think I was among the first to suggest the lengthening of the period. I should like to refer to a statement I made in this connection on November 12, during the debate on the address. At that time I made some very constructive suggestions which were offered after discussion with some of the best military men in Canada. These men had examined the matter without prejudice and in the light of a desire to do the best under the circumstances for these trainees and in the belief that we were not getting value for our money. I quote from page 23 of *Hansard:*

> Mr. Ralston: I said they are attached to a non-permanent active militia unit.

I intend to deal with that phase of the matter at a later time. I then went on to say:

> After giving the matter the best consideration I can, and having obtained the best advice I can, I am going to make two concrete suggestions. I hope the minister will give heed to them, because these suggestions are offered in the best of good faith, designed to achieve an objective which I think both he and I have at heart.
>
> The first suggestion is that the length of time of training for these men be increased to at least four months, and that we train three groups a year instead of ten. The first eight weeks of this four months' course should be designated the basic recruits' course, and the second eight weeks the trained men's weeks, and graduation being required from one course into the other.

I pause here to say that apparently the government has incorporated the principle

of that recommendation into the new scheme. For that I am grateful. It seems that the government are receptive to constructive suggestions.

Mr. POWER: We should be grateful to the hon. gentleman for making the suggestions.

Mr. HANSON (York-Sunbury): Exactly, but it is not up to me to say that. It is up to my hon. friend, and he has just done the right thing, for which I thank him.

Mr. POWER: I am doing it for the benefit of the Minister of National Defence.

Mr. HANSON (York-Sunbury): I then went on to say that I was not going to compare what we were doing with what they were doing in the United States. I quote further:

> My second concrete suggestion is this. I propose that all men, when they have received the four months' course, should be posted to the local non-permanent active militia units, not merely put on the reserve, as I understand is the present position. If I am wrong I hope my hon. friend will correct me. This would ensure their training being continuous and would prevent them from forgetting most of the rapidly given instruction already received, as will probably be the case under the present plan. It would keep up their morale, which to-day I am glad to think is magnificent. These young men have fine morale and we ought to keep that up.
>
> The non-permanent active militia units are probably able to absorb one or two groups, but their facilities for doing so would soon be overtaxed. Therefore it is extremely difficult to post the trainees from the thirty-day course to the non-permanent active militia units because of excess of numbers and lack of facilities. The saturation point would soon be reached.

That position has been given effect to, in principle if not in detail. But what bothers me and a good many people in the country is this: after we have given a four months' course how is the country going to capitalize—if I may use that term—upon the investment we have made in these young men? I am not a military man and I do not understand all the terms used by the Minister of National Defence and his colleagues. My hon. friends run off the alphabet just as people do in the United States when referring to the new deal, and it does not mean anything to me. But that is my fault. These men, as I understand it, are posted into the non-active army, but that is only on paper in many cases. When they have completed their thirty-day course, or their four months' course as it now becomes, a poll is taken as to whether they will enlist in the active army or in other active war services.

Mr. POWER: It is taken after two months.

Mr. HANSON (York-Sunbury): At some period.

Mr. RALSTON: Is my hon. friend talking about the present plan?

Mr. HANSON (York-Sunbury): I was talking about the thirty-day plan. The present plan has advanced that position somewhat, but the same basic weakness is there as was apparent under the thirty-day scheme. How is the country going to capitalize—I am not sure that is the proper term to use—how is the country going to retain its equity—if that is not too inhuman a term to use with respect to men—how is the country going to retain its right to the services of these men under the present regulations and the present plan?

Mr. REID: They will be attached to the militia.

Mr. HANSON (York-Sunbury): On paper only, and that is not good enough.

Mr. RALSTON: My hon. friend uses the word "right". I do not think he means that. He asks: how is the country going to retain its right to the services of these men? There is no question that the country retains the right to their services. If my hon. friend will permit me, perhaps he means to say, how is the country going to get the benefit of the training they have already done?

Mr. HANSON (York-Sunbury): That is the idea. The country theoretically has the right—

Mr. RALSTON: Absolutely, not theoretically.

Mr. HANSON (York-Sunbury): Well then, absolutely. The country has the right absolutely to the services of its nationals for the defence of the state.

Mr. RALSTON: No, but under these regulations.

Mr. HANSON (York-Sunbury): Under these regulations in a limited sense that is true; but the country has no right under these regulations to use these men to defend this country abroad, and that is the weakness of the whole position. The country has the right to utilize the services of these men in the event of an invasion of Canada. But time and again we have had it explained in this house by the ministry that the first line of defence in this country is not here but over there. Why, then, has the government not had the courage to go the whole way and retain the absolute right to utilize the services of these men for the defence of Canada over there, after giving them four months' training and spending the huge sums of money that have been spent on their military education? That is going the whole length and putting

the thing in a nutshell. It shows the weakness of the whole position of the government with respect to this training. The government will have to justify its failure to go the whole way before the eyes of the people of this country before the people will be satisfied. This thirty-day training plan has cost a huge sum of money. If you include the capital expenditures on the camps, the hutments, the preparation of the ground, it has cost I should say $25,000,000.

Mr. RALSTON: It is not fair to include that, is it?

Mr. HANSON (York-Sunbury): It is fair to include part of it. Just how much you should allocate to the individual training periods or for the individual trainee I do not know. I have not made a calculation. I know that this is capital expenditure, just as the purchase of a uniform is treated in the first place as capital expenditure, but the one runs off much more slowly than the other. A huge sum of money has been spent on this training plan, and if the system were to stop now, the cost per unit would be exceedingly high. I do not wish at this time to get into a discussion of the cost of the training plan because I propose to discuss that a little later. I notify the minister now that I am going to have something to say about the construction of some of these camps. I venture to suggest that in the mad rush and haste that was exhibited by the government after it really started to do something in June last, the country has lost a huge sum of money; that proper business administration was not brought to bear, and that these camps have cost at least twenty-five per cent more than they ought to have cost.

If I might digress for a moment, I took the trouble to ask the best builder I could find in New Brunswick to go over the specifications in connection with these hutments, and I know what he said about the cost of construction. When I get the break-down of these figures I hope I shall be able to demonstrate—

Mr. RALSTON: You do not hope that.

Mr. POWER: You should be sorry.

Mr. HANSON (York-Sunbury): The minister's smile and his words are very disarming. I will change my expression out of consideration for him and his feelings and say that I think I shall be able to demonstrate that the officials of this department did not have very much consideration for the public treasury. That is a substantial weakening from what I had intended to say, thanks to the disarming smile and expression of the minister. However, perhaps it serves my purpose just as well.

There is no doubt about it, Mr. Chairman, that no consideration was given to the taxpayers by the permanent officials of the army in building these hutments. Look at the specifications for the lumber that went into them and the mad haste with which the material had to be procured in order to satisfy them and keep construction going.

Take the case of Debert, about which I happen to know something. It is not one of the training centres but it will illustrate my point just as well. Requisitions were made on the Department of Munitions and Supply by the Department of National Defence for lumber of a kind and quality and of specifications which under normal lumber manufacturing conditions in eastern Canada could not readily be supplied in the quantities wanted. The big mills are manufacturing their stocks to-day based largely on the quality and calibre of the round logs which are delivered to them, and which the sawyer has to utilize to get every foot he can out of the logs. This manufacturing is done in very limited quantities of lumber of the specifications that were required by the Royal Canadian Engineers who had charge of this work.

Mr. RALSTON: Will my hon. friend name a particular sample?

Mr. HANSON (York-Sunbury): I was thinking particularly of the 10-inch lumber which had to be planed on four sides. I happen to know who bought the lumber for Debert. He was a first-class lumber buyer who had been lent to the timber controller by one of the best lumbering companies in Canada, and his services were given free. He went down to Nova Scotia to buy the timber, and because they required the timber to be delivered within such a short time he had to go hither and yon to get it, if he could get it delivered at all according to the specifications, and he had to pay very high prices for it because of the haste. Just imagine paying $31 to $35 a thousand for hemlock. Anybody in eastern Canada who knows anything about it knows that is a very high price. I have statements on my files upstairs showing that prices of $31 to $35 were paid for planed hemlock. The Minister of National Defence for Air, who comes from a lumbering family, will know what scandalous waste there is in paying prices like that.

An hon. MEMBER: What would be a fair price?

Mr. HANSON (York-Sunbury): I would say that $20 would be a big price.

Some hon. MEMBERS: Oh, oh.

Mr. HANSON (York-Sunbury): Hemlock is an inferior class of wood.

Mr. PURDY: I would hate to have to pay my men on the basis of receiving $20 a thousand for hemlock.

Mr. HANSON (York-Sunbury): I happen to have had something to do with lumbering, and the mills I represented never in their lives got $35 for hemlock. I admit that the price of $35 included truckage, although there was a siding right on the camp. But the stuff was trucked into camp from Little Mills in Colchester county. The man from whom this lumber was bought for the Debert camp was H. J. Mackenzie, a life insurance agent in the town of Truro, and he was my hon. friend's campaign manager in the last dominion election.

Mr. PURDY: On a point of order, I ask the hon. gentleman to withdraw the statement that Harry J. Mackenzie was my campaign manager.

Mr. HANSON (York-Sunbury): All right; if the hon. member denies that he was his campaign manager I will take that back. But I will say this, that he was a life insurance agent.

Mr. RALSTON: It was sold to this purchaser?

Mr. HANSON (York-Sunbury): Yes.

Mr. RALSTON: This expert purchaser?

Mr. HANSON (York-Sunbury): Yes. I will give the minister the name if he wants to know. I prefer not to put it on record, but I will tell him who he is and what firm employs him. He bought at least 280,000 feet of these boards from Mr. H. J. Mackenzie, life insurance agent of the town of Truro, who is represented to me to have been the campaign manager of the hon. member for Colchester. If the hon. member says that is not true, I accept his word absolutely. But he was not a producer, and as far as I know he did not have a dollar's interest in a lumber mill in the county of Colchester.

Mr. RALSTON: Will my hon. friend permit me? Of course, it is not in my department, and I have not heard either of the names before: I have not yet heard the name of the lumber buyer.

Mr. HANSON (York-Sunbury): I will give the minister the name of the lumber buyer.

Mr. RALSTON: I would be interested to know why this lumber buyer would go to an insurance agent to purchase.

Mr. HANSON (York-Sunbury): So would we—absolutely. I should like to know how he got in touh with Mackenzie.

[Mr. R. B. Hanson.]

Mr. RALSTON: I thought he was given a certificate of character.

Mr. HANSON (York-Sunbury): Yes. Because of the pressure on him to get the stuff in; he could not get it from the big mills in New Brunswick; he could not wait. It was the old story of "Cox can't wait." Perhaps my hon. friend knows that.

Mr. RALSTON: Yes. Who was the lumber buyer?

Mr. HANSON (York-Sunbury): The lumber buyer was a Mr. McCabe of Campbell, MacLaurin Lumber company.

Mr. PURDY: And he was a Conservative candidate in Toronto.

Mr. HANSON (York-Sunbury): I never heard of his being a candidate. I have not any idea of his politics.

Mr. PURDY: He was also president of a Conservative association.

Mr. HANSON (York-Sunbury): I hope so. I know his principal is a first-class Conservative; and he gave this man's services to the timber controller at the timber controller's request, and he operated without a dollar of expense to this government.

Mr. POWER: This looks like collusion between the Grits and the Tories. It is a "fishy" deal.

Mr. HANSON (York-Sunbury): Perhaps it is. May I ask the hon. member for Colchester if any of his production went into those camps through Mr. H. J. Mackenzie. I do not know, but I am not debarred from asking that question.

Mr. PURDY: I ask the right to answer that question here and now. Not one stick.

Mr. HANSON (York-Sunbury): I accept the hon. gentleman's statement without question. I make no charge. I do not know. But I have the right to ask that question.

Mr. GARDINER: I do not think you have.

Mr. McNEVIN: Have I not the right to say what I did this afternoon?

Mr. HANSON (York-Sunbury): Surely. The hon. member has the right to say anything he wants to say in this chamber, so long as he does not violate the rules of the house. And I have the right to criticize what he has to say. Let me proceed.

To come back to the general principles, the cost of the camps was greatly increased because of the pressure of the national defence departments to get these camps built in order that they might be put in operation. If there had

been proper business administration, these camps could have been built at a saving to the country of from one-fourth to one-third.

Mr. RALSTON: That would have meant some delay, and that would have been "red tape" then.

Mr. HANSON (York-Sunbury): Possibly it would. Of course, we always leave an avenue open.

Mr. RALSTON: It would have been "red tape."

Mr. HANSON (York-Sunbury): I do not know any people who ought to know more about red tape than the representative of the defence departments.

Mr. RALSTON: But I say that if all this business care had been taken, it would have been characterized as red tape.

Mr. HANSON (York-Sunbury): I do not think so. I believe that the tender principle in this country is still a good, sound, safe principle, even in war time.

Mr. RALSTON: I thought the man who purchased was a man who could himself purchase. I did not know that the hon. gentleman suggested that the man who purchased was not a good buyer.

Mr. HANSON (York-Sunbury): The minister has got his wires crossed.

Mr. RALSTON: What did the hon. gentleman talk about the tenders for?

Mr. HANSON (York-Sunbury): I spoke of tenders for the construction of these buildings. Perhaps it is my fault that I did not make it clear. I would not suggest for a moment that the minister's mind was obtuse; that would not be fair.

Coming back for a moment to the construction of these camps, to tell me that the camp at Fredericton cost $254,000 is to advertise to this country government incompetence and government waste, and I believe that an analysis of the whole break-down will reveal it.

Mr. RALSTON: My hon. friend will have a full opportunity to show it if he can.

Mr. HANSON (York-Sunbury): I am taking the opportunity. I am under no obligation to the minister for that.

Mr. RALSTON: My hon. friend thinks that taking up time at this stage, at the tail-end of the week, to bring up these matters, with no chance to reply, is taking a proper opportunity, when he knows that there is a committee on expenses going into these very matters?

Mr. HANSON (York-Sunbury): I think I am entitled to take my own time and my own method to make my presentation. I notice the government does not give very much consideration when they want to make a presentation. They seize time by the forelock; they take whatever time they want, and we are not to be denied the like privilege.

Mr. RALSTON: Nobody is denying any privilege. I am only saying that this is not the right way. If my hon. friend thinks this is the way in the public interest to investigate these matters, nobody is stopping him.

Mr. HANSON (York-Sunbury): The public are talking about this. My whole city is seething about the cost of these thirty-day training units.

Mr. GARDINER: That is because the hon. gentleman lives there.

Mr. HANSON (York-Sunbury): I could give the hon. gentleman a lot more. Who was put in charge of the construction?

Mr. RALSTON: I cannot tell my hon. friend.

Mr. HANSON (York-Sunbury): The Liberal zone captain in the city of Fredericton was put in charge of the construction, and he had the hiring of these men. Hon. members can imagine what happened. I will give the minister his name if he wants it. His name is Hayward Allan.

We have already dealt, sufficiently I think, with the question of the defects in the medical examination. That was discussed here on a previous occasion, and I must say that the number rejected after they got to the training centre seemed to me very large. I do not, however, think any blame can be laid on the department for that. The defect was that there was not uniformity in the preliminary medical examinations. I do not believe that the doctors who examined these men were fully instructed. The result was that a large percentage were rejected when they came to the medical board at the training centre. That may have been inevitable. One should not be dogmatic about that unless one has satisfactory proof of the facts, which I have not.

I am not going to take up the third defect of the thirty-day training scheme, connected with the question of withdrawal of men from essential war industries. We have debated that subject quite sufficiently, and I believe that the regulations, if they are to be put into effect, will provide satisfactorily for non-interference with war industry. The only argument that I can draw from that, and the recommendation I make, would be that there

should be some form of selective draft so as not to interfere with war industry or with the farm boy who cannot be spared.

I suggest that another defect of the scheme was—and this will be rectified in a measure by the four months' scheme—that it was too expensive, with a constant turnover of men. Partly to train a man and then return him to civilian life where he would forget all about this very preliminary training was unsound. The better plan would have been to complete his course entirely and then absorb him into the active army.

The plan for the future provides that the twenty-one-year-old class will be called up for training and the call will be confined to them. Six thousand will be called up the middle of this month—I think the call is out now and they will be on hand next week—and 6,000 each succeeding month; then there will be a rotation. These men will all receive basic training for two months. After this they can volunteer for service in any branch of the army, navy or air force for service overseas if openings are available, otherwise they will be retained for a further two months for specialized training in one or other of the branches of the army. Some of these young men will be taken into the active army at the end of the first two months if they wish to enlist. But there is no obligation.

I suggest to the minister in all frankness that that is a real defect in the system. He might give consideration to remedying that defect as time goes on. I am sure he is of the same mind as I am. If he cannot give effect to that principle now, will he take it into consideration and possibly at a later stage in the war give effect to it?—because I believe that should be done.

I shall not go further into this aspect of the matter, but there is one other point to which I should like to refer. The minister has partly cleared it up in the statement about the officers' training courses that are to be set up. During the present break period instructional staffs in the various centres should I think have been given a uniform course of advanced training. The young men who went into the training centres as instructors were very keen, but they themselves had had only a limited training course, because, owing to the drain that had been placed upon our instructional staff for the overseas divisions, they were new men. I think at one time I suggested to the minister that it might be good policy for the department to bring back from England some of the non-commissioned officers and other trained men, and it may be that partial effect has been given to that principle. But there was a great weakness in the system because the officers themselves knew little beyond the syllabus of the thirty day plan. They were new men as a rule—some of course were older; all they had had themselves was partial training over a period of two or three weeks, and what they could gather night by night by the most intensive study—

Mr. RALSTON: My hon. friend is wrong about that; they were not new men.

Mr. HANSON (York-Sunbury): Well a great many of them were new men. The minister says categorically they were not new men; I tell him many of them were new men in the work of instruction.

Mr. RALSTON: The way my hon. friend puts it, it sounds as if they were brought in off the street.

Mr. HANSON (York-Sunbury): No, the minister knows better than that. I did not say that, and it was no proper inference to take from what I said. These staffs of instructors consisted for the most part of officers and non-commissioned officers from the non-permanent active militia units. Their training was limited. Anyone knows how much training the non-permanent active militia had before the war. It was negligible. There could not be proper training. It is of no use to harp on that now; it is past and gone, and no one in particular is responsible—we just felt that we could not afford it. In the light of after events we see now that it was a mistake, but none of us have at a given time all the vision we ought to have in respect to what may happen in the future.

It is suggested that there should be set up between periods not only these officer training schools that the minister has I think very properly intimated will be established, one at Brockville and one in the west, but also schools at various centres for the training of the non-commissioned officers. My information is that these after all are the men who do the actual work of instructing and training under the supervision of an officer. I may be wrong, but I do not think the officers themselves are the actual instructors. I understand the instruction is given by the non-commissioned officers under the supervision of the officers. There ought to be more intensification of their instruction in order that they may be able to instruct the trainee. Whether we have enough trained instructors among the non-commissioned officers in these training camps to proceed with a four months'

syllabus I do not know, but I am informed that we have not. If we have not, the matter should be rectified, and I have no doubt it is receiving attention from those in authority.

Mr. RALSTON: I propose on Monday to give a statement in answer to what the hon. member for Vancouver South has said. I should like very much to accept the invitation of the hon. member to give a short statement with regard to the object of this training.

I regret that the leader of the opposition thought fit to bring these matters up, particularly with regard to the purchase of lumber, and so forth, in the absence of my colleague the Minister of Munitions and Supply. I shall endeavour, however, to get information about that also and give it to the committee on Monday.

Progress reported.

On motion of Mr. Ilsley the house adjourned at 6 p.m.

Monday, March 17, 1941.

The house met at three o'clock.

PRIVILEGE—MR. REID

REFERENCE TO ARTICLE IN "NEW CANADIAN" OF FEBRUARY 28—FURTHER COMMENT IN "NEWS HERALD"

Mr. THOMAS REID (New Westminster): Mr. Speaker, I again rise to a question of privilege. On Friday last when the house opened I took occasion to rise to a question of privilege in connection with an article which had appeared in a Japanese-owned and printed newspaper in Vancouver, wherein certain remarks were made concerning myself.

I am in receipt this morning of an article sent to me by air mail. This article appeared in the Vancouver *News Herald* of March 15, and under the heading "Reid Claims B.C. Members Make 'Malicious' Attack," it states:

Tom Reid (Liberal, New Westminster) issued a blanket charge in the House of Commons yesterday that fellow British Columbia members had made a "false, malicious" attack on him.

The article continues:

Refers to Green.

Reid said that he was referring especially to Howard Green (Conservative, Vancouver South) and Angus MacInnis (C.C.F., Vancouver East). He declared their attack had been over the Japanese problem in the Pacific province.

"I have never tried to raise hostile or racial hostile feeling against the Japanese," he said. "I merely tried to point out at times the dangers of giving the Japanese the franchise."

Whether the Nipponese were Canadian born or not, Reid declared, they owed their first loyalty to Tokyo, not to the dominion.

In fairness to the hon. members and in fairness to myself I believe some correction should be made, because when I spoke on Friday last I made no reference slightingly to any hon. member. I was dealing particularly with an article printed and directed against myself, which had appeared in the *New Canadian*, a paper issued by the Japanese of Vancouver.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

ROYAL CANADIAN AIR FORCE—COMMISSIONING OF OFFICERS

Mr. ROSS (Souris):

1. On completing a course of training in the R.C.A.F., what basis is followed in granting commissions and sergeant's rank?
2. What standard of examination is required for these various ranks?
3. Who is responsible for these appointments?

Mr. POWER: It is presumed that this question refers to aircrew trained under the British commonwealth air training plan.

1. Approximately 50 per cent of the aircrew trained as pilots or air observers are to be commissioned. Approximately 33 per cent are awarded on graduation and 17 per cent awarded for service in the field. The remainder of the aircrew trainees who complete their training are promoted to the rank of sergeant on graduation.

2. The standard of examinations on completion of the course is in accordance with the syllabus of training as approved by the air ministry. The examinations consist of:

Ground subjects—These include navigation, signalling, airmanship, ground gunnery and the theory of bombing.

Flying training—Consisting of aerobatics, forced landing, service manoeuvres of aircraft in the air, air gunnery and practice bombing.

Officer qualities—An assessment made by the instructors during the course of training, considering capabilities as to leadership, initiative, educational background and deportment. The assessments in the above phases of training determine the degree of efficiency of all trainees and is the basis of selection for commissioning.

3. The process of making the appointments to commissioned rank begins at the school where a board of officers is formed to recommend 50 per cent of each class for appointment to commissioned rank. This board submits their recommendations in order of priority

for the whole class. The recommendations are forwarded to the air officer commanding the command in which the school is located and he in turn submits to air force headquarters his recommendations for appointment to commissioned rank. Appointments to commissioned rank are made under the authority of the Minister of National Defence for Air. The minister's appointments are made on recommendations of a selection committee, presided over by a wing commander of the Royal Canadian Air Force and composed of representatives of the R.A.F., R.A.A.F., R.N.Z.A.F. and the R.C.A.F. All appointments made in the services of the commonwealths other than Canada are, of course, subject to their respective governmental approval.

CHATHAM, N.B., TRAINING SCHOOL

Mr. HATFIELD:

1. Who was the contractor for the construction of the foundation for the Chatham air training school at Chatham, New Brunswick?

2. After the foundation was built, was it found necessary to change the location?

3. If so, why was the change of location made?

4. What was the contractor paid for the first foundation?

5. What was the contractor paid for completing the second foundation?

Mr. POWER:

1. John Flood and Sons Ltd., 111 Princess Street, St. John, N.B.

2. Contractor had worked only four days on original site before notification of change was given. During this time he had moved his materials, tools, etc., on to job.

3. The aerodrome development committee considered the north site more suitable for the building area for the following reasons:

(a) The contours of this location are such as to make it easy to obtain adequate drainage.

(b) Water supply could be obtained more easily.

(c) The required stumping is not excessively greater than that required for the south location.

(d) Road construction need not be extensive.

(e) Closer to town than the south side location.

(f) There is room for expansion if required.

(g) It has better visibility, as it is on a higher location.

4. The contractor has not submitted an account for work done on original site, to date.

5. The total amount of the contract awarded to John Flood and Sons Ltd., which was for the buildings and foundations, was $126,590. A separate price for foundations was not tendered.

[Mr. Power.]

ALBERTA AIR TRAINING SCHOOLS

Mr. HANSELL:

1. What type of air training schools are located at Macleod, Granum and Claresholm, in the province of Alberta?

2. How much money is allocated for the construction of each of these three schools?

Mr. POWER:

1. Macleod—No. 7 service flying training school.

Granum—Relief field for Macleod, No. 7 service flying training school.

Claresholm—No. 15 service flying training school.

2. Macleod—$1,483,918.05. Granum—$218,-138.59. Claresholm—$1,531,322.30.

LIFE INSURANCE, 1930-39

Mr. MARSHALL:

1. What was the total amount of life insurance terminating during the ten-year period January 1, 1930, to December 31, 1939, under the following headings: (a) lapse; (b) surrender; (c) expiry; (d) death; (e) decrease; (f) maturity; (g) disability?

2. What was the percentage under each heading of the total terminations for the same period?

3. What was the net increase in amount of insurance in force for the same period?

Mr. ILSLEY:

1. The total gross amount of life insurance held by dominion registered companies, terminated during the ten year period January 1, 1930, to December 31, 1939, under the following headings, is as follows:—

(a) Lapse	$2,910,853,801
(b) Surrender	2,786,920,851
(c) Expiry	371,548,633
(d) Death	465,354,396
(e) Decrease	1,171,090,701
(f) Maturity	141,701,099
(g) Disability	11,420,883
Total	$7,858,890,364

2. The percentage under each heading of the total terminations for the same period is as follows:—

(a) Lapse	37·04%
(b) Surrender	35·46%
(c) Expiry	4·73%
(d) Death	5·92%
(e) Decrease	14·90%
(f) Maturity	1·80%
(g) Disability	·15%

3. The net increase in gross amount of insurance in force with dominion registered companies for the same period is $634,917,273.

*NATIONAL RESOURCES MOBILIZATION—DEPENDENTS' ALLOWANCES

Mr. MacINNIS:

1. Are the dependents of persons called for training under the National Resources Mobilization Act, who were married after July 15, 1940, eligible for dependents' allowance?

2. If dependents' allowance is paid is it at the same rate as for persons in the armed forces?

Mr. RALSTON: The answer to this question is that the regulations have not been issued in connection with this matter. They will be issued very shortly.

Mr. HOMUTH: Could the minister give us an idea as to when the regulations will be down? It is rather important.

Mr. RALSTON: I think almost at once.

PASSPORTS

Mr. REID:

1. How many passports have been issued by the government during the fiscal years 1930 to 1940?

2. What respective amounts of money have been received by the government for passports issued during the fiscal years 1930 to 1940?

Mr. MACKENZIE KING:

1. Fiscal Year

	Passports	Renewals
1st April, 1930 — 31st March, 1931	29,116	3,286
1st April, 1931 — 31st March, 1932	25,377	3,009
1st April, 1932 — 31st March, 1933	27,050	3,835
1st April, 1933 — 31st March, 1934	22,844	3,628
1st April, 1934 — 31st March, 1935	22,513	3,909
1st April, 1935 — 31st March, 1936	21,041	3,766
1st April, 1936 — 31st March, 1937	26,302	4,043
1st April, 1937 — 31st March, 1938	25,255	3,823
1st April, 1938 — 31st March, 1939	21,406	3,253
1st April, 1939 — 31st March, 1940	12,282	1,971
	233,186	34,523

Passports	233,186
Renewals	34,523
Total	267,709

2. Fees received by the government for issue and renewal of passports during the fiscal years years 1930 to 1940:

April 1, 1930 to March 31, 1931	$149,428.66
April 1, 1931 to March 31, 1932	128,091.34
April 1, 1932 to March 31, 1933	142,379.99
April 1, 1933 to March 31, 1934	121,689.35
April 1, 1934 to March 31, 1935	120,210.15
April 1, 1935 to March 31, 1936	111,773.45
April 1, 1936 to March 31, 1937	142,945.01
April 1, 1937 to March 31, 1938	130,560.20
April 1, 1938 to March 31, 1939	112,269.87
April 1, 1939 to March 31, 1940	64,368.72
	$1,223,716.74

INCOME TAX

Mr. SHAW:

How many individuals in Canada are in receipt of the following incomes, as shown by the income tax returns filed in 1940, (a) $10,000 to $25,000; (b) $25,000 to $50,000; (c) $50,000 to $100,000; (d) in excess of $100,000?

Mr. GIBSON: (a) 9,901; (b) 1,433; (c), (d), 483.

It is not deemed in public interest to answer (c) and (d) separately.

RECOGNITION OF FRENCH PROVISIONAL GOVERNMENT—FRENCH LEGATION IN OTTAWA

Mr. CHURCH:

1. Why is not the French provisional government of General de Gaulle recognized in Canada?

2. Does the government still recognize the Vichy government in view of the further demands of Germany on Vichy and its new belligerent policy against Britain, as announced by the deputy premier, Admiral Jean Darlan on March 10?

3. Have they still an embassy in Ottawa, where is it located, who is its head and who are the members of the staff?

4. Is there any inspection thereof?

5. Has Canada an envoy or consul general in France, of the Vichy government? If so, where, and what are his functions?

6. Has the government had any correspondence with the government of Vichy or of Great Britain in the matter?

Mr. MACKENZIE KING:

1. General de Gaulle has not set up a French provisional government.

2. The government's position in relation to the French government remains as it has already been stated, on more than one occasion, in the house.

3. France has a legation in Ottawa located at 42 Sussex Street. It is headed by the French Minister, M. Rene Ristelhueber. The members of the staff are:

M. Henri de Lageneste, First Secretary;
M. Jean du Boisberranger, Second Secretary;
M. Raymond Treuil, Commercial Attaché.

4. Inspection of diplomatic legations is not in accordance with international law or practice.

5. Mr. Pierre Dupuy, who was secretary in the Canadian Legation in Paris, acts as Chargé d'Affaires to the governments of France, Belgium and the Netherlands. His headquarters are in London.

6. Yes.

MILITARY DISTRICT NO. 5—M. C. FAGES

Mr. ROY:

1. Does M. C. Fages, of Quebec, hold a position in military district No. 5 at Quebec?
2. If so, what are his rank and duties?
3. What does he receive in pay and allowances?
4. Did he serve in France during the last great war?

Mr. RALSTON:

1 and 2. District recruiting officer, military district No. 5, with rank of major.

3. Pay and allowances of rank, i.e., $7.75 per diem—dependents' allowance, wife $55 per month, children, $12 per month per child up to and including two.

4. No. Canadian expeditionary force service in Canada, 1914 to 15th July, 1918, when he proceeded to England. Returned to Canada and demobilized 25th November, 1918.

OUTSTANDING TREASURY BILLS

Mr. BENCE:

1. What is the total amount of treasury bills now outstanding?
2. Upon what dates were they authorized and sold?

Mr. ILSLEY:

1. $230,000,000.
2. Authorized by order in council dated — Date sold — Amount

Dec. 11, 1940—Dec. 12, 1940....	$40,000,000
Dec. 28, 1940—Dec. 30, 1940....	35,000,000
Jan. 17, 1941—Jan. 15, 1941....	40,000 000
Jan. 31, 1941—Jan. 30, 1941....	35,000,000
Feb. 14, 1941—Feb. 13, 1941....	40,000,000
Feb. 25, 1941—Feb. 27, 1941....	40,000,000

[Mr. Mackenzie King.]

ISLE OF ORLEANS MILITARY STATION

Mr. ROY:

1. Has the Department of National Defence a military station on the Isle of Orleans?
2. Have any complaints been received respecting the manner in which it has been conducted?
3. If so, what is the nature of these complaints?
4. Has the Royal Canadian Mounted Police been instructed to make an investigation into them?
5. If so, has any report been received thereon?

Mr. RALSTON:

1. Yes.
2. No.
3, 4 and 5. Answered by No. 2.

SURPLUS APPLE CROP

Mr. ROY:

1. For what portion of the surplus apple crop of 1940-41 has the government assumed responsibility?
2. How and where was the surplus converted into apple products?
3. What apple products has the government distributed, to whom and in what quantities?

Mr. GARDINER:

1. Nova Scotia, up to 1,147,000 barrels; Ontario (a) up to 50,000 barrels; (b) for 40 cents per hundredweight to canners who have paid not less than 80 cents per hundredweight for apples 2¼ inches minimum diameter; British Columbia, up to 1,750,000 boxes.

2. By being converted into evaporated and canned apples and apple sauce in Nova Scotia. Small quantity in Ontario under 1(b).

3. British ministry of food, 23,978 cases evaporated; department of munitions and supply, 575 cases canned, 246 cases evaporated; department of justice, 30 cases evaporated; department of pensions and national health, 130 cases canned, 20 cases evaporated, 100 cases apple sauce; manufacturers for resale in the regular channels of trade, 3,106 cases canned, 143 cases evaporated, 24 half cases evaporated.

QUESTIONS PASSED AS ORDERS FOR RETURNS

MUNITIONS AND SUPPLY—DEMURRAGE ON RAILWAY CARS

Mr. AYLESWORTH:

1. How much has the government paid since the outbreak of war, (a) to the Canadian National Railways; (b) to the Canadian Pacific Railway, for demurrage on railway cars containing materials and/or munitions and/or supplies shipped to or from plants owned and/or controlled by the government, or plants engaged in the performance of contracts for the government?
2. What amount was due and unpaid as of March 1, 1941, on such accounts?

WAR SAVINGS CAMPAIGN

Mr. FRASER (Peterborough West):

1. What was the total cost of the war savings campaign?
2. What was the cost of clerical assistance for the war savings campaign?
3. What was the cost of the publicity for the war savings campaign?
4. How many people received remuneration in connection with the war savings campaign?
5. What amount has been subscribed by provinces?
6. What is the per capita amount subscribed by provinces?

RADIO LICENCES

Mr. ADAMSON:

1. How many radio licences were issued in the fiscal years 1936, 1937, 1938, 1939 and 1940?
2. How many were issued in each province in each of the above years?
3. How many prosecutions were initiated for failure to have a radio licence in each of the years 1936, 1937, 1938, 1939 and 1940?
4. How many in each province?
5. How many convictions were obtained in each of the above years?
6. How many in each province?

CONSCIENTIOUS OBJECTORS

Mr. CHURCH:

1. How many conscientious objectors are there recorded in each military district in Canada?
2. How many are, (a) natives of Canada; (b) from the continent of Europe; (c) from the British isles; (d) from the United States; (e) from other countries?
3. What action has been taken to deal with them in each military or other district?
4. What work have they been ordered to do, or assigned, since the war started; how many, and where, in each military district?

SOLDIERS' TRANSPORTATION

Mr. CHURCH:

What sums have been paid monthly, since the beginning of the war, to the Canadian Pacific railway and the Canadian National railways, or any of their services, for transportation within Canada of members of his majesty's forces in Canada?

ALDERSHOT, N.S., MILITARY CAMP

Mr. BLACK (Cumberland):

1. What has been the expenditure in connection with the military camp at Aldershot, Nova Scotia, between September 1, 1939, and February 28, 1941, for, (a) land; (b) buildings; (c) equipment; (d) improvements to grounds; (e) drainage; (f) supplies and operating costs; (g) total expenditures?
2. What additional acreage has been purchased since September 1, 1939, stating, (a) names of former owners; (b) acreage acquired from each; (c) the price asked; (d) the price paid or offered; (e) the amount claimed, offered or paid to each person in occupation or possession of any such land without his having good title thereto?
3. What is the total present acreage?
4. What has been the total expenditures to contractors or for building materials and supplies, stating, (a) names of contractors, firms or individuals who were given contracts, or orders for building material or supplies in excess of $1,000 each; (b) nature of contract and class of material or supplies and total payments or commitments in each case?
5. What has been the total expenditures for drainage, stating, (a) the quantity of drainage or sewer pipe purchased, the quality, the unit and total cost delivered; (b) the names of the firms or individuals supplying same and the unit and total expenditures for purchases from each?

LAUZON, QUE., MILITARY CAMP

Mr. ROY:

1. Have buildings been constructed at Lauzon for the accommodation of recruits?
2. If so, what was the cost?
3. Was the work done under contract or by day labour?
4. How many feet of lumber were purchased for the construction of such buildings?
5. Were tenders called for? If so, from whom were tenders received, who was the successful tenderer and at what figure?
6. Were tenders called for the feeding of recruits stationed at Lauzon? If so, who tendered, who was the successful tenderer and at what price?
7. Has the government received any complaints with regard to the management of this camp? If so, of what nature?
8. Did the Royal Canadian Mounted Police investigate such complaints?
9. Was any person discharged and were thefts discovered?
10. Was the inquiry suspended and were representations made to the government in favour of the suspension? If so, what were they?
11. Did the Royal Canadian Mounted Police submit a report to the government?

MOTION FOR PAPERS

UNEMPLOYMENT INSURANCE—ONTARIO REGIONAL SUPERINTENDENT

Mr. LOCKHART:

For a copy of all applications, correspondence, findings, reports and other documents in the possession of the government or the civil service commission, relative to the selection of regional superintendent, grade 2, for the province of Ontario, advertised under number 40-1190, in connection with the Unemployment Insurance Act.

May I ask that this motion be amended in order to simplify the work of the department, so that it will include only those who received the oral examination.

POSTAL CENSORSHIP

ARRIVAL IN CANADA OF CERTAIN BRITISH OFFICIALS

On the orders of the day:

Mr. THOMAS REID (New Westminster): I should like to direct a question to the

Postmaster General (Mr. Mulock), and I should like to preface it by saying that if a reply is not considered in the public interest I will accept that explanation. Some six weeks ago there appeared a press notice to the effect that twenty-four officials had come from Great Britain and taken up residence in Vancouver to perform certain duties in connection with postal work in that city. My question is whether these officials are here at the request of the postal authorities of Canada, and what special work is required of them.

Hon. W. P. MULOCK (Postmaster General): The hon. member was kind enough to give me notice of his question. In reply I would say that he is correct in stating that approximately twenty-four men and women were sent from England to Canada in connection with censorship work. I would advise the hon. member that the facts in connection with this matter are as follows.

Representatives of the British government, including the director of imperial censorship, interviewed me and gave me certain information of a confidential nature which I do not consider it to be in the public interest to disclose at this time. I will say, however, that for reasons given to me at that time I agreed that Great Britain should send these people to Canada to do certain highly specialized censorship work. I feel that it is the duty of my department and myself as minister to cooperate to the fullest possible extent with the British authorities in this vital war work, while safeguarding the interests of our people in Canada. I was informed at the time the arrangements were made, and I have since been advised by officials of my department, that the people referred to in the hon. member's question have certain training, experience and qualifications for a special kind of work, and their duties are not merely those of translators or supervising translators.

Although the hon. member did not specifically ask, I think he would be interested to know that while in Canada these censors are under the control and direction of the chief postal censor of Canada, and that the expense of sending them to Canada was borne entirely by the British government. Further, although payment of their salaries is provided for in a vote under censorship in the war appropriations of the Post Office Department, the arrangement is that these moneys are repayable by the British government, who are responsible for the payment of their salaries, their respective rates of pay, and any allowances they may receive. Their employment in Canada has in no way affected the employment of Canadians for Canadian postal censorship work.

[Mr. Reid.]

FEED GRAIN

INQUIRY AS TO FEDERAL ASSISTANCE IN PAYMENT OF FREIGHT RATE TO BRITISH COLUMBIA

On the orders of the day:

Mr. THOMAS REID (New Westminster): I should like to ask the Minister of Agriculture (Mr. Gardiner) if any representations have been made to the government of British Columbia offering assistance in the matter of freight rates on feed grains, similar to the assistance that has been offered other provinces.

Hon. J. G. GARDINER (Minister of Agriculture): The hon. member was kind enough to submit to me a copy of his question, and I have prepared the following answer.

No request has been received from officials of the British Columbia government to obtain for that province free freight privileges on feed grain similar to the arrangement whereby the federal government agrees to pay half the freight rate on grain from Fort William to any eastern point provided that the province of destination pays the balance of the freight costs. The federal government, however, in cooperation with the government of British Columbia, are carrying on negotiations with officials of the railways with a view to making arrangements with the railway companies whereby the higher grades of wheat in western Canada may be shipped to British Columbia at feed grain rates as provided under tariff C.F.A. 145 and C.T.C. 154, the rate which is more or less intermediate between the regular domestic and export rates on grain.

LABOUR DISPUTE

APPLICATION OF UNITED AUTOMOBILE WORKERS FOR BOARD OF CONCILIATION IN WINDSOR

On the orders of the day:

Mr. ANGUS MacINNIS (Vancouver East): I should like to direct a question to the Minister of Labour (Mr. McLarty). I have a wire from the representative of the United Automobile Workers at Windsor to the effect that they asked for a board on February 17 and that up to last Saturday no word had been received in reply from the Department of Labour. I wonder if the minister would have something to say on that.

Hon. N. A. McLARTY (Minister of Labour): The hon. member for Vancouver East (Mr. MacInnis) was kind enough to give me notice of his question. The application for a board was received on February 19, I think it was, not the 17th, but that is immaterial. The application was one that was

not in order and could not be granted. I have been in continuous contact with the officials of the Canadian Congress of Labour in connection with this matter since that time. They are thoroughly familiar with any possible projected steps, and while it is possible that Mr. Burt has not been directly communicated with, I am advised by the congress officials that he has the necessary information in connection with the matter.

FOODSTUFFS FOR GREAT BRITAIN

WHEAT AND OTHER PRODUCTS FROM THE UNITED STATES—SUPPLIES FROM CANADA

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): Mr. Speaker, I wish to direct a question to the government. In view of the fact that, as reported by the Associated Press from New York under date of March 11, "a British inquiry for 22,500,000 pounds of United States lard" was "expected to be filled to-morrow"; and considering the suggestion made in a newspaper that the United States might give wheat and other foodstuffs to Great Britain, will the government tell the house whether or not the Canadian government has taken precautionary measures to see to it that Canada supplies Britain with those foods which Canada is eminently adapted to produce for Britain?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I may say to my hon. friend that, with respect to foodstuffs supplied to Great Britain, Canada is taking every precaution to see that we go as far as possible in meeting Britain's wishes.

UNEMPLOYMENT INSURANCE

QUESTION AS TO DATE OF COMING INTO OPERATION OF ACT

On the orders of the day:

Mr. GORDON GRAYDON (Peel): May I ask the Minister of Labour (Mr. McLarty) if he would care to inform the house when the unemployment insurance scheme is likely to come into operation?

Hon. N. A. McLARTY (Minister of Labour): I have heard it suggested in this house that it is sometimes dangerous to make predictions; perhaps it would be well, therefore, if I did not endeavour to mention a definite date. I can assure the hon. member for Peel, however, that the necessary machinery is being put into operation as fast, I believe, as is possible to ensure the very earliest possible application of the act.

There is one difficulty which I know the house will appreciate, namely, that the plan has to be one hundred per cent complete before it is put into operation. It is not something that you can develop at one point and then spread it to another. In other words, before operation of the act commences the whole plan must be completely organized and ready to start as a completed task; it is not one that can be gradually developed. I can assure the hon. member that no steps are being left untaken to ensure that the act will come into operation at the earliest possible moment.

TRANSPORT COMMISSION

JUDGMENT AS TO DISCONTINUANCE OF BEISEKER-LANGDON, ALTA., RAILWAY LINE

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, on Friday last the hon. member for Bow River (Mr. Johnston) inquired in regard to the abandonment of certain railway lines in Alberta.

I have obtained some information in connection with this abandonment and may say that the judgment of the board of transport commissioners in connection with this matter includes a paragraph which reads as follows:

> Provided further, that said leave to abandon the operation of the said lines of railway in question is conditional upon the subsequent recommendation by the board, to the governor in council, for the sanction of the agreement between the Canadian National Railways and the Canadian Pacific Railway Company referred to in the application.

I am further informed that no application has been made to the board of transport commissioners by the railways concerned as contemplated in the above quoted paragraph and that it may be some little time before the contemplated application is made.

In consequence the position in regard to the grain elevators on the railway line proposed to be abandoned is unchanged.

ST. PATRICK'S DAY

SUGGESTED ADJOURNMENT AT SIX O'CLOCK

On the orders of the day:

Mr. ROBERT FAIR (Battle River): On Friday last I asked the Prime Minister whether the house would adjourn at six o'clock this evening in order that hon. members and their friends could properly celebrate St. Patrick's day. His answer at that time was that it would depend on the condition of the house to-day. I am very glad to see that the Prime Minister is in condition to be here

and would ask him for his opinion now as to the house continuing to sit after six o'clock this afternoon.

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say that judging from the condition of the hon. member who has just asked the question and the condition of other hon. members as I see them at the moment, the house will be in a first-rate shape to go on sitting this evening. Moreover, I am perfectly sure that St. Patrick will feel highly honoured if we do so.

ROYAL CANADIAN MOUNTED POLICE

STATEMENT AS TO QUESTIONING AND INVESTIGATION OF TWO JOURNALISTS

On the orders of the day:

Right Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, at the last sitting of the house on Friday the leader of the opposition (Mr. Hanson) asked me to make a statement on a certain matter to which he called my attention. I quote his words, from page 1539 of *Hansard:*

> I should like to direct the attention of the Minister of Justice (Mr. Lapointe) to an article in this week's *Saturday Night,* which just by chance relates to the Royal Canadian Mounted Police and their activities, for which body I have the greatest respect. This article purports to have been written in reply to certain statements made in this house by the minister on March 4. In the article it is categorically stated that two journalists, whose loyalty is unquestioned, namely Miss Judith Robinson and Mr. Oakley Dalgleish, have been questioned and investigated by the Royal Canadian Mounted Police. It is suggested in the article that the purpose of this questioning and investigation was to intimidate these journalists who have been critical of this government's war effort. The freedom of the press is a matter of such vital importance that I believe this house is entitled to a full and complete explanation from the minister.

Complying with the request of my hon. friend, I desire to make this statement.

In the issue of March 1 of the Toronto *Saturday Night* an article appeared by "Politicus", in which is stated:

> Politicus knows of two cases of newspaper people of the highest loyalty and integrity whom the Royal Canadian Mounted Police are investigating and on whom they have a dossier. And in neither of these cases, both journalists being people whom Politicus knows well, is there the slightest doubt of their anxiety, perhaps over-anxiety, if there can be such a thing, for Britain to win this war, and of their responsibility.

On Tuesday, March 4, I stated in the House of Commons, in effect, that the commissioner of the Royal Canadian Mounted Police had advised me that such statement was incorrect.

[Mr. Fair.]

In the issue of March 15 of Toronto *Saturday Night,* "Politicus" again refers to this matter and names the two persons to whom he had reference in his article on March 1 as Miss Judith Robinson and Mr. Oakley Dalgleish, and gives certain information which indicates that these two parties were interviewed by a member of the Royal Canadian Mounted Police particularly for the purpose of obtaining the name of the printers who printed certain posters in connection with the "Calling Canada Campaign".

On the 6th June, 1940, the commissioner received a poster called "Tanks or King, You Can't Have Both", together with a request that information be obtained as to the parties responsible for the publication or printing of the document, there being nothing on the poster indicating such information.

On the 27th June, 1940, the hon. member for Essex East (Mr. Martin)—asked a question in the house respecting "Calling Canada" advertisements, and I replied, as reported at page 1183 of *Hansard,* in effect that I was submitting the matter to the law officers and to the Secretary of State.

On the 2nd July, 1940, this matter was raised in the house by the hon. member for York West (Mr. Adamson) and I replied, as reported at page 1245 of *Hansard,* in effect, after quoting a telegram I had received from Judith Robinson, Oakley Dalgleish and J. R. Robinson, reading as follows:

> Understand you wish to investigate our organization "Calling Canada". We are at room 264 Chateau Laurier.—

that it was not my purpose to investigate these highly estimable persons, and repeated, in part, what I stated on the 27th June.

The police, as a result of the request of the 6th June, 1940, for information, made an investigation. This was carried on under the Royal Canadian Mounted Police file heading of "Poster—Tanks or King, You Can't Have Both", and all information obtained in respect to such investigation is contained in that file.

The commissioner advises that there was no investigation made of Miss Robinson or Mr. Dalgleish, nor is there any individual or personal file or dossier in the police records respecting either of these two persons. The investigation respecting the poster was completed on or about the 23rd August, 1940, and no further inquiries have been made.

Miss Robinson and Mr. Dalgleish, contrary to the statement in the Toronto *Saturday Night* "that they have both been repeatedly and excessively 'quizzed' by an officer of the R.C.M.P." were each, in fact, interviewed in connection with this matter on only one occasion.

The loyalty and integrity of Miss Robinson and Mr. Dalgleish have never been questioned. They were merely interviewed, the same as anyone else might be interviewed in the course of an inquiry, who might have information relevant to the matter under investigation.

This statement is made in answer to the request made by the leader of the opposition (Mr. Hanson) on Friday last, the 14th instant.

MILITARY TRAINING

POSITION OF ONLY SON REQUIRED BY PARENTS FOR SPRING FARM WORK

On the orders of the day:

Mr. ANTHONY HLYNKA (Vegreville): I should like to ask the Minister of National War Services whether he is prepared to make an announcement of the government's policy in regard to the postponement of the four months' military training in cases where there is only one boy in the family and the parents wholly depend on their son's help for spring work.

Hon. J. G. GARDINER (Minister of National War Services): I made a statement with regard to this matter a few days ago when the question was under discussion and in committee. I can only add to what I then said, that the regulations will be placed on the table to-morrow, and a reference to the matter will be contained in the regulations.

DEBERT MILITARY CAMP

PARTICULARS OF ACTUAL AND PROSPECTIVE EXPENDITURES ON SITE AND BUILDINGS

On the orders of the day:

Hon. J. L. RALSTON (Minister of National Defence): The leader of the opposition (Mr. Hanson) asked on March 13 for information with regard to Debert military camp. If I may be allowed, I will put it on the record now.

Total payments to January 31, 1941:	
Labour—wages	$1,985,833 00
Materials and supplies	1,896,410 00
	$3,882,243 00
Commitments made to January 31, but not paid	$ 592,610 00
Estimated probable total expenditures to March 31, to complete:	
Buildings	$4,591,571 32
Services	1,104,000 00
Two rifle ranges (not yet built)	100,000 00
	$5,795,571 32

In amplification on the matter of buildings, I may say that there are 416 buildings, providing for accommodation, messing, administration, training, hospitals, supplies and recreation; also garages for servicing unit vehicles.

There are 82 temporary buildings consisting of warehouses, stores, store sheds, latrines, et cetera.

The services consist of clearing, roads, sewers and septic tanks, water, drainage and maintenance.

To give further particulars of that: the services include:

Clearing about 1,200 acres.
Roads, about 4½ miles.
Sewers laid:
30 sewer pipe laid, 4,500 feet.
24 sewer pipe laid, 12,000 feet.
12 sewer pipe laid, 18,000 feet.
8 sewer pipe laid, 29,000 feet.
6 sewer pipe laid, 5,000 feet.
Septic tanks:
H.Q., 3rd Can. Div.
A.C.S. lines.
7th Bde. area.
9th Bde. area.
Hospital area.
Water lines:
6-inch C.I. water pipe laid 18,000 feet.
4-inch C.I. water pipe laid 28,000 feet.

I should have said that, as stated by the director of engineer services, there will also be the usual maintenance and incidental services; and this does not include, as I have made clear before, the figure with regard to land. Options have been taken on 4,020 acres at a total option price of $79,050. The Department of Justice is now working on options on a further 3,000 acres. No option value is available yet on these parcels of land.

Mr. HANSON (York-Sunbury): That does not include the airport?

Mr. RALSTON: No.

Hon. C. G. POWER (Minister of National Defence for Air): With respect to the airport, the Debert airport and magazine were originally begun as a station in the home war establishment. Recently the airport and buildings, but not the magazine, have been handed over to the Royal Air Force. At the moment it is impossible to determine what proportion of the costs will be allocated to the Royal Air Force, and naturally any future commitments will be carried out by the Royal Air Force. I am having the matter looked into in order to see what portion of the cost will be borne by Canada in that the work will be useful to Canada after the war and generally speaking as a home station, and what proportion will be borne by the Royal Air Force as a Royal Air Force station.

ROYAL CANADIAN AIR FORCE

QUESTION RESPECTING DARTMOUTH, N.S., AIRPORT CONTRACTS

On the orders of the day:

Mr. P. C. BLACK (Cumberland): May I ask the Minister of National Defence for Air (Mr. Power) when the house may expect a copy of the report of W. N. Tilley, K.C., on the Eastern Passage airport contracts?

Hon. C. G. POWER (Minister of National Defence for Air): I have not as yet had Mr. Tilley's report. As soon as I receive it I will look into it, and probably in due course lay it on the table.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, March 14, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Mr. RALSTON: On Friday the leader of the opposition and my hon. friend the member for Vancouver South made certain inquiries with regard to training camps, and certain comments thereon, and I propose to deal with them and to give the committee such information as I can in this regard. As I indicated to the committee at that time, I felt that it was necessary, although it seemed to me that this was not the place to do it, to deal with some of the matters which have been referred to by the leader of the opposition in connection with some expenditures which have been made at Debert camp and at Fredericton.

There was a vague insinuation by my hon. friend that a man named Mackenzie, of Truro, was favoured in connection with a purchase of materials because of the fact of his political affiliation. I do not know Mr. Mackenzie; I do not know anything about his occupation; and therefore I got some information from the gentleman who dealt with him.

Hon. members will understand that the purchase of timber which was made for Debert camp, amounting to something like 26 million feet, was not made by the Department of National Defence, but by the Department of Munitions and Supply through the timber controller's office.

At that time the timber controller was Mr. H. R. MacMillan. I inquired from Mr. Loren Brown, who succeeded Mr. MacMillan as timber controller. Mr. Brown communicated with Mr. McCabe, who was referred to by my hon. friend as being the man who actually made the purchase of this lumber; and here is a telegram which Mr. McCabe has sent to Mr. Brown and which Mr. Brown handed to me.

> Reference lumber purchase from H. J. Mackenzie, this lumber bought in good faith from Mackenzie who represented himself as a lumber dealer and I was not aware of any different status. The prices were fair and reasonable in fact considerably lower than other competitive market prices. Before leaving Debert the bulk of the stock had been delivered, was up to standards specified and measurement correct, as I gave it personal examination.

I do not know what my hon. friend had in mind in referring to this matter. Down in Nova Scotia, so far as I know, the people generally speaking belong to one of two parties, either the Conservative or the Liberal party. Apparently Mr. Mackenzie happened to be a Liberal. Mr. McCabe says—and Mr. McCabe was given a certificate of character by the leader of the opposition—that he purchased this lumber from Mr. Mackenzie at prices considerably lower than other competitive market prices, that the stock was up to the standard specified, and the measurement was correct. I really do not know what object or what idea my hon. friend had in bringing up this matter.

Mr. HANSON (York-Sunbury): The point was this, if the minister will allow me—that Mr. Mackenzie was not a producer, but a middleman.

Mr. RALSTON: Does my hon. friend suggest that Mr. McCabe did something wrong in not purchasing from a producer; that he has to go to a producer, he cannot purchase from anyone else who buys lumber? I submit that that is a new principle, and in enunciating it he is condemning Mr. McCabe and nobody else. As a matter of fact, Mr. McCabe, so far as I can learn, is an estimable man, and a good lumber purchaser. He purchased as cheaply as he could, at competitive prices, and at prices, he says, lower than were some others.

Mr. HANSON (York-Sunbury): Does the minister say that Mackenzie was a lumber dealer?

Mr. RALSTON: I do not know whether Mackenzie was a lumber dealer or not. I have no idea, and I say it does not make any difference, if the lumber was purchased at fair prices and prices even lower than were paid to other people. The prices paid for this lumber were certified as being fair and reasonable by the timber controller or his office at that time; and from what Mr. Brown tells me, and from my hon. friend's own recommendation of Mr. McCabe I think the committee can be satisfied that Mr. McCabe, in making this purchase, was not influenced by any consideration other than obtaining the required lumber at the proper prices. I submit that that ought to be enough. I submit with deference that the time of this committee should not be taken up with it. My hon. friend ought to have known this. He has made inquiries from the timber controller, but he saw fit to bring this matter up in the committee, and take up the time of the house, and bring the hon. member for Colchester into it, and ask him a question which I submit should not have been asked by one hon. member of another on the floor of this chamber, in order to cast some smear of political influence over this transaction.

But I have not finished with that. There was a small quantity purchased from Mackenzie, Mr. Chairman. Do you know how much? There was 26 million feet purchased at Debert, and the total amount sold by Mackenzie consisted of two lots of 100,000 feet each, and another of 80,000 feet, 280,000 in all, or a little over one per cent of the lumber which was purchased at Debert.

Now, my hon. friend says that the lumber companies which he represents—

Mr. HANSON (York-Sunbury): I did not say anything about the lumber companies which I represent.

Mr. RALSTON: My hon. friend forgets.

Mr. HANSON (York-Sunbury): If I did, that was an error.

Mr. RALSTON: Well, I read it in *Hansard* this morning. I want to be clear about it.

Mr. HANSON (York-Sunbury): What page?

Mr. RALSTON: I will find it in a moment. Page 1560:

> I happen to have had something to do with lumbering, and the mills I represented never in their lives got $35 for hemlock.

Mr. HANSON (York-Sunbury): If the minister will allow me: I used the past tense, he used the present tense. There is quite a difference. I do not represent any lumber mills to-day, but for many years I represented many lumber mills in the business world of Canada—quite large ones.

Mr. RALSTON: My hon. friend, as he knows—and it is no disgrace whatever, and no insinuation goes with it—

Mr. HANSON (York-Sunbury): Then why use the word "represents"? That was an improper thing.

Mr. RALSTON: Well, then, "represented." I am going to deal with the companies he represented—if that is good enough. The company he represented was, I am sure, the Fraser company. I have no doubt about that. Let us take the Fraser company and the payments made to them as compared with the payments made to Mackenzie. By the way, my hon. friend said something about the Fraser company not having been paid $35 for hemlock, never in their lives having got $35 for hemlock. Anybody would think that they were selling hemlock to the government and not being able to get $35 for it. My hon. friend knows perfectly well that the Fraser company do not even list hemlock and do not sell it at the present time, but he rather gave the impression that they were selling to the government and did not get $35 for it.

Mr. HANSON (York-Sunbury): I did not say anything of the sort. That is the kind of special pleading for which my hon. friend is famous.

Mr. RALSTON: I gave my hon. friend the right to speak, but I will not give him permission to interrupt me. My hon. friend referred to the companies he represented, let us say in the past, and I say that my hon. friend is suggesting that in some way or another Mackenzie got some advantage because of the fact that he happened to be of a certain political faith. That was the suggestion. If that was not the suggestion, I do not know what it was.

Mr. HANSON (York-Sunbury): All right, let it go.

Mr. RALSTON: Now, on September 6, Mackenzie sold 100,000 feet of 1 by 4, up 6/16 feet, merchantable hemlock, dressed on one side, at $31. That was delivered by truck on the job at Debert. Fraser Brothers' list price at that time for a quality of lumber which was inferior to that—although it was not

hemlock—fifth quality spruce, 1 by 6 boards—and that is inferior to merchantable hemlock—

Mr. HANSON (York-Sunbury): Is that so?

Mr. RALSTON: —was $33 delivered Montreal, $31.50 f.o.b. cars, or, translating it into the Debert figures, according to the timber controller, it would be $33 delivered by truck at Debert, compared with $31 paid to Mackenzie.

Mr. HANSON (York-Sunbury): Who said the spruce was inferior?

Mr. RALSTON: The timber controller, and anybody else. Would my hon. friend say the contrary?

Mr. HANSON (York-Sunbury): I certainly say that spruce is superior to hemlock.

Mr. RALSTON: In other words, Mackenzie's merchantable hemlock was better than Fraser's fifth quality and better spruce and sold at $2 less than Fraser's price. That is one instance with respect to the company which my hon. friend represented.

Secondly, Mackenzie sold 100,000 feet of 1 by 5, up 8/16 feet in length, of merchantable spruce, dressed on one side, and in that case he got $32 for it. That also is better lumber, I am informed, than lumber quoted by Fraser's in their list, at a price which would net $33 to the department instead of $32.

So much for that. The next lot was 80,000 feet of spruce, 1 by 5, up 8/16 feet in length, merchantable spruce, dressed on one side, matched, finished 25/32 of an inch off the face, and he got $33 for that. That was delivered by truck on the job; that is sheathing. Fraser, on the other hand, sold to the timber controller fifth quality and better spruce sheathing, $31.70 f.o.b. cars at South Nelson. With freight added, they were paying Fraser Brothers $34.20 for what Mackenzie supplied at $33.

I find no fault with the timber controller for doing that, but I say to my hon. friend that, when he starts in to insinuate there is something wrong with this particular transaction, he had better compare it with those of people he knows something about.

Mr. HANSON (York-Sunbury): The only thing I think was wrong about it, and the only thing—

Some hon. MEMBERS: Order.

Mr. HANSON (York-Sunbury): —I had in mind was that it was bought from a man who was not a producer, not in the lumber business, when it should have been bought direct from the producer.

Mr. RALSTON: Then my hon. friend's quarrel is with his friend Mr. McCabe and not with the department.

Mr. HANSON (York-Sunbury): All right, we will let it go at that.

Mr. RALSTON: No, we will not let it go at that. In other words, Fraser sheathing may have had a slight advantage in finish because it is finished on both sides and you might allow fifty cents difference for that, although there is really no extra cost in planing both sides. The Fraser sheathing was a lower grade, fifth quality, as against Mackenzie's which was merchantable grade, and it was sold at $1.20 more than Mackenzie's.

Mr. HOMUTH: But there is a difference in cost for finish on both sides.

Mr. RALSTON: I have given credit for fifty cents for finish on both sides, and still it is seventy cents above Mackenzie's lumber.

My hon. friend talked about "mills I represented" never getting $35 for hemlock. I have already said the mills he represented were not selling hemlock last fall.

Mr. HANSON (York-Sunbury): How do you know they were not?

Mr. RALSTON: Because the timber controller tells me, and the hemlock is not listed by Frasers.

Now about the price paid for hemlock. This is my hon. friend's statement:

> Just imagine paying $31 to $35 a thousand for hemlock. Anybody in eastern Canada who knows anything about it knows that is a very high price. I have statements on my files upstairs showing that prices of $31 to $35 were paid for planed hemlock. The Minister of National Defence for Air, who comes from a lumbering family, will know what scandalous waste there is in paying prices like that.

Later he said $20 would be a big price.

Mr. HANSON (York-Sunbury): So it is, for hemlock boards.

Mr. RALSTON: Well, I had my officers go over a thousand acceptances of tender in order to find the price that he says was paid for hemlock. I am surprised that my hon. friend did not bring it down instead of talking about its being up on his table. It is true that $35 was paid for 20,000 feet of hemlock—note that that is less than one-tenth of one per cent of the lumber that was used at Debert. It was for 2 by 6, ten feet long and up, of merchantable hemlock, and $37 was paid for

forty thousand feet of 2 by 8, 10 feet and up, merchantable hemlock. The timber controller at that time was H. R. MacMillan, and his officials certified that that was a fair and reasonable price. I say that as evidence against my hon. friend's statement about its being a scandalous waste. He did not even give the size; he did not indicate that it was 2 by 6 and 2 by 8, minimum 10-foot lengths.

I wonder that my hon. friend did not in his statement give the firm from which that lumber was bought.

Mr. HANSON (York-Sunbury): I did not know anything about it.

Mr. RALSTON: Well, I will tell him. It was bought from Ralph and Arthur Parsons. They are a concern in Windsor, Hants county, Nova Scotia—reputable people, probably as strong Conservatives as there are in Nova Scotia. I knew their father very well. He was in opposition in the provincial house when I happened to be there, and opposed the present premier of Nova Scotia in Hants county. If my hon. friend had told the committee that the $35 was paid, not to some bad Grit, but to a firm who are his own political friends, the story would not have sounded so well. It took me half a day or more of going over files to find out what the situation was. I make no charge whatever against Ralph and Arthur Parsons. They are reputable people, so far as I know and believe. I make no charge against Mr. McCabe for having paid it; but my hon. friend did not do himself justice when he talked about hemlock at $20 a thousand when the timber controller himself has paid $35 and $37 to my hon. friend's own political friends for the same sort of lumber.

My hon. friend talked about ten-inch lumber planed on four sides, and this was his complaint:

> Requisitions were made on the Department of Munitions and Supply by the Department of National Defence for lumber of a kind and quality and of specifications which under normal lumber manufacturing conditions in eastern Canada could not readily be supplied in the quantities wanted. The big mills are manufacturing their stocks to-day based largely on the quality and calibre of the round logs which are delivered to them, and which the sawyer has to utilize to get every foot he can out of the logs. This manufacturing is done in very limited quantities of lumber of the specifications that were required by the Royal Canadian Engineers who had charge of this work.

That is a general charge that the specifications of the Department of National Defence are such that only a very small quantity can be obtained from the mills in eastern Canada because they do not manufacture that kind of lumber. I asked my hon. friend if he would name a particular sample, and he came back with his old friend that he mentioned last November. He said:

> I was thinking particularly of the 10-inch lumber which had to be planed on four sides.

In the first place, the specifications of the Department of National Defence were prepared by the Royal Canadian Engineers in consultation with the timber controller—who knew what lumber was available—the Forest Products Laboratories, and the Canadian lumber industry. There was no hit or miss about it; the specifications were prepared having regard to the possibility of getting the lumber, and were designed to take as far as possible the logs produced in eastern Canada, including the lowest quality that would suit the purposes specified. The fact that in three months' time there was purchased, mostly in eastern Canada, nearly 80 million feet of lumber for Debert, the air training centres down there, the naval establishments, and Sussex and other military projects, would rather indicate that my hon. friend is a bit wide of the mark when he says that only small quantities could be produced of the specifications laid down.

Mr. HANSON (York-Sunbury): They were special sizes.

Mr. RALSTON: My hon. friend said the specifications were such that logs could not be got out of which to saw them.

Mr. HANSON (York-Sunbury): Well, they were very expensive.

Mr. RALSTON: They could not have been; they were dried lumber. So let us lay that ghost with regard to the Department of National Defence putting out specifications which could not be complied with.

About the 10-inch planed on four sides, we discussed that pretty thoroughly when my hon. friend and I held the little debate across the floor last November, but he does not seem satisfied yet. I should like to finish that up too, because that is the particular instance he brings forward of a specification which is undesirable.

Mr. HANSON (York-Sunbury): Not undesirable, but too high. Very desirable if you can get it, but it costs too much.

Mr. RALSTON: Undesirable, he says, from the point of view of ability to get production. Does my hon. friend know that in the whole specifications for the Department of National Defence of 26 million feet for Debert there were just 600,000 feet of this 2 by 10? Does he know there is no builder or lumberman outside of himself, if he classifies himself as

one, who will say that is a specification which could not be readily complied with under normal manufacturing conditions in eastern Canada in the quantity required? There was no difficulty in getting the lumber. It is standard for floor beams and sills; it is more easily obtained than 4 by 10's, and it is stronger.

Now, what is done with it? I explained this before, but my hon. friend did not seem to listen. It is used for floor beams and sills, the two finished pieces spiked together, making by that process a 4 by 10. In spiking them together the joints are staggered; you do not have the same thing as a single piece of 4 by 10, but the joints are broken, with the result that you get a stronger piece of timber.

The reason for the planing on four sides, about which my hon. friend complained, is, in the first place, that there is a saving in weight and therefore in freight cost. The planed material packs into a smaller space than rough lumber and is appreciably less in weight. Secondly, the planed stuff is more easily handled and therefore the work can proceed just that much more quickly. Third, it gives uniform dimensions. I think my hon. friend knows quite a bit about lumber, and he knows that rough planks—and these are rough planks—are not sawn to the exact eighth or quarter of an inch. You have to put your planks on edge to make floor beams with a post underneath, and if you have them rough-sawn, and you have to shim up in order to take care of the irregularity which exists because of the sawing. That is all done away with when you have planed, dressed pieces of timber of uniform width. Then, again, the surface of the rough lumber is not true for nailing on the floors, because there is a certain amount of unevenness and waviness since there is not the same care taken in running a piece of lumber through a big saw that there is when you run it through a planer. Fourth, with that rough lumber, the faces do not fit tightly, and therefore strength is lost.

Let me say further, and probably he knows this, too, that I am instructed that the cost of planing on four sides is practically the same as the cost of planing on two. Probably there is a little difference in power, that is all—because you have a planer with four heads, which does the same operation at one time. Our engineers advise that it is economical to have lumber planed on four sides, that it is efficient, and a common practice, and that narrow widths are uneconomical for floor beams or joists.

I am going to finish this subject about planing on four sides, even at the risk of tiring the committee. My hon. friend seems to feel that he had some better way. He said last fall, on November 15, 1940:

> It costs about $20 a thousand more—perhaps not $20, but a good deal more—to have 2 by 10's instead of 4 by 6's, which would have the same carrying strength.

There was the statement of a man whom he thought was an expert that 2 by 10's cost a great deal more than 4 by 6's, and that 4 by 6's would have just as great carrying power. I have taken the trouble to check that. I will not go into detail, but let me say that 4 by 6's cost just five per cent more than 2 by 10's, and the 2 by 10's have a carrying strength of about 33⅓ per cent more. My hon. friend can check that if he wishes to. But I hope we have finished with this matter of cost of planing on four sides, and the necessity for it, and the question whether the specifications in the Department of National Defence are made having regard to the possibility of the lumber being supplied in the market. So much for lumber.

Then, with reference to the camp at Fredericton, My hon. friend said:

> Coming back for a moment to the construction of these camps, to tell me that the camp at Fredericton cost $254,000 is to advertise to this country government incompetence and government waste, and I believe that an analysis of the whole break-down will reveal it.

I believe I can say to my hon. friend with some assurance that his break-down will not reveal either waste or incompetence.

Mr. HANSON (York-Sunbury): We have not got it yet.

Mr. RALSTON: The training centre at Fredericton was one of four three-company centres, and it cost the least of all. The original estimate made was for $270,000, and this was based on known costs of similar buildings in central camps which had been built throughout the summer. And I may say that no allowance is made for overtime work in that.

Mr. HANSON (York-Sunbury): Were there any changes—were there any land changes in the other camps?

Mr. RALSTON: I am just taking the cost of construction. And no allowance is added to these costs for high speed requirements. Taking the cost of similar buildings which had been built at other camps, they added to these costs a percentage figure for exterior services, water, sewer, power lines and roads. There was no allowance in that $270,000 for overhead or job supervision.

The actual cost of that camp, for the information of my hon. friend, was $254,000. That is to say there was a saving on the actual cost

as compared with the estimated cost of something like $16,000. I want to say that around the Fredericton camp there was to be a fence which was not be be around the other camps, and that cost about $2,500 more.

To compare with the other camps which were built—the other three-company training camps—Fredericton was the lowest of any of them, putting them on the same basis, and leaving out the fence, which was not put around all the camps.

That is different from the general experience. The general experience has been that costs have been exceeded. It has been our experience that estimated costs have been exceeded by five per cent or ten per cent. My hon. friend said that he took the trouble to ask the best builder he could find in New Brunswick to go over the specifications in connection with these hutments, and he said:

I know what he said about the cost of construction. When I get the break-down of these figures I hope I shall be able to demonstrate—

And I interrupted—

—that the officials of this department did not have very much consideration for the public treasury. That is a substantial weakening from what I had intended to say.

I would like to have my hon. friend's friend at any time go over these specifications and submit them for examination by engineers; I think what I have said would be substantiated, namely that there has been a saving in the building of that camp, and that it was built at a fair price.

Mr. SLAGHT: He will not produce it.

Mr. RALSTON: Then my hon. friend referred to another matter. And here I must confess that it is along the lines of the Mackenzie thing. He does something which he is just a bit prone to do. He seems to have an obsession with regard to this matter of patronage in the area of Fredericton, New Brunswick. He says:

The Liberal zone captain in the city of Fredericton was put in charge of the construction, and he had the hiring of these men. Hon. members can imagine what happened. I will give the minister his name if he wants it. His name is Hayward Allan.

Well, my hon. friend makes an attack against Mr. Hayward Allan. He alleges that Mr. Hayward Allan used his position there in order to further the interests of the Liberal party. He knows, and he has been told that Mr. Hayward Allan was not in charge of construction, and that the man in charge of construction was Captain Ahern.

Mr. HANSON (York-Sunbury): He was not there, let me say to my hon. friend. Hayward Allan was in charge; I saw it myself.

Mr. RALSTON: My hon. friend knows that Hayward Allan was not in charge of construction, and that Hayward Allan was not in charge of hiring the men.

Mr. HANSON (York-Sunbury): I do not know anything of the sort.

Mr. RALSTON: My hon. friend does know. My hon. friend was himself in communication with Captain Ahern. I know a lot about it. I was surprised that my hon. friend would ask an officer to come to his office to discuss these matters. The officers down there are pretty busy just now. And if my hon. friend has any complaints to make I want him to make them to me, and not to the officers who are on the job.

Captain Ahern, who was in charge of this job and who was responsible for hiring of the men, graduated from the Royal Military College in 1920, in civil and military engineering, and from McGill in 1923 in civil engineering. He followed that up by a short apprenticeship with the Westinghouse Electric. He was construction engineer for the Fraser-Brace Construction company for one and a half years. He was with the Canadian International Paper company for two and a half years. He was with the International Power and Paper company at Newfoundland, in design and construction, for one and a half years. He was with the New Brunswick International Paper company, in construction and operation, for about ten years. He joined the Royal Canadian Engineers in 1940.

Then, my hon. friend knows something else about Captain Ahern and it is this: Captain Ahern told him at that time, when he was accused that the Liberals were being given preference on the job,—he told him at that time that he had never given a Liberal vote in his riding, as far as that goes, and that his father had run at an election as a Conservative candidate. That is the man who was charged with favouring the Liberals.

Now let us turn to Allan. Allan was employed at Fredericton as civilian foreman on the work, and paid at hourly rates, like other workmen. He was first employed in July as a carpenter, at the internment camp at Little River, and the way he got the work was to apply for it in the ordinary way at Captain Ahern's office. He was not previously known to Captain Ahern. He presented no credentials of any kind, except to tell of his experience, which was generally that he had been employed as a carpenter foreman and a painter foreman; was an independent builder and had a workshop of his own in his home where he accepted contracts for various types of benchwork. He stated that he was an ex-service man and a member of the Fredericton branch of the

legion. He was taken on as a carpenter on the Little River job; was promoted to sub-foreman in a very short time, then to carpenter foreman and finally to foreman of works. That promotion was made, Captain Ahern tells me, solely on proven ability. He was sent by Captain Ahern a little later to Fredericton as foreman of works when the training camp was started, and proved a first class foreman. He is enlisting in the home war establishment of the Canadian engineers; his medical category bars him from overseas service. Captain Ahern tells me that all men were taken on personally by him, and that he so told my hon. friend.

Mr. HANSON (York-Sunbury): Captain Ahern?

Mr. RALSTON: Yes.

Mr. HANSON (York-Sunbury): I deny that absolutely. I know that Hayward Allan hired the men himself. I will put my word against Captain Ahern's right there. Ahern was only there one day a week. He had a lot of other camps that he was supervising.

Mr. RALSTON: I am telling my hon. friend what Captain Ahern instructs me, and what he instructed my hon. friend. And Captain Ahern told my hon. friend something else. He challenged my hon. friend to name one man whom he had hired or fired, promoted or demoted, because of political, racial or religious proclivities of any kind. My hon. friend did not name a man. The hon. gentleman puts Hayward Allan's name on the record here as being a man who uses his position for the purpose of forwarding his political affiliations. I say to my hon. friend that this is not fair.

Mr. HANSON (York-Sunbury): I would not bother answering that.

Mr. RALSTON: Well, I do not think there is much answer.

Mr. HANSON (York-Sunbury): I know what the local situation is down there better than Captain Ahern does.

Mr. RALSTON: If only my hon. friend would get that "local situation" out of his mind. I have had a lot of things from my hon. friend about the local situation, and I think I have unearthed more mares' nests coming from my hon. friend than from any other member of the House of Commons. If my hon. friend wants me to deal with them, I will do so, but in all fairness I suggest to him that he has said he wants to lay friendly hands on this government and help us out. I say that is not the way to lay friendly hands on any government, to spread that sort of thing when he knows better. Because of a little situation down there which does not quite suit him he thinks he can come up here and from his place on the floor of this house, and as leader of the opposition, lend his weight to a suggestion of that kind against a man who has served as faithfully as this man Allan has served. I never saw this man; I do not know anything about him. And I want to say one thing more to my hon. friend. If he does not believe what Captain Ahern says about Hayward Allan, let him ask his colleague the hon. member for Royal. He knows Allan; he is around that camp all the time and he has seen Hayward Allan in action. Ask him whether he thinks Hayward Allan is a square shooter, whether he thinks he is an excellent foreman, whether he thinks he is an experienced man, whether he thinks he is a disinterested public servant.

Mr. HANSON (York-Sunbury): I never said he does not do good work. I said he happened to be the Liberal zone captain, and I still believe that is why he was appointed.

Mr. RALSTON: Oh, no; that is not what my hon. friend said at all. The hon. gentleman is very deft at this sort of thing, but here is what he said:

> The Liberal zone captain in the city of Fredericton was put in charge of the construction, and he had the hiring of these men. Hon. members can imagine what happened.

That is the insinuation that was levelled against Allan's name. I say to my hon. friend that it is unworthy of him to do that sort of thing. That does not get us very far with the discussion of this war appropriation measure, but that is the gravamen of a good deal of what my hon. friend said at almost six o'clock on Friday afternoon, when it could not be answered, and when the Minister of Munitions and Supply was away.

Then, having dealt with that—

Mr. HANSON (York-Sunbury): For an hour.

Mr. RALSTON: My hon. friend took an hour; and I think this is worth an hour if the hon. gentleman will at last realize something else; that while this may be fair game in peace time, it is not fair game in war time. If my hon. friend has any case as to which he has made any real inquiry, in which he thinks there is some evidence that an employee of the Department of National Defence has exercised or discriminated against anybody in the Dominion of Canada because of his political affiliations, he knows that he has only to bring the matter to me. Already he has brought several such matters to my attention, and I think I have satisfied him in that respect.

Mr. HANSON (York-Sunbury): I thought they were mares' nests.

Mr. RALSTON: My hon. friend has brought these matters to my notice, and they have turned out to be mares' nests; I have shown him there was nothing in them. But down in New Brunswick men's nerves are getting frazzled because of my hon. friend constantly bringing up these matters.

My hon. friend thinks they are not mares' nests, so I will take just one case, no more. The hon. gentleman sent me a wire with regard to a man down in New Brunswick named King, who had been appointed timber buyer. This was the wire:

> I protest with all my might against appointment Thomas H. King of Moncton as timber buyer defence projects in eastern Canada. This man's wholly-owned company recently went through bankruptcy, paid dividend less than three per cent. His appointment this responsible post affront to New Brunswick lumber producers who suffered and protest to me appointment must be political. In any event should be recalled immediately.

Mr. HANSON (York-Sunbury): Hear, hear.

Mr. RALSTON: Well, I wired my hon. friend and said:

> Have referred your telegram re Thomas H. King to Mr. MacMillan, timber controller, by whom this appointment made. He will be able advise regarding your suggestion that appointment political. Neither I nor anyone this department knew anything about this appointment.

Mr. MacMillan sent me a copy of the wire which he sent to my hon. friend, the leader of the opposition, in this connection. This was the wire:

> Your telegram received. I assure you King's appointment in no way political. I have no knowledge his politics. He has been asked contribute his services for short period assist in purchasing and expediting shipment of specific items of lumber for immediate use various government construction programme. I take responsibility for his purchases.

That telegram is signed by H. R. MacMillan. That is the sort of thing my hon. friend is bringing up all the time.

Mr. HANSON (York-Sunbury): Would the minister allow me a word?

Mr. RALSTON: Certainly.

Mr. HANSON (York-Sunbury): Mr. MacMillan got rid of him just as quickly as he could; he told me so.

Mr. RALSTON: Was it political?

Mr. HANSON (York-Sunbury): I would not say it was political. It was represented to me by those who had suffered from this man that it was political.

Mr. RALSTON: Well, in all kindness I suggest to my hon. friend that he should not be so gullible when people represent things to him.

Now I should like to say a word to the hon. member for Vancouver South with regard to recruits under the National Resources Mobilization Act. I believe what the hon. gentleman had in mind was the place of recruits under that measure in the scheme of our army problem, where they fit in. First, it seems hardly necessary to repeat what has been said so many times, that the training under the National Resources Mobilization Act is for the purpose of possible needs in regard to home defence. The act itself expressly provides that the service for which men may be called out under the act is service in Canada or the territorial waters thereof.

Now may I recall the situation last summer, which has been referred to by my hon. friend the leader of the opposition, who spoke about hurry, haste and things of that kind. The unexpected had happened. The break-through had occurred; and the capitulation of Holland, Belgium and France followed the extension of German operations in Norway. No one knew what might happen. Every effort was bent to take all the measures possible to provide for the most serious contingencies. The possibilities were visualized in that fighting speech by Mr. Churchill early in June. Let me remind the house of the words with which that speech was concluded:

> And even if, which I do not for a moment believe, this island or a large part of it were subjugated and starving, then our empire beyond the seas, armed and guarded by the British fleet, will carry on its struggle until in God's good time the new world with all its power and might sets forth to the liberation and rescue of the old.

All that seems to have been forgotten by my hon. friend the leader of the opposition (Mr. Hanson). He implies in some way that speed and rapid action could have been avoided. I say that speed was essential. It was considered essential by everybody. The cry was "Get on with it—cut the red tape—never mind the cost." We got on with it, and the story of those hectic, hard-riding days from June to November is one which is, I think, a credit to the officers and men who put forward herculean efforts to get the job done.

In Canada we authorized the recruiting, up to full strength, of the non-permanent active militia, now known as the reserve army, which to-day is over 100,000 strong, apart from those who were trained and posted from the military training centres.

Mr. GREEN: Has the minister the figures of those who have been posted to the reserve units—

Mr. RALSTON: About 75,000.

Mr. GREEN: —and have not since joined the defence forces?

Mr. RALSTON: I will not look up the file now, but 175,000 odd, I think, is the total strength of the reserve army.

Mr. HANSON (York-Sunbury): That is including the 75,000?

Mr. RALSTON: Yes. To be exact, I think it is 177,000. There were 102,000 in the reserve army and around 75,000 posted from the militia training centres.

The time for the dispatch of the second Canadian division was advanced, and the announcement was made that a Canadian corps would be formed overseas. Authority was given for raising the third and fourth Canadian divisions and some additional battalions as well, and for the mobilization of thousands more of ancillary troops of the active army. Another squadron of the Royal Canadian Air Force was authorized for dispatch overseas, and authorization was given for the dispatch of Canadian troops to Newfoundland, Iceland and the Caribbean. Emergency steps were taken to increase the output of pilots and airmen both within and outside the air training plan, and hon. members will remember the pressure that was brought to bear to see if that plan could not be advanced. The veterans home guard was authorized. Every department of our war programme was speeded up, modified and supplemented in the most effective way possible having regard to the interests of Britain and our allies and the part that Canada must play. We announced many other measures which we thought were necessary in view of the menace which had so suddenly arisen. No criticism of these steps was raised, nor could it have been fairly raised by anyone at that time. The action taken was in keeping with that instituted by Mr. Churchill's government which in May created the forces that are known as the local defence forces and proceeded to the registration of almost 1,000,000 more young men preparatory to calling them up for service. The pressure was to do more, not less; and to provide for these contingencies the National Resources Mobilization Act was passed.

Then came the question of how best we could give our citizens some training having regard to the facilities and equipment available. The whole matter was fully discussed and considered by the staff and by the government. There were two essentials; the preparation of accommodation and the training of instructional staffs, and that required weeks and possibly months to accomplish. The length of the training period had to be arranged so that equipment could be provided, and at the same time it was felt to be highly desirable in the early days to inculcate into the minds of young Canadians their responsibility as citizens. The thirty-day period was adopted as meeting these conditions. There was no thought or suggestion—hon. members will not find it in any statement in *Hansard* or in any public statement by any member of this government—that thirty days' training would fit a man to take his place as a trained soldier in a fighting unit. Therefore, to take time to argue that a period of thirty days is not enough for that purpose is to set up a straw man to knock him down. There was no mystery and no politics about the thirty-day decision. The decision was made realistically, based on the situation as it existed, and based on the possibilities as they could be judged regarding the course of the war and Canada's means of waging it.

The staffs were carefully selected. These staffs were put through an intensive course of training for the responsibility which they were required to assume. Instruction and the preparation of thirty-nine centres across Canada were commenced, and by October 20 these centres were ready to take classes. Three thirty-day training periods have been held, with the result that more than 75,000 young men in Canada have had the benefit of what is probably the most effective and efficient course of basic training that has ever been furnished to men in this country in thirty days' time. They have learned something of the fundamentals of soldiering, the use of the basic arms, and they have had the benefit of the physical training and the discipline that go with army life. The training they have already had forms a most useful foundation for their complete preparation for service in the defence of Canada should they be called on.

More than that, I believe that the training and the experience they have had will be found an incentive to many of them to volunteer for active service should the call come.

Mr. HANSON (York-Sunbury): How many have volunteered so far?

Mr. RALSTON: Including the army, the navy and the air force, about 25 per cent in all, according to the figures given me, have expressed a willingness to volunteer should the necessity arise. So far, because of the comparatively few casualties, the requirements

for reinforcements have been fortunately small. Since we mobilized the third and fourth divisions there has not been any urgent or widespread call for enlistments for active service. Recruits needed for reinforcements have been furnished without difficulty simply by the allotment of quotas to the different districts. But if and when active recruiting may have to commence, I sincerely believe that a considerable proportion of these men who have had the thirty days' or four months' training—

Mr. MacNICOL: They have not had the four months' training yet.

Mr. RALSTON: —who have had the benefit of the thirty days' training or will have had the benefit of the four months' training may desire to continue their service in an active capacity. What I think the committee do not quite realize, Mr. Chairman, is that the establishment of these training centres has provided this country with an asset which would have had to be provided in any event so that we would be ready to train the maximum reinforcements that might be required for the formations now authorized. Or, to put it the other way, if we did not have the military training centres to-day, we would have had to set about building them for the training of reinforcements against the time when the maximum number might be needed.

As I stated in the house last November, there were two points about the thirty-day training plan which made modification desirable, if that could be done. One was the shortness of the period. I stress again that this was realized from the start, and the thirty-day period was adopted because of the equipment situation and because of the desirability of having as large a number as possible in these early classes. The other point was the disturbing effect which the calling-up of these men had on industry; for 30,000 a month for ten months would have meant that 300,000 would have had to make arrangements to leave their civilian occupations for one month in the year. On this latter point I have repeatedly stated that the army has recognized the necessity for the maximum possible production in this country. But with the improvement in production and supply, the equipment situation is no longer a vital factor in preventing the adoption of a longer period.

In order to make allowance for industry, we wanted to consider whether it would be necessary to adopt a system of reserve occupations such as they have in England, or whether some other plan could be evolved which would cause a minimum of dislocation, without the complicated system of reserve occupations and the enormous amount of machinery necessary to administer it. We studied the situation overseas. We found, on examining the system of reserved occupations there, that it would be highly desirable, if it could be done and still supply our needs, to work out some plan which would avoid our having to set up machinery and prescribe arbitrarily classifications and subclassifications to be excepted. On our return the present plan was worked out. It provides for four months' training—two months' basic training and two months' advanced training. This means that future additions to the reserve will be completely trained in all weapons with which, as individuals, they may be called upon to fight. It avoids the system of reserved occupations by the simple expedient of confining the calls to a very much limited group unless circumstances change materially or the numbers in this group should prove unexpectedly small. It also embodies this desirable feature, that young men at the time of their coming of age are reminded to recognize and prepare themselves for their responsibilities for the defence of Canada.

The question is asked: How does this fit in with our general army programme? What we are doing is to combine certain training facilities and establishments for training in the active army with facilities and establishments we shall be using for the training of those called up under the National Resources Mobilization Act and to help to create a trained reserve for the defence of Canada.

By and large, the military training centres which have been used for training the three classes already held under the National Resources Mobilization Act will be used for the basic training of both the active and the National Resources Mobilization Act personnel.

Mr. HANSON (York-Sunbury): Would the minister be good enough to repeat that.

Mr. RALSTON: The training centres heretofore used for the active army personnel will be used as advanced training centres for both.

Mr. HANSON (York-Sunbury): Will the minister enlarge on that? I am not sure that I caught the underlying principle.

Mr. RALSTON: There were thirty-nine reserve training centres for Canada. These training centres have been used so far for personnel under the National Resources Mobilization Act, and there are also a large number of training centres in Canada which have been used for the training of those who volunteer for overseas service and at the

present time are training for reinforcements. What this plan envisages is giving basic training to both those enlisting for active service and those called up for reserve under the National Resources Mobilization Act, generally speaking, in former militia training centres, and then sending all to advanced training centres, which will be composed of those camps where previously only the active service force were trained.

After allowance is made for other courses, there is accommodation for about 40,000 men in all for the four months' course. When the plan is fully going, there will be 40,000 men continuously in the school at any one time, and 10,000 going in at one end and coming out at the other each month.

Mr. GREEN: Does that mean 5,000 trainees and 5,000 of the active service force?

Mr. RALSTON: The figure is variable, but, speaking generally, that is correct. At the time the announcement was made, we estimated an entry of about 10,000 a month to the training centres. About 4,000 of these, we thought, would be reenforcements for the active service force, and the rest, 6,000, would be called for training under the National Resources Mobilization Act. These figures have changed, and it would appear as if, at the present time, the numbers will be in the proportion of about half active service force and half those called up under the National Resources Mobilization Act—that is, about 5,000 of each category each month, making the training establishments full at the end of four months and thereafter. It may be that the numbers required for the active service units will increase, or the reverse, in which case the numbers called under the National Resources Mobilization Act will be adjusted proportionately.

Someone may ask, will that give enough for home defence? I can answer quite frankly. As a result of reconstruction of the previous militia, now reserve army formations and units, and the number which have since been commissioned and enlisted in that force, either through volunteering or the absorption of those who have undergone compulsory training, the potential strength of the reserve army now stands at about 175,000 men. All these men have completed thirty days' training; many have years of service in the previous militia to their credit.

Mr. GREEN: Does that figure of 175,000 not include whatever number of trainees have enlisted in the fighting forces? Many thousands of trainees have enlisted in the fighting forces, either the army or the navy or the air force.

[Mr. Ralston.]

Mr. RALSTON: I have been trying to keep away from my desk; I did not want to divert to get the figures. However, I will get them.

Mr. GREEN: Does the figure of 175,000 not include all trainees, whether they have since enlisted in the fighting forces or not?

Mr. RALSTON: I have given the exact figures. The number in reserve units, not in the active service force, but those in reserve, as of March 7, 1941—those who were in the militia and not those who came under the National Resources Mobilization Act—was 102,019.

Mr. GREEN: Would that not include also any of the trainees who have actually enlisted in their reserve units?

Mr. RALSTON: Let me finish with the figures. That is the number who were volunteers, who joined the militia. Supernumerary to these, posted to these units, were a total of 76,128 of those who had come in under the National Resources Mobilization Act. That does not include any of those men who had enlisted, included in the other column, which is for the active service forces.

Mr. GREEN: Can the minister tell us how many men have taken training in the training camps? I understood him to say the number was 75,000.

Mr. RALSTON: I said 75,000, speaking roughly. I can give the exact number.

Mr. GREEN: But some of them have since gone into the fighting forces.

Mr. RALSTON: I did not know the hon. member was interested in that. I will get the exact number who have gone through training camps.

Mr. GREEN: We should know that.

Mr. RALSTON: I shall be glad to give it.

Mr. GREEN: And how many have gone into the fighting forces.

Mr. ROSS (St. Paul's): Are these 76,000 men trainees?

Mr. RALSTON: Yes.

Mr. ROSS (St. Paul's): What obligation have they when they are posted to the militia?

Mr. RALSTON: The same obligation as any other member of the militia service, and the obligation under the National Resources Mobilization Act to be called up at any time. It is expressly provided in the regulations.

Mr. GREEN: They are simply posted to these reserve units?

Mr. RALSTON: I wish to deal with that. If it is not being carried out as I would like. I want to see about it. My hon. friend has raised a point that is worth examining.

Mr. DOUGLAS (Weyburn): Will they be required to take annual training?

Mr. RALSTON: It depends on accommodation and equipment. We have 175,000 men to train in Canada, apart from over 100,000 of the active service force. It is a matter, not of requiring them to take training but of providing the equipment and facilities to give it.

Mr. ROSS (Souris): With reference to the 102,019, the figure mentioned by the minister, can he say what percentage of these men are in a category which would permit of their transfer to the active service?

Mr. RALSTON: I should think they would be classified. I shall be glad to find out. I will not make a note of it because it will be in *Hansard*.

Mr. ROSS (St. Paul's): With reference to the 76,000 trainees posted to the militia, have they joined the militia? Do they have to turn out and drill?

Mr. RALSTON: They have done thirty days' training. There is a provision in the regulations with regard to training at the armouries at headquarters. They were given the same privilege as other reserve personnel of attending training and being paid therefor if they wanted to attend headquarters, notwithstanding that they had done thirty days.

Mr. ROSS (St. Paul's): Their obligation ceases after training, apart from being liable to be called up for service? That is the only obligation they have after they are posted?

Mr. RALSTON: With all due respect to the militia, they will have had as much training as a militia man in that year.

Mr. HANSON (York-Sunbury): In any one year.

Mr. DOUGLAS (Weyburn): The militia units will require to take two nights' training a week?

Mr. RALSTON: They are paid if they attend. It is an inducement to them.

Mr. STIRLING: The minister does not wish to convey the idea that 76,000 men are now carrying on training?

Mr. RALSTON: No—does the hon. member mean at headquarters?

Mr. STIRLING: Anywhere?

Mr. RALSTON: That is the only other place. They did thirty days' intensive training, and the only other place in which they would train would be the armouries at headquarters with the rest of the unit.

Mr. STIRLING: They are now carried on reserve strength. If they are with the active service unit they are carrying on training; those in the reserve units are not, except in a certain number of cases?

Mr. RALSTON: That is correct.

Mr. GREEN: Is it not quite clear that these 75,000 or 76,000 are simply names on a wall in different reserve units, and take no part in training, but have gone back to civilian life?

Mr. RALSTON: Certainly they have gone back to civilian life and the members of the reserve unit are also back in civilian life.

Mr. GREEN: But they are training two or three nights a week.

Mr. RALSTON: These men have taken their training, which is equivalent to the training which the reserve units take at the armouries.

Mr. DOUGLAS (Weyburn): But the reserve units take thirty days in addition.

Mr. RALSTON: If the impression is left on anyone's mind that these men who trained for thirty days in the last three months are not as well trained as members of the reserve units training in the armouries, or those at camp, that impression is erroneous, and I think it would be admitted by anyone who had visited the camps, examined the syllabus and knew of the training carried on there.

Mr. STIRLING: The minister has no hold over these 76,000 who are not carrying on their training now in the reserve units?

Mr. RALSTON: The same hold as over any other member of the militia.

Mr. DOUGLAS (Weyburn): They are not attested. Is there any attestation?

Mr. RALSTON: No; there is enrolment. An enrolment form is signed.

Mr. STIRLING: May I carry that further?

Mr. RALSTON: I should be glad if the hon. member would. I want to understand it.

Mr. STIRLING: I had in mind men in southern British Columbia who passed through thirty days' training and whose names are attached to the reserve units in that neighbourhood. They are not easily getatable.

The distance is considerable, and I know of many men who would be only too glad to have an opportunity of reaching the armouries and carrying on. I know of men who for a short time after the training period were able, by getting a lift, or by some other means, to carry on, and they would write to me on occasion and ask this question: If there is no transportation, how are we expected to carry on training? It seems to me there must be a considerable proportion of the 76,000 who are in that difficult position. They cannot reach the place of training to carry on.

Mr. RALSTON: Perhaps it does not meet the situation for me to say that they are in exactly the same position as any other resident of the town who would like to join the militia voluntarily but is unable to do so because he is too far away from headquarters of the militia unit. Has the hon. member in mind forming some sort of special unit for these men? I am looking for constructive suggestions, and my hon. friend wants to be constructive.

Mr. STIRLING: I cannot say that I have found any suggestion which I can make with regard to keeping tab on these men and providing a possibility for their carrying on, but it seems to me a most desirable thing that somehow they should be able to carry on training.

Mr. HANSON (York-Sunbury): Is it not simply a physical impossibility because of location and the expense involved?

Mr. RALSTON: Notwithstanding what some of my friends on both sides of the house have represented, we feel that we have about all the reserve units we can usefully employ.

Mr. HANSON (York-Sunbury): With the accommodation.

Mr. RALSTON: Yes; and, I really think, in view of our needs.

Mr. HANSON (York-Sunbury): With the equipment available.

Mr. RALSTON: And the needs too.

Mr. GREEN: Why would it not be possible to have these men who come back to the city actually tied in with their reserve unit and train with it? It may be that men who had thirty days' training have had more training than men in the reserve army, but surely that is not a handicap. It would help other men in the reserve unit and then you would have all the reserve army together. As it is now, you send back trainees and they are simply names on a wall as far as the reserve army unit is concerned. If they had to be called out in a hurry and then fitted into a battalion or any military organization, it would take a long time to fit them in. The whole thing, it seems to me, is not being handled as efficiently as it might be. Why are they not put right into a reserve unit? They are all posted now to infantry units. Why should not some be posted to artillery units or the engineers or the army service corps? Why not allow them to carry on with other members of the reserve army?

Mr. RALSTON: My hon. friend is assuming something I do not admit. They are permitted to carry on with these other units. He says that they are names on a piece of paper. They are members of a reserve unit, and these were the instructions given. I think I am correct when I say that we expressly provided that these men, if attending training classes, were allowed pay similarly to other reserve personnel for the time they trained. It may be that there is not sufficient encouragement, but certainly the instructions were that they were to be treated exactly as members of that particular unit. My hon. friend cites a case the opposite of that mentioned by the hon. member for Yale (Mr. Stirling). He suggests an instance where the men who are trained are close to a reserve unit and, if possible, that case ought to be met. He is absolutely right in assuming that these men will provide some strength for the reserve unit. They have had intensive training, more intensive than the reserve unit can give. As a humble officer of a militia unit for a time, I remember how sketchy any training was that I was able to give the poor devils under me. But these men know something about training; they have had it intensively. The same applies where they are needed in connection with defence if there is a call. These men, particularly those trained for four months, would be a tremendous help, and an additional strength to a unit which might be called out for the defence of Canada. I shall certainly look into the question to see if a better tie-in can be made.

Mr. GREEN: Is there any reason why, when they come back, it cannot be made a part of the regulations that they shall join up and take part in the training of, say the Seaforth Highlanders in Vancouver or any other unit to which they are nominally posted? This would make for esprit de corps and pride in their regiment. As it is now they come home after the thirty days and because of the way the government has handled the matter they say, "I have done my job, all that is required of me, I don't have to be bothered

going to the militia to train two nights a week; I know more than they do." That is due to the way the government has handled it. Talk about offering them pay for two nights a week!—they can do other things with their time. These men are not told that their services are needed in the reserve unit; they think they have done their bit, and that is because of the way the government has handled the matter.

If that is to be continued with the men training for four months, then it is all the more serious. All these men should be tied in—

Mr. RALSTON: My hon. friend has said three times, "due to the way the government has handled the matter." I have not heard yet what his criticism is. I have said that they are tied in with the unit that we have provided for pay for training similarly to the other reserve personnel, and that the instructions are that they are to be treated the same as members of the unit. I am ready to be convicted if I have done something wrong or neglected to do something I should have done; the government the hon. member refers to, is your humble servant in connection with this matter, and I should be glad to know wherein we have handled the matter badly and how we can improve it.

Mr. GREEN: Perhaps it is my fault, but I do not know how to make it any plainer. A man in the riding I represent goes away for training and is posted to the Seaforth Highlanders, one of the finest regiments in Canada.

Mr. RALSTON: I was in the same brigade with them, and I agree with the hon. member.

Mr. GREEN: That regiment has a reserve unit. When these young men come back they do not feel under any obligation to go to the Seaforth Highlanders reserve battalion and join up there; they feel they have done their bit. As a matter of fact, until about a month ago I understand those men could not be attested in the reserve battalion; the orders were such that they could not be signed up as proper members of that reserve unit even if the battalion was under strength.

Mr. RALSTON: May I interrupt there? My hon. friend knows that up until a short time ago nobody could be attested in the reserve units. Recruiting stopped on August 15 and there was no recruiting for the reserve units. My hon. friend knows further that units have now been authorized to fill up to full strength, and as they supply reinforcements or as their ranks are reduced in any way, they have been authorized to recruit. These men can enlist for that purpose the same as anyone else. But I am still waiting for my hon. friend to tell me what I can do to better the situation. Does he think we should make an order requiring these men to go to drill at headquarters after they have done their training?

Mr. GREEN: Certainly. Why spend all this money giving these men all this training and then simply send them back to civilian life so that they are gone unless Canada is attacked? Why not have the regulations such that they go into a reserve unit?

Mr. CASSELMAN (Grenville-Dundas): They are not attested in a reserve unit?

Mr. RALSTON: You do not have to attest them; they are on the roll.

Mr. CASSELMAN (Grenville-Dundas): Is not the difference that they fall into two classes? Prior to the reserve army being what it is now, to belong to the non-permanent active militia unit a man was attested, and when he received notice that drill was on a certain night he had to be there or he was subject to a fine. We have added to that now between 72,000 and 80,000 men who are not in that position but are in the position that they have done their training and are told that as a result of the regulations of the department they are now part of the reserve. The only way their services can be utilized is to use the pressure which you can use under the National Resources Mobilization Act and call them out for service in camp.

Mr. RALSTON: Right, or by reason of their being posted to the unit.

Mr. BENCE: In connection with this matter of enlisting for reserve units now, are the men who enlist required to undertake to go on active service?

Mr. RALSTON: There is no regulation requiring it.

Mr. BENCE: They are in some districts, are they not?

Mr. RALSTON: Not that I know of. There are no instructions to that effect. The instructions are that as far as possible officers will endeavour to see that men are of a medical category which would make them acceptable.

Mr. BENCE: I do not mean that.

Mr. RALSTON: There are no instructions other than that.

Mr. BENCE: I had in mind seeing in the press in my own city a statement that no recruits would be taken for the 2nd battalion unless they undertook to go on active service.

Mr. RALSTON: That is the 2nd battalion that is responsible for that. It is not under instructions.

Mr. HANSON (York-Sunbury): Have they authority to do that? It does not seem to be the law.

Mr. RALSTON: I suppose the commanding officer might say, "I will not take anyone who will not agree to go overseas."

Mr. HANSON (York-Sunbury): A little pressure. With respect to the thirty-day training, is not this the position in a nutshell, that they are part of the non-permanent army *de jure,* but *de facto* they are not? If they are not joined up the instruction will in time be lost to the country. That is the principle I was arguing for. Will they not go back? I am told they will. The minister knows more about it than I do, but there seems to be a gap with respect to these trainees and their usefulness to the country after a large sum has been spent on their training. That is what I was trying to argue on Friday, only for the extension to overseas service. If the situation gets bad enough I think that ought to be done. The question of policy will have to be worked out in the course of time, subject to the trend of events. At the moment it is not necessary, but we ought to take a long view, and I suggest that one of the first questions the minister should consider is: how can these young men be made more effective for (a) non-active service and (b) active service, so that the country will not lose the benefit of the expenditure incurred for their instruction and training. This is offered in good faith, I suggest that the government give attention to the whole position in that regard.

Mr. RALSTON: I know the suggestion is offered in good faith. I have told the committee what has been done in that respect. I certainly shall give the suggestions of the leader of the opposition and the hon. member for Vancouver South and other hon. members regarding a closer tie-up between these men who have been trained and the reserve units the very best study I can. The first thing to do, however, is to get this plan started; hon. members perhaps do not realize the administrative and instructional difficulties there are in setting up these schools and installing new instructors.

Mr. MAYBANK: I should like to make a statement and ask a question so that I may get the facts definitely. As I understand it, it is now proposed that when men leave training they shall be attached actively to these various units, such as the Seaforth Highlanders?

Mr. RALSTON: The word is "posted".

Mr. MAYBANK: They are attached already in the sense that when they leave the training camp they are part of the reserve army. Let us take, say, the Seaforth Highlanders. There are openings for a relatively small number of men, say 50 or 60. You have leaving camp a much larger number, say 1,000. If you are going to say to these 1,000 men, not merely "You are attached to the reserve army", but "You are attached to the Seaforth Highlanders", then you have the Seaforth Highlanders badly swollen, and you will have difficulty in getting 1,000 of them into a place where fifty ought to be. It seems to me that is so.

Then, if you do not put the whole 1,000 of them actually into the reserve army, you are up against the proposition of deciding which fifty out of the 1,000 you will choose. This is a point to which I believe those who are advocating placing these persons in the reserve must address themselves, and unless they can offer something constructive in that respect, then nothing constructive has been offered at all. I may be wrong in that, but from the picture I have drawn from what has been said this afternoon, as well as what people have said to me from time to time, that is the problem as I see it.

You cannot put a whole 1,000 men into a particular regiment, and therefore you are up against the problem as to which ones you shall choose to take the regular training.

Mr. REID: It could be done by selectors.

Mr. MAYBANK: If that is what is being proposed, namely, something in the nature of selective draft for continued home service, all right; let us know about it. But it has not been worked out so far.

Mr. GREEN: In reply to the hon. member for Winnipeg South Centre, I would point out that there have been only 25,000 in each thirty-day period in the whole of Canada; and, as I understand it, all of these men have been posted to infantry units. There are other units—artillery, engineers, medical corps, and so on; and I say that they should be posted to and train with some particular unit—not necessarily an infantry unit, but some reserve unit. If necessary, a third battalion could be made of the infantry regiments.

Mr. MAYBANK: Are they under strength?

Mr. GREEN: The point is that those men should be posted and actively training with some militia unit. Under the new plan we are going to have only 5,000 a month for the whole of Canada. There can be no question that there is plenty of room to absorb that number across Canada. I do not see how there can be any excuse now for simply turning back those 5,000 into civil life, and not putting them into a reserve unit.

Mr. STIRLING: And letting them make the choice of unit.

Mr. DOUGLAS (Weyburn): Before the minister continues, I believe it is felt in many circles that a great deal of money is being spent on the training of these men, and that unless that training is followed up, the value of it will be almost nil. I believe we are talking at cross purposes when we say that these men are attached.

An hon. MEMBER: Posted.

Mr. DOUGLAS (Weyburn): They are not posted; they are attached.

Mr. RALSTON: "Posted" is the word.

Mr. DOUGLAS (Weyburn): Let me place before the committee a specific instance: The unit in which I am interested is a unit which is well over strength. There are something over 1,400 men in that reserve unit. There are attached or posted to it over 1,500 of these men who have taken thirty days' training. What does it mean? It simply means that some files are carried into the adjutant's office, and that they are put into a corner.

Mr. RALSTON: I would assume that the 1,500 men live nowhere near the unit.

Mr. DOUGLAS (Weyburn): They live in the area from which the unit is recruited.

Mr. RALSTON: I believe that is taken care of, from the point of view of administration, and from the point of view from which hon. members have approached it, by the fact that they are posted (*a*) to the reserve unit in the locality, or (*b*) to corps reserve.

Mr. DOUGLAS (Weyburn): As the minister states, this unit covers a considerable area. There are four rifle companies, and a headquarters company. In each of the larger towns in that area there is a company commander, and sometimes a company sergeant-major, who are responsible in the particular area from which the company is recruited for part-time training. Then they are brought together to battalion headquarters, annually, for annual training.

These men—and possibly I should use the term "trainees"—have no feeling of unity with the company or area in which they live. They are not called in for training, because the company is already over-strength. They are not called for training in the battalion. There is a cleavage there, and considerable feeling has arisen in that connection. These men do not belong to any company; they are not attached to any particular company, and are not in any platoon. They do not go to training with that unit. As a matter of fact, they are not part of the unit at all, except that their names are in the same files in the adjutant's office.

The minister has asked for some suggestion. I do not think they can be merged into a unit which is already over-strength. I do not see why another battalion could not be formed, and these men become a reserve battalion. Where one company is now training, two companies could be trained. These men who have taken thirty days' training would have a company or a platoon to which they could go, and with which they would train, having exactly the same routine they would go through if they were members of the reserve army. Otherwise they do not feel any attachment to the unit with which they are posted. Unless something of the sort is done within the year, I believe the money the Canadian people have spent on this project will have pretty well filtered away. That will happen, unless there is some way of keeping these men attached to some unit, with contacts through non-commissioned officers, officers and in this way develop an esprit de corps.

Mr. RALSTON: I do not believe I need take further time in committee by adding to what I have already said. I shall certainly take note of the observations of hon. members, and I want them to take note of what has already been done. I believe the hon. member who spoke last had the gist of the matter when he said that this was not an immediate thing. But I can see the point they are making, and therefore I will give it the best study I can.

Mr. SENN: What will be done in the event of a trainee changing his place of residence? Is there any provision whereby he would be followed up? Is there a provision that he shall notify the authorities in the event of a change of residence, or may he easily be lost?

Mr. RALSTON: I do not think there is any provision, but he is in the unit to which he has been attached.

Mr. GREEN: What provision is made for enlisting these trainees in the various fighting forces? What encouragement is given to them to enlist? I have been told that while the navy and the air force are fairly active in the camps, trying to have these young men enlist in their respective forces, the army is not doing so. I understand the army makes little or no attempt to persuade the young men to enlist in the active service force. Is that so? What provisions have been made whereby it is made easy for one of these young men to enlist in the active army?

Mr. RALSTON: I cannot say that any provisions are made, or that any pressure is brought upon them to enlist. As my hon.

friend and the committee know, and as I said the other day to the hon. member for Hastings-Peterborough, so far we have had sufficient enlistments to take care of our reenforcement requirements. The trouble is—if it is a trouble—that we have in Canada a great many men who are impatient for overseas service. Casualties have not occurred. Our reenforcements are more than up to requirements, and therefore there is not the call for recruits.

I may say that the navy, the army and the air force have a committee working at the present time with a view to what may be a joint recruiting call, having regard to the needs of the three services which we visualize this summer may be required by reason of formations going overseas. But, answering my hon. friend's question, there has not been any intensive recruiting campaign. As I said to the hon. member for Hastings-Peterborough, our difficulty is that we cannot put on these evangelistic campaigns in this war, as we did in the last one, because the need is not there as yet at least. People are complaining that we are interfering with industry, with farming and with everything else; they ask what we are going to do with the men when we do enlist them. No one realizes better than I do the fact that this has a dampening effect upon recruiting. I do not say we have not ideas in the department with regard to the matter; we have, but I would welcome any suggestions which might be made by any one in this connection.

Answering my hon. friend, there is no special effort made to get these men to enlist. What was done, as my hon. friend knows and as the house has been told, was this. They were asked in the camp whether, if an opportunity to enlist should come, they would be willing to do so. The figures I received were what I gave my hon. friend the leader of the opposition this afternoon; namely, that taking the navy, the army and the air force, about twenty-five per cent expressed their willingness to enlist if required.

Mr. GREEN: Of that number how many have actually enlisted?

Mr. RALSTON: I cannot tell my hon. friend.

Mr. GREEN: Or have that twenty-five per cent been given an actual opportunity to enlist?

Mr. RALSTON: I am telling my hon. friend the opportunity is there all the time. The way enlistments are called for is this. If a call comes from overseas for reinforcements, or if the adjutant general's office feels that in some particular service there is necessity for reinforcements, a quota is immediately made up of the reinforcements required, and that quota is apportioned to the different districts all over Canada; each district is asked for so many men. My hon. friend knows this procedure, I am sure. They have their district depots where men have enlisted, from which they have gone to the training centres; and these recruits are called for from these different training centres. Then, if there is need for more men for enlistment in place of these reinforcements, the militia units in that particular area are told that so many men are required, and they are given an opportunity to have their personnel enlist for that purpose. That is the way in which recruiting is done generally, through the militia unit. There are not usually general calls. Of course there are men from time to time who come directly to the recruiting office from the street. They enlist, and they are received, of course.

Mr. HANSON (York-Sunbury): If the minister will allow me, is that quite so? In the filling up of the quotas to which he has just referred, from the military district, is there an opportunity every day for men to enlist in the active service army? I have been told, and I should like to be corrected if I am wrong—it seems that I am very wrong most of the time, according to the minister this afternoon—

Mr. RALSTON: We are talking about something else now.

Mr. HANSON (York-Sunbury): I want to know if there is an opportunity to enlist six days in the week, whether quotas are filled up or not.

Mr. RALSTON: No, I would not say so.

Mr. HANSON (York-Sunbury): The opportunity for enlistment is very limited indeed, is it not?

Mr. RALSTON: That is correct.

Mr. HANSON (York-Sunbury): Then let us have that perfectly clear. Until there is the need of men for the active army, whether it be for service in Canada or overseas, that opportunity will continue to be very much restricted?

Mr. RALSTON: That is so.

Mr. HANSON (York-Sunbury): Well, I think that is a fair statement.

Mr. GREEN: In the case of these men who are anxious to join the army would it not be wise to let them enlist at once, even though it meant expanding the force to a

certain degree? Now that only 5,000 are being trained each month there will not be such large numbers of these men available, and surely when a man in the camp wants to enlist in the forces it should be possible for him to do so, even though it means making the forces a little larger than had been planned. It is far better for us to have too many men trained and under arms in this country, in this terrible crisis, than to have too few.

Mr. RALSTON: I can only say to my hon. friend that there I am guided by the staff. I am assured that we have ample men in Canada under this plan for any possible forseeable need for home defence. As far as the situation overseas is concerned we have ample men at the present time—I just say at the present time—for reinforcements for the troops who are overseas. The leader of the opposition has put his finger on the main point, namely, that until there are casualties or some need arises because of these formations going overseas, there is not the opportunity for any widespread enlistment. My hon. friend asks if we could not give that opportunity to a few men. What I think he has in mind is to utilize the four months' training of these men. I will give consideration to that point, as to whether possibly some special consideration could not be given in these circumstances because, as my hon. friend says, there we have trained men.

Mr. HANSON (York-Sunbury): In addition to the reason that has been given by the minister, is there not the further reason that the equipment and accommodation are not available and would require considerable extension. Is that not about right?

Mr. RALSTON: I would think so.

Mr. HANSON (York-Sunbury): I think that is a fair statement.

Mr. MARTIN: In this country there are representatives of a number of free governments, the Polish, the Norwegian, the Dutch and more recently the Belgian. They have troops in training centres in various parts of the country. What assistance, if any, is being given by the government of Canada or the Department of National Defence to these groups? What financial assistance is being given?

To give my question more force, I should like to point out to the minister that recently the Polish group appear to have had some difficulties. They have been moving from one city to another in an endeavour to find quarters for the training of their men. I think it is desirable that the minister make a statement in regard to this matter, because I know it has caused some inconvenience and, with no desire to magnify it at all, I believe there has been some friction. Are we rendering any assistance to these movements? If so, what is that assistance, and should it not go further and actually help them to get established in various communities? This difficulty now exists, and I should be very grateful if the minister would say a word about it.

Mr. RALSTON: All I can say to my hon. friend is that this is a matter for the Department of External Affairs rather than for the Department of National Defence. The assistance which is given in this connection and the arrangements which have been made have been the subject of correspondence between the Secretary of State for External Affairs and the representatives of the various governments. I am not in a position to give my hon. friend any information beyond that at the moment.

Mr. MacNICOL: When I was home last I was interviewed by a number of soldiers who had recently returned from England, for reasons into which I made no inquiry. They find it impossible to obtain positions.

Mr. RALSTON: These are discharged men?

Mr. MacNICOL: Yes; and after having been in the army for a year, more or less, they are almost unfit for employment right away. Could not the Department of National Defence connect up or work with the Department of Munitions and Supply or the Department of Labour in an endeavour to bring about the employment of these returned soldiers in some of the large factories or on some of the building programmes under the control of the department? It seems to me too bad that these men should be brought back from England and have nothing to do here. The government is financing or assisting to finance many large projects, and I do not see why the various departments could not cooperate in order to place many of these men. It is bad enough to be out of work at any time, but it is worse for a returned soldier coming home to be out of a job. Something should be done in this connection. If nothing is done it may result in the men saying things they should not say, after having been in the army and then out of it. It would relieve their anxiety if the government would see that they are placed in some of the government projects.

Mr. POWER: To answer for my colleague, the Minister of Pensions and National Health, there was put through by order in council

some time ago what is known as a rehabilitation plan which I think awards one month's pay to those who have been discharged from the army. If the man is unfit owing to his war service he obtains a pension. If he is not, the Department of Pensions and National Health is reorganizing the rehabilitation branch, and the Minister of Pensions and National Health has recently created the position of associate deputy minister to look after rehabilitation. My understanding is that the veterans assistance committees across Canada are being called in to assist in making the very placements which my hon. friend has mentioned. The veterans assistance committees in days gone by did do a valuable work. They are in touch with industry throughout the country, and they would appear to be the appropriate coordinating body as between the discharged soldier and the new industries which are being set up. I do know that the Minister of Pensions and National Health has large plans along these lines, but to what extent these plans have been completed I am not in a position to say.

Mr. MacNICOL: The minister must have read that at the recent labour conference resolutions were passed recommending that the government keep on the payroll, until they obtain employment, soldiers who have now returned. Has the minister anything to offer in that connection?

Mr. POWER: That is for the Department of National Defence, but speaking as an associate minister of the department, I certainly would not keep crocks on the payroll.

Mr. MacNICOL: Why should a returned soldier be called a crock?

Mr. POWER: If he has been discharged from the army as unfit for army service, I would not keep him on the payroll.

Mr. MacNICOL: He must have been 100 per cent fit when he joined.

Mr. POWER: If he is unfit, the question of pension arises. But to make the broad statement that a man unfit for army service should be kept in the army goes beyond anything I ever heard of. Look after him somewhere else; well and good. But I would not subscribe to the view that because a man has served in the army he should be kept perennially on the army payroll after the medical board has decided that he is not fit for active service in the army.

Mr. MARTIN: I want to come to the support of the hon. member for Davenport (Mr. MacNicol). I do not think he usually requires support, but on this occasion I think he does. The minister has not adequately covered the question put forward by the hon. member for Davenport. When a man has been taken into the army and has been discharged from further service, is the department prepared to keep him on for a certain period, until such time as he can find employment? Obviously there must be some limit to the period. I cannot fully agree with the position taken by the minister.

Mr. POWER: The rehabilitation branch is for that purpose. The suggestion, however, of the hon. member for Davenport was that the man should remain in uniform in the army, and I would say that that is not the thing to do. When the soldier is discharged as unfit he belongs to some other department. He belongs to the rehabilitation branch and should not be kept in uniform in the army. That is all I am saying. The Department of Pensions has created a rehabilitation branch. I do not know just how far the Minister of Pensions has gone with the functioning of it, but I understand that he has gone pretty far with it.

Mr. MacNICOL: A good deal of the building work now being done is under government control, and perhaps the veterans assistance committees to which the minister referred will be able to see that the discharged soldier gets some of this work.

Mr. POWER: He comes under Pensions and National Health.

Mr. MacNICOL: After the question has been thoroughly considered by the department, I think it ought to be possible, in view of the vast amount of building that is being done by the Department of Munitions and Supply, supported financially by the government, to provide for the discharged soldiers, if they are able to be reemployed, on some of these staffs.

Mr. POWER: I am under the impression that machinery does exist at the present time for taking care of these men when they are discharged. They go to the veterans assistance committees in the various cities and have their names put down for employment wherever it can be found. Whether employment has been found or whether the men are capable of doing the work required in these plants is another question.

Mr. MacNICOL: They are to receive pay for one month?

Mr. POWER: They get paid for one month.

Mr. MacNICOL: If that were extended to two or three months they might be able to find something to do.

Mr. POWER: My hon. friend will have to appeal to the generosity of the Minister of Pensions.

Mr. ROSS (Souris): The Minister of National Defence has stated that many of the trainees have volunteered to join the service. I have been concerned with the set-up of our reserve army, if something should happen overseas, which we all trust will not happen, necessitating large numbers of reinforcements. I think we should be training a reserve army immediately for reinforcements. Has the minister considered with his staff, training a reserve army composed of those within the required categories who could be transferred for training to active service? In the whole set-up of the reserve army it seems to me that we are not getting value in man-power or for the money spent should a sudden demand for reinforcements arise.

Mr. RALSTON: My hon. friend is mixing up two things. The reserve army is not for reinforcements for overseas except to the extent that the men volunteer. The staff have advised that so far as Canada's defence is concerned, our reserves are adequate. We know what our resources are overseas and what we plan for, and I have given the committee a list of the formations we are going to have. We feel satisfied that we can provide ample reinforcements for them. I do not know just what my hon. friend has in his mind when he says he is not satisfied with the set-up. We have 175,000 trainees in all in the reserve army, some with thirty days' training and some with longer periods. In addition, we have a great number of men, over 100,000, in the active service force in Canada. The defence of Canada must visualize certain scales of attack. These scales have been weighed and appraised. It is only in certain contingencies that these attacks can occur, and we all realize what will be the situation if they do occur; that is, what additional forces will be available for that purpose. In the light of all that the staff have advised me that we are making ample provision.

Just in that connection, may I be allowed to complete my statement. All these men—that is, these 175,000 men—have completed thirty days' training, and many have, to their credit, years of service in the previous militia. They represent a potential force rather than an actual one at this time because the battle of Britain is being successfully waged, and so long as that continues no heavy attack on Canada will be practical. All these are in addition to the active army formations in Canada.

I can say to the committee that, a careful appraisal having been made of the prospects and requirements in any emergency which can be reasonably foreseen, it is considered that the plan we have evolved will meet the requirements of home defence. That is not my opinion only but the opinion of the staff who have given most careful consideration to the matter, and who are responsible for advising myself and the government in that connection.

Something has been said regarding the release, to the existing reserve units, of these men who are being trained. What we plan is that where they are in localities which have reserve units, they shall be posted to those units; if they are in localities where there are no reserve units, they will be posted, after the completion of their training, to a corps reserve of the arm in which they have been trained. I have heard what hon. members have suggested in that regard and I assure them—and this is no mere formal assurance—that their suggestions will have the very best study we can give them.

If the unit is needed for home defence, they will form a useful nucleus of trained men to give added strength to that unit; and, on the other hand, as I have said regarding the men who have had thirty days' training, I believe that many of them will, by reason of their experience in army life, be ready to enlist in case a widespread call goes out for recruits for overseas service.

May I emphasize that with the large numbers of partly trained reserve personnel available the sensible course is now to see to it that so far as facilities permit, future additions to that force will be completely trained in the weapons with which, as individuals, they might later be called upon to fight.

Barring changes which no one can foresee, we envisage some 60,000 young men of the twenty-one year old class being called up for four months' compulsory training in the year.

Training this 60,000 for the reserve would allow, in our revised system of basic and advanced training centres, capacity for a further 60,000 per annum of active service personnel of other age groups. Remember that this number is the equivalent of two or two and a half divisions, and is in addition to the men we have partly trained, men of the reserve, and whatever active units there may be in Canada.

In other words, we would expect to train in an adequate and approved manner no less than 120,000 young men in Canada during the next year. Some of these, at the end of two months' basic training, on volunteering will be transferred to the Royal Canadian Navy or Royal Canadian Air Force, and the remainder to the active or reserve army as the case may be.

Let me make this clear—perhaps it needs to be emphasized a bit. The four months' training plan is not merely a National Resources Mobilization Act plan; it is not merely an active service force plan; it is a Canadian army plan. The plan will, we believe, by training men who have enlisted for overseas service, provide training for the maximum reinforcements needed for overseas. At the same time, through its training of men who are called up for training under the National Resources Mobilization Act, it will provide us with the means to assist in creating a trained reserve force which, in addition to such active units as may be allotted to that task, will suffice to meet the possible demands of home defence.

I believe that the latter part of that statement does meet what the hon. member for Souris has referred to. It is true that the reserve army is only partly trained, but it is a large army for Canadian defence. There is no doubt about that. What this plan does is to endeavour to put alongside of it—and I am as anxious as anybody to see that it not only puts alongside of but integrates with it—the men who have four months' training, in order that it may be given stiffening and made as effective as possible.

Mr. ROSS (Souris): There is not, I suppose, a standing order that these men who are in the reserve army will be in A category?

Mr. RALSTON: No.

Mr. ROSS (Souris): A great many of these men would be in a lower category and therefore would not be able to transfer.

Mr. RALSTON: I should be glad to hear from the committee—although it is a peculiar position for a minister to take—whether the categories of the reserve army should be A and B instead of including C. As the committee knows, it goes down to "C-1." That is a difference between the active and the reserve. The active does take A and B and does not take C.

Mr. GRAYDON: Has the minister any information as to how the reserve army is made up in so far as the medical categories are concerned?

Mr. RALSTON: The proportion?

Mr. GRAYDON: Yes.

Mr. RALSTON: No; I am sorry I have not. I can get it very easily.

Mr. GRAYDON: Perhaps it would be of interest to the committee.

Mr. RALSTON: It is germane to the question I have just mentioned.

[Mr. Ralston.]

Mr. FULFORD: The hon. member for Souris has just asked a question which I intended to ask. There are, however, some further questions I should like to put with regard to the present reserve army units. Will the result of the attachment of these trained men to the established unit change the present training programme in any way? Will it, for instance, change the length of time in camp? Will it change the personnel of the present units? Will the new men have to take the full training of the unit they join? As a matter of fact, I am thinking particularly of the Brockville rifles. By the time the first batch of these men are turned out, it will be just about time for the Brockville rifles to go to camp. These men, I take it, will be attached to the local regiment. They will just have finished four months in camp, and naturally will be far ahead of any training that the local unit will have, and any work they do at camp will appear very elementary to them. Will a special company be set up for them? It would seem to be a waste of effort that they should go through all the elementary training which the normal reserve unit would have to go through.

Mr. RALSTON: As I understand it, those who are in my hon. friend's vicinity who are attached to the Brockville Rifles and have finished the four months' training will not go to camp with the Brockville Rifles.

Mr. GREEN: Has the minister given any consideration to the question of the selective draft, that is, covering a wide age group and choosing by lot, rather than taking all the twenty-one year old men?

Mr. RALSTON: Yes. That is what I endeavoured to cover in the first part of the statement I made to the committee a little while ago. With a selective draft, you immediately get into difficulties with industry. We must face that fact. If we are going to have a selective draft and extend these age groups any distance, I for one believe—I do not know whether all my colleagues agree with me, but perhaps the committee may—that we must have reserved occupations for two purposes: to exempt men of the reserved occupations from being called up for training, and to refuse to accept men who volunteer; that is to say, we would say to men who want to go into the army, "No, you cannot go in because the particular occupation you are in is one so essential to industry that you can better serve your country there."

Mr. HANSON (York-Sunbury): Is that not what the principle of the selective draft implies? I may be all wrong in my understanding of what the selective principle is,

but my idea of it was that you could say, "You shall not be selected because you are more valuable to the state in some other capacity." Has that been turned down definitely?

Mr. RALSTON: We studied that in England. It involves reserved occupations, and it involves all the machinery of boards and things of that kind, and constant changes of regulations, which we think we have avoided under this system, which simply takes a very much limited age group, and cannot disturb industry seriously, but empowers the board to postpone a certain class, in order that they may have the benefit of pursuing their seasonal occupation, or matter of that kind. It avoids all complications. There was a book prepared a year and a half ago containing lists of reserved occupations; it must have extended to 150 typewritten pages.

Mr. GRAYDON: That is, in England.

Mr. RALSTON: That is what they are worrying over in England at the present time. We may have to come to it. If you take more than these twenty-one year olds you reach the stage where you disturb industry. You may have to do it, but I feel that we do not have to come to it yet, and therefore we propose this simple course of taking the twenty-one year old class, providing for postponement in cases of occupations where postponement is required, but not providing for exemptions. According to the staff, it fully supplies our needs of home defence at the present time.

Mr. HANSON (York-Sunbury): The young men are not a factor in industry.

Mr. RALSTON: Not to the same extent.

Mr. HANSON (York-Sunbury): I think we ought to welcome that statement of the minister, whether or not we agree with it.

Mr. ROWE: Some of them are a factor.

Mr. RALSTON: My hon. friend is right, some of them are. As a matter of fact, the national labour supply board were talking to me to-day with regard to a few men. I know that the mining industry say that they are training some young men; they have some twenty-one year old men in their service. Industry is cooperating in connection with this plan. We have consulted the national labour supply board; they have been in on all the conferences, and they know what is being planned.

I know of one instance in which an industry was asked, with regard to the thirty-day training, how many men would be affected who were essential to that industry. The manager sent back word, "175." The general manager did not believe that. He went down and investigated and he found that there were just three men who could not be spared. The same is true of a number of other industries. It is found that there are not many men who cannot be spared for the limited time required. There are some industries which are training young men who fall into the twenty-one year old class, and provision will have to be made in that direction.

Mr. GREEN: Is the position not the same with young men who are being trained in the technical schools under the Minister of Labour? Take young men in their teens, who are receiving training courses for industry. Shortly they will be twenty-one. Are they to go into training camps or will they remain in industry?

Mr. RALSTON: The hon. member does not want me to look a year ahead?

Mr. GREEN: That is the trouble. We are looking a couple of days ahead instead of a year.

Mr. RALSTON: That is not a fair statement. I ask my hon. friend if anyone in this war can look ahead a year and make plans further than we have made our plans. We have quite sufficient if we make the best plans we can for the formations we are providing for this year and endeavour to meet them with the man-power we have, and I do not think it is quite fair to suggest that these are two-day plans. They are no such thing. I will endeavour to give attention to what my hon. friend suggests, but it is not essential at this moment—

Mr. GREEN: Perhaps not two days, but we are not looking far enough ahead.

Mr. ROSS (Souris): Can the minister give a statement of those receiving the thirty-day training, by provinces, and then volunteering for active service?

Mr. RALSTON: Another question was asked with reference to information by provinces. I cannot give it by provinces; I can give it only by military districts.

Mr. ROSS (Souris): By military districts.

Mr. HOMUTH: Would it be possible to speed up the report on the men who go for medical examination? Industry hesitates to take the twenty-one year old class unless they have already had training. Industry hesitates to take in a great many of these boys because, in the course of a month or two, just as they are beginning to work at a job, they will be called for training. A great number of them are rejected after medical examination, but

it is so long between the time they take the medical examination and the time they get their report that it would expedite matters a great deal, so far as industry is concerned, if the report could be received sooner.

Mr. RALSTON: That ought to be done.

Mr. HOMUTH: It would help considerably.

Mr. GRAYDON: The minister made some reference to the national labour supply board.

Mr. RALSTON: Council.

Mr. GRAYDON: Is there any voice of agriculture with respect to that council, or are they going on their own, as it were, so far as selections are concerned? I am interested in it because we all realize that the shortage of labour on farms is now becoming so acute that something has to be done in that regard, and I should like to see agriculture with some representation so far as the labour supply council is concerned.

Mr. RALSTON: As regards the national labour supply council, the Minister of Labour can answer. The Department of National Defence is represented on the labour coordination board, which is the important board after all; I say this with all due respect to the national labour supply council, who are an advisory body. It is not a board which originates and carries out decisions. On the labour board the Minister of National War Services, who is also Minister of Agriculture, has direct representation.

Mr. GRAYDON: What representation is there so far as industry is concerned?

Mr. McLARTY: I do not wish to amplify anything that the Minister of National Defence has said, but in the national labour supply council the representation is directly from manufacturing industry and from labour. As the minister has said, in connection with the interdepartmental committee on labour supply, on which agriculture is represented *ad hoc,* consideration is being given at the present time to the matter of increased labour supply in that industry.

Mr. HOMUTH: Can the minister explain just what coordination there is between these two boards? I was talking the other day to a manufacturer who is doing an important job in the war. I asked him whether he was carrying on his ordinary peace-time pursuits and he said, "yes". He had built an addition for what they are doing in connection with the war. As I say, it is an important job, his being the only firm which at the time was in a position to do it. He told me he had taken in thirty farmers' sons from our territory, and in the course of a year he has made real mechanics of them. He says they are wonderful fellows, coming into industry fresh and strong and with a desire to learn. But there are thirty farmers' sons who have gone into that industry off the farms where they ought to be. It is a serious matter.

In December we had more applications for employment in our plant than we had during the depression, or at least as many. I could not understand it. We kept a record of these men and I wondered why that should be. Then for several days I checked up on the men who came and applied for work. I talked to them personally. Every one was a son of a farmer, a boy who prior to that time had been employed on his father's farm. Now he was asking for work. There are hundreds of boys in Waterloo county who have come off the farms and gone into industry in that county, and it is a serious thing for the farmer. I realize the difficulty of saying to a boy that he must stay on the farm and do that work even though there is not much compensation in it, instead of going into industry and getting higher wages than those paid on the farm. Something should be done. I was wondering whether under our national war services some action could be taken to distribute labour in such a way as not to interfere with production on the farm, because we are going to do it in our county. I know that for a fact.

Mr. GRAYDON: The difficulty raised by the hon. member for Waterloo South (Mr. Homuth) is a real one. When you talk about distributing labour, your greatest obstacle is that when you begin to distribute labour among the farmers you strike the low-wage level as against the high-wage level of industry, and perhaps at no time in our history has this matter been as acutely drawn to the attention of the public and of industry as it is to-day. I see advertisements in the papers stating that young men can leave high school and get, I believe, about fifteen dollars a month and board. That is not so very attractive when you put up against it some of the wages paid in industry. It is not a matter of being a demagogue in relation to the farmers of the country; the question is one of acute lack of parity between farm income and the income of many other industries. This disparity has become so apparent that in it lies the fundamental difficulty in distributing labour at the moment. You cannot fairly say to a farmer's son, "You stay where you are and work for next to nothing during the war, while men in other war industries are being paid a high rate of wages".

In that lies the whole kernel of the labour situation. The sooner this government acting

in conjunction with organized agriculture, comes to the point where something is done to put agriculture on more of a parity with other war industries—because it is a war industry—the sooner we shall be able to distribute labour in the national interest and for the national benefit. While the present lack of parity exists, I can readily understand the position in which the Minister of Labour finds himself in attempting to say to one man, "You stay in a low-wage category" and to another, "You go into a high-wage category." I am not in favour of low wages for the working man; in many instances he is not getting enough; but the solution is not to bring him down but to bring the farmer up, and until we come to that realization we are going to have the troubles this committee is trying to deal with now.

Mr. ROSS (St. Paul's): I have listened with great interest to the minister's description of the difficulties of this occupational selection. We ought, however, to take a longer view of this matter. The minister tells us we shall not need the same amount of judicial machinery to do it the way we are going to do it. I hope the war is going to end soon, but that is not the present consensus. The course of the war is going to change; we are going to require more and more goods, more and more war material all the time; we are going to need aeroplanes, guns and munitions. This idea of calling up the twenty-one year old men now is all very well; but some time we shall have to set up this machinery in order to make a proper selection, and appeal boards and that sort of thing, so why not start as soon as we can?

The minister says the twenty-one year old men are the ones who will be least affected. But things change so rapidly these days, by the end of this year we shall probably need all these young men who have been trained not only in the technical schools but many of them in the aeroplane factories as well. Industry is expanding; they will all be needed. Now is the time to start on the selection, rather than doing it this way now and some other way later. We should have some machinery set up now and take the long view.

Mr. HANSON (York-Sunbury): Did the minister finish his statement?

Mr. RALSTON: Yes.

Mr. HANSON (York-Sunbury): I should like to ask the Minister of National Defence for Air about the construction to be placed on the term, "home war", as used on page 1494 of *Hansard*.

Mr. POWER: With reference to air?

Mr. HANSON (York-Sunbury): I assume it is with reference to air; I had not heard the term used with reference to any other branch.

Mr. POWER: Usually we divide our estimates into three parts: overseas, home war establishment, and the joint air training plan. The home war establishment is the establishment for the defence of Canada; it operates a certain number of defence stations which are not employed in the training plan. The training plan set-up is kept separate from the home war establishment and overseas.

Mr. GILLIS: I want to come back for a moment to the question asked by the hon. member for Davenport. It is an important question, and personally I was not satisfied with the answer. I notice in the break-down of the figures under Pensions and National Health there is an appropriation of $20,000 listed for a committee on demobilization, which indicates that the government are considering the matter of demobilization. To my mind, one of the things that can hurt our war effort most at the present time is to have men who went overseas, did what they could and came back broken in health, some of them wounded, now on the street with just a month's pay and no understanding as to what is going to happen after that. Many of them have dependents.

I notice the British government have enacted legislation providing that a man remains in uniform and is taken care of by the government until he is placed at some gainful occupation. I suppose this committee has been functioning; there is an appropriation for it here and men are being demobilized, but from the answer given by the Minister of National Defence for Air apparently there is not in the department any regulation for or concrete understanding for taking care of these men. I should like to have some more definite answer than was given by the minister.

Mr. POWER: Rehabilitation is not the business of the Department of National Defence. We cannot do it. The energies of the Department of National Defence are devoted to getting the best type of men and training them to fight. When, however, a man is discharged from the army as no longer fit he should automatically go to another department. I can assure my hon. friend that the business of rehabilitation is big enough to require the work of a department that is not engaged in looking after the fighting services. The department of Pensions and National Health has had the experience of the last twenty years, since the

last war, in dealing with those questions. That department is setting up the necessary machinery to look after demobilization.

I expect that the committee on demobilization referred to by my hon. friend is a committee being organized by the Minister of Pensions and National Health, with representatives of labour and of industry, and I think some economists, in order to make a thorough study of what should be done with these men when they come back.

While this study is going on in order to formulate a broad general policy, if men are found unfit owing to war service they are pensioned. If they are not unfit owing to war service; if for some reason they are not entitled to pension, then these veterans assistance committees set up in various centres across Canada are going to endeavour to find them positions in industry.

My hon. friend says that the British government keeps such men in uniform until they obtain positions. I am not aware of such legislation as that anywhere; I do not think it would be feasible in this country to keep in the army twenty or thirty or fifty thousand men who are unfit; it would be a burden which the army should not be called upon to bear. These men should go to another department, the rehabilitation department, and I believe steps are being taken to have them do so.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. DOUGLAS (Weyburn): When the committee rose at six o'clock, the Minister of National Defence for Air was replying to a question which had been asked by the hon. member for Davenport with reference to a request made a few days ago by an organization that, with regard to men who had been discharged, the government keep them on the payroll until such time as they are placed in civilian life. The minister's mind is probably too departmentalized in the matter. I do not believe anyone was suggesting that these men should be kept on in the actual army.

Mr. POWER: That was the suggestion, and it was that suggestion to which I took exception.

Mr. MacNICOL: It was not suggested by me.

Mr. DOUGLAS (Weyburn): I do not think anyone was suggesting that. The trades and labour congress made the suggestion to the government, and I do not believe that, in the memorandum submitted, they made the suggestion the minister has indicated. Their suggestion was that those men be kept on the payroll. Whose payroll it is does not matter. It would be on the government payroll. No one was suggesting that these men could be kept on the army's strength, but it was suggested that they should be kept on the government payroll. In other words, the suggestion was that the government should recognize its responsibility to these men, just as these men in turn have recognized their responsibility to the country.

The suggestion that the veterans assistance committees can take care of these men is not practical. These committees have done some excellent work, and I know a number of men they have assisted to reestablishment in civilian life. But as the war goes on, the number of men being discharged is bound to increase, and the committees giving part time to such a task could not possibly meet the situation.

Mr. POWER: There is a whole department for that work. The Department of Pensions and National Health deals with the matter; that is their job, and it has been their job for twenty years.

Mr. DOUGLAS (Weyburn): It may be their job, but the point I make to the minister is that the job is not being done. There is scarcely a member in the House of Commons who does not know of at least a few cases respecting men who have been discharged. They come in two categories, the first category being those who have pensions coming to them. The minister knows that such pensions do not come by return of mail. The men have to make application, boards have to be set up, and a considerable length of time is required. There is an interim period. What are they to do during that period?

There is the second class of men who are not eligible for pension, and who have to make some adjustments. One month's pay does not begin to tide these men over the period of readjustment. I suggest that some time before this appropriation bill passes we ought to have a statement from the Minister of Pensions and National Health as to exactly what the government's programme is in connection with men returning to Canada for discharge. What is to happen to them during the time their applications for pensions are being investigated? Second, what will happen with respect to those men who are not eligible for pension, but who are trying to become reestablished in civilian life. We ought to

have a statement on these points, because we know that the number of men who will return and find themselves in these positions will increase. It is increasing daily.

Unless the government can give this committee a satisfactory explanation concerning their policy in this respect, we shall have a serious situation in Canada. When these men come back, are discharged and have a difficult time, it leaves a bad taste in the mouths of people across the country. It is not a good thing for those young men who are interested in entering the military services to come in contact with other men in a community who have served for a year or a year and a half, but who, upon coming back, have found it difficult to get jobs.

I am not blaming the Minister of National Defence for Air. I believe his position is quite right. No one is suggesting that the army should be responsible. Certainly, however, the government must be responsible. Unless the government is prepared to keep these men on the payroll, or unless it can set up machinery necessary to their establishment, and, if necessary, train them so that they may enter some branch of service in Canada, a difficult situation will arise. We have a responsibility to them. I hope the responsible minister will tell us, before the appropriation bill passes, just what the government proposes to do.

Mr. MARTIN: Perhaps the minister would permit me a word at this point. I have already concurred in the views expressed by the hon. member for Davenport. So as to indicate that the point before the committee is not purely academic, I would place before the minister one concrete instance, which is one of at least ten or more. I believe this instance will show that there is merit in the point raised.

On one occasion my attention was called by a United States citizen who lives in Detroit to the fact that when he had been in Toronto the day previous, a young boy had approached him, and said, "Can you lend me some money? I have just been discharged from the Essex Scottish regiment, which is at Camp Borden. I am a United States citizen, enlisted in the Canadian army, but because of the regulations"—which prevailed at that time—"which provide an oath of allegiance to His Majesty the King, I have forfeited my United States citizenship. I have now been discharged; I have no job; I cannot return to my own country, and I am really down and out." The gentleman who had been approached, who was anxious to do the right thing, told me where the boy could be found. I learned from him that the boy was at the Salvation Army hostel in Toronto, and upon receipt of that information I caused him to be brought to Windsor.

This was an instance of a man separated from his wife, one who had forfeited his United States citizenship, and could not return to that country, in spite of the efforts of our immigration branch, and our Department of External Affairs. Nothing could be done because he had lost his United States citizenship. He was without funds and without a job. Had it not been for a number of people who came to his assistance he would not have been provided for until such time as he was finally able to get a job. I say without reservation that, without any thought of coddling, we owe that type of man a definite responsibility. We should have seen to it that he had work the day after he was discharged, and that every opportunity was given to him to find a job. Through the efforts of people in the community from which I come he finally found a job.

That is only one case. I bring it up, not because of any belief that the administration is not sympathetic to the problem, but rather to impress upon the committee the fact that in this respect there is a real problem.

Mr. GRAYDON: It is perhaps unfair to ask the Minister of National Defence for Air to answer the question I have in mind, but could he ascertain for me whether the Department of Pensions and National Health has any record of the number of soldiers discharged from this war who are unemployed?

Mr. POWER: A year or so ago I could have given the number of unemployed soldiers from the last war.

Mr. HANSON (York-Sunbury): What about this war?

Mr. POWER: I have not that information, but I would be pleased to get it—if the Minister of Pensions and National Health is not in his seat to-morrow.

Mr. HANSON (York-Sunbury): The Minister of Pensions and National Health is in the chamber. Why should this problem not be dealt with now? The government is not unsympathetic.

Mr. POWER: The minister is not here; he is ill.

Mr. HANSON (York-Sunbury): I thought I saw him coming in ahead of me to-night.

Mr. POWER: No.

Mr. HANSON (York-Sunbury): I am sure I did—unless I am labouring under a delusion. The problem is a real one. There are 18,000 men, 9,000 from overseas and 9,000 in Canada.

These men have been released with thirty days' pay. I have had at least ten cases in my own community of men who have been put out of the army because of a re-boarding, and their medical category did not measure up. Some of those cases are the result of pneumonia in training camps in eastern Canada. The disease left them in bad condition.

I know of one man who had a wife and eight children, and while at Aldershot he suffered from pneumonia. He was let out of the army and was given thirty days' pay. He went away, and the last I heard of him his wife did not know where he was. She was accepting charity, and she certainly put it up to me to see what could be done for her. I could not do anything but give her something.

Mr. POWER: Did he apply for a pension?

Mr. HANSON (York-Sunbury): He could not be found, and as far as I know he has not yet been located. Of course, that is an extreme case.

Last fall the Minister of Pensions and National Health made a rather important statement setting out the whole position and showing that the government was giving consideration to the problem. The only criticism which I think can be made in fairness is that the government have not assumed the whole responsibility. They are assisting, but they are not assuming full responsibility. We asked these men to enlist; they have been turned back through no fault of their own, and I think it is up to this country to assume full responsibility for them until they can be reestablished in civil life. I ask the minister to give sympathetic consideration to this whole problem. It ought not to be such a problem with industry going ahead as I believe it is. Surely jobs can be found for these men. I am not prepared to-night to advocate that they should be given preference in the government war industry, because their physical condition may not be good enough. It is, however, a problem which the country might as well meet fairly and squarely.

Mr. POWER: I am under the impression—and I think I am right—that the problem is being faced by this rehabilitation committee which has been set up, and it is certainly being actively considered by a committee of this house. The committee has asked for an extension of its powers in order to study the whole rehabilitation question. The hon. member for Vancouver South (Mr. Green) is an assiduous follower of these committees and perhaps he has more information than I.

Mr. GREEN: That is correct.

[Mr. R. B. Hanson.]

Mr. POWER: A committee of this house is actually studying this problem, as is a committee of the department. What conclusions they have arrived at up to the present, I am unable to say. I shall be glad to advise my colleague, the Minister of Pensions and National Health, of this discussion.

Mr. HANSON (York-Sunbury): In the meantime their stomachs are not filled.

Mr. ROSS (St. Paul's): The Minister of National Defence for Air (Mr. Power), who is the acting Minister of Pensions and National Health, knows how keenly I feel about this matter. There are many of these men in my riding. Our difficulty is that democracy is slow in acting. I know the sergeant-major who is looking after these fellows out at the exhibition grounds; he knows them intimately and he has told me of the difficulty there is in getting them fixed up. A man may be discharged when in need of medical attention, and the question is where he is to go.

Mr. POWER: There would be no trouble about that; he would go to Christie street.

Mr. ROSS (St. Paul's): I have had some correspondence about this matter with the Minister of National Defence as well as with the Minister of Pensions and National Health. These men are being discharged and many of them may not be pensionable. As this sergeant-major says, unless something is done we are going to make reds of these fellows. I wish to impress upon the government the necessity of speed in getting this situation cleaned up. These fellows must not be sent out with nothing to do; they must not be allowed to go on relief. It is all very well to say that a committee has been set up to study this matter, but I should like to know what the government have done about getting in touch with the various employment agencies throughout the country, particularly in Ontario. These men should be given every possible consideration. We must not make agitators out of them. We must have speed in solving this problem.

Voluntary committees may be all right, but we want more than that. Such committees are likely to let things slide and something should be done immediately to have these men placed. We do not want any injustices. I know that in my riding many of these men have developed into agitators. We do not want that sort of thing. Perhaps these men could be kept on the strength until this pension committee gets through. I understand that at the present time they are given a month's pay; is that right?

Mr. HANSON (York-Sunbury): Yes.

Mr. ROSS (St. Paul's): If they cannot get jobs there should be some way of taking care of them in the meantime. These men are sore at being turned out. They feel that the doctors did not know what they were talking about. I cannot speak too strongly about the need for speed in getting something done in connection with these men.

Mr. CASSELMAN (Edmonton East): Having heard what other hon. members have said about this matter, I should like to give my experience in the city of Edmonton. Just before coming to Ottawa in November, I took the trouble to get from an officer of the veterans assistance committee the number of men who had been turned out, and at that time it was forty-eight. I received the last weekly report just a few days ago and this shows that the number has increased to eighty-eight, or almost double. This officer was doing all he possibly could to place men, in either permanent or temporary jobs. He is able to place only from four to five men a week and the list continues to grow. He is trying to have some of these men placed upon the waiting list for the youth training programme in order that they may obtain some extra training to fit themselves for mechanical jobs. There seems, however, to be a hold-up there, because these men must stay on the waiting list for a considerable time. Our schools out there are doing a wonderful work in taking on these men, but they have not been able to take them on as fast as the list piles up.

I should like to associate myself with those who have spoken on this matter. No doubt this committee is trying to do something, but what are these men to do in the meantime? It has been suggested that in the coming year we shall need 300,000 more workers in factories now being built and nearing completion. I wonder what coordination there is between the Department of Pensions and National Health and the Department of Labour with a view to utilizing these men in these jobs. Possibly those departments are doing something, but it seems to me that here is where some concrete progress could be made. Surely the services of these men could be utilized in some capacity.

Mr. NICHOLSON: I should like to ask the Minister of National Defence for Air what the policy is in connection with the establishment of training schools. A year ago the minister made it quite clear that no consideration would be given to representations by boards of trade or local organizations with regard to the selection of sites. I have before me the Melville *Advance* for February 20, in which is reported an interview with Pilot Officer Cecil Bass of the Royal Air Force who was on leave from Carberry, Manitoba. The report reads:

> We urged Melville to get an air port by any means possible so as to have a part in this great air development of the future. "Pull all the strings possible and get that air port somehow," he said.

I notice by the press from time to time that delegations come to Ottawa from different parts of Canada. Would the minister inform the committee what policy is followed in the selection of these sites.

Mr. HANSON (York-Sunbury): And how many applications for airports he has had.

Mr. POWER: I had imagined that after three weeks of this debate, someone might get around to talking of the Department of National Defence for Air, although for a time I was under the impression that this department was going to be forgotten entirely. I had proposed to make some kind of statement on the progress of the department, indicating what we have done and what we propose to do; and in view of the fact that one must almost barge into this debate, I might as well make a statement now as at any other time. In the course of my statement I will come to the question of the selection of aerodromes, and "pulling strings," as my hon. friend puts it. I do not propose to make a formal statement at all. I know the committee is reluctant to hear such statements and I am not particularly enamoured myself of that kind of statement, but in an informal way I should like to discuss the air training plan in particular and to explain to the committee in a broad and general way just where the money which the committee is asked to vote this year—$250,000,000—is going.

As I said this afternoon in answer to a question by the leader of the opposition (Mr. Hanson), the estimates, broadly speaking, are divided into three parts. It is proposed to spend during the year 1941-42: on the home war establishment, $154,000,000; on the overseas war establishment, $15,800,000. Then there is the commonwealth air training plan, and if the committee will permit me I shall deal for the moment only with the commonwealth air training plan, being quite willing to answer in due course any questions that may be asked with reference to the other two branches of the service.

There has been a great deal of confusion in the minds of the public and of members of the house and in the press as to the air training plan. It is a huge, complex and complicated undertaking, but in a word it is this: The government of Canada is a contractor for the whole British empire to turn out—and this

is what I wish to emphasize—an output of air crews, consisting of pilots, gunners and observers. That is the job of work we undertook to do. All else—aerodromes, buildings, aeroplanes, trained technicians, instructors—is only incidental to the process of doing the job we were asked to do, namely, to turn out thousands of pilots, gunners and observers, and I submit to the committee that we should be judged on the results of the job of work which we have been asked to do.

We are at the same time partners and contractors for our partners. The partners are the United Kingdom, New Zealand, Australia and Canada. We are contracting, but at the same time we are contributing, in that we contribute about 65 per cent of the joint funds and 90 per cent of the raw material, which is the young men who go into the plan and afterwards become the output, the air crews that are handed over to the Royal Air Force as members of that force. We are producing for the Royal Air Force the human units which belong to the Royal Air Force as they are graduated from our schools. I hope to make that clear to-night because I have not perhaps made it clear enough on other occasions when I have addressed the house. Our contract calls for the delivery of a certain number of human units at certain specified times.

Canada was selected from among the nations of the commonwealth to undertake this job, partly on account of our freedom from prospective attack, partly on account of our proximity to the United States, which would furnish us with a supply of raw material, and partly on account of our proximity to the United Kingdom, which would also supply us with material, and which was close enough and accessible enough to make delivery of the output easy. Fourth, I suggest that Canada was chosen because of the reputation of Canadian youth for efficiency and gallantry during the last war as members of the Royal Air Force and of the air arm of the navy.

A large part of the energies of the officers, staff and men of the Royal Canadian Air Force is devoted to this job. We might have preferred; I imagine that most of the officers of the air force would have preferred, a more direct contribution, that is to say, that we send over more all-Canadian squadrons. We were, however, asked to do this job as a matter of empire cooperation. It was believed, and I think in the event it will be proved, that the belief was founded upon common sense and reason, that by pooling the efforts of the empire to produce these young men and put them in the firing line, we would do much better than if each part of the commonwealth endeavoured to carry on, on its own.

Mr. HANSON (York-Sunbury): The minister is speaking of the work of fighting over there.

Mr. POWER: No; I say that in order to get more of these trained fighters over there, it was considered best to coordinate the efforts of the empire in this commonwealth training plan, that eventually by that means we would get more and perhaps better trained fighters over there within possibly a shorter time than would likely be the case if each part of the empire started out on its own to raise so many squadrons here and so many squadrons there. That is an entirely different set-up from the army.

Mr. ROWE: Can the minister indicate how many there are now?

Mr. POWER: I am not permitted to tell the committee the number of graduates from the air training plan schools.

Mr. CASSELMAN (Grenville-Dundas): Nor the number being trained?

Mr. ROWE: I ask the minister's pardon if I embarrassed him with my question. He had stated that he wished the plan to be judged by results, and therefore I thought my question was a reasonable one.

Mr. POWER: I am very much afraid that the results will not be known until later in the war and possibly not until afterwards. In the meantime I shall endeavour to indicate to the committee as best I can just what success there has been.

In 1940 there were pre-zero arrangements. The plan itself actually started in April, 1940. It started with 168 pupils, and I remember that there were bursts of ribald laughter all across Canada at that time that we should be proposing to win the war with a schedule of 168 pupils. It was said by everyone both in the house and in the press that you could not win a war with a schedule.

Mr. HANSON (York-Sunbury): What was said in the house?

Mr. POWER: I think it was said in the house, but I acquit my hon. friend of having said it. You cannot win a war with a schedule, I admit, but a schedule is an indication of study and planning, and the only way you can win a war is by studying and planning, and producing and getting the men at the right place at the right time. During the months of May and June last year, we did have a period of anxiety when it appeared evident that it would be very

difficult for us to get our supplies to carry on. I pass over that; it has already been discussed.

In November last I was able to tell the house that, certain classes having graduated, certain pilots and other air crew having been produced, the plan was no longer an experiment; it was a success in that we knew that we could produce. But it remained to be seen whether we could succeed in mass production. To-day I am able to say that, with 60 per cent of the plan in operation, and about ten production lines, that is series of schools, operating, we know now what we can do and we have gone in for mass production and have succeeded. Not only have we succeeded in producing what was originally intended in the plan, we have almost doubled it. Let me give figures—which do not represent the actual statistics—to illustrate my point. Supposing, when the plan was conceived and when it was started back in April, it was considered that the output on the 28th February, 1941, should be, let us say, 500 gunners, observers and pilots; not only have we achieved that figure, but we have achieved almost a thousand; to be nearer the mark, let us put it at, say, 950, because we were 5 per cent below the doubled figure which was our second target. There is a good deal of confusion about this; I do not mean that we have doubled the plan; we have simply accelerated so as to get more schools operating, more production lines, if you like, and more output at the time when, we figured, that output would be most needed; that is, now.

Mr. HANSON (York-Sunbury): Has there not been a reduction in the length of the course, too?

Mr. POWER: Yes. I am going to explain later the reasons for that, but I am now explaining the results. I am not asking for any particular commendation or praise of us, because the results have not been achieved entirely by our own efforts. Some having been due to fortuitous circumstances; some, to change of plan by the Royal Air Force, and some, to other factors; and, as I expect to say in a moment, in some instances we accelerated and perhaps may have reached a danger point in the plan generally.

Mr. ROSS (St. Paul's): And the men themselves.

Mr. POWER: No, not the men.

Mr. ROSS (St. Paul's): I mean the calibre of the men.

Mr. POWER: No; the calibre of the men is all right.

Mr. HANSON (York-Sunbury): I think the hon. member meant that the young men themselves are entitled to a meed of praise.

Mr. POWER: Oh, certainly.

Mr. ROSS (St. Paul's): That is what I meant.

Mr. POWER: Certainly, and the instructors; the members of the air force, and everyone who put his shoulder to the wheel in order to get this thing done.

I wish to make it clear that we never intended to double the plan; that is, double the number of schools, of aircraft, of output; all we did intend to do and what we have succeeded in doing was so to accelerate the output that at a given time it was almost double what it had been proposed it should be.

With all the units in operation in September, 1941, the plan will automatically flatten out and the number which it was intended to produce at that time will be produced.

Mr. HANSON (York-Sunbury): Can the minister say with safety approximately what the flow will be at that time?

Mr. POWER: I am not even allowed to say that. I have the figures, and would be glad to give them in confidence to my hon. friend, but I cannot say publicly what the flow will be.

Mr. HANSON (York-Sunbury): I am not disagreeing with the minister.

Mr. POWER: The reason is obvious, that the lines of battle could easily be figured out if it were known how many pilots, how many gunners, how many observers were sent overseas. The enemy could then readily know how many squadrons there would be in Great Britain at a given time, and we are told that we must not give that information. I would only be too glad to do so if I could. The important thing I should like to impress upon the committee is that we have produced air crew now, and that a large number of them are overseas taking part at the present moment in the fighting over Britain.

I have in my desk a statement which I happened to read in the press two days ago, which will indicate that, even though we are not supposed to say anything about the success of the air training plan, our friends in the United Kingdom are not so chary of talking about it. In the Ottawa *Journal* of March 11 appears a dispatch giving an account of Sir Archibald Sinclair's statement in the House of Commons with regard to air training and the air services generally. He said:

While Sir Charles Portal, Chief of the Air Staff, listened intently from the gallery, Sir Archibald told the cheering house men trained

in the commonwealth air training plan now are flying against the enemy, "and in battles this year our cause will be sustained by Canadians, Australians, New Zealanders, and men from this country, trained side by side."

That should be evidence that in Great Britain, at least, they believe we have been successful in our effort. I have here somewhere, also, a tribute—

Mr. HANSON (York-Sunbury): Oh, never mind the encomiums. Give us the facts.

Mr. POWER: Apart from the dispatch overseas of air crew, I should like to make reference in a rather guarded way, but so that the committee will know to some extent what is going on, to another feature of the work which we have been able to accomplish. We read in the press a month or so ago a statement of Air Vice-Marshal Sir Hugh Dowding, former Chief of the Air Staff of Great Britain, to the effect that night bombing was being overcome, that certain devices had been developed by the United Kingdom authorities to overcome night bombing, and that he hoped that before long they would be successful. Canadian scientists, and to some extent United States scientists, played no mean part in the further development of these devices.

I should like to mention also that men were needed to operate these devices, and it was to Canada they turned to get many of them. In November we sent more than 300 overseas, and they have been followed recently by many hundreds more. That is why we have been combing the country from one end to the other to find radio mechanics, who are being sent over for that purpose; and if any hon. members of this committee know any radio mechanic who desires to enlist and go overseas at the earliest possible moment, I should be only too glad to get his name and send him over. As a matter of fact, we have been of great assistance to the mother country in recruiting a considerable number of these young men and sending them over for the purpose of doing this important specialized work.

Mr. HANSON (York-Sunbury): Will the minister be good enough to tell the committee just what part the British technicians played in establishing the scheme? My understanding was that we were woefully scarce of technicians in Canada, and naturally so.

Mr. POWER: In establishing the scheme —the device? The device was invented in Britain.

[Mr. Power.]

Mr. HANSON (York-Sunbury): I do not mean that. I am referring to the empire air training scheme, the technical assistance given there.

Mr. POWER: I was about to say that that was the bright side of the picture and to proceed to deal with what is not quite so bright; but before doing so I might reply to my hon. friend. I could not give offhand the number of Royal Air Force officers that are attached to the Royal Canadian Air Force for the purpose of putting this air training scheme into effect. I do not know the numbers offhand, but there have been a large number of officers—for instance, the director of medical services, Group Captain Ryan, who is a Royal Air Force officer. He was lent to us, and so was the director of training, Air Commodore Leckie. He enlisted in Canada in the last war, but he was born in Scotland, and I believe he served in the Royal Navy, fleet air arm, for many years until lent to Canada. A number of others are in the same position. They have been lent to us by the Royal Air Force to help us to put the plan into operation. I suppose the proportion would be extremely small as against the number of officers whom we have at the present time.

Mr. HANSON (York-Sunbury): But at the beginning, were they not the nucleus of the training staff?

Mr. POWER: I would not say that. The nucleus of the training staff really came from the permanent force of the Royal Canadian Air Force, with such assistance as they could get from the Royal Air Force. That is the bright side of it. On the other side we have to admit, I must say, that the result, successful as it has been, has not always been brought about by orthodox methods and that the acceleration in itself has brought difficulties which we must face.

For instance, we built aerodromes faster than was required—not faster than we should have, but faster than was required by the original plan. We would have very much fewer built to-day if we had not decided to accelerate. The result was undoubtedly that the cost was higher. When we decided to accelerate last spring—and, as was said to-day, everyone was for speed and more speed—the emphasis was not on economy, I will say quite plainly to the committee, so far as the air training scheme and the putting up of our schools and the development of aerodromes were concerned the emphasis was on getting them built as fast as we could in order to put pupils into them and have those pupils turned

out. The result was a higher cost and, I should say, greater confusion probably; that expansion of itself disorganized the steady expansion which was planned, and caused us a great deal of trouble.

Another factor in the acceleration was the shortening of the training period, as my hon. friend has pointed out. That was as a result of consultation with the United Kingdom authorities. It has, however, the effect of transferring certain of the more advanced training to a position nearer to the theatre of actual war. It does not bring the pilot out, in many instances—it refers only to pilots—very much earlier than would have been accomplished under the old system we were following, but it does send him overseas where he completes his training in operational work a little earlier than he otherwise would.

There is another factor in the acceleration—what is called "overbearing." We took a certain number of pupils into a school at one time; and after consultation we found, particularly in the elementary schools, that with the establishment, both in aircraft and in instructors, it was quite possible and quite easy to train more pupils than were originally allowed to these elementary training schools. We increased the number in the proportion of four to five. This to some extent placed a greater burden on the instructors and required also the building of additional accommodation for the extra pupils we took in, at greater cost.

There was another factor. We wanted to get aircraft more quickly. That placed on the shoulders of the Minister of Munitions and Supply a burden which became pretty heavy for him to bear. It is easy for me to say, "Open a school six weeks, or two months or three months earlier than it was planned to be opened." We can get the building erected and we can scurry around and get instructors, but it is left to the Minister of Munitions and Supply to find the aircraft. He has had considerable trouble over that, and I wish to pay him this tribute, that so far he has not complained very much about the burden put upon him.

Then there are real dangers, which we hope to be able to deal with, in this acceleration itself. Aircraft, like any other machines, need overhauling. At the present time most of the aircraft we have are new and we are using up our capital. We are using these aircraft as hard and as fast as we can. In normal times, if this were not war time, I would say that the leader of the opposition could rise in his place and accuse me of the most reckless extravagance and improvidence.

Mr. HANSON (York-Sunbury): Not you.

Mr. POWER: Not me, no. As a matter of fact, we are using up that capital. These aircraft, after a certain period of time, need overhauling. They cannot keep on running eternally and the time will come—I wish to make this danger plain to the committee—when we shall have too many needing to be overhauled at the same time. This will not bog down or stop the plan, but it may retard it to some extent. I say frankly, I have no alibi if that happens, but we know there is that danger.

Mr. CASSELMAN (Grenville-Dundas): Will lack of overhauling mean casualties?

Mr. POWER: No; but the planes will be grounded. They will be unserviceable. I understand it varies with different types; but with certain types, after they have gone 360 hours, they must be taken down for overhauling. If the work is something of a minor nature it can be carried out at the station and might take a week or so; but if it is something major—from 360 to 400 hours—it may take a month in order that every part of the machine may be gone over so as to make it thoroughly safe.

Mr. HANSON (York-Sunbury): Is provision being made for that now?

Mr. POWER: Yes; in the estimates there is something like $19,000,000 for that kind of overhaul at contractors', apart from the ordinary maintenance overhaul which we have at the stations themselves.

Mr. CASTLEDEN: Would the minister give the break-down of that $250,000,000.

Mr. POWER: I will later on. This overhaul not only means that the contractors must have efficient men, but it also means—and there is our greatest difficulty—that we must have spares. Spare parts are really our greatest difficulty at the present time. That arises from the extreme desire of all manufacturers to produce the completed article; they are not very much interested in making spare parts, they want to be able to say, we have turned out so many aircraft. The result of that is that we have a large number of aircraft which at the present time are down and unserviceable for lack of comparatively small spares. We are endeavouring to have these spares manufactured in Canada as far as we can.

Mr. ROSS (St. Paul's): Is that for the primary trainers or the advanced?

Mr. POWER: I am speaking of the plan as a whole. There is not so much difficulty with the primary trainers, because they are manufactured in Canada, but the advanced

trainers come from either the United States or Great Britain. I do not think I am saying anything derogatory to the effort Great Britain is making; in fact, I am astounded that they are able to ship their spares in such an orderly fashion as they do. It would not be astonishing to find them just jumbled into boxes and shipped, but in fact they are shipped in pretty good order. At the same time there is, in many instances, a lack of comparatively unimportant spares.

Mr. STIRLING: Is that not a very strong argument for subcontractors for these parts?

Mr. POWER: We are endeavouring to have these parts made here as far as it is at all possible so that we shall not have that difficulty. We are even going beyond that; we are endeavouring to have them made in our own shops, hand made; it takes longer perhaps, but not as long as trying to get them from the other side or the United States.

As I say, this is a serious danger. As far as we have been able to estimate we do not believe that the plan will ever go beyond 15 per cent less than the target output; we might perhaps go 20 per cent below if we were so unfortunate as to have a very large number of our aircraft down at the same time for lack of spares. In order to meet that difficulty the deputy minister, Mr. de Carteret, has asked Mr. Colbrook, who came to the department some six months ago from the Robert Simpson company, Toronto, to be the trouble shooter and take special charge of this job of seeing, first, that the overhaul work is carried out by the contractors, and, second, to rush the spares as fast as possible. We think we can overcome that obstacle, but it is a serious one in the way of continuous output.

It might be interesting to the committee, and I do not know that it will give very much information to the enemy, to have some idea of the present situation with regard to aircraft. Let me say, first, that when the plan is complete—and it is a three-year plan—in April, 1943, we shall have put through the plan 6,100 aircraft, and I am making allowance for wastage; we shall have something over 6,000 aircraft—I speak now only of the training planes.

We have at the present moment something like 2,400 aircraft of all types. I can give the percentages of aircraft at the different types of schools. When I speak in percentages I speak not only of what is called the initial establishment but also of the "in reserve". We have in our elementary schools 100·9 per cent of planes, so there is no difficulty there. The service flying training schools are of two kinds, one which uses twin engines and the other which uses single engines. As far as the twin-engine schools are concerned we are short of aircraft; we have 46 per cent of what we should have. As far as the single engine schools are concerned we have 89 per cent of what we require, which is reasonably good; it means that our reserve is not up to what it should be, but we have all we want for the initial establishment.

Mr. ROSS (St. Paul's): What kind are the single engine planes and what the twin-engine planes?

Mr. POWER: The twin engines would be Ansons and Cessna. The single would be Harvards largely. The schools are equally divided at the present time, five service flying training schools using single engines and five using twin engines. In the air observer schools we have 70 per cent of our requirements. They are twin-engine Ansons. For the bombing and gunnery schools we have 86 per cent. For the air navigation schools, which need a very small number of twin-engine aircraft, we have 44 per cent and we can soon catch up. For the wireless training schools, single-engine aircraft, we have 82 per cent.

With respect to the Ansons, we never expected to get them until April. We did, however, expect to do better with what is known as the Fort Fleet 60, which is being made or assembled by a private manufacturer in Canada, because it carries an American Jacobs engine. We expected to get that in December, or January at the latest, but at the present time we have a promise that we shall receive production at the end of March. In order to overcome that difficulty, which was to some extent foreseen, Mr. Ralph Bell and Mr. Duncan, the former deputy minister, in July or August went to the United States and purchased a very large number of twin-engine Cessnas, which are now beginning to arrive, and I am told by our training officers that they are an excellent machine and will in every respect not only replace but probably be better than the Ansons. There was a little delay in the arrival of these Cessnas some time in January, and it gave us cause for some concern, but the production now is coming along very well and will fill the gap for some little time to come.

I do not want to enter into the controversy which has been stirred up in the press with respect to the power and authority which should be conferred on the proposed minister of aircraft production, or on the suggestion made that this minister should control all the engineering. It is a long, long controversy which has taken place probably in every business, as to whether the man who uses the article—in this case it is a plane—should have

something to do with the design of it, or whether he should give his orders for the plane, fold his arms and let the thing be built for him.

Speaking without any authority, with the exception of what I have read, I have learned that the German system prior to the war was to establish a model and to go ahead and produce it on mass production lines. On the other hand, I learn that the British went in for developing better and better aircraft. The result was that they had fewer of them, but the result was also that they had the Spitfire and the Hurricane when the time came.

I do not wish to take one side or the other in that controversy, but I do say that the aircraft production side may have grounds for saying that to some extent they have been delayed by the engineering side in the Royal Canadian Air Force. The engineers and the operators of the machines—the people who fly them—are constantly looking for the newest improvements. There is no doubt about that. There is the tendency on both sides to carry out their ideas. The producer wants to put the thing on the production line, and get it off. He does not want any change. The man who is going to use it does want change. As I said, I am not going to take one side or the other, but I think the committee is entitled to the statement that there are two sides to the story, and that either side can make a pretty good cause.

I have given what I thought was the good side of the picture. Then I pointed out the difficulties in production. I should now like to refer to what I describe as the headaches.

Mr. HANSON (York-Sunbury): Headaches?

Mr. POWER: Yes, headaches. The house and country has quite a legitimate concern in all matters connected with the air training scheme, and particularly as it affects individuals and as it affects different sections of the country. But I would say and repeat that our job is to produce air crews, and we must take every possible means we can to get on with the production. It is just too bad sometimes if some hon. member does not get an aerodrome in his constituency, but I am not going to stop the plan to discuss the matter with him. I suggest to the committee that this is as good a time as any for them to have a bargain day, and for all of them to rise in their places and tell me how well suited are their particular constituencies to accommodate the building of aerodromes. There is the one who claims that there should be an aerodrome in his constituency because the people in it are more loyal than the people in any other part of Canada. There is the other person who claims that there should be one in his constituency, because it would help to keep the disloyal element down. I would like to take in both sides.

Mr. CASSELMAN (Grenville-Dundas): Too late for that now.

Mr. POWER: That is one headache. There is a further headache, and perhaps one more difficult of solution. Perhaps it does not affect individual members, but it does affect those of us who are operating the plan. I refer to the matter of recruiting. Perhaps hon. members will bear with me if I outline some of the difficulties in connection with recruiting.

At the beginning of the war thousands of young men desired to join the air force, and we were obliged to put them off. We could not take them all in. There was no room for them, either in the training schools which trained the technicians, or at other points. When I refer to training schools I have in mind schools like that at St. Thomas. May I add, in passing, that we now have about 6,000 technicians in training at St. Thomas and other places, and we have actually trained and brought into the force 10,000 trained mechanics.

If those young men were mechanics before they joined the force, there was very little difficulty in bringing them in. But if they were not mechanics, they were difficult to handle because we had to open schools for them. If they intended to become air crews—and that includes pilots, gunners and observers—it was still more difficult because, up until April we really had no schools for them. At that time the schools began, but very slowly.

We were considerably worried as to what we should do. I believe it was last May or June that I announced in the house that rather than see these young men go around kicking their heels while waiting, we would take them in and give them three months' drill. We did that. We took in 5,000, and gave them the drill. Those young fellows are now in the plan, and are being turned out as air crews.

But our difficulty is this: I do not mind saying to the committee that we will require thousands and thousands of air crews. Those young men represent the very flower of the youth of our country. They must be A-plus physically, and they must have educational qualifications equivalent to matriculation from high school. In order to give some idea of the problem, I might refer to some figures which, I believe, were placed on record by my colleague the Minister of National Defence. I refer to the number of young men of the age of twenty-one years. There will be for

training this year 93,000 young men of the age of twenty-one years. Without hesitation one can knock off 33 per cent of those as being unfit even for military training camps. That is, they would be placed in classes C-1 or C, and unfit to walk five miles. They are completely eliminated, so far as the air force is concerned. Then, the difference between C and A-plus, with good eyesight, would mean that one would knock off another 30,000, leaving about 30,000 annually from which we can draw.

Then, if one looks at them from the point of view of educational qualifications I believe he would knock off another half of those—these would be the ones who have not high school matriculation—leaving 15,000 eligibles. Laying aside figures which I have, but which apparently do not fit the picture any better, we find that in all provinces, with the exception of Quebec, there are 119,000 young men in secondary schools, and approximately 30,000 in Quebec. I give the two figures, because the school systems are not the same. This makes a total of about 150,000 in all schools. But I take it they would be in three or four age groups, and I have not been able to arrive at an accurate yearly figure. But the figure I have taken is that of the young men of twenty-one years. Therefore, that leaves me for the air force approximately 15,000 men a year. The year brackets are from eighteen years to twenty-eight years, and we are not particularly keen on accepting anyone over twenty-five years. Therefore the pool from which we can draw consists of about 105,000; and there are, let us say, 15,000 or 20,000 more coming in every year.

We will need thousands of these young men. I do not want to say how many thousands a month, but we will need thousands a month. We do not need them all yet. I have in hand a reserve of about six months, but we do not want to let them get away from us, if it is possible. That is our problem.

What we are doing at this time is to let them come to our recruiting offices. We enlist them, and let them go away on leave without pay. We tell them to come back in July or August. We say to them, "Do not give up your jobs; do not give up your schooling; we will require you; we will tell you to report in July or August; the day on which we tell you to report will be the day you will report, and there will be no further postponement."

The difficulty up to the present time has been that we could not tell a man when he was coming in, because we did not know exactly how our plan was getting along. But we do know now, with some degree of certainty. We are able to say that a certain number of men shall come in every month, or on such and such a date.

Mr. STIRLING: Have they had their medical examinations?

Mr. POWER: We are going to enlist them, pass them through their medical, put them in the air force, let them go away without pay, and tell them to come back in three or four months. At the present time I have in hand about five or six months' supply. We would want at least three months' supply ahead, so that at the end of about three months from now we would be taking in some of the men who come before us to-day and who are sent away on leave. That is the only way I can think of whereby we can hold these young men. They are going to be extremely precious to us. I do not want the committee to get the idea that I am starting an intensive recruiting campaign. We are not doing that because the time is not ripe yet. We do not want our recruiting offices to be thronged with young men at the present time. Our present plan calls for a certain number of students to go into each school each month and we cannot take any more unless we expand the plan. The plan may be expanded, but at the moment it has not been decided to do so.

Mr. ROWE: The minister said a few moments ago that there would be 15,000 of the twenty-one year age group; he then mentioned the group from eighteen to twenty-eight years and I understood him to say there were 105,000 in that group.

Mr. POWER: I said that I was not particularly anxious to have the twenty-five to twenty-eight group; I would rather have them under twenty-five years. Seven times 15,000 makes 105,000, but the ten-year bracket would give you 150,000.

Mr. FRASER (Peterborough West): Will the recruits who have been examined and who are to come back in July be given another medical examination?

Mr. POWER: I would expect that they will be.

Mr. FRASER (Peterborough West): If a man does not pass the second examination, will he be eligible for pension?

Mr. POWER: They must be good men to be passed. I would say that point will come up in the pension committee, as to whether the disability which a man might incur during the time he is absent on leave without pay would be pensionable. I leave that to the good judgment of the members of the pension

committee to decide. Offhand, I would say, "no", but that will be something for them to decide.

Mr. ROSS (St. Paul's): What matriculation standard is required?

Mr. POWER: High school.

Mr. HANSON (York-Sunbury): In each province?

Mr. POWER: In the province in which a man applies.

Mr. TUSTIN: Is any arrangement made to transfer men from other forces to the air force after they have enlisted? Many young men who applied for the air force have since enlisted in the other forces and some of them are anxious to get back in the air force.

Mr. POWER: Mr. Churchill calls that combing the mane to sharpen the tooth. I am strongly in favour of it. If we are ever stuck for recruits, I think we shall go to the army to get them. I think we shall be able to get quite a number who would be fully qualified. My colleague says that he is not so keen on my taking men from the navy. It may be that the supply will be exhausted sooner than we expect.

Mr. JOHNSTON (Bow River): There are many young men who are actively engaged in England at the present time and who would like to get into the air force. I have in mind a young fellow who has been over there for seven months. Before he left he tried to get into the air force and he was given the assurance that the transfer could be made. When he got to England he attempted to get a transfer from the artillery into the air force, but he was told that no provision had been made for such a transfer. He was advised that plans were under discussion and they thought that within a short time he would be given a transfer. Has anything been done to take care of such cases?

Mr. POWER: Plans were brought before me during the last two or three weeks whereby Canadians serving in England might be transferred to the air force if they were found to be qualified. I am not sure of the details, but the principle has been accepted.

Mr. JOHNSTON (Bow River): It has not been completed.

Mr. POWER: I cannot say whether the appropriate cables have been exchanged.

Mr. HANSON (York-Sunbury): That principle was in effect during the last war when Canadian lieutenants were transferred to the Royal Air Force.

Mr. POWER: I do not mind telling the committee that some difficulty may arise on account of the set-up of our air training plan. That plan calls for everyone to go in as a private. There might be some difficulty in having men come into the plan who have commissions in other services. That is really one reason why I am dodging it for the moment. I understand it is being done in England without any difficulty, but there may be some trouble here. Under our plan young men who may be able to qualify for commissions in the army join as members of the air crew in order to go through the six months' course and be commissioned in the air force. They might feel that they had not been treated fairly if someone else came in direct from the army with a commission. That is something that must be ironed out.

Mr. CASTLEDEN: Will the minister give the committee a break-down of the 1941-42 expenditure of $394 million, referred to on page 1494 of *Hansard?*

Mr. POWER: May I finish with my headaches first? I just want to enumerate them because I know every member of the committee has some knowledge of some of them. I simply want hon. members to know that I am fully aware of them.

The next thing is the selection of air crew and the granting of commissions. There has been a slight change, but originally all young men who wished to be air crew went into the initial training school after going through the manning depot and the security guards, if necessary.

Mr. HANSON (York-Sunbury): Is the selection left to the man himself, or is that made by the selection committee?

Mr. POWER: That is where I am coming to the trouble. The vast majority of the young men want to be pilots as there is more glamour in that branch of the service. It must be remembered that the whole set-up is based upon the Royal Air Force, to which these men are consigned after we graduate them. Fifty per cent of the pilots receive commissions, thirty-three per cent here upon graduation and seventeen per cent within a few months. The same thing is true with respect to observers; but with respect to gunners, few if any receive commissions until they have proved themselves in actual fighting at the front. As a result of representations made here, the United Kingdom has recently agreed to give commissions to two per cent of those graduating as air gunners.

But here is the difficulty. Assume we have three young men with equal attainments, possessing the same educational qualifications

and physical standards. They enter the initial training school where the selection is made. After a month or six weeks one is told that he will be a pilot, another that he will be an observer and the third poor devil is told that he will be a gunner. For six months he must study wireless at the wireless school. It is very difficult to explain to the boys and the parents just why this is. I must say that the men in charge of these schools are of the highest calibre, but I have always had some doubt personally as to whether one young man can be sufficiently observed among 600 in a short space of time to decide whether he shall be a pilot, an observer or a gunner. But that has been the way it has been worked, and it has given us more trouble than anything else.

I can give some instances. A son of a very great friend of mine, a judge in one of the provinces—if I am not mistaken he is the chief justice—came from the university to join up as air crew. After a certain time he was told that he would never make a pilot, that he would never make an observer, but that he had to be a gunner. The son was naturally very much disappointed and his father wrote to me, but I could not do anything about the matter.

Another case was that of the son of a very great friend of mine, a former associate in matters connected with pensions, veterans' problems and so forth. This young man also had had a university training, but he was told that he had to be a gunner. His father was very much upset because he had intended the boy to try for a commission in the infantry, but the boy wanted to be a pilot. Unfortunately he did not qualify. And so on all down the line.

I could tell the committee of an amusing case. An old friend of mine came to me and said, "My boy must have been made a gunner, I think, on account of his name". The family name was not MacDonald or MacPherson or MacIntosh, but they were descendants of people who had been kings in their own land many years ago. I asked, "What is wrong with his name?" He replied, "His first two names are Roger Casement, but little did I know when I christened him that he would be fighting against those devils some day". He had suspected that because his name was Roger Casement he had not been appointed a pilot.

This just illustrates one of our great difficulties. We have lowered the standard of education for gunners, and there is the odd chance of two per cent getting commissions. But even though the chances of a commission are the same for observers as for pilots, the young men always insist on trying to be pilots. We have endeavoured to the best of our ability to show them that observers perform just as essential work as pilots—as a matter of fact the observer course is harder—and work that is just as useful, but in the public imagination the pilot is the man. Members of parliament have written to me to see what can be done about such and such a boy and I have always said that I do not dare to interfere. Members of the committee will readily understand that if I interfered in one case I would bring down on my shoulders the burden of choosing vocations for thousands of young men, and I am not going to do that.

Then there is the security guards policy, to which I referred a moment ago, the policy of keeping these young men in reserve. We send them out as guards for aerodromes. It is pretty hard on the young man who thinks he is going to join the air force and that within a week or two he will be riding the skies, to have to be sent to Yarmouth or Prince Rupert or somewhere else to form fours. He does not like it, of course. But we were obliged to adopt that policy in order to keep them in reserve. We are trying to get away from that policy as much as possible, but we still want to have available at least 3,000 to 4,000 of these young men whom we can bring in readily if there is any failure among those who have enlisted and may not turn out on time. We must keep a large reserve on hand to keep on feeding our schools. I have had complaints from members and parents about this, but there is nothing else to be done, and we are doing the best we can under the circumstances.

The only other point I might refer to is the cost of aerodromes, perhaps not excessive, but expenses have been incurred that we might not have incurred had we not been in such a hurry. I mention all these matters not to preclude any discussion of them because they are things which it is essential the committee should take cognizance of. I mention them merely to show that we are aware of these difficulties, and are endeavouring to solve them. Some, of course, we shall never be able to solve. We are keeping our mind and bending all our energies towards one thing, the turning-out of air crews as well trained and as fast as we can, to go overseas to take part in the fighting there. All the rest, as I said before, is incidental to that main purpose. These other matters are of importance, of course, but the primary and paramount thing is to send our young men overseas to man the aircraft for Britain to carry on the battle, and that is what we are trying to do.

I gave some break-down of the figures the other day, but I understand that a break-

down of the estimates for next year is desired. I stated at the beginning that the expenditure on the home war establishment for 1941-42 would be $154,683,960. Perhaps I might be permitted to mention some of the highlights in order to give some idea of what will be expended. They will not add up to the total but will give the committee an idea of the main items:

Royal Canadian Air Force—Estimates 1941-42

Pay and Allowances	
Home war	$ 12,931,760
Joint air training plan	63,522,081
Overseas	7,091,416
Total	$ 83,545,257
Construction—Repairs	
Home war	$ 26,149,000
Joint air training plan	25,364,883
Total	$ 51,513,883
Aircraft Engines and Spares	
Home war	$ 76,919,000
Joint air training plan	62,372,200
Total	$139,291,200
Clothing—Necessaries	
Home war	$ 887,500
Joint air training plan	4,484,472
Total	$ 5,371,972
Stores—Miscellaneous	
Home war	$ 8,450,190
Joint air training plan	13,289,379
Total	$ 21,739,569
Rations	
Home war	$ 851,800
Joint air training plan	5,178,036
Total	$ 6,029,836
Bombs and Ammunition	
Home war	$ 16,850,229
Joint air training plan	5,055,315
Total	$ 21,905,544
Aero Gas and Oil	
Home war	$ 660,000
Joint air training plan	9,454,500
Total	$ 10,114,500
Overhaul of Aircraft and Engines	
Home war	$ 1,505,000
Joint air training plan	17,500,000
Total	$ 19,005,000

These items do not add up to the total estimate. I have simply given the highlights, the principal items of expenditure.

14873—102

Mr. MacNICOL: The minister may have already answered this question in the course of his remarks, but I am not just clear what the situation is. I know a young man who attended the wireless training school in the northwest end of Montreal and graduated therefrom with high credit to himself. He told me his title was wireless operator, ground—W.O.G. From the school he was sent to Jarvis, where there is no wireless work being done. There he apparently takes messages over the radio, and he has been wondering whether that is to be the end of his training, and whether the work he is doing at Jarvis might not result in his losing the benefit of the training he had at the wireless school. I understood the minister to say that these young men who had graduated from the schools are sent to different places merely to keep them in reserve, and that it does not necessarily follow that they will be wireless operators, for example, at the camps to which they are sent. They may be in a squad, forming fours, as the minister said.

Mr. POWER: I should think that a wireless operator, ground, would not be used much overseas and would probably be sent to one of our home stations.

Mr. MacNICOL: That is where he is now.

Mr. POWER: If my hon. friend will write me, I will check up on it.

Mr. ROSS (St. Paul's): Do British pilots, when they are in Canada, receive Canadian pay or are they still under British pay? I refer to the ones who have come here under the air training plan. The reason why I ask is that some of them who are in western Ontario have their wives with them, and I believe they find it a little difficult to carry on. I wondered what scale of pay and allowances they are receiving.

Mr. POWER: I think my hon. friend is confusing two things. There are some who are attached to the air training plan, and they are under our own pay and allowances. Others are out at a special school; they are under a different system altogether, and they are not and may never be under the joint air training plan. They are carried directly on the strength of the Royal Air Force and to all intents and purposes are Royal Air Force personnel.

Mr. ROSS (St. Paul's): Thank you. There is just one other point. In the course of his remarks the minister said he did not intend to get into a controversy with respect to air service control. I do not want to start one, but I believe he suggested that those people who are flying machines and so on should have quite a say in what is going

on. They should no doubt present their information and express their wishes to the engineering branch in his own department, the Royal Canadian Air Force. The minister suggested that his own department may have been responsible for certain delays on account of changes. I realize that and quite appreciate it, but what I have tried to advocate is the establishment of a ministry of air production, also the very thing which he pointed out, that his own engineering branch which are in close cooperation with his operators should be at all times in control of and in touch with that ministry of air production so that we shall not have a repetition of the difficulties and delays which we have had in the past. That is what we have been advocating. I do not want to enter into any controversy, but I wish to make my position clear.

Mr. POWER: The question is not whether they should be in touch—they are in touch—but, should they be controlled by a production ministry? I said I did not wish to get into that controversy. It is something with regard to which I am willing to listen to anybody's advice. Frankly, I do not know, and I am giving the two sides of the story as I understand it.

Mr. ROSS (Souris): I understand that it has been the policy of the department, in order to avoid any international complications, that no air fields be established on the prairies south of the main line of railway. I wonder whether that still prevails.

Mr. POWER: That never was a definite policy of the department. I do not mind saying that there was one place where an aerodrome might have been established had it not been thought at that time that it might involve international complications, since the proposed landing field was extremely close to the border, and the flyers in taking off every day would have been almost obliged to cross the border. That situation arose six or eight months ago. I do not know that the question arises at the moment. As a matter of fact, there is a school at Windsor.

Mr. MARTIN: The best in Canada.

Mr. POWER: Also one has been established at Boundary Bay, which is extremely close to the international border. My hon. friends from British Columbia can tell me the distance; it cannot be more than five or six miles from the border.

Mr. CRUICKSHANK: Two miles.

Mr. POWER: One of the reasons for putting aside certain projected aerodrome sites was, in the early days, that they were too close to the United States border. That happened some time before I took office, but it was not a definite policy.

Mr. ROSS (Souris): I think that reason was given. But the vast area of the prairie provinces south of the main line is without any air field at all. I was wondering whether there was any particular obstacle to developments there in future.

Would the minister give the figures of how many of the members of the Royal Canadian Air Force have been discharged to date and how many have been found medically unfit?

Mr. POWER: I will get that information for my hon. friend.

Mr. CASTLEDEN: I understood it was the policy of the department to contract with civilian flying clubs for elementary flying training. Is that policy still being followed?

Mr. POWER: Yes. That is one of the things I was going to list as a headache.

Mr. CASTLEDEN: Would the minister table one of the contracts?

Mr. POWER: I have tabled a dozen. If my hon. friend will call at my office at any time, he can have a contract. They are all the same.

Mr. DOUGLAS (Weyburn): I am sure hon. members have enjoyed the minister's word picture, which has given us a view of things that it would have been impossible to get otherwise. What exactly is the situation of the men who have graduated under these air training schemes and have become members of the Royal Air Force? Is the Canadian government in any way responsible for any expenditures, pay and allowances, after they leave this country?

Mr. POWER: Is the hon. member going to give me a chance to make another speech?

Mr. HANSON (York-Sunbury): They become members of the Royal Canadian Air Force, do they not?

Mr. POWER: I will have to make a speech to explain this. I will read the agreement covering the training of aircraft crews and pilots in Canada and their subsequent service, which was entered into between Canada, the United Kingdom, Australia and New Zealand. There is one section which, I believe, will make clear to hon. members just what we are driving at.

Mr. HANSON (York-Sunbury): Is this the commonwealth air training plan?

Mr. POWER: Yes. Article 15 is probably the one in point:

The United Kingdom government undertakes that pupils of Canada, Australia and New Zealand shall, after training is completed, be identified with their respective dominions, either by the method of organizing dominion units and formations or in some other way, such methods to be agreed upon with the respective dominion governments concerned. The United Kingdom government will initiate inter-governmental discussion to this end.

Article 16:

The government of the United Kingdom will, subject to the provisions of Article 17, provide the pay, allowances, pensions and other non-effective benefits, maintenance and other expenses of the pilots and aircraft crews who are trained in Canada (other than those made available for service with the Royal Canadian Air Force in accordance with the provisions of Article 14)—

I may say that article 14 permitted Canada to keep for home defence a certain number, a comparatively small number, of pilots.

—with effect from the dates of their embarkation in Canada for service with, or in conjunction with, the Royal Air Force.

That means that the British government is responsible for the pay and allowances of these graduates from the moment they get on the boat to leave Canada.

The government of the United Kingdom also undertakes to arrange for those pupils who are made available for service with, or in conjunction with, the Royal Air Force to be embarked as speedily as possible after the completion of their training, and to defray the cost of their passage to the stations to which they are appointed on leaving Canada.

With respect to Canadians and British rates of pay:

The pay, allowances, pensions and other non-effective benefits, maintenance and other expenses, for which the government of the United Kingdom undertakes liability under the provisions of article 16—

Which I have just read.

—will be as laid down in Royal Air Force regulations.

If it should be decided by the government of Canada, the government of Australia or the government of New Zealand to supplement the amount so issued, any such supplement will be borne by the government concerned.

The Dominion of Canada does pay to each one of these, during all the time he is abroad, the difference in his rate of pay. During the time he is here he gets Canadian rates of pay. From the moment he embarks he gets the British rate of pay, but the government of Canada undertakes to make up the difference between the British and the Canadian rate.

Mr. DOUGLAS (Weyburn): That is what the $15,000,000 is for?

Mr. POWER: Yes, and for three squadrons that are overseas.

Mr. ROWE: What about pensions?

Mr. POWER: We pay pensions also.

Mr. ROWE: We pay the full pension?

Mr. POWER: It would certainly run between one-quarter and one-fifth more, and I am told that we are converting the pound at a stated amount. They draw their pay in pounds and we convert it at a stated amount.

Mr. ROWE: You pay the difference in pensions?

Mr. POWER: Yes; we pay the difference. The government of the United Kingdom undertakes to pay non-effective benefits.

Mr. ROWE: In other words, they are actually British pilots?

Mr. POWER: Yes. That is the status of these pilots. In the air training plan we have expended so much money—65 per cent of the plan—and then the pilots go over and are at the disposal of the Royal Air Force; but, as I read a moment ago, it was decided at the time of the agreement that some means should be found of identifying Canadian pilots either by unit or by formation or in some other way. It did not stand to reason that thousands of our young men should go there and have no connection with Canada, being spread all over Libya, Greece, Ethiopia and everywhere else. Therefore one of the errands of which the Minister of National Defence spoke was the endeavour to bring into practical application clause 16, which says that they should be identified. As a result of this, arrangements have been made whereby twenty-five squadrons will be set up as Royal Canadian Air Force squadrons. Mind you, they will be paid at British rates of pay. They will be maintained as British, because they do belong to the British, but they will be called Canadian squadrons because they will be all Canadian pupils. As to the dates at which they were formed, I had better not mention that.

The consultations took place during the summer. When the Minister of National Defence went overseas he was asked by the government to undertake this task of settling the question of identification, and the agreement was signed by him, with the Right Hon. Sir Archibald Sinclair, Minister of Air. It provides that there shall be twenty-five squadrons called Canadian squadrons, from graduates of the joint air training plan, to be formed at different dates which I will not specify, and that all the Canadian pilots and

air crews from the air training plan—not in the Royal Canadian Air Force units or formations, because there would be many more than twenty-five squadrons, which represent only about one-fifth of the output within the next few months, but all those who were not in these squadrons—would continue to wear the Canadian air force uniforms and Canada badges. This arrangement is to be revised in September, 1941. It goes on to say:

6. Under the air training plan and at the request of the United Kingdom government, the Royal Canadian Air Force has concentrated on the production of pilots and air crews. This has necessitated the provision and employment in Canada of ground personnel who would otherwise have been available for service with Royal Canadian Air Force squadrons overseas. It is recognized, however, as desirable, so far as it may mutually be considered practicable, that the United Kingdom ground personnel who, for the reason stated above, will be required for the squadrons referred to in paragraph 2 should gradually be exchanged for Royal Canadian Air Force ground personnel employed on the air training plan, with a view to achieving homogeneity of personnel in these squadrons.

The ground crew of these squadrons will be United Kingdom for the moment, because we are using all the ground crew we can possibly find for the training plan in Canada. The suggestion is that there should be exchanges. Possibly it will be that when we have trained enough, we shall be able to send some of our young men overseas to serve as ground crew.

Mr. DOUGLAS (Weyburn): Strictly speaking, the operations of the Royal Canadian Air Force as such are confined to Canada?

Mr. POWER: No. We have three Royal Canadian Air Force squadrons of our own overseas, and have had for several months. They are equipped, maintained and manned, as to both ground and air, by Canada.

Mr. DOUGLAS (Weyburn): And paid by Canada?

Mr. POWER: Yes. I may add that we are now on a kind of flat rate. At first we made an arrangement to pay for replacement every time an aircraft was destroyed, but it complicated bookkeeping to a considerable extent, and we had to put a large amount of money in the estimates last year on the assumption that there would be a one hundred per cent renewal every month. We have now an arrangement with the British government whereby they will supply aircraft for any destroyed, and will feed our men, on a flat rate. We pay something like three million dollars a year for a squadron, and they take chances whether the squadron will be continuously occupied or not. We pay the same flat rate no matter how many or how few aircraft are destroyed. It is called a capitation rate. The same applies to feeding.

Mr. DOUGLAS (Weyburn): These three squadrons will operate on a different basis to the twenty-five?

Mr. POWER: Yes; they are entirely Canadian, just as Canadian as the army is over there, whereas the other squadrons are composed of Canadians who graduated from the plan but are on initial rate of pay from the British, having been formed for purposes of identification.

Mr. DOUGLAS (Weyburn): Are these army cooperation squadrons?

Mr. POWER: Some will be army cooperation; some, bombers and some, fighters. The rest of the agreement deals with the fact that at the beginning there may be a shortage of senior Canadian officers to fill the posts of squadron commanders, because they will be graduates from the plan and will not have the experience. At the inception the United Kingdom personnel will be in command of these young men, but as we go on, Canadians will replace them so that the squadrons will become entirely Canadian. Then there is provision for consultation as between the air officer commanding Canadian overseas headquarters and senior officers in the air force, and also the British, with regard to the employment of these squadrons—when they are to be used in any major operation.

Mr. DOUGLAS (Weyburn): I wish to ask the minister a question and he can use his discretion about answering it. A report has been given to the house about accidents, and most hon. members regret the large number of accidents that have taken place recently. As a result of the investigations into these accidents, has the minister found that accidents are more prevalent with any one type of plane? I will tell the minister why I ask. I have had a number of flying men tell me about the Grumman plane, not the British but the Canadian assembled plane.

Mr. POWER: I do not think any have flown in them, certainly not in the air training plan. The only ones who would fly in that plane would be skilled pilots who had graduated. It is not a training plane; the big one is a good transport plane, and there is a fighter plane but it is not being used by any pupils.

Mr. DOUGLAS (Weyburn): It was the fighter plane to which I had reference. They were trained pilots who were using it, and I heard some complaint that the Canadian assembled plane was not a particularly safe

one; there was that feeling. Therefore I wanted to ask the minister whether these accidents had been more prevalent with any one type of plane.

Mr. POWER: No. The other day I was referring only to accidents in training. There have been very few accidents in the home war establishment, the defence forces, although there have been some. I do not remember having had statistics made out for this, but they are not more prevalent with any one type than another, certainly not in the air training plan.

Mr. STIRLING: Early in his statement the minister referred to 90 per cent of those in the air training plan being Canadians.

Mr. POWER: The pupils, yes.

Mr. STIRLING: Does that mean that 10 per cent came from Britain, Australia and New Zealand?

Mr. POWER: About that, yes.

Mr. STIRLING: Can the minister divide that 10 per cent up?

Mr. POWER: No, I have not that figure. It is roughly 10 per cent; it may be 11 per cent that came from Australia, New Zealand and the United Kingdom quota, which takes in Newfoundland.

Mr. STIRLING: Over and above that, Australia provides herself with a great many more men in the various descriptions by other training facilities.

Mr. POWER: I am not sure how many they send over direct.

Mr. STIRLING: They must have an air training plan quite apart from this.

Mr. POWER: Most of their elementary training men come through the training schools here. They have an air force of their own and presumably many of their men go direct. I do not, however, think they have a large air training scheme of their own.

Mr. NICHOLSON: Have we any appropriation to cover the construction of the proposed Alaska project?

Mr. POWER: Yes, in the home war appropriation.

Mr. NICHOLSON: Can the minister give us any information in that connection?

Mr. POWER: Simply that we are spending about eight or nine million dollars on station facilities in the interior of British Columbia to Alaska. I should not like to give the break-down any further than that. But I should be glad to give my hon. friend the information personally if he will come to my office. It is a defence project.

Mr. STIRLING: Is this just for the purpose of providing air fields in that area?

Mr. POWER: Staging facilities.

Mr. SHAW: I understand that after the last war an officers' reserve list was set up. It was necessary for an officer to keep himself in good standing from year to year. I know several of these men, approximately forty-five years of age, who have kept in good standing, passed medical tests A-1, but apparently they cannot get beyond that point. Some of them have taken several of these medicals in the course of a year. I have been asked by some of them to find out what the advantages are of having kept in good standing on the reserve list and to secure information regarding the method of absorbing these men into active service at this time.

Mr. POWER: If my hon. friend is speaking of the air force, obviously a man of forty-five would not be any use to us as a flyer, no matter how good his state of health; we are not taking them in at forty-five now. But we have been taking in, I might say, hundreds of men who served in the last war and have a good record as administrative ground officers. We have been taking them in up to fifty years of age as ground officers.

Mr. SHAW: I understand these men have applied for appointments as Link trainers or ferry pilots. I was not referring to active service in the air.

Mr. POWER: We are taking them in every day. Of course there is a background of about two thousand men who are extremely eager to serve their country at about $2,500 to $3,000 a year in a nice soft job at home wearing a uniform.

Mr. MacNICOL: With a brass hat.

Mr. POWER: With a brass hat, and they are extremely indignant—I am not referring to the gentleman my friend speaks of—when they are told "Well, you have not been selected yet." There is a selection board that selects from among the applicants those who, we think, would make administrative officers or accountants or engineer officers, and when they are not selected they write to me or to their member wondering why we refuse to let them serve their country. We cannot take them all in, we must make a selection amongst those many thousands. As far as I know, we are selecting former air officers for administrative positions whenever any of them are qualified. I have insisted right along that former air officers particularly get the preference for administrative positions when they are otherwise qualified.

Mr. McNEVIN: Are there any in that category over fifty years of age?

Mr. POWER: There may be some exceptions but the limit is fifty. There may be an odd exception, I do not remember any; a person over fifty is barred.

Mr. GRAYDON: I do not recall the minister giving any particulars of the number in the air force outside the training plan.

Mr. POWER: That is another thing I am not supposed to give, but I think we should give it. I do not agree with all my officers about the hush-hush policy. I do not see any reason why we should not tell the country how many people are in the air force.

I have here the last weekly report: officers, 3,490; airmen, 42,732.

Mr. GRAYDON: That does not include the empire air training scheme.

Mr. POWER: Yes; that is everyone serving now in Canada. That includes students and all kinds in the scheme.

Mr. ROSS (Moose Jaw): That does not include the Royal Air Force men?

Mr. POWER: No, except those who are attached to us or loaned to us specially. That in terms of the last war is about three divisions; when we talk of raising so many divisions of infantry, let it be remembered that there are three divisions of airmen in this country at the present time.

Mr. SLAGHT: About what proportion in the commonwealth air training scheme are Canadians?

Mr. POWER: Ninety per cent of the pupils are Canadians, the remaining 10 per cent come from Great Britain, Australia and New Zealand. I should like to add that between 7 and 10 per cent of the recruits that come in as Canadians are United States citizens, and I would also say that we are fortunate in being alongside the United States and getting our instructor personnel from there. Some four to five hundred United States trained flyers have been enlisted or commissioned in the air force as instructors. Without them we would have had an extremely difficult time to get as far as we have.

Mr. MacNICOL: We have the best neighbours in the world.

An hon. MEMBER: What is the percentage of Americans in the air force?

[Mr. Power.]

Mr. POWER: I would say at the moment between 7 per cent and 10 per cent of the air crews; that is, those pupils who will be graduated. I have not worked out the percentage with regard to instructors, but between 400 and 500 of the instructors are largely used in ferrying duties, to ferry the students at the bombing and gunnery schools, and to bring them out to the places where they practice bombing, or to observer schools or elementary schools. To a large extent these are Americans who have come to and are serving in Canada.

Mr. MacNICOL: If questions concerning the air programme are exhausted, I should like to ask the Minister of Munitions and Supply a question. If, however, other hon. members wish to ask questions of the Minister of National Defence for Air, I shall delay my question.

Mr. EDWARDS: Is the Department of National Defence for Air, as such, responsible for the selection geographically of the various air training fields, or is that the responsibility of some other department?

Mr. POWER: Shortly after my appointment I explained the system of selection. The Department of Transport makes a general survey of prospective aerodromes across Canada. It then makes a report to what is known as the aerodrome development committee, which is composed of officers of the Department of Transport and of the Department of National Defence for Air. They then decide what aerodrome is to be developed, and where aerodromes are to be located. The report then comes to the minister, and the minister says "yes" to whatever they tell him, because he is not going to get mixed up in aerodrome development or the selection of aerodromes, because he has something else to do.

Mr. EDWARDS: What is the policy of the government with respect to the location of aerodromes and air training fields? What are the guiding principles? I can understand that naval training would be carried on at the seaboard, and that other branches of the service would be carried out where natural facilities are available. I should like now to know the guiding principle which prompts the government to locate air fields for example at Ottawa, Montreal, Northern Ontario, Quebec and the maritime provinces. Is it the principle of proximity to population, or what are the determining factors?

Mr. POWER: On the first or second day after I came to the department I made a statement to the house, received from one of

the officers in the department, in which I indicated the guiding principles. The first principle is to get a place suitable for development as an aerodrome. Then, at the time these selections are made there was an attempt to foster recruiting, and in order to help recruiting, the aerodromes were spread at suitable locations across Canada. As has already been explained, there was at that time a tendency not to place aerodromes too close to the United States border. There was some thought that on account of climatic conditions, including heavy snowfalls and the like, some sections of the country would not be as suitable as others for the development of aerodromes. All these principles, however, were laid down.

I have sent for a copy of *Hansard*, and I should be pleased to read again what I read last year. Generally speaking, however, the principle followed when placing an aerodrome at any point is that such point has been found to be a suitable location.

Mr. NICHOLSON: How does the department decide that it is a suitable location?

Mr. POWER: It is the decision of the Department of Transport in conjunction with officers of my department.

Mr. PERLEY: All hon. members have listened with keen interest to what I would term a straightforward statement made by the Minister of National Defence for Air this evening. Had we heard similar statements earlier from other ministers, we would have been through long ago.

Mr. HOWE: That is quite a comment.

Mr. PERLEY: I have not held up the committee very much. I would ask the minister who has interjected that I should have liked to ask him many questions, but possibly I was rather intimidated by the replies he gave to some other hon. members. I am now asking the question of the Minister of National Defence for Air as to whether or not he can give us information respecting the number of aerodromes and training centres in Saskatchewan. Are there one or two there operated solely by the Royal Air Force?

Mr. POWER: Yes.

Mr. PERLEY: Could the minister give us some information on that point? Are there others operated jointly, and what is the expenditure by this government and by the British government in that connection?

Mr. POWER: Would my hon. friend be satisfied if I answered him respecting the aerodromes in Saskatchewan operated by the Royal Canadian Air Force, and let him find out the answer to his question?

Mr. PERLEY: I should like to have the ones operated by the Royal Air Force, alone.

Mr. POWER: I would rather tell him those operated by the Royal Canadian Air Force. My answer would give the same result, and my conscience would be clear in that I had not mentioned the location of Royal Air Force schools in Canada.

Mr. RALSTON: That is spoiling the minister's record.

Mr. POWER: My colleague suggests that I should have kept up my record for being straightforward. In Saskatchewan there is an elementary school and also an air observer school at Prince Albert. There is an elementary school and an air observer school at Regina. Then there are Canadian schools at Mossbank, Dafoe, Saskatoon, and Yorkton Those would appear to be all the Canadian flying schools in Saskatchewan. Then, as my hon. friend knows, there is a munitions training school at Regina, and several other ground schools. I believe, however, he was referring only to flying schools.

Mr. PERLEY: And the Royal Air Force are not operating any?

Mr. POWER: Not operating any.

Mr. PERLEY: In Saskatchewan.

Mr. ROSS (Souris): Following the question put by the hon. member for Calgary West, did I understand the minister to say that he was going to enlarge upon the requirements essential for the development of the fields?

Mr. POWER: No. I should say to the committee that at the present time all requirements, so far as aerodromes for the empire training plan are concerned, are complete. All aerodromes have been selected. What will happen in the future, and whether this plan will be extended, is another question. At the present time, however, there is no use in bringing in any delegations, because I will tell them that we have all the aerodromes we want. Committee members will please take notice; tell them to stay home, because they will only waste their time.

Mr. ROSS (Souris): I was not suggesting that. at all.

Mr. POWER: I was not referring to my hon. friend; I was speaking for his colleagues.

Mr. ROSS (Souris): Do I understand that during the coming year there will be no further development of air fields in western Canada, even on our own programme?

Mr. POWER: All sites have been selected for the air training plan. There are a certain

number of elementary schools, a certain number of surface training centres, and a certain number of bombing and gunnery schools not yet developed or constituted. Each one of the sites of these schools has now been selected for the air training plan. If it so happens that the plan needs to be expanded or further developed or some other circumstance arises, other aerodromes and other sites may be selected. Meanwhile, against the time when that kind of thing may happen, the Department of Transport is surveying every possible site in Canada. They have a list of them; should we ever require any more, we will go to the Department of Transport and they will tell us where to locate them.

Mr. ROSS (Souris): The minister would not care to enlarge upon the requirements or the essentials which are taken into consideration in the selection of these various fields?

Mr. POWER: There is the question of water and the question of proximity to communications, railroads and that kind of thing. The question of water is perhaps the most serious we have had to face. It seems extraordinary that in a country like Canada with its lakes and rivers we cannot get sufficient water. We have had people looking for water everywhere. There is hardly a school which has been opened where there has not been trouble in getting water to it. I never for one moment imagined that this country was so dry as it has turned out to be.

Mr. ROSS (St. Paul's): I should like to ask a question of the minister in his dual capacity as acting Minister of Pensions and National Health and Minister of National Defence for Air. No doubt there is a considerable civilian personnel in these flying schools. Perhaps the minister could tell us what percentage there is. I thought it might be possible to absorb many of these men who have been discharged from the army into the personnel, not only of the flying schools but of some of the thirty-day training camps. This might be one way to take up the slack for these fellows who have been discharged.

Mr. POWER: There would be no objection at all provided they are qualified. I understand the rule in the Department of National Defence is that no one is sent back from overseas unless he is in category E, and a man in that category is not fit for anything like hard work. Those who were placed in category C were kept on as line communication troops as long as they could do anything. I would have no objection to taking on ex-soldiers; as a matter of fact, they have preference in our department for positions round the camps.

[Mr. Power.]

Mr. ROSS (St. Paul's): If a man is in category E, is he entitled to a pension?

Mr. POWER: Not always; he might be in category E because of disabilities not due to service.

Mr. ROSS (St. Paul's): If they were due to service?

Mr. POWER: He should get a pension. Probably he would be hospitalized in Canada for some little time.

Mr. NICHOLSON: The minister has not yet answered the question which led up to this interesting discussion. A year ago the minister made it quite clear that representations by boards of trade and such organizations would not influence the department in choosing sites. I notice from the press that delegations are still coming to Ottawa to try to persuade the government to decide on such and such a site. I should like the minister to make it clear whether such representations are of any use, or whether, if certain constituencies had elected as members of parliament those of other political stripes, they would have been more successful in getting air training centres.

Mr. POWER: I made a trip west last summer, and it was made quite miserable by delegations that waited on me every time the train stopped. I told them that there was no use bothering me; that if they wanted to make representations, they should make them to the Department of Transport or to the officers of my department. I told them that if they wanted to fill reams of paper or make books of plans and so on, it would do no good to present them to me; they should be sent to the officers of the department who would make the decision.

Mr. HANSON (York-Sunbury): But they did not believe you.

Mr. POWER: No. I had a delegation here last week, and I simply told them that they had wasted their time and money, that they might as well go home. They wanted to know if I could tell them if they had a chance of further development, and I told them, "I do not know and I do not care." I am sorry to say that the delegations do not like me any more, but that is the only way to handle them.

Mr. ROSS (St. Paul's): There is an observers' school at Malton, but on wet days the young fellows there can do nothing but lie in their bunks. They have no recreation hall, and I do not suppose it would cost much to erect one.

Mr. POWER: I am not sure whether a recreation hall goes with an air observers' school.

Mr. GRAYDON: May I intervene to say that we have a fine recreation hall in the village of Malton. A community spirit has developed, and they are taking care of most of the young men in both the elementary training school and the observers' school. We will be ready to welcome the hon. member for St. Paul's in the recreation rooms at any time.

Mr. POWER: Then I do not need to build one?

Mr. GRAYDON: No, not at the moment.

Mr. HANSON (York-Sunbury): What is the position with respect to the Gander airport?

Mr. POWER: The aerodrome there was one of the finest and best developed in the British empire, but certain accommodation was needed for aircraft and crew. Something in the vicinity of $1,400,000 has been expended. Does my hon. friend want to know how the work is progressing?

Mr. HANSON (York-Sunbury): Yes.

Mr. POWER: The work progressed rather slowly at first on account of illness and difficulty in getting materials.

Mr. HANSON (York-Sunbury): What about the labour situation?

Mr. POWER: Newfoundland labour is perhaps not as accustomed to working steadily over long periods of time as is labour in this part of the country. They do like to get away for Christmas. Then measles broke out, and there were 101 difficulties in the way of making rapid progress. I saw the contractor this week, and he reports that since about the middle of January things have been progressing much more rapidly. As a matter of fact, the original contract has been about completed. There have been some complaints which, as my hon. friend knows, were well founded.

Mr. HANSON (York-Sunbury): Has there been any relaxation on the part of the Newfoundland government with respect to letting in skilled and ordinary labour?

Mr. POWER: The contractor told me that he did not anticipate much trouble in that regard. He has seen the United States authorities who are expending large sums of money in Newfoundland; he was also in communication with Mr. Wood, commissioner of works, who is also in charge of the department of labour in Newfoundland, and he tells me that arrangements with regard to labour have been worked out to his satisfaction. He believes that no further difficulties will ensue. It may be necessary for him to bring key men from Canada.

Mr. HANSON (York-Sunbury): How much more development is proposed at that point?

Mr. POWER: I should not like to say offhand. It is rather complicated.

Mr. PERLEY: Can the minister give us some information with respect to conditions at Mossbank, Saskatchewan, where the water supply has been bad and there has been a great deal of difficulty? There was a rumour there that conditions were so bad that the department was considering closing up the school.

Mr. POWER: We do not close any schools. For better or worse we go through with them; but, as my hon. friend knows, there was some little difficulty with a crew of about sixteen men who went to Dafoe and ran into a snowstorm. The buildings which we had for their accommodation had not been heated at that time, but I understand that difficulty was ironed out. That was at Dafoe, not Mossbank. I have no information here about Mossbank. .

Mr. PERLEY: Has the water supply been taken care of? I understand that it comes in under contract by truck at the present time.

Mr. POWER: I shall be glad to look into that.

Mr. ROSS (St. Paul's): I did not want to poach on the preserves of the hon. member for Peel when I said that I had been at Malton, but there were two or three of my constituents in Malton whom I wanted to meet, and I found conditions as I have stated. The boys only had their bunks to go to on wet days, and so on. I know that my hon. friend has been instrumental in having a wonderful hall put up at Malton, and we are very proud of it, but it is two and a half miles for the men to walk to from the preliminary school. I thought I would just bring the matter to the attention of the minister because I knew he would take care of it.

Mr. DIEFENBAKER: Are all air observer schools in Canada operated by private companies?

Mr. POWER: Yes.

Mr. DIEFENBAKER: Is there a standard form of agreement covering the operation of the schools?

Mr. POWER: Yes; I have produced it in the house two or three times and I shall be glad to do so again. Both elementary and observer schools are civilian schools. May I say with respect to civilian schools generally that there has been a good deal of criticism as to the profits being made, and I had intended referring this whole question of civilian school contracts to the war expenditures committee. I wanted to do so before it became a matter of political controversy, before hon. gentlemen opposite would have to attack the system and before I would have to defend it. Up to the present it has not been a matter of controversy. The whole thing is a matter of judgment.

So far as the elementary schools are concerned, they are all sponsored by flying clubs, and I do not think there will ever be the slightest difficulty about them because most of them are turning their profits back to the government in one way or another. I think that could be readily shown, and I would have been more than pleased to have these men come before the committee and explain their case.

There are, however, some instances in which perhaps rather large profits may be made, and in view of the fact that it would take too long to get the matter before the committee I am now going into that to see what can be done by voluntary action on the part of the clubs themselves.

With regard to the air observer schools, the same condition obtains, I think, and I am having that looked into. I can assure the committee that if there are any profits that look a little bit high, they will be cut down by agreement between the government and the operators.

Mr. HANSON (York-Sunbury): I did not know that the same principle applied to the observer schools as applies to the elementary schools. We not only guarantee against any loss but guarantee a profit of 5 per cent, which is pretty profitable to-day having regard to profits available in other lines. What was the inception of the system? How did that arise? Was it at the instance of the government or of the flying schools themselves?

Mr. POWER: They have civilian schools in England, and the general outlines of the plan came from England. So far as Canada was concerned, we have here a large number of flying clubs, all of which wanted to do their bit. The gentlemen in charge were reputable. These flying clubs were spread all across the country and they all wanted to do their bit. These gentlemen came here; we had a meeting of the flying clubs, and they drew up a tentative agreement. At that time Major Seymour, a barrister of St. Catharines, represented the flying clubs, and Mr. K. S. Maclachlan, then deputy minister for air, and Mr. Henry Borden, represented the government in drawing up this agreement. None of them had any very great experience in how the thing would work out, so it may be a loosely drawn agreement in certain respects.

The reason why I think the arrangement was a good one is that it enabled us to get experienced management we would not have been able to obtain otherwise. We got the experienced management of these different schools, something we did not have in the air force. We did not have a sufficient number of men accustomed to run such schools, so it was necessary to bring in civilians with some experience and of some business acumen to run these schools. Whether, after another six months or a year, we shall require to continue operating them as civilian schools, I could not be sure, but it was a godsend to us that we had in Canada at that time a number of people, commercial companies, bush pilots, bush operators, and flying clubs, who knew how to put planes in the air, maintain them in the air and keep them operating. That is something we have to be grateful for. I do not think there is the slightest doubt that the contract can be modified and amended in such a way that the profits will be even less than reasonable because these people have met us so far at every turn.

Mr. HANSON (York-Sunbury): I have had a good many representations made to me about this matter, but I have never raised the question. One thing that was represented to me was that all these flying schools were not being treated alike, and that some were really eliminated. Is there anything in that charge?

Mr. POWER: I think I can say that every flying club in Canada that was operating—I am speaking of flying clubs now; these are the amateurs, not the commercial corporations—has had an elementary flying school. I do not know of one that has not, and I have not heard of any complaints from them. In some instances, in fact, we have been obliged to amalgamate them; that is, to get clubs at a long distance to come in to other places where the schools were being operated. Chatham, for example, is being operated by the Moncton flying club.

With regard to the commercial companies, I am not sure that every commercial company has had an opportunity—

Mr. HANSON (York-Sunbury): I think that is the trouble.

Mr. POWER: One difficulty there is that a great many of these commercial companies

are affiliated in one way or another, either by stock control or by directorates, with a fairly large corporation, and while one company carrying on under a certain name may perhaps claim that it has not had an opportunity, the parent company, with which it is affiliated may have probably had an opportunity in two or three different places.

Mr. NICHOLSON: How many new private schools have been started?

Mr. POWER: I do not know just what my hon. friend means by "new." We have seventeen elementary flying schools, all operated by civilians, and six air observer schools, all operated by civilians.

Mr. NICHOLSON: How many of these were in operation at the time the scheme was introduced?

Mr. POWER: This is all part of the scheme. The flying clubs were being operated as flying clubs. They had nothing to do with the empire training plan. They were simply organizations of people interested in flying in their locality, and they called themselves flying clubs. I am under the impression that the Department of National Defence gave them a subsidy at one time. I am not sure whether that was cut out afterwards. In any event, they have started to operate schools only since last April.

Mr. DIEFENBAKER: Does the minister exercise any control over the salaries paid in these several schools, in order to ensure uniformity throughout the dominion?

Mr. POWER: No. The salaries paid in the schools are a matter for the provincial departments of labour, which really decide what are the prevailing rates and what are the salaries paid in the civilian schools. I understand my hon. friend is referring to civilian schools?

Mr. DIEFENBAKER: I refer particularly to those holding executive, managerial, secretarial, positions and the like.

Mr. POWER: We give a flat rate. The contract calls for a flat payment of $1,400 a month covering manager—I am not quite sure of that—telephone operators, stenographers and all the rest of the staff. We give them that flat rate and they are supposed to pay their people out of it. I believe some of them make a little profit. I would have to check that. Of course we take 75 per cent of the profit away.

Mr. HANSON (York-Sunbury): Well, 30 per cent anyway.

Mr. POWER: No; we take 75 per cent under our contract, apart from what they pay in income tax; except for one thing, which is a fixed fee, and that is something I am trying to get after; there is a fixed fee of so much per flying hour. Perhaps the flying hours are a little greater than was anticipated at the time they began, and they can make a reasonable profit. There is no revision of that, nor taking away of 75 per cent, but some companies have agreed to take 30 cents and some, 25 cents per flying hour as a fixed fee. Some are not taking anything.

An hon. MEMBER: Are they not guaranteed 5 per cent on their investment?

Mr. POWER: I am not quite sure. I think they are guaranteed. I have not looked at the contract for some time.

Mr. DIEFENBAKER: Are the instructors in those elementary training schools and the like, subject to overseas service?

Mr. POWER: Originally the instructors were engaged by these schools, and they employed whom they wanted to. They went out and hired bush pilots, or Americans, and paid them whatever they thought was the right salary. As time went on, they had more difficulty in finding them, so they came to us; what we did was that we trained them and turned them out as sergeants on leave without pay, and the flying schools pay them their salaries. Under these circumstances, of course, we can call them back at any time, because they belong to the Royal Canadian Air Force, and we can send them overseas if necessary.

Mr. ROSS (St. Paul's): And there is military supervision of these flying schools?

Mr. POWER: There is a supervisor, a Royal Air Force officer, who supervises the curriculum of flying and generally acts, so to speak, as the school principal. The civilian manager looks after the maintenance of the aircraft, the messing and so forth.

Mr. NICHOLSON: I understand that there is a training school at Goderich, Ontario, and that last summer they were selling stock up in the county prior to the starting of the school. Would the minister explain the set-up?

Mr. POWER: An elementary school was originally required to raise $35,000 in order to show its good faith. In most instances that amount was pretty rapidly raised, especially for the larger cities. Around Goderich and Huron counties, what I believe is called the Huron-Goderich club went out and sold stock, I understand in amounts of $100 or $200, to the farmers. I do not think it was sold to them as a money-making proposition; I believe they are not going to make money, because there will not be very much profit out of it. They wanted to get as many people as possible

interested in the enterprise. In most other cities half a dozen people subscribed five or ten thousand dollars and let it go at that. But interest has been much more widely distributed in connection with the Goderich school than any other school I know of.

Mr. NICHOLSON: What control will the people of the county have?

Mr. POWER: I do not know in whose hands the control of the stock lies; I do not know where the majority of the stock is. If the majority are farmers from Huron county, I suppose they could get together and oust the manager and carry on if they so desire; but if it is a matter of getting more profits, they will have to come to us, and I will not give them any.

Mr. ROSS (St. Paul's): The government provide the buildings and the plant?

Mr. POWER: The buildings, aircraft and everything else.

Mr. ROSS (St. Paul's): All the plant?

Mr. POWER: Yes.

Mr. HANSON (York-Sunbury): If the committee is through with the discussion on aeroplanes, I should like to ask the Minister of National Defence for Naval Services if he will make a statement to the committee, and I would like him to explain the basis upon which a large number of United States privately-owned yachts were bought in the early stages of the war and brought into Canada, the purposes for which they were bought, and what use is being made of them.

Mr. MACDONALD (Kingston City): This matter of the yachts is rather an unusual arrangement which happened before I came to Ottawa. I am familiar with it, but I do not know whether even now, after a year, it would be wise to announce publicly the form in which that transaction was made. I would be glad to tell my hon. friend.

Mr. HANSON (York-Sunbury): I will forgive the hon. gentleman if he will not tell the form, because I know it. I should, however, like to know how many we bought, how many are in use now, and for what purpose?

Mr. MACDONALD (Kingston City): I forget whether it is fifteen or sixteen. They are all in use.

Mr. HANSON (York-Sunbury): For what purpose?

Mr. MACDONALD (Kingston City): Well, for war purposes.

Mr. HANSON (York-Sunbury): All right—if that is all the minister wants to tell.

[Mr. Power.]

Mr. MACDONALD (Kingston City): They are in use in different parts of the world. I do not know if I should say exactly where they are. All the yachts have been armed. They are patrolling the various waters in which they have been placed, and are carrying on the regular duties of ships of that class. I do not know that I can say much more than that.

Mr. HANSON (York-Sunbury): Of course that is quite illuminating! Have any been used for living quarters or office quarters for members of the naval staff?

Mr. MACDONALD (Kingston City): No, none of those.

Mr. HANSON (York-Sunbury): Some ships which have been requisitioned have been so used, have they not?

Mr. MACDONALD (Kingston City): Not for the Canadian staff. There is one ship in Halifax used by a flag officer commanding there, the British representative and his staff. That is the only yacht I know of which is used for living accommodations of any naval officer.

Mr. HANSON (York-Sunbury): We did not get very far on that.

Mr. DOUGLAS (Weyburn): I should like to ask the Minister of National Defence if his department has authorized deductions from the pay of men in the reserve army to set up regimental funds. I have heard a number of instances of it. I have never actually known of a case, except one which came to me the other day, of a certain regiment in the west, in which it was announced that authorization had been given by which each man was to have deducted from his pay—I believe it was $9; I can check the memo on it—to go towards the regimental fund. I was wondering whether the minister knew anything of that, and whether it was authorized.

Mr. RALSTON: I have not heard of it, and have no idea of anything of that kind being done. If my hon. friend would give me the name of the unit, either privately or at the present time, I shall be happy to look into the matter.

Mr. DOUGLAS (Weyburn): I shall be very glad to give it to the minister. I can quite understand why it is done. I am not speaking in a spirit of criticism, because I think I know something of the problem the men are up against in the reserve units, but there is a feeling among many of the men that there is a difficult problem. I know the minister is familiar with it because he has had a good

deal of experience along that line. No allowance is made for buying things like multigraph machines and other equipment they must have if they are to operate a unit properly. The result is that they are usually forced to do one of two things. Either they have to use money from the canteen fund, or they make a whip-around among the officers and non-commissioned officers. In this particular case, I am informed, they actually deducted so much from each man's pay. If they did, I am not complaining about the act as about the necessity for such a thing. Some allowance should be made for reserve army units whereby they will have funds to buy the type of thing they need in order to keep the regiment working smoothly.

Mr. RALSTON: My hon. friend has mentioned multigraph machines. That is not quite in keeping with an officers mess. The things about an officers mess that I think of are dishes, cutlery, furniture and such necessities. Is he advocating the other as well?

Mr. DOUGLAS (Weyburn): No.

Mr. RALSTON: My colleague has mentioned a headache. He does not know about headaches until he has to deal with allowances for such matters. My hon. friend is referring to provision for equipment for company offices and battalion headquarters?

Mr. DOUGLAS (Weyburn): Yes. I am not thinking of officers messes. That is something they can take care of; but it is too much to ask these men, the rank and file, to contribute to office equipment which is not provided for by the department.

Mr. RALSTON: My hon. friend suggested that a deduction was made not only from officers but from the rank and file.

Mr. DOUGLAS (Weyburn): Exactly; and as a matter of fact, indirectly, in practically all units it is taken from the rank and file, because it is taken from the canteen fund and that comes from the men who buy cigarettes and chocolate bars from the canteen. Therefore, indirectly all ranks contribute to buy the things that should be a responsibility of the department.

Mr. HANSON (York-Sunbury): The Minister of National Defence for Naval Services is reticent on the question of these yachts. I am not suggesting that there is anything to hide. He might have given a little more information than he did. He is not going to get into trouble over this matter. The position is entirely changed since that transaction took place about a year ago.

Mr. RALSTON: Since Saturday night.

Mr. HANSON (York-Sunbury): Yes, or last Wednesday, I assume, would be the better date upon which to base the change. If he is not willing to give more information, I shall not press him, because doubtless he has what seems to him to be good and sufficient reasons for not conveying any information. I think it might have been better if, at the time this transaction was put through, a little more information had been given the public by the government, because many unjust statements were made by people who did not understand the position and who thought some people were getting something for nothing. I understood it from the beginning. I never raised the question in this house before to-night. I thought that now we might be told the story, but if that is not possible, I shall not press it.

Mr. HOWE: I handled the transactions and perhaps I can give my hon. friend certain assurances. They were purchased through the Department of Munitions and Supply or its predecessor board. We carried out the transaction in accordance with the laws of the United States government, and to do that we had to get several individuals each to buy a yacht. Those individuals were carefully chosen as men who knew yachts, men outstanding in the community, who were willing to volunteer to give time without profit.

Mr. HANSON (York-Sunbury): I am not questioning all that. I want to know how much was spent.

Mr. HOWE: It was not large, altogether not more than a million and a half.

Mr. HANSON (York-Sunbury): For how many ships?

Mr. HOWE: Fifteen.

Mr. MACDONALD (Kingston City): Fourteen.

Mr. HANSON (York-Sunbury): And they are all in commission?

Mr. HOWE: Yes, and at the time, of course, they were needed. Patrol vessels were badly needed, and these could be got and armed quickly.

Mr. HANSON (York-Sunbury): They were in commission for the most part?

Mr. HOWE: Yes. They were valuable.

Mr. HANSON (York-Sunbury): I never criticized it.

Mr. HOWE: I want to make it clear that these men arranged their own financing privately. At the end of the transaction the men received their absolute out-of-pocket expenses. No one made five cents profit on

the boats. As a matter of fact, the men went to a great deal of trouble to perform the service, and I was able to call them together and thank them for a really patriotic service.

Mr. HANSON (York-Sunbury): I am delighted to hear the minister's statement, because I will tell him that in eastern Canada there was a great deal of misapprehension about that transaction, and a very unjust inference was drawn, perhaps from the secrecy with which the thing was carried on. I understand thoroughly the reason why it was done in that way; it was because of the laws of a certain foreign country. It had to be carefully examined and carried out. But I had numerous letters last session with regard to this matter, that so-and-so, and so-and-so had got a private yacht and unloaded it on the government. I never for a moment believed that there was anything of the sort, knowing some of the men at least who allowed their good offices to be used in connection with that service. It seems to me the statement the minister has made to-night is a little bit of belated justice to these men, having regard to the uninformed criticism which was made of the transaction. As far as I am concerned I welcome this statement; and as far as I am further concerned the transaction is closed.

I should, however, like to have from the minister a statement of the policy of his department in connection with expenditures of a very substantial sum with respect to the acquisition of vessels during the past fiscal year, or the one now closing, the break-down of which he gave the other day and for which we have had no explanation, and also with respect to the coming year, so far as the acquisition of vessels is concerned; what has been done, and what is proposed.

Mr. MACDONALD (Kingston City): I shall be glad to give the statement. I cannot give details at this moment, but, generally speaking, there are only two ways of acquiring the vessels needed. We have either to build the vessel or to buy it. There is also a third way, and that is to charter the vessel. It depends on the purpose for which the vessel is required which method will be followed. In the case of United States yachts, the quickest way to get ships of that class into commission in the Canadian navy was to obtain them in the way in which they were obtained, and that practice was followed. Certain steps had to be taken, and I do not think, even at this time, while conditions have changed, we should go back and say that a year ago certain things were done in a manner which at that time might be open to criticism.

[Mr. Howe.]

Mr. HANSON (York-Sunbury): I do not think it was open to criticism, but it was open to misconception because of lack of knowledge. I would rather put it that way, that there was misconception.

Mr. MACDONALD (Kingston City): Could anyone tell the Canadian people at that time what was done?

Mr. HANSON (York-Sunbury): I did not say they could.

Mr. MACDONALD (Kingston City): It could not possibly be told.

Mr. HANSON (York-Sunbury): The time has arrived when it has been done, and I welcome it as clearing up certain misapprehensions which were created by the methods adopted. What I ask now is: What is the minister going to do with the vote of $56,000,000, mentioned on page 1495 of *Hansard*, for the acquisition and construction of vessels? I further ask him what he did with the money, $28,525,000 in the last fiscal year or up to January 31, 1941. I think we are entitled to that information.

Mr. MACDONALD (Kingston City): I shall be glad to give my hon. friend an analysis of those two figures, the amount for the current year and the amount asked for the coming year, as to ships to be constructed for us, ships to be bought and ships to be chartered.

Mr. HANSON (York-Sunbury): The minister cannot give it to-night?

Mr. MACDONALD (Kingston City): I do not think I can give the exact figures. I have the detail here, but I think I can arrange it in shorter form by to-morrow.

Mr. HANSON (York-Sunbury): I am quite willing to let it wait until to-morrow.

Mr. GRAYDON: Has the Minister of National Defence had opportunity during the recess to find the answer to the question which I put some time before six o'clock with regard to various medical categories in the reserve army?

Mr. RALSTON: No, I have not. I will have it to-morrow.

Mr. MacINNIS: I wish to ask a question of the Minister of National Defence for Naval Services. Some time ago the people of Canada were delighted to hear that in the army promotion would be made from the ranks. I have heard some criticism of the way in which promotions are made in the navy. Could the minister outline to the committee how promotions are made?

Mr. MACDONALD (Kingston City): Some promotions are made from the ranks. I think an announcement to that effect was made before Christmas. Generally speaking, if a man wants to take a commission in the Royal Canadian Navy he would enter the navy as a cadet and undergo a course of training in the naval college in England for a period of two years, after which he would serve some time on ships and receive his commission. The more common course to pursue is for a man desiring to be an officer to join the Royal Canadian Naval Volunteer Reserve, one of the eighteen divisions of that reserve found in the leading cities of Canada from Charlottetown to Vancouver. He joins as a sort of probationer and is observed by the officers commanding, and if he seems suitable for commissioned rank in the navy he is given a course. If he passes that course satisfactorily, he is sent to sea. Of the men training on the west coast now, a certain number have been taken from the ranks, I forget the exact number; but a certain number have been taken from what is called the lower deck, that is men in the ranks, and they are training along with others for positions at this time.

Mr. MacINNIS: Could the minister give at some other time the figures for the number taken from the ranks?

Mr. MACDONALD (Kingston City): Yes; I should not like to give a figure now; I am not sure what it is.

Mr. MacINNIS: Is there a minimum educational requirement for cadets?

Mr. MACDONALD (Kingston City): Yes, there is an educational requirement for an officer in the navy; he has to be able to do certain things with instruments which require a certain amount of mathematical training. It is all laid down in the regulations. It is, I think, about equivalent of matriculation.

Mr. NICHOLSON: I wish to ask a question of the Minister of National Defence. On page 1352 of *Hansard* where the appropriation for this department is broken down, I see an item of $8,232,697 for internment operations. Could the minister give details of this item? It seems a large amount. What proportion is recoverable from the United Kingdom?

Mr. RALSTON: I do not want to shift responsibility, but the matter of recovery from the United Kingdom is in the hands of the Minister of Finance. Only lately I think an agreement has been concluded with regard to internment camps. It was under discussion for a long time, and certain proposals were made. Internment camps are, however, under the Department of the Secretary of State, although the Department of National Defence does the work. We supply the guards and do the running and administration.

Mr. MacNICOL: Do you select the sites?

Mr. RALSTON: Generally speaking, the sites are selected by the director of internment operations who is appointed upon the recommendation of the Secretary of State but who has close liaison with the Department of National Defence. I think the sites are selected by him in consultation with the officers commanding in the different districts. I will try to give such break-down as I can. What has my hon. friend in mind, pay and allowances for instance?

Mr. NICHOLSON: It seems quite a large item.

Mr. MacINNIS: I have another question to ask of the Minister of National Defence for Naval Services. There was some criticism on the Pacific coast when the captured German ship the *Weser* was refitted and a crew was taken from the Atlantic coast to man the ship. The seamen in Vancouver claim that there are many idle sailors there who could have done the work just as well. What explanation has the minister on that point?

Mr. MACDONALD (Kingston City): I have nothing to do with that.

Mr. HOWE: That boat was condemned and turned over to the Canadian government merchant marine, and a crew was sent out by the Canadian government merchant marine. I presume it was a crew they had immediately available in the east, and instead of recruiting one in the west they sent out a crew they had available from another boat. I think it was not a complete complement of officers and men; I think it was only officers they sent out. I have a dossier on that boat, but I do not have it before me. I will try to get the information.

Mr. HANSON (York-Sunbury): What has the minister to say about the Vancouver *Sun's* story on that boat?

Mr. HOWE: I have been expecting a question on that. I have a complete story, I have it well briefed but I do not have it here.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Tuesday, March 18, 1941.

The house met at three o'clock.

LOANS TO PROVINCES

CORRESPONDENCE BETWEEN DOMINION AND CERTAIN PROVINCES TABLED

Hon. J. L. ILSLEY (Minister of Finance): I desire to lay on the table correspondence between this government and the government of Alberta, and between this government and the government of British Columbia, relating to certain loans made by this government to those governments.

Mr. HANSON (York-Sunbury): Is that all the correspondence? There was no correspondence with other governments?

Mr. ILSLEY: That is all.

NATIONAL WAR SERVICES

TABLING OF REGULATIONS, 1940, WITH RESPECT TO RECRUITS

Hon. J. G. GARDINER (Minister of National War Services): I wish to lay on the table two copies of order in council P.C. 1822, providing for national war services regulations, 1940, recruits, and two copies of the regulations.

Mr. HANSON (York-Sunbury): Will these regulations be printed and distributed to hon. members, or shall we have to get copies individually?

Mr. GARDINER: I think it will be possible to have them mimeographed and sent to hon. members, if that is desirable.

Mr. HANSON (York-Sunbury): I think it would be.

PRIVATE BILL

GENERAL SECURITY INSURANCE COMPANY OF CANADA

Mr. SARTO FOURNIER (Maisonneuve-Rosemont) moved the first reading of Bill No. 18 (from the senate) to incorporate General Security Insurance Company of Canada.

Some hon. MEMBERS: Explain.

Mr. FOURNIER (Maisonneuve-Rosemont): The principle of this bill is to give to the General Security Insurance Company of Canada the status of a dominion company and to place it under the control of the federal department of insurance.

Motion agreed to and bill read the first time.

[Mr. Howe.]

MUNITIONS AND SUPPLY

SHORTAGE OF NATURAL GAS IN WESTERN ONTARIO FOR DOMESTIC USE

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): I should like to direct to the attention of the Minister of Munitions and Supply a matter of some importance. I brought it to his attention a week or so ago, and I spoke to him about it during the noon hour. A serious situation has developed in parts of western Ontario with regard to the supply of gas for heating purposes. I received a telegram at noon from the chairman of our citizens' committee, which reads:

> Gas situation really desperate. People draining water systems and deserting homes. Unable to work in our office.

In many of these homes are small children; in others are newly born babies, and there is no other method of heating than by gas. In spite of the expected scarcity of gas, the gas company continued to sell heating equipment last summer. This matter is very serious; could something not be done about it? I realize it is more or less a provincial matter, but perhaps there could be cooperation with the province in an effort to stop the use of so much gas in some of our war-time industries.

Hon. C. D. HOWE (Minister of Munitions and Supply): I have been in touch with the minister of mines for Ontario in connection with this matter, and some months ago he asked my cooperation. At that time I gave instructions that the officers of the department were to cooperate fully with the minister of mines for Ontario in curtailing the use of gas for industrial purposes. The difficulty I think is, as my hon. friend has said, that the gas company itself has greatly oversold the quantity of gas that can be produced, and it is difficult for this government to do anything other than to assist, if we are asked by one of our contractors to assist in installing oil instead of gas. We have been doing that for some time. We have been encouraging our contractors to change over from gas to oil. If the Ontario government minister responsible can suggest any further cooperation I am sure we shall be very glad to give it.

Mr. GERSHAW: I suggest that the minister move some of the industries out west, where there is plenty of gas and power and sunshine.

UNEMPLOYMENT RELIEF

QUESTION OF FEDERAL AID TO PROVINCES BY WAY OF GRANT OR LOAN

On the orders of the day:

Mr. A. H. BENCE (Saskatoon City): I should like to ask the Minister of Finance (Mr. Ilsley) if he can give any information in connection with the question I asked on Friday last respecting unemployment relief for those provinces which have indicated that they are not in a position to take care of it themselves.

Hon. J. L. ILSLEY (Minister of Finance): I find that there are no written communications, but there have been some negotiations, some conversations between the representatives of the Saskatchewan government and this government in reference to relief in the province of Saskatchewan. I am not sure whether there have been conversations with either of the other two provinces, Manitoba or Alberta, but there may have been something in the nature of conversations with Manitoba, though nothing very definite.

The matter has been taken up between the Saskatchewan government and the dominion government and certain arrangements are being made in reference to the current fiscal year, not the coming fiscal year.

INCOME TAX RETURNS

POLICY AS TO GIVING INFORMATION WHICH WOULD INDICATE INDIVIDUAL INCOMES

On the orders of the day:

Mr. F. D. SHAW (Red Deer): Mr. Speaker, I should like to direct a question to the Minister of National Revenue. In answering certain questions which appeared on the order paper in my name the minister stated that it would not be in the public interest to separate individuals in receipt of incomes between $50,000 and $100,000 from those in excess of $100,000. Will the minister be good enough to explain what he means by that phrase, "not in the public interest," and will he also explain why it is not in the public interest?

Hon. C. W. G. GIBSON (Minister of National Revenue): Income tax returns that are filed are confidential documents, and it is not considered to be in the public interest that we should give information which might indicate the amounts of income tax that are paid by various individuals.

Mr. JOHNSTON (Bow River): He did not ask that.

Mr. GIBSON: If my hon. friend will wait a moment, I was going on to say that when we get up into the higher income brackets, there are so few individuals concerned that any indication of the actual number would almost point to the particular individuals who are in receipt of these incomes. The department therefore has always taken the stand that it should not particularize as to income tax returns of over $50,000 a year.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I think the question has hardly been answered. I myself have often wondered what is the government's interpretation of the phrase, "not in the public interest." It seems to me to be a convenient term which has been used by many governments on many an occasion as a reason for refusing to give information which might sometimes very well be given. That was the point of the question—what is meant by "not in the public interest?"

Hon. J. L. ILSLEY (Minister of Finance): There is an important matter of policy involved in the divulging of incomes of identifiable individuals in this country. It has been decided as a matter of policy in the United States that individual incomes should be made public, but in this country we have always gone on the opposite principle—that the government should not divulge to the public the incomes of any particular persons. That is a matter of public interest. Whether the policy is a correct one or an incorrect one is a matter of opinion; but assuming it is a correct one, that is actually what is meant by saying that it is not in the public interest to divulge the information.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, March 17, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war.—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Mr. MacNICOL: Mr. Chairman—

Mr. RALSTON: I wonder if the hon. member would permit me first to put on the record

a few sets of figures as to which one or two inquiries have been made.

First, the hon. member for Regina City (Mr. McNiven) asked for the pay and allowances, by districts, of the Canadian Army. I have them here. They are as follows:

Military district	
No. 1	$2,604,167
No. 2	8,169,445
No. 3	5,085,769
No. 4	3,841,136
No. 5	3,302,993
No. 6	5,289,390
No. 7	2,624,269
Petawawa camp	867,209
No. 10	3,864,965
No. 11	4,001,040
No. 12	1,843,282
No. 13	2,225,821

Some days ago the hon. member for Melfort (Mr. Wright) asked for figures that would show the amounts spent under a number of different headings. The first heading to which he referred was the non-permanent active militia, which is now known as the reserve army. I want to explain to him and to the committee that the accounts are not kept in such a way that one can separate the total costs of the non-permanent active militia from the active army, for the simple reason that stores, accommodation, equipment and many other items are paid out for both active and reserve army and are not segregated between these two particular functions. I am afraid that the best I can do at this stage is to give my hon. friend a statement which has been made up to show the amount paid to the reserve army, that is, the reserve army excluding those who have been trained under the National Resources Mobilization Act, for pay and allowances, also annual allowances for command, training, et cetera, paid to the commanding officers of the various units and which largely fall due for payment at the end of the fiscal year; also for rations in cash or in kind; rental of training areas; laundry charges; hire of vehicles; mechanical transport and horses where necessary.

Up to January 31, 1941, the total paid out for these items amounted to $3,008,821, and the probable payments to be made from February 1 to the end of the fiscal year will be an approximate sum of $3,000,000, a total in round figures of $6,000,000 for the fiscal year 1940-41. It must be made clear that these figures cover only the items which have been mentioned; that other costs such as stores and equipment, accommodation, travelling, upkeep and maintenance costs are not included.

My hon. friend also asked the same question with regard to the active service force. There the same difficulty applies. The branch, however, has endeavoured in another way to give my hon. friend such information as we could, taking a rough break-down and attempting to deduct charges for services other than for the active army. The figure arrived at in this way which was given me as a probable amount for expenditures up to January 31 for the active army is $252,497,796. That would approximate the expenditures made to January 31, 1941, for the active service force, subject to this, that it is made up roughly by attempting to make deductions so far as these could be quickly decided for services in Canada not within the active army. There again one has to consider that there is difficulty in segregating certain objects of expenditure in their application to the reserve army as compared to the active army.

My hon. friend asked for particulars of the expenditures for trainees. I refer him to page 907 of *Hansard*, where a statement was put on record. He also asked for the expenditures on administration of general headquarters and on the administration of the different military districts. But the accounts are not kept in that way, and it would take a very great deal of work to segregate the administration of these headquarters from the other charges for the army.

As regards actual expenditures for ordnance stores, another item for which he asked: for the ten months' period ended January 31, 1941, they amounted to $82,625,956.

On construction and repairs, the actual expenditure for the ten months ended January 31, 1941, amounted to $23,926,143. This does not include dominion arsenal, mechanical transport depots and assembly plants, or the National Resources Mobilization Act training centres.

For travel and transportation in the ten months ended January 31, 1941, the actual expenditure was $7,752,952. This item does not include transportation for those under the National Resources Mobilization Act, which is shown in the statement on page 907 of *Hansard*.

Last evening the hon. member for Peel (Mr. Graydon) asked for a break-down with

regard to the medical categories of those who were trained at the training camps. For the first period, October 9 to November 8, 1940, I am sorry to tell my hon. friend, the break-down is not available; that is, it is not tabulated. It would be necessary, I am told, to examine the medical examination forms of each particular candidate who passed. That is to say, if a man passed they just filed his form. The total number was 25,521 for the first camp. I can give my hon. friend the break-down for the second and third camps:

	"A"	"B"	"C"	Total
Second period November 22—December 22, 1940	23,152	3,899	1,066	28,117
Third period January 10—February 9, 1941	23,199	3,867	961	28,027

Mr. GRAYDON: May I ask the minister if he has also the figures—I thought this had been made clear yesterday—of medical history sheets of the reserve army in Canada?

Mr. RALSTON: I fear it is impossible to obtain that. They are at the different districts, I understand, and I am having the Director General of Medical Services make further inquiry from the districts to see whether that information can be supplied.

Mr. GRAYDON: I would not want to cause any inconvenience or expense, because the matter is not sufficiently important.

Mr. RALSTON: I should be interested in the result of the examination if I could get it.

Mr. MacNICOL: In the course of the wonderful speech made on Saturday night last by that very great man who is now President of the United States—one of the greatest men, in my judgment, of all time—he mentioned on several occasions the matter of ships; and last evening I told the Minister of Munitions and Supply that to-day I should like to ask him a little further about ships to be produced in Canada. I thought that perhaps in the course of his reply he would be able to give Canadians the reassurance that everything possible is being done in this country to produce sufficient ships to take care of our responsibilities in that direction in connection with the prosecution of the war.

I read carefully what the minister said the other day in his brief observations on what I said in the course of a short speech on the building of ships; and if I understood him correctly, he said it was his intention to initiate and support the building of ocean-going cargo ships, presumably of five, six, seven, eight and ten thousand tons, on both coasts. With that I am in hearty accord. I believe that is where these big ships should be built, because they could not be taken down through our St. Lawrence locks, which, I believe, will accommodate only ships of 245 feet.

Mr. HOWE: That is right.

Mr. MacNICOL: The minister also said that in his opinion corvettes and mine-sweepers could be most satisfactorily built on the great lakes. With that statement also I am in hearty accord. But he added, as I remember, that the difficulties were, the supply of steel and the obtaining of men qualified to superintend the construction of ships.

Could the minister not do somewhat more than has been done? I do not know—perhaps he will tell us—what has been done in the way of producing a great deal more iron in Canada. I believe in 1939 we did import somewhat less than 1,700,000 tons from Bell island, Newfoundland, to keep the blast furnaces at Sydney in operation. I understand that we are now producing in Ontario over half a million tons of iron a year from the Helen mountain deposit in Algoma. Those later deposits, which I have examined thoroughly, are a magnetite ore. Now the same company which operates the magnetite ore deposits in Algoma is—I am told, although I am not sure of this—considering reopening or going on with the production of more or less similar ore deposits at Moose mountain, in the Sudbury area. I do not know whether the company has asked any support from the government; but is there anything the department could do to expedite the production of the Moose mountain ores? Because if they could produce another half million tons at that point, it would mean that a million tons would be produced in Ontario and thus another half a million less would have to be imported from the United States. It is not that I have any objection to importing from the United States, but I am more in favour of producing in Canada if we can.

I should like to know whether the department could do anything to expedite production on another body of ore, with which the minister is familiar, at Steep Rock, which, if not in his own area, is in northwestern Ontario: it is a very large deposit of hæmatite ore, similar to that found in Wisconsin and in Minnesota, and therefore of a high

grade. All of us have been reading during the past two or three years of the progress of development at Steep Rock. I know something of the difficulties, of the necessity of eliminating the water hazard, but can we do anything to expedite production there? It is a particularly high-class grade of hæmatite ore. I have examined a sample of it, and was much pleased with the sample I saw. In that regard the department might help materially in producing steel for the construction of ships in Ontario. Where the steel for the production of ships on the two coasts comes from is another matter. Perhaps some of it could be produced on the east coast.

Yesterday we were all alarmed, though perhaps we should not be, at what we read in the newspapers about the sinking of British shipping since the war broke out. The amount is less than 5,000,000 tons. The same article indicated that, notwithstanding that great loss, as a result of the purchases of ships, the building of ships in their own yards and the use of ships from other nations, our allies, besides captures, the total British tonnage is only three per cent less than when war broke out. But in view of the avowed intention of the Germans to send into the Atlantic ocean a large number of submarines, I have been wondering what the minister could do to speed up production at the present time of submarine chasers, corvettes and so on, all of which can do effective work in keeping down the submarine menace. Such ships can go through the St. Lawrence canals, and these small ships could be built on the great lakes.

I would ask the minister to tell the committee and, through the committee, the country, what he has in mind in that regard. Will he tell us what he can do and thereby reassure the country and, through this country, our brave friends in the old land that we shall do everything we possibly can in this house, that his department will do everything it can —all of which I know both parliament and the country will back up to the limit—in the way of production, first, in steel if necessary, and secondly, in any event, in the production of ships from steel that we make here or that we can purchase. A statement to this effect would reassure everyone that all that this great country can do will be done to see to it that the submarine menace now threatening is kept down. I shall be glad to hear what the minister can tell us.

Mr. HOWE: First, regarding the steel situation as it affects the building of ships, the situation is in very satisfactory shape or is becoming so. Some ten or twelve months ago, perhaps longer, we undertook to step up the steel plate capacity of Canada. At that time the only firm manufacturing steel plate was a firm in Hamilton, the Dominion Steel Foundries, I believe.

Mr. HANSON (York-Sunbury): Was there not a plant available in New Glasgow?

Mr. HOWE: No.

Mr. HANSON (York-Sunbury): I am told by Colonel Cantley that the plant in New Glasgow is available but is quite idle.

Mr. HOWE: If it is capable of running I am surprised that some one has not operated it. There was a plant, I believe, at Sydney, installed during the last war. Since then parts of the equipment have been taken for other purposes and it was determined that an expenditure of $4,000,000 would have been required to put the mill into operation. The difficulty there is the shortage of primary steel. Contracts had been made for the export to England of all surplus ingot capacity of that industry. We have opened up the question with Great Britain to see whether they would take steel plates produced by the mill, but the British steel controller said that it would be more useful for their purpose to obtain ingots, rather than ingots converted into plate, and as they had contracted for the output before the war we did not feel that we could interfere with that contract against their wishes. However, since the beginning of the war we have stepped up our steel plate production. Under the first ship contracts, steel plate was largely purchased in the United States. Within the next thirty days the Steel Company of Canada are putting into production one of the largest and most modern steel plate mills on the continent, and it is anticipated that the total ship requirements for anything that we can do in Canada would not reach more than forty or fifty per cent of the capacity of that one mill. So that we are amply provided for so far as steel plate capacity is concerned.

Mr. MacNICOL: Is the new plant in Hamilton going to roll 40, 50, 60, 70, 78 and so on, or is there a limit?

Mr. HOWE: It is one of the widest of plate mills. It is at least 72 inch though it may be 90 inch; I am not sure. However, it is one of the widest plate mills installed anywhere, and of course a mill of that type has no difficulty rolling narrower sizes. We are in quite a satisfactory position as regards steel plate.

As far as the steel situation generally goes, it has been increased by about 500,000 tons since the outbreak of the war. We had a theoretical steel capacity at the outbreak of the war of about 2,200,000 tons, and within the next month or two we shall be producing at the rate of about 2,700,000 tons. We still

require to import about 1,000,000 tons of steel from the United States, and that is the normal position when Canada is busy. Of course, except in peak periods, our steel industry is not working to anything like capacity. It is a matter of judgment whether at a time like this we should go all-out to make ourselves self-contained in steel for war requirements. It is my judgment that that is not justified, particularly as we have obtained every assurance that the usual source of supply will be available to us at least up to the amount that we nominally take, and it is the opinion of the steel controller and of those who have studied the matter that we are amply protected for our war-time steel requirements.

Iron ore is not a serious problem. Of course, Sydney has its own iron deposits, ample for all purposes. The Algoma Steel company has the Helen mine, which provides part of its requirements directly, and from which they are able to trade ore for ore to obtain the rest of their requirements. As my hon. friend knows, no single mine can produce all the ore that a steel company requires. Various grades of ore are necessary, and I believe that the Algoma plant uses some ten different grades of ore which are mixed to manufacture the various grades of steel which the plant produces. The Steel Company of Canada owns iron mines in the United States and purchases its requirements from a great number of sources. There is no shortage of ore in sight there. The only possible shortage of ore would be due to a lack of lake tonnage, and that I think is scarcely likely to occur this season.

As far as Steep Rock is concerned it is difficult to associate that with a war project. It is the estimate of those responsible that it will take at least two years to complete the development of that ore. The Moose Mountain mine near Sudbury is a deposit somewhat lower in grade than the Helen mine, and there again it is doubtful whether the development of that mine would make any great contribution to the Canadian war situation.

Hon. members will appreciate that we lost no time in undertaking a shipbuilding programme in Canada. The first order placed when the defence purchasing board was formed was for railway rolling stock, and the second was a very large order for corvettes. We have been using yards that were in existence at the beginning of the war to their full capacity, and those yards are working at full capacity to-day. We have arranged for the building of corvettes in two new yards on the great lakes, that is yards that have not been in operation for many years, but both are locations where ships had been built in the last war and where skilled labour was available, one at Toronto and one at Midland.

We carried out a very large programme of building of corvettes, and that was followed by a large programme of mine-sweepers. The last of the corvette ships that we have on order have recently been placed. We still have a number of mine-sweepers to place.

The demand for cargo ships has arisen within the last three months, as far as our communications indicate. The fact that everyone believes now that we should have been full-out in merchant ships arises of course from the recent losses, from a situation that has developed very recently. After the fall of Dunkirk the great demand was for guns. We responded to that demand; I think to the full productive capacity of Canada. About one-third of all our contracts in Canada are for the production of guns. Had the emphasis at that time been on ships, our effort would have been directed towards a somewhat more rapid development of additional capacity in existing yards, and possibly to the opening up of new yards.

Mr. ROWE: What percentage of the present shipbuilding capacity are we utilizing at the present time?

Mr. HOWE: One hundred per cent of all the capacity we can get, and we are building more capacity all the time by getting more trained men. We have kept it up to one hundred per cent of what the yards can do. There is no yard in Canada capable of building steel ships that has not had all the work it can do since we started operations.

Mr. ROWE: In three shifts?

Mr. HOWE: Well, with all the labour that they can use. They have plenty of work to do; whether they can work one, two or three shifts depends on the number of experienced men that can be made available. I assume every yard is trying to turn out as much work as it can.

Mr. ROWE: I think I could name a couple of yards that could increase.

Mr. HOWE: Well, let us have your story.

Mr. ROWE: I am not going to interrupt, only to say that I believe the shipbuilding yards of Collingwood and Midland could increase their present capacity. I think they are running only one shift, eight hours a day. There have been I understand many men unemployed still in those districts that could be used for that purpose. It seems to me that in many districts three shifts would be justified, that those plants should be running nearer to full capacity instead of only one shift a day. I think they should be running also on Sundays.

Mr. HOWE: All I can say is that the Collingwood yard has had all the work it can

possibly do last season and this season. I know they have had applications with us for boiler makers, we have been scouring the country to get boiler makers for Collingwood and Port Arthur. It is probable that there is a surplus of unskilled labour, but if there is a man idle in this country to-day who is skilled in the building of ships I should like very much to have his name and address, because he can be given a job immediately. I cannot say why the Collingwood yard has not been running three shifts, but I assume it is only because it has not been possible to obtain more skilled men. I know that the staff at Collingwood has been growing steadily, as has the staff at Port Arthur; each week the number of men at work is larger than for the preceding week. It is just a question of being able to train and develop additional men. That is the history of the whole shipbuilding enterprise in Canada. We started from very small beginnings, and each week have had a larger number of men engaged in the industry.

Mr. ROWE: In other words, it is running at the full capacity of labour?

Mr. HOWE: That is it.

Mr. HANSON (York-Sunbury): I had a letter this morning from a labour union in British Columbia in regard to that matter. I am sorry I haven't it here, I sent it to the hon. member for Vancouver South and he is gone to Toronto to-day. In it they questioned that statement. I express no opinion at all, I do not know; but I wish the minister would take steps to explore the position in British Columbia, because they rather contradict the allegation that all skilled labour there is fully employed.

Mr. REID: I think the letter to which the hon. leader of the opposition refers relates to unskilled labour, because it was signed by the labourers' union.

Mr. HOWE: We have had our director of shipbuilding in British Columbia for the past week or ten days exploring every avenue for obtaining new production there. We have also had a report from the war-time requirements board; that board consulted experts in shipbuilding from all parts of Canada. It is the considered opinion of all the experts who have reported to me that it will be possible gradually to expand the existing yards in British Columbia, but all recommend against opening new yards there for the reason that there is not sufficient skilled labour available.

I wish hon. members to understand that our shipbuilding project has never been static, it has always been increasing. In every yard in Canada capable of building steel ships, each week shows an increase in the number of men employed; that will continue, and it continues rather in geometrical progression, in that as each staff gets larger it is capable of training and absorbing men at a higher rate.

As I say, we have finished placing orders for the corvette programme, but it will be the end of this year before the last are delivered. Our mine-sweeper programme is still under way, and we have additional mine-sweeper orders to place. It is our intention to concentrate this work more or less in the great lakes, to the extent that we can do so and still maintain deliveries. Those that order mine-sweepers order them to be delivered as of a certain date, and it is necessary for us to maintain those dates.

The policy of the department will be to concentrate in great lakes shipyards boats that can be moved out through the Welland canal. As for the coast and St. Lawrence river yards, we have already placed all the cargo ships for which berths are readily available. Twenty ships of approximately 10,000 tons have been placed; steel is being assembled, and work is proceeding.

Mr. HANSON (York-Sunbury): That is for the account of Great Britain?

Mr. HOWE: That is right; and we have determined on additional capacity that can be developed. It must be developed in the way of new berths, and we have worked out what our experts advise us is the maximum programme that can be successfully carried out, covering 1941, 1942 and 1943. It shows a rapid progression in the number of boats that can be launched in each of those years, and at the present time we are proceeding to arrange for the construction of this additional boat capacity, which we will follow up with orders as we are able to place them.

In brief, that is the policy. As I stated in the house, as Canada is situated to-day we believe it is necessary, even though it is not economical, to undertake the building of destroyers. We believe that with the fleet of destroyers we have to-day it is necessary to develop destroyer building technique in this country, and to develop sources of supply in Canada for every piece of equipment that goes into a destroyer. That work is proceeding and will be carried along as rapidly as possible without interfering with the more urgent requirements of our programme.

Of course, as I have said in the house before, the most urgent requirement of all is to be able to give rapid service in overhaul and repairs to the boats that are coming to our shores. The greatest contribution we can make to the immediate situation is to give a quick turn around to these boats, and we

are doing everything we can to build up the repair facilities at Halifax, Saint John and other ports capable of doing this repair work. We are building a floating dry dock at Halifax which will greatly help out the docking situation there, in connection with the repair of ships. Construction of that dock is well under way and will be in operation this autumn. We have also greatly enlarged the machine shop facilities at Halifax. The shore shops have been enlarged and in addition we have installed a floating shop, which is a great help in the repair and overhaul of ships. That will be our first and most urgent effort, to enlarge as rapidly as possible the personnel and facilities for the repair and overhaul of ships. The situation will be eased greatly when the St. Lawrence river opens and some of that repair work can be diverted to St. Lawrence yards, but I can assure the committee that we intend to move heaven and earth to make sure that adequate overhaul facilities are available on the Atlantic coast before the St. Lawrence closes this year.

That, I think, is the building programme. It is intended to expand our shipyards as rapidly as possible. Since the beginning of the war, we have kept every yard well supplied with work. I do not think any yard can complain that it has not had at all times all the work it was capable of carrying out. I am sure if any yard had been capable of doing more work it would have delivered its boats faster than has been the case, though I must say that deliveries of boats have exceeded our expectations up to this time, and we believe the shipbuilders are doing everything possible to cooperate with the government in producing the maximum number of ships.

Mr. HANSON (York-Sunbury): Is any extension contemplated at Saint John, and is anything contemplated at Sydney?

Mr. HOWE: We are studying the Sydney situation, and I believe something should be done there. The difficulty at Saint John is that we cannot get enough men to operate the present facilities. My hon. friend will understand that where we have existing facilities the first necessity is to get those facilities operating to full capacity before installing further facilities. For example, there is no purpose in extending a dock if the present dock is operating only fourteen hours a day. It is far better economy to get that dock operating twenty-four hours a day; in that way we will get quicker and better results. The same situation exists at the Saint John dry dock. If we can ever get that dock operating anything like twenty-four hours a day we will then go ahead with the additional facilities. I feel sure the time will come when these facilities will be expanded.

Mr. MAYBANK: Mr. Chairman, it is always a difficult matter to change the subject, and I suppose very often it is not quite in accord with the desires of hon. members that the subject should be changed. At the same time the difficulty in which I find myself is that if I do not change the subject, no one else will. There are certain matters I wish to lay before the committee under this omnibus resolution; therefore at the risk of appearing to be abrupt and even brusque—which is far from my intention—I must take the responsibility myself of changing the subject.

On Tuesday and Wednesday of last week I was speaking in this house upon a subject which was then left unfinished, and I wish to resume that discussion. I was speaking about the cordite plant located at, or certainly very near, the city of Winnipeg, and the matter of the coal to be used in that plant. I should like to preface my remarks to-day by an expression of regret at the course which the debate took last Wednesday afternoon, and to say that in so far as I had any responsibility for the debate being less orderly than it might have been, I apologize. As a matter of fact, after thinking it over I believe I had a good deal of responsibility in that respect, and I the more readily express my regret. I have another reason for saying that. Candour, I think, would compel one to do it; but I have a further reason, which I communicated in writing to the minister immediately after I left the house last Wednesday. I should regret indeed to say or do anything which would hurt the minister's feelings. There is no person for whom I have a higher regard than the Minister of Munitions and Supply. No man, I believe, is doing greater work at the present time in this war effort than this same gentleman. That does not mean that everything will flow along smoothly. In fact, I think he would be disappointed if that were the case.

There is another reason for my speaking as I do this afternoon. The general feeling has apparently been that a sharp attack has been made upon the government by one of its followers. My attitude with reference to this problem should not be interpreted as an attack upon the government, except in an indirect way. My attack is made upon some of these persons who have been given a great deal of authority but who have practically no responsibility to the House of Commons or to parliament. My attack is upon certain agents of the government of Canada. My attack is upon the people who head the Allied War Supplies Corporation Limited; the chairman of the board of directors of that corporation is Hon. Mr. Dunning, the president is Mr. Harold

Crabtree. They and their engineers are the people against whom I would direct any shafts than I may shoot.

But I must say even with respect to them and to persons like them that I would not want it thought that there is any general dissatisfaction on my part. I am not one of those who is ready to come out and attack all the so-called dollar-a-year men just because it seems to be the popular sport. I think many of these men, and the two I have mentioned specifically, are doing a great job. They have given their services and time. They have had long experience, a great business build-up, and they have much to offer to the country. In the main, they are giving it fully and freely. I do not want to be misunderstood as making a general attack upon the motives, upon the patriotism, upon the abilities or upon the qualities of these people. My attack is made only on this one specific point.

As will be clearly seen to-day, my complaint is that a decision was made without thought: that no thought was given to the particular point in dispute. After the decision was made, and after the persons who had made it had drawn to their attention the fact that a wrong decision was arrived at, they were not prepared to back up or admit a wrong. They undertook to justify that decision. Having commenced to justify it, they stuck to their attitude and have been doing so ever since. I propose to prove this largely out of the mouths of these people themselves.

So far as any general attack upon the government is concerned, I do not suppose any person believes more profoundly than I do that we have a government to-day which is doing its job better than any government that possibly could have been put into these seats. I do not want to get into any tangle with the members of the opposition on this matter by saying to them what could be said. I could be just as frank with them should I so decide. I am not currying favour with the government when I talk that way, and I am not currying favour with the opposition when I please them.

Perhaps I might just restate the problem. In the cordite plant at Winnipeg, a $10,000,000 project, it is desired to burn a coal which will be the most economical. The Allied War Supplies Corporation Limited, a creature of this government, decided to use a coal which in my opinion is not the most economical. I am interested in saving as much as I can of the money of the citizens of this country.

Mr. HANSON (York-Sunbury): It is British money.

[Mr. Maybank.]

Mr. MAYBANK: I realize that it is British money, but that has nothing to do with it. I do not want to be thought impolite in making that quick retort. I thank the hon. gentleman for making the interjection, but I do not think it makes any difference whether the money to be saved is British or our own. If we owe a duty to our own citizens to save money, we owe a greater duty to the beleaguered people of Britain to save their money. We are trustees for them, and I think my hon. friend will agree with what I say. If I appear to be vehement in my reply, I do not intend to be impolite to him.

There is the problem. Aside from its being an economic problem, there are other factors which enter into it. There is the question of government policy generally. So that hon. members may be left in no doubt I say that the company headed by Messrs. Crabtree and Dunning has deliberately flouted government policy in respects other than economical. I think I shall be able to show this. Since I have correspondence I wish to place upon the table, it may be necessary for me to ask the indulgence of hon. members to be allowed to speak longer than forty minutes. I hope that indulgence will be granted.

Between last Wednesday and Saturday morning I spent a good deal of time interviewing people in Ottawa in order to get their opinions upon this subject. For example, I interviewed the fuel board, who are interested in the conservation of coal in this country, as well as various experts in combustion engineering, most of them government employees.

Just before presenting some of the facts I wish again to make reference to the possibility of this matter being referred to the committee which has been set up to examine expenditures. The most cursory examination of this suggestion should suffice to convince anyone that it would be a useless act on our part. The problem we have before us now is to stop some of the government appointees from flouting the government. The problem we have before us now is to stop some of these people from wasting the money of the British government which we hold in trust. The problem we have before us is to stop them now from pursuing a course which will waste the coal and put our transportation system to an uneconomic use. The problem we have before us is to stop these appointees of the government now, and not leave the matter entirely in their hands to deal with just as they like, leaving it to us to inquire afterwards. Merely to refer the matter to the committee would be putting our seal of approval on what they have so far done, and then inquiring afterwards whether they were

right. In the meantime the money would be lost, the coal wasted, and the transportation system overloaded.

Allied War Supplies Corporation is determined to have its own way in this matter, regardless. I repeat, they are determined to have their own way. Let us get that point clear. They know where they are going. I quite agree that when organizations of this kind are set up we must allow them a great deal of freedom, but we cannot, it seems to me, give them full freedom; for that would be simply to abdicate governmental functions. They have made a decision here, I submit, first of all, without thinking; and secondly and thirdly and fourthly and fifthly they endeavour to support it by a lot of spurious reasons and arguments. I think they have proved that point themselves.

I should like to read to the committee a copy of a letter which would seem at first glance to wipe out all the objections I am making and to set at rest or brush aside any criticisms. But a second consideration of the matter will create quite a different impression. I read from a copy of a letter which is a report to the Department of Munitions and Supply, dated January 13, and signed by W. H. Wharton, chief engineer of the Allied War Supplies Corporation. There is a reference to a file number at the top of the page, and then the report is entitled "Fuel for steam generation". It reads:

> Further to our conversation of Saturday morning regarding fuel for the Winnipeg project.
>
> This matter was given considerable thought during September when we then had before us a resume of coal costs and analyses, all from Canadian mines, and ranging from the low rank Saskatchewan lignite to the bituminous and semi-anthracite coals of Alberta.
>
> Saskatchewan lignite from Estevan was definitely the cheapest fuel, but other important considerations mentioned below mitigated against its use.
>
> Lignite fines can be burned successfully on travelling grate stokers—

Lignite fines, I may say, are simply the very fine particles that you will find in any kind of coal. It is a good descriptive expression. The report goes on:

> Lignite fines can be burned successfully on travelling grate stokers, but this equipment was ruled out because of high first cost and the fact that such a job is unsuitable for use with other coals. The lignite "sized" coal is best handled on the sprinkler type stoker, but this machine is more costly than single retort underfeeds and this latter machine will provide a better fuel burning range and will give higher efficiency with other western coals. The kicker stoker would give us a problem of ash discharge which we must guard against in this type of explosive plant and this consideration also ruled out the possibility of going to pulverized fuel firing. It will be realized that this plant would consume in excess of 20 tons of lignite per hour for steam generation and since lignite cannot be stored on the site in quantity, I did not feel that we could depend on day by day deliveries from the lignite field, especially in view of labour troubles which have been in evidence in that section.
>
> The schedule on the Winnipeg project definitely called for a part of this steam plant being in service July 1, 1941, and this fact weighed heavily in favour of duplication of equipment at Nobel, and de Salaberry, on which plants all engineering work had been completed, entailing design of power house, steam generating equipment, piping, bunker storage, etc., etc. We are still dealing with the mines in Alberta and have not, as yet, signed a contract for coal, but we will, in all probability, burn the better grades of bituminous coal, either from the Crowsnest pass or from the northern field.

The letter concludes:

> I trust that the foregoing will cover the situation fully, and am
>
> Allied War Supplies Corporation,
> W. H. Wharton,
> Chief Engineer.

Before passing on to something else I should like to direct a little more careful scrutiny of that letter. In the first place, according to the chief engineer, Mr. Wharton, the matter was definitely closed in September, 1940. It is important to bear that date in mind because of what developed afterwards. The matter must have been closed on the date of this letter, January 13. This letter, dated January 13, says the matter had been closed in September. Well, even if it was not closed in September we can be pretty sure that it was closed in January, and it is important to bear this in mind in view of what happened afterwards. He says in the letter:

> This matter was given considerable thought during September when we then had before us a résumé of coal costs and analyses all from Canadian mines, and ranging from the low rank Saskatchewan lignite to the bituminous and semi-anthracite coals of Alberta.

I want to tell you what I know now, and that is that tenders were called for coal on September 30, and there were not many days left in September after the 30th. Tenders were called on September 30. In spite of that fact the letter states that they had before them these costs and analyses from Canadian mines "ranging from low rank Saskatchewan lignite," and so forth. When you read that sentence there is enough right there to start the flow of suspicion. Would you think that they had ordered the equipment for bituminous coal, equipment which they admit and state over and over again is not suitable for lignite coal, and then sent out the call for tenders? If so, it was just playing ducks and drakes with the trade, just asking them to submit informa-

tion when they knew full well they did not want any such information. They did not get their replies until October. Here again I want to point out that it was clear in their minds—pluperfectly clear—that Saskatchewan lignite coal was definitely the cheapest. After this letter there is no more argument about the economics of the question. They have to find some other objection to the use of lignite. The travelling grate costs more, and therefore it is ruled out. I have not any special complaint about that. It may be so, although all manner of other people are using it and are finding it worth while. A large number of commercial plants are using that particular equipment. But I am not concerned about that; that is not the only equipment they can use. Every other person that uses it—and most of the big plants do—say they have found out over a period of time that the savings far outweigh the disadvantage of the higher first cost. A big sugar beet plant which has been erected in the city of Winnipeg burns while in operation more coal than this ten million dollar cordite plant will burn, and they have that kind of equipment. However, I am not insisting that any particular type should be installed; all I am emphasizing is that sound economic practice should be followed, that Allied War Corporation should keep in accord with the policies of this government generally, which in fact it is violating. I say they should follow this government instead of trying to lead it. We shall have no difficulty as soon as Messrs. Crabtree and Dunning assent to that simple proposition.

As a matter of fact, with the kind of equipment which I have just mentioned, the cost to that sugar plant of making steam is something like 28 cents per thousand pounds, whereas by any method in use with bituminous coal, the figure is nearer to 40 cents.

However, Mr. Wharton gives another reason in his letter. He says that the equipment which apparently he had then decided upon is useful for a larger range of coals. But he does not mean to include in that, it will be recalled from reading his letter, the lignite coal, because he has ruled lignite out. Well, what he is deciding to put in may be better in the sense that it will take in a wider range of the bituminous coals, but it is against the interests of the country to use anything but lignite coal. So that he does not need to set out to use something which is suitable for burning several different kinds of coal. We shall find out, as we found out in the last war, that Canada has no more coal than she needs, and that something akin to rationing will be necessary. As I understand it, government policy already points in that direction.

[Mr. Maybank.]

Mr. Wharton declares against using the travelling grate equipment. He adds that there is another kind which is best suited for using sized lignite coal. This is coal of about half an inch to two inches. He talks about the additional cost of that kind of equipment. But he never made any inquiries as to its cost; there never was any tender called; he and they decided without thought that certain things would be done. That is all there was to it. No inquiries were made of other concerns with reference to the equipment which, he says, has a higher cost; that is, this so-called "kicker" system.

In spite, however, of his objection to the higher cost he does not go so far as to say in this case that the higher first cost of that kicker equipment would offset the savings from the lignite coal. On the contrary, the lignite is good, and he knows it, and every person knows it; it is still by far the cheapest coal for Canada, and, having regard to that, it is thoroughly efficient coal for Canada.

The description of this kind of machinery which has been given to me—and I have also seen it—is substantially this. What he calls the "kicker" system is simply a system of stoking which carries the coal in and lays it on top of the fire, whereas the kind of equipment in use with bituminous coal has already been referred to as an underfeed; it pushes the coal up from the bottom. I mention that because these terms may be used from time to time. What more than one engineer has remarked to me about the kicker equipment, which lays the coal on top of the fire, is that it is simply hand-firing, except that it is done mechanically; this is rather a contradiction in terms, but it is the way they put it; and most people would think that so long as you pile enough coal on, you can get enough steam, although you cannot do as well in some cases as in others.

I have discovered a further point. When he speaks about the unsuitability of that equipment for certain other coals, it is to be noted that this equipment which ought to be put into the cordite plant is the standard United States government equipment from coast to coast, and consequently it must be in use in the United States for all kinds of coal. In seven years in the area from Swift Current to Kenora there has not been installed a single new underfeed plant; we are left to this day and this date with Crabtree and Dunning, with a creature of this government under their leadership, or rather under their compulsion, trying to turn back the clock.

Not all these other people can be wrong, you know. Do you suppose that every industrialist in western Canada would be fool enough deliberately to place his industrial plant in jeopardy? It just does not make sense, Mr. Chairman. I do not mind a man on the outside making—to a certain extent—fools of the members of this parliament, but these gentlemen are going a step too far. Do you suppose that every combustion engineer out there is always and completely wrong, and that only the combustion engineers whom these gentlemen have in their employ are always right? As I have said, one of them, not the Mr. Wharton whose name I have mentioned, but Mr. Abbott, comes straight from the company which makes the equipment that is to be put into the plant. I do not suggest that this man is financially interested, but I say that after long experience with that company he is almost certain to be prejudiced in favour of the organization for which he worked so long, and which doubtless he served so well.

I might interject this. Whenever any possibility of personal interest or personal bias or prejudice, because of long association with an industrial concern or for any other reason, enters into a picture, then it is the part of wisdom to examine most carefully any decision that is being made; and it would be wisdom on the part of a man in such a position to lean backwards against the making of a decision in favour of his own company.

It was remarked in the letter I read to you that the writer did not feel safe in relying on day to day deliveries. Well, all kinds of others use a great deal of coal. They are relying on day to day deliveries. Nobody has been let down yet. There is coal of all kinds there. It is very close to Winnipeg. They are all getting it. The Canadian Pacific Railway at its Weston shops is burning 15,000 tons. The Canadian National Railways at one of its shops is burning 30,000 tons, and the Canadian National Railways in another shop is burning 30,000 tons.

Mr. NICHOLSON: Per annum?

Mr. MAYBANK: Per annum. I might tell you, by the way, that the Canadian National Railways found out—and it is simple enough for us to find out from them—that when they installed the equipment for lignite they saved $40,000 in one shop. The Swift Canadian company, another big plant, is using 12,000 tons. The Manitoba Sugar company, which I have already mentioned, is using 20,000 tons. There are all kinds of small ones. The university of Manitoba is using 8,000 tons, and all our hospitals in the city of Winnipeg are using it, one using 5,000 tons. The Selkirk mental hospital, just outside Winnipeg, is using 10,000 tons, and another large place in Brandon is the same. They are all the same. All you have to do is to take the list of industrial concerns in the area I am talking about and it will be practically a list of those that burn lignite with this equipment, with this exception. The only ones you have to cross off the list are those with old equipment, who could not change; but apart from that, the list of industrial places burning coal and the list of places burning lignite with the proper equipment that we have been talking about here to-day are coterminous. No one says they are fools except the engineers of allied war supplies.

We have lignite coal close to Winnipeg, about 290 miles away. It comes into Winnipeg by both railways, and there is a twenty-four hour service. Every person gets all the coal he wants of this kind. There are no difficulties. On the other hand, the coal which these people propose to use comes from a place about 890 miles away, and there is only one railway bringing it in. They cannot get it from the northern part of Alberta but only through the Crowsnest pass, a trip of about 890 miles. Any kind of tie-up on the railway is much more serious for that kind of delivery than in the case of the short haul of lignite.

Mr. NICHOLSON: Which railway?

Mr. MAYBANK: The Crowsnest is Canadian Pacific.

Now, someone might wonder about the possibilities of supply—whether or not they have all the coal in the ground, whether or not they are working at it. I have heard that raised. This man talks about the dependability of supply. I talked with Abbott, the engineer whom I have mentioned, and he spoke of dependability of supply. That was the final and only thing he had to talk about. He said that was the only thing that worried him. Well, I have a memorandum I made after inquiring into the facts—and there is no doubt about it that the facts are correctly stated.

Who are there out there who can deliver one hundred tons a day? There is one company which for a long time has been delivering 1,000 to 1,200 tons a day, and it has not let anyone down. There is a larger company which has been delivering for a long time from 3,000 to 4,000 tons a day. Numerous small mines are producing 100 tons a day or more. Most of the mines are not working to capacity. Most of them can be stepped up almost double without any difficulty at all; that is to say, they can spring right into double to-day's pro-

duction almost overnight. So that there is no problem of any kind involved from the standpoint of dependability of supply.

But for a really egregious statement indicating ignorance, I commend you to the last sentence of this gentleman's letter where he talks about labour troubles. There have been no labour troubles there. That is the answer. That is the fact. In 1932 in the Estevan field there was trouble. The only bit of trouble in the Estevan field in regard to labour from that time to this was a dispute between two trade unions as to which one of them should be recognized. They eventually got that settled. It was not under the present Minister of Labour; it was under Norman Rogers. I remember discussing the question with him at that time. They got that worked out. I do not know which one turned out to be the one recognized, but what does that matter? I do know that there was never any dispute about wages and working conditions.

Mr. MacNICOL: No dispute between the company and the men?

Mr. MAYBANK: Nothing of that sort. The man who talks about labour trouble in this field does not know what he is talking about. There is no coal field in Canada as free from labour troubles as this. As soon as that particular union war was over the union that won signed its agreement of wages and working conditions, which had always been ready for them. Not only that, but they got a model agreement whereby all changes that come about in conditions from forces over which they have no control—cost of living and so forth—will be immediately incorporated as changes in the agreement. You have the best labour situation out there of any coal mine in Canada. When an engineer says he cannot rely on his supply because of labour troubles, and is going somewhere else on that account, he is not getting out of the frying pan into the fire; he is getting out of the refrigerator into the fire.

One day in that little community of Estevan —and that is the centre spot of this business— they decided to raise money for an ambulance. They required $2,500. In twenty-four hours the fund was $1,000 oversubscribed by the workmen in and about that field. The Red Cross and all other similar drives were quickly over the top. What do hon. members suppose would be the results in Toronto in one of these subscription drives that newspapers, such as the *Telegram*, put on, if there were a similar response? Instead of getting half a million, in the same ratio they would be picking up two or three millions at a time.

My reason for mentioning this is not sentimental, but simply to drive home the thought that you cannot get that kind of patriotic response in a community which is brooding over some real or fancied labour wrong. It is only people who are enjoying a reasonable approach to contentment from whom action of that kind can be expected. And when you have such a reaction to the various movements you can be reasonably sure that there is no serious labour trouble or threat of labour trouble in the neighbourhood.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I must remind the hon. member that he has spoken for forty minutes.

Some hon. MEMBERS: Go on.

The ACTING CHAIRMAN (Mr. Fournier, Hull): With the unanimous consent of the committee.

Mr. MAYBANK: I thank you, Mr. Chairman, and the members of the committee.

Now I wish to speak in a little more detail upon the subject of costs. I would not be talking about costs if it were anything in the nature of a close decision, if it were a question of just a few dollars one way or the other. You may notice that I speak positively; well, I confess that is a matter of rhetoric rather than of knowledge. I am not claiming for myself the knowledge of an expert in this matter. Perhaps it would not have been necessary to say some of the things I have said to-day in the way of statements of fact if the Crabtree-Dunning company had laid all their facts on the table, but that of course has not been done.

I had some figures in my possession last Wednesday and Thursday but I did not wish to say very much about them because I was a little afraid that they might have come from some biased source. They did not, as a matter of fact, come to me from any biased source, but you can never tell where that sort of thing starts. So I spent two days—I think it was Thursday and Friday and part of Saturday—going about trying to get unprejudiced and impartial statements of fact.

I suppose we do not realize that we always buy coal by what is called its B.T.U. value, rather than by the ton. We may ask a dealer to send us a ton of coal, but in point of fact what we buy is heating value, in other words B.T.U's. Lignite coal of the kind Engineer Wharton says is most suitable if it were used, costs at Winnipeg $3.50 a ton, its B.T.U. content being 7,400 to the pound. The bituminous coal costs $8.15. I I am making any error I am making it in favour of the bituminous coal. The B.T.U. rating of that coal is 13,000; in other words, the heat value of the bituminous coal is almost, but not quite, double that of the other coal.

On that basis the cost of a million heat units obtained from the lignite will be 23·5 cents, and the cost of a million heat units from the bituminous coal, 33·6 cents. This ratio alone would strongly indicate that the lignite is very much cheaper. But we should not jump to the conclusion that that is quite the correct comparison; for there is always some loss of heat in the use of any kind of coal in a furnace, and more with lignite than with bituminous. The remaining heat value is referred to as such and such a percentage of efficiency. For example, you might say that one coal burns with 75 per cent efficiency and another with 68 per cent efficiency, and that has to be taken into account as well as the other factors I have mentioned.

I went to an engineer and posed a problem to him, and I had his answer checked afterwards by others. I am going to lay it before you just to let you know that there are some engineers at any rate besides those I have been speaking about who are able to figure costs. I said to him: "Suppose you get these two coals at these two prices, and suppose you have a 216 million pounds production of steam"—I chose that figure because I understand it is about the production at full capacity for one unit in this plant, and there are ten such units. "Then," I said, "assume these two ratings, B.T.U.'s 13,000 and 7,400." The efficiency that we find in most of our Winnipeg plants is 73 per cent for the bituminous coal and 68 per cent for the lignite. "Assume," I said, "these efficiencies, and what will be the cost in each case per 1,000 pounds of steam?" The answer came back—and I have had it checked in half a dozen different places—40·3 cents per 1,000 pounds of steam with the bituminous coal and 33·8 cents with the lignite—an advantage in the neighbourhood of 25 per cent for the latter.

If you stop there you find that the total savings is $140,000 a year. But do not take that at once, because that is based on the assumption that the plant would be in operation at full capacity three hundred days a year. This is decidedly unlikely, so the saving would not be that great. And here another point comes into the picture. Apparently the plant is to be increased by nearly fifty per cent. If that is so, then you can stand upon the $140,000 saving. At any rate the saving would amount to a good deal of money. That is all we need; the saving to be effected amounts to a lot of money, and money in that amount not saved is a prodigious waste.

There is another way of looking at that. In putting out their tender they said they wanted about fifty thousand tons of coal, meaning bituminous coal, the total cost of which would be about $407,000, while the total cost of lignite with the same B.T.U. value would be $333,000. So it will be seen that the total amount of money to be saved is very considerable, and that is all I want this committee to understand. It seems to me that we as members of parliament should care about that. We are dealing with the purse of the people; we have the responsibility of saying whether or not the purse strings will be loosed and the mouth of the purse left open so that the money is scattered on the ground unnecessarily. It is savings of this kind that have caused so many industrial plants in western Canada to change over to the cheaper fuel. The plants that have not changed as yet are doing so just as quickly as their financial condition will permit.

Now I come to a completely different aspect of this matter. I have mentioned that there may be a coal shortage and that it is important to conserve railway equipment. I now wish to read a letter addressed to Mr. H. B. McKinnon, chairman of the war-time prices and trade board, under date of February 3, signed by Mr. F. G. Neate, technical adviser to the fuel administrator, who says:

Dear Mr. McKinnon,

Following our discussion at the board meeting of Wednesday last regarding the question of fuel requirements for the cordite plant now being erected at Transcona by the Allied War Supplies Corporation, I have now had an opportunity of reviewing this matter with officials of Canadian Industries Limited.

Canadian Industries Limited; Defence Industries Limited; Allied War Supplies Corporation—they are all pretty much the same so far as this part of the picture is concerned. Naturally they are all working in fairly close cooperation.

As the coal administrator pointed out to the board, we should permit no wasted transportation effort in these times by the haulage of coal for longer distances than are necessary. The proposal to supply this plant with coal from Alberta bituminous mines situated some 850 miles from Winnipeg when fuel from areas under 300 miles from Winnipeg is readily available does give some cause for concern.

It is suggested that Mr. H. R. MacMillan, chairman of the war requirements board, should be informed of this situation and immediate inquiries be made to determine whether or not it would be possible to secure a suitable fuel from areas closer to the Winnipeg market. It is not likely that the Allied War Supplies Corporation will make any move to correct this situation unless directly requested to do so by government.

It will be seen what is apparent in the background there. The fuel controller's office, having in mind the carrying out of the policy of the government, had conversations with these people in an attempt to persuade them

to act reasonably in this matter. A report was made to the war-time prices and trade board with regard to the situation, and after that Mr. Neate put into writing and sent to the board substantially what it was thought should be done. To that letter Mr. McKinnon, chairman of the board, replied under date of February 8, as follows:

I was unable to bring before the board until yesterday yours of the 3rd instant regarding the matter of fuel supply for the plant now being erected at Transcona.

We are not quite clear as to why the chairman of the war requirements board should be communicated with, rather than the head of the Allied War Supplies Corporation (if I remember correctly, the Hon. C. A. Dunning). It was the feeling of the board that a letter should go on behalf of the administrator to the Allied War Supplies Corporation, pointing out the desirability of using the fuel so readily available from the Saskatchewan field.

In other words I think it is fair to say that in effect this letter states: "We agree with your representations regarding this matter. We agree that something has to be done with the Allied War Supplies Corporation. The only point of difference is that we think you ought to short-circuit it and get at them quickly, instead of wasting time by making a triangle out of a straight path. Do not go to Mr. MacMillan and get him to go to them; go to them directly and get them to make the change."

Pursuant to that advice Mr. J. McG. Stewart did write to the corporation directly, under date of February 12. He of course was not aware of the letter I have read to this committee, signed by W. H. Wharton, in which it was stated that the matter had been closed in September. Certainly it was closed in January. They probably told him that they desired to continue to cooperate with him, or at least that they desired to cooperate. Addressing his letter to Mr. Harold G. Crabtree, president of this organization, Mr. Stewart said:

I have had occasion lately to review the question of the coal supply for the new cordite plant being erected by Defence Industries Limited at Winnipeg.

My technical adviser, Mr. F. G. Neate, has been in touch with Mr. Wain, the purchasing agent for Defence Industries, by correspondence and on February 1 had personal interviews with both Mr. Bowen and Mr. Wain.

The point involved is the type of Canadian coal that should be used, and as a corollary, the stoking equipment that should be ordered. I have been informed that the stoker equipment under consideration at present is adapted to burning Alberta bituminous coal but is not adapted to burn the Saskatchewan lignite effectively and it is precisely in this connection that I would draw your attention to several pertinent facts.

First of all, it has been shown by the experience of several industrial plants in

[Mr. Maybank.]

Winnipeg that Saskatchewan lignite if burned in the proper equipment can produce steam at a cost as low as, if not lower than, any other coal under the prices prevailing in the Winnipeg market at the present time. Possibly this condition might also obtain at the plant you have under construction.

Of course it would, because the plant is right at Winnipeg.

Secondly, the railways throughout the west are practically dependent on the Alberta bituminous coal mines for their fuel and the railway fuel situation throughout the west, while not acute, is not any too easy at the present time. I cannot contemplate the diversion of some thousands of tons from the railway field without misgiving if other satisfactory fuel is available.

Thirdly, in view of the constant growth of our national war effort, an ever-increasing strain is being thrown upon our railway facilities. The questions of staff, locomotives, cars available, et cetera, are undoubtedly becoming of more serious import from month to month. From this point of view it would seem uneconomic to haul coal some 850 miles from the Alberta bituminous fields to Winnipeg when lignite can be secured from the Estevan area some 290 miles away. The saving to the national effort in the more efficient use of the transportation facilities would certainly be considerable.

With these three points in mind, I would ask that your engineers be instructed to make a full investigation of the possibility of using Saskatchewan lignite in this plant.

I understand that there are several modern plants in Winnipeg using this fuel with complete satisfaction and I will be glad to write them and request that your engineers be allowed to inspect the layout and costs in order that they may be fully informed.

I will also be glad to cooperate in any further way, but before closing would again urge you to use your best offices to see that no definite commitments are made to any other fuels or equipment until a full investigation has been made. If, after this investigation, the facts show that Saskatchewan lignite can be used in a satisfactory manner, I trust you will give due weight to the arguments noted above.

Naturally there was a reply to this letter, and it was made on February 11 by Mr. Crabtree, who said:

I acknowledge your letter of the 10th, having reference to the advisability of our equipping the cordite plant at Winnipeg to burn lignite.

I am pleased to be able to tell you that this situation is having our careful consideration, and for your information I am enclosing herewith copies of letters that I have written on this same subject.

I have not those copies, but I can tell you roughly what they said. They were simply letters addressed to certain people indicating substantially the same thing, namely, that consideration was being given to the matter, that they were sympathetic and all that sort of thing. The reply continues:

Your technical adviser, Mr. F. G. Neate, has also spoken to me in regard to the matter and the first time I am in Ottawa I hope to see him and discuss the situation.

You may rest assured that we are very anxious to cooperate in any way we can in this matter.

I have this comment to make. If men of this sort would only learn to be candid, would only learn to study the facts, would only learn to say, if, as and when they make a mistake that a mistake has been made, they would advance much further, they would get along much better with their fellow men, and their fellow men would have more confidence in them.

In order to complete the record I should like to read a telegram. In spite of the reply which I have read, dated February 11, Mr. Stewart, the coal administrator, had to follow up with a telegram dated March 12, which reads:

Reference use Saskatchewan lignite Winnipeg project. Arrangements should be made to instal equipment capable of utilizing this particular fuel. If unsuitable equipment is installed greatly fear use of Saskatchewan lignite will be jeopardized. Understand suitable equipment available for prompt delivery if ordered now.

In spite of that letter from Mr. Crabtree those people were not giving any cooperation, and they did not intend to give any. There has never been any cooperation from them from start to finish of this matter. As I said earlier, they proposed to have their way regardless. This introduces the consideration of certain difficulties which we are experiencing in getting cooperation among persons who are coming in from different industries to lend their services, cooperation among these so-called dollar a year men. There has been real difficulty in this regard, and this is a good example.

In setting up this expenditures committee a little while ago the Prime Minister said that it would have power to examine into all these things, but not to impinge upon government policy. I think everyone agrees that that is sound. But here is the fuel administrator endeavouring to carry out government policy when the actions of Dunning and Crabtree and people like that in this Allied War Supplies Corporation Limited impinge upon the carrying out of government policy. They will not carry out government policy, and they will not let any one else do it.

A while ago I said that some difficulty had been experienced during the last war in connection with coal. Despite the large amount of coal we had in Canada, there were actually ships on the Atlantic seaboard which could not be bunkered and coal was brought from Cardiff to bunker them. I see the hon. member for New Westminster nodding his head; I was sure he would support me in that statement. We know that our railroads need bituminous coal now. The situation is not acute, but they need it. In the last war we just skirted ahead of real need, both before and after the United States came in. Several conferences were held during the last war in an effort to conserve the coal of this country and to try to get coordination among the producers and the users of coal.

Having this in mind, the government very wisely appointed a coal administrator some time ago to direct the use of coal. But then an organization, the one I have mentioned, comes along and pays no attention to anything the fuel administrator says. From the point of view of responsible government it is important that these people should be directed to do what should be done. In fact I think the whole matter of control should be placed in the hands of the fuel administrator or under some board—they could buy, handle and distribute the coal. We have to get down to zoning these supplies, we have to get down to having something in the nature of rationing. There will have to be some person to say what can be used, and his word will have to be law, subject to the control of the government.

I wish to direct your attention again to the letter of February 11, which I have read. That letter was not a frank statement, which fact is proven out of their own mouths. Earlier I read what the engineers had said as to the lignite being out of the question—that we might as well forget about it. It was said that lignite could not be used. But at this late date Mr. Stewart, the fuel administrator, is told that the matter is still receiving consideration. How can it still be receiving consideration when the equipment to burn bituminous coal has already been ordered? How could they be giving consideration to burning lignite coal when the equipment already ordered was not suitable for burning lignite coal? He was just pulling Stewart's leg, that is all. Does that mean that he will deliberately order a kind of equipment that is not suitable for burning lignite coal, and that even while it is being made he decides to burn a coal that is not suitable? Surely the man is not silly enough to do that sort of thing. No man would buy a shovel for mixing cake; and if a man has a shovel on order, he will not aver that he is getting it for the purpose of mixing cake.

Just a little while ago, when I was talking to Abbott—I told the committee about that —the statement was made by Abbott that the company would burn lignite coal with this unsuitable equipment. I am not denying that it can be done. No one will deny that. But what all will agree is that the equipment is not suitable; it is not the right thing. No person will do it deliberately, but it is done in certain places for a peculiar set of reasons.

He said: "We have decided to use as high as 40 per cent lignite." Then he went on to say that they would use as high as 80 per cent lignite. Of two things one is certain. When these people come forward promising, as the minister himself stated the other night they had promised, that they will burn up to 80 per cent lignite, either all the objections they have urged against the use of lignite go by the board, or else they are not bona fide in their promise. It must be one or the other. Either all their objections go by the board, or they do not intend to carry out their promise. I suppose there is another possibility; that they are not limited to those two horns of the dilemma. It may be that the two alternatives I have named are both correct; one thing is certainly true that they have not been bona fide throughout.

In order that lignite coal may be burned in the manner I have described it is mixed with bituminous coal. What does that mean? It means that they would add the expense of mixing probably 100,000 tons of coal by hand, shovelful by shovelful, in order to get a good mix. All that just adds to the expense; and instead of making the saving that they otherwise could have made by using lignite coal, that saving will be to a considerable extent wiped out by this additional labour which they will deliberately bring into play. If they could save money by using up to 80 per cent, why cannot they save by using lignite up to 100 per cent?

The only people who mix bituminous and lignite coal are those who do it under circumstances such as these, for instance. There is, in Winnipeg, a large central heating plant, one of the really large ones of the country, but they put in their equipment originally to burn bituminous coal before this lignite coal had such an established place on the market. Then lignite coal came on the market and they found that anyone burning lignite got his steam cheaper. These people had to find some way to cut their costs; while it was not satisfactory to burn a mixture of lignite and bituminous in the equipment they already had, nevertheless they went ahead and mixed the two coals because they could save a little money that way, and then, as finances would permit, they would switch from the equipment they had bought originally until they had the new type of equipment entirely. They are making that switch unit by unit. Every time they make a switch they get the new equipment for burning lignite coal, and by that method they are saving a great deal of money as fast as they can.

An industrialist sometimes finds himself in the position of burning bituminous and of seeing a competitor put in new equipment and burning lignite coal. He cannot himself change over immediately, and so he mixes the coal in order to try to keep up with his competitor. It is only in such circumstances that these two kinds of coal are mixed. Everybody else naturally keeps away from mixing the two coals.

But these people—Allied War Supplies Corporation—are proposing to mix the coal. They finally come to promise that, when people put pressure on them. I go back to the statement I made before either that this promise which they are now making, under pressure, to burn lignite coal is not a bona fide one, or, if it is, it wipes out every objection they have ever made to the burning of lignite coal. Probably both these propositions are correct.

In support of what some people have said, I should like to read an editorial on the subject; an editorial not particularly in my favour. The Winnipeg *Free Press*, dealing with the question wrote under date of March 13, what I think everybody will admit is a sound editorial. It said:

> The big chemical plant being erected east of Winnipeg will use a very large amount of coal, and the question of the type of coal that should be used has been raised. It is understood that the installation of equipment for the use of bituminous coal is contemplated, although it is well known in business circles here that that type of stoker has been increasingly replaced in recent years in this city by equipment for using the cheaper lignite coal. The economy is so great that the change has been made, or is being gradually made, by nearly all large users of coal in this district.
>
> This equipment costs more than that for using bituminous coal, but the difference is a matter of dispute, and what it would be in the case of the chemical plant is for experts to say, as is the question of the relation between that difference and the saving through the use of lignite.

That is as far as I need read. I wanted to quote that last sentence, that it is a question for the experts to decide. I do not think anyone would disagree with that, generally speaking, as a sound piece of advice. But here is the picture to keep in mind regarding the experts. Last January or last February I wrote to the Minister of Munitions and Supply about this matter, telling him that the present situation ought to be guarded against. I know that he dealt with the matter. I also know that at that time he was extremely busy because it was just after he had returned from overseas, and when he inquired into the matter I have no doubt that certain things were told him which caused him not to look into it any further. As a matter of fact, he must have been dealing with it back about January because about that time Wharton

wrote the letter that I have read to the committee. In spite of that letter, in spite of what may have been said between the minister and Mr. Crabtree, in spite of the decisions they may have made, Mr. Crabtree told a colleague of mine in this house on or about February 25 that this question was still open, that they were approaching it with a completely open mind. Then two days later, after the engineer wrote, his man Abbott told me and that same colleague that he could not understand how Crabtree could have said that; that Crabtree knew the facts; that this matter was settled long ago, definitely settled beyond being raised again, and that he could not understand how Mr. Crabtree could have made that statement. In spite of the fact that Wharton wrote to the effect that lignite could not be used, Abbott told us in that interview that they were going to use lignite to the extent of somewhere between 40 and 80 per cent. I could not help feeling, as I still feel, that there is something pretty rotten in the whole situation. When I reviewed a set of facts like that, I could not help feeling that these people were being a great deal less than frank.

The same story is in the correspondence I read to the committee. The representative of the fuel board deals with these people and apparently finds them intractable. He takes the matter up with the prices board, and they arrange to write a strong letter on the subject so as, in any event, to put themselves on record. They do so, and they give cogent reasons why these people should use lignite. It is in accordance with government policy that they should do so, because it is in accordance with government policy to save fuel and rolling stock. Even then Mr. Crabtree says, "We are giving consideration yet to that matter." By inference, from the letter I read, there is still an "open door." It was not until about a week or so ago that I learned definitely, conclusively, and, one might say, for the last time, that Crabtree's engineers are apparently "already"—that is the expression—"too far committed." If that is not the story of an irresponsible organization playing ducks and drakes with you, then you tell one.

They are not too far committed, Mr Chairman, to do what is right. They must be made to do it. They can get the equipment. If they have already ordered their other equipment, they can do one of two things. They can take it and sell it at some loss, or they can cancel the order and pay some loss. The savings will more than make up for any loss so incurred. Indeed, that is one of the points they make, that this other equipment they have ordered has salvage value. They can get something for it. Well, let them get something for it; it will have all the more salvage value if they dispose of it now while it is new. Let this organization, however, now do what is right with reference to the policy of the government of Canada and show a proper regard for the money of the people of the old country which we have in trust.

Mr. TUCKER: Mr. Chairman,—

Mr. HOWE: Mr. Chairman, I demand the right to reply.

Mr. TUCKER: I wish to say just a word or two before the minister speaks.

Mr. HOWE: The hon. member can speak after I have replied. After listening to this for three hours, I think I have the right to reply.

What in effect my hon. friend has been doing is taking the time of the committee for three hours to sell Estevan coal. That is the basic fact we have to start with. In doing so, he has attacked the probity of two men who need no defence in this chamber—one, the Hon. Charles A. Dunning, and the other, Mr. Harold Crabtree.

I am not going to argue that the Hon. Charles A. Dunning is a patriot and a man of probity. I do not think that is necessary with regard to a man who has sat in this house and occupies the place in public life which the Hon. Charles A. Dunning holds. I am not going to defend the probity or the honesty or the patriotism of Mr. Harold Crabtree. I can say that, for the last year, without salary, he has given his time and has worked harder than any man should work in conducting the organization of which he is the head.

My hon. friend says that this company is not competent to build an economical plant for the production of explosives.

Mr. MAYBANK: I never said that.

Mr. HOWE: That is the implication. These people are not building a coal-burning plant; they are building an explosive plant. Now let the hon. member sit down.

Mr. MAYBANK: May I rise to a point of order.

Mr. HOWE: No; there is no point of order.

Mr. MAYBANK: I rise to a point of order.

Mr. HOWE: I do not yield.

The CHAIRMAN: The hon. gentleman has raised a point of order.

Mr. HOWE: What is the point of order?

Mr. MAYBANK: The point of order, Mr. Chairman, is this. No hon. gentleman may misquote another; and the hon. gentleman has definitely misquoted me. I ask him to withdraw. That is my point of order.

Mr. HOWE: Mr. Chairman, I think it is a fair summary of the hon. member's remarks that he said that something very uneconomical is being done in designing this cordite plant. I see no point of order there. If the cordite plant is economically designed—and I think we must assume that the people responsible are designing it to the best of their ability—we can reasonably assume that the remarks which my hon. friend has made, taking over three hours of the time of the committee, are themselves very much out of order. Either the plant as at present designed is economical, or it is not.

As I have said, the problem at Winnipeg is not to build something for the burning of a certain type of coal. That is incidental to the problem. The problem is to build an explosives plant. I know something about building plants for a special purpose. I have spent all my life at such work. I know that in building a grain elevator there are certain practices which, although they do very well for other industries, are not economic when applied to a grain elevator; and the power part is very much a case in point. People have accepted my judgment with regard to the matter because I had the reputation of being able successfully to build grain elevators.

Similarly, when we are building an explosives plant we go to people who have a reputation for being able to build, successfully and economically, explosives plants. I may say that two explosives plants built by this organization, Allied War Supplies, with their experts, Defence Industries Limited, are in operation and producing cordite cheaper than any other plant on this continent. That, I think, is something to the credit of those responsible for the operation.

The production of explosives has several peculiarities which it is well to note at this stage. One of them is that the dangers from explosives are related very closely to the degree of cleanliness which is maintained in a plant. Those hon. members who have ever visited an explosives plant know that before you pass into the operational part of it you are required to take off your shoes, to go over the operational part bare-footed, or to put on other shoes which are furnished to you and which are never allowed to pass out of the explosives part of the plant. So much for cleanliness, and I might say that practically every explosion which occurs in an explosives plant is caused by carelessness on the part of the workmen, in allowing something unclean to develop in the plant, permitting dirt to accumulate, or cordite or some other explosive to drop on the floor from a barrel or some other receptacle.

The problem of cleanliness is definitely related to the coal supply. It is reported in the correspondence that pulverized coal cannot be used on account of the danger of sparks and the dust resulting from the coal. It is true that lignite is a cheap coal, very economical for certain purposes; but it is also true that to get the same amount of heat from lignite as from Alberta bituminous coal, twice the volume has to be burned. It is also well known that lignite will not stand storage particularly. It breaks down quickly to slack coal, much more quickly than does Alberta coal; and it is known further that lignite in the slack form, that is, the dust of lignite, has the same objections that pulverized coal of any kind has, in that it is a distributor of dust and ash.

The problem, I know—it is obvious from the record—was thoroughly studied, because every possible pressure was brought to bear upon the company to use lignite. Those responsible for the sale of lignite have, in my opinion, exhausted every possibility that could be thought of, including pressure upon the fuel controller, and that part has been quite thoroughly done. Knowing these facts, the board of directors of Allied War Supplies Corporation have still come to the conclusion that the course they are pursuing is the proper one. Nothing could have been overlooked in the matter, because it is obvious from the record that every fact in connection with the problem was brought to their attention.

Someone may ask, what do you know about the problem? I know very little about it. I was in Europe when it was being discussed. I went to England, having left Ottawa on December 4, and I returned to Canada in the last few days of January. The matter was called to my attention then by the same agencies that have raised it in the house, and I called Mr. Crabtree to Ottawa, or at least asked him to discuss the matter with me on the first occasion on which he was in Ottawa. He came with a technical expert, and we discussed the relative merits of lignite coal and bituminous coal for that locality. We discussed the matter for the best part of an hour, and in that time Mr. Crabtree reviewed all the facts that had been presented to him and gave the reasons why he had come to the conclusion that the equipment being installed was the proper equipment for the purpose. As I said in the house

earlier, he did not close the door upon burning a portion of lignite in the grates, and the reason for that is that if coal can be transferred direct from the cars under the boilers, there is not the same danger from dust that there is if the coal has to be stored for a time. I pointed out to him at the time, however, that it seemed desirable to use coal from the lignite field, if only from the point of view of coal conservation. He said he agreed with me entirely and it was their intention to do the best they could in that direction, but there were limits beyond which, in his judgment, they could not go. After the study which I knew he had given the matter; after the expert type of opinion which I knew he would obtain, I saw no reason for pursuing the matter further.

A forum has been set up in which this matter can be properly considered, namely, the committee on economy. The advantage of that committee is that Mr. Crabtree can be there and refute any statements such as the ex parte statements made in this house. His experts can be brought before that committee. The Estevan coal people can bring their experts, and the committee can decide the case with the fullest possible technical information before them.

I suppose that if I had time I could make myself sufficiently familiar with all the facts in this case to discuss each item that has been taken up by the hon. member. Frankly, however, I have not the time to do it. I have gone into the matter sufficiently to satisfy myself that every factor was taken into account, that expert opinion was brought to bear on it, and that the action taken by Allied War Supplies Corporation followed the advice of their expert opinion. I may say that these were not street-corner opinions. They were the opinions of men who were paid to give their expert advice on the problem. They were the opinions of men who were qualified, by success in fuel engineering, to give advice. I know that the advice of the national research laboratories was brought to bear on the problem, as it is on all problems involving coal purchased by the Department of Munitions and Supply or by any officers responsible to that department. I know that this opinion was available to Allied War Supplies Corporation and that it was used accordingly.

That is all I wish to say on the matter. It is not my duty to say to the committee on economy what cases they should hear or when they should hear them, but I express the opinion that it is desirable that the committee should see whether economies were overlooked in this particular case, having in view the exacting requirements in connection with the manufacture of explosives. If the committee, after examining into the situation, report to the house that there has been failure to carry out economy in the transaction, even though it is wholly for the British government, I shall be glad to take corrective steps at that time.

Mr. HANSON (York-Sunbury): I do not desire at this stage of the proceedings or at this late hour of the afternoon to enter into any part of the controversy between the minister and one of his followers; but there is a larger aspect, with respect to the establishment and situation of this cordite plant, to which I direct attention for a few moments. Why was this plant located 2,000 miles from seaboard?

I have made some investigation. We have, according to the minister's statement, a commitment of something over $9,000,000, all for the account of the United Kingdom, and I understand the plant is to be increased substantially, so that before this plant is finally completed and in full operation there will have been a capital expenditure of between $13,000,000 and $14,000,000. That is a great deal of money.

The raw materials for cordite are four. First, there is cotton lintos, which is the odds and ends of cotton. This is imported from the United States and is, of course, as easily available to Winnipeg as to a site on seaboard. I understand that plans are under way to make use of wood pulp in substitution for cotton.

The second ingredient in the manufacture of cordite is nitric acid, which is made at each explosive plant from ammonia. At the present time there is a contract for the supply of ammonia from the United States. This contract will expire shortly. Plants are now in operation at Trail, British Columbia, and at Calgary, Alberta, making ammonia from air.

The third ingredient is sulphuric acid, which is being manufactured from smelter gases given off in the refinement of nickel and copper and from iron pyrites. These sulphuric acid plants are located at Copper Cliff and Valleyfield in the eastern townships.

The fourth item is nitro-glycerin. Glycerin is a by-product obtained in the manufacture of soap. The large soap manufacturers are Procter and Gamble and Lever Brothers. The soap manufacturers make use of domestic animal fats and vegetable oils.

I am advised that the capital cost of the location of this plant at Winnipeg was increased some $500,000 because of the necessity of taking certain material parts there and for other reasons. But the gravamen of the charge against the location at Winnipeg is based on this, that all the product of this

plant has to be transported from Winnipeg 2,000 miles to the seaboard before it can be shipped overseas where it is to be used.

Mr. HOWE: No; it is used at the shell-loading plant at Pickering and de Salaberry.

Mr. HANSON (York-Sunbury): I understand that part of it has to go to the seaboard. I have that from a source very close to the operating company; I am not going to give any further information on that. If we assume, however, that the minister's statement is correct—and I am accepting it with the utmost good faith—the annual transportation charges on the product of this plant will be substantially increased by reason of the fact that the plant has been located at Winnipeg.

I sympathize with the people of Manitoba and the city of Winnipeg in their desire to get industrial plants located in their jurisdiction. That is most natural; it is something that has been contended for in this house by representatives of the different sections of Canada. *Per contra,* in the location of these plants consideration must be given to the economic situation. I suggest to the minister that the location of this plant at Winnipeg is uneconomic from the point of view of transportation and will, for that reason, increase the cost of the product being manufactured there.

I should like to ask the minister that at a little later stage, if he cannot do it to-day—not necessarily on the discussion of this resolution, because I had hoped that would soon be through—to answer these questions:

1. Why was the plant located at Winnipeg?

2. Is it true that D.I.L. recommended against locating the plant at Winnipeg?

3. Is it not true that Allied War Supplies Limited preferred to have this plant located nearer the seaboard?

4. Is it not true that the minister overrode all these recommendations and insisted that this plant must be located at or near Winnipeg?

5. Will the minister lay the reports, if any or all are in writing, on the table so that we may examine them?

That is all I have to say about the matter.

Mr. HOWE: I can answer these questions at once. We have in the department a policy that, as far as possible and reasonable without undue cost, plants will be dispersed out of the industrial areas. This plant was of a type that could be so placed. Naturally, under the present conditions of agriculture in the west, it would be to the advantage of Canada if we could change over some of the manpower of that section from agriculture to war munitions work.

Two plants have been located. I may say these plants are large users of power and must be located where large blocks of power are available; I think the one in Winnipeg uses some 20,000 horse-power, something of that order. The first plant we located in the Parry Sound area where a large explosives plant had been built during the last war. The second plant we located at De Salaberry island where power and an adequate labour supply were available.

The engineers of the company looked round for available locations for the three plants, and recommendations were made. Perhaps I should not tell the committee; it may get me into trouble, but a location was suggested which would have suited me very much better than the one chosen, as far as I was personally concerned. The Winnipeg location was mentioned. It was definitely felt that it would not be wise to put further explosive plants in the provinces of Ontario and Quebec. We had to take into account the fact that practically all the necessary raw material that required transportation in bulk originated west of Winnipeg. There were small quantities perhaps to be brought from the east; I think we have not yet located a plant that did not have some back haul.

The purpose of this explosive plant was primarily to supply the shell-loading plant at Pickering near Toronto, and the movement of materials was a straight line movement towards the seaboard to that plant at Pickering. Of course we locate these shell-loading plants so that we can funnel in all the components that make up the loaded shells without back haul; that is, haul away from the direction that the shell must ultimately travel. As I remember the picture, I think my hon. friend is right in saying that the capital cost at Winnipeg was about $500,000 more than it would have been at De Salaberry. I think, however, he is not correct when he says that the operating costs are higher.

Mr. HANSON (York-Sunbury): I said the transportation cost; I did not say anything about operating costs. The second point I made was that the transportation cost would ultimately be increased by reason of the long haul from Winnipeg to the seaboard.

Mr. HOWE: I doubt if that is true. I have not seen the report for a long time; as a matter of fact, the recommendation to locate at Winnipeg was not mine at all; it was made to me by a committee of our officers that was functioning at that time. As I say, a recom-

mendation was of a site somewhat closer to my home, and this was the second. There was little to choose between the two as to physical characteristics. The only opinion I cared to express was that of the two I would prefer to have it located at Winnipeg because I believed there was a better labour supply there, and economic reasons why that was the more desirable location of the two offered. As far as my intervening in the matter or taking any initiative in having the plant built in Winnipeg is concerned, I did nothing of the sort. I do not know what correspondence I have on the subject, and I do not wish to get in the habit of bringing down the reports from my own officers. I speak for the Department of Munitions and Supply as a whole, and it is not customary and, of course, is not required by the rules of the house that internal departmental reports be brought down to the house. I will, however, look into the matter and see whether it is in the best interests of the business of the house to bring down those reports.

Mr. TUCKER: First, I wish to explain why I intervened in order that the hon. member for Winnipeg South Centre should have a chance to lay his whole case before this committee. For some days now we have listened to charge after charge, general charges made repeatedly of extravagance, partisanship and so on, without any facts whatever to substantiate them. Days have been so wasted; and although the charges have been answered and answered and the people making them have been asked to bring forward facts in support of them but have been unable to do so, yet the effect has been that the people out in the country are having their confidence shaken to some extent as to the manner in which the war effort is being administered.

If a member of this house brings up a definite, concrete case like this, it seems to me he should be given every opportunity to lay it before parliament, and there should be no attempt to prevent him from doing so. That is particularly true, because of the peculiar nature of the present situation. Ordinarily, if a government department is going to spend money, an appropriation must come before parliament and be granted. In this case, however, a wholly government-owned corporation is spending money, or undertaking to spend money, without that money having been specifically appropriated. Therefore, if this committee is to do anything other than hold post mortems, we must do exactly what the hon. member for Winnipeg South Centre has done; we must lay the facts before the government and ask for the best possible consideration of them before action is finally taken.

What I had intended to say, had I been permitted, was this. I was going to ask the minister not to regard the remarks of the hon. member for Winnipeg South Centre as an attack upon those administering the Allied War Supplies Corporation, and to request that, every time something is questioned in regard to these government-owned corporations, he should not feel called upon to immediately come to their support on the floor of this house. The greatest patriot and hardest working man in the world, even if he works for a dollar a year, may make mistakes. Surely it is the duty of members of this house to bring these matters in all good faith to the attention of the government, which I know desires to see that its agents make as few mistakes as possible. If hon. members are not to be permitted to discharge that duty without being regarded as enemies of the government or as making attacks upon the patriotism of people whom we all admire, then members will be definitely discouraged from doing that which they are sent here to do.

That was why I wished to say a few words in this connection. I am sorry the minister did not let me say a short time ago what I was going to say. I was about to beseech him not to take the attitude that, in fact, at the commencement of his remarks, he did take. I have listened to what has been said by the hon. member for Winnipeg South Centre. I have no interest in this matter one way or the other, except as a member of this house from Saskatchewan.

If to-day you are actually using or likely to use all the Alberta coal that you can conveniently produce, and if there is an abundance of Saskatchewan coal, then I think the reasons advanced by the minister were insufficient. In all fairness I must admit that. If those reasons are to be accepted as sufficient for over-burdening the industry in Alberta and taking away a demand for what the industry in Saskatchewan can produce, then Saskatchewan might as well make up its mind that it is not going to get anything from the government-owned subsidiaries that have been set up. I am bound to say that. No one has greater respect and admiration for the Minister of Munitions and Supply than the member now speaking; I can assure him of that. In season and out of season I have said that, as a member of the government, he has done a good job for Canada, that he has shown himself to be a good Canadian whom we all admire and respect. I have said that every man in this house should be ready to assist him and should not bother him by carping criticism or general criticism which does nothing but raise doubt and suspicion. When, however, some of the servants or agents of the government

of this country, servants of the people of Canada, are suspected of having made a mistake; or, as appears to be the case here, when they may have been too greatly prejudiced by their past connections and may not have carried out the policies of this government, should this government not welcome one of its supporters rising in his place and saying that this man has perhaps made a mistake; that what he did was in their opinion, not right; that the minister should look into the matter? This should, however, not be done after the action has been taken and the mistake made. I was surprised to read in *Hansard* this remark by the minister:

> If the committee cares to bring down a report to parliament that there has been wasteful expenditure in connection with this installation, I shall be prepared to accept the rebuke and take the responsibility.

No one in this house wants that situation to develop, so that when some servant of this government makes a mistake, the minister, hard-worked as he is, must take the rebuke and the government must take the loss. That is not the way in which parliament should work. If that is all we are going to be able to do here; if we can only hold post mortems and find that money has been lost, and have that constitute a rebuke to a minister, then I submit that we are not discharging the duty which the people have a right to expect of us at this time.

Without prejudice one way or the other I am bound to state that I am not convinced that it would not have been a good thing to instal, in that plant, equipment to burn lignite. The suggestion that this might create dust does not carry weight with me, because I have seen many steam plants established entirely separate from the plants for which they were providing motive power. Of course I am not an engineer, but sitting here as a member of this house, I still think a mistake will be made if equipment is installed to burn bituminous coal, for these reasons: it will be more costly; it will use bituminous coal and overload the producing capacity of Alberta while plenty of Saskatchewan coal is available; it will be more expensive to haul that coal; it will require more labour to get the coal there; it will use and wear out railway equipment when we should economize in every possible way with regard to such equipment.

I realize that the minister is in a difficult position. Unless he stands behind these people, they may throw up their hands and say, "We are not going to work if we are going to be subject to the criticism of every little member of parliament, unless whatever we do, you stand behind us." We all know the minister's difficulties, and we all sympathize with him; but we also ask him to take into consideration the position in which we, as private members, find ourselves. If there is a suggestion that some mistake has been made, surely it is our duty to draw the matter to his attention. I am convinced that he will consider such suggestions not as attacks upon himself or the government, but rather as attempts to assist in the war effort, about which we are all deeply concerned.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. BLACK (Cumberland): I think it is agreed that as far as possible there should be continuity of discussion in this committee. I was sorry to see the discussion on the building of ships interrupted, but the committee has got into a discussion of the matter raised by the hon. member for Winnipeg South Centre (Mr. Maybank) with respect to the advantage of using coal produced in central Canada. Perhaps there are other hon. members who would wish to follow that discussion. I had something to say with regard to the building of ships, but I am ready to give way for the moment in order that the discussion being held prior to the six o'clock recess may proceed.

Mr. NICHOLSON: At six o'clock the hon. member for Rosthern (Mr. Tucker) was dealing with the coal situation as it affects western Canada, particularly Saskatchewan. I should like to make a few observations in connection with the discussion which has taken place. I think the minister is altogether too touchy regarding suggestions and comments coming from various parts of the house, and made with a view to having the work of his department more efficient. I think hon. members and the people of the country are convinced that the minister has a most difficult role to fill. In the information which came from the director of public information in to-day's mail there appears a list of the various departments under the supervision of the Minister of Munitions and Supply (Mr. Howe). It is inconceivable that in carrying on the administration of these various departments there should not be some mistakes. I think the people feel that, on the whole, the minister is possibly one of the best qualified men in Canada to administer the affairs of this department.

Many hon. members took the opportunity of seeing some of the work being done. A

trip of inspection was arranged by the hon. member for Hamilton East (Mr. Ross) and the citizens of that city. Many of us were able to see the tremendous undertakings which are under way. We saw plans being carried out which will transform the production of ploughshares into the production of guns. We saw great mountains of scrap being transformed into steel. We saw the manufacture of gun barrels. If I remember correctly, these were some twenty-two feet in length and we were able to see them being taken out of huge furnaces and dropped into vats of oil in order to temper the steel. We saw bomb racks under construction and radio equipment being produced, equipment which is so necessary for the carrying on of our war effort. If more hon. members would visit some of these industries, they would be more apt to realize that Canada is really carrying on an important part in the present struggle for the preservation of democracy.

After seeing what is being done in that particular district, I am sure that hon. members feel that the Minister of Munitions and Supply is doing everything humanly possible to see that the work is carried on efficiently. I hope, however, that he will also realize that hon. members are anxious that his work be carried on with as little criticism as possible. It seemed to me that the hon. member for Winnipeg South Centre presented a case which should appeal to impartial hon. members. Speaking the other night, he said:

> I do know that about eight or nine days ago Mr. Crabtree stated to a colleague of mine in this house that this question was still an open one, that they would approach it with open minds, and yet within thirty-six hours this man Abbott sat in a room in this House of Commons with that same colleague and me and told us that it was a closed book, that it had been closed for months.

Speaking the other day, the minister said:

> Mr. Crabtree believes that he would be able to burn a very high percentage of lignite coal in these boilers. I hope that is true, because we are finding it rather difficult to get supplies of bituminous coal from western Canada at the present time. The use of lignite coal at Winnipeg would have a balancing effect upon the coal situation in western Canada. Mr. Crabtree tells me that he will be able to use a considerable portion of lignite coal. He has studied the question, and I have a good deal of confidence in his statement in the matter.

Since the question was raised last week, the minister has had ample opportunity to bring expert opinion to bear upon the matter. Although he spoke at considerable length this afternoon, I still feel that the case made out by the hon. member for Winnipeg South Centre stands as a valid one. I should have liked the minister to tell the committee whether, since the question was raised last week, he had consulted expert opinion or engineers other than those who had given advice to the department on former occasions. I do not think the objection with respect to the dust creating problem in connection with explosives was well founded. The minister said that they had planned on using a considerable amount of lignite coal; but if they are going to mix lignite with the other coal, there will be a greater dust problem created than if lignite were used exclusively. I would think that the boiler rooms and the place where the coal would be stored would be at a sufficient distance from where the explosives would be made to overcome any great danger from dust that might be created by the use of lignite coal. I should like the minister to tell us who was the technical expert who came with Mr. Crabtree last fall to give him advice, and whether he has secured advice from other engineers since the hon. member for Winnipeg South Centre first brought up this question.

Mr. HOWE: I do not know that I need to give the name of the engineer.

Mr. NICHOLSON: The hon. member mentioned Mr. Abbott.

Mr. HOWE: It was not Mr. Abbott. I do not know him and I never met him. I never heard his name until it was mentioned in the house. It was a senior officer of the D.I.L. who accompanied Mr. Crabtree.

As my hon. friend knows, the D.I.L. are the designers of the plant at Winnipeg and have everything to do with it. In connection with the next question, I may say that we retain certain engineers in whom we have great confidence. We accept their advice; we do not go throughout the country shopping for engineers. We take the advice of engineers who are familiar with the problem, who are designing this cordite plant and who are competent thermal engineers. The hon. member is debating a subject here which he could very well debate in a place where the engineers could be present. A forum has been created before which subjects of this kind can be examined and before which evidence can be produced.

I have not spent enough time on this particular project other than to satisfy myself that the matter is being handled competently. I have not posted myself on the technical data that must decide the matter. It was not last autumn that this subject was raised with myself; it was only since I got back from England some time in February. At that time the matter was called to my attention, and I called Mr. Crabtree and one of his engineers to discuss it. They had the reports that had been made to them, and I

looked these over hurriedly. I am really not in a position to debate this question. As I say, a forum has been created where all the engineers who have had anything to do with this project can appear and where the proper information can be obtained. I urge strongly that it be left to the committee to decide whether or not this project has been carried out economically. I know I do a good deal of criticizing, but I would ask hon. members: Is this a subject of national importance? The real question now being discussed before this committee is whether we shall use coal produced in Alberta or coal produced in Saskatchewan. Is that of great importance to the people of Canada? On the question of value the matter is very close. There are no thousands or millions of dollars to be saved. There is no great sum involved.

Mr. NICHOLSON: The hon. member said that there would be a saving of $140,000 a year.

Mr. HOWE: He is mistaken. I can say dogmatically that there is no such sum involved. Further, I can say definitely that the sum involved is not large. I believe that D.I.L. are correct in the opinion which they have given officially and on which they stake the reputation of their company, that the course recommended is the proper one from an engineering point of view. Of course engineers have been known to leave out certain factors that might have been considered, but I do not think they have done so in this case because there has been enough pressure from the lignite coal operators to ensure that every factor which could be produced in favour of lignite coal was considered. Is it, I ask, of great importance to the people of Canada from coast to coast whether this coal comes from Drumheller, shall we say, or from Estevan? That is the question before the committee, and I do not think it is of extreme importance. To tell the truth, I think too much time has been taken up in the discussion of this particular question, and the cost to which the country has been put in keeping this House of Commons going while debate on this question has been going on would, I believe, outweigh any saving there might be one way or the other.

Mr. EDWARDS: Mr. Chairman, on Monday, March 10, the hon. member for Bow River (Mr. Johnston) in the course of his remarks on this resolution made a statement which will be found at pages 1384-85 of *Hansard,* with respect to a vital and important part of the war effort initiated by this government, namely, the war savings certificates campaign. His statement was grossly misleading and falsely represented the stand and position, with respect to the war savings certificates campaign, of the members of the Independent group comprising the official opposition in the Alberta legislature, which is now in session. The hon. member, either in his ignorance of the facts, or else with the deliberate intention of placing a false face upon the facts of the case, stated—

Mr. JOHNSTON (Bow River): On a point of order, Mr. Chairman, I should like to know what the hon. member is reading from.

Mr. EDWARDS: I am reading from my notes.

Mr. JOHNSTON (Bow River): On a point of order, Mr. Chairman, the hon. member is imputing motives. He said that I deliberately placed a false face upon the facts. I demand that he withdraw that statement. I deliberately imputed motives to no one.

Mr. EDWARDS: In order that the record may be absolutely straight I will repeat what I said. The hon. member either—or if he is Irish, ayther—in his ignorance, I say, of the facts or else with the deliberate intention of placing a false face upon the facts of the case, stated—

Mr. JOHNSTON (Bow River): I would ask you, Mr. Chairman, to give a ruling on that word "deliberate". That is definitely imputing motives to a member of this house, and I demand that the hon. member withdraw that word and erase it from his notes.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I would suggest that the hon. member withdraw the word "deliberate", which is against standing order 41, paragraph 298 of Beauchesne's Parliamentary Rules and Forms.

Mr. EDWARDS: I would bow to your ruling, Mr. Chairman, if there was no alternative, but my remarks were prefaced with the statement that the hon. member was "either ignorant of the facts" or else speaking with the deliberate intention of placing a false face upon them. I would like to believe, sir, that he was ignorant of the facts, and I believe that when I have finished he will admit that he was ignorant of the facts of the case when he spoke to this house on March 10.

Mr. JOHNSTON (Bow River): On a point of order, Mr. Chairman, I ask that your ruling be enforced and that there be an unconditional withdrawal of the word "deliberate."

Mr. MACKENZIE (Vancouver Centre): It was withdrawn.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I believe that the last statement of

the hon. member was in order. His statement was to the effect that the hon. member was ignorant of the facts.

Mr. COLDWELL: Do we understand, Mr. Chairman, that the objectionable statement was withdrawn?

Mr. MACKENZIE (Vancouver Centre): It was withdrawn.

Mr. COLDWELL: Then that is all right.

Mr. FAIR: On a point of order, Mr. Chairman, I believe that the hon. member for Calgary West said "if there was no alternative." That is not an unconditional withdrawal. Even if he is a Liberal, he should have no more rights than other members.

Some hon. MEMBERS: Order.

Mr. JOHNSTON (Bow River): According to your ruling, Mr. Chairman, the hon. member should withdraw unconditionally.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I understood that the hon. member did withdraw.

Mr. JOHNSTON (Bow River): He did not say so.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I would suggest that the hon. member withdraw his statement.

Mr. EDWARDS: Just what is it that I am desired to withdraw—my whole statement?

Mr. JOHNSTON (Bow River): Mr. Chairman, the words "deliberately" and "intentionally" should be withdrawn.

Mr. EDWARDS: I quite readily withdraw "deliberate" if that is what is objected to.

Mr. JOHNSTON (Bow River): Also "intentionally".

Mr. EDWARDS: I assume that the hon. member intends what he says.

Mr. JOHNSTON (Bow River): I was giving the facts.

Mr. HANSON (York-Sunbury): Mr. Chairman, I think the hon. member should be allowed to proceed.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I would ask the hon. gentleman to proceed with his remarks.

Mr. EDWARDS: The statement of the hon. member for Bow River was that the resolution endorsing the federal government's war savings campaign had been passed by the legislature of Alberta on a division of thirty-five to eighteen in the face of solid opposition by the Independent members.

Mr. JOHNSTON (Bow River): I think that is correct.

Mr. EDWARDS: The hon. member was at pains to preface his remarks with respect to this matter with pious protestations of cooperation despite—alleged, but wholly unsupported—charges of discrimination at the hands of this government, and he then proceeded to take credit to his party for unmatched patriotic war efforts—also unsupported. I quote:

> "No other organization in all the dominion has given this federal government the support that the province of Alberta has given in every way possible as far as this war is concerned."

Those are his own words.

I am indebted to a member of the Alberta legislature, Mr. J. J. Bowlen, for the facts in connection with this resolution, and I cannot do better than quote the memorandum which he was good enough to send me covering the correspondence and the draft resolution which led up to the passing of the resolution to which the hon. member has referred.

I should explain at the outset that the Mr. J. H. Walker referred to is the house leader of the official opposition, and the Mr. D. M. Duggan also referred to is the former provincial Conservative leader of the province of Alberta and a member of the Independent group. Mr. Aberhart—need I say?—is the high priest of Social Credit.

Mr. JOHNSTON (Bow River): Mr. Chairman, on a point of order—

Mr. EDWARDS: At least he is the author of the revised version, Canadian edition.

Mr. JOHNSTON (Bow River): On a point of order, I should like to know what the hon. gentleman is reading from. He might as well put it on *Hansard* unread.

Mr. EDWARDS: My memorandum.

Mr. COLDWELL: I am not particularly interested in this controversy; I am interested simply in a matter of procedure. Is this memorandum drawn by some one who is not a member of the house, and is this in reality a speech prepared by someone who is not a member of this house? If so, it is clearly a violation of the rules of order of this house. That is the point in which I am interested.

The ACTING CHAIRMAN (Mr. Fournier, Hull): For the information of the hon. member, citation 314 of Beauchesne's Parliamentary Rules and Forms states:

> It is a rule in both houses of parliament that a member must address the house orally, and not read from a written, previously prepared speech, for the reason that if the practice of reading speeches should prevail, members might

read speeches that were written by other people, and the time of the house be taken up in considering the arguments of persons who were not deserving of their attention.

I would suggest that the hon. gentleman may refer to his notes, but not read a speech.

Mr. EDWARDS: I do not propose to read my speech, or any speech prepared by anyone else, but with your permission, Mr. Chairman, I should like now to read the letter which is signed by Mr. Bowlen, and which I shall be very happy to table, as well as the memorandum embodying the copies of the actual correspondence which led up to the passing of this resolution.

The letter of Mr. Bowlen addressed to me under date March 12, reads:

M. J. Edwards, Esq., M.P.,
House of Commons,
Ottawa.

Dear Sir:

I noticed in last night's Edmonton *Journal* a statement made by Social-Crediter Johnston of Bow River, when he said that the independents refused to support a motion moved by the Social Credit government in Edmonton introducing the war savings certificate campaign.

This statement is a deliberate falsehood and I am enclosing a copy of what actually happened.

We had a resolution prepared to place on the order paper ourselves, when someone foolishly suggested we get the government to join in with us and make it unanimous. The records tell the story of what followed, and we have learned a lesson never to expect this government to cooperate in anything.

If you get an opportunity, you might correct the misstatement made by Mr. Johnston, as it puts us in a false light.

Yours truly,
John J. Bowlen.

Acting on behalf of the Independents, Mr. Duggan telephoned the premier on the morning of February 20, the day the session opened—

Mr. JOHNSTON (Bow River): Is the hon. member still reading a memorandum?

Mr. EDWARDS: I am now reading the memorandum sent to me—the day the session opened, and suggested that the members of the legislature could render a useful service to the country by passing a resolution endorsing the programme of the dominion government in relation to the sale of war savings certificates and stamps. The premier concurred in the suggestion, and agreed to receive for consideration a draft resolution. The next day the Independents sent the following draft to the premier:

Resolved: That this legislative assembly endorses the campaign for the sale of war savings certificates and stamps, which is now being carried on within this province and throughout Canada, as an integral part of our united war effort,

[Mr. A. Fournier.]

And further: that this assembly urges upon every citizen of Alberta to make the greatest possible contribution to this plan, and to our country in the present crisis.

The foregoing draft resolution was accompanied by this letter:

Dear Mr. Aberhart:

In accordance with our conversation, I am enclosing herewith a draft of a suggested resolution which I think should be moved by you and seconded by Mr. Walker.

Mr. QUELCH: Mr. Chairman, on a point of order, under standing order 41, citation 306 states:

It is not in order to read articles in newspapers, letters or communications emanating from persons outside the house and referring to, or commenting on, or denying anything said by a member or expressing any opinion reflecting on proceedings within the house.

The hon. member is definitely out of order. I ask your ruling, Mr. Chairman.

Mr. MACKENZIE (Vancouver Centre): I suggest that the hon. gentleman is quite in order in reading the resolution, but is not in order in reading a communication denying any statement made by a member of this house.

An hon. MEMBER: That is what he is doing.

Mr. QUELCH: Mr. Chairman, I have asked your ruling.

The ACTING CHAIRMAN (Mr. Fournier, Hull): If the hon. gentleman is not reading something commenting on anything said by another hon. gentleman in the house—

Mr. QUELCH: The hon. member stated a little while ago that—

Some hon. MEMBERS: Order.

An hon. MEMBER: Sit down.

Mr. QUELCH: Mr. Chairman, may I draw your attention to the fact that the hon. member read a statement to the effect that the statement of the hon. member for Bow River was a falsehood, thus reflecting upon a member of this house. I ask that that statement be withdrawn.

An hon. MEMBER: The hon. member did not object in time.

Mr. QUELCH: The statement was that it was a falsehood.

Some hon. MEMBERS: Too late.

Mr. MacKINNON (Edmonton West): Let us "face the facts."

The ACTING CHAIRMAN (Mr. Fournier, Hull): If any hon. member desires to express an opinion on this point of order, I will listen before rendering a decision.

Mr. ILSLEY: Mr. Chairman, it seems to me that the memorandum, as I have been following it, is merely a statement of what took place in the Alberta legislature. The memorandum itself has at least no obvious connection with anything any hon. member said or any proceedings which took place in this house.

Mr. QUELCH: I would point out that a letter which the hon. member read did refer to this matter.

Mr. MacKINNON (Edmonton West): That is finished.

Mr. HANSON (York-Sunbury): The hon. member for Vancouver Centre has correctly stated the position under the rules. I suggest that the advice which he gave should be followed.

The ACTING CHAIRMAN (Mr. Fournier, Hull): Any hon. member reading comments upon remarks made by another hon. member in this chamber would be out of order if an hon. member raised the point of order at the time the comment was read. Later on, it would be too late. As to the last remarks made by the hon. member, I am of opinion that he has a right to read that resolution, but not to comment on what was said by an outsider against a member of this house.

Mr. COLDWELL: Mr. Chairman, I should like briefly to discuss the point of order, because I think it has an important bearing upon the future conduct of business in this chamber. I would say this, that the hon. member for Calgary West, in speaking—

Some hon. MEMBERS: Order.

Mr. COLDWELL: —said that he was reading.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I believe the only proper procedure would be to appeal from the decision of the chair, not to comment on a decision after it has been rendered upon a point of order.

Mr. COLDWELL: Do I understand that I am not permitted to discuss the point of order?

The ACTING CHAIRMAN (Mr. Fournier, Hull): As I understand the rules, after a decision has been rendered it cannot be discussed. The hon. member could have taken part in the debate, but he cannot discuss the decision after it is made. The only way would be to appeal from that decision.

Mr. MACKENZIE (Vancouver Centre): May I inform the hon. member that the chairman invited expressions of opinion deliberately from all members of the committee.

Mr. EDWARDS: Let me read the letter.

Dear Mr. Aberhart:

In accordance with our conversation, I am enclosing herewith a draft of a suggested resolution which I think should be moved by you and seconded by Mr. Walker.

I see no necessity for a protracted debate. I further suggest that you introduce the resolution to-day under "Notices of Motion," and ask the house to suspend the rules so that you will be in a position to proceed with the resolution to-day.

If you care to discuss this matter with me I shall be glad to come to your office at your convenience.

Yours sincerely,

D. M. Duggan.

Later the same day, the premier replied as follows:

Dear Mr. Duggan:

I shall be glad to introduce the following resolution which I think will cover the matter, if Mr. Walker will second the same.

Yours sincerely,

William Aberhart.

This is the premier's resolution:

Whereas the dominion government has adopted the sale of war saving certificates and stamps as one of the methods of financing the war; and

Whereas this method of financing the war, although highly unsatisfactory, has been designed by the dominion government to achieve the primary and foremost objective of the British empire at the present time, namely, winning the war;

Now therefore be it resolved that this legislative assembly endorses the campaign for the sale of war saving certificates and stamps which is now being carried on throughout Canada as a part of our war effort;

And further that this assembly urges that every citizen of Alberta should cooperate with the dominion government in the winning of the war in every reasonable way possible;

And finally that this assembly urges upon the dominion government the necessity of adopting effective methods of financing the war and preparing for the post war period by the national control and issue of money and credit without inflation.

Date: February 21, 1941.

William Aberhart.

In reply, the Independents wrote to the premier as follows—

An hon. MEMBER: Who are the independents?

Mr. EDWARDS: They are the official opposition in the Alberta legislature, their leader being Mr. J. H. Walker. The following letter was addressed to the premier:

Dear Mr. Premier:

Thank you for your letter of the 21st inst., enclosing a resolution signed by you as proposer, which is designed to endorse the action of the dominion government in connection with a nation-wide campaign for the sale of war

saving certificates and stamps. The inclusion of the main points of our "draft" sent to you earlier the same day, is a courtesy we appreciate, but we sincerely regret that you have included in your resolution certain statements which are controversial, thereby destroying the object we had in view. We respectfully suggest for consideration the following deletions:

(1) The words "although highly unsatisfactory" in the second clause in your preamble.

(2) The word "reasonable" in the last line of the second clause of your resolution.

(3) All the words after the word "period" in the final clause of your resolution.

A resolution which expresses an opinion on any specific national monetary policy would undoubtedly provoke discussion and possibly injure the campaign, thereby impairing an important phase of Canada's war programme.

If you cannot see your way to accept our suggestion, we strongly urge you to allow the matter to drop.

The next step was taken by the premier when he placed on the order paper the following resolution:

Mr. JOHNSTON (Bow River): The hon. member is still reading from the memorandum?

Mr. EDWARDS: Still reading from the memorandum.

Moved by the Hon. Mr. Aberhart, seconded by Mr. Morrison:

Whereas the dominion government has adopted the sale of war saving certificates and stamps as one of the methods of financing the war; and

Whereas this method of financing the war has been designed by the dominion government to achieve the primary and foremost objective of the British empire at the present time, namely, winning the war;

Now therefore be it resolved that this legislative assembly endorses the campaign for the sale of war saving certificates and stamps, which is now being carried on throughout Canada as part of our war effort;

And further that this assembly urges that every citizen of Alberta should cooperate with the dominion government in the winning of the war in every reasonable way possible;

And finally that this assembly urges upon the dominion government the necessity of adopting effective methods of financing the war and preparing for the post war period by the national control and issue of money and credit without inflation.

When the foregoing resolution came after the debate, Mr. Duggan moved the following amendment:

That the resolution be amended by deleting the following words:

1. The word "reasonable" in the fifth line of the resolution.

2. The entire last paragraph commencing with the words "And finally."

During Mr. Duggan's address, he urged the premier to accept the amendment in order that the main part of the resolution could receive the unanimous support of the legislature. It will be noted that the premier's resolution is practically the same as the draft submitted to him by the Independents, but in order to provide an opportunity for a discussion of the ideas of Social Creditors with respect to monetary reform, an additional clause was added.

It will also be noted that the premier modified the position taken by the Independents to urge that every citizen of Alberta should cooperate with the dominion government in the winning of the war in every way possible by inserting the word "reasonable," which was interpreted by the Independents as being "modified" support instead of unconditional support.

Mr. QUELCH: On a point of order, Mr. Chairman, is the hon. member reading a memorandum to the committee? If so, by whom has it been prepared?

Mr. EDWARDS: This memorandum was prepared and sent to me in Mr. Bowlen's letter, over his signature, and he takes full responsibility for it.

Mr. QUELCH: Is it your ruling, Mr. Chairman, that the hon. member is allowed to read a memorandum prepared outside this house? Are we to listen to a memorandum prepared by different people throughout the country? Mr. Chairman, we are waiting for the ruling of the chair.

The ACTING CHAIRMAN (Mr. Fournier, Hull): Do any other hon. members wish to speak to the point of order?

Mr. McNEVIN: We have listened in this house to entire Douglas pamphlets time and time again.

Mr. FAIR: Hon. members do not seem to understand them any better.

Mr. ILSLEY: As I understand the point raised by the hon. member for Acadia (Mr. Quelch) it was decided a few minutes ago.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I understand that the hon. member for Calgary West (Mr. Edwards) is reading a document in support of his argument, and that is quite in order. My first decision stands.

Mr. EDWARDS: When the amendment of the Independents was put, it was supported unanimously by the Independent members and opposed unanimously by the members of the government and Mr. Morrison, Labour member for Edson. It should be remembered that the Independents initiated the proposal for unqualified support of the war savings certificates plan and that the action of the

government in including controversial clauses in the resolution, precluded unanimous support.

The public should clearly understand that the Independents expressed themselves as being whole-heartedly in support of the war savings certificates programme, and the attitude taken by the government members has been interpreted as modified and conditional support.

Now, Mr. Chairman, I leave it with hon. members of this house and with the public to judge who are the true patriots in the Alberta legislature, and whether or not it was the Independent members who, when they could not obtain the passage of an unconditional and whole-hearted endorsation of an unconditional resolution, refused to be a party to a resolution which was passed and which was intended to label Alberta's patriotism with a Social Credit brand, and to qualify our war effort with an impossible condition.

Mr. ROEBUCK: Did the parties who voted against the qualified resolution then follow their action by introducing a resolution of their own?

Mr. EDWARDS: No; the record shows that they moved an amendment to the resolution, and voted for the amendment. The unqualified resolution came before the house by way of an amendment to the qualified resolution; the Independents voted unanimously in support of the unqualified and unconditional endorsation of the campaign, and that unqualified resolution was voted against unanimously by the Social Credit government.

Mr. JOHNSTON (Bow River): I do not know when we have listened to a display which so clearly violated the rules of the house, and yet was permitted.

Some hon. MEMBERS: Order.

Some hon. MEMBERS: Withdraw.

Mr. MARTIN: It was a reflection on the chair.

An hon. MEMBER: Sit down.

The ACTING CHAIRMAN (Mr. Fournier, Hull): I really believe the hon. member should withdraw the first remarks he addressed to the chair. I believe it was a reflection on the decision, and if he was not satisfied at the time he should have appealed from that decision.

Mr. JOHNSTON (Bow River): I made no reflection on the chair.

Some hon. MEMBERS: Withdraw.

Mr. JOHNSTON (Bow River): But if—and I say "if" advisedly—there was any reflection on the chair—and I use that word advisedly—then I withdraw my reflection on the chair. I do not, however, intend to take up the quarrel of the unfortunate Independents in Alberta. I believe they will be quite adequately handled by the government there.

Mr. MARTIN: You mean by the dictator?

Mr. JOHNSTON (Bow River): I am sure the committee would be interested to know who the Independents are. I have heard the Conservative party criticized in this house for taking a new name during the election campaign. I believe they called themselves the national government party. The Prime Minister and the Minister of Justice went to great lengths to criticize the Conservatives in this house for being ashamed of their name, and going before the electorate on a new set-up. That is exactly the picture which obtained in Alberta. They were, shall I say, ashamed of their identity, one which was so discredited in the eyes of the public that they did not dare to run as Conservatives, nor did they dare to run as Liberals.

Mr. MacKINNON (Edmonton West): Yes, they did.

Mr. JOHNSTON (Bow River): So they had to combine all their forces. Oh, yes, the Cooperative Commonwealth Federation joined with them—the U.F.A. rather—and they were—

Mr. MacKINNON (Edmonton West): Mr. Chairman, may I—

Mr. JOHNSTON (Bow River): —so grossly ashamed of themselves that they had to call themselves Independents. One of the mysteries in the west is to know what they are independent of. The only thing we can conclude is that they are entirely independent of the people of that province. I do not intend to take up the argument for Mr. Bowlen, because it seems to me the case for Mr. Bowlen has been spoken freely in this chamber this evening.

I do not—

Mr. HANSON (York-Sunbury): On a point of order: I suggest this whole discussion is out of order, and that we are just wasting the time of the committee.

Mr. GRANT: Apologize and sit down.

Mr. JOHNSTON (Bow River): I will say this, Mr. Chairman, that I do believe the speech of the hon. member for Calgary West was entirely out of order, but the leader of the opposition has been a long while coming to that conclusion.

Mr. HANSON (York-Sunbury): I am afraid it will go on all night.

Mr. JOHNSTON (Bow River): It should have been mentioned before. Nevertheless I

believe Mr. Bowlen's case does not concern us here. I want to say something about the business before the house—

Mr. THORSON: About time.

Mr. JOHNSTON (Bow River): —not the business of the unfortunate Independents in Alberta. The question has been discussed as to coal coming from either Saskatchewan or Alberta. I have no brief for Saskatchewan, and I have no intention whatever of entering into an argument as to whether coal should come from Alberta or Saskatchewan. I am definitely of the opinion that there should be a national coal policy, and I believe it is a long time overdue.

The hon. member for Rosthern, who spoke immediately before the supper adjournment, advanced as one of the reasons for using Saskatchewan coal the argument that there should be no attempt to overload the coal industry of Alberta. I assure the hon. member, and other hon. members who are interested, that the coal industry in Alberta is definitely not overburdened. In fact there are hundreds of miners in the Drumheller area who are sitting along the tracks, day after day, with no work to do.

Only a few days ago I read to the house a resolution from that city appealing to the government to do something to relieve the unemployment of employable men in the Drumheller valley. Over 14 per cent of the world's coal deposits are in Alberta, and yet we have hundreds of unemployed men. Just a few days ago I received a memorandum from the coal miners' association in Drumheller showing where the miners in that valley, and in other parts of Alberta, work on an average of only one hundred days in the year, or roughly speaking about one-third of the total time. They have to maintain a living for themselves and their families for the other two-thirds of the year. So certainly one cannot say that the industry is overburdened.

There should be no difficulty getting all the coal required from Alberta, not only to satisfy the requirements of Saskatchewan but for more extensive use here in the eastern and central parts of Canada. When we consider the limited amount of storage for wheat at terminal elevators we must realize at once that hundreds of box cars are now standing idle, because they are not being used to haul that wheat. I suggest those box cars could be used advantageously for the hauling of coal from Alberta to other parts of the dominion.

In this connection I would read a resolution received recently from the city of Drumheller, to show the feeling at that point about the coal situation. It would be a shame in my opinion if the committee were left under the impression that Alberta coal miners are overworked. This was sent to me from subdistricts 1 and 2, district 18, United Mine Workers of America, and is as follows:

Dear Sir,

At a mass meeting of the general public—

This was not the meeting of a political organization but of the general public.

—held in the Elks hall, Drumheller, on March the 2nd, 1941, under the sponsorship of subdistricts 1 and 2 of district 18 U.M.W. of A. and supported by the city of Drumheller and the Drumheller board of trade, the following resolution was unanimously adopted, and I was instructed to forward it to you, for your earnest consideration.

Resolution

Whereas:

In the opinion of this meeting, the time has arrived for the dominion government to give earnest consideration to the plight of the Drumheller and surrounding districts, and the Canadian coal trade in general.

Therefore be it resolved

That this meeting protest strongly against the continued importation of United States coal and that we demand that steps be taken immediately to provide additional markets for Canadian mined coal, so as to conserve Canadian exchange during war time, and to eliminate the necessity of Canadian miners applying for relief, in the meantime, until these markets are made available, we demand the dominion government bear its fair share of necessary relief.

William Briggs
Thomas Mackie
William Jones
George Wiggan
Mike Ivan

Mr. CRUICKSHANK: Will the hon. member permit a question?

Some hon. MEMBERS: Order.

Mr. CRUICKSHANK: I should like to ask the hon. member what he is reading from.

Mr. JOHNSTON (Bow River): If you had listened you would have heard it.

Mr. CRUICKSHANK: I probably would not have been able to understand it.

Mr. JOHNSTON (Bow River): I would not doubt that for a moment; I would not contradict the hon. gentleman.

The ACTING CHAIRMAN (Mr. Fournier, Hull): Order. I would ask the hon. gentleman to address the chair.

Mr. JOHNSTON (Bow River): I spoke directly to you, Mr. Chairman.

An hon. MEMBER: It was the other hon. member.

Mr. CRUICKSHANK: I did address the chair.

Mr. JOHNSTON (Bow River): Perhaps I might be permitted to conclude this resolution:

We hope the above resolution, which was sent to the Right Honourable Mackenzie King, Prime Minister of Canada, and various other cabinet ministers, meets with your approval and that you will press for its adoption at this sitting of the House of Commons.

Thanking you in advance for courtesy and cooperation and with best wishes,

Yours fraternally,

That is signed by the secretary of the organization. In view of the fact that last year we brought in a tremendous amount of coal from the United States; in view of the fact that this resolution calls for a united effort with regard to our coal problem and asks, in effect, that we form a national coal policy, I think it only right that I should place on record our imports of coal, from a return of the house tabled last year, as follows:

	United States (tons)	Other countries (tons)
1939—		
September	6,644,720	1,076,191
October	3,469,782	701,396
November	3,091,195	548,668
December	2,406,712	234,633
1940—		
January	2,895,051	87,563
February	2,127,463	138,174
March	2,136,850	57,797
April	2,134,974	57,490

The value of the coal imported in 1939 from the United States alone, amounted to over $48,000,000. As I have said before, Mr. Chairman, it is difficult to instil patriotism and unity into the people of Canada just by talking, by advertising and by putting out propaganda. If members of the cabinet would spend a little time going among the people, especially in these mining communities, they would find that perhaps these people do not read as much as other classes do; they do not go to as many shows, because they have not the money, to see the expensive propaganda that is shown. They form their opinions from what they see in their daily life. When they see their people sitting by the side of railroad tracks, unemployed and starving in the midst of the most gigantic war in the history of the world; when they know there will not be enough food on the table for supper, although we are supposed to be in the midst of an all-out war effort, they are not very receptive when we say, "You must do your utmost in this war." They look at you in stark amazement and say, "That is exactly what we want to do. Why does the government not let us work?" Here are these able-bodied men, one hundred per cent physically fit; they want to do something. Here we have the city of Drumheller, with its board of trade and even the Liberal organization, which, as I said the other day, sent me a resolution—which was perfectly correct—wanting the government to do something to remedy this condition. And all the time these people know, through their organizations, that last year the government brought in from the United States something more than $48,000,000 worth of coal; and they ask themselves whether the government is really serious about saving foreign exchange. I ask myself that question, too, and I must confess that I have my doubts when I see these things, which I know to be true. One of the most logical and essential things the government should do right at this session is to declare and develop a national coal policy.

As the Minister of Munitions and Supply said a little while ago, and perhaps justly so, this is simply an argument as to whether coal should come from Saskatchewan or Alberta. This simply magnifies the situation and shows the great necessity of a national coal policy for Canada. If we had that, it would have saved much of the argument which has been carried on to-day. Saskatchewan is a nice province; there are nice people there, but they are not quite as nice as the people in Alberta, and their coal is not quite as good. We can supply more coal than they can think of; we can supply all Canada with coal, and I am not overlooking the tremendous amount of coal available in Nova Scotia and eastern Canada. They have problems there which should be given consideration. As I say, all this simply magnifies the fact that the Department of Munitions and Supply or the appropriate department should get together and form and announce a national coal policy for Canada.

Mr. DOUGLAS (Weyburn): During the passage of this resolution through the committee, the Minister of Munitions and Supply has attempted to explain the bottle-necks which exist in aircraft, shipbuilding production and other industries by outlining the difficulty the government has in obtaining skilled labour. I should like to ask the Minister of Munitions and Supply and the Minister of National War Services just what collaboration there is between the two departments. We understood that the National Resources Mobilization Act was passed last year for the purpose of tabulating all the available labour resources in Canada, in order to classify them into categories and to move men or give them assistance in moving so that they might be able to contribute to a maximum war effort. Could either of the ministers involved give the committee a statement as to what collaboration has taken place between the two departments?

A national volunteer registration bureau was set up in the Department of National

War Services and a national registration was held last year. The only value of such a registration is to permit the government to find skilled labour in shipbuilding, skilled technicians, men and women who are experienced in explosive manufacturing, and other types of labour. I have a case in mind, and perhaps other hon. members could duplicate it. I have received letters from people who are working on farms but who had experience in the manufacture of high explosives during the last war. In every case I have turned the name over to officials in the Department of Munitions and Supply. These are people who possess some skilled knowledge in this particular industry and who are desirous of making what contribution they can toward Canada's war effort.

That, however, is not enough. About nine months ago the government set itself the task of taking an inventory of the labour resources of Canada. What has been done about it? What results have been obtained? A few days ago I had on the order paper a question about this, and the answer I received was that the only figures compiled so far were for Ontario. How soon will the figures for the other provinces be compiled? How soon will the Department of National War Services be able to say to the Department of Munitions and Supply that they know where technicians are available and can give it names and addresses?

Under the Department of Labour young men are being trained with a view to absorbing them into war industry. Only last evening I had in my office a young man who had just come from Toronto. Previously he had lived in the west, but he had come to Toronto to take an eight weeks' training course at Danforth technical school. Along with the rest of his class he had graduated as a machinist, but all these young men find there are no jobs for them. When they started the course they were told that jobs would be available before they were finished, that they might not be able to complete the course. When, however, they finished the course there were no jobs. They were told to go and see the Massey-Harris people, but when they went there they were advised that 150 men had been laid off and these men would have first claim on any jobs. This young man told me they went to the John Inglis company where they were told that 50 men had been recently laid off and would be given first call before any new men were taken on.

There is something wrong. We have been told that there is a scarcity of technicians and skilled labour; we have been told frequently by the Minister of Labour that we are going to need 200,000 or 300,000 skilled men. Those statements do not jibe with the experiences of these young men who have taken these courses and who find they cannot get jobs, although the very thing the government has been training them for is to enable them to undertake work in war industry. There is no use in the government spending money to train young men and then have them go back to the farm.

I think the committee would appreciate an explanation from either one of the ministers involved. We should like to know what steps have been taken to mobilize labour, to find out where qualified technical men can be obtained, of whom the Minister of Munitions and Supply says there is a scarcity. We wish to know where these men can be located and what steps are being taken to place them.

Mr. GARDINER: I have not before me at the moment the statistics from which I could give this information. During the last two or three weeks we have been going round in circles as far as the discussion is concerned, and it is difficult to have material available at all times. All the questions which were asked during the last few moments were answered a few days ago and the answers now appear in *Hansard*. The figures with regard to Ontario, as well as the general statistics with regard to all Canada, were given. The statement was made that in another week or ten days the figures with regard to the other provinces would be available. They can be very closely estimated from the Ontario figures. As far as the registration is concerned, hon. members know that this was started in August of last year, being completed on August 22. Immediately afterwards a compilation was begun of the statistics gathered through that registration.

I may say that from time to time certain information has been passed on to different industries in Canada as well as to the Department of Labour. Any information required by the Department of Munitions and Supply respecting certain types of labour that might be available in certain places has been passed on from time to time. Last night some reference was made to a number of young men who have gone over to Great Britain from Canada to take part in the operation of the instruments made available for the purpose of locating planes at night and in connection with night flying. Practically all of those young men were located through the registration. The first 1,500 were located in one city. Their names were handed to the officials who visited the homes of those men house by house, and they were

on their way to Great Britain in a very short time. The registration figures are being made use of in that way from time to time.

One of the difficulties that we experience in connection with the matter is the fact that nearly every one who applies for employment applies, in the first instance, to the wrong place. Over a long term of years it has been customary for persons who were looking for employment to make application at the employment offices across Canada. For some reason or another, however, a great many people now think they should make application to Ottawa and they write to some minister or to some person connected with the promotion of some particular industry. We simply had to advise them that all the information with regard to these matters is now, as it always has been, at the labour offices and that that is the proper place to apply; that they can get action quicker in that way than by applying to someone else somewhere else. With that information sent back to them, some of them do find it possible to locate employment.

I quite realize that not all of those who desire employment in different parts of Canada have been brought into contact with industry that requires their labour. We have some difficulty in bringing that about, difficulties sometimes associated with the place where the person is now living and the circumstances under which he has been living. Sometimes it is difficult to take the head of the family away from the family, and sometimes it is difficult to move the whole family. There are all kinds of inconveniences of that sort because of the great distances in this country, but we are trying to work out methods of dealing with these different problems that arise. There have been advertisements from time to time put in the western papers seeking applications from persons who are competent to do certain kinds of work, such as shipbuilding, requesting them to apply for jobs in other parts of Canada, and by that method many of those who require work have been brought into contact with employment.

I do not know just how soon we shall have all the figures in connection with the registration, but I am informed by the members of the staff in the statistics branch that the figures will practically all be ready before the end of this month.

Mr. HOWE: If I may add a word, I hardly think it is fair to judge the whole labour situation by the case of this one young man. My hon. friend said that he had received six weeks' training as a mechanic.

Mr. DOUGLAS (Weyburn): Eight weeks' training.

Mr. HOWE: In other words, he was converted into a mechanic in eight weeks. That is hardly long enough experience for a mechanic, as my hon. friend will admit. The difficulty may have been in his approach. An employment officer naturally pays some attention to the type of approach made. The lad may have been cheeky, or a number of other things may have happened. It was stated that the John Inglis company were laying off 50 men. That is not the situation. They are taking on additional men each week, and if any men are being laid off, they are men who have not measured up to the standard required by the John Inglis company.

So far as the Massey-Harris company is concerned, they are doing work in their own line of business, which is the manufacture of agricultural machinery. It is possible that some may have been laid off who are engaged in that line of work, but I can assure my hon. friend that, so far as the war work of Massey-Harris is concerned, employment has not slackened because contracts are still current.

Mr. DOUGLAS (Weyburn): I know it is always dangerous to argue from the particular to the general, but I am informed that this is the case not merely of one young man but of an entire class. I saw his graduation certificate and the marks he made were exceedingly good. Could the Minister of Labour (Mr. McLarty) give us some idea of the percentage of young men who have gone through this course of training who have been placed in employment, and what percentage have not yet been placed?

Mr. McLARTY: I cannot give a categorical answer as to the definite percentage placed of those who have taken training courses. We are operating training courses at a substantially high rate at the present time. It is regrettable, but it is a fact that in certain localities some of those who have received training have not yet been placed. For example, a situation arose last fall where we had something like 500 men in Calgary who had received upwards of 600 hours of training, and who did not have employment. We arranged to transport them to a point where there was employment, and I think it is not unfair to say that all those 500 men were placed in employment. It undoubtedly is true that we are training faster in certain localities than the war industries in that particular locality can take care of the men. It is necessary to arrange for their transpor-

tation, and even when that is done, you are going to find the isolated case of a man who cannot immediately secure employment.

Let me give to the hon. member the figures, which are quite recent, of the number of trainees in the month of February; that is, the number receiving training in that month. There are four branches of training being carried on under the general training plan of the government. There are, first of all, the war emergency classes; there are the war industrial classes, under the youth training programme; there are the army classes, under the war emergency training programme; then there are the Royal Canadian Air Force classes, training aeroplane mechanics and those who are to take their place in the aircraft manufacturing industry.

In February, the month just past, we had in training in the war emergency classes, 6,351; in the war industrial classes, under the youth training programme, 992; in the army classes, under the war emergency training programme, 2,353; and in the Royal Canadian Air Force classes, training aeroplane mechanics and those who will be engaged in aircraft manufacturing, 1,727; or a total throughout Canada of 11,423. That was the number of trainees whom we were training in the month of February.

Please do not get an incorrect impression from that. It does not follow that that number joined the training classes in the month of February or that they were turned out in the month of February. That is the total number of trainees in that month.

Then as to the average time for training, the hon. member for Weyburn (Mr. Douglas) mentioned eight weeks. That is substantially below the average.

Mr. DOUGLAS (Weyburn): Some train for eighteen weeks.

Mr. McLARTY: Generally speaking, I think it will be correct to say that the average is about three months. Mind you, in dealing with the number trained, we do not deal with those who go into industrial plants and perhaps spend seven or eight days in learning a trade. They are not included in these figures. I think I am safe in saying that the average period of training—in some instances it may be longer and, in some instances, shorter—is three months; we have 11,423 men in training in one month, and the number is constantly increasing. That was the number in training in February. In January the equivalent figure of the total number of trainees was 10,381. In other words, February increased over January, in the number of those receiving training during the month, by over 1,000.

[Mr. McLarty.]

Mr. DOUGLAS (Weyburn): What would be the average output per month? Has the minister a rough idea?

Mr. McLARTY: I have that figure somewhere, but it does not appear to be right at hand; I shall be glad to give it to my hon. friend. In a rough way I suppose you could calculate it. If the average period of training is three months, and there were 11,000 in training in the month, there would be a present output of over 3,000 a month, but I shall be glad to supply the hon. member with the exact figure because we have it.

That is the situation, scattered throughout Canada. Then vocational training is carried on in seventy-five schools situated in different parts of Canada. In some of those parts, war industry is carrying on at a tremendous rate; in others, though having the advantage of trainees, war industry is not so substantially located. It is inevitable that between the time of training and the time of securing employment, some delay occurs. What we are endeavouring to do in connection with the training programme—and I am dealing now only with vocational training, to which I assume the hon. member for Weyburn referred—is to stimulate the use of vocational schools. I hope by the time this measure is through to have a somewhat complete report as to the success which has been obtained in plant schools.

We are, however, endeavouring to attain a condition in which those who receive training will not have to return, as the hon. member remarked, to territories where industrial concentration is not great. We are trying to correlate the training plan with industry itself so that, once a man receives his training, he will, as soon as possible, be placed. As the Minister of Munitions and Supply pointed out, we are up against a difficulty as to individual characteristics of the particular trainee. That is inevitable. We shall be faced with the difficulty that you cannot secure immediate employment for those who are trained. But we believe that, when this general industrial movement reaches its height, there will be employment for every trainee whom we can turn out; in fact our difficulty at that time will be to provide enough trainees.

Mr. PURDY: Mr. Chairman, I do not propose to take up much of the time of the committee; I feel that we are getting pretty well tired of the discussion. But you recall that on Friday evening, at the closing hour, the leader of the opposition (Mr. Hanson) tried to leave with the country and the committee certain impressions respecting the purchase of lumber for the Debert camp. These I gathered under the following headings:

1. That a large portion of the lumber used in construction at Debert military camp was purchased from Harry J. Mackenzie at very high prices.

2. That H. J. Mackenzie was my campaign manager during the March, 1940, election.

3. That a portion of my lumber was included in the Mackenzie sale.

4. That Mackenzie, an insurance agent, was not previously interested in the lumber business.

On Monday, the Minister of National Defence pointed out that the lumber sold by Mackenzie was about one per cent of the total amount comprised in the purchase. He further showed that the price paid to Mackenzie was very reasonable.

At the time the discussion was on, I denied that Harry Mackenzie was my campaign manager. I do not propose to say who my manager was, but I think a good many hon. gentlemen here will say that, whoever he was, he made a fairly good job of it.

That a portion of my lumber was included in the Mackenzie sale I denied at that time.

We come now to the statement of the leader of the opposition with respect to Harry J. Mackenzie not having been previously interested in the lumber business. This evening at around six o'clock the following telegram reached my desk:

> Have been interested in lumber at various times for thirty years. Did not solicit orders for Debert. Was called to hotel by Mr. McCabe and asked if I could supply special sizes which I had on hand. Standard price delivered at Debert. Will have one million feet of first class lumber for delivery early summer at competitive prices. Will go to Ottawa at Hanson's expense if necessary. Letter to follow.
>
> H. J. Mackenzie.

Now that we have laid the last wrinkle in the shroud of the ghost raised by the leader of the opposition, I do not think I should say anything more, except, in closing, to leave the idea that it does seem a shame that because a known Liberal gets a contract from the government it is immediately suggested around the country that there is something underhand about it, and that he is making money at the expense of the country.

You know, sir, that in this chamber there are some big big men, and there are some big little men, and there are some little little men and there are some little big men. I am going to leave it with you and the committee and the country just where the leader of the opposition places himself by making such an unwarranted reflection upon a friend and follower of mine.

Mr. MacINNIS: I think the Minister of Labour should give the committee more complete figures on the point he mentioned a moment ago. To my mind they are very important indeed, first, because the people are looking to those training plants, and the government is continually asking everyone to do his or her utmost in carrying on the war effort, whereas so many people find themselves unable to do anything.

I realize, as I think all hon. members must, the magnitude of the work which the government has to do, to organize in eighteen months all the activities which have been necessary because of the war, and there are bound to be some complaints, a number of bottlenecks, and a certain amount of disorganization. In the western cities, however, there is a great deal of unemployment. I made inquiries of the city hall in Vancouver by letter a few days ago, and I am told that there are at present over 10,000 unemployed, of whom over 7,000 are employable. That is an enormous number at a time like this. We need the labour of every man who is capable of working. The minister should make as complete a survey as possible of the work which the training centres are doing, and let the country have the figures at an early date.

Mr. McLARTY: I should be very glad to adopt the suggestion of the hon. member for Vancouver East. A survey is now proceeding in connection with the plant schools. May I, however, point out to the committee that there are two phases of the work which the interdepartmental committee on labour supply is doing. One is through the vocational schools, and the special training schools for aeroplane mechanics. Another phase of it deals with an entirely different matter, namely the plant schools. It is a little difficult to get exact information as to the volume of training being done in the latter schools. The survey is, however, now under way, and I believe that within a few days it will give us a more accurate picture.

I appreciate what the hon. member for Vancouver East has said with regard to the situation in Vancouver. It is, I know, a little different from any other city in Canada, and necessarily so, on account of the charming climate of British Columbia and the city of Vancouver in the winter time; and the figures he gives are not startling.

Generally speaking, I am advised by the officials in British Columbia, they are largely those of unskilled labour, and there is a period of definite seasonal unemployment at that point. Perhaps the situation is more aggravated in Vancouver than in any other city. I believe that to be fair.

I shall be very glad, when the bill is in committee, to give a complete statement of the whole training plan. I have given figures indicating that the plan as regards adoption

of industrial training classes in the development of aeroplane mechanics and air training mechanics is operating in a pretty substantial way. I should like to be able to give to the committee definite figures of the plant schools.

Generally speaking, the plan is to train in the coming year 1941—I speak of the calendar year—something over 100,000 men. It is designed that about 80,000 of these will be available to war industries, and as far as basic training is concerned they will be skilled men. I do not suggest that after they go through basic training they do not also have to take certain practical training in the plants. The members of the committee will agree that that is essential, but, generally speaking, we aim through the plant schools, the training schools, to train not less than 100,000 men this calendar year. I shall be glad to give a break-down of the figures when the bill is in committee, if that is satisfactory to hon. members.

Mr. REID: I suggest to the minister that when he makes his survey he should look into the complaint which is made that many manufacturers, in the preference for employment, are favouring young men of from twenty-one to twenty-four, and that many of the older mechanics—I am referring to British Columbia—find it almost impossible to obtain work. When they go to the shipyards and the factories they are told that they are a little too old. That aspect of the matter should be looked into seriously by the minister in the survey he makes.

Mr. MACDONALD (Kingston City): Last night the hon. member for Vancouver East (Mr. MacInnis) asked for some information as to the number of men who had been promoted from the ranks to officer rank in the navy, with particular reference, I think, to the number now taking the officers training course at Hatley Park near Victoria. I looked up the figures since last night, and I find that twenty men formerly serving as ratings in the navy are there now taking the officers course.

Another question was asked last night by the leader of the opposition (Mr. Hanson), who I am sorry is not in his seat at the moment. He asked for certain figures showing the composition of the item of $28,000,000 odd which I gave as representing the expenditure for ten months of the current year for acquisition and construction of vessels. I do not know whether the hon. member for Yale (Mr. Stirling) would take down the figures or whether he desires me to wait. I may have a chance of getting the floor again when the leader of the opposition returns, but I can give the figures now.

[Mr. McLarty.]

The item of $28,525,293 which I gave last week for the acquisition and construction of vessels is made up of the following sub-items:

For construction of corvettes	$18,503,682
For construction of mine-sweepers	5,401,708

Mr. MacNICOL: Will the minister give the number of each—how many corvettes and how many mine-sweepers?

Mr. MACDONALD (Kingston City): I suppose it could be given, but it is something the naval authorities never want to give in exact detail. I do not mind saying, however, that our programme is for seventy corvettes.

Mr. STIRLING: Does that mean the total?

Mr. MACDONALD (Kingston City): By the spring of 1942.

Mr. STIRLING: For Great Britain and Canada?

Mr. MACDONALD (Kingston City): No; for Canada only. To continue:

Acquisition of armed merchant cruisers	$2,097,433
Motor torpedo boats	579,507
Other vessels, which would take in smaller vessels for patrol—auxiliary vessels, harbour craft, et cetera	1,942,963

These figures total $28,525,293, which represents the amount I gave last week as the outlay for the first ten months of the present year.

The leader of the opposition also asked last night for some details as to the vote of $56,000,000 odd required for the coming fiscal year. I am able to say in that regard that that amount is made up, in part, of the moneys necessary to complete destroyers and to commence construction of further destroyers. In that respect the total is $9,250,000. The other figures are:

To complete corvettes	$ 8,750,000
Anti-submarine vessels, to complete	3,300,000
Anti-submarine vessels, part construction	4,875,000
Fairmile boats, coastal motor launches	1,500,000
Fairmile boats, another group of these boats	1,500,000
Motor torpedo boats, to complete 12	1,002,600
Four other motor torpedo boats	1,054,200
Six motor seine vessels	324,000
Ten harbour service motor boats	300,000
Two base supply ships	1,200,000
Twenty-eight mine-sweepers (that is the sum necessary to complete)	6,750,000
Ten mine-sweepers, part construction	$ 4,750,000
Ten mine-sweepers, another lot, part construction	2,000,000
Two magnetic mine-sweepers, wooden	350,000
Four boom maintenance vessels	320,000
One boom maintenance vessel, conversion	20,000
One boom attendant vessel, to complete	15,000
Four gate vessels (to be purchased, and converted for such purpose)	340,000

Four gate vessels, conversion alone...	$ 100,000
Twenty-five harbour craft, partly constructed; amount necessary to complete	150,000
Two ammunition lighters	130,000
111 degaussing	762,000
One fire boat	125,000
Contingencies	3,000,000
Sales tax	4,149,200
	$56,017,000

Mr. STIRLING Did the minister refer to the building of submarine vessels?

Mr. MACDONALD (Kingston City): Anti-submarine.

Mr. STIRLING: Was the second one mentioned an anti-submarine vessel?

Mr. MACDONALD (Kingston City): Yes. There are three lots of these anti-submarine vessels. There was no item for the building of submarines.

Mr. BLACK (Cumberland): How many of these classes of boats are of wooden construction, and could be built in yards in the maritime provinces?

Mr. MACDONALD (Kingston City): Those boats known as Fairmile could be built in the maritime provinces. As a matter of fact, two are being built in the county of Digby. Some others which could be built in the maritimes are the motor torpedo boats, the motor seine vessels, harbour service boats, two wooden magnetic mine-sweepers, twenty-five harbour craft and the ammunition lighters. Any wooden ship mentioned in this list could be built in the maritime provinces.

Mr. MacNICOL: What kind of wood is used in the construction of wooden ships?

Mr. MACDONALD (Kingston City): It varies, according to the type of ship. For instance, there is a good deal of mahogany in the Fairmiles. There are mahogany planks and decks. Of course the plans for these boats were British Admiralty plans, and they were followed in Canada. That is true, too, as to certain types of mine-sweepers. The hon. member for Queens-Lunenburg pointed out the other night that some of these boats contained a good deal of teak, and other expensive woods. These, again, were British specifications, and very little could be done about it here. As a matter of fact, the mine-sweepers about which he spoke were all built for the British Admiralty, to British specifications. We have changed the specifications, to some extent, in connection with the two mine-sweepers we are building, so as to permit greater use of native woods.

Mr. MacNICOL: Is rock elm used in the construction of boats?

Mr. MACDONALD (Kingston City): So far as I know, rock elm has not been specified for any of the larger boats, but I would not be sure about some of the smaller craft and the motor boats, a good many of which have been built in Nova Scotia.

Mr. BLACK (Cumberland): Have the boats for next year's programme been requisitioned, and have orders been placed, or is the new programme still outstanding, so far as construction is concerned?

Mr. MACDONALD (Kingston City): A few boats are still to be placed. However, by far the greater number have already been ordered. While this is a matter which might more properly be dealt with by the Department of Munitions and Supply, I have in my hand a list of the boats built in Nova Scotia since the beginning of the war. My figures show that the total number stands at 126. That looks like a great many, but from the point of view of Nova Scotia the unfortunate thing is that most of these boats were small craft, such as pulling boats, whalers, crash boats, cutters, some scows and a few tenders.

Mr. REID: Has the minister the information for British Columbia?

Mr. MACDONALD (Kingston City): I will come to that later. So far as I can ascertain, the total value of ships ordered in Nova Scotia so far stands at $930,000.

Mr. BLACK (Cumberland): Only $930,000 in a programme of $50,000,000.

Mr. MACDONALD (Kingston City): Up to date, yes. The point to be remembered is that one steel ship, such as those built in British Columbia, on the lakes or on the St. Lawrence is worth a great many times more than the value of the wooden ship. Ten steel ships which would run to a value of six or seven millions of dollars would easily outstrip fifty or perhaps one hundred wooden ships. As a matter of fact, Nova Scotia, building 126 wooden ships, receives only a total of $930,000. On the other hand, it would seem to me that the total orders already placed in British Columbia—and these figures include some cargo ships—stand at something like $38,000,000.

Mr. STIRLING: How many ships does that represent?

Mr. MACDONALD (Kingston City): This amount includes a large item for cargo ships, concerning which I have not the exact information. Leaving out, however, the cargo ships, we still have an item of $24,000,000 in British Columbia.

Mr. STIRLING: How many ships does that represent?

Mr. MACDONALD (Kingston City) There are fourteen corvettes and twenty-two mine-sweepers.

Mr. STIRLING: That makes a total of thirty-six. In addition, I believe there is a considerable number of smaller craft.

Mr. MACDONALD (Kingston City): Yes, I have only given the larger ones. I have left out such things as the Fairmiles, which cost about $80,000; I have left out some scows, towing tugs and such craft. I have given the larger ships of the corvette class.

Mr. STIRLING: The minister mentioned 111 vessels being supplied with degaussing equipment. What kind of craft are those?

Mr. MACDONALD (Kingston City): Those are our own ships: corvettes, mine-sweepers and other naval ships. That would not take in any merchant ships.

Mr. BLACK (Cumberland): In the main statement made by the minister at the beginning of this session, he made an announcement of policy with regard to the construction of destroyers and ultimately cruisers in this country. Would he care now to enlarge upon that statement and inform the committee what headway has been made, when this work will be undertaken if it has not begun already, and in what part of Canada it is proposed to carry on this construction?

Mr. MACDONALD (Kingston City): I regret to say that I have nothing very much new to tell the committee on that point, except that we have continued our efforts to get some experienced workmen from the British isles to supervise the construction of these destroyers. When I spoke on the general question of naval services last November, I think I said that the construction of destroyers was a very difficult undertaking, which would require the services of some men especially skilled in that work. We approached the British Admiralty with a view to getting those men, and we have every hope that they will be here shortly to undertake the supervision of the construction of our destroyers. As to where these destroyers will be built, I am not in a position to make any statement at the moment.

Mr. MacNICOL: Is the minister in a position to say where the destroyer steel is to come from; that is, the steel to be used for the plates? Is it coming from Great Britain, or will it be made in Canada?

[Mr. A. L. Macdonald.]

Mr. MACDONALD (Kingston City): I think the whole thing can be made in this country. I think we can make the destroyer and all its machinery.

Mr. EMMERSON: I understood the minister to mention an item for degaussing. Is that to take care of merchant ships plying between England and Canada?

Mr. MACDONALD (Kingston City): No. I think I said that item covered only naval ships, our own ships in the naval service.

Mr. BLACK (Cumberland): It is unfortunate that there has not been continuity of discussion of subjects under this resolution. I was disappointed that we were not able to continue with the discussion of the shipbuilding programme after the Minister of Munitions and Supply made his statement this afternoon. I believe this is one of our most important war undertakings, ranking second only to the construction of aeroplanes. Not long ago Lord Beaverbrook made an appeal for ships, and said we should go to the four corners of the world to find them. Canada should be doing her share in this connection.

I think all hon. members will agree that in a programme of this kind Nova Scotia, which made such a reputation years ago in the building of ships that sailed over all the seas, should receive first consideration. This afternoon the hon. member for Davenport discussed the possibilities of a shipbuilding programme on the great lakes. Unfortunately, ships built on the great lakes are constructed of raw materials coming principally from the United States. I believe that if Canada wants to carry her full share of the burden, these ships should be constructed from our raw materials processed and fabricated in Canada by Canadian labour.

It is realized now, even more than in the last war, that the construction of ships is of supreme importance, yet we are not nearly as far advanced in such work as we were at that time. The Minister of Munitions and Supply said that the programme already outlined would require all the shipbuilding capacity of Canada, and would employ all the workmen qualified for such construction. I do not believe that our capacity has been even nearly reached as yet, and I think much of the shipbuilding should be done in Nova Scotia. To some extent that would compensate for the relatively small volume of war orders which have been placed there.

In the last war, under the direction of Colonel Cantley, six or more steamers of from 2,000 to 4,000 tons were constructed in the county of Pictou. I understand that of these

at least one, the *Watuka*, is still in service, operating between Louisburg and Halifax. Other boats constructed at that time included the *War Wasp* and the *War Bee*, taken over by the British government before launching. The *War Wasp* was torpedoed three times, but survived.

Those ships were constructed out of materials processed in Canada, largely in Pictou county. I understand that plates up to fifty inches in width were rolled at that time, together with the steel frames, but such work has not been undertaken during this war. It may be that wider plates are required in the construction of ships to-day. If that is so, I believe a rolling mill should be provided in the maritime provinces in order that this work might be carried on. If wide plates are required, mills capable of doing that work should be established in Nova Scotia. I agree with the hon. member for Cape Breton South that the mill at Sydney, on which about $4,500,000 was expended during the last war, should be reconditioned and put into service once more.

Unfortunately, so far as Nova Scotia and the Cape Breton steel industry are concerned, almost the entire output goes to the British market for war needs in the form of billets. That is a splendid accomplishment of which we are all proud. That production, involving the consumption of more than a million tons of coal annually, and our biggest industry, will likely cease almost immediately on the cessation of hostilities, which we hope will not be long delayed. When that happens, this industry, which is performing such a necessary and vital service, will be closed. It should be the policy of the government to give special consideration to this problem. A committee representing the maritime provinces should be set up to see that war orders are distributed more fairly, especially for industries that will carry on after the war.

The same applies to ship-repairing which is so necessary at this time. This is being carried on effectively at our eastern ports, but such work will cease in a great measure upon the termination of hostilities. Nova Scotia may be in a worse position than it was before the war. The steel mills at Sydney might well be enlarged to provide additional steel for shipbuilding. The plate mill should be operated so that we would have available raw material during and after the war. This material should be produced by Canadian workmen, using Canadian materials and for the advantage of Nova Scotia after the war.

The Minister of National Defence for Naval Services has said that quite a large number of wooden ships are being built in Nova Scotia. That is all right as far as it goes, but more orders should be placed with the shipyards which were producing ships in the old days. Wooden ships were used during the last war to carry cargoes across the ocean. These ships can be powered with internal combustion or diesel engines, which have been developed to such an extent since the last war. This class of vessel could replace steamers now occupied in the coastal trade, which could then be utilized for transatlantic commerce. I believe more could be done by the Department of Munitions and Supply and by the Department of National Defence for Naval Services by way of enlarging the shipbuilding programme in Nova Scotia. I do not agree with the Minister of Munitions and Supply that we are working to anywhere near our capacity in building ships. If this is as important as it would appear from the appeal by Lord Beaverbrook to the British people the world over, then the capacity of Nova Scotia to build steel and wooden ships should be utilized to the utmost. I appeal to the Minister of National Defence for Naval Services and the Minister of Munitions and Supply to direct the efforts of their departments to this end.

Mr. O'BRIEN: Following the hon. member for Cumberland (Mr. Black) and with the tang of the sea of the maritimes in the air, it seems to me that, as another "wise man from the east", perhaps I should make a few remarks, particularly with reference to shipbuilding, in which I have been interested for some time and in which I have attempted to interest the Department of Munitions and Supply.

First of all, may I take a few moments of the time of the committee to make a brief historical reference to the constituency of Northumberland, which I have the honour to represent. Hon. gentlemen will recall that prior to confederation the question of a united Canada was discussed pro and con. I think it is worth noting that New Brunswick was the only province in which the people were permitted to give a decision through the franchise as to whether or not they would enter federation. At that time elections were held on different days and the vote was taken first in Northumberland on May 26, 1866. The county sent four members to the legislative assembly with an overwhelming majority in support of confederation. Since New Brunswick was the only province which gave its decision through the franchise, and since Northumberland county was the first county to vote in favour of confederation, I think I may with all due modesty claim that my seat in the House of Commons is perhaps the very corner-stone of the foundation of confederation.

Northumberland has produced many famous men. If not by birth, certainly by environment, we produced the Right Hon. R. B. Bennett. I would refer also to Lord Beaverbrook, to whom the eyes of the world look for assistance in this terrific struggle. Northumberland had the distinction of having two fathers of confederation, an outstanding historical event.

Mr. BLACK (Cumberland): Cumberland had four.

Mr. O'BRIEN: Probably Cumberland needed four as against Northumberland's two. I do not want to take up the time of the committee with historical references, but I should like to refer to an old member from that county. Mr. W. S. Loggie is now ninety-one years old, taking an active interest in present day events. He was speaking in this house when the House of Commons caught fire in 1916. I hope that no similar disaster occurs at this moment.

To get down to the matter of shipbuilding, the reason why I am now on my feet, I do not wish to be considered as wailing over the conditions which prevail in Northumberland county. We consider ourselves to be rugged individualists, and we and our forefathers have always tried to maintain ourselves without applying to other governmental bodies for assistance. On May 26, 1866, our forefathers went to the polls with high hopes in their hearts. As I speak here to-night I wonder whether those high hopes have been fulfilled. I should like to place on record some information contained in the submission by the municipality of Northumberland to the royal commission on dominion-provincial relations. Quoting from page 9, I read:

> There is a great deal of unemployment and much poverty in the county. Perhaps it is this increase in unemployment and poverty that has given the marked increase in tuberculosis and insanity.
>
> The assistance to the poor is a parish affair and as little outside relief as possible is given.

And again:

> Certain obligations and services now performed by the municipality should be taken over by the province or the dominion or at least there should be a greater contribution therefor paid to the municipality by the province or the dominion or both.

That submission was made prior to the war. One might believe that in an all-out war effort similar conditions could not prevail, indeed could not be foreseen at this time. I hope it may not be thought that while we sit in this committee pondering national problems, my references may seem to be parochial. I represent this constituency and my constituents look to me for some measure of help and assistance. In 1932 the gross bonded debt of the municipality was only $42,000, with $22,269 of a sinking fund, leaving a net debt of only $19,730. The final figures quoted in this submission are for 1937, by which date the gross debt of $42,000 had multiplied exactly ten times in five years and stood at $420,000. In the intervening years since 1937, the debt has reached the astounding sum of very close to $600,000, largely due to the years of depression and the severe and difficult times through which that municipality passed.

To explain the situation fairly to this committee would take too long a time and would be too involved a matter. I have no intention of doing so, but I should like to cite from the submission that paragraph which says:

> The conclusion that unemployment has become a national problem and should be dealt with as such is rather obvious. We submit that the matter of unemployment relief has grown to such proportions that it has long since ceased to be a subject of local or private interest and has become one of national concern.

As I said, that was pre-war, pre-September, 1939. Since then, money has been expended at such a terrific rate that perhaps even the Minister of Finance (Mr. Ilsley)—and I say this not unkindly—has not been able to keep up with the terrific pace because through no fault of his own, after bringing down this resolution asking the house to appropriate $1,300,000,000 for war expenditures only a few days later he announced that $160,000,000 more was required. And so the expenditure goes on at this terrific rate. Yet the municipality of Northumberland, after passing through the most severe years of the depression to which I have referred, now finds itself—I hope I am not prophesying that which may happen, but I cannot see any other outcome—entering upon what we believe will be another period of depression, because the constituency which I represent depends largely upon fishing, and particularly upon lumbering.

Prior to the war we were making shipments to Europe, to a country which I would not in present circumstances care to mention as being that country upon which our people had to depend for their livelihood and sustenance. That is perhaps a travesty upon what we call our democracy and perhaps upon our commonwealth of nations. That, however, is in the past, and I hope that when peace is declared, such conditions may not prevail again.

Realizing as I do that in times of war we must submit ourselves and our desires to the overwhelming demands of the war effort and that people in various localities throughout Canada must suffer to a certain degree, never-

theless with a view to alleviating the possible, perhaps probable suffering in the constituency I represent, I plead with the government to attempt to do something, within the scope of the war effort, for the people of my constituency, and it might perhaps be shipbuilding. That has been referred to by hon. members from Nova Scotia, where shipbuilding has been carried on more extensively in recent years. The Miramichi has a wonderful history of shipbuilding dating back to 1796, when ships were first built there and pine masts were shipped across the Atlantic for his majesty's navy. From that time down until 1860 or 1875 we were building ships there. True, we have not built any ships in recent years, although we built one sailing ship during the last war. The Minister of Munitions and Supply, and perhaps rightly so from the point of view of budgeting and watching the national purse as we believe at least the national purse should be watched, has not so far done anything in approximating volume for us in the maritimes, in shipbuilding, maybe because we have not the trained men. I admit that we have not the trained men in Miramichi, but I submit that if we have not these men already trained, they at least are there and it is our duty to attempt to train them so that they may be enabled to earn their livelihood.

Seventy-five years ago, Mr. Chairman, we did not have a Dominion of Canada, and eighteen months ago we did not have a Department of Munitions and Supply. All these things have been created because of the necessity of the moment. Now that the timber controller in the United Kingdom has stopped the purchases of our lumber—I hoped at first that this would be but a temporary measure, but now I believe that it will be permanent—with that in the offing, the people of Northumberland county are faced with the prospect of going through this summer and into next winter with virtually nothing to do in the way of earning the living to which they are entitled. Therefore, I plead with the minister, yes, with the ministry, to see if he or they cannot possibly do something for the people of my constituency.

We hear a great deal these days that we must "stick to fundamentals"; but when one asks what these fundamentals are, no definite answer is given. The only fundamental I know, pre-war, and the only reason for having government and for having these houses of parliament, is to create some degree of happiness so that the people for whom we legislate may be able to live, not in luxury necessarily, but at least in happiness and contentment.

Since the war broke out, the one overwhelming fundamental is the winning of the war. If, however, our finances have in some way become so tangled that we must pay tribute to an inanimate thing called gold; if human happiness must circulate about that gold standard, we have perhaps reached the point where it has ceased to be of any useful value in the lives of the ordinary citizens.

I know little about financial problems in the higher involved order, and I have met very few others who seem to know just what it all means; but I do maintain that at the present time—I hope I am wrong—the dollar sign seems to be the guiding factor, and in Canada the dollar sign seems to be almost placed upon the glorious union jack. That, I think, we dare not have. If the people of Britain need our products of the maritimes; if they need ships, then in this fight to save democracy and civilization we should give everything we possibly can even if we must do it "on the cuff", as a matter of credit. It seems strange to me that we here in Canada, directly connected with and a part of the British empire, should find our cousins to the south virtually giving to that empire in order to save those things in which the people of the United States believe, while we here in Canada apparently cannot do that, but must have Canadian dollars of which Britain is now running short.

These matters are all too involved for me to attempt to solve them or even to explain them because, after all, I am only thinking out loud, which is what I believe most members of the house are doing. Yet perhaps in thinking out loud we may arrive at some possible solution that would be of benefit not only to the people of my constituency to whom I am responsible but to the whole dominion. Therefore, so long as I occupy this seat in this house, I dedicate myself and this seat to the service of the government, not in any maudlin way that would assume the government to be letter perfect in everything they do, but rather in a constructive sense. It is for that reason I have until now refrained from taking up the time of the house in making what I think have been perhaps somewhat neutral speeches. Again I dedicate myself and my seat to the members of the government individually and collectively so that, as a unit in the constitutional government of this country, I, during my tenure of office, may satisfy at least myself that I have done what I think is the decent thing.

Mr. MACDONALD (Kingston City): The hon. member for Cumberland raised somewhat the same question as was raised last week by the hon. member for Queens-Lunenburg.

As far as the building of ships in Nova Scotia is concerned, there was only one firm in Nova Scotia at the beginning of the war, and I think there is only one now, that would undertake the building of steel ships, namely, the Halifax Shipyards, Limited. Nobody else in that province was equipped to build steel ships, but this firm could have built mine-sweepers or ships as large as 10,000 tons. It was felt, however, that they could better devote their energies to the repairing of ships, and they have been very busily engaged in that work since the beginning of the war. In New Brunswick the Saint John Dry Dock company or a subsidiary have now the contract for the building of three corvettes, and they also have a good deal of repair work.

At that time, no other yards in either province could undertake the building of a steel ship of any size, and up to the present the policy of the government has not been to bonus or subsidize shipyards, in view of the fact that there are at the present time and were at the beginning of the war fifteen or sixteen or perhaps twenty yards in Canada which could undertake the building of steel ships.

After I came to Ottawa I had many requests from Nova Scotia asking money from the government for the repair or establishment of shipyards for the construction of wooden ships, or perhaps, steel ships. Obviously it would be rather unfair to existing yards which have been developed by private capital for the government to go in and erect government yards when there were enough existing yards in the country to carry on such work as was available.

With regard to wooden ships, I have given my hon. friend some figures indicating that orders were placed in Nova Scotia for some 126 wooden ships. They were mostly small ships, but there were two classes for which orders were placed a few months ago, many of which I hoped, would be built in Nova Scotia. These were the Fairmile boats, the motor launches 112 feet long, and the wooden mine-sweepers.

To show that every effort was made to get Nova Scotian builders into the production of wooden ships, I may say that my colleague the Minister of Munitions and Supply sent down last August the director of shipbuilding, Mr. Carswell, who surveyed all the shipyards in the east before the orders for these wooden ships were placed. It seems to me that if the Nova Scotian builders, in view of the fact that twenty-four ships were to be ordered in the Fairmile plant, had wanted the work, and if their bids had been low enough, they could easily have got eighteen or twenty, because there is no question that my hon. friend is right when he says that the proportion of money going to Nova Scotia for shipbuilding is very small as compared with the sums which have gone to Quebec, Ontario or British Columbia. It is out of proportion in relation to a great shipbuilding province such as Nova Scotia. Therefore it was the desire of my colleague the Minister of Munitions and Supply, and, the hon. member for Cumberland will agree, it was my desire to see perhaps eighteen or twenty of these Fairmile boats built in Nova Scotia. That would have meant orders amounting to something like a million and a half dollars for the wooden shipyards of that province. What happened?

Mr. MacNICOL:: The Fairmile ships of which the minister is speaking are mahogany ships, are they not?

Mr. MACDONALD (Kingston City): Mahogany planking and so forth, yes.

Mr. BLACK (Cumberland): What is the value of a boat?

Mr. MacNICOL: It is $112,000.

Mr. MACDONALD (Kingston City): No; it is a little less than that. It is something around $90,000 for the hull. It is under $100,000; I have not the exact figures here.

Mr. Carswell went down to Nova Scotia, looked at the yards, and discovered that there were a good many which were capable of building the ships. Tenders were invited from those yards; the government of Nova Scotia interested itself in the matter, called a meeting of the shipbuilders, urged them to go on; called a second meeting of the shipbuilders, sent to Ottawa a delegation of shipbuilders accompanied by a minister of the crown in Nova Scotia; but after all that work the only Nova Scotian tender which was at all comparable with tenders from Ontario and British Columbia in the matter of wooden ships was one by a man at Weymouth, who tendered for and received a contract for two ships.

Mr. MacNICOL: At what price?

Mr. MACDONALD (Kingston City): Only three other tenders were received, and none of them was at all within the mark. That is the Fairmile story.

Mr. GILLIS: On that matter of tenders, would the minister make this clear: how did the Nova Scotia tenders compare with others, and what is the reason for the tenders from Nova Scotia being higher? A desire for more profits? How does the minister explain such a difference?

Mr. MACDONALD (Kingston City): Well, I do not know. All I know is that the government of Nova Scotia urged these people to get their tenders down as low as possible, because we knew the competition would be stiff. These people had plenty of time to consider the plans; indeed, they were given extensions of time for that purpose. In spite of that, there was only one man who could meet the price advanced by builders in British Columbia and Ontario. What the reason is I do not know.

Mr. MacNICOL: Is not the reason that, so far as Ontario is concerned, a great number of boats of this type are in use, and large numbers are made, in the counties of Muskoka and Parry Sound and Midland, and towns adjacent to Georgian bay? That is where these classes of boats are used.

Mr. MACDONALD (Kingston City): Yes; there is a good deal of that sort of building round the Georgian bay district and Midland, but that does not answer the question of the hon. member for Cape Breton South.

Mr. REID: British Columbia pays the highest wage.

Mr. MACDONALD (Kingston City): British Columbia pays a high wage. Of course there are firms in that province which have done a great deal of shipbuilding in recent years. They have splendid timber, and for some reason or another they are able to underbid Nova Scotians for the construction of these ships.

The next type of wooden ship, in size, which we had to build was the mine-sweeper. Eight of these mine-sweepers were for the British Admiralty and were built to their specifications. It is true the specifications called for expensive woods, such as teak, which Nova Scotia people were not entirely accustomed to, but neither, I suppose, were the builders in other parts of Canada. Every Nova Scotian builder of any consequence was given a chance to bid on these mine-sweepers. I have here a list of twelve builders who were asked to bid and who did bid. The first eight of these British ships—the whole eight—were awarded to Nova Scotia. What has happened? Four builders have renounced their contracts. They have said that they will not go on with the contracts to build these ships because, as they are honest enough to admit, they do not think they can do it for the money in the time specified, and they have asked to be released. That is the story with regard to the mine-sweepers.

Everything possible has been done. I should think, in fairness to the builders in that province, both by the authorities here and by the government of Nova Scotia, but there is an unfortunate condition. It may be, as my hon. friend pointed out, that the builders there, accustomed to working on a small scale, have not the necessary capital. It may be that when they saw the expensive wood that would be required, such as mahogany and teak, which will have to be imported and paid for, they felt that they had not the capital necessary to undertake the work. Whatever the reason may be, there is the result. It is unfortunate, but I do not see that anything more could have been done here.

One other word. My hon. friend said he thought the matter of shipping was second in importance only to aircraft and aircraft production. It is my judgment that it is second to nothing at all in the winning of the war. So long as Britain remains an island and so long as she has to get supplies from overseas, shipping and the protection of shipping will be absolutely vital to the life of that country. There is no question in the world about it. We must have not only cargo ships to carry supplies to England but ships of other kinds which are just as necessary—underwater craft, surface craft and, at other stages, aircraft for purposes of protection.

That brings me to this point. You cannot take a navy, whether it be a merchant navy or a service navy, and turn out its ships and its men overnight. This afternoon I was pondering the time it takes to train an officer in the navy. Someone has asked how many men were promoted from the ranks, and what educational qualifications were required. I believe I told the hon. member for Vancouver East that at least senior matriculation was required for entrance into the Royal Canadian Navy, but after that a cadet would have to go to naval college at Dartmouth, England—I am talking of peace time—for a period of about two years. He would then be made a midshipman and be at sea for about a year and six months or two years more. Then he would be a sub-lieutenant for a year and a half or two years more. He would then take some courses of about six months to qualify as lieutenant. At the end of six years of study, after he had acquired matriculation standing, he would be a lieutenant in the navy. At the end of another eight years he would be a lieutenant commander. Thereafter his promotion would depend on merit and selection.

You cannot turn out such men overnight, nor can you turn out skilled shipbuilders overnight. The thing to remember in this house in future is, I think, that whatever you may be able to do in other respects, and without in any way attempting to depreciate the importance of other services, the naval service is one the nucleus of which, both in

service personnel and in shipbuilding personnel, should never be allowed to decrease below the danger point. It has been allowed to decrease below that point here and in other countries as well in the last twenty years, and this and other countries are feeling the effect to-day.

We are trying our best to train men for the navy to man the ships we are building, and it is not an easy task in view of the high calibre of training required in a naval officer or even a petty officer. As regards the shipyards of the country, the programme which was agreed to in 1939 for shipbuilding in Canada, estimated at four years, is going to be compressed into the space of two and a half years. Every ship that we planned to build up to the year 1943 will have been completed in 1942.

Mr. MacNICOL: But not destroyers?

Mr. MACDONALD (Kingston City): No, because the plan had not contemplated destroyers. I am speaking of the plan made in 1939 on the basis of what was then considered to be the capacity of Canadian yards. We said that we could build so many corvettes, mine-sweepers and patrol boats; that was all that we could do, and the plan was to last until the end of 1943. That plan will be completed next year owing—I think it is fair to say—to the enterprise, courage, skill and energy of the shipbuilders of the country who have done a magnificent bit of work in this regard.

Mr. BLACK (Cumberland): Accepting the statement of the Minister of National Defence for Naval Services, that the building and maintenance in operation of ships constitutes the most important of our war activities, and accepting the assurance of the Minister of Munitions and Supply that he is endeavouring to harness the shipbuilding capacity and the man-power of Canada to its utmost, I feel that some special effort should be put forward to get the production that can be derived from Nova Scotia and New Brunswick. I am satisfied that if proper efforts are made, a very much increased programme of production can be obtained in Nova Scotia. I am of opinion that the time has come when the yards and the facilities and the men should be subsidized and encouraged in order that the shipbuilding programme can be pressed to its utmost limit, and I should hope that the Minister of National Defence for Naval Services and the Minister of Munitions and Supply would make special efforts to this end.

I was surprised to see the following Canadian Press dispatch from Shelburne, Nova Scotia, yesterday, showing that this yard has no construction work. I quote:

[Mr. MacNicol.]

Shelburne, Nova Scotia, March 16 (C.P.) The 118-foot freighter U.K. service IV was launched Saturday from the ship yard of Winslow Mackay Sons Limited and shortly after that officials of the company announced they were closing down the yards for lack of further orders. The 149-ton wooden vessel built for a firm at LaHave, N.S. was the 14th turned out by the plant in the last year.

We accept this as correct, coming from the *Canadian Press*. It seems to me that with the present need for the building of ships, this condition should not exist. There should be officials from the Department of National Defence for Naval Services and the Department of Munitions and Supply following up the work in these yards, to see that new construction is offered to them to the limit of their capacity. Not only should the yards be given business to the limit of their present capacity, but they should be expanded, as has been done in connection with munitions factories, largely in central Canada. I suggest there should be some explanation as to why a dispatch such as I have quoted should be sent across Canada at a time like this, when there is such pressing need for more ships of many kinds.

Mr. MACDONALD (Kingston City): I had intended to deal with that matter when I spoke earlier, but it slipped my mind. The hon. member has referred to the shipyards of Winslow Mackay Sons Limited at Shelburne. I would reply that the Mackay company were asked to tender on the Fairmiles, but did not put in a bid. That happened last fall. They were again asked to bid on the mine-sweepers. They said they would not bid on that type of boat, but they might be interested in a somewhat similar type of boat built on Canadian designs and of Canadian material. The Mackay company has had some work from the government, although not a great amount. I believe it has built three derrick scows, four float scows, and four wooden lighter skids, but it has not bid on the larger wooden ships.

Mr. MacNICOL: What about the machinery used on those lighter ships?

Mr. MACDONALD (Kingston City): They do not have to provide the machinery.

Mr. MacNICOL: Then how are they going to build Fairmile boats?

Mr. MACDONALD (Kingston City): Is the hon. member referring to the building of engines?

Mr. MacNICOL: No; the machinery for planing, and fitting up the woodwork.

Mr. MACDONALD (Kingston City): Mackay has as good facilities as any yard in Canada.

Mr. MacNICOL: For Fairmile construction?

Mr. MACDONALD (Kingston City): Yes; nobody can turn out a better yacht than Mackay.

Mr. MacNICOL: I am glad to hear that; and yet they would not tender.

Mr. MACDONALD (Kingston City): They would not tender, no.

Mr. KINLEY: I am glad the minister said that, because Mackay is one of the finest shipyards in the east. I have information that they were figuring on a ferryboat for the city of Halifax at the time these tenders were asked. In order to be sure that they could do the work they were tendering on, they stuck to the other boat. I believe the contract has since been awarded to a firm at Dartmouth. It may be that some of the firms which were at that time figuring on the Dartmouth ferry might now be open to figure on these other boats, if they were asked to.

Mr. STIRLING: Examining the two sets of figures appearing at page 1495 of *Hansard*, I would suppose that the first one sets out the amount of money required for the next fiscal year, and the second one contains figures relating to expenditures in the present fiscal year, up to January 31.

Mr. MACDONALD (Kingston City): Yes

Mr. STIRLING: In neither figures do I see any reference to armaments and guns.

Mr. MACDONALD (Kingston City): Armament stores appear in both lists.

Mr. STIRLING: Armament stores usually apply to ammunition.

Mr. MACDONALD (Kingston City): It includes ammunition and guns, and such things as mines, depth charges, ammunition, reserve ammunition and so on.

Mr. POULIOT: I wonder whether it would not be possible to-morrow for the Minister of Finance (Mr. Ilsley) to give a full statement of the representations which have been made regarding the repatriation of funds. Something was said about it in the press. There is now a mission, and I believe most of the work is done by one missionary, Sir Edward Peacock, who is now in the United States, selling British capital.

Besides the statement about repatriation, I should like to know if Sir Edward will come to Canada on the same mission, and if part of his mission is to sell the stock of the Canadian Pacific Railway to the Canadian government. I am more interested in it because Sir Edward himself is a director of the Canadian Pacific Railway, and all the movement behind a union government converges on the amalgamation of railways.

In addition to that, it would be interesting to see the connection of the Hon. Charles Dunning with the directors of the Canadian Pacific Railway, showing the boards on which he sits with the directors of that railway. All that is done behind the stage, and we, of course, need information about it.

I remember reading in the press some months ago a statement about the repatriation of funds for the Grand Trunk Railway. The question was not decided for a long time; but finally some pressure was brought to bear, and a decision was reached regarding the repatriation of those funds. These are general questions, and I can understand that it would be impossible for the minister to answer them to-night. I shall be pleased, however, if he would look at *Hansard* to-morrow, and see what he can do about giving an answer.

People are ready to make sacrifices for war, but the question is as to what is properly called war. It is most absurd to think that the Canadian people will suffer privation to increase the value of the stock of the Canadian Pacific Railway, and to give some schemers an opportunity to make much more money at the expense of our people. The feeling in Canada is strongly against amalgamation of the railways. Those who are for it do not come out boldly; they try to get it in some other way, in a different way from that to which we are accustomed. The purpose of the last union government was not to win the war; the railway business was behind it, and now there is another railway scheme behind the move for a union government. That is known by everyone. We want some enlightenment on the matter. I do not wish to take the minister by surprise. I respect and admire him, but the matter is of such tremendous importance that we are entitled to full information about it, which I hope the minister will be kind enough to supply. I am not making any attack on Mr. Dunning, although it would be very easy for me to k.o. him. I am just asking for facts. The matter is so serious, so important, that we should not show false sympathy to anyone who is behind the curtain.

Mr. MARTIN: The hon. member for Simcoe North is behind the curtain.

Mr. POULIOT: He is there, but he is not offensive.

There is another matter that should be investigated as well; that is, the Purvis business, the C.I.L. We must have full light on the C.I.L. and all the interlocking companies. After the Minister of Finance has answered

those questions, with regard to the amalgamation of the railways and Mr. Dunning's connections with the Canadian Pacific Railway, and so on, I shall have other and more interesting questions to ask the Minister of Munitions and Supply. But everything in good time; I am not in a rush. We are here to take our time, to judge the pros and cons of everything. I am not acting in any spirit of animosity.

Let me add one further word. Last year when I mentioned to the leader of the official opposition that some people were receiving large fees and high salaries, some members of the Conservative party protested vehemently, and the leader of the opposition said he had resigned all his directorships when he was appointed leader of his party. According to *Hansard,* however, he has kept at least one, and in a guide in the library it is stated that he has several others. I do not object to that at all, but what is interesting is the connection between a man who is a director of a company and other men who are directors of the same company and who sometimes may confuse their private interests with public interest, unless they are great enough completely to sacrifice their private interests and think only of the public interest. That would be praiseworthy, but I am not yet sure that it applies in this case. I do not say that it does not apply; I am very careful, and I want to use parliamentary language. After I get the information about Mr. Dunning, I will show the business connections of the leader of the opposition, and then I will go further and show what are the jobs of those whom he defends in this house. Then people will have all the information. I do not say there is anything evil in that, but the people should have full information before we vote such amounts of money as we are asked to vote now.

There is only one further observation I wish to make. If the Minister of Finance is able to collect the amount called for in this measure, he will be the best man ever born in Canada. I know he is a good man, but we have to be very careful. Some people say, "Oh, let it go." The duty of the opposition is not to step on it but to apply the brake at times, but this the leader of the opposition never does. We have to apply the brakes from this side. I am afraid, Mr. Chairman, that if we go too far, if we become careless or reckless, the result will be that we shall have to go to the United States for money, and if we have to do that, my great fear is annexation in the near future. I fear it very deeply. I want Canada to remain a British dominion, and my constituents and I are ready to make great sacrifices in order that this may be so. We desire to be at peace with the United States, who are our allies. We want to keep them as our allies, because their interests are the same as ours in this war. On the other hand we do not want annexation at any time; and if we have to go to the United States to borrow huge sums of money, annexation will be all the closer. That is a matter to consider. I do not want to be a false prophet, but I tell the committee frankly what I think about the matter.

[Mr. Pouliot.]

Mr. NICHOLSON: Would the Minister of Finance be kind enough to make a short statement to-morrow with regard to the portion of this appropriation which may be raised by taxation and the portion which may be raised by way of loan? I think he promised a few days ago he would make some such statement.

Mr. ILSLEY: No: I did not agree to make any such statement, although I was requested to do so.

Mr. NICHOLSON: I understood that the minister said he would make a statement later on.

Mr. ILSLEY: No; I never agreed to make a statement to that effect at all. It would be impossible, for the reason that this is only part of the total requirements of the government, and it will be necesary to make a budgetary statement. I said that to make any such statement would be anticipating the budget, and that I did not think this was the debate during which that statement should be made.

Mr. NICHOLSON: I understood that in reply to the leader of the opposition the minister said he would have some statement to make.

Mr. ILSLEY: No.

Mr. ROSS (St. Paul's): I should like to ask the minister of naval affairs a question. I understood the minister to say there were seventy corvettes, but in a bulletin issued by the Department of Munitions and Supply it states that there are eighty corvettes. Are there seventy or eighty?

Mr. HOWE: Ten for the United Kingdom.

Mr. MACDONALD (Kingston City): Seventy corvettes for Canada and ten for the United Kingdom.

Progress reported.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, March 19, 1941.

The house met at three o'clock.

ST. LAWRENCE WATERWAY

AGREEMENT RESPECTING DEVELOPMENT OF POWER AND PROVISION OF DEEP WATERWAY FROM HEAD OF THE LAKES TO MONTREAL

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, an agreement between the government of Canada and the government of Ontario with regard to the Great Lakes-St. Lawrence basin development was completed to-day at 1.35 p.m. It was signed at Ottawa yesterday by Mr. Howe and myself on behalf of the Canadian government and at Toronto to-day by Mr. Hepburn and Mr. Nixon on behalf of the government of Ontario.

This agreement is designed to enable the two governments in cooperation with the government of the United States to carry out the developments which are necessary to make beneficial use of the waters of the Great Lakes-St. Lawrence basin, including the development of power from the Ogoki and Long Lac diversions at the Sault, Niagara and ultimately in the international rapids section; the preservation of the scenic beauty of the Niagara river and falls and the more effective use of the waters in the Niagara for power purposes and the building of a controlled single-stage project in the international rapids section of the St. Lawrence.

An agreement with the United States of America was signed at Ottawa at 2.40 this afternoon in the Prime Minister's office by the plenipotentiaries appointed by His Majesty the King in respect of Canada: myself as Secretary of State for External Affairs, Mr. Howe, Minister of Munitions and Supply, and Mr. Read, legal adviser of the Department of External Affairs; and by the plenipotentiaries appointed by the President of the United States of America: Mr. Moffat, the United States minister to Canada; Mr. Berle, the Assistant Secretary of State of the United States, and Mr. Leland Olds, Chairman of the Federal Power Commission of the United States. This agreement covers the development of power throughout the Great Lakes-St. Lawrence basin and makes provision for a deep waterway from the head of the lakes to the harbour of Montreal. It also contains provisions dealing with and controlling diversions from the Great Lakes-St. Lawrence watershed and for the preservation of the scenic beauty at Niagara. Generally, its scope is similar to that of the Niagara convention of 1929, and the St. Lawrence Deep Waterway treaty of 1932.

The copy of the signed agreement for the President of the United States of America is being taken to Washington to enable the president to communicate it, in a formal manner, to the United States congress. The agreement will be formally brought to the attention of congress on the afternoon of Friday, the 21st. On the same day, when the House of Commons assembles, it will be communicated to the parliament of Canada together with the texts of the Canada-Ontario agreement, the texts of relevant correspondence between Canada and the United States from May, 1938, to the date of signature of these agreements, the texts of relevant correspondence with the governments of Ontario and Quebec during the same period, and a general plan of the power and navigation development in the international rapids section. In order to permit simultaneous publication in congress and in parliament, the agreements will not meanwhile be tabled.

By an exchange of correspondence tabled in the House of Commons at an earlier date, provision was made for the establishment by the two governments of temporary Great Lakes-St. Lawrence Basin committees, in order to make the engineering investigations that were necessary to expedite work on the project, in the event that the development was approved by parliament and by congress. Reports addressed to the President of the United States of America and to the Prime Minister of Canada have been submitted by these committees, which have been working in cooperation. These reports give the general description of the project, the recommendations of the committees and the estimates of costs.

I shall now table copies of these reports in English and in French. They will be distributed without delay.

The report being tabled is styled:

St. Lawrence Deep Waterway, International Rapids Section.

Reports submitted to the President of the United States of America and the Prime Minister of Canada by the Canadian temporary Great Lakes-St. Lawrence basin committee and the United States-St. Lawrence basin committee.

1. Joint report submitted by the committees.
2. Engineering report transmitted by the committees.
3. Detailed estimate of cost.

The question of the relationship of the St. Lawrence waterway project, both to the immediate war effort of our country and to the broader defence problems in which the governments both of Canada and the United States of America are interested, has been carefully considered by the two governments. I deem it advisable immediately to bring to the attention of parliament the exchange of cor-

respondence, which contains a personal message addressed to me by the President of the United States of America, with regard to this aspect of the question. I do not think that it would be desirable to comment on Mr. Roosevelt's statement at the present stage, but I feel bound to express the satisfaction and gratification of the government, and, I am sure, of all Canadians, at the president's action in placing on record in a formal state paper the determination of the government of the United States to supply such aid and material to Great Britain, the members of the commonwealth and their allies, as may be necessary to enable them to bring the war to a successful termination. As these communications are of the greatest possible public interest, I shall now read to the house the exchange of notes between the United States minister and myself of March 5 and March 10, which contain the message referred to.

The following is the message addressed by myself as Secretary of State for External Affairs to Mr. Moffat, the United States minister to Canada. It is dated Ottawa, March 5, 1941:

Sir:

I have the honour to refer to certain questions which have arisen in the course of the St. Lawrence waterway negotiations, and which we have discussed recently.

As you are aware, my colleagues and I have been giving prolonged consideration to the problems presented by the St. Lawrence waterway project. We have noted the progress made in the preparation of the engineering plan for the international section and in the drafting of the general agreement. There is, however, one consideration of a fundamental character to which we desire to call attention.

The growing intensity of the war operations and the apprehension that still more serious perils will have to be faced in the very near future, necessitate the most careful examination of any proposed expenditure from the point of view of public need and in the light of war requirements.

In existing circumstances, the Canadian government desires to know whether the government of the United States is of the opinion, in view of the position in Canada, and, of course, the position in the United States as well, that the project, as outlined in the State Department's proposals of 1936 and 1938, and under consideration since that time, should now be proceeded with.

We have, of course, been fully aware of the desire of the government of the United States to have a treaty or agreement respecting the St. Lawrence waterway concluded at as early a date as possible, and negotiations, which have been carried on or more or less continuously for some time past, have had in view the desire on our part to arrive, at the earliest possible date, at terms of agreement which would be mutually advantageous. We are also aware of the pronouncements, which have been made from time to time by the president, respecting the added emphasis given by the war to the importance alike of power and navigation developments in the Great Lakes-St. Lawrence waterway project. We are also duly appreciative of the agreement recently reached between our respective governments, whereby the province of Ontario has obtained the right to the immediate use of additional power at Niagara, and the diversion of the waters of the Ogoki and Long Lac rivers into lake Superior, in consideration of which, authority was given for the immediate investigation by United States engineers of the project in the international section of the St. Lawrence river in Ontario, in order to enable work of future development to proceed with the least possible delay, once an agreement between the two governments, respecting the St. Lawrence development was concluded.

We would naturally be prepared to give every consideration to power or navigation developments which the United States may deem necessary to the prosecution of measures calculated to aid Great Britain, Canada and other parts of the British commonwealth of nations in the present war, or to further the security of the United States itself against possible future events, which, at the moment, cannot be foreseen, but of which in times like the present full account must be taken. We realize that the government of the United States will be as solicitous as our own government to appraise the project at the present time in terms of its contribution to the efforts which are being put forward by our respective countries to preserve and to restore freedom.

It is from this point of view and in this spirit that we would ask that the St. Lawrence project be again reviewed by the government of the United States before an agreement or treaty be finally entered into.

Accept, Sir, the renewed assurances of my highest consideration.

W. L. Mackenzie King,
Secretary of State for
External Affairs.

To that communication I received from Mr. Moffat, the United States Minister to Canada, the following reply:

Legation of the United States
of America
Ottawa, March 10, 1941.

Sir:

I lost no time in bringing to the attention of my government your note of March 5 in regard to the St. Lawrence waterway negotiations. In view of the importance of the question you raised, the matter was laid before the president, and I have been instructed by way of reply, to transmit the following personal message from him to you—

The remainder of this communication is in quotations; it is the message from President Roosevelt:

"I have given careful consideration to your recent request that in view of the growing intensity of current war operations and the apprehension over perils which may have to be faced in the near future, the government of the United States review the St. Lawrence project and give you an indication of its views as to whether, in the existing circumstances, this project as outlined in the State Department's proposals of 1936 and 1938 should now be proceeded with.

"May I say at the outset that I am aware of Canada's increasing war effort and I readily agree that it must have first call upon your country's resources and man-power. I also

agree that in view of the existing situation the most careful examination of any proposed expenditure is necessary from the point of view of the public need and in the light of defense requirements.

"With these considerations in mind the government of the United States has as you requested reviewed the St. Lawrence project. We have welcomed this occasion to review the project because of the fact that our own defence programme renders it desirable that all public expenditures in the United States be weighed in the light of considerations similar to those set forth in your communication. The government of the United States is engaged in a great defence programme. It is determined to supply such aid in material to Great Britain, the members of the commonwealth and their allies as may be necessary to enable them to bring the war to a successful termination. Simultaneously our own defences are being strengthened to the extent necessary to prevent any foe from menacing the security of this hemisphere. It is indispensable that all public projects contemplated by the government of the United States be considered from the standpoint of their relationship to these supreme objectives.

"The government of the United States regards the Great Lakes-St. Lawrence basin project as directly associated with the accomplishment of the foremost national objectives of this government. It believes that the project should be proceeded with and that construction should commence at the earliest possible moment. It regards the construction of this project as a matter of vital necessity.

"You refer to the engineering investigation now being conducted in the international section of the St. Lawrence river. I need hardly say that I directed the release of $1,000,000 from the special defence fund for this purpose only because of my conviction that the completion of this project by 1945 might prove of vital importance to our defence effort. It is gratifying that there has been sufficient progress to make possible the initiation of construction this spring.

"I am sure you will agree with me that, while our countries must put forth maximum immediate defence effort, we must also prepare for the possibility of a protracted emergency which will call upon the industries on both sides of the border to meet constantly expanding demands. The combination of advantages offered by the St. Lawrence project makes it imperative that we undertake it immediately.

"In terms of the time factor, the St. Lawrence project as a part of our defence programme is not exceptional, since we are to-day appropriating money for construction of vessels of war which will not be ready for service until the completion of the St. Lawrence undertaking.

"I am convinced of the urgent need for the large increment in low cost electric power which the St. Lawrence project will provide. Already the demand for power is running ahead of expectations. In fact one of the most serious handicaps to the rapid expansion of aeroplane production is the difficulty of finding the large supplies of high-load factor power required for aluminium production. We are of course expanding our electric facilities for this purpose as fast as practicable but by the time the St. Lawrence power is available other sources of cheap power will have been largely allocated.

"The St. Lawrence project offers by far the soundest and most economical provision for the power requirements of certain portions of our long-range defence programme, more particularly for certain high-load factor defence industries. Furthermore the manufacturing facilities and skilled labour available for the construction of steel turbines and electric equipment will be needed to meet the requirements of the vast areas of our continent where water power is not so economically available.

"I am also convinced that the opening of the St. Lawrence deep waterway to afford an outlet for naval and cargo ships constructed in great lakes shipyards, far from representing a diversion of funds and resources from the defence effort, would have the opposite effect. Our shipbuilding programme, to meet the requirements of defence, will call for a great expansion of shipyards with their associated machine shops and adequate supplies of skilled labour. The extent to which intensified submarine and air attacks on convoys may necessitate an expansion of the programme is still unknown. If the war is protracted however it seems certain that the number of shipyards required will have to be several times those at present available. In terms of our present industrial arrangements, many of these can be most readily and economically available in the great lakes area.

"If the full burden of our expanding ship construction must fall on seaboard shipyards the time required to complete the vessels themselves must, in many instances, be increased by the period necessary to construct new shipyards and facilities. With this in mind it is apparent that the deep waterway could be completed in time to provide an outlet to the sea for many of the new vessels included in the present programme.

"In the light of these facts it is my belief that the funds and man-power required for the earliest possible completion of the St. Lawrence project could not be better spent for our joint defence effort, including aid to Great Britain. It is my feeling that failure to take advantage of the possibilities of this project would be short-sighted, in no way contributing to an increase in our immediate defence effort, while limiting our defence programme in the difficult years which lie ahead."

Accept, Sir, the renewed assurances of my highest consideration.

Pierrepont Moffat.

I now table copies of this correspondence in English and in French, and also French copies of the report of the engineers.

I should like to repeat what I said a moment ago, that, while I do not think it is desirable to comment upon Mr. Roosevelt's statement at the present stage, I feel I should emphasize the great appreciation of the government and the people of Canada of the president's expression in a formal state paper of the determination of the government of the United States to supply such aid and material to Great Britain, and members of the commonwealth and their allies, as may be necessary to enable them to bring the war to a successful termination.

Hon. R. B. HANSON (Leader of the Opposition): The Prime Minister has made an announcement of more than ordinary importance although, I may say, not altogether

unexpected. It would be manifestly improper, if not impossible, for me to make at this time any comment which would serve a useful purpose. There are, however, a few questions which I should like to ask the Prime Minister. It is apparent, I think, from the statement which he read that the agreement is in the form of an agreement and not in the form of a treaty. I think we can take that as an accepted fact.

Mr. MACKENZIE KING: That is right.

Mr. HANSON (York-Sunbury): Then I should like to ask the Prime Minister whether this agreement will be submitted to parliament at this session. If so, will it be submitted before it has been considered and approved, or otherwise, by the United States congress. Finally, I should like to ask him if he will lay on the table of the house an opinion of the Department of Justice, if one has been received, as to the legality of proceeding by way of agreement rather than by way of treaty?

Mr. MACKENZIE KING: In reply to the leader of the opposition, I may say that the agreement will be submitted to this parliament for approval after it has received the approval of congress and not before. I hope and expect that that approval will be given shortly and that it will be possible to have the agreement presented to this parliament at the present session. With respect to my hon. friend's other question, I shall be glad to table on Friday, with the agreement, the opinion of the Department of Justice with respect to the binding nature of an agreement in the form of an agreement rather than in the form of a treaty. That opinion will be supplemented by an opinion of the Attorney General of the United States.

CANADIAN ARMY (RESERVE)

TABLING OF REGULATIONS WITH MODIFICATIONS RESPECTING TRAINING PLAN

Hon. J. L. RALSTON (Minister of National Defence): I wish to lay on the table of the house a copy of reserve army special regulations, 1941, which have been passed, containing certain modifications of the army regulations which were considered necessary and advisable in connection with the training plan, as announced.

Mr. STIRLING: Will copies be available for members?

Mr. RALSTON: I made inquiries to-day and I believe there are a number of copies. They tell me they have about seventy-five available.

Mr. STIRLING: I should like to have one.

[Mr. R. B. Hanson.]

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

OIL PRODUCTION AND CONTROL

Mr. HOBLITZELL:

1. What are the conditions in the oil industry which make it necessary to give wide powers to the oil controller as set forth by order in council No. 1195 dated February 19, 1941?

2. Has the government taken any action with a view to promoting a more extensive production of oil in Canada?

3. Is it the intention of the government to take possession, control or management of the oil industry in whole or in part under powers contained in clause 2 (c) of order in council No. 1195 dated February 19, 1941, or any other authority thereunto enabling, and has the government taken any such action?

Mr. HOWE:

1. The oil industry in Canada is the largest user of United States exchange, and war needs make it imperative that the use of United States exchange be reduced to the fullest possible extent.

2. The government has taken steps in that direction.

3. This is a matter of government policy which will be made known in due course.

HAMILTON HARBOUR COMMISSION

Mr. BENCE:

1. Who were the members of the Hamilton harbour commission from July 31, 1940, to September 30, 1940?

2. Who represented the Hamilton harbour commission at a convention of harbour commissioners held in California during the month of September, 1940?

3. Who paid the expenses of these representatives?

4. What did these expenses amount to?

Mr. CARDIN: In answer to the above questions, the Hamilton harbour commissioners have supplied the following information:

1. Cecil V. Langs, K.C., and Andrew G. Gaul.

2. C. V. Langs, K.C., chairman, was appointed a delegate for the Hamilton harbour commissioners, and attended the annual convention of the American Association of Port Authorities held at Long Beach, California, from September 10 to September 15, 1940. E. H. Corman, who, as a member of the Hamilton harbour commissioners, was elected a director of the American Association of Port Authorities at their annual convention held in Milwaukee in 1939 and attended meetings of such directors during his term of office. Mr. Corman was appointed alternate delegate of the Hamilton harbour commis-

sioners, and attended the said convention held at Long Beach, California, in September, 1940.

3. Hamilton harbour commissioners.

4. Railway expenses		$414 26
Other expenses—		
U.S. funds	$250 25	
U.S. exchange	31 05	
Travellers' cheques	3 44	284 74
Total Canadian funds		$699 00

SPITFIRE AND HURRICANE FUNDS

Mr. LOCKHART:

1. Are Spitfire airplanes made in Canada?
2. If not, what becomes of the money donated to Spitfire funds?
3. What becomes of the moneys donated to Hurricane funds?

Mr. ILSLEY:

1. No.

2. It is understood that those collecting Spitfire funds forward them to the government of the United Kingdom, as Spitfire airplanes are manufactured in the United Kingdom.

3. These moneys are paid into the consolidated revenue fund of Canada out of which payments for the purchase of war equipment including Hurricane airplanes are made. Hurricane airplanes are made in Canada.

MUNITIONS AND SUPPLY—HOUSING

Mr. FRASER (Peterborough West):

1. What is the name of the recently established government-owned housing corporation?
2. What are the names of the officials and directors of such company?
3. In what localities or districts is it proposed that the company should carry on housing projects?
4. Is it intended that the company shall build and own new dwellings or merely assist individuals to finance the building of new dwellings?
5. What amount of money will be made available to the housing company for the purpose of carrying on its activities?
6. What arrangements will be made for the liquidating of obligations incurred by the housing company?

Mr. HOWE:

1. Wartime Housing Limited.

2. President: Joseph M. Pigott; directors: Wilfrid T. Gagnon, William Lyon Somerville, Ernest Ingles, William E. Tibbs, Robert J. Gourley, Hedley C. Wilson.

3. Wartime Housing Limited will take action wherever a shortage of housing accommodation is shown to be impeding war-time production or delaying completion of a military construction project.

4. P.C. 1286, page 1, section (d) provides that Wartime Housing Limited is authorized to "purchase or otherwise acquire and sell, exchange or otherwise dispose of, any real or personal property or interest therein which in the opinion of the minister is or is likely to be necessary or desirable for the carrying out of any of the powers conferred upon the minister by this act, or by the governor in council."

5. Wartime Housing Limited is authorized under P.C. 1286, section 7, to spend:

"From the moneys provided by parliament under the War Appropriation Act, 1940, or otherwise, one hundred thousand ($100,000) dollars shall be allotted to permit such living accommodation to be rented, purchased, constructed, or otherwise provided, and for the payment of necessary organization and administrative expenses; the said one hundred thousand ($100,000) dollars shall be placed at the disposal of such company when it is incorporated in such amounts, from time to time, as the minister may deem advisable; and the said company shall not enter into commitments exceeding ten million ($10,000,000) dollars without a further order in council."

6. This is a matter of government policy which is now under consideration and will be disclosed in due course.

Also refer to minister's statement page 1328 *Hansard*.

NIAGARA PENINSULA FRUIT AND VEGETABLE INSPECTORS

Mr. CORMAN:

1. What is the personnel of the staff of fruit and vegetable inspectors in the Niagara peninsula, including the counties of Wentworth, Lincoln, Welland, Halton and Haldimand?
2. What are their names?
3. What position do they occupy?
4. How much salary did each receive for the fiscal years 1939 and 1940?
5. Have their services been satisfactory to the Department of Agriculture?

Mr. GARDINER:

1 and 3.	2.	4. Year ending March 31, 1940	4. 11 months ending Feb. 28, 1941
	Permanent		
District fruit inspector (for western Ontario)..	Ponton, H. H.....	$3,000 00	$2,750 00

5. Yes, with very few exceptions.

PORT HOPE, ONT., FEDERAL BUILDING

Mr. ADAMSON:

1. How much money was spent during the year 1940 and up to date in 1941 on the Federal building in Port Hope, Ontario, for decorating, renovation or other such work?
2. Were tenders called for this work?
3. If so, what are the names of those tendering and the amount of their respective tenders?
4. Was this work done by day labour?
5. If so, who was the superintendent of the work?

[Mr. Corman.]

Mr. CARDIN:

1. Expenditure for interior and exterior painting, decorating and repair of public building: 1940, $675; 1941, $1,605—$2,280.
2. Yes.

3. Only one tender received from Robert Sainsbury of Port Hope for $2,280.

4. No.

5. Answered by No. 4.

SOLDIERS' TRANSPORTATION

Mr. CHURCH:

1. How many soldiers at Petawawa are on trial at Pembroke, charged with using false railway tickets for furlough?

2. Before whom will they appear and what is the date of the trial?

3. Who laid the complaints and what railway is prosecuting?

4. Will the government provide counsel for the accused so as to assure them a fair trial?

5. Will the government or Minister of National Defence order a government inquiry so as to establish reforms in soldiers' transportation, as a protection to Canada's soldiers?

Mr. RALSTON:

1. Fourteen.

2. Magistrate F. J. Galligan. Hearing March 22, 1941.

3. Provincial Constable E. V. McNeill. Railway concerned is Canadian Pacific Railway.

4. It is not the practice for counsel to be provided at public expense in such cases.

5. This involves a matter of policy regarding which announcements are not made in advance.

MUNITIONS AND SUPPLY—PURCHASE INVESTIGATORS

Mr. ISNOR:

1. How many purchase investigators are employed by the Department of Munitions and Supply?

2. What are their names, addresses and salaries?

3. What are their duties?

4. Do investigators make recommendations? If so, to whom and of what nature?

Mr. HOWE:

1. Two.

2. John A. Marsh, 35 McLeod street, Ottawa, Ontario. Salary—$4,200 per annum.

George A. Briggs, 225 Fifth avenue, Ottawa, Ontario. Salary—$3,960 per annum.

3. (a) To review Department of Munitions and Supply submissions for privy council authority covering contracts for amounts over $5,000: to check such submissions and see that the statements contained therein are in accordance with the facts and that the necessary supporting papers and documents are on file. If such submissions are not in order, it is the duty of the purchase investigators to return such to the directors concerned, for correction. In the event of the low tenderer not being recommended, it is the duty of the purchase investigators to see that there is a good and valid reason for placing the contract with other than the low tenderer.

(b) To report to the deputy minister any irregularities inconsistent with the departmental policy of purchasing.

(c) In the placing of contracts where there is insufficient competition or when it is recommended that the lowest tenderer be not awarded the contract, it is the duty of the purchase investigators to present such recommendations before a committee composed of the executive assistants to the minister, and to secure or give whatever information is necessary by the committee before such submissions are approved and signed by the executive assistant to the minister.

(d) To check all financial encumbrances received from the three services of the Department of National Defence and those originating within the department, to ensure that they are dated and signed by the appropriate signing officers before issuance to the purchasing divisions.

4. Answered by 3.

WAR SERVICES—MOTION PICTURES

Mr. BENCE:

1. What motion pictures are represented in the commitment of $112,220 mentioned by the Minister of National War Services at page 1337 of *Hansard?*

2. What motion pictures have been produced and/or paid for by the director of public information?

3. What was the total cost of each such motion picture?

4. Were these motion pictures produced in cooperation with the national film board or the Canadian government motion picture bureau?

5. If so, what amount, if any, was expended by the national film board and/or the Canadian government motion picture bureau in respect of such motion pictures and what outstanding commitments are there?

6. Are expenditures and commitments for such purposes by the national film board or the Canadian government motion picture bureau charged to the ordinary estimates or to the War Appropriation Act?

Mr. GARDINER:

1. Theatrical—Produced:
Atlantic Patrol.
Letter from Aldershot.
The Home Front.
Front of Steel.
Squadron 992.
Wings of Youth.
Britain at Bay.
Peoples of Canada.
Letter from Camp Borden.
Un du 22ieme.
Children from Overseas.
Guards of the North.
Everywhere in the World.
French news reels.
London Can Take It (French).
La Croix et L'Epee.

Theatrical—In production:
Science in War (provisional title).
Canadians in Britain (provisional title).
Navy Film (provisional title).
Strategy of Metals.

Non-Theatrical—Produced:
On Guard for Thee.
Not Peace—But a Sword.
Timber Front.
Iceland on the Prairies.
The Lion Has Wings.

Non-Theatrical—In production:
Workshops of War.
Youth in War (provisional title).
This is My Country (provisional title).

2. All those listed as "Produced" in answer to question 1.

3 and 5.

		$132,079 03

4. National Film Board.
6. War Appropriation Act.

EXEMPTION OF AGRICULTURAL SOCIETIES FROM CERTAIN TAXATION

Mr. ROY:

1. Are reserves and working capital of agricultural societies, as well as the cash surpluses of cooperative agricultural societies affected by the war revenue tax?

2. Will the government consider the advisability of exempting such societies from this taxation?

Mr. GIBSON: This question, in almost identical form, appeared on the order paper last week, and at that time I stated that it was impossible to answer it in its present form. The question does not yet specify the tax referred to, and I might say further that it is quite impossible to state how a tax will affect any society without knowing whether the society comes under the provisions of, or any exceptions to, the taxing act referred to.

QUESTIONS PASSED AS ORDERS FOR RETURNS

TRANSPORT COMMISSION—RAILWAY LINES ABANDONED

Mr. FERLAND:

What railway lines have been abandoned by order of the board of transport commissioners in each province of Canada?

SOLDIERS ELIGIBLE FOR TRADE PAY

Mr. SHAW:

1. What are the classifications of those in the armed forces eligible for trade pay?
2. What is the rate of pay for each such class?
3. Are all those holding trade papers eligible for trade pay?
4. Are all those eligible for trade pay in receipt of such pay?

MOTIONS FOR PAPERS

OIL PRODUCTION AND CONTROL

Mr. HOBLITZELL:

For a copy of all orders in council, reports, memoranda and correspondence between the government and Department of Munitions and Supply and the oil controller, his officers, assistants and employees and associates and consultants in his own or any department of government having reference to the constitution of the oil controller and of his office, or the control of oil or the oil production and supply business or having reference to the maintenance and carrying on of the office of oil controller and the various policies to be pursued by him, or acts, matters and things proposed, done or to be done by him during the years 1940 and 1941 to the present time.

Mr. HOWE: May I point out that a considerable portion of the return asked for is privileged, particularly the correspondence between the government and the Department of Munitions and Supply and the oil controller, his officers, assistants, employees, associates and consultants, all those men being employees of the department. Of course, correspondence between the minister of the department with these employees is privileged.

I believe the other documents asked for have already been tabled under previous orders for returns, so that this motion could very well be dropped.

Mr. HANSON (York-Sunbury): May I ask if the recent order in council respecting the powers of the oil controller, and in particular the one which gives him immunity for any act done by him or purporting to have been done by him under any order in council, has been tabled? I desire to call attention to the last section of that order in council, which so far as I know is the most unusual grant of immunity from legal process ever given to any public official in Canada, far beyond any statute ever passed by this parliament for the protection of a public official.

Mr. HOWE: I will look into the matter, and if all orders in council have not been tabled I will see that they are tabled immediately.

CANADIAN NATIONAL RAILWAYS

INQUIRY AS TO DATE OF TABLING OF ANNUAL REPORT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Minister of Transport (Mr. Cardin) whom we are all so glad to see back in his seat—

Some hon. MEMBERS: Hear, hear.

Mr. HANSON (York-Sunbury): —if he will say when we may expect the report of the Canadian National Railways to be tabled in this house. The fiscal year of the company ended, I understand, on December 31, now nearly three months ago. We should be glad to have the report tabled.

Hon. P. J. A. CARDIN (Minister of Transport): I sincerely thank my hon. friend for his kind reference to my return, and also the members of the house for their generous approval of the comment.

In answer to his question I may say that I expect to be in a position to table to-morrow the report to which he refers.

CANADA'S WAR EFFORT

SUPPLIES TO GREAT BRITAIN—QUESTION OF STATEMENT AS TO CANADA'S POSITION

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I wish to address a question to the Prime Minister. Now that the lease-lend bill has been passed and there is no longer danger of being charged with interference in a United States domestic issue, as indicated by the Prime Minister in reply to my question of February 28, would the Prime Minister now consider making a statement informing the United States of Canada's actual position in relation to supplies to Great Britain?

Right Hon. W. L. MACKENZIE KING (Prime Minister): May I say to my hon. friend in reply that I think such a statement might most appropriately be made by Canada's minister at Washington, and I will with pleasure instruct the minister to make such a statement and to do so within the course of the next few days.

I might add that I have noticed in a section of the press some comment upon the fact that Mr. McCarthy on the day of his arrival at the legation did not give out full information in reply to a series of questions asked him by

a large number of representatives of the press who were present at the legation at a gathering called to afford the press opportunity of making the new minister's acquaintance. I would say that I think Mr. McCarthy was wise in not attempting to answer offhand in his first meeting with the press the number of questions presented to him at that time. But I know it was his intention when he left Canada to take an early opportunity to give to the people of the United States, in an appropriate way, the very information to which my hon. friend refers.

PRICE OF BUTTER

REPORTED INTENTION OF GOVERNMENT TO WITHDRAW PEGGED PRICE

On the orders of the day:

Mr. KARL K. HOMUTH (Waterloo South): In view of the fact that there are rumours and newspaper reports to the effect that the government is considering the withdrawal of the pegged price on butter, would the minister care to make a statement to the house in that regard?

Hon. N. A. McLARTY (Minister of Labour): I believe I should answer the question, as the Minister of Labour is responsible for the contact of the government with the war-time prices and trade board.

I had not heard the rumour referred to by the hon. member and did not hear any discussion of it, consequently I am unable to add to the information which the hon. member already has. By that I do not mean to suggest in any way that such information is correct.

Mr. ROWE: Page the Minister of Agriculture.

COMMONWEALTH AIR TRAINING

CONTRIBUTION OF OTHER PARTNERS IN THE EMPIRE'S EFFORT

On the orders of the day:

Hon. C. G. POWER (Minister of National Defence for Air): In the course of the observations I had to make the day before yesterday in respect of the commonwealth air training plan it has been suggested to me that perhaps I did not place sufficient emphasis on the part played by our partners in the plan.

I find that my remarks inadvertently gave the impression that Canada was virtually the sole dominion that was contributing materially to the British commonwealth air training plan, and in addition that the plan, which is operating in Canada, is the sole expression of the empire's air training effort. This of course is not so. There are training organizations going on in Australia and New Zealand as well as in the United Kingdom.

I also gave a wrong impression, and was inaccurate in the figures which I gave with respect to the contribution in numbers of pupils made by the other dominions. Thus Australia and New Zealand supply a portion of the trainees to the British empire air training plan in Canada, in addition to their large efforts within their own boundaries.

Roughly speaking the dominion distribution of trainees for the British commonwealth air training plan in Canada is:

Pilots—
Canada—13/16
Australia—2/16
New Zealand—1/16
Air observers and air gunners—
Canada—8/10
Australia—1/10
New Zealand—1/10

Of the contribution in man power, the government of the United Kingdom reserved its right to supply up to ten per cent of the pupils to Canadian elementary flying training and air observer schools.

The Commonwealth of Australia and the Dominion of New Zealand have not only supplied in full their trainee requirements for the joint air training plan but they have also been able, by means of a speed-up plan very much along the lines of that in Canada, to take care of the additional home defence requirements made necessary by the altered situation in the far east.

I make this explanation in order that our partners in the plan may not think for one moment that I have not the highest appreciation of the efforts they are making not only at home but to carry on this cooperative empire effort.

ST. LAWRENCE DEVELOPMENT

On the orders of the day:

Mr. J. SASSEVILLE ROY (Gaspé) (Translation): Mr. Speaker, the St. Lawrence development plan having been officially adopted, I wish to ask the Prime Minister (Mr. Mackenzie King) the following question: The tergiversations leading up to the adoption of the plan having been under way since 1936 or 1938, why did the government not submit this important question to the approval of the people at the election of 1940?

Right Hon. W. L. MACKENZIE KING (Prime Minister): I hope my hon. friend will pardon me if I do not attempt to answer him in the language in which he has spoken. That I believe would be a courtesy to the language. As I understand his question, it is wholly academic. However, I shall read it over carefully and if I think it requires further answer I shall make it on another occasion.

NATIONAL DEFENCE

NUMBER OF RECRUITS WHO HAVE EXPRESSED WILLINGNESS TO ENLIST FOR ACTIVE SERVICE

On the orders of the day:

Hon. J. L. RALSTON (Minister of National Defence): On March 17 the hon. member for Souris (Mr. Ross) asked for a statement of those receiving the thirty-day training, giving the number by military districts of those who had expressed a willingness to volunteer for active service, either in the navy, the army or the air force. I am laying on the table of the house a statement in accordance with my hon. friend's request.

There is one slight discrepancy to which the officers of the department want me to call attention. It has been pointed out that in replying to the hon. member for Parkdale (Mr. Bruce) on March 3, as reported at page 1144 of *Hansard*, the number of recruits of the first and second training periods who expressed a willingness to volunteer for overseas service was given as 13,736. A comparison between that figure and the figure shown on this statement reveals a difference of seven, which discrepancy is explained by the fact that returns had not then been received from the training centres at Cornwall and Peterborough. Estimates were made instead of getting the actual figures.

Mr. HOMUTH: Will that statement appear on *Hansard?*

Mr. RALSTON: I can put it on *Hansard,* but I would have to read it.

Some hon. MEMBERS: Take it as read.

Mr. RALSTON: The statement is as follows:

NUMBER OF RECRUITS WHO HAVE EXPRESSED A WILLINGNESS TO ENLIST IN THE ROYAL CANADIAN NAVY, CANADIAN ARMY (ACTIVE FORCE), ROYAL CANADIAN AIR FORCE

Military District	District Headquarters	1st Period 9th Oct. to 7th Nov. 1940			2nd Period 22nd Nov. to 21st Dec., 1940			3rd Period 10th Jan. to 8th Feb., 1941			Total

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Tuesday, March 18, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

Mr. COLDWELL: Mr. Chairman, there are several questions I should like to ask the Minister of Munitions and Supply (Mr. Howe) in connection with radio broadcasting. On March 29 the Havana agreement comes into effect, and there are some questions which I think should be asked and answered before that date. As far as possible I have endeavoured not to interrupt the line of questioning by other hon. members, but since we seem to be getting toward the end of this debate I am taking this opportunity to ask the questions. The minister may not, at this time, be able to give me all the information I want, but I shall ask the questions and he can give me a reply at his leisure.

In the allocation, as announced some time in February, of broadcasting frequencies or channels to take effect on March 29, in accordance with the so-called Havana agreement of 1937 and subsequent arrangements, I notice that three of the six or seven class 1A clear channels, listed as available for Canada in the north American regional broadcasting agreement, have been allotted to private commercial stations which operate on a power of from 10,000 to 15,000 watts. Inasmuch as the class 1A clear channels envisage the ultimate use of 50,000 watts or more, will this allocation mean the abandonment of the policy which was stated by the minister at Moncton on October 12, 1937? The minister is reported as having summarized the basic policy as follows:

> The broadcasting corporation has adopted, as a policy, government ownership and operation of the larger stations. In future private stations will not be allowed to expand beyond 1,000 watts, while existing larger stations will not be permitted to increase their present power. The corporation will, however, proceed as rapidly as funds will permit to build a series of high-power stations, which will in themselves give full coverage.

Mr. HOWE: Would it not be good policy to answer one question at a time?

Mr. COLDWELL: I have a number of questions to ask. If I give them all to the minister, he may feel inclined to answer them at the same time. This policy was outlined to and approved by the parliamentary committee on radio broadcasting which sat in 1938 and 1939. These high-power channels, if I may call them that, were looked upon as being ultimately intended for the purposes of the corporation's long-term national publicly-owned coverage. In accordance with this policy, I believe that all subsequent applications for power in excess of 1,000 watts have been rejected. My question in this regard is: If this policy has not been abandoned, have the stations at present obtaining high-power clear channels been so informed? There should be no misunderstanding and no possibility of the owners of the stations feeling that they have vested interests beyond what is covered by the original understanding.

In the Havana agreement, 730 kilocycles is described as a clear channel, but it was not included among the channels to be made available for Canada. In the minister's statements of February 3 and 5, this channel is allocated to station CKAC owned by the Montreal *La Presse*, which, I believe, is operating on 15,000 watts. My question is: Has Canada obtained this channel in addition to the clear channels obtained in accordance with the agreement made at Havana? If not, has it been obtained in substitution for one or more channels? What is the exact classification of this channel to-day? According to the announcement made by the minister on February 5, when the new allocations go into effect on March 29 the CBC's 50,000 watt Ontario regional transmitter CBL is to operate on a frequency of 740, which is a class 1A channel. Do the technical advisers in the minister's department, or the responsible technical officers of the Canadian Broadcasting Corporation consider ten kilocycles to be sufficient separation on the average dial to obviate serious interference between this station near Toronto and station CKAC near Montreal, using 730 kilocycles? I ask this question because my experience, even with a high-powered modern set, has been that it is very difficult to separate stations close together, and I am wondering whether the separation in this instance is sufficient; for, after all, the broadcasting corporation's own stations so far as possible should be relieved of interference from a comparatively high-powered station not far away, and operating only ten units apart. I would ask the minister to look into that matter.

There is this further point: Out of the seventy privately-owned stations in Canada

which serve a local function, with power of 1,000 watts or less, stations CKBI, Prince Albert, Saskatchewan, belonging to the Prince Albert radio club, station CFPL, London, Ontario, belonging to the London *Free Press,* station CHML, Hamilton, Ontario, belonging to the Maple Leaf Radio Company, and station CJBR, Rimouski, Quebec, owned by J. A. Brilliant, have been allocated channels listed in the Havana agreement as clear, high-power channels. The first station I mentioned, and the last two, have been allocated 900 kilocycles, and the London station 1570 kilocycles. Again, how was this selection made, and what are the classifications of these channels?

Mr. HOWE: Surely they are not clear channels allocated to Canada, are they? Are they not allocated to Mexico?

Mr. COLDWELL: Then I have this further question: Do the allocations to CKBI, CFPL, CHML and CJBR imply a permission later to increase the power of all or any of these stations to the limit provided for such channels in the international agreements? Again I ask these questions designedly, because I believe it was the intention of parliament, the parliamentary committee, the minister and all concerned to see to it that our own publicly-owned broadcasting system is preserved. I raise these questions so that we may clarify the position, and make certain that there is no possibility of a privately-owned competing broadcasting system being permitted to set itself up in Canada, and thereby in any way interfere with or disturb our nationally-owned system.

Therefore I wish to ask this question: Did the immediate and future requirements of the Canadian Broadcasting Corporation's long-term plan of national coverage govern the allocation of frequencies announced by the Minister of Munitions and Supply on February 3 and 5? Were all the announced allocations duly recommended by the board of governors of the Canadian Broadcasting Corporation in accordance with the requirements of the Canadian Broadcasting Act, 1936?

If there has been any departure on the part of the department from the broadcasting board's recommendations, will the minister state in respect of what stations and frequencies, giving particulars and reasons why such departure or departures were taken at that time?

The next question which arises is this: In view of the allocation to privately-owned stations of some twenty-five class III channels, involving the possibility of using up to 5,000 watts, has the basic principle of the corporation's plan of national coverage been modified to permit of such increases?

I believe the remaining questions relate more or less to the possibility of the setting up of a United States chain in Canada. I ask these questions because it has been suggested to me that unless we safeguard the present position, such a condition might develop. Are stations CFRB Toronto and CKAC Montreal, agencies or outlets of a United States commercial network? What is the exact relationship between these stations and the Columbia broadcasting system?

Has the Canadian Broadcasting Corporation, as the national network authority, control of this entire network affiliation, and any stations which may be affiliated with the two stations to which I have referred?

Is it the policy of the board of governors of the Canadian Broadcasting Corporation to retain and to maintain a *de facto* control over all networks or hook-ups, as outlined to and approved by the parliamentary committee on broadcasting of 1939? That refers, of course, to the discussion which took place in the committee and to its subsequent report.

The last question I would ask the minister is this: In view of the importance of radio broadcasting in connection with the present war, and in view of the extent to which it has been used for propaganda and other purposes, has the government considered the advisability, under the circumstances, as a war measure, in the near future to purchase, lease, expropriate or otherwise acquire the outlets from United States networks to which I have just referred, namely, stations CKAC and CFRB?

I have asked these questions because several persons have drawn to my attention some changes which seem to have been made. In view of the minister's statement made in 1937, and the approval given to that policy by the parliamentary committee, before the Havana agreement becomes effective on March 29 I believe it would be well for the house to understand the situation as it now exists, and it should receive assurances that the privileges which have been granted to certain privately-owned stations shall not cause any misunderstanding in the future as to the determination of the House of Commons and the Dominion of Canada to retain this great public service

as a national public service nationally controlled, serving the Dominion of Canada, and one which shall not be allowed to become a profitable organization for any private group or interests in the country.

Mr. HOWE: I shall be pleased to submit the hon. member's questions to the technical officers in my department, and to give the answers at a later date. In the meantime, however, I would say that so far as the board's attitude toward the power of stations is concerned, there has been no change in policy whatever. In other words, new stations are limited to 1,000 watts. They are granted 1,000 watts, if a wave length can be made available. Stations of high power are being maintained at the power they had when the board took control.

Mr. HANSON (York-Sunbury): Is it not quite clear that under the authority of the War Measures Act the government has power to-day to take over the two stations to which reference has been made, if, as and when it deems it desirable so to do?

Mr. HOWE: Oh, quite. So far as those two stations are concerned, we have the power, without spending any money at all, to stop them from being outlets for the two chains. The government believes, however, that its coverage to-day is satisfactory and it sees no difficulty about that situation.

Mr. McNIVEN: Mr. Chairman, last Saturday and Sunday a number of members of the House of Commons enjoyed the hospitality of the city of Hamilton as guests of the hon. member for Hamilton East (Mr. Ross). The hon. gentleman has for some time established a reputation for geniality and joviality, but a geniality and joviality with a fixed purpose, because the group which journeyed with him to Hamilton included representatives of the nine provinces and members of the Liberal, Conservative, and Cooperative Commonwealth Federation parties in this house.

In Hamilton we saw its peace-time industrial life; we saw and heard how Hamilton had converted and adapted its peace-time industrial life to the war effort. We saw Hamilton's war industry in action. We learned of its intricacies; we saw its magnitude; we observed its efficiency along a wide and varied front. The hon. gentleman whose guests we were has rendered a public service not only to the city of Hamilton but to the whole dominion in promoting a better relationship between central Canada and those of use who come from distant parts of Canada, and also in according an opportunity to understand industry and its contribution to the war effort in these perilous times.

Those of us who were privileged to visit Hamilton have extended to the hon. gentleman our personal appreciation, and I am quite sure that those who were with that party would join with me in a public recognition of the opportunity thus accorded. The opportunity gave rise to less serious moments, for Hamiltonians are good entertainers, and on this occasion we had an opportunity of hearing from Mr. Black, president of the Otis-Fensom Elevator company; Mr. Myler, president of Canadian Westinghouse Limited; Mr. Morton, vice-president and general manager of the International Harvester company; Mr. Sherman, president of Dominion Steel and Foundry; Mr. Maybury, representing the Firestone Tire company; Mr. Hart of the National Steel Car company; and Mr. Hilton, representing the Steel company of Canada.

Each of these gentlemen gave a brief outline of his particular industry and of what it was doing in connection with war work, and extended to the members of the House of Commons a warm and cordial invitation to come to the city of Hamilton and see for themselves what each of these respective industries was doing. That invitation was given in warmth and sincerity, and I would advise all those who are in the neighbourhood of Hamilton to take advantage of it.

One member of the party, not any of those to whom I have referred, suggested to me the adjournment of the House of Commons in order that our entire membership might see and observe for itself, a procedure, which, I believe, would serve to dispense with that paltry, petty, picayune criticism which, during the last three or four weeks, has characterized much of the debate on this resolution.

Shortly after our arrival in the city of Hamilton, our host arranged for us to visit the plant of the Canadian Westinghouse Company. That company first came to Canada in 1896, and started on an expansion programme in 1903, with the result that to-day its plants cover an area of fifty-three acres and has some 4,600 employees. They are now building a new plant, started some four months ago, which we were not privileged to see or go through, inasmuch as its purpose, devoted to the war effort, is shrouded in secrecy. We had an opportunity, however, of observing

plants in operation, and their domestic establishments where everything of an electrical nature is manufactured—irons, toasters, washing machines, refrigerators and many other household and office conveniences. Radios are being made there; and as an instance of how this company has adapted itself to Canadian war requirements, we saw radio cabinets, hitherto made of imported wood, manufactured from Canadian elm, cabinets of which any home might well be proud.

On the commercial side we saw ignition switches being manufactured for motor cars; electric motors up to 7,000 horse-power. In 1903, when this company first embarked on this line, the height of their ambition was to manufacture an electric motor of 100 horse-power. In that plant, too, they are manufacturing air-brake equipment for locomotives, freight and passenger cars; also brake equipment for the electric cars used on our street railways, and brake equipment for motor cars.

In the power equipment plant we were privileged to see giant transformers up to a capacity of 50,000 k.v.a.; immense water wheel generators up to a capacity of 70,000 horse-power, being manufactured and turned out for the development of electrical energy in Canada. Dynamos, too, are constructed there. The activity of this plant takes on a new significance in the light of the Prime Minister's statement to this house this afternoon when a shortage of power was visualized even in the United States of America.

We saw, too, the manufacture of a plant which, as nearly as I can remember, was called an electric pot line. This electric pot line is essential to the mining of aluminium. These pot lines are being manufactured in large numbers and shipped to the aluminium mines on the Saguenay river in the province of Quebec. I learned that these electric pot lines were essential to the manufacture of aluminium and that, by their use, those engaged in that branch of mining were able to extract approximately fifty-eight pounds of aluminium from every ton of ore. The importance of this industry to the life of Canada can be visualized when it is remembered that several thousand pounds of aluminium are required in the manufacture of every plane.

One interesting item which is being manufactured there and which we saw, was the bomb racks attached to aeroplanes for the holding of bombs and their subsequent release. They looked to me comparatively simple, about 5½ feet long and 1½ inches in width. They are required to carry a bomb weighing 1,000 pounds, and before those bomb racks are released from the plant they are subjected to a test of 4,000 pounds so as to make definitely certain that they perform their intended function.

We also saw in progress the manufacture of miscellaneous war equipment and component parts for Canada's war effort. There is another phase of the Westinghouse production which I shall mention in a moment or two when I come to the plant of the Otis-Fensom Elevator company.

We next proceeded to the plant of Dominion Foundries. It was an eye-opener to many of us who are not accustomed to great industrial enterprise. There are great blast furnaces, together with batteries of crucibles and retorts for treating molten metal. We saw gun barrels sixteen to twenty feet long, ten to twelve inches in diameter, sizes never before made in Canada. We saw a block of metal placed in huge retorts, heated, shaped and then put on a series of lathes from which it was turned into the shape which we ultimately saw. We then saw that barrel wrapped, ready for transfer to another plant, where it will be bored. May I emphasize, on the authority of those who conducted us through the plant, that never before in the history of Canada have gun barrels of this calibre, of this size, or practically of any size been made in the dominion.

In that same plant we saw armour plate up to 5½ inches in thickness being made, and armour plate of 3 and 3½ inches in thickness for the manufacture of tanks, for use in corvettes and other equipment, in process of being made. We were told, too, that never before in the history of Canada had armour plate of this type and of this thickness been made. That plate is shipped to the Angus shops in Montreal to be manufactured into tanks. We were told that certain sections of that metal were shipped to Valcartier, where they were subjected to the most rigid tests in order that they should function as intended.

We saw, too, the smaller sizes being made, every sheet of which is tested in the plant of Dominion Foundries. They have built a gallery to which each section is taken and a machine gun is turned upon it. The gentleman in charge said that it was a most dangerous place to be, for the bullets ricocheted in all directions. However, not a sheet of this metal is accepted unless it has the imprint of a bullet upon it.

Next, we were taken to that portion of the plant utilized for the manufacture of tin-plate. The tin-plate is cut to all sizes and used subsequently in the manufacture of metal containers. I do not know the extent to which heretofore tin-plate has been manufactured in Canada, but I do know that the facilities at the city of Hamilton have been

substantially increased in the plants of Dominion Foundries, and that the Steel company of Canada is opening, in the immediate future, a new plant for its manufacture. It was interesting at the end of the process to see a section of that tin-plate taken and tested for its tensile strength and also tested chemically in order to make sure that no injurious substances were contained in the metal itself.

Later in the afternoon we went to the plant of the Otis-Fensom Elevator company, which until recently was not engaged in war activities. They have just completed a new plant, the construction of which was started on November 15 last. It is partly occupied now and will be completely occupied in the immediate future. It covers 7½ acres of ground and cost, I understand, somewhere around $5,000,000.

Mr. REID: May I ask if the tin-plate is completely finished?

Mr. McNIVEN: As I understand it, the tin-plate is really steel rolled to a certain thickness, carried through a solution of tin, and then put on immense rolls, from where it is carried to various shearing machines, by which it is cut into sizes required by the manufacturer. We saw every step of that process.

In this new building we saw long rows of lathes of every kind and description, made, it seemed to me, in almost every city in both Canada and the United States. In that factory we saw the Bofors gun, which is, I understand, the most efficient and effective anti-aircraft gun yet made. We saw these gun barrels in their initial stages and processed from lathe to lathe until finally they came out a complete unit, boxed and ready for shipment to Great Britain. This was the most interesting part of our experience, inasmuch as we saw the boring of the Bofors gun, and observed how the gun was finally rifled in order to give it greater projectile strength. The Bofors gun shoots 120 2-pound shells a minute, and the life of the gun is exactly seven minutes; after that, its value is pretty much that of scrap.

I regret that the limitations which were placed upon us prevent me from giving figures of the production of the Bofors gun, but I can assure you, Mr. Chairman, from information we received, that the production, already quite substantial, will be doubled within the next few weeks and will progress steadily from that point until a maximum production is reached.

A few days ago, in glancing over the Ottawa *Citizen,* I noticed an item, "How Germany Trains Her Workers." I quote one paragraph from that article, which is an excerpt from the Manchester *Guardian:*

> The foundations of the German training system are four-week courses of intensive training. The trainees are first given a job (before training), and are paid during their training time at unskilled rates. After the four-week course they are taken over by the firms and further trained in the works. As much as possible of the training is done in the factories and as little as possible outside, in the technical institutes, Labour Front camps, and training courses.

I had no information that anything of that kind was being attempted at any of our Canadian factories, and it was a real thrill to have the Otis-Fensom people show us through their trade school. In fact, it was a part of their plant in which they took greater pride than in anything else. They established this trade school, and in reply to questions they said that they drew their recruits from likely applicants. They gave some preference to graduates of technical schools or the youth training movement, and found that these youngsters were more receptive to future training than those who came in completely uninitiated. It is a large school, and in order to have a training staff they sent three of their men to England to get the necessary technical instruction. These men are now instructing advanced pupils and the advanced pupils in turn will instruct others, so that from this school they expect to build up their personnel in order to carry on the work of that factory.

The same thing is being done in the Westinghouse plant. Certain girls are there now, being given definite technical instruction in the inspection and testing of the products of that plant.

We then went to the plant of the National Steel Car company. I was in that plant on the 23rd day of June last. The manager, Mr. Hart, informed me that four months before that date the site upon which that plant stood was a swamp. I could scarcely believe it; for I was in a building that was approximately 1,200 feet long and 400 feet wide, and it was equipped for the manufacture of 3·5 and 3·7 anti-aircraft shells. They were actually being turned out on the 23rd day of June. Mr. Hart told me on that occasion that they employed some 1,800 people in that plant and that they had little or no difficulty in getting the required number of employees. When I asked him from what source, he said that many of the people who were employed in the plant had not had any work for a couple of years. Many had been taken off the relief rolls of the city of Hamilton.

Going through that plant, we saw steel ingots put into the blast furnaces; we saw them brought to red heat; we saw them put

through the presses, progressing from one press to another, from one lathe to another, until finally the 3·5 or 3·7 anti-aircraft shell appeared on the inspection table ready for inspection and shipment.

The inspection completed, the shells are boxed in cardboard cartons, eight to the carton. Formerly these shells were shipped in wooden boxes at a cost of $2.50 each and took up twelve square feet of shipping space for their transhipment to the old land. Now the cardboard carton is used at a cost of 50 cents, with a corresponding saving in labour and shipping space. I am not able to give the quantity of shells being turned out in that plant. I mentioned having been in the plant on June 23, 1940, and I can say that the production on that date was quite substantial, and that on March 16 last, the production was seventeen times the figure which was given to me on June 23, 1940

The National Steel Car also manufactures steel freight and passenger cars; and when we remember the statements made in the last few days as to possible shortage of rolling stock, we may be grateful for the efficiency of the plant. It also turns out truck bodies and car frames. When I was there in June last, they were turning out 200 a day. On Sunday last, we saw long lines of freight cars loaded with truck bodies painted in familiar military colours, enabling the motor car industry to function with that efficiency which provided transportation for British troops in Libya and in certain other parts of Africa.

There were 1,800 employees in that plant in the month of June. There are many hundreds more employed at the present time, and I should like to pay a tribute to Mr. Hart, general manager of that company, who apparently is the hardest worker among his employees, for he is there day and night, at all times helping and encouraging.

As a result of my experience there and my observations of what was going on, I could not help being impressed with the fact that all our activities are inter-related and that all of us as individuals or groups are inter-dependent. The products of Canada, products of the land, the sea, the mine and the forest, are brought together, fused by the ingenuity and skill of man. We saw both in action, peace-time pursuit and war-time activity. My Hamilton experience has made me a better Canadian and has given me a greater appreciation of Canada's potentialities and resources, and still greater confidence, if that were possible, in the Minister of Munitions and Supply (Mr. Howe), the guiding genius, directing hand and correlating head of Canada's ministry of munitions.

[Mr. McNiven.]

May I in the time that remains to me make some remarks with regard to my own province of Saskatchewan. I know that as soon as I mention Saskatchewan, the popular mind immediately turns to wheat—thinks of the wheat farmer as the wheat miner who alternately spends his winters in Florida and on relief. Just in that regard I should like to emphasize that Saskatchewan does grow wheat. It grows the best wheat in the world, and has perfected mass production of that commodity.

I know also that the wheat surplus to-day is what the Minister of National Defence (Mr. Ralston) referred to the other day as a headache. But there have been and are great men in the world. The name of one man has come down in history as the result of an idea, generated 2,500 years ago, when Joseph decided to store corn in Egypt. As a result of his wisdom and foresight, the people of that day and generation were saved from starvation, and his prudence and foresight have been remembered all down the ages by the phrase, "There is corn in Egypt." I say to you there is corn in Saskatchewan, and that corn (wheat) will yet fulfil a useful function. Wheat was a factor in the last war. I heard Sir George Paish say two years ago that had it not been for the bountiful harvests of western Canada and the ability of the British navy to ensure its safe transportation, Great Britain would have been starved into submission in 1916 or, if not, in 1917. Wheat will yet be a factor in this war. Wheat will ultimately be a peace-time asset of great value, enabling Prime Minister Churchill to carry out his pledge to the people of the devastated parts of Europe that there will be food in abundance for all.

In the corridors of this building I sometimes hear Saskatchewan referred to as the problem province. May I say, however, that is heard only in the corridors of this building. We have had a long chain of agricultural disasters; rust, wind, grasshoppers, drought, low prices and many other things. But, great as these other problems are, the greatest with which we have had to contend and from which we suffer at the present moment, is the fact that by reason of the manner in which Canada's war effort is being conducted, there are a million people in Saskatchewan who have not been given an opportunity to pull their full weight in Canada's war effort. I submit that we have given abundant evidence of our willingness to pull that full weight, and that we deserve better treatment.

May I remind hon. members that Lieutenant-General McNaughton, commander of Canada's army, was born at Moosomin, Saskatchewan, and also that Saskatchewan citizens of every race and creed have enlisted

in Canada's armed forces. May I remind them also—and this was a surprise to the Minister of National Defence for Naval Services (Mr. Macdonald)—of the number of recruits for the navy who came from the prairie provinces, and, in particular, from Saskatchewan.

Mr. REID: They are good sailors, too.

Mr. McNIVEN: Exceedingly good sailors, as was proven by their experience on board the *Fraser* and the *Margaree*. On the *Fraser*, when it was rammed in the bay of Biscay, there were twenty-three sailors from Saskatchewan, many of them from the city of Regina. Two of those young lads, Donald Snelgrove and Ronald Young, were plunged into the bay of Biscay and swam around for an hour and ten minutes before being rescued. Taken to England, they were stationed on board a boat there, and it had to be moved because the jetty to which it was moored was bombed. A little later, a bomb lit on the right of the boat and, a few minutes later, one on the left. On leave in London, they were on the third floor of a seven-storey hotel, and a bomb came through to the fourth floor. They spent the day in helping the air-raid wardens and the relief department in carrying succour to those who were injured, and during that afternoon a thermite bomb fell on the street sufficiently close to burn the coat of one of those lads. In all of these experiences they escaped unhurt.

Later, they boarded the *Margaree*, and when she was sunk a few months ago, those two lads were the sole survivors of the Saskatchewan contingent on board that boat. The Saskatchewan boys had entered into a compact that those who survived would, on their return to Canada, visit the homes of those who were lost. Those two lads arrived back in Regina; and in order to carry out that compact, borrowed a car and visited the parents of the other twenty-one who were lost on board the *Fraser* and the *Margaree* and carried to those parents a message of sympathy in which we could all join. Singularly enough, on the way home a tire blew out and the car turned over three times. Once again the two lads emerged unhurt. Their reaction to these experiences was that if there is anything in that old story about the cat, they had still two lives coming to them. What an experience for boys not yet 19 years old!

Within the last few days, this city has been honoured by a visit from Wing Commander Ernest McNab, a son of Saskatchewan. I may remind hon. members that he is a son of the lieutenant-governor of Saskatchewan. He covered himself with glory, brought glory to Canada and to his native province, and carried consternation and dismay to the enemy. In this city he was interviewed by the press but refused to talk of his personal exploits. He displayed a modesty which he learned at his mother's knee. He spoke of team work; that spirit he absorbed from the Saskatchewan atmosphere. That spirit is characteristic of the attitude of the people of Saskatchewan to-day; they desire to play their part and pull their weight with the other provinces of the dominion in order that this war may be speedily brought to a successful conclusion. In the armed services, Saskatchewan people have played their full part.

In Saskatchewan, national registration was accomplished in the three days set apart in August, and Regina, which I have the honour to represent, was one of the three constituencies in Canada which carried out national registration on a purely voluntary basis. Over forty thousand men and women were enrolled during those three days without the expenditure of a single dollar of public funds. We have also more than doubled our quota in every one of the war charity appeals of this dominion. In my own city in the last two campaigns the Red Cross succeeded in raising $90,000 in cash at a cost of less than $400.

The war savings certificates campaign has just been concluded. Our city has a recorded population of about 55,000 people, and of this population 15,025 men and women pledged themselves to make monthly contributions to Canada's war effort by the purchase of war savings certificates to a total of $825,000. This has all been accomplished from a sense of duty, and despite difficulties which in 1933 reduced our per capita income to $133, an income lower than the per capita of any other province. Happily, our income is double that to-day, but it is not from surplus income that these contributions are being made. The people of Saskatchewan realize their obligation and these accomplishments are only evidence of a willingness, a desire and an inclination to endure further sacrifices in order to do their part.

I should like to refer to the matter of military establishments. Yesterday the hon. Minister of National Defence put on *Hansard* a table showing the pay and allowances according to military districts. I do not think this table answers the question which I asked. The total to which I referred was $253 million, but the total of what he has given is not anywhere near that amount. From the figures that have been given, it will be noted that No. 12 military district, located in Saskatchewan, has a lower total of pay and allowances than any other district in the dominion. The military pay and allowances

for Canada in 1940 amounted to $183,122,000, which was distributed among the various provinces as follows:

Prince Edward Island	$ 1,824,000
Nova Scotia	18,660,000
New Brunswick	8,772,000
Quebec	27,264,000
Ontario	74,064,000
Manitoba	17,760,000
Saskatchewan	9,552,000
Alberta	7,344,000
British Columbia	17,748,000

It may be inferred from these figures that Saskatchewan men have not been enlisting. What has happened is that Saskatchewan men have been transferred to other units and have been sent to other points for military training. I was really alarmed the other day when I heard the Minister of National Defence outline the plans for the formation of a tank corps and an armoured division. He stated that the training of these units would be carried on at Petawawa, Kingston, Listowel and Barriefield. Reference was made to Lord Strathcona's Horse, which, I believe, originated in the west but now is identified with the city of Listowel. It seems to me that the logical place to recruit an armoured division or a tank corps is in the prairie provinces. In Saskatchewan alone there are more than 47,000 tractors and over 7,000 combines in operation. Our men are experienced in driving tractors and combines; they are used to handling motors. Apparently, however, the whole outfit is to be recruited and trained in the central provinces. Once more we are being deprived of that to which I think we are entitled.

I contend that there should be a wider distribution of war industrial plants in Canada. As was said by the hon. member for Témiscouata (Mr. Pouliot) the other day, there is a possibility of invasion. Just recently, an editorial in one of the Ottawa papers commented upon this. It will be remembered that a year or two ago, the Hon. Doctor Manion referred to the possibility of bombing planes coming down through Hudson bay and James bay to bomb Toronto, Hamilton and other centres. On Sunday last, Mrs. Black, a former member of this house, referred to the possibility of this happening. If that is so, some of these industries should be established on the prairies which are a long distance removed from any such possibility.

I am not speaking in a spirit of jealousy or with a desire to have removed any plants which are located in eastern centres at the present time. I have, however, too much respect for the good people of Hamilton to wish to expose them to the danger of bombing should industrial plants continue to be concentrated there and in other centres. We have no war industries in Saskatchewan. Just one small contract in Saskatoon for the manufacture of universal gun carriages.

Mr. HOMUTH: Does the hon. member say that there are no war industries in Saskatchewan?

Mr. McNIVEN: None at all.

An hon. MEMBER: Except wheat.

Mr. HOWE: What about air training?

Mr. McNIVEN: Hon. members representing different provinces have outlined the war activities in their respective provinces. I notice that British Columbia had, in 1940, a payroll of over $17,000,000. That province has varied industries. They supplied about three-quarters of the timber which was used in Canada's war effort during 1940, I believe a total of 374 million feet.

Mr. REID: We provided a market for your wheat.

Mr. McNIVEN: Of that immense total, only eight million feet was supplied by Saskatchewan.

I come now to the maritimes. The hon. member for Queens-Lunenburg (Mr. Kinley) gloried in the contribution which Nova Scotia was able to make. I read now that traffic is so heavy on the Atlantic portion of the Canadian National railways that there is practically no such thing as unemployment in that section. I understand that the war traffic required 258,000 freight cars, and that more than 7,500,000 tons of war materials have moved over the Atlantic division into the maritime provinces, creating on the Atlantic coast of Canada two of the greatest harbours on the north American continent.

I am not jealous of that, but I do desire most seriously that the people of Saskatchewan be given an opportunity to pull their full weight, and that some effort be made to develop our resources. Yes, Mr. Chairman, we have industries out there. We have resources, besides wheat; and if I had the time, I could speak for hours in telling you not of beauties and grandeur but of the resources of Saskatchewan which are not related in any way to the production of wheat. There are, however, certain things we need. More than $300,000,000 of public money have already been expended in subsidizing certain industries, building new plants in the eastern and other parts of Canada, and not a single dollar of that has been expended in Saskatchewan—with the exception of some airports.

When I first attended the university in Winnipeg some thirty-five years ago, that city was not as large as the city of Regina is

to-day. At that time Calgary was a mere dot on the map. To-day, both those cities have outstripped Regina, and largely because of power developed at Winnipeg and at Calgary, which has brought industry to their doors. Ours is not a well-balanced economy; and if we are going to place ourselves in a better position economically, we must have the development of a block of power. From where, do you say? My reply is that in southern Saskatchewan we have twenty billion tons of coal—yes, I said billions. It is lignite coal, true, but it is a better coal than the brown coal of Germany upon which that country must rely to-day. It is a better coal than the brown coal of Norway and Sweden which was used to develop the iron and steel industry of those countries. It is a coal with an overburden of from 40 to 150 feet. Right there to-day immense steam shovels are operating to remove that overburden and to mine the coal. After it is sized, it is placed on freight cars, all at a minimum of cost.

Already at the mouth of the mine there is an electric plant generating electric current, and distributing it over a limited area in southern Saskatchewan. A company has recently offered to build at the mine mouth a plant which will develop electrical energy at a price of six-tenths of one cent per kilowatt hour, delivered at Regina, 128 miles distant. I realize that power is essential, and feel that something could be done by the government of Canada to establish a war industry in that part of the country, thereby justifying the development of power at the coal mines in Saskatchewan.

In addition to that, there is at Fort à la Corne on the North Saskatchewan river, a hydro site which has been investigated and surveyed. All it lacks is capital for development. Then, there are at Lloydminster in northwestern Saskatchewan, gas and oil fields, which could be utilized for the development of a block of power.

Mr. HOMUTH: Surely the development of power is a provincial matter?

Mr. McNIVEN: And so is the building of an industry inside a particular community. The point I make is that over $300,000,000 of public money has been used to subsidize various enterprises and to provide plants for corporations which are infinitely better financed than is the province of Saskatchewan.

Mr. CASTLEDEN: Why?

Mr. McNIVEN: Why what?

Mr. CASTLEDEN: Why are they being financed?

Mr. McNIVEN: I have no criticism of that. These plants were put up under pressure. Their products were required for immediate use; the government turned to those agencies which could produce the goods with the least possible delay, and the least possible expense, in order to meet the emergency which was right at our door. I am not making any criticism of that. But we are told by Mr. Churchill, and we have been told repeatedly by our Prime Minister that we must prepare for a long war. If we are to prepare for a long war, then let us prepare in a manner which will utilize the resources, willingness, energy, information and initiative of all the people in Canada, including the million in Saskatchewan.

I have mentioned that a site is being developed in Alberta at lake Minawanka, west of Calgary. Already there have been overtures for the transmission of power from that site, or associated sites, to Saskatchewan. If transmission lines were built to connect the cities of Regina, Saskatoon and Moose Jaw, power reserves could be pooled, and a block of power developed which would be sufficient to support a very substantial industry.

May I remind hon. members that in Saskatchewan we have over eight billion lineal feet of standing, merchantable timber, accessible to transportation. Yet for Canada's war effort that province has supplied only some 8,000,000 feet.

Mr. REID: What kind of timber?

Mr. McNIVEN: Spruce, tamarack and a few other varieties of that kind. It is all good lumber. I am not going to suggest that it is available for shipbuilding. The day of the prairie schooner is gone, but I suggest that that lumber could be used for housing, for erecting other buildings required, and thereby conserve the supply of timber in other areas for the building of ships and larger buildings. The use of that timber should be developed under the direction of the timber controller.

We have heard a great deal about our wheat surplus; yet no one has so far made any move to establish a plastics factory on the prairies, right alongside the wheat surplus. In the press we saw rumours respecting the erection of an aeroplane plastics factory, and of course it was to be built in central Canada, 2,000 miles away from the best wheat area in the world. Wheat makes a good plastic. Certain electric fixtures are now being made in Regina from wheat plastic. If a plastics industry could be developed, we would have an outlet for the wheat surplus which is causing so much anxiety to many people to-day.

Last Saturday and Sunday I saw thousands of firebrick in the various plants we visited. I inquired where they came from, and I was informed that they came from England and the United States. The people in charge

seemed to be oblivious of the fact that at Clay Bank, south of Moose Jaw, there is the largest deposit of fireclay in Canada. In fact, there is only one other, and it a small one, in the constituency of Fraser Valley.

Mr. CRUICKSHANK: Not a small one, at all.

Mr. McNIVEN: Well, a little smaller. At that point fireclay is being manufactured into firebrick and is used in the boilers of all locomotives on the western divisions of the Canadian Pacific Railway and the Canadian National Railways. But the users of that material do not seem to know that such a product is available in Saskatchewan, and they proceed to buy it from outside points.

I have spoken a good deal longer than I had intended; but there is one further point which I should like to develop and with respect to which I again suggest Saskatchewan has been overlooked. There have been youth training centres at Regina, Saskatoon, Moose Jaw and Prince Albert. But, sir, the personnel trained in those schools was less by one-half than the number who trained in and graduated from the school in Galt, Ontario.

Mr. HOMUTH: Oh, but look where Galt is!

Mr. McNIVEN: I do not envy the location of Galt. I would sooner be where I am in the city of Regina.

Mr. HOMUTH: You would be surprised.

Mr. McNIVEN: I do not envy them anything they have.

Mr. HOMUTH: They have me.

Mr. McNIVEN: As I was saying, those who have been trained have come down to eastern Canada, and over a hundred of them have found work with the Canada Car and Foundry company at Fort William. Advertisements appear almost daily in our newspapers, calling for trained mechanics and for those experienced in the handling of machines to come down to eastern Canada where they will find a job. You see, Mr. Chairman, what has happened to us. We have been drained economically by the fiscal policy of Canada ever since the days of confederation, and now by the application of the war policy we are being drained of our young men and our young women. It is becoming a problem for us, but the problems that are being created now are nothing to what the problems will be after this war is over to again populate that province and find something for our people to do.

I ask the Minister of Labour (Mr. McLarty) to increase the vote for the training of personnel for war industries so that in Saskatchewan, schools may be established, not only in the large centres such as Regina, Saskatoon and Moose Jaw, but in twenty-five or thirty or forty towns, where schools can train from forty to fifty pupils, because in all those towns will be found that number of willing workers who are eager to be trained. Give them an opportunity to participate in Canada's war effort on an equal basis with people from other parts of Canada. I wanted to bring this matter to the attention of the Minister of Labour and to urge him to increase the vote in order to provide trained personnel from our Saskatchewan towns.

This, together with the location of some war industries in Saskatchewan, particularly those with peace-time possibilities, will remove that sense of frustration which our people resent so much today and will at the same time provide a cushion, a shield, a buttress for the aftermath of the war.

Mr. DIEFENBAKER: Mr. Chairman, I find myself in accord with the address just delivered to this committee with regard to industry in Saskatchewan, but it is not with that I intend to deal this afternoon. Rather I wish to direct certain questions to the Department of National War Services.

Last evening, the Minister of Labour (Mr. McLarty) stated that the day was fast approaching when the man-power of this dominion, so far as labour was concerned, would be used up and that the training courses which are now being given would be insufficient to provide the necessary labour.

What I wish particularly to deal with this afternoon is the mobilization of women throughout the dominion, a matter that has not yet been dealt with by the committee, nor was it dealt with by the Minister of National War Services (Mr. Gardiner) in the review which he gave the other evening. I think the committee and this country should know what the policy of the Department of National War Services and of the Department of National Defence is in connection with the utilization of the services of the women of this dominion.

All of us agree on one thing, that the women of Canada have at this time the will to serve and to sacrifice in even greater measure than during the last war. Many Canadian women feel to-day, as we know from correspondence which all members of the house receive from time to time, that they are being denied that equality of sacrifice for which opportunity is accorded the women of the mother country. I have no apologies for bringing this matter before the committee because, in my opinion, the time has arrived when the women of

Canada should be given a greater share in determining the outcome of this war. They give their services to-day in the Red Cross, in the nursing services, and in great degree in connection with war service campaigns and the like.

Mr. HOMUTH: And they are sacrificing their sons.

Mr. DIEFENBAKER: Yes; we all realize that. They have, however, had no opportunity as yet to serve in any public organization, nor have the auxiliary organizations which they have set up been given that recognition to which I believe they are entitled. There have been started in various parts of Canada by the women of this dominion, voluntary organizations such as the auxiliary service corps, the women's voluntary service corps, the Canadian auxiliary territorial corps, where physical training is given, motor mechanics are taught, and also first-aid and home nursing, and transport and office administration courses are given.

I would ask the Minister of National War Services what use is being made of the training which these women are voluntarily undertaking. These women are willing to serve. Over the radio and in the press they are being asked to serve, and yet no use in a public way is being made of their services. They told of their qualifications in the voluntary registration which the women made in November, 1939. They followed that up and gave their qualifications again in the national registration.

The necessity of mobilizing the woman-power of the nation has been recognized in Great Britain, and the situation there has been epitomized in the words of Peggy Scott, in a recent work known as "British Women in War," a few lines of which I should like to quote:

> Woman, as a national worker, was an experiment during the great war. She was regarded as an acquisition when war came again.
>
> The British government was slow to make the woman-experiment in 1914. It held out both hands to acquire her services before the war began in 1939.
>
> Not until the country had its back against the wall in 1917 were the women allowed to relieve the men in the fighting services. Not until the food of the people was threatened were the women allowed to go on the land. . . .
>
> The government did not wait for war a second time to enrol the women. It reckoned with the woman-power which had astonished it in the last war. Before the second great war began, the government had called for the biggest women's voluntary service ever known, and the navy, the army, and the air force had turned again to the women who had helped them out in 1917-1919.

In the United Kingdom, munitions factories have been staffed from top to bottom in consequence of the training schemes which were established there in 1939 by the women's engineering society. As a result of what has been done in the old country, many men are to-day being relieved for active war service by reason of the fact that the women have been organized to take over managerial and labour work in the munitions factories.

All I am advocating to-day that the Department of National War Services should do is this—prepare now to mobilize these women; do not wait for another year or two years when the problem of a shortage of employees is likely to face this dominion.

In the old country, women are organized also into what one might call military corps: the women's royal naval service, in which they are enlisted as cooks, bookkeepers and the like; the women's auxiliary territorial service, where they are enlisted as clerks, stenographers and the like; the women's auxiliary air service, where they are organized under supervision to do work which is ordinarily done by men. There are also the nursing organizations, to which I shall not now make reference. These organizations of the air force, the navy and the army are under government control, and themselves form part of the services. There are also voluntary corps.

My only reason for making this resumé is to ask the government this question, what is the government doing towards organizing the women of Canada along similar lines to the organizations I have mentioned? What is the government doing towards the establishment of a Canadian women's corps, where the services of women will be utilized in a similar manner to that in which they are used in these corps in Great Britain? Our man-power for purposes of production will gradually diminish—we have been told that over and over again in this committee—as the war progresses; and if this women's corps is set up now, or provision is made for its establishment, many men who are to-day doing work as clerks, cooks, drivers of cars, ambulances and the like, in the army, could be released to active army service. As a matter of fact, it has been estimated that women could take over 10 per cent of the positions now occupied by men in the armed forces of Canada.

I suggest to the government, and I ask for a declaration of policy with regard to, the establishment of training corps for workers, the widening of the scope of those already in existence, the setting up of training courses to fit women throughout Canada to do work in munitions and other factories for, as the Minister of Labour (Mr. McLarty) intimated last night, the day is fast approaching when the necessary man-power for labour

will be diminished to a minimum. The training of women at this time for the day when that shortage of man-power does arise, will ensure that their services will be available when they are required.

What is the position to-day of the Department of National War Services? Does it give inspiration and leadership to women's work in this dominion? Have they any announced policy in this connection? Offers from thousands of women have come during recent months to the department. Are their services being utilized? I will read an excerpt from a letter written by Doctor E. W. Stapleford, director of voluntary services, of the Department of National War Services, on November 6, 1940, in answer to the request of a woman for war work of some kind:

> Your letter of November 2 addressed to the Minister of National War Services has been referred to me for reply.
>
> As yet we have not time to make use of the thousands of offers which have come to this office. This whole problem is being carefully worked out, and we hope that before long we shall be able to offer useful employment to all who desire it.
>
> You may expect to hear from us again in the course of a month or two.

It is revealed there that already offers by the thousand to serve this country had been received. More than two months have elapsed, but as yet there has been no announcement or declaration of policy. What is more, under the regulations as they now stand in this country, women who can secure work in the United Kingdom in connection with the war are denied the right to leave Canada and go to Britain to do the war work which they cannot find an opportunity of doing here. Is it not time that some leadership should be given to the women of this country, by the setting up of an organization to survey, if necessary, the situation here in Canada and to correlate the work of the various women's organizations? I believe there are many outstanding and public-spirited women who would be willing voluntarily to undertake this work with a view to contributing their part in assisting the country and the empire at the present time. I ask the government to answer these questions, in particular: What is being done towards the organization of a women's corps in this dominion? Is it the intention of the government to appoint some woman to take over the direction with a view of organizing the various corps that are willing to serve?

This matter, I submit, is of great importance at this time; it is one that, if properly taken hold of, will do much towards mobilizing and uniting the people of this dominion.

[Mr. Diefenbaker.]

Mr. GILLIS: Mr. Chairman, the few remarks I have to make I should like to have made immediately following the speech of the hon. member for Regina (Mr. McNiven). I was greatly interested in his story of his visit to Hamilton, and was sorry that I could not have taken that trip with other hon. members. I had an invitation to a previous engagement in Hamilton which prevented me from accompanying the delegation. The hon. member effectively told the story of his visit to the different plants, and I am sure that all of us are greatly encouraged to know that matters are going so smoothly in that particular section.

However, while in that city on Sunday, at the same time as the delegation was there, I happened to meet some returned soldiers who served in the last war and who were employed—I say, "were"—by the National Steel Car company, one of the plants visited by the delegation. This group of ex-service men asked me if I would bring to the attention of the government the situation which confronts them at the present time, and which is not very nice. They have been endeavouring with every means at their disposal to have this matter settled by correspondence with their representative here and other agencies, but so far they have received no redress.

In order that hon. members may understand the basis for the few remarks I shall make, and the steps taken by the men themselves for the purpose of having the matter satisfactorily adjusted, I wish to quote from the Hamilton *Review* of September 27, 1940:

> Too old now to fight for their country, there are Hamilton veterans of the last war with a fight on their hands at home this week. And right now it looks like a losing one. They are fighting for their jobs. This week six of them were fired. And there are others slated to go soon. There may be as many as fifty of these old soldiers discharged within the next few weeks. At least, there will be a couple of dozen unless some effective protest is registered at Ottawa. Incompetence is not the reason for dismissals of these veterans, and it is not because their jobs are being eliminated. Every one of them is being replaced, and will be replaced, by a young woman who will do the same job for less money.

That is just the beginning of that editorial which appeared in September, 1940. I have here another copy of the Hamilton *Review* of January 31, and perhaps it would be well for me to read a short extract from an article appearing on that date:

> With their jobs at stake, a group of forty veterans of the last war were looking for a friend in Ottawa this week. They were pretty sure that the saving of those jobs was a matter that a friend in Ottawa could do something about. For nine or ten months now these

veterans have been shell inspectors. By the end of next week most of them, perhaps all, will be ex-shell inspectors—unless the official order of the munitions board is changed; unless someone in Ottawa is able to convince Ottawa that there may be some things more vital to the successful prosecution of Canada's war effort than placing women in their jobs. And we think these veterans might be excused for believing that there are some aspects of the war effort more important. Some of them have told us of things that they see from day to day on their jobs which make them wonder whether Canada's war effort is the serious, all-out business that they have been led to believe.

These men are working on shells of about 50 pounds. When it was pointed out to one official of the munitions board that it would require six women to do the work of two men now on the job, the official replied that the munitions board was "not interested in production." If this answer came as a surprise . . .

And so forth and so on. The matter is not one that arose last Sunday, and the men affected have been doing everything they can to bring about an adjustment. I have no objections to the Department of Munitions and Supply utilizing the services of women in any plant, factory or enterprise where there is a shortage of labour, but from the short visit paid to Hamilton I do not think that in that particular city there is any shortage of labour. I do not think it is conducive to our war effort, or lends any support to the effort in that city, to have forty or fifty ex-service men in this condition. These men went through the last war for the preservation of democracy, to make Canada a fit country for heroes to live in; and to have them, many of them married men with families, replaced to-day by young girls with no responsibility whatever, will not help the war effort. If, as the editorial sets out, it is for the purpose of reducing wages, then I think it is a matter that should be looked into by the Department of Munitions and Supply.

I would gather from a conversation which I had with the men affected that there is some misunderstanding as to who is responsible for the situation, or who has jurisdiction over these particular jobs. These men were shell inspectors. I understand that this work is under the supervision of the United Kingdom technical mission, an organization which at the present time is bringing out from Britain technical experts who are taking charge of this work. I believe that some of the correspondence they had with their own representative stated that there was not much that could be done because this particular end of that operation was in charge of British representatives in this country. Assuming that is true, I still think the government of this country have responsibilities as far as their own employees are concerned.

In some instances an alternative was given some of the men. They were asked if they would go to the United States or move to other parts of Canada and carry on the same line of work in other plants. I was given to understand that the rate of wages in the plant at Hamilton is fifty cents an hour. If they moved to the United States their wages would be increased to fifty-six cents an hour. The men that are being sent from Britain, the technical experts and others from Woolwich arsenal, are paid a subsistence allowance of $17 a week. There was a previous arrangement in that plant, I was told, and what I am saying is subject to correction. I understand that, under the previous arrangement, when they were sent to Canada they were paid a subsistence allowance of $17 a week.

Most of these ex-service men are getting on in years. They are fully qualified and capable of doing that kind of work; but to ask them at this time, with a rate of wages of fifty cents an hour, to break up their homes in Hamilton and move to other parts of Canada or to the United States, without giving them the same subsistence allowance as is given by custom established by the people under whose supervision they are to-day, is absolutely unfair. Most of them are in a poor condition of health. We can understand that. As I say, they are getting along in years, the victims of the last war more or less, and they cannot be expected to pull out and go to another country without any assurance of what they will return to when the war is over.

I think the Minister of Labour (Mr. McLarty) should have some responsibility. The labour department has definitely brought down laws governing wages, and fixed them at a certain level. May I ask whether order in council P.C. 7440 applies in plants under the supervision of the United Kingdom technical mission, and do other labour laws which have been passed in order to regulate matters for the duration of the war equally apply?

I mention this in order to bring it to the attention of hon. members. It is nothing new to those in charge of the Department of Munitions and Supply. There is nothing against these men. They are fully qualified. Some of them showed me certificates given them by employers who are letting them out now. One man in particular had twelve weeks without employment.

He had a certificate from the superintendent stating definitely that he was leaving through no fault of his own; that it was because of a change in their regulations; that the work

was being allocated to women, and the superintendent had no hesitation in recommending him for that work. He gave me a copy of that certificate.

Mr. McLARTY: The hon. member made a suggestion as to the extent to which order in council 7440 applies. Perhaps he would permit me to give the answer. It applies to all labour matters over which the federal government has any jurisdiction.

Mr. GILLIS: What I am endeavouring to find out is this. Apparently this is only the start. I gather that British industries are moving in here now. They are moving in this way, that grants are being made to certain industrial plants in Canada; and when they come into production, technical experts come in and take charge. That plant is entirely manned, as far as employees are concerned, by Canadian labour. What jurisdiction or authority has the Canadian government over a plant which is managed and owned by the United Kingdom technical mission that is directing their work in this country?

Mr. McLARTY: I would say that would be definitely a war industry, and would come under the provisions of order in council 7440.

Mr. HANSON (York-Sunbury): And you have jurisdiction over it?

Mr. McLARTY: Yes; to the extent that it is a war industry, we have jurisdiction, of course.

Mr. GILLIS: I just wanted to bring that to the minister's attention and should like an explanation as to what can be done to have this group of forty or forty-five men retain their work in that city.

Before I sit down I should like to refer to representations that have been made in the house with regard to the question of shipbuilding. I was very much interested in the remarks of the hon. member for Regina City (Mr. McNiven) with respect to the smoothness of our war effort from the industrial point of view as he saw it in a brief visit to one city. The Minister of National Defence for Naval Services (Mr. Macdonald), when questioned last evening as to the possibilities of shipbuilding in Nova Scotia, stated that the reason why more of the appropriation of approximately $50,000,000 was not being expended in that part of the country—only about two per cent of it is allocated to Nova Scotia—was that tenders by those who operate shipbuilding plants in that province were so high that nothing could be done. I know that most of the plants in Nova Scotia are not equipped to handle the type of ships that are needed at present. He also made the observation that there is no provision whatsoever for the government to subsidize that industry.

The operations in Hamilton should be pretty smooth. The government has done pretty well by the industrial set-up in that city. I do not want to go through the list, but I observe that the government has made grants, to one particular company alone, to the extent of $8,000,000. In all, the government has made grants to subsidize industry in that city to the extent of $26,211,776. If that can be done, and if shipbuilding is as much needed as it is at the present time—and there is no doubt it will be more important as time goes on—admittedly something is necessary, at any rate, in the eastern end of Nova Scotia where the only industry they have has declined and employment has been very little helped by reason of the war, and some assistance might be given that industry there. I see no reason why the government should not subsidize or set up a plant of its own, to be operated as a national project, no one making any profit out of it. The industry is necessary there; it will serve the war needs. If they put into it some of the millions that have been put into private industry, and supervise the operation themselves, it would serve both purposes at this time; it would give that part of the country a new lease of life; it would provide ships during the war; and when the war is over, it could be maintained as an industry, for shipbuilding is going to be important for a long time to come.

I am particularly interested in having an answer from the Minister of Labour as to his jurisdiction over that matter in Hamilton, and from the Minister of Munitions and Supply (Mr. Howe). I think the Minister of National Revenue (Mr. Gibson) represents that constituency, and I know he has been doing what he can with respect to bringing the matter to a satisfactory conclusion. This is merely the start of this business; it is going to grow. I am particularly interested in it, as all who are interested in organized labour in this country at this time should be.

Mr. RALSTON: May I say just a word with regard to what my hon. friend said last respecting the intergovernmental inspection board. Until he spoke, I had not heard of the cases to which he refers; I had not heard of ex-service men losing their positions and being replaced by women. The reason I speak of the matter is that the intergovernmental inspection board was constituted by virtue of an order in council which was recommended by myself after negotiations with the British government. The situation in Canada was that we were doing inspection of all sorts of

munitions; the British were doing inspection of all sorts of munitions. That inspection is a highly technical job.

Mr. HANSON (York-Sunbury): Does the minister mean they were overlapping?

Mr. RALSTON: They were overlapping; that is just the point. We have, if I remember correctly, something like one thousand people employed in connection with inspection, and I think the British had something like three thousand. The result was that there was duplication; we were inspecting our stuff and they were inspecting theirs—and in the same factory, my colleague the Minister of National Defence for Air, reminds me. It was not a good or businesslike arrangement from the point of view of economy or efficiency. It was much better that men should be trained and have experience in inspecting all the munitions of any particular class which might come off the line; they would be just that much more skilful for having that opportunity.

The result was the proposal that came, I think, from the United Kingdom first. I am not sure about that; my colleague thinks I am wrong and that it came from the dominion government. As I come to recall it now, I think it came from Mr. Chester, who was then master-general of the ordnance. He considered that this duplication was unjustified and inefficient. After considerable negotiation, an arrangement was arrived at whereby the intergovernmental inspection board was established on which Canada was given equal representation with the United Kingdom, and that, notwithstanding the fact that, at the most, 25 per cent I would think of the material that was being inspected was for Canada and at least 75 per cent for the United Kingdom. Hon. members will realize that that board operates not only in Canada but also in the United States in respect of both United Kingdom and Canadian purchases there, as my hon. friend has indicated by the fact that some of these men were given opportunity to go to the United States. The board was operating under the chairmanship of General Locke who was chairman of the British inspection mission. At present Canada has two representatives and the United Kingdom the same number. The board is being increased by the addition of one member from each side representing each party. They have authority to hire the employees, and some provision is made with regard to rates of wages. Let me point out that in a large measure the British are paying the shot, because the arrangement provides that the costs of the board are divided proportionately to the value of the goods which are inspected. Therefore, the British are perhaps much more interested in the amount being paid for operating expenses including salaries than is Canada.

Having said that, may I say to my hon. friend that my department has two representatives on that board, and the Department of National Defence for Air will have one, I expect shortly. I cannot give the committee any undertaking that anything will be done in respect of the cases my hon. friend has mentioned, because I do not know the circumstances, and the board conducts its own operations. However, I do give the committee the undertaking that I shall be very glad to bring my hon. friend's representations to the attention of the chairman of the board in order that he may ascertain just what the circumstances are. I yield to no one in my desire to see that ex-service men are employed as far as possible. The question asked by my hon. friend gives some indication of the difficulties of government. He protested against the hiring of women to replace men, while the hon. member who preceded him put up strong advocacy of the replacing of men by women in connection with our war effort.

The hon. member for Lake Centre (Mr. Diefenbaker) spoke with regard to the utilization of the women of Canada in our war effort. May I say that the Department of National Defence and the government generally have the greatest appreciation of the offers which have been made by the women of Canada in connection with our war effort. But I do not think they realize, and I do not think the committee realizes how limited is the possibility of employing women to replace men in the army services. This does not mean that a study has not been made of this matter. When I went overseas last fall I made a most thorough examination of the situation over there in order to ascertain what organizations had been set up in connection with which the government had anything to do. I brought back full particulars, and a complete memorandum with regard to the whole matter has been prepared. I just wish to assure my hon. friend that the matter has not escaped our attention.

This memorandum shows that the replacement of men by women in the army service in Canada could be carried out only to the extent of about 1,500 in the year. That figure is quite small compared with the number of ladies who would like to do war work. My hon. friend will realize that there are a limited number of suitable occupations. Some could be taken on as motor drivers or as cooks in permanent camps and in clerical duties, but the number would be limited. The

situation with regard to stenographers in uniform and stenographers out of uniform has certain difficulties. There is some clerical work that women might do, but any clerical work having to do with field formations could not be done by ladies. We must have trained men who are able to go into the field to do this administration work.

Mr. GREEN: Would that be in connection with the active or reserve army?

Mr. RALSTON: I am referring to all possibilities in the army service where women might be placed, both active and reserve. I have had ladies call on me from Winnipeg, Montreal, Victoria and other points, and I imagine that many of my colleagues have had the same experience. I realize how patriotic these ladies are in their desire to do war work. My colleague, the Minister of National War Services (Mr. Gardiner) has had the matter under full consideration, and I expect that before very long we shall be able to announce the best method of taking care of this situation. As far as taking full advantage of the offers of these ladies is concerned, my hon. friend must remember that much as we may wish to avail ourselves of all offers, there are many people who cannot be engaged directly in war work. Someone must be doing the other work. I do not think it can be taken as a reflection upon the government or upon the war effort of the people of Canada when it is realized that everyone who desires to be directly engaged in war work, cannot be so engaged.

In order to let hon. members fully into the situation, I might add that there is some question as to whether a woman's corps should be a civilian organization or whether it should be organized within the Department of National Defence. If my hon. friend has studied the situation in England, he will know that in that country only a limited number is attached to the services. However, the great body of the women who are working in connection with the war belong to women's volunteer organizations which are completely outside the departments of government. The question is not a simple one, and notwithstanding my hon. friend's vigorous advocacy, I say to him that many questions will have to be considered before we can formulate a policy. When I tell him that the maximum number of women who could be employed is only 1,500, he will realize that there have been some things which have taken our attention in the last few weeks, which have made it necessary at least to postpone the complete consideration of this question to this time.

[Mr. Ralston.]

Mr. GREEN: Has consideration been given to the formation of a women's land army?

Mr. RALSTON: I may say that in the memorandum consideration was not given to that. Consideration was given to the utilization of women in connection with the army services.

Mr. GREEN: Has the other matter not been considered?

Mr. RALSTON: I am quite satisfied that my colleague, the Minister of National War Services, has had that under consideration.

Mr. GIBSON: I should like to make a few remarks in reply to the hon. member for Cape Breton South (Mr. Gillis) concerning the inspection staff at Hamilton. Munitions were being made prior to the war at the National Steel Car company. Upon war breaking out, the British authorities increased their orders at that plant and set up a staff to provide inspectors for the shells that were being sent overseas. The officials were careful to take on as inspectors only men who had had overseas service, and we in Hamilton were careful to see that returned soldiers were so employed. Later on, when the British government began to expand the production of shells in other plants, they had to increase the number of inspectors. These men were not taken into the National Steel Car company for the purpose of acting as inspectors in that plant forever; they were brought in to be trained, and they signed an undertaking that when they had been trained they would go to whatever plant they were sent.

When the time came for these men to be sent to other industrial plants which were making munitions and which required their services, a certain number of them refused to leave Hamilton. They did not wish to leave their families and break up their homes, and rather than move from Hamilton they decided to resign and look for other employment. This matter was taken up with the officials by myself and other people, and we were told that they were willing to provide transportation for the men and to move their families, but that they must employ the men in outside factories; they could not be retained in Hamilton. They pointed out that they did not wish to go to the expense of training inspectors and have them resign when they had completed their training. That was the last thing in the world they wanted; they wanted these men to go and do the work for which they had been trained. I have had assurance from General Locke, the chairman of the inspection board, that any man who finished his training

would be given inspection work if he was willing to go where he was sent, but General Locke could not give assurance that the men would be employed in Hamilton, because, that is not the job for which they were taken on and trained.

Mr. GILLIS: I think the minister is more familiar with this question than I am. I had only a short visit there when I talked with these men. Is it true that the original understanding by these inspectors was that in the event of their being sent out to other parts of Canada, a subsistence allowance would be paid to them, in addition to their regular wages? If they were asked to go to some other part of Canada or to the United States, the subsistence allowance would disappear, and the only change in the rate would be six cents an hour.

Mr. RALSTON: Is my hon. friend asking whether I know that was the arrangement?

Mr. GILLIS: I am asking the Minister of National Revenue.

Mr. GIBSON: I cannot say that I know what the arrangement was, but I do know that if they were sent to the United States, they were given an allowance to take care of United States exchange. That arrangement has been in operation right along.

Mr. GILLIS: The original understanding was that subsistence allowance would be paid. Then, after training, when some of them were approached to go to other parts of Canada or to the United States, they were informed that this had been changed. The difference of six cents an hour, if a man had to move into the United States, would not be a fair proposition.

The Minister of National Defence has stated that I was protesting against the employment of women. I do not wish to get in wrong with the women. I have no objection to the employment of women in any enterprise in Canada, where such employment is necessary, and where it will release men for more important duties, or where they will take the place of men going overseas. I am informed, however, that what happened in Hamilton was that men were laid off and placed in the ranks of the unemployed, and that girls with no responsibility were put in their places.

Mr. MacNICOL: Is my hon. friend speaking about inspectors being laid off?

Mr. GILLIS: Yes. I understand these men were replaced by girls, and, in some instances, girls who had no obligations. Those men who went off their jobs in Hamilton were relegated to the ranks of the unemployed, and in future will be recipients of relief. The services of women should not be utilized in that way, and I protest against it. When, however, the employment of women is necessary so as to relieve men to perform more important work, that is all right.

Mr. GIBSON: My hon. friend is going rather far when he says those men were relegated to the ranks of the unemployed. They were employed with the National Steel Car corporation. There are, however, other industries in Hamilton looking for men to-day. In the meantime the majority of those men will have found employment in other industries busily engaged in that city.

Mr. GILLIS: I know at least one man who told me he was unemployed for twelve weeks; that he had not had a day's work in that time, and that when he did get employment, it was through the efforts of the men themselves. The men were working full time, seven days a week, and they made an arrangement among themselves so that the men in turn would take a shift off one night to give this young man an opportunity to work. That lasted only a short time. I understand that he is now receiving work as a temporary watchman, but he was unemployed for twelve weeks and he told me that there were others in the same position.

Mr. HANSON (York-Sunbury): Would the Minister of Labour tell us what is the exact jurisdictional position with respect to this inspectional service employed under the joint board of which we have heard here, having regard to the policy laid down by the government with regard to labour, hours of labour, wages and so forth in Canada? In other words, are they without the pale of the jurisdiction of the Department of Labour, on their own, so to speak; or has an effort been made to have the British government conform to Canadian standards in that respect? What is the position, so that we may have it concretely before us?

Mr. McLARTY: I would answer that, generally speaking, the jurisdiction of the government of Canada over labour is limited by the decisions of the judicial committee of the privy council in 1924, I think it was, in the case of the Toronto Electric Commissioners—

Mr. HANSON (York-Sunbury): Where the Lemieux act was declared ultra vires?

Mr. McLARTY: Quite so.

Mr. HANSON (York-Sunbury): But we are at war, and we are governed now by the War Measures Act.

Mr. McLARTY: I would say in answer to my hon. friend's definite question that the

government of Canada has definite jurisdiction, whether it is a war industry under the control of the Canadian government or one that has orders from the British government. In other words, I would say that we have complete control in the matter of jurisdiction in connection with all war industries.

Mr. HANSON (York-Sunbury): And in connection with the inspectional services of the joint board?

Mr. McLARTY: I would say that that follows naturally.

Mr. HANSON (York-Sunbury): Yes, I would think so.

Mr. RALSTON: My hon. friend will understand that most of the employees handed over to the board were civil servants or officers already employed by the government.

Mr. BLACKMORE: The simple fact that impresses itself upon me as a result of this discussion is this: that Canada is not short of labour. Canada has a surplus of labour, and Canada has a surplus of raw materials or resources. Canada can therefore increase her production of practically any commodity of which she desires to increase production. This means that all we have been listening to for six months now from this government about a threatened shortage of labour was just a little bit beside the point.

Mr. GIBSON: If my hon. friend would go to Hamilton and see the new industries, the big plants that are being put up, he would realize that when they are completed shortly, any surplus of labour that appears to be there at the present time will be completely absorbed and there will, in addition, be a demand for outside labour to come in.

Mr. BLACKMORE: The point that impresses me is this. Here are great numbers of women from one end of this country to the other, and in many cities of Canada there are thousands of men looking for work. There must be tens of thousands of people who have never registered as being unemployed, but who would be willing and able and glad to work if they could get the chance to work. At the present time, however, so far as I can gather—and I wish to be perfectly fair to the government—the government does not seem to have any proper, coordinated method, any definite, effective way of getting the people who wish to work in contact with the jobs that need to be done.

Progress reported.

[Mr. McLarty.]

At six o'clock the house adjourned, without question put, pursuant to standing order.

Thursday, March 20, 1941.

The house met at three o'clock.

HON. R. B. HANSON

BIRTHDAY GREETINGS TO THE LEADER OF THE OPPOSITION

Right Hon. W. L. MACKENZIE KING (Prime Minister): Before the flowers are taken away, may I have the pleasure of extending to my hon. friend the leader of the opposition (Mr. Hanson) my best wishes for many happy returns of the day. I do so as well on behalf of my colleagues, on behalf of all hon. members on this side of the house, and, may I say, on behalf of all hon. members of the house. We all wish him many happy returns of the day.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, may I thank the Prime Minister for his kindly sentiments expressed just now to myself. It is a matter of the greatest regret, I think, to every one of us that time will not pause. I declare now that I am not going to have any more birthdays.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

*CIVIL PROTECTION COMMITTEE

Mr. COLDWELL:

1. Under whose authority are civil protection committees established?

2. What is their relation to the Royal Canadian Mounted Police?

3. Under whose authority did the Verdun civil protection committee, on Saturday afternoon, March 1, 1941, stop cars and demand registration certificates or licences?

4. Is it the policy of the department to allow local organizations to arrange check-ups of this nature?

Mr. LAPOINTE (Quebec East): I can only answer question 2, which concerns the Royal Canadian Mounted Police; to this question the answer is, none. Perhaps it may be just as well to have the question stand for the other departments.

Mr. COLDWELL: Yes.

Mr. SPEAKER: Stands as to 1, 3 and 4.

LIVERPOOL, N.S., DREDGE

Mr. BLACK (Cumberland):

1. Has the Department of Public Works a dredge at Liverpool, Nova Scotia? If so, state, (a) when it was last in service and where it operated; (b) what has been the cost each year since 1935, for repairs, caretakers, rental for storage or wharfage accommodation, other expenses?

2. When was such dredge built, what is the present estimated value, and what is the estimated cost to put it in satisfactory working condition?

Mr. CARDIN:

1. Yes, dredge "No. 115."

(a) 1930-31 at Liverpool, Brooklyn, and Lockeport, N.S.

(b)	1935-36	1936-37	1937-38	1938-39	1939-40	1940-41*
Repairs	Nil	Nil	Nil	$ 130 06	$ 85 00	$ 16 15
Caretaker	$2,007 10	$1,765 08	$2,061 28	2,064 51	2,096 78	1,730 65
Storage and wharfage	688 50	646 75	638 25	638 75	640 50	535 50
Stores, etc	557 30	235 00	192 45	346 02	90 49	175 00

*To January 31, 1941.

2. (a) 1906; (b) $45,000; (c) $14,675.

IMPORTS OF FRUITS AND VEGETABLES

Mr. GRAYDON:

1. What was the total value of the imports of fresh fruits from the United States into Canada during the calendar year 1940?

2. What was the total value of citrus fruits and fruits of a class or kind not grown in Canada imported from the United States during the said year?

3. What was the total value of fresh vegetables so imported during the said year?

Mr. MacKINNON (Edmonton West):

1. Total value of imports of fresh fruits from the United States into Canada during the calendar year 1940 were $16,132,037.

2. Total value of citrus fruits from the United States into Canada during the calendar year 1940 was $9,625,373.

3. Total value of fresh vegetables from the United States into Canada during the calendar year 1940 was $5,890,223.

DECENNIAL CENSUS

INQUIRY AS TO DECISION TO PROCEED IN 1941

On the orders of the day:

Mr. GORDON GRAYDON (Peel): I should like to direct a question to the Minister of Trade and Commerce. In view of wartime conditions, and in the interests of economy, has the government decided to postpone the taking of the census for this year?

Hon. J. A. MacKINNON (Minister of Trade and Commerce): The question of the census is under consideration by the government.

Mr. GRAYDON: Does that mean that there is some chance of postponement?

Mr. MacKINNON (Edmonton West): I cannot answer that at the moment.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Wednesday, March 19, consideration in committee of a resolution to provide sums not exceeding $1,300,000,000 for the year ending March 31, 1942, for the carrying out of measures consequent upon the existence of a state of war—Mr. Ilsley—Mr. Vien in the chair.

Mr. GREEN: I think it would be very helpful to the committee if the Minister of Pensions and National Health (Mr. Mackenzie) would explain the present situation with regard to air raid precautions work across Canada. As I understand it, a year or so ago the government set aside a certain amount of money to be used to finance the development of air raid precautions groups in certain parts of the country, and looked to the provincial governments and the municipalities to carry out the details. I do not know of course what the situation is in the other provinces, but in British Columbia the time has come when some government, dominion or provincial or municipal, must be given the responsibility of leadership in the making of necessary further arrangements. For example, in British Columbia several thousand people have taken training and have really made great sacrifices

to fit themselves to take charge in the event of air raids, but now they have no proper places in which to store their equipment, nor have they any alarm signals or sirens; there is no central control system such as would be needed in the event of air raids, and they have no depots at all for various headquarters, no first aid posts. In many ways the scheme has come to a dead end.

These people have shown an excellent spirit throughout, over a long period of time, and if all that effort is not to be lost, definite steps must be taken at once either by the federal government or by the different provincial governments. I notice that in this war appropriation provision is made for $250,000 for air raid precautions work. I would ask the minister to tell us just how far the government proposes to go. Are the various local committees that have been set up being given any information that will enable them to judge as to the seriousness of the danger of air raids? How can they tell whether they should organize on the basis of an imminent threat or on the basis of the mere possibility of danger?

I think the local governments are entitled to have that information from the federal government, and they should know whether or not they have to put up any further money that is required or whether it will come from the federal government. Some of the municipalities find themselves without the legal power to tax, to raise money for furthering this work; yet the provincial governments are hanging back, not paying out the necessary money, and there is great confusion in different parts of the country. I am quite certain that leadership is needed from the government here and I would ask the minister to tell us what the government proposes to do.

Mr. MACKENZIE (Vancouver Centre): As indicated last year before war broke out, an interdepartmental committee was formed to consider the question of air raid precautions in Canada and a report was available with respect to the situation before the outbreak of the present war. Acting upon the recommendation made in that report, the responsibility for initiating certain measures was entrusted to the Department of Pensions and National Health, as in England. There, the ministry of health was entrusted with the work. The first method of procedure was to ask the Department of National Defence to specify which areas in Canada would be considered vulnerable.

Mr. GREEN: Will the minister tell us what areas have been so specified?

Mr. MACKENZIE (Vancouver Centre): It would not be wise to do so.

Mr. GREEN: That is confidential information?

Mr. MACKENZIE (Vancouver Centre): I can tell my hon. friend privately, but I would not state it in public because it is marked most secret by the Department of National Defence. Otherwise I should be glad to tell my hon. friend.

Certain degrees of vulnerability are assessed in the recommendations made by the Department of National Defence, and consequent upon that the officers of the Department of Pensions and National Health got in touch with the various provincial governments—at first, only four governments: those of Nova Scotia, New Brunswick, Quebec and British Columbia. The provincial premiers were interviewed well over a year ago and they agreed to set up provincial committees, and it was also agreed to set up municipal or regional committees in the various provinces. Generally speaking, the recommendation of the first committee was that air raid precautions work was in the nature of passive defence and would be considered to be in the main the responsibility of the local authorities, that is, the provinces and the municipalities. The order in council itself was rather secret and was not circulated. A letter of instructions based on the terms of that order in council was sent out to the various provinces outlining what their responsibility would be and what measure of cooperation would be extended by the federal government.

Excellent work has been done in all provinces and since that time the organization has been developed in Ontario and is now under way in the federal district in Ottawa. A recommendation was made by my predecessor at the very outset of the war that a grant be made to these four provinces, for the purpose of organization only, of $5,000 each, and there may be some more small grants for the purpose of organization. But in recent months the assistance being given by the federal government from these moneys, last year some $100,000 and $250,000 this year, consists

practically entirely of literature and thirteen or fourteen different kinds of equipment which I shall be glad to specify later. So that at the present time I do not think assistance is being given for anything like salaries or expenses, which are assumed entirely by the various provincial governments. In Nova Scotia, for instance, they have expended only one or two thousand dollars of the first grant, and they have done excellent work. I saw the black-out once myself in Halifax, it was most successfully carried out. Excellent work is being done also in New Brunswick.

The trouble has been, if I may use the word, that the patriotic urge to serve outran the terms of the intention of the recommendation of the committee when that recommendation was first submitted. In some provinces, notably Quebec and our own province of British Columbia, through keenness and anxiety to branch out they did engage in many activities which really were not related to air raid precaution work as such. There is now some disappointment in some of these centres because they have trained great numbers of men in this very excellent work—

Mr. GREEN: Can the minister give the numbers?

Mr. MACKENZIE (Vancouver Centre): Yes, I was just going to do that. They are as follows:

Province	Wardens	Auxiliary fire	First aid	Municipal
New Brunswick	1,712	111	587	154
Nova Scotia	1,500	100	400	100
Ontario	10,000	5,000	2,500	1,000
Quebec	30,000	1,000	2,500	750
British Columbia	2,800	650	600	250
Federal District	2,200	250	450	150
	48,212	7,111	7,037	2,404

Total personnel, 64,764.

This was made up last week.

In regard to the nature of the work carried out, in the first place the wardens, who are practically all volunteers, are attached to the various police forces. Their duties are to know the districts to which the various workers are assigned, to know the locations of first aid posts, fire alarm boxes, and the resident address of doctors; to prevent panic or confusion; to patrol and enforce lighting restrictions during black-outs.

The auxiliary fire services consist of volunteers trained by the fire chiefs to augment and assist the regular fire departments by relieving the firemen of ground duties.

The engineering services are volunteers trained by the ordinary municipal repair crews to assist in regard to water mains, sewers, et cetera, also a number trained in decontamination work and the demolition of buildings.

Under public utilities, are volunteers to assist, if required, repair gangs of electric light, gas and telephone companies.

The first aid are volunteers for stretcher parties and first aid posts. Under the Red Cross there are volunteers for relief and care of temporary homeless—this is a matter of training of course; for the care of evacuees if the evacuation of any centre is found necessary; for the hospitalization of injured.

Under transportation come volunteers with privately-owned cars and light trucks used as ambulances or for other transport needs. That is the basis of the transport organization, following closely experience obtained by some officers who had been overseas and seen the methods adopted over there. But the responsibility of carrying them out is entirely that of the local authorities. This government is assisting as far as possible in the type of equipment most necessary to carry out that work.

Mr. GREEN: Does the government intend to go any further than it has already gone? It is of the greatest importance that this work should not be allowed to drop at this stage. The minister has just said that there are approximately 64,000 volunteers trained to do this work. I fear that if further equipment is not provided without much more delay these volunteer groups will not be held together. The vote has been increased this year; is it not possible for the government to provide the equipment which has become necessary in connection with the more advanced training? For example, should not the government provide alarm signals and the central control system, and depots in which to store equipment which after all has been bought with federal government funds? There is not much money involved, but if the government does

not step out and take a lead the whole thing may be lost; thousands of people who had felt they were doing something to help the war effort will be discouraged, and there will be a weakening of morale right across the country. Is the government not prepared to go further and meet this present situation, or must the provincial governments do it?

Mr. MACKENZIE (Vancouver Centre): I stated very carefully in reply to my hon. friend that to make it a primary federal responsibility would be an absolute departure from the entire spirit of the recommendation upon which they acted in the first place. Even in England, where of course there is much greater necessity for this kind of work, they commenced it on a local authority basis. I saw a clipping from a Scottish paper in which it was stated that the local community were complaining that they could not carry on their share of this work. But it would be unwise to assume this as a federal responsibility. It is the responsibility of the local authority.

In regard to equipment I see no reason why we cannot assist materially in that regard. There are considerable quantities of equipment now in the provinces.

In regard to storage, something can certainly be done. I am not aware that there is any necessity for storage facilities in any centre, but I will certainly look into that. If any additional equipment is recommended by those in charge of the work, I see no reason why—

Mr. GREEN: Who would make the recommendation?

Mr. MACKENZIE (Vancouver Centre): Doctor Gliddon, our federal officer, is in constant touch with the provinces. He was in Vancouver a couple of weeks ago. Ontario has got out an excellent booklet on the various phases of A.R.P. work, and they have done the same in Quebec and in the maritime provinces.

Having regard to the experience of other countries, unless the situation drastically changes I think it would be a mistake to assume this as a federal responsibility entirely. I am satisfied that excellent progress has been made in all centres, and, as mentioned by my hon. friends, the spirit of these volunteers is simply splendid in every way.

Mr. GREEN: At the moment I am not suggesting that the federal government should take over the plan in its entirety. What I want to know is whether or not the federal government will provide the funds required for the further equipment which is needed if the training is to be carried on.

[Mr. Green.]

Mr. MACKENZIE (Vancouver Centre): If our experts who are in constant touch with the situation recommend it as necessary.

Mr. GREEN: That is, if Doctor Gliddon recommends it, the government will act?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. GREEN: What arrangements are being made to provide for compensation in the event of any of these wardens being killed or injured? Is any provision made for them or for their families?

Mr. MACKENZIE (Vancouver Centre): Not definitely as yet, but that matter has been under consideration for some time and an order in council has been prepared to deal with it. The order in council is now before the Department of Justice for review.

Mr. HOMUTH: Is it the local committee in the municipality that requisitions whatever equipment it may need?

Mr. MACKENZIE (Vancouver Centre): Yes. They would probably get in touch with the provincial A.R.P. officer. The municipal authorities dealing with this work, say in the city of Toronto, would get in touch with that officer. If he, after consultation with the attorney general, who is in charge of the matter, thought it was a federal responsibility, we would be asked immediately to supply the equipment, and in all likelihood that equipment would be issued.

Mr. LOCKHART: Just following that through, is it entirely under provincial jurisdiction as to what equipment will be supplied to the local groups in the various municipalities, or does the federal government come through with certain recommendations? Who is definitely responsible for the type of equipment that is being bought; and what supervision does the federal government exercise?

Mr. MACKENZIE (Vancouver Centre): From our experience certain equipment has been supplied, and perhaps if I name that equipment it will answer my hon. friend's question: Badges and arm bands; crutches; first aid haversacks complete with eleven articles; first aid kit boxes complete with twenty articles; first aid pouches; metal stretchers; protective clothing; splints; rubber knee boots; tarpaulins; gas masks and carriers for instructional purposes. These are some of the items. Other types of equipment, such as those mentioned by the hon. member for Vancouver South, have not yet been supplied by this government, but that is a matter for discussion with the various provinces.

Mr. LOCKHART: Have there been any actual trial black-outs in Canada, and is any consideration being given to the need for air raid shelters?

Mr. MACKENZIE (Vancouver Centre): There have been several trial black-outs. I do not think they have had any on the Pacific coast as yet, but that is entirely a matter for the local authorities to decide, as a rule after consultation with the officers of the Department of National Defence in the area concerned, when they are sufficiently well equipped to have a black-out arranged. I think my hon. friend will find certain procedure set out in sections 32 and 33 of the defence of Canada regulations. The officer commanding the area or district would be interviewed by the chief provincial A.R.P. officer, and the air force and other defence services probably would cooperate in staging any such black-out.

Mr. LOCKHART: What about the air raid shelters?

Mr. MACKENZIE (Vancouver Centre): So far as I know there is no provision as yet for any shelters.

Mr. LOCKHART: Has that been considered by any department of the government?

Mr. MACKENZIE (Vancouver Centre): It has been discussed, and it was the considered opinion that for the time being it would be premature to embark upon an extensive policy of air raid shelters.

Mr. LOCKHART: How many paid employees has the dominion government in this air raid work?

Mr. MACKENZIE (Vancouver Centre): Just Doctor Gliddon and whatever secretarial staff he may have. Recently, for purposes of inspection, Colonel Snell, who of course is a high officer in the St. John ambulance corps, accompanied Doctor Gliddon across Canada to interview the authorities in the various districts I have mentioned.

Mr. LOCKHART: Has the minister any idea how many paid employees there are in the different provinces?

Mr. MACKENZIE (Vancouver Centre): I have not that information but I can get it for my hon. friend later on.

Mr. LOCKHART: They are all paid by the provincial governments?

Mr. MACKENZIE (Vancouver Centre): Yes, not by us at all.

Mr. HANSON (York-Sunbury): The whole thing was intended to be on a voluntary basis, was it not?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. HANSON (York-Sunbury): A grant of $5,000 was made by this government to the government of New Brunswick, and, after some considerable delay, action was taken to organize air raid precaution work in that province. I should like to pay a tribute to the former mayor of the city of Saint John for the work he did in connection with this matter.

Mr. MACKENZIE (Vancouver Centre): I quite agree with my hon. friend.

Mr. HANSON (York-Sunbury): He is a first class citizen of Canada, and he took a keen interest in these matters. Will the minister say that if requisitions are sent on for A.R.P. material such as he mentions, the government will at once arrange to have it issued? So far I think it has been limited in New Brunswick to the seaport city of Saint John, though there have been some small efforts made by the city of Moncton. With these exceptions the movement has not been extended, I suppose on the theory that Hitler's submarines have not reached this side of the ocean as yet. In the city of Halifax, however, they have done a very considerable amount of work. How far is the government prepared to go towards, shall I say, underwriting the cost of this movement, or has consideration been given that point?

Mr. MACKENZIE (Vancouver Centre): In regard to locality the department administering these moneys is governed by the recommendations of a staff committee of the Department of National Defence. In other words under our authority we cannot properly expend any of these moneys in areas other than those proclaimed to be vulnerable by the Minister of National Defence.

Mr. HANSON (York-Sunbury): That seems very sound.

Mr. MACKENZIE (Vancouver Centre): In regard to equipment, that would be a matter of experience. Any equipment that might be deemed necessary for the thorough training of these volunteers in the various subbranches of the service would be supplied by the federal government.

Mr. LOCKHART: Would the minister be good enough to give us a break-down of the $250,000 which is being supplied the provinces under this estimate?

Mr. MACKENZIE (Vancouver Centre): It has not been broken down at all; it is purely an estimate. I can give my hon. friend the amounts spent in the various provinces up to date, if that would answer his question.

Mr. LOCKHART: Yes, and how the last appropriation was spent.

Mr. MACKENZIE (Vancouver Centre): It will not be exactly limited to the last appropriation, for this reason: a governor general's warrant was obtained at the very outset of the war, and some of those moneys were used for the purpose of obtaining emergency equipment, before we got any moneys from the war appropriation of last year. As I said, there were grants made of $5,000 each to Nova Scotia, New Brunswick, Ontario and British Columbia, and $10,000 to Quebec, and $5,000 to the St. John ambulance corps. Printing and stationery, head office, $4,551; this was for sending out these pamphlets and booklets. The amount spent in Ontario for printing and stationery was $1,648.50. For further books of instruction we spent at headquarters $1,410.20. Films cost $298.87. Then the travelling expenses of federal officers all across Canada amounted to $4,037.77.

Mr. LOCKHART: May I ask how many federal officers?

Mr. MACKENZIE (Vancouver Centre): Just the two I mentioned a moment ago. Incidentals, freight, express and so on, $2,812.42; supplies, head office and Plaza stores, $32,516. That is for the various types of equipment specified. The supplies by provinces were as follows:

Nova Scotia	$ 8,149
New Brunswick	7,064
Quebec	15,408
Ontario	42,577
British Columbia	15,048
Federal district	5,019

That makes a total of $126,185 for supplies; and with the other items with which I began my reply the total is $175,943.82.

Mr. FRASER (Peterborough West): I should like to ask the minister if the women's auxiliary corps throughout the country have been used in connection with this work. In the city of Peterborough they have a women's auxiliary corps with over two hundred members. They have been training for over six months. They have taken a course covering the St. John ambulance corps first aid course; they have had lectures on anti-gas work, and they have been helped by the officers of the training camp there. "A" company have had military training, under an officer, in army office work and correspondence. "B" company have had training in map reading, and later on they are going to take up motor mechanics. "C" company have had lectures under Doctor Clarke, medical officer of health of Peterborough, in sanitation, and is now taking an advanced course in first aid under St. John ambulance corps officers. "D" company have completed a course in dietetics, and in another week they go into canteen work. Could these women be used in that work? Yesterday the hon. member for Lake Centre asked the Minister of National War Services a question on this point. These Peterborough women are anxious to get into war work and do what they can to help win the war.

Mr. MACKENZIE (Vancouver Centre): Many women are now being used in connection with these services. The information I have before me, which was compiled about two weeks ago, shows that there were at that time in Canada about 65,000 registered volunteer air raid precaution workers. Of these, 1,438 were doctors and 3,119 nurses. Of the others many thousands had then completed their training in first-aid during the year 1940. The department has now a record of almost 38,658 first-aid certificates issued by the St. John Ambulance Association in 1940 to those who have completed their training. Those certificates were not all for individuals at the time enrolled in A.R.P. work, but a large majority will be eventually. In addition about 22 new divisions of the St. John ambulance brigade have been formed, the majority of them in Ontario. More than 23,000 persons have received training in order that they may be qualified to serve as air raid wardens, and approximately 4,000 volunteer firemen were taking training. More than 2,700 persons were trained in mobile squads to assist the police in preventing any disorder or looting at the time of a crisis.

The answer, then, is that many women are now being employed in the rendering of most excellent services. I do not think any organization, as such, could probably be used in this work. But probably many of the members referred to in the question of the hon. member are now rendering excellent services.

Mr. McIVOR: Mr. Chairman, I rise to give expression to one or two thoughts which have been passing through my mind, and which I am sure have been in the minds of persons in this house and outside it, with regard to the patience of the government in answering questions as to details. I am just wondering when there is going to be a limit.

I shall give a concrete example of courteous procedure in the furnishing of details. A young man who trained in Toronto and took an eight-weeks' course interviewed the hon. member for Weyburn, asking why he did not have a job. In Fort William I was interviewed by a young man who came from the west, and who wondered why he did not have a job. He had had ten months' training in an aeroplane factory, and thought he

should have obtained a job at the expiration of that training. I believe he showed wisdom in approaching the local member, because a local member in a constituency should be able to answer questions of that kind, settle difficulties, or give direction as to where an answer can be obtained. I told him what to do, and said that if he did not get redress he might come back to see me. But the reason he was not employed was that he was a Chinaman.

I appreciate very much the fact that the Minister of Labour is keeping in motion the machinery set up by the late Hon. Norman Rogers, at one time Minister of Labour, who did good work in connection with the youth training plan. The present minister is keeping the machinery oiled in such a way that it is functioning in a splendid fashion throughout Canada. So well does it function that with the exception of one person a whole class has come in from a western city for employment in another place.

I have risen to speak because I am wondering when this debate is going to close. So far it has reached only the resolution stage, and the legislation must still be considered on second reading and in committee of the whole. When is this debate going to close? When you and I hear over the radio and read in our newspapers what happened in London last night, when we know that they are being shot at and bombed to pieces, and when we know that the people of the United States are stepping on the gas—and I use that expression advisedly—because they see the need, and realize what the democracies of the world are facing, why should it take so long for us to pass this measure? Why is it that congress can pass a bill in four days which involves seven billions of dollars, and we cannot pass this resolution, even after two weeks of discussion? I suggest we should have a little more regard to what is happening, that we should get this resolution through and let the Minister of Finance get on with his work. I suggest that we do this so that we may tell the United States and the world that we mean business, and that we are going out to support the allies in the winning of this war.

Mr. GRAYDON: Mr. Chairman, I rise to make some comments with respect to the statements made by the previous speaker. He is a gentleman, and a member for whom I have perhaps as high regard as I have for anyone in the House of Commons. I hesitate even to correct some of the thoughts which he said were drifting through his mind and which obligated him to speak this afternoon.

May I point out—and I do this in a sense of fairness, and I believe in a constructive way—that if we are looking for the persons responsible for the circuitous manner in which this debate has been conducted, for the delay and for the lack of continuity, I believe that entire responsibility can be placed upon the government, not upon the opposition or upon those of whom the hon. member for Fort William has spoken.

Mr. BRADETTE: That is not what the public thinks.

Mr. GRAYDON: May I point out—

Mr. BRADETTE: The public knows better than that.

Mr. GRAYDON: Before my hon. friends become too caustic they might better reserve their judgment, because I am going to say something with which they will agree.

Mr. DUPUIS: We want to say it is not so.

Mr. GRAYDON: In the first place hon. members will want to speak themselves, and at such time I shall be glad to listen.

When the debate on the resolution in committee began, most of us wondered how the government was going to conduct the debate. It was not until March 13 of this year that we finally got the war-time estimates from the government. In times of peace we have always followed the course which we thought would expedite debate, namely, that of discussing estimates department by department. Had the government done what has always been done in peace time; had it handled its present war-time estimates department by department instead of having all the war ministers as well as other members of the cabinet sitting here day after day, the results would have been much better. Had the estimates been brought down department by department there would have been no need for the attendance of more than one minister of the crown at any time. Ministers would have been saved the time they spent sitting in the house, away from their departmental duties, and in addition there would have been some continuity of effort in the debate. For that reason I suggest that when the discussion—

Mr. BRADETTE: Let us get on with the business of the house.

Mr. GRAYDON: Mr. Chairman, I have a high regard for the hon. member for Cochrane. I do not believe I have ever interrupted him, and I can assure him that his humorous interruptions this afternoon are being taken in the spirit in which they are made.

Now, if I may proceed, I will say that while perhaps—

Mr. BRADETTE: Keep on moralizing.

Mr. GRAYDON: I did not hear that.

Mr. BRADETTE: Keep on moralizing.

Mr. MARTIN: He asked the hon. member to be moral.

Mr. GRAYDON: I was looking in that direction, and perhaps I may have deviated from that course a little.

It is not yet too late for us to pursue a sensible course in committee, so that the government can carry out the ordinary peace-time procedure of dealing with the estimates for the separate departments one by one. If we do this we shall have the opportunity of discussing the different items in an expeditious and orderly manner, and can release these hard-worked ministers for their other work.

I see in front of me now the Minister of National Defence, the Minister of National Defence for Air, the Minister of Munitions and Supply, the Minister of Pensions and National Health, and other ministers as well. There is no occasion for all these ministers to be here waiting to answer any question that may be asked from any corner of the house on any subject. I do not think we have ever witnessed a greater waste of time in this parliament than has resulted from the failure of the government to adopt the proper procedure for the regulation of this debate.

I make these comments in the very best spirit; I am only expressing now what I have felt for some considerable time. I had intended to get up before but I thought the government might change its way. When the hon. member for Fort William (Mr. McIvor) brought the matter so forcibly to the attention of the committee I felt that the house and the country should know the real reason why there had been some delay in the course of this debate.

Mr. RALSTON: I do not know a more good natured member than my hon. friend the member for Peel (Mr. Graydon). Some comment has been made already in connection with procedure, and I know that my hon. friend and other hon. members opposite are pretty well satisfied with the procedure which was adopted by Sir Robert Borden and his government as a procedure that would be in the interests of the country. I think if my hon. friend will look at the records of *Hansard*—I remember having looked it up some time ago—he will find that exactly the same course was pursued then. The bill was introduced and my hon. friend will find that very few pages of *Hansard* were taken up with a discussion of individual items. The measure was regarded as a war measure for which the government was taking responsibility, and information was elicited rather on the larger matters of policy. There was nothing like—and I believe this is a considerable understatement—the examination in detail which has taken place in this committee. There was no consecutive taking of one department after another. It was a free-for-all in which anybody could ask any question he liked on any matter covered by the appropriation that was being asked.

Mr. HANSON (York-Sunbury): That was early in the war.

Mr. RALSTON: My hon. friend will find that the same course was pursued all the way through. As I explained before, the ministers for the defence services have been making statements, and I do not think those statements were received with particular acceptance by my hon. friends opposite, who rather indicated that they were cut-and-dried statements and that they would prefer to proceed in the other way by question and answer. We determined that if that was the way they wanted it, we would go about it in that way. We have pursued that course. Hon. members will recall that about one week was taken up with a discussion of the aircraft situation particularly, and with regard to matters in connection with munitions and supply. Then one night the Minister of National War Services made a statement on the activities of his department, feeling no doubt as many other hon. members did that the aircraft subject had been pretty well exhausted, the members always having the right to go back to aircraft if they wished. Considerable time was taken up in discussing the work of that department, and then the members on the other side went back to the aircraft industry and discussed that over again, and I remember one or two speeches which rather repeated what had been said on previous occasions.

Then I made a statement on the army and the Department of National Defence. Somebody suggested that it was long. I did not read the statement but I endeavoured to give the house as full information as I could with regard to the whole gamut of expenditures in my department, and I answered questions as fully as I could. Even then we had interjected into that discussion a number of different things which had nothing to do with the army at all but with other projects which might technically at least come within the scope of this resolution. I think even the agricultural policy was touched upon. No one had any objection to that on this side, but it just illustrates what may happen in a democratic assembly where no member is bound by any agreement that one department

shall be taken up after another and no other department discussed until that one is disposed of. That is the way we have proceeded.

The Minister of National Defence for Air then made a statement and we spent considerable time on that, and even yesterday we went back to the army, not because of the minister wishing to do so but to suit the convenience of members of the committee who wanted more information. That information we endeavoured to give in full.

The Minister of National Defence for Naval Services then made his statement, and there was considerable discussion on that. Now we are discussing a small amount which is to be appropriated for air raid precautions.

I do not think, therefore, that anybody is to blame in connection with this matter, except in regard to the amount of detail which seems to be required at this stage in connection with the appropriation which is asked to be voted. Perhaps we might have avoided some discussion of detail, particularly discussion with regard to expenditures, in view of the fact that a special committee is going into the matter of war expenditures. Nevertheless that was the will of the committee. I am perfectly willing to say that nobody is to blame in connection with this matter. It is the perfect right of the committee to have this information before it if they so desire, but I do say that the procedure is at variance with that followed in the last war, particularly as to the wealth of detail required. The procedure which has been adopted by the government in connection with this measure is exactly the procedure which was adopted and followed by Sir Robert Borden and his government during the three or four years of the last war when similar appropriation bills were brought down.

Mr. HANSON (York-Sunbury): The Minister of National Defence I think has made a fair and moderate statement of the position, but there are a few things he might have mentioned, I think, which he did not mention. First of all let me point out to him, and I do so with the utmost good-will, that when the war appropriation resolution was before this committee last year the utmost expedition was afforded to its passage with great goodwill by opposition members. At the same time we coupled with that exhibition of goodwill the statement that when we met again we would ask the government to give us the items of expenditure in some detail. I remember saying that the Canadian people would pay this money willingly but would hold the government accountable as trustees for the manner in which the money was expended.

The policy that was adopted by the government this year was to have the Minister of Finance bring down a very short resolution, and I must express some surprise at the lack of detail there was in his opening statement on the resolution. His statement did not occupy twenty minutes. When you are asking parliament to vote the sum of $1,300,000,000, which later the Minister of Finance increased by $160,000,000, the fullest information and detail must be given. I must confess that to me the amount of the appropriation was staggering. Just how to approach the consideration of this huge appropriation was something that I debated with myself for a considerable length of time. The discussion proceeded and I noticed that we were not getting very far. I am bound to say that the debate on the aircraft industry injected itself very early in the discussion. That was something that was bound to come up. It had to be aired on the floor of this house either at this time or at some other time. So far as I know, it is now pretty well out of the way; there may be repercussions of that branch of the discussion at a later stage, but certainly not now.

Then it dawned upon me that the government did not propose to give us any further information as to how this money was to be expended. I was astounded by the statement of the Minister of Finance that it was our duty to ask for the information and to dig it up. I should not have thought that was the principle upon which information as to government expenditures ought to be given to the public. It certainly is not the principle upon which we proceed in peace time. I admit at once that the two positions are not quite comparable, and that it might not be wise, perhaps would not be possible, to follow out the peace-time method of developing items of expenditure, for this huge war appropriation and for the $700,000,000 which was authorized last year, and the additional amount that was spent. But it was a matter of surprise to me when the Minister of Finance told me it was my duty to dig this out from the government, and that in effect I had been derelict in my duty. Well, I was not conscious of any dereliction of duty. I am just a young fellow trying to get along and to do a job, and I was astonished at the minister's statement, because I believe that trustees must account whether they are asked to account or not. That was the principle which was running through my mind as a lawyer, and when the Minister of Finance intimated that I was not on to my job, that I had not done my duty to the Canadian people, he rather "set me up," if I may use that expression. So this thing has gone along, and it will continue to go

along for a limited period of time. I agree that a good deal of time has been wasted, but I do not feel guilty, myself, and if there was the war pressure on this parliament which there was in June last, this resolution would go through just like that! But there is not.

Mr. MARTIN: It is worse now.

Mr. HANSON (York-Sunbury): Well, that is a matter of opinion. I know that in certain parts of the ministry there is an increasing war effort; I think that that is true of the two or three war ministers. But if they themselves had established an organization such as I think should have been done, and not waited for us to set up an organized debate for them, there would have been no necessity for any more than one of them to be in this chamber at a time. They could have intimated, for example, that "the Minister of National Defence will be here to-day and will not be here to-morrow." There would have been no cavil about that. The whole thing might have been organized on an orderly basis and a lot of time saved. Business would have gone along, we would have got the information we wanted, the resolution would have gone through, and in due course the bill would have been introduced and passed. I do not think it is up to a private member to lecture this house, but I believe the ministry will agree that there was a lack of organization in getting the matter directly before the committee. Perhaps we can all assume some share of responsibility for that. I am willing to take mine; I want the ministry to accept theirs.

Mr. RALSTON: I am sure that I do take responsibility so far as I am concerned, as other ministers do, for the course which was followed.

Mr. HANSON (York-Sunbury): I do not say this in any cavilling manner.

Mr. RALSTON: But the course that was taken was considered.

Mr. HANSON (York-Sunbury): Well, I assume that every piece of government policy has been considered. But may I say this and say it in no spirit of fault-finding, that I believe that there was just a little lack of candour on the part of the ministers when the resolution was introduced. If they had come forward earlier with the information we wanted, instead of deferring it until just before the middle of this month, things would have been much better organized, and possibly by this time the resolution would have been through.

With this statement may I ask the Minister of Munitions and Supply if he would be good enough to give me a statement of what he proposes to do at Saint John under the war vote. I am very much interested in that item. I am glad to see it there. When I had the honour to represent New Brunswick in the government of this country I undertook to do something with respect to the port facilities at Saint John. We had already let a very large contract for the rebuilding of the docks on the west side; they were completed in due course and a very fine job was done. On the east side of the harbour are two old wharves known as the Pettingill wharf and the McLeod wharf. They are old timber structures which have been there for, I suppose, a third of a century. They were not adapted to modern dock facilities, and I undertook to have them rebuilt. The government was defeated; my hon. friend became Minister of Transport, and in the course of his journeys down east he saw for himself the facilities, or rather the lack of facilities on the east side of the harbour of Saint John, without which facilities, I suggest, this great Atlantic port of Canada can never be considered to be a twelve-months port—an ambition of its citizens with which I strongly sympathize. When the minister went down before the war, in company, I understand, with the then sitting member for the city of Saint John, he agreed to rebuild the Pettingill and McLeod wharves, and I was delighted. But the work was not done. I do not know the reason why, whether it was lack of money, or what. Now that the war is on I am glad to see that he has in this appropriation, government-owned enterprises, an item of approximately one million dollars, indicated on page 1630, "National Harbours Board, $995,000": I assume that is for the construction of some new piers at the city of Saint John.

As to the location, I have seen in the press that there are to be additional facilities on the west side. Well, I am not in a position to judge as to the location. I know that the port is overcrowded five months in the year, especially in war time. But I hope that the minister has not forgotten the speech he made to the people of Saint John and his promise to rebuild the Pettingill and McLeod wharves. Maybe this item is to cover that cost, but from what I saw in the newspapers I understand that what is intended is an entirely new venture, to be located on the west side, designed no doubt to take care of the present congestion at that point. I should be glad if the minister would give us a statement of the position, and so far as I am concerned that will be an end of the matter.

Mr. HOWE: Mr. Chairman, perhaps I should touch slightly on the past. As my

hon. friend knows, the building of permanent dock facilities in the port of Saint John is an exceedingly expensive business.

Mr. HANSON (York-Sunbury): Very.

Mr. HOWE: It is difficult and expensive, on account of the great fluctuations in tide. It has been the policy of all governments, I think—

Mr. HANSON (York-Sunbury): I should not like to put it on that ground. I do not think that they will, either. The difficulty is in the contour of the harbour bottom.

Mr. HOWE: Yes, and also the fluctuation in tides makes the dock structure much higher and much more difficult to keep stable. However, it has been the policy of all governments gradually to improve the facilities of the port of Saint John, and this government, as my hon. friend knows, finished some extensive improvements and had got to the point where it intended to rebuild the McLeod and Pettingill wharf. The wharf is useful to-day. It is getting near the end of its life, and it should be rebuilt to give more and better facilities than are now available. As I said, it was the intention of that government to undertake this work. Plans had been prepared, and I am not sure that tenders had not been called, when the war broke out. We were faced then with the difficulty that, while work was under way—and as I remember, it was a two-season job—half the dock would be out of commission, and it seemed obvious to us that we were going to need every foot of dockage we could get during this war; so that, so far as the war effort was concerned, we would be further ahead were we to postpone the rebuilding of that dock until half the wharf could be spared without interfering with the handling of freight in the harbour.

There is a proposal to build additional dockage in that port at the present time. But I might explain that we are not attempting at this time to build permanent facilities; we are trying to provide facilities which can be built in one summer season and put in use for next winter season.

The same policy is being adopted at Halifax as at Saint John; that is for the duration of the war the facilities we shall build will be temporary only, presumably to be replaced with permanent work as time goes by. The present proposal is to build a structure 900 feet long by 60 feet wide with a 30 foot draught on the deep water side and a shallow draught of approximately 12 feet on the south side for the accommodation of cargo lighters. Three standard railway tracks will be laid on the structure. The structure will be located on the west side of the harbour immediately north of the Rodney wharf on the site of proposed berth No. 4. It is also proposed to extend loading facilities at both Halifax and Saint John to meet war emergencies by introducing a system of lighters, so that in addition to loading alongside docks it will be possible to load at anchorages in the harbour.

We expect shortly to call for tenders for a considerable number of lighters and to provide docks so that the loading facilities of both harbours can be supplemented in this way; and provision is being made at this new berth for 900 feet of loading space suitable for loading these lighters. There may be other work proposed for the harbour of Saint John; I may point out that the harbour board is no longer under my jurisdiction, though I am sure that when the estimates of the Department of Transport are up my colleague will be glad to advise about that.

Mr. HANSON (York-Sunbury): My understanding, then, is that this is really only a temporary proposal.

Mr. HOWE: Yes, that is all.

Mr. HANSON (York-Sunbury): Is it intended to build it of cribwork, and will tenders be called?

Mr. HOWE: Yes; I think tenders are being called at the present time.

Mr. HANSON (York-Sunbury): On plans prepared by the harbour commission?

Mr. HOWE: That is right.

Mr. HANSON (York-Sunbury): Well, I am rather disappointed. Of course, they have had the proposal under consideration for quite a while and I would not pretend to put my judgment against that of the members of the harbour commission and their engineers, who have no doubt given intensive study to the situation. It may be that this is the quickest way in which facilities can be obtained for the present nature of the freight being offered there. After all, this is only a stop-gap, and I was wondering whether a larger view could not be taken of the position in the city of Saint John. The building of a wharf of 900 feet, with a 30-foot draught, will of course provide space for good sized freighters. That means 30 feet at low water, I assume, which would mean 56 feet high water, where good sized freighters could lie afloat at all times; and with three lines of railway trackage on it, this work might be very useful in connection with loading the type of freighters that are coming there now. I understand that they are not of such large tonnage that they cannot be accommodated, but I would not frown at all on the system of lighters proposed. That, I think, will relieve pressure to a great degree.

I am rather disappointed, however, to find that this is only a temporary measure after all, and that there is nothing permanent about it. A crib structure at that point of the Rodney wharf, having regard to the nature of the bottom, which is more or less mountainous—it can hardly be so described, but it has sharp declivities, because I have seen pictures of the bottom—may be satisfactory for the time being, if this is all that they are going to do. But it will not meet the permanent situation at all.

The question of crib work as opposed to the other type of construction, cylinder construction, concrete construction was a matter that gave us great concern prior to 1935. We acted on the basis of the best engineering data available, including outside engineering data, and it was concluded that the cylinder type would be much better than a crib work structure. There is a school of thought in the department which believes that the crib work type would be preferable for the city of Saint John. There is always a danger of sliding. I suppose that is present too in the other type but not nearly to so great an extent.

I am glad to know that the work is being provided for but I must express disappointment that it is only temporary.

Mr. HOWE: My hon. friend knows that to build a permanent structure would take not two seasons but probably three.

Mr. HANSON (York-Sunbury): It would take about two years.

Mr. HOWE: Sometimes it runs into the third season, and what we need there is the provision of dock facilities immediately. This autumn all our harbour facilities in the east will be heavily taxed and we are not looking beyond immediate needs.

Mr. QUELCH: There are a few observations which I should like to address to the Minister of Finance at this time. The subject is, in my opinion, of sufficient importance to justify my taking the time of the house.

Mr. ILSLEY: If the hon. member will pardon me, I was getting up just as he rose. He spoke to me last night with reference to a statement I was expected to make before the debate concluded and perhaps it would facilitate the discussion if I made that statement now, because I presume the hon. gentleman will talk about the same subject matter.

On March 11 the hon. member for Macleod (Mr. Hansell), at the conclusion of his speech, said:

> Perhaps it will suffice if I ask the Minister of Finance those two simple questions. First, will he tell the committee and the country by what method this huge debt will be repaid? Second, will he take steps to have the measure sent to the banking and commerce committee for a wide-open, public airing?

[Mr. R. B. Hanson.]

To which I replied:

> A little later in the debate I will answer the first question asked by my hon. friend, which I think is a reasonable one. As to whether I will send or move to have this measure sent to some committee, as at present advised at least, I should not like to agree to do that.

With regard to the first question, presumably the meaning is not, how will individual maturities be met, but rather how will it be possible to meet our maturities without having to borrow the money again to do so. In fact there is no reason to expect difficulty in fulfilling our contracts. The dominion has always met its obligations and certainly will always have sufficient power to meet them in future, either by taxation or by refunding loans. It may be added that the maturity dates of the various dominion loans are arranged in such a way as to prevent any undue concentration of maturities in any particular year.

It need hardly be pointed out that there is no question of having to meet a demand for repayment of all, or most of the debt at any particular time. The debt is not a demand liability. Moreover, the public would not wish to realize upon all its holdings of dominion securities at any one time. The securities representing the debt are held as investments. If they were all to be repaid in cash at once the public would be left holding an enormous balance of idle money, for which no immediate use could be found without causing a tremendous speculative boom.

The real question, therefore, is, how far can we expect our national debt to be reduced out of revenue after the war. Obviously this is not an easy question to answer, since so much depends upon post-war conditions and the policies to be followed by post-war governments. The burden of interest charges upon post-war budgets will naturally make it desirable to reduce the debt as soon as possible, or at least to reduce the interest charges on it by continuing efforts to achieve lower and lower interest rates. On the other hand, heavy taxation for the purpose of debt redemption is apt to be deflationary. There will be periods of prosperity when we can expect to reduce our debts out of our current revenues. Indeed such action would be a sensible way of preventing a runaway boom, rather than attempting to check it by raising interest rates. It would certainly be a defeatist view to assume that we must expect no prosperity after the war. Indeed it is reasonable to anticipate a better international economic order to result from the victory of

our cause. We in Canada should have the industrial capacity and skill to take advantage of the opportunities that such a world will offer.

There is no justification for an abject fear of the problem raised by our increasing national debt. Certainly the interest charges will impose some burden on the budgets after the war, but it will be far from an intolerable burden. It is not, after all, a tribute that we pay to foreigners, but simply a transfer between Canadians. The process of transfer is not pleasant, but it need not be damaging. In fact we are reducing the debt that we owe abroad, to Britain, and are replacing it with internal debt by the process of repatriation.

The important thing, I believe, will be to raise the funds for paying the interest on the debt, or for reducing the debt, by taxation in accordance with ability to pay. I think our pre-war tax system is being improved in that regard, and I hope that we shall have a fairer system of taxation in Canada after the war than we had before it. There is another point we shall have to watch, that is to see that we do not discriminate against enterprises requiring the bold assumption of risks by comparison with others. I think properly designed taxes will enable us to meet our obligations both financial and social, without inhibiting the constructive and venturesome action upon which our economic progress will depend.

Perhaps I should also answer the question that was asked by the hon. member for Témiscouata on Tuesday last, March 18. He asked certain questions on the subject of repatriation of Canadian securities from the United Kingdom.

Before dealing specifically with his questions I should like to remind the committee of the reason for operations of this character. The committee is well aware that the United Kingdom needs tremendous amounts of materials of war and foodstuffs from this country. The United Kingdom has to obtain Canadian dollars with which to pay the suppliers of these materials and foodstuffs. Some Canadian dollars reach the hands of the United Kingdom authorities in payment for the things which we import from the empire, and we also have occasion to pay them quite substantial amounts in the form of interest and dividends, ocean freight charges and other items.

After making allowance for all these things, however, a very large deficit remains. It has been and will continue to be the policy of the government to see that United Kingdom purchases in this country are not hampered by reason of any lack of Canadian dollars. We have seen and will continue to see that the problem of the deficit is solved. The character of the solution may vary from time to time. For the moment, I propose to deal only with the form of procedure which has provided the United Kingdom with over two-thirds of its net requirements of Canadian dollars since the beginning of the war, namely, repatriation of Canadian securities and accumulation of sterling.

I think it will be useful to follow these transactions through step by step. From week to week, as the United Kingdom needs Canadian dollars to make payments in this country, the foreign exchange control board is advised by London what amount is required. Let us assume that the figure named to-day is $10,000,000. In that case the foreign exchange control board will purchase from the United Kingdom authorities approximately £2,250,000. The board then owns these pounds and carries them in its account in London. The United Kingdom owns and has at its disposal $10,000,000 Canadian. As a matter of interest to the committee I may state that since the beginning of this year over $150,000,000 have been placed at the disposal of the United Kingdom in this way.

As time goes on, and the foreign exchange control board continues to accumulate sterling in London, this sterling may be used to purchase our outstanding obligations in London and bring them home. Transactions of this character, which have been carried out since the beginning of the war, have resulted in the redemption of two dominion government sterling loans, namely the 3½ per cent registered stock, 1930/50, and the 4 per cent registered stock, 1940/60, and the purchase of £20,250,000 par value of the Grand Trunk perpetual 4 per cent issue guaranteed by the dominion government. The total amount involved in these particular transactions was $259·3 millions.

I have no idea what the hon. member for Témiscouata was referring to when he said that the question of repatriating the Grand Trunk Railway guaranteed issue was not decided for a long time, and that finally some pressure was brought to bear. There was no pressure, no representations of any kind; the decision was taken by the government without delay at the time when the government thought action would be appropriate.

Some Canadian dollar securities have also been repatriated. I refer particularly to those which were acquired from their owners by the treasury of the United Kingdom last October. A list of the securities affected by the vesting order was, of course, published at the time the order was issued in London, so I shall not refer to the composition of the

list except to say that no securities of the Canadian Pacific Railway were included in it. To the extent that Canadian Pacific Railway company shares or debentures are held in the United Kingdom they remain in the hands of private owners. There has therefore been no change in the situation as a result of the war.

The Canadian dollar securities which I have just mentioned have been sold in Canada through ordinary market channels under the supervision of a representative of the treasury of the United Kingdom, who has worked in close cooperation with the Bank of Canada and the foreign exchange control board.

My hon. friend refers to Sir Edward Peacock and to the mission on which he is engaged in the United States. There has been no suggestion that his mission will be extended to Canada, nor have I any expectation that it will be so extended.

I think that answers the outstanding questions that have been asked in the debate so far.

The minister takes, I think, a very optimistic stand regarding the question of repayment of the war debt. As I look back to confederation I do not think there is any ground for such optimism, for since that time our national debt has steadily increased, in practically every year, with a few exceptions around 1928. If, on the other hand, we include the total debt of Canada, municipal and provincial as well as federal, then we can say that the public debt has increased in every year.

I do not dispute that we shall be able to meet our obligations, but we shall do so largely by refunding, paying only the interest, so the debt will be continually increasing.

I remember before the war the former Minister of Finance told us that it was taking forty-six per cent of the revenue from taxation to pay interest charges alone on the national debt. Where shall we come to if we continue such a policy? The time will come when it will take considerably more than forty-six per cent, unless we are continually going to pare down interest rates.

Mr. ILSLEY: It does not take anything like that percentage now.

Mr. QUELCH: That statement was given to the house by Mr. Dunning. Of course interest rates have been reduced, but at the same time the amount of the debt has increased greatly. Would the minister be prepared to tell the committee that there is no danger of running into a depression after the war? If we do, it is likely to take more than forty-six per cent, even disregarding the fact that our debt is increasing.

We were told that the issue of war savings certificates is twice blessed—that statement was made by Doctor Clark—in that it provides revenue for the government now, and will provide revenue for the investor when the next depression hits us. Already he is looking forward to the next depression. In that regard I would ask, if we are going to have another depression, when we are in that depression and the people need the money they have invested in war savings certificates, where is the government going to obtain that money? Surely increasing taxation in order to pay off those certificates is not going to help us out of a depression. Therefore the only way the government would be able to pay them off would be by an expansion of credit.

Mr. ILSLEY: Does my hon. friend realize how much we are raising by way of taxation at the present time? We are taxing at the rate of about $900,000,000 a year now, and that will be considerably more next year even without any increase in rates.

Mr. QUELCH: Yes, but the minister will admit that after this war the government will not have anything like the revenue it has at the present time.

Mr. ILSLEY: Well, I don't know.

Mr. QUELCH: When the day of peace comes, most of these munitions factories will automatically cease operations, and it will not be any small problem under the present system to find ways and means of putting these industries to work. I will admit that if we changed the system and made our one objective production to satisfy the needs of the Canadian people, and issued money for that purpose, it would not be a major problem; but in the past that has not been the policy of this government. The main policy of this government has been foreign trade; they have been willing to sacrifice anything and everything to expand our trade. We all know how a nation maintains a large favourable balance of trade. That is done by reducing the prices of primary products to levels where they can compete with those of other countries. In other words, you have to reduce our farmer to the level of the lowest paid farmer in the world, making him compete with slave or peasant labour. If I remember rightly, since confederation we have had only about eleven balanced budgets. Not only have we not been able to pay our debts; we have not been able to pay our expenditures out of our current revenue. I am satisfied, as I believe the majority of the people are satisfied—and the statement already quoted from the remarks of the general manager of the bank of Montreal expresses the same fear—that we are heading towards a situation where our total debt charge one day will be greater than our revenue.

I have listened with interest to many of the speeches made during the course of this debate since the introduction of this resolution over a month ago. One of the things that has surprised me has been that, although we are discussing an appropriation bill, practically the entire discussion has centred on how we are going to spend the money, and there has been very little discussion as to how we are going to raise it. Of course I will admit that it is always easier to spend money than to provide it. Many hon. members have deplored the fact that in many industries our production has lagged. A great deal of criticism has been levelled against the aeroplane industry, and I believe the Minister of Munitions and Supply admitted that the production of aeroplanes was three months behind schedule. I was especially interested in the remarks of the hon. member for Northumberland, Ont. (Mr. Fraser) in this regard. He stated:

> To my friends on the other side I say with respect—and with pity—that in the interests of Canada and the British empire it is too bad that we did not year by year, particularly in 1938 and 1939, get sufficient money in our estimates to be in a position to build up an aeroplane industry in this country.

The hon. member for Jasper-Edson already has referred to this statement, but I should like to make a few further observations regarding it. I think the hon. member for Northumberland, Ont., was ill-advised to address that statement to the opposition. I say that because from 1935 to 1939 the Liberal party had an overwhelming majority in this house. They had power to introduce any legislation they desired. I am well aware of the fact that the Prime Minister has tried to place the blame for the failure to build up our defences upon public opinion. He has stated that from 1935 to 1939 public opinion was not such that it would have supported greater expenditures for war purposes. I think the Prime Minister should have followed through on that point. Why was public opinion not prepared to support a greater expenditure for war purposes? For the very simple reason that year after year, from 1935 to 1939, we heard the former Minister of Finance continually tell the house that the only money available to this country was the money the government could tax from the pockets of the people. The former Minister of Labour, the late Mr. Rogers, went even further and stated that if we were to increase expenditures it would be necessary not only to increase taxation but to increase taxation upon people in the lower income brackets. In view of the fact that during the period in question we had in the neighbourhood of a million people on relief, with hundreds of thousands of others enduring a very low standard of living, it seems only natural that they were not willing to have their incomes still further reduced in order to meet increased war expenditures.

It is interesting to note that as soon as war was declared the present Minister of Finance, who was then acting minister, told the house that the government would adopt a policy which would include a moderate monetary expansion. I do not want it to be said that I have misrepresented what the minister stated on that occasion, so I will quote his words:

> All this is not to say that a small and carefully regulated amount of credit expansion may not be desirable in the early stages of the war in order to assist the increase of production and employment.

And again:

> If at the beginning of the war there are unemployed resources, some credit expansion may give an impetus to their prompt utilization. If it is carefully controlled, the expansion of production may prevent any abnormal rise in prices, confidence may be maintained and the initial impetus may be carried on and accelerated by the insistent demand that exists for supplies.

The question I should like to ask the minister, and I think it is a question that should be answered now, is this. If it was sound to have monetary expansion in September of 1939 in order to bring about greater production and greater employment, why would it not have been just as sound in the years from 1935 to 1939? Then some of the unemployed could have been utilized to build up our defences, while the remainder were used to expand the production of consumer goods in order to satisfy the demand created by the money paid out in the defence programme. Many people are asking that question, and I wonder whether the minister would deal with it.

Mr. ILSLEY: I do not think I ever said that monetary expansion of itself would bring about increased production. There are a number of factors that bring about increased production and increased employment. I should be very much surprised if I ever said—

Mr. QUELCH: I quoted the minister's exact words.

Mr. ILSLEY: Just quote them again and let us see what they were.

Mr. QUELCH: The minister had been criticizing the idea of inflation, and then he went on to say:

> All this is not to say that a small and carefully regulated amount of credit expansion may not be desirable in the early stages of the war in order to assist the increase of production and employment. . . . If at the beginning of the war there are unemployed resources, some credit expansion may give an impetus to their prompt utilization. If it is carefully controlled, the expansion of production may prevent any

abnormal rise in prices, confidence may be maintained and the initial impetus may be carried on and accelerated by the insistent demand that exists for supplies.

Mr. ILSLEY: Oh, well, that is different from bringing about increased employment or production by that one thing alone. In the early stages of a war there will be, for a number of reasons, increased production and increased employment. For one thing, the psychological state of the people is altogether different, and I said in that speech that some monetary expansion might be necessary to assist in the increase that was taking place, so as perhaps to give an additional impetus.

That, however, is quite different from saying that that one factor, monetary expansion, would in a period like 1936, 1937, or 1938, have brought the same results. As a matter of fact, it might not have brought those results at all. It might simply have scared capital at that time, so that you would lose more in unemployment than you would gain by increasing employment.

I believe we are facing the old issue which has existed for a long time, namely, as to whether monetary measures alone can bring about prosperity or increased employment. I do not think they can. I do not believe the Cooperative Commonwealth Federation think so. I believe that is a theory held by a comparatively small group of people in the world, some of whom are monetary reformers. They hold the view that everything depends on the amount of money. That is not so.

Mr. QUELCH: I am not suggesting that various precautions and other means would not have to be taken. I am pointing out that it does not matter what you do, in a time of depression you cannot improve conditions until first of all you have monetary expansion. In September, the minister admitted that it would be desirable to have monetary expansion. Why? The minister realized that if they tried to borrow money from the people they would be drawing money out of circulation, and reducing production. Therefore, first of all they hire—and I use the word advisedly—the chartered banks to create $200,000,000. I remember well the statement made at that time by the Minister of Finance. He said, "When this money is paid out it will increase the savings of the people, and then we will be able to borrow those savings." But the minister realized that the government would not be able to borrow savings from the people until it had created those savings by an expansion of money. In other words, the expansion must come first.

The minister has said he cannot see the similarity between the condition in September and the condition between 1935 and 1939. I will give the similarity. During that time industry was running at about 50 per cent of its capacity. We had in the neighbourhood of half a million unemployed. We had, in the form of a million people on relief, a tremendous undeveloped market for goods. The logical question, then, is this: Why did we not put people to work in industry to produce goods to satisfy that market? Why did industry not expand? I have heard the criticism of industry that it did not have sufficient confidence to expand during that time. To me the reason is obvious; industry at that time could not sell the products it was already producing. It knew well that if it expanded production it would have a still greater unsold surplus of goods.

I say to the minister that if during that period of time we had had monetary expansion for the purpose of putting a certain proportion of the unemployed to work in capital goods industries—such as armaments, road building, the elimination of railway crossings, and so on—and had we utilized the remainder of the unemployed for the purpose of expanding production of consumer goods, then those goods would have been available to satisfy demands which would have been created by payment of moneys to those people working in capital goods industries. I am satisfied that industry in Canada will always be ready to increase production, when it knows that it is going to be able to sell what it produces. The trouble between 1935 and 1939 was that it could not sell what it produced. During that time we had a favourable balance of trade amounting to about $200,000,000 annually. In the committee I asked the governor of the Bank of Canada this question: During that period why could we not have put into operation $200,000,000 worth of national projects, so that the money paid out in these projects would have created in this country a demand for the $200,000,000 worth of goods that were credited to us abroad? He did not deny that this could be done, but said that it was purely a matter of government policy.

I remember that in 1935 in his pre-election speeches the Prime Minister (Mr. Mackenzie King) stated that if the Liberal party were elected, a great battle would be engaged in between the government and the money powers. I make this charge: Had the government engaged in that battle with the money powers, and had the governments of Great Britain and of France engaged in that great battle, the history of Dunkirk as we have it to-day would not have been written. Because of the deflationary policy which existed throughout those years, defences were allowed to deteriorate.

I want to refer now to a statement placed on record by the minister in his reply to a question I asked on February 20. According to that statement we have borrowed from the chartered banks in the neighbourhood of half a billion dollars. The minister will agree that, other things being equal, deposits would have increased by a like amount. As a matter of fact, it is admitted in the statement that in so far as the $250,000,000 that was borrowed in the spring of 1941 is concerned, deposits would have increased by that amount, other things being equal. That is to say, when we borrowed the money from the chartered banks, they lent us that money by creating the means of payment. I do not believe the minister would disagree with that statement. It is true that for years prominent officials of various banking institutions in this country have carried on the delusion or the hoax that they are in a position to lend only their depositors' money. We have heard members in this chamber say that banks are able to lend only their depositors' money. I do not doubt that many hon. members are still in that fog, or confused state of mind.

In any event, it was refreshing in 1939 to have a statement by the deputy governor of the Bank of Canada to the effect that it was nonsense to suggest that chartered banks could lend their deposits, because it was pointed out that deposits are liabilities, and that it would be impossible to lend their liabilities. Then, again, when giving evidence before the committee on banking and commerce in 1939, the governor of the Bank of Canada said, as reported at page 455 of the proceedings, that the chartered banks cannot, of course, loan the money of their depositors. He also admitted that they lend by creating the means of payment. Hon. members may verify this, if they wish, by turning to the evidence of the banking and commerce committee of 1939, page 456, where it was pointed out that the banks lend by the simple procedure of creating the means of payment.

The main question in connection with which I am particularly interested in receiving an answer from the minister is this—and I want to put it accurately. When we have obtained from the people all the money we consider it wise to take, whether by taxation or by the sale of war savings certificates, and when we deem it necessary to indulge in a form of inflationary borrowing, why do we not obtain the money from our own bank, the Bank of Canada, instead of from the chartered banks, who will merely create the amounts of payment?

Mr. ILSLEY: That would be far more inflationary.

Mr. QUELCH: Why?

Mr. HANSON (York-Sunbury): It would be pure inflation.

Mr. ILSLEY: It would be far more inflationary to borrow from the Bank of Canada than it would be to borrow from the chartered banks.

Mr. QUELCH: Why?

Mr. ILSLEY: Because, if we borrow from the chartered banks, the amount of new money, or the additional deposit liability, is the amount that we borrow. For instance, if we borrow $250,000,000 from the chartered banks, there are deposits immediately in existence, after the loan, of $250,000,000 more than there was before. That is inflationary, to a certain extent, other things being equal. If we borrow from the Bank of Canada, the result of a loan of $250,000,000 from that bank is a deposit in the Bank of Canada of $250,000,000 which, when we use it, finds itself in the possession of the chartered banks, as cash reserves.

The banks, in order to carry on a banking business along the lines commercial banks have always followed the world over, must lend a good deal more than $250,000,000 to the public. The ratio is nine or ten times as much as that, and that in turn creates deposit liabilities, which add to the total deposits of the country a very large sum and are very much more inflationary in their effect than borrowing from the banks would be. This could be nullified or offset if we were to raise the reserve ratio. The legal reserve ratio at the present time, as the hon. gentleman knows, is 5 per cent. If we were to make it 100 per cent, we would have no more inflationary effect if we borrowed from the Bank of Canada than if we borrowed from the banks, because when that $250,000,000 found itself in the commercial banks as cash reserves, the banks could not lend a thing on it. There would be a deposit liability of $250,000,000 and a reserve of $250,000,000.

There is, however, a certain cost for carrying deposits. In addition to the cost of carrying on the banks, there is the interest which the banks must pay on their savings bank deposits. When the money comes back to the banks in the form of savings bank deposits, the banks have to pay one and a half per cent interest on it. It is estimated that nearly one per cent is paid in interest. Therefore, to create a 100 per cent reserve ratio which would nullify or equalize the inflationary effect in the way I have mentioned, would mean that you would, in effect, be asking the banks to carry on at a substantial loss in respect of that transaction.

In other words, it would be a tax on the banks which would be passed on either to the depositors of the banks or the shareholders of the banks, or passed on in some other way. If, as a matter of policy, we decided to lay that additional tax on the banks, we could borrow from the Bank of Canada instead of from the commercial banks and have exactly the same effect. Unless, however, we take some steps like that, if we merely change that feature of the present system which is the only feature which the hon. member is talking about now, we would be setting in motion forces which would have a powerful inflationary effect.

Mr. QUELCH: I appreciate that answer of the minister. It is similar to the answer given by his predecessor, Mr. Dunning. The minister is aware of the fact that many prominent bankers of the United States have advocated the adoption of what is known as the 100 per cent system. That is the policy which the minister has just mentioned. If he has read "One Hundred Per Cent Money" by Irving Fisher, he will have seen there a long list of prominent bankers of the United States who advocated that this system should be put into operation. Therefore, evidently they did not visualize being put out of operation by its adoption. Furthermore, it is advocated strongly by Robert Hemphil, former credit manager of the federal reserve bank at Atlanta, and more recently by Babson's Incorporated in their letter of March 20, 1939, where they point out that the banks would still continue to make a fair profit. They also point out that you would have to differentiate between current accounts and savings. At the present time a depositor is supposed to give notice before he can draw out his money from a savings account; but, as a matter of fact, savings accounts are treated the same as current accounts in that respect. As Babsons, however, point out, you would have to have the savings banks deposits withdrawable on notice only.

Mr. ILSLEY: If the hon. member will permit a question, while I do not think this is really the occasion for a protracted debate on monetary policy, may I ask if he is advocating the adoption of the 100 per cent system, plus borrowing from the Bank of Canada instead of from the commercial banks? Does he advocate that as the financial policy of the government?

Mr. QUELCH: No; but I would say that the 100 per cent system would meet the objection which the minister has raised. I would advocate the 100 per cent system so far as current accounts are concerned, but not as regards savings accounts, which should be treated the same as any other investment. Money in savings accounts should be treated as an investment and as the property of the bank. I would apply it as Irving Fisher and Babson's advocate, and use it only in so far as current accounts are concerned. The banks would still have their savings accounts to lend from, if they need more money to put into circulation they can borrow money from the Bank of Canada at a nominal sum and then lend it at a higher rate. They would, however, be in a position to expand their loans only provided the Bank of Canada gave them authority. Unless they got the money from the Bank of Canada they would not be able to expand their loans. In that way the government would have effective control over the volume of money in circulation.

You do not, however, have to go as far as the 100 per cent system. Increase the cash reserve requirements of the chartered banks to the extent necessary to prevent an expansion of loans. If they were at the time operating on a ten to one basis, for example, you could increase the cash reserve requirements of the banks to the extent necessary to prevent them from expanding their loans on the basis of their increased cash reserves.

Mr. ILSLEY: Would you be any further ahead?

Mr. QUELCH: If I remember rightly—and I am speaking more now from hearsay—the government of the United States of America in 1937 increased the cash reserve requirements of their banks to 20 per cent. The cash reserve requirements of the banks in Canada could be increased to 12 or 15 per cent or to whatever degree was necessary to prevent the chartered banks from taking advantage of that new issue of money further to increase their loans.

Some people may argue that it would not be fair to the chartered banks, that it would seriously decrease their profits if we took such action. On the other hand, when one considers the profits of the chartered banks for the past ten years, I think it will be agreed that they are in a position where they can readily stand a reduction in their profits. I have figures taken from the "Canada Year Book" showing the profits of the various chartered banks over the past ten years, and I find that on their paid-up capital the profits are as follows for the ten-year period:

	Per cent
Bank of Montreal	9·35
Bank of Nova Scotia	13·15
Bank of Toronto	10·6
Dominion bank	10·6
Imperial bank	10·6
Royal bank	9·35

That is the profit on their paid-up capital, and that ten-year period includes one of the worst depressions this country has ever known. No one can say that a business which is making 10 per cent profit over a period that includes the worst depression ever known is not doing very well indeed. In addition, they have built up their reserves and built up a number of fine capital structures; they also have their hidden reserves. I think the position of the banks so far as their profits are concerned is a very satisfactory one, and that their profits are greater than necessary, especially when one considers that they were made over the period of the depression. If one takes the period just prior to that ten-year period, they were then making as high as 14 to 16 per cent. It was the depression that brought their profits down to approximately 10 per cent. I have not seen the figures for 1940, but I have no doubt the profits of the banks are now increasing. The *Financial Post* stated that their assets were increasing, although their liabilities might be increasing in the same proportion.

Mr. ILSLEY: I wonder whether the hon. member would care to express an opinion on this point. Was it not a good thing for the country that the profits which the chartered banks were receiving in the decade of the twenties were sufficient to enable them to accumulate reserves which kept them solvent in the early thirties and prevented bank failures in this country such as they had in the United States? In other words, is it not a matter of considerable importance to the public that the banks should at all times be solvent?

Mr. QUELCH: I quite agree, but the minister will admit that under the 100 per cent system the banks would be in a safe position because they would have one dollar of cash behind every dollar of their deposits. A run on the banks would be absolutely impossible. That is why so many bankers support the idea of the 100 per cent system in the United States. They got such a cleaning up through what happened in years gone by, that no doubt it would relieve their anxiety if there were no danger of a run. Under those circumstances they could very well suffer a decrease of profits. There would be under this system no danger of insolvency, because any time the banks needed money for this purpose they could obtain it from the Bank of Canada. That bank would have absolute control.

What happens at the present time? The Bank of Canada issues a certain amount of money, or the government through the Bank of Canada issues a certain amount of money, and they do not know what the result will be. The banks may expand it by ten times, or they may not. There is no direct control under this system.

I have heard this argument advanced against the proposal, that in view of the fact that people bought shares in the chartered banks in good faith, in the belief that the same system would be maintained in operation and that, therefore, they could expect to continue to draw the same profits, it would not be fair to the shareholders of the chartered banks to change the system to one whereby those profits would be reduced. That may be a fair argument. In that event, however, the only thing would be for the government to undertake to buy up the shares of the chartered banks and then there would be a government-owned system. I am very much in favour of buying up the shares of the chartered banks and having a publicly-owned banking system, because I do not believe it is a desirable state of affairs to have any body of private persons in a position where they can increase or decrease the amount of money in circulation. When you are in a position to do that you are also in a position to raise or lower prices.

Mr. ILSLEY: Does the hon. gentleman think it would be a desirable state of affairs to have the government of Canada making all the commercial loans required by the people of Canada?

Mr. QUELCH: Certainly not. I regard that as the business of the chartered banks. I believe, however, it is the business of the Bank of Canada to act as the nation's bank, and our expenditures should be financed through the Bank of Canada without borrowing a single dollar.

Mr. ILSLEY: I thought my hon. friend said he was in favour of the Bank of Canada buying up the shares of the chartered banks.

Mr. QUELCH: I am in favour of the government buying up the shares of the chartered banks, but the people who manage them would continue to do so as now. The chartered banks would be under the control of the Bank of Canada and would be making commercial loans.

Mr. ILSLEY: That is, the government would be in the banking business.

Mr. QUELCH: Not any more than one can say that the government is in the wheat board or in the post office. The board of the Bank of Canada would be looking after the whole banking system. I know some people claim that every time an election took place, the bank management would change. I hope we are not quite so rotten as that. I know that sort of thing may happen in connection

with some post office appointments, but I will frankly admit that in so far as western Canada or Alberta is concerned, I have not noticed it, and I hope it will never occur. It is certainly not a nice charge to make against any government that it finds it necessary to change all the postmasters every time there is an election; and I hope it would be possible to leave the administration of the banks entirely under the control of the Bank of Canada.

Mr. HOMUTH: But the government of Canada would then be making the commercial loans.

Mr. HANSON (York-Sunbury): We would be right in the business.

Mr. QUELCH: I see the hon. gentleman's point in that regard, that in view of the fact that the chartered banks would then be publicly owned, the loans would be made by an institution of the people. But the people of Canada would be handling their own business, because that institution would be directly under the control of the government—although I admit that in these days we have not very much control of the government. Unfortunately, there are, outside of government, forces which largely control us at the present time.

An hon. MEMBER: What about the government of Alberta?

Mr. QUELCH: If this government will give Alberta the power to have a bank, I think that province will indicate many advantageous ways in which that bank could be utilized. It seems a pretty hard thing for Alberta to get a bank. I believe the dominion government would be well advised to allow our province to have that charter, and let us see what we can do.

Mr. MacNICOL: Conditions are bad enough now, without it.

Mr. QUELCH: I will now deal with a slightly different angle of this subject, the pay-as-you-go policy. The minister, in a statement in September, 1939, frequently repeated that he believed in adopting as far as possible a pay-as-you-go policy. The minister will admit, I think, that if we maintain production at its maximum level, utilizing a certain portion of the production for war purposes, the standard of living of the people cannot be higher than the portion that is left of the production.

No matter how the war is financed, the standard of living of the people cannot be higher than that portion of the production which is left after the rest has been utilized for war purposes. Therefore, if we utilize taxation alone for the purpose of reducing the people's spending power and make up the remainder of the required revenue, from the Bank of Canada, the standard of living of the people will be no lower than if we financed by the issue of bonds to the public. It could not possibly make any difference. On the other hand, however, there would be this vast difference, that a real pay-as-you-go policy would have been adopted and there would be no increase in debt. That would make a very great difference in the standards of living of the people after the war. We would not have to increase taxation to pay interest.

The Minister of Finance, however, has contended that people should be allowed to put aside a little for a rainy day. He stressed that point in his budget speech in September. I agree with that; and for that reason we are not opposed to the sale of war savings certificates, but we believe that the amount each individual is allowed to purchase should be definitely restricted. It is now restricted, I understand, to $600, but in the case of a family of five or six people, that family is allowed, in my opinion, to put aside too much for a rainy day; in that instance, it is $3,000 or $4,000. That people should be allowed to put aside a little for a rainy day does not justify the sale of large amounts of bonds to the public. In my judgment we shall have a lot of days of drought, rather than rain. I do not like that expression "rainy day"; "drought" would be a more accurate term, so long as we carry on the policy which has been in operation since the present government came into power in 1935.

Mr. MARTIN: Is the hon. member opposed to all savings?

Mr. QUELCH: I am not opposed to anybody putting aside a certain sum for a rainy day. I am, however, opposed to this government saying that in order to provide a person with an investment, they are going to put the people into debt, because just so long as the government adopt that policy, the consequence is that a large amount of bonds are sold to a comparatively few individuals. A national debt is being formed, which the governor of the Bank of Canada says is a national asset; but remember that it is the asset of only a comparatively few people, and it is a liability of all the people. Therefore the government must make a levy against all the people in order to pay tribute to a comparatively few people.

Let people save and invest their money in industry. Why should this government be

obliged to provide an investment for them? By all means save, but do not penalize the rest of the people when you are doing it.

Let us at all times remember, especially in view of the conditions which are existing in Europe to-day, that war is a scourge.

Mr. MARTIN: Are we not saying this with regard to the war savings certificates? First of all, they are not restricted to any particular group; there is a wider diffusion than in the case of bonds. We are also saying, "You save this money so that at a future date production may be enhanced as a result of this investment; but we now want a curtailment of production, or rather, to confine production to certain very necessary channels for war purposes."

Mr. QUELCH: I would ask the hon. member how production in the future can be enhanced by issuing a lot of war savings certificates now; because when you get in a depression, the only way by which you can pay off the certificates under the present government's policy is by taxation, and that would increase the depression. You would require to have monetary expansion, and if you are going to have that, you might as well have it now; now is the time we need it.

I have pointed out to the hon. member that I am not opposed to the issue of war savings certificates so long as it is understood that the object is to reduce the spending power of the people, not to provide revenue for the government. I remember Professor Plumptre made that plain. He stresses the point that war savings certificates are needed, not to provide revenue, but merely to prevent spending.

Let us remember that war is a scourge and not a carnival, and no one should hope or desire to profit materially as a result of war. I am sure the minister would agree with that. When we bear in mind the terrible sacrifices that are being made in England and Europe at present, not merely from day to day, from week to week, but from month to month, year in and year out, then I think we are all agreed that no one should hope to profit in any shape or form as a result of such suffering. Recognizing that fact, if people can go through this war in a state of comparative safety, enjoying a decent standard of living and being no worse off at the end than they were at the start, then I say they should consider themselves exceedingly fortunate. I am sure the government will agree with that.

When I read and listen over the air to statements urging people to be patriotic by investing their money in gilt-edged securities, that is, dominion bonds at 3 per cent; when I see that type of profitable investment eulogized as patriotism, I feel positively nauseated to think we should be guilty of such rank hypocrisy in this country. Let us keep in mind, Mr. Chairman, that, apart from external loans, the real cost of war must be met out of current production. The Mniister of Finance emphasized that time and again when speaking in this house in September. I wonder whether he realized what his statement really meant at that time, because I do not think he would suggest for a moment that we are even trying to adopt a pay-as-you-go policy to-day. Let me read what he said—because it is so easy for someone to rise in his place and say that I am misrepresenting a certain person.

The CHAIRMAN: I am sorry, but I must remind the hon. gentleman that he has already exceeded his time.

Mr. QUELCH: I have had a large number of interruptions.

An hon. MEMBER: Let him go on.

The CHAIRMAN: Shall the resolution carry?

Some hon. MEMBERS: No.

Mr. QUELCH: May I continue?

The CHAIRMAN: Not unless the hon. gentleman has the unanimous consent of the committee.

Mr. QUELCH: I will not take long. I want to refer to one or two statements made by the Minister of Finance on September 12, 1939, regarding a pay-as-you-go policy. He said:

> . . . . as I have already said, the real costs of war must come out of current production, out of the goods and services produced during the war. It is true that some stocks of military supplies may be on hand at the beginning of a war, but their importance is slight for a war of any duration . . . .
>
> First of all let me emphasize that however we finance the cost of the war, whether by taxation or by borrowing or by inflation, we cannot escape its real costs. By the real costs I mean the goods and services which have to be sacrificed out of our current production to meet the needs of war.
>
> . . . . and I repeat it again, that in real terms, namely, in terms of the loss to the nation of this production, a war is paid for substantially during its duration.

I am afraid that the minister at that time was indulging in wishful thinking.

Mr. ILSLEY: I was stating a fact; I was not announcing a policy.

Mr. QUELCH: The minister admitted that the real cost of war was substantially paid for during the war. If that is so, why cannot its financial cost also be met during the war? I will put it to him in this way. We must

admit that while we are prepared to pay the real cost of the war, in so far as goods are concerned, we are not prepared to pay the financial cost; that is to say, a certain class of society is not prepared to make the sacrifice which is necessary in order that such a policy may be adopted. If they were, there would be no increase in debt apart from that resulting from the sale of war savings certificates. What we are really saying is this, that while we are providing the goods to prosecute this war, we are going to demand that future generations shall compensate us for a large proportion of this production. And remember that by far the greatest proportion of that compensation will be paid to a comparatively few people.

I cannot understand how anyone can say that that is an honest policy; for what is the government really doing? It is misappropriating the funds of future generations. Some people may attempt to justify such a policy on the ground that we are fighting a war to make the world safe for democracy for future generations, and that, therefore, future generations should be prepared to pay a certain proportion of the cost of the war. I heard the same sort of statement made time and again from 1914 to 1918. I heard it said that we were fighting to make the world safe for democracy, that we were fighting the war that would end war; yet here we are to-day, twenty-five years later, engaged in one of the greatest wars the world has ever known.

No; I do not think we have any right to ask future generations to sacrifice themselves for the troubles that we are facing to-day, because I believe that future generations will have plenty of troubles of their own without having to look after ours, as we are having to take care of troubles that were incurred hundreds of years ago. Britain is still paying interest in connection with the Crimean war, and in connection with every major war fought in the last hundred years or so. It is high time we started a real pay-as-you-go policy, because it would not entail a reduction in the standard of living of the people to a level lower than that due to the present policy of the government; whereas the difference that would be brought about would be this, that people would not have as a result of the war, at the end of the war, large accumulations of bonds representing nothing more or less than war profiteering. I say again, therefore, that there is no justification for the attempt to pass on any large proportion of the financial cost of the war to future generations.

I do not suppose it will do any good to ask the Minister of Finance again to consider this question. I appreciate the fact that he has been quite frank in answering a number of questions, but before sitting down I should like to put to him a few more very short questions, which I think he can answer easily without deep consideration. Can he explain why rates of interest on money borrowed from the chartered banks vary? Why does the interest rate on money borrowed from the chartered banks since the declaration of war vary as it does? In one instance, it is two per cent; in another, one and a half per cent.

Mr. ILSLEY: Money is borrowed for different period.

Mr. QUELCH: Can the minister explain why the length of time for which money is borrowed, is reflected in a difference in the rate of interest? Is it from fear that interest rates may go up in the meantime?

Mr. ILSLEY: I am not sure I can give a complete answer to that question, but it is well known that the interest rate which is proper for one period is not proper for another. A certain rate prevails for long term loans, a certain rate for short term loans; and for very short term loans, such as treasury bills, the rate is almost negligible. The rates are fairly well graded between those points. That applies to loans generally.

Mr. QUELCH: I can quite understand that as far as it relates to the borrowing of actual money; but in this case, as far as the chartered banks are concerned, it is merely a question of bookkeeping. I cannot see why we should pay any more for bookkeeping for a long period than for a short period. Hon. members may laugh, but it is acknowledged by the governor of the Bank of Canada and all responsible officials that the chartered banks make their loans by creating the means of payment. I ask, why should we pay 2 per cent interest in one case and 1½ per cent in another? I can understand that borrowing money from an individual is a different matter, but this is merely a question of hiring the banks to create money for the government. There is a big difference between the two.

Mr. ILSLEY: The hon. gentleman is opening up rather theoretical questions here.

Mr. QUELCH: No; the governor of the Bank of Canada has admitted that the banks loan by creating the means of payment.

Mr. ILSLEY: I do not know that I would undertake to answer these questions impromptu. It is rather like writing a book, or an essay, to deal with such matters. The hon. gentleman, I suppose, has spent a good deal of time in working out these questions and he asks them of me in the committee and

wants an immediate answer. Perhaps I have not given so much thought to the theoretical foundation of the variation in the rates of interest depending on the length of time the money is borrowed, but I do not think there is anything in the point that the hon. gentleman has just made, that it is merely a book-keeping transaction as compared with an individual going to borrow money from a bank.

Mr. QUELCH: That is true; when an individual borrows money from a chartered bank, it creates the means of payment.

Mr. HANSON (York-Sunbury): What is that?

Mr. QUELCH: Surely the leader of the opposition is not going to dispute the fact that when an individual borrows money from a chartered bank, it creates the means of payment.

Mr. HANSON (York-Sunbury): It all depends on whether the individual takes the money away in his pocket or puts it back in the bank.

The CHAIRMAN: Order. The hon. gentleman had the consent of the committee for a few minutes more, but unless he now gets further consent, his time is up.

Mr. QUELCH: On a point of order, I have finished the speech I was making and I am now asking questions. I understand that in committee one may ask questions as long as he likes.

Mr. HANSON (Skeena): On the point of order, we have discussed this resolution for three or four weeks—

An hon. MEMBER: Not this angle of it.

Mr. HANSON (Skeena): In the United States they took five days to pass an appropriation of seven billion dollars. And they are not in the war. At the rate we are going the war might be over before this resolution is passed.

The CHAIRMAN: My ruling is that the hon. gentleman's time is exhausted.

Mr. DOUGLAS (Weyburn): I should like to ask a question of the Minister of Finance. What happens to these repatriated securities? I understood him to say that the government securities and the Grand Trunk obligations were held by the Bank of Canada. What happens to the unspecified securities? Does the government sell them on the market, or hold them?

Mr. ILSLEY: Nothing has been repatriated by the government except government bonds or government-guaranteed railway bonds, and they have not been put on the market.

Mr. DOUGLAS (Weyburn): There have been no other bonds repatriated?

Mr. ILSLEY: Not by the government. As I said in my statement, some other securities have been repatriated, but in a different way. They have been sold on the Canadian market to private buyers by the United Kingdom government, which has taken them over from the United Kingdom holders.

Mr. DOUGLAS (Weyburn): But the repatriation activities under this appropriation are confined entirely to repatriating government securities and the Grand Trunk guaranteed bonds, all of which are held by the Bank of Canada; is that correct?

Mr. ILSLEY: To date that is the situation.

Mr. DOUGLAS (Weyburn): If there should be any repatriation of private securities, some disposal will have to be made of them, and we shall be told then how they are disposed of?

Mr. HANSON (York-Sunbury): The government policy of repatriation is based on accumulating sterling on the other side? Or what is the policy?

Mr. ILSLEY: We accumulate sterling and then repatriate as much as we can. I am not sure that I understand the hon. gentleman's question. We are trying to supply the United Kingdom with dollars. We can go on and accumulate sterling if we can afford it. Then we might have a huge accumulation of sterling, and residents of the United Kingdom would still have their securities. That would perhaps leave us in a not too desirable position at some time. It would depend on developments. It has been considered that we should try to keep our accumulations of sterling within hailing distance of these repatriations.

Mr. HANSON (York-Sunbury): What is the policy with respect to the accumulation of dollars for the United Kingdom? How has that been done?

Mr. ILSLEY: We just buy the sterling, that is all. We get the sterling and they get the dollars.

Mr. QUELCH: It has been suggested that it makes a big difference whether a person goes to a bank and gets notes or gets a deposit. Why does a person borrow money? Can one imagine anyone going to a bank and borrowing money at interest to keep it in his pocket? He borrows it to pay for something and it comes back into the bank.

There is another question that I want to ask the minister. Would he explain certain issues sold to the Bank of Canada? I notice

in one statement it shows that $250,000,000 was borrowed for the purpose of purchasing gold. Then another item of $40,000,000 was, I think, for the purpose of refunding. Could the minister explain what the issues of $75,000,000 and $24,040,000 were used for? In other words, were they used for refunding or for the purpose of meeting current expenditure? The statement is on page 904 of *Hansard*.

I might say that the reason why it was suggested by the hon. member for Macleod that this measure be sent to the banking and commerce committee was in order that we might ask these questions. The only way we have to get this information is by asking questions of the minister in this committee. Had this measure been sent to the banking and commerce committee, these questions would have been asked there, without taking the time here. Surely the government should desire that there be a thorough understanding of this procedure, and I guarantee that there are not more than a few hon. members who can explain how this money is going to be raised this year.

Mr. ILSLEY: What is the question?

Mr. QUELCH: The question is, What were the issues of $75,000,000 and $24,040,000 for? I understand that the $250,000,000 issue was for purchasing gold, and that the $40,000,000 issue was for refunding. Was any of that money shown in the statement at the top of page 904 utilized to meet current expenditure? I wish to find out whether that money got into circulation, and how.

Mr. ILSLEY: Those two amounts have asterisks opposite them, and the note says:

> These issues purchased by Bank of Canada in order to provide funds for the foreign exchange control board to purchase gold and foreign exchange from the Bank of Canada in the amount of $253,507,331 and from others under the foreign exchange acquisition order, 1940.

My recollection is that under that order the foreign exchange control board took over foreign securities held by Canadian residents. This money was, I presume, used to pay for them.

Mr. QUELCH: Was the $24,000,000 for the same purpose?

Mr. ILSLEY: No. The $250,000,000 was for that purpose, and for the purpose of purchasing the gold and foreign exchange held by the Bank of Canada. The $24,000,000 apparently was not for that purpose. That is an issue of June 1, 1940, running to March 1, 1945, for $24,040,000. At the moment I cannot say whether that was allocated to any specific purpose.

Mr. QUELCH: Up to the present time the government have not used the Bank of Canada for the purpose of obtaining money to meet current expenditures, apart from refunding and the purchase of gold? That is really what I wish to know.

Mr. ILSLEY: No.

Mr. QUELCH: There is only one other question I should like to ask the minister. How is it proposed to raise this amount of $1,300,000,000? Could the minister give any information in that connection? I do not expect a detailed analysis.

Mr. ILSLEY: On that point, Mr. Chairman, I took exception when the request was made the other night. I think it was first made by the leader of the opposition, who felt that during this debate I should tell the committee how the government proposed to raise this money.

Mr. HANSON (York-Sunbury): That is hardly a fair statement. I asked how much was to be raised by taxation and how much by loan. I expressly excepted the ways and means of getting the money; I thought that would be improper at this stage, but I wanted to know if the minister could tell me what was what as to the other point.

Mr. ILSLEY: That is correct; the leader of the opposition asked how much would be raised by taxation and how much by borrowing. That question cannot be answered, because the total requirements of the government will be considerably more than $1,300,000,000. The only way in which the question can be answered is to take the total requirements of the government for the next fiscal year. For the sake of argument—I may be away out in this—let us say that the total requirements are $2,500,000,000. Then it would be necessary to say how much of that would be raised by borrowing and how much by taxation. But that would be a budgetary statement; that is exactly the statement the Minister of Finance makes when he brings down his budget. He tells the house and the country how much money he will require during the coming fiscal year, and he tells how he proposes to raise it. You cannot take any part of that—in this instance, on the figures I have mentioned for the sake of argument, it would be about half of it—and say that any particular part of that is to be raised by borrowing and any particular part is to be raised by taxation.

For example, suppose I were to say that of this $1,300,000,000 we propose to raise $900,000,000 by taxation. We are taxing now at the rate of about $900,000,000 a year, and at present rates the amount recovered through

taxation during the next fiscal year, even if there are no changes at all, will be substantially more than that. Let us say, however, that I were to state now, "We are going to allocate the taxes to this $1,300,000,000," leaving $400,000,000 to be borrowed. That would be a thoroughly futile reply; it would not mean a thing. Nothing would mean anything unless we took the total requirements and stated how they were going to be raised; and I must say again that this is not the time or the place to do that. It is in the budget itself that this should be done.

Mr. QUELCH: I was not trying to find out about taxation, because this resolution has nothing to do with taxation. It states that the governor in council shall be empowered to raise money by way of loan. What I want to find out is whether the minister can give us any indication of how that loan will be raised. How great a percentage does he expect to obtain through the sale of war savings certificates; how much by monetary expansion; how much by loans from the chartered banks, and how much from the sale of bonds; and does he expect to obtain any by the sale of bonds to the Bank of Canada?

Mr. ILSLEY: In the first place the hon. member says "that amount." I do not know that "that amount" will be borrowed at all; that is, the $1,300,000,000, so we cannot get past that first hurdle. I shall have to give the house that information when the budget comes down. We have never held that back. I and my predecessors have come before the house and said how much money it was expected the government would require during the next fiscal year or the current fiscal year, as the case might be; and in our budgetary and financial statements, when dealing with the whole field, we have been very particular to give the house a full statement as to the manner in which we expected to obtain the money. That I will do at the proper time.

Mr. QUELCH: Could the minister give the committee the assurance at this time that there will not be any increase in interest rates during the war?

Some hon. MEMBERS: Oh, oh.

Mr. QUELCH: Someone laughs, but it is not a laughing matter. Through the Bank of Canada we have power to control these interest rates. We have the power to force interest rates down. If interest rates go up, it will be at the instigation of this government. We have power to keep interest rates down, and I hope the minister can give the committee the assurance that interest rates will not be allowed to go up during the war.

Mr. ILSLEY: I cannot give any such assurance. Obviously the hon. gentleman is a deeper student of these matters than I am, but I do not know just how we could control interest rates with that precision. For instance, if we considered, as a matter of policy, that in the public interest we needed to make a very wide sale of war savings certificates, or of war loan bonds—

Mr. QUELCH: To meet these expenditures?

Mr. ILSLEY: For any matter of public interest, or as a matter of public policy. I do not think we could arbitrarily say, for example, "We are going to pay one per cent, Mr. Public, and we want your money; come across with it." I think the amount we get will depend upon what we offer, and I do not think it can be arbitrarily fixed.

Mr. QUELCH: I would say to the public, then: "The main reason for taxation, or the sale of war savings certificates in war-time, is in the first place, to reduce spending and, in the second place, to allow everybody to put a little aside for a rainy day. If, on the other hand, people do not want to take advantage of that opportunity, then it will merely mean an increase in taxation. To the extent that this does not provide the revenue necessary, we will utilize the Bank of Canada and finance our war expenditures at no cost other than the actual cost of operating the accounts in the banks." If that were explained to the people, I believe the government would have no trouble in keeping down interest rates, because otherwise the people would have the money taxed from them.

Mr. DOUGLAS (Weyburn): In repatriating these securities, what was the basis of payment and how was it arrived at? Were these securities repatriated at their market value, at their face value or at some value arranged between the persons in the United Kingdom holding them and the Canadian government?

Mr. ILSLEY: My recollection is that the United Kingdom government took them over at the market value, and that we bought them at that value.

Mr. DOUGLAS (Weyburn): And the Canadian government bought them from the British government at the value at which the British government had procured them?

Mr. ILSLEY: That is my recollection. There may have been some slight variation for some charge there somewhere, about which I do not remember, but substantially that was the transaction.

Mr. DOUGLAS (Weyburn): It would be approximately the market value?

Mr. ILSLEY: Yes.

Mr. NICHOLSON: The minister was kind enough to answer a question which I placed on the order paper some time ago in connection with interest-free bonds. I was delighted to see that the Canadian public had responded in a very generous manner, but I was surprised to learn that the minister's department had spent only something like $600 in popularizing this type of saving. Perhaps the minister would make a statement about the possibility of spending additional sums of money to try to promote the sale of bonds of this type.

Mr. ILSLEY: It is not the policy of the government to promote the sale of interest-free bonds by campaigns of advertising, or the like. That policy was decided upon after a great deal of consideration. As to whether it is a right or a wrong policy, I never have been sure. I believe that in England they ask the public to buy interest-free bonds, and they also ask the public to make donations to the government. It was felt in this country, however, that if we started advertising campaigns, which cost a lot of money, and otherwise promoted in a wide-spread manner the sale of interest-free bonds, the result would be that the conscientious, generous and self-sacrificing part of the population would perhaps be buying interest-free bonds as a matter of duty, and the more selfish or prudent part of the population would be buying the bonds which carried interest. It was thought that we would be open to severe criticism. It would be suggested that there was not that equality of sacrifice about which we have been talking. Therefore, when we have asked the public to buy bonds, it has always been in connection with bonds which pay interest. We make it clear, however, to any persons who wish to buy interest-free bonds as a matter of patriotic duty, that we deeply appreciate their action, and we make the particulars with respect to those bonds available. Also, when persons send us donations—and there are thousands of people who make gifts to the government—we do not discourage them. We are very grateful for those donations, and appreciate the spirit which prompts them. We offer our thanks for such donations, but we do not go out and advertise for them.

It is open to the committee to express its views as to that policy; but if we took the other one, I am afraid hon. members in the group which has been addressing itself to this matter would be the first to criticize it by saying that the long-headed and shrewd part of the population were lending their money at fairly good rates of interest, while we were trying to force these bonds on the more unselfish and self-sacrificing part of the population. It would be suggested that there could be no equality in a programme like that.

Mr. DOUGLAS (Weyburn): Has the minister not presented a good argument for compulsory interest-free loans? That is what he has done.

Mr. ILSLEY: Perhaps I presented one argument. I believe, however, other arguments against compulsory loans would outweigh the one I have presented. The hon. member knows that other considerations enter into the matter.

Mr. CASTLEDEN: I believe all hon. members who are at present in the chamber will benefit in some degree from the discussion which has taken place this afternoon. The results that may flow from it will no doubt be seen in the days which follow. I believe the people of Canada are interested in seeing that as light a burden of debt as possible be placed upon the coming generation. We do not want another crop of millionaires lining their pockets with tax-free bonds, as they did after the last war.

I do not offer any excuse this afternoon for having taken time of the committee in discussing this measure. We are considering a resolution which would permit the expenditure of $1,300,000,000. If we continue as we have been doing, it will be $2,600,000,000 next year and $5,000,000,000 in the third year. If our programme of shipbuilding alone is to be continued until 1945, I feel quite sure that anyone who knows anything about elementary arithmetic will realize that the debt structure we shall have in Canada after this war will not stand the burden. Every realistic person realizes that we are going to need a new set of rules. The seed that is destroying the present system is the seed of interest. It may bring down our whole financial structure after the war is over, and there are a great many parts of that financial structure which I believe most of the people will be glad to get rid of.

This resolution provides for advancing $103,000,000 as capital assistance to private corporations and contractors in Canada. I maintain that some of those companies are quite capable of obtaining the money for themselves. I have in mind a company such as Canadian General Electric which, I understand, is a branch of General Electric of America. There is a further amount of $2,500,000 to the Canadian Pacific Railway; $8,000,000 to the Consolidated Mining and Smelting company; $3,500,000 to the Dominion Steel and Coal company, and more than $3,000,000 to the Ford Motor company of Canada. I do not know to what extent the John Inglis company needs the money, but I

note that there is provision of $18,000,000 to that company, and $13,000,000 to the Canadian Car and Foundry company.

Coming from Saskatchewan, where people with reduced incomes are depending more and more upon direct relief, I would say that they view with great apprehension the decision of this government, at this time of heavy expenditures, to cut off direct relief assistance. Some of those people are going to face even more dire straits than they have faced in the past. If hon. members had seen what I have, they would know that those people have gone down economically further than should happen in a great and young nation such as Canada.

I repeat that I offer no excuse for discussing these matters in committee. Last year we shortened discussion and criticism because the government was in a hurry. We were informed that new war boards were being set up. We were told that the thirty-seven panels and committees which were set up would so correlate our production with our natural resources, distribution and production, that by the early months of 1941 we would be producing—I believe these were the figures—twelve planes a day or 360 a month. We kept quiet because we believed the government should have a chance to implement its policy. What we wanted most of all was results. We want delivery of goods, and when they are not being delivered we wish to know why.

Mr. MARTIN: What particular goods?

Mr. CASTLEDEN: Planes constitute one of them. We are three months behind schedule. Hitler is not waiting. He is coming over London dropping his bombs. I think the paper says that about 10,000 bombs were dropped last night.

An hon. MEMBER: Talk a little while longer, and they will be more than three months.

Mr. CASTLEDEN: We want delivery of the goods, and the government has power to deliver them. Why are they not being delivered?

Mr. McCANN: Why not pass the resolution?

Mr. CASTLEDEN: I wish to refer briefly to a matter brought to the attention of the committee a few nights ago. I refer to the matter of health. Apparently we need men to man our aeroplanes. These are figures which Canada must face. I quote from the words of the Minister of National Defence for Air (Mr. Power) at page 1605-6 of *Hansard*:

> There will be for training this year 93,000 young men of the age of twenty-one years. Without hesitation one can knock off 33 per cent of those as being unfit even for military training camps.

That is, 30,000 of these men would be unfit even for military training camps. To continue:

> That is, they would be placed in classes C-1 or C, and unfit to walk five miles.

What a glorious tribute to the health of Canada's youth!

> They are completely eliminated, so far as the air force is concerned. Then, the difference between C and A-plus, with good eyesight, would mean that one would knock off another 30,000, leaving about 30,000 annually from which we can draw.
>
> Then, if one looks at them from the point of view of educational qualifications I believe he would knock off another half of those—these would be the ones who have not high-school matriculation—leaving 15,000 eligibles.

One man in six, the flower of Canada's manhood, men in the prime of life, twenty-one years of age! What is happening to the health of Canada? What has happened in the past? Perhaps these facts will shock the Canadian people from some of their apathy. They reveal that the health problem in Canada is a real one. It is urgent, and I want to know why it is neglected. It is closely linked up with the matter of education, and I think it has arisen from neglect, poverty, insecurity and bad housing conditions. If the facts were given to the Canadian people with regard to present housing conditions in Canada, I am sure we would hang our heads in shame. Bad housing is where crime and vice breed. That is where a nation declines. We are at war, and yet we find that only one man in six who is examined is fit to be a pilot. A poverty stricken, ignorant and unhealthy populace fits in well with the plans of certain European dictatorships. Such people are easily frightened and easily bribed. You can drive such a populace wherever you will, like frightened sheep. I maintain that in Canada we have no room for a populace which is unhealthy, ignorant or poverty stricken. Such conditions have no place in Canada's economy. The right to health in this country should be as readily recognizable as the right to breathe. What kind of country are we building? I want to know who is responsible for these conditions. Is it political expediency that allows such conditions to exist? Have we a department of health?

Looking over the membership of the house, I find that there are seventeen medical doctors —fifteen on the government side, and I believe two on the opposition side. There are at least a dozen laymen like myself who are willing to help, but we seem to be blocked at every step we try to take. I inquired last July whether there would be a committee on health. That was in the closing days

when the estimates were before the house, and I was informed that the matter was under consideration—that is the usual answer. I asked again in December what was going to happen in this matter, and I was told that a voluntary committee of members of the house was set up. I was a member of that committee, and I can say that it was set up only for the purpose of trying to get action from the government in attacking this problem of health. But such action was not taken. When I inquired again in February of this year I was told that the minister did not intend to set up a parliamentary committee on health.

Nevertheless there is much work to be done. There is the matter of research. Perhaps research would reveal more startling facts regarding the health of the Canadian people which would not make very good reading, and if the statement which I saw in the Montreal *Gazette* this morning by a member of the provincial legislature of Quebec is true, there are some startling health facts which the people of Canada should know. This question needs publicity. We need cooperation between the health departments of the provinces and health organizations right across Canada, and the Department of Pensions and National Health in this government should be correlating and bringing together the various schemes of the provincial departments of health. Splendid work is being done by provincial recreation centres in British Columbia and by the anti-tuberculosis league in Saskatchewan. Why not extend such efforts? This matter is closely linked up with education. We need a proper national viewpoint, and this house should be giving that leadership on the question. We are paying to-day for our failure in the past to attack this problem. We need men now who are strong, virile and healthy. I am sorry the Minister of Pensions and National Health has left his seat, but I suppose the financial questions which have been discussed this afternoon have wearied him.

Mr. DOUGLAS (Weyburn): Oh, no; he is a monetary reformer.

Mr. CASTLEDEN: I think this question is too urgent to be disregarded any longer. We need A-1 men, A-1 plus, as we never needed them before, and it is not just for cannon fodder that we need them. We want them for the reconstruction period after the war is over. You cannot build a worthy nation unless it is healthy, is educated and has proper security. Canada can give all these.

Mr. NICHOLSON: I had a question which I intended asking of the Minister of Munitions and Supply, but possibly the Minister of Finance might give me the information. I have here a copy of the capital expenditures contract between His Majesty the King in the right of Canada and the John Inglis company, under date of October 31, 1940, and I quote a clause from the contract reading as follows:

> No member of the House of Commons of the United Kingdom of Great Britain and Northern Ireland or of the Senate and House of Commons of Northern Ireland or of the House of Commons of Canada shall be admitted to any share or part of this contract or to any benefit to arise therefrom.

There is a corresponding clause in the contract on production between the John Inglis company and His Majesty the King in the right of Canada, under the same date. Am I not right in assuming that members of the Senate of Canada should likewise be debarred from any share or part of this contract and from any benefit to arise therefrom? No provision is made to bar members of the senate from the benefits of this contract. Would the Minister of Finance explain this omission?

Mr. ILSLEY: I will bring it to the attention of my colleague the Minister of Munitions and Supply and see if there is any explanation or whether it is just an omission. I would have thought the matter was covered by the House of Commons Act governing the independence of parliament and that it was not necessary to have that clause, but I may be wrong about that.

Mr. HANSON (York-Sunbury): That clause is often put in, and I have always thought it was an insult to members of parliament. I have protested against it on more than one occasion.

Mr. NICHOLSON: Why mention the House of Commons and not the Senate of Canada?

Mr. MARTIN: The Independence of Parliament Act does not cover shareholders.

Mr. HANSON (York-Sunbury): No.

Mr. NICHOLSON: Would the minister make a statement on this point after the dinner recess?

Mr. ILSLEY: I will bring it to the attention of my colleague.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. ROSS (St. Paul's): Mr. Chairman, the Minister of National Defence (Mr. Ralston) said before the dinner recess that we on this side should be satisfied with the way in which this debate has been carried on, because it was the method which Sir

Robert Borden used in times gone by. I took the trouble to look up *Hansard* of 1917 and 1918, and I found that there is quite a lot of difference. In 1917 Sir Robert Borden introduced a similar resolution in the House of Commons, and immediately started in and gave the full details of the estimates for 1914-15, 1915-16, 1916-17, and then the war estimates for the then current year. That was the procedure followed; there was a great deal of detail, and several other ministers spoke at that time.

In 1918 the resolution was introduced by the Hon. J. D. Reid, who, in introducing it, said:

> I may say that an understanding was arrived at between the Prime Minister and the leader of the opposition to the effect that the statement which is necessary to be made in connection with the resolution should be made on the second reading of the bill. It was decided between them that this resolution should be allowed to go through and a bill founded upon it introduced.

There was very little discussion about it. But what happened was that by mutual consent the resolution was allowed to go through. Then on April 10, Sir Robert Borden gave a full and detailed account of all the expenditures theretofore and the appropriations which would be necessary for that year for the carrying on of the war.

Even though the Minister of National Defence thinks the present procedure is good enough for us because of what was done by Sir Robert Borden, the resolution moved by Sir Robert Borden was for $500,000,000, which was a lot of money in those days, yet it was not quite on the same scale, either in vastness of amount or in the detail connected with it, as the resolution now before us, and it seems to me that the government should have taken a little more care to have the debate carried on in an orderly fashion. If the important point was to get the appropriation through quickly so that the government would have the money required to carry on with, there can be no question that, with the consent of the house, a proportion of the money could have been voted, just as for years we have voted a proportion of the estimates. Further, it would have been very easy to have had a book prepared giving in detail by departments all the estimated expenditures, without the necessity of having the ministers stay in their places and repeat the details to the committee. Had this material been printed, hon. members would have had an opportunity of studying it.

I admit that there has been a little delay, and possibly some repetition. On the other hand, under the system involved in this resolution, hon. members, who cannot be in their places all the time, may miss something, when it is brought up in this unorderly way, if they happen to be out of the chamber, and that naturally leads to repetition and loss of time. Had they had the estimates to study, much delay would have been avoided.

On the other hand, the last thing in our minds—in mine, anyway—is to delay anything. A plan such as I have outlined, whereby the estimates would go through without the necessity of ministers attending other than the minister in charge of the particular department, would save members of the cabinet a great deal of time.

It must be pointed out that our constituents are interested in knowing how this money is being spent. They want to know what has been going on. They want to know what progress is being made. It is our duty, even in times like these, to find these things out. The $700,000,000 which we voted last fall went through with hardly a murmur. Now, it seems to me, the people of the country are entitled to some details of the expenditures.

In connection with certain financial aspects of this resolution, for example matters affecting companies which are in receipt of capital assistance, the banking and commerce committee could be properly asked to investigate and find out what has happened, where there are no secrets concerned. I am sure that the public would be well satisfied if all material facts were brought to the light of day.

I suggest that, in future, some course such as I have outlined should be followed, and I do not think it is too late now to do something of the kind. Certain elements of these war expenditure estimates have not yet been accounted for: for example, items with respect to the post office, the national revenue—a small item, it is true—and fisheries. Possibly, when we get into committee on the bill, some such arrangement could be adopted.

Mr. HANSON (York-Sunbury): In connection with the Department of Agriculture, on page 1497 of *Hansard* the minister gave a statement of expenditures from April 1, 1940, to Janury 1, 1941. Included are these two items: disposal of Canadian apples, 1939 crop, approximately one and a half million dollars; disposal of Nova Scotia apples, 1940 crop, $1,172,000.

I had a complaint from New Brunswick about the disposal of Nova Scotia apples in New Brunswick, where the arrangement does not apply, and where, according to my correspondent, who is a truthful man, a grower, and much interested in horticulture, the local market was very much bedevilled by the way in which the marketing of Nova Scotia apples was handled. The minister may not have got my letter. If he has not, I would not expect

him to answer offhand. I had hoped I might get an answer from him before this. Possibly the matter has not come to his attention. Will he tell us what the explanation was?

While it is too late to cure what happened last fall and this winter, I should like to have some kind of understanding that it will not occur again with respect to the fairly limited market for New Brunswick apples in New Brunswick. I understand the crop is not large, not more than 50,000 barrels or so, and the local market can absorb it pretty well if there is no dumping from Nova Scotia. The marketing regulations might, I think, be tightened up a little bit so that at all events ungraded fruit will not be dumped into the New Brunswick market. The gravamen of the charge, as I recall, is that ungraded fruit was dumped into the New Brunswick market and sold at a price away below the market price, and that the difference was made up by this government. That, I believe, is the crux of the matter, and if it is true the situation is one that ought not to obtain.

Mr. GARDINER: I recall a letter having come to my desk. I sent a letter from the leader of the opposition (Mr. Hanson) to the department to get any information obtainable on the subject. So far as I can recall, no reply has yet come back to me, but as soon as I receive it I shall give full information. On the last point made, it would not be correct, as I remember the terms of the agreement, to say that on any ungraded apples dumped anywhere the government had assisted, unless it might be considered that they had done so indirectly, because ungraded apples of that type are not covered by agreement at all.

Mr. HANSON (York-Sunbury): I may be wrong about ungraded apples. Apples, we will say.

Mr. GARDINER: It is just possible that ungraded apples might be those that were dumped. We have had, for a time, some difficulty not only in Nova Scotia but in Ontario as well with ungraded apples. We have not full control over the sale of apples within a province. We would have as between Nova Scotia and New Brunswick possibly, but we have had difficulty with ungraded apples being sold on a market that we have been attempting to hold for graded apples in connection with which we have been giving some assistance financially.

Last year we attempted to carry on without any zoning. The previous year we had zoning under which we did not permit apples to be shipped from one area to another during certain seasons. Last year we attempted to get along without that provision, but we think there will probably have to be an element of it again this year in the arrangements under which, between certain times, it will not be possible to ship apples from one section to another without a permit from the government, so that we may have more control. I will look into the matter and get information which I will put in the form of a letter and send it to the hon. gentleman.

Mr. RALSTON: May I say a word in answer to the hon. member for St. Paul's (Mr. Ross). I do not think he gave the committee the dates and the time consumed in connection with the proceedings to which he has referred. Let us take the war appropriation legislation which was dealt with in 1917. The year 1917 was the third year of the war, corresponding to the year 1942 of the present war. In 1917 the war appropriation of $500,000,000 was the largest that had been asked for up to that time, and the resolution was introduced on February 1, 1917. Sir Robert Borden took altogether six pages of *Hansard* to make his statement. As I say, his resolution was introduced on February 1 and it passed on February 6, taking six days in all.

Mr. HANSON (York-Sunbury): By agreement.

Mr. RALSTON: No, not by agreement in 1917. The same day the bill was introduced and it was given three readings and passed on February 7. This resolution has been before this committee for a month. That shows the difference in the time taken in 1917 and the time taken on this resolution. As I stated before, I am not blaming any one. I repeat that the procedure which the government has adopted in the present matter is very similar to the procedure adopted by Sir Robert Borden. My hon. friend said that Sir Robert Borden gave a great deal of information. This is the information he gave.

Mr. HANSON (York-Sunbury): He gave a break-down.

Mr. RALSTON: No. He gave expenditures on account of the war. Of course he gave the expenditures for 1914-15 and 1915-16, because there were two years back which we have not; we have only the past year. He also gave expenditures for the preceding year for the different departments—no break-down but just for the different departments, at page 355 of *Hansard* of 1917. Similar information was given by my colleague the Minister of Finance. Sir Robert gave, second, an estimate of expenditures of the various departments, which was what my colleague the Minister of Finance gave. Sir Robert gave one more thing; he broke down his

statement into pay and allowances; rations and subsistence, other items of that kind: objects of expenditure such as I gave particulars of when I was speaking. The hon. member will find that practically no questions are asked in connection with these general items. Questions were asked on certain matters of policy, and it took only six days in which to do it. Sir Robert Borden's statement was an extremely general one. The only thing in connection with which he went into detail was the arrangement with the British as to capitation allowances, the amount paid for maintenance of troops overseas, and that is what takes up a great part of his statement. In 1917 it took from February 1 to February 7 to pass not only the resolution but the bill, and that was not in the first year of the war but in the third year. That is certainly quite different from the time which it has taken on this resolution.

I repeat, I am not blaming any one, but on behalf of the government I am not accepting blame for the course which the debate has taken.

Mr. NICHOLSON: I should like to discuss a few matters affecting the Department of National War Services. I am sure that all hon. members were interested in the description the minister gave some days ago with regard to the national registration, and I have no doubt that hon. members have been greatly concerned about the large numbers of people in the various constituencies in Canada who are still waiting anxiously for directions as to where they may find employment in the different war industries. The minister, speaking on Tuesday of this week, said that for some reason or another a great many people now think they should make application to Ottawa and they write to some minister or to some person connected with the promotion of some particular industry. He said:

> We simply had to advise them that all the information with regard to these matters is now, as it always has been, at the labour offices and that that is the proper place to apply; that they can get action quicker in that way than by applying to someone else somewhere else.

The difficulty in Saskatchewan is that the labour offices find it next to impossible to direct people seeking employment to places where they might find it. I had some experience with the employment office at Yorkton last year when the air training school was under construction. On one occasion I was told that there were some 700 employees on the waiting list, and one of our difficulties has been that apparently we have no machinery set up to make it possible for the unemployed to move from one part of Canada to another.

The minister, writing from Ottawa on July 27, said:

> We hope to be able to help the Canadian people by means of the information gathered —to direct those presently unemployed to employment, and to aid those who are employed in obtaining more gainful employment.

I realize that there are difficulties in carrying out an objective of that sort, but the letter was written on July 27 and I think the department should be able to report by now some progress in that direction. Hoping that some machinery would be set up by November, I wrote to the associate minister stating that I had received a letter from the secretary of the Pelly branch of the Canadian Legion in connection with finding employment for the daughters of one of the veterans of the last war, one girl aged twenty-five and the other nineteen, and that I wondered if he could give me information as to where and when employment might be found. The associate deputy minister replied, saying:

> I would strongly suggest that (the) two daughters write to the secretary of the commission and secure applications.

The reference was to the civil service commission.

> They should complete the same and return them. Thus they will be in line for employment in the future as and when further employees are being sought.

I discussed the matter with the secretary of the civil service commission and was advised that it would be misleading to these girls to encourage them to make application to the civil service commission because at present they had no machinery for the placing of girls who were not stenographers or had no other special qualifications. Therefore, on the advice of the secretary of the civil service commission I did not carry out that suggestion.

The associate deputy minister went on to say:

> I have had a good many letters from people in the west with special qualifications amply fitting them for employment in war industries, and I have suggested to them that they go to their nearest employment office, register thereat, and ask the manager of the office to communicate with the employment offices in the larger industrial centres of Canada. These offices are pretty well informed as to where employment is to be found. In this way they do bring together those seeking employment and those seeking employees.

The letter went on to say:

> The whole problem is very much to the fore at the moment, and I know is being thoroughly canvassed and considered by the Department of Labour and the national labour supply board. It will also be given consideration by the minister of this department, the Hon. Mr. Gardiner, on his return from Great Britain.

That letter was dated November 6. The difficulty seems to be that we have not any machinery that will enable the people seeking employment, in Saskatchewan for example, where we have no war industries operating at the present time, to get in touch with industries in Ontario or Quebec. The minister mentioned the other night that they have machinery here, so that manufacturers wishing employees could find out where properly qualified people might be found, and I am sure that a valuable piece of work is being done in that connection. I should like, however, to ask what machinery we have for keeping these cards up to date. The registration took place last August. Is there an up to date record as to which of those registered as unemployed last year now have employment, so that manufacturers who wish to secure toolmakers, for example, or steel workers, could obtain the names of those who were unemployed in that particular industry and know whether or not they are now working? Further, what progress is being made towards directing the unemployed to where they might find employment in other parts of Canada?

Mr. GARDINER: I think the system under which the direction is given is pretty well outlined in the letter written by the associate deputy minister. In the first place, as I stated the other night, there is in the statistics branch of the Department of Trade and Commerce, which is doing this work now at the request of the war services department, a list of persons across Canada who are capable of doing certain kinds of work. So far as industries that require that type of labour are concerned, there is no difficulty; they can make application to the department and get lists from any part of Canada they desire, and with those lists they can make inquiry and engage as many of those persons as they require.

When the initiative is taken by the industry, the machinery is to be found in the lists that are available. As to keeping the lists up to date, an effort is made to do that. That effort will not be entirely successful unless there is one hundred per cent cooperation on the part of those looking for jobs; that is, if they move from one place to another, they should notify the branch keeping the lists. An attempt is being made to get that done, but it may not be done quite one hundred per cent.

On the other hand, individuals desiring to find employment should as far as possible follow the advice that was given by the associate deputy minister; that is, they should use the machinery which has been set up by the Department of Labour at Ottawa, cooperating with the labour branches in the different provinces, by listing their names with the labour offices. It is assumed that if they request that that be done, those names will be filed at the centres where industry is situated and where employees may be required. In so far as that is done, I think the machinery makes it possible to bring the unemployed person in touch with the industry where employment is available.

Further, I do not think it is impossible for the individual to get service by writing direct to the labour offices in the larger districts and seeing that their names are filed there. In other words, it is to be assumed that the individual will do everything possible on his part. I know that most are anxious to do that, but they often do not know just how to proceed. If we as members, when we get communications from individuals seeking work, would try to instruct them along that line, sooner or later the greater number would at least know how to make use of the machinery that is available. We are putting out information regarding it from time to time, but I am afraid it does not always reach those desiring it.

I do not think there is anything I can add so far as the machinery set up is concerned. I am doubtful whether we could set up machinery that would be any more complete. We might change the administration from one department to another and get more of it into one place, but it is a question whether that would produce any better results.

The other difficulty referred to by the hon. member was that of persons getting from where they are to the place where employment might be found. The information that I have is that with regard to most of those who are requiring employees, that is in connection with war industries or shipbuilding, when they have been able to locate persons suitable for their employment there has not been any great difficulty in having funds advanced to take them from where they are to the place of employment. The main difficulty is, I think, to convince the industry that the individual is qualified to do the work so that it will take the chance of paying the transportation. It would probably be just as difficult to get government bodies to do the same thing. We have, of course, the additional difficulty that there may be a certain amount of unemployment in a province, and if persons were to be moved into that province from another one, the provincial government would probably have to be consulted. The machinery, however, is there, making it possible to bring about the contact. It may be it is not sufficiently generally known that the machinery is provided.

Mr. DOUGLAS (Weyburn): What has been done by the voluntary service registration bureau? Is it still functioning, or has its work been taken over entirely by the national registration?

Mr. GARDINER: The voluntary service registration bureau was conducted in the first instance under the Department of the Secretary of State. All the applications made to any of the departments of government early in the war period were turned over to that organization. In addition, persons made application direct, knowing that the organization was there. There was a very considerable list of persons who sent in their names from all across Canada. That list, I am told, was combed thoroughly by the supplies department when it was first set up, and information with regard to the names contained therein was passed on to industry, which made some use of it but perhaps did not take all the persons who thought they should have been employed as a result of having registered in that way. At the present time the list is still with the Department of the Secretary of State, but I believe it is just in process of being turned over to the Department of National War Services, to be used along with the lists we have, although I would suggest that hon. members should not take from this that no use has been made of that list since the present department was set up. That list has been consulted from time to time, and from it have been taken the names of persons available for certain types of employment, where that was requested by industry.

Mr. GREEN: How many names are on the list?

Mr. GARDINER: I have forgotten; there are some thousands.

Mr. GREEN: Last summer it was reported that there were 75,000 names on it.

Mr. GARDINER: I imagine there would be that many. For the benefit of the committee and, I think, of the country, I would say that I believe those who made up that list had very much the same experience as we have had from the lists under the registration. It will be noted that in Ontario, for example, there is a very large number of people between the ages of thirty and fifty, a much larger number than perhaps one would expect. It is unfortunate that a great many people between the ages of forty and fifty and even between fifty and sixty, who found themselves unemployed during the period of depression, are finding the greatest difficulty in getting back into employment again. I regret, as I am sure every other hon. member will, that this is the situation. Probably the time will come when it will be necessary to urge, much more strongly than we have been able to do up to the present, that many of these persons be employed in industry. It may be that younger people could do the work to better advantage, but there may be some other work to be done by younger people that older people can not do, and in such instances it might be necessary to urge the employment of many of those who were on those lists made up under the voluntary effort. Not only does that apply to voluntary effort; I think a large part of those seventy thousand names will be found in the one or other of the ten-year age groups referred to in Ontario at the present time, and the same thing will be true right across Canada.

Mr. MUTCH: It seems to me that we in this house are in danger of overdoing the slogan, "This time we are all in the front line." With all proper respect to the author of those words, so far as Canada is concerned they simply are not true. It is not only untrue that we are all in the front line in Canada; unhappily it is true also that many of us apparently have not realized the magnitude of our task, which is to get on with the battle itself. It is now a month since we began to deal with this resolution, and perhaps we should note that it is not taking nearly so long to deal with the seven billion dollar appropriation which is being discussed in Washington to-night.

This debate has lagged disgracefully. It is a spectacle that reflects no credit upon either the earnestness or the sincerity of any of us in this house. To emphasize in its defence the importance of opposition is to insult the intelligence of all, and does not fool anybody. The word "break-down", I think, has become almost overworked during this discussion; I believe if we took out that one word we would save a day or two. The break-down, if there has been a break-down in this house, has been the break-down of the opposition which, bankrupt of ideas, keeps bobbing up, hinting this and insinuating that. As a result of this procedure, two conditions have arisen in this house and in the country. In the first place, unthinking criticism has had and is having the effect of widening the gap between the government and the public, or perhaps it would be better to say the gap between parliament and the public; and this at the very time when public confidence is essential to victory. The second result of this recognized weakness has been that the newspapers of the country have been led to attempt to usurp the function of opposition, to become the thoughtful, informed critics of the administration. Apropos of that

situation, I should like with your permission, Mr. Chairman, to recall the words of a very wise American editor, now dead, who said: "A government without newspapers would be intolerable. A government with newspapers is endurable. A government by newspapers would be the worst conceivable."

Linked with the folly of criticism without regard to ultimate consequences is another evil which is sometimes evidenced in this house. We have been told how difficult it is for a camel to pass through the eye of a needle. Sometimes I have thought that a camel passing through the eye of a needle would have an easy time compared with the problem of a cabinet minister admitting an error in judgment. This chamber has been called the last refuge of free speech, and that has not been a jocular reference. There is real reason to agree with the thought that in this country it is the last refuge of free speech. But that does not justify or excuse licence in connection with this forum. We have been singularly free from licence, in the sense of misuse of our privileges, but this does bring me to one or two conclusions.

The first conclusion to which I have come is that in this country we have been a bit silly about censorship. I do not think any real harm has been done, but personally I object to the banning of publications because they hold views which are unpopular or not in accordance with those of the majority of us. I protest against that sort of thing; in my opinion it is a violation of the rights of the citizen. I do not think it heals any breaches in public opinion. I think it accomplishes no worth while end. Our cause—the cause of the government, of parliament, of the country and of the empire—is a just one; I think we can justify ourselves both at home and in the eyes of the world with regard to our methods of protecting the system of society in which most of us still believe and have a good deal of confidence, without resorting to the very practices against which we are fighting at the present time. I should like to make it perfectly clear that I am referring not to military censorship, but rather to the type of censorship which is aimed at things, written or oral, with which the majority of us happen to disagree.

Even I know the exasperation which comes from attempting to answer carping criticism. Most of us, perhaps, have not the consciousness of virtue which cloaks almost all governments—and I suppose always will—like a mantle; but even you and I would sometimes choke off thoughtless criticism if we dared or if we had the opportunity. I think we all need the criticism of both friend and foe in order to retain our proper perspective, and in any event, to my mind this is the essence of the democratic principle.

This unreality of the proceedings here during the last month or so; this failure to face up to our situation, as evidenced by our deeds rather than by our words, has come as a shock to people outside the house. I have no hesitation in saying that the atmosphere which pervaded this house during the first ten days of our participation in this war was something which will not be forgotten by anyone who had the privilege of experiencing it. A good deal of that has, it seems to me, evaporated somewhere in the meantime. And in spite of the example of those in other lands who have been lulled by temporary inaction we are following the same fatal practice here, and trying to do business as usual. It occurs to me that with respect to the debate on this resolution, in particular, the government is not to blame. With praiseworthy promptness the resolution was put before us. We may haggle about the method of it and the phraseology of it, or the general practice with respect to it, but the fact remains that within forty-eight hours of the time we arrived here we had an opportunity to begin our deliberations.

We the members of the House of Commons in all parties are those who are responsible for delay. Our people are willing and anxious to be led to greater things than any inspiration they can get from this last month in the House of Commons would justify. Every day since I first came to this chamber in 1936 I have had the opportunity to sit on the opposition side of the house. And during the last days I have been here I am bound to say I have been more comfortable about it than I had ever been during the previous time. I am not paying tribute to any changes or to any newcomer on this side of the house, when I say that. But, disturbed as I am about what I conceive to be the unreality of our attitude, it is worth something to me to be able to sit on this side of the house day by day and to be able to look into the face of the one man who, I am sure, has looked into the future with eyes undimmed by false hopes and without being motivated by pious wishes. I seek the opportunity to say that because I believe it represents not only the view which is my own, but the view of those whom it is my privilege to represent.

We have been rather tender about mentioning politics in the last little while, except to mention it by suggestion or innuendo, as something which is a bit discreditable. In connection with that I have a word or two I should like to say. There is a form of political brigandage which is not confined to the east

or to the west, and which is not entirely confined to political parties. It creeps sometimes into organizations of persons who have banded themselves together for purposes other than the promotion of the government of the country. I do not care whether that type of propaganda—politics—is cloaked in the verbal garb of patriotism or whether it comes out openly as a kind of self promotion; it is something which should be scotched. No dignity should be lent to it by taking it into consideration in the deliberations of this chamber.

I wonder whether we have so soon forgotten the spirit of sacrifice that built this country? I wonder whether no one does any more dedicate himself or herself to the task which is ours with something of the fine fervour of the Jesuit fathers, the covenanting Scot, the Puritan pilgrims or the huguenots? Men starved and froze, strained every nerve and tissue to make this country what it is and to win the privileges which we have, to the protection of which we all give lip-service in between bouts of seeking our own selfish ends.

Some excuse themselves on this account from greater service on the plea that there is in the war effort inequality of sacrifice. There never was and there never will be equality of sacrifice with respect either to the war effort or to any of those problems or those efforts which require sacrifice. Sacrifice is not something which can be measured in a measuring cup, or with a yardstick. Sacrifice involves—if it means anything at all—giving all an individual has. Fortunately or unfortunately, all are not equally endowed.

Let me repeat that equality of sacrifice is an objective always to keep in mind, bearing with that thought the realization that there is not any common yardstick for measuring it. In debates such as this, and in consideration of problems such as we are now considering, it has become a political catch-phrase, the cloak of the demagogue and those who imitate him.

At this point I should like to say a word or two about questions which have been asked during this session. In my opinion, most of the questions which have been asked in the house concerning the military efforts of Canada were improper questions. And I make bold to say that at least some of the answers which were made were at least indiscreet. The first reason I believe for the asking of improper questions arises out of an honest desire to understand what is taking place. Perhaps in some instances some of us ask questions in the hope that by asking our questions we may give the impression that we understand something which, in fact, we do not understand. Generally speaking, I fancy the real reason is an honest seeking after information. The question-harassed minister perhaps cannot resist the chance to give some credit to his hard-pressed staff, who are seldom offered anything in the way of praise. If they have accomplished something worth while, the temptation must be great to give some credit, because no one would assume that the minister had done it all himself. Perhaps under those circumstances we sometimes hear too much.

I fancy only a fool would try to guess what issues will predominate at the next election in Canada. That being the situation, I am at a loss to understand a good deal of the delay we have had in this debate. I am not so foolish that I cannot understand honest questioning and serious debate, but I have heard a good deal which I believe frankly was not serious, and I have read more of it than I have heard. If we admit, and we must admit, that we do not know what is going to be our problem in three or four or five years from now, I cannot see the point of spending so much time in raising little issues which the whirlwind of the next two or three months or the next two or three years will carry into oblivion—possibly with some of us, ourselves. But there is an issue which is conceivable, namely, the preservation of this chamber and the system it stands for. Every idle word spoken now, every utterance of political clap-trap and every careless word that mars the mutual understanding and co-operation of all elements in this country and in this chamber will be turned against those who in that day champion the cause of parliamentary and representative government.

If there are failures and follies in the war effort of this country—and there are; I do not think anyone denies that—we have an opportunity, and many have taken it, of going directly to the minister or the ministers who are responsible, and placing the situation before them. After all, they are the only people who can do anything about it. I say it ill becomes anyone who professes to be interested in promoting that effort to pin medals on his own breast for discovering the fault, when our real and earnest endeavour should be to draw the fault to the attention of those who are responsible, in order that the machinery may be perfected.

By the same token it seems to me that those who accept responsibility in a time like this should not regard criticism as sacrilege. Our problems are a bit too serious to let personal considerations on either side of the question enter into it at this time. I might venture a word of warning, and perhaps one of advice, since I am not one in the habit of

taking either. The pressure of war administration and the hand of time will too shortly, as most of us believe, deplete the ranks of those schooled in the practices of government, and steeped in the traditions of our parliamentary system. It is time those in authority began to train in the school of experience—and I do not mean just the government; I mean those of all parties who are interested in the preservation of our institutions—some who will be called upon to carry a share of the load, some who may be trained in the school of experience to meet the problems which will come. It is putting too much on Providence to believe that we can simply coast along through this war period and go through whatever is coming afterwards, and that the Lord will look after everything and raise up properly trained people to take care of the situation. I might illustrate my thought by referring to my immediate neighbours to my left. Certainly no one would say that the Conservative party is a godless party, but yet at this very moment it is a headless party, by its own admission. That is not due to Providence but partly due, at all events, to the improvidence of the party itself. That is something we might well think about.

As a Liberal who does not believe that the Liberal party has a monopoly of all grace; as a staunch believer in the two-party system; and as a sincere Canadian, I pray for the emergence of the sort of opposition which with watchful eye and helping hand will press onward with the government in order that we may speedily win the victory upon which the survival of all of us depends.

The hardest lesson which we have to learn, and some never learn it, is that war alters all values. We all need to remember that a decision which is or may be regarded as bad politics should be taken cheerfully by each and every one of us if we honestly believe it is in the interest of our common aim which is victory. By the same token, it borders on treason, just for the sake of winning some political or personal advantage, to destroy public confidence at a time when so much sacrifice is asked of those by whose grace we happen to be here.

Some day this government will disappear. It will be defeated. That is a situation which I think Canada can face with a reasonable degree of equanimity. Some day our Conservative colleagues will form a government, and I believe that Canada will survive even that. But the thing we must above all be afraid of and avoid is the failure of our free institutions of government themselves to survive. I am of opinion that by our action here, or perhaps by our words and lack of action, something is being done to destroy the confidence of our people in those institutions which we should be doing everything to uphold. Parliament as an institution is in the hands of its members, and when some of us forget that, we all suffer for it.

Finally, referring back to what I said before, I think we should all question the wisdom of the slogan that now we are all in the front line. I think that breeds a sort of atmosphere among our people which I do not think is helpful. And growing out of that, I would say that the sons, brothers, mothers, sisters, wives and sweethearts of our soldiers, sailors and airmen, and our men themselves, have a right to expect us to match in some measure the sacrifices which they themselves so freely make.

Mr. GREEN: Mr. Chairman, for the last few weeks the Minister of Mines and Resources (Mr. Crerar) has been having a fairly easy time in this house, although I have no doubt that he has been more than doing his bit outside. To-night I should like to ask him a question with regard to the guest children coming from Great Britain to Canada. I see in the war appropriation estimate the sum of $244,800 which is earmarked to cover "expenses re British evacuee children." We have been reading in the press during the last few days, how badly the people of Great Britain are being bombed, with an increasing number of casualties which no doubt include many children.

In the annual report of the Secretary of State for External Affairs for the last calendar year, at page 8, I find:

> The total number of applications from British parents exceeded 70,000 up to July 5, 1940, when postponement of the scheme had to be announced, due to the difficulty in securing convoyed shipping space.

The report goes on to say:

> On September 20, 24,130 children had been approved for Canada; 1,538 had actually sailed.

In other words, there are about 23,000 British children who have been approved for passage to Canada but have not been able to come out. The British children who have already come to Canada have won the hearts of the Canadian people. They have been more than welcome, and I believe that there are thousands and thousands of Canadian homes open now for children from Great Britain but unable to get the children. Some one has said that as many as 50,000 children could be placed. I think that just at this time it would cheer the people of Great Britain very much if this house could show beyond any question that we are only too anxious to welcome and take care of every single British child who can be brought to

this country. I would ask the minister to make a statement with regard to this matter.

Mr. CRERAR: It is quite true, Mr. Chairman, that the committee has heard nothing from me so far in this debate. I would not, however, want the hon. member for Vancouver South (Mr. Green) to get the impression that it has been altogether a pleasure to me to listen for four weeks to a discussion on this appropriation bill ranging over almost every subject that one could imagine. We have had monetary theories expounded, opinions given as to how the war could be won, discussions on the merits and demerits of lignite and bituminous coal, as well as the discussion of a great many other subjects as I have observed with much interest, when I have been listening to the debate.

On the subject of British guest children which has been raised by the hon. member for Vancouver South, he has, I think, stated the pertinent facts pretty well in quoting the extract he read a moment ago. As I recall it, between 1,500 and 1,600 of assisted passage British children have reached Canadian shores. In addition, there were several thousand, as I recall, approximately 5,000, who, some with their parents and some without their parents, found their way to Canada without any assistance from either the British or the Canadian government.

Mr. GREEN: Did the minister say 5,000?

Mr. CRERAR: Yes; my recollection is that it was about 5,000. I give that figure with reservation because I do not recall the exact number, and as I said a moment ago, between 1,500 and 1,600 of assisted passage children came out under arrangements made between the two governments. The movement started in the latter part of last summer and continued for several weeks, but as the autumn closed in and the danger of transport across the ocean increased, the British government of its own volition suspended the movement for the winter months. So far as we are aware, it was the intention of the British government to resume the movement with the coming of spring. It will, however, be in the minds of every hon. member, I am sure, that the risks to-day are even greater than they were a year ago, and consequently the British government and the British parents who might wish to send their children to a safe haven in Canada have to make a very difficult and tortured decision as to whether it is safer to keep the children in Britain, subjected as they are to bombing, or to take the risks of transferring them across the Atlantic, where they may be subjected to submarine attack. Consequently, it is not for the Canadian government to advise the British government as to what they should do under these circumstances. The people of Britain are the best judges.

There is no misunderstanding in the minds of the British government or the British people as to the willingness of the Canadian government and the Canadian people to give asylum to all the children they can send to this country. That has been made very clear on more than one occasion; and we simply have to wait on events and see what course the matter may take in the light of the conditions of the war as they develop in the weeks which lie immediately ahead.

Mr. GREEN: It is perfectly clear that we will welcome all the children that can be sent?

Mr. CRERAR: There is no question of that.

May I just say an additional word on how the scheme has worked out so far as the children are concerned. Hon. members will recall that the basis of operation of the scheme was the utilization of the existing welfare agencies in each of the provinces. As a result of conferences held in Ottawa, the plan was developed and homes were carefully inspected by experienced social workers as to their suitability for the reception of the children. That occurred in every province. Here may I pay a very large meed of praise to the provincial governments and to the social welfare agencies under their control which have cooperated in making this scheme, I think, a fine success. These children have been placed all across Canada. It is true that occasionally changes of homes have had to be made; that was inevitable; but I think I may say with confidence that the plan has worked out excellently and that the overwhelming majority of these children are happy and safe; and that is the important thing.

At the commencement of the scheme the British government sent a representative to Canada who was attached to the British high commissioner's office in this city. In the late months of last year and, I believe, the beginning of the present year, this gentleman made a trip across Canada, personally visited a great many of the homes in which children were placed, and met the people who had the direct supervision in the provinces. When he returned he came to my office to express his satisfaction on the whole with the manner in which the plan has worked out. If there are complaints, they have not come to my notice. I think I would have heard something of them if the scheme were not working out on the whole satisfactorily. I have not received by letter a single complaint from any part of

Canada as to the operation of the scheme, and to the best of my knowledge and belief it is working out in a satisfactory manner. These children are being cared for as though they were the children of the homes in which they are placed. They are receiving proper medical and dental care, adequate clothing for winter weather, and all the educational facilities that the communities in which they reside can provide.

I wish to say here publicly a word of thanks to the supervisory committee that has had under its close and unremitting attention the welfare of these children. As hon. members are aware, Doctor Wallace, president of Queens university, is chairman of this committee; Mr. Logan, president of the Canadian Bank of Commerce, is honorary treasurer of the committee.

It may be of interest to the committee to know that quite a considerable sum of money —I cannot at the moment give the precise amount—has been received, not in response to a public appeal, but by way of voluntary giving on the part of many people throughout Canada and some in the United States who have made contributions to the welfare of the children. These gifts have been applied to such extra expenses as are involved in hospital, medical and dental care where the homes in which the children were placed have not the means themselves to provide these necessaries.

I am glad that the hon. member asked the question, because it has given me the opportunity to state just how the scheme has worked out so far. The amount in the appropriation bill to which my hon. friend referred, is, of course, an estimate. Should the movement be resumed in a large way, all the money may be required. It is put in for that purpose and is about as close a guess as we are able to make at the present time.

Mr. DOUGLAS (Weyburn): Could the minister give us any information as to the distribution of these children over the different provinces? Have most of them been located in one province, or have they been distributed pretty well over the various provinces of Canada?

Mr. CRERAR: I could get that information for my hon. friend; I do not have it at the moment. They have been distributed to every province in Canada. I should say, to hazard a guess, that there are probably more in Ontario than in any other province.

Mr. CASTLEDEN: Has any part of this expenditure been made to pay people for keeping children?

Mr. CRERAR: No, not beyond the items mentioned a moment ago.

[Mr. Crerar.]

Mr. CASTLEDEN: Yes, I understand—social service.

Resolution reported, read the second time and concurred in. Mr. Ilsley thereupon moved for leave to introduce Bill No. 19, for granting to his majesty aid for national defence and security.

Motion agreed to and bill read the first time.

NATIONAL PARKS

PRINCE ALBERT—PROVISION FOR WITHDRAWING CERTAIN AREAS OF LAND AND ESTABLISHING NEW BOUNDARIES

Hon. T. A. CRERAR (Minister of Mines and Resources) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to amend the National Parks Act for the purpose of withdrawing certain areas of land from the Prince Albert national park as presently constituted, and for establishing new boundaries for the said park as a consequence thereof.

Mr. HANSON (York-Sunbury): Will the minister explain the object of the resolution? It withdraws certain areas of land from the national park in Prince Albert. What is the area, and what is the purpose of the withdrawal?

Mr. CRERAR: The total area of the Prince Albert national park at the present time is 1,870 square miles. It is proposed to reduce that by 376 square miles, leaving the park thereafter with an area of 1,494 square miles. The part that will be taken out under this legislation comprises three different blocks, one a comparatively large block which is rather swampy with a certain amount of timber and which, as a matter of fact, should not have been included in the park area in the first instance.

Mr. MacNICOL: Who is asking for it to be taken out?

Mr. CRERAR: I will deal with that in a moment. I should say that the areas taken out of the park will revert to the province, but we have reached an understanding with the province that one block of eleven square miles, which is fair agricultural land, will be added to an Indian reserve near the southeast corner of the park. This additional block of eleven square miles will prove very useful to the Indians on that reserve for development in an agricultural way, and the other small block will probably be opened up to settlement. It lies on the southern boundary of the park.

The reason for this is that it will reduce to some extent the cost of administering the

park. The area has to be patrolled to guard against fire and to protect it against illegal trapping, because trapping is forbidden in the park. After giving the matter considerable thought, the park officials came to the conclusion that the exclusion of these particular areas I have mentioned would reduce the cost of administration and would not detract in any way from the purposes for which the park was created. After I had studied their recommendations, I agreed with them.

Mr. NICHOLSON: Has any survey work been done by the minister's department to find out whether the land to be set aside for agricultural purposes is suitable?

Mr. CRERAR: No, we have not made any particular surveys of the land. We know the general nature of the land, and we know that similar land is being farmed to-day. My hon. friend is familiar with the Prince Albert district. He knows that north of Saskatchewan river, north and west of Prince Albert, there is fine agricultural country developed as a result of clearing timber off the land, and the information I have is that the two smaller blocks, one of which goes to the Indian reserve, are land of this type. It would be suitable for settlement.

Motion agreed to and the house went into committee, Mr. Vien in the chair.

Mr. HANSON (York-Sunbury): The minister gave a brief explanation and, so far as I know, there is no question about the matter. Is it the primary object of the bill to cut down the cost of administering the national park?

Mr. CRERAR: Yes.

Mr. HANSON (York-Sunbury): Is there any other object?

Mr. CRERAR: Not that I am aware of.

An hon. MEMBER: Who recommended it?

Mr. CRERAR: The recommendation came from the officers of the department.

Mr. NICHOLSON: Has the department of natural resources in Saskatchewan been consulted? Has it made representations expressing a desire to secure these lands?

Mr. CRERAR: Not that I am aware of. The matter was taken up with the Saskatchewan government, because the land will revert to them, and we wished to secure these eleven square miles for the Indian reserve, to which they agreed.

Mr. HANSON (York-Sunbury): That area of eleven square miles will have to be dealt with in the bill?

Mr. CRERAR: Yes.

Mr. COLDWELL: Has this land which has been classified as agricultural been surveyed by the soil survey department of Saskatchewan? I ask the question because a great deal of land in that part of the province which was thought to be good agricultural land was found after a few years to be leach land and not really suitable for agricultural purposes, although it looked all right. Saskatchewan, has, I believe, done more in soil survey work than any other province, and I was hoping that before any of this land in the north country was opened up for agricultural settlement, the soil survey branch of the university of Saskatchewan would first of all advise as to its suitability. I wonder whether, in throwing open this land out of the park, attention has been given to that matter. In my opinion it is of vital importance, because we are going to have a further relief problem in northern Saskatchewan for the reason that people have settled on land which is not really suitable for agricultural purposes, because it is so badly leached.

Mr. CRERAR: The larger area I spoke of, lying to the east of the park, is, I am informed, not suitable for agricultural purposes. It is more or less swampy, with some timber. The two smaller areas, one of which goes to the Indian reserve and the other lying at the southern part, have been described to me as fair agricultural land. As regards the part that goes to the reserve, the Saskatchewan government will have nothing to do with its administration. So far as the other part is concerned, that which lies westerly and at the southern boundary of the park, when it will be opened up for settlement and the conditions under which it will be opened up are, of course, matters for the provincial government to deal with. I should think it likely, although I have no knowledge of the subject, that in the light of their experience in the past they would probably have soil surveys made, such as the hon. member for Rosetown-Biggar (Mr. Coldwell) has referred to, before opening up the land for settlement. That, however, is a matter wholly for the Saskatchewan government to determine. Of course we did not make the provision; indeed, it would have been wholly unwarranted on our part to have made it a condition that they institute a soil survey of this area before they would open it to settlement. We simply arranged with them to take it back. The conditions of settlement are for the Saskatchewan government to determine.

Mr. CHURCH: It seems strange to me why the National Parks Act is being amended for the benefit of these prairie parks, although I am not objecting; but during the last two

or three sessions there was a proposal for an amendment as far as Ontario was concerned, which is almost a similar case, and nothing has been done. Ontario has the smallest area in national parks of any province of the dominion. The proposal was to link up all the government properties from the Trent canal, lake Simcoe, Muskoka, Parry Sound, right through to new Ontario into a grand scheme of national parks, with Muskoka which is very suitable both in summer and winter. What has become of that proposal?

Mr. CRERAR: I think there was some discussion along the lines my hon. friend has mentioned; indeed, I think he himself advanced that in one of his occasional speeches in the house last session. But there was no proposal of any legislation to amend the parks act or enlarge the parks to take in the various areas he has mentioned. Legislation is necessary in this case because the park boundaries are set under the National Parks Act, and consequently we cannot reduce the area of a park or enlarge it without legislation. The purpose of the legislation in this case I have already stated.

Mr. HANSON (York-Sunbury): What has become of the proposal, now six or seven years old, to set up a national park in New Brunswick? About 1934 the former government undertook to establish a national park in that province, and an expert was sent down there to make a survey of the several locations suggested. One, known as the Lepreau area, I think got grade A; the other in Albert county, which some people sought to call the Bennett national park, got grade B. Before that squabble was settled, the change of government came and the Bennett park disappeared. Then a new provincial government came into power in New Brunswick, and I suppose there must have been a dozen—that may be an exaggeration, but at least there were three or four new entries in the race for the location, including one in Victoria-Carleton, and another in Queens county. Perhaps the minister would tell us if that has died a natural death, and who was the executioner?

Mr. CRERAR: I would not say it has died either a natural or an unnatural death; I think the idea still has the breath of life in it. An examination was made of several sites, and that data is available in our parks branch. I would draw the attention of my hon. friend to this, that two considerations have to be met before a national park can be established in New Brunswick or anywhere else. The first is that the area selected must be suitable for park purposes. I am sure that no difficulty will be experienced in meeting that condition in the beautiful province of New Brunswick. Indeed, I have heard it said that the whole province is a park.

Mr. HANSON (York-Sunbury): Yes; I agree with that, but not with the implications of that statement.

Mr. CRERAR: The next consideration—and I think this is where the difficulty arose in 1935 or subsequently—is that the area must be conveyed for park purposes without charge to the federal government.

Mr. HANSON (York-Sunbury): In other words, the province has to deliver the goods.

Mr. CRERAR: When it comes to establishing a park in New Brunswick, where settlement has existed for many years in practically every part of the province, it means, or at any rate I am so informed, that private properties have to be acquired by the government.

Mr. HANSON (York-Sunbury): Some private properties.

Mr. CRERAR: Some private properties have to be acquired by the provincial government and transferred free of charge to the federal government. I think that is where the difficulty has arisen. Certainly for two years at least after this government came into office we had a vote of $25,000 a year to carry on preliminary surveys, once the area had been made available to us. So far it has not been made available. I am not criticizing anyone for that; I think very obvious difficulties have arisen. I think it is quite impossible during this time of war to proceed with the establishment of any new parks. I would have great difficulty in convincing my colleague the Minister of Finance that it is desirable to spend money in developing new parks during the war. I have no doubt, however, and I express my own view in the matter quite frankly, that New Brunswick should have a national park, and that when the troubles we are now experiencing have passed away, that province will have a national park.

Mr. HANSON (York-Sunbury): I agree entirely with the last proposition of the minister, that it would be ridiculous to talk about establishing a national park in any province to-day. But I might give him a little piece of information. A park would have been established if his friends in the provincial government could have agreed among themselves, but they absolutely failed to do so.

Mr. CRERAR: I, of course, have no knowledge of that. We deal with these matters, or at any rate we endeavour to, in a coldly realistic way in the departmental administration.

Mr. McIVOR: I think this discussion is getting out of order, but if it is in order to discuss the parks of Canada in general I should like to present a claim for Kakabeka falls near Fort William.

The CHAIRMAN: I would point out to the committee that my task is rather difficult. I have tried to apply the rules, but a custom developed during the last debate of allowing the greatest possible latitude of discussion to all hon. members. I am sure, however, the question of the hon. leader of the opposition was altogether out of order on a question with respect to the boundaries of a park in Saskatchewan. Therefore the point of order is well taken.

Mr. HANSON (York-Sunbury): I shall not pursue the matter any further.

Mr. CASTLEDEN: What is the name of the Indian reserve to which the eleven square miles is being added. Is that the reserve just north of Birch Hill?

Mr. CRERAR: I am sorry I cannot give my hon. friend the name of the reserve at the moment, but I can describe its location fairly accurately. As I recall now, it is at or near the southeast corner of the park.

Mr. CASTLEDEN: In one of those reserves there is a valuable piece of land on the south side of the Saskatchewan, and I wanted the assurance of the minister that it was not the intention of the department to exchange the eleven square miles which are being added to another portion of the reserve for that very fine piece of land on the south side of the river, which now is included in that reserve.

Mr. CRERAR: Oh, no; we would never think of such a thing.

Mr. NICHOLSON: Just what is the saving likely to be? I have not had any communications in connection with this park, but it is one of the most valuable tourist centres in Saskatchewan, and we would be greatly disappointed if the beauty of this park should be in any way affected by any such transfer of properties. Could the minister estimate what will be the saving to his department as a result of this transfer?

Mr. CRERAR: I have no definite figures that I can give my hon. friend as to the saving. Perhaps we might save the expense of a few fire rangers who patrol this area, since, as I have said, it is largely swamp and timber. I can assure my hon. friend that it does not add anything to the beauties of the park; as a matter of fact, it should not have been included in the park area in the first instance. Occasionally we have changed the boundaries of parks where experience has indicated that it was advisable to do so, and the recommendation for this change came from the officers of the parks branch. As I stated in reply to a question by the leader of the opposition, after I had looked into and studied the matter I agreed with their recommendation, and consequently the resolution is here.

Mr. CHURCH: Who is requesting this amendment?

Mr. FRASER (Peterborough West): I would suggest that the minister get for us the figures with regard to the administration costs of the park; and, as the hon. member to my left suggested, what is going to be saved. We have all too few parks across Canada now. I understand that this year we are going to spend $500,000 in advertising to bring tourists to Canada; but if we cut down our parks by so many square miles each year, in another ten or fifteen years we shall not have any parks. We must have some attractions to offer the tourists. The minister says these are swamp lands, but I think that is the very part that should be retained, because that is the part of the park where the deer and wild animals feed during the winter.

Mr. CRERAR: I think I would be in a position to give the hon. gentleman the information he has requested with regard to savings when the estimates of the parks branch are before the committee at a later stage. Let me relieve his apprehension at once as to the effect of this transfer on the general park system of Canada. I agree that it is desirable to have these national playgrounds, and for quite a number of years now, successive dominion governments have spent considerable sums of money in developing our parks. Since the present government came into office at the end of 1935, two new parks have been developed or are in process of development, one the Cape Breton Highlands park in Nova Scotia—

Mr. HANSON (York-Sunbury): Which will be one of the best in Canada in time.

Mr. CRERAR:—which is a matter of very great pride to my colleague the minister of naval services, and also a park in Prince Edward Island. If conditions had remained normal; if our revenues had been fairly buoyant and we could have afforded it, I think it would have been the policy of the government to increase the number of these national parks throughout Canada. I am a thorough believer in the national park system.

Perhaps my hon. friend did not hear me, or he may not have been in the chamber when I stated earlier that all we are doing in this instance is reducing the area of the Prince Albert national park from 1,870 square miles to 1,494 square miles. In making this reduction we are not detracting in any degree whatever from the essential features of the park. We still have a very large area, and we have to keep a balance in these things. For instance, a park of 1,500 square miles requires a great deal of patrolling, and necessitates the expenditure of money for protection against fires and so on. We are turning back to the province an area of swamp and forest land. The province will assume the responsibility of protecting that area against fire, and our expenditures will be reduced correspondingly. How much they will be reduced, I cannot say at the moment.

Mr. FRASER (Peterborough West): When that land is turned back, will the province keep it in its present condition?

Mr. SLAGHT: That is their business.

Mr. FRASER (Peterborough West): I do not know. I should think that would be up to this government. I was in the house: I have the figures the minister gave, but I should like to know if the province will keep that land in its present condition. Some restriction should be imposed.

Mr. CRERAR: No; we could not do that; it would be quite impossible. I think my hon. friend will realize that if he gives the matter a moment's thought. This land reverts to the province and becomes part of the public domain of the province, which administers it just as it administers the rest of its public domain. I have been advised that there is a certain amount of timber on this part, I do not know how much, which will be transferred back to the province. I have no doubt that they will look after it just as effectively as we would be able to look after it, and perhaps even more so, because they have the timber areas adjoining.

Mr. FRASER (Peterborough West): What I was afraid of was that the province might get in there and make a slash through this timber, which would be a detriment to the park. Some restriction should be put on, so that they would have to keep it in good shape.

Mr. CRERAR: We cannot put on any restrictions when we return the land to the province, but I do not think my hon. friend's concern in that regard is very sound. I have no doubt that the province will look after this area, and this transfer will not affect the remainder of the park in any event.

[Mr. Crerar.]

Mr. NICHOLSON: There is some value to the point just made by the hon. member for Peterborough West. There is the further point that very often, when areas are thrown open for farm settlement, the fire hazard increases. I am not familiar with this portion of the park, but I think some precaution should be taken to see that the park forest should not be endangered by land settlement which might be carried out by the provincial government.

Mr. CRERAR: I do not think there is any foundation for that fear, either. As a matter of fact, settlement does adjoin the park now over a considerable length of its boundaries, and our experience has been that there is very little danger of fire originating on farms adjoining the park. It is of interest to note that it is estimated that 80 per cent of the forest fires in Canada are what are described as man-made fires. The remaining 20 per cent may be due to natural causes, such as lightning. The higher percentage would be due to carelessness on the part of campers and people travelling through the forests. That is what we have to guard against within the park boundaries. Someone smoking a cigarette may be driving along a road in an automobile. When the cigarette is half consumed it may be thrown out of the window of the car, and start a fire which may do a great deal of damage. That is the sort of thing we have to guard against in patrolling these park areas. I might say there is a road which passes through this swampy timbered area which we are returning to the province. It passes through the park down to Montreal lake to get into water courses which go away back into the Lac la Ronge country.

Resolution reported, read the second time and concurred in. Mr. Crerar thereupon moved for leave to introduce Bill No. 20, to amend the National Parks Act.

Motion agreed to and bill read the first time.

TRANS-CANADA AIR LINES

EXTENSION OF INITIAL SUBSIDY PERIOD—CHANGING OF FIXATION-OF-RATES PERIOD

Hon. C. D. HOWE (for the Minister of Transport) moved that the house go into committee to consider the following resolution:

That it is expedient to amend the Trans-Canada Air Lines Act, 1937, changing the period for the fixation of rates for the current year, as defined in the act, and extending the initial period during which a subsidy may be payable to Trans-Canada Air Lines.

Motion agreed to and the house went into committee, Mr. Vien in the chair.

Mr. HANSON (York-Sunbury): Would the minister make an explanation now, or shall we ask questions later on?

Mr. HOWE: I should be glad to explain. The bill to be based on this resolution has the effect of further extending the date after which the rates for the carriage of mail by Trans-Canada Air Lines will be fixed automatically by the financial results of the preceding year. Our difficulty in applying the automatic feature is that the traffic is growing very rapidly on Trans-Canada Air Lines, and the mileage operated is growing to meet the requirements of the traffic.

In the year ended December 31, 1940, about 5,000,000 miles were operated by Trans-Canada Air Lines, and the plans for the fiscal year 1941-42 call for the operation of well over 7,500,000 miles, or more than 50 per cent increase in the mileage flown. Of course the greater mileage and the increasing traffic increase the operating profits of the company. Based on the operating results of last year, the automatic feature of the bill would fix a rate of fifty-three cents a mile for the mail rate for 1940-41. We feel, however, that in view of the increased mileage and the steady increase in business on the line we can do rather better than that for the post office, and the objective will be to fix a rate of not fifty-three cents a mile but forty cents a mile, as the basic mail rate, which is a reduction of course from sixty cents a mile to forty cents.

Last year the earnings of the air lines, after all write-offs and interest on investment, was something over $500,000. This year it is anticipated that the earnings from air mail based on the increased mileage and the 40-cent rate will be $3,153,000. The passenger revenue will be $2,170,000. Miscellaneous revenue, comprised chiefly of express, will amount to $250,000, giving a total gross revenue of $5,573,500. Operating expenses are anticipated to be $5,315,477, giving an operating income of $258,032, less interest on capital, and other income charges, of $197,500. That leaves us with an estimated surplus of $60,523.

Mr. HANSON (York-Sunbury): After depreciation?

Mr. HOWE: Yes; depreciation is an operating charge.

Mr. HANSON (York-Sunbury): What is it figured at?

Mr. HOWE: At 25 per cent of the value of the aeroplanes, engines and flying equipment; I believe the rate is 10 per cent on the buildings. I might say that throughout the period of the operation of Trans-Canada Air Lines we have had a steady increase in the poundage of mail carried, subject to seasonal variations. Over an average period the increase in the amount of mail carried has been at the rate of 4 per cent per month, a very steady increase. Anticipating that this increase will continue throughout the fiscal year 1941-42, we have reached the point where the post office will almost break even on revenue as against expenditure, counting four cents of the six cents charged for air mail as revenue to the air mail, and two cents as the cost to the post office for the collection and distribution of the mail. A very slight increase in mail beyond the normal increase will balance the books, and we anticipate that in the following fiscal year the post office will make a profit on the sale of air mail stamps.

Mr. HANSON (York-Sunbury): On the basis of forty cents?

Mr. HOWE: Yes. We have also brought the cost of carrying air mail down to about the level that is current in the United States. I may say that this is something of a freak, because our equipment costs us about 50 per cent more than similar equipment in the United States, since we pay duty, sales tax and all other charges on the equipment when we bring it into Canada. Also we are charged higher rates for gasoline than are paid by air lines in the United States.

For purposes of comparison, the mail rate on the Trans-Continental and Western Air Line, from New York to Los Angeles, via Chicago, is forty cents a mile; on the Canadian Colonial Airways, from New York to Montreal, forty cents per mile; on Northeast Airlines, from Boston to Caribou, Maine, thirty-six cents per mile; and on Northwestern Airways, Minneapolis to Winnipeg, thirty-seven cents per mile. Therefore, while passing through the development period, in the brief time Trans-Canada has been in operation we have succeeded in getting the mail rate down to a comparable basis with similar services in the United States. We have succeeded in building up a volume of mail much more quickly than had ever been anticipated. When we started the line we anticipated that five years must elapse before the post office could break even on its operations, but we are on the point of achieving that in about three years' operation, and we shall have at the end of the year a service that, I think, will be adequate for the business of Canada. Of course, this will always be an expanding service, but at the end of this expansion the changes will be more normal and the automatic feature of the act will then operate quite properly.

This bill makes one other change in the situation. The fiscal year of Trans-Canada Air Lines is the calendar year, and formerly it was provided that any change in rates would take place on January 1, but there were operating difficulties in getting the data to fix the new

rate on January 1. It usually takes from one month to six weeks to close the books of Trans-Canada, and there was also the difficulty of the post office budgeting for a fiscal year when there might be a change in the rate in the last three months of the fiscal year. Therefore, the bill provides that hereafter the rate established under the automatic feature for the carriage of mail shall extend from March 31 in one year to March 31 in the following year.

Mr. HANSON (York-Sunbury): What the minister has told us of this bill and the effect of last year's bill would seem to indicate that the automatic rate fixing structure in the statute as originally passed was entirely out of line. Is that about the effect of it?

Mr. HOWE: It is out of line when there is a very rapid expansion of the mileage, but there will come a time, and it is coming I think after this year, when I do not think we shall have to ask parliament for such extensions because the mileage will be reasonably stabilized. There will be the matter perhaps of an extra trip on a given route or a short route may be added to the mileage, but that will not seriously affect the automatic feature. A fifty per cent addition such as we anticipate this year would, of course, increase the earnings to a point where the automatic feature would not be fair to the post office.

Mr. HARRIS (Danforth): Mr. Chairman, it is a matter for congratulation that Canada has made such headway and achieved this fair amount of success in the operation of Trans-Canada Air Lines. A good deal of that success, as the minister probably admitted in his statement to-night, has been due to the fact that so far as financing is concerned the post office has helped out very considerably.

The minister was good enough to give a few of the rates that apply on certain runs in the United States. The rates he quoted were in the neighbourhood of forty cents a mile, with one as low as thirty-six cents. Perhaps, before we pass this bill, the minister, who no doubt has the information before him, will tell the committee if there are rates in force in the United States as low as nineteen cents a mile.

Mr. HOWE: They are not comparable rates.

Mr. HANSON (York-Sunbury): Rates caused by competition, perhaps.

Mr. HOWE: Yes.

Mr. HARRIS (Danforth): Take, for instance, the average rate for the carrying of mail in the United States. I would not want the impression left upon the committee that we were carrying our mails at a lower cost than that which obtains in the United States. As I say, I am not complaining. I think it is a matter for congratulation that the Postmaster General was able to get this legislation before the house and get the rate down from the very high rate of sixty cents. The observation I made on a previous occasion I repeat now, that when the balance sheet was struck, with a rate of sixty cents; when depreciation charges were provided for, and quite substantial depreciation charges, in some instances as high as twenty-five per cent, and when interest charges were taken care of, the statement was made that they had earned big money, and I notice that the minister in his statement said, "Our earnings will be such and such". Quite so, so far as bookkeeping earnings are concerned. But is it real earnings so far as the consolidated balance sheet of the Dominion of Canada is concerned? The word "subsidy" has been used, and I think it would apply to a degree.

Mr. HOWE: It is quite an improper use of the word "subsidy."

Mr. HARRIS (Danforth): Very well, we will reserve our opinion with regard to that. It certainly is not now a subsidy to the same degree as obtained previously. Previous balance sheets showed as much as $2 revenue received from the post office till as against $1 for the carriage of passengers. The post office will contribute $3,153,000 and the passenger service, $2,170,000, with a few miscellaneous services which do not affect the picture. I look forward to the day when passenger and other revenues will be sufficient to equalize at least the post office—I shall have to find a new word for subsidy—contract, we will call it. I am gratified to note that there has been a continual increase in the amount of business, an increase of four per cent on the average, but I think that is not enough.

Mr. HOWE: Four per cent a month.

Mr. HARRIS (Danforth): That is forty-eight per cent a year. That is a good record. But we shall not be able to keep that up beyond a few years.

As to passenger travel, we have had a minimum of accidents, and I say to the minister that those of us who feel disposed to look into the work of the department and offer constructive criticism must not be charged with being parties to wanting to demoralize the service, as it were, or not giving it all the attention required, with the result that now and then there may be accidents. Gasoline costs are higher, and then there are sales tax and all these other charges to be taken care of. But more and more attention should, I believe, be given by Canadians to the service given

by Trans-Canada Air Lines. It is a good way to travel, and I should like to see more members of the Canadian House of Commons using this service.

I saw a skit in a Toronto newspaper of Friday, March 14, which read:

A member of a reserve unit writes, re transportation for the soldiers:

"If there is room on the train for big fat politicians like Joseph Harris, there should be room for people like these boys."

That will be found—I hope the press is listening—in the issue of Friday last.

Mr. HANSON (York-Sunbury): What paper?

Mr. HARRIS (Danforth): The Toronto *Telegram*. I am not complaining at all, because every knock is a boost, as we all know, otherwise I probably could not have answered the roll call for two decades.

Mr. HOWE: They have said worse things than that about some of us.

Mr. HARRIS (Danforth): I merely wanted to point out the irony of that suggestion because, in order to be here after completing a day's work in Toronto, I was privileged to ride to Ottawa by plane, and pay my fare. And this is the newspaper report I find when I get here.

Mr. MARTIN: That would not be the first mistake which that paper has made.

Mr. HARRIS (Danforth): I suggest to the government that it might cancel all these passes. I say to my friends the press that this is the sixth time I have urged in the House of Commons the cancellation of all passes, so that the railways would come that much nearer to balancing their budget; yet I got a telephone call on Monday last from Trans-Canada Air Lines to my office, asking me if I would pay my fare or whether I was travelling on a pass.

Mr. HOWE: My hon. friend never was asked that. He is mistaken. There is a policy under which $300 is paid and put in a credit and charged to the passenger's account. Nobody travels with a pass on the Trans-Canada.

Mr. HARRIS (Danforth): The question asked was, was I travelling on a pass or was I paying my fare. I am not complaining about the question. They have a right to ask it because, as I understand it, those who travel on passes on the Trans-Canada Air Lines have to take second place to those who pay their fares.

Mr. HANSON (York-Sunbury): I understand there are no passes.

Mr. HARRIS (Danforth): The minister can correct me if I am wrong. I understand that, if there is a spare seat, a person who rides free can have it. If all the seats are taken by paying passengers, those who travel on passes have to wait. That is quite a proper provision, but I would go further and cancel all passes on the Trans-Canada Air Lines. That is only by the way; it gave me an opportunity to reply to a suggestion which I noticed with some pleasure in the press.

Mr. REID: The cost would not be so light to British Columbia as it is to Toronto.

Mr. HARRIS (Danforth): Quite; and following up the point the hon. member has raised, as far as railway and aeroplane passes are concerned this house should deal with the matter in a businesslike way, the same as any industry, and pay a voucher, in the case of any hon. member travelling on government business, whether he comes from the Yukon or Halifax. Then we would be all on a parity. It would, however, stop a lot of joy-rides.

Mr. REID: Cut them all out.

Mr. HARRIS (Danforth): Yes, when an institution is not making money, and Canada has to foot the bill.

I should like the minister to explain what effect will the changing of the date have. What rate applies? Does sixty cents apply to the end of December, and forty cents from then on, or does sixty cents carry through until the end of March?

Mr. HOWE: Answering the question of my hon. friend, the sixty cent rate carries through to the 31st of March, and the forty cent rate obtains for the fiscal year, April to April.

Mr. SLAGHT: Just before this resolution is passed, as I assume it will be, I rise to pay to the minister who introduced it what I believe is a well-earned tribute for his development and administration of this difficult service. I shall spend only a moment on it. I know something of the story. It fell to the lot of our minister to take on this task while he was Minister of Transport, administering the department of railways, the department of marine, and what is sometimes described as that other department, radio. He was in competition with four east and west air lines in the United States, nearly all of which had been established for ten or eleven years, tapping a business, both postal and passenger, with which our sparsely populated country furnishes no parallel whatever. In the administrative personnel that he selected and in the operating personnel that

he selected, barring one misfortune of recent date which appears to have been one of those accidents for which no one could be held responsible, the administration of this service and the place it now occupies in the east and west traffic of this continent are remarkable. There is one man more than any other who is responsible for its success, and that is our minister who has had the responsibility for the work.

In addition to setting up the system, he has had to negotiate with the authorities at Washington regarding many intricate and difficult problems of air service between our country and the republic to the south. I had personally an opportunity of learning the respect in which the board at Washington hold our minister, and the success he has had in these delicate and difficult negotiations. I believe that I am speaking for almost every hon. member in taking this opportunity to pay a measure of tribute to him for the big job he has done.

Mr. HANSON (York-Sunbury): I cannot pay an equal tribute to the minister—I see him blushing over there at the words of encomium from his follower—but I will take it for granted that everything said is correct and endorse what has been done. There is, however, one criticism about this service in the east.

Mr. MAYHEW: Don't spoil it!

Mr. HANSON (York-Sunbury): Well, I have a duty to perform. I shall do it as quickly as possible.

The Saint John *Telegraph-Journal,* which is the leading morning newspaper in New Brunswick, published on March 18 an editorial under the caption, "Our Unsatisfactory Air Service." I had no idea that this matter would come up to-night, but I am going to read this to the minister and then leave it with him, in the hope that he will draw it to the attention of the officials of Trans-Canada and see if something can be done.

It is not based on the fact that the terminus has been changed from Moncton to Halifax. Our friends, I think, put over rather a fast one on the hon. member for Westmorland. I suppose that while he slept, they were working. Personally I believe it will do no harm to anyone to have the terminus at Halifax; in fact, I regard it as a logical growth of the system. It may hurt the pride of Moncton a little bit to feel that they are no longer the eastern terminus of Trans-Canada, but they are going to be served by Trans-Canada as well as and perhaps better than they have been in the past.

[Mr. Slaght.]

This is the voice of Saint John, and of course some of us must pay attention to it. Here is the complaint:

> Changes in the Trans-Canada airways service east of Montreal, under which the large passenger liners which hitherto stopped at Moncton will soon be continuing on to Halifax, will leave the large port city of Saint John and New Brunswick's capital city of Fredericton in the same unsatisfactory position as they have been since the T.C.A. lines were extended to this province. Prior to their advent there was a service between Saint John and Halifax which is not now operating. The plan just announced at Ottawa is to the effect that early in April the Montreal to Moncton plane, after stopping at Moncton, will continue on to Halifax, thus doing away with the transfer at Moncton to a smaller plane. The return trip from Halifax will also be via Moncton. So far as the situation as regards other important places in New Brunswick is concerned, it remains exactly as it was—practically no air service. Fredericton has no connections at all, and Saint John is on the end of a so-called feeder line which makes connections at Moncton to and from Montreal, but no connections with Halifax. Air mail from Saint John to Halifax is flown to Moncton in the afternoon, but it arrives too late to connect with the Halifax plane, and must go on from there by train.

That seems to me a cause of complaint which could perhaps be easily remedied if the Postmaster General, who, I know, is alert in the discharge of the duties of his office, would give ear to that complaint and have that plane started a little earlier in order to have it make connection with the Halifax plane. If that were done, that complaint would be done away with.

> Likewise, mail from Halifax is brought by train to connect with the aeroplane for Saint John.

I do not understand why that is. I should think that the mail would come up by plane and be transferred there. There ought to be some cooperation with the feeder system.

> The same situation exists with regard to passengers. If a person wants to fly from Saint John to Halifax, he is obliged to remain overnight and until early the next afternoon in Moncton, and adopt the same procedure on the return trip. In other words, it consumes two full days to make the return trip.

I have not checked on that, but I think it is true. Of course that is an impossible situation with regard to aeroplane travel between the two Atlantic cities. This, then, is the complaint of the newspaper:

> It is about time that some serious consideration was given to this thoroughly unsatisfactory situation. Here are the two principal cities on the eastern seaboard, between which there is an increasing commercial traffic, virtually without air connection, and the capital of this province entirely omitted from the plan.

Well, in Fredericton we are used to that. Unfortunately, we have never been on the main line; nevertheless we are very happy

indeed, and some day perhaps we shall get aeroplane connection. I have no high hopes in the immediate future, but I will revert in a moment to a situation which may help to remedy that. The article goes on:

Many efforts have been made to remedy this deficiency but all to no avail. Now that something is being done to improve the service between Montreal and Halifax, the matter of a service between Saint John and Halifax and connections with Fredericton deserves immediate consideration.

I think the situation between Saint John and Halifax ought to be remedied within a reasonably short space of time. I cannot see very much hope for air connection with Fredericton. I do not believe the traffic presently offering would pay for a feeder service. It may be that in time it will be developed, but I have had some conversation with the minister with regard to the development of the Blissville air field. That was established by the late government as an emergency landing field. It is on the beam between Moncton and Montreal. It is only thirty-five miles from Fredericton and about the same distance from Saint John. I hope that the government will do something this year, and I entertain high hopes in that regard from what the minister has said about developing that field, so that planes can land there with a much greater degree of safety than at the present time. There are no runways. The field has been cleared and put into shape and it ought to be extended somewhat, and some runways built. I hope the minister will give consideration to having Blissville established as a permanent port of call, or at least as a flag station. Perhaps that is a fair thing to ask for at the start. If business is offering between Montreal and Moncton, then I hope he will consider having the Blissville air field established as a port of call if, as and when it is required. That would be, as far as I know, the only solution of the problem of aeroplane service as between Moncton and Halifax on the one hand and Montreal on the other, in respect of Fredericton at least.

I do not think the cost of building an air port at Blissville would be very great, and of course it would be a great convenience to a great many people, who could utilize it to get to Montreal quickly by evening plane. I believe that one reason why it has not been pressed for before is that we have an excellent train service from western New Brunswick to Montreal. You leave in the evening and are in Montreal the next morning. Being now at the advanced age of sixty-two, and not being air-minded, I find that method of transportation quite good enough for myself. I have never thought I had any business up there; my wife tells me the same thing, and I am not proposing this on my own account. I am quite content to travel in the good old-fashioned way, but I seriously suggest to the minister that he give some consideration immediately, if he will, to this complaint about lack of connection for both air mail and aeroplane passenger service between Saint John and Halifax.

There was an airways company which operated a plane service on a triangular basis covering Moncton, Halifax and Saint John. I would suppose that company could not continue. I believe they do the Island work, with certain flights to the Magdalen islands and they are open for charter; but that service will not continue, at least not without some kind of mail subsidy, and I assume, from the arrangements made with Trans-Canada, that this is out of the question now so far as Saint John and Halifax are concerned.

I do not think it is asking too much to have a decent feeder service between Saint John and Moncton so as to take advantage of their planes. I would ask the Minister of Munitions and Supply, who has the aeroplane situation under his guidance, and the Postmaster General to put their heads together and find a solution of this problem. If they do not, they will hear more about it at a later date.

Mr. HARRIS (Danforth): There is one further question I wish to ask, for the hon. member for Peel (Mr. Graydon) of the Postmaster General. At Malton there are, to my knowledge, no post office facilities, with the result that air mail going from Ottawa or Montreal to Toronto goes to Malton, and from Malton it takes it an hour to get to the general post office where it is sorted for dispatch to its destination. The net result is that it is almost as quick to send mail in the ordinary way from Montreal to Toronto or from Ottawa to Toronto as against the air mail facilities. It would be of advantage if some post office arrangement were made at Malton, or air mail directed there so that, if picked up there, there would be a considerable saving of time and more of the mail service between those points would be used.

Perhaps the minister in charge of this matter would be kind enough to let the Postmaster General put on record the position, and if he feels so disposed, the other question also with regard to the rates obtaining in the United States other than those the minister put on record. The statute of 1937 definitely says that this rate is a matter of negotiation between the Postmaster General and the minister of the department administering the Trans-Canada Air Lines. We have the Trans-Canada Air Lines point of view on record with regard to these negotiations. Would the

Postmaster General put his point of view on record, and how he came to agree to the 40-cent rate? I realize that it is lower than the fifty-three cents which might have been payable, but at the same time I can visualize that he had some difficulty in reducing a rate from sixty to forty cents, and I think that ought to be put on record.

Mr. MULOCK: I shall be glad to discuss the question of putting postal employees at Malton with the official in charge of air mail, and also with the hon. member.

Regarding the second matter, that of the attitude of the post office towards this rate, I may say that we are well satisfied with the arrangement that we have been able to make with Trans-Canada Air Lines. The minister in charge has been very cooperative, has given us every possible assistance. We sat down with officials of each department and worked out what we thought was a fair rate.

Mr. HARRIS (Danforth): And saved a million dollars for your department.

Mr. MULOCK: That was one idea, I may tell my hon. friend. So far as the post office is concerned, naturally we would be glad to have the rate reduced still further, but I think he will agree that Trans-Canada has made an excellent showing and that the post office has made a pretty good bargain in getting a reduction from sixty cents to forty cents in one year.

Mr. HANSON (York-Sunbury): It all depends on whether sixty cents was too high before.

Mr. MULOCK: Still, it is a substantial reduction. If we could be so fortunate as to reduce some of our debts and taxation in the same measure, it would be very satisfactory.

Mr. HARRIS (Danforth): What is the grand average for the United States?

Mr. MULOCK: It depends what lines you take. I think that is a matter for the Minister of Munitions and Supply to deal with. I do not want to encroach on his department.

Mr. HANSON (York-Sunbury): It is fair to state that a number of these rates in the United States are established by competition between air lines which want the distinction of carrying the United States mails. They seem to think there is something in that. I understand that some rates from New York south are as low as nineteen cents.

Mr. JACKMAN: Would the minister endeavour to settle a doubt which arises in my mind, and I am sure in the minds of many, in connection with the projected increase in flying miles from 5,000,000 to 7,500,000, an increase of 50 per cent. That seems almost incredible in time of war, and surely must interfere with our war effort. I noticed in a recent United States paper that the United States government through its proper agency was limiting the expansion of the airways in that country to a very modest degree. The air line companies were allowed to purchase only sufficient planes to replace those wearing out in the service and add in a very meagre way. Would the minister explain why it is necessary that the Trans-Canada should expand fifty per cent in this year 1941 when we know that planes are so badly needed, particularly the large bomber type which is used in the Trans-Canada service, especially in view of the fact that these planes must be purchased in the United States and that I believe in the last twelve or fourteen months we have used nearly a million dollars of United States exchange in the purchase of these planes.

If there is a demand for aeroplane transportation in war business, either passenger or mail, surely we can use the existing facilities for the very necessary purpose of expediting the war effort and raise the mail rate from six cents to twelve cents, or whatever rate might be feasible, and also raise passenger fares which at present are not very much higher than railway fares. It would appear that Trans-Canada Air Lines are making severe competition for the railways as to passengers and for the post office as to ordinary letter mail, when the air mail postage rate is only six cents as against three cents. If it is so necessary that war business be carried by air, surely we could, by raising the rates, eliminate much unnecessary other business in these trying times.

Another question, which is perhaps slightly divorced from those I have mentioned, is this: We all feel that the Minister of Munitions and Supply, under whose aegis the Trans-Canada Air Lines come, is a much overburdened man. He was good enough to tell me privately why it was that Trans-Canada Air Lines continued under his jurisdiction. I am sorry to say, however, that his statement did not sufficiently impress itself upon my memory, although I think I understood it at the time. It would be of interest if he would explain why it is that he as one of the busiest members of the cabinet still keeps Trans-Canada Air Lines under his jurisdiction.

Mr. HOWE: I think my hon. friend's first question was whether the contemplated expansion in mileage would interfere with the war effort. I would say that at least fifty per cent of our business is in connection with those travelling up and down the country on war business. It is a very great convenience for people to be able to get in a plane in the

morning, come to Ottawa, do their business and be back home the same evening, as many do. It is a great convenience to be able to telephone a man in Vancouver and have him in Ottawa next morning to discuss the business we have in hand.

We bought six planes this year, but they were bought out of the depreciation fund of the Trans-Canada Air Lines. No new capital was involved. Of course the purpose of a depreciation fund is to make sure that we do not end a certain period with no equipment. The purpose of the fund is to keep the equipment up to a standard.

Mr. JACKMAN: But you bought six new planes; you could not keep your full number of old ones and add six new ones out of depreciation.

Mr. HOWE: Yes; the age of the old ones was getting on, and as we take them out of service we add new planes. We had at one time a fleet of fifteen planes; we lost one in an unfortunate accident; we have fourteen old planes and six new ones. The old planes are about three years old; they have a theoretical life of four years, and we have six of a larger and more expensive type bought to replace those planes. Of course it is desirable not to have all your planes bought the same year but to stagger them so that some end their theoretical life each year. However, as I say we have not changed the capital of Trans-Canada Air Lines. The capital invested is $3,250,000, and it is not anticipated that additional capital will be required at any future stage.

Mr. JACKMAN: We cannot purchase these planes for use against the enemy and at the same time use the planes in Canada.

Mr. HOWE: I can assure my hon. friend we are purchasing a good many planes both for training and for use against the enemy.

Mr. JACKMAN: All we can get, I should suggest.

Mr. HOWE: What was the next question?

Mr. JACKMAN: The minister's answers do not quite satisfy me. I feel, as I am sure we all do, that every available plane should be used overseas. There has been a shortage of planes; we all know that production in this country has not been all that we hoped for, and here we are using what I might term the very lifeblood of the country for a purely domestic service. At the same time we are using United States funds for the purchase of these planes, which means that these funds are not available for the purchase of planes or other war equipment which could be used in the first line of defence across the ocean. For that reason I think we should go as easily as possible in the expansion of this service during this extremely critical period. I know that Trans-Canada Air Lines has had a splendid record, but from the experience of many who have used it I feel that they could have travelled by train just as easily. The great centres of industry are in Quebec and Ontario. If a man from Toronto uses a plane, it merely means that he sleeps at home rather than on the train, so there would be no very great loss of time if he travelled by train. The same thing applies to a man living in Montreal. It is true that this service is a great convenience to anyone going to the Pacific coast; but there, as we have heard so often in this house, there is not a great deal of war industry. For these reasons I feel that this committee should seriously consider this great expansion of Trans-Canada Air Lines at this time.

That was one of the points I raised. I also suggested that if it should be considered necessary to confine traffic on the air line to the war effort, as it were, the rates should be increased so that unnecessary commercial and pleasure traffic could be eliminated and the available space left for those people who really have a vital need to use these planes. That was my second point. The third question was why the minister should keep this department under his jurisdiction together with the very important work he is doing in connection with munitions and supply.

Mr. HOWE: It is necessary to maintain transportation facilities in this country even though we are fighting a war. We are buying box cars, passenger cars and rolling stock all the time. We are buying equipment to haul tourists to Banff and Lake Louise from points in the United States, and we are purchasing aeroplanes so that we may bring tourists from New York to Toronto and open up new routes of that kind. We must maintain our communications in this country. If they are necessary in peace time they are even more necessary in war time; and I think the capital cost of these planes in United States funds will be only a small fraction of the United States funds which will be brought into Canada by the run between Toronto and New York.

As for rates, the act requires that the rates charged in Canada shall be competitive with the rates in the United States. As a matter of fact, they are exactly the same, both for mail and for passenger traffic, except that we collect in Canadian funds and across the line they collect in United States funds. It would be quite impossible, of course, to have a rate for air mail in Canada different from the rate for air mail in the United States,

because the two are readily interchangeable. That would only make more confusion. Similarly, in my opinion, the passenger traffic should be competitive.

As to why I kept the department under my jurisdiction, I did it as a matter of convenience. I was Minister of Transport at the same time that I was responsible for the war supply board. A considerable part of the work at that time had to do with the construction of a number of air fields across Canada; that is still an important part of the work. In the Department of Transport we had developed a large, highly trained staff familiar with the work of locating, designing and supervising the construction of airports. When I left the Department of Transport I thought it would be a very great convenience if I could retain the use of that staff. There was also the fact that the radio control at military airports is the same as the radio control at civil airports; and there again we had a staff well trained in the installation and operation of the controls. It was a convenience to have that staff associated with the department that was building the military controls. The department of air services is a unit; the same technicians serve the radio department, the meteorological department and the air regulations department. In taking one branch of that service, it is practically necessary to keep the three together. As a matter of fact, the meteorological work is very closely associated with the work of military airports, in that we have a man from the weather bureau at each military airport, and we also have teletype communication between the central weather service and the military airports. This department was taken over as a matter of convenience. If I do not object to the strain, and if hon. members do not object to the service the branch is giving, frankly I do not think it is anyone's affair very much, except the government's as to who has the department.

Mr. HANSON (York-Sunbury): Before the minister leaves that, would he not say a word of encouragement about the matter I brought up, namely, the service between Saint John and Halifax, both air mail and air passenger.

Mr. HOWE: Yes, I should say something about that. We have had difficulty in working out a satisfactory service to the maritimes, but gradually we have been able to iron out those difficulties. The first difficulty we had was that with only one trip to Moncton it was hard to satisfy both the passenger service and the air mail service. Obviously the best mail service to the maritimes should involve a late evening departure from Montreal, a departure after six o'clock from Toronto and an early morning arrival in Moncton, so that the mail could be landed in the three large maritime cities in time for the first delivery. That would suit the mail very well, and we tried that service, but we found that the passengers did not care to travel at night. Therefore we took the alternative of satisfying the passengers. We have now a morning departure from Toronto, a departure before noon from Montreal and an arrival in Moncton which brings the mail to the maritime cities too late for distribution the same day. That is not satisfactory from a mail point of view, although it seems to be satisfactory from the passenger point of view. This year, however, traffic has developed to such a point as to warrant both services, and this year I think we shall be able to satisfy both the mail and the passenger requirements.

Mr. HANSON (York-Sunbury): That is on the through service?

Mr. HOWE: Yes. We have had difficulty with the short run from Moncton to Saint John. It is a difficult run. It is too short to warrant the exclusive use of an aeroplane, and it has been worked in on other services. I will admit at once that it is not at all satisfactory to the city of Saint John, but I would state also that when the Moncton airport can be put in condition, a much more satisfactory service to Saint John and Fredericton will be possible.

Mr. HANSON (York-Sunbury): Does the minister mean the Blissville airport?

Mr. HOWE: Yes. I would, however, point out to my hon. friend that to make a first-class field out of Blissville is a serious job. It is not difficult to make a runway in one direction, but it is difficult to get a runway of the proper length in the other direction. We are studying the matter.

Mr. HANSON (York-Sunbury): I had somewhat different information from that of the engineer.

Mr. HOWE: No; parallel to the track it is not difficult to extend the runway, and that is the runway which would be most used. But to get across the runway 4,000 feet is very difficult, because you run back into a heavy excavation. I am hopeful that we shall be able to satisfy Trans-Canada with the improvements we can make this year, and get a stop there by autumn. If we can, it will improve the situation materially. But we have to let Trans-Canada be the judge as to whether or not they would be justified in making the stop. We hope to be able to satisfy them with the Blissville field.

Our difficulty in getting into Halifax was the conflict with the air force operational authorities. Some strenuous objection was

made to our coming into their area of operations; but experience has shown that the two services do not seriously conflict. We have another problem in the maritimes, namely, the service to Sydney. Of all the maritime cities, probably air service would be more beneficial to Sydney than to any other, because it is a long rail trip from Moncton.

Mr. HANSON (York-Sunbury): That is quite right.

Mr. HOWE: We are studying that service, and we hope that before the summer is far advanced, we shall have a service from Moncton not only to Prince Edward Island cities but also to Sydney. These are problems we are working hard to meet. Of course it has taken a few years to build these air lines, and they are not perfect yet. But I can assure my hon. friend that we appreciate the problems of the maritimes and appreciate that our service is far from perfect at the moment. We will, however, improve it as rapidly as funds will permit.

Mr. CHURCH: Mr. Chairman, the work of the Trans-Canada Air Lines must be considered from the commercial aspect, whether it be for the carrying of passengers or mail. This is a luxury service. When we survey the figures for last year of $3,150,000 from the post office and $2,170,000 from passenger service, we see at once that ever since the air service has been given, the Toronto post office has not been receiving the ordinary postal service it used to receive. All this arises as a result of giving this luxury air service.

After all is said and done, the average business man, the retail grocer, or the wholesaler, or the householder, is interested in the main function of the Toronto post office. I have had dozens of complaints since Trans-Canada Air Lines began operations, all to the effect that the other local services are being starved so that this luxury service may be given. For instance, Toronto, with its eight million postal receipts, should have one-cent drop letters, but we do not have that privilege. Then, labour conditions in the post office service at Toronto are deplorable, and should be changed and bettered. In fact, I have fifteen or twenty letters I shall show the minister which would indicate that the department has set up, in effect, a sweatshop, all as a result of starving the original post office services to carry out the functions of this luxury service, and use the receipts of the Toronto post office for outside purposes.

In the residential districts letters are not received until the first mail delivery at eleven o'clock or eleven-thirty in the morning. In the business district the department is not giving the service it used to give. Whether it be the Trans-Canada Air Lines luxury service, or some other part of the service, the Post Office Department is a public utility, and it should give an up-to-date and efficient service equal to that given by the Bell Telephone Company, the Consumers Gas Company, or any other public utility. The Post Office Department should not live in the past. It should give us the proper service and permit its employees to work under reasonable conditions of labour, as to hours, holidays, overtime and work conditions. In fact, I would ask the Minister of Labour to look into labour conditions in the Toronto post office district I have indicated. They are deplorable, and there should be an inquiry into them. The men have to work long hours, and usually have to work at least part time for holidays. Then they work shifts, part at night and part in the day time. Some work at night all the year round, and have been doing that for several years. The schedules should be revised.

I contend that the Toronto post office service has been starved for outside places. We cannot get the service because, by bookkeeping or otherwise, the revenues are diverted to another account known as the luxury service elsewhere. The heads and staff are excellent. I am not here to complain about air service; it is a splendid service, and I believe it will be better in the future. But I do wish that the money might be utilized so that the post office might give better work conditions and wages, and a better service to the residential and business areas in Toronto, so that we might have drop letters, and services along many other lines.

In my opinion, this Trans-Canada air service is a public utility, and should be run from the commercial aspect. The rates should meet all maintenance and operational charges, and if they are not doing that, some other older branches of the service are going to be starved, and labour conditions are not going to be what they should be.

Mr. MULOCK: First of all, I should like to ask the hon. member for Rosedale if I understood him correctly: Did he advocate an increase in the air mail rate from six cents to twelve cents?

Mr. JACKMAN: I suggested that if Trans-Canada Air Lines was necessary for the carrying on of our war effort in Canada, it might be possible to eliminate some of the surplus passengers and mail now being carried by Trans-Canada Air Lines, and that this might be done by raising the rate. That is the ordinary way in which we eliminate all unnecessary things, and maintain those which

are essential. Passengers could pay more, because the rates on Trans-Canada both for mail and for passengers are extremely low. The mail rate competes with the rate on ordinary mail, being only six cents as against three cents and the rates on railway trains are almost as high as they are on Trans-Canada. I suggest that if we must confine the operations of Trans-Canada Air Lines to important war services, this can be done by raising the rates.

Mr. MULOCK: I suggest to the hon. member that he is accurate in one statement, namely, that he would eliminate air mail, or a great part of it. He would, however, add another problem; he would add a tremendous deficit to the Post Office Department. I might say that I should like to do something toward making it a paying department, rather than one which is losing money. I believe, if the hon. member would reconsider his suggestion, he would see at once that it is not one which would help the revenues of the department. Certainly it would not be of any great assistance in increasing the volume of business. It is the volume of business which makes it possible for Trans-Canada to operate. I hope he is not seriously suggesting that we should stop our air mail service at this time. If the policy of dismemberment which once took place were continued, I might say that we would not have the air fields available in Canada to-day, air fields which are available because of construction by Trans-Canada Air Lines. Those air fields are available for purposes of training, and for the defence of the nation. I believe the hon. member, in the interests of both air mail and defence, would do well to reconsider his suggestion, because it is the financing of this volume of business which makes it possible to run Trans-Canada Air Lines.

I would say to the hon. member for Broadview that I most definitely disagree with him in respect of his observations regarding service in Toronto. I have no doubt that in a city of that size there will be some complaints. Certainly there is not all the service he would like to have or I should like to have; but he knows very well there is a war on. Is he seriously considering that we should again increase the number of deliveries in Toronto at this time? I think not. There are already many deliveries, depending on the districts being served.

I explained to the hon. member some time ago that unfortunately some of our men were off work, because of sickness. They have been replaced by new men. It must be obvious that new men going over routes cannot carry out their duties as rapidly as men who have been doing the work for a long time, and who have known their routes and their deliveries over a period of years. I would point out another thing to the hon. member, that many of the employees of the Toronto post office have joined the armed forces of this country, and new men have to be broken in to take their places. The men have to learn new routes. There is one other point I might mention, and here the hon. member may not agree with me, but the roads and sidewalks in the city of Toronto have not been conducive to quick delivery. I think it is generally admitted that this has caused delay.

Mr. HANSON (York-Sunbury): Surely not!

Progress reported.

SUPPLEMENTARY ESTIMATES, 1941-42

A message from His Excellency the Governor General transmitting supplementary estimates for the financial year ending March 31, 1942, was presented by Hon. J. L. Ilsley (Minister of Finance), read by Mr. Speaker to the house, and referred to the committee of supply.

BUSINESS OF THE HOUSE

Mr. HANSON (York-Sunbury): What will be the business to-morrow?

Mr. CRERAR: The second reading of the war appropriation bill.

Mr. ILSLEY: I understood that it was considered desirable to have the wheat matter dealt with and that to-morrow we should go on with the estimates which I have just now moved to be referred to the committee of supply.

Mr. CRERAR: My understanding was that the Prime Minister desired to have the second reading of the war appropriation bill taken so that the bill might get over to the senate. Several weeks have been spent in discussing the resolution stage.

Mr. HANSON (York-Sunbury): That will be the business to-morrow?

Mr. CRERAR: In view of the long discussion there has been of the resolution, I venture to hope that the house will pass the second reading of the bill so that it can be sent over to the senate, and after we have disposed of that, we might take up the legislation to which the Minister of Finance has just referred. I think the house should be prepared to take anything on the order paper, which contains some measures that are not of great importance.

Mr. HANSON (York-Sunbury): Before we adjourn to-night, can we have an understanding as to what the plan of the government is for proceeding with this whole wheat problem? I understand that the supplementary estimate brought down to-night is to take care of the proposed bonus, but that is only a very small portion of the whole question, and it seems to me that it should not be taken up piecemeal. Of course, I know the government can do what it likes.

Mr. GARDINER: The supplementary estimate is to provide for payments on reductions of wheat acreages under conditions prescribed by the governor in council, for administration expenses in connection therewith, and for temporary appointments that may be required notwithstanding anything contained in the Civil Service Act. When that estimate is up for discussion, the whole programme in connection with the making of payments on account of taking acreage out of wheat will be open for discussion, and that is the main part.

Mr. COLDWELL: Do we understand that there is to be no legislation on the wheat acreage reduction plan, but merely an estimate, and that all the regulations regarding payments will be made by the governor in council? It seems to me that this very important matter should be the subject of legislation, so that the house will have before it in black and white the actual proposals of the government in relation to this great problem.

Mr. HANSON (York-Sunbury): Hear, hear. Anything else will not be satisfactory.

Mr. DOUGLAS (Weyburn): Absolutely not.

Mr. GARDINER: There are ways in which the regulations themselves can be brought before the house and discussed. I would suggest that to follow the course now proposed would in all probability result in there being nothing done this year, if we are going to follow the usual process.

Mr. COLDWELL: I think there can be some cooperation in this matter, but certainly the house should have definitely before it the proposals of the government.

Mr. HANSON (York-Sunbury): If you want to get it through, bring down something definite.

Mr. ILSLEY: My hon. friend is very fond of making just that kind of remark. He has made it on several occasions.

Mr. HANSON (York-Sunbury): I am giving a friendly warning.

Mr. ILSLEY: It is not a friendly warning. It is a threat to obstruct if we do not proceed in a certain way.

Mr. HANSON (York-Sunbury): You can interpret it any way you like. The method of procedure which the minister proposes shows the intention to legislate by order in council, and the country will not like it. I do not like it and no other member likes it. Members supporting the government will not like it; the members from Ontario will not like it.

Mr. GARDINER: This is probably not the time to discuss it, but there are two or three ways open for dealing with the question. One way, of course, was to deal with it under the War Measures Act. We did not desire to proceed by that method because it would not have made it possible to have the kind of discussion here that members would want to have. I am quite sure that we can arrange for the kind of discussion and just as full a discussion as hon. members would have if legislation were introduced; and if the house will leave it at that until we come to it to-morrow, or whatever day we do come to it, we can have a full discussion then.

Mr. PERLEY: When the question comes before us, does the minister propose to make a statement himself outlining what we may expect if this goes through or will someone else have to make an opening statement?

Mr. GARDINER: I would hope to have an opportunity of making a statement.

Mr. McNEVIN: As a supporter of the government, I believe that this problem should be dealt with by legislation, which offers a much wider opportunity for a full review of the whole problem. It is a matter of great importance.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Friday, March 21, 1941.

The house met at three o'clock.

THE LATE F. C. CASSELMAN

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, hon. members will have learned with profound regret and also, I am sure, with a sense of shock, of the very sudden passing last night of one of our number, Mr. Frederick C. Casselman, the member for Edmonton East.

When the house assembled yesterday the hon. member was in his accustomed place in this chamber, and when the house reassembled

in the evening he was again here and, I believe, remained until after the resolution respecting the war appropriation bill had been passed and the bill itself had been introduced and received its first reading. He then left the Commons to go to his place of residence in Ottawa. As he was about to enter the door of the house he was overcome by a heart seizure and passed away immediately.

The very sudden passing of one who was only in his fifty-sixth year, one who in so many ways appeared strong and well, is evidence to us all of the great strain under which men who hold positions of responsibility labour in the discharge of their duties to-day. I doubt if any of us begin to realize how great is the burden upon the heart, as well as the mental and nervous strain borne by members of parliament who seek to discharge their duties as representatives of the people in these terrible times. So momentous have been the events of the past year that it is difficult to realize that it is less than a year since hon. members in this chamber were returned to the House of Commons by the people of Canada. Mr. Casselman, a supporter of the present administration, was one of the number who were elected to parliament for the first time in the general elections of March 26 of last year. He had therefore been a member of parliament for less than a year. He was of Canadian parentage, though born in the state of Montana. Only the first five years of his life were spent in the United States. He was educated in the province of Ontario, at Queen's University, at the university of Toronto, and later supplemented his education at the university of Alberta. He held degrees in both arts and law, and in the course of service overseas was awarded the Military Cross. He had been wounded in action.

In his chosen profession of law in the city of Edmonton Mr. Casselman gained a position of real prominence in the city. He was not content to devote his time merely to his profession. He gave evidence at an early age of his desire also to serve the public in disinterested ways. He began, as many men in public life have begun, by serving on the school board, a position he held for many years. Later, in 1937, he was elected as an alderman in the city council of Edmonton. This position he continued to hold up to the time of his death. The place Mr. Casselman had won for himself in the community, his character, his abilities, his attainments, all helped to gain for him the confidence of the citizens of Edmonton, who honoured him with the representation of one of the city's constituencies in this House of Commons.

As I have already indicated, Mr. Casselman's services were genuinely patriotic as well as public-spirited. When he went overseas in the last war as a member of the Canadian expeditionary force, he had enlisted as a private and served for two years with Canada's forces. Later he joined a regiment of one of the imperial forces and received a commission as a lieutenant.

Reviewing the career of one who was but fifty-six years of age, a career embracing public service to his municipality, to his province and to his country, both in its parliament and on its fields of battle, one feels that the nation is indeed poorer to-day through the loss of so public-spirited and patriotic a citizen. Had Mr. Casselman been spared, there is no doubt he would have played an increasingly prominent part in the public life of Canada. As it is, he has left a record of honourable services to his city, his province and his country with which his name will be long and gratefully associated.

The hon. member has left to mourn his loss, a widow and a daughter. It will be the desire of all members of this house that you, Mr. Speaker, should convey to Mrs. Casselman and her daughter an expression of the very deep sympathy which we have for them in their great bereavement.

Hon. R. B. HANSON (Leader of the Opposition): May I be permitted, on behalf of myself and my colleagues, to join in the sentiments of respect and sympathy which the Prime Minister has just so eloquently expressed. I had not the honour of Mr. Casselman's acquaintance but I had observed his work in the house. I understand he was a man who did his own thinking and who was capable of expressing his own view. He came, if I gather aright, from a stock that has been the very foundation stock of this country, the United Empire Loyalists. He served his country as a schoolmaster, as a professional man, as a gallant soldier and as a legislator. He must have had a full life. He himself probably would have said that he had no regrets so far as his public activities were concerned. It will be said of him that he was a scholar and a gentleman. I am sure that on this occasion the sympathy of all of us goes out to his loved ones.

I appreciate what the Prime Minister has said with respect to the strain to which public men and those in positions of great responsibility are exposed in these terrible times. I am going through that experience myself. Therefore I think we should all have a measure of charity in respect of each other's failings, remembering the strain and pressure that is upon every one of us.

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, I wish in a few words to add my tribute to what has already been said by the Prime Minister and the leader of the opposition regarding my late colleague from the city of Edmonton.

I knew Mr. Casselman for many years in Edmonton and had been intimately associated with him. I know of the high esteem in which he was held. To a very great degree he has enjoyed the trust and confidence of the people of Edmonton, and lately in particular of the constituency of Edmonton East.

Mr. Casselman took a self-effacing but very prominent part in the public life of the city, serving with great distinction for many years as a member of the Edmonton school board, and latterly as a member of the city council. He did good by stealth, and his untimely passing is a very great loss to Edmonton, to Alberta and this parliament.

Mr. M. J. COLDWELL (Rosetown-Biggar): On behalf of my colleagues and myself I would join with the Prime Minister, the leader of the opposition and the Minister of Trade and Commerce in expressing regret and sorrow at the passing of another member of this house. I have often thought in the last six years, since I have been here, that the strain of public life has told in this chamber probably more than almost anywhere else. These sad occasions have brought home to me the truth of the words of the prayer book of the church in which I was brought up, the Church of England, "In the midst of life we are in death."

I would therefore on behalf of my colleagues and myself join in the expressions of sympathy and regret that have already been voiced. I little thought yesterday as I walked into this chamber with Mr. Casselman that we would be speaking of him to-day as a departed colleague.

We extend to the widow and the bereaved daughter our very sincere sympathy in the loss which they have sustained.

Mr. J. H. BLACKMORE (Lethbridge): On behalf of the members of my group I wish to associate myself with the kind words, so thoroughly deserved, which have already been spoken regarding Mr. Casselman. The member for Edmonton East was one whom this house at this time could ill afford to lose. He was a man of understanding, vision and courage. Our sympathies go out earnestly to his bereaved family. In their sorrow they can take some comfort from the fact that he died in harness, doing, and ready and eager to do, his part.

Mr. DANIEL McIVOR (Fort William): As a humble private member may I be allowed to pay my tribute to one whom I came to know intimately. As I saw the flowers here yesterday to cheer the living, and as I see now the flowers on the departed member's desk to commemorate one living on the other side, I am reminded of the last conversation I had with him, when I said: "What difference does it make what may be our creed or our party?" And he interrupted and said, "If you shoot straight and follow the Master Workman, that is what matters."

Our colleague has gone to God's other world and now he may see better than ever what is going on in this house.

ST. LAWRENCE WATERWAY

AGREEMENT RESPECTING DEVELOPMENT OF POWER AND PROVISION OF DEEP WATERWAY FROM HEAD OF THE LAKES TO MONTREAL —DOCUMENTS TABLED

Right Hon. W. L. MACKENZIE KING (Prime Minister): I rise to table the correspondence and documents relating to the Great Lakes-St. Lawrence basin development, 1938-41, which I promised the house on Wednesday last would be tabled to-day.

I am tabling the documents in the form of a white paper which comprises the following:

Part I. Agreements with the United States and with Ontario concerning the Great Lakes-St. Lawrence basin development;

Part II. Correspondence between the governments of Canada and the United States, concerning the Great Lakes-St. Lawrence basin development;

Part III. Correspondence between the government of Canada and the government of Ontario concerning the Great Lakes-St. Lawrence basin development;

Part IV. Correspondence between the government of Canada and the government of Quebec concerning the Great Lakes-St. Lawrence basin development, and

Part V. General plan.

A publication regarding correspondence and documents relating to the St. Lawrence Deep Waterway treaty, 1932, and Ogoki river and Kenogami (Long Lake) projects, and export of electrical power, was tabled in the House of Commons on February 28, 1938. A supplementary publication was tabled on March 21, 1938. The white paper now tabled includes the correspondence and documents relating to the Great Lakes-St. Lawrence basin development subsequent to those publications and up to the date of the Canada-United States agreement of March 19, 1941. With what is contained in this white paper and the two previous similar papers that have been tabled

the house will I believe have before it the essential documents and correspondence relating to the Great Lakes-St. Lawrence waterway agreement.

I have in my hand a summary of the outstanding features of the agreement, something in the nature of a historical sketch of the events leading up to the agreement, essential features of the agreement and the like. This has been prepared by officials of the Department of External Affairs and was given out to-day as a release to the press. It might be of some service to hon. members in subsequent discussions in the house if, for purposes of reference, this statement were printed in the *Votes and Proceedings* of to-day. I shall table it for that purpose.

My hon. friend the leader of the opposition (Mr. Hanson) asked me to place on the table the legal opinion of the law officers of the crown with respect to the position of the agreement as an agreement in contrast with its presentation in the form of a treaty, more particularly with relation to the binding nature of the agreement upon both countries. I now table the correspondence setting forth an opinion from the legal adviser of the Department of External Affairs and from the Deputy Minister of Justice, also an opinion of the legal adviser of the state department, and of the Attorney General of the United States. They relate respectively to the validity of an agreement passed upon the legislative authority of parliament and of congress.

I propose that this correspondence be also printed in *Votes and Proceedings* so that it may be available to hon. members for future reference.

Hon. R. B. HANSON (Leader of the Opposition): Before we leave this item of business I wish to thank the Prime Minister (Mr. Mackenzie King) for having sent me, just after noon, copies of these documents, except the legal opinions which he has now tabled. In the cursory glance that I was able to give them I did not see any figures showing the ultimate cost to Canada of this project. Have any such estimates been made, and if so where can they be found?

Mr. MACKENZIE KING: The engineering report which I tabled the other day has some data; other data will be found in the white paper tabled to-day, and in part V of the summary.

[Mr. Mackenzie King.]

Mr. HANSON (York-Sunbury): There are data, but there is no indication what Canada's share is.

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): I should like to ask the Prime Minister whether the government have given consideration to the question of the Easter adjournment. Easter Sunday is April 13, and Good Friday is the 11th. Hon. members of this house who live at a distance are particularly interested in any announcement the government may make. Personally it does not matter very much to me whether we have a long adjournment or a short one, but certainly it would be a great convenience if we could have a few days at Easter to look after pressing personal affairs. Therefore if the Prime Minister is in a position to make any announcement I should be grateful if he would do so.

Right Hon. W. L. MACKENZIE KING (Prime Minister): My colleagues and I have carefully considered what would be most advisable in the way of an adjournment at the Easter season. The choice seems to lie, as my hon. friend has just said, between a very brief adjournment possibly from the Thursday until the following Tuesday, or an adjournment sufficiently long to enable hon. members in all parts of the house to return to their constituencies if they desire to do so; and particularly, I may add, sufficiently long to enable members of the government, who have been pretty constantly in attendance in the house during the discussion of the war appropriation measure, to give much needed attention to many important matters in their respective departments, and to give us all an opportunity to catch up on arrears. In addition, I hope to secure opportunity for something in the way of much needed rest and recreation in that period of time.

In these circumstances, I have thought that if it were acceptable to the house I would suggest an adjournment from April 9, that being a half day, until Monday, April 28. As hon. members will see, that period includes three Saturdays and Sundays. Actually the adjournment will be for little more than a fortnight. Having regard to many matters to which the government must give attention I think it is important that the adjournment should be for that length of time.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

Hon. J. L. ILSLEY (Minister of Finance) moved the second reading of Bill No. 19, for granting to his majesty aid for national defence and security.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, I have no intention of delaying the house in connection with this measure. We had a considerable amount of discussion in the resolution stage, and certainly I would be the last to want to inflict a speech on the house in connection with the second reading of the bill. Nevertheless I do not think it should go through without something being said.

The resolution called for the appropriation of a very large sum of money; and the bill, which I have perused hurriedly, follows closely the provisions of the resolution. When we reach the committee stage of the bill there are one or two features which I shall bring to the attention of the minister. One point to which I desire to refer at the moment is that under section 4 of the bill there is no division whatever between the amount that may be raised by taxation, and that which may be raised by borrowing. The whole amount of $1,300,000,000 may be borrowed. This is a vote of credit for the full sum of $1,300,000,000, all of which may be borrowed by the minister.

As has been said so often in this house, of course that is a very large sum of money, and it seems to me that before second reading is given, the minister might indicate with some degree of certainty that the government are not going to borrow the whole sum. It would, I think, be contrary to government policy to borrow the whole amount, and I believe the people of Canada would not wish that to be done. *Per contra,* I think the government should announce that all this huge amount is not to be raised by taxation. To raise it all by that method would be too severe, and in large measure would dry up those sources of revenue which are and will continue to be so essential. I invite the minister again, as I did on a previous occasion, to indicate, if he will, just what portion is to be raised by taxation and what portion is to be raised by way of loan.

In connection with this part of my remarks, I would reaffirm the faith I have expressed in this chamber on many occasions during the past eight or ten months, that the people of Canada will produce the money for this government's war effort, no matter what their opinion of the war effort may be. I want to go farther than that and pledge to the service of the state not only myself and my own personal effort, but the membership of my party in this house and in the country to the end that this money will be raised, especially such portion of it as has to be raised by way of loan. I think it would be the most unpatriotic course I could pursue if I were to refuse in any degree to participate in the forthcoming appeal which will be made to the Canadian people. Therefore I have indicated to the gentleman who has been appointed to take charge of this loan that I shall be glad to place myself, with such limited powers as I may possess, at his disposal, and at the disposal of those who are preparing to make the appeal to the Canadian people, and who are preparing to make the loan a success. I desire now to reaffirm that pledge, and to associate with it all my friends in this house. Through the medium of the press I ask at this time the loyal people of the Conservative party to stand behind this government, so far as its loan is concerned. I am sure they will do so.

It is a large sum of money. If all the money were to be spent in Canada, from the purely economic standpoint I do not think there would be any great difficulty in getting it. But a substantial portion of the amount required will have to be spent in the United States and the purchases paid for in the currency of that country. To that extent provision of the money will at least be fraught with some difficulty. If the money is raised from our own people, then theoretically this would be a matter more or less of bookkeeping. I do not claim to be a great economist, but it would seem to me that this would be a self-contained matter, and would not present any great difficulty, except as regards the quantum of the amount to be raised. If, however, as I apprehend will be the situation, a substantial amount of the money must be exported from the country to purchase war supplies and other materials in the United States, in terms of their currency, then I would visualize considerable difficulty in connection with war financing in this year.

Especially will I expect that difficulty if the amounts reach the astronomical figures which have been indicated. It must be remembered that not only this sum of $1,300,000,000, but a further substantial sum estimated by the Minister of Finance (Mr. Ilsley) at $160,000,000, together with a supplementary appropriation for the now expiring current year will have to be raised. The circumstances I have indicated will, I believe, present substantial difficulties to the Department of Finance and to those who are charged with the responsibility of making those payments.

I was interested a few days ago to read the report of a statement purported to have been made by the Secretary of the Treasury in the United States, Mr. Morgenthau. It was intimated that Mr. Morgenthau had been assured by the deputy minister of finance that Canada was prepared to finance her requirements in the United States for the year. I assume the calendar year of 1941 was meant. He said, however, that after that there would be more difficulties. That remark may not be properly attributable to the deputy minister of finance; but if it is, and he did say that, then I am more or less in agreement with him. With the growing commitments for war supplies, commitments properly incurred, I believe there will be increasing difficulties in taking care of that position. It is my belief that we shall be confronted with two courses, both of which will have to be adopted. The first is that there will have to be further restrictions on the importation of non-essentials from the United States, and, second, that we may have to resort to borrowing in that country.

That is all I have to say with respect to the general principles involved in the bill. Before I resume my seat, however, I desire to make one further appeal to the Minister of Munitions and Supply (Mr. Howe) in connection with Federal Aircraft. I do not make the appeal in any carping spirit. While the resolution was being debated in committee, there may have been engendered some expressions of opinion which might better have been left unsaid. On the whole, however, I believe the debate was more or less on an elevated level, and the minister himself came to the conclusion that no one was aiming any shafts at him, personally. No one was attempting to intimate that he had fallen down in the tremendous work he has undertaken upon himself. There was a feeling, however, that there had been a failure to adopt a definite policy such as the minister himself had indicated in his press releases of early last summer.

I have no intention whatever of rehashing the whole story of Federal Aircraft. I would ask permission, however, to call the attention of the minister and the house to a statement made by him through the director of public information on July 2 of last year. At that time the minister is reported to have said:

> The Canadian aircraft industry has responded so splendidly to the emergency created by Great Britain's inability to ship components under the terms of the joint air training scheme, that the larger part of the original programme, which covered two years, has been compressed into a one-year plan. Elementary trainers are already being manufactured on a mass production basis and the construction of advanced training planes is proceeding in accord with the needs of the accelerated schedule.

Then he goes on to say:

> The ability and willingness of the operators and workmen of the Canadian aircraft industry to meet the unprecedented demand, have been so pronounced that the government will be able to complete both the Canadian programme and the whole joint air training programme on the basis of the dominion's own resources and without assistance from overseas.

I confess at once that when I read that statement I thought it was a cheerful one, and one which would bring comfort to the Canadian people, who had heard appeals for planes and more planes—and that sort of thing—from overseas. I was content to accept the matter at its face value.

At the same time the minister announced the appointment of Mr. R. P. Bell to the executive committee of the department with —and note this—the responsibility for coordinating the entire aircraft production throughout the dominion and accelerating, even beyond its present speed, the output of the aviation industry. Then the minister proceeded as follows to summarize aircraft production:

> Work is well advanced on all the orders for planes required under the joint air training plan. Arrangements have been completed for the purchase of some 5,000 engines.
>
> Originally most of these engines were to have come from Great Britain. Orders have also been placed for instruments and other necessary equipment of the aircraft production programme.
>
> Under the air training plan, pilots receive their first air experience in elementary flying training schools. There they fly Fleet trainers and de Havilland Tiger Moths. According to the plan, some 800 of these elementary machines are needed. One Canadian plant is producing more than two of these planes a day. Nearly 200 of this type of plane have already been delivered from Canadian plants. By the end of the year Canada will have produced all the elementary training planes required.

I think that schedule has been lived up to pretty well; at least that is my understanding of the situation. The minister went on to say:

> To fulfil her part of the training plan, Great Britain was to have provided 400 Gypsy engines for the Tiger Moths. To replace these, 400 Menasco engines have now been purchased. The engines required for the Fleet trainers also have been bought.
>
> As the pilots graduate from their elementary training, they are taught how to handle the bigger and faster craft. These include Harvards, Fleet 60's and Ansons.

He then went on to indicate the orders which had been placed in Canada and the United States for Harvard training planes. He then said:

> The production in Canada of Ansons, Harvards, and Fleet 60's has been so scheduled that they will be available as pilots graduate

from their preliminary training in the elementary planes. Deliveries of Harvards will begin within a month.

As I understand, the Fleet 60's are intermediate planes. The minister then proceeded to state that the Anson programme, involving the construction of 1,509 twin-engined craft, was proceeding vigorously in the nine Canadian plants that are manufacturing the various component parts, and that in order to coordinate the output of all Anson parts and to expedite the production of the complete Anson machine—one of the most important units in the air training plan—steps had been taken to segregate this work from the remainder of the aircraft programme and to place it under one management and direction.

He then announced that a company had been formed for that purpose, Federal Aircraft Limited, with headquarters in Montreal. Mr. Ralph P. Bell would be its president. He would be assisted by a board of directors, consisting of Mr. Sidney Dawes, Mr. Blair Gordon, Mr. Russell Smith and Mr. Allen Aiken. The general manager would be Mr. R. J. Moffett, formerly chief aeronautical engineer of Canadian Vickers; and Mr. Frank L. Jeckel, a member of a firm of chartered accountants, had been appointed treasurer.

The company was then set up, and I understand a contract was entered into directly between the department and this company for the production of these planes. The company was to have the planes assembled, and to arrange to have the parts manufactured and the engines imported from the United States, as has been indicated here. As I understand it, Federal Aircraft Limited was set up at the suggestion of those who were directing aircraft production in the department; it may be attributed to Mr. Bell and perhaps to Mr. Sanderson. They suggested the setting up of this company to do the engineering and reengineering and to procure certain essential parts. This was necessary because of the involved state of the Anson programme at that time.

My understanding is that the original statement to the minister, and of course from the minister to the government, was that the company should be independent of ordinary government facilities in connection with the treasury and that sort of thing; that that suggestion was approved by the government, either formally or informally. But I understand within a short time the whole set-up was changed and Federal Aircraft Limited became merely an agent for the Department of Munitions and Supply, all its actions being subject to the approval of the minister. I should like to know if this is correct; if there was a change and the basis of the change.

I assume that the change was made on the theory that there was no responsibility for the expenditure of public funds. With that principle I do not think any one who has had any experience in public life will have any great quarrel. I should, however, like to point out that while such a principle may be absolutely essential in peace time for the protection of the public treasury, it is too inflexible for war time. This is the sort of thing which had to be overcome in Great Britain and which was overcome by the appointment of Lord Beaverbrook as minister of aircraft production and his inclusion in the ministry.

I have received substantial information with respect to the history of the company from that time onward, but I shall not repeat it here for two reasons. First, I do not think I should take up the time of the house in doing so and, second, I have not had an opportunity of verifying the information which has been given to me. I realize that the difficulties which have arisen have been multitudinous and sometimes almost insurmountable, on account of the combination of circumstances. If, however, those charged with responsibility had had a little more foresight, had had a better understanding of conditions as they were, and had taken a long range view, some of those difficulties might have been obviated. I think we will all agree that so far as the Anson programme is concerned, the delays have been too numerous, the programme has been retarded, and the set-up to-day is not as satisfactory as it might be. That is putting the case quite mildly.

In closing my remarks, I appeal to the minister to review the whole position with respect to the Anson programme and consult with those who do know the industry. I do not suggest that he should put one of his subcontractors in charge of the programme, as he has intimated we have suggested. That suggestion has been made, however, by some of those who know or pretend to know about this matter. I appeal to him to review the whole position with respect to Federal Aircraft so that we can get some action on this Avro-Anson programme. This is the attitude the country is taking. If we get satisfactory action in the not too distant future, I am sure the country will forget a good deal of what has happened in the past.

Hon. C. D. HOWE (Minister of Munitions and Supply): Mr. Speaker, I intend to make only a few remarks on this bill because I think the subject matter has received complete consideration. My hon. friend opposite has, however, raised one or two points and has asked me to deal with them. The hon. member for Rosetown-Biggar (Mr. Coldwell) asked some

questions which I shall attempt to answer. I shall deal also with the matter of brass which was brought up in the debate in a rather offensive way.

As far as the very moderate remarks, which my hon. friend has made about the Anson programme and Federal Aircraft, are concerned, there is a fundamental difference between us. During my absence in England an attack was made on Federal—I have traced the source of this, but I do not know that this is of any particular interest to the house—and by the time I had returned this had grown to be a rather virulent newspaper debate. I looked into the situation very carefully on my return because having established the company I had to decide what should be done. I viewed with an open mind the situation as it had developed and I came to the conclusion that while the management had perhaps not been all that could have been desired, it was still most decidedly advisable to continue as we had started and straighten out the management.

My hon. friend is quite correct in saying that we established the company to coordinate our work that could not be placed in a single aircraft plant. Situations vary from time to time, but at that time every plant was developing from small beginnings into a position to handle a substantial programme, and every plant had a substantial programme.

By February it had developed that the de Havilland company were anxious to take over the whole programme. In July, the time to which my hon. friend refers in connection with the press statement from my department, de Havilland was one of the busiest plants in Canada trying to step up production of primary trainers.

My hon. friend says that it was set up with the idea that the management would have a free hand. May I say that several men who have joined our department have come in with the great idea of having a free hand. That idea of authority without responsibility seems to be the great goal of men who enter into government work, but no man and no government company has that kind of free hand. The purpose of the government company is to manage and recommend. No expenditures can be made by a government-owned company except through the ordinary channels of government. If it is an item over $5,000 the expenditure must be recommended to the government and approved by them and an order in council prepared just the same as for other government expenditures. If the item is less than $5,000 it must have ministerial authority. Each of the public companies has a limit within which it is allowed to use its own discretion, and that limit is not large. So far as I have been able to observe there have been no great handicaps to the business of these companies through the fact that no person in them has had a free hand to spend the money of the taxpayers of Canada. The purpose of the government-owned company is not to avoid the restraints on public expenditures.

My hon. friend has referred to Lord Beaverbrook as having a free hand. As a matter of fact I know from personal contact with him that he has not a free hand because I have been present at battles between Lord Beaverbrook's staff and the staff of the British treasury and it is just as difficult—this may seem almost unbelievable—to get accounts through the British treasury as it is for a member of this government to get the approval of the treasury board of Canada. This "free hand" in spending public money exists only in theory, and I for one have no desire that it should exist in practice. If it did exist in practice I do not believe public business would be greatly expedited.

The purpose of Federal Aircraft is the purpose which up to the present it has carried out. The delays which have occurred and the difficulties in the relations between Federal Aircraft and its subcontractors have arisen out of the necessity of completing the redesigning of the plane. We had no thought in July that the plane would be completely redesigned. We knew that certain adaptations had to be made from British to Canadian standards, but the extent of the redesigning subsequently decided upon went far beyond that. We were greatly disappointed at the inability of our designing staff to complete the design as quickly as we could have wished. Until these designs were completed the most expert business management and the most superior board of directors in the world would have been just as helpless as were the directors of Federal Aircraft to place firm contracts with subcontractors on a basis that would allow them to proceed to furnish the finished planes.

The fact is that to-day the redesigning has been wholly finished. The orders which had been placed for raw materials were necessarily placed subject to the furnishing of finished designs and layout drawings. These designs and layout drawings have been furnished; the Anson programme to-day is in the hands of the builders and the builders are now in a position to go full-out on the programme. There was a delay on the engineering end, but I have never been able to see that any charge of incompetence would have been justified against the directors of the company, who have been giving a tremendous amount of their time to this work. If there

is any company whose business I know well it is the Anson company because I have gone into it personally in minute detail. I felt it was my duty to do so on account of the decision that I had to make with regard to the company. The Anson programme is completely in order to-day and I think that the prospects of obtaining Anson planes on schedule are just as good as the prospects of obtaining any other plane that has not yet gone into production.

Mr. BLACK (Cumberland): Under the programme to which he refers, does the minister care to say what quantity is contemplated at this time?

Mr. HOWE: The present contract is for 1,050 Anson planes.

My hon. friend, referring to my so-called press statement, referred to the statement that it would be possible to speed up the air training programme and do two years' work in one. I do not know whether that was ever a correct statement of the intentions of those responsible for the air training programme, but I do know that the air training programme has been speeded up very substantially. My colleague has made a statement to that effect in this house, and so far as I know we have kept him in planes—not all the planes he could have wished for; nevertheless it has been possible to speed up his programme very greatly. We are ahead of the schedule that was given to us for the production of planes, and the fact is that he has received the planes to carry out that programme.

The hon. member for Rosetown-Biggar (Mr. Coldwell) asked for certain information concerning the Canadian Broadcasting Corporation. My officers have prepared a reply which I shall be glad to place on *Hansard*. It is as follows:

Three of the Class I-A channels allocated under the Havana agreement to Canada have been assigned to privately-owned stations in order to meet a provision of the treaty that some use must be made of these channels within one year from March 29, 1941, but under the present policy the stations concerned may only use their present power. With regard to the possibility of a misapprehension in this respect on the part of the owners of these stations, there is no vested interest in the licence issued for the operation of a radio broadcasting station.

Mr. HANSON (York-Sunbury): That is to say, the government can refuse at any time to renew the licence?

Mr. HOWE: Yes. It is definitely stated in the act that there is no vested interest.

730 Kc. is a Class I-A assignment to Mexico—

Not to Canada.

Under the provisions of the Havana agreement Canada may use it for Class II assignments provided no interference is caused on the Mexican border and the five kilowatt (not fifteen kilowatts)—

The fifteen kilowatts is in parenthesis. My hon. friend said five and I said fifteen.

—station CKAC may have to use a directional antenna if interference is caused. The assignment of 730 Kc. to CKAC is a Class II assignment. No Canadian frequency facilities were given up in obtaining the use of 730 Kc. by CKAC.

The separation between CKAC and CBL is well beyond the separation required between a 5 kilowatt and a 50 kilowatt station on adjacent channels (10 Kc. separation).

CKBI Prince Albert, CFPL London, CHML Hamilton, CJBR Rimouski are assigned Mexican Class I-A channels as Class II stations as permitted by the treaty. The selections were made in accordance with the engineering standards of the treaty. These assignments do not imply a permission later to increase the power.

In fact, quite the reverse.

The immediate and future requirements of the Canadian Broadcasting Corporation long term plan of national coverage did govern the allocation of frequencies.

All frequency allocations were concurred in by the board of governors of the Canadian Broadcasting Corporation in accordance with the requirements of the Canadian Broadcasting Act, 1936. The Canadian Broadcasting Act, 1936, gives the corporation complete jurisdiction over all network broadcasting in Canada. The authority is section 22, subsection 1, clause (a), which says:

"The corporation may make regulations to control the establishment and operation of chains or networks of stations in Canada."

Pursuant to this power, appropriate regulations have been passed by the board of governors covering national and international chain broadcasting. The contracts which stations CFRB (Toronto) and CKAC (Montreal) have with the Columbia Broadcasting System give them the right to accept or reject such commercial programmes as they desire, having in mind the interests of Canadian listeners. There is no obligation on their part, under the contract, to clear time for Columbia at any time, either for sustaining or commercial programmes.

The contract is made subject to the provisions of the Canadian Broadcasting Act and all rules and regulations made thereunder, and to annual reconsideration by the Canadian Broadcasting Corporation.

The corporation fully appreciates that parliament intended that it should be the network broadcasting authority in Canada, exercising supervisory control over all chain transmissions, irrespective of whether they originate within or outside the country. The regulations have been framed in the light of this consideration and administration has proceeded to this end.

Now I come to a matter which was brought up in this house at a time when I had no information to enable me to go into it fully. Hon. members, from observations they have made to me personally, have an idea that I

have been rather bad-tempered in the discussion of this particular bill. I think on consideration they will admit that the only time I have been extremely bad-tempered is when a member of my staff has been accused of doing less than his best. I do resent suggestions in this house that some member of my staff has used his position in the government to further his private interests, or that he has been dishonest in the exercise of his judgment. I therefore wish to go into the subject raised by the hon. member for West York (Mr. Adamson), which was a very serious reflection on senior members of my staff, one of whom he mentioned by name.

To lay the background for what I have to say, I wish to read two letters, one signed by Mr. M. S. Moss, general manager of Anaconda American Brass Limited, and the second from Mr. H. Horsfall, president and managing director of Canada Wire and Cable company.

Mr. HOMUTH: The minister refers to the hon. member for West York having made reference to a member of his staff. I do not recall that he did.

Mr. HOWE: Yes; he referred to Mr. Henry. That was on March 13, 1941. This is the letter from Mr. Moss, on the letter head of Anaconda American Brass Limited, and it is dated March 19, 1941. It is addressed to myself:

Honourable Sir:

As requested by Mr. Henry Borden, we are furnishing the following information with regard to the questions raised in the House of Commons by Mr. Rodney Adamson, M.P., as reported in *Hansard* for Thursday, March 13, 1941, at pages 1652 and 1653.

I have inquired of Mr. John A. Coe of Waterbury, our president, Mr. W. H. Stewart, our secretary, and Mr. W. M. Moffatt our superintendent, who with me as general manager are the officials in charge of our business, and neither any of them nor I have given any information on the subject to Mr. Adamson. It is possible that some member of our organization without authority may have talked to Mr. Adamson.

In regard to placing the contract for a government mill with us, the facts, as we understand them, are as follows:

At the request of the war supply board, we submitted our estimate for the erection of a government mill on our property to Mr. W. S. Lecky, of the war supply board, on April 8. The amount of our estimate was $2,735,040. On May 29 we were asked to attend a meeting in Mr. Woodward's office. Present at this meeting were Messrs. W. C. Woodward, Colonel W. A. Harrison, W. M. Moffatt, superintendent of Anaconda American Brass Limited, and the writer, general manager. At this meeting we were told that it was a little hard to get any action on the government mill at our plant due to the fact that the exact poundage of metal required was not known, so it was hard to tie down the British and French commissions to any concrete proposition.

Mr. Woodward stated that the French commission were very desirous of owning a mill in Canada, preferably in Quebec, as they thought such a mill would be of value after the war was over to produce slab metal for export rather than exporting copper and zinc separately, and they had asked the executive committee to locate a manufacturer who would build a plant for the French government, preferably not our company.

Mr. Woodward stated that officials of other companies had been summoned to Ottawa and asked to figure on a new mill, it being the idea that this mill would be built at the expense of the French government and the mill would belong to them after the war. It was further stated at this meeting that the quotation for the Quebec mill would include a rod and sheet mill, while we had only been asked to quote on a sheet mill. At no time did we understand that we were bidding against the Canada Wire and Cable Company Limited.

On June 17, 1940, Mr. Moffatt and the writer attended another meeting in Mr. Woodward's office. Mr. R. A. C. Henry was also present. At this meeting we were told definitely that Mr. Murdoch of the Noranda Mines Limited had been asked to erect a mill capable of producing 100,000,000 pounds of metal annually, and we were told that in addition to this mill our company would be asked to build a mill. We were asked to secure options on the necessary machinery capable of producing a substantial poundage. We were not authorized to go ahead with the work, but from Mr. Woodward's office a firm of engineers were called on the phone and were asked to get in touch with us in regard to plans.

The Beauharnois Company's name was never mentioned at any of the meetings that we attended in Ottawa, and the writer has no recollection of Mr. Henry ever mentioning power, although it is possible we may have been asked if the Hydro-Electric Power Commission could serve us with sufficient power in New Toronto to take care of the new mill.

In regard to the statement that the Canada Wire and Cable Company Limited had to come to our company and ask for help with the layout of their plant, we can say positively that we had nothing whatsoever to do with this layout, but after the plans had been made they were shown to our superintendent. Our relations with the Canada Wire and Cable Company Limited have always been friendly and during the time their plant in Quebec was being erected we gave certain of their officials the run of our plant and gave them all the information we could on any matter that was brought up.

In regard to the training of men, it will be found by referring to our agreement with the government for the erection of a government mill on our property, which was drawn up by the Allied War Supplies Corporation and signed on September 11, 1940, that a paragraph appears whereby we are authorized to train forty men for the government mill at government expense, and providing we would give a certain percentage of them to the Canada Wire and Cable Company Limited. In training men as we did for the Allied Brass Limited we were only living up to our agreement.

In regard to increasing our prices one cent per pound to amortize the cost of the government mills, the possibility of doing this was one of the many things which were talked over in Mr. Bateman's office on February 5 or 6, 1941, but it was thoroughly understood that

no action at all would be taken in this matter without it first being submitted to the minister for approval and being made the subject of an order in council. Mr. G. C. Bateman, metal controller, would be able to tell you more about this than we can.

Yours very truly,
Anaconda American Brass Limited,
M. S. Moss,
General Manager.

The next is a letter on the Canada Wire and Cable company's letter head, president's office, dated Toronto, March 20, 1941:

Dear Sir,—

I acknowledge your letter of the 18th instant re speech of Mr. Adamson, M.P., with copy as reported in *Hansard* attached. I wish to advise:

1. No help was asked of Anaconda on the design, layout or construction of the brass plant referred to. Our engineers visited the most modern United States plants for the production of this product and were given every facility and all information necessary to do this work.

2. The Anaconda company have cooperated fully with us and have always been very friendly. It is true that a number of our men were trained at the Anaconda plant under an agreed arrangement which has been most helpful.

3. Mr. Adamson's remarks regarding power are incorrect. The question of power was never discussed at any time, with anybody, nor has anyone in our company had any conversation with the Mr. Henry mentioned by Mr. Adamson. I, personally, am not acquainted with Mr. Henry, the Beauharnois company was never mentioned at any time.

4. No suggestion was ever made by any officials of this company that the price of brass should be increased by 1 cent per pound or by any other figure for the purpose of writing off the cost of the brass plant in Montreal, and while the writer has heard some hearsay rumours in this connection, I can state positively that any such suggestion did not originate in this organization.

Yours very truly,
H. Horsfall,
President and Managing Director.

I should like to deal with the remarks of the hon. member for York West (Mr. Adamson) as reported in *Hansard,* page 1513:

I come now to a condition of expenditure. In my riding the largest industrial plant is the Anaconda American Brass Company. They are, or were until a very short time ago, the largest and practically the only manufacturers of brass in Canada.

This is the statement to which I should like to call attention:

Some time during the latter part of last year the Department of Munitions and Supply asked for tenders on a plant to produce 100 million pounds of brass sheet and rod a year.

The answer to that is that no tenders were asked for, but negotiations took place with two companies, one being asked to submit an estimate for a sheet mill, and the other for a rod and sheet mill. I should like hon. members to note that the two proposals are quite different. They are the same in that both had sheet capacity, but only one proposal also includes extrusion press and rod capacity.

The hon. member continued:

On this tender there were two bids, one from the Anaconda company and one from the Canada Wire and Cable Company in Montreal. When the contracts were let, it turned out that the Anaconda company had made a bid of $1,500,000 less than the bid actually accepted. There is now a discrepancy of $2,300,000 because, after the original contract was let, the demand for brass increased to such an extent that the government had to ask the Anaconda company to build a plant of the same size as it originally intended to build.

The answer to that is found in the Anaconda letter, the fifth paragraph. It shows that estimates were not for the same project. Then he went on:

The Anaconda American Brass Company have offered to run this government plant entirely and absolutely without fee.

The answer to that is that the contracts with both companies provided for a management fee, but last November the Anaconda company advised the government that they did not wish to accept the fee provided for, and I acknowledged this helpful action on their part by letter of November 4 last.

The hon. member continued:

I understand from the information I have received that the Canada Wire and Cable Company is charging a fee for the operation of their plant. Further than that, the Canada Wire and Cable Company had never made brass sheets and rods before. They had to go to the Anaconda company in New Toronto and ask them, first, to help them with their layout of plant—

The answer to that is in the Anaconda letter, paragraph 8, and the Canada Wire and Cable company letter, paragraph 1.

Mr. JACKMAN: Had they turned out the brass rods?

Mr. HOWE: Yes; the plant is in production now and the brass rods are now being turned out.

Mr. JACKMAN: I mean, had Canada Wire and Cable company been turning out brass rods before this contract?

Mr. HOWE: No; the Canada Wire and Cable company had never been manufacturers of brass, but of course they are one of the largest, in fact the largest manufacturers of copper rods and sheets in the country.

The hon. member went on:

. . . and, further, to train men in their private plant—not in the government plant—in the manufacture of brass sheets and rods.

I may say that Allied War Supplies, who have charge of these contracts as part of their explosives and chemical work, made an arrangement with Anaconda so that they would train men for both government plants at a price that was agreed upon, and that was done. The men were trained there, but under an agreement with Anaconda. The hon. gentleman went on:

When this information was presented to me I naturally investigated the matter, because this concern is in my riding, a company that is vitally important to the welfare of York West, and one on whose lists there are to-day the names of some four thousand men wishing for employment. Therefore I assumed with my constituents who are members of this organization—

And I stress these words:

—that the reason why the contract was given to the Canada Wire and Cable Company could not be lack of labour in York West, because there is plenty of labour available there.

The answer to this is found in the Anaconda letter, paragraph 4, beginning, "Mr. Woodward stated" and ending "preferably not our company." Then the hon. member went on:

Then I said, perhaps there is a power shortage in York West, so I inquired of the Ontario Hydro-Electric Commission and officials of the company and found that ample power was available. But one of the members of the company said to me: "Yes, we had lots of power, I understand that the Canada Wire and Cable Company were guaranteed power and that the deal was put through by a Mr. Henry" —I think the name was—"who said there would be opportunity to get plenty of power from the Beauharnois company, they had a surplus of power, and that they could build their plant in Montreal."

As hon. members will recall from reading the letters, Mr. Horsfall said he had never heard of Mr. Henry and that no member of his staff had discussed power with Mr. Henry, while Mr. Moss stated that he had never at any time heard the subject of power mentioned in Mr. Henry's presence.

Mr. HANSON (York-Sunbury): Did he not say he did not recall hearing it? That is quite different, you know.

Mr. HOWE: Nevertheless, here we have absolutely no foundation for that statement. It was pure innuendo, designed to destroy one of the senior men in my organization, a man who from the inception of the defence purchasing commission, I think, has worked as hard as, if not harder than, any man we have on the staff to keep this war effort of ours moving. It is the sort of thing I despise.

Mr. HANSON (York-Sunbury): Of course I do not agree with that interpretation of the hon. member's remarks.

Mr. HOWE: It is absolutely plain.

[Mr. Howe.]

Mr. HANSON (York-Sunbury): I do not think there was any intention to destroy Mr. Henry. The hon. member had been told that Mr. Henry intimated that there would be ample power available from Beauharnois.

Mr. HOWE: It was dragged into the discussion in a very different way from that. The hon. gentleman mentioned that with a sneer in his voice, and this was what he said:

But one of the members of the company said to me: "Yes, we had lots of power, but I understand that the Canada Wire and Cable Company were guaranteed power and that the deal was put through by a Mr. Henry"—I think the name was—

The name was dragged right in there.

—"who said there would be opportunity to get plenty of power from the Beauharnois company, they had a surplus of power, and that they could build their plant in Montreal."

It is quite obvious from reading the letter that this had absolutely nothing to do with it, and I have my own opinion of a man who will go out of his way to bring discredit on a faithful officer of this government. I need not read all of these remarks. I will go on down to this point:

The suggestion was made to a very high official of the Anaconda American Brass Company that he should increase the price one cent a pound so that the Canada Wire and Cable Company would be able, or the government would be able, to write off this plant in Montreal.

We are not talking about additions to either the properties of the Canada Wire and Cable company or the properties of the Anaconda American Brass company. These were wholly owned government plants, and all that we arranged for was the designing and operating technique of these two companies. The plants were owned and paid for by the government. There was this difference: the same operating fee was arranged by contract with both companies, but last November the Anaconda company said that after consideration they had decided that they did not wish to accept the fee and would donate their services, both for design and for the operating of the plant, to the government. This was a splendid act on their part, and an offer that I was glad to accept. I may say that from time to time we have had other offers of that kind, and have accepted them, in similar transactions.

The question came up of two government-owned plants. We went through with the Montreal plant as one which was to be owned by the French government. We were just completing negotiations with them when the collapse of France took place. After Dunkirk, the British took over all the French commitments in the United States while the Canadian government took over the French

commitments in Canada, which fortunately were very few. So we took over the French commitment in the matter of the brass plant at Montreal.

From time to time we have been studying the question of the amortization of these government-owned properties. It is my belief that where part of the product is going to a customer other than the owner, the question of amortization should be considered. It is considered in the United States, where the amortization is carried on over a five-year period; and we have come to the conclusion that where questions of amortization arise—and it is only a question of bookkeeping as far as the government is concerned except in so far as it affects the price of the product—

Mr. HOMUTH: During the discussion on the resolution, did the minister not say at one time that this was written off at the start in government-owned plants because we were financing the whole thing?

Mr. HOWE: So it is, and no question of amortization enters where the government owns the plant and the same government obtains the product. But where one government wholly owns the plant and another government accepts the product, it is only fair that the second government should pay an increased price for the product which would include an amortization charge. I am told that in trying to price the product of this government-owned plant to take care of amortization on a five-year basis, it was questioned whether the current market price of brass would permit that to be done; and a discussion took place as to whether the price should be increased by a cent a pound to take care of the full amortization charge. The matter never got to me; the decision was that certainly we should not attempt to sell brass at more than the current market price of the product, and the matter ended there. It was only an academic discussion, in an attempt to see how the product could be priced to work out amortization in five years.

Mr. HANSON (York-Sunbury): It will have to be dealt with sooner or later, will it not?

Mr. HOWE: What we have decided, and I think it is the only thing we properly could do in connection with a commodity sold in current market transactions, is that we will charge all our customers the market price of the brass. Of course, anything between the bare cost and the market price will be returned to the government for the amortization of the plant. It may be more or it may be less than the amount required to amortize the plant in five years; nevertheless I think any reasonable consideration would indicate that we should not attempt to sell brass for more than its world market price.

I feel sure the margin will be sufficient for our requirements. That is the matter of brass. I should like once again to impress upon the house that we are talking about two entirely different types of plant. One is a rod mill, with a large rod capacity as well as sheet capacity; the other is a sheet mill. We never asked for tenders on the two plants. We asked for proposals, one for one type of plant wanted by the French government, and the other for another type of plant we require for our own shell programme. The French plant came into our hands at the time of the general assignment of French contracts in this country, so that we now own two brass plants, one at Montreal and the other at Toronto. Both of them are needed. We are very close to the thin edge of our brass requirements. Both are in good hands. The plant at Montreal now in operation is turning out brass. Brass from that plant has already been used in ammunition orders; it is a finished product. The sheet metal plant at Toronto will be in operation very shortly.

In my opinion these were thorough business transactions, and I believe anyone who cares to inquire into them will find nothing to criticize about either.

Before taking my seat I do ask hon. members to be fair in their criticism. I do not object to fair criticism. I believe in fact that our department should be criticized. I believe criticism is helpful. I believe I never have shown any resentment concerning anything in the nature of fair criticism or a desire to seek information. I realize that it is in the best interests of good government to give all information any member can ask. I shall try to deal with criticisms fairly; but I do ask that hon. members do not take the offhand attitude that any individual member of our organization who cannot be here to defend himself is either acting dishonestly or is improperly carrying out the duties assigned to him.

Mr. HANSON (York-Sunbury): I rise only for the purpose of asking a question on a related matter. May I add that personally I have not criticized the minister's stand; I have praised him.

Mr. HOWE: Quite.

Mr. HANSON (York-Sunbury): In most cases the men in that department are doing good work. I could name some of them. For instance, Mr. Crabtree is one I would name,—a great business executive in Canada who is giving his entire time to service to this country—and he is giving us service of the very highest order. He may be guilty of errors in judgment—I do not know anything about

that; but certainly I never have criticized these gentlemen. Criticism, if any, has come from the minister's own friends more than from this side of the house.

With respect to the matter of treasury control over these government companies, it is my understanding with respect to Federal Aircraft that within a period of two or three weeks the position was changed, because they could not have unlimited control over expenditures of government money. What is the position with relation to these government plants which are being set up and managed, we will say by Canada Cable or Anaconda, through Allied War Supplies Corporation? What is the position as to observation and control of these companies by the treasury? Would someone in the ministry make the position clear so that the public, including myself, will have a clear understanding?

Mr. HOWE: Mr. Speaker, so far as construction and purchase contracts are concerned, the transactions are recommended to the government by Allied War Supplies Corporation. Those contracts are then approved by the government. The contracts are drawn by Allied War Supplies Corporation, but payments are made by treasury officers of the government, in conformity with the usual procedure. Vouchers are sent through in the usual way, certified by the officers of Allied War Supplies, signed by my deputy minister and passed on to the treasury.

So far as operating goes, the treasurer of each of these companies, or of each government-owned plant, is an officer of the Minister of Finance, and certain accountable advances are given the company. The work is carried out subject to the audit of the auditor general, who has a staff in very close touch with the plants. The accountable advance is given for working capital, and the operations then go on, subject to the supervision of the auditor general and the Minister of Finance, in the same way that the president and board of directors would have control over any private business.

Mr. HANSON (York-Sunbury): There is full control?

Mr. HOWE: Yes.

Mr. HANSON (York-Sunbury): That is what I wanted to know.

Mr. KARL K. HOMUTH (Waterloo South): Mr. Speaker, I do not wish to delay progress of the bill, and I would not attempt to refer in detail to what the minister has said respecting matters to which the hon. member for York West (Mr. Adamson) addressed himself. But as closely as I could follow the letter I concluded that there was at least some reason for some of the things said.

It is matters of this kind which give rise to suspicion in the minds of the people. The hon. member for Winnipeg South Centre (Mr. Maybank) made certain statements in the house a week ago, and returned to his subject again this week. On both occasions he spoke about the building of a cordite plant outside the city of Winnipeg, and the installation of heating equipment therein. From his statement in the house and from a careful reading of his speech one cannot help being led to the conclusion that in that plant there is an expenditure of $100,000 or $200,000 extra for heating purposes, and that that money could be saved.

These are matters which should be cleared up in the minds of the public. Speaking not only as a member of the Conservative party but as a Canadian I say the worst thing that can happen to our war effort is to have even the breath of scandal directed against it. Had I a thousand pieces of information of a scandalous nature I would refuse to take them up on the floor of the house at a time like this, because I believe we are all concerned with only one thing, and that is the winning of the war. Party politics have to go to one side. For that reason I say we should be most careful in the contracts we let and the way they are administered. I make that statement in all seriousness.

During the discussion on the resolution which preceded this bill I wanted on several occasions to ask the Minister of Labour (Mr. McLarty) to give us a clear explanation of the various orders in council passed in connection with the regulation of labour. For instance one order in council practically pegged wages at either the 1926-29 level or the present level, whichever was the higher. Another order in council was passed under which those engaged in war industries and requiring help were limited as to the manner in which they might advertise for that help. One order in council pegs wages and the other pegs labour at the job. These work disadvantageously to labour, and the Minister of Labour might give a clear explanation with regard to them. On several occasions I was going to ask him to explain this, but the time of the committee was taken up with the discussion of a heating unit at Winnipeg, with the discussion of wheat or butter or something else, which broke the whole trend of the discussion. Could the minister, when the bill is in committee, give an explanation of the various orders which were passed with

respect to the limitations put upon labour both as to wages and as to seeking employment in other industries?

Mr. THOMAS REID (New Westminster): Mr. Speaker, I should like to offer a word of commendation to the Minister of Finance (Mr. Ilsley) in connection with one aspect of raising the money needed to meet these expenditures. I refer to the war savings certificates campaign which has been in operation for the past number of weeks. More than 50,000 Canadians have given of their services freely and nobly without any hope of reward. A sum of over $150,000,000 has been, shall I say, given to the government by thousands of Canadians. All this speaks well for the spirit of our people. The good is twofold. First, it shows the willingness of the people to lend to the government and, second, thousands of our people are putting by for the day when the war will be ended. At that time they will have returned to them the savings which they so willingly gave to the government during these stressful times. I commend what has been done to the house and the country, and I congratulate the minister upon inaugurating this wonderful scheme.

Mr. NORMAN J. M. LOCKHART (Lincoln): Mr. Speaker, I should like to associate myself with the remarks of the hon. member for Waterloo South (Mr. Homuth). I have personal knowledge of employees in certain plants being seriously inconvenienced by the orders in council referred to by the hon. member. If the Minister of Labour (Mr. McLarty) could clarify the situation in the minds of employers and employees, it would prove helpful. I have in mind a number of instances in which employees have desired to make certain changes, but were told it was impossible under the provisions of the orders in council.

Motion agreed to and the house went into committee, Mr. Fournier (Hull) in the chair.

On section 1—Short title.

Mr. HANSON (York-Sunbury): I think the suggestion made by the hon. member for Waterloo South could properly come before the committee at this time. Personally, I should like to have an explanation from the ministry as to the effect of these labour orders in council.

Mr. ILSLEY: The Minister of Labour is not in the committee, and I am informed that he is going away this afternoon. I hope that the passage of the bill will not be delayed on this account alone. There are at least two opportunities of asking the minister to give that information later on.

Mr. HANSON (York-Sunbury): On this bill?

Mr. ILSLEY: It could be asked when we are discussing the supplementary appropriation bill, and the other occasion would be when the minister's estimates are being considered. If he were here, I would send for him, because he is the only one who can give the information.

Mr. BRUCE: I should like to ask the Minister of Munitions and Supply if consideration has been given to the erection of a high-powered short-wave station as a war measure, particularly in view of the possibility of one of the stations in England being destroyed.

Mr. ILSLEY: I would suggest that this question should be asked under the next section. This section deals merely with the short title, whereas the next section covers the appropriations, and any questions as to expenditures should be asked then.

Mr. HANSON (York-Sunbury): It is understood that the Minister of Labour will make the statement requested on either of the two occasions referred to by the Minister of Finance.

Mr. ILSLEY: In so far as I can bind him.

Mr. NICHOLSON: Just before six o'clock yesterday I asked a question of the Minister of Munitions and Supply with regard to a clause in the John Inglis company contract which reads:

> No member of the House of Commons of the United Kingdom of Great Britain and Northern Ireland or of the Senate and House of Commons of Northern Ireland or of the House of Commons of Canada shall be admitted to any share or part of this contract or to any benefit to arise therefrom.

No mention is made of members of the Senate of Canada and I was wondering whether that is an oversight.

Mr. ILSLEY: On a point of order, am I not correct, Mr. Chairman, in saying that a question of that type should not be asked when we are discussing the section relating to the title?

The ACTING CHAIRMAN (Mr. Fournier, Hull): The questions should relate to the section before the committee. I do not think this particular question should be put under section 1.

Mr. ILSLEY: It could be asked under the next section.

Section agreed to.

On section 2—Appropriation.

Mr. HOWE: Perhaps I could answer the question asked by my hon. friend opposite in connection with the erection of a high-powered short-wave broadcasting station. This matter has received a good deal of consideration, but it is not an easy problem to solve. Certain representations have been made by Great Britain that it would be desirable to have a station here. To be effective, however, the station would cost two or three million dollars to build and would require a large annual charge to operate. The Canadian Broadcasting Corporation obtains its funds largely from the sale of radio licences in Canada, and it is questionable whether funds so acquired should be used for broadcasting outside Canada. I think we can assume quite definitely that such funds should not be so used. It would be difficult, apart from a direct government grant, which in my opinion is not desirable. It is hard to know where the funds would come from to finance the operation of a station of this kind.

We have not, however, closed the door upon the matter. It was the subject of some discussion when my colleague and I were in Great Britain and, judging from subsequent correspondence, it is the view of the British government that the erection of such a station here is not now necessary for their purposes. Some day I assume we shall have a short-wave station, but I hope it will not be in a period when its chief use will be the supplying of propaganda to enemy and neighbouring countries. My hon. friend says that the contract is not clear, however, the independence of parliament act must be observed. That act is a statute of Canada, and as the law of the land it must be observed whether or not there is a clause in the contract referring to it.

Mr. HOMUTH: Not as regards a limited company.

Mr. HOWE: The independence of parliament act applies whether it is written into the contract or not.

Mr. NICHOLSON: But why is specific mention made of the House of Commons and no mention made of the Senate? How does that happen?

Mr. HOWE: I am sorry I cannot say because I did not draw the contract, but I assume that members of this house have not acquired that venerable and august appearance which distinguishes members of the upper chamber. The statute, however, is applicable to one chamber just as much as to the other.

[Mr. Ilsley.]

Mr. REID: As one who advocated last session a high-powered station for Canada, may I urge on the minister, when he is thinking of propaganda, not to think of propaganda only in connection with war. The whole economic life of the world is changing at this moment, and we may have to look for closer trade relations with other countries. We send out our trade commissioners, but we do nothing to back them up, and I believe that a high-powered radio station would serve a useful purpose in bringing Canada into touch with the countries of south America, if it served no other end. The government should take a broad view of the proposal instead of thinking only of propaganda which might be used for war purposes. I might add that propaganda is an effective weapon even in war time. I believe we are falling down in that respect. I do not think the people of Canada should be called upon to contribute by way of licence for the purpose I suggest; but in view of the millions we are now spending, we might well consider the erection of a high-powered broadcasting station.

Mr. ROSS (St. Paul's): The minister says that such a radio station would cost between $2,000,000 and $3,000,000. My information is that a short-wave high-powered broadcasting station would not cost more than $500,000. I was careful to get the facts before I spoke on the subject last year, and I was astounded to hear the minister mention that it would cost between $2,000,000 and $3,000,000.

Mr. HOWE: It all depends upon what sort of station is required. We had in mind a 50,000 watt station, which my hon. friend is quite correct in saying would cost about $500,000, but the sort of station Britain discussed with us was four 50,000 units, similar to the station at Daventry, and that cost about $2,500,000.

Mr. ROSS (St. Paul's): With the improvements that have been made in broadcasting, the sending out of radio direction signals and so forth, would not a modern station of the type I have in mind costing $500,000 be able to do very good work? Is it necessary with the modern apparatus we have to-day to have such a high-powered station as four 50,000 watt units? Many improvements have been made in the last few years, and I certainly think we should erect a new high-powered station, not only because of the position of Great Britain but because it would help us to keep in contact with the countries of south America. At the present time Canadians are not permitted to travel to south America, or to the United States to any considerable extent, and I think the Minister of

Trade and Commerce (Mr. MacKinnon) ought to welcome a station of this kind as a means of developing our trade and keeping in touch with the south American republics, Mexico and the United States.

Mr. HOWE: We always had a station in contemplation as a peace-time project, and we had in contemplation for some years the type of station my hon. friend suggests, a 50,000 watt station, costing about $500,000, which could be used to help marketing Canadian products. But what has held that back is that we could never find any department of government that would give us $500,000 for capital expenditure on such a station, however much they might be for it in theory. I think that is the type of station we shall have some day, but the Daventry station, which is similar to the type of station we have been discussing with Great Britain, is a very much more powerful station and one that can be used for broadcasting propaganda all round the world.

Mr. HOMUTH: Why not let the Minister of Trade and Commerce build it instead of taking the census this year?

Mr. ROSS (St. Paul's): I do not want to appear too persistent, but the value of our motion picture bureau and the work it is doing are recognized, I think, by everybody; and in considering the erection of a short-wave station, we would do well to bear in mind the results that have been obtained from the motion picture bureau.

Mr. HANSON (Skeena): Has any consideration been given to the requests that have been made by the people of central and northern British Columbia for improved radio reception? It is practically impossible and has been so ever since we had the radio to get Canadian news in northern British Columbia from Canadian stations. All we are getting is United States news, and in view of the licence fee we have to pay we feel we ought to be able to get Canadian news. Some of the news we get from the south at the present time is not desirable for some of our people, and I know that several requests have been made from boards of trade and other organizations in our province for improvements to ensure better radio reception in northern British Columbia from Canadian stations. I understand, as a matter of fact, that about half the radio owners in the northern part of the province are not paying the licence fee because they cannot get Canadian stations.

Mr. HOWE: It is true that there is a small vote in these estimates for radio for war use, but I hardly think this is the proper place for a general discussion of radio. I may say, however, to the hon. member for Skeena that the broadcasting corporation have been considering for some time the problem of serving northwestern British Columbia, but the problem is a difficult one in that it would require a very large expenditure to serve a very small population, and the corporation have not been able so far to adjust their finances to let them do it. But the matter is still receiving consideration.

Mr. STIRLING: They have been considering it for four years.

Mr. BLACK (Cumberland): Is a short-wave channel reserved for Canada, and is there any danger of some other country usurping that wave length if we do not use it? Personally I agree with the hon. member for New Westminster and the hon. member for St. Paul's that even at some sacrifice we should establish a short-wave service in Canada.

Mr. HOWE: We can always get a short-wave channel.

Mr. BLACK (Cumberland): Has a short-wave channel been allocated to Canada?

Mr. HOWE: No; but we can always get one.

Mr. HANSON (York-Sunbury): May I change the subject from broadcasting to fish? Our much overworked Minister of Fisheries (Mr. Michaud) has not had anything to do lately, and I should like to have an explanation from him as to the expenditure of $158,000 for lobster control in the last year and as to the proposed expenditure of $600,000 for the coming year. I should like him to give a pretty full statement.

Mr. RALSTON: Which clause is my hon. friend referring to?

Mr. HANSON (York-Sunbury): To lobsters, under this clause.

Mr. MICHAUD: The $603,000 proposed to be spent this year, is divided into two items. First, there is an amount of $3,000, which is the estimate of possible expenditures that may be required to cover the costs of the advisory board that had to be set up, composed of producers and exporters of fish to Great Britain. The importation and distribution of fish in Great Britain having been taken over by the British government, under the food controller, it was necessary to have a central organization in Canada to negotiate with the food controller, and it has been requested by the industry and by those who are interested in the export of fish that the government set up some central body to coordinate relations with

the British food controller. To that end it was thought advisable for the department to take the responsibility of organizing an advisory board, which comprises persons interested in the business, the leading exporters of the country.

Mr. HANSON (York-Sunbury): Has the board been set up?

Mr. MICHAUD: Yes.

Mr. HANSON (York-Sunbury): Who are the members of the board?

Mr. MICHAUD: So far, the necessities of the trade have required the setting up of a board only on the Atlantic coast. There is one representative from a firm in Sydney, Mr. Nickerson; there is Mr. Connors of Halifax, representing the Maritime Fish company; from Lockeport there is Mr. Swim; and Mr. Smith represents the fisheries in Lunenburg. In my opinion, they represent the only companies that put up and export frozen fish to Great Britain.

Mr. HANSON (York-Sunbury): They are fresh fish exporters.

Mr. MICHAUD: Yes, frozen fish. The food controller in Great Britain has asked that frozen fillets of cod be put up in a certain way and has given definite specifications; and in order to facilitate the provision of ship space, and to deal with the food controller in Great Britain, it has been deemed advisable to have these exporters recognized officially as a board in Canada working under the direction of and consulting with the deputy minister of fisheries. A board will be set up on the Pacific coast comprising exporters of frozen and canned fish in that part of the country, but up to the present time the necessity has not made itself felt for the constitution of that board, because on the Pacific coast the exporters themselves sent overseas a representative to consult with the food controller. On his advice the fish exporters on the Pacific coast, who are well organized, will make suggestions to the department as to whom they wish to have recognized officially as the representatives on their advisory board. The sum of $3,000, it is estimated, will be required to cover the cost of travelling of these advisers. That is one of the items making up the $603,000.

Mr. HANSON (York-Sunbury): The minister has spoken of frozen cod fillets. Does the food controller take no other kind of frozen fish—chilled haddock, for example?

Mr. MICHAUD: No. The specifications laid down do not indicate that he will take any other kind of frozen fillet, but the advisory board are trying to convince him that consumers in Great Britain could be persuaded to accept other kinds of frozen fillets which could be put up cheaply and in larger quantities by Canadian producers. We had word recently from the British food controller that the British government would send one of their representatives to Canada to consult with Canadian exporters with a view to reaching some agreement. People in Canada may not realize the difficulty in dealing with the food controller just now, because the English people are not used to Canadian frozen fish except halibut and frozen salmon, which are considered as luxuries at the present time. An attempt has been made to import cheaper frozen fish from Canada, but the English taste must be cultivated.

Mr. HANSON (York-Sunbury): No luck yet?

Mr. MICHAUD: No; and of course there is the difficulty of transportation. The exporters are faced with many difficulties, and they feel that they should be recognized by the Canadian government and constituted as an advisory body. They wish to have some official recognition and some authority in dealing with the British food controller. That is the purpose for which the $3,000 is required.

Mr. HANSON (York-Sunbury): Has any of it been spent?

Mr. MICHAUD: No.

Mr. HANSON (York-Sunbury): Was there any such fund last year?

Mr. MICHAUD: Yes. As soon as the British government placed the import of fish under the food controller, we set up the committee and we have spent $150 since last November. I believe the board had two meetings. This amount is to cover expenses.

Mr. HANSON (York-Sunbury): They do not draw salary?

Mr. MICHAUD: No.

Mr. HANSON (York-Sunbury): That is the $3,000.

Mr. MICHAUD: I do not think we shall spend that amount. That is the limit.

Mr. HANSON (York-Sunbury): What about the $600,000?

Mr. MICHAUD: That is provided as a working capital in connection with lobster. This committee will recall that shortly after the outbreak of the war, the British government declared certain imported foods as luxuries and their import into Great Britain was virtually prohibited. Up to that time for many years since the canned lobster industry started in Canada the pack was exported to Europe to the extent of about 85 per cent.

Mr. HANSON (York-Sunbury): What is the value in a normal year?

Mr. MICHAUD: About $2,000,000. A month after the outbreak of the war, the market for that old-established industry was absolutely wiped out and the export to continental countries like France, Germany and Norway was destroyed by force of circumstances.

Mr. HANSON (York-Sunbury): By force majeure.

Mr. MICHAUD: I might say "torpedoed" by the declaration of war. But the export to Great Britain, which constituted the bulk of the trade in canned lobster, I would say an average of about 60 to 70 per cent—

Mr. HANSON (York-Sunbury): Was it not nearly all sold there and largely distributed on the continent from there?

Mr. MICHAUD: Well, yes and no. We had some exports direct to France, Germany and Norway, but the great bulk was to Great Britain. The exporters had very old-established trade connections. This business was a cash one, well established; it was destroyed by the declaration of the British government that canned lobster was a luxury, in consequence of which no sterling was available to buy it in this country. This meant that a $2,000,000 industry had to be abandoned or else new markets found. Producers and exporters appealed to the government for help. We asked them to come to Ottawa and consult with us and the officials of the department, and it was finally decided that the government would guarantee the marketing of the coming pack, beginning May, 1940. This encouraged the packers to make advances to the fishermen. The fishermen went on fishing as usual, and the department stood by its undertaking and agreed to take all of the pack that would meet the inspection requirements.

Mr. HANSON (York-Sunbury): That is the entire pack?

Mr. MICHAUD: Yes; we undertook to take the entire pack if it was offered to us.

Mr. HANSON (York-Sunbury): Without any limitation at all?

Mr. MICHAUD: Eighty per cent.

Mr. HANSON (York-Sunbury): Eighty per cent of the entire pack, but no limitation on the amount of the pack? If they doubled the pack, you were still prepared to take eighty per cent?

Mr. MICHAUD: To the extent of 55,000 cases.

Mr. HANSON (York-Sunbury): Oh, then there was a limitation.

Mr. MICHAUD: Yes, to the extent of 55,000 cases.

Mr. HANSON (York-Sunbury): What is the relation of 55,000 cases to the average pack?

Mr. MICHAUD: Eighty per cent.

Mr. HANSON (York-Sunbury): That would be eighty per cent of an average pack?

Mr. MICHAUD: For the last five years.

Mr. HANSON (York-Sunbury): Was consideration ever given to the question of giving the lobster industry a rest at this time? If the minister will allow me, I should like to suggest that the time has come when the government should give consideration to the question of conservation of this wonderful food supply. I know there will be some distress. I have watched this thing all my life. When I was a boy we used to fish lobsters in Passamaquoddy bay on the neap tides with a pole and hook, and you would get a bushel basket of merchantable lobsters on any neap tide in the months of May and June. To-day you could not get a lobster if you searched there for a month. The change that has come over this industry in fifty years is so alarming that, in my opinion, if something is not done, within our lifetime the lobster fisheries on the eastern coast will become a thing of the past. It is distressing to go to Shediac or such places and see the size of the lobsters that are being canned—baby lobsters. Fresh lobsters are one of the finest foods in the world, but they are disappearing. What consideration has the minister and his officers given to conservation of this resource during this time of war? It seems to me a grand opportunity to do something in the way of restriction. I do not mean the elimination of the entire pack.

Mr. MICHAUD: I agree that some measure of conservation should be adopted. This was realized some time ago. In the last few years restrictions have been placed on the length of the season during which lobster fishing is permitted. Gradually the length of the season during which lobsters can be legally caught is being cut shorter and shorter.

Mr. HANSON (York-Sunbury): What does that restriction amount to?

Mr. MICHAUD: In most districts the open season is only six weeks in the year. Of course we have a reaction from the fishermen who claim that their rights are being curtailed. We are also placing a minimum limit on the size of lobsters that can be caught.

Mr. HANSON (York-Sunbury): How is that observed?

Mr. MICHAUD: Fairly well.

Mr. HANSON (York-Sunbury): Is there any restriction on the number of traps that may be set in a particular period of time? Is there any restriction on overlapping in the laying of traps? A lobster has not a chance for his life in some sections.

Mr. MICHAUD: Limiting the number of traps which any fisherman may put in the water is very difficult to enforce. But we are limiting them to using the traps in only one season of the year, licensing one person to fish only once during the year, or one licence to one fisherman a year. Then we are not permitting a man to lease his traps to another fisherman in another season.

Mr. HANSON (York-Sunbury): Would the minister make that clear? Does that mean that a lobster fisherman who is licensed to fish in one area for a limited period cannot move on to another location at another period.

Mr. MICHAUD: That is right. Those are the three restrictive measures which have been adopted to conserve the lobsters: curtailing the length of the season; prohibiting persons from fishing in two areas during the same year, and limiting the size of the lobsters that may be legally taken out of the water. In most areas around the Nova Scotia coast the size now is nine inches, but in those areas lobsters are fished for the live lobster trade, the export trade.

Mr. HANSON (York-Sunbury): Which is the real business after all.

Mr. MICHAUD: We hope that eventually most of the trade will be of that kind. In other districts, where distances are longer or the fishing areas are distant from large centres of population, where heretofore difficulty of transportation existed, the lobster fishermen can their lobsters, and naturally a smaller size is permitted. Last year we took a step which had been considered in the department for some time, and placed a minimum size on all lobsters caught in Canadian waters. Of course this had the effect of curtailing the pack; there is no doubt about that.

Mr. HANSON (York-Sunbury): That was the intention, was it not?

Mr. MICHAUD: To a considerable extent; and the indirect result was that a certain number of lobsters were left a year longer in the water than they would have been if a minimum size had not been established. These are the three measures which have been taken in an endeavour to conserve the lobster industry, as my hon. friend has suggested. With regard to the expenditure of $600,000—

Mr. HANSON (York-Sunbury): Just before the minister leaves the question of conservation, have he and his officers considered the question of promoting the export trade in fresh lobsters, vis-à-vis the canned lobster trade? What would be the effect on the individual fisherman? These are days of rapid transportation. Trucks are operated clear from Shediac to Boston, which is the outlet for our live lobsters. I have eaten lobsters in Florida that were brought by plane from New York.

Mr. MICHAUD: So have I.

Mr. HANSON (York-Sunbury): And of course we paid something for them. They had nothing like them in the south. What would be the effect on the individual lobster fisherman if he sold fresh lobsters only instead of selling his catch to the canneries? My own view, speaking subject to correction, —and perhaps I am a little rash in making the statement—is that he would get three dollars for every one he gets now; that for the lobsters he exported to the luxury trade in New England he would get three times as much as he is paid by the canned lobster trade, which now is nearly non-existent. Lobster consumption has gone down. The minister will find himself with a very large quantity of canned lobster on his hands when he gets through spending this $600,000, and I do not know where he is going to dispose of it. It cannot go overseas, and I do not think either the New England or the Canadian people will take it unless it is very cheap. What is the minister's opinion with respect to transforming the fisherman's business into one in which he sold only fresh lobsters? I think it could be done, and that it would be all to the good so far as the fisherman is concerned. Just take the status of the lobster fisherman in Shelburne-Yarmouth, around that end of the bay of Fundy or in Kent county, New Brunswick. What is the position?

Mr. MICHAUD: In the first place, the fresh lobster market is the luxury market, and the quantity of fresh lobsters that can be absorbed by that market is limited.

Mr. HANSON (York-Sunbury): In the home market?

Mr. MICHAUD: In the home market as well as the United States market.

Mr. HANSON (York-Sunbury): Oh, I think there is an unlimited market over there.

Mr. MICHAUD: To-day practically all the lobsters caught along the coast of Maine, around the southern coast of New Brunswick, and in the Bay of Fundy, are exported to the United States market. Fresh lobsters must be consumed quite soon after they are out of the water; they cannot be conserved or kept in cold storage for any length of time.

Mr. HANSON (York-Sunbury): Lobsters may be kept alive all summer in a pond. Go to St. Andrews and you will see them fished out every day.

Mr. MICHAUD: Exactly. Then we must take account of the fact that the canned lobster industry has been established for some time; that a large amount of capital is invested in it, and that a certain number of fishermen and also a number of cannery men and fish exporters depend upon that industry. In order to transform it into a more modern method of marketing, time is required. We cannot overnight, or even in a year or two, absolutely wipe out the investments of the last thirty or forty years and change the industry entirely. That takes time.

With that in view, for some years past the department has been encouraging the keeping of lobsters in ponds. We have licensed people who will invest the money necessary to keep lobsters the year round, and market them. This has been quite successful, and of course the demand of the market is practically the limit of that branch of the industry. Those who go into that business have a very good and profitable market, but as I said before, the ability of this market to absorb lobsters is limited, and the amount of fresh lobsters marketed is limited by the demand. It is certain that along the coast from Prince Edward Island, the northern part of New Brunswick, the strait of Northumberland, the coast of Kent county, Northumberland county and Westmorland county, there were no live lobsters exported three or four years ago. At the present time throughout the fishing season, from May 10 until the end of June or the first week of July, trucks especially fitted with tanks leave New Brunswick practically every night and arrive in Portland the next morning. There the lobsters are loaded on trains and reach the Boston market the following noon. However, as I have said, this market has a limit. There is no doubt, of course, that the development of this branch of the industry has had its effect on the canning branch. Last year the reduction in the pack of canned lobsters was due partly to the profitable fresh lobster market which the fishermen had.

Mr. HANSON (York-Sunbury): What does the minister now propose to do with the 55,000 cases? That is important.

Mr. MICHAUD: I do not propose to do anything, because the 55,000 cases were all sold out, three weeks ago.

Mr. HANSON (York-Sunbury): To whom?

Mr. MICHAUD: To United States and Canadian consumers. Last spring the department estimated that a million dollars as a possible working capital would be required to turn over the pack of that year. We asked for an advance of $173,000.

Mr. BLACK (Cumberland): What for?

Mr. MICHAUD: Working capital.

Mr. BLACK (Cumberland): What was the profit or loss last year?

Mr. MICHAUD: I will come to that. We asked for a first advance of $173,000, as working capital. We did not know how the trade would be affected, or what we would have to do. That was the first venture we had made. Fortunately, we did not have to use that advance of $173,000. We took all the canned lobster offered to the lobster controller, provided it met with the established inspection standards, and sold it. The cost to the department was about $12,000.

Mr. HANSON (York-Sunbury): That was a total loss to the department?

Mr. MICHAUD: Yes.

Mr. HANSON (York-Sunbury): Was that a loss in sales?

Mr. MICHAUD: No; there was a margin of profit on sales. But the actual cost of setting up provisions for the marketing of that lobster was about $12,000. Only 20 per cent of the pack was offered to us. Of course we encouraged the packers to sell their own pack, because the department was not interested in ousting them from their business, taking their place, or disturbing the usual business practice they had established. It was our intention simply to encourage them; that we did. It cost us $12,000 and established a new market for the Canadian industry. Up to last year the United States market absorbed only 10 per cent or 12 per cent of the pack.

Mr. HANSON (York-Sunbury): That is canned lobster?

Mr. MICHAUD: That condition arose from two causes: First, there was the competition of Japanese and Russian crabmeat, and there was the further cause arising from inferior quality in the pack our fishermen were offering to the United States market. Last year we made a determined effort to break into the United States market. We circularized the packers urging them that their

goods should be produced as first quality. That was done to meet the main objection offered by the United States buyers.

By cooperation between the packers and the departmental officials we were successful in enlisting the good-will of the United States buyers, and succeeded in obtaining their agreement to give another trial to the Canadian product. As a result, we marketed last year in the United States 66 per cent of the pack.

Mr. HANSON (York-Sunbury): At what price?

Mr. MICHAUD: There were three grades at prices of $16, $17 and $18 respectively, if I remember correctly. We did that through connections we succeeded in establishing with chain-store buyers from the United States who were willing to give a preference once more to the Canadian product. Further, we succeeded in convincing the Canadian consumer to give greater consideration to Canadian canned lobster.

The surprising fact is that in the five years preceding last year, out of an average of 85,000 or 90,000 cases no more than 5,000 were consumed in Canada. Last year, however, we consumed in this country from 35 per cent to 40 per cent of the Canadian pack. The result was that we disposed of last year's pack on the Canadian and United States markets to the point where three weeks ago none could be found in Canada. The market was short.

Mr. HANSON (York-Sunbury): That seems to be a successful operation. In view of it, does the minister require $600,000 working capital this year?

Mr MICHAUD: Again this year we do not know what the conditions may be. The catch might be much larger than it was last year, and larger quantities may be placed on the market.

Mr. HANSON (York-Sunbury): Is that desirable?

Mr. MICHAUD: From the viewpoint of conservation, it is, strictly speaking, not desirable; but when the lobsters are in the water, we may be sure the fishermen will catch them and offer them to Canadian consumers. That is practically the only cash crop of the fishermen on the Atlantic coast.

Mr. HANSON (York-Sunbury): There is something in that.

Mr. MICHAUD: It is an important paying crop—

Mr. HANSON (York-Sunbury): The minister is absolutely right, there.

[Mr. Michaud.]

Mr. MICHAUD: —and it would be difficult to convince the fishermen that they should not take advantage of it. My hopes are that if we have to use the $600,000 as working capital, we might make a profit rather than have a deficit in the coming year.

Mr. HANSON (York-Sunbury): What the minister has said with respect to the lobster fisheries being the only cash crop of the fishermen on that coast is absolutely right. In the light of that fact, while I shall not now press the Minister of Fisheries for an answer, I advise him that when his estimates are before the committee I shall ask him what he is doing for the other fishermen on the Atlantic coast, as well as for those on the Pacific coast. As I indicated last summer, there can be no question that the fisherman, at least in eastern Canada, is the forgotten man. His position is deplorable to-day in most centres.

For instance, the smoked herring trade of Grand Manan island is shrinking to almost nothing. When I was a boy it was the staple product of 3,000 people. I know that, because we were directly connected with the trade, and supplied practically all the boxes in which they were packed. As a boy I had an intimate knowledge of the trade. To-day it amounts to nothing. I know the efforts which have been made by the marketing board to nurture it, and when the time comes I shall ask the minister what he proposes to do for those people. My colleague now wishes to ask some questions about the lobster board.

Mr. BLACK (Cumberland): Has the minister given consideration to the bonusing of the lobster fishing industry for not catching lobsters, as a solution or partial solution of the difficulty. We know that action is being taken to help solve the wheat situation in the prairie provinces. They are offered a bonus for not producing wheat. The waters surrounding my constituency constitute the finest lobster fisheries in the world. I suppose the same could be said for the waters in the constituency of the hon. member for Prince. I should like to know if the lobster fishermen in Cumberland, Prince and other counties are to receive a bonus for not catching lobsters, in order that the lobster industry may be conserved.

Mr. MICHAUD: Has my hon. friend tried to convince the fishermen of Cumberland or Prince or Yarmouth that they should not fish when the lobsters are there?

Mr. HANSON (York-Sunbury): They want both the bonus and the fish.

Mr. MICHAUD: There is a demand for this product on the Canadian market. The suggestion might be in order if there were a

surplus, but actually there seems to be a shortage. During the last three weeks inquiries have been received from large distributors in Canada and the United States for canned lobster. Under such circumstances I do not think it would be wise to pay people not to carry on this profitable industry.

Mr. BLACK (Cumberland): The main purpose would be to conserve the lobster industry.

Mr. MICHAUD: We are trying to conserve the lobster industry. At the same time we are trying to take advantage of the markets that offer. These factors must be taken into account in an effort to satisfy the people who depend upon this industry for a livelihood, and at the same time to conserve the industry.

Mr. KINLEY: You are able to sell the lobsters?

Mr. MICHAUD: Yes. The leader of the opposition suggested that something should be done to help the industry, and he referred to the smoked fish or smoked herring industry. At one time this was a profitable industry on Grand Manan and other islands in those waters. However, world conditions have changed. This product was put up largely for export, but the people living in countries which took this product are now demanding a different kind of fish.

Mr. HANSON (York-Sunbury): Is that correct, or is it not that they cannot find the money with which to buy them?

Mr. MICHAUD: Both. They are asking for a cheaper fish which cannot be obtained in Canada. We cannot compete with Newfoundland and Norway in putting out certain varieties of cheaper fish. This is a difficult problem which we have to face. It has confronted all governments, and all those who have occupied the position which I now occupy.

Mr. BLACK (Cumberland): Who constitute the lobster board?

Mr. MICHAUD: Mr. Lee of Halifax is the administrator.

Mr. HANSON (York-Sunbury): Is Mr. Magee on that board?

Mr. MICHAUD: He was on the advisory board when the board was first set up. There is Mr. Tidmarsh of Charlottetown and Mr. McInerney of the United Maritime Fishermen's Union.

Mr. BLACK (Cumberland): What expenditures were necessary in connection with this board? The Minister of Finance has told us that no partisanship is to enter into these expenditures, and I should like to have the assurance from the minister that this principle has been applied to all appointments and to all rentals of premises in connection with the lobster board.

Mr. MICHAUD: It does apply as far as I am concerned. The gentlemen who compose the board were not known to me before their names were suggested by the deputy.

Mr. BLACK (Cumberland): Does the board appoint the staff?

Mr. MICHAUD: The deputy minister is the lobster controller, and he appoints the staff. Mr. Magee is the only one who was known to me. I knew Mr. McInerney slightly because of his connection with the United Maritime Fishermen's Union. There was considerable difficulty last year in obtaining suitable quarters. In Charlottetown it was necessary to take quarters in the skating rink or auditorium. In Halifax we were able to get space in the harbour cold storage plant.

Mr. HANSON (York-Sunbury): That is for storage purposes?

Mr. MICHAUD: In New Brunswick we had some difficulty in Shediac, but it happened that an English packing firm had to discontinue business because it could not export its products, and we leased its premises for a short time during the season.

Mr. HANSON (York-Sunbury): What is the cost of operating the board?

Mr. MICHAUD: There was a deficit of $12,000.

Mr. HANSON (York-Sunbury): That is for last year; what is the estimated cost for this year?

Mr. MICHAUD: If we have the required volume, we expect to have a profit.

Mr. BLACK (Cumberland): How many cases were involved in this deficit of $12,000?

Mr. MICHAUD: Twenty thousand cases. We try to find markets for the established trade rather than take over ourselves. This year if it is possible we will do the same, and if we have the volume we shall make a profit on what is turned over to us. We had a set-up —we had to provide it at the beginning of the season—to handle a business of $1,000,000.

Mr. GREEN: May I ask the Minister of National Defence to tell us the channel through which it is planned to raise reinforcements for the active army. An announcement was made early in the year that Canada would require from 40,000 to 80,000 men this year, and as I understand it the procedure before was to raise them through depots—that is, the regiments overseas would have a depot at home which would raise the necessary reinforcements. But recently there seems to have

been a change made, to have the reinforcements come in through the reserve units. That may be all right, but I would point out to the minister that in at least some cases these reserve units were recruited last summer after the fall of France, and older men and men with families enlisted in these units for the purpose of being prepared to defend Canada should that be necessary. A great many of them I think could not go overseas. It does seem to me that there is danger of the government getting its wires crossed on these reinforcement plans if it is intended to recruit the reinforcements entirely through the reserve units. It is very discouraging to the reserve units to be called on for reinforcements and find themselves in the position of not being able to respond at once because of the type of men they have in the unit. Will the minister tell us just what the plan of the government is and how many men have so far been recruited this year for the active army?

Mr. RALSTON: The question, Mr. Chairman, will require quite a long statement in answer. As a matter of fact, as I intimated to the committee the other day, the Minister of National Defence for Air and the Minister of National Defence for Naval Services and myself have had a committee together in an endeavour to prepare a statement in words of one syllable, if I may put it that way, so that the recruiting system may be understood.

If I may take a moment or two before the committee rises, the system is this. At the moment, just as I am speaking, a call has gone out for reinforcements for a certain quota. I shall not give the serial number of the quota but I can tell my hon. friend the number of the reinforcements. The number of the reinforcements for this particular quota will be 6,000 other ranks. That quota is prepared at National Defence headquarters and is sent out to the military districts, the basis being the relation of the number of artillery units in the different districts, the number of artillery recruits required from the whole of Canada for this quota is 1,576, to be exact. As I have said, that number is divided amongst the different districts on the basis of the number of reserve artillery units which are there. And the same with the engineers; but there the number required is less. Each district is given its quota to raise. The same with the signals, each district being included in the quota. For the armoured corps the number required is 731, divided among the different districts. For infantry—that is, rifle battalions—there is a call on four districts only of the eleven districts in Canada and for infantry, machine gun units, there is a call on only one district. For the R.C.A.S.C. there is a call on all districts, 894 recruits being required, and for the R.C.A.M.C. there is a call on nine of the eleven districts. For the R.C.O.C., the ordnance corps, there is a call on the whole eleven districts, and for the provost corps the same For coast defence there is a call on the coast districts only, Nos. 6, 7 and 11; and for the forestry corps there is a call on four districts altogether.

What happens is this, that the district officer commanding gets the list, and having a call for a certain number of artillery personnel he allots them among the reserve artillery units in the district to give them all a chance.

Mr. HANSON (York-Sunbury): The troops are taken from there first?

Mr. RALSTON: Yes. The district officer commanding knows long before he gets this call about how many men in a particular unit are ready to enlist if the call comes. The district recruiting officer has kept in touch with the commanding officer and the recruiting officer advises the district officer commanding.

I am informed that, speaking roughly, one-third or more of these men will be got from the reserve units; that they are prepared now to furnish at least one-third of the number required The other men will be obtained through enlistments direct at the district depot of men who come in off the street, to use the phrase I used in answering my hon. friend the leader of the opposition the other day. These men who come into the district depot and enlist there will be documented at the depot and then be sent along with the men who have come in from the reserve units —the one-third I mentioned a moment ago— and go to the training centre.

Mr MacNICOL: Will these new recruits be eligible for overseas service?

Mr RALSTON: This quota is all for overseas service.

Mr. HANSON (York-Sunbury): Will public notice be given as to how many enlistments will be accepted at a particular military depot? Many men will come in and be disappointed —I have seen them turned back—unless they know just what the number required is.

Mr. RALSTON: I have not seen the advertising that is done, but as members of the committee know, there is an allotment for each district for advertising for recruits. I was talking with the officers this morning and I asked that very question myself. It seemed to me that there was no reason why the public should not be advised how many men were wanted; that would prevent men from being disappointed when they come in and having to go home again. I see no reason why that should not be done. They told me

that it is done in some cases, that they advertise that so many men are wanted for a particular arm of the service.

I have given a very rough outline of the procedure, in answer to the question of the hon. member for Vancouver South, and I should like an opportunity at some time to amplify it because it is useful information for members of the house and for the public too.

I just want to say this, in addition. I said to my hon. friend the other day that the recruiting offices were not open every day. I should have qualified that by saying that they are not open every day for recruiting for every arm of the service. For instance, in connection with this particular quota, vacancies will probably not be open for men who come in off the street to enlist in infantry units, and if they are open it will be only in a few districts. I am informed by my officers that it is probable, however, that infantry men in very limited numbers could be taken on even though not included in this quota because probably they could be used in the next quota. Generally speaking I think I can say that for the artillery, engineers, signals, the armoured corps, and probably the ordnance corps as well, there is opportunity in every district for a limited number, and only a limited number, of men who enlist off the street in addition to the men who come in from the reserve units.

The last thing I want to say is that the commanding officers of the reserve units, who receive pay for organization and recruiting, the commanding officers and the officers concerned have as one of their primary duties, in justification of the salary which is paid them, to see that their unit is organized and prepared to furnish a reasonable quota of men for the unit which their unit is reinforcing overseas. Secondly, and perhaps, along with that, they should make every effort to see that the unit is kept filled with men who will be able to take the place of those who have volunteered for overseas service.

Mr. GREEN: Does that mean that you do not want in the reserve units the older men who would be available to defend Canada but not to go overseas?

Mr. RALSTON: The other day I invited an expression of opinion from the committee, though I have not heard anyone say anything, as to whether or not the time had come when the reserve units, henceforth, should be confined to men of A and B categories instead of including category C as well. In connection with the training centres, the regulations which have been laid on the table indicate that in those centres we are only taking men of A and B categories who would be qualified physically to go overseas if the opportunity offered. As a matter of fact, the officers commanding the reserve units have been asked to see to it, though not by shoving men out, that in connection with their enlistments some attention shall be paid to the possibility some day of an opportunity being given to their unit to be mobilized for overseas service, ensuring that the physical condition of the men shall be such that they will not have to drop a great number who would really like to go overseas but could not for physical reasons.

Mr. HANSON (York-Sunbury): That is not settled yet?

Mr. RALSTON: That instruction went to the officers, but the matter is not settled as to whether the category for enlistments in the reserve unit is to be definitely limited entirely to A and B category.

Progress reported.

On motion of Mr. Crerar the house adjourned at six o'clock.

Monday, March 24, 1941.

The house met at three o'clock.

RUSH-BAGOT AGREEMENT

EXCHANGE OF NOTES AS TO APPLICATION AND INTERPRETATION IN LIGHT OF PRESENT CONDITIONS

Hon. T. A. CRERAR (Minister of Mines and Resources): At the request of the Prime Minister (Mr. Mackenzie King), who is absent to-day, I wish to make the following statement:

1. I am tabling, for the information of members of this house and for distribution, the following documents, both in English and in French:

Exchanges of notes, June 9, June 10, 1939, and October 30 and November 2, 1940, between the Under-Secretary of State for External Affairs and the United States Minister to Canada, relating to the application and interpretation of the Rush-Bagot agreement.

2. The Rush-Bagot agreement was embodied in an exchange of notes between His Majesty's minister at Washington and the United States Secretary of State, concerning the naval force to be maintained on the great lakes (Washington, 28-29, April 1817). This exchange is to be found in the publication filed in the Department of External Affairs, entitled "Treaties and Agreements Affecting Canada, in force between His Majesty and the United States of America, with subsidiary documents 1814-1925" at pages 12 and 13. This volume is, of course, available

to members of this house and to the public generally in all libraries, but for the convenience of the members of the house I shall read into the record a short excerpt from Sir Charles Bagot's note, which sets forth the operative provisions:

> His Royal Highness, acting in the name and on the behalf of His Majesty, agrees, that the naval force to be maintained upon the American lakes by His Majesty and the government of the United States shall henceforth be confined to the following vessels on each side—that is:
>
> On Lake Ontario to one vessel not exceeding one hundred tons burthen and armed with one eighteen-pound cannon.
>
> On the upper lakes to two vessels not exceeding like burthen each and armed with like force.
>
> On the waters of lake Champlain to one vessel not exceeding like burthen and armed with like force.
>
> And His Royal Highness agrees, that all other armed vessels, on these lakes shall be forthwith dismantled, and that no other vessels of war shall be there built or armed.
>
> His Royal Highness further agrees, that if either party should hereafter be desirous of annulling this stipulation, and should give notice to that effect to the other party, it shall cease to be binding after the expiration of six months from the date of such notice.

3. In modern terminology it may be said that this was an agreement for quantitative and qualitative naval limitation on the great lakes. It is more than a century old and for a good while both Canada and the United States have mutually recognized that the technical scheme and definitions do not fit the actual present-day conditions, and that in fact they can reasonably and safely be waived without vitiating the underlying political spirit and objective which must be maintained.

4. It is clear from a study of the documents relating to the negotiation of the agreement and its early history that the objective of the negotiators was to provide a solution of an immediate and urgent problem arising out of the war of 1812, and the terms of the agreement themselves support the view that its indefinite continuation in force was not anticipated. The governments of Canada and the United States have in fact from time to time by informal interchanges mutually recognized certain variations from the technical scheme and definitions. The agreement itself, however, has survived unchanged for more than one hundred and twenty years, and with the passage of time has assumed a symbolic importance in the eyes of the peoples of Canada and the United States.

5. Recent negotiations between the Canadian and United States governments, affecting the agreement, took place in June, 1939. It was the desire of the United States government at that time to substitute other naval vessels of larger tonnage for certain naval vessels already in the great lakes. The United States government also desired to use these vessels for training purposes and to equip them with armaments of heavier calibre than those permitted under the terms of the agreement. It was found possible to give effect to the wishes of the United States government by means of an informal exchange of notes and without the necessity of amending the agreement itself in any way.

6. The outbreak of war brought about the need for a further understanding between the two countries with regard to the problem of naval construction on the great lakes. It was therefore suggested by the Canadian government that a further "interpretation" of the Rush-Bagot agreement be made, without involving any deviation from the basic intent of the agreement, namely that important naval vessels should not be built for service on the great lakes. An understanding was accordingly effected by an exchange of notes in November, 1940, to the effect that armaments might be installed on vessels built in great lakes shipyards, but dismantled for the voyage to the sea.

7. It will be observed that the exchanges of notes, now being tabled, are in the nature of informal understandings as to the interpretation and application of the original agreement. They are not intended to rescind the Rush-Bagot agreement or to prejudice in any way the principles underlying that agreement or the underlying political spirit and objective which both countries have maintained. The position is continued whereby the great lakes are recognized as being an area in which naval armaments are not maintained by either country. At the same time, an arrangement has been worked out whereunder the resources of both countries within this area can be utilized to facilitate the defence, both of Canada and the United States, from external attack.

The documents which I now table contain the correspondence referred to in the statement I have just made, and they are submitted in both English and French.

Hon. R. B. HANSON (Leader of the Opposition): What the minister has told us, if I followed him aright, is that within recent years there has been a reinterpretation of the Rush-Bagot treaty, without going through any particular formality; but I do not understand that the principle of the treaty has been in any way waived. My recollection, without having looked up the matter for a long time, is that this was a treaty to which effect was given by the senate of the United States.

[Mr. Crerar.]

Mr. CRERAR: The documents speak for themselves. It is referred to as an agreement.

Mr. HANSON (York-Sunbury): It is referred to in both ways.

Mr. CRERAR: In any case I am not informed as to what has taken place down through the years. I presume my hon. friend the leader of the opposition has reference to this statement:

The governments of Canada and the United States have, in fact, from time to time by informal exchanges, mutually recognized certain variations from the technical scheme and definitions.

Mr. HANSON (York-Sunbury): That is, a reinterpretation.

Mr. CRERAR: I regret that I am not in a position to inform my hon. friend as to what they were, but doubtless that information can be made available. The documents tabled contain the exchange of notes in 1939 and 1940.

UNEMPLOYMENT INSURANCE

AMENDMENT OF ACT TO PROVIDE FOR COOPERATION AS TO MEDICAL CARE OR COMPENSATION

Hon. H. A. BRUCE (Parkdale) moved for leave to introduce Bill No. 21, to amend the Unemployment Insurance Act, 1940.

He said: Mr. Speaker, the purpose of this bill is to provide that the unemployment insurance commission created by the Unemployment Insurance Act, 1940, shall cooperate with other authorities in the dominion or provinces for the purpose of collecting information concerning any plan for providing medical care or compensation in cases of ill-health.

The provisions were found in the Unemployment and Social Insurance Act, chapter 38 of the statutes of 1935. This act, having been declared to be ultra vires by a majority of the supreme court, and subsequently by a judgment of the privy council delivered the 28th day of January, 1937, was repealed in 1940 by section 103 of chapter 44 of the statutes of that year, being the Unemployment Insurance Act, 1940.

The competency of parliament to legislate in regard to unemployment insurance now has been settled by the amendment to the British North America Act of 1940. It is highly desirable to reintroduce these health provisions into our dominion law.

Motion agreed to and bill read the first time.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

STORAGE OF WHEAT

Mr. JOHNSTON (Bow River):

1. How much did the government pay elevator companies for the storage of wheat during each of the last ten years?

2. How much did the government pay farmers for the storage of wheat during the same years?

3. Does the government pay storage to the elevator companies while the wheat is in transit to the terminal elevators?

4. If so, for how many days, and how much has been paid in this regard during the above period?

Mr. MacKINNON (Edmonton West):

1. The wheat board was established August 1, 1935, and there is no record, therefore, of any storage which was paid prior to that date.

The storage paid for each year ending July 31, since August 1, 1935, is as follows:

Period ended	Elevator companies	Government elevators	Combined
July 31, 1936	$ 3,540,601 26	$* 178,805 74	$ 3,719,407 00
July 31, 1937	98,187 23	* 4,958 61	103,145 84
July 31, 1939	6,483,136 40	327,408 19	6,810,544 59
July 31, 1940	11,441,911 41	740,669 35	12,182,580 76
December 31, 1940	6,946,846 41	502,341 42	7,449,187 83
	$28,510,682 71	$1,754,183 31	$30,264,866 02

*Estimated conservatively.

2. Farm storage paid or accrued to March 15, 1941—$1,141,693.97. No payments were made to farmers for the storage of wheat except during the present season.

3. Yes. When the board entered into an agreement with the elevator companies in 1935, payment of carrying charges continued until two days after unload. The "two days" was provided as being the time necessary to obtain the documents from the terminals at the head office of the companies, and for them to make delivery of the documents to the board.

The following year the companies asked for three days, on the basis that documents could not be made available in two days, and their request was granted.

Beginning with the 1939 crop, the board placed a time limit of thirteen days after date of bill of lading for which the storage would be paid. During that crop year and the present year, when lack of storage space became acute, the transit time of cars between country elevators and terminals has widened materially. Right at the present time there are cars loaded with wheat standing on practically every siding in the west, many of which will require at least a month to six weeks to reach terminal points. The "thirteen days" really represents ten days' storage with three days for delivery of documents, and is accepted in lieu of interest on delayed cars, except in extraordinary circumstances such as embargoes.

4. Crop year ended July 31, 1936—Storage paid until two days after unload.

Crop years ended July 31, 1937 and 1938—Storage paid until three days after unload.

Crop years ended July 31, 1939 and 1940—Storage paid until three days after unload, with maximum of thirteen days from date of bill of lading. The amount thus paid is not available.

*ARMY CANTEENS

Mr. SHAW:

1. What are the regulations governing the operation of army canteens?
2. Do men operating army canteens in Canadian military camps receive pay and allowances over and above regular army pay?
3. If so, what are the rates of pay or allowances for this work?
4. What operating costs, if any, are charged against the revenue derived from these canteens?
5. What are the regulations governing the distribution of profits accruing from the operation of army canteens?

Mr. RALSTON: My hon. friend is asking for the regulations governing the operation of army canteens. As my hon. friend will understand, these regulations are quite voluminous, and I wanted to tell him and the house that the matter of canteens, particularly the central fund and also the disposition of moneys accruing from canteen operations other than those already covered by agreements with the auxiliary services, is now being examined into by a committee appointed by the government and consisting of the following members: Mr. J. M. Macdonnell, of Toronto, general manager of the National Trust Company; His Honour Leonce Plante, recorder of the city of Montreal, and Mr. Watson Sellar, auditor general of Canada. The powers and authority of that committee are set out in P.C. 7520, dated December 21, 1940, and in an amendment, P.C. 1087 of February 14, 1941. Copies of these orders will be laid on the table. There was another order in council, P.C. 224, of January 13, 1941, which substituted His Honour Leonce Plante, recorder of the city of Montreal, in the place and stead of Mr. Rodolphe Deserres, K.C., of the city of Montreal, who had been appointed by the order in council to which I have already referred; that is, P.C. 7520 of December 21, 1940.

I shall have to ask that this question be made an order for return if my hon. friend wishes the regulations with which that committee is now dealing, but it occurred to me that possibly he would prefer to wait until the report of the committee is received. The hon. gentleman also asks some further questions, the answer to which I shall table to-morrow; that is, in regard to questions 2, 3, 4 and 5. Perhaps between now and to-morrow my hon. friend can consider whether or not he desires to drop question 1.

Mr. HOMUTH: Has the minister any idea whether that report may be received shortly?

Mr. RALSTON: The committee has been working since February, and I should not think it would be very long before the report is received. I shall make inquiries about that also.

Mr. SPEAKER: No. 1 answered; Nos. 2, 3, 4 and 5 stand.

MAGDALEN ISLANDS FISHERMEN

Mr. ROY:

1. Did the Department of Fisheries, during 1940, receive any reports from its officer in the Magdalen islands bearing on conditions in connection with the sale of fish, and the distress of the fishermen?
2. If so, what are the details of such reports?

Mr. MICHAUD:

1. Yes.
2. Contents of reports by employees of departments of government are privileged and cannot be disclosed.

MARKETING OF LOBSTERS—W. G. AKINS

Mr. BLACK (Cumberland):

1. Has Mr. W. G. Akins been employed by the Department of Fisheries in connection with the advertising and marketing of fish or lobsters? If so, what was his previous experience?
2. What is his profession or business and is he connected with an advertising agency?
3. Did he or any advertising agent or agency enter into contracts or perform services in the marketing of lobsters in the years 1939 or 1940? If so, state, (a) the salary paid to each person or agency; (b) the expenses paid to each; (c) the commissions paid to each; (d) the total cost of the advertising campaign; (e) the total cost of the lobster marketing undertaking; (f) the number of cases marketed, the average price and total price received?

Mr. MICHAUD:

1. (a) Mr. W. G. Akins volunteered his gratuitous services to help market canned lobster purchased by the lobster controller, and such services were accepted.

(b) Several years experience in commercial advertising and market promotion.

2. Mr. W. G. Akins is an advertising agency executive.

3. Mr. W. G. Akins acted without salary as assistant to the lobster controller for the marketing of canned lobster in the fiscal year 1940-41.

(a) Nil.

(b) To Mr. W. G. Akins $1,463.63 for expenses only in connection with marketing of canned lobster.

(c) Nil.

(d) To January 31—$44,294.30.

(e) To January 31—$12,756.46.

(f) To January 31—4,410⅝ cases, $18.38—$81,079.20.

Note.—Figures subject to correction as value unsold goods are estimated and will vary on account sales tax, discounts and freight.

INCOME TAX—CORPORATIONS

Mr. PERLEY:

1. How many corporations filed income tax returns for their latest business year, of which the national revenue department has record?

2. How many of these corporations are shown by their returns to be inactive?

3. How many of these corporations have made a return showing no taxable income?

4. How many of these corporations have made a return showing a taxable income?

5. How many of the corporations showing a taxable income are more than six months in arrears in payment of their taxes?

Mr. GIBSON:

1. 31,748. 1939 taxation year as at 31st January, 1941.

2. Inactive corporations are not called upon to file returns of income.

3. 18,179.

4. 13,569.

5. The tax is a liability of any company immediately after the close of the fiscal period. It may be paid any time within four months therefrom without interest; the balance thereafter (if any) may be paid by instalments with interest at 5 per cent over the next four months. Thereafter, the rate of interest is 8 per cent.

The daily variable number more than six months in arrears is not known.

PUBLIC SERVICE—EMPLOYMENT OF PERSONS NOT DOMICILED IN CANADA

Mr. BLACKMORE:

1. How many persons has the dominion government employed since the outbreak of war who were not domiciled in the Dominion of Canada at least six months before September 1, 1939?

2. What is the position of each?

3. What special qualification in each case justified his employment in preference to a Canadian?

4. What income is given each, whether as salary, living allowance, expenses or other form of payment?

5. What are the names of all persons on the government payroll who receive in excess of $6,500 per annum?

6. What is the amount each receives, the duties he performs, the qualifications he possesses and the length of service he has rendered?

Mr. CASGRAIN: Mr. Speaker, a reply to this question would require a tremendous amount of work. It refers not only to civil servants, but also to others in the government service, and to persons in companies under the control of the government. I believe, too, that it refers to persons who might be taken on temporarily, to serve only for a short time, and then to be released. Would the hon. member give some further explanation as to what he desires before we attempt to answer the question? Meantime I would ask that it stand.

Question stands.

FOREIGN EXCHANGE CONTROL—IMPORTS OF MOTOR VEHICLES

Mr. CASSELMAN:

1. Has any change been made since the passing of the War Exchange Conservation Act in the conditions under which motor vehicles may be imported into Canada?

2. If so, what is the nature of such change and for what purpose was it made?

3. Has any ruling been made limiting an American motor vehicle manufacturer who might desire to establish a factory in Canada to a specified quota?

4. If so, how was that quota determined?

5. What was the purpose of such ruling?

Mr. ILSLEY:

1. Yes.

2. Instead of refusal of all permits, permits are now granted for imports for three months based on a quota of 20 per cent of average imports for the comparable three monthly periods of the years 1938-1940.

3. In addition to such limitations as may be imposed from time to time by the controllers of steel and machine tools, the motor vehicle controller, on the instructions of the government, has refused any new manufacturer the right to produce or assemble in

Canada more cars than can be imported under the import quota. Firms not producing cars in Canada prior to December 2, 1940 will not be permitted to produce more cars than they could obtain under import quota.

4. This quota was made equal to the import quota the manufacturer would have received had the factory not been established in Canada.

5. The prohibition of imports, in addition to imposing hardships, probably greater on the whole in the automobile business than in other businesses affected by the War Exchange Conservation Act, has also had the effect of leading some companies to consider setting up manufacturing facilities in Canada under conditions which cannot permit of economical production and at a time when machine tools and skilled labour are extremely scarce and required for war work.

When control of the entire industry was decided upon, the government took the view that the most effective plan was to allow the importation under permit of a very limited number of passenger automobiles as a part of a general plan of control. The plan will result not only in conserving machine tools and skilled labour for war work but also will save more foreign exchange than would have been possible, had new factories for the purpose of assembling cars in Canada with a low Canadian content been allowed to be established.

WAR EXPENDITURE, 1914-18

Mr. RAYMOND:

How much did Canada expend for war purposes from, (a) August 1, 1914, to March 31, 1915; (b) for each successive fiscal year thereafter to the end of the war?

Mr. ILSLEY:

War and Demobilization Expenditure

Fiscal Year ended March 31	
1915	$ 60,750,476.01
1916	166,197,755.47
1917	306,488,814.63
1918	343,836,801.98
1919	446,519,439.48

QUESTIONS PASSED AS ORDERS FOR RETURNS

WAR-TIME RESTRICTIONS ON SALE OF LIQUOR

Mr. AYLESWORTH:

How many requests in the form of resolutions and/or petitions from public bodies or others advocating war-time restrictions on the sale of liquor have been received by the government, or any member thereof, since July 24, 1940?

[Mr. Ilsley.]

ILLEGAL STILLS IN MANITOBA

Mr. COLDWELL:

1. How many cases have been prosecuted in the province of Manitoba for operation or possession of illegal stills in the last three years?
2. Who were the prosecuting attorneys in each case?
3. How many offered to plead guilty?
4. In how many cases did the accused plead guilty?
5. How many pleaded not guilty?
6. What fees were paid in connection with each case?
7. Has Mr. S. Hart Green, K.C., of Winnipeg, Manitoba, been the only counsel engaged in the prosecution of such cases since April 1, 1940? If not, what other counsel were engaged?
8. In how many cases since April 1, 1940, has the plea of guilty been made by the accused and accepted by the court?
9. What sums were paid to Mr. S. Hart Green, K.C., for legal services for the three years prior to April 1, 1940?
10. What sums have been paid to Mr. S. Hart Green, K.C., since April 1, 1940?

FOUNDATION COMPANY, LIMITED

Mr. LACOMBE:

1. Who are the directors of Foundation Company, Limited, and has this company secured a contract for the manufacture of munitions at St. Paul l'Ermite, Quebec?
2. Who are the directors of Canadian Car Munitions, Limited, and is this company executing part of a contract awarded to Foundation Company, Limited?
3. Upon what dates and in what year were the abovenamed companies incorporated?
4. Who are the presidents and managers of these companies?

FEDERAL LOANS TO PROVINCES

Mr. McGREGOR:

1. What loans have been made by the dominion government to the provinces which are now outstanding?
2. What is the amount of each such loan?
3. What is the date upon which each such loan was made?
4. What is the maturity date of each such loan?
5. What was the purpose for which each such loan was made?

FOREIGN EXCHANGE CONTROL—AMENDMENTS TO ACT

Mr. CASSELMAN:

1. Have any amendments, alterations or changes been made by order in council or otherwise to part 1, schedule 1, of the War Exchange Conservation Act, 1940?
2. If so, what is the nature of each such amendment, alteration or change?
3. What was the purpose of each such amendment, alteration or change?

WOOD ISLAND, P.E.I.-CARIBOU, N.S., FERRY SERVICE

Mr. BLACK (Cumberland):

1. What have been the expenditures and estimates for acquisitions of lands for wharf, terminals, dredging, harbour approaches and the improvements at Wood island, Prince Edward Island for the projected ferry service, (a) to December 31, 1940; (b) to complete the project; (c) total cost completed; (d) annual maintenance costs?

2. What have been the expenditures and estimates for acquisitions of lands for wharf, terminals, dredging, harbour approaches and the improvements at Caribou, Pictou county, Nova Scotia, for projected ferry service, (a) to December 31, 1941; (b) to complete the project; (c) total cost completed; (d) annual maintenance costs?

3. What have been the total expenditures (a) for purchase, (b) rental, (c) subsidies, for boats to operate the projected ferry service, stating to whom such payments are made?

4. What ferry service is proposed for 1941, stating, (a) name of boats, size, draft, carrying capacity of automobiles, trucks and freight tonnage; (b) the schedule for daily trips, including Sundays, and rates or fees for passengers, automobiles, trucks and freight; (c) the owner and operator of the boats; (d) the annual subsidy and other costs, also period contract to run?

ROYAL CANADIAN AIR FORCE—OFFICERS

Mr. HAZEN:

1. (a) How many officers, non-flying, special reserve, under 33 years of age, hold commissions in the directorate of personnel R.C.A.F.; (b) of this number, how many hold the rank of flight lieutenant or higher rank, acting or temporary?

2. (a) How many officers, non-flying, special reserve, holding commissions in the directorate of personnel R.C.A.F., have had active service in a theatre of war with the R.F.C., R.N.A.S., or R.A.F.; (b) how many of these officers have the rank of flight lieutenant or higher rank, acting or temporary?

3. (a) How many officers, non-flying, special reserve, of 33 years and over, hold commissions in the directorate of personnel in the R.C.A.F. who have had no service in an active theatre of war; (b) how many of these officers hold the rank of flight lieutenant or higher rank, acting or temporary?

4. (a) How many officers, non-flying, special reserve, from N.P.A.M. units hold commissions in the directorate of personnel R.C.A.F., with the rank of flight lieutenant; (b) of these, how many have served in an active theatre of war from 1914 to 1918; (c) how many have served in Canada or England only; (d) how many had no service in the war of 1914-1918?

5. How many recruiting officers are there in the R.C.A.F.; (a) with previous service in the R.A.F. in a theatre of war; (b) with previous service in the R.A.F., in England or in Canada; (c) with previous service in the army or navy in any theatre of war; (d) with previous service in the army or navy, but not in a theatre of war; (e) without previous service in the army, navy, or air force?

6. (a) How many commissioned officers of recruiting centres are there; (b) what is the rank, acting or temporary, of each recruiting officer as at March 15, 1941; (c) what is the record of service of the commanding officer of each recruiting centre?

BUSINESS OF THE HOUSE

EASTER ADJOURNMENT

Hon. T. A. CRERAR (for the Prime Minister) moved:

That when this house adjourns on Wednesday the 9th of April next, it stand adjourned until Monday the 28th of April, 1941.

Motion agreed to.

LOANS TO PROVINCES

BRITISH COLUMBIA—QUESTION OF REDUCTION OR REPAYMENT

On the orders of the day:

Hon. R. B. HANSON (Leader of the Opposition): May I ask the Minister of Finance, in view of what I read in the newspapers over the week-end, if any further telegrams, letters, memoranda or other documents have been exchanged between the Prime Minister or the Minister of Finance himself and the premier or the minister of finance of British Columbia since March 17, with reference to a request that the province of British Columbia take steps to pay off or to reduce outstanding loans of that province. If so, will they be tabled?

Hon. J. L. ILSLEY (Minister of Finance): I do not know that they should be tabled. As we go along from day to day some correspondence is exchanged between Mr. Hart and myself with regard to this matter.

Mr. HANSON (York-Sunbury): What is the nature of it? Surely the country is entitled to know. They owe us a lot of money, and there was at least a suggestion by the premier of British Columbia of repudiation. I suggest we ought to know what is going on.

Mr. ILSLEY: I have no desire to keep anything from the house; but it is very difficult to summarize each stage when letters are exchanged between the governments of the dominion and the province. As soon as any agreement is arrived at, or as soon as it is apparent that no agreement can be arrived at, I shall report the matter to the house.

Mr. HANSON (York-Sunbury): Bring them down once a week.

SIR FREDERICK BANTING

REPORTS AS TO CAUSE OF FATAL AEROPLANE ACCIDENT—NEWFOUNDLAND INQUIRY

On the orders of the day:

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, in view of the wide publicity over our own radio broadcasting system and in the newspapers, and the disquieting stories regarding the accident in which Sir Frederick Banting lost his life, would the Minister of National Defence for Air be prepared to make any statement to-day, or at some later time?

Hon. C. G. POWER (Minister of National Defence for Air): All I can say to the house is that that flight was not under the control of the Royal Canadian Air Force. When the British government requested the Newfoundland government to make an inquiry into all the circumstances surrounding the unfortunate

occurrence, the Newfoundland government requested the Royal Canadian Air Force to lend them two of its officers to be members of the board of inquiry, and they also requested that the Department of Transport should lend one of its officers. The report will be made to the Newfoundland government and not to the government of Canada. The only connection our department had with it was the loan of personnel to act on the board of inquiry.

WAR SAVINGS CERTIFICATES

REPRESENTATIONS AS TO METHOD OF DISTRIBUTION BY MAIL

On the orders of the day:

Mr. D. G. ROSS (St. Paul's): Mr. Speaker, I should like to draw the attention of the Minister of Finance to a question connected with the sale of war savings certificates. I believe I might best put my question by reading from a letter appearing in the Toronto *Globe and Mail* of March 24. It says:

> On March 17 we received by post from Ottawa five letters, each containing a war savings certificate fully registered in our name, on which, of course, no postage was required. We believe your attention has been previously drawn to the lack of thrift in the wastage of time, clerical labour, paper, etc., in sending to purchasers enclosures under five covers where one would suffice.

Would the minister give an explanation?

Hon. J. L. ILSLEY (Minister of Finance): I have received many letters making representations similar to those made by the hon. member. In answering them I have explained that these war savings certificates are put in envelopes by machinery and that it is much more economical to put one, and one only, in an envelope, than it is to put several in an envelope, even though they may all be going to the same person. The matter was fully and carefully considered, and it was decided that this was the most economic method of proceeding. The condition arises as a result of the use of machinery in placing them in the envelopes rather than doing it by hand.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Friday, March 21, consideration in committee of Bill No. 19, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

On section 2—Appropriation.

Mr. McLARTY: I regret very much that I was not in the chamber on Friday afternoon when the hon. member for Waterloo South (Mr. Homuth) asked for an explanation of certain orders in council which had been passed by the government on the recommendation of the Minister of Labour. My absence was unavoidable because I had made an appointment to attend a meeting in Montreal in connection with some important labour problems.

I realize that the orders in council to which the hon. member referred are of extreme importance and I have been advised by quite a number of the hon. members of this committee that they are desirous of discussing them. When I arrived in Ottawa to-day I received my first intimation that matters which had to do exclusively with labour would be debated in this committee. I am not suggesting that there is anything improper about that, but these matters are so important from the standpoint of labour that perhaps the purposes of the committee would be better served—I have no intention of delaying the discussion—if they were discussed either on the labour estimates or on the supplementary estimates.

To divert this discussion, in connection with which the service ministers are being held here, to purely labour matters would probably not be a kindness to the committee, and certainly would not be a kindness to them. I know that many hon. members of the committee wish to discuss these matters, and it is only natural that they should. One of the orders in council, P.C. 7440, is most important and far-reaching. If it meets with the approval of the committee I would undertake to deal with this matter on the earliest possible occasion rather than to inject it into the debate at this time. I understand that this procedure meets with the wishes of those who urged that this matter be taken up. I wanted to give this undertaking to the committee.

Mr. HOMUTH: In view of the minister's assurance that we shall have an opportunity of fully discussing these matters, I shall not delay the proceedings of the committee. However, I should like to remind the minister that there have been times when bills have been brought before the house at seven or eight minutes to eleven o'clock, which rather catches one off guard. If those who are interested could be given some intimation, perhaps the day before, as to when these matters are to be brought up for discussion, it would help greatly. Perhaps the minister can assure us that such notice will be given.

Mr. McLARTY: I have no hesitation in giving that assurance to the hon. member for Waterloo South. Personally I welcome discussion in this committee or in the house.

As the hon. member suggests, these orders in council are of a far-reaching nature, and the more thoroughly they are discussed and digested, the more helpful it will be, not only for this house but for the government itself. I shall endeavour to give my hon. friends plenty of notice and will not bring these matters into the house at eight minutes to eleven o'clock when many hon. members may not be present.

Mr. STIRLING: Does the minister propose to give to-day the statement to which he alluded the other day with regard to the details of the training scheme, and particularly with regard to what methods are being employed to bring trainees who have completed their training into contact with those who are ready to employ them?

Mr. McLARTY: We are endeavouring to see that the trainees receive employment at the earliest possible moment. Under the directorship of Mr. Thompson a committee has been set up which will keep in contact with the trainees as well as with prospective employers. I believe that everything possible is being done to see that trainees who have received their training shall be placed as soon as possible.

Mr. STIRLING: Is the official to whom the minister refers resident in Ottawa?

Mr. McLARTY: Yes, Mr. Chairman.

Mr. STIRLING: What machinery does he use to get in touch, say, with those who come out of the training classes in British Columbia?

Mr. McLARTY: This work is carried on in cooperation with the provincial governments. Mr. Thompson was director of youth training and is now director of war emergency training. There is a set-up in each province which, subject to the supervision of Mr. Thompson, looks after the placing of these trainees. The hon. member realizes that in some provinces war industries are not concentrated to the extent they are in others and it is necessary that there should be a certain exchange of trainees, the trainees being brought to the industries. This whole matter was discussed at a conference which was held last week and at which I believe all the provinces were represented. The whole plan was considered and I am told that the opinion was expressed that every possible step was being taken to see that trainees are brought into contact with industries that require them. In other words, it is a matter of dominion-provincial cooperation.

Mr. STIRLING: Is this committee a child of the provinces?

Mr. McLARTY: It is perhaps a child of the provinces and the dominion. The provinces appointed representatives to attend this conference. Along with Mr. Thompson and Mr. Crawford, the latter in charge of the plant training plan in Ottawa, it was decided to secure the most effective cooperation in placing trainees as well as in developing trainees.

Mr. STIRLING: What progress has been made in seeing that young men who have actually received this training get employment in the industries?

Mr. McLARTY: I shall have to supply my hon. friend with that information. I can give him the number being trained, if that would be of any assistance.

Mr. STIRLING: I think the minister referred to that the other day.

Mr. McLARTY: I have referred to that already. I would have to get the figures as to the actual number of trainees placed.

Mr. HANSON (York-Sunbury): Of course that is the test.

Mr. McLARTY: Quite. Generally speaking the placements have been most satisfactory. I shall place on *Hansard* the exact figures as to the number of placements. Sometimes it is a little difficult to get the proper records. For instance, a trainee may move from one point to another and neglect to advise us that he has been placed. We can give some figures, but we cannot undertake that they will be complete.

Mr. STIRLING: Before I left home at the beginning of February I attended the classes which were being held in my town and I was impressed with what I saw. These young men had acquired a considerable handiness and knowledge in a comparatively short time. But the principal and the instructors were worried over the next step, over how these lads in southern British Columbia were going to bring themselves into contact with industries which could use their services. I want to impress that fact upon the minister.

Mr. McLARTY: I appreciate that. I intended to give the hon. member for Yale some information in that regard. There were about fifty of these basic training schools to which he refers, and at that time definite plans were being made—I am speaking purely from memory—to place the trainees in an aircraft manufacturing plant in Vancouver. In other words, the plan is reasonably well coordinated. In one western city, for instance, we had 500 trainees. There was no employment for them there, and we had to move them, which we did, and I think every one of them has

been taken care of. With reference to the particular school to which my hon. friend refers, the plan is to find employment for these trainees in the aircraft manufacturing plant in Vancouver, with, I think, the Boeing company.

Mr. GREEN: What number of men who have been discharged from the forces and what number of middle-aged men have received or are receiving training at the present time under these training schemes?

Mr. McLARTY: I am afraid I cannot give definite figures to the hon. member. I try to keep as up to date as I can on the number of trainees, but to answer that question I would have to have one of the officials of the department here.

Mr. GREEN: Perhaps the minister could tell us what proportion of the trainees are young men, what proportion are men who have been discharged from the forces and what proportion are middle-aged.

Mr. McLARTY: I would say—and I must put this in most general terms—that the training in the vocational schools is of young men from eighteen to thirty. There is, it is true, training of older-aged groups, but I could not advise my hon. friend as to the exact number.

Mr. GREEN: Have active steps been taken to train these older men who could be fitted in perhaps much more easily than the younger men? Is that a factor at all?

Mr. McLARTY: Yes; it is a factor, but I would say that the great number of the trainees are between eighteen and thirty.

Mr. GREEN: What provision has been made for training ex-service men?

Mr. McLARTY: Under the war emergency training plan, preference is given to ex-service men who wish the training. It is definitely set forth in the war emergency training programme.

Mr. GREEN: Is any large number of them in training?

Mr. McLARTY: I do not think it is a very great number, but there are some. The definite arrangement was made that preference would be given to them in the war emergency training programme.

Mr. HANSON (York-Sunbury): This is an important matter, and it has been published in the press as one of the achievements of the Department of National War Services. I am not very familiar with the programme myself, but as we are endeavouring to pass this bill to-day—at least that is the hope I entertain—I would ask the minister, before the committee stage is passed, to give us definite information on this training plan. I have the idea that in the maritime provinces this training programme has not been effective at all, but I should not like to speak too strongly as to that. I know an attempt was made in my own city to find work for these unemployed but no jobs could be found for them because no war industries are established and no new plants are being built in the maritimes. These men are willing to go to central Canada to find employment if they have to, but they have not had the opportunity.

I do not want to delay the passage of this bill, but we ought to know a little more about this training programme. It has been advertised to the country as one of the things we are going to do, and the point raised by the hon. member for Vancouver South (Mr. Green) is of importance. We have already brought back a large number of men. I have had some of them on my doorstep who cannot find employment.

The minister has also been advised of the situation existing in the county of Northumberland, New Brunswick, where unemployment threatens to be very, very serious this year due on account of a falling off in normal activities in that part of the country. Many of these unemployed are young men, and we have to do something about them. They cannot be left there to starve. Relief is cut off by the government of New Brunswick, and the municipality itself is so far in debt that it cannot possibly sustain these four or five thousand men who are threatened with unemployment if not actually now out of employment. I had hoped that this training scheme would be of great material benefit, and certainly, if labour is scarce in some places, work should be found for those who are trained. We have undertaken to train these young men, and the application of the scheme should be national, embracing the whole country.

Mr. McLARTY: I know the situation in the county of Northumberland to which the hon. leader of the opposition refers. It is a matter about which he and I have conversed, but I doubt if the situation there is one that could properly come under the training plan. I think it would have to come under some such thing as he suggested, namely, the building of wooden ships or some definite activity of that kind.

With regard to New Brunswick generally, it is true that there are not as many receiving training in that province as there are in some other provinces. Perhaps I might give the figures for New Brunswick. The number in training on February 1 was 212; the number enrolled in February was 91. I agree that in

comparison with the total figures that is not a large number. The number who left during the month was thirty-seven. The number training at the end of February was 266.

Mr. HANSON (York-Sunbury): How many of them were placed?

Mr. McLARTY: There were twenty-four finished but not placed. That would mean that the number placed was forty-six. That is not a large number, I must admit, as compared with other provinces. It might be fair to the committee for me to put on *Hansard* a general statement as to the training plan as the leader of the opposition has suggested, and with the permission of the committee I shall follow my notes pretty closely.

The emergency war training programme has its legal basis in the Youth Training Act. This act, passed in 1939, provided grants to the provinces to meet 50 per cent of the cost of training and rehabilitating unemployed youth. With the outbreak of war, emphasis in training necessarily shifted from rehabilitation to the fitting of young persons to meet the demand for semi-skilled and skilled labour in war production. Although the programme was changed in this way it has continued to operate under the youth training legislation. The youth training work proper has rapidly declined, while the special training for war occupations has been so expanded that additional war appropriations have been secured to finance the expansion of the work. The provinces have made their technical schools and equipment available to the dominion for the work of the programme, while about 85 per cent of the additional expense involved is being met by the dominion government.

The war emergency training has two phases:

(1) Training in vocational schools.

(2) Training in industry.

The former is in charge of Mr. R. F. Thompson, dominion director of youth training; the latter phase has been assigned to Mr. A. W. Crawford, former dominion director of technical education, who has been loaned to the dominion government by the Ontario department of labour.

With regard to the vocational schools, we were fortunate in having laid a foundation for further expansion in the experience already had in youth training. New curricula for war production occupations were drawn up, suitable instructors were secured, and many of the schools were placed on a two-shift and even on a three-shift basis. To date the supply of applicants for training has been adequate and the programme has proceeded according to schedule. It is proposed to train 50,000 persons for industry and the armed forces in the 75 vocational schools in the present calendar year—14,000 for the army, 6,000 for the air force and 30,000 for industry—and I am glad to report that in the first two months of the year this schedule is being met.

The numbers in training were:

At the first of January, 6,585.

At the first of February, 10,381.

At the first of March, 11,422.

Since the average duration of the courses is about three months, this means that an average of about 4,000 persons can be graduated monthly. Moreover, the output of trainees can be expanded as the need arises. In the summer vacation months, when the ordinary day pupils of the schools are on vacation, another shift of war production trainees can be introduced. We are also informed by the provincial authorities that, on short notice, the facilities will permit the training of perhaps 25 per cent more persons. Moreover, new centres may be added if required. I am confident that our objective of 50,000 vocational school graduates for service in war production will be attained.

That figure was arrived at, as probably some members of this committee know, as a result of the investigation of the interdepartmental committee on labour supply, comprising various departments of the government interested in it.

With respect to the plant training phase of the programme it is difficult to speak in the same precise terms. No governmental assistance is being given to employers to meet the cost of training new workers. Up to the moment we have adopted the position that the cost of training in industry should be borne by industry itself. This being so, we have no control of the activities in this direction and are unable to insist upon detailed statistical reports covering the extent and nature of their training plans.

While available figures indicate that the estimate of 50,000 trainees in industrial plants will be exceeded, it should be borne in mind that the constantly changing situation in each industrial establishment makes it impossible to predict the future with any great degree of certainty.

There is some difficulty in getting the figures from the industrial plants. For instance, in the case of one large firm where, I know, they are training about 500 men, they say, "We are not training them, because they are not in a plant school; they are being trained in the plant itself." In the case of other industries, every man they take on will be in training under direction, no matter how short the training that is given. The result is that it is a little difficult to get figures for the industrial plant schools.

The point is this, however. I feel that the programme is doing well. The reports I obtain on it are that we shall have no difficulty and will train in the vocational schools over 50,000 during the calendar year and will train in the plant schools also 50,000 during the calendar year.

Mr. HANSON (York-Sunbury): That is a very substantial programme, and I wish it every success. What, in the opinion of the officials of the minister's department, is the proper course to pursue; is it better to have these trainees trained in the technical schools, or in the plant schools, or in the industry itself? The good old-fashioned system of apprenticeship obtained in this country for many years and I always regretted that it went on to the scrap hill. I would assume that all three methods might properly be utilized and that the training in technical schools is, possibly, the least conducive to immediate employment. That is just a hazard, a guess. The objective, of course, is to put these men to work in the appropriate place, so that they may become self-sustaining and preserve their self-respect and become good citizens. The crux or true test of any of these schemes is the success which has been achieved in finding employment, and the minister cannot give us very much information on that at the moment. I should like to know what the results are.

Mr. McLARTY: Of course all three plans which the leader of the opposition suggests, namely the technical school, the plant school, and the apprenticeship system, have been worked. The difficulty with apprenticeship is the time it takes, a matter of four or five years; and necessarily the number of apprentices is limited. The vocational schools are giving training in respect of branches of industry in which it appears that there will be the first shortage of labour; in the matter of welding of various kinds we are dealing with those in an endeavour to avoid a shortage. In the plant schools—and perhaps it is a misnomer to call them "schools"—or in the plants, the training they are giving is directly related to the work which they are going to do.

Mr. HANSON (York-Sunbury): The particular industry.

Mr. McLARTY: Quite true, the particular industry. We are trying through the vocational schools to anticipate the demand which there will be for the scarcer varieties of labour. For instance, we are turning out a great number of aircraft mechanics for the air force and a great number for the aircraft manufacturing companies. We are endeavouring to fill the gap which is caused by the lack of certain forms of skilled labour, such as welders, not related to one particular industry but to a number of industries.

Mr. GILLIS: Would the minister give the figures for Nova Scotia? My experience with the training plan in that province is that it is as hard to get into those schools as it is to get into the university.

Mr. HANSON (York-Sunbury): Well, that ought not to be.

Mr. GILLIS: For instance, over the week-end I had personal letters from 115 boys in one ward in the town of Glace Bay. They were advised to write the government, and they wrote me. Their ages range from nineteen to thirty years. They have never had a job, and they are endeavouring to get some information as to how they can take advantage of these schools, or whether there is the possibility of employing them somewhere. From another ward in the same town there were forty-seven individual letters registering complaints. Under whose supervision in Nova Scotia, is the work being carried on, and what are the figures relating to trainees?

Mr. McLARTY: I shall be glad to give the hon. member the figures for Nova Scotia. I cannot recall offhand the name of the particular individual in that province who is in charge. The number in training at the first of the month was 158; the number enrolled during the month is 97; the number in training at the end of the month is 253. The industrial schools in Nova Scotia are, the Halifax, N.S., technical college, and the New Glasgow training centre, trainees' training centre; and for the army, the Halifax, N.S., technical college, and, at New Glasgow, the training centre.

Mr. MacNICOL: If a young man wants to get into the big central school in Toronto, by what procedure does he obtain that privilege?

Mr. McLARTY: I would say, Mr. Chairman, that the procedure would be to apply to the school; and if there should be any difficulty in getting in, he would be at perfect liberty to take it up with the Ontario authorities.

Mr. MacNICOL: My information is that there is great difficulty in getting into these schools, that young men who apply are told that they might get in six months hence or nine months hence, but that at present the classes are filled up. By what method are selections made of those who enrol?

I have had a great deal of experience with such work as is taught in the technical school, particularly that relating to iron and steel,

and I do not know just how much a young man could learn in the length of time which a course in that particular work, according to what I read in the papers, is supposed to cover. After all, it takes time to train expert machinists, tool makers, die makers, and the like. In my day a man had to work two or three years, or longer, before he learned enough to be really worth much. Are we going to get out of this technical training scheme everything we should get out of it so far as the prosecution of the war is concerned? —for that is the real purpose of it. A young man who gets a smattering in two or three months in a technical school might be helpful if he went to work in a plant. I have no doubt the teachers in those schools are doing everything they can, working early and late and on Saturdays to try to fill the gap. I remember a few years ago telling the then minister of labour that it was high time some effort was made to retain in this country expert mechanics who at that time were going to England to work in munitions plants—as tool and die makers, experts of particularly high type—but nothing was done. I feel that what the minister is trying to do should be appreciated, and I hope something is coming out of it.

Mr. McLARTY: The particular school to which my hon. friend refers—

Mr. MacNICOL: The Central Technical School.

Mr. McLARTY: I would not be surprised if difficulty were being experienced in getting in there; it is pretty well filled up. For instance, there were 391 trainees at the first of the month, and 272 joined during the month. It is one of the major schools. They probably have a waiting list.

Mr. MacNICOL: Yes, I tried to get one in myself.

Mr. McLARTY: In regard to the training, we are giving three months' training on an average. As the hon. member says, you could not turn out a highly skilled tool and die maker in that time, such as you used to get under the apprenticeship system. What we are trying to do is to give the fundamental knowledge, to try to grade up, so to speak, and at least teach them the fundamentals to make them useful in the plant. As to how useful they are, the only information I have comes from those into whose employ they go, and I would say that employers have been uniformly favourable in their comments on the helpfulness of the training and the advantages to industry which are flowing from this work.

Mr. LOCKHART: Is there any shortage of instructors?

Mr. McLARTY: We could perhaps train more men if we had more instructors and more equipment. If there are any shortages it is in instructors and equipment.

Mr. GILLIS: The minister's answer to my question would indicate that in Nova Scotia the whole scheme is concentrated in one end of the province. The figures are very low. So far as the training of industrial workers is concerned or of boys who are to take part in future industry he might well move that Halifax school down to the other end of the country where there is the greatest concentration of industry as well as the greatest number of unemployed boys. It would save money for the government, transporting men from one end of the province to the other. In addition you have the big steel plant down there, and if the minister is receiving the cooperation from industry that he should be receiving that is the proper place to train the trainees.

Mr. POTTIER: What would happen in the other end of the province?

Mr. GILLIS: You have practically everything there now; that is the trouble. The last time I was home I met hundreds of these boys in our end of the country who had absolutely no knowledge of the scheme or who was handling it or whom to get in touch with to inquire about it. There is very little advertising in Nova Scotia with respect to it. I suggest that an examination of that question in Nova Scotia is necessary. As I see it, the training of industrial workers is being done at the wrong end of the country. The whole thing is concentrated in Halifax. The few times I have been in Halifax since the outbreak of the war I found everything so congested that one did not know what he was doing or where he was going.

Mr. McLARTY: I have had the opportunity of visiting the Halifax technical school on at least two occasions. I have been immensely impressed with the training they are giving and the work they are doing.

Mr. HANSON (York-Sunbury): It is a good school, but in the wrong place.

Mr. GILLIS: I am not objecting to that.

Mr. McLARTY: I should be glad to give consideration to the representation of the hon. member, but I would not want to move the Halifax school, which is doing extremely efficient work.

Mr. GILLIS:: I know the Halifax technical school is capable of doing a very good job for a limited number of trainees, but to

handle the situation the government is faced with at the present time an addition to that school is necessary. They are not equipped to handle the programme you are embarking on.

Mr. McLARTY: I shall be glad to consider that.

Mr. BLACK (Cumberland): I want to commend the minister, but I am in agreement with the hon. member for Cape Breton South, except that I do not think the technical school should be moved from Halifax. There is no sound excuse for not having a school of large capacity in Cape Breton to give mechanical training to the young men there, because that is the industrial centre of the province. The minister's department and the government of Nova Scotia have not done all they might have done in setting up school in Nova Scotia. Schools of this kind should be established in other industrial centres in the province At New Glasgow a plant school has been organized in recent months, but there is not a training school in the town of Amherst, which has been a prosperous industrial centre but has suffered in recent years. I asked that there be a school set up to train workmen for the aeroplane plant there, which I hope will soon be in full production There are hundreds who have been expecting to be given employment in that aeroplane plant. A munitions shop is also being set up and should soon be under way, but no training of this kind is available except the limited mechanical training that the public school has been able to give.

The department has sent a limited number to Halifax, at great expense to the federal and provincial governments and at great inconvenience to the students from Cumberland, but the school at Halifax has been congested and cannot do the best work.

The figures the minister has given of the number of young men in training in Nova Scotia do not reflect great credit on the department or on the government of Nova Scotia. A special effort should be made to establish these schools in centres which are industrial, such as Cape Breton, Pictou and Cumberland counties. Nova Scotia is the most industrial province in eastern Canada, and young men and boys in that province have not had the opportunity to get the training that they have sought by the thousands.

Mr. ROSS (St. Paul's): In the *Globe and Mail*, under the caption "Plane Output Hits Forty a Week says Director"—this relates, I believe, to the tour of inspection by members of the parliamentary press gallery—I was very much interested to read this paragraph, in which one of the writers gives, in part, his impressions of the tour:

> 3. The need of recognition that young men of twenty-one are veteran craftsmen in the airplane industry and that conscription of these workers for four months' military training is a threat to essential expansion of production. Each one of the plants visited has lost trained men and some of them key men to military service in the last week.
>
> 4. The threat to airplane production that the rapidly rising repair problem presents. Already overhaul jobs have flooded the repair sections of the plants and by midsummer, officials admit, this problem will assume critical proportions.

We in this house have been talking about the four months training plan and the need for some differentiation in the selection of the trainees. The views we have been expressing are borne out by these members of the press gallery who have been through these plants. In my opinion, at a time like this when aeroplanes are needed so badly we should do nothing to disturb the work going on in these plants. I have been through some of them myself, and I know the opinions that are held in them. I would say, though, that as time goes on these men might be taken into the air force, when new men come along who are capable of doing their work, but I do not think it is right at all that they should be taken from their work now when we are trying so hard to expand our production.

While I am on that point I should like to say a word with respect to the schools in Toronto training older men. I have seen some returned men and others who have been out of jobs for some time and who need a little brushing up, but who have found it impossible to get into the technical schools at the present time—that is, the schools training men of forty and over.

Mr. McLARTY: Perhaps what the hon. member has in mind are the schools for men from eighteen to thirty. In the general war emergency training programme enlisted men and returned men are definitely supposed to receive preference, and my understanding is that they do receive it. Certainly that was definitely laid down in the programme.

Mr. ROSS (St. Paul's): There is no doubt that you cannot produce a skilled mechanic in the length of time these men are given instruction in the training schools, but you can give a man the fundamentals. What I am trying to get at is that some of these men, who have the fundamentals, should be given the opportunity to brush up. We have great need for shipbuilders, for instance, and it seems to me we should have some place to send men who have had a certain minimum amount of experience, where they may get

further experience in order that they may not be a burden when they go into the shops. Something further should be done to provide training for men of thirty years and older.

Mr. RALSTON: Perhaps I might say just one word with reference to my hon. friend's remark that the four months training is interfering with industry. I do not know where the hon. gentleman obtained the information which my hon. friend quoted, but I want to repeat to this committee what I have said time and again, that so far as the army services are concerned—and I am sure this is also true of the navy and the air force—there is not the slightest disposition to take what we call key men from the aeroplane industry or any other industry which has to do with war production. And I want to say further that in my judgment there is ample provision in the regulations whereby these men may have their training postponed. If that is not done I think it must be because the manufacturer has not seen fit to make application. The provision is that training may be postponed—the provision does not mention any industry at all—when the employer presents a plan; and, as was stated by my colleague the Minister of National War Services the other day, the employer has a right to present a plan and any such postponement is not limited to twelve months. It seems to me it must be clear that there is no attempt or any likelihood of disturbing war industry; and that this must be a case where either the industry itself has not made application for postponement or where the man is not regarded as so essential that it is necessary to do so. If my hon. friend can bring to my attention one case in which a key man in industry—and I mean a real key man; I am not talking about a case where perhaps the same result could be obtained by a shift of employees—has been taken to a military camp and has not been granted a postponement, I should be glad to take it up immediately with my colleague the Minister of National War Services, and will see that he gets in touch with the chairman of the board.

Mr. DOUGLAS (Weyburn): Under the new regulations do the firms apply for postponement? Do not the men have to make personal, individual applications for it?

Mr. RALSTON: As I remember it, the employer submits a plan.

Mr. DOUGLAS (Weyburn): I am asking because I had some conversation with some of the newspaper men who made this trip, and their impression was that under the new regulations the men must make personal, individual application for postponement; and that they were being told, "Yes, your training will be postponed, but you will have to take it next June or next September," and they were saying that if they had to take it anyway they might as well take it now. The objection apparently came not so much from the men but rather from those in charge of aircraft production, who were saying that after some of these young mechanics had been trained for a year, and just about when they were becoming useful, they were being compelled to take their training, either now or when the next group was called up. The impression was that the men must make application for postponement individually and that an industry could not, as heretofore, submit a plan.

Mr. RALSTON: I have not the regulation before me, but I was told by the gentleman who was closer than anyone else to the making of these regulations that the regulations were the same with regard to the employer presenting a plan, subject to this, that the previous requirement that a man must take his training within twelve months had been eliminated, so that the postponement could continue in the case of such a man.

Mr. ROSS (St. Paul's): There appears to be some misunderstanding which should be cleared up. As I stated, I was reading from an account which appeared in the *Globe and Mail,* and the matter should be straightened out in order that these people may know their exact position.

Mr. RALSTON: Does the hon. gentleman recall the names of the plants?

Mr. ROSS (St. Paul's): They went to several plants—Vickers, Fairchild and Noorduyn.

Mr. RALSTON: Does the report indicate which plant had suggested it was having this difficulty?

Mr. ROSS (St. Paul's): These were the impressions gained by the reporter on that tour. I should be very glad to let my hon. friend have the clipping.

Mr. RALSTON: I am satisfied that the impression is wrong and has resulted from the fact that the employer either did not know the regulation or did not consider the employee such a key man as to warrant an application being made.

Mr. ROSS (St. Paul's): That is the impression many of these men have given me.

Mr. RALSTON: We publish the regulations and do everything possible to let people know what they are. The national labour supply board, which is composed half of

representatives of employers and half of representatives of employees, has been over the important points in these regulations. That board knows what the regulations are, and surely it is not too much to ask that employers should find out what they are before making complaints.

Mr. POTTIER: I am afraid that if the minister follows the suggestions of the hon. members for Cape Breton South and Cumberland, we shall find training centres in Nova Scotia only at Halifax, Glasgow, Sydney and Cumberland. I gathered from the remarks of the minister that the suggestions of the two hon. members who have just spoken would be considered. May I assure him that in the western part of Nova Scotia we have young men who would like to take training. I believe we have as large a number there as will be found in other parts of the province. I would be opposed to the transfer of the training school from Halifax to Sydney, at the other end of the province. When the minister is considering the suggestions of the hon. members for Cumberland and Cape Breton South I would ask him also to consider the suggestion that western Nova Scotia be kept in mind in connection with the training scheme.

Mr. GILLIS: I was under the impression when I first spoke that there was an industrial training school at Halifax. The Minister of Labour has cleared up that point; I do not believe there is. But if the work is being carried on in the Nova Scotia technical college at Halifax, I should think there would be only sufficient equipment to care for their peacetime needs, and that they would be operating on the same basis as they have in years gone by. I believe practically nothing is being done in the province in connection with industrial training. At least that is my opinion; I cannot find out anything about it, although when I was home on the last occasion I tried to do so. In the part of the country from which I come there are hundreds of men between the ages of nineteen and thirty years who have never had work, and who are running around in circles. They were given some encouragement when the government advertised that a trainee's programme was to be put into operation. Hundreds of them came to me trying to find out something about it. I did not know who was in charge, but I did carry on some correspondence with the minister of education in the province, and made application for some of the boys. As to whether any results were obtained I do not know. Since that time I have not been in Nova Scotia and have not heard what progress has been made. I have, however, received 115 personal letters from one town, and 49 from another, in connection with the matter.

I had no intention of suggesting that the technical school which has been in Halifax for years should be moved. But if the government has any intention of carrying out the programme outlined by the Minister of Labour an effort must be made in Nova Scotia to develop industrial schools. If that is to come, then the proper place to do it is in the industrial centres.

Mr. McLARTY: There is one point which members of the committee may be overlooking to some extent. In the first place we are utilizing seventy-five vocational schools throughout Canada. In each case those schools are the property of the province—

Mr. HANSON (York-Sunbury): Or the school board.

Mr. McLARTY: Yes. There has to be a fairly complete equipment in order that those schools may be operated. In other words we cannot say, "Well, we will go to some place and open up a school." In some instances we are endeavouring to obtain the necessary equipment and put it into the schools, but in the majority of instances we have chosen schools most completely equipped. I believe hon. members will agree that that is the most reasonable course to pursue. In view of the terrific demands for equipment in Canada to-day it is not the easiest thing in the world to obtain additional equipment; consequently we have been taking those schools, the property either of the provinces or of the school boards, which are best equipped to carry out the training programme. I shall be very glad, however, to see that investigation is made by the director of training into the Nova Scotia situation. After all we are not anxious to prejudice one section of a province against another. If the equipment and trainees are there, we will try to bring them together.

Mr. ROSS (Souris): With reference to the young men called for thirty days' training in my district, may I point out that the registrar has insisted that the recruits make personal application for the postponement of training. The other day the Minister of National Defence put on *Hansard* a record of the number of trainees who were willing to volunteer for active service. Can he say how many of those trainees are actually in the active service army?

Mr. RALSTON: I have not that information here; I could not get it. In the committee stage some one was ingenious enough to suggest that I might take the number of those who went through the training

schools and the number of N.R.M.A. recruits found afterward, in the rolls of the reserve units, and that the difference would be those who had enlisted in the active service force.

Mr. HANSON (York-Sunbury): But that does not necessarily follow.

Mr. RALSTON: No, it does not. I have a memorandum before me dealing with that subject. The hon. member for Vancouver South asked me on an earlier occasion for the exact number who had gone through the training camps. I placed on *Hansard* a statement showing that the total number was 81,086. Then I stated on March 17 that under the National Resources Mobilization Act the number of recruits posted to reserve units was 76,128 on March 7, the difference being, 4,958. Some members of the committee said that this difference might perhaps be the number who had enlisted in the active service force. That, however, is only conjecture. The best I can say is this, that no figures were available to permit of any definite statement as to the actual number of men out of those 4,958 who have enlisted in the active service force. Nor is it possible to obtain this information. I can only make the general statement that the number 4,958 is explained by (*a*) enlistments into the active force; (*b*) recruits who have been absorbed from the supernumerary list into the authorized establishments of their respective reserve units, where those establishments were below strength, and (*c*) a comparatively small number of men who may have been discharged on account of their medical categories having been lowered. The result is that I cannot give the committee any definite information along the line it desires, namely as to the number of men from those camps who actually enlisted.

Mr. GREEN: Would it be accurate to deduce from these figures that not more than 4,958 have enlisted in the fighting forces?

Mr. HANSON (York-Sunbury): That would be misleading, too.

Mr. RALSTON: It is quite possible that some of them may have gone from reserve units to the active service force, after having been posted to the reserves. Yes, I think it might be correct to say that up to March 17 not more than 4,958 had enlisted. But I am going to put a caveat in on that, because I am not sure of it. It may be that some did go into the reserve units previously, and subsequently enlisted in the active service force.

Mr. HANSON (York-Sunbury): But there is no available data on it?

Mr. RALSTON: No.

Mr. HANSON (York-Sunbury): Before leaving the question of technical education, I should like to say something with regard to what was said by the hon. member for Cape Breton South (Mr. Gillis). I am very much disappointed at the number of men who have come out of the schools in the maritime provinces. In New Brunswick we have no technical college such as they have in Nova Scotia; but in Saint John we have a large vocational school, and there are some smaller schools, one of which is in Fredericton. The work undertaken in these institutions is exceedingly limited. At Fredericton I do not think the studies go beyond motor mechanics and subjects of that kind. Women attend these schools and learn to make hats and the like. But this is war business in which we are now interested. Could the minister tell us where the courses of instruction are given, and what those courses are?

Mr. McIVOR: I should like to say a word about the outstanding value of the vocational school at Fort William. They had the hearty cooperation of the school board and the teaching staff. Extra classes were opened up at 6.30 in the evening, using the same equipment and the same teachers. Boys and girls and young men and women were taken in. If a man was found to have had previous training as a mechanic he did not have to stay there very long. Courses were given in arithmetic, in filing, in the machine sewing of fabrics, in welding, and so on. There is no doubt about the outstanding value of that school. At one time there were about one hundred in the class and it has been kept going right along.

Mr. BLACK (Cumberland): Could the minister place on *Hansard* a statement showing by provinces the places in Canada where training of this kind is given, as well as the number of pupils receiving training? The minister gave some of this information at the last session, but it would be most helpful if we had it now.

Mr. McLARTY: I suppose the hon. member means a break-down as to provinces?

Mr. BLACK (Cumberland): Yes.

Mr. McLARTY: I would have to go over rather extensive figures to give it now, but I shall be glad to place it on *Hansard* at the first opportunity.

In answer to the leader of the opposition, I may say that the schools in New Brunswick are the Campbellton high school, the Fredericton high school, the Moncton high school and the Saint John vocational school. I can assure my hon. friend that we do not include in the list trainees who are learning to make hats. As a matter of fact the trainee must be

receiving training in some essential work connected with the war. For instance, we would not include the training of hard-rock miners in Nova Scotia. Would the hon. member like to have the number of pupils in each school?

Mr. HANSON (York-Sunbury): No.

Mr. McLARTY: The army schools are at Campbellton, Fredericton, Saint John and Woodstock.

Mr. HANSON (York-Sunbury): They are limited to motor mechanics?

Mr. McLARTY: Mechanics generally, and motor mechanics.

Mr. O'BRIEN: There is a good vocational school in Newcastle and another one in Chatham. The one in Newcastle is particularly active. In view of present conditions in Northumberland county and those which may have to be faced in the near future, may I ask whether more use could not be made of the school? Perhaps it could even be enlarged.

Mr. McLARTY: I shall be glad to give that consideration.

Mr. BLACK (Cumberland): Does the department contribute to the maintenance or the providing of equipment or the upkeep of the plant schools?

Mr. McLARTY: No.

Mr. BLACK (Cumberland): Is that done exclusively by the industry?

Mr. McLARTY: What we do is to try to keep in contact with them and develop the schools. We pay our administrative expenses, but we make no contribution to the industrial plants for the training which they do.

Mr. GREEN: There is a very serious feature about this whole situation which should be considered by the committee. Both the Department of Labour and the Department of National Defence are drawing from the same age groups. The Department of Labour take mostly young men for this industrial training scheme, while the Department of National Defence are calling men of twenty-one years of age for compulsory training. It is true the Minister of National Defence has said that the time of training may be postponed, but sooner or later these young men will have to go to the camps. Would it not be possible to train more older men for industry, the men who will not be called up for compulsory military training? I am afraid our troubles are only beginning. More and more men will be required for compulsory training, and as more and more men are needed for industrial training, there will be conflict. We will not have enough men for both schemes and there is bound to be a scramble sooner or later. It seems to me that a definite policy should be laid down under which the older men would be trained for industry leaving more of the younger available for the military training. I do not see how we can prevent a clash between the two departments.

Mr. McLARTY: I think that situation is being kept in mind by the interdepartmental committee. They made definite recommendations which I believe are being carried out, because the direction of this plan is under their control. They recommended that we should not try to train men who will be called out under the four months training plan, and that defence should endeavour not to call on the men we are training to join the four months training plan. Let me make this perfectly clear. According to the advice I have received there has not been any shortage in applicants for training. It might be that if this situation should develop we would have to have a more definite differentiation between industrial and military training, but I believe that the situation which has been worked out by the committee is a satisfactory one. So far as my information goes, it has not resulted in the slightest bit of conflict.

Mr. GREEN: As I understand it this committee has set up a priority list to govern the taking of men into industrial training?

Mr. McLARTY: Yes.

Mr. GREEN: The first group is made up of veterans of the great war and those who have been discharged from the armed forces during the present war. This afternoon the Minister of Labour led us to believe that comparatively few men in that category are being trained.

Mr. McLARTY: I did not intend to convey that impression; I said comparatively few when the total number was considered. We had 11,423 in training in February and the number of veterans of the last war and returned men of this war would be relatively small. I shall be glad to get the figure for the hon. member, but, for instance, it is not over ten per cent.

Mr. GREEN: There have been over 18,000 discharged during the present war.

Mr. McLARTY: I am simply stating that the relative number is not great. I do not wish to mislead the committee.

Mr. GREEN: Then the interdepartmental committee say it will be necessary to train in increasing numbers men over forty years of age. Apparently very few of these are being

trained now. Women make up the third group. All others are in the fourth group. It seems quite clear that the great bulk of the men being trained are young men, probably eighteen or nineteen years of age. Within a year or two these men may be required by the Department of National Defence, and then comes your trouble. Would that not be avoided by training more older men?

Mr. McLARTY: I think the best thing to do would be to have a break-down giving the ages of the trainees.

Mr. GREEN: I asked for that earlier in the afternoon.

Mr. McLARTY: It will take a little time to get it, because it would mean a thorough survey throughout the country. However, I shall endeavour to get it. I can assure the hon. member that we are endeavouring to live up to the priorities, but up to the present time there has been an abundance of applications for training. For that reason, I take it that it has been a matter of dealing with them in the order in which they come.

Mr. GREEN: Does the fact that you have a lot of applications provide a solution? Thousands of young men of eighteen or nineteen years may be offering themselves for training, but that does not get us over the difficulty.

Mr. McLARTY: The hon. member referred to the training of women. We have not yet come to the point where we must train that class of labour to any great extent.

Mr. GREEN: The trouble is that the Minister of Labour is drawing on the young men and the Minister of National Defence is drawing on the young men.

Mr. RALSTON: My hon. friend has said that two or three times and I really think he is making it hard for himself and for the committee. The situation is not quite as difficult as he thinks, although I realize that there are difficulties. Here is the difficulty my hon. friend puts up. He says that my colleague the Minister of Labour is training men eighteen years of age, and that some day the Department of National Defence will want them. It is true that three years from now, when they become twenty-one, the Department of National Defence may want them, but the Department of National Defence has indicated, at least by the present regulations, that if these men have become key men essential to war industry they will not take them. So there is no conflict there. I do not know what other conflict there is. My hon. friend reads the list of priorities to the committee. The army is not in conflict there in any way. The first to be trained are the veterans.

Mr. GREEN: But they are not being taken—that is the point.

Mr. RALSTON: My hon. friend means they are not going to be taken?

Mr. GREEN: I say they are not being taken. I did not say they are not going to be. Probably 20,000 men have been discharged already.

Mr. RALSTON: Does my hon. friend mean that they are not applying, or that they have been refused?

Mr. GREEN: I say that nobody is going after them very strongly.

Mr. RALSTON: The rule is that the veterans are given the preference in connection with training. Those over forty years of age and the women are next. There are three classes we do not ask for, and the fourth is the group from forty years down to eighteen. There is only one class in that group whom we are calling to take training and that is those twenty-one years of age, and of those the army says "We do not want and will agree to the postponement of those who are twenty-one years of age and who are engaged in key posts in essential war industry." My hon. friend I think is making it harder than it really is, because the army, as I have said time and again and now repeat, is not in competition with industry but in cooperation with it, and when we narrow our requirements for compulsory training down to the twenty-one year old class and say that of that class we will postpone calling, if necessary, those who are key men, and still leave all these other classes from eighteen to forty, I do not think my hon. friend has much ground for assuming that there is conflict.

Furthermore, this whole matter has been the subject of discussion by the labour coordination committee which is composed, not only of representatives of labour and representatives of the army, but of representatives of labour, representatives of the defence services, representatives of the national war services and representatives of the Department of Munitions and Supply. They all come together on that committee, and that committee is recommending this course. My hon. friend has a right to press as hard as he can to see that that is working, but on the principles which have been laid down he will find there is not very much competition between labour and the army training plan, and I want him to take what I say at one hundred per cent. We are endeavouring in

every way possible to promote the interest of the essential war industries in order that equipment may be produced; and the four months plan which I outlined some time ago had that idea very definitely in mind.

Mr. GREEN: The minister must remember that there are also the men who will be required for the active army—

Mr. RALSTON: I am remembering them.

Mr. GREEN: —and the men who will be required by national defence for air, and the men who will be required for the navy. There will be competition there, too, with the Department of Labour. Can the Minister of National Defence tell us how many men have been recruited for the active army this year? He announced in January that from 40,000 to 80,000 would be required. I asked him on Friday last how many have been recruited, but I notice that he did not answer. How many have been enlisted so far this year? I think he is going to wake up one day and find that it is hard to get recruits. We go on now as if there were plenty of recruits waiting to come in, but that may not always be the case. How many men have been recruited for the active army this year?

Mr. RALSTON: I am sorry I overlooked that my hon. friend had asked for that information. I gave him the quota which had been called. I think I can get this afternoon, before the committee stage is through, the other information he wants.

Let me also say to him in connection with the 40,000 to 80,000, that that requisition goes before the same board along with the requisition for industry, and the requisition for the potential requirements of the air force and navy. So that the problem is before them on the drawing board, as it were, and I assure my hon. friend that we will try to keep fully awake to it. I realize, as my hon. friend says, that there may come a shortage some day, but I assure him that it is not because of any short-sightedness that we have adopted the policy under which we are working. I will get my hon. friend the information he asked for regarding enlistments.

Mr. McLARTY: There was one remark made by the hon. member for Vancouver South (Mr. Green) to which I wish to refer. He said that we were not going out in this training programme to look for the returned men. He said that was true of both this war and the last. That is quite correct, but without qualification that remark would carry the inference that we were looking for other classes of trainees and neglecting the returned men. On the contrary, we have provided for preferential treatment for them when they apply, but, as I have tried to make clear to the committee, we have not had to go out and look for a single trainee at any point. We have had more trainees than our facilities would allow us to handle. I do not want the impression to go out to the country that we are looking for a particular class and not observing the preference to the returned men. If the applications have been coming in from the returned men, the priority, I assume, is being carried out. I just wanted to make it clear that it is not so that we are looking for a certain class and not looking for another class.

Mr. GREEN: Would the Minister of Labour give us the figures showing how many in each of these four classes are being trained or have been trained, and also the ages?

Mr. McLARTY: I shall have to get the ages. I could give the number of trainees in all the classes. Does my hon. friend want the number of those being trained in the war emergency training classes for the army and for the air force?

Mr. GREEN: I am not at the moment asking for information as to the air force or the army.

Mr. McLARTY: I will see what information I can get along that line.

Mr. GREEN: From the minister's figures I take it that two-fifths of these men who have been trained had actually been recruited for one or another of the forces, so that they are not for industry at all.

Mr. McLARTY: No.

Mr. GREEN: That is about the way it works out. And the others we are training for industry.

Mr. McLARTY: I shall endeavour to get the information during the dinner recess.

Mr. MacINNIS: I think this discussion has shown that there is need for much more training facilities than we have at the present time. I do not quite understand what my hon. friend for Vancouver South has in mind. Even if these young men who are being trained join the army later or are taken into the armed forces, I cannot see why we should refuse to give them training at this time if there is nothing else for them to do. I think it would be a tragedy not to give them the opportunity to fit themselves for some kind of work until the time comes when

they go into the armed forces, or are drafted into the armed forces, whichever may come first.

I do not think you can make a mechanic out of a man by giving him four or five or six weeks' or even six months' training at a training school. I am satisfied you cannot do that. But you can train a man to tend a machine, and that is what a great deal of our manufacturing work consists of in this age—machine-tending, doing some one particular job. A mechanic is an altogether different man. He is a man who knows how to do a thing from experience and the training of hand and eye. But a machine-tender just tends a machine, while the machine does the work. You can train young people to do that kind of work in a training school. But there are all over Canada, on our western farms and possibly on our eastern farms and in various other parts of the country, a great many people who at one time were skilled mechanics in some particular trade. There should be an opportunity, particularly in view of the cutting down of farm production in western Canada, for these men to be retrained in their old vocations so that they could be absorbed into industry.

That is one of the first things that should be done. The other day I read in a United States periodical statistics of age groups in the skilled trades, and it was interesting to note that more than half of the really skilled men in industry are over forty-five years of age.

There is another point to which I wish to refer. I do not know to what extent it is being looked after. When these men are trained are they compelled to register at the employment offices, and are employers compelled to seek their men at these offices? If this is not already being done, the minister might take it into consideration and advance this aspect of the work which is to be performed by the unemployment insurance commission. It need not wait until the whole system is set up; it is needed now in order to take care of the labour supply for war services. Every man should be required, as soon as his training is completed, to register at an employment office, specifying his skill and grading and so forth, and in much the same way the employer should be expected to send in his applications for men, giving the necessary particulars. I hope we shall not take the position that, because later on they are to be drafted into the army, men are not to be given the opportunity, while they are waiting, to fit themselves for something else.

Mr. McLARTY: I believe that the suggestion of the hon. member for Vancouver East is an excellent one. He will remember that when we were discussing the employment offices in connection with the Unemployment Insurance Act, it was suggested that they could perform an admirable service. We are now endeavouring to have them established at the earliest possible moment. I assure my hon. friend that I shall endeavour to have his suggestion with regard to the registration of trainees at the offices, and their employment through those offices, definitely adopted by the commission.

Mr. GRAYDON: Something was said this afternoon about applications for industrial training of men who have been discharged from the army during the present war. It was said that the schools are taking in only those who have applied. There is quite a difference, in the matter of applications, between men who have been discharged from the army, and those who come in through the ordinary school processes, because, as the minister well knows, in the high schools and collegiates the principals usually have a full knowledge of what is required of the young men who are expected to take training. I have no doubt that the active and energetic principal singles out a number of his pupils and suggests that, if they want to go into the training courses, they will receive every encouragement. That kind of invitation is not comparable to the facilities extended to men who are discharged from the army.

In a desire to offer some constructive suggestion in this respect, may I invite the Minister of Pensions and National Health or the Minister of Labour to consider whether it should not be the duty of one or the other department to draw to the attention of every man discharged from the army in this war, immediately upon his discharge, the facilities available for his training and for his rehabilitation in industry and in the ordinary life of the country. I am a little concerned as to whether there is a welfare service which will take him under its wing and show him just what is available. There is hardly a member of this committee who has not found from time to time that he did not know until some time afterwards what vacancies were open in certain lines. We have a definite responsibility and duty in this regard to the men discharged in this war. It is all very well to say that we will try to find them jobs. But the difficulty is that many of them are not trained for any particular employment. Perhaps before the war they were unemployed for a number of years, and their training had not been brought up to date, because the trained man of fifteen years ago in certain

lines may be almost an unskilled man in the present general industrial set-up. At the very least, every discharged man should be furnished with a list of the possible avenues of employment open to him, and should be encouraged to go into some training scheme, and it should be pointed out to him that he will have a preference in the matter of entry to the training schools. Already the number of discharged men is fairly considerable, I believe around 20,000, and a good deal of difficulty and much criticism of the government by the country generally will be avoided if we will tell these men, "We are going to give you the best we have in the way of training and do all we can to rehabilitate you in the industrial life of our land." By so doing we may hope to avoid some of the mistakes which have been made in the past.

Mr. MACKENZIE (Vancouver Centre): To a limited extent that is being done now, and it will be done to a complete extent as soon as the new welfare division of the Department of Pensions and National Health is organized. The civil service commission is now reviewing applications from all over Canada for the appointment of these officers, and there will be complete liaison and co-operation with the Department of Labour, and complete information given to the discharged men as to what amenities or facilities may be desirable.

Mr. GRAYDON: I understand that when the new welfare officers are appointed, these will be part of their duties?

Mr. MACKENZIE (Vancouver Centre): Yes.

Mr. GRAYDON: May I ask the minister a question which I intended to ask him a week ago, but because of the course taken by the debate I was unable to do so? Could the minister give even an estimate of the number of discharged veterans of the present war who are unemployed? There must be in the department some records of the number who are looking for work.

Mr. MACKENZIE (Vancouver Centre): I took notice of my hon. friend's question a week ago, and immediate steps were taken to ascertain what he has asked. The information is not yet available, but I hope to have it for the committee of the house which will deal in a week or so with all questions relating to the rehabilitation of ex-service men.

Mr. ROY: Are any of these industrial training schools located in the province of Quebec?

Mr. LOCKHART: While the minister is looking that up, would the Minister of Pensions and National Health include in that schedule the number of returned men who have been discharged in this present war who are taking the training referred to?

Mr. MACKENZIE (Vancouver Centre): Yes; that question was also asked last week, and we are getting that information. It is difficult in some instances to get the information asked for by the hon. member for Peel, but as far as it is available it will be presented.

Mr. McLARTY: Answering the hon. member, the schools situated in Quebec are: the Hull technical school; the dominion-provincial aircraft school, Cartierville; l'école d'arts et métiers, Lachine; l'école technique de Quebec, Quebec city; l'école d'arts et métiers, Lauzon; l'école d'arts et métiers de Maisonneuve, Montreal; l'école d'arts et métiers, Rimouski; l'école technique de Montreal, Montreal; the Shawinigan technical institute, Shawinigan Falls; l'école d'arts et métiers, Sherbrooke; l'école technique, Trois Rivières; and l'école d'arts et métiers, Verdun.

Mr. CASTLEDEN: Will the minister give the latest figures he has on unemployment in Canada, both skilled and unskilled?

Mr. McLARTY: I shall be glad to supply the figures, but I have not them with me here.

Mr. CASTLEDEN: In the particular area of Saskatchewan where I live they were building an airport last fall, and there were so many unemployed that over six hundred men registered at the employment office and notice was given that there was no use in any more registering. These people are still looking for work. Is the Department of Labour doing anything with regard to seeing that such unemployed men are moved to industrial areas where apparently there is a lack of labour?

Mr. McLARTY: It is a rather slow and difficult course to do that. We have moved a number of men from the prairies, but it must be remembered that except for particular skilled classes of labour there is, as far as I am aware, no shortage in any part of Canada.

Mr. CASTLEDEN: That is what I wanted to know.

Mr. HANSON (York-Sunbury): There is a surplus of ordinary labour?

Mr. McLARTY: Yes. There are exceptions; I understand in Halifax, for instance, there might be some shortage, but areas in which there is any suggestion of shortage except for skilled labour do not exist. Therefore the situation would not be helped by moving unskilled people from one section of the country to another on a large scale at the present time.

Mr. CASTLEDEN: May I take it then that there is unemployed unskilled labour in every area?

Mr. McLARTY: With the possible exception that I mentioned I understand that is the situation; that is the advice I receive.

Mr. GRAYDON: I hope the minister is not forgetting the great scarcity of agricultural labour practically all over the dominion.

Mr. McLARTY: No. I assumed the hon. member meant industrial labour. I am advised that there is a definite shortage of farm labour. That is a problem to which the interdepartmental committee on labour supply is giving attention. The hon. member referred to the construction of an airport and said that six hundred men had applied for work on it, so I took it he was not referring to farm labour.

Mr. O'BRIEN: Did I correctly understand that these payments are made to the provincial authorities and that they determine how the money is used?

Mr. McLARTY: The hon. member is referring to the contributions?

Mr. O'BRIEN: Yes, from this fund.

Mr. McLARTY: Perhaps it would be fair to say: yes, in the mechanics of the thing that is the way it is done, but it is always done by consultation between the province and the dominion.

Mr. O'BRIEN: As to how it is to be used?

Mr. McLARTY: Yes; we agree on that.

Mr. O'BRIEN: How much has already been paid to New Brunswick, and has any amount been appropriated to that province for the future?

Mr. McLARTY: I am afraid I cannot answer that now, but I shall be glad to obtain the information.

Mr. HANSON (York-Sunbury): And the same for Nova Scotia.

Mr. McLARTY: I shall get it for all the provinces.

Mr. GILLIS: I notice in this appropriation there is $3,885,000 for that purpose. How much of that is allocated to Nova Scotia, and what has been spent there to date?

Mr. McLARTY: I shall be glad to get that.

Mr. JACKMAN: What steps are being taken to increase the number of instructors? The reason why I ask is that some months ago a small advertisement appeared in the Toronto dailies suggesting that if there were any old employees who were still of some effective use, they make their services available for training these young men for war industries. I communicated with a constituent, an expert machinist, who had recently been pensioned by the Consumers Gas company, and he wrote to the department in Ottawa, I assume the Department of Labour, and received a reply saying he should make his application to the Ontario department of labour, which he did and received a formal acknowledgment. That was some months ago and he has not heard anything further.

I notice in this war emergency training programme the administration seems to be pretty well under provincial jurisdiction. It says on page 6:

> While the control and administration of training in the schools is a provincial responsibility, continued and greater federal financial assistance will be necessary for war training purposes.

Does it not seem that this programme might be better carried on if it were directly under the Department of Labour of the dominion, which is putting up practically the entire resources for it? If that were done, then we might be assured of a greater supply.

Mr. McLARTY: If there were any suggestion that we are not getting a sufficient supply, there might be some merit in the proposal.

Mr. JACKMAN: Supply of instructors, I mean.

Mr. McLARTY: The instructors are drawn primarily from the vocational schools themselves. I understand that where there has been a shortage they have, in some instances, drawn on the railway employees and retired skilled men brought in for that special work. I would not say there is any set plan that has to be followed. It is in the charge of the vocational schools, and they take such steps as they consider advisable to obtain the instructors that they need.

Mr. JACKMAN: But what are those steps?

Mr. McLARTY: The steps would be for the principal of the school and those in charge to arrange, through the sources of information they have, to obtain competent instructors in the particular work in which training is being given. In other words, I do not think you could say that they should go to so-and-so, to the railways or the large industries. I understand they go to both. The course taken to obtain competent instructors depends on the classes that are being taught. It would be impossible to lay down a hard and fast rule.

As to the federal government taking over the schools, I have pointed out that they are owned by the provinces or the local school boards. We are using in great measure their

equipment, and since we are defraying most of the expenses, if it were suggested that the system was weak in any way we might have to do something. The policy, however, of cooperating with the provinces and having them cooperate with us is much more effective than if the dominion were to take over the whole thing.

Mr. ADAMSON: If a municipality had been seriously considering before the outbreak of the war the construction of a technical school—I am speaking of the township of York, and particularly the highly industrialized lake shore area, where they were considering seriously the erection of a technical school—could the minister give any information to the municipalities as to whether the government could assist in the erection of this technical school, which is badly needed in this industrial area?

Mr. McLARTY: I think this question of the dominion government contributing to the cost of erecting a school was brought to my attention before. Of course this government has always left the matter of education strictly to the provinces; and while under certain circumstances a war condition might justify our contributing to the capital cost, certainly I would not be in a position to give any commitment that we would pay some part of the cost of erecting a school. We do contribute to the cost of putting in certain equipment; we do contribute to the expenses, but in no instance of which I have knowledge have we made a capital outlay for the construction of a technical school.

Mr. ADAMSON: If the municipality should be prepared to erect the school, would the government be prepared to assist in providing the necessary machines and equipment for training?

Mr. McLARTY: We would be able to assist in connection with that school in the same way that we are willing to assist every vocational school that has the proper equipment. We would not be prejudiced against that school in any way, if that is what the hon. member means. I would not want to give a blank cheque in this connection, of course, but certainly there would be no reason why we should not consider giving training in that school, as we do in every other available school in Canada.

Mr. GILLIS: I understood the minister to say that in the Halifax area there was a shortage of skilled workers in certain trades, and also that in certain sections of Canada there was a shortage of agricultural workers. Would it be possible at some time in the near future to inform the committee as to the particular trades in which there is a shortage in Halifax, and about how many workmen are required, as well as with regard to those sections of Canada which require agricultural workers, and the number required. I know hundreds of boys who have never had jobs who would like to get them, and it is quite possible that there may be available a good many men skilled in the trades in which there is a shortage.

Mr. McLARTY: Perhaps the hon. member misunderstood my statement. I said that in some parts of Canada there were some shortages of the more highly skilled mechanics, but that the only place I had heard it said there was a shortage of unskilled labour was the city of Halifax. I shall, however, be glad to take note of the hon. gentleman's question, and if I can get him the information I shall be glad to do so.

Mr. DIEFENBAKER: With regard to these estimated expenditures there is one matter that so far has not been dealt with, beyond the explanation given by the Minister of Finance when he introduced the resolution. I refer to expenditures by way of capital assistance for government plants, advances to private companies for additions to existing plants or the construction of new plants, and also the provision of working capital. This is an important matter, which was not dealt with when the resolution was in committee, and I think we should have some explanation with regard to the operation of this scheme of making advances. We find that the estimated cash requirements for 1940-41 amounted, in round figures, to $146,000,000, of which approximately $98,000,000 is the estimated expenditure to March 31. For the coming year, out of an expenditure estimated at $1,300,000,000, the sum of $180,000,000 is the estimated amount required by the Department of Munitions and Supply, a large part of which undoubtedly will be required for advances to companies.

The first question I should like to ask the minister deals particularly with companies that have been set up by the government, or, in other words, government-owned corporations. On December 3, a return was laid on the table with regard to government-owned corporations. Among the questions asked at that time was the following:

Has the government any plan regarding the disposal of such plants after the war?

The answer was:

Yes. The government has plans which vary having regard to the purposes for which each plant was created.

That being so, I would ask the minister to explain the plans of the government with

respect to the disposal, after the war, of these government-owned plants. Then I shall have some further questions to ask with regard to private companies.

Mr. ILSLEY: I shall have to refer the question to my colleague the Minister of Munitions and Supply; I am not in a position to answer it.

Mr. HANSON (York-Sunbury): Would the information not be in the minister's department?

Mr. ILSLEY: I do not think so. We are getting into a very big field now. If it is to be gone into thoroughly, it will require a list of all the plants to which capital assistance has been given.

Mr. HANSON (York-Sunbury): We have that.

Mr. ILSLEY: I suppose my colleague the Minister of Munitions and Supply would have formed some opinion as to the use to which these plants might be put after the war, but I should be doubtful if there would be anything definite about it. Quite a lot would, in some instances, depend upon developments. I think it is hoped that they can be used for certain purposes in times of peace, while in other instances it is doubtful whether they can be so used. I know that in a good many instances, private companies making the expenditures are allowed to write them off in a limited period of time; I do not know whether it is two years or three years.

Mr. DIEFENBAKER: I was referring particularly to government-owned corporations.

Mr. ILSLEY: That would not be the case with government-owned corporations. All I can do is bring this matter to the attention of the Minister of Munitions and Supply when he returns. Perhaps the department would be able to give me some information in the meantime. I should be sorry if this matter were to hold up the passage of this bill. If the question had been asked when the resolution was in committee, perhaps we could have gone into it; but this is a late stage to be asking for a very large amount of information to be brought down. On the other hand, it is a proper, legitimate inquiry, and it may be that the information could be given at some other stage. For instance, I am going to introduce a supplementary appropriation bill for the current year; and while, strictly speaking, this information should not be given during the discussion of that bill, I do not think I would be disposed to take too narrow a view of the matter.

Mr. DIEFENBAKER: I thank the minister for that assurance. I realize his difficulty in attempting to answer questions of this kind at this time. No doubt, however, he would be able to answer questions in connection with advances to private companies, first, so far as capital assistance is concerned and, second, with regard to assistance by way of additional working capital. When the resolution was introduced, the minister mentioned the difficulty of deciding in advance with any degree of certainty what would be the expenditures for the next year, and he pointed out that one of the difficulties in the way was the fact that he was unable to anticipate what moneys would have to be advanced to private corporations during the course of the ensuing year.

Mr. ILSLEY: I do not think my hon. friend is quite right about that. I think one of the difficulties was to ascertain the duplication between the estimates of the Department of National Defence and those of the Department of Munitions and Supply. It is true that there is some uncertainty as to the amount which will be advanced to private companies, but it is not as great as might be first thought. The capacity of the country is limited, and we believe we are now very near the capacity. We cannot go on indefinitely starting new enterprises, because we shall in that way spread our activities too thin. It would mean that we would start many things we would not finish. It would be better to start fewer, and obtain our objectives.

That was not the difficulty I mentioned. The difficulty I mentioned was this, that when we place in our estimates an amount of $180,000,000 for assistance to private companies and for expenditures on government companies, and when we also place in the defence estimates an amount of $666,000,000, there is a certain degree of duplication, the extent of which cannot possibly be ascertained. That was one of the factors entering into the uncertainty about which I spoke. That was the point I made.

Mr. DIEFENBAKER: The minister is recorded as follows at page 823 of *Hansard:*

> But as the house will realize, there are very great difficulties in making precise estimates of war expenditures. In particular, there are at least three factors which make accurate estimates impossible.
> First,—

I need not read that part, because it does not affect the subject we are now discussing. Then he continued:

> The second factor has to do with the capital assistance which has been given to manufacturing plants through the Department of Munitions and Supply. Large sums of money

have been advanced, and additional sums will be advanced, to contractors to pay for adding to their plants or to build new ones. Additional sums will be advanced to provide working capital. In many cases Canada and the United Kingdom are making advances on a joint basis, but in some of these cases the division between the two countries has not been settled.

Mr. ILSLEY: I said a good deal more, though. The hon. member stopped in the middle of it.

Mr. DIEFENBAKER: In view of the fact that this is a matter which comes under the jurisdiction of the Minister of Finance, I would ask him certain questions regarding advances to private corporations. I find that out of the many millions of dollars advanced to private corporations, the only advance to Saskatchewan is to the M. and C. Aviation company of Prince Albert, which received some $81,000 for overhauling a base for the air force, and $450 for office furniture. Have there been any applications from Saskatchewan for advances to private corporations to permit them to build additions to plants so as to make provision for the filling of war orders?

Who determines the amount to be advanced to the different companies by way of capital assistance?

How are the allotments made?

Why is it that in certain instances among companies in the same industry exceptionally large advances are made to some, while others receive only comparatively small advances, each of the companies being capitalized on about the same basis?

Would the minister explain whether or not this system of advancing moneys to private corporations is in effect in the United Kingdom?

Upon whose recommendation was this system brought into effect?

In view of the fact that many millions of dollars have been advanced to these private corporations, as an incentive or by way of assistance, has consideration been given by the government to the powers it possesses under the National Resources Mobilization Act to take over those plants, or to have them operated by private corporations throughout the period of the war, under the direction and supervision of the government?

By these questions I direct the attention of the minister to the type of information to which I believe the committee is entitled.

On whose recommendations are these advances made?

Who are the trustees who look after the advancing of moneys, and the collection thereof?

[Mr. Diefenbaker.]

In other words, I want a general statement of the whole situation.

Mr. ILSLEY: I can give a fairly general statement. First, I would point out that this is a matter administered by the Department of Munitions and Supply, not by the Department of Finance.

Mr. HANSON (York-Sunbury): But the Department of Finance has to find the money.

Mr. ILSLEY: Yes. The Department of Munitions and Supply applies to the treasury board for the approval of draft estimates which, in effect, is approval of certain of the advances, as those advances are required, and that department supplies the Department of Finance with information which makes a case for the approval of the draft estimates, whereupon the estimates are approved, and taken out of the war appropriation. This is done by the treasury board.

After that, when the agreement is made with the particular company to which the advance is made, authorization for that agreement is obtained by order in council. Thousands of these orders in council go through. Of course there are not thousands which relate to capital advances, but there are thousands relating to agreements made by the Department of Munitions and Supply with companies and firms throughout Canada. They go to council, as a matter of fact, there is a committee of council, known as the government business committee, which examines these recommendations to council. If there is anything extraordinary or unusual about them, they are brought to the attention of council as a whole. If we did not adopt some such procedure, council would be so greatly overtaxed that it would never finish the work it has to do.

So far as the Department of Finance and council are concerned, there are those two stages. First, there is approval of the draft estimate. This does not approve the agreement with the company, but merely makes the money available, and places the matter in the same position as if it were an amount voted by parliament. After this, the Department of Munitions and Supply must make a recommendation to council for approval of the particular agreement it is making with the private company. There are those two stages. The real work, however, is done in the Department of Munitions and Supply. The theory underlying the practice is that they have to get ahead; they have to get action. They have to have things manufactured in Canada, and must get things done.

Mr. HANSON (York-Sunbury): They initiate the particular objective?

Mr. ILSLEY: Yes, for the purpose of getting munitions and supplies—it may be a supply of chemicals, or a wide variety of other goods. They do it for the purpose of getting these facilities for the British government or for the Canadian government. If facilities for making the particular type of munitions do not exist and they have to be supplied, the question then arises as to what is the best, the most effective way of getting those facilities established.

There is no use in going to a private corporation and telling them to take a chance, to risk their capital, to put up one or two million dollars because they owe it to their country to risk it. They probably will reply that they cannot afford to put up two million dollars, run their plant for a year and a half or two years, and then find it is not worth anything or is not any good. We have to have some better arrangement than that. Therefore all kinds of arrangements have been made. Sometimes they are willing to put up their own money provided they are allowed to write it off within a certain period, to charge it off to operating revenue. In that event there is no advance from the government; the only thing they get from the government is a market. Either the British or the Canadian government buy their products, and it is with that money that they pay for the plant in the year or two years or three years, as the case may be. In some instances this is not good enough for them and it is necessary for the government to lend them money. Sometimes the government will build the plant and retain ownership in it, or sometimes it will put up an extension to the plant. As a matter of fact, there is no consistent principle followed. It is not a government ownership system and it is not a private ownership system; it is whatever system will get results.

The Department of Munitions and Supply have a number of exceptionally able men who have had a tremendous amount of business experience. They have a large legal staff and a number of trained accountants. I have been impressed with the great ingenuity and ability which they have displayed in making these arrangements, and in getting the wheels of industry turning. Canada is not primarily an industrial country. but the strides which have been made are tremendous.

I was asked if there had been applications from Saskatchewan. I do not know whether there have been applications; I shall have to find that out. It is quite possible that there have been applications and that these have been turned down.

Mr. DIEFENBAKER: Who determines that?

Mr. ILSLEY: The Minister of Munitions and Supply. I do not know whether he does it personally or through his deputy or officials, but he must take the responsibility.

Mr. HANSON (York-Sunbury): He has an executive committee.

Mr. ILSLEY: Yes. They have a good organization and they go over all these applications. They do not please everyone by any means, but they deal with them and are usually able to give good reasons for their decisions. I may say that the Department of Finance keep an eye on things during the early stages. These large expenditures of money are being made under arrangements which are not in line with ordinary civil service procedure. The comptroller of the treasury and the treasury board have been very much alert in obtaining reasons why these things were being done. I must say that in practically every instance the reasons for the course taken appeared to be overwhelmingly convincing.

The next question was: How does it happen that some advances are large and some are small? That would depend upon the requirements of the individual case.

The next question was: Is this in effect in the United Kingdom? I have no information on that.

Mr. HANSON (York-Sunbury): I think it is.

Mr. ILSLEY: I do not know what they do there. I think I am safe in saying that it is not correct to state that it is done here simply because it is done there. This is something which grew up by itself in this country. These men were brought here from all over Canada; they were men with experience, and they went to work with great enthusiasm to try to get production in any way that could be reasonably defended. That is what they have done.

The next question was: Upon whose recommendation was this system brought into effect? I do not think it is exactly a system; it is a set of systems, and they were brought into effect upon the recommendation of the Minister of Munitions and Supply and approved by the government.

The next question was: Was consideration given by the government to the powers which it has to take over these plants or to operate them? Yes; consideration was given to that, but it is a pretty drastic step to take over a plant and run it directly. Many of these plants are being run on a management-fee basis.

Mr. HANSON (York-Sunbury): The government would not do that unless there was refusal to cooperate.

Mr. ILSLEY: No, they would not do that. They would let the existing organization function in so far as they could because, in most instances, they would get better results.

Mr. HANSON (York-Sunbury): As I recollect it—and I speak subject to correction—during the last war the government did not advance into the new fields which have been taken over by the present government. In order to encourage industrialists to produce munitions, which was the big item—we have gone into many other things since—if the government was satisfied as to their capabilities, plant and so on, a trial order would be given at a high price. If they were successful with that order, then the order was renewed at a progressively lower rate, until it was got down to a decent basis. I have often wondered whether there might not be opportunity for abuse in connection with this writing off for depreciation. I understand that most of these depreciation accounts are to be taken up in two years.

I should like to refer to another governmental activity in connection with the providing of additional storage facilities for wheat. In that connection the government has made what I consider is a most generous gesture to the elevator companies by allowing them to write off the cost of structures in two years. I was reading the order in council to-day. These companies are being allowed to write off in two years the cost of new structures which may be good for from five to ten years.

Mr. ILSLEY: At the end of the two years they must lower their storage charges.

Mr. HANSON (York-Sunbury): There are some limitations. At the moment I am not critical of that. I think some inducements had to be offered in order to have them make the necessary capital expenditures. I discussed this matter informally with the Minister of Mines and Resources, and I told him that I thought the principle was one which the government would have to recognize, but I certainly did not visualize a write-off in two years. That, however, is only by the way. What care is the government taking to protect the income tax branch with respect to these write-offs for depreciation by industrial plants? For instance, do they take into account what salvage value there might be?

Mr. ILSLEY: Yes.

Mr. HANSON (York-Sunbury): Could the minister tell us anything about that particular feature?

[Mr. Ilsley.]

Mr. ILSLEY: The McTague board is the one that sanctions the write-off arrangements. The first thing this board does is to estimate the salvage value at the end of the period for which the write-off is allowed. For instance, if the period is three years and it is estimated that the salvage value will be 25 per cent, then at the end of the three years they permit a write-off of only 75 per cent, which would be 25 per cent per annum for the three years. Then, after that, I assume there would be the regular write-off at income tax rates.

The public is, however, protected in connection with these arrangements in two ways. In the first place, if munitions are being supplied to the government—and the government will be the purchaser—as soon as the supplier has had his plant completely depreciated, his costs drop. That write-off disappears as an element of cost, and the price that he can get from the government comes down. That is protection No. 1. Protection No. 2 is that if there should be an intervening period where that was not the situation, the excess profits tax comes in and takes 79½ per cent of his excess profits for the dominion, and he also has to pay from 5 to 10 per cent of those profits to the province, the rate depending upon where he is. So industry is pretty well under control, even with these write-offs.

Mr. RALSTON: May I now give to the hon. member for Vancouver South (Mr. Green) the figures for which he was asking. I do not see any objection to giving them, but I would prefer to give the total figures, and I will let my hon. friend see the division by months. The total up to date for 1941 is between 12,000 and 13,000; that is, recruits for the active army. That does not include the air force or the navy.

Mr. GREEN: Has the minister the figures for the reserve army?

Mr. RALSTON: Does the hon. member mean the enlistments?

Mr. GREEN: Yes, for this year.

Mr. RALSTON: I will get that information.

Mr. McNIVEN: May I ask the Minister of Labour if an item in the Ottawa *Morning Journal* of Saturday last has been called to his attention? It is headed "Enough Ontario Labour" and reads:

> Labour Minister Norman Hipel said to-day that no importation of labour from outside Ontario is needed for the province's war industry except in such highly-skilled trades as tool and die-making.

That can be interpreted as a notice from the government of Ontario to the people of

the rest of Canada that the people of Ontario want a monopoly of employment in Canada's war industry, for war industry is largely situated in that province.

Last June I made some inquiries and learned that employment in Ontario was arranged for the proprietors of those war industries through the Ontario government employment offices, and I was likewise informed that in order to get employment through the Ontario government employment offices one had to be a resident of that province for two years.

I protested to the Minister of Labour at that time, and I believe that this regulation was relaxed, but we have here again a warning from Ontario's minister of labour to the rest of the people of Canada to stay out of Ontario because "you are not wanted, you are not required, you are not needed, for we demand for Ontario residents a monopoly of employment in Ontario's war industry".

How does that affect us in other parts of Canada? In my own city of Regina, with a population of 55,000 people, we have, on relief, 1,044 men who are fit for war work. They are not unemployable. They are healthy vigorous men, heads of families, who desire and require work in order to maintain themselves and their families. As an alternative to employment they must be provided with relief. The same condition prevails in Moose Jaw and in practically every other urban centre in Saskatchewan. Frankly, we do not like notices such as the one I have just read from the minister of labour of Ontario that that province intends to monopolize labour employment in Canada's war industry.

Further, the greater part of the moneys that have been advanced to subsidize war industry has been invested in Ontario, and the greater part of the army training, of the air training programme, is centred in Ontario. Likewise, the great military camps are centred in Ontario. An analysis of pay and allowances shows that the great bulk of that sum also goes to Ontario.

What is the situation in our province? War conditions or the particular facts concerning war strategy make it impossible or inadvisable for us to sell our wheat; freight rates, or the lack of power or the lack of this or that also make it impossible for war industries to be established in Saskatchewan, so we are told. The necessities of dominion government finance also make it necessary to refuse any further advances for relief.

I ask you, Mr. Chairman, to visualize the situation of Saskatchewan where there are one million people anxious and willing and equipped to do their part in this war effort and to pull their full weight. They are precluded from so doing by the facts just enumerated and emphasized now by an announcement such as I have just read. If that situation continues, there is going to be a definite protest, couched in more definite language, from all the rest of Canada and a demand that this centralization of war industry shall cease, that war industry be decentralized and spread out so that all the people of Canada will be given a chance to do their part.

Mr. DIEFENBAKER: Again referring to the matter of advances, may I say first that I entirely agree with what the hon. member for Regina City (Mr. McNiven) has just said, and that is the reason why I have asked the questions I have been asking. I wished to ascertain why, when approximately $300,000,000 is advanced over a period of time to assist corporations in other provinces in the building of plants or in making extensions to their plants, only $75,000 or so has been advanced in Saskatchewan, to this one company, in the city of Prince Albert, although we have in Saskatchewan the coal and the power available to handle a greater share of war industry.

I wish particularly to ask the Minister of Finance what considerations govern in the granting to corporations of advances for working capital. That is quite a different thing from some of the instances to which he refers, namely, advances of money in order to help in the construction of plants or advances to protect industrialists from the day when there is a change from a war-time economy to a peace-time economy. On whose recommendation are these advances of working capital made?

Mr. ILSLEY: The same.

Mr. DIEFENBAKER: The same. So that the recommendation in every instance is made by the Minister of Munitions and Supply?

Mr. ILSLEY: That is correct.

Mr. DIEFENBAKER: Who are the trustees who look after these advances that are made particularly for working capital?

Mr. ILSLEY: I do not know of any trustees.

Mr. POULIOT: I agree with what my good friend and esteemed colleague from Regina City has just said about the industries in the large centres. We have, of course, to a very large extent a centralization of war industries; and as a result of that, in many instances the employees cannot find suitable homes. The large cities are filled with workers of every description, and small centres cannot have their share. When we make representations, we are never listened to.

I have taken the trouble to study the set-up of the Department of Munitions and Supply, and it is far from being satisfactory. I regret that the minister is not in his seat at present, so that I could question him. His duty is to be here to-day to listen to hon. members who have observations to make.

Mr. MACKENZIE (Vancouver Centre): He is on duty.

Mr. POULIOT: His duty is to be here; as when something arises affecting the Minister of Pensions and National Health, it is the duty of the minister of health to be here. All right, but he cannot answer for the other minister. Moreover, he is not the leader of the house. I want him to keep quiet while I am speaking.

The ACTING CHAIRMAN: Order.

Mr. POULIOT: I do not want any disturbance; and further, I do not need any brotherly advice from my hon. friend the minister. The duty of the Minister of Munitions and Supply is to be here, especially when a bill like this is before the committee. It is a most important bill so far as his department is concerned, and we are spending millions upon millions of dollars; yet the minister is not here. Where is he? I do not know.

Mr. ILSLEY: I can tell the hon. member that the minister is absent from Ottawa on work of the very greatest importance.

Mr. POULIOT: Yes; but I am very sorry he is not here now. This is important for him to hear. I am very sorry he is not here to listen to it, because I am sure he has no time to read *Hansard*, and these remarks will not come to him.

I have to complain very bitterly about the set-up of the Department of Munitions and Supply. Except for a few branches, it is impossible to get any satisfactory answers. Once I had to write to one of the controllers, who had never replied to my letters, asking him when he would answer me that he did not reply to any letter; then I got an answer.

There are a large number of people in this country who are willing to work, who are willing to do their bit for Canada, who tried to enlist but were not accepted by the medical authorities, or were discharged, and cannot secure work anywhere. Their experiences were very unfortunate when they went to the employment office in Quebec city. It happened that on one occasion there were two people who had letters "To whom it may concern", signed by a minister. They were not direct recommendations, but they were indirect recommendations to the effect that these men were worthy of employment. When they went to the office they were told that no recommendation would be accepted. Afterwards they had a recommendation of the same kind from another minister. It was addressed to the man who was supposed to be in charge of the office. When they went there they were informed that he was behind a screen. He had a sore toe; he was behind the screen, and nobody could see him.

Mr. POWER: I hope the hon. gentleman does not say that I gave the letters.

Mr. POULIOT: No, I do not say that. I say, moreover, that the letters were "To whom it may concern".

Mr. POWER: I have never given any of those letters.

Mr. POULIOT: I know, and I appreciate the fact, that my hon. friend is very busy. But these letters were given, and I do not blame ministers for having given them. Those in charge of the office are very hard to see, and the business is arranged in a very strange way in Quebec city. The members do not play politics; they give a chance to everyone; they try to satisfy everyone in Quebec city, whether he is a Tory, a Grit, a "Socred" or to whatever political group he belongs. That is all right; if I had enough to serve everybody I would give a chance to everybody, Conservatives as well as Liberals. But the poor devils who come from outside cannot receive anything; because they come from outside, because they do not live in that Mecca, they are barred from employment in Quebec city. It seems that every man who is willing to work should have a share of the employment. Why are those of Quebec city privileged at the expense of poor country people who are willing to work, who try to enlist and are not accepted for medical reasons, sometimes because they have not the required weight? Whatever may be the reason, when a man who is willing to enlist has been found medically unfit or has received his discharge, and when he goes to the employment office, it is not a pleasure for him to be turned down.

At six o'clock the committee took recess.

After Recess

The committee resumed at eight o'clock.

Mr. POULIOT: Mr. Chairman, I do not intend to make any speech, but my idea will be to mention just a few facts especially relating to the bill which is now before the committee. It is entitled "An act for granting to his majesty aid for national defence and security." The word "security" must have

a meaning, and the meaning should be that there should be protection for every part of the country. I wonder what protection the part of the country in which I live and which I represent in this house may have at the present time against any possible attack by land or air or water. In other words, I should like to know what is the military protection for the city of Rivière du Loup and the county of Témiscouata. I have made representation to the Department of National Defence for a military training centre, a military camp in the vicinity of Rivière du Loup, and the experts of the department have not yet answered. I had occasion some years ago, when the estimates of the Department of National Defence were increased for the first time, to say what I thought of those experts, and I shall judge them after they have given an answer and I see what it is.

In connection with all that expenditure there is something that should not be overlooked. I shall quote a few words spoken by a great lady who has a very clear mind and a very generous heart. My quotation is from the Montreal *Gazette* of October 8 last year. The heading is:

Home Services must be continued declares H.R.H. Princess Alice.
Holds they are no less important than war projects though they lack glamour—Urges aid to Magdalen islands—Speaks to Women's Canadian club.

The report continues:

No less important than direct war work, though it lacked glamour and romance, was the task of keeping important home services going, said Her Royal Highness Princess Alice when yesterday she addressed the luncheon meeting of the Women's Canadian club held in the Windsor hotel. She stated that it was "more than futile" to spend all the money available on the actual war effort to the neglect of essential home services, for when peace came the youth of the country then would be wholly unfitted to share in the great task which lay before it.

In saying that, Her Royal Highness expressed what many people in every part of this country are thinking.

An objection that is made by some people is that we have not enough trained men. Of course they consider only those who live in big cities, they pay no attention to the skilled workmen who live in smaller communities or rural districts. Anyone who lives in the country knows that there are trained men of great ability in such places, but they have no opportunity to work on war projects because they are not residents of a city where there is some large war expenditure.

I shall now make a few suggestions to the government regarding what could be done to give to men of good-will an opportunity to do their share even if, for physical or other reasons, they are unable to enlist. This afternoon I received a pamphlet about advertising good roads, a short cut to Alaska. Of course Alaska belongs to the United States and there is a route projected from there to Alaska. But there are other routes of no less importance; from the United States to the St. Lawrence there are three. There is the King Edward VII highway between Montreal and Rouse's Point; there is the Levis-Jackson route, and, finally, there is a route from Madawaska, Maine, to Rivière du Loup through Edmundston. This is an old military road, and it should be maintained in good order now that we are supposed to receive military supplies from the United States by truck. It may surprise the committee to know that the province of Ontario has received more than $14,000,000 for the trans-Canada highway, and has a very big project for this year, while the province of Quebec until last year received only $400,000 for the same project. We did not have our share, and since we hear now only about war projects, I do not see why the government does not take this opportunity to redress the wrong that has been done to the province of Quebec in the past, by spending a certain amount of money on repairing and putting in good order the military route between Edmundston and Rivière du Loup and keeping it open in winter time.

Mr. HANSON (York-Sunbury): Hear, hear.

Mr. POULIOT: I am glad to hear my hon. friend say that because he knows the place very well; he travels there often and he knows it is an old military road. There is no reason why it should not be made up to date immediately. It would be at the same time an evidence of good-will to our neighbours who are our allies and associates in this war.

Then, with regard to the manufacture of wooden boxes for shells, immediately after the start of the war there was no question of manufacturing wooden boxes for shells; the shells were wrapped in corrugated paper, just like bottles of Scotch. I wonder whether that was done by Mr. Dunning or on his advice, because he was interested in the Consolidated Paper company and other pulp companies, or Mr. Belnap or Mr. Crabtree or another. It would help the smaller industries in various parts of the country if those boxes were made in the same way as in the last war. I understand that now the Department of Munitions and Supply is starting to do it again.

Another thing that some of my friends know and that my hon. friend the leader of the opposition knows also is that ships have

already been built in the estuary of the Rivière du Loup by the Fraser company. I remember that a steamship was built there. It is a fine place to build ships, and I do not see why our people should not be given the same opportunity that is given other people to build ships in other parts of the country. There are before the government at the present time requests that this work be carried on there, as well as requests for dry docks at that point, and I believe these projects would further our war effort and at the same time give many more people an opportunity to do their share.

I might leave the matter at that. I am very sorry the Minister of National Defence is not in his place, but perhaps at another time I may ask further questions. In any event I have placed these facts on record. I would say further that we must have regard to the unemployable unemployed in our country, as well as to those who are unemployed at the present time although able and willing to work. They must be given a chance. Canada does not consist only of the capital cities of the provinces and the great centres of population; Canada is more than that. Canada is every part of this country from ocean to ocean. War industry must be decentralized to as great an extent as possible. These industries should be located not only in the constituencies represented in this house by ministers but also in the constituencies represented by private members. I say that because in all constituencies the people are subscribing to drives of all kinds, and the men are enlisting. In Rivière du Loup, for instance, with a population of 9,000, some 550 men have enlisted voluntarily in the army, the air force and the navy, which is an average of over six per cent. We must not overlook the fact that Canada is a large country; that it is represented here by 245 members, and that each constituency is entitled to have a share in the work necessary to win the war.

The men now unemployed must not be allowed to starve after April 1, although it has been decided that this government will not contribute in any way to relief after that date. I would direct the attention of members of the government to certain facts which I placed on *Hansard* last year, and I urge as strongly as possible that we follow as closely as we can what is being done for the unemployed in the United States. Many boys have been found unfit for army service because they have not been properly fed. That was because the unemployed did not have enough to eat and did not receive the medical attention to which they were entitled, and which the unemployed were given in the United States. This is a humanitarian business, and the country receives some benefit in return. I was appalled at the proportion of young boys who were found medically unfit for military service. Two of the war ministers stated that about one-third of those who applied for enlistment were not accepted for physical reasons. In a country like ours, where the climate is so healthful, there is no excuse for that sort of thing. Often I have heard hon. gentlemen from the west say that in this country where the elevators are full of grain there is no reason for anyone to die of hunger, and I agree with that. In my humble view the government should act as a pendulum and try to correct all wrongs of this kind. This is not entirely a question of charity, because the country will receive much in return. For one thing, if the unemployed are treated as they should be, the proportion of men fit for military service will be greatly increased.

There is another aspect of the matter. If no consideration is given our young people in all parts of the country, there will be unrest which will grow deeper and deeper until eventually it may cause great social problems. That is my fear. Our own citizens should be given the first opportunity to earn money in this country. At the present time Canada is a dumping ground for all the countries of the world, and sometimes the fact that a man is a Canadian is an obstacle to his appointment to the civil service, or to consideration which is given other people. I do not mean that we should be other than generous to those who suffer now, but when it comes to filling a position and there is available a Canadian citizen who is competent to do the work, I do not see why he should not get the job.

According to some of the sessional papers, in 1931 there were 3,500 people employed in the Post Office Department who were not born in Canada. In 1937 that number had increased to over 7,000, and now I wonder whether if it is not 10,000. I do not place the blame for this on anyone in particular, but I find it strange that 10,000 people not born in Canada should find jobs in one department of this government while many of our own people are still unemployed. The conclusion is, I think, obvious. It is that we must think first as Canadians. When we give help to Great Britain or any other friendly country in the world we must do all we can; we must do our utmost for the very worthy cause for which we are fighting, but on the other hand

we must never forget that we are Canadians and that we must give our own people the first chance.

Mrs. NIELSEN: Mr. Chairman, there was lengthy discussion when the resolution preceding this bill was in the committee stage, yet this evening I feel that before this bill passes it is necessary that I should say something about one section in particular. Section 2 of the bill mentions the security, order and welfare of Canada. I have sat through these last few days listening to a debate, much of which has had to deal with technical matters. I feel there are some points concerning the welfare of Canada itself which perhaps have not received from the committee the amount of consideration that they should have. It was most encouraging this evening to hear the hon. member for Témiscouata quote the words of the Princess Alice, who said that although these matters of concern to the people of Canada are not perhaps as glamorous as some others, yet they are necessary. It is of those things I wish to speak.

The very first time I spoke in the house I said I would try always to speak in the interests of the lives of the Canadian people. To be consistent, I must continue in that direction. In January, 1941, President Roosevelt said that this was no time to stop thinking about the social and economic problems which are the root cause of the social revolution which is to-day a factor of supreme importance in the world. We can never forget, even in a time of crisis such as this, the needs of our own people.

I was greatly alarmed the other day when I listened to the remarks of the Minister of National Defence for Air (Mr. Power) when he told the house about the number of young men unfit for service. On Monday, March 17 the minister said, as reported at page 1605:

> There will be for training this year 93,000 young men of the age of 21 years. Without hesitation one can knock off 33 per cent of those as being unfit even for military training camps. That is, they would be placed in classes C-1 or C, and unfit to walk five miles.

If so large a proportion of the men called for military service must be classified as C or C-1, then what must be the proportion of our civilian population who are to-day unfit because of ill health to help carry the burden of the war effort. We are fighting a war which not only falls upon the shoulders of the young men in uniform, but is placed upon the shoulders of the civilian population. For this reason the question of the health of our people in these years is one of primary importance.

During the last war there were people who enjoyed what might be called comparative prosperity; yet after that war, when we went down into the slough of depression they suffered unduly. This war is being fought after a period of depression, during which time the health of the people of Canada suffered. I feel that, as time goes on, the health of our people will suffer even more—not only in the immediate future, but after this war is over. We must not forget these things.

After the last war we had the money to pay interest on the debt which accumulated during the war. But during the years of depression we did not have sufficient money to start a national health scheme. I am wondering whether perhaps right here and now is not the proper time and place to begin thinking about the problem of national health. We ought not to leave it until after this war is over.

Recently I came across a pamphlet entitled "The Fight For Life," written by Grant Lathe, M.D., who places on record some startling figures. Among other things he said that in Canada to-day we are needlessly losing many of our children. He said that a needless infant death occurs every hour. There would be 6,500 more Canadian babies alive to-day if the rest of the country had enjoyed as low a rate of infant mortality as does British Columbia. He says that 59·9 persons out of every 100,000 of the population die each year from tuberculosis. That makes an average of 7,500 persons a year. He states that in Canada there is a shortage of 3,500 beds for patients suffering from tuberculosis. He states, too, that syphilis in Canada is causing more than 3,000 deaths each year, and that in 1937 the total number of new cases stood at more than 8,000. Canada has almost as many new cases of syphilis as has Great Britain, despite the fact that Great Britain has a population four times as great as ours. He points out that mental hospital accommodation in Canada falls short of requirements in the amount of 8,657 beds. Dementia praecox takes a terrible toll of our young people. Every fourth hospital bed in Canada is occupied by a person suffering from this disease. He goes on to point out that more young people enter our mental asylums than enter our universities. The inadequacy of existing public health service in Canada is shown by the fact that the average expenditure by municipal departments of health for public health services was only fifty-one cents per person per annum. Yet the minimum necessary is placed at one dollar per person per annum. Only one city in Canada goes beyond that amount. That is the city of Toronto, which shows a rate of $1.21 per person. On the

other hand, Halifax spends only about twenty-two cents. Roughly, two-thirds of our Canadian citizens, or about 66 per cent, are unable to afford the medical care which should be theirs, as human beings.

When we consider these things we feel there is no time like the present for the government really taking into consideration the needs of the people and devoting some of this huge appropriation to the beginning of a health scheme in Canada which would give our people an opportunity to maintain that vigour which is so necessary, if they are to give their very best in the war effort, as they are being asked to do.

There is one other factor which I feel is of the utmost importance. We are fighting a war to preserve and to extend democracy. There is no place where the principles of democracy can be better taught than among our children in the schools of the nation. That must be done, if we are to preserve democracy, because democracy is founded upon the premise that we shall have an intelligent and educated people, and by discussion we shall decide what shall be done. That cannot be effected if we have a population part of which is to be denied the right of education.

Recently the Canadian Teachers' Federation published a bulletin which I believe would be of interest to hon. members. I feel that I could not do better than turn to that group for ideas concerning what should be done in connection with education. As a body they have information on the subject. The federation say they are concerned with the fact that Canada to-day is setting a course which in the future may lead through uncharted seas, and that we are not giving the solicitude to education which as a nation we should give. Education more than any other agency can, by its power, save the ship of democracy, or, by its impotence, scuttle the ship.

The brief which should have been submitted to the dominion-provincial relations conference contains a number of statements about the condition of education in Canada. I believe there was in the Sirois report a statement to the effect that in some parts of Canada education has been terribly neglected and that children in the various provinces do not have equal opportunities. I find this in the brief:

> The present system of financial support for education in Canada is such that only two provinces (Ontario and British Columbia) can take rank in the upper half of the American states in per-pupil expenditure, while four provinces (Nova Scotia, Saskatchewan, Prince Edward Island and New Brunswick) must rank in the lowest quartile of the American states.

It goes on to say that about 49 per cent of all Canadian teachers receive less than $770 per annum, which is below the average initial salary of women teachers in most British countries. In 1938, over 32 per cent of Canadian teachers were paid less than $600 per annum. The teachers' federation say that in England in 1914, after the start of the war, the British parliament voted an increase of about six millions for education. They go on to say that in Canada they feel that the dominion government should—I believe that a body of this kind has every right to state these things—make available a substantial sum, and they suggest $10,000,000 annually, as a grant in aid for education to those provinces which are found by a competent survey to be deficient in tax-paying ability.

I know that to many people these things do not rank with the same importance as the industrial production for our war effort. Yet I cannot help but stress the fact that in a war to preserve democracy these things are of fundamental importance and we cannot afford to neglect them at any time. During this debate we have had many examples of politics, but I feel that to-day it is not politics that matter so much as statesmanship. We should not be thinking of the present or of the next few months; we should be thinking of statesmanship of the future; we should be thinking of the generations which are to come and which will benefit from the things for which we are fighting to-day.

After all, the children of this country cannot speak for themselves. Many children throughout the dominion have no way of knowing that they have unequal chances; they have no way of knowing that they are being deprived of opportunities which would benefit them in the years to come to make a contribution to Canada.

When we come to analyse the income of the average Canadian we realize that it is insufficient for him to give his children a decent standard of health and a decent standard of education. The Canadian federation of agriculture has stated that from 1930 to 1937, roughly eight years, the average net income per farm was $400.50 and the average income for industry was roughly $1,031. There is a great difference between the two incomes.

I think we must all realize that neither of these incomes is really sufficient to maintain the standard of health and education which is necessary for our people. Recently the dominion bureau of statistics made a study of the budgets of working-class families. This really was a striking exposure of the underprivileged position of most of our working families. They broke down the figures to show the amount spent by the average family upon food. A family with a yearly income of around $775 would spend roughly seventeen

cents per person a day upon food. A family earning $1,000 would spend roughly twenty-one cents; a family earning $1,200, twenty-three cents; a family earning $1,400, twenty-five cents; a family earning $1,600, twenty-seven cents, and a family earning $1,850, twenty-eight cents.

Early in 1940 the Canadian Medical Association, with the best dietetic advice it was possible to obtain, drew up a series of menus for families of different sizes. These menus listed only necessary food substances. For the average family of from four to five they placed the cost per person a day for food requirements at twenty-six cents. A family earning $775 per annum can spend only seventeen cents per person a day upon food, and we must get up into the income bracket of $1,400 before we find a family able to spend twenty-five cents per person a day for food. When we find that our farmers are earning roughly $400 per annum and our industrial workers $1,031, we begin to realize that no people earning these sums are able to provide the necessary food to give their families a decent standard of health.

We cannot get away from these facts and I do not think they can be disputed. If they can, I should be only too glad to know it. This investigation shows that one year ago about 85 per cent of our population were forced to live below the minimum standard of nutrition. I fear that now a far greater number of our people will have to live that way. If that is so, how can we expect the people of this nation to make the maximum effort which they would like to make when they have not sufficient in their daily rations to provide the health and strength necessary for a maximum effort. These things simply cannot be done. When these huge appropriations are being made, I feel that the government should inaugurate a health programme in this country, and they should set aside an appropriation for education as aid to such provinces as are needing it. Certain things by way of legislation are needed to get the income of our people up to that level where health can be maintained.

Before very long we may have an opportunity to discuss the need for legislation to provide a floor below which agricultural prices cannot drop, so that our agricultural population may be brought up to a proper standard. Then in the industrial world there are certain orders in council passed by this government which have limited and which will limit the right of our working people to work and to obtain a better wage which the increased earnings of industry warrants. This afternoon the Minister of Labour (Mr McLarty) said that later on we would have an opportunity of discussing certain orders in council which have had the effect of restricting wages. There is no doubt that the matters which I have mentioned are part of our war effort. I feel that with this appropriation bill the government is being one-sided in its war effort. It has not given sufficient thought to nor has it brought forward sufficient legislation for these things which I have mentioned.

There is no doubt that to-day we as a nation need greater vision in looking toward the future. We cannot expect to have the benefits of democracy if we are not willing to put into the lives of our people those things which are so necessary to encourage democracy and to make it flourish and function. I feel that in the advisers of our government to-day there is too strong a representation of business and industry. In the governmental committee assisting in the war effort where are the educationalists? Where are the members of the medical profession? Where are those people who have a broader and wider vision? This committee which is aiding the government in its war effort is made up almost exclusively of business interests. As long as that is so, the war effort of the government will continue to be directed more or less in that one direction and will not be directed into those various channels so necessary in a fight for democracy.

This makes it quite easy for those people interested in industry to talk loudly of their patriotism. But patriotism consists of more than mere words. To-day patriotism is like charity, it should begin at home, in and around the lives and homes of our own people. Those of us who are prepared to take this course have as great a claim to patriotism as any of those interested in the business side of the war effort, who are continually wanting to concentrate and focus the attention of the nation upon those matters, to the detriment of others.

Before a bill of this kind is passed, the ordinary people of this country should have a better knowledge of what is going to be the foreign policy of this government with regard to the future. There is no doubt whatever in the minds of most of us that we are in this war because Britain is in this war. We have not through the years had a very definite foreign policy, and a great many people these days are wondering greatly what will be our future foreign policy. Are we in our future foreign policy to be guided and directed by those same business interests which to-day are guiding and directing this war effort; if so, what will be their interest, and how will it guide the destiny of this nation?

Some hon. members may have read a book by John McCormac called "Canada—America's Problem", in which he says:

> Canada's foreign policy has . . . consisted largely of a refusal to have any. This almost purely negative attitude has involved the surrender of any right to fashion in peace the imperial policies for which the dominion has to fight in war.

And again:

> The poorest voter in London's east end has more control over Canada's foreign policy than a member of Canada's parliament.

We the common people, before we see the appropriation of such sums as this for war, want to know what is going to be the foreign policy of this government in the future. Are we to be committed to more wars because those who are standing behind the government's war effort to-day can see further profits in involvement in further wars? These are some of the things I feel we cannot pass over without more information.

There was a famous man of the United States who at one time was facing a crisis which was as great perhaps as that which faces us to-day. I am speaking of Abraham Lincoln, who said at the time of the civil war:

> I have two great enemies, the southern army to the south of me and the financial institutions in the rear, and of the two the one in the rear is my greatest foe.

As one of the common people I would say this, and I think there are thousands who would say it with me, that if business and industry are to control entirely our war effort, and if they are to concentrate upon the business side of things for the profit which will be gained from it, rather than allocating some of this money to education and other services of which the people are in need; if this business concentration is to guide the destiny of Canada in the future as apparently it is guiding it to-day, then I think we can bring the words of Lincoln up to date by saying, "We have two great enemies, Hitler to the front of us and the financial institutions in the rear, and of the two the one in the rear is our greatest foe". That is, from the point of view of the common people, the financial institutions are at the present time our greatest foe.

I was pleased to hear the hon. member for Laval-Two Mountains (Mr. Lacombe) say on March 5:

> One of the war aims of the allies is the defence and preservation of democracy. Of course, all forms of government are handicapped by imperfections inherent in their contingent and human nature. For that very reason should they not ever strive after justice, honesty, and sound and true freedom, which cannot possibly be derived from the favouritism and ambition of exploiters, who invariably subordinate the welfare of the people to their own interests?

[Mrs. Nielsen.]

I can certainly endorse those words. I feel that to-day we are fighting against Hitlerism and fighting also for the preservation and extension of democracy. I do not want this war effort to be a one-sided war effort. I want it to be an effort which will truly preserve democracy so that in the years to come we people will be able to say that here in Canada, "a loftier race than ere the world hath known shall rise with the flame of freedom in their soul and the light of knowledge in their eyes."

I feel that in the name of the people whom I represent I must oppose this appropriation bill because it neglects some of the fundamental things for which we as a nation believe we are fighting.

Mr. CHURCH: Mr. Chairman, I wish to call attention to three or four matters on clause 2 of this bill, which is to appropriate $1,300,000,000 for the war. The larger the amount of the appropriation, the less likelihood there is of its being well spent. The main purposes of the bill are to provide for home and overseas defence and for the matters set out in paragraphs (b), (c) and (d). Three weeks ago I asked the government if they would take into consideration the works which Canada has established for the defence of this north American continent. We decided to spend a large amount on defence works on the Pacific coast long before the United States had any idea of passing the lease-lend bill. At that time, two years before the war, Canada was spending about twice as much on postage stamps as on defence by sea and air.

Under the lease-lend act of the United States, Canada ranks with Britain, and I maintain, Mr. Chairman, that with the passing of this appropriation bill we should revise our clause 2 herein and also our elaborate system of exchange and the work of the foreign exchange control board, and that an agreement should be made between Canada and the United Ctates for the parity or near parity of our dollar with the United States dollar, notwithstanding any law, statute, usage or custom to the contrary. As I said, Canada, by a ruling handed down by the attorney general of the United States, is to receive equality of treatment with the mother country under the lease-lend measure. I feel that the people of this country from coast to coast are willing to make any scarifices to win this war, and I believe they will support this appropriation if they believe the money is essential to the winning of the war.

I believe there has been too much talk altogether, judging by the statements I have heard from the government, about home

defence. Home defence is not as essential here as it is in Britain. Britain is only a few minutes by air from the continent of Europe and is within easy range of German air power, bombers and flame parachutes.

I believe that under this bill the Canadian government should take up with Washington the question of making an arrangement to recoup the people of Canada for the expenditures they have made on defences by land, sea and air. When all is said and done, what is the basis of Canada's foreign policy? As a matter of fact, we have never had any foreign policy at all. As to defence policy, the Minister of National Defence two or three years ago—we had only one Minister of National Defence then—laid down two cardinal principles of our defence. One was home defence, and the other was to protect our neutrality against any foreign power that might want to use our harbours and ports for non-neutral purposes to attack the United States. With very little change that is the policy of the government to-day. So I say that the government should take this matter up with Washington, and I believe they should pay part of this bill, because the purpose of most of this is to protect the neutrality of Canada in case the United States is attacked.

Another matter, Mr. Chairman, I referred to the other night. Mr. Wendell Wilkie got a glorious reception to-day in Toronto—the leading recruiting district of Canada; they came there from all over Canada to seek recruits for units spread all over Canada for Canada's forces. Mr. Willkie could tell this parliament and the people of Canada some things which his country has done for its soldiers that we have not done for ours. The first relates to national insurance for soldiers. This parliament has adopted a measure of insurance for those civilians who stay at home. Then why should not the soldiers who are going overseas to risk their lives for the people of Canada be insured also? The last time this resolution was being discussed I proposed to put on *Hansard* something which was not allowed to be inserted, though hon. members may notice that in the same day's issue three or four treatises of ministers were included. A bill for national insurance for soldiers which the president signed at Washington three weeks ago insures every soldier in the United States for a large sum of money. The policy contains a clause which protects his dependents and provides for contingencies—demobilization, unemployment, sickness after the war, and all that kind of thing. The United States had a form of insurance during the last war. It saved the taxpayers large sums of money in pensions and assisted the men when demobilization came. I believe we should have a national form of insurance for our own soldiers. Toronto insured for one thousand dollars all its soldiers in the last war.

Another reason why I am suggesting it is this. I have here a form of insurance contract which every soldier has to sign who, when he goes to war, has an existing policy with any insurance company in Canada. I might say first, as hon. members may be aware, that it is impossible for a Canadian soldier, or for that matter a Canadian civilian travelling overseas, to remain insured under any policy purchased since September, 1939, if he leaves the confines of the Dominion of Canada and the continental United States of America, unless he is prepared to pay an exorbitant additional premium. If that extra premium is not paid, and death should occur, the insurance company are liable only for the return of the premiums plus three per cent. Further, if the soldier should die from any cause whatsoever within six months after his return to Canada, a death claim will not be paid.

I have here a copy of the uniform war clause contained in all Canadian war policies issued at the present time. The soldier's policy, unless he can pay the additional premium, is practically vitiated. I believe that the government would have been well-advised if, in place of some of the expenditures provided for under this bill, they had inserted in the estimates under a national insurance plan for soldiers, a small amount to protect the lives of the soldiers who are going overseas. My view is that there should be an immediate investigation by a committee into the matter. I wrote about it to the inspector of insurance, Mr. Finlayson, because I believe that in view of the small number of casualties which we have had in this war as compared with the last war, the premiums charged by Canadian companies are exorbitant and should be inquired into by this parliament, in the interests of the soldier, of this country, and of the future of insurance in Canada. The life insurance companies are not doing their duty.

Just one or two other matters. I may say that so far as the soldier is concerned, Mr. Willkie could tell the people of Canada what his country is doing for its soldiers travelling on the railways. While recently on a train, I noticed that troops coming from Petawawa are required to pay $1.25 to $1.50 for a meal, and similar rates apply to men travelling from one camp to another all over Canada. Under the United States government the railways have had to come to time on the rates for soldiers' meals. On the Union Pacific a day's meals can be had for ninety cents—twenty-five cents for breakfast, thirty cents for lunch, thirty-five cents for dinner, or three meals for

ninety cents, or for less than the price of one which on our railway systems, is being charged soldiers who receive $1.30 a day.

Another thing that Mr. Willkie could have told us is what the United States is doing about soldiers' fares. How did it come about that Canada, where it is estimated 700,000 passes are issued annually by the railways, has not enough money, under clause 2 of this bill, to transport its soldiers? How did it come about that a country which is paying out $4,000,000 a day cannot spend the equivalent of one-half hour's expenditure to give its soldiers free transportation? Every day on the trains I see men, connected with almost every department of the public service, travelling on annual passes, many in contravention to the Railway Act. Why does the government not do as the United States and other countries have done—compel the railways to carry the soldiers free? In addition, in the United States they copied what was done in the last war by the city of Toronto, where soldiers travelled without charge on the street-cars: it is not done in this war, but some arrangement should be made by the government with the municipalities for free transportation of troops who live in the large cities and have to travel long distances from the suburbs to the place of recruitment or to a camp, and the federal power should pay for it.

I have here some tables of railway fares, and they are exorbitant. The rates paid by soldiers are, sometimes one-third more than those at which, from time to time, civilians can travel on special occasions from the maritimes, for instance, to central Canada. I called this to the attention of the railway commission and asked them to stop this discrimination of their own volition as the Railway Act empowers them to do, but nothing was done. They would not do anything. They seem to have also the parliamentarian's religion, the policy of following the line of the least resistance and doing nothing. Everybody in Ottawa seems to be afflicted with it and with this virus of inaction. I might mention that out of this vote of $1,300,000,000 large sums will be paid the railways for transporting troops vast distances across Canada to camps which never should have been erected; yet apparently we cannot afford any money for the particular purpose I have mentioned. Illegally, as I contend, an order was passed prohibiting hitch-hiking and making it a military offence, over parliament's head. I have here a letter from the Ontario minister of highways, Hon. T. B. McQuesten, in which he says that he had not seen the order to which I referred, but that neither his department nor the Ontario government had ever at any time objected to hitch-hiking by soldiers. Civilians are permitted to hitch-hike, and why should soldiers be discriminated against by some officers who have federal cars at camps? The order is illegal, and I hope it will be at once withdrawn. The railways inspired such an order of prevention. Under this vote an adequate amount should be included to pay transportation for soldiers on leave. In spite of the hundreds of thousands of dollars provided under this vote for the transportation of troops, I venture to say that when the monthly bills come in, twice the amount of money will be due to the railways on this account as in the last war.

At Camp Borden on Saturday five or six young men were sent to gaol for fake railway tickets. It is a disgrace to the people of Canada that this should be so, when 700,000 passes are yearly issued on the railways and some military officers have passes, and in view of the huge sums which the railroads will be getting under this vote, increasing their receipts—according to a financial column in the morning paper the other day—from forty to forty-five per cent as a result of the war and the transportation which they are paid to give, to all these camps across Canada. Fancy taking Ontario's troops to Winnipeg and Petawawa! I see that there are some Toronto soldiers, the Toronto Scottish, at Three Rivers. Others have to go out to the coast and the maritimes. Why move them all over Canada and put money in the pockets of the railways, in defiance of economy, the nature of the military situation, training purposes, good business, and the interests of the soldier? These young men of whom I have spoken deserve a break, because they were first offenders of whom the commanding officer at Barrie at the trial spoke most highly, and said he would take these men back. At the trial it came out that this was the result of the two railways' influence in stopping hitch-hiking. I do not see any members of parliament hitch-hiking, or any members of the government, or any of the seven hundred thousand people in Canada or officers of camps, who have passes. The Duff report of 1931 sets out at page 154 reforms which should be made in transportation passes and suggests changes in the whole system, but nothing has been done.

This vote is too large; the railways are getting too much; those matters should be looked into; we should have a rescinding of the illegal order to stop hitch-hiking, and camp officers should ignore it. Leave is refused if a soldier has not enough money for

fares. An inquiry should be held into the whole matter by a committee of the house, and into all these matters.

Mr. HAZEN: I wish to ask the Minister of National Defence whether instructions have been given to officers commanding army units and other army officers to observe by-laws passed by municipalities for the purpose of preventing fires, and to cooperate with the civil authorities in avoiding fire hazards on army premises.

There have been a considerable number of fires in premises occupied by the army in different parts of this country. There were fires in the exhibition building in Fredericton, which was destroyed; in the O'Regan building in Saint John, which was destroyed; in the exhibition building in Saint John, which was destroyed; in a building in Yarmouth and in other buildings not only in the maritimes but in other parts of Canada.

I am bringing the matter to the minister's attention because I recently saw a report, dated January 16 last, made by Colonel E. J. Mooney, building inspector for the city of Saint John, to the common council of that city. In the course of that annual report he said:

> Another local condition I would like called to the attention of the council is the way the defence department is doing work without taking out building permits, which means that I have no authority to inspect the work done. I spoke to Major Blake, commanding officer of engineers at headquarters of military district No. 7, and he informed me that the engineers could design and build according to their own ideas and local civic authorities had no jurisdiction. As a result all kinds of infractions of the building and fire laws and common sense have been made and on several occasions due to lack of common knowledge such things as furnaces in our exhibition buildings were placed on thin concrete slabs on top of wood floors, stovepipes carried through wood partitions without proper insulation and as a result our fire department had to be called out to extinguish fires in these buildings.

About a month after that report was made, the exhibition buildings in Saint John were burned down. As far as those buildings are concerned, my information is that in the exhibition building proper there were five stoves, and the chimneys of those five stoves were all connected with a seven-inch jointed stove pipe that must have been about forty feet long running up through a fibre board false ceiling to the upper floor, and then to the roof. In the blind space between the ceiling and the floor above, there must have been a great accumulation of dust, and there is information that the dust fell down from the floor into this space when the upper floor was swept. There were a great many panes of glass out in the front of the building—as a consequence, there were plenty of blobs of dust floating around, and the chimney, without any sort of insulation, must have been red hot at times, which would set fire to this dust.

The board of fire underwriters looked into the matter and made two reports. I am informed that the first report showed that there were great fire hazards and they were ordered corrected, and the report went on and said that they had been corrected. A second report, however, was subsequently made which said that not only were the former hazards replaced but they were greatly increased. Not only was the exhibition building destroyed and a number of other buildings adjoining it, but some valuable equipment was destroyed. One man lost his life, and if the fire had happened at night instead of in the middle of the day, in all probability a great many men would have lost their lives.

At the present time in the barracks square back of that building there are many temporary huts. My information is that they are constructed of light inflammable wood with pitch roof, false fibre board ceilings, and with jointed stove pipes running up through to the peak, with no insulation whatever; that some of these huts must accommodate a great many men, and that at any time there are likely to be further fires in these huts.

In addition, I should like to ask the minister whether these fires were investigated. If they were, who investigated them? After they were investigated, were reports made to the department, and can these reports be tabled? Further, was any action taken in consequence of these reports, and was any disciplinary action taken against any officer in consequence of these fires breaking out?

There is another matter to which I wish to refer. I do not wish to trouble the minister too much, but could he outline to us how promotions are made among officers in the army in Canada? There have been a great many promotions. This matter must be of considerable importance to the Minister of Finance. How are these promotions made? Is it a matter of time; does a man have to serve a certain length of time in one rank before he is promoted to another? I may tell the minister that there is some dissatisfaction among officers who volunteer and go overseas and do not get promotion, while those who stay home do, in many instances get promotion. Might not some way be evolved whereby promotions at home might be a little slower, even though the officers have to take on some other duties?

Mr. RALSTON: Regarding the fires, I wish my hon. friend had drawn my attention to this matter so that I could have obtained a report from the quartermaster-general as to the matters of considerable detail with which he has dealt in connection with construction at Saint John. I cannot tell him at this moment whether or not actual orders go out requiring cooperation with the civic authorities. I do remember that in the case of one of the fires to which the hon. gentleman refers, high praise was given some of the military personnel who assisted in putting out the fire and in saving the equipment.

With regard to the matter of fires, I can only say to the hon. gentleman that I will make inquiries and give an answer either to him personally or to this committee. The practice is to hold courts of inquiry, and the findings of those courts are placed before the officers concerned, after which action is taken. I cannot give particulars at the moment; I remember the Yarmouth fire and the one at Saint John. Those are the two that have been brought particularly to my attention. I can assure the hon. gentleman, although I imagine I hardly need to do so because I believe he knows himself, that the district engineer officer at Saint John, Captain Blake, is an experienced officer who would not, I think, wilfully or carelessly put up buildings which did not conform to proper requirements with regard to fire hazards. However, I shall be glad to look into the matter and see if there has been any negligence or lack of care.

With regard to the matter of promotions, let me say to my hon. friend that promotions are made on the recommendation of the commanding officers concerned. These recommendations are passed upon by the district officer commanding, and then they come to national defence headquarters for approval.

With respect to staff appointments, as I think I have already told the committee, these appointments are made, after examination, by the selection board at national defence headquarters, based upon recommendations which are received from all over Canada as to officers in each district who are regarded as suitable for promotion or appointment to particular staff positions. These reports are gone over thoroughly, and the selection board itself makes the selection on the merits of the case. Although I should be disappointed to hear of it, at the same time I should welcome any instance my hon. friend can give me in which promotions have not been made on the basis of merit, whether in connection with the forces in Canada or for overseas service. If there is one thing I have tried to emphasize, and I think the officers at headquarters have tried to emphasize, it has been that particularly at a time like this, and, as far as that goes, at all times, promotions must be based on merit. I want to say to my hon. friend what I stated to the committee the other day, that I am a bit radical in respect of this matter of service and seniority. There are instances when it seems to me promotions ought to be made even over the heads of more senior officers, when the merit and the services of particular men may warrant that being done; and I wish to say to the hon. gentleman that I think this principle does govern the selections which are made at national defence headquarters. I had a talk on the same subject with the district officers commanding when they were here, and I would very much expect that this policy is being followed.

I say again that if my hon. friend has any instance in which he thinks an injustice has been done, I should be glad if he would bring it to my attention, although I want to tell him that I am taking the only ground that a minister can take if he is going to administer an armed force; that is, to see to it that there is no interference from national defence headquarters with the responsibilities of officers commanding in connection with making recommendations for promotions. We hold the officers commanding responsible for the administration of their units, and if we attempt to thrust upon these officers people whom we at headquarters may think desirable men, then the chain of responsibility is broken.

Mr. COLDWELL: Arising out of the interesting speech made by the hon. member for North Battleford (Mrs. Nielsen), there is a question I should like to ask the Minister of Pensions and National Health, who happens to be out of the house at the moment although he has been here almost continuously since the beginning of this debate. Yesterday in the New York *Times* I read a report by a United States doctor and a group of nurses who spent a considerable time this winter at the port of Halifax. That report was rather alarming, particularly since we have heard nothing about the matter in our own newspapers or in this house. The situation, it seems to me, concerns not only the Minister of Pensions and National Health but the ministers of the various branches of the defence forces as well.

The report stated that during the past few months Halifax had been a cesspool of preventable disease; that there had been a large number of cases of diphtheria, influenza and meningitis. When I heard the hon. member for North Battleford say that Halifax

expended only twenty-two cents per capita, I think, on health services, I felt that someone ought to bring this matter to the attention of the ministers concerned, particularly because so many boys from all over Canada are at Halifax at the present time. What is being done by the Dominion of Canada to supplement the exceedingly inadequate health services in that city?

The story I read in yesterday's New York *Times*, dealing with the report made by this group who were sent to Halifax by the Rockefeller institute, made me feel not only alarmed but ashamed that such a condition could exist at this time in a Canadian city. It was remarked, of course, that ships from the four corners of the earth were coming to Halifax bringing various diseases, and that new types of diphtheria and other diseases were being brought to that city from abroad. But with thousands of young men passing through Halifax at the present time; with our sailors and those of the British navy in and out of that port, I felt that someone in this house should ask what steps are being taken by the dominion government to supplement the wretched health services that apparently exist in Halifax.

It may be said, of course, that we look after our own troops, but the health of our own troops cannot be better than the general health of the community in which they are stationed for the time being. You cannot easily give them immunity from some of these diseases, and I am asking the Minister of Pensions and National Health what he can tell us about the situation at Halifax, whether any steps have been taken to deal with the serious condition which has developed in that city during the past several months.

Mr. MACKENZIE (Vancouver Centre): I regret very much that I was not in the chamber when my hon. friend raised this question, but I intend to make a full statement with reference to the situation at Halifax when my estimates are under discussion. Briefly, however, there has been complete cooperation between the federal Department of Health and the authorities at Halifax with regard to the situation described by my hon. friend. According to my understanding, the visit of the clinic from Harvard was purely for research purposes. At the commencement of that visit I believe there was some misunderstanding, but later on that was entirely cleared up and complete cooperation was established. I shall be glad to give my hon. friend further information in that regard at a later stage of the session.

Mr. CASTLEDEN: I should like to direct a question to the Minister of National Defence. During 1940 many of us did our best to get the government to consider the matter of free railway transportation for soldiers on furlough. At that time a number of hon. members seemed to believe that it was our intention that every soldier who wanted leave at the end of the week could get a free pass on the railway. That was not my intention when I spoke of the matter last summer, nor is it my intention now. I should like to know, however, whether the minister would be willing to bring down an estimate of what it would cost to grant free transportation to soldiers on their furlough after six months' service, which furlough is, I believe, for about two weeks. I should like the estimated cost in dollars and cents, say for the past year, (a) of free transportation and (b) for men taking such leave if they had been required to pay a one-way fare for the first three hundred miles, and then had been given free transportation for the balance of their trip. I do not think there is any other action which would do more toward bolstering the morale of these men or improving their attitude toward the government and toward those officials who are placed in control over them. I believe it would improve their opinion respecting the general attitude of the government toward those men who are willing to make the greatest sacrifice of all.

Any action the government might take would have a splendid effect upon the morale of parents, brothers and sisters at home who might see again their loved ones who may never come back. The men who are to do the fighting do not know what they are going into over there. I believe the general attitude of the people will be improved if they feel the government is humane in this respect, and if they hold the view that when the boys come back the administration will take care of them.

Mr. RALSTON: Mr. Chairman, I believe there is some misapprehension in connection with this matter, and I am confirmed in that view by what the hon. member has said. There have been all sorts of suggestions with respect to free transportation. Generally, the suggestion has simmered down to free transportation on embarkation leave, as it is called.

I do not think hon. members have a clear understanding of the procedure in connection with embarkation leave. The idea apparently in the minds of hon. members is that men who are taken to a port should be allowed a few days' leave before sailing, so that they might go to their homes, and that on account of their being a great distance from their homes free transportation should be allowed. The committee will understand that it is impossible, from the point of view of our

conducting a war, for us to give even the slightest indication as to when men are going to embark.

What we endeavour to do is this: When men are moved from their home stations, and when we have in mind that it is quite possible those men are being moved for the purpose either eventually or in a comparatively short time of going overseas, the custom is at such time to give what is called embarkation leave. That embarkation leave is not a serious financial burden to a man. It would be serious if he were taken from the port of embarkation, or from a point near the point of embarkation, and sent back to his home. Generally speaking, however, embarkation leave is given some time before embarkation, and given when the men are at points comparatively close to their homes.

As I say, we endeavour to meet the convenience of the men, as far as possible. I did have one serious complaint from Calgary, where it was pointed out that men had not been given sufficient notice, with the result that they felt they could not take embarkation leave, and go home—to Edmonton, I believe—and get back in time. But that was a case which arose through misunderstanding, and I believe that had there been proper administration, those men would have got their leave. As I say, however, the rule is to give embarkation leave at a time when they are near their homes, and, if necessary, we see to it that an advance is made in their pay in order that they may have the benefit of that leave. But we do not give free transportation. The rules with regard to transportation state that the men travel on a one-way fare.

This question of transportation has been raised frequently, and I do not propose to make any extended statement with regard to it to-night. Let me say, however, that I have gone over the records for the last war, and I find no instance of free transportation having been granted, except in one special case in connection with harvest leave. I am speaking from memory, but I believe what I say is correct. Free transportation was never granted, as part of a soldier's privilege, for the purpose of visiting his home. It has been granted only in the event of some special mission, such as the one I indicated as harvest leave, when men were sent home, free of charge, because it was believed to be in the interests of the country so to do.

The granting of free transportation simply means the addition of that much to a soldier's pay; that is what it means. In this war we have increased the pay of the men, and we have provided for dependents' allowances as well. But that is not all. In this war the dollar buys considerably more than it did at the time of the last war. Therefore there has been a substantial increase both ways, both in the amount paid to the men and in the amount the dollar will buy.

I might as well say to my hon. friend that I see no likelihood of the government's reconsidering the decision it has made—and the matter of providing free transportation for men going on leave has been brought to our attention repeatedly. Rather we would endeavour to meet the convenience of the men, as far as possible, and see to it if we can, that leave is granted in such a way that it will entail comparatively small expense if a man wishes to visit his home.

Mr. ROSS (Souris): Has the minister any idea as to the cost involved in granting free transportation? Could he give us an approximation of what it would cost? If not, would he consider negotiating with the railway companies to the end that soldiers might receive the cent-a-mile rate used in connection with excursions offered civilians? It has been pointed out that people coming home from Newfoundland are granted in Newfoundland a free pass to the coast. Then, travelling on the same trains as civilians from the coast to, we will say, Toronto, their tickets cost $22.75, whereas those of civilians who travel on excursion tickets, cost only $15.

It has been urged that the distribution of soldiers in Canada is somewhat different from what it was at the time of the last war. They are not training in their local districts, as they did before, and in many instances they have been moved to coastal areas. Many boys from my constituency in Manitoba are training at points so far away that it cost them from $50 to $60 to secure a round trip ticket.

Mr. RALSTON: From where?

Mr. ROSS (Souris): From Nova Scotia to Winnipeg, round-trip fare. That is a large item, and costs the soldier more than the civilian who travels at excursion rates. It has occurred to me that the railways, upon representations by the minister, might be prepared to make some concessions in this respect, and that a reduction would mean a great saving to a soldier who wished to travel to his home, some distance away. It seems to me that the railways might make some concessions if they were asked by the Department of National Defence.

Mr. RALSTON: I know representations have been made to the railways in the past. I shall, however, be pleased to take note of

the circumstances outlined by the hon. member, and see if they form any ground for reopening the matter with the railways.

The subject of leave from Newfoundland is in very much the same category as leave from overseas. We are endeavouring to provide reliefs for the units in those outposts, so that they will not be away too long, while they are based in Canada, and so that they will have an opportunity to visit their homes and enjoy the privileges of leave in this country. When the men are on duty in Iceland, Newfoundland or in the Caribbean, it is quite impossible that they should pay for leave home, and it is not expected that they will get leave home, because they are on duty, for the time being, just as were the men in France and as are the men in England to-day. I shall, however, look into what the hon. member has just said, and see if it forms any ground for reopening the case with the railway companies.

Mr. REID: I know the minister has given a great deal of consideration to this matter. While it is true he has looked into the records for the last war, may I point out that while the dollar may be worth more, it does not buy more by way of transportation. Transportation charges are just the same. There are many aspects of this war which were not in evidence at the time of the last one.

I know some cases which should receive special consideration. I know of boys, officers and men who at times are out four months at a stretch on patrol duty on the Atlantic. Many of those boys come from the Pacific coast. One in particular, a friend of my family, spent four months on the Atlantic, and upon reaching Halifax was given one month's leave of absence. It cost him $175 for his fare from Halifax to British Columbia to see his people. That is far too much.

I join with the last hon. member who spoke in urging upon the government, if it is to continue its policy of not granting free transportation, to see that strong representations are made to the railway companies to do as they did before the days of the combine, when they took men from British Columbia at a rate of one cent a mile. That would be a splendid thing for the boys and I am advocating it if the government is going to continue its policy of not providing fares for our men.

Mr. GREEN: The minister did not answer the question asked by the hon. member for Souris as to the estimated cost to the government of providing free transportation for the men. This question was brought up last year, and surely the government must have made some estimate as to what it would cost. I think it would be money well spent to provide free transportation for men going on leave after six months' service.

Mr. RALSTON: I have just completed signing a letter to someone dealing with that same subject. As I said to him, I think this is about as nebulous a computation as you could possibly find. You would have to estimate the distances to be travelled in the individual cases and other indefinite factors which make it almost impossible to arrive at even a rough figure. I do not think the roughest sort of estimate would be within, shall I say shooting distance of what it might cost. I shall endeavour to see if we can find any basis upon which the cost could be figured.

I am dealing with the question more on the matter of principle. I have been interested in the number of people who have spoken with regard to providing free transportation, and I have been wondering where the idea came from. It has never existed in Canada before, and I should like to know what has been behind this proposal for free transportation. As the hon. member knows, during the last war when we had leave from France we were given a leave warrant. But that was at the front; it was not in Canada. On principle, I really find it difficult to see why if transportation is provided, other concessions should not be asked for which would, in effect, be additions to the pay and allowances of the men. No one knows better than I how much we owe to these men, but at the same time we have to deal with the matter man fashion. As I said a moment ago, I am not in a position to give any hope that there will be any change in the government's decision. I am not in a position to-night to make even a guess as to what the cost might be.

Mr. GREEN: The position is different from the last war because then men were enlisted and sent overseas in a comparatively short time, whereas in this war many battalions are being kept in Canada.

Mr. RALSTON: Where does my hon. friend get that idea? I enlisted in September, 1915, and went overseas in October, 1916.

Mr. GREEN: I think the minister will admit that his battalion was never far from home when it was in Canada.

Mr. RALSTON: Some were and some were not. My hon. friend said that the men enlisted and went overseas right away.

Mr. GREEN: The majority did. In the present war we have, for example, troops from Manitoba located on both coasts and

being kept there for indefinite periods, perhaps for as long as a year. To-day troops in Canada are much in the same position as were troops in England during the last war when the front line was in France. Now the front line is in England. While we were in England we got free transportation, and I think the same thing should be done in Canada to-day. If the government will not provide free transportation for everyone, why not set aside a certain sum to provide transportation for those men who have the farthest to go to get to their homes? If something like that were done, it would provide relief in many instances. I do not think the government should just shut the door and say it is not going to do anything about this, the men can get home as they like. I believe regulations have been promulgated to prevent the men from accepting free rides on the highways. Is it true that troops of ours are not free to accept transportation on the road?

Mr. RALSTON: The other day I brought down a return containing an order which was issued requiring compliance with the Ontario act which prohibits solicitation of rides by those on the highway. This was with regard to Camp Borden.

Mr. GREEN: It is the same in all provinces?

Mr. RALSTON: I do not think so.

Mr. LOCKHART: That would not prevent a civilian driver from picking up a soldier?

Mr. RALSTON: No.

Mr. LOCKHART: I should like to supplement what has been said by making some observations with special reference to Petawawa. I do not intend to go into the question of inadequacy of equipment and so on or to rehash other matters which have come up lately. In this case, the commanding officer must initial a railway ticket before a soldier can get a pass.

Mr. RALSTON: That is what I understand.

Mr. LOCKHART: Many of these men are gunners, and at the end of a month a man has about $19 left after having provided the minimum $20 to his dependent. These men have been recruited from various parts of Ontario—from Simcoe, Tillsonburg, Brantford, Hamilton, Dundas and other points. The railways advertise a return fare of $6.25 between Ottawa and Toronto, but these men cannot take advantage of that because they must present a ticket before they can get a pass. I do not want to delay the deliberations of this committee, and perhaps the minister could give me a few minutes to discuss these matters. At the present time these men are rather confined, and they will not be out on the wide open spaces for a week or so. I think they should receive some consideration, and I should like to have an opportunity to outline to the minister an idea which was developed yesterday by some of the non-commissioned officers. If this were carried out, I think it would go a long way to satisfy the soldiers.

Mr. RALSTON: I shall be very glad to give my hon. friend two or three minutes, or as many more as he wants. Let me say to him that he is not the only one who is interested in the men at Petawawa camp. There is a battalion from Prince Edward Island at that camp.

Mr. HANSON (York-Sunbury): And one from New Brunswick.

Mr. RALSTON: The men of those battalions have farther to travel than the boys from Hamilton. My hon. friend will not blame me if I am at least sympathetic.

Mr. LOCKHART: It should be possible for these boys to take advantage of the $6.25 fare on week-ends rather than to have to pay $10.55 minimum.

Mr. DOUGLAS (Weyburn): The minister did not seem to be clear as to where the idea for free or assisted transportation came from. He stated it did not exist in the last war, but there were two reasons for that, and there may have been many others. The system of training in this war is different from that carried on in the last. We have specialized groups located in different areas for training. Generally speaking, a man who enters the army service corps will go to Petawawa, as would a man entering the artillery. This would be the situation no matter in what part of Canada he might enlist. If a man joins the tank corps, he goes to Camp Borden. If a man is in the infantry, the chances are that he will train fairly close to home, but that does not apply to the special units and most of the men are in these units. The result is that many men are long distances from home.

I had an example of this coming down on the train when I met a man who had joined the forestry corps in Nanaimo, British Columbia, and who had been sent to Valcartier. He said that was where they were training the forestry units. At the end of his period of training he was given leave and he found himself faced with an impossible situation. If it had not been for the assistance given by some of his wife's people, he would not have been able to go back to Nanaimo at the end of one year's service.

Second, there are large bodies of men being placed on garrison duty. We have the third and fourth divisions disposed of on the Atlantic and Pacific coasts, and a man may find himself posted on one coast, perhaps many miles from his home. At the end of a year these men are given a furlough, but it is no good to them unless they can raise the money to go back home.

There is a changed situation to-day, and that is why the demand has arisen.

What I said applies also to our sailors to some extent and to our airmen, but I mention sailors particularly because every time I happen to be travelling between here and home there are sailors on the train, either sailors going from Halifax to Calgary to their homes, or returning to Halifax from Calgary. The railway fare is, of course, very high. They get only one leave a year, and a good deal of the pay they have saved up is absorbed by the railway fares to take them home.

Those who are advocating government assistance in the matter of transportation have in mind, not free transportation, but assisted transportation. Certainly a man who is stationed 1,000 or 1,500 miles away from home should receive assistance in buying his transportation back home. I know the minister has quite a problem there and that it is not easy of solution, but perhaps a special rate could be worked out with the railways, or else when a man is granted his furlough, if his home was beyond a certain distance, let us say 500 miles, he might be given assistance to cover any distance beyond that.

Certainly the situation to-day is not a happy one for a man who finds himself 1,500 or 2,000 miles from home; it is a situation I knew quite a few men to be faced with before Christmas, and if the man has not the means, he cannot take advantage of his furlough to visit his loved ones back home. I hope the minister will give consideration either to working out an arrangement for giving assistance above a certain mileage, or to arranging with the railroads for a rate of one cent a mile to help these men when they go home on furlough.

Mr. CASTLEDEN: Perhaps the quickest way to deal with it would be for the minister to bring down an estimate.

Mr. QUELCH: I think the stand taken by the hon. member for Vancouver South (Mr. Green) was a sound one. The minister has stated that transportation was not given in the last war, but once the soldier got overseas, free transportation was given. Unquestionably the soldiers are being kept in Canada for a longer period in this war than in the last. I was overseas for four years during the last war, and during that whole time I do not ever remember having to pay my transportation. I was in Canada for a period of five months only. To-day, however, there are many soldiers who have been in Canada for a year or more. There is also this question of the soldiers being moved from the west to the east, and when they are granted leave we know that it is impossible for ninety-nine out of a hundred of them to pay their fares back home if they live any distance away.

If we cannot get free transportation for the soldiers, some form of pool rate should be worked out so that soldiers who have been moved from one end of Canada to the other should not be penalized. In addition to a special rate, some form of pool rate should be worked out. It is not the soldier's fault that he is moved from Calgary to Petawawa. Contrast the soldier in that position with one whose unit is stationed just outside the city only a few miles from his home and who can get home for a few cents. It is a very unfair situation. If we cannot get free transportation, there should be a special rate, and on top of that a pool rate.

So far as embarkation leave is concerned, there should be free transportation on embarkation leave. Some soldiers have told me that it would not help very much because often they have only three hours' notice before they embark and leave is not granted, but in some instances it is granted, and in such instances free transportation should be provided.

The minister has stated that he is not sure where the demand comes from. The demand has been caused by public opinion. It is not coming from just any one section; public opinion throughout Canada is absolutely behind the demand for free transportation, and I think it is the least we can do for a man who has enlisted and is prepared to sacrifice his life for his country. He should at least be given an opportunity to go home and see his wife and family, but under present conditions that is not possible in many instances unless the soldier is prepared to commit a crime. If he has not the money to pay his fare home, he will take the train to some nearby point and then go on by freight, which is listed as a crime. In this way we are breeding crime within the army and causing discontent. So I hope that the government will seriously consider ways and means by which special rates can be given so that the soldier can travel at least as cheaply as the civilian. As it is now, we find that civilians get special fares while the soldier has to pay a higher rate. That is absolutely unjust. Finally, I suggest that the government should give consideration to establishing a pool rate.

Mr. RALSTON: I want to say in reply to the hon. member for Weyburn (Mr. Douglas) and the hon. member for Acadia (Mr. Quelch), who were good enough to give me their ideas of what gave rise to this demand at this time, that artillery men came to Petawawa in the last war just as they do now, and Camp Borden was going in the last war just as it is now. At Camp Borden now you will find, not specialists so much, but whole units as in the last war. I do not think there is much difference, and if there is any difference it is that the camps are more spread around now than in the last war.

Mr. QUELCH: The soldiers are held in Canada for a longer period than during the last war.

Mr. RALSTON: I am thinking of my own personal experience, and my hon. friend is no doubt thinking of his, but I would have thought that the soldiers spend about as long here now as they did in the last war.

With regard to the units on the coasts, to which the hon. member for Weyburn referred, we are trying to meet that situation by moving a whole unit back for relief, so as to give them each a turn. That is regarded as a line duty. The same is true of the units in Newfoundland and Iceland. As a matter of fact, Iceland was one of the matters I discussed with the war office when I was in England a short time ago.

I would say to the hon. member for Acadia that I have already told the hon. member for Souris (Mr. Ross) that I will look into this matter to see if there is any ground for reopening the situation with the railways. That is the best I can give the committee to-night, but I have taken note of everything that has been said with regard to assisted rates and special rates, to see if any better arrangement can be made with the railways in that respect.

Mr. FRASER (Peterborough West): One of the reasons why free transportation is asked this time is that we have more automobiles in the country than we had in the last war. People then did not see the soldiers travelling back and forth as much as they do in this war. During the past week I have talked to soldiers, and they claim that at Debert you cannot get leave unless you can show the paymaster that you have $30, for instance, if you are coming to Peterborough. That would cover the ticket amounting to $24.60, and on top of that enough to pay for meals on the train. If the soldier is going to the coast, I believe he has to show $100 because the fare is about $80. I mentioned this away back in June. I believe I was the first to mention it.

[Mr. Quelch.]

Mr. RALSTON: I cannot believe that anybody mentioned it before the hon. member for Broadview.

Mr. FRASER (Peterborough West): I was second, then. At that time the reason why free transportation was asked was that a number of soldiers' wives had not received any pay or allowance. The men had sent them money from their own pay in order to carry on, and the men had to walk. The other night I picked a man up in the car and drove him home. He had taken the train as far as Kingston, and he said he would not have been able to get that far unless he had been lucky at poker. I think that is the situation with a number of them.

Mr. RALSTON: Where did he come from?

Mr. FRASER (Peterborough West): He came from Debert.

Mr. MacNICOL: I wanted to ask one or two questions of the Minister of Labour; I know he can answer them promptly. I could not understand what he said this afternoon in reply to my question as to how students can be taken on at the technical schools in connection with the government's plan of training young men for work in munitions plants.

Mr. McLARTY: The hon. member means, how they get admission to the schools?

Mr. MacNICOL: Yes.

Mr. McLARTY: As the hon. member understands, that is a matter directed by the provinces. My understanding is that to a large extent admission is arranged directly with the particular school itself by the applicant. I assume that in some instances the applicant could be placed by application to the provincial director, but generally, no doubt, the application would be direct to the training school.

Mr. MacNICOL: Quite a number of young men have come to me from time to time and have told me that they had to go to the department of labour in the legislative building.

Mr. McLARTY: Yes. In some provinces that would be true.

Mr. MacNICOL: They came back with the story—I have no way of proving it; it may not be worth proving, anyway—that they had to get a letter from somebody, and when they told me the name of the man they had to get the letter from, I knew it was no use for me to do anything in the matter. Whether what they said is a fact, I do not know. I could not pin it down. I hope that is not the situation.

Mr. McLARTY: I can assure the hon. member for Davenport that if he can give me evidence of any practice of that kind, it will, so far as I can direct it, be discontinued at once. I did not believe that any preference of that kind was being shown, and I hope that it is not true; but if it is, we will see that it is discontinued.

Mr. MacNICOL: The young man came back to me with this statement after being interviewed at the parliament buildings. They may have turned him down because he was not a satisfactory candidate for admission to the school, and that may have been the excuse which they gave me. I have heard the same thing in connection with the Galt school. There may not be a word of truth in it. The hon. member for Waterloo South, who, however, is not here, would probably know more than anybody else about that.

Mr. McLARTY: The hon. member for Davenport knows that the federal government does not direct the trainee to a particular school.

Mr. MacNICOL: I know that, but I was just reporting what has come to me. I am not prepared to say whether it is true, nor am I pursuing the matter any further.

One other matter. A young man goes, let us say, to the central technical school at Toronto, where, if he is going to work in a munitions plant, he will probably be given some instruction in the operation of a shaper, a drill, a planer, a lathe, or all of them. I assume he receives a limited knowledge in all of them, because the school is equipped with these various machines, and has some excellent teachers. How long is the student kept at the technical school, and is he paid while in attendance?

Mr. McLARTY: Yes, Mr. Chairman. I have some information on the matter of payment. The average course of training is, I believe, three months, although it varies under some circumstances. As the hon. member for Vancouver East said this afternoon, you cannot turn out a skilled mechanic in three months, but you can train him to some extent in the use of machines. My hon. friend mentioned, for instance, the Galt school, with which I am more familiar than I am with some of the others, because I have been through it a number of times. We try to keep definitely in contact with employers who require labour in war industries, and we endeavour also to turn out trainees in the particular course which is related to the work for which they are required. I do not think it would be fair to say that each trainee goes through the same course. Certainly that is not the situation at Galt. Some men may go to a firm at Brantford; some are required, let us say, for the Massey-Harris company; the training they receive is largely designed for the particular work which they will be called upon to perform after the course is given.

In connection with the amounts paid to trainees, the weekly allowances to be paid by the dominion to trainees in industrial training centres and preemployment schools are as follows: Single trainees living at home shall not receive any allowance except (*a*) where they have given up employment to attend a class, or (*b*) where there is a financial need. In such instances the maximum weekly allowance shall be $3.

Mr. MacNICOL: Three dollars a week?

Mr. McLARTY: Three dollars a week, yes. Single trainees living away from home shall receive a maximum weekly allowance of $7, except in those areas in which board and lodging cannot be obtained for that amount, when the maximum weekly allowance shall be $9. Trainees who are heads of families shall receive $12 a week. That is the provision in connection with those in the training classes.

Not to divert from the subject at all; the hon. member for Vancouver East asked a question—

Mr. MacNICOL: Will the minister let me finish my one or two questions? During the afternoon the minister said that many more young men are offering themselves for these various schools than there are facilities for training them.

Mr. McLARTY: I would say that was the present condition.

Mr. MacNICOL: I have been wondering whether any consideration has been given to training young men in the plants themselves. I have visited many plants, and I have in mind one very large one which is now being erected. Instead of sending a young man to the technical school at Toronto, or to any other technical school, where no place can be found for him, is there a plan whereby he can be sent direct to the plant, and the company advised that "this young man is now going to train, and we will allow the same amount for him as a trainee as he would receive in a technical school if he were attending there"?

Mr. McLARTY: No, Mr. Chairman; there is no provision made for any allowance for trainees in the plant schools. The term "plant schools" is perhaps a little vague. There is no question that industry is now training at a substantial rate. I gave a figure this afternoon but pointed out that it was a little

difficult to get a definite figure because of the different categories of the training in the various plants. For instance, one plant where I know they are training over five hundred said "we are not training any in a plant school", because they are training them in their factory. Another firm will send a list of every person in their employ as trainees even though some were there only seven days. That branch of the training plan is under the direction of Mr. Crawford, a former superintendent of technical education. He has set up a staff in the various provinces; he has visited all the industries where training would likely be carried on throughout Canada and is endeavouring to correlate the work. He advises me that the training is going on at a higher rate than estimated by the committee when it made its estimate in November last.

Mr. MacNICOL: They do not receive anything?

Mr. McLARTY: No; nothing is paid by the government to any trainee in an industrial plant.

Mr. MacNICOL: When a young man is graduated from a technical school after three months training, is there some provision or plan whereby he graduates into a plant? I ask because I have visited quite a number of plants in the last few week-ends. I go to the employment office and sit in with the employment agent—I know many of them, have been associated with many of them up and down the years—and I listen to them interviewing applicants. A man will come to the employment office; he will be asked to sit down; his whole record is carefully investigated, his age, schooling, experience, and all the time the employment agent is carefully looking him over. They are careful about getting the most gentlemanly men they can; if a young fellow sits with his hat on, or if he is not courteous in his replies, usually he is not taken on. What I want to mention, however, is that these men are of all ages, and they go directly to the employment office of the plant. What chance has a young fellow who has served three months in technical school to compete with the type of man to whom I am referring who goes to the employment office at the plant? Has the government set up any machinery whereby the young man whom they have paid $3 or $7 a week, as the case may be, and thus have invested that in his training, is taken into a plant after serving the three months in the technical school?

Mr. McLARTY: In the large majority of cases the way they would be taken on is that the plants are in direct contact with the schools, and vice versa the schools have contact with the plants—

Mr. MacNICOL: Does the government arrange that?

Mr. McLARTY: The government supervises and directs it through the provincial officers, and one of the functions of the directors is to make or to expand that contact. It would be more in that manner than through the employment offices that placements are made. As was mentioned this afternoon, when we have the employment offices operating under the Unemployment Insurance Act I believe they can serve a useful purpose in performing just the function that the hon. member has mentioned.

Mr. MacNICOL: I was coming to that. That is the British system, and it works satisfactorily. I have investigated many of those offices. In Great Britain, all applicants for employment go to the government employment offices. I was going to ask the minister whether that is going to be part of the programme in our set-up later on. In England, the employers are almost, if not actually, compelled to apply to the government employment offices for their help.

Now a final question, which perhaps I should address to the Minister of National Defence, regarding troops overseas, or wherever located, perhaps in Canada too; they probably have a good deal of off-time. Is there any type of school or educational facilities in the camps in England or Canada whereby the soldiers —should I address this question to the Minister of National Defence?

Mr. McLARTY: The Department of Labour has not instituted any such schools.

Mr. MacNICOL: Then I will ask the Minister of National Defence. Is there any plan under that department whereby soldiers have an opportunity of being trained in their off hours along the lines of business or any kind of technical or mechanical training?

Mr. RALSTON: That is done not by the Department of National Defence itself, but by the auxiliary service organizations, of which the Canadian Legion is one. The legion conducts educational courses I think in almost anything within reason that a man would wish, something of the type of correspondence courses, and men are given an opportunity in the camps to go to classes. That is the only educational work which is carried on in off hours.

Mr. STIRLING: Who is the head of that now?

Mr. RALSTON: Doctor Chateaugard on the other side, and Colonel Bovey in Canada. The department also has the training school for tradesmen which is being established at Hamilton.

The hon. member for St. Paul's this afternoon read a newspaper report indicating that there were complaints by manufacturers, particularly aircraft manufacturers, with regard to the four months' training interfering with their work. That was mentioned as one of the highlights of the visit which had been paid to the three aircraft industries, Canadian Vickers, Fairchilds and Noorduyn. I said to my hon. friend that if there was any case where a key man in an essential war industry had not had his training postponed, I should like to hear about it, because I want to bring it to the attention of my colleague the Minister of National War Services. I did bring the matter to the attention of General LaFleche, the deputy minister, in the absence of the minister, and I should like to put on record letters from two of these concerns. I have not as yet received word from the third. I asked General LaFleche if there had been complaints from these industries, and he said he would look up the records. I told him of the specific instances that had been given me with regard to the Noorduyn company, and he is following that up.

Let me read first a letter from Mr. Decary, divisional registrar at Montreal where Canadian Vickers are located. Apparently Mr. Franklin of Canadian Vickers had written to H. B. Chase, labour relations officer of the Department of Munitions and Supply, complaining that seven men had been taken from the Vickers aircraft plant and sent to camp. This is the letter from Mr. Decary, with whom General LaFleche communicated after he had heard about the complaint from Mr. Chase:

Montreal, Quebec, March 18, 1941.

Major General L. R. LaFleche,
Associate Deputy Minister,
Department of National War Services,
Ottawa, Ontario.

Re: Canadian Vickers Limited, Aircraft Division, National Labour Supply Council

Dear Sir:

1. With reference to your letter of March 17, 1941, enclosing copy of a letter dated the 14th of March, 1941, addressed to you by Mr. H. Mitchell, secretary to Mr. H. B. Chase, director general of labour relations, Department of Munitions and Supply and a letter addressed to Mr. H. B. Chase by Canadian Vickers Limited, I beg to report as follows.

This is the registrar reporting with regard to complaints which were received from Canadian Vickers.

2. Out of the seven (7) men mentioned in Mr. Franklin's letter to Mr. H. B. Chase, the following have received notices military training:

E 60382—Gibbs, Kenneth, training centre No. 41

E 60146—Patenaude, Gerard, training centre No. 41

The five (5) other men have not yet been sent notices military training, because I had sufficient number of men to fill the quotas without calling them.

Of the seven men named, these are the two who the registrar says were called.

3. Out of the two men mentioned in the above quoted letter, employed by the United Shoe Machinery of Canada—

Here I pause to say that the United Shoe Machinery Company was a sub-contractor of Canadian Vickers, and therefore Canadian Vickers were interested in men called up for training who were employed by the United Shoe Machinery Company.

—the following has received notice of military training:

E 61781—Cicchillitti, Nicholas Feliz, training centre No. 44. The other E 60283, Clement, Marcel, being unfit.

So we have three men, not seven, who the registrar says have been called: first, Gibbs; second, Patenaude, and third, Cicchillitti. Then he goes on:

4. I have communicated, by telephone, with the chairman of the board, who is out of town for the week, informing him of your letter also giving him the information above quoted. He told me that the men ordered to report for military training could not be postponed.

5. I then communicated, by telephone, with Mr. D. G. Campbell, superintendent of personnel, Canadian Vickers Company, Limited, and advised him that only Patenaude and Cicchillitti were being ordered to report for military training, and also Gibbs.

6. I inquired from Mr. Campbell whether the fact that these three (3) men were going to go to military training during the period opening the 20th of March, 1941, would hamper war production and I was informed that he was quite satisfied it would not.

7. During the conversation with Mr. Campbell I was told that the absence of Mr. Patenaude would cause them inconvenience, but that he would try and let another man go if Patenaude could be released.

That is, he would furnish another man in place of Patenaude.

I told him that could be arranged. A few minutes later Mr. Campbell called me back informing me that Patenaude could be dispensed with now, as another man had been found to replace him.

Very truly yours,

Pierre Decary,
Divisional Registrar,
Administrative Division "E"

I think that disposes of the Vickers company, which had three men called. The chairman felt that their training could not

be postponed; a call was put through to Mr. Campbell, superintendent of personnel, who was asked whether their absence would hamper war production and who replied that he was quite satisfied that it would not. Then he said the absence of Patenaude would cause them inconvenience, and he was told that perhaps he could get some other man to train instead of Patenaude, but a few minutes later he called back to say that the services of Patenaude could be dispensed with because another man had been found to take his place.

Another firm mentioned was the Fairchild company. General LaFleche, to whom I spoke this evening, sends me this memorandum:

> Following your telephone call at about 8.15 to-night, I proceeded to my office and there found the attached copy of a letter dated March 18th, 1941, addressed to me by Mr. Pierre Decary, divisional registrar "E", National War Services, 405 Transportation Building, Montreal, on the subject:
>
> Canadian Vickers Limited,
> Aircraft Division,
> National Labour Supply Council.
>
> I spoke to Mr. H. M. Pasmore, president, Fairchild Aircraft Limited, who told me that Mr. Bell—

That is Mr. Ralph Bell, director of aircraft production.

> —had inquired of him this afternoon. The telegraph company has just 'phoned in the following telegram from Mr. Pasmore:
>
> "I understand reports are circulating to effect that calling out of our employees for military training programme has interfered with our production. We wish to report your department has given every satisfaction in regard calling out of these employees for training in the past and for period beginning twentieth instant and that we have no complaints whatsoever."
>
> I tried to reach Mr. Noorduyn but he was out and not expected home until after eleven o'clock to-night. I asked his office to request Mr. Noorduyn to phone me to-morrow morning.

I know the committee will be glad to learn, as I am, that in at least two of the three cases mentioned this afternoon by the hon. member for St. Paul's, the companies seem to be completely satisfied that war production is not being interfered with.

Mr. STIRLING: I have been awaiting an opportunity to ask the Minister of National Defence a question with regard to the equipment of units training in Canada. When the minister dealt with the formation of the armoured division he said he was not going to give information with regard to their equipment. That is a matter the minister must decide. If he sees fit not to give that information, we certainly will not press for it. I think, however, it would be a good thing if the minister could see fit to give us information with regard to the equipment of units training in Canada.

The other day the minister gave the house some advice; he said that hon. members frequently were in a position to give information to the public and help the government along. With that I entirely agree, but hon. members must have that information in order to be able to impart it. I do not think there is any subject on which I am asked questions more often than on this very matter of equipment. The reason for that is, I think, that among one's constituents there are many who have sons, brothers or acquaintances training with units in different parts of Canada, and in their communications these men pass on to our constituents statements with regard to the equipment available.

There is no doubt that one reason for originally deciding on the thirty-day training was a shortage at the time of the necessary equipment. There is little doubt in my mind that to some extent the equipment situation has improved, but here we have infantry units and specialized units of many kinds. For instance, there are four or five motorcycle regiments training in Canada. I do not know whether they have the necessary motor cycles for their training, but certainly a technical unit of that description cannot get very far without motorcycles and the necessary facilities for keeping them in operation. In addition, there are signallers, anti-tank regiments, anti-aircraft companies and so on. These are all technical units, and without equipment they cannot get on with their training.

Would the minister see fit to give us some information in this regard? He will remember quite well that we of the opposition did not feel satisfied last year in respect of the amount of information forthcoming with regard to Bren guns. It did not seem to me then, and certainly it does not seem to me now, that it is reasonable to withhold information with regard to the output of Bren guns. Certainly infantry units cannot get on with this most necessary part of their training if they have not Bren guns in numbers greater than simply those necessary to look at, as unfortunately was the situation some time ago. We should like to be informed that it has improved. As yet the minister has not explained the reason for his extraordinary omission with regard to the entire change in the John Inglis contract when he spoke on November 15. He spoke two weeks after that change had taken place, and my recollection is that the space occupied in *Hansard* in referring to the Bren gun was only about three-quarters of an inch. He dismissed it very lightly. It was not until the news more or less accidentally tumbled out that the

public in Canada knew anything about the complete change in the John Inglis company contract.

The minister will no doubt explain to us why in that speech of November 15 when he, as Minister of National Defence was describing the progress his department was making in the war effort, he did not refer to that. If, however, the minister chooses to take the line that information with regard to this equipment in some detail would be of assistance to the enemy, again we must content ourselves, and remembering that the responsibility is on the government we must make what answer we may to the constituents who ask us for information.

Mr. RALSTON: At this hour, and I was going to say after a long day, I have not the information with me. As a matter of fact, I should like to go over with the staff the matter of equipment, just in order to see what information the staff feel I should give the committee. I assure my hon. friend I will give the committee all I can. According to the newspapers I have been erring on the wrong side, in giving rather too much information.

Mr. HANSON (York-Sunbury): I had not heard that.

Mr. RALSTON: That is with regard to certain matters which have been spoken about. It is suggested that there has been an error on the part of the government in giving too much information. But if my hon. friend will agree that it might stand, I shall have an opportunity to-morrow morning to get a statement and to present it to my hon. friend.

Let me say with regard to the Bren gun that I really was surprised at my hon. friend's reference thereto. With respect to the new contract for the Bren gun, I do not think it was signed when I spoke on November 15, and if it had been I would not have mentioned it. The question was as to the rate of supply, as to how fast we were getting the Bren gun. It was not my job—the matter of making the contract with the John Inglis company.

Mr. STIRLING: But the information, when it did come out, gave the public to understand that on October 31 the change was made. I think October 31 was the date of the order in council. I do not have it before me.

Mr. MACKENZIE (Vancouver Centre): November 29.

Mr. STIRLING: It was most decidedly in the press which reached me in western Canada that the change dated from October 31.

Mr. MACKENZIE (Vancouver Centre): That is right.

Mr. STIRLING: And the minister was speaking in this house—

Mr. RALSTON: What change was there that I would be giving with regard to the rate of delivery of Bren guns? What does my hon. friend mean?

Mr. STIRLING: I should say the Minister of National Defence would describe to the house such change in the John Inglis company's contract that considerably increased any production which would be forthcoming from then on.

Mr. RALSTON: The increase in production was, as I understand it, very largely an increase in production on account of British orders.

Mr. STIRLING: Under the new regime, the new contract, from what the Minister of Munitions and Supply tells us there is a possibility of turning out tens of thousands of guns.

Mr. RALSTON: Tens of thousands of guns in a long time. But I was dealing with the deliveries. I had given my hon. friend the number up to the end of September. This is what I say at page 149 of *Hansard*:

> Regarding Bren guns, I have given my hon. friend the number up to the end of September. I am not giving the number delivered each week, but it is a figure which I must say is most satisfactory having regard to what was planned on when production started at the plant. These weekly deliveries are increasing steadily and by the end of the first year of production we expect to have three times as many guns delivered as were called for by the contract.

Is there anything in the world which calls upon me to tell the house that my colleague is negotiating a new contract with the John Inglis company in order to reduce the cost of them? The production which was being increased was with regard not only to the Bren gun, but to other items. The Browning machine gun was one which had not been previously manufactured there at all. I plead guilty to anything for which I am to blame, but I do not take the responsibility for this. I am sorry if my hon. friend feels I should.

With regard to the matter of equipment, I shall be pleased to have a statement prepared, if the matter may stand over.

Mr. HANSON (York-Sunbury): I do not wish to detain the committee at all, but it does seem to me there was a lack of frankness on the part of the administration with respect to the new set-up of the John Inglis company.

Mr. RALSTON: I wish my hon. friend had brought up the matter when my colleague the Minister of Munitions and Supply was here, because he made the statement about it.

Mr. HANSON (York-Sunbury): I know he did. He told the house how it came out, first of all by an error on the part of his secretary, which I think was not quite cricket, and, second, through the inquisitiveness, if I may so describe it, of a newspaper. I do not think the country feels the government was quite candid with respect to this whole Bren gun situation. The new contract was made while the house was still in session, and we were not apprised of what was going on. I do not think that was candid. I am not, however, going to stir up that old sore now. It is not worth while.

Mr. RALSTON: I must take issue with my hon. friend about the matter of frankness.

Mr. HANSON (York-Sunbury): I find the Minister of National Defence never admits anything, and the Minister of National Defence for Air is much more candid. He tells us his difficulties, and we forgive him.

Mr. RALSTON: Yes, yes.

Mr. HANSON (York-Sunbury): And he gets away with it.

Mr. RALSTON: But at the same time, I do not propose to plead guilty to this.

Mr. HANSON (York-Sunbury): All right.

Mr. ADAMSON: With respect to the training of specialists and tradesmen in the vocational schools, what steps are taken? I understand the vocational school in Toronto is now being used by the army. I do not believe that was brought out in the minister's statement.

I believe that in the long run he would find it in the interests of economy to get the railways to cooperate in some way in connection with the matter of troops going on leave. A great many suggestions have been made, and it is my belief that over a period of years the government would find it an economy.

One further point. Fire underwriters have said that the fire protection at Camp Borden is a model for all other military camps in Canada. I suggest that hon. members having camps in their districts should see the methods by which the huts at Camp Borden are protected from fire. There is a stand pipe in each hut, and a permanent hose connection. The underwriters' association have reported favourably on that method of fire protection.

Mr. RALSTON: I understand my hon. friend is referring to the trades school being set up in Hamilton.

Mr. ADAMSON: And in Toronto.

Mr. RALSTON: We are providing for the training of about 2,000 men. There will be a normal three months' course, and for certain trades that course will be lengthened, depending upon the degree of specialization required.

Mr. ADAMSON: For the ordnance corps.

Mr. RALSTON: Yes, for the ordnance corps particularly, and for the army service corps.

Mr. ADAMSON: What are the methods of recruiting for that course?

Mr. RALSTON: We are not recruiting for the course. Men are enlisted, and are then sent for training.

Mr. HANSON (York-Sunbury): They are selected.

Mr. RALSTON: We are not recruiting for the course. The men are recruiting into the army, and then taken there for training in their special trades.

Mr. GREEN: Did the Minister of Labour obtain figures showing the number of men and women who have taken or are now taking industrial training, dividing the information into the four classes of priority? Perhaps the minister could also tell us what arrangements have been made for training men in shipbuilding. Then the Minister of National Defence for Naval Services might tell us whether the government has in contemplation the training of merchant seamen. The Minister of Munitions and Supply announced the other day that Canada was to build her own merchant ships. Many losses have been suffered by the British merchant marine, and it may be only a matter of time until merchant seamen may be required from Canada.

Mr. McLARTY: We are doing some training of those who will be absorbed into the industry, but the industry itself is doing most of the necessary training and upgrading of its own employees. While we give basic training in the use of machines used in shipbuilding, the real training can be done only in the shipbuilding yards. I shall give the figures asked by my hon. friend as far as I have been able to obtain them, and there will be an opportunity later on to give them in a more complete form. The total number in the war emergency and youth training plans at the end of February was 11,423. Of that number, those in the industrial classes totalled 6,351.

Mr. BLACK (Cumberland): Is that the number in training or those who have been trained?

Mr. McLARTY: The number in training on the last day of February. The hon. member for Vancouver South referred to the number of veterans of the last war and those who had been discharged in this war who were in training. The number in the industrial classes was 436. Perhaps I could give an indication of their ages, as follows:

16 to 19 years	18
20 to 29 years	76
30 to 39 years	42
40 to 49 years	235
Over 50 years	65

According to the ages they would seem to be practically all veterans of the last war.

Mr. GREEN: How about those in the second class, civilians over forty?

Mr. McLARTY: I have not the breakdown of civilians over forty. I have the figures of those in the war industrial classes only, as follows:

16 to 29 years—	
Male	1,535
Female	121
20 to 29 years—	
Male	1,936
Female	94
30 to 39 years—	
Male	579
Female	13
40 to 49 years—	
Male	339
Female	4
50 and over—	
Male	150
Female	13

Mr. GREEN: Perhaps the Minister of National Defence for Naval Affairs could answer my question with regard to the training of men for merchant ships?

Mr. MACDONALD (Kingston City): This matter really does not come under the Department of National Defence for Naval Services; it belongs rather to the Department of Transport. I do not know of any plans having been made by the government for the training of men for merchant ships. The suggestion has been made that some attention should be given to the formation of manning pools in various parts of the country, so that merchant seamen may be allotted to those ships which may be short of crews.

Mr. BLACK (Cumberland): Is there any restriction on the use of wooden ships with diesel engines? This is a matter of great concern to Nova Scotia. Many of these ships can travel just as fast as steam transports.

Mr. MACDONALD (Kingston City): I do not know that there is any restriction in the formal sense, but as far as convoy work is concerned I do not think anyone would think of using ships of wooden ship size. I doubt if anyone would think of a ship of less than 6,000, 7,000 or 10,000 tons, and with those sizes you are out of the wooden ship class. The opinion of naval men and of those engaged in merchant shipping is that for convoy work you cannot have a great number of small ships because they are as much trouble as a large ship.

Mr. BLACK (Cumberland): The controlling factor would be speed rather than size, would it not?

Mr. MACDONALD (Kingston City): They are slow ships, generally speaking.

Mr. GILLIS: I should like to direct a question to the Minister of Mines and Resources (Mr. Crerar). I notice that there is an item of $147,000 under this department to provide for the detention of alien seamen who refuse to perform their regular duties in Canada. There are rumours to the effect that in some parts of Canada the reason for this refusal is the fact that the government has offered them lower rates of wages than are paid to Canadian seamen. Last summer there were some 200 French seamen off four or five French boats which had been brought into Sydney from the banks and tied up in the harbour. These men were roaming around apparently without any supervision or means of livelihood, and most of them could not speak the language of the country. Was anything done for this particular group of men? In just what way is this $147,000 to be spent?

Mr. MACDONALD (Kingston City): When my hon. friend says that the government offered them a lower wage than they have been receiving, that must be incorrect because the government does not operate any transatlantic steamship service, and the pay of merchant seamen is entirely a matter between the seamen and the shipping company which employs them.

Mr. GILLIS: These men being detained by the government, the government would have something to say with respect to their employment.

Mr. MACDONALD (Kingston City): The government would have nothing to say with respect to their employment. They were detained, I presume, for some offence under the Canada Shipping Act. The government would have nothing to say as to the rate of wages because they are not government

employees in the same sense that men in the navy are. The government does not operate a merchant marine service across the Atlantic.

Mr. CRERAR: If I might add a word to what my colleague has said, sometimes we find sailors deserting their ship when it reaches Canadian shores, and then they come under our immigration laws. We insist that they shall return to their ship, and if they do not they are taken into custody. These sailors are of many nationalities, and a great majority of them cannot be deported to their own country. Consequently they are detained in custody in Canada until they express a willingness to return to their vocation as sailors. This sum of money is to cover the necessary expenses incidental thereto.

Mr. MacINNIS: Can the minister give us the number of these men, their nationality and the names of the ships they deserted?

Mr. CRERAR: I cannot give that information now, but I could probably get a fairly accurate summary prepared.

Mr. GILLIS: The sailors I spoke of did not desert their ships, but the ships were detained in Sydney harbour for some months. Perhaps they are still there. The 200 sailors were not detained but were moving about from place to place, living pretty much on the charity of anyone who would take them in.

Mr. KINLEY: Didn't they sell their fish in Sydney?

Mr. GILLIS: I do not know. My connection with them was to try to secure relief for them, and I was wondering how that group of men was taken care of. Their ships were detained and they were prohibited from taking employment anywhere.

Mr. ROSS (Souris): I should like to ask a question of the Minister of Trade and Commerce. The Ottawa *Journal* of March 17 last has an article headed "Teachers Offer to Take Census Free of Cost". It goes on to say:

> The Canadian Federation of Teachers volunteered to take the census free of cost to the government, it was announced on Saturday by Miss Eleanor Anderson, president.
>
> Miss Anderson was speaking at the annual meeting of the federation of women teachers for districts 12 and 13, in the Chateau Laurier. She said no reply to the offer of voluntary help had been received.
>
> She thought most of the appointments had already been made and were likely to be political. Miss Anderson told the *Journal* that 25,000 teachers in Ontario alone were available for census work and would like to undertake it in June.

My question is, does the government consider it an essential part of the war effort to take the census at this time? And has the government refused the offer of the Canadian Federation of Teachers, which would save the country approximately $3,000,000 at this time? We know that census commissioners have already been appointed on a patronage basis. Will the minister say on what basis the enumerators will be selected?

Mr. ILSLEY: Just before my colleague answers, I want to enter a protest, Mr. Chairman, against this discussion going any further than is necessary at this time. There is an item in the main estimates covering the census and the discussion on the census should take place on that item, not on this clause. If we get into a discussion on that subject now, there is nothing to prevent us from giving the rest of the week to it if some of the members continue the practice of the last few weeks. If my colleague desires to answer to oblige the hon. member, and then the matter is let go at that, I have no objection, but I certainly would object to the committee entering upon a discussion of the census under this clause.

Mr. ROSS (Souris): That will be quite satisfactory to me. To take the census would cost a lot of money, and I thought, therefore, my question had a bearing when we are now voting this large sum for the war.

Section agreed to.

Section 3 agreed to.

On section 4—Loans authorized.

Mr. HANSON (York-Sunbury): The minister has not in any way divided the amounts which may be raised by loan and by taxation. I know this is the exact wording that was used in last year's bill, but I think some restriction should be placed on the total amount that can be borrowed and on the amount to be raised by taxation. The whole $1,300,000,000 could be borrowed under this clause. It is too wide, and I want to enter a formal protest against that kind of procedure.

Mr. COLDWELL: Before the clause carries, I want to take this opportunity of doing something which was declared out of order when the resolution was before the house.

Mr. ILSLEY: Will the hon. gentleman do me the favour of giving me a few minutes before eleven o'clock to present supplementary estimates to the house?

Mr. COLDWELL: I shall be very glad to give way to the minister now because what I have to say would take until eleven o'clock.

Mr. ILSLEY: Thank you.

Section stands.

Progress reported.

FURTHER SUPPLEMENTARY ESTIMATES, 1940-41

A message from His Excellency the Governor General transmitting supplementary estimates for the financial year ending March 31, 1941, was presented by Hon. J. L. Ilsley (Minister of Finance), read by Mr. Speaker to the house, and referred to the committee of supply.

On motion of Mr. Crerar, the house adjourned at 10.55 p.m.

Tuesday, March 25, 1941.

The house met at three o'clock.

WAR SAVINGS COMMITTEE

REVIEW OF OPERATIONS AND RESULTS, 1940-41

Hon. J. L. ILSLEY (Minister of Finance): I desire to lay on the table a letter from Mr. W. H. Somerville, joint national chairman of the war savings committee, to which is appended a review of the operations and results from May, 1940, to March, 1941.

This is the first report I have made to parliament on the results of the war savings drive conducted last month.

ST. LAWRENCE WATERWAY

INQUIRY AS TO CONSULTATION WITH PROVINCES BEFORE SIGNING OF AGREEMENT

On the orders of the day:

Mr. J. H. BLACKMORE (Lethbridge): I should like to direct the following question to the Prime Minister. Did the Prime Minister or the government consult the government of each of the nine provinces to ascertain its views with respect to the signing of the treaty between the United States and Canada in connection with the St. Lawrence seaway power project?

Right Hon. W. L. MACKENZIE KING (Prime Minister): The answer is in the negative.

COAL

REPORTED INCREASE IN PRICES OF CERTAIN GRADES IN NOVA SCOTIA

On the orders of the day:

Mr. GORDON B. ISNOR (Halifax): I should like to direct a question to the Minister of Labour, as the minister having jurisdiction over the war-time prices and trade board. Is he aware that while prices of coal from Inverness, Bras d'Or, Indian Cove, Drummond and other independent mines have not been altered, Halifax prices of all soft coals produced by the Dominion Coal company and subsidiaries have been increased by 25 cents per ton to Halifax consumers? This being so, what action if any does the minister propose to take in the matter?

Hon. N. A. McLARTY (Minister of Labour): The hon. member was kind enough to give me notice of his intention to ask this question, and a few moments ago I obtained the information in connection with it.

I am not in a position to deal with the several mines referred to in his question, the respective coal operators and the variation of prices. But I believe the answer would be this. A little time ago a conciliation board granted wage increases amounting to a very substantial sum to the Dominion Coal company. I believe that now the operators are suggesting a proposal under which there will be some increase in the prices of certain grades of coal. This matter at present is receiving the consideration of the fuel administrator and the war-time prices and trade board, to determine whether such increases are justified.

YOUNG COMMUNIST LEAGUE

SUBVERSIVE MATERIAL ALLEGED TO HAVE BEEN MAILED TO UNIVERSITY STUDENTS

On the orders of the day:

Hon. H. A. BRUCE (Parkdale): I should like to direct the attention of the Minister of Justice to a circular letter entitled "Student Beacon" issued by the Toronto district young communist league, which is being mailed to university students and which contains subversive material intended to interfere with our war effort. Have the Royal Canadian Mounted Police been made aware of the activities of this young communist league and, if so, what means have been taken to suppress it?

Right Hon. ERNEST LAPOINTE (Minister of Justice): I will give my hon. friend an answer to-morrow.

ARMY CANTEENS

INQUIRY AS TO REPORT OF COMMITTEE REVIEWING REGULATIONS

On the orders of the day:

Mr. F. D. SHAW (Red Deer): Yesterday the Minister of National Defence stated that a committee is at present engaged in inquiring into the regulations governing the operation of army canteens. I believe he stated

also that he would make inquiries as to the date when this report might be expected and made available. In view of this I would ask the minister three questions:

1. Has the minister any further information as to when the report may be expected?

2. Has this committee authority to effect changes in the regulations as they at present exist?

3. When the report is finally tabled will the regulations, as they are at present or as amended, be tabled together with the report?

Hon. J. L. RALSTON (Minister of National Defence): As to the first question I must confess to my hon. friend and the house that I have not had an opportunity to ascertain what progress has been made. It will be necessary to communicate with Mr. Macdonnell, at Toronto, and the matter slipped my mind. With regard to tabling the report, of course the report will be received by the department, where it will be considered and the disposition to be made of it will be decided. My hon. friend will understand that the committee has power to recommend but not to make changes in the regulations until the matter has been considered by the government.

Mr. SHAW: I believe the minister expected that I should make a decision with regard to the first part of the question I placed on the order paper.

Mr. RALSTON: As to the present regulations. I asked my hon. friend to consider whether he desired the tabling of those regulations. I take it he does desire that the present regulations be tabled, and I shall see that they are tabled to-morrow.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

The house resumed from Monday, March 24, consideration in committee of Bill No. 19, for granting to his majesty aid for national defence and security—Mr. Ilsley—Mr. Fournier (Hull) in the chair.

On section 4—Loans authorized.

Mr. COLDWELL: Mr. Chairman, when the resolution foreshadowing this measure was before the house last month we attempted to amend it so as to secure consideration for a compulsory non-interest-bearing loan, and for the acquisition by the government of the entire banking system of Canada, so that it might become during the war and afterwards an instrument of national policy.

The national ownership and control of the financial system has always been a fundamental policy in our proposals and in our programme. The amendment we made then was ruled out of order, and Mr. Speaker was good enough to indicate that at some future stage such a resolution might be introduced. This I believe is the stage at which an amendment to the measure is in order. I believe an amendment to this section of the bill would be proper.

To-day we have before us a bill for the raising of $1,300,000,000 for various purposes, and in several ways, in connection with the war. Had we the opportunity now we would move to amend this section to include the acquisition of the chartered banks. But I understand that would not now be in order, because it would involve a further expenditure of public money and, according to the rules, private members may not move for such expenditure.

We must therefore confine ourselves to the amendment of the section to provide that such part of the appropriation as may be raised by way of loan shall be raised without interest, and levied according to ability to pay.

I therefore move, seconded by the hon. member for Vancouver East (Mr. MacInnis):

That paragraph 1 of section 4 be amended by striking out all the words after "raise" in line sixteen, and substituting the following therefor:

"under the provisions of the Consolidated Revenue and Audit Act, 1931, by way of compulsory interest-free loans to be levied according to ability to subscribe, such sum or sums of money, not exceeding in the whole the sum of one billion three hundred million dollars as may be required for the purposes of this act."

and that paragraph 2 of section 4 be amended by the deletion in line twenty-six, of the words "and the interest thereon."

The amended section would then read:

(1) The governor in council may, in addition to the sums now remaining unborrowed and negotiable of the loans authorized by parliament, by any act heretofore passed, raise under the provisions of the Consolidated Revenue and Audit Act, 1931, by way of compulsory interest-free loans to be levied according to ability to subscribe, such sum or sums of money not exceeding in the whole the sum of one billion three hundred million dollars as may be required for the purposes of this act.

(2) The principal raised by way of loan under this act shall be a charge upon and payable out of the consolidated revenue fund.

This does not of course prevent the government from raising all or a substantial portion of this amount by taxation, or by the use of the Bank of Canada for any direct issue of credit or currency which may at any time at any given moment seem desirable and necessary. Like the original section, it limits

the amount that may be raised by loan or otherwise to $1,300,000,000. As the minister explained last Thursday at page 1880 of *Hansard,* the actual amount to be borrowed will be stated when the budget is introduced in the near future.

On the same day the minister expressed himself as being opposed to the principle now included in the proposed amendment. He went farther and said it was not the policy of the government to promote the sale of interest-free bonds on a voluntary basis, as we now have it, by advertising and the like. He made the extraordinary excuse—I thought it was extraordinary—that such a campaign would cause the conscientious, generous and self-sacrificing people to buy the interest-free bonds while the more prudent and selfish would refrain from doing so.

Our amendment meets this very objection, for it would place the prudent and the selfish upon the same basis as the imprudent and the unselfish. Indeed the proposal in our opinion is eminently fair and eminently just. Moreover, what is the object of borrowing money? Is it to finance the war, and for no other purpose? Obviously not, for if we fought wars with money, then the government could issue currency and credit for all our needs. But wars are fought with goods, not with money. It was this truth which Dorothy Thompson had in mind in an article from which I quoted some time ago, and in which she said:

> The allies had money, but failed to produce goods. The Germans had no money, but did produce them.

A few days ago I was taken to task by the hon. member for Calgary East (Mr. Ross) for quoting those words with approval. But they are true, and to quote them did not imply approval of the methods Hitler used to regiment and reduce the living standards of the German people, and thus to divert German resources almost exclusively to war production.

Money is not wealth; to think so is a delusion. All wealth is in goods, and no amount of money will suffice if we lack the goods and services which money may buy. This is obvious of course if we consider the position of a beleaguered city. It may have all the credit and all the currency it ever had, but if it lacks the materials of defence, food, munitions and so on, then the accumulation of currency and credit in that beleaguered city will be of no avail.

The real cost of this war must be paid for now in the sacrifice of the things we should like to have, because the raw material, the machines and labour are required for the production of war goods. Therefore to be realistic we must measure the material cost of this war, as of every other war, in things, not in billions of dollars. If we grasp this idea we shall see that no amount of money in our pockets will enable us to buy the luxuries which we must make it impossible to produce. However, in our profit economy the diversion of industry from peace-time requirements to war-time needs is admittedly a most difficult problem. Heavy taxation and the levying of gifts or of loans from large accumulations of wealth must be undertaken. Otherwise, to use the minister's words, the selfish and the prudent will invest their money in the wrong things and industry and labour will be diverted from our war effort, thus defeating the objectives of the conscientious, the generous and the unselfish members of our population.

Only to-day I came across an interesting illustration of what I mean. Reference was made recently in the *Financial Post* to two estates which had recently been probated in the province of Ontario. One estate totalled the enormous sum of $5,229,020. The main item was made up of stock in a mining company, of which the deceased had been the president, amounting to $4,565,000. Book debts and promissory notes totalled $540,931; life insurance, $112,182; real estate, $7,590 and personal effects, $3,317. Apparently there had been no subscription to any issue of government bonds. A week or two earlier the same paper published the details of the estate of one of the great industrialists of this same province, a man who had been the president of one of our great producing corporations. That estate totalled $942,858 made up of stocks in more than thirty companies totalling $670,996; insurance, $166,228; real estate $73,000; cash, $11,965; bonds and debentures, $1,467 and other assets, $19,202. The gentleman in question had purchased one $400 war saving certificate and he held one $1,000 five per cent, 1945, Dominion of Canada bond.

I bring these details to the attention of the committee in support of the argument which I am making as well as the argument the minister made for us the other evening. It is contended that any form of loan, whether interest-bearing or non-interest-bearing, merely defers the evil day when the loan will have to be repaid. That is true to a degree. But when we make an appeal in war-time we ask the people in effect, not only to lend money but to forgo the building of new non-essential homes and plants, to defer the purchase of new automobiles or expensive radios, and even to do without some necessities. Our plea is that this should be done on a fair and just basis so that the poor, unselfish and sometimes imprudent people will not have to deny

themselves necessary food. Compulsion should not be exerted only upon the wage earner, the salaried masses and incidentally the farmers whose incomes are to be lowered by restrictions upon the deliveries of grain, tobacco and other produce.

A compulsory non-interest-bearing loan, levied according to ability to pay, is obviously a means of securing something nearer equality of sacrifice. Make those who have a large stake in the outcome of this war because of the wealth and property which they control bear their fair share of the burden which the nation is being called upon to carry. There will be some who will say, "Why not a capital levy instead of a non-interest-bearing loan?" To my mind a capital levy should have been made after the last war in order to retire some of the money borrowed on the capital destroyed during the war. Perhaps that is the method we shall have to adopt in part when this war is over in order to retire a substantial portion of the debt we are now assuming.

The proposal which we now make is a constructive suggestion similar to that which was adopted in New Zealand. According to recent articles which appeared in the British press, the same thing is being considered by some people in the United Kingdom. If our war financing is undertaken realistically we shall be able to escape many of the difficulties which caused confusion after the last war. After all, if properly planned and used, the tremendous capital equipment we are now providing for our war effort ought to enrich us when this war ends. It is true that much that we shall have made during the war will be destroyed during its progress or made useless by peace. But we are learning now how to extract from the earth through man's skill and by proper organization much more than we ever extracted before. Thus if we have the sense to profit by this lesson we can enjoy more things than we have ever enjoyed before. In that sense we shall be actually richer as a nation.

War has taught us that the masses do not suffer poverty when there is work to do. It is unemployment which curses many thousands in our midst with poverty. War with its tremendous waste and demands actually ends or at least mitigates unemployment and through the provision of wages and salaries relieves some forms of poverty and distress. This is certainly a paradox, and it is an indictment of our present economic system. It is a problem which we must prepare now to solve when peace comes; for if we do not solve it we shall perish as we deserve to perish. It seems to me that now is the time to consider the implications of the post-war period. The amendment offers a logical solution to one part of our war financing problem.

We propose that Canada borrow now without interest and on a graduated plan, according to ability to pay, the purchasing power we desire to transfer now from peace to war, and which can and must be transferred again in the future from war needs to peace-time requirements. How that transfer shall be made eventually, and upon what kind of basis the loans now being made shall be repaid, the progress of the war and our post-war needs must determine.

One thing is certain. We must not allow this war effort to enrich the so-called prudent and the selfish. We must not, as we are doing, play into the hands of those who monopolize wealth and power in this country.

The amendment would do much to prevent us from falling into such a net in the future, and would bring about a measure of that equality of sacrifice of which so much has been said in this house and throughout the country. We ask men to fight; we ask men and women to labour; we ask all to sacrifice. Equally we should ask wealth to place itself now at the disposal of the nation, without interest and without profit. I believe that if something of this sort were done, it would do much to remove from the minds of many of our people the fear that when the war is ended the great masses of the people will not be any better off, indeed will be worse off, and that a few people in the Dominion of Canada will be infinitely richer in accumulated wealth than they were before the war broke out.

In my opinion we have not yet been able to obtain that enthusiasm for the cause in which we are involved that we ought to have obtained. If this is a war, as I believe it is, for the preservation of our democratic way of life, then it seems to me that the nation has the right to ask those who, through fortuitous circumstances as well as by their own endeavours, have been able to accumulate this nation's goods, to lend their wealth freely to the nation. I am not even suggesting that we ask them at this moment to give it, though later we may have to ask them to give some of their wealth. But certainly at this time we have a right to ask them to lend to this nation in her hour of need their wealth without interest and without profit. I am urging the government to accept this point of view and to allow this clause to be amended in order that the portion of this appropriation which is to be raised by loan may be raised by a graduated loan based on ability to

subscribe, and that the money shall be loaned without interest at least for the duration of the war.

Mr. TURGEON: May I ask the hon. member a question before he resumes his seat?

Mr. COLDWELL: Certainly.

Mr. TURGEON: The hon. member said to-day what he said when making a similar amendment some weeks ago, that the particular form of loan he proposes was adopted in New Zealand. My reading, which might not be complete, is to the effect that while New Zealand has passed general legislation which would permit the government to levy an enforced loan, interest-free, in the same manner as our mobilization act permits this government to do many things which have not yet been done, New Zealand as a matter of fact has not yet taken action in the matter of interest-free enforced loans. Would the hon. member tell the committee what action, if any, New Zealand has taken in that matter? I am asking for information.

Mr. COLDWELL: In the summer, I think it was, or in the fall, I quoted from the budget speech of the Minister of Finance of the Dominion of New Zealand, who made the definite statement that money would be raised in New Zealand this fiscal year by means of a non-interest-bearing loan. I have before me the Montreal *Standard* of March 8, 1941, which contains an article headed "New Zealanders Taxed for Social Experiments and on Top of That, War," in the course of which it is stated:

> The government (of New Zealand) expects to realize an additional $26,000,000 from 15,000 individuals and 3,000 corporate taxpayers through a compulsory war loan on which no interest will be paid for three years.

Mr. TURGEON: What was the amount?

Mr. COLDWELL: The amount stated in the Montreal *Standard* is $26,000,000. That sum does not quite agree with my recollection of the statement made by the Minister of Finance of New Zealand when he introduced his budget last June. As I recollect it, he stated then that New Zealand expected to raise in the neighbourhood of fifteen million pounds, which would be closer to $60,000,000, at current rates of exchange, than the sum mentioned in the Montreal *Standard*. I think it is clear, both from his budget speech and from the paragraph I have just quoted, that such a loan has actually been raised in the Dominion of New Zealand.

Mr. BLACKMORE: Before this amendment is voted upon I wish to make a remark or two. The last time the hon. member for Rosetown-Biggar (Mr. Coldwell) brought this amendment forward the Social Credit group supported it as the lesser of two evils. The present system of debt and taxation is a very grievous evil. Taxation, if it is persevered in as this government seems determined to persevere in it, will ultimately destroy the standards of living of the people of Canada. First it will decrease the production of the Canadian productive machine because it will heighten the cost of production; second, it will ultimately deplete the resources with which producers must produce, and, third, it will bring about a failing of markets both at home and abroad.

Furthermore, this system will develop grave dangers of inflation through irregularity of production. As matters now stand there is no way in which the governing power in Canada appears to be able to cause the kind of production it wants or to prevent or divert the very kind of production it does not want. The result is that we might have a dangerous scarcity of certain commodities in this country and a dangerous superabundance of other commodities. This is one of the conditions which will bring about inflation.

Let us bear in mind that inflation is a rise in prices which results from a shortage of goods. The policy which is being followed to-day of a general, blanket taxation as heavy as the people can possibly stand is aggravating the tendencies to inequality and irregularity and unbalance of production, and will continue to do so more and more. There is altogether too little appreciation of just what inflation is and what causes it and how it is to be overcome. As soon as there is a complete understanding of the matter on all sides, there will be no doubt of the accuracy of the remark which I have just made, that the present system of debt and taxation is leading to inflation.

Furthermore, the system which is now being followed may ultimately impair Canada's credit—perhaps irrecoverably. It is one thing to make wise-cracks about certain governments that have declared themselves unable to meet their commitments with respect to debt; it is entirely another thing to face facts and to realize that the government at Ottawa, if it continues to plunge this country headlong into debt, will ultimately arrive at the point at which it will no longer be able to meet its commitments and to maintain its rate of interest.

These points which I have mentioned indicate the inevitable tendency and danger and result

of borrowing and taxation. Altogether the policy is a dangerous one. There are so many who seem to assume that the way we are proceeding now is the sound way. There was a time when farmers believed that the only sound way of travelling was by horse and buggy or horse and wagon, and that the only sound way of harvesting their crops was with a sickle and by means of hand binding. To-day everyone has outgrown such antiquated notions. The very devices which used to be sound came, as a result of the development of certain forces in the world, to be unsound. The financial system which we have traditionally followed is becoming unsound because of the development of great forces on the earth.

I have said this much to indicate that the present system is a great danger. We thought as a Social Credit group that for the time being it was safer to cause people to subscribe to interest-free loans than it was to go forward indefinitely with the present system of borrowing and taxation.

But times have changed. Forced loans, which the hon. member for Rosetown-Biggar has advocated in his amendment, are a danger. It matters not whether New Zealand or any other country in the world has resorted to them; they are a danger. They would be more subversive of Canada's economic well-being than even the system which is now being followed.

In the first place, the surpluses of money which had accumulated and which were to be found when the amendment was last presented have now, I believe, been largely dissipated as a result of rigid taxation and aggressive government borrowing. In my opinion, what surpluses now remain are needed for productive enterprise in this country. Forced loans tend to discourage people. I find in my contacts with men and women from day to day that there is developing in Canada a very unfortunate attitude of pessimism and uncertainty and anxiety and discouragement, because people feel that there is simply no use in striving. This is the logical result of the taxation we now are using. It will be, more still, the result of forced loans.

Mr. DOUGLAS (Weyburn): The hon. member means that they will not work unless they get big profits.

Mr. BLACKMORE: I am not saying that they will not work unless they get big profits. But if a man works twelve or fourteen hours a day and then has all he worked for taken away from him, he will ask, what is the use, why not work four hours a day, the way the other fellow does, and have what you accumulate taken away from you?

[Mr. Blackmore.]

Mr. DOUGLAS (Weyburn): The soldiers seem to fight very hard for very little.

Mr. BLACKMORE: We will grant that the soldiers fight very hard for very little. But I do not think you will find farmers doing that, although they are loyal enough; I do not think you will find mine owners, oil producers, munition makers or clothing manufacturers spending their hours for nothing.

Mr. GILLIS: Mine owners don't work!

Mr. DOUGLAS (Weyburn): Mine owners do not dig coal; it is the mine workers who do that.

Mr. BLACKMORE: That may be so, but the mine workers will stop producing coal as soon as the mine owners stop.

Mr. DOUGLAS (Weyburn): They had better take over the coal mines, then.

Mr. BLACKMORE: There is another aspect of the forced loan to which I object. It is a step towards communism. I was a bit disgusted last evening, while the hon. member for North Battleford was giving what I regarded as a very fine speech, to hear four or five hon. members across the way come out with the word "communism." I wonder whether such people know what communism is.

An hon. MEMBER: What is communism?

Mr. BLACKMORE: I am not sure that I know; but this, I believe, is one of the concepts of it: that it stands for taking away from people what they have; it is based on state ownership. Now, if the state takes away from people the money they have toiled to earn and save, surely the state is making a step towards communism, unless I am entirely misinformed as to what communism is. In other words, we have just been hearing reasons advanced for a step towards communism; and no one used the word "communism" when the hon. member for Rosetown-Biggar was speaking! Yet when the hon. member for North Battleford was advocating better schools and further health measures and more of many things which every hon. member knows we ought to have, certain people were foolhardy enough to whisper "communism." I must say, Mr. Chairman, attitudes like that utterly confound me.

This really is a step towards communism. Whether the government or the hon. member for Rosetown-Biggar wishes to introduce communism, it is certainly, in my opinion, a move in that direction.

Moreover, it is a step towards totalitarianism, towards regimentation, towards cen-

tralization. Totalitarianism, regimentation, centralization are characteristics of the very foe we fight.

But, people will say, what are you going to do? Well, Mr. Chairman, that is just the question we should have begun to ask ourselves two years ago. If the system which we are using to-day is such that we face an inevitable break-down, as a result of which we are first advised and then urged to adopt measures which we all abhor, it should be evident that the system we are endeavouring to apply is at bottom fallacious, unsound.

The proposal for forced loans is a step towards reducing all to poverty instead of raising the people to prosperity. There seems to be an idea on the part of some people that some people are poor because other people are rich. I have never been impressed by the reasoning of those who hold so. We could take all the money and possessions away from the few who possess them and distribute them evenly among all the population and still have everybody poor. The solution certainly does not lie along that path, the path of reducing everybody to poverty. The solution lies in the direction of raising everybody to prosperity; and in a country like Canada that is unquestionably possible. Those who maintain that it is not possible have simply not thought far enough through the problem.

It is plain common sense that in a country like Canada, with such an abundance of resources, a country so varied, with such people as we have in Canada, with such industrial equipment, means of transportation and organization generally, there can certainly be prosperity for everyone even while we fight the most terrible war the world has ever seen. If the system we are following to-day denies this fact, then the system condemns itself.

The present proposal is only one of the devices which will be urged upon the governments of our land under the present system. If we continue making attempts to do the impossible, such as making an antiquated financial system work in a modern age to fight a modern war, a forced loan is simply one of the desperate expedients and doubtful experiments to which governments will be tempted to resort more and more as the days go by.

Some people will ask, "Well, what is your solution?" I have no intention of offering a solution; I am merely explaining the reasons why my group are not going to support the amendment. I will say though, in passing and in closing, that the solution lies along the line of wisely using our national credit. Such a use will obviate the need of, and the urge towards, such extreme measures as this one.

To those who feel disposed to smile, let me put this question baldly: Is it not common sense that a country as wealthy as Canada is in resources should be able to fight this war and still have prosperity? Everyone will say, "Yes." Next, can the system we are following enable us to do that? Everyone will say, "No." Very well, then; there must be a way out. Now, where is the way out? If we set to work as members to find the way out we shall begin to do some effective thinking; we shall begin to do the things we came here to do.

I am going to move an amendment to the amendment as follows:

That the amendment be amended by striking out all the words after "therefor" in the third line thereof, and substituting the following:

Under the provisions of the Consolidated Revenue and Audit Act, 1931, by way of interest-free money obtained from the Bank of Canada, such sum or sums of money not exceeding in the whole the sum of one billion three hundred million dollars as may be required for the purpose of this act. This method to be used only to the extent that government expenditures cannot be met from the receipts of taxation and the sale of interest-free war saving certificates.

Mr. ILSLEY: Mr. Chairman—

The CHAIRMAN: Before the minister speaks, I wish to direct the attention of the committee to citations 551 and 552 in Beauchesne's Parliamentary Rules and Forms. Section 4 of the bill which is now under consideration is submitted by the government, and the proposal is to raise the amount necessary to carry out the provisions of the act by way of an interest-bearing loan. The amendment proposes to raise that money by way of a compulsory interest-free loan to be levied according to the ability to subscribe such sum or sums of money, not exceeding in the whole the sum of $1,300,000,000, as may be required for the purpose of the act. I quote:

551. It is a fundamental principle that no resolution or amendment to increase a charge upon the people can be moved with the Speaker in the chair; it must be initiated in committee by a minister acting on behalf of the crown.

No. 552 reads:

552. Though it is the function of the committee of ways and means to impose rather than to repeal taxes, example of the repeal of taxation effected in this committee are to be found upon the journals. Proposals for the variation or modification of taxation can therefore be made in the committee; but these

proposals must be grafted upon the financial scheme submitted by the government, and must not affect the balance of ways and means voted for the service of the year. Amendments, therefore, can be proposed to substitute another tax, of equivalent amount, for that proposed by the government, as, for instance, a proposal to substitute probate and legacy duty on real property as an alternative for an inhabited house duty, the necessity of new taxation, to that extent, being already declared on behalf of the crown.

In my opinion the proposed amendment increases the burden upon the people and it does not lie within the power of a private member to move such an amendment in committee. It should be moved by a minister acting on behalf of the crown.

Mr. COLDWELL: May I discuss that ruling for a moment. I should like to have a further elucidation of the ruling on the point that it increases the burden upon the people. In my opinion, it decreases the burden upon the people considered collectively and as a whole, the people being those who are taxed collectively, the people of Canada. I submit that in reality the amendment decreases the burden upon all the people of Canada and is therefore entirely in order.

The CHAIRMAN: In my opinion the amendment is out of order for the reasons I have stated. Is the committee ready for the question? The question is on section 4. Shall section 4 carry?

Section agreed to.

On section 5—Orders and regulations.

Mr. CLAXTON: Before this section carries I should like to say a word or two on the subject of information. I had hoped to be able to make these remarks yesterday but the minister of information was away on business, so I should like to avail myself of his presence here to-day to say just a word or two on this subject.

There is no need to emphasize to this house or any other body the importance of information during this war; it cannot be exaggerated. All I wish to do is urge upon the government that the very excellent work described in the minister's statement of March 7 should be carried on and extended with all the pressure and urgency that the minister, with his very great ability, can bring to bear. Obviously, early in the war this government decided that it would not be proper for it to issue propaganda in the United States. With that decision I think every hon. member of this house was thoroughly in accord; and when friends in the United States asked me why we Canadians were not telling about the things we were doing in the war I always answered by saying, "Is it not much better that we should say too little than that we should say too much?" I think everyone who has thought about the matter was in thorough agreement with that policy, but we see where it brought us on several occasions. Representative Maas and Senator Nye, two of the leading isolationists in the United States, urged upon the United States congress and senate that Canada was not playing its part in the war, that we were not matching the United States lease-lend effort. In the United States our war effort was not thoroughly appreciated, and we did not have the flow of tourists backward and forward through which we might carry on those normal, friendly contacts we have always had with our neighbours to the south. In the New York *Times* of yesterday Mr. P. J. Phillips says that Canada's ban on publicity in the United States is to be lifted. I certainly hope that we are going to give more information in the United States, for a good many reasons which must be obvious to all. If we are to continue to have the close, friendly relations with the United States that we always have had and should always have, the United States must understand what we are doing, and we must express ourselves, our aims and our actions, to the people of that country.

This week, Mr. Chairman, there is an added reason for taking this matter more seriously. The London *Economist* in its current issue is reported to state that we in Canada should have a lease-lend bill like that of the United States. There again what we are doing is not properly understood, and with all respect I suggest to the minister that here is another opportunity for his department and the other branches of the government to increase the work they are doing abroad.

I suggest also that there is room for an intensification of information service at home. The fact that this debate has gone on for twenty-one days indicates that there is a lack of appreciation of what is being done. Had even more information been given, it is possible that the debate would not have lasted as long as it has. But I suggest that the way to give information, in addition to giving it here in the house, is through the press releases issued by the government in the ordinary course.

Within the last few days I had the very great privilege of visiting Halifax harbour and Sussex camp, and of seeing aeroplane factories and munitions works. I was immensely impressed with what I saw and with the appearance of the alert, fit men who are doing our jobs for us in those places. I suggest that if all the members of this committee had seen what there is to be seen of our war work in the various camps, ports and munitions works, a great deal of the

criticism that has been expressed here during the last few weeks never would have been uttered at all. There I saw men from all parts of Canada, men of whom any part of Canada might be proud. We cannot bring all the people to the Halifax and Sussex camps, but we can bring Halifax harbour and the Sussex camp to the people by means of the movies and broadcasting and the publications of the department of information. This department has been doing most useful work. The films that have been prepared are magnificent, but I think more can be done to bring home to the people of Canada a realization of the wonderful work that is being done and that is too often deprecated here and elsewhere.

It is exceedingly difficult in Canada to translate this figure of $1,300,000,000 into munitions, planes, tanks and trained men and women working eight-hour shifts, day and night, turning out things necessary for our security. Unless this can be visualized by the people and by this house, then it is apt to be felt that this sum represents just so much money or so much talk. What a story there is to tell! It is a story of which every Canadian should be proud. During the last eighteen months we have multiplied our air force tenfold, our army fortyfold and our navy tenfold. Each day we are raising and spending $2,700,000, while in the last war the figure was only $117,000. The expenditures for which we are providing in this appropriation, together with the amounts required for the repatriation of securities, are five times the expenditures during the corresponding period of the last war, and more than the entire cost of the last war. That is the picture the people need to see. That is why I say this figure must be translated into things they can see and words they can understand. That is the job the department of information has been doing, the job that I hope it will do more thoroughly as time goes on.

These are difficult times, Mr. Chairman. We are at perhaps the most serious stage of the war. These are times that try men's souls. We need, and the government need, all the support and help they can get from every source, and I suggest that the department of information has a task to perform in telling the story so that the government may get that support. The exploits of our men in the air, the indomitable courage of our merchant marine, the endurance of the people of England have won the admiration of the world and have called forth our gratitude day by day. In the air, on land and at sea the heroic age has returned to our race, and that is the story that should be told.

Mr. CHURCH: The country has taken this huge expenditure with a great deal of good grace. But the business men of Canada do not wish to permit the functions of the House of Commons to be usurped by scores of orders in council. We have seen the effect of orders in council in connection with what has happened concerning the National Resources Mobilization Act. This huge war expenditure is what we are getting because over a period of twenty years parliament had become so strongly Geneva-minded.

In my opinion this section is unnecessary. Parliament meets from time to time, and there is no necessity to give the governor in council such vast, wide powers—powers which practically override the financial structure of Canada. They override our tariff provisions—and all this is done merely by order in council. It has the effect of adding further burden to the hard-pressed industries and businesses of Canada.

The artificial burdens, barriers and restraints of trade to which business men are subjected render it almost impossible for them to conduct their business. This bill smacks of the Marxian policy of the totalitarian states. It may also be a gesture to hon. members to my left. It may be the intention to give them a loaf in this way, and to decline to give it to them in the manner that has been described this afternoon.

If Hitler comes he will care nothing about our financial structure. He will not consider whether we have a government composed of Liberals, Conservatives, Social Crediters or members of the Cooperative Commonwealth Federation. Before this measure passes the government should tell the country to what extent its financial programme to be carried out by order in council will interfere with the normal peace-time business of the wholesalers, retailers and grocers. In my opinion the aim should be to add to the production of armaments without a shortage of non-defence consumption, and without unnecessary substitution of goods used in every day consumption.

As I said the other day this country has unlimited resources. Our natural resources from coast to coast are vast. We have financial resources and, notwithstanding the measures brought down by the government in connection with war expenditures, I say we have a reserve of labour. There is still a large reserve force of labour, and especially of people over forty-five years of age. Those are men with technical experience, and well able to help.

The people of Canada are behind the war effort to the utmost extent, but I must object to giving the government of the day the vast liberties set out in this measure. In our experience in connection with the National

Resources Mobilization Act, we see what happens when we give power to act by order in council. We gave the government supreme power over the liberty of the subject, and over all other statutes which safeguarded our liberties.

What has happened in connection with conscientious objectors? With its power to pass orders in council, what did the government do? Instead of giving those people work in military districts, or sending them to Iceland or to Greenland's icy mountains, by the time the government has finished I am convinced it will wind up, by order in council, by presenting every conscientious objector in Canada with a gold watch and an illuminated address. That is what happens when we have government by order in council.

Has the business community been consulted about this section? Have officials of the Bank of Canada been consulted? Have the so-called brain trusts, which appear to be doing very little at the present time, been consulted? Does the manner of proceeding under section 5 fit into the lease-lend bill? Does this section take into account the effect it will have on that bill? How will it affect the negotiations now pending with Washington concerning parity of the dollar? The United States has made some arrangements with other north American countries, and in my opinion there should be some explanation of the very wide powers conferred under this section. If we are to pass legislation of this kind, we might as well abolish any further control over the financial structure of the country.

Mr. MacNICOL: I should like to ask a question in connection with paragraph (c) of section 5, which reads:

> Prescribe administrative practices with respect to contracts and agreements for the execution of any public work or for the acquisition of lands—

And so on. If a munitions plant is to be erected on land expropriated by authority of an order in council, has the expropriating authority the right to pay the owner of the land anything it desires to pay?

Mr. ILSLEY: This subsection has for its purpose the strengthening of the cabinet's control over departments. For example it might be felt desirable to lift war transactions out of the scope of the Public Works Act or the Department of Transport Stores Act. Likewise the desire might be to have a uniform practice with respect to purchases. At the present time a department, except that of Munitions and Supply, goes to council for a works contract involving $5,000, but it can buy $50,000 or more of equipment without coming for an order in council. Generally speaking the intent is to provide the necessary power to the governor in council to make such rules as are considered necessary. It also permits pool orders for materials and supplies. It gives the governor in council wide powers with regard to the acquisition of lands. I do not think that in the acquisition of lands the governor in council would be bound by the provisions of other acts, once this act is passed. That is the object of the measure.

This subsection was contained in a similar section of the last appropriation bill. The whole of section 5 is identical with that of section 5 in the 1940 act.

Mr. MacNICOL: Perhaps the question I have in mind has no connection whatsoever with this paragraph. I shall ask it however, and if I am out of order the minister need only nod his head, and I shall not proceed farther. I have in mind a resident in my constituency who about twenty years ago purchased land in a subdivision which had been opened up outside the city of Welland. Many others purchased land in that subdivision but in the course of that twenty years much of it has become the property of the original owner, which I believe is now the city of Welland. As the minister is probably aware, recently a large munitions plant has been built on that land outside Welland, in Crowland township. The person I have in mind was from a thrifty Scottish family, and having paid something on the land he determined to continue paying until he received the title. This was accomplished. Including the original cost of the land, payments for interest, taxes and so on, he has put into that property more than $500. Along comes the purchasing agent of the Canadian National Railways and states to this person that he must take $50 or nothing, because that is all he will get for his land. "Other people are selling their lots for that, and the city of Welland are selling theirs," he said. This does not seem to be British fair play. I do not believe the government wants to have land needed for war work purchased under such conditions.

Mr. ILSLEY: I do not know just what the facts are in that particular case.

Mr. MacNICOL: I have stated them quite clearly.

Mr. ILSLEY: I presume there are other facts which have not been brought to the attention of the hon. gentleman. I do not think the government would tell Canadian citizens that they can take a certain amount or nothing. This is the first instance I have heard of that kind of thing. I do not know

just how the government go about it; this would come under the Department of Munitions and Supply.

Mr. HANSON (York-Sunbury): What is the general practice followed in taking over land for war purposes? Is it done under the general expropriation act or under the War Measures Act?

Mr. ILSLEY: I am afraid I cannot tell the hon. gentleman.

Mr. HANSON (York-Sunbury): Some complaints were made to me in connection with the taking over of land at Tracadie in the county of Gloucester for the new artillery range. After investigation and having the facts supported by affidavits I came to the conclusion that generally speaking the prices offered were fair and reasonable. I happened to know the right of way agent who was acquiring the land for the government and he promised to review all cases that I named. There were instances where there was a difference of opinion or perhaps a difference of judgment as to the value of the land. My own view is that the government was endeavouring to pay a fair price, not the large price that some people would like to get from the government in war time. In this case I think the land is being acquired by the Department of National Defence, but I want to say that I believe they are trying to protect the public treasury. After I had investigated a series of cases where exception was taken to the amount offered, they promised to review them. Perhaps the method followed was a little harsh. I understand that these people were told that if they did not take what was offered, the government would expropriate the land and if they did not get a court decision for more than had been offered they would have to pay all costs. Perhaps that was turning on the heat a little too much, but on the whole I think the job has been done in a decent way. This is certainly not carping criticism.

Mr. MacNICOL: Perhaps when I said "that or nothing," I should have said that they were told they would have to accept that, for they would get no more. I had some conversation with an officer of the railway company which was buying the land and he was quite emphatic that they would not pay any more than $50 for the lot. If my memory serves me correctly, these people had paid approximately $500 in purchase price and keeping up taxes and interest. That offer struck me as being rather arbitrary. I think they should have been given at least the original cost, and I believe they were willing to settle for that.

Mr. ILSLEY: If my colleague were here he could inform the committee as to the practice of his department. I think it is just what the leader of the opposition has said. A certain sum is offered and if a man does not desire to accept that, the land is expropriated and he must run the risk of the final decision by the court not being more than the offer, in which case he would have to pay the costs.

Mr. MacNICOL: A humble working man cannot engage a solicitor to contest an action in the courts. He is forced into the position of having to take whatever is offered.

Mr. ROSS (St. Paul's): Many hundreds of millions of dollars have been advanced to companies to do war work. This money has been advanced in various ways. In some cases the government have built buildings, in other cases they have purchased machinery and in other cases the companies have bought machinery on government account. What is going to happen to this machinery after the war is over? I suggest that a permanent commission be set up so that proper records can be kept and a study made of what will be done with this machinery and these plants after the war. Now is the time to tackle this problem. We should not wait until the war is over.

When the Minister of Munitions and Supply went to England the men in the aeroplane industry were rather pleased because they thought that he would discuss matters with the British people and they would know when he returned just what was going to be done. But so far no policy for the future has been laid down, and no announcement has been made by the government as to what planes are going to be ordered or what planes will be required. Some of the men in the aeroplane industry are beginning to get to the end of their tether as far as work is concerned. Unless some policy is announced and orders given out they will not know where they are. In some factories men have been laid off. I just bring this matter to the attention of the government. For the sake of the industry I think some statement of policy should be made by the government.

Mr. MACDONALD (Kingston City): With regard to machinery purchased by the government or by companies for the government, the title remains in the government. This is provided for in each contract. There is no doubt as to the ownership; this machinery will belong to the government when the war is over. As to aeroplanes, I do not think it is correct to say that the government has no policy with regard to aeroplane production. That policy has been announced in the house.

Mr. HANSON (York-Sunbury): The hon. member means for the future, after the war.

Mr. ROSS (St. Paul's): I realize that some of these companies have been given work to carry them to the end of the year, but it must be remembered that it takes a considerable time to bring an aeroplane from the blueprint to the construction stage. It will tail off at the other end. Men are out of work and they want to know how they can carry on. In respect to the machinery, I realize that the title is in the government. But has the government a tag on every piece of machinery? The records may be all there, but you have this building down here on Wellington street with thousands of people in it, with various subdepartments. Records are scattered all over. It seems to me that there should be a permanent commission to collect this information. I quite realize that the government has title to the machinery, but some plan ought to be worked out in connection with what is to be done with it after the war.

Mr. O'BRIEN: Yesterday I asked a question of the Minister of Labour in connection with the expenditures in New Brunswick upon vocational schools. I notice the minister is not in his seat, and as we seem to be making rapid progress with this bill perhaps the Minister of Finance could give me the information. If it cannot be given now, it may be available later, after the bill passes.

Mr. ILSLEY: I do not just remember what the question was.

Mr. O'BRIEN: The question was: How much has already been paid to New Brunswick, and has any amount been appropriated to that province for the future for vocational training?

Mr. ILSLEY: I have not the information but I shall bring the question to the attention of my colleague. The hon. member would like the assurance that he will get the information at some later stage?

Mr. O'BRIEN: In the event of this bill passing.

Mr. ILSLEY: There will be stages of this bill or of some other bill on which it can be given, perhaps on the supplementary appropriation bill. I will bring the question to the attention of the Minister of Labour.

Mr. CASTLEDEN: Clause 2 of section 4 reads:

> The principal raised by way of loan under this act and the interest thereon shall be a charge upon and payable out of the consolidated revenue fund.

Would the amount chargeable to consolidated revenue fund be less if there were no interest?

[Mr. A. L. Macdonald.]

The CHAIRMAN: The question is out of order.

Mr. COLDWELL: Surely, Mr. Chairman, the question is not out of order.

The CHAIRMAN: The question is futile, in my opinion. The question is, will the charge on consolidated revenue be less if there is no interest charge. The answer is obvious; therefore the question is futile.

Mr. COLDWELL: What is the answer if it is so obvious?

The CHAIRMAN: I have not to answer the question. All I say is that the question is futile because the answer is obvious. If any hon. member asks whether the sun will rise tomorrow I would rule the question out of order because it was not a serious question; and asking whether a charge would be less without interest or with interest, is in exactly the same category. The question is futile and therefore out of order.

Mr. COLDWELL: What becomes of your ruling of a short time ago, Mr. Chairman?

The CHAIRMAN: My ruling is not in question. The hon. member could have appealed from my ruling, but he did not do so. Therefore my ruling is not before the chair now.

Mr. CASTLEDEN: I am willing to abide by your ruling, Mr. Chairman, and I will now ask what might appear to be a more serious question. Has the Minister of Finance given any consideration to pegging the rate of interest? A good many of these so-called selfish prudent people very often withhold from investing in a loan hoping that another loan will be offered later at a higher rate of interest. It would do a great deal to save interest charges on the consolidated revenue fund if the rate of interest on these loans was pegged right now.

Mr. ILSLEY: I think the hon. gentleman is wrong. He may be right about one individual in ten thousand, but he just is not acquainted with what actually happens when a loan is floated. The second war loan was offered to the public, not at a higher rate but at a slightly lower rate of interest than the first war loan, and it was subscribed in very large amounts by institutions and wealthy individuals. The disappointment in the early stages of the second war loan was not with people with large amounts of money to subscribe, but with persons of small or moderate incomes. That was where the loan fell down in its early stages—not with the class of people to whom the hon. member refers. I have no brief or preference for one income

group rather than another, but since I have been in the Department of Finance I have never seen any real ground for an accusation against one income group rather than another. You will find selfish people as well as unselfish people in the low income groups, and you will find selfish and unselfish people in the higher income groups, and I could give the house a good many instances to substantiate what I am saying.

The hon. gentleman asks whether the government has given consideration to announcing that the interest rates will never be higher on any subsequent issues. Is that his question?

Mr. CASTLEDEN: Yes.

Mr. ILSLEY: I said the other day in answer to a question by the hon. member for Acadia (Mr. Quelch) that the government could not give an assurance about interest rates. But the facts speak for themselves. The interest rate has not gone up, and our securities have maintained their standing on the market. At the time we floated the second war loan, the first war loan bonds, if I remember correctly, were selling at par or slightly above, and I have no expectation that it will be necessary to pay higher rates of interest than we are paying at the present time. I can give no assurance further than that.

Mr. CASTLEDEN: What was our experience in the last war?

Mr. MACDONALD (Kingston City): I submit, Mr. Chairman, that this discussion is out of order, because it has to do with clause 4, which has already been passed.

The CHAIRMAN: The point of order is well taken.

Mr. DIEFENBAKER: I think my question will be in order under section 5, paragraph (d), which provides that the governor in council may, by order or regulation, "provide for the utilization, control and disposal of equipment, materials and supplies".

Under the heading of "supplies" I would ask the Minister of Agriculture to explain the anticipated expenditure of $7,877,550 in the war appropriation estimates for 1941-42 for the Department of Agriculture, and in particular what expenditures are anticipated "to provide assistance in disposal of agricultural products rendered surplus by war". That will be found at the bottom of page 1497 of *Hansard*.

Mr. GARDINER: The first item, $31,000 for administration, is obvious. Next is "programmes to encourage production of essential war supplies, $100,000". That comes under the war supplies board, covering such things as dealing with flax. The government has taken over the flax supplies and has designated a certain proportion of them for Ireland, some for Britain, and some here. The next item is for the "purchase, storage and distribution of agricultural supplies, $1,000,000". Those two items have to do with similar things, namely, the production of garden seed, flax, and certain substances which are required for fertilizers, the shipment of which out of the country has to be guarded against.

The commodity boards are the dairy board and the bacon board. For the bacon board the amount is $71,300; for the dairy products board, $14,950. There is a vote for assistance in the disposal of agricultural products rendered surplus by war: that is the large item, and has principally to do with apples. The expenditure under the apple and cheese agreement is indicated in the item above, "disposal of Canadian apples, 1939 crop, $1,503,108.89". There will be a similar amount required this year for apples. "Disposal of Nova Scotia apples, 1940 crop, $1,172,820.79." For the advertising of apples last year, $49,704 was required; a similar amount will be required this year.

For the other items which appear in the war appropriation of 1940-41, covering purchase, storage and distribution of fibre flax seed, a similar amount will be required this year. For bacon board administration, $33,618, a large amount will be required. For dairy products board administration, which was $5,434 in 1940-41, probably a larger amount will be needed this year, as the full year will be covered. A sum corresponding to last year's vote will be needed for scutchers, and for the purchase of seed potatoes. The final items are, agricultural supplies board administration, $23,576, and root vegetable seeds, $30; similar amounts will be included this year. These various items make up practically the whole amount in 1940-41.

Mr. DIEFENBAKER: Why the very large increase, approximately $3,000,000 over the expenditures of last year? What does the minister intend to do which will justify that extra expenditure?

Mr. GARDINER: I am sorry that I have not the items any further particularized than in the figures which were given here. Not all the amount estimated last year was spent.

Mr. HANSON (York-Sunbury): Of course the minister should explain why there is this increase in the amount. There must be a reason, and if he needs time to get the information we shall be glad to give it to him.

While I am on my feet may I ask why no consideration has been given to the plight of the potato farmers in Prince Edward Island

and New Brunswick? Potatoes are selling in Prince Edward Island at 24 cents a bushel, or 60 cents a barrel, without any appreciable market. The farmers of eastern Canada who grow potatoes as their principal crop are just at the end of their tether. They have had ten years of this sort of thing, with one on two exceptional seasons in between. They have used up their reserves and their resources. In addition, the price of their fertilizer has steadily increased, largely as a result of the legislation passed by this government in the baby budget last fall; the cost of exchange was increased, and the ingredients of the fertilizer have to be imported. The potato farmers see their neighbours in the Annapolis valley being bonused. They see that our friends the wheat farmers of the west have at least had their prices stabilized, no matter what the opinion may be as to the adequacy of the price to be received by them. Over and above that they observe this gesture on the part of the government, that men shall be bonused for non-producing. But not one word from this government with respect to the farmers of the maritime provinces, aside from the apple growers. If the government can provide a war appropriation of $6,600,000 to dispose of unmarketable agricultural surpluses, they can do something for the potato farmers of Prince Edward Island and New Brunswick.

I do not understand why these people are forgotten. The industry is an important one in the northern part of the Saint John river valley. I have often urged that these men get back into other varieties of production. They look across to the county of Aroostook in the state of Maine and they see that the potato men there make a strike one year in three or four. There is no doubt about it that occasionally over there they make a real strike. But it is a crop for which the soil of our growers is adapted. They have the machinery, they are able to produce, and they do not lightly yield their desire to do their own planning. I am more particularly interested in the growers of New Brunswick because I know their situation a little better. I have lived among them, gone around among them, and tried to assist them as an individual and in every way I could. I have put money in those farms, a good deal of which I shall never get back, nor do I expect to get it back. But they have a right to ask this government, when it has adopted the policy as a war measure of asking the general taxpayers of the country to put up $6,600,000 for surplus agricultural products, that it should give them at least some consideration. And it is denied them. That position is not good enough for the potato farmers of New Brunswick. They want to know why they have been overlooked.

The CHAIRMAN: I do not believe that the remarks of the hon. gentleman are in order under section 5 of the bill. Section 5 is limited to orders and regulations by the governor in council. Shall section 5 carry?

Mr. HANSON (York-Sunbury): I suggest that, before you get the bill through, the minister should give us an answer. We do not intend to delay this bill; I should like to see it get through before six o'clock.

Mr. GARDINER: I have no objection to giving an answer with respect to potatoes, but I must bow to the ruling of the chairman in connection with a matter of this kind. There is a proper time to bring it up. As a matter of fact the particular subject raised has nothing to do with war expenditures at all; it has to do with agriculture as such.

Mr. HANSON (York-Sunbury): But the minister is justifying the purchase of the Annapolis valley apple crop, under this section and in the bill; and surely the subject of potatoes is just as germane as that of apples.

Mr. GARDINER: No, Mr. Chairman, it is not.

Mr. HANSON (York-Sunbury): If the minister wants to leave it there, I am satisfied.

Mr. ADAMSON: Under section 5, subparagraph (c), I should like to address a question to the Minister of National Defence for Naval Services. I received a letter to-day, from which I will omit names, but I believe it is symptomatic of what is going on in Halifax. It reads in part as follows:

> My young nephew . . . was recently transferred by the Royal Canadian Air Force from Toronto to Halifax, and writes to his mother . . . in Toronto stating that air force men must live in billets in Halifax, and are allowed $5.95 per week for subsistence.
>
> He states that it is extremely difficult to obtain billets and he considers he was lucky to land in with a former pal at an address given as —— Barrington street. He states that this house is full of airmen and soldiers, and his landlady collects $4 per week each from them plus 35 cents per meal. He states that he is one of five living in one room, so that in this case the woman takes in $20 per week from one room only.

Would it be asking too much to request that the minister should have some person check—

The CHAIRMAN: Order. The remarks of the hon. gentleman do not fall within paragraph (c) of subsection 1 of section 5. The purpose of the section is to empower

the governor in council to make orders and regulations, but it has nothing to do with the subject matter with which the hon. gentleman is now dealing.

Mr. ADAMSON: The question I wish to bring to the attention of the government is this. This is going to be a long war and this practice of billeting out men in the three services is extremely bad for their morale. Would the government consider at the earliest possible date the question of establishing camps in order to alleviate the present condition, which is reacting very badly on all the services.

Mr. HANSON (York-Sunbury): May I point out that the reason for the inadequate discussion of the question with regard to the $6,600,000 is the fact that the Minister of Agriculture (Mr. Gardiner) was not here yesterday when the discussion arose. I think some latitude might be allowed now that he is in his place. I have no doubt the minister was away on important public business. I would certainly advise that an opportunity be given the minister to make a statement on this particular point.

The CHAIRMAN: The minister has stated that nothing with regard to potatoes was involved in the vote of $1,300,000,000 though there was something in connection with apples, and that when the estimates of the various departments are being dealt with in committee an opportunity will be given for full discussion. I should like to remind hon. members of the committee that, when an item is before the committee, if a general discussion foreign to that particular item is allowed, the discussion is started all over again when the proper item in the estimates is taken up by the committee. I have not made these rules. The rules governing parliamentary procedure have come to us as the result of wisdom and experience and it is the duty of the Speaker and of the deputy speaker in committee to apply those rules. Parliamentary institutions and parliamentary practice and procedure will fall into contempt unless the rules are adhered to. I should like to have parliament change the rules if it is desired to have some other method adopted of dealing with matters of procedure to be followed in committee. But unfortunately I am the slave of the rules and regulations of parliament and my function, as is the function of the Speaker, is to apply the rules. I should be derelict in my duty if I did not bring the rules to the attention of hon. members and point out the importance of observing them, if we wish the public, as well as ourselves, to have any respect for our parliamentary institutions.

Mr. GRAYDON: May I refer to a matter that was brought up yesterday in the house —and I hope I shall not be in the unfortunate position of the gentleman who was discussing the probability of to-morrow's sunrise. The question was discussed at some length yesterday and the minister in charge at that time was the Minister of National Defence. I believe he was taking for the time being the place of the Minister of National War Services. I would refer the committee to page 1826 of *Hansard,* in the first column of which three questions are raised. The first is with regard to newspaper reports concerning Canadian Vickers Limited; the next, a newspaper report concerning the Fairchild company; and the third, a report with regard to the Noorduyn company. As I understood, reports came to the minister with regard to the first two companies, and he received a memorandum from General LaFleche, deputy minister of national war services, at the foot of which, as will be seen at page 1826 of *Hansard,* appear these words:

> I tried to reach Mr. Noorduyn but he was out and not expected home until after eleven o'clock to-night. I asked his office to request Mr. Noorduyn to phone me to-morrow morning.

That indicated that to-day we might expect an answer with regard to the Noorduyn company and the matters to which reference was made in the debate at that time regarding aircraft production and the question of the four months training plan. I should like to have some explanation.

The CHAIRMAN: Does the hon. gentleman suggest that that has anything to do with conferring upon the governor in council the power to make orders and regulations? I do not regard the question as in order at this point.

Mr. GRAYDON: We are all trying to get certain information of a public sort, and I submit that a little latitude might be allowed with regard to a matter as important as this particular communication purports to be. I should like the chair to give the minister an opportunity to answer the question.

Mr. MARTIN: I do not like to take serious issue with the hon. gentleman who has just spoken, but this house has sat for five weeks and ministers have been subjected to all sorts of inquiries, and the hon. gentleman was the one who rose in his place the other day and criticized the administration

because of the method then pursued. Every latitude has been extended to hon. gentlemen opposite, and the hon. member who complained against the administration is the very man who is now asking us to go back to the procedure which the other day he condemned.

Mr. GRAYDON: It is not very often that my hon. friend misses the point entirely, but on this occasion—

The CHAIRMAN: Order. I have intimated to the hon. gentleman that in my opinion the subject which he proposes to discuss does not come within the provisions of section 5, which empowers the governor in council to make orders and regulations. Unless he has the unanimous consent of the committee to suspend the rule, I must rule his question out of order.

Mr. HAZEN: If I am in order, Mr. Chairman, and I trust you will call me to order if I am not—

An hon. MEMBER: He will.

Mr. HAZEN: —I should like to address a question to the Minister of National Defence for Naval Services. Has any consideration been given to the question of equalizing pay and allowances of officers, petty officers and men in the navy so as to bring them more into line with the pay and allowances of officers, non-commissioned officers and men in the army? I have here some information which I believe is correct, showing that a lieutenant in the army receives $5 a day pay and $69 allowance per month, while a sublieutenant in the navy receives $4 a day and $45 allowance. A captain in the army receives $6.50 pay and $74 per month allowance, while a lieutenant in the navy receives $5 pay and $45 per month allowance. A sergeant in the army receives $2.20 and $59 allowance while a petty officer in the navy receives $2.40 and $37.50 allowance. A corporal in the army receives $1.70, or a lance-corporal $1.50, and $59 a month allowance. An able seaman gets $1.85 and $37.50 allowance.

An army lieutenant with a wife and two children receives $219 per month, while a naval officer of equivalent rank with a wife and two children receives $165. An army captain with a wife and two children receives $269 per month, while a naval lieutenant with a wife and two children is paid $195. These are just some of the figures I have before me, which would lead to the conclusion that officers, non-commissioned officers and other ranks in the army receive much better pay than officers, petty officers and men of the navy. Moreover, naval officers suffer in other respects in comparison with army officers. Naval officers must supply themselves with standard uniforms from private outfitters, whereas an army officer can purchase his battle dress from quartermaster stores at about one-quarter the cost of a naval officer's uniform.

I do not wish to take up the time of the committee to go into all the figures I have before me. I have referred briefly to this matter for the purpose of asking whether any consideration has been given the question of equalizing the pay of the different services.

Mr. MACDONALD (Kingston City): A great deal of consideration has been given the question which my hon. friend brings before the committee. It is true that when you take the daily rate of pay of a certain officer in the navy, and the allowance which his wife and children may receive, and compare that with the pay and allowances received by an army officer of similar rank, you may find some discrepancy. In certain ranks the naval officer will receive less; in certain other ranks he will receive more. But naval officers have many allowances of one kind or another which have come down through the years, and which help to make up for that difference. I have not the figures before me at the moment, but I shall be glad to make a more complete statement to-morrow. I may add, however, that the matter of relative pay has been considered by a committee representing all three services, which has studied the matter for months and which struck what it thought was a fair solution, taking everything into consideration. That solution is being applied at the present time. My hon. friend has been very fair in his presentation, and I shall be glad to look into the matter.

Mr. GRAYDON: After I mentioned the Noorduyn question, Mr. Chairman, and before I obtained a reply, you were kind enough to suggest that perhaps the committee would give unanimous consent in order that I might obtain an answer to my question. I should be very glad if you would put that question to the committee now, in order that I might obtain at least some reply from the minister. It is a matter of only a very short answer.

The CHAIRMAN: What was the question?

Mr. GRAYDON: I do not want to repeat my whole statement, but we should like to know what sort of reply was received from the Noorduyn company in connection with the interference of the four months' training with the operations of that plant.

Mr. GARDINER: The discussion which took place yesterday had not been brought to my attention, and I do not know whether a reply has been received as yet. If the hon. member would care to repeat his question on

the orders of the day to-morrow, I should be glad to have information available at that time.

Mr. NICHOLSON: I wanted to ask the Minister of Munitions and Supply a question under paragraph (d); but since he is not here, perhaps the Minister of Finance could give me the explanation. My question has to do with the rate of profits available to corporations receiving government contracts.

The CHAIRMAN: The hon. gentleman is out of order in asking that question under section 5.

Mr. NICHOLSON: Paragraph (d) states:

(d) provide for the utilization, control and disposal of equipment, materials and supplies—

The CHAIRMAN: This section only gives the government power to make orders and regulations.

Mr. NICHOLSON: Paragraph (d) provides for the utilization, control and disposal of equipment, materials and supplies. What control has the government in connection with these materials? I have in my hand an article by Leslie Roberts stating that contracts are liable to continuous audit and that the figures may be revised in order to keep the manufacturer within his ten per cent profit zone. I should like to know whether this ten per cent profit zone is on the entire investment or, for example, if the company had a turnover of a million dollars a month in connection with materials purchased, whether or not this percentage would be on the total turnover.

Mr. ILSLEY: There is no ten per cent profit zone of which I have ever heard. I would have to see the article to know what the writer is talking about. I know in some instances an arrangement is made to keep the profit down to five per cent.

Mr. HANSON (York-Sunbury): With some companies it is three per cent.

Mr. ILSLEY: Yes. I am quite unable to understand that reference to ten per cent.

Mr. NICHOLSON: Even assuming that the profit is five per cent, would that be on the total volume for a given month? For example, if you bought a million dollars worth of material in the course of the month, would this five per cent profit be allowed on the materials purchased over a given period?

Mr. ILSLEY: It would depend on the contract. There is no general rule.

Mr. ADAMSON: I should like to ask the minister of naval services a question. I understand that officers of the Royal Canadian Navy are exempted from payment of income tax. Is that so? With reference to the situation in Halifax, I understand that the navy is building a large new barracks there, but are the other services doing the same thing? Would the minister find out for me from his colleagues?

Mr. MACDONALD (Kingston City): I cannot answer at the moment, but I will ask my colleague, who will be back to-morrow, or his deputy, and find out for my hon. friend.

Mr. ILSLEY: I suggest, Mr. Chairman, that the question with regard to income tax is not in order under this section.

Section agreed to.

On section 6—Accounting record of commitments.

Mr. HANSON (York-Sunbury): I should like to make a few observations on this section, which provides:

Upon the governor in council making an allotment of any part of the one billion three hundred million dollars ($1,300,000,000) granted by this act to provide for the cost of any service, the Minister of Finance shall cause an accounting record to be maintained in a form that will disclose the financial commitments entered into and the expenditure made as a consequence of the allotment being provided for the service concerned.

Predicated on that, there will always be available to the government, and should be available to the country at stated intervals, statements of the expenditures as made under the authority of this section, and in a form that will disclose exactly what expenditures have been made in consequence of the allotment. I have not looked up the record, but I think last year I appealed to the Minister of Finance to lay before parliament within a limited period—I am not sure whether or not it was after the end of the fiscal year—a statement of this accounting of expenditures. I suggest to him that that is a reasonable request, and that if we had had something like that before us during the last three or four weeks, we would have made much more rapid progress than we did make. Instead of a procedure of hit or miss, catch as catch can, as we know was the situation in connection with discussions in committee, we would have had by operation of law and by direction of the house a statement placed before us in convenient form before we began to discuss the appropriation for the coming year, upon which matter we have spent so much time.

I appeal to the minister, as I believe I appealed to him on a former occasion, to amend this section by providing that there shall be laid before parliament a statement of the expenditures based upon section 6. That is what ought to happen and what the trustees ought to be obliged to do. It seems to me

that that would bring about a great saving of time in the discussion of war appropriation bills. If we had had that a month ago, this bill would have long since been passed, and we would have had much more information than we have received up to the present time.

Why, Mr. Chairman, we have just touched the fringe of the expenditure of $700,000,000 for last year and the proposed $1,300,000,000 for this year! In a great body of 245 members I doubt if it is possible to do a thorough job in the examination of expenditures made under last year's bill. This body is too large and too unwieldy. We have, as I say, only touched the fringe of the proposed expenditure of $1,300,000,000 to be made in the coming fiscal year.

I am not going to take any blame or responsibility for the delay in the discussion. That blame is on the administration because of its not having given us in the early stages of the discussions in committee a succinct break-down of the money which parliament voted so willingly in the months of June and July last. I suggest that in the interests of the orderly conduct of the business of the House of Commons it should be made incumbent upon the Department of Finance at the next session as early as possible to submit to the house at least an interim statement of the expenditures, we will say, between the 1st of April and the succeeding six months, at which time probably parliament will not be in session.

I offer this suggestion in the spirit of goodwill. Before the bill has received third reading, I hope the minister will give consideration to what I believe is a constructive suggestion and one which in the end will save parliament a great deal of time and money.

Mr. ILSLEY: Mr. Chairman, the information asked by the hon. member will be given at the next sitting, if it is required.

Mr. HANSON (York-Sunbury): Oh, if it is dragged out of you, it will be given.

Mr. ILSLEY: There has never been the slightest hesitation or delay in complying with requests for information. We have given table after table and information in all forms just as soon as we could find out what the members of the house wanted.

Mr. HANSON (York-Sunbury): We are entitled to have it all.

Mr. ILSLEY: And we are prepared to do this again.

Mr. HANSON (York-Sunbury): Under this section the minister is commanded by parliament to cause an accounting record to be maintained in a form that will disclose the financial commitments entered into—that is for the guidance of the various spending departments—and the expenditure made as a consequence of the allotment being provided for the service concerned.

All we are asking—and I submit it is a reasonable request—is that within a limited period of time after the next session of parliament begins, there shall be laid before parliament, without our having to ask for it, and without having to drag it out, the information I have indicated. That would be a statement of, we will say, six months of the fiscal year.

What do we get to-day, if we do not get it in this committee? We get an abbreviated statement in the auditor general's report which, to me, does not mean anything. Look at the auditor generals' report for this year!

Mr. MacNICOL: A disgrace to any country.

Mr. HANSON (York-Sunbury): No; I will not say that. I believe the auditor general has probably had in mind the purpose of abbreviating, if he could. But I do not think the annual report of the auditor general is satisfactory for this purpose. It may be that we are wedded to an old system, and that we do not like to depart from it. Probably if we have to, we will get used to a new set-up. But the present condition is not satisfactory. The report comes to us too late to be of any use in discussing current events or current expenditures.

I did submit this to the minister in the utmost of good faith, and he has rebuffed me. I do not know what more I can do. I suggest to the Prime Minister—and I now make my appeal to him—that he give consideration to what I considered last session and what I now consider to be a reasonable request on behalf of the people of Canada, who are paying this money, so that their representatives in parliament may know at the earliest possible moment what is being done with their money.

On many occasions I have said in the house that the people of Canada will give this government, or any government charged with the responsibility of our war effort, all the money required to carry on that war effort. I have no doubt as to the truth of that statement. But *per contra* they will demand at the earliest possible moment a just and true accounting of how those moneys have been expended. If we abdicate that function in Canada and in the House of Commons, then I suggest we are not performing our proper functions as representatives of the people.

It is true that under the War Measures Act we are being governed by order in council, and that parliament has been reduced to the status of a body which passes votes of money and which hands over blank cheques to the government to be filled in, in the manner they see fit. That is more or less inevitable in war time; I do not think it could be done in any other way. But the corollary is true, that because confidence is placed in the administration, that administration should rise to the occasion and submit to the people a full accounting of how the money has been spent. Surely that is a reasonable proposition.

If the right hon. gentleman were sitting here and that principle were promoted, I am sure he would get in behind the demand for its support. I well remember his attitude and that of his colleagues in days gone by in connection with votes for relief—and quite properly so. This is war time, and necessities for greater expenditures, rapid expenditures, speedy expenditures are constantly arising. All I am contending for is the principle of trusteeship. This government, the trustees of the people, should render an accounting unto Cæsar—and the people are Cæsar.

Mr. ILSLEY: On February 18 I introduced the war appropriation bill now under discussion. I stated that $700,000,000 had been supplied last spring for the current fiscal year. I pointed out that up to January 31, 1941, approximately $538,000,000 of that sum had been expended. I broke that amount down into the amounts spent on militia services, naval services, and on the air force. Further, I gave a sub-breakdown for the amount allocated to the air force. I pointed out the amount spent on other defence services, in the Department of Munitions and Supply and in other departments. That break-down is to be found in *Hansard* for February 18, 1941, page 822. That was the day after the house reassembled. The information I placed on record at that time was as to the amount which had been expended, and the purposes for which the expenditures had been made. I expected that if any further break-down were required, it would be asked for. Later, in the month of March, that further break-down was asked for, and I gave it. *Hansard* for March 10, page 1363, shows a further break-down of the $538,000,000. It was slightly inaccurate, because the amount was $536,000,000. I explained at every stage that there might be slight inaccuracies, but I offered at all times to give information if it was required. There has been the fullest accounting and the promptest conveying of information to the hon. gentleman and to other members of the house. When the hon. gentleman says that information has been dragged out of us, that we have given information reluctantly and only when we were forced to, he is making a misrepresentation of the facts. We have given a strict accounting and have offered to give further information at every stage. We are prepared to do so again. We do not wish the impression to go out to the country or to members of this house that we have not been giving information just as soon as it was asked for and just as fully as it was possible to give it.

Section agreed to.

Bill reported.

SUPPLY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee of supply.

He said: I should like to explain why I am moving that the house go into committee of supply to consider interim supply. The government is asking for one-sixth of the amount of the estimates for the year 1941-42. It is understood that no advantage is to be taken of agreement with this motion. It is more or less a routine matter, to permit the senate to pass the bill which will be based upon the resolution, so that the services may continue in the beginning of the new fiscal year.

Hon. R. B. HANSON (Leader of the Opposition): The Minister of Finance (Mr. Ilsley) was courteous enough to speak to me yesterday about this matter. At that time there was another question involved to which I felt I could not agree. We are prepared to agree to the granting of interim supply on the distinct understanding that it is without prejudice and that it does not supersede, if that is the correct term, the previous motion to go into supply. I suppose this procedure is necessary because the other chamber may not have sufficient work at the present time and may not be available at a later date to pass this supply. This is almost a routine matter when the supply bill has not been passed before the end of the fiscal year. I took occasion to check up, and I find that in 1934-35 interim supply was asked for by Mr. Rhodes on March 29; in 1935-36 Mr. Dunning asked for it on March 27, and in 1936-37 it was asked for on March 3. I was not here at that time and I do not know the peculiar circumstances that governed. With the undertaking the minister has given, we shall be glad to agree to this motion.

Motion agreed to and the house went into committee of supply, Mr. Vien in the chair.

INTERIM SUPPLY BILL

Mr. ILSLEY moved:

Resolved, that a sum not exceeding $37,725,207.65, being one-sixth of the amount of each of the several items to be voted, as set forth in the main estimates for the fiscal year ending 31st March, 1942, laid before the House of Commons at the present session of parliament, be granted to His Majesty, on account, for the fiscal year ending 31st March, 1942.

Motion agreed to.

Resolution reported, read the second time and concurred in.

WAYS AND MEANS

INTERIM SUPPLY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee of ways and means.

Motion agreed to and the house went into committee, Mr. Vien in the chair.

Mr. ILSLEY moved:

Resolved, that towards making good the supply granted to His Majesty on account of certain expenses of the public service for the fiscal year ending 31st March, 1942, the sum of $37,725,207.65 be granted out of the consolidated revenue fund of Canada.

Motion agreed to.

Resolution reported, read the second time and concurred in. Mr. Ilsley thereupon moved for leave to introduce Bill No. 22, for granting to his majesty certain sums of money for the public service for the financial year ending the 31st March, 1942.

Motion agreed to, bill read the first and second times, considered in committee, read the third time and passed.

WAR APPROPRIATION BILL

PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

Hon. J. L. ILSLEY (Minister of Finance) moved the third reading of Bill No. 19, for granting to his majesty aid for national defence and security.

Hon. R. B. HANSON (Leader of the Opposition): Mr. Speaker, this bill is entitled "An act for granting to his majesty aid for national defence and security", and I should like to make a few remarks with respect to the announcement that was made on behalf of the Prime Minister yesterday by the Minister of Mines and Resources (Mr. Crerar) on a subject matter that is akin at least to the defence of Canada.

Yesterday the Minister of Mines and Resources during the Prime Minister's absence tabled an exchange of notes between Canada and the United States respecting the Rush-Bagot agreement of 1817, which if formally given effect to will serve, first, as a reinterpretation of the agreement and, second, pave the way for an extension of its principles, the intent being, as I understand the position, to use the agreement as a vehicle to provide and furnish mutual defence against the common enemy.

Stated in these terms, I cannot at first blush see any vital objection, but I would hope that at a later and appropriate date the arrangement visualized by the exchange of notes be formally ratified or otherwise. I am of opinion that neither the constitution of Canada nor the constitution of the United States visualizes international arrangements merely by executive action.

It will come as a surprise, I think, to many people both in Canada and in the United States to learn that the Rush-Bagot agreement—or arrangement, as it is sometimes termed—was not technically a treaty within the meaning of that term.

Notwithstanding the descriptive verbiage used, I think it will be clear that, so far as the United States is concerned, that nation at the time the arrangement was made looked upon the matter as a treaty, even though not in the technical form of a treaty, and not as an arrangement entered into by mere executive action of the acting secretary of state of the United States, acting under presidential direction.

Complete and convincing evidence of this statement is found in the fact that, prior to the 28th of April, 1818, the senate of the United States approved and ratified the arrangement and recommended that it should be carried into effect, and after such approval and ratification, the then President of the United States, James Monroe, issued a proclamation setting forth the terms of the arrangement, and publishing and declaring that the arrangement and every stipulation thereof had been "duly entered into, concluded, and is of full force and effect."

There is evidence also that the arrangement had received the sanction of His Royal Highness the Prince Regent, acting in the name and on behalf of His Britannic Majesty.

This action, on the part of the Senate and President of the United States, and of the British Sovereign, gave the arrangement the full force and effect of an international treaty, and I believe it has always been so considered in international law, notwithstanding it may have been designated as an "arrangement".

The best, in fact the only explanation I have been able to find for the approval and ratification of the Senate of the United States and

the publication and declaration of the president in confirmation, is found in an able and interesting address delivered by Sir Charles Fitzpatrick before the Lawyers club of New York city on March 17th, 1917, while he was still Chief Justice of Canada.

In that speech, full of historical interest, after detailing the proposal in 1815 of John Quincy Adams, then Secretary of State, to Lord Castlereagh for mutual disarmament on the great lakes, and the subsequent negotiations leading up to the exchange of notes, later ratified and approved by the senate and proclaimed by the president, Sir Charles made the following observations:

> It was only some months later that doubt arose as to the validity of the agreement, as to whether it so far partook of the nature of a foreign treaty as to require the assent of the United States senate. It was thought better to avoid all possible complications on this score by bringing the matter formally before the senate. This was done in due course and, on April 16, 1818, the senate "approved and consented", and a few days later, the terms of the agreement were formally proclaimed by President Monroe.

In the words of Sir Charles on that occasion:

> It would be hard to overrate the blessings that that agreement has been to both parties. It has been the keynote of their policy of peace for a hundred years, and at the same time has happily influenced the attitude of both governments towards the whole question of fortifications. And what an object lesson has been here for the rest of the civilized world. The longest frontier on the earth's surface has at the same time been the most defenceless—and the most safe.

May we all reecho those sentiments and pray to God that the position thus created and maintained, in spirit at least, down to this day will be maintained forevermore.

I am a little bit surprised that the announcement made on Monday was not communicated to the people of Canada and the United States sooner, the last note from the United States Minister to Canada to Doctor Skelton being delivered as long ago as November 2 last.

One might imagine, however, that it is given publicity now because of the recently announced agreement between the two countries with respect to the St. Lawrence waterway development.

Be that as it may, I prefer to believe that the new arrangement is based on a far greater and higher thesis, namely, that it may be used as a vehicle to furnish mutual defence against a common enemy. And if that be the basis, it will be accepted gladly by all those who, in common with myself and those who surround me, believe in an "all-out effort" against the common enemy of democracy and civilization.

The fundamental underlying principle of the original agreement was that no naval armaments, in the light of the modern conception of that term, should be maintained by either party on the great lakes.

Because of the outbreak of war and the valuable aid to be given by our great southern neighbour on the side and on the part of Britain and Canada, as I interpret the position we are being asked informally to agree to the extension and interpretation of the original agreement in the light of present circumstances, without intending to rescind the original agreement and without prejudice to the underlying principles.

Naval armaments are not to be maintained by either country in the great lakes area.

But the proposals do recognize and permit the right of either country to install armaments on naval vessels constructed in the great lakes area, provided:

(a) That such vessels are not intended for service on the great lakes;

(b) That prior to construction full information be furnished by the one government to the other;

(c) That such armaments are placed in such condition as to be incapable of use while the vessels remain in the great lakes; and

(d) That such vessels be promptly removed from the area upon completion.

In time of peace, I imagine neither country would respect such extension and interpretation. It would disturb a status quo in existence for over 130 years.

But we are living in a changing world. We are confronted with the greatest crisis in history. The proposals do not impinge upon our sovereign rights. I believe they will enure to the benefit of the common purpose against a common peril; and on that theory, if on no other, I am prepared to accept them.

I do so, however, with one reserve. In dealing with a great nation such as the United States—or, indeed, with any nation—it is a sound principle, I submit, to expect that in matters of international agreement some formality binding in its character shall be adopted. The proposals before us to-day, it is true, are in the form of informal notes between representatives of the two nations, but I do not conceive that this is a satisfactory procedure and that executive action alone is sufficient.

In my view, there should be some ratification of the new position. I think that it should be in the form of a treaty, because I believe that the Rush-Bagot agreement is, in law, a treaty although not so designated, and because I believe that that is the method by which nations enter into binding and lasting agreements.

I think we should preserve formality in entering into arrangements with any foreign country.

Mr. MARTIN: As a matter of curiosity, who signed the Rush-Bagot agreement?

Mr. HANSON (York-Sunbury): Mr. Richard Rush was, I believe, the acting secretary of state of the United States, and Sir Charles Bagot was the British Minister to Washington.

Right Hon. W. L. MACKENZIE KING (Prime Minister): Mr. Speaker, I should not like the debate on the war appropriation bill to conclude without saying a few words concerning its significance. I believe that what I have to say can be said before six o'clock, if my hon. friend the leader of the opposition (Mr. Hanson) will pardon me for not following him at the moment with respect to what he has said concerning the Rush-Bagot agreement. What I have to say will not provoke further debate but will, I believe, appeal to the pride of hon. members in all parts of the house.

More than a month has now elapsed since the resolution was introduced on which the war appropriation bill is based. During that time, discussion on the resolution and the bill have, with the exception of a few days, occupied the almost continuous attention of hon. members. I am not objecting to what there has been in the way of consideration in detail of the various aspects of Canada's war effort. That, I believe, has been all to the good. I feel, however, that the detailed discussion, and the many by-paths explored, may have tended to obscure from the house, and certainly from the country, the tremendous significance of our war appropriation.

We are enacting a measure which pledges Canada to the most stupendous effort in our national history. I feel we should not allow the bill to receive its third reading in this House of Commons without giving the fullest possible credit to those who have made the measure possible, and who are bearing the burden of the tremendous task which it imposes, namely, the people of Canada.

There has been far too great a tendency, both in the house and in the press, to speak of what we are doing as the government's war effort. We all know it is something far greater than that; it is Canada's war effort. What is more, it is an effort which is wholly worthy of Canada, and of which every Canadian is entitled to be justly proud.

As a tribute to the people, whom all of us in this chamber represent, I am going to try this afternoon to put that effort in its true perspective; to give a broad picture of what Canada is already doing, and what we have undertaken to do in the coming year.

[Mr. R. B. Hanson.]

It is only eighteen months since we entered the war. Yet, in that year and a half, our armed forces have grown to the point where to-day, in the three services, there are a quarter of a million men on active service. I might add that this figure does not include over 175,000 additional men, enrolled in the reserve army, who are subject to call for the defence of Canada.

A Canadian Army Corps, Canadian destroyers, and Canadian air squadrons are sharing in the defence of Britain. Our navy and our air force are doing their part to keep open the vital sea lanes of the north Atlantic Canadian garrisons in Iceland, Newfoundland and the West Indies are on guard in the outposts of this continent. Canadian engineers are strengthening the defences of Gibraltar. In recent months we have also sent overseas, hundreds of radio mechanics for vital defence duties with the Royal Air Force.

From the Atlantic to the Pacific, Canada to-day is throbbing with military activity. Soldiers, sailors and airmen are cooperating in the defence of our ports, our coasts and our coastal waters. The Canadian navy, which had only fifteen ships when war broke out, now has over 180. Nearly sixty military training camps are distributed across the country. In these camps, the soldiers in our active army, and the young men called up under the National Resources Mobilization Act to prepare them for the defence of Canada, are now training side by side. Some ninety establishments of the British commonwealth air training plan are already in operation. In addition, facilities are being provided for training schools of the Royal Air Force under the jurisdiction of Canada's air ministry.

It is for the maintenance and expansion of this military programme that the present appropriation is being voted. The Minister of Finance has already told the house that he expects the appropriation to be exceeded, and that his best estimate at present is that, in the next fiscal year, Canada's direct war effort will cost the Canadian people $1,450,000,000.

But Canada has a twofold task in this war. Not only are we sharing as a full partner in the struggle; not only are we, with but one important exception, ourselves bearing the whole cost of equipping, supplying and maintaining our military, naval and air forces at home and overseas, giving of life as well as of treasure, but we are also helping to supply to Britain equipment, munitions and the other essentials of war. The exception I have referred to is this: Canada is paying the entire cost of three air squadrons already in Britain. But as Canada is bearing the major portion of the cost of the British commonwealth air

training plan, the United Kingdom, on its part, will maintain in the field Canadian pilots and airmen graduated from the plan. The number of Canadian pilots and airmen on active service overseas is steadily increasing month by month. The flow of trained aircrews from the plan will soon be measured by thousands.

What I have said up to the present relates to Canada's outright national contribution as a belligerent. It is being paid for in full by the Canadian people. It is not something that has been leased to Britain. It is not something that is being lent to Britain. It is a direct contribution by Canada to the cause of freedom. It represents the freewill offering which our country began to make over a year and a half ago, when this parliament decided that Canada should enter the war at the side of Britain. It is a contribution which we are making to-day, and which we will continue to make.

Canada, as I have indicated, is also a major source of supply for Britain. In common with the United States, Canada is an arsenal of democracy. Since the war began, the British and Canadian governments have undertaken capital advances of over $380,000,000 for the expansion and equipment of Canadian industry. New plants have been built; old plants extended to make the complex instruments of war, many of which were never before made in this country. The creation of a vast new war industry has taken time. Occasionally impatience has been shown at delays. The same impatience has been evidenced elsewhere—even in Britain. I might say that none in Canada are more impatient of delays than members of the government itself.

I should like to remind hon. members of what Mr. Churchill said not long ago in the British house on this very subject. Here are his words:

> It is not possible to make a warship go to sea, and fight against the enemy, until fires have been lighted, and the water in the boilers changed from cold to tepid, to warm to hot. The steam is generated and the vast power is given. While this is going on there is no use rushing about uttering alarming cries.

I might add that it is equally useless to utter alarming cries about any aspect of war production. Careful critical scrutiny is of great aid to the government, and is appreciated by the country. But general charges, doubts or suspicions serve only to belittle the country's effort and to discredit Canada in the eyes of the world.

We have every right to take pride in our industrial expansion. Canadian labour and Canadian industry have responded splendidly. We have been building an aircraft industry from the ground up. We have already built over fifty small naval vessels and more are being built. We are turning out motor transport vehicles at the rate of hundreds a day. We are producing universal carriers, Bren and Colt-Browning machine guns, trench mortars, bombs for aircraft, great quantities of shells and ammunition, a wide range of chemicals, electrical apparatus and radio equipment, many other types of essential manufactured goods, large quantities of base metals and alloys, and an increased output of steel. We will shortly begin to produce field guns, and before the year ends, naval guns, anti-aircraft and anti-tank guns and Lee-Enfield rifles. The production of tanks and of cargo vessels is already under way. Plans are also being made to build destroyers in Canada. Such are the highlights of our programme of war production.

The expansion of production has already been reflected in the absorption of between 330,000 and 350,000 additional men in industrial employment since the outbreak of war. Nor must it be forgotten that the armed forces and industry will make additional demands estimated at over 300,000 men in the coming year. Skilled labour and specialized plant facilities will have to be increasingly diverted to the production of vital war supplies. All along the line, Canadian industry has been geared up to make a maximum contribution to the prosecution of the war.

Perhaps the best illustration I can give of the magnitude of the indirect contribution by Canada to the war is to say that, over and above what is being appropriated for our direct war effort, we expect, during the next twelve months, to send to Britain approximately $1,500,000,000 worth of munitions of war, raw materials and agricultural products. This total is larger than was originally estimated, but it has been arrived at as the result of a careful re-examination of the figures relating to British orders already placed, or to be placed, in Canada, and the probable production of our war plants and other Canadian industries.

It is only at this point, when we have fully realized the magnitude of Canada's direct and indirect contributions to the war, that, with justice to the Canadian people, comparisons can be made of the financial arrangements between Britain and Canada, and the arrangements between Britain and the United States.

Britain, of course, cannot herself find all the necessary dollars with which to pay for her enormous purchases of Canadian products. For the new fiscal year, Britain's deficit in her balance of payments with Canada is now estimated at over $1,150,000,000. Canada must provide Britain with the Canadian dollars to meet this deficit, either by purchasing Canadian securities now held in Britain, or by the accumulation of sterling balances.

In this connection, it may interest the house to know that from September 15, 1939, to the end of February this year, the United Kingdom's deficit with Canada amounted to approximately $737,000,000. Of this deficit, Canada provided 45 per cent by the repatriation of securities, and 21 per cent by the accumulation of sterling balances in London, while only 34 per cent was met by the transfer of gold. During the six months' period ending February 28 last, Britain's deficit with us was $359,000,000, and Canada financed the whole of that deficit, except for $65,000,000 which was covered by gold shipments. Since the early part of December, no gold has been received from the United Kingdom.

In order to facilitate Canadian purchases in the United States which are essential to keep up Canadian war production, Britain, we hope, will continue to be able to make up a part of her deficit by providing Canada with some gold, or United States dollars. I wish, however, to emphasize the fact that whatever gold, or United States exchange, Britain makes available to Canada is for one purpose only, and that purpose is to enable Canada to make payments to the United States for war purchases. The gold, or its equivalent, assists Canada in meeting our exchange deficit with the United States, but it does not decrease by one dollar the net amount which must be raised from the Canadian people in taxes and loans.

To meet the total burden upon the Canadian people of our direct war effort and our indirect effort in the form of financial assistance to the United Kingdom during the next fiscal year will, according to the best estimates which can now be made, require almost 44 per cent of the national income. I may add that, as a result of the recent investigations to which I have referred, and which took into account the effect of the increased estimates of British purchases in Canada, and our own expanded war programme, the estimate of Canada's gross national income in the new fiscal year has been raised to $5,950,000,000.

For the benefit of those, either in this or in other countries, who have not a due appreciation of the magnitude of Canada's war effort, or who may have been misled by comparisons between our war effort and what has been said concerning the lease-lend programme of the United States, I am going to translate a few of these figures into comparable American terms. I understand the national income of the United States this year is expected to exceed 80 billion dollars. On that basis the estimated war expenditure, direct and indirect of Canada, in 1941-42, would be equivalent to an expenditure by the United States, in a single year, of almost 35 billion dollars. In providing the Canadian dollars necessary to meet the deficit in Britain's balance of payments with Canada next year, the Canadian people will be rendering financial assistance to Britain which would be equivalent, in comparable American terms, to something over 15 billion dollars a year.

These figures may help members of parliament and the people of our country to appreciate what Canada is committed to, and what is meant by the statement that, in our opinion, Canada is making the maximum effort of which this country is capable.

But this is merely the financial side. Let me also make the comparison in terms of human lives. Apart from Canada's material contribution, Canada's men are participating in this war. The quarter of a million Canadians on active service would, in terms of the population of the United States, be equivalent to an armed strength in the forces of the United States of over two and three-quarter million men, and this without taking account of a reserve army for home defence.

For the great contribution which the United States is making; for the still greater contribution which it will make, the government and people of Canada have nothing but admiration and gratitude. Since the United States has pledged its strength to a victorious issue we know that the struggle, though hard, will be shorter. But in the enthusiasm of our satisfaction that the United States has resolved to throw the decisive weight of its material aid into the struggle, we as Canadians have no reason to discount the magnitude of the material contribution and the contribution in man power which the people of this dominion are making. It should never be forgotten that Canada is spending not only her treasure but her blood. Our eleven million people have given freely and pledge fully their treasure, their resources and their manhood. Canadians also have reason to be proud of the part which Canada has had in the reconciliation of the English-speaking peoples, the healing of ancient wounds, and the closing of the great schism of the Anglo-Saxon race.

Surely in the light of such a war record, without boasting and without vainglory, we may all take pride in the vision, the unity, the resolution and the achievement of the Canadian people.

At six o'clock the house took recess.

After Recess

The house resumed at eight o'clock.

Mr. M. J. COLDWELL (Rosetown-Biggar): Mr. Speaker, I do not propose to-night to speak at any great length, because I covered the ground pretty thoroughly this afternoon. I feel, however, that the amendment moved in committee this afternoon, which was ruled out of order by the chairman, has a considerable amount of merit, and contains a principle which should be decided by the house. I have made an alteration in the amendment moved this afternoon, and I propose to move an amendment in new form, seconded by the hon. member for Vancouver East (Mr. MacInnis):

> That said bill be not now read a third time but that it be referred back to the committee of the whole with instruction that they have power to amend it by striking out all the words after the word "raise" in paragraph 1 of section 4, line 16, and substituting the following therefor:
>
> "under the provisions of the Consolidated Revenue and Audit Act, 1931, by way of interest-free loans to be levied according to ability to subscribe such sum or sums of money, not exceeding in the whole the sum of one billion three hundred million dollars as may be required for the purposes of this act."
>
> and that paragraph 2 of section 4, be amended by the deletion in line 26, of the words "and the interest thereon."

Mr. MACKENZIE (Vancouver Centre): Is that the same amendment as was moved this afternoon?

Mr. COLDWELL: The same in substance, although there is a slight alteration in the wording.

I regret very much that I was unavoidably absent this afternoon when the hon. member for Lethbridge (Mr. Blackmore) spoke, and therefore I shall leave to someone else the duty of saying something regarding his remarks. Neither do I propose to discuss the point of order raised by the chairman's ruling, because I do not think that would be proper at this particular time.

As I said, however, I believe that the people of Canada who are making great sacrifices in connection with the financing of the war feel that we must endeavour to approach something of equality of sacrifice. As I said this afternoon, there are large accumulations of wealth in the country which, in our opinion, should at least be lent, free of interest, to the government during the progress of the war, in order that the country may not be overburdened with interest during the prosecution of this struggle.

With those few words I place the amendment to section 4 before the house for its consideration.

Mr. ANGUS MacINNIS (Vancouver East): Mr. Speaker, this afternoon I had intended making a few remarks when the amendment was moved in committee, but the ruling of the chair made that impossible. However, before submitting the reasons why in my opinion this amendment should be accepted by the house, may I make it clear that in proposing the amendment we are not opposing the appropriation. We merely propose an alternative way by which the money may be raised, or at least that part of it which will be raised by way of loan.

I believe the house is unanimously of opinion that the appropriation should be passed—and more, as occasion demands. We are unanimous in that regard because we all realize that we are fighting nations which have glorified war and which have made deceit, force, fear and terror the methods by which they negotiate with other countries.

Mr. REID: Plus brutality.

Mr. MacINNIS: Yes. There can be no peace for us or for the world until victory shall crown the efforts of those who desire that the democratic way of life and the rule of law shall prevail. I am satisfied that all hon. members in this group agree wholeheartedly with the sentiments I have just expressed. If there is any difference of opinion in the house, it is as to the most socially desirable method of financing our war effort. There are at least two definite reasons why our method of floating war loans should be accepted. First, it is the psychologically desirable method; second, it is the method economically desirable. I shall take only a few moments to support those two reasons.

It is psychologically desirable because, whether we like it or not, or whether we accept it or not, we are living in a class society, and there is a strong feeling in large sections of the country that only one class is being asked to-day to do the sacrificing. In other words, acceptance of the method we propose would go a long way toward bringing about equality of sacrifice. It may be answered that we have that now, that we are all making sacrifices, and that we are all in the front line. In the language of the street, I would say that that is all hooey. In Canada we have not even begun to make sacrifices—that is, except a very small fraction of the population. So far the only people who have made sacrifices are, first, the men who have enlisted and put their lives at the disposal of the country and, second, those who are in receipt of very small incomes and find their standard of living being lowered because of the increase in prices which has already taken place. These people with small incomes have a hard time to get along, but they are anxious

to do whatever they can. But they see other people going on as before just as though we were not engaged in a life-and-death struggle.

Let me give two or three examples of what I have in mind. I gave one example to the house some days ago. A woman in Regina in receipt of an income of $20 a month agreed to buy one war savings certificate a month. She pointed out to the young woman who solicited her subscription that to buy the certificate she would have to forgo one meal a day. The Montreal *Gazette,* that strong champion of things as they are, referred to this as a gracious gesture.

I should like to give another illustration, and if the old lady's act was a gracious one, this one is disgraceful. A few days ago some one sent me a page from the Vancouver *Sun* containing an architect's drawing of a beautiful home being built for a man in Vancouver, at an estimated cost of $100,000. It is to be 150 feet long and thirty or forty feet wide and will contain fifteen bedrooms; the basement is to contain a number of rooms for entertainment. There will be a room for moving pictures as well as rooms for other kinds of games. If the sacrifice made by the old lady in Regina was a gracious one, the lack of sacrifice on the part of the man building this home is a disgraceful example at a time when we are all said to be in the front line. In order that things like this may not continue, we suggest that people who can afford to build $100,000 homes should be compelled to subscribe to non-interest bearing war bonds.

I noticed the other day that Doctor Stapleford, director of voluntary services in the Department of National War Services, was advising Canadians to be patriotic, to be proud to wear an old suit of clothes or to drive an old car. If it is patriotic to wear an old suit of clothes, then I have about the most patriotic people in Canada in my constituency. They nearly all wear old clothes because they cannot buy new ones, and most of them cannot afford to buy even an old car. The same can be said of the great majority of people in all constituencies. This is another reason why we should compel people to subscribe to the financing of the war effort according to their ability.

Last month we concluded a drive to get people to subscribe to war savings certificates. I noticed that as soon as the campaign was over, the chairman went on a vacation to the Bahamas or Bermuda in order to get over the effects of his strenuous work. But hundreds of thousands of those who subscribed for war savings certificates have to count every solitary cent. As an unemployed man in the old country said to a government agent some time ago, even a pair of shoe-laces is important to an unemployed man. He said he had strings in his shoes instead of laces. We must remember that almost every man, woman or child beyond a certain age is able to read, and they know what is going on. They have nearly all the sources of information that those in authority have. They cannot be fooled any longer that there is equality of sacrifice when in fact there is no equality of sacrifice.

I have in my hand a compilation of the debt of Canada which was prepared by the former member for Huron North, Mr. Deachman, who I understand is now director of publicity for the Department of Munitions and Supply. I should like to draw these figures to the attention of the house in order that hon. members may understand what we have in mind when we advocate the issuing of interest-free bonds. Mr. Deachman showed that the direct expenditures of the last war were $1,698,619,000. Since the war the cost of pensions has amounted to $770,563,000. The cost of soldiers' civil reestablishment has been $258,750,000. The cost of maintaining war graves has been $4,811,000. The cost of administration of soldiers' settlement has been $28,055,000 and the estimated loss on this work is $100,000,000. He then shows that the amount paid in interest from 1915, or when the bonds were first floated, to the end of 1938, was $2,153,465,000, and we still have the principal of $1,698,619,000 to pay.

I receive dozens of letters from widows of veterans complaining that their pensions were stopped when their husbands died. Here is the situation. A man enlisted in the last war and served overseas for whatever time was necessary. He may have been wounded or his health may have been impaired so that on discharge he was granted a pension. He dies, and the pension stops.

Another man stayed at home. He bought Victory bonds and drew the interest on them from the day he bought them until he died, and after he had passed away the interest on the bonds continued to be paid to his widow. Surely, when we are asking people to give their lives in this war, is it too much to ask people to give their money?

The hon. member for Lethbridge (Mr. Blackmore) in his address this afternoon said that we would be taking this money away from people. Not at all. We are asking people to lend their money to the country because the country needs it; and when the war is over, if we are in a position to pay the principal back—and this applies, of course, whether the loan is with interest or without—the lender will be repaid what he loaned, without interest.

We are not taking anything away from him. All we ask is that every one of us should be willing to give what we have in order that we may help to win this war. We should be willing to do that or we are not sincere when we say that we want to win the war.

The hon. member for Lethbridge this afternoon made a number of observations that seemed curious to me. For example, he called this kind of compulsory loan more subversive than the ordinary way of raising money. I do not believe that even the present way of raising money: loans with interest is subversive. I am, however, quite satisfied that there is nothing subversive about a compulsory non-interest-bearing loan. He went on to say he was of opinion that already the surplus accumulations of money in this country had been absorbed by taxation and through the war loans already floated. The hon. gentleman is not watching the accumulations of money as closely as he should be, because the returns made by the chartered banks show that on December 31, 1940, savings deposits in the chartered banks amounted to $1,641,000,000 in round figures. One month later, by January 31, savings deposits had increased to $1,668,000,000, or an increase of over $27,000,000 in savings deposits in one month. It seems to me that there is no excuse for an hon. member not knowing these facts.

As I pointed out when the resolution on which this bill is based was under discussion, war economy changes the normal situation. While in ordinary peace time, at any time between, say 1929 and 1939, it might have been desirable to have an issue of money, it is not desirable at the present time, and we might as well get that fact clear in our minds. The more we get our war industries into production, the greater the number of people who go into war industries, and the greater the number of men who join the armed forces, the more imperative it will be for us to increase our taxation enormously or to raise large sums of money by borrowing. An hon. member beside me asks me to explain why. The reason is that by the production of war supplies we are putting purchasing power into circulation, and we are also putting money into circulation for the ordinary consumers' goods, but only the consumers' goods appear on the market. The war supplies are taken by the government and they do not appear on the market in the ordinary way. Consequently, the more war production we have, the greater the competition there will be for the more limited amount of the ordinary consumable goods on the market, and prices will therefore rise.

Whether we like it or not, there is no way of dealing with that situation except by taxation at a terrific rate—and remember that taxation at the necessary rate would be confiscation—or by borrowing. We are asking that the borrowing be without interest so that when this war is over, we shall not have to pay over the next twenty-five years more in interest than the principal amounted to in the first place, and then have the principal to pay. In twenty years at five per cent each year we can pay off the whole of any loan, but we can never pay off the debts contracted in this war if we follow the old method. I believe it would be not only more sound economically but also more honest to do our war borrowing in the way we propose.

I was surprised to hear the hon. member for Lethbridge opposing our amendment because at the beginning of the war he and his party proposed total conscription: man-power, money and property. We are not by this amendment proposing conscription of money in the full sense of the term, but our proposal is a step in that direction and to that extent it should satisfy the hon. member for Lethbridge.

A great deal more could be said on this question, but I do not wish to detain the house further. I think I have proved, Mr. Speaker, that both from the point of view of sound economics and also for psychological reasons it is desirable that the government should offer compulsory non-interest-bearing loans.

Mr. SPEAKER: Perhaps in view of what took place this afternoon in connection with the amendment moved by the hon. member for Rosetown-Biggar (Mr. Coldwell), I should say something with regard to the amendment which is now proposed.

The amendment as now proposed differs materially from the amendment which was proposed this afternoon in that the word "compulsory" has been deleted, and the position now is that an amendment has been moved that loans shall be issued without interest. If hon. members will refer to section 4 of the bill, they will find that it reads:

> The governor in council may, in addition to the sums now remaining unborrowed and negotiable of the loans authorized by parliament, by any act heretofore passed, raise by way of loan, under the provisions of the Consolidated Revenue and Audit Act, 1931—

And so on. The amendment moved applies to subsection 1 of section 4 of the bill, but proposes an alternative method of raising the money. The purpose of the bill and the purpose of the amendment are the raising of money—in the case of the bill, with interest;

in the case of the amendment, without. In Beauchesne's Parliamentary Rules and Forms, citation 552, it is provided:

Though it is the function of the committee of ways and means to impose rather than to repeal taxes, examples of the repeal of taxation effected in this committee are to be found upon the journals. Proposals for the variation or modification of taxation can therefore be made in the committee; but these proposals must be grafted upon the financial scheme submitted by the government, and must not affect the balance of ways and means voted for the service of the year. Amendments, therefore, can be proposed to substitute another tax, of equivalent amount, for that proposed by the government, as, for instance, a proposal to substitute probate and legacy duty on real property as an alternative for an inhabited house duty, the necessity of new taxation, to that extent, being already declared on behalf of the crown.

In the citation which I have quoted, the pregnant words are:

. . . but these proposals must be grafted upon the financial scheme submitted by the government. . . .

I point out to the house that the financial scheme of the government is not now before the house. What we have is an ordinary bill for the raising of money; and in the reference at the beginning, mention is made as to the function of the committee of ways and means. This is not a committee of ways and means; it is a committee of the whole; and therefore, when exception is taken to any proposals that they must be grafted upon the financial scheme submitted by the government, it is my judgment on this amendment that we are not dealing with the financial system of the government.

In May, thirteenth edition, at page 510, it is stated:

As is subsequently explained, the constitutional principle which vests in the crown the sole responsibility of incurring national expenditure, forbids an increase by the commons of a sum demanded on behalf of the crown for the service of the state. This principle, however, is apparently disregarded when the recommendation of the crown is given to a resolution empowering the expenditure of public money which, framed in general terms, places no limitation on the amount of expenditure to be authorized by the resolution. As the resolution sanctions, without any specific limitation, the application of money to be provided by parliament to certain purposes, when the clauses in a bill founded upon such a resolution are before the committee, the freedom of action sanctioned by that resolution can be exercised. The committee is not bound by the terms of the provisions which the ministers of the crown have inserted in the bill; and any member may propose to increase the grants specified in these clauses or to extend the application of the provisions of the bill, whatever may be the cost resulting therefrom, so long as the power conferred by the royal recommendation is not exceeded. Acting on this principle, when, in 1812, a committee was considering a message from the prince regent recommending, in general terms, provision to be made for the family of Mr. Spencer Perceval, amendments were permitted for increasing the provision proposed by the ministers. This practice has been supported by rulings from the chair, though, on the last occasion, not without remarks which deserve careful consideration.

The principle that the sanction of the crown must be given to every grant of money drawn from the public revenue, applies equally to the taxation levied to provide that revenue. No motion can therefore be made to impose a tax, save by a minister of the crown, unless such tax be in substitution, by way of equivalent, for taxation at that moment submitted to the consideration of parliament.

And, on page 512 of the same edition:

The house can make amendments which diminish the amount of a reduction of taxation, or postpone the day when the reduction takes place, although the amendments may increase to that extent the charges proposed to be levied upon the people. So long as an existing tax is not increased, any modification of the proposed reduction may be introduced in the committee on the bill, and is regarded as a question, not for increasing the charge upon the people, but for the determining to what extent such charge shall be reduced.

Further on, the author gives another illustration:

As a final illustration of the way in which the reduction of public charges is dealt with, it may be mentioned that, as a "drawback" is a fiscal arrangement made to facilitate the exportation of goods liable to excise duties, and is so far an alleviation of taxation, a provision creating a "drawback" can be considered without recommendation from the crown, or a preliminary committee resolution.

While it is true that none of the illustrations given are directly apropos of the question which is now before the house, yet the principle is the same and the fact is that if the amendment carries and becomes a part of the bill, the charge against the country will be lessened rather than increased. As I have already said, this is not the financial scheme of the government, in that we are not dealing with the budget, which really embodies the financial scheme of the government. In my judgment, therefore, the amendment is in order.

Hon. J. L. ILSLEY (Minister of Finance): Mr. Speaker, before the question is put, I should like to make a few observations.

The amendment now before the house differs from the amendment proposed this afternoon and also the amendments or proposals suggested previously by the Cooperative Commonwealth Federation group, in that it leaves out the element of compulsion. That is, nominally it leaves out the element of compulsion, but in reality that element is present. It is quite obvious, I believe, to any hon. member who gives the matter even slight consideration that if we were to attempt to borrow $1,300,000,000, or even a small part

of that sum, from the people of Canada without agreeing to pay interest on that loan, we would not get the money on a voluntary basis. It would be necessary to levy the loan. As a matter of fact, the word "levy" or "levied" is used in the proposed amendment. The amendment is that:

> . . . under the provisions of the Consolidated Revenue and Audit Act, 1931, by way of interest-free loans to be levied according to ability to subscribe such sum or sums of money, not exceeding in the whole the sum of one billion, three hundred million dollars as may be required for the purposes of this act.

Apparently what is proposed is the infusion into a voluntary loaning system of a compulsory loaning system, a system of forced loans. The first observation which I should like to make is that the two systems cannot exist side by side. Just as, I think, Lincoln said that a nation cannot exist half slave and half free, so I am sure we could not have here in Canada a system of loaning which was half compulsory and half voluntary. The effect of announcing that a substantial sum of money was going to be levied upon the people by way of forced loan would be that it would be practically useless for us to appeal for voluntary loans, because all the enthusiasm, all that spirit of democratic cooperation to which we appeal, and appeal very successfully at the present time, would dry up.

Mr. MacINNIS: Only for raising money, but not for people to fight.

Mr. ILSLEY: I do not want to be dragged off of my line of argument.

Mr. MacINNIS: That is not dragging you off; it is setting you right.

Mr. ILSLEY: The temptation is too great and I am going to be drawn away from my line of argument just to deal with that observation. The hon. gentleman who has just interrupted has frequently said that this government is fond of conscripting men but will not conscript wealth. I heard him make an eloquent appeal on that point here last November or December. I wish to examine it for one minute. It is true that we have conscription of men in this country, but it is conscription of men to a very limited extent. If one were able to measure the extent of the conscription of men in Canada in terms of the percentage of total conscription, one would find that the conscription of human beings is far less than the percentage of conscription of wealth. Let me adduce some figures in support of that.

I believe I told the house the other day about the amount of money we are taking in taxation, which is real conscription of wealth, because there is then no obligation to repay, as my hon. friends think there should be, apparently, to a larger extent than I think there should be.

Mr. MacINNIS: All right, accept the amendment, if that is true. We will go part of the way with you.

Mr. ILSLEY: The amendment is not to levy increased taxes but to make forced loans, which is a very different matter. Let me, however, come back to the statement I made, that there is a very great degree of conscription of wealth in Canada. We are now taxing the people of the dominion at the rate of about $900,000,000 a year, and we shall be taxing them in the next fiscal year at the rate of something over $1,000,000,000 a year.

Mr. HOMUTH: What percentage of the national income is that?

Mr. ILSLEY: That of itself is about one-fifth at the present time. But I want to give some of the rates and the amounts we collect. The hon. gentleman says we leave wealth alone but not human beings—we take them compulsorily and make them do our jobs for us, but we leave wealth alone; we do not touch wealth. May I point out that we have one of the most steeply graduated systems of taxation in the world, much more so in the higher incomes than has been the situation in the United Kingdom all through the years. I am not familiar with recent changes.

Let us take incomes of from $20,000 to $500,000, because these are the people whom my hon. friends are after, if I understand them rightly. On an income of $20,000, under present rates, the taxpayer who is resident in British Columbia pays, in provincial and dominion taxes, $8,895. In Ontario he pays $7,030.90. If his income is $30,000, in British Columbia he pays $15,375, and in Ontario, $12,175. If his income is $50,000, in British Columbia he pays $30,605 and in Ontario $23,721.80. If his income is $75,000, in British Columbia he pays $52,060, and in Ontario, $39,561.55. If his income is $100,000, in British Columbia he pays $74,515, and in Ontario, $56,382.20. If his income is $150,000, in British Columbia he pays $121,470, and in Ontario, $92,044. If his income is $200,000, in British Columbia he pays $170,425, and in Ontario, $129,679.75. If his income is $500,000, in British Columbia he pays $492,230, and in Ontario, $381,103.30.

An hon. MEMBER: What about Saskatchewan?

Mr. ILSLEY: I can give the figures for Saskatchewan. I have them here. They will be found in the budget speech of the then Minister of Finance on June 24, 1940, at page

1027 of *Hansard*, setting out a table for all the provinces which have income taxes. To hon. gentlemen who think that we are running the government in the interests of the rich, I would recommend a perusal of that table.

What I was going to say when I was derailed by the interruption is that the blending of the two systems is impossible. We would be driven to a compulsory system. My hon. friends have been talking about inequities and injustices. The essential injustice of the compulsory system is that equity is impossible because of the differing circumstances, differing requirements and differing necessities of persons with the same income.

In so far as equity is possible, in so far as we can determine equitably what each can pay, we determine that when we impose taxation. We impose taxation up to a pretty high level, and above that there will be some persons with a surplus who cannot, and in other instances, persons who should not, devote that surplus to the uses of the government. It might be far more advantageous to the country if they would put that surplus into capital investment and produce goods for war purposes or something of that kind, while alongside them might be another person with the same income whose surplus could not be devoted to that purpose but who should lend his money to the government. That is the reason why a voluntary system of taxation fits in equitably if there is the right spirit in the country, if the people have the right view of the matter, while the voluntary system of lending fits into the taxation system.

My hon. friends gave instances of slackers, men who got money apparently in some way or another in the war and did not show any conscience about it, who indulged in an ostentatious display in the expenditure of that money. These people are not very numerous in this dominion, and they are becoming less numerous with the growth of a proper public opinion. In England the degree to which public opinion has developed is considerable. A few weeks ago I heard Lord Kindersley on the radio, in one of the Sunday afternoon broadcasts in the interests of the war savings campaign, make the statement—I cannot remember his exact words—that public opinion had been developed to such an extent in Great Britain that the blatant spender was a social outcast. That is the state to which opinion will have to be developed in the Dominion of Canada. The compulsion is then the compulsion of public opinion, the pressure of what a man's neighbours think, what people all over the country think. That is the system upon which we are relying, and we have been relying upon it with good results.

I do not believe I finished the thought I was attempting to develop about the impossibility of saying what one person should lend to the government and what another person should. I was dealing with the man with the big income, the man with a great deal of wealth; but when you come to people with small incomes and small amounts of wealth, and undertake to have the government say to them, "You should lend so many dollars to the government"—

Mr. COLDWELL: That is what is done now with the small people; not by the government, but by employers.

Mr. ILSLEY: My hon. friends have said a great deal about employers.

Mr. COLDWELL: Some employers.

Mr. ILSLEY: There may have been some instances in which excessive pressure was exerted, but it must be remembered that in the war savings certificates drive we are not taking money away from people without interest; we are paying three per cent compound interest on the money. I should be much surprised if there were any real injustices in this connection. I think the percentage of cases in which any injustice has been done to any person, rich or poor, in this dominion, in the war savings certificates drive would be infinitesimal. On the contrary, when they have been persuaded to buy war savings certificates, in practically one hundred per cent of the cases they have been persuaded to do something greatly in their own interest as well as in the interest of the country.

As I say, I think it would be perfectly impossible for any government, by any system of compulsion or by any system of exemptions, to get substantial sums in this way with any degree of justice. We could perhaps do it up to a certain level, but if we were to get very large sums such as we get in our loan campaigns it would be impossible to say to Mr. A, "You should lend X dollars to the government," and to Mr. B, "You should lend Y dollars to the government". In one case there might be sickness in the family; there might be demands about which we would know nothing. There might be requirements, obligations a man had to meet, of which the government could have no knowledge, and for which there would be no possible way of making any allowance. That is why the ideal system is to have a healthy state of public opinion, upon which in a democracy one has to depend in order

to get the maximum war effort. That is what we have by our system of voluntary contribution.

I am a little surprised at that group, which is so strong on freedom and liberty, rushing so quickly to compulsion in this important matter. I am always very much interested in the views expressed by both groups in the far corner opposite, and I think if we could take the best views of each group we might have a pretty good policy. For instance, I agree with the hon. member for Vancouver East (Mr. MacInnis) when he says that the creation of substantial sums of new money is a most foolish policy, particularly under present conditions. I also agreed with the leader of the social credit group this afternoon when he said a forced loan would be a bad thing under present conditions. If they would just take the best and discard the worst of the policies that emanate from that corner of the house, I think we might accept those hon. gentlemen as pretty safe guides. Unfortunately there is always a certain admixture of error with a considerable amount of truth in what they have to say.

The compulsion should, I think, be reserved for taxation for the time being. As I say, we are raising large sums by taxation. If it really were to be thought by the public of Canada that this house was to-night considering forced loans—and the government is not considering forced loans—I am afraid the results in the country to-morrow would be fairly serious. Any threat of a compulsory loan would be likely to create considerable uncertainty and fear among many people with small savings but without much understanding of financial matters. Certainly it would result in many small savings deposits being withdrawn from the banks and hoarded in the form of currency, in the hope that thereby they might be hidden and so escape any such conscription of wealth. Such action would be useless and foolish from the point of view of the individual, since in any event there is no question of confiscating bank deposits. It would mean that the owners of these small savings would lose the return on them by refusing to invest them. The well to do, on the other hand, with better sources of information, would not be penalized by any such fears, so any fear of compulsion is apt to work damage on the poor rather than the rich. There is another type of hoarding which might result from fear of compulsory loans; that is, the hoarding of goods by those who might wish to spend their money before the government could commandeer it. This would be just as baseless a fear and as futile a reaction as the hoarding of currency, but it would be much more contrary to the public interest. Any action of this kind would tend to increase the scarcity of labour and materials needed for war purposes.

I think that pretty well sums up the reasons for which I would ask the house to reject this amendment. Something has been said about New Zealand. I am not familiar with the experience of that country, but I do not think they have gone very far with their proposal; at least I cannot find any evidence that they have done so. They took power to levy some compulsory loans in that country, but though I have been trying to find out what they have done I have been unable to get any information, and I doubt if the hon. member for Rosetown-Biggar (Mr. Coldwell) has anything more definite than I have. I should be very much surprised if that plan really has been tried there, or, if it has been tried, if it has been a success.

Mr. T. C. DOUGLAS (Weyburn): Mr. Speaker, I should like to take just a moment or two before this motion is put. It seems to me that the Minister of Finance (Mr. Ilsley) has put up an excellent straw man in order to knock him down again. In the first place the minister suggests that he is prepared to obtain money by taxation while we are suggesting that money obtained by this method should be given back; and the minister suggests that he wants to take money in much larger quantities than we are prepared to do. Of course he knows that the amendment now before the house would not in any way preclude the levying of taxes. What is suggested is that when all that can be collected out of current income is collected, the remainder must be secured from reserves. That is what we do now. The remainder must be obtained from reserves of wealth, and this motion only suggests that instead of getting that money from reserves by borrowing it at rates of interest, it shall be borrowed without interest, and that the levy shall be made on the principle of ability to pay.

In the second place I wish to point out that the minister has suggested that this government is following a policy of conscripting wealth to a much greater extent than it is conscripting men. I point out first that this conscription has been imposed upon one class to a much greater extent than upon other classes. Economic conscription has been brought to bear upon thousands of men in Canada, particularly unemployed young men and those in the distressed areas of this country, many of whom have flocked into the fighting services not only for patriotic reasons but also because of economic motives. What has the minister to substantiate his claim

that wealth is making its contribution? He quotes some figures which in themselves are fantastic. When the minister talks about incomes of $500,000, he knows very well that last year there were only 483 people in Canada who received incomes of $50,000 to $100,000 and up. That statement is contained in an answer given on March 17 by the Minister of National Revenue (Mr. Gibson) to a question asked by the hon. member for Red Deer (Mr. Shaw). So those people in the $500,000 income bracket, about whom the minister spoke, are simply non-existent.

The important matter, however, is not to read to this house or the country figures showing how much a man pays when he has an income of $100,000. I note just one or two of the figures. I notice, for instance, that, according to the minister, a man in Ontario with an income of $100,000 has to pay $56,000. That is not the important thing. The important thing is that he has $44,000 left. Does the minister suggest that any man who has an income of $44,000 a year, when this country is at war, is making the greatest possible contribution he could make to the winning of this war? At this time we ought not to ask what a man pays in taxes when he has $44,000 a year left to spend. That man does not know anything about conscription of wealth, or anything else.

The amendment now before the house asks for the introduction of two principles: First, that over and above taxes the money which the government must secure from reserves other than current income shall be levied on the basis of ability to pay. We are levying on reserves now; that is why we float loans. In the main they do not come out of current income. Taxes come out of current income, but loans come out of reserves or savings. Voluntary loans, however, are made on the basis that the person with the greatest sense of public duty subscribes. We collect our loans now from the people who have the greatest sense of public duty; and we entirely overlook, and allow to slack—and I use the minister's own expression—that person who has no sense of public duty.

The outstanding principle included in this amendment is that for the first time we shall begin to tax those reserves on the basis of the ability to contribute toward the winning of this war. The second principle is that we shall eliminate the payment of interest, because by the time this war is over, the major part of the bonds having been contributed to a very large extent by a minority of the people, we shall find that we shall have mortgaged Canada for a generation or two to come, and that at the present rate at the end of four years we shall have sold bonds which will be equivalent in value to practically all the farm land in Canada. We shall find that we, our children and our children's children will continue to pay interest to those very people who are now in a position out of their reserves of wealth, apart from their incomes, to subscribe to the government's war effort. We are suggesting that the people who have reserves of wealth shall contribute on the basis of ability to pay, but having in mind that generations after us shall pay back contributions made without having to pay toll and tribute year after year, as we did after the last war.

I should like to close with this observation: The minister has said that if this policy were announced to-night it would cause fear from one end of Canada to the other. I tell the minister I believe it would cause confidence in many parts of Canada. It would cause many of our people to feel for the first time that we are really all in the front line, and that this government is now calling upon every Canadian citizen on the basis of his ability to contribute toward the financing of the war. It would give to the men in the fighting services and to those people across Canada who pay innumerable taxes and are already carrying a great load, a feeling that for the first time the government is calling upon those who have the ability to pay, to shoulder their fair share of the burden of carrying on this war.

Mr. VICTOR QUELCH (Acadia): After listening to the ruling given this afternoon by the chairman, and then listening to the ruling given by Mr. Speaker, and the statement of the Minister of Finance (Mr. Ilsley) that compulsion has been removed, but that it still remains, I am somewhat confused as to what the effect of this amendment really is. I think all must admit that to all intents and purposes it is still the same as it was this afternoon. It is still a compulsory loan measure, and as such I am still most definitely opposed to it.

May I say that I have no objection to the remarks made this afternoon by the hon. member for Rosetown-Biggar (Mr. Coldwell). I agree with practically everything he said. On the other hand, what he said, and the interpretation the government may put upon this amendment would, in my opinion, be two totally different things. John Maynard Keynes advocates compulsory loans, but I am certainly not in line with John Maynard Keynes' proposals. The hon. member for St. Antoine-Westmount (Mr. Abbott) last year spoke concerning compulsory loans. I do not agree with what he advocated. I do say again, however, that what we would have if this amendment carried, would

depend altogether on who interpreted it. And remember, the Cooperative Commonwealth Federation is not in power, so it would not be in a position to interpret it.

If the proposal embodied in the amendment carried, the result would be that by the end of the war large accumulations of bonds would be held by wealthy individuals, and those bonds to a great extent would represent war profits. That is what I am opposed to. I cannot see why we should allow any body of people in this country to accumulate large holdings of bonds which represent nothing more or less than war profits. It merely means that we are not holding to a pay-as-you-go policy.

I repeat the statement I have made before that any persons in this country who can keep their pre-war savings intact, and have a good standard of living during the war should consider themselves indeed lucky if they are not worse off after the war than they were when it started. No one should desire to accumulate a large amount of bonds as a result of war profits, and yet this resolution will mean that very thing. It will mean that the wealthy people in Canada will accumulate tremendous holdings of bonds which represent war profiits.

I know hon. members to my right do not mean that that is what should happen; but this government will have to make the interpretation, not they. For that reason I cannot support the amendment, nor will the group to which I belong lend their support. Let us face the facts as they have been outlined by the minister. I do not remember his exact figures, but I believe he has told us that we shall be spending well over $2,000,000,000. He mentioned the other day that in the past year we had taxed in the neighbourhood of $900,000,000. So by this method we shall have to raise well over a billion dollars, or maybe $1,200,000,000. Does anyone suggest or think for one minute that we can sell enough interest-free bonds to cover that? Does anyone think for one minute that we could, under a compulsory scheme of selling bonds to the people, raise that amount of money without reducing the standard of living of the people of Canada to a very low level? I am sure hon. members must realize that that cannot be done. Whether we adopt the present system the government is following, or whether we adopt compulsory loans or voluntary loans, we have to face the fact that we shall have to have a great degree of monetary expansion, no matter what system is adopted. We have already had expansion to the extent of half a billion dollars. I have no doubt that before the war is over we shall have a billion dollars of monetary expansion.

We are still of the opinion I expressed the other day that to the extent we cannot meet government expenditures by taxation and by war savings certificates, we should use the Bank of Canada. In the amendment to the amendment moved this afternoon by the hon. member for Lethbridge (Mr. Blackmore), we used the expression "interest-free war savings certificates." I believe that the war savings certificates should be interest-free. The minister himself pointed out that the people must be allowed to put aside a little for a rainy day. One of the easiest ways to do that is to give the people the privilege of investing a certain amount of money in war savings certificates so that that money will not be taxed away from them and they will have a small amount put aside for a rainy day after the war. That does not mean for one minute that we should be compelled to pay them interest. We are allowing them to keep a small amount of money, but why should we pay them interest? There is no need to pay interest on our war savings certificates. Therefore I move the following amendment to the amendment:

That the words "to be levied according to ability to subscribe" be struck out and the following substituted therefor, "from the Bank of Canada."

Also that the following words be added after the words "purposes of this act" in the thirteenth line:

"This method to be used only to the extent that government expenditures cannot be met from the receipts of taxation and the sale of interest-free war savings certificates.

I should like to say a few words with regard to the minister's attitude to this proposal. The other day I asked him what objection he would have to such a proposal and he said it would be inflationary. The leader of the opposition (Mr. Hanson) went one step further and said it would be pure inflation. What he meant by that, goodness only knows. In other words, the leader of the opposition says that if you issue one dollar, you have one dollar inflation. Inflation depends entirely upon the relationship between money and goods. You can issue $100,000,000 and not have inflation if at the same time you increase your production by $100,000,000. I want to follow the minister's reasoning. In order to refresh the memory of the house, perhaps I had better read the question I asked the minister and his reply. I asked the minister this:

When we have obtained from the people all the money we consider it wise to take, whether by taxation or by the sale of war savings certificates, and when we deem it necessary to indulge in a form of inflationary borrowing,

why do we not obtain the money from our own bank, the Bank of Canada, instead of from the chartered banks, who will merely create the means of payment?

That is when the minister interjected that it would be inflationary. This is the reason the minister gave for saying that it would be inflationary. He stated that when money is issued by the Bank of Canada, that money eventually finds its way into the cash reserves of the chartered banks; that is to say, the cash reserves of the chartered banks will be increased by that amount. In view of the fact that they are operating on a ten to one basis; they would then be able to expand their loans by ten times the amount of the increased cash reserves. This is exactly the same reason which Mr Dunning gave on previous occasions. What does this really mean? It means that we dare not use the Bank of Canada for fear the chartered banks will expand their loans and thereby bring about inflation. In other words, it proves conclusively that up to date this government has not established effective control over the issue of credit by the chartered banks. Yet time and again we have been told in this house that we have. The former Minister of Finance, Mr. Dunning, told us that we had absolute and effective control over the chartered banks. I should like to quote what the former Minister of Finance said in this regard on February 28, 1938. He said:

> Parliament through instruments which it has created and which are now in operation does control currency and credit in Canada day by day, week by week and month by month.

And yet we dare not issue money through the Bank of Canada for fear the chartered banks will expand their credit. As I say, this shows conclusively that we have not obtained effective control over the issue of credit by the chartered banks. Is it not strange that we should have a national bank and yet not be in a position to use it because we are afraid of the action the chartered banks may take? Surely the first thing to be done, something which ought to have been done long ago, is to establish effective control over the chartered banks. When I spoke on March 20, I outlined three methods by which that control might be effected. I suggested the 100 per cent money system advocated by many leading economists and bankers. I pointed out also that it would not be necessary to go that far, that one could merely increase the cash reserve requirements of the chartered banks to an extent where they would not be able to utilize the new issue of cash for the purpose of expanding their loans. I suggested also that we might buy the shares of the chartered banks.

I maintain that any one of these three methods would give us control of the chartered banks so that we could issue money through the Bank of Canada without any danger whatsoever of the chartered banks increasing their loans. Until we do that, we shall never be in a position to finance the expenditures of this country without debt. That is my main objection, really the only objection I have to the amendment moved by the hon. member for Rosetown-Biggar. It would increase our debt, and I consider that in war time we ought to adopt a really pay-as-you-go policy. No one should desire or hope to benefit materially as a result of the war. I should like to read a statement made by the Prime Minister (Mr. Mackenzie King) on August 2, 1935. He said:

> Until the control of the issue of currency and credit—

Very often the word "credit" is left out.

> —is restored to government and recognized as its most conspicuous and sacred responsibility, all talk of the sovereignty of parliament and of democracy is idle and futile. To regain for the nation what has been lost and to secure a properly constituted national central bank will continue to be a first objective of Liberal effort.

Will anyone dare to suggest for one moment that this objective has been reached when we dare not issue money through the Bank of Canada without fear of the chartered banks creating inflation by expanding loans to ten times the amount of the cash issued by the Bank of Canada? That seems to me to be a rather unfortunate position for this government or this country to find itself in at the present time.

Mr. ILSLEY: Do we not control credit when we refrain from issuing money through the Bank of Canada?

Mr. QUELCH: Yes; but that is saying that we will control credit by removing the basis for credit. That is a negative stand to take. I quote further from the remarks of the Prime Minister as to why this bank was to be established:

> It stands for the immediate establishment of a properly constituted national central bank, to perform the functions of rediscount, and the control of currency issued, considered in terms of public need. A central bank is necessary to determine the supply of currency in relation to the domestic, social and industrial requirements of the Canadian people.

I do not think anyone can maintain that during the past five years credit and currency have been made available in terms of public need, to meet the domestic, social and industrial requirements of the Canadian people. When we had during that period a million

people on relief, a half million people unemployed, can anyone say that currency and credit were made available to meet the social requirements of the Canadian people? I should like to give the house the definition of inflation which was given by a former minister of finance to show that credit could have been issued safely at that time without danger of inflation. The hon. member for Lethbridge said this:

> The minute you get more money in circulation, let me repeat, than enough to do the work of distributing goods and services which are abroad in a country to be distributed, then you have inflation, and not a minute before.

The then Minister of Finance, Mr. Dunning, said that he agreed. No one will suggest that there was enough money in circulation from 1935 to 1939 to exchange the goods and services available at that time. The minister admitted himself in 1939 that it was necessary to have a degree of carefully controlled monetary expansion in order quickly to put people to work, in order quickly to bring industry to full production. The same thing could have been done from 1935 to 1939. Yet every time that we urged the government to issue money through the Bank of Canada we were given the same excuse the minister gave on March 20, that we cannot do it for fear the chartered banks would create inflation by expanding their credit on the basis of the cash issued. This proves conclusively that we have not established effective control over credit. I remember that in the past the Minister of Finance said, when we suggested that $200,000,000 should be issued to build up a national works programme, that the issue of $200,000,000 would not in itself cause inflation; but when the chartered banks acquired that $200,000,000, he said, and expanded it to $2,000,000,000, he was old-fashioned enough to think that would cause inflation. But, Mr. Speaker, if any of the three proposals I have mentioned were adopted, it would be impossible for the chartered banks to expand their loans on that basis.

Now that this subject has again come up for discussion, I wonder whether the Minister of Finance could not give us a better excuse —perhaps I should say reason, but I think I am justified in using the word "excuse"— than the one he gave us the other day, that we cannot use the Bank of Canada because the chartered banks are likely to expand their credit on the basis of the cash issued through the Bank of Canada.

Mr. SPEAKER: With reference to the amendment to the amendment, I would call the attention of the house to section 4, subsection 1, of the bill, which reads:

> The governor in council may, in addition to the sums now remaining unborrowed and negotiable of the loans authorized by parliament, by any act heretofore passed, raise by way of loan—

And so on. The principle of the bill is contained in that section, which is, a loan to be raised. The amendment to the amendment which is now before the house proposes to raise part loan, and part something else, which is not stated. If this amendment had been brought before the house on the second reading of the bill, when the principle of the bill was adopted, it might not have been out of order, but at this moment in my judgment it is out of order.

The house divided on the amendment (Mr. Coldwell) which was negatived on the following division:

Main motion (Mr. Ilsley) agreed to and bill read the third time and passed.

CITY OF OTTAWA AGREEMENT

AUTHORIZATION OF PAYMENT OF $100,000 FOR THE YEAR ENDING JULY 1, 1941

Hon. P. J. A. CARDIN (Minister of Public Works) moved that the house go into committee to consider the following resolution:

That it is expedient to introduce a measure to authorize the Minister of Public Works on behalf of His Majesty to enter into an agreement to pay to the corporation of the city of Ottawa the sum of $100,000 for the year ending July 1, 1941.

Motion agreed to and the house went into committee, Mr. Vien in the chair.

Mr. CARDIN: This resolution precedes the introduction of a bill providing for the renewal of the agreement between the federal government and the city of Ottawa by which the federal government pays to the city the sum of $100,000 as compensation for water used for sprinkling purposes in parks and also for fire protection.

A number of years ago, as hon. members will recall, the city of Ottawa made a claim against the federal government on the ground that a number of properties had been taken over by the government, thus depriving the city of the taxes previously imposed upon these private properties. Several points of discussion were raised, but finally, after negotiation, an agreement was reached, I believe, about the year 1920. By that agreement the city was to be paid $75,000 a year for the services to which I have referred. A few years afterwards the agreement was extended for a period of five years on the understanding that the $75,000 would be increased to $100,000 a year. That agreement was in force up to the year 1930. Since 1930 it has been extended every year by a bill similar to the one which will be introduced if this resolution carries.

I do not know that I can add very much more by way of explanation. This is an old procedure which has been followed every year. Some people might suggest that it was about time we made an agreement which would last for more than one year, but that would reopen all the questions which were raised when the first agreement was negotiated, and certainly for this year, in the difficult times through which we are passing, I do not think it would be opportune to reopen the matter with a view to reaching a new agreement.

The criticism has been made that we are not giving similar compensation or payment to other cities. My reply is that Ottawa is in a peculiar position because the federal government controls a much larger number of properties in this city than in any other city in the dominion; and these properties being exempt from taxation, the city of Ottawa is exposed to the loss of a much larger amount of taxes than any other city in the country.

Judging from the favourable reception given to similar proposals in years gone by, I sincerely hope that the committee will support the resolution and allow the bill to be introduced.

Mr. HANSON (York-Sunbury): I rise, not for the purpose of opposing the resolution—it is an old friend—but to ask for a little information with respect to the government's policy regarding property recently purchased by the dominion in the city of Ottawa. There is an outstanding instance in the purchase of the Jackson building, now occupied largely, if not altogether, by the Department of National Defence for Air. That building, of

course, is a rather modern and improved building, costing the government a large sum of money—I have forgotten what it is, something around $1,000,000. The moment it becomes government property, it automatically goes off the assessment roll of the city of Ottawa. I should think the loss of revenue from a property of this kind would be a matter of great concern to the civic government, and I should like to know just what is being done with respect to that building. Of course I realize that if title has not passed, the property is still subject to taxation, and I am not quite sure that I know the exact position. I recall that the building was purchased on the instalment basis, with so much to be paid each year, so I presume the title would remain with the former owner until such time as the payments were completed.

There are, however, other buildings in Ottawa which have been acquired recently. I have some recollection of reading that a warehouse building on Nicholas street was purchased from somebody for $100,000. Automatically that would be taken out of the assessment of the city of Ottawa. Then I believe an expensive brewery property was expropriated recently, for what purpose I do not know. Perhaps, if the minister has the information, he would make a statement as to what property has been purchased and what has been the effect on the Ottawa civic revenue.

Mr. CARDIN: I regret very much not having before me at the moment all the information with regard to properties which have been expropriated by the government. I might say generally, however, that once the property is acquired, it ceases to be subject to the payment of taxes to the city of Ottawa. That was one of the claims made by the city, that in taking over properties which were paying taxes to the city treasury we were depriving Ottawa of substantial revenue, and that was one reason for asking the government for some kind of agreement.

Mr. HOMUTH: Does that apply to the Jackson building?

Mr. CARDIN: Yes, it does. It also applies to the brewery to which the leader of the opposition has referred, and to all properties that we are taking over. The moment we take over these properties, they cease to pay civic taxes.

Mr. HARRIS (Danforth): The property is still assessed, and the minister has before him the assessed value for the current year.

Mr. CARDIN: Yes; we have the assessed value, but we pay no taxes.

Mr. HARRIS (Danforth): In that way we could get some idea of the loss in taxation.

Mr. CARDIN: Oh, yes; that could be obtained.

Mr. HANSON (York-Sunbury): If the minister has not the information here at the moment, perhaps he could give it to us at a later stage of the bill.

Mr. CARDIN: That could be given when the estimates of the public works department are being considered.

Mr. HANSON (York-Sunbury): Or when this bill is in the committee stage.

Mr. CARDIN: Yes.

Mr. CHURCH: The principle under which this grant is made originated some years ago, at a meeting of the municipalities of Canada. At that time it was pointed out that in Australia each province gave a cash grant to the capital city in exchange for municipal services. For example, the government of New South Wales helps to maintain the police and fire departments of the city of Sydney. I do not desire to oppose this grant to the city of Ottawa; far from it. But when you add this amount of $100,000 to the amount spent by the Ottawa improvement commission and the other large sums of money spent in this city—I think there was a year ago something like $8,000,000 for new buildings—it amounts to a very large sum. This $100,000 and the amount spent on other Ottawa parks work are equivalent to about two and a quarter mills in the Ottawa tax rate, and to that extent this government is lessening the taxes which otherwise would have to be paid by the people of this city.

The principle underlying this grant should be applied to the provincial capitals as well. It applies in the United States, where they give what is known as a subvention to the capital in exchange for certain civic services to the state such as police protection, fire protection, water, health regulation, street cleaning and so on.

That is the situation in times of peace, but this is a time of war, and the war has placed a very heavy burden on the municipalities. In the first place, the government comes along and appropriates their revenues. The income tax was the exclusive field of the municipalities from 1867 to 1917. That field has been taken over by the provinces and invaded by the dominion, and now hon. gentlemen opposite are threatening what they are going to do in the way of appropriating more of municipal and other provincial revenues. The result will be that our municipalities will starve, because all their money must come from taxes on real estate and they can get no help anywhere.

That is not a fair condition. Every vote must have a principle, and if the principle of

this vote is sound, then I believe it should apply to the larger municipalities throughout the country. The city of Toronto, for instance, gets little or nothing no matter what government is in power. Why, Toronto has to pay the cost of guarding the hydro-electric power plants and other city property, and the distribution system covering the whole of Toronto, which furnishes all the power used by the munitions factories of that great city. We do not get a cent for that. During the last war the federal government paid the cost of guarding, by the militia in training, all federal, provincial and municipal property, but that is not so to-day. The province of Ontario came to Ottawa with regard to that matter, and this government last fall receded from its position and took over the cost of guarding the power plants in the Niagara district, but did nothing about the distribution power system of the municipalities; it let them pay for that work.

In my view this principle should be applied to other municipalities in addition to Ottawa. Some contribution should be made by this government in exchange for the services rendered as well by the larger municipalities. In Toronto the government has been given the use of the exhibition buildings and grounds, which cost $24,000,000 of the taxpayers' money on grounds, buildings and permanent exhibits. Those buildings and grounds were used for military purposes in the last war, and are similarly used in this one, and this government does not pay a cent for them. It does not even pay the cost of lighting the grounds.

This government has thus placed a very heavy burden upon the municipalities. Almost every statute passed by this parliament adds to that burden, but the municipalities are not given a dollar in subventions. That is inequitable and unfair. Here Ottawa is given a grant amounting to about two and a quarter mills in the tax rate, while the other municipalities can get nothing at all. Here we are voting about three billion dollars, presumably for war purposes, although a great deal of it is not for the war at all. It must be remembered that some war work is also being done by the municipalities, and they pay part of the federal burdens. Toronto has, in its tax rate, about two mills of purely federal burden.

Since I have been in this house I have urged that the government should heed the handwriting on the wall. I believe the principle under which this grant is made originated when I was president of the union of Canadian municipalities. We adopted a motion urging that the government should give subventions to the larger centres of population in exchange for municipal services, but so far that principle has been extended only to the city of Ottawa. I believe some recognition should be granted the other cities that give a great deal more in the way of the services than is given by the city of Ottawa. I urge the minister to consider this point. Two years ago he said he would do so, but he has not considered it at all. In view of the heavy burden of taxation municipalities are paying, a contribution of two or three mills to the tax rate would look particularly good, especially in view of the fact that the government is taking large revenue from municipalities. We seem to have the principle of the law of the jungle—"to him that hath shall be given, and to him that hath not shall be taken away even that which he hath." I see no reason why the city of Ottawa should not have some recognition; but I must say, as I said last year when a similar bill was under consideration, that some consideration might be given to other cities in this connection.

It was pointed out by me last year that there is not sufficient room for all the war departments of the government, and I suggested that many of them should be moved to Toronto, Hamilton, Montreal and other points where housing and building space are available. I believe such a movement would effect great economies. When the minister replied, he said the matter would be taken up, but it has not been.

Where is the government going to get space? I suggest that great economies could be effected by a rearrangement of departments and their transfer to other cities and towns. I hope the minister will give us some explanation of this expenditure. Why is it that there is always discrimination against the city of Toronto? No matter what government is in office, we receive the same treatment. We contribute tax moneys to the extent of nearly $92,000,000, and we get nothing in return but pin-money. I say we are entitled to recognition. We have no post office. We had a new mail order building, but it was taken away and given to the military authorities for an ordnance department. Toronto paid one-third of the cost of the viaduct, a sum it had no right to pay, at all. It has contributed large sums of money to the federal exchequer; it is behind the government, and wants to help it. I hope, however, that after the representations I have made, the minister will give the matter some consideration. I believe that in other places they do receive better treatment. I hope other members of the Conservative party from Ontario will take a similar stand. I

would hope, too, that members on the government side might do likewise. The hon. member for Hamilton West (Mr. Gibson) a minister, is in his seat to-night, and I hope he will take that stand. I shall not plead their cases for them, but I do say they are entitled to just as much money as is the city of Ottawa. I should like to know the views of the hon. member for Hamilton West regarding this policy of treating cities in a different manner, because he is a member of the government.

Resolution reported, read the second time and concurred in. Mr. Cardin thereupon moved for leave to introduce Bill No. 23, to authorize an agreement between His Majesty the King and the corporation of the city of Ottawa.

Motion agreed to, bill read the first and second times and the house went into committee thereon, Mr. Vien in the chair.

On section 1—Agreement with city of Ottawa extended for one year.

Mr. ROSS (St. Paul's): I listened with interest to the remarks of the hon. member for Broadview, and I should think the city of Toronto would very much like to have the capital at that point. As a matter of fact, I believe we would be willing to pay money to the government of Canada to have the capital in Toronto. I am not, however, opposing the vote of $100,000 to the city of Ottawa; probably that vote is needed.

I suggest, however, that this is war time, and that the vote is the same as it was in other years. It seems to me that in a time of war some of these expenditures might be reduced. I believe that economies are necessary, and I would recommend that on account of the war the minister do something toward reducing the amount of expenditures involved in this measure. That is my only reason for making the suggestion. We must economize in all quarters.

Mr. GRAYDON: I rise to protest that we have not a copy of the bill with which we are now dealing. Surely, if we are to follow the rules, we should at least have the bill before us.

The CHAIRMAN: I would point out that the bill is in language exactly similar to that in the resolution on the order paper. If hon. members wish, I shall read the bill.

Mr. CARDIN: Certainly the hon. member has had some experience in these matters, and he has knowledge of similar bills which have passed through the house since he has been a member. As I pointed out earlier, since 1930 there have been bills each year renewing the agreement, which dates back to 1920. This bill provides only for a renewal of the agreement for another year. At other times the house has been most generous in its treatment of similar measures; on some occasions it has proceeded from the resolution stage to third reading at one sitting.

When discussing the resolution the leader of the opposition pointed out that there were certain details I was not in a position to give at that time, and he asked me if I would give those details in committee on the bill. I would be ready, if necessary, to move that the committee rise, and that we consider the bill to-morrow. In order, however, that the other house may have some business, I would ask that the bill be permitted to proceed to-night, on the understanding that when the estimates of the Department of Public Works are before the committee of supply, I shall bring the information asked by the leader of the opposition and the hon. member for Danforth. The whole matter could be reopened, so far as property in Ottawa is concerned. If it is satisfactory, I would ask that the bill be reported, and that we dispose of it.

Mr. GRAYDON: I was not objecting in a critical way, but it is the right of every hon. member to have before him any bill which is being discussed. I had no knowledge that the minister had made an explanation to the effect that the bill was similar to that passed in previous years. I must maintain, however, that our ordinary procedure of having bills before us when they are discussed is one from which we ought not lightly to depart. I have no desire in any way to hold up the passage of the bill or the business of the house.

Mr. CRERAR: There is no desire to press the matter against the wishes of the hon. member. I asked across the floor of the house if we would take second reading, and someone nodded. After all, it is a simple measure, and we might do well to get it out of the way.

Mr. HANSON (York-Sunbury): There is no objection.

Mr. GRAYDON: No objection, at all.

Mr. McILRAITH: With reference to the suggestion of the hon. member for St. Paul's, that the amount be reduced by reason of the war, I wish to make it perfectly clear to the committee that, as the member for Ottawa West I feel the amount is very much too small. I have refrained from raising this point before or from going into the matter because of the war situation and the urgency

of the need for money for war purposes. In no way, however, do I acquiesce in the suggestion that the amount is too large.

Mr. PINARD: Mr. Chairman, I should like to say a few words to those who are objecting to this bill. Apparently the leader of the opposition is waiting to hear what I have to say. Two or three years ago I objected to the amount paid to the city and asked for $200,000 instead of $100,000. Since that time many additional expropriations of property have been made. Property totalling millions of dollars has been taken off the tax-rolls of the city. If this bill is to stand over; if the objections are well founded, then the chances are that the Minister of Public Works and the leader of the opposition will be ready to agree to the amount being raised to $200,000, which would be quite reasonable. I think objections to this bill should be withdrawn. Hon. members should consider the amount of money contributed in many different ways by the civil service. They have done their bit. As far as the hon. member for Peel is concerned, if he is willing to spend a few minutes with me in my office I shall treat him right and I think I shall be able to show him that he is wrong.

Mr. CASTLEDEN: What is the procedure with regard to the payment of taxes on properties acquired by the government?

Mr. CARDIN: The federal government pays no taxes.

Mr. CASTLEDEN: In other words, these properties come off the tax-rolls?

Mr. CARDIN: Yes.

Mr. ROSS (St. Paul's): How much will that amount to?

Mr. CARDIN: I cannot say at the moment, but I shall undertake to supply that information.

Mr. ROSS (St. Paul's): I am not objecting to the vote for the city of Ottawa because of any smallness of mind, but the committee is entitled to know more about the services rendered and what the actual situation is. If $100,000 is not enough under the circumstances, perhaps the city could be given a little more. If, however, it is too much, I know the people of this city would not want to take away from our war effort. I wish to know if the government has given sufficient consideration to this matter to be able to say whether some reduction might not be made. I do not want to be unfair to the city of Ottawa because I understand that they give fire and police protection and water service, but I think we should have the balance sheet.

[Mr. McIlraith.]

Mr. PINARD: If the hon. member will accompany the hon. member for Peel, I think I can satisfy them both.

Mr. ROSS (St. Paul's): I shall be glad to go to the hon. member's office to look over the situation, but that would mean that only two members would know it. The whole membership is entitled to this information. Perhaps, when the estimates come along, the hon. member will present this balance sheet. Probably he is more familiar with it than is the minister.

Mr. GRAYDON: We have gone a long way in our procedure to-night. We are considering a bill which has not been brought down, and we are being asked to debate it in the room of an hon. member.

Mr. CASTLEDEN: Could we have a statement of the properties which the federal government has acquired in the last twelve months?

Mr. CARDIN: I promised that information to the leader of the opposition, and I will give it when I am dealing with the public works estimates. It will be a long list running into many millions of dollars. If the committee will pass the bill to-night, I will undertake to give this information when the estimates are being considered. I am suggesting that we do this only in order that we may provide a certain amount of business for the other house; I am not doing it for the purpose of withholding any information. If I remember correctly, a complete list of expropriation was given a year ago, but a number of properties would have to be added because they have been taken over since war was declared.

Section agreed to.

Bill reported, read the third time and passed.

MEAT AND CANNED FOODS ACT

APPLICATION OF COMPULSORY INSPECTION AND MARKETING PROVISIONS TO CANNED LOBSTER

Hon. J. E. MICHAUD (Minister of Fisheries) moved the second reading of Bill No. 14, to amend the Meat and Canned Foods Act (fish and shellfish).

Mr. A. W. NEILL (Comox-Alberni): Mr. Speaker, I should like to say a few words on this bill which deals with the canning and care of lobsters. It appears suitable for that purpose. Since I have only a limited knowledge of that matter, I shall leave it to hon. members from the maritimes to deal with the question in detail. There is, however, one small matter I should like to call to the attention of the minister. Perhaps he will

be kind enough to look into this and change the bill when it is in committee. The old act required certain facts to be placed upon the label of each can, among them being the name of the place where the article was packed. That applied, not to salmon, but only to shellfish, but through some rearrangement of the wording of the section, quite inadvertently I am sure, it has been made to apply to fish salmon, or herrings and pilchards.

This brings in the salmon trade of British Columbia. It is required that this information be placed upon the labels of each can. Salmon is put up in one pound, half-pound, and, I believe, quarter-pound tins, and this will mean a lot of work. What is required to be put on the label is the place where it was packed, not where it came from, and that gives no information at all. Supposing a housewife buys a can of salmon and she wants to purchase another similar can; if the label simply states that it was packed in a place called Kildonan, it gives no information as to where the salmon really came from.

Of late years there has grown up a system of transporting salmon from the place where it is caught to a central point. In the old days it was packed in the cannery at the place, involving large expenditures for hauling supplies back and forth and people, also houses, schools, doctors and so forth. But better transportation methods have allowed it to be done the reverse way, and now the tendency is to bring the salmon to where the centres are and where the population ensures that the cannery can easily get a supply of labour at a few moments' notice. The consequence is that while the fish might be regarded as being packed in Vancouver, it might have been caught a couple of hundred miles away. That gives a wrong impression as to the point of origin. These big companies in British Columbia often have a number of canneries, and some of the fish may be caught in one place and some at another place, and a precise statement of where they are packed is asked for.

The proposed method is inconvenient, expensive and unjust. Every intelligent citizen of British Columbia knows that fish of any variety are always caught in their best excellence in the district I have the honour to represent, and that applies to other things than fish. A fish might be caught at Kildonan or at Barkley sound or some other place on the west coast and be transported to Vancouver to be packed. It would be regarded as packed in Vancouver. But the same identical fish might be packed next week or next month at Kildonan. Also, of course, the history of a particular catch would have to be carried out in its entirety, can by can. You might have 26,000 cases of sockeye sold to Britain, some of them packed in one place and some in another, and the same with any of the other main, known and acknowledged varieties—sockeye, springs, chums, and so on. The inspection of salmon in British Columbia is scientifically carried out, and when that test is passed and the stamp is put on certifying that the fish is No. 1 sockeye, or whatever the variety may be, from British Columbia, the public in Britain can be perfectly sure that they are getting a first-class article, no matter where it was packed.

What is really required is that, instead of putting on the name of the place where the fish is packed, the name of the province should be put on. That is the usual custom of the trade, and it is better for the customer as well as for the purchaser. Then the British housewife buying a tin of No. 1 sockeye can tell whether it was packed in British Columbia, but if she asks about a particular cannery, they would not be able to tell her where it came from. The suggestion I make would be to the distinct advantage of the business and of the packers, and I do not think it would detract in any way from the object which the minister has in mind in bringing in this amendment. I hope he will agree to make it the name of the province.

Mr. MICHAUD: Mr. Speaker, I entirely agree with the suggestions that have been made by the hon. member for Comox-Alberni. The purpose of this amendment is to enable the department to make regulations along the lines my hon. friend suggests, particularly with regard to canned lobster. If the amendment passes, it will enable the department to make rules and regulations to correct not only the anomalies pointed out by the hon. member with regard to canned lobster but anomalies with respect to other kinds of shellfish as well as salmon. That is exactly the purpose for which this amendment to the Meat and Canned Foods Act is sought.

Mr. J. J. KINLEY (Queens-Lunenburg): Mr. Speaker, I should like to refer to section 1 of this bill, which gives a new definition. In the old act we referred to lobster as lobster meat. It takes quite a stretch of the imagination to call any fish meat. You would have a comprehensive definition of the word "meat" to label a can of lobster as "lobster meat."

I think the elimination of the words "dry lobster meat," in the present act is a most commendable change. The bill in its entirety is for the purpose of ensuring proper super-

vision and inspection of the sale of lobster both in Canada and for export, and as such deserves the support of the house.

Motion agreed to, bill read the second time, and the house went into committee thereon, Mr. Vien in the chair.

On section 1—"Dry meat."

Mr. HAZEN: Are there two different kinds of packed lobster meat—dry meat and meat that is not dry—or is it all dry meat?

Mr. MICHAUD: There is only one kind of lobster meat put into cans, and the trade description of that lobster meat is "dry meat." The purpose of the amendment is to eliminate the detailed description, "dry lobster meat," and to substitute the words "dry meat." I am told that the former detailed description was necessitated by the provisions of section 23, which is repealed by this amendment and a new section substituted therefor. The words "dry lobster meat" will no longer be necessary. To avoid misunderstanding on the part of packers, dealers and sometimes brokers, it has been decided that it would be better to eliminate those words.

Since this bill was printed, it has been found that the definition of "dry meat" contained in clause 1 is a little ambiguous, and it is proposed to clarify it, without changing the meaning at all. I would ask my colleague to move an amendment accordingly. The new definition will read:

"Dry meat" means the meat of shellfish contained in a can which has been processed and allowed to cool thoroughly, and which is opened and upturned for not less than one minute and not more than one and one-half minutes so as to permit free drainage of the liquor therefrom.

Mr. CARDIN: I move accordingly, Mr. Chairman.

Amendment agreed to.

Section as amended agreed to.

Section 2 agreed to.

On section 3—Packs subject to inspection.

Mr. NEILL: I move to eliminate the word "place" and insert the word "province" in paragraph (b), subsection 2 of the proposed section 18. The minister spoke about arriving at the same result by regulation, but this is a bill which we are passing, and you cannot or you should not be able to change by regulation what is passed by law. Besides, the regulations referred to in section 4 are in connection with a different matter altogether. I ask the minister if he will not consider allowing paragraph (b) of subsection 2 of section 18, which is covered by section 3 herein, to read:

(b) a true and correct description of the contents of the can, including the vernacular name and the name of the province where the same was packed.

The only change is that, for the reasons I have mentioned, I have put in the word "province" instead of the word "place." I believe this would be much more convenient to the cannery people and to the whole industry, as well as to the buying public, and would better carry out the purpose of the original act.

Mr. MICHAUD: I am satisfied to agree with what the hon. member has suggested, although I believe it will not make much difference, because the phrase, "the name of the place where the same was packed" is inclusive enough to cover the name of the locality and the province where the pack is put up. In my opinion, even though we have these words in the act, they will enable us to make regulations providing for placing on the can the name of the place, as in some circumstances may be required, particularly for lobster; and in the case of salmon it would not prevent us from making regulations provided that it is sufficient to have the name of the province on the can. With regard to the lobster there are packs put up in certain districts of the maritime provinces where the locality gives some trade value to the goods, and we want to be sure we have power to provide that the name of the place where the goods are put up is indicated on the can. I feel that the existing wording is broad enough to enable us also to make regulations covering the case of canned salmon, where the name of the province would be sufficient.

Mr. NEILL: The section carries out that idea in part, but it goes on to say, "in the case of fish." "Fish," I take it, means, other than shellfish.

. . . in the case of fish the minimum weight . . .

And so on.

. . . and in the case of shellfish, unless it is otherwise provided by the regulations . . .

I would say, with no offence at all to the minister—for I do not care who the minister is; the idea is the same—that I do not care for the idea of accepting assurances in this house that such-and-so put into an act is going to mean something other than it exactly does read, and of trusting that later on it will be so carried out. I well recall, in connection with a bill dealing with soldier settlement, pointing out an anomaly somewhat similar to this one, and saying that I was afraid that

it might be interpreted later on by officials in a manner prejudicial to the settler. The minister in charge—he is no longer here—said that I could accept his assurance in the presence of the whole house that it would not be so interpreted. Six months later I had occasion to protest against the treatment of a settler under the strict wording of the act, and I was told by the officials that they had nothing to do with the statement made in the house by the minister, that it did not bind them and that they did not propose to be bound; and in consequence of that, the settler suffered a grievance. The minister expressly stated in the presence of the house and the whole government that the interpretation would be such-and-so. That happened on more than one occasion, and that is why I am a little dubious about accepting the assertion that everything will be lovely.

I quite admit that to put all this pedigree that the act calls for, about the lobster, is perhaps necessary. It always has been so, and I am not seeking to make it different. I am only seeking to preserve the purity, so to speak, of the British Columbia salmon as regards the province it comes from, without going into any ridiculous demand which might involve putting the exact spot where it was packed. In days gone by there used to be floating canneries where the packing was done wherever the boat happened to be. You would have to take the degrees of latitude and longitude every night in order to ascertain exactly where the boat might be at the moment certain packing was going on, and when a canner is putting up 50,000 cases every year, with six or seven varieties, he cannot keep track of every half or quarter-pound tin, or a lengthy pedigree of the source and origin and where the fish in each tin was packed; it would be a heavy expense, and expense at any time means poor business, because the product would cost more to the consumer and yield less to the fisherman. I will not press the amendment, because the government has a large majority behind it; I am merely putting in my protest. Expense and inconvenience will be caused, with no benefit to anybody at all.

Mr. MICHAUD: As regards what the hon. member for Comox-Alberni has said, to accept the amendment as suggested would make it almost impossible to comply with the trade practice in merchandising or marketing canned lobster, by indicating the place of origin, which is considered by the trade to be absolutely necessary. On the other hand, if the section is left as it is, I believe that the wording is broad enough to permit the making of regulations which, if applied to canned salmon, would require the name of the province only to appear on the can, and it would be open to the department to make regulations providing for the naming of the place as it may apply to canned lobster. So, by leaving the section as it is, without amendment, it will be broad enough to cover all cases and enable the department to make regulations covering such a case as is suggested by the hon. member for Comox-Alberni.

Mr. KINLEY: It seems to me that the word "place" in the bill is quite enough to protect the industry. The hon. member for Comox-Alberni says that there may be a floating cannery, a ship outside the harbour. Well, the ship will come to port; it seems to me that the port where the ship is registered would be the place where, according to the intention of the bill, the fish would be canned, and the place where they are canned is, therefore, easily definable and should not cause any confusion, especially when the matter is covered afterwards by regulation in accordance with the act.

Mr. STIRLING: Is it clear that these labels which are being discussed apply only to fish?

Mr. MICHAUD: Yes.

Mr. STIRLING: They apply only to fish?

Mr. MICHAUD: Fish and shellfish.

Mr. STIRLING: Would the difficulty indicated by the hon. member for Comox-Alberni not be got over if the words "place and province" were used? For instance, "Kildonan, B.C."

Mr. POTTIER: "Place or province"?

Mr. STIRLING: No; "place and province".

Mr. POTTIER: It seems to me that the difficulty would be overcome by inserting the words "or province", making it read, "place or province". There would then be the alternative, if the difficulty suggested by the hon. member for Comox-Alberni were encountered.

Mr. KINLEY: Why say "place or province"? A province is a place, and the regulations would define what is a place under the act.

Mr. NEILL: "Place" indicates a specific place. I do not think any stronger argument could be adduced in support of the amendment that I have proposed than the argument put forward by my hon. friend sitting behind me (Mr. Kinley) when he said that a ship would always be registered somewhere. It might be registered in Liverpool. Any of the proposals suggested, either by the hon. member for Yale (Mr. Stirling) or by the hon.

member for Shelburne-Yarmouth-Clare (Mr. Pottier), would be satisfactory and would meet the case. "Place or province" would leave it open to one or the other. As regards fixing it by regulation, that is not satisfactory. We are passing an act, and in making the act we should not be told that it will be changed by regulation. When you provide by law that the place where a product is packed shall be indicated on the tin, it has to be done and no regulation will allow you to change that. I suggest that "place or" would meet the wishes of the minister.

Mr. MICHAUD: Suppose we compromise by inserting after the word "place" the words "and or," so that it would enable us, as regards canned salmon if desired, to print only the name of the province, and as regards shellfish to print on the label the name of the place as well as of the province.

Mr. STIRLING: Can the minister assure me that this does not apply to tomatoes?

Mr. MICHAUD: Not at all.

Mr. STIRLING: The other part of the act does?

Mr. MICHAUD: The other part of the act may provide for them, but we are not interested in that.

Mr. MACDONALD (Kingston City): Is it the understanding that you can use either the place or the province?

Mr. CARDIN: I move the amendment.

The CHAIRMAN: The subsection as amended will read:

(b) A true and correct description of the contents of the can, including the vernacular name and the name of the place and or province where the same was packed.

Amendment agreed to.

Mr. HAZEN: The subsection goes on to say:

. . . and in the case of shellfish . . . the minimum weight in avoirdupois of the dry meat in the can.

Do the regulations cover clams, which are not packed in that way?

Mr. MICHAUD: Yes; there are already regulations that apply to clams.

Mr. HAZEN: Why on the label do you ask for the initials of Christian names? It might be possible that some man is packing not under his initials but under his Christian name and surname. I do not know what the provision was before, but I should like to know the reason for the initials rather than the full name if a man wishes to use his full name.

Mr. MICHAUD: The reason is that in some sections there are several packers with the same surname—several Macdonalds or Smiths—and they are all old-established packing houses. Their names have a trade value and they are distinguished only by initials. In order to protect them we must provide in the regulations that they should indicate their initials. Otherwise they would be infringing the rights of competitors.

Mr. HAZEN: Do none use their Christian names instead of their initials?

Mr. MICHAUD: There is nothing to prevent them from including their full Christian names so long as they use their initials.

Mr. HAZEN: It does not say that they may use their Christian names. It is peremptory. It says that "all such cans shall be labelled with (a) the initials of the Christian names." There is no mention of Christian names.

Mr. MICHAUD: But there is nothing to prevent the use of their Christian names—

Mr. HAZEN: Except the act.

Mr. MICHAUD: —so long as they use their initials. If they do so, they comply with the provisions of the law, and that is all that is required. They may spell their names in full if they wish to do so, but the law compels them to use their initials.

Mr. HAZEN: Why not say initials or Christian names and make it clear?

Mr. CARDIN: I would move that paragraph (a) of subsection 2 of section 3 be amended by striking out in the first line thereof, after the word "initials," the word "of" and substituting in lieu thereof the word "or," so that the paragraph will read: "(a) the initials or the Christian names."

Mr. NEILL: It should be "initials of" or the Christian names. Now they have to show the initials or the Christian name. Suppose you said, "the Christian names or the initials."

An hon. MEMBER: You would have to have the initials of the Christian names.

Mr. NEILL: The Christian names or the initials thereof. I would point out that some of these tins are very small, not much bigger than a dollar, and there is a lot to be put on them. "William Adolphus Hoffenweit" would take a lot of space on a tin.

Mr. CARDIN: I move that the paragraph be amended by striking out the words "the initials of" and adding after the word "names" the words "or the initials thereof."

Amendment agreed to.

Section as amended agreed to.

On section 4—Confiscation.

Mr. MICHAUD: There is a slight change in order to make this section clear. I will ask my colleague to move the amendment, which is as follows:

That section 4 be struck out and the following substituted in lieu thereof:

4. Subsection two of section twenty-two of the said act is repealed and the following substituted therefor:

(2) Any unsound fish or shellfish found during the process of preparing and packing, and any unsound canned fish or shellfish found at any time thereafter, as provided by the regulations, may be seized and confiscated on view by any inspecting officer and dealt with as required by the regulations.

Mr. CARDIN: I move accordingly.

Amendment agreed to.

Mr. HAZEN: Might it not be possible for unsound fish or shellfish to be found prior to preparing and packing. The inspectors, in the course of their rounds, might find unsound fish prior to preparing and packing, so I think it should read, "found at any time before or thereafter".

Mr. MICHAUD: The section now provides for the confiscation of unsound fish or shellfish found during the process of preparing and packing. The whole process starts with the bringing of the fish to the cannery or place of packing. Then it is prepared for packing and placed in the can. This provides for seizing the fish at any time, from the moment they are taken into the cannery until they are put into the cans. Then follow the words, "and any unsound canned fish or shellfish found thereafter," which means after it has been prepared and put in the cans. The cans are sealed; then on second or third inspection they may be found to be unsound, and this provides for their seizure as well.

Mr. FRASER (Peterborough West): The section reads, "any unsound canned fish". That would mean the fish would be in the can.

Mr. MICHAUD: Yes; but the amendment has been suggested to correct that.

Section as amended agreed to.

On section 5—Regulations fixing grades of canned lobster.

Mr. CASTLEDEN: What is the purpose of this change?

Mr. MICHAUD: As it stands now, the regulations are statutory. The canned lobster trade is changing rapidly; we have to find new markets in the United States for a large part of the pack, and we find it necessary to make regulations different from those that existed in the past. We must meet the conditions with which we are faced when we market our lobsters, so instead of having the regulations statutory, we are taking power to make the regulations by order in council.

Section agreed to.

Sections 6 and 7 agreed to.

Bill reported, read the third time and passed.

At eleven o'clock the house adjourned, without question put, pursuant to standing order.

Wednesday, March 26, 1941.

The house met at three o'clock.

QUESTIONS

(Questions answered orally are indicated by an asterisk.)

NON-INTEREST-BEARING BONDS

Mr. HANSON (Skeena):

What is the total amount paid in subscriptions in Canada since the beginning of the present war to date, in connection with non-interest bearing bonds, showing each province separately?

Mr. ILSLEY:

Province	To March 15, 1941 No. of applications	Amount
British Columbia	351	$3,523,995 15
Alberta	600	85,647 32
Saskatchewan	418	86,063 93
Manitoba	2,614	125,023 63
Ontario	2,991	956,489 00
Quebec	156	1,188,176 49
Nova Scotia	28	6,739 00
New Brunswick	62	75,325 15
Prince Edward Island	....	.....
Yukon	1	5,000 00
Total	7,221	$6,052,459 67

ST. LAWRENCE WATERWAY—EFFECT ON PORT OF MONTREAL

Mr. JEAN:

1. Before signing the treaty respecting the St. Lawrence waterways as announced by the Right Honourable the Prime Minister on the 19th instant, did the government consult experts as to how the port of Montreal would be affected by the completion of the project?
2. If so, what are the names of such experts?
3. What were the conclusions of each of them?

Mr. CARDIN:

1. Yes.

2. The possible effect of the St. Lawrence development on the port of Montreal has been studied by various engineering boards during the past two decades. The joint board of engineers investigated the project in 1924-1926, and the effect of the project proposed at the present time has been examined by the Canadian temporary great lakes St. Lawrence basin committee, the engineers on which were Mr. G. A. Lindsay, Department of Transport; Dr. Olivier Lefebvre, vice-chairman, Quebec Streams Commission; and Dr. T. H. Hogg, chairman and chief engineer of the Hydro-Electric Power Commission of Ontario.

3. The conclusions of the above are that the provisions of the Canada-United States agreement together with the engineering design of the structures and arrangements for regulation and control are of such a character as to prevent any adverse effect on the port of Montreal.

*BEAUHARNOIS POWER DEVELOPMENT

Mr. LaCROIX (Quebec-Montmorency):

1. Is there an agreement between the dominion government and the government of the province of Quebec providing for the return to the province of the electrical energy developed from the Beauharnois canal?

2. If so, upon what conditions?

Mr. CARDIN: I understand the agreement and the correspondence, tabled on Friday, already contain the answer to this question.

*ST. LAWRENCE WATERWAY—NAVIGATION

Mr. LaCROIX (Quebec-Montmorency):

In connection with the St. Lawrence waterways agreement, is there any restriction with reference to vessels from the great lakes continuing their voyages from Montreal to the ocean?

Mr. MACKENZIE KING: The reply just given by my colleague to the question concerning the Beauharnois power development, would apply to this question.

TUBERCULOSIS IN WENTWORTH, ONT., CATTLE

Mr. CORMAN:

1. How many cattle were tested in the county of Wentworth for tuberculosis?

2. How many were found to be suffering from the above disease?

3. What amount of compensation was paid farmers having these diseased cattle?

Mr. GARDINER:

1. 19,806.
2. 1,251.
3. $37,358.

SYDNEY, N.S., AIRPORT

Mr. GILLIS:

1. What was the cost of the site for the airport located at Sydney, Nova Scotia?

2. From whom was the site purchased?

3. Was the land where this airport is located originally crown land?

4. If so, to whom was it sold or transferred?

Mr. POWER:

Provincial crown lands, 670 acres	$ 670 00
Militia rifle range, 312 acres (transferred)	1 00
Dominion Coal Co., half interest 192·5 acres	721 88
Mary and Sarah Wallace, ½ interest 192·5 acres	481 25
Note.—One-sixth interest in this tract has been expropriated but no owner can be found and therefore no money has been paid for it.	
John Gillis, guardian of the person of Peter Gillis, unsound mind, ¼ interest 38·4 acres	72 00
Peter Gillis, Michael Gillis, John Gillis, Katy Ann Gillis, heirs of M. Gillis, ¾ interest 38·4 acres	216 00
Daniel McMillan right of way 6·08 acres	60 00
Total	$2,222 13

*USE OF IRISH PORTS AND BASES AS A PROTECTION TO EMPIRE SHIPPING

Mr. CHURCH:

1. Has Canada a foreign minister or envoy to the Eire republic in Dublin?

2. If so, who is the acting head, what is his staff, what duties do they perform and what are their respective salaries and other allowances?

3. Has the government made any representations to Eire as to the loss of Canadian shipping off Eire ports by enemy action, resulting from the refusal of Eire of the use of her ports for defence purposes?

4. Is Eire considered by this government a dominion or a separate republic?

5. What trade commissioners or other Canadian officials are in Eire, where are they located, at what cost, and is there duplication of services?

6. Has Canada made representations to Eire or to the government of Britain requesting the use of Irish ports and bases as a protection to Canadian and empire shipping against enemy submarines and air bombers?

7. Have empire ships been sunk, and Canadian and British seamen drowned as a result of the lack of protection by the use of Irish ports?

8. What has the government done in the matter, or what action will be taken?

Mr. MACKENZIE KING: I feel I ought to say a word or two about the questions which the hon. member for Broadview (Mr. Church) has asked, and in that connection point out to him and to hon. members of the house that in considering both the placing of questions on the order paper and the replies to be made thereto, it is desirable that we should all have in mind the effect which the questions when asked and when answered may have upon the situation with which the entire British empire is faced at the present time. It is important that we keep in mind particularly the position of the United Kingdom and the government as well as that of our own country in dealing with matters which affect not one part of the empire only, but all parts. If any useful purpose can be served by asking and answering questions, if we can achieve a purpose which will assist the war effort of the British commonwealth, then I think questions might well be asked and should be answered. But if a question is of a character to provoke discussion and is in no way calculated to aid in meeting an existing situation and one which may be very embarrassing, with all due respect I submit that any such question should neither be asked nor answered.

There are one or two questions asked by my hon. friend which I can answer. He asks: "Has Canada a foreign minister or envoy to the Eire republic in Dublin?" I would reply that Canada has no foreign minister in Dublin. There is the office of high commissioner which unhappily, due to the death of the late Mr. John Hall Kelly, is vacant at the present time. At present the acting high commissioner is Mr. E. J. Garland, a former member of this House of Commons. My hon. friend following his first question asks: "If so, who is the acting head, what is his staff, what duties do they perform and what are their respective salaries and other allowances?" I have already given him the name of the acting head. The staff is a small one. It consists of one stenographer, Miss E. O'Malley, grade 3, who receives a salary of $1,560 and an allowance of $250 per annum, and Mr. Chambers, messenger, who receives $465.

I shall have to bring the next question to the attention of the Minister of Trade and Commerce (Mr. MacKinnon). My hon. friend asks: "What trade commissioners or other Canadian officials are in Eire, where are they located, at what cost, and is there duplication of services?" Perhaps this question may be allowed to stand on the order paper to be answered later by my colleague. The hon. member's next question is: "Has the government made any representations to Eire as to the loss of Canadian shipping off Eire ports by enemy action, resulting from the refusal of Eire of the use of her ports for defence purposes?" To begin with, this question is out of order because it carries with it an implication. It is asked not so much for the purpose of getting information as for the purpose of purporting to give information, which may and probably is wholly incorrect.

The next question asked is: "Has Canada made representations to Eire or to the government of Britain requesting the use of Irish ports and bases as a protection to Canadian and empire shipping against enemy submarines and air bombers?" And next: "Have empire ships been sunk, and Canadian and British seamen drowned as a result of the lack of protection by the use of Irish ports?" What I said a moment ago about a previous question would apply also to these. Then my hon. friend asks: "What has the government done in the matter, or what action will be taken?"

I submit, Mr. Speaker, that to give any replies to these questions, either in the affirmative or in the negative, would serve only to provoke discussion which might prove unfortunate to the relations between Canada and Ireland or create complications as between the United Kingdom and Ireland. I would not wish it to be assumed that the matters which are referred to have not been the subject of careful consideration by representatives of Ireland and our own government. On the other hand, I have no desire to answer questions which might quite unnecessarily occasion further questions or occasion embarrassment in other parts of the empire, with respect to a controversial matter. I think the whole matter is perhaps best left in that position. I am sure that my hon. friend, who is the most loyal of men, will appreciate that it is only because of reasons of great loyalty to the crown that I take the position I do.

Mr. HANSON (York-Sunbury): I followed the Prime Minister quite closely, but I do not recall that he answered question No. 4, in which the opinion of the government was requested as to whether Eire is considered to be a dominion or a separate republic.

Mr. MACKENZIE KING: I suppose that is a case of paying your money and taking your choice. I imagine that the United Kingdom would have something to say in regard to that matter as well as ourselves. I do not think we need to go into that particular subject, which is an academic one, at this time.

Mr. CHURCH: The British government have answered these questions. I wanted them answered and to know what will be done. There has been great loss of life and shipping

because of our inability to use these Irish ports, bays and inlets, and the government should make known its stand on the matter. I asked the question on July 10 of last year, as to what our policy was, when the Right Hon. Prime Minister's estimates were under discussion. A statute of Eire, the Irish National and Citizenship Act, declares the United Kingdom to be a foreign power, and the act states that in the event of any war of the United Kingdom, Eire will remain neutral. I do not want this question to stand. We have no foreign policy. The enemy will not let things stand and stop sinking ships. They will continue to destroy our fleet. These ports belong to the empire, not to Eire. I think the house is entitled to know something about the matter, and the country is asking what is being done. Two or three people in my constituency have asked me to take up the matter and have suffered as a result.

Mr. MACKENZIE KING: Like my hon. friend, I do not wish to have the question stand; I desire to have it dropped.

Mr. SPEAKER: Question answered with the exception of No. 5 which stands.

*PRICES TO SOLDIERS OF MEALS IN DINING CARS

Mr. CHURCH:

1. Will the government look into the matter of the price of meals charged soldiers on railway dining cars in Canada while travelling to their homes on furlough?

2. Will the government also look into the system of restaurant prices adopted by the Union Pacific Railway and other railway systems in the United States, and study the application of such a system for Canada's soldiers?

Mr. RALSTON: The matter referred to is already under examination.

WAR MATERIALS—CHICOUTIMI, QUEBEC, WORKSHOPS

Mr. LaCROIX (Quebec-Montmorency): Is it the intention of the Department of Transport to finance the putting into operation of the workshops for the manufacture of war materials at Chicoutimi?

Mr. CARDIN: This question is directed to the Department of Transport. If any assistance is given for the establishment of munition plants, it would be given under the jurisdiction of the Department of Munitions and Supply. The question refers to the putting into operation of workshops for the manufacture of war materials, but it does not indicate what workshops are referred to. It is somewhat vague. At all events I suggest that this is really a matter of policy which will be announced in due course.

[Mr. Church.]

QUESTIONS PASSED AS ORDERS FOR RETURNS

NATURAL GAS AND PETROLEUM

Mr. HOBLITZELL:

1. What encouragement is being offered to Canadians who desire to explore for further natural gas and petroleum development in eastern Canada?

2. Has the oil controller taken any steps to ascertain the difference between the cost of crude oil imported into Canada and the cost of the same crude oil in the country from which it was imported, and how does this cost compare with a similar grade of crude oil if it were produced in any of the provinces of eastern and western Canada?

3. Has the oil controller issued a complete list of the rules and regulations concerning the petroleum industry which is available to any person in the Dominion of Canada? If they have not issued such rules and regulations, what reason can be given for such a policy?

4. Has the oil controller or any other official of the government the right to interfere with any one person or persons acquiring acreage on which to explore for oil, or to formulate or to put into effect any regulation which would prevent the development of a native supply of crude oil in Canada?

ARMY CANTEENS

Mr. SHAW:

1. Do men operating army canteens in Canadian military camps receive pay and allowances over and above regular army pay?

2. If so, what are the rates of pay or allowances for this work?

3. What operating costs, if any, are charged against the revenue derived from these canteens?

4. What are the regulations governing the distribution of profits accruing from the operation of army canteens?

Mr. RALSTON: Return tabled.

PRICES PAID BY FARMER FOR FEEDS

Mr. LACOMBE:

During the years 1939, 1940 and 1941, what prices were paid by the farmer for the following feeding stuffs, (a) red middlings; (b) white middlings; (c) barley meal; (d) crushed oats?

DEFENCE OF CANADA REGULATIONS—NEWSPAPERS AND PERIODICALS

Mr. MacINNIS:

1. What newspapers and periodicals published in Canada have been banned under the defence of Canada regulations since the commencement of the war, and what is, (a) the name of the paper; (b) the date when banned?

2. What newspapers and periodicals published in the United States have ben denied entry into Canada under the same regulations and for the same period?

3. What newspapers and periodicals published in Great Britain and/or the British dominions have been prohibited from entering Canada under the same regulations and for the same period?

4. What newspapers and periodicals published in other countries (friendly nations) have been prohibited from entering Canada under the same regulations and for the same period?

MILITARY DISTRICT NO. 11—SUPPLY OF MEAT

Mr. TUSTIN:

1. Was cow meat supplied in place of steer meat to military district No. 11 during 1940?

2. If so, who was the contractor?

3. For how many weeks was this meat delivered to military camps in British Columbia?

4. Was quality of meat supplied up to department specifications?

Mr. HANSON (York-Sunbury): I do not see why this should stand as an order for return.

Mr. RALSTON: I have been looking into this matter and I find that it involves regulations, the interpretation of regulations and possibly some correspondence. My hon. friend will see that a question which follows, with regard to meat contractors, relates to the same matter, but has to do with the Department of Munitions and Supply. That department purchases this commodity while the Department of National Defence inspects it. I telephoned the Department of Munitions and Supply this morning and they told me they were engaged in getting this information. I really thought the questions were connected.

Mr. HANSON (York-Sunbury): This is an important matter. When may we expect the return to be brought down?

Mr. RALSTON: I will have it brought down almost immediately.

MUNITIONS AND SUPPLY—CLAIMS AGAINST MEAT CONTRACTORS

Mr. CARDIFF:

1. Did Munitions and Supply department make a claim on any meat contractors during 1940 for supplying cow beef when other grades were specified?

2. If so, what amount of money was rebated during 1940 and during 1941?

3. Who were the contractors?

4. What military districts made claims?

LANGUAGE QUALIFICATIONS OF FEDERAL EMPLOYEES IN QUEBEC PROVINCE

Mr. LaCROIX (Quebec-Montmorency):

1. How many employees have been appointed in the province of Quebec since September 1, 1939, to the Departments of National Defence, Transport, and Pensions and National Health?

2. How many of these employees (a) are bilingual; (b) how many speak English only?

3. Were these employees appointed by the civil service commission under the authority of the Civil Service Act or the War Measures Act?

BRITISH CHILDREN

Mr. BRUCE:

1. How much money has the government received to date in the way of gifts towards the care of evacuated British children?

2. How much of this money has been spent respectively on, (a) hospitalization; (b) dental work; (c) clothing?

3. Do provincial governments make any contribution towards the above services? If so, how much?

4. Do any national voluntary organizations supply clothing for evacuated children? If so, what organization or organizations?

5. Do any of these organizations receive a government grant for this purpose? If so, which and for what amount?

6. Have any national organizations undertaken responsibility for certain evacuated children? If so, give the name of such organization or organizations?

7. Do these organizations receive grants from the government for their work?

8. As these children are in voluntary homes, what expense does the government incur in regard to them?

9. Did the federal government pay part of the cost of transportation of the government-assisted children to Canada? If so, state the total amount?

10. Were any of these children placed in their foster homes by provincial welfare agencies without cost to the federal government? If not, what portion of the cost did the federal government bear?

Mr. CRERAR: I doubt if we can get specific answers to all the inquiries covered in this question. Donations have come in, some of them direct to the Department of Mines and Resources and some to the Department of Finance. I suggest that the question be made an order for return, subject to the limitation I have stated.

MOTIONS FOR PAPERS

TORONTO-FEDERAL REVENUE AND FEDERAL EXPENDITURE

Mr. CHURCH:

For a return showing what federal revenues have been collected from the city of Toronto, during the last year of record in (a) postal receipts; (b) customs; (c) excise; (d) income tax; (e) inland revenue; (f) sales tax; (g) other federal levies. Also a statement of the expenditures made in the city of Toronto by the federal government during the last year of record.

Mr. ILSLEY: Mr. Speaker, I would ask that this motion be dropped and redrafted. I have been having some correspondence with the hon. gentleman suggesting redrafting.

Mr. CHURCH: Mr. Speaker, I shall be glad to accept the suggestion of the minister. I am in hopes that a better system will be installed.

Mr. SPEAKER: Order. I have no idea of what is being said. Do I understand that the minister asked the hon. member to drop this motion?

Mr. HANSON (York-Sunbury): To have it redrafted.

Mr. ILSLEY: To drop it and have another one redrafted.

Mr. CASSELMAN: In accordance with the correspondence exchanged.

Motion dropped.

SOLDIERS HITCH-HIKING ON HIGHWAYS

On the motion:

Mr. CHURCH:

For a copy of all correspondence, telegrams and other documents exchanged between any department of the government or any official thereof, and the minister of highways of Ontario, the highway ministers in the other provinces of Canada, or any officials of their departments, since the beginning of the present war, objecting to hitch-hiking on the highways by members of his majesty's forces. Also a copy of any orders in council and any correspondence exchanged with the railways of Canada with respect to the above.

Mr. CHURCH: Mr. Speaker, I ask that this motion be dropped because the minister of highways of Ontario wrote me in answer to my letter and said that never at any time had he asked anyone to stop soldiers or civilians from hitch-hiking.

Mr. RALSTON: I have written my hon. friend, who was good enough to send me a copy of the letter from the minister of highways, and I have also written the minister of highways and asked him just what I am to take from his letter. The province of Ontario is not objecting to soldiers hitch-hiking because, having regard to the act which the province of Ontario has itself passed under the Highways Act, all persons are prohibited from soliciting rides on the highways.

Mr. HANSON (York-Sunbury): But they can solicit rides elsewhere.

Mr. RALSTON: But my hon. friend the member for Broadview says that the province of Ontario has never objected to soldiers hitch-hiking whether on the highways or not.

Mr. CHURCH: The action taken to prevent it was by request of the railways. It is so stated in the return that was tabled.

Motion dropped.

WAR APPROPRIATION

SUPPLEMENTARY PROVISION FOR GRANTING TO HIS MAJESTY AID FOR NATIONAL DEFENCE AND SECURITY

Hon. J. L. ILSLEY (Minister of Finance) moved that the house go into committee at the next sitting to consider the following resolution:

Resolved, that it is expedient to introduce a measure to be called the Supplementary 1940 War Appropriation Act to provide inter alia—

[Mr. Speaker.]

1. That sums not exceeding $135,000,000 be granted to his majesty in addition to the sums granted by the War Appropriation Act, 1940, towards defraying any expenses or making any advances or loans that may be incurred or granted by or under the authority of the governor in council during the year ending March 31, 1941, for:—

(a) the security, defence, peace, order and welfare of Canada;

(b) the conduct of naval, military and air operations in or beyond Canada;

(c) promoting the continuance of trade, industry and business communications, whether by means of insurance or indemnity against war risk or in any other manner whatsoever; and

(d) the carrying out of any measure deemed necessary or advisable by the governor in council in consequence of the existence of a state of war.

2. That the governor in council be empowered to reexpend, advance or loan moneys that may be received by way of refund or repayment of advances, loans or expenditures under the War Appropriation Act, 1939, the War Appropriation Act, 1940, and the Supplementary 1940 War Appropriation Act.

He said: His Excellency the Governor General, having been made acquainted with the subject matter of this resolution, recommends it to the consideration of the house.

Motion agreed to.

YOUNG COMMUNIST LEAGUE

SUBVERSIVE MATERIAL ALLEGED TO HAVE BEEN MAILED TO UNIVERSITY STUDENTS

On the orders of the day:

Right Hon. ERNEST LAPOINTE (Minister of Justice): Mr. Speaker, in answer to a question asked yesterday by the hon. member for Parkdale (Mr. Bruce), I desire to say that the Royal Canadian Mounted Police are aware of the activities of the young communist league and are in possession of copies of the "Student Beacon" to which he referred. The matter is being investigated. This association was declared illegal many months ago.

ARMY CANTEENS

STATEMENT AS TO REPORT OF COMMITTEE REVIEWING REGULATIONS

On the orders of the day:

Hon. J. L. RALSTON (Minister of National Defence): The hon. member for Yorkton (Mr. Castleden) and I think the hon. member for Waterloo South (Mr. Homuth) asked me when the report with reference to the canteen fund would be available. I said that I would make inquiries from the chairman. I have communicated with Mr. Macdonnell, chairman of the committee, and also with the secretary of the committee, and I am advised that the

committee communicated with General McNaughton, general officer commanding the Canadian corps, and with the senior officers of the navy and air force in England, with a view to ascertaining what the British authorities are doing in this regard. That information is not yet at hand, but they assured me that as soon as the information is received the committee will take up the matters referred to, and I would anticipate that a report will be made with reasonable promptness. I might add that to-day, in response to a request by the hon. member for Yorkton, I have tabled the canteen regulations.

MILITARY TRAINING

INQUIRY AS TO POSTPONEMENTS IN THE FOUR-MONTHS TRAINING PLAN

On the orders of the day:

Mr. GORDON GRAYDON (Peel): Mr. Speaker, I should like to follow the suggestion made by the Minister of National War Services yesterday and inquire what answer he has received from the Noorduyn company relative to key men in the aircraft industry and the four-months' training scheme.

Hon. J. G. GARDINER (Minister of National War Services): Mr. Speaker, last evening the hon. member for Peel called attention to some questions and answers which were asked and given the night before in the house. As reported at page 1826 of *Hansard* the Minister of National Defence (Mr. Ralston) made a statement with regard to Noorduyn Aviation Limited, Montreal, and stated that the associate deputy minister, General LaFleche, had communicated with the company and was expecting a reply. I have received from General LaFleche a copy of the notes taken of the telephone conversation which took place between him and Noorduyn Aviation, Limited, as follows:

> Mr. Noorduyn informed me over the telephone early this afternoon that as yet the calling out of his employees for compulsory military training has not adversely affected the production of aircraft by his company.
>
> Mr. Noorduyn added that whether or not his industry will be hampered in the future would depend upon the successful working out of the procedure whereby any war industry or other employer may submit at any time, for consideration by the board, a plan for the advancement or postponement of the military training of any group of his employees.

DECENNIAL CENSUS

ANNOUNCEMENT OF INTENTION TO PROCEED IN 1941

On the orders of the day:

Hon. J. A. MacKINNON (Minister of Trade and Commerce): Mr. Speaker, I desire this afternoon to make a statement to the house in connection with the decennial census which is due to be taken in June of this year.

In the minds of many persons it has been assumed that the national registration of last summer could take the place of the census. I wish to make it very clear that the information asked for under the national registration was very different from that required under the census.

The census as it has been developed in this country is far more than a mere counting of heads. I have before me the schedules which will be used. They are eight in number. The one schedule for the national registration of last year contained 16 questions. The census schedule dealing with population statistics contains 39 questions.

There is a general farm schedule comprising 167 main questions and a very great number of subquestions.

There is a special schedule for the fruit and vegetable growers of this country containing 64 questions.

There is a schedule in connection with abandoned or idle farms containing 24 questions.

There is a schedule dealing with those who may be undertaking the production of fruits, vegetables and animals on a small acreage, or to a small value. This schedule has 54 questions.

There is a schedule containing nine questions covering merchandising and service establishments; and to assist in the complete enumeration of those who may be blind, deaf or mute, there is a special schedule containing some seven questions.

For reasons which will be obvious it is proposed in connection with the housing situation to have what is known as a test census. Some twenty-nine main questions will be asked of the owner or occupant of every tenth dwelling.

This brief statement as to the schedules to be used will give hon. members a slight idea of the scope of the information which it is desired to obtain.

It will not be possible to tabulate all the details which it is expected to obtain on these various schedules in a few weeks or even a few months. This means that, if the census were to be postponed for a year, or two years,

or for that indefinite period "until after the war," particulars regarding housing, the data on abandoned or idle farms, that in connection with the general farm schedule, and other information which would be of infinite value in connection with the problems of demobilization and reestablishment of our soldiers, would not be available when it was required.

The census has been taken in the whole of Canada every tenth year since 1871; and in 1916, 1926 and 1936 there has been a federal census taken in the western provinces. Incidentally, I might point out, 1916 was a war year.

It is necessary that the information obtained be accurately compared with that obtained on previous occasions. If the period elapsing were to be eleven, eleven and a half, or twelve years, or longer, instead of ten years, this accurate comparison would not be possible.

The bureau of statistics has built up an enviable reputation for the information which it is able to provide for businesses of all types. It would be unfortunate if the value of that information were in any way impaired because of the inability of the bureau to make the necessary comparisons which must be made if the true picture of our economic life in Canada is to be obtained.

It is, of course, well known that the decennial census is obligatory under the British North America Act. The number of representatives which each province is entitled to have in this house, and the subsidy which the federal government pays to the western provinces, are based on the information obtained at this census. While this of course does not present insuperable difficulties, the amendment of the constitution at any time is a matter that should be most carefully considered.

Postponement of the census would require an amendment of the British North America Act not only by both houses of this parliament but also by the British parliament.

It is interesting to note that one of the first acts of the United States in relation to their defence preparations was to declare the census bureau a war department so that it could not be interfered with. All census employees there are exempt from any military service unless or until released from census duties. However we propose to overcome this by the selection of personnel.

The majority of the communications which I have received or the newspaper editorials and articles which have been published opposing the census this year, have been based largely on one or other of the arguments, that it is simply a matter of head counting or that the expense can be saved. I have already dealt with this first objection and shown that the intended census is far from a mere tabulation of our population. It is a much needed statistical basis for a full consideration of all economic and social problems.

The idea of saving money by postponement of the census is attractive, but it is not well founded. If the money which would be spent would in any degree lessen the effectiveness of our war effort, you can be assured that neither I nor any one of my colleagues would contemplate proceeding with the census for one moment, and of course the same is true of every member of this house. We definitely believe, however, that the value of the census to the economic life of this country far outweighs the immediate saving of the money which would be spent on a census this year. I say immediate saving because this money will have to be spent, if not this year, then next year or the year after or at a still more distant time. If long delayed the census would lose much of its real value. I might add that already approximately $100,000 have been spent in preparatory work for the census. The total cost will be spread over approximately four years although the greatest expenditure of course will take place this coming year.

The large number of enumerators who will be required will be taken entirely from among those people who would not be available or suited for war work. We propose to use ex-service men and capable women where practicable. There will be no necessity for any men to be drafted or withheld from industry because of the census. The enumerators will be selected on broad, general principles, from people of all classes who are able and available, and partisanship in this selection will be avoided. Instructions to the census commissioners will be definite in these respects.

We have had suggestions from different quarters that the census might be taken by workers on a voluntary basis. We appreciate to the full the spirit which has prompted these offers. The nature of the census, however, requires a regimentation of staff which would be very difficult if the workers were on a voluntary basis. It is necessary that the commissioners be in a position to direct their enumerators to do certain things at certain times, and, with all respect to a voluntary organization, I think the house will agree with me that many difficulties would result if voluntary workers were employed. One group which made an offer of assistance for little or no fee was the Canadian Teachers' Federation. There is perhaps no group in this country who are better able to carry out the census work or complete the intricate forms

necessary, but the census must be taken in June and it will take several weeks to instruct the enumerators before that time.

Secrecy is an essential part of the census. Oaths of secrecy must be taken by all enumerators and, for this as well as other reasons, it is essential that the commissioners be able to select enumerators having regard to their suitability. This might be extremely difficult if the work were handled through a voluntary organization.

In considering the problems to which the war is giving rise, it is most desirable that complete up-to-date information as to our economic situation be available not only for ourselves but for our allies. One illustration of this is the desirability of having complete knowledge of the situation in regard to western agriculture at the earliest possible moment so that we may deal with agricultural problems, such as wheat, with all available facts before us.

Full consideration has been given to the fact that many of our enlisted men are away from home. Arrangements have been made that all abroad as well as in Canada will be enumerated, and the information included for their ordinary place of residence.

The reasons for the census this year may be briefly stated as follows:

Failure to take the census would impair the working of the principle of representation by population. It is, therefore, a constitutional necessity.

It is a financial necessity for the purpose of determining provincial subsidies.

It is a practical necessity because of the need of comprehensive factual information on innumerable subjects by provincial governments as well as the federal.

The census is the basis of all our statistics dealing with the problems of population.

With our large immigrant population a census is the only means of determining the rate of assimilation and is therefore essential for determining immigration policy. This, incidentally, may be very much to the front after the war.

The information obtained as to occupation, employment and earnings of our citizens is essential to competent administration of social welfare legislation. This information will be particularly necessary in regard to the administration of the Unemployment Insurance Act.

The census is essential to educational administration in the provinces because the information obtained is required for the determination of present and future school problems.

The decennial census is the factual basis of the agricultural policy of the ten departments of agriculture of this country. Annual sample investigations have been made but these are unsatisfactory unless a comparison is possible with complete statistics for a decennial period.

The census of trading and service establishments has been found most valuable in the legislative work of parliament in recent years and it cannot be given up without serious loss to the country.

The usefulness of the census extends over a ten-year period. It affords much needed information to foreign countries as well as to our own people concerning developments and opportunities of investment, trade and the like.

Unless the decennial census is taken there will be many special statistical investigations required and these in all would be very much more expensive than a single census.

The census has become an integral part of our government operations. It is just as important as hundreds of functions of other departments which are being carried on from day to day unquestioned. The fact that the census occurs only once in ten years should not obscure this fact, and opposition to the taking of the census should not be based on this premise without complete evaluation of the essential factors which require a census.

The government has decided that for these and other reasons the decennial census should be taken this year. Arrangements are being made accordingly.

Hon. R. B. HANSON (Leader of the Opposition): I rise not for the purpose of opening any debate on this matter, which would be entirely out of order, but to ask a question the object of which is to clarify the position. The minister has stated that the census will be completed, $100,000 having been already spent. I understand that the commissioners in each constituency have been appointed. The minister has stated that the services of returned men and of qualified women will be used wherever available. I should like to ask him, what is the basis upon which the enumerators will be appointed? May I call his attention to a statement which he made to the house on February 21 in which he said:

> I may say that if the census is proceeded with, enumerators will be selected from all parties, returned men in all cases where available, and women where practicable.

I should like to have that position made quite clear at this time if possible.

Mr. MacKINNON (Edmonton West): That is the intention.

Mr. HANSON (York-Sunbury): That is as clear as mud. Will the minister make a statement clarifying the whole position as to the appointment of enumerators?

Mr. DOUGLAS (Weyburn): Will the minister tell the house whether the census commissioners were selected on a non-partisan basis?

Mr. MacKINNON (Edmonton West): Will the hon. gentleman repeat the question?

Mr. DOUGLAS (Weyburn): I asked, were the census commissioners selected on a non-partisan basis.

Mr. MACKENZIE KING: The minister has made a statement. If hon. members wish to have further information with respect to the matter they should place questions on the order paper. This is not the time to debate the subject. The question which the leader of the opposition has asked is proper in the circumstances, but I think the minister was equally wise in not attempting to go into an explanation at length at this time. The explanation, when given, will be satisfactory to hon. members, I am sure.

Mr. HANSON (York-Sunbury): On the orders of the day I should like to ask the minister how he is going to arrange with the census commissioner for my constituency, who is secretary of the Liberal association, for the appointment of enumerators in that constituency.

Mr. DOUGLAS (Weyburn): I was not attempting to debate the matter of the census. I was asking the minister a question on the orders of the day. I wanted to know whether or not the census commissioners had been appointed on a non-partisan basis.

Mr. MacKINNON (Edmonton West): In answer to the hon. gentleman's question, I personally have no knowledge of that. The permanent officials in charge of the census have proceeded in the same way as they have been doing every ten years since there has been a census—from 1871.

CANADIAN NATIONAL RAILWAYS

APPOINTMENT OF GEORGE A. TOUCHE AND COMPANY AS AUDITORS

Hon. P. J. A. CARDIN (Minister of Transport) moved the second reading of Bill No. 13, respecting the appointment of auditors for national railways.

Hon. R. B. HANSON (Leader of the Opposition): If these were ordinary circumstances I would have no objection to going ahead with the second reading of the bill, but may I point out that a week ago to-day I asked for the tabling of the report of the Canadian National Railways. That report will contain the auditors' report for the last year. We were promised it the next day. Then we were told by my hon. friend (Mr. Cardin) that it was being delayed by the printer. It has not been brought down, and I suggest that we ought not to proceed to give authority for the appointment of auditors for another year—I realize that this is more or less a pro forma bill—until we have seen the report for the last year. For that reason I object to proceeding with this order. I think the reason is a valid one, and I hope it will commend itself to the minister.

Mr. CARDIN: When the leader of the opposition the other day drew my attention to the fact that the report had not been tabled I told him that I expected to have it tabled the next day. I was informed the next day that the printing had been delayed and that the report would not be out of the printing office for a few days. The officers of the department have informed me to-day that the two reports will be out of the hands of the printers by to-morrow. There is a separate report by the auditors, and another report is also made by the board of directors. Both reports, I am informed by the officers, will be out to-morrow. As this is a mere formality, if my hon. friend has no serious objection to the appointment of the auditors, I would ask him to allow the bill to get its second reading. However, if he presses his objection I do not mind.

Mr. HANSON (York-Sunbury): I think we should have the report. There is a principle involved even if this is a pro forma bill. I am surprised that the report has not been brought down before this. There may be something in the report upon the basis of which we would not want to reappoint these auditors, although, speaking for myself, I have the greatest confidence in this firm. I know certain of their branches and know the good work they have been doing, and I would not oppose for a moment their reappointment, although there was a suggestion in years gone by that this work ought to be passed around. That, however, is not a practical question at the moment and there are good reasons against it, because this is a continuous audit and if a new firm took it over there would be difficulty. I would ask the minister, however, to be good enough to let the order stand until the report is down and we have had a chance to look at it.

Mr. CARDIN: That is all right.

Mr. CHURCH: What are the instructions issued to the auditors under the ten statutes set out in the bill—

Mr. SPEAKER: Order. The motion stands.

Motion stands.

SUPPLY

AGRICULTURE—AMENDMENT OF MR. SENN ON MOTION OF MINISTER OF FINANCE

The house resumed from Wednesday, March 5, consideration of the motion of Mr. Ilsley for committee of supply.

Mr. M. C. SENN (Haldimand): It is just three weeks ago to-day since this motion was before the house on a former occasion. At six o'clock that afternoon I was attempting to discuss the plight of the agricultural industry throughout Canada. I had stated among other things that the revenue of the average farm was insufficient to meet overhead expenses and maintain a reasonable standard of living for the farmer and his family. In proof of that statement I referred to figures in the Sirois report which showed clearly that for many years the share of the national income which the farmer has been obtaining ranged from eight to eleven per cent. A supplementary report to the Sirois report, recently brought down, shows that for the years 1936 to 1940 the farmers' share of the national income had not increased but had, in fact, been a little less than in 1936, the final year of the former period.

I had also stated at that time that because of certain action on the part of the administration, and on the other hand because of certain lack of action by the administration, there was a feeling of resentment in the mind of the farming community of Canada against the present government. As an indication of that I instanced a meeting held in the city of London at which the Minister of Agriculture (Mr. Gardiner) attended and spoke. The minister said at that time that I had left for home too soon. I am afraid that practically everyone who attended that meeting went home too soon to get any satisfaction either from the minister or from those who were present. I am afraid the minister has not properly gauged public opinion throughout Ontario, for this meeting was representative of the farmers of western Ontario. Those farmers went there that day with open minds, I believe; they hoped and expected that the minister would lay down some policy which would be of benefit to the agricultural industry in that section, and, in fact, in all Canada; but I know from those to whom I have talked that they were not satisfied; in fact, I have heard of no one yet who went away at all satisfied.

As proof of this I point out that shortly afterwards organized agriculture came to Ottawa to present their views and to ask certain things from the Prime Minister himself. The Minister of Agriculture will remember, as a great many in this house do who attended that meeting, that the minister of agriculture of Ontario voiced dissatisfaction with the statements which were made at that time, and the Ontario government have gone further and taken certain steps by way of bonusing cheese and bacon to help overcome the difficulties under which agriculture in Ontario has been labouring. That action was endorsed by all parties in the Ontario legislature, although they have stated both in the legislature and on the public platform that they thought this action should have been taken by the federal rather than by the provincial authority.

That the government feared that conditions arising out of the present struggle would add to the farmers' difficulties was made apparent at the beginning of the war, by its action in setting up different boards to deal with farm problems, and more particularly the problem of marketing farm products. A number of boards were set up; the first, I believe, was that known as the agricultural supplies board. From that board there emerged a number of supplementary boards to deal with farmers' problems and the problems of marketing farm products. The bacon board was set up, and shortly afterwards the dairy products board, a fruit and vegetable board, a seed supply committee and a fertilizer committee among others. I point out, as I believe has been done before, that the personnel of these boards ranges in number from three to eight each, yet there has not been a single producer or representative of any farm producer organization placed on any of these boards from that time to this. That criticism should be levelled particularly against the action of the government in setting up the bacon board and the dairy products board, because these two boards have wide powers, and they deal particularly with the marketing of farm products. The bacon board, for example, was given wide powers in the control of exports, and was also vested with the authority and the duty of regulating hog prices, having regard to the price which was received for bacon.

Up to the beginning of the war, exports of bacon were carried on through the ordinary channels of trade, but shortly after the war began, an agreement was entered into between the government of Canada and the British supplies board relating to the export of bacon to the United Kingdom at a set price of $18.01 per hundredweight at the seaboard. The first bulletin which came out led the farmers to believe that they would receive a set price for the hogs which they produced and marketed during that year. Unfortunately, however, that was not realized. There were continual fluctuations during that year, and

the farmers as a result were very much disappointed. They made their plans on the basis of a set price, and have been unable to realize since then a price which netted them a reasonable profit.

Last fall the Minister of Agriculture went to Great Britain where he entered into a new agreement with the British supplies board or the British government whereby prices on bacon shipped from Canada to the United Kingdom were reduced by the sum of $2.19 per hundredweight. That has resulted, as everyone knows, in a reduction in hog prices to the farmer. It has been hard medicine for the farmers to take. No one will suggest for a moment, farmers least of all, that Britain itself should be required to pay higher prices. Everyone realizes that the British people are doing their utmost in an all-out effort, and that over there they are making sacrifices the like of which we in this country know nothing about. It is, however, still true that the farmers of Canada have been asked to produce some 425 million pounds of bacon to be shipped to Great Britain at prices which will not repay them the cost of production, and which, indeed, mean a loss. Everyone will admit that foodstuffs are just as great a necessity for our war effort as any other line of production. But the farmers are not receiving the same treatment as other producers in this country, and that is what troubles them and the thing to which they object. I stated the other day, and I repeat, that munitions of all kinds are being purchased from the producer at prices which cover the cost of production plus a reasonable profit. Labour is also receiving prices which it realized during the years 1926 to 1929, giving to labour an entirely different basis from that which the farmer is enjoying.

I want to speak for a moment about the activities of the dairy products board. This is another board which was set up without any representation of producers or of any dairy organization in Canada. They were given authority and power to control exports of dairy products, and particularly exports of cheese. They have set up a number of regulations, which I shall not discuss at this time—regulations which I am afraid are taking the exporting of cheese out of the hands of the ordinary exporter and placing it very largely in the hands of two or three big exporting firms.

I should like to ask a further question of the administration, a question which is being asked by farmers throughout the dominion. Were butter prices pegged on the recommendation of the dairy products board, or were they pegged because of the statistics given to the war-time prices and trade board by the dairy products board? What prompted the idea? I should like to know, as well, why the same basis was not employed in determining the pegged price of butter as has been employed in pegging the price of labour.

Between the years 1926 and 1929, which served as a basis for the pegging of labour prices, the average high for butter stood at 44·6 cents and the average low at 38 cents, making an average, between high and low in those years, of a price about five cents higher than the pegged price of butter to-day. The minister made a statement at London, and I believe he has since repeated it in the house, that butter prices were pegged largely to control speculation, and to ensure that speculators did not make unreasonable profits. I have no brief whatever for speculators, but I believe in times past they have performed a useful function by entering the market and taking off surpluses which would have depressed butter prices to a point much lower than they went last summer, or than they have been in years past.
