Technical and Bibliographic Notes/Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming, are checked below.

L'institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

12X	16X	20X	24X	28X	32X

The copy filmed here has been reproduced thanks to the generosity of:

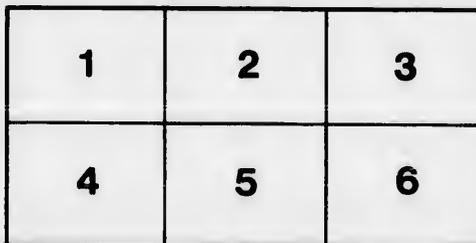

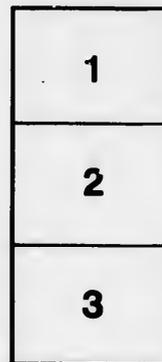

Douglas Library
Queen's University

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol \rightarrow (meaning "CONTINUED"), or the symbol ∇ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

L'exemplaire filmé fut reproduit grâce à la générosité de:

Douglas Library
Queen's University

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier feuillet et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second feuillet, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole \rightarrow signifie "A SUIVRE", le symbole ∇ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

BOOK I.

CHAPTER I.

CONFIGURATION AND AREA OF NORTH AMERICA.

THE configuration of North America is even more diversified, by inlets of the sea, by islands, and by lakes, than Europe; while there is a remarkable similarity in the outlines of South America and of Africa.

North America is usually considered to include the countries, islands, inlets, and lakes, extending from New Granada in 9 deg. north latitude to the Arctic Sea, and from the Atlantic to the Pacific Ocean.

The territories, comprised within this great area, include Greenland, and the frozen regions; Labrador, and the vast country west of Hudson Bay, including Russian America; the Canadas, and the country called Columbia, claimed by Great Britain, west of the Rocky Mountains; the islands of Newfoundland, Cape Breton, Prince Edward, Anticosti, and Cuba; several minor islands lying off the coast of North America; Porto Rico, Hayti, and all the British and other West India islands, with the exception of Trinidad and the Dutch and other islands which lie off the coast of South America; Nova Scotia, and New Brunswick; the extensive territories comprised within, and appertaining to, the republics of the United States; Texas, and the states of the republic of Mexico, including California; and Central America or Guatemala, which includes Panama, Costa Rica, Honduras, and the Mosquito country.

The Andes extend through Mexico, where their summits are far higher than those of the Alps, and through the territories of the United States, and of Great

60

Britain, under the name of the Rocky Mountains ; and divide the waters falling into the Pacific from those which fall into the Bay of Hudson, the St. Lawrence, the Atlantic, and the Gulf of Mexico. The Ozark range stretches parallel with, and nearly midway between, the Mississippi and Rocky Mountains. The Alleghanes, which Jefferson in his time designated the spine of the United States, divide the waters flowing into the Atlantic from those flowing north into the river St. Lawrence, and west into the Ohio and Mississippi, from the waters flowing south of Cape Gaspé into the Gulf of St. Lawrence, and from Nova Scotia to Carolina, into the Atlantic. These, with the ranges north of the St. Lawrence, form the great mountain regions of North America. With the moderate interruption of some highlands in Nova Scotia and Cape Breton, and the rocky cliffs and heights of Newfoundland, the foregoing mountains form the exceptions to the generally level, and undulating character of all America, north and east of Mexico.

The other great general features of North America are : the inlets of Hudson, Baffin, and other bays and inlets of the frozen regions ; the gulf and estuaries of St. Lawrence ; the bays of Chaleur, Fundy, Chesapeake, and the Mexican and Californian gulfs ; the islands of Newfoundland, Anticosti, Cape Breton, Prince Edward, Long Island, and the West Indies ; and those lying along the shores of the northern promontories and peninsulas, of Greenland, Labrador, Nova Scotia, Florida, California, and the north-west coast of America ; the five great lakes of Canada and the United States ; the Great and Lesser Lakes of the northern territory ; the St. Lawrence, Hudson, the Mississippi, and the numerous other great, and small rivers, which discharge their waters, not carried off by evaporation, into the Atlantic, Hudson Bay, the Arctic, or Pacific seas ; the geological formation of the mountains, hills, great and lesser valleys, prairies, and alluvions ; and the forest zones or regions extending from within nine degrees north of the equator, to the northern limit of utter barrenness.

CHAPTER II.

CONFIGURATION AND ASPECT OF BRITISH AMERICA.

THE physical aspect of British America presents along the Atlantic coasts, with but few exceptions, a broken, rugged configuration, in some parts thickly wooded to the water's edge, or to the utmost verge of the most perpendicular cliffs ; in others, as along the greater part of Newfoundland, the south-eastern shores of Nova Scotia, and the whole of Labrador, rocks, with dwarfish trees

growing thinly among them, predominate. Within the Bay of Fundy, the coast, that of Nova Scotia in particular, is fertile and beautiful; and the features of Prince Edward Island, and the greater part of Nova Scotia and New Brunswick, situated within the Gulf of St. Lawrence, are soft, luxuriant, and picturesque, with trees growing, almost uninterrupted, along the coasts and over the country.

Along the river St. Lawrence, from the Bay de Chaleur to Quebec, and for some miles upwards, the country is of a bold mountainous character, and covered with dense forests. After passing the highlands above Quebec, the lands on each side of the St. Lawrence are low, fertile, and in most part of alluvial formation. The country, with few interruptions, maintains this appearance, until we reach the Queenstone Heights, close to the falls of Niagara; above which, again, along the lakes, a flat country prevails. Wherever cataracts occur the surface of the adjoining country is unequal; we observe this at Niagara, and at all the falls and rapids of the St. Lawrence and other rivers. The districts lying intermediate between cataracts are usually flat and of alluvial formation.

The geological structure and mineralogy of the North American regions are, as yet, but very imperfectly known. The great chain of mountains, known by the general name of the Alleghanys, rises abruptly out of the Gulf of St. Lawrence at Percé, between Bay de Chaleur and Gaspé, and following nearly the course of the river St. Lawrence, until, opposite Quebec, bends to the southward, and entering the United States, divides the Atlantic coast from the Basin of the Ohio. The mountains of North America are generally covered to their summits with trees. They have also a greater continuity in their ridges, and more regularity of outline, than those of Europe. They are, besides, with the exception of the Andes, far from being so high as those of Europe, Asia, or South America.

The nucleus of the Alleghany chain appears, and is generally considered to be granite, which extends from those mountains, and forms the prevailing basis, with some exceptions, however, of all the countries lying between them and the Atlantic, and north of the river Hudson. Those ranges are also considered to have been frequently convulsed by earthquakes, while the ridges, west of the Alleghanys, have remained undisturbed.

Limestone, generally in horizontal strata, prevails to the westward of the Alleghany chain, as far as the St. Lawrence and the lakes. On the north of the St. Lawrence, and throughout Labrador, granite predominates; and Sir Alexander Mackenzie remarks in his travels, that the great lakes of North America are in a line of contact between vast chains of granite and limestone.

Volney observes, that the granitic range of the Alleghany chain may be said to terminate southward, (or more properly loses itself to observation), at West Point, river Hudson, on the opposite side of which sandstone commences, and prevails from the Catskill Mountains to the angle of Georgia.

Those vast inland seas, the great lakes, form, with the St. Lawrence and

other magnificent rivers, most gigantic features in the geography of British America; to which we may also add the Gulf of St. Lawrence, a Mediterranean, bounded by our territories; the Bay of Fundy, with its extraordinary tides; and the Bay of Hudson, which divides Labrador from the north-western or frozen regions of the trans-Atlantic hemisphere.

The surface of the extensive countries of British America, with the exception of the sterile parts of the north, the prairies, and where towns and settlements have been formed, along the sea coasts, and on the banks of lakes and rivers, is still covered with dense and almost limitless forests, which commence at the sea coast, and extend to the banks and lakes of the St. Lawrence; beyond which they are succeeded by others of equally gigantic growth, and terminate with the occasional interruption of buffalo prairies only at the shores of the Pacific.

In many of the most extensive districts, we still discover no signs of civilisation, nor any marks of the progress of improvement; and the scenery, in its primeval wildness, and natural luxuriance, exhibits what the whole of America, north of Mexico, was about two centuries and a half ago; when none but the Indian tribes traversed its woods, and when no vessel but the bark canoe of the savage alone navigated the waters of its Atlantic shores, rivers, and inland seas.

We shall now proceed to describe briefly the configuration and aspect of the several British colonies and possessions in North America.

NEWFOUNDLAND.—This large island is indented with deep bays, and its interior broken up by waters, rocks, and barren, as well as some tracts of soil fit for cultivation. Except on the Western Coast, within the Gulf of St. Lawrence, the general character of Newfoundland is rocky and barren. The Atlantic coasts, are formed generally of terrific rocky cliffs, rocky shores, and on the south and north indented with inlets, and lined with islands. From the straits within the Gulf of Belleisle to Cape Ray, the aspect of the country is far less forbidding, and generally wooded. Coal, lime, and gypsum, are said to abound in the western parts of the island; where the lands are adapted for cultivation and grazing.

ANTICOSTI.—This island is said to owe its name to an Indian word, Naticoti, but it is more likely from the Spanish, Antecuesta. It is situated in the Gulf of St. Lawrence, and near the entrance of that great river. Its length is 125 miles, and its greatest breadth about 30. The whole of its north coast is high and without harbours. The rocks that present themselves are calcareous and contain various animal petrefactions.

The water, close to the cliffs, is very deep; and there are some coves where vessels may take shelter from the wind blowing off the land. The south shore is low; the lands wet and swampy, and covered with birch and fir trees. There is a bar harbour near the west point, which will admit small vessels; it can scarcely be said that this island has any rivers, if that called Jupiter River be not an exception. On the south the water is shoal, but the soundings are regular. Flat

rocky reefs extend a considerable distance from the east, west, and some other points. Sandy downs line a great part of the south coast, within which there are lagoons or ponds, filled by small streams running into them from the interior. During stormy weather and high tides, the sea frequently makes its way over the sands into these lagoons, out of which, also, there are small streams running into the gulf.

LABRADOR.—This vast country, equal in square miles to France, Spain, and Germany, has not a resident population of 4000 inhabitants, including the natives and Moravians.

Its surface is as sterile and naked as any part of the globe. Rocks, swamps, and water, are its prevailing features; and in this inhospitable country, which extends from 50 to 46 deg. north latitude, and from the longitude of 56 deg. west, on the Atlantic, to that of 78 deg. west, on Hudson's Bay, vegetation only appears as the last efforts of expiring nature. Small scraggy poplars, stunted firs, creeping birch, and dwarf willows, thinly scattered in the southern parts, form the whole catalogue of trees; with the exception of where in a few valleys which are sheltered, some large firs and birches grow. Herbs and grass are also, in sheltered places, to be met with; but in the most northerly parts, different varieties of moss and lichens are the only signs of vegetation.

The climate is, in severity, probably as cold as at the poles of the earth, and the summer is of short duration. Yet, with all these disadvantages, this country, which is along its coasts indented with excellent harbours, and which has its shores frequented by vast multitudes of fishes, is of great importance to England. The whole of the interior of Labrador appears, from the aspect of what has been explored, and from the reports of the Esquimaux and other Indians, to be broken up with rivers, lakes, and rocks. The wild animals are principally bears, wolves, foxes, and otters; beavers and deer are not numerous, but their furs are remarkably close and beautiful.

CAPE BRETON.—The aspect of Cape Breton is romantic and mountainous. The coast, washed by the Gulf of St. Lawrence, is of dangerous access, without any harbour, except Port Hood near the Strait of Canseau; and its high iron-faced cliffs are in many places perpendicular. On the Atlantic, the shores are broken and rugged, but indented with numerous harbours and bays. A vast inlet named the Bras d'Or, entering by two narrow passages, and afterwards spreading into numerous bays and arms, nearly divides the island into two.

Woods, with the exception of small patches cleared for cultivation, and such spots as are thrown open where rocks occupy the surface, cover the whole island. The trees are of much the same kind and description as those hereafter described, unless it be on the sea-coast, and mountains; in which situations they are of a dwarfish character.

It is usually conjectured that the island has been detached from the continent of America by some violent convulsion. This, like most speculative opinions

for which we have no historical data, must ever remain uncertain. The strait of Canseau is not, for a distance of five leagues, more than a mile and a half wide, and in some places, not one mile. The highlands also, rising on each side rather abruptly, make the width of the strait to seem much less, and impart to it, at the same time, the appearance of an immense fissure, laid open by the explosion of some tremendous agency.

There is not, however, a striking resemblance in the geological structure of the opposite shores of Cape Breton and Nova Scotia; but this is no uncommon circumstance in nature; and we often, in America, meet with a chain of granite predominating on one side of a river, and a calcareous region prevailing on the other.

The geology and mineralogy of Cape Breton can only be said to be known in outline. From all that we have observed, however, and from all the information we have been able to obtain, it may be remarked, that almost all the rocks named in the discordant nomenclature of Werner, are found in this island. Among the primitive rocks, granite prevails in the peninsular country south-east of the Bras d'Or; and it probably forms the nucleus of the highlands between this inlet and the Gulf of St. Lawrence. Sienite, trap, mica, clay-slate, and occasionally quartz, also appear on the gulf coast. Primitive trap, sienite, mica-slate, and clay-slate, show themselves, together with transition limestone, gray wacke, gypsum, and coal, generally in all parts of the island.

The class of floetz rocks, appears, however, to be the most numerous; and coal exists in such abundance, that persons unacquainted with geology have stated seriously to us, that they considered this mineral formed the base of the whole island. Coal, in a field, or fields, of vast extent, abounds in the south-eastern division of the island, surrounded by carboniferous limestone, excellently adapted for common fire-places.

The extent or quality of the coal-fields, north of the Bras d'Or, have not been ascertained. Gypsum occurs in great plenty along the shores of the Bras d'Or, at the Strait of Canseau, on the gulf coast, and in some other parts of the island.

We may conclude, from the strongly saturated salt-springs which are found in different places, that the rock-salt formation is extensive. Iron ore, in various forms, iron pyrites, red ochre, &c., exist in great abundance. Pieces of copper ore, lead, &c., have also been found, and various other minerals will probably be discovered.

NOVA SCOTIA.—The Atlantic coast of Nova Scotia, from Cape Canseau to Cape Sable, is pierced with innumerable small bays, harbours, and rivers. The shores are lined with rocks and thousands of islands; and, although no part of the country can properly be considered mountainous, and there are but few high steep cliffs, yet the aspect of the whole, if not romantically sublime, is exceedingly picturesque; and the scenery, in many places, richly beautiful. The land-

scape which the head of Mahon Bay, in particular, presents, can scarcely be surpassed. There is deep water, almost without exception, close to the rocks and islands, and into the harbours. The coasting vessels sail among and within the myriads of islands that line the coast, during the most boisterous weather, and have thus the advantage of passing along in smooth water, while there is a heavy sea running in the main ocean. Within the Bay of Fundy, the shores have a more continuous outline; and after passing St. Mary's Bay, the rugged appearance of the coast diminishes, but it still presents a bold and generally high character as far as the Basin of Minas.

The interior of Nova Scotia is intersected and watered by numberless streams, rivers, and lakes. None of the last are large, or, at least, not considered so in America. Lake Rossignol, out of which a river, named the Mersey, runs to the harbour now called Liverpool, but formerly Rossignol, is said to be thirty miles long; and Lake George approaches to the same extent.

The mountains, so called, scarcely warrant the appellation; the highest elevation not being more than 700 feet above the level of the ocean.

The *geological features* of this province are prominent; and a greater variety of rocks present themselves, particularly along the Atlantic shores, than we have observed in any other part of North America. Granite, trap, and clay-slate, predominate, not only as primitive, but as prevailing rocks, along the whole of the coast of Nova Scotia, and several miles into the country, extending from the Strait of Canseau to Cape Sable, and from thence to Brier Island.

Quartz, usually in veins, with clay-slate, mica-slate, sienete, and gneiss, but always detached, occur also in this extensive district. Gray wacke is the most prevailing kind of transition rock. Whether all the gypsum strata and calcareous rocks belong to the floetz class, we have not been able to ascertain. The vast gypsum strata within the Bay of Fundy, at the Strait of Canseau, and at Antigonish, evidently belong to the latter. Granite and trap rocks appear at Cobequid Mountains, and occur probably in all the hilly parts of Nova Scotia; but so small a portion of the interior has been examined, and so little is known respecting its geology, except where roads cross the country, that it would be presumptuous to state even what appearances indicate.

Granite and calcareous rocks, with gray and red sandstone, prevail in the northern parts of Nova Scotia, from the Strait of Canseau to the Bay de Vert, and extend across the province to the Basin of Minas, if not interrupted by a granite ridge, which may very probably occur in the Mount-Tom range of highlands. The hard gray or bluish sandstone which occurs in various parts of the province, makes excellent grindstones. The light-gray granite quarried at Whitehead, near Cape Canseau, makes remarkably good millstones; and a beautiful freestone, most admirably adapted for building, is abundant in several places, particularly at Port Wallace.

Among the minerals of this province, coal and iron certainly claim the first attention. As to the extent of the coal-fields, or what may be considered independent coal-fields, it may be sufficient to observe, that enough has been discovered for the consumption of America for centuries. Iron of excellent quality abounds in great plenty in different parts of the province, generally accompanying vast strata of coal, and chains of carboniferous limestone. A most extensive coal field has been opened at Picton. It is accompanied with vast strata of iron stone. Coal abounds also at Chignecto, and many other parts of the provinces. Different varieties of copper ore, but one in great plenty is met with at Carreboo, Tatmagouche, and some other places. Lead ores, chiefly sulphurate of lead, and carbonate of lead, are also found in small quantities. Salt springs are met with near Picton, at River Philip, and in some other parts, one of which is saturated with salt in the proportion of 12 to 88 water.

The soil of Nova Scotia is of many different qualities and of various degrees of fertility. The alluvial, or intervale lands, of which there are extensive tracts, are rich, and produce plentiful returns of wheat, barley, oats, Indian corn, potatoes, turnips, and all vegetables and fruits common in England. Apples, equal to any grown in the United States, are produced in many parts of the province; and vines, covering several acres, have been discovered, growing wild, or indigenous, near Digby. Some of the uplands, lying between the hilly ground and the intervalles, or rivers, are light and poor; while the high, or what the inhabitants call the hill lands, are rich and very productive. The circumstance appears somewhat unaccountable; and the cause assigned is, that the light sand, or other substances, which naturally impart little nutrition to vegetables, having been carried at various periods, by the rains down from the hills, have left behind a rich loamy earth, and that the poor uplands or rather midlands, which prevail below the hills, and which have been formed of those sandy and light deposits, being very deep and loose; therefore retain neither rich earth or manures near the surface, and are consequently sterile and unproductive.

The lands on the southern coast are generally so rocky, as to admit of cultivation only at much expense and labour. After the rocks and stones are removed, the soil is by no means barren; and some remarkably fine tracts are met with at the heads of the bays and up the rivers. The lands, however, within the Bay of Fundy, and those lying between the Gut of Canseau and Bay de Vert, form fertile agricultural districts.

PRINCE EDWARD ISLAND.—In coming, by sea, within view of Prince Edward Island, its aspect is that of a level country, covered to the water's edge with trees, and the outline of its surface scarcely curved with the appearance of hills. On approaching nearer, and sailing round its shores (especially on the north side), the prospect becomes interesting, and presents small villages, cleared

farms, red headlands, bays, and rivers, which pierce the country; sand hills covered with grass; a gentle diversity of hill and dale, which the cleared parts open to view; and the undulation of surface occasioned by small lakes or ponds, which from the sea appear like so many valleys.

NEW BRUNSWICK.—The province of New Brunswick extends from the river St. Croix, which is considered the boundary line of the United States, to the Bay de Chaleur and the river Restigouche, which divide it from Canada. The greater part of this colony is yet in a wilderness state, although its soil, with the exception of a few rocky districts, principally on the Bay of Fundy coast, and several, but not extensive, swampy tracts, is rich and fertile.

The river St. John, with its lakes and myriads of streams; the tributary waters of one side of the St. Croix; the river Petit Coudiac; the Miramichi, with its majestic branches; the river Nipisighit, and many lesser rivers, open an inland navigation into almost every part of the province.

Dense forests cover nearly the whole country; and the trees, which grow to an immense size, are of the same kind and quality as hereafter described under the head of forest trees. Pine abounds in greater plenty than in any other of the lower provinces. Birch, beech, and maple, are the prevailing hardwood trees.

The quality of the soil, here, as elsewhere in America, may always be ascertained by the description of wood growing on it. Along the countless rivers of this province there are innumerable tracts of what is termed *intervale land*: this kind of soil is alluvial, with detached trees of luxuriant growth, principally elm, maple, black birch, and butter-nut; and like the lands of the Nile, annually irrigated and enriched by the overflowing of the rivers. In several parts of the interior country, generally along small brooks, are wild meadows: caused, originally, by the irrigation of a flat tract, with the water arrested by the dams, constructed by the industry of the beaver.

The aspect of the coast of New Brunswick, along the Bay of Fundy is generally rugged, and the soil near the shore stubborn and difficult to cultivate.

The geology of the province is very imperfectly known. Limestone, graywacke, clay-slate, with sandstone, interrupted occasionally by gneiss, trap, and granite, seem to prevail on the southern coast. Among these, however, calcareous rock appears to predominate. Marble, of fair pretensions to beauty, is plentiful; and iron ore abundant. Copper, plumbago, and manganese, have also been found; and greater research may likely discover many other minerals. Gypsum and grindstone are abundant near Chignecto Basin. Along the shores of this province, facing the Gulf of St. Lawrence and Chaleur Bay, sandstone prevails. Gray sandstone and clay-slate seem to predominate, as far as we could observe, along the course of the Miramichi; among which, granite, mica, quartz, and ironstone, in detached rocks, occasionally occur. Specimens of amethyst, car-

nelian, jasper, &c., have been picked up in various places. Some sulphurous or hepatic springs, of much the same properties as the waters of Harrowgate, have lately been found. Salt springs, strongly saturated, are numerous. Some of the salt produced by boiling the water of one of these springs which was shown us, resembled the finest table salt we have in England.

As we proceed from the sea coast up the rivers of this province, the rich fertility of the country claims our admiration. A great flat district may be said to prevail, from the parallel of the Long Reach, up the river St. John, to the foot of Mar's Hill. High hills occasionally rise in various places, but no part of New Brunswick can be considered mountainous. The scenery of the rivers, lakes, and cataracts, is beautifully picturesque, and often grandly romantic.

CANADA.—Canada may be said to present the most extraordinary and grand configuration of any country in the world. From the eastern extremity of this vast region, rising abruptly out of the Gulf of St. Lawrence, to the rocky mountains, the natural features, of its lands and waters, exhibit romantic sublimities, and picturesque beauties, amidst the variety and grandeur of which, the imagination wanders and loses itself,—luxuriating among boundless forests, magnificent rivers, vast chains of mountains, immense lakes, extensive prairies, and roaring cataracts.

The mind, on sailing up the St. Lawrence, is occupied under impressions, and with ideas, as varied as they are great and interesting. The ocean-like width of this mighty river where it joins the gulf,—the great distance (about 2500 miles) between its débouché and the source of the most westerly of its streams,—the numerous lakes, cataracts, and rivers, which form its appendages,—the wide and important regions, exhibiting mountains, valleys, forests, plains, and savannahs, which border on these innumerable lakes and rivers,—their natural resources,—their discovery and settlement, and the vast field thrown open, in consequence, for the enterprise, industry, and capital of mankind,—are subjects so great and so fertile in materials for speculative theories, as well as practical undertakings and gainful pursuits, that the imagination strives in vain, to create an empire so grand, and powerful, as that to which the energy of succeeding generations will likely raise a country possessed of such vast and splendid capabilities as those of the Canadas.*

The natural aspect, configuration, and geological structure of Canada, exhibit the greatest diversity of appearance.

* The St. Lawrence may certainly, including its lakes, tributaries, vast breadth, and the quantity of fresh water it discharges, be considered the largest river in the world—from Cape Chat, 100 miles above Cape Rosier, where its mouth may be deemed to commence, to the head of Lake Superior, the distance is 2120 miles. At Cape Rosier its breadth is 80 miles, and at Cape Chat 40 miles; at Kamouraska, where its waters are brackish, its breadth is 20 miles, and its average depth 12 fathoms. It discharges annually to the sea 4,277,880,000,000 tons of fresh water, of which one-half may be considered melted snow. The length of the Amazon, from the Andes to the ocean is 2070 miles, and its greatest width at its embouchure is 23 miles.

On the south side of the St. Lawrence, from Gaspé to some miles above Point Levi, opposite Quebec, the whole country presents high mountains, valleys, and forests;—these mountains appear as high as any of the Alleghaney chain, of which range they form a part.

Their altitude has not, however, been ascertained. We have seen various parts of their outline and summits rising in the interior, when we were on the sea, at least a hundred miles distant. The prevailing rocks are granite, in vast strata, but sometimes in boulders between the mountains and the shore; graywacke and clay-slate also occur, with limestone occasionally; and various other rocks, usually detached, present themselves. The mountains and valleys are thickly wooded. The soil is generally very productive along the banks of the St. Lawrence; and in the valleys of the interior, according to the usual indications of fertility, equally fit for cultivation. The lower islands of the St. Lawrence are mere inequalities of the vast granite strata which occasionally protrude over the level of the river. The Kamouraska Islands, and the Penguins in particular, exhibit this appearance; and in the parish of Kamouraska and St. Anne, huge masses of granite rise into sharp conical hills, one of which is 500 feet high, with smooth sides, and scarcely a fissure. The mountain of St. Anne is lofty and imposing. Its ascent is rugged and picturesque.

At St. Roch the post-road leads for more than a mile under a perpendicular ridge of granite, 300 feet high.

The north coast of the St. Lawrence, below Quebec, exhibits trap rocks, clay-slate, various detached rocks and granite occasionally: the latter is considered to prevail in the interior country, and particularly as forming the base of the mountains of Labrador, and of the country north of Quebec. Cape Tourment, thirty miles below Quebec, is a round, massive granite mountain, about 1000 feet high, and a ramification of the rugged interior chain. The lands situated on the north shore of the St. Lawrence, below the river Saguenay, are not near so high as those on the south coast; but their features are remarkably rugged and forbidding, and apparently nowhere fit for cultivation. Numerous small rapid rivers, plentifully frequented by salmon, roll from the mountains over rugged channels, or foam over precipices into the St. Lawrence.

Except in the bogs or marshes, rocks obtrude between the trees over all parts of the surface. Although the country is generally covered with wood, yet the trees are far from attaining the size of those on the south coast. In various parts we observed extraordinary deep fissures, from six inches to two feet wide, and apparently many feet deep, dividing the rocks as if they had been cracked by the action of fire, or some volcanic shock: intense frost may have been the agent. In many places, these fissures hidden from view by various creeping shrubs, formed dangerous traps. The Indians have told us, that they have traced

some of these rents for several miles in length, about a foot broad, and from forty to fifty feet deep.

As we approach Quebec, a reddish or dark clay-slate appears as the prevailing rock, and it forms the bed of the St. Lawrence to Kingston and Niagara. Boulders of granite, limestone, sandstone, syenite, trap, and marble, occur as detached rocks in the same extensive region. Above the rapids of Richelieu, where the mountains commence retreating to the south and north, a flat country prevails, until we reach Queenston Heights. The greater part of the soil of the low lands is apparently of alluvial formation; and twenty to fifty-five feet rise of the waters would nearly cover the whole country between the Alleghanys and the high lands of the north. The exceptions to this general rule are the Rouville mountain, the highest summit of which is about 1200 feet high. This mountain is an abrupt termination of a branch of the Green Mountains, and divides the waters of Lake Champlain from the sources of the rivers St. Francis and Yamaska. The mountain to which Montreal owes its name, the rocks of which appear to be principally of the trap family, accompanied by limestone, is another exception. Whenever rapids occur, we find the elevation of the country increasing, and limestone generally accompanying the prevailing rocks. The step of country formed by the calcareous ridge which commences at Queenston Height, and which rests on a bluish clay-slate, is elevated about 350 feet above the shores of Lake Ontario; and the upper country, the base of which is limestone, is generally level, until we approach the high lands, between the Lake Huron and Lake Michigan. This calcareous region abounds in organic remains, some of which, particularly the serpents in nests, are very rare and beautiful;* and in many places petrified horns and bones of wild animals, shells, trees, &c., have been frequently dug up. The limestone rocks of the Manitoulin islands, in

* Various names applied to local appearances or peculiarities, are current in the common parlance of the Americans, and introduced, sometimes, without explanation, into books,—for instance:—"Vaults," which are deep glens or valleys in the forests; *Carraboo Plains* are lands formerly laid waste by fire, or that, from some natural cause, produce little wood. They are also called *Barrens*; and are frequented by the Moose and Carraboo. *Cedar Swamps* are deep mossy bogs, soft and spongy below, with a coating sufficiently firm to uphold small cedar or fir trees, or shrubs. Such lands are difficult, almost incapable, of culture.

Buffalo, or *Deer Licks*, are marshes on low level grounds, over which salt-springs flow, and to which buffalo and deer resort, to lick the salt that adheres to shrubs or small trees.

Prairies are lands on which, from being overflowed during spring and fall, the growth of trees is prevented.

Intervales or *Bottoms* are alluvial lands, along the rivers or lakes.

Mammoth Caves are dens in which skeletons of the mammoth have been found.

Rattlesnake Dens are caverns in the basins of the Ohio and Mississippi, in which, myriads of living rattlesnakes are said to abound tangled among each other. Of this circumstance I know nothing but the common report; although I have heard the backwoodsmen swear that it is true.

Blazes are marks on the sides of trees, by chipping a small slice off with an axe, and continued in a line through a forest, for the guidance of travellers, when there are no roads.

Sugaries is a plot of forest lands in which maple trees abound, and where sugar is made from the sap.—*Macgregor's British America.*

Lake Huron, contain similar organic remains to those that occur, abundantly, in the limestone rocks, which prevail as the base of Anticosti. Along the north coasts of Lake Huron and Lake Superior, granite predominates. Some distance back from the lakes and rivers, steps or ramps, which are abrupt elevations, occur. They seem to have formed, at some period, the banks or beaches along which the waters flowed. Behind the first of these steps, table land generally extends for some distance, or until a second step and flat land occur, sometimes followed by a third and fourth ramp. These appear at Malbay, Lake St. Peter, Lake Huron, and at many other places. Indications of volcanic eruptions appear at St. Paul's Bay, and on the mountains north of Quebec. The great earthquake of 1663 is said to have overturned a chain of freestone mountains, 300 miles long, north of the St. Lawrence, and levelled them with the plains. We cannot, however, consider the authority, we find in the journals of the Jesuits, as sufficient to establish this circumstance, when the configuration of the adjoining country has not apparently been disturbed. Canada is considered rich in minerals. Iron of the best quality has been found in great abundance. Silver has been picked up in small quantities; lead, tin, and copper, have been discovered in several places. Coal has not yet been discovered. We are, however, still ignorant of the mineral riches, and even of the geology of these regions. The researches of the Montreal Natural History Society leads us to expect important discoveries. The following extract enumerates most of the minerals that have been discovered: "The mineralogy of the Canadas has hitherto been almost altogether neglected; but the imperfect researches which have been made prove it to be rich in the scarce kinds of minerals, and not deficient in those applicable to economical purposes. Petalite, one of the rarest substances in the world, and remarkable for containing the newly-discovered fourth alkali, lithia, was sent from York in Upper Canada, in 1820, by Dr. Lyon, surgeon to the forces. Beryl is found at Lake of the Woods; Labrador felspar (Lake Huron); axinite (Hawkesbury Ottawa, the only place in North America); aventurine (Lake Huron); amethyst (Lakes Superior and Huron); apatite, a phosphate of lime (Fort Wellington), may be added among others; Aragonite (Laclina); strontian, in magnificent forms (Erie, Ontario, &c.); schorl (St. Lawrence); manganese and garnet (river Moira, Ontario, &c.); carnelian, agate, zeolite, prehnite, barytes, and fluor spar (Lake Superior); brown and green coccolite (Montreal and Hall Ottawa); olivine, angite (Montreal); staurotide (Rainy Lake), and the very rare anthophyllite (Fort Wellington). Marbles and serpentine are quite common. Plumbago, ores of antimony, lead, iron, and copper, are frequently met with. The northern and western shores of Lake Ontario abound in salt-springs, some of which (Stony Creek and St. Catherine's) are very productive, even with the employment of small capital. The north shore of Lake Erie exhibits immense beds of gypsum, which are quarried for the purpose of agriculture."

The region between Lakes Michigan and Superior and the Rocky mountains, is generally flat; and in this territory, and south of it, to Santa Fé, are situated the largest savannahs in the world. The lands separating the rivers which fall into the lakes of Canada, and those of the Mississippi and Missouri, are generally low, and sufficiently overflowed in spring to allow a communication with canoes.

The coast and interior country of Lower Canada from Cape Gaspé to the Paps of Matane, a distance of about 200 miles, still exhibit the same primeval wildness which this portion of the western world presented to Cartier 296 years ago. The northern shores, from Labrador to Tadousac, are sterile and desolate; and if we except the king's posts at Seven Islands Bay and Pont Neuf, we discover no signs of art or civilisation, no traces of the industry or enterprise of man. A few miserable wandering Montagnez Indians, and a few transient fishermen and furriers, are the only human beings that frequent this cold and barren region. The vast country which lies between the lower shores of the St. Lawrence and Hudson Bay, seems, indeed, unfit for any other inhabitants, save the shaggy bear, prowling wolf, ruthless Esquimaux, and hardy mountaineer Indian, who wander along its waters, or traverse its wastes; yet the vast swarms of salmon that frequent its rivers, and the remarkably fine fur of its wild animals, offer sufficient temptations to the adventurous, and sources of profit to the industrious. Minerals, especially iron, are believed to abound; but, from the geological formation of the country, we think that few, unless it be copper, will ever be found east or north of the Sagunay.

Cape Gaspé is rather high, and its rocky cliffs are perpendicular. Cape Rosier is low, but the land behind rises into high round hills; and the whole is covered with trees of various kinds, except the few small spots near the Cape cleared by some fishermen settled there. The coast preserves this character as we proceed up the St. Lawrence, and generally slopes, covered with trees, to the water's edge.

The countries of Gaspé, Rimouski, and Kamouraska, comprehending a fertile territory, extending about 300 miles along the river St. Lawrence, are less known in England than Kamtschatka.

THE RIVER ST. LAWRENCE, and the whole country from the lowest parishes to Quebec, unfold scenery, the magnificence of which, in combination with the most delightful picturesque beauty, is considered by the most intelligent travellers who have visited this part of Canada, to be unequalled in America, and probably in the world.

Niagara comprehends only a few miles of sublimity. The great lakes resemble seas; and the prospects which their shores, like those of the coasts of the ocean, afford to our limited visual powers, although on a grand scale, fall infinitely short of the sublime views on the St. Lawrence below Quebec.

Here we have frequently, as we ascend the eminences, over which the post road passes, or as we sail up or down the St. Lawrence, prospects which open a view of 50 to 100 miles of a river, from ten to twenty miles in breadth. The imposing features of these vast landscapes exhibit lofty mountains, wide valleys, bold headlands, luxuriant forests, cultivated fields, pretty villages and settlements, some of them stretching up along the mountains; fertile islands with neat white cottages; rich pastures and well-fed flocks; rocky islets; tributary rivers, some of them rolling over precipices, and one, the Saghunay, bursting through an apparently perpendicular chasm of the northern mountains; and on the surface of the St. Lawrence, majestic ships, brigs, and schooners, either under sail or at anchor, with pilot boats and river craft in active motion.

This beautiful appearance, however, changes to a very different character in winter; and late in the fall of the year, a dark stormy night in the river and gulf of St. Lawrence, presents the most terrific, wild, and formidable dangers.

In winter the river and gulf are choked up with broken fields of ice, exhibiting the most varied and fantastic appearances; and the whole country on each side is covered with snow; with all the trees, except the stern fir tribes, denuded of their foliage.

The upper waters of the Ottawa has only been partially explored. It rises in the north-west regions, beyond Lake Huron; and probably winds its course, for from six to eight hundred miles, before it joins the St. Lawrence. This great river, however, was scarcely known, except to the Jesuits and fur traders, before the conquest of Canada. It was their grand route to the north-west territories. Forty to fifty canoes formerly proceeded from Lachine with articles of traffic, and ascended the Ottawa for about 300 miles, from whence they were carried over *portages* and *decharges*, or paddled along lakes, and then across by French River to Lake Huron. The coasts of this lake, and those of Lake Superior, were afterwards traversed, until the *voyageurs* reached the Grand Portage, where they received the furs purchased by the company's agents from the Indians. The *voyageurs* then returned with these furs to Montreal, and in light bark canoes, voyages of several thousands of miles were performed by those adventurous men.

The navigation of the Ottawa is frequently interrupted by cataracts and rapids; and the scenery exhibits picturesque beauty and fertility. In some parts it expands over the country, and forms what are termed the Lesser or Thirty-mile Lakes of Canada. It receives several rivers between its embouchure and its upper settlements, most of which issue from or run through lakes. The largest of these rivers are the Petite Nation, the Rideau, the Canadian Mississippi, La Rivière des Lièvres, the Madawask, &c.

It divides Lower from Upper Canada; and townships have been laid out, and settlements have for some time been rapidly forming along its banks. Its periodical rising, which enriches the alluvions, owing to the rapid melting of the snows in the extensive northern region through which it and its numerous tributaries flow, is much higher in the spring than in the fall of the year.

Neither the northern nor western boundaries of Upper Canada are well defined, but generally considered as including the countries watered by the streams falling into the Ottawa from the west, and into Lakes Tomisaming, Huron, and Superior, from the north and north-west, and comprising altogether a superficial surface of about 140,000 square miles, or the vast area of 89,600,000 acres. Of this region, the greater portion, if not all, north of Lake Tomisaming and of Lakes Huron and Superior, may be considered a hunting country, and, with few exceptions, unfit for agriculture. Of the extensive territory south of Lake Tomisaming, and bounded by the Ottawa, the St. Lawrence, and by Lakes Ontario, Erie, Sinclair, Huron, and the Georgian Bay, the greater part has been laid out in townships and reservations.

The configuration of Upper Canada we have delineated partly in the general description of British America, and partly in the geographical outline and aspect of Canada. The whole province may be considered, with few exceptions, as sufficiently level in all parts for agriculture; its soil generally fertile; and, exclusive of the large lakes and rivers, abundantly watered with small lakes and streams.

The principal height of land rises between the Ottawa and the St. Lawrence. Its elevation, however, is neither abrupt nor great. This height, or rather table land, extends westerly between the streams descending into Lakes Ontario and Erie, and those falling into Lake Huron.

There is no other remarkable elevation, except its principal ramifications, which commences above Kingston, and sweeps round Lake Ontario. To the north-west of Bathurst, and north of Lake Huron, a mountainous country prevails. In the districts east of Lake Ontario, the exceptions to rich soil are some portions of heavy clay land, and marshy or swampy tracts. None of these are extensive. The country between Lake Ontario and Lake Simco, is in some places less fertile, in others more loamy, and generally less obstructed by rocks or stones. The prevailing character of the territory lying between Lakes Ontario, Erie, Huron, and the river Detroit, is luxuriant fertility.

Limestone, gypsum, iron ore of the best quality, salt-springs, clay, for brick and potters' use, marble, freestone, granite, timber, of great dimensions, and adapted for all purposes, are abundant, which, with a soil and climate that will produce wheat, maize, and all other grains and vegetables grown in Europe; delicious fruits, even vines, nectarines, and peaches; grazing lands, plenty of wild

fowl, and fish in the numerous rivers and lakes; fresh water and mill-streams, and a climate generally salubrious, are the prominent natural advantages.

Its natural inconveniences are, chiefly its being more difficult of access from the ocean, and somewhat further from markets, than the other colonies. It is, however, doubtful if these be real disadvantages; for the industry of the inhabitants is consequently more closely applied to agriculture—the most substantial and lasting source of individual prosperity and independence—than in the maritime colonies.

There are springs of petroleum near the Moravian village, and springs near the head of Lake Ontario, impregnated with sulphur, thrown out sometimes in small lumps. Medicinal springs, like those of Balston, are also found at Scarborough, near Toronto. The water of the lakes and river St. Lawrence is wholesome, but in summer too warm to be agreeable. It is impregnated, in a slight degree, with lime, though the resident inhabitants do not perceive it. The best spring water is where the country is undulated. With the exception of the alluvions, the lighter soils prevail near the lakes; the richer and heavier some distance back in the country.

NORTH-WEST AND HUDSON-BAY TERRITORIES, &c.—The region lying north of the boundary of the United States, and south of the lakes discharging into Hudson Bay, and west of Lake Superior, to the Pacific Ocean, has long been called the north-west, or Indian territory.

These boundaries on the north and south are not easily defined; and their adjustment is likely to be attended with doubt and difficulty. But if we consider of how little importance even the whole territory can be to powers, which, like those of England and the United States, already possess far more of the surface of the earth than can be profitable, wise statesmen, and reasonable people, should willingly consent to settle the Oregon boundary on the same principle as that on which the north-eastern boundary of Maine was adjusted: that is, by each party yielding to the other a portion of their respective claims.

This vast region possesses almost every variety of the soil, and of the temperate and cold climates. Its configuration, and aspect, unfolds innumerable lakes, rivers, mountains, savannahs, magnificent forests, immense tracts of fertile lands, and barren, rocky, and frozen countries.

A great portion of the region lying south of Lake Athabasca, and west of the Stony Mountains, is eminently adapted for agriculture, and its splendid forests and broad savannahs, abound with buffalo, moose, caraboo, common deer, and most, if not all, the wild animals and birds of America. In the lakes and rivers great varieties of fish are plentiful.

This remote territory possesses resources capable of yielding sustenance and independence to many millions of inhabitants; but hitherto the soil has

in no part been subjected to cultivation, except in small spots, where the fur traders have established posts; and on the banks of the Red River, where the late Lord Selkirk established a settlement.

The principal lakes of this region, are, the Lake of Woods, equidistant between Lake Superior and Lake Winnipeg. It receives the river La Pluie, rising in the heights west of Lake Superior, and discharges its waters, by a rapid river, into Lake Winnipeg.

LAKES ATHABASCA AND WINNIPEG.—Lake Winnipeg is about 240 miles long, and, in its irregular width, from five to fifty-five miles broad. It lies between latitudes 50 deg. and 54 deg. N., and longitude 96 deg. to 108 W. It receives the waters of several rivers, the largest of which is the Saskatchewan, which flows from the Rocky Mountains. It receives also the Assinboin and Red rivers, and its surplus waters are carried off by two or more rivers to Hudson Bay. The large lakes, Winnipegosis and Mannotowoopow, lie immediately west of, and discharge their waters into, Lake Winnipeg. Lake Athabasca, lying west of these, is about 200 miles long, and from fourteen to twenty-six broad. It receives several rivers, some of which, the Unjigah, or Peace River, and others, rise in the Rocky Mountains. Its waters are carried off the rapid Stony river, along a rocky channel, into Slave Lake; on the north, its shores are rugged and barren; on the south, alluvial; and on the west, sandy and naked.

The Slave Lake is larger than either Lake Ontario or Lake Erie, being 250 miles long, by about fifty in breadth. It is from sixty to seventy-five fathoms in depth. Its shores are generally wooded, with firs, beeches, and poplars; and it has several small islands, many of them high, abrupt elevations of rock, principally gneiss and granite. It receives several rivers, and discharges its waters by the river Mackenzie, by which Sir Alexander Mackenzie first, and afterward Sir John Franklin, descended to the Arctic Ocean, in latitude 67 deg. 48 min. N., and longitude 115 deg. 37 min. W.

The extensive regions lying west of the Rocky Mountains, from the Gulf of California to Behring Straits, and possessed by Russia, England, the United States, and Spain, abound with innumerable bays, islands, rivers, and harbours; and, south of the Russian limits, in latitude 55 deg. N., splendid forests, mountains, hills, rich valleys, and plains, wild animals, and plentiful fisheries. The climate, also, like the western shores of the old continent, is much milder than that of countries under the same latitude on the eastern coasts. The Oregon, or Columbia, the Frazer, and the Buenaventura, are the principal rivers.

The territory of the Hudson Bay Company, held by virtue of the charter granted by Charles II., is now understood to include all the countries from 52 deg. N., on the coast of Labrador, to the extremity of all the rivers falling into Hudson Bay. This portion of Labrador is of little importance, excepting

for furs and fisheries; and the coast and Bay of Hudson, and the inhospitable regions of the Esquimaux, are of as little consequence; but the rivers which flow into the bay, rising in the south and west, actually include a portion of the United States, and nearly the whole of the Indian territory, in which the old French fur traders, and the Montreal Company, had forts or trading-posts. The latter are now occupied by the servants of the Hudson Bay Company, who may be said to monopolise the whole fur trade of British North America. The territory, called Ossiniboin, purchased in 1811, by the late Earl of Selkirk, from the Hudson Bay Company, is understood to commence "at a point in 52 deg. 30 min. N., on the western shore of Lake Winnipeg, the line running also west to Lake Winnipegosis, or Little Winnipeg; then south, to latitude 52 deg. on the western shore of this lake, thence south to the highlands, dividing the waters of the Missouri and Mississippi from those falling into Lake Winnipeg, thence by those highlands to the source of river La Pluie, and down that river, through the Lake of the Woods and river Winnipeg, to the place of beginning." Half of this territory at least, and certainly the better half, is within the boundary of the United States. The whole comprises about 116,000 square miles, or 73,240,000 acres.

CHAPTER III.

CONFIGURATION AND ASPECT OF THE TERRITORIES OF THE UNITED STATES.

THE land, along the whole sea coast of the United States, is generally low, level, or undulated, for some distance into the interior. This low or sea coast region is about fifty miles broad at the north-east extremity, and from thence widens, gradually, till it attains near 200 miles in the State of Georgia; beyond which line, the land gradually rises into hills and mountain ridges, which are more remarkable for their length and breadth, than their height; and whether, in parallel ridges, or rising in isolated hills, the whole range with its numerous ramifications form Percé, near the mouth of the St. Lawrence, in the district of Gaspé, to where they disappear in the southern states, from the Alleghaney, called by the Indians the *Endless Mountains*. The general course of the Alleghaney, from their rise to the frontiers of British America, is about north-east and south-west. East of the Hudson they diverge, and spread, irregularly towards the south.

The range of the Rocky or Chippewyan Mountains are a continuation of the Andes, or Cordilleras of Mexico. Their western limit is considered to be about 112 deg. west longitude, and they terminate in about 70 deg. north latitude.

The numerous ridges and ramifications of the Rocky Mountains occupy a breadth of from two to three hundred miles. Lewes says he saw their high snow-covered summits at a distance of one hundred and fifty miles. From the highest summits being covered with perpetual snow, they have been called the shining mountains. The Missouri and all the rivers falling into the Mississippi from the west, are supplied by the streams, and torrents, flowing from the Rocky Mountains. Along the Pacific there is a large, collateral range, extending from the Cape of California along the coast to Cook's Inlet, generally rising to no great height in the southern portion. In the northern part, Le Prouse states that this range rises to the height of ten thousand feet, and that its northern extremity, Mount Elias, is eighteen thousand feet high, and the loftiest peak of North America.

MOUNTAINOUS ELEVATION OF THE SEVERAL STATES:

NEW ENGLAND.—The White Mountains in New England are the principal ramifications running north-east and south-west, which diverge from the great Alleghany ridge. The highest summits are those of the White Mountain ridge in New Hampshire, which extend from north to south. These are the loftiest in the United States east of the Mississippi. Mount Washington, the highest, is six thousand two hundred and thirty feet above the level of the sea. Mount Adams, Mount Jefferson, and Mount Madison, are each more than five thousand feet high.

These mountains are difficult of access. The east side of Mount Washington rises at an angle of forty-five degrees. From the summit the Atlantic, sixty-five miles distant, is seen, and the view extends west to the hills.

MAINE.—The northern and western parts of Maine are mountainous. The highest summits are the Katahdin, the Speckled, Bald, Bigelow, and Ebeem, mountains.

VERMONT.—The range between the rivers Hudson and Connecticut, and between the latter and Lake Champlain, called the Green Mountains, which have given a name to the state of VERMONT, corrupted from *Verd-Mont*, the name given to the highest range by the French in Canada, from its perpetual verdure, being covered on its western side with pine, spruce, hemlock, and other evergreen trees. The Green Mountains, or hills, are from ten to fifteen miles in breadth, and intersected with fertile valleys, through which numerous streams flow. Vegetation, which is luxuriant in the valleys, and on the lower slopes of the hills and mountains, becomes gradually stunted towards the summits; which are usually covered with broad thickets of spruce and hemlock, from two to three feet high, with the branches so closely intertwined, as to render the way between them impassable.

The loftiest summits are Killington Peak, near Rutland, Camel's Rump, between Montpelier and Burlington, and Mansfield Mountain, all of which are above 3000 feet high.

MASSACHUSETTS.—Ramifications of the Green Mountains enter the western parts of Massachusetts from the north, and form the Hoosack and Tagkannuc ridges, which run nearly parallel to each other south, into Connecticut. The most elevated of the Tagkannuc are, Saddle Mountain, in the north, 4000 feet high, and Tagkannuc Mountain in the south, 3000 feet high. None of the summits of the Hoosack ridge exceed half that elevation.

NEW YORK.—Ramifications of the Alleghaney range extend in two principal ridges in the state of New York, the Catskill and Wallkill. The Catskill, or the most northern, is the chief ridge of the Alleghaney or western chain. The hills of *Weehawken* rise on the west side of the Hudson, nearly opposite the city of New York.

The *Highlands* of the *Hudson*, called Fishkill Mountains, about forty miles above the city of New York, are conspicuous for their picturesque and romantic grandeur. These heights extend for about twenty miles along both sides of the Hudson. The loftiest summit is about 1500 feet high.

The *Peruvian Mountains* consist of a lofty region in the northern part of New York, the sources of the Hudson flow from them, and these separate also the waters of Lake Champlain from those falling into Lake Ontario. The loftiest summit, called *Whiteface*, is about 3000 feet above the level of Lake Champlain.

PENNSYLVANIA.—The Alleghaney, called the Apalachian chain, in Pennsylvania, spreads in this state to its widest limits, and occupies, with its various ramifications and ranges, more than half of the state.

The greatest breadth is about 200 miles, and consists of parallel ridges, separated, in some parts, by narrow valleys, or ravines, in others by valleys and plains, twenty or thirty miles broad. The range nearest the sea-coast, called the *South Mountains*, is a continuation of the blue ridge of Virginia. The blue ridge is an irregular rocky, broken eminence, sometimes disappearing altogether, and afterwards rising into hills and summits over a breadth of several miles. They rise about 150 to 200 miles inland from the sea-coast, and are about 1200 feet above the level of the surrounding country. Beyond these are the Kittatinny, or the Blue Mountains, which extend from Maryland to New Jersey, the Susquehanna and Delaware flowing through the range. Further westward are the ridges called the *Sideling Hills*, *Ragged Mountains*, *Great Warrior Mountain*, *East Wills Mountain*, all of which branch from the Alleghaney ridge. The highest summits are between 3000 and 4000 feet above the level of the sea.

West of the Alleghaney, are the *Laurel* and *Chesnut* ridges. These are generally covered with thick forests, and are traversed by the great streams of the Susquehanna and the head waters of the Ohio. The *Wallkill*, which crosses the Hudson at *West Point*, forty miles below the Catskill, is a continuation of the Blue ridge, or *Eastern Chain*.

The eastern and western ranges run parallel to each other south-west, till on

the frontiers of North Carolina and Virginia they unite, and are called the Alleghaney arch. A little further to the south, but still in North Carolina, collateral ridges unite from the west, and form a culminating point between the sources of several rivers. Another ramification, or rather range, stretches south-west, and then west, called by the name of the Cumberland Mountains, through the whole state of Tennessee, while the main *Alleghaney Chain*, nearly unaccompanied by any collateral ridge, extends south-west to the western boundaries of Georgia, and the Carolinas.

Mr. Jefferson divided the whole of the territory from the Mississippi to the Atlantic into three natural divisions each differing from the other in climate, configuration, soil, and production, namely, the sea coast, the mountains, and the western territory. On the summit of a lateral ridge, separating the valley of the Arkansa from that of the Plate river, north latitude 41 degrees, there runs a peak called the *Great White Mountain*, the height of which is said to be 10,580 feet above the level of the meadows at its foot, and the height of the meadows are estimated at 8000 feet above the level of the sea, being 18,580 feet of absolute elevation above the level of the sea. This, however, being an estimate may probably be exaggerated.

On the west side of the Mississippi, and about midway between the Rocky Mountains and the Alleghaney, lies a broad range of mountainous ridges called the Ozarks, 600 or 700 miles in length from south to north, about 100 broad, and having an elevation varying from 1000 to 2000 feet above the sea. A similar range of broken and hilly country commences on the Wisconsin river, and extends north to Lake Superior. Between the Ozarks and the Rocky Mountains a flat country called the American desert is said to prevail.

The Floridas, Louisiana, and all the countries of North America, south of the termination of the Alleghaney and west to the Ozarks, and south of those to the Gulf of Mexico, and thence west to the first highlands of Mexico, and north to the rising *plateaux* of Texas, may all be considered as flat countries.

CHAPTER IV.

VALLEYS, RIVERS, AND LAKES OF NORTH AMERICA.

THE Valley of the Mississippi is the most extensive in America. It is bounded on the south by the Gulf of Mexico, on the west by the Rocky Mountains, on the north by the great lakes of America, and on the east by the Appalachian ridge of mountains. Its general aspect may be classed under three diversities,—the thickly wooded, the barren, and the prairie regions. This

valley extends from the 29th to the 42nd parallel of north latitude, and exhibits every variation of temperature from the climate of Canada to that of the tropics. It comprises, in its breadth the generally level country, through which the great and small rivers, flow between the two great chains of American mountains, east and west of the Mississippi, and which are 3000 miles apart, and in which, finally, these rivers run into one great channel, and then, through a delta, discharge their waters into the sea.

A soil, much of it alluvial, of great fertility, prevails in this magnificent valley: the principal appendent basins of which are the valleys of the great rivers which fall into the Mississippi.

Valley of the Missouri.—The greatest length of the valley of the Missouri is about 1200 miles: its greatest breadth 700. Ascending from the lower verge of this widely-extended plain, the forests gradually disappear, until nearly woodless plains, or prairies, extend far from the banks of the river.

The valley called the *American Bottom*, extends along the eastern bank of the Mississippi to the Piasa Hills, four miles above the mouth of the Missouri. It is several miles in breadth, and its soil of astonishing fertility. The *great valley of the Ohio* comprises, as described by the American geographers, 80,000 square miles, north-west of the great river, and 116,000 on the south-east, or total superficies of 196,000 miles. It is intersected by chasms and rivers, and diversified by bold elevations. The valleys of the St. Lawrence, and its confluent the Ottawa, are naturally of great fertility.

The valleys of the Hudson, Mohawk, Connecticut, and of most of the remaining rivers of North America, and south of fifty degrees, are fertile and richly wooded when not cleared for cultivation.

Under the general head of the inland navigation of America we shall give some account of the great navigable rivers of North America; viz., the St. Lawrence, the Ottawa, the Saghunny; the rivers Miramachi, and St. John in British America; and of the Mississippi, Missouri, Ohio, and their navigable affluents; of the St. Croix, Penobscott, Merrimack; the Saco, the Kennebec, the Pisquataqua, the Connecticut, the Hudson, the Delaware, the Susquehannah, the Potomac, York River, James's River, the Great Peelee, the Savanah, and the streams of Florida and Alabama.

CHAPTER V.

GREAT LAKES OF CANADA AND THE UNITED STATES.

LAKE HURON is 250 miles long, 120 broad, and 860 feet deep, without comprehending a branch of it called Georgia Bay, which is 120 miles long and 50 miles broad. Near the head of the latter, at Pentagushine, there is a small naval

depôt. It receives several rivers; the principal of which are, the Severn, flowing over a rocky bed from Lake Simcoe; the Maitland, at the mouth of which is the town and harbour of Godrich, and which flows through the Huron tract; the river Muskotea, flowing from lakes between the Georgian Bay and the Ottawa; and the French river, a large stream flowing from Lake Nippising, which a very narrow portage divides from a rapid river falling into the Ottawa. This was formerly the grand route of the north-west voyageurs.

The lands on the east and west coasts are generally fit for cultivation, and covered with heavy timber, presenting clay cliffs, rocks, and woody slopes along the shore. The north coast exhibits a rugged, formidable, and barren aspect. The Cloche Mountains are behind this shore, and very little is known of the interior, which bears the general name of the Chippewayan hunting-grounds.

A multitude of islands, called the Manitoulins, or Islands of Spirits, extend from the northern extremity of Georgian Bay to the *détour* between the continent and Drummond's Island. The largest of these is eighty miles long. The Indians attach a religious veneration to them, as being consecrated by the Great Spirit, Manitou.

Through the strait of Makillimakinak, the fort of which the Americans claim, the navigation to Lake Michigan is deep and safe. This lake is within the United States boundary. It is, without including Green Bay, a branch of it, 400 miles long, and 50 broad: and Green Bay is 105 miles long and 20 miles broad; both are on a level with Lake Huron. The Michigan territory, lying between Lake Huron and River Detroit, and Lake Michigan, is a valuable and extensive region, in which settlements are forming with extraordinary rapidity.

The passage to Lake Superior, by the strait of St. Mary, 40 miles long, is interrupted by the rapids or falls of St. Mary, which occur about mid-distance between both lakes. The appellation of fall is, however, improper. About midway between both lakes, the banks of the strait contracts the channel, which also descends altogether, in the course of the rapid, about 23 feet; and the vast discharge of Lake Superior rolling along impetuously over and against natural irregularities, renders the navigation upwards altogether impracticable. Canoes have descended, but the exploit is dangerous. A canal two miles long would avoid this rapid, and connect the navigation of Lake Superior with that of Lake Huron, and Michigan, and Erie.

Lake Superior, the great upper reservoir of the St. Lawrence, is about 360 geographical, or 417 statute miles long, and 140 geographical, or 162 statute miles broad; its circumference round its shores about 1600 miles, and its depth about 900 feet. Its waters are pure, and astonishingly transparent, and this inland ocean is not surpassed in turbulent commotion, during tempests, by the most violent agitation of the Atlantic. It receives numerous rivers, but none of them are remarkably large. Low lands, lying between the lake and the ramps and mountains, are considered to have been formerly covered by the waters of the lake.

The elevations and cliffs, rise in parts to 1500 feet above the level of the lake. In other places a flat country extends back from fifty to seventy miles. The largest of its islands, near the British side, Isle Royale, is about 100 miles long, by 40 in breadth.

The lands fit for settlement and agriculture may be considered to be nearly altogether within the boundaries of the United States. Tracts of good land may occasionally occur, or be found, on the British side; but as far as we know, chiefly from the fur traders, the northern shores are forbidding and sterile, and the whole country between this lake and Hudson Bay is of little value, except for the furs of the wild animals, or the fish that may be caught in its waters.

Salmon of great size, herring, black bass, sturgeon, and all the lake fishes, are abundant. It is said that neither salmon nor herring are caught in any of the lakes, except those communicating with the St. Lawrence. How either herring or salmon got into those lakes is a question to puzzle the naturalist.

The comparative depths of the lakes form another extraordinary subject of inquiry. The bottom of Lake Ontario, which is 452 feet deep, is as low as most parts of the Gulf of St. Lawrence, while Lake Erie is only 60 or 70 feet deep; but the bottoms of Lakes Huron, Michigan, and Superior, are all, from their vast depths, although their surface is so much higher, on nearly a level with the bottoms of Lake Ontario, and of the Gulf of St. Lawrence. Can there be a subterranean river running from Lake Superior to Huron, and from Huron to Lake Ontario? This certainly is not impossible; nor does the discharge through the river Detroit, after allowing for the full probable portion carried off by evaporation, appear by any means equal to the quantity of water which the three upper great lakes may be considered to receive. All the lakes of Canada are estimated to cover 43,040,000 acres.

The great lakes occasionally rise above their usual level, sometimes from three to five feet. These overflowings are not annual nor regular. They have occurred about once in seven years, and are probably the effect of more rain and less evaporation, during the seasons in which they take place. Sir Alexander Mackenzie observed several overflowings of two or three feet in the lakes north-west of Superior, so that they are not peculiar to the lakes of the St. Lawrence.

Lake Champlain is one of the most picturesque of the inland waters of America. The great lakes are so expansive, that parts only can be seen of their coasts; which, however, are often exceedingly bold, sometimes precipitous, and when studded with rocky or wooded islands, and pierced with inlets, are remarkably picturesque and romantic. Lake Champlain is long and narrow; and at its southern extremity, and where it unites with Lake George, it is richly varied by woods, islands, and highlands.

The interior of Labrador, Newfoundland, Nova Scotia, New Brunswick, and the state of Maine, abound with lakes.

CHAPTER VI.

WILD ANIMALS, BIRDS, REPTILES, AND FISHES, OF AMERICA.

THE zoology and ornithology of America have been so thoroughly described and illustrated, that neither require any notice in this work. As man advances in subduing and forming settlements among the forests, the wild animals diminish in number. In the far west and north-west, the buffalo, the different varieties of the deer species, and the various animals hunted for their furs, though far less abundant than formerly, inhabit the prairies and forests; and there are none of the countries of America in which some of the original native animals are not still to be found.

The natural history of the fishes of America is still to be written: with the exception of the turbot, and a few other kinds, the fishes of the sea-coast of America are nearly similar to those of the corresponding shores of Europe; they differ frequently in quality, and some of those which are scarce on the European shores, are abundant on those of America. Pilchards, anchovies, and sardines, are rarely, if ever, seen in the American waters. Smelts and caplin swarm in the latter.

The fishes of the Mississippi are described as generally coarse, often hideous and voracious. The cat-fish, of which there are many varieties, weighs about 100 lbs. Pike, pickerel, and jack, are also caught in the Mississippi, and its streams. Fishes, of which there are several varieties, called gar-fish, are caught in the Mississippi. The trout, yellow cat-fish, pike, bar-fish, and perch, are described by Mr. Flint as the best.

The alligator-gar, appears, from the description given of it, to be the shark of the rivers. It is about eight feet long, weighs about 200 lbs., its mouth is large, round, and set thickly with sharp teeth. Its scales are said to be impenetrable by a ball from a rifle, and when dead, to be so hard, as to strike fire from flint. It is more dreaded than the alligator. Another monster of the Mississippi waters, is called by the Americans, devil-jack diamond fish, is from four to ten feet long, and weighs from 100 to above 350 lbs. There are several varieties of sturgeon, some of which are eaten. The saw-fish, the shovel-fish, the buffalo-fish, perch, weighing from ten to twenty pounds, bass, hog-fish, saw-fish, eels, minny, *false* herrings, and several varieties of small fishes abound in the Mississippi and its tributaries. The fish, called *florida*, or Louisiana trout, is striped, of the perch species, and it weighs from one to four pounds; and the fishes caught in the saline lakes of Louisiana, and the rock-fish, taken in the rivers from Susquehanna to the Mississippi. Crawfish, and various shell-fish abound in the Gulf of Mexico. A

ray-fish, which Dr. Mitchell describes as the "oceanic vampire," was caught near the entrance of Delaware Bay, when towed ashore, was found so heavy, that five oxen, two horses, and twenty men, could not drag it up on the shore. Its length was seventeen feet, and its breadth sixteen feet. It weighed from four to five tons.

Among the fishes of the great lakes is the sturgeon, it weighs from 70 to 120 lbs.; it affords isinglass, and differs from the sturgeon of the sea, by wanting the shelly scales on the back. The masquinongé is delicious, and sometimes weighs 50 lbs. The white fish, caught in abundance, resembling the shad of the Atlantic coast, or very large alewives; it is excellent eating, but inferior to the masquenongé. The lake herrings are plentiful, but flabby and indifferent.

Trout of all sizes, weighing from half a pound to sometimes 50 to 70 lbs. The large kind called lake salmon resemble those of the sea, but the flesh much paler and not so richly flavoured. Pike are much the same in flavour as in England.

There are two or three varieties of bass, the black is the best. The other fishes which are found in the lakes and rivers of Upper Canada, are principally perch, eel pout, cat-fish, mullet, dace, chub, carp sucker, dog-fish (small), bill-fish (the tyrant of the lakes, with a bill about a foot long), lamprey, silver eel, sun-fish, &c.

On the Atlantic and Gulf of St. Lawrence, coasts of America, especially along the shores and inlets of the Northern States and of British America the best fish abound, and where they have afforded the source, since the discovery of Newfoundland, Labrador, the Gulf of St. Lawrence, and Nova Scotia, of extensive and profitable fisheries.*

CHAPTER VII.

NORTH AMERICAN FORESTS.

THE forests of North America have been classed under three great general divisions, or zones. The vegetation, and the growth, and kind, of trees, in these divisions, are not altogether dependent on their more northern or southern latitudes, but also on the nature of the soil, and on their distance from the sea coasts, as well as on the peculiarities of the mountainous, of the low, flat, table land, and valley regions. The first forest zone, or that of the southern sea coasts, comprehends the region south of the Chesapeake and the

* These will be found described hereafter, under the general head of "THE FISHERIES OF AMERICA."

Alleghanys, to the point of Florida, and west to the rising grounds of Texas. On the Atlantic coast, and over a portion of Louisiana, resinous trees, peculiar to low and sandy soils, prevail: such as cedars, cypresses, firs, pines, and some others: intermingled with shrubs and various plants. The swampy, marshy, and even alluvial soils of this region are generally but ill adapted for agriculture.

In Florida and Louisiana, the magnolia, catalpa, and tulip trees flourish. Several other trees peculiar to warm latitudes and low lands also grow. Extensive tracts called cedar swamps also occur covered thickly with cedar-trees. Some of the characteristics of this zone appear in latitudes farther north, where the low sandy soils, even within the Gulf of St. Lawrence, produce low spruce firs, dwarf-willows, poplars, and other trees and shrubs, similar to those found on the same kind of soils in Florida. The low sandy shores of part of the north side of Prince Edward island; the country generally near the shore north from Miramichi to Point Mescou, and even on the south side of the island of Anticosti, present, frequently, though of less extent, barren soils, bogs, and swamps, resembling those near the low shores of Virginia and Florida.

The second zone comprehends the hilly and mountainous parts of the Carolinas, Pennsylvania, the southern parts of New York, and the country west to the prairies, and south to the northern limits of the low regions of Louisiana and other low grounds of the south. Oak, beech, maple, sycamores, mulberries, acacias, large poplars, large birches, walnuts, and sassafras-trees, with, occasionally, fir-trees intermixed; and in the lower grounds cypresses, cedars, pines, and some other trees, are the predominant woods. East, and on the brows, of the Alleghany chain, and intermixed with several varieties, to the west, are found chesnut, sumach, and various other trees, which grow in fertile soils.

The third zone comprehends the forests of the New York, and New England States, Vermont, New Brunswick, the wooded parts of Nova Scotia, and parts of Cape Breton. A portion of the west part of Newfoundland, Canada, south of the St. Lawrence, and partly to the north of the St. Lawrence as far as 47 deg. 30 min. north, thence following nearly a direct line to the parallel of 43 deg. 30 min. north, on the shores west of Lake Huron, and including nearly all Michigan, and the countries in the same parallel of latitude to the Pacific: and comprehending all the countries south of this extensive line to latitude 40 deg. north-east of the Mississippi, and west of that river and of the Missouri, to the foot of the Rocky Mountains; and thence, west of that chain to the shores of the Pacific. This zone may be considered as comprehending the great forest regions of America, and embracing a portion of the second zone and some parts of the northern zone.

The fourth zone comprehends the woods of the northern regions, chiefly low firs, dwarf birches, willows, small poplars, &c., until vegetation, diminishing to creeping firs and low dwarf shrubs, finally ceases. The woods of the gulf

and river of St. Lawrence, north of Quebec; the whole country of America, north of the parallel of the Manitoulin Islands, in Lake Superior; the north-east section of the district of Gaspé; and, nearly, the whole island of Newfoundland, are comprehended in this zone. Even in this division there are exceptions to the general character of its trees; for on the west of Newfoundland, and within some of the sheltered valleys of Labrador, and in the valleys of the river Saghuny, trees sufficiently large for ship-building are found.

It is, however, to the two central zones that we must chiefly advert in our brief view of the forests of North America: the magnificent splendour of which, is peculiar to that division of the western world.

In Europe, in Asia, in Africa, and even in South America, the primeval trees, how much soever their magnitude may arrest admiration, do not grow in the promiscuous style that prevails in the great general character of the North American woods.

Many varieties of the pine, intermingled with birch, maple, beech, oak, and numerous other tribes, branch luxuriantly over the banks of lakes and rivers, extend in stately grandeur along the plains, and stretch proudly up to the very summits of the mountains.

It is impossible to exaggerate the autumnal beauty of these forests; nothing under Heaven can be compared to its effulgent grandeur.

Two or three frosty nights in the decline of autumn, transform the boundless verdure of a whole empire into every possible tint of brilliant scarlet, rich violet, every shade of blue, and brown, vivid crimson, and glittering yellow. The stern, inexorable fir tribes alone maintain their eternal sombre green: all others, in mountains, and in valleys, burst into the most glorious vegetable beauty, and exhibit the most splendid, and most enchanting, panorama on earth.*

Amidst the American wilderness we have often ascended one of those heights, from which the scope of vision ranges over the surface of boundless forests, varying in shades from the funereal hue of the firs, to the bright verdure and golden tinges of the birch, the yellow and brown shades of the beech, and the red and violet of the maple; from whence the imagination alone penetrates underneath the silent, indomitable covert, amidst the intricacies of which, the traveller might suddenly wander into bewildered labyrinths, and for ever lose his way, in perplexing ignorance of the course that would lead him back to civilization and to the human throng—from the coverts, where the moose, cariboo, and bear, have safely fed and roved, until pursued to gratify the desires, and until ensnared by the wiles of man.†

The forest trees in North America are exceedingly numerous, but in this work

* I consider that these metamorphoses are caused by the action of frost at this period on the acids contained in the leaves.

† British America, vol. ii., page 30.

it will only be possible to describe briefly the principal timber-trees, among which those of the pine family claim the first rank.

Michaux describes fourteen species of pine, and there are probably more varieties. Pines do not often grow on fertile soils, at least not in groves; low, sandy, and poor, but not strong lands, are most congenial to their growth.

The yellow long-leaved pine (*pinus strobus*) is the most generally useful; and the great bulk of the timber of commerce exported from America is of this kind. It grows in extensive forests in Canada and New Brunswick, and grew formerly in great plenty in the old provinces, and in Prince Edward Island, Nova Scotia, and Cape Breton. It is a magnificent tree, frequently fifteen feet in circumference near the ground, free from branches for seventy or eighty feet, and often more than 120 feet in height. Some trees, after being hewn square, and the limbs, with twenty to thirty feet of the top cut off, have measured eight or nine tons, of forty solid feet each.

The pitch pine, (*pinus Australis*), also long-leaved, and valuable on account of its durability, but more so from its producing principally the turpentine and tar of America. It delights in higher ground than the yellow pine, and seldom exceeds six feet in circumference.

The red pine (*pinus Sylvestris*) is often a tall tree, but seldom more than four or five feet in girth. It is nearly the same in kind and quality as the fir imported into the United Kingdom from Norway, in square logs. Until this tree be sufficiently matured, or if it be in a situation where it grows rapidly, it contains a great proportion of sap wood; and it is only when this part is hewn away, that the red pine is durable. It is much used in ship-building and many other purposes, but it is much more rare than any of the other pines. In many parts of Canada, and along some branches of the St. John, it has lately been discovered in extensive groves.

Hemlock spruce (*abies Canadensis*). There are two varieties of the hemlock, the red and white; both are very durable. The lath wood, imported in billets from America, is principally hemlock. The red splits too freely, and is remarkably full of cracks, or, as the Americans term it, shakey. The white is often apt to splinter, but it is close grained, hard, holds nails or tree nails well, and is used in colonial ship building. Its bark is used very generally in America for tanning. There is no wood better adapted for mining purposes or piles; and it is remarkable that iron, driven into it, will not corrode either in or out of water. Hemlock trees generally grow in dry hollows, in groves, and from two to three feet in diameter, and sixty to eighty feet high.

Five varieties of the spruce fir are abundant in all except the northernmost regions; and the dwarf spruce creeps as far north as any tree. The black, gray, white, and red spruce firs, called so from the colour of their respective barks, are the same as those of Norway, imported into England for masts, yards, &c. These

trees grow to a great height. The black spruce (*pinus albes*) is frequently observed in the distance, like a black minaret or spire, towering twenty or thirty feet above all other forest trees. The spruce firs of rapid growth are not durable, but those growing in bleak situations, or near the sea coast, are hard and lasting. The wood of all the species is white.

The American silver fir (*abies balsamiferæ*) is that from which the transparent resin known as Canada balsam is procured. This balsam is the best possible application to fresh wounds. The Indians use it also as a remedy for several internal complaints. The timber of this tree is seldom used in America, except for fencing rails.

The celebrated essence of spruce is extracted from the black spruce. When the branches are used to make beer, so common in America, merely by boiling them in water, and adding a few hops and a certain portion of molasses, those of the dwarf trees are preferred.

The Hackmatack, or larch (*pinus laryx*) called also in America, tamarac, and juniper, is considered the most durable of the pine family. In some parts, but not generally, it is very plentiful. It attains, frequently, a great height, but rarely more than two feet in thickness. Its wood is heavy, tough, and becomes hard by seasoning. It burns with difficulty, and does not readily absorb water. In these respects hemlock resembles it most.

Both red cedar (*juniperus Virginiana*) and white cedar (*cupressus thyoides*) are met with in the north of Virginia, and New York, but not in abundance. The former is found in Upper Canada, the latter grows in the lower provinces. The largest trees that we have seen, about three feet in diameter, were on the banks of the Buonaventura river, in the district of Gaspé, at which place the Acadian French use the white cedar, in preference to other wood, for house and ship-building. There are two or more varieties of it, one of which is called Canada cyprus: it is a beautiful ornamental tree. It has been successfully transplanted from Canada to France; and in the garden of the Petit Trianon, Versailles, there are two or three fine trees of this species.

The common juniper, which yields the berry used in the arts, and which takes two years in ripening, is found in most cold situations, where other trees seldom grow. A creeping variety of fir, called in America ground spruce, producing a delicious red berry, and on which cattle delight to browse, grows in many places in great plenty. It differs in its nature from all other varieties of firs, inasmuch as it thrives only in fertile soils.

The oak, in England, claims the precedence of all other trees; but not so in America. The people of the United States boast much, it is true, of the durability and excellence of their white oak (*quercus alba*). It is certainly a tough, durable wood, and probably equal to the greater part of the oak now cut down annually in Great Britain; but no more, in firmness and durability, to be com-

pared to the "unwedgable and gnarled oak of England," than sand-stone is to granite. The wood growing in the southern parts, which they term "live oak," is, however, very firm, and remarkably durable; probably as lasting as the old English oak.

The gray, or, more properly white oak of Canada, New York, Pennsylvania, and Michigan, is a tolerably close-grained and lasting wood, and much used in ship-building and for staves. It resembles very closely the *quercus pedunculata* of the continent of Europe, and is probably as durable.

The quercitron oak (*quercus tinctoria*) is considered, in the United States, of very lasting quality. The bark, also, contains a great portion of tannin, but imparts a yellow colour to the leather, and is therefore objected to.

The red oak of America is the most plentiful, but very porous, and of indifferent quality. It is, however, frequently made into staves, and its bark is valuable for tanning.

The beech-tree (*fagus sylvatica*) thrives abundantly, but always on fertile dry soils. It is in America usually a beautiful, majestic tree, and sometimes three feet in diameter. It is useful for the same purposes to which it is applied in England; under water it is remarkably durable, and it affords a great quantity of potashes. Its bark contains a fair portion of tannin; and it produces, every second year, heavy crops of *mast*, or nuts, which are pleasant to the taste, and on which partridges, squirrels, mice, &c., feed; the hogs of the settlers ramble through the woods as soon as the beech-nuts begin to fall, and fatten so rapidly on them, that they acquire one to three inches in thickness of additional fat, not very firm it is true, in a few weeks.

Two or three varieties of the elm (*ulmus campestris*) are met with in America. It attains much about the same size as the beech-tree, and its quality is fully equal to the best that grows in England. Elm, however, is not abundant in America.

Ash (*fraxinus*)—of this tree there are many varieties; but the common gray ash only, generally called white ash in America, is durable or useful.

The mountain ash (*pyrus aricaparia*) grows in all parts of North America. It is not, however, of the ash, but rather of the birch tribe. It is, in fact, Sir Walter Scott's "rowan tree." Its foliage and berries make it a pretty ornamental tree.

Of the birch tribe (*betula*), we met with eight, or probably more, varieties, known in America by the names of black, white, yellow, gray, birches, &c.

The common white birch (*betula alba*) is the most hardy tree that we know. The dwarf white birch grows farther north than any other tree; and where the rigour of the climate prevents it growing upright, it creeps along the ground affording food and shelter to birds that resort in summer to high latitudes.

Between the latitudes of forty and forty-eight, we find, in valleys, or where

it grows among other timber, the white birch, a fine majestic tree, fifty to sixty feet in height, often two to three feet in diameter, and, for twenty or thirty feet, without branches. When growing in this manner, it is known to naturalists as *betula papyracea*, which, however, although differing in appearance, is by no means a distinct variety from the common white birch, which merely assumes a tall, spreading, or dwarfish character, according to the situation and soil in which it grows.

The white birch, although the wood, except under water, be not durable, is still a most valuable tree. It is clean, close-grained, easily worked, and useful for common turner's work. Its inner bark contains excellent tannin, and of the outer bark of the large trees, are made the canoes used by the Indians and Canadian voyageurs.

The yellow birch differs only from the white in its outer bark, which is yellowish, being too thin for any useful purpose, and its wood being somewhat tougher; neither will it grow in exposed situations, nor on barren soils. Its fibres are split open, and worked by the Indian women into baskets, ropes, brooms, &c. The gray birch seldom attains more than eight or nine inches in diameter. It is hardy, and differs only from the dwarf white birch in the colour and texture of the outer bark.

The black birch of America (*betula nigra*) is a magnificent tree, often fifteen to eighteen feet in circumference; its outer bark is rough and dark, the inner bark thick and full of tannin. The wood is finely shaded and variegated, susceptible of as high a polish as mahogany; and furniture made of choice trees is equally beautiful. It is imported in large square logs from America, and used in this country for many purposes. It makes excellent planks for ships' bottoms, but if exposed to the weather, it is not durable. This might not, probably, be the case if it were first well seasoned.

The sap drained in March and April, by incision, from all the varieties of birch, makes excellent vinegar; and a pleasant weak wine may be obtained from it, by boiling and fermentation.

The Russia leather, used for binding books, is prepared with the empyreumatic oil obtained from the outer bark of the white birch. This bark is very inflammable, and used for torches or flambeaux by the Indians and others, when fishing for eels, salmon, &c., at night.

There are many varieties of the maple (*acer*). Those generally known in America, are: the white maple, which is straight and close in its fibres, elastic, and slow in burning. The waved maple, which resembles zebra wood, is exceedingly beautiful, admits of a very fine polish, and is the same as that generally used for the backs of violins.

The great maple (*acer pseudo platanus*) generally known in America by the different names of rock maple, from its being hard and tough; bird's-eye maple

from its being frequently beautifully mottled, like birds' eyes ; curled maple, from its being generally curled in the fibres, and richly shaded. It takes a high polish ; and beautiful specimens of this wood may be seen in the ornamental work of the cabins of the American packets that come to Liverpool and London.

The sugar maple (*acer saccharinum*) differs from the great maple, in its fibres being generally straight and coarser, its wood not being so hard or compact, and its sap granulating more perfectly. From its juice, principally, is made the maple sugar ; although all the varieties of maple that we know of, if we class them agreeably to the saccharine matter contained in their saps, might be called sugar maples.

The process of obtaining sugar from the sap of the maple, is simple. In the early part of March, at which time sharp frosty nights are usually followed by bright sunshiny days, the sap begins to run. A small notch, or incision, making an angle across the grain, is cut in the tree, out of which the juice oozes, and is conveyed by a thin slip of wood, let in at the lower end of the cut, to a wooden trough or dish, made of bark, or wood, placed below on the ground.

The quantity of sap thus obtained from each tree varies from one pint to two gallons per day. Those who follow the business, fix on a spot where maple trees are most numerous, and erect a temporary camp, or lodging. When they have as many trees tapped as can be attended to, the sap is collected once or twice a day, and carried to a large pot or boiler hung over a wood fire near the camp. It is then reduced, by boiling, until it granulates ; and the sugar thus obtained is rich and pleasant to the taste. An agreeable syrup is also made of maple sap.

The maple ground occupied by a party is termed a "sugarie ;" and those who first commence tapping the trees, consider that possession for one year constitutes right for those years that follow. They often receive, without having any tenure themselves of those lands from the crown, a consideration from others for the right of possession.

There are three or four varieties of poplar, which delight, as in Europe, to grow in low soils. A dwarfish kind abounds where the original wood has been destroyed.

The white walnut or hickory (*juglans alba*), generally called butter-nut tree in America, is common on intervale or alluvial land, and grows to a considerable size. The nut is edible, and contains about the same proportion of oil as the common walnut. The magnolia and acasia grow well only in the southern parts of North America.

Besides these trees, which on account of their appearance or usefulness, are the most generally known, many other varieties abound, among which it will be sufficient to name the alder, wild cherry, Indian pear-tree, dog-wood, bass-wood, horn-beam or iron-wood, the persemon of the south, sycamore, sassafras, and white

and black thorn. The very great variety of smaller trees, shrubs, and herbs, which abound in North America, must be left for the professed naturalist to class.

Sarsaparilla, ginseng, as well as many other medicinal plants, are very plentiful, the virtues of which are as yet but imperfectly known. The Indians have vegetable specifics for all the diseases, except those introduced by Europeans, to which they are liable.*

The vine, generally called, in America, maiden hair (*adiantum capillus veneris*: Linn.), is abundant, growing usually along the sides of dry hollows, or among old fallen trees, but always in the shade. The leaves of it are infused as tea; its berry affords a delicious jelly, from which the once celebrated "sirop de capillaire" took its name.

A root, called from its colour, blood-root, and from its taste, chocolate-root, is boiled in water, and the decoction used by the Indians as a certain remedy for the most violent attack of cholera. It is also taken by them to remove dysentery, &c., and it alleviates acute pain as readily as opium, without possessing the pernicious qualities of that drug.

A variety of herbs and roots are used by the inhabitants instead of tea, and many of them are grateful to the taste, and probably as conducive to health as the oriental shrub.

Many varieties of wild fruits abound in North America. Vines are discovered growing indigenous in Canada and Nova Scotia. Cranberries are plentiful, uncommonly fine, and as large as cherries in England. Raspberries and strawberries grow naturally in astonishing abundance; also whortleberries and blueberries; black and red currants, gooseberries, and two or three descriptions of cherries grow wild.

The fruit called Indian pear is of the most delicious flavour. Juniper-berries, in many places, are very abundant. Hazel nuts grow wild. There are many kinds of grasses indigenous to the soil of North America; white clover springs spontaneously wherever the land is cleared of the woods.

It seems an extraordinary fact in natural history, that wherever the original forest is destroyed in America, and the land left uncultivated, trees of a different species should spring up. This is always observed where lands have been laid waste by fire. The first year tall weeds, and raspberry and bramble bushes shoot up; then cherry-trees, white birch, silver firs, and white poplars, appear; but seldom any tree of the genus previously growing on the space laid open by the devouring element.†

* The nuns and catholic clergy prepare a vegetable plaster, which never fails to cure inveterate cancer. The secret they do not divulge. The author was acquainted with several persons who have been perfectly cured by them, after being considered past recovery by very able physicians.

† Sir Alexander Mackenzie observes, that on the banks of the Slave Lake, land, formerly covered wholly with spruce, fir, and birch, having been laid waste by fire, produced subsequently nothing but poplars.

Under the heads of "Agriculture," and "Timber Trade of America," hereafter, see the mode of clearing the forests for cultivation.

The great trees of the fir, maple, black birch, and beech tribes, when once destroyed, do not appear to be succeeded in the ground they occupied, by trees of the same kind.

Vast districts of the forest lands have been laid waste by fire, at different periods; and fires lighted, for the purpose of burning woods, cut down for clearing the soil, have often extended much farther, and devastated the surrounding forest country.* In Europe we can form no conception of the fury and

* We have witnessed many of those great fires, but none so terrible and destructive as the great Miramichi fire of October, 1825: when about 140 miles in extent, and almost as great a breadth of the country on the north, and from sixty to seventy miles on the south of the Miramichi river became a scene of perhaps the most dreadful conflagration that occurs in the history of the world.

It appears that the woods had been, on both sides of the north-west, partially on fire for some days, but not to an alarming extent, until the 7th of October, when it came on to blow furiously from the westward, and the inhabitants along the banks of the river were suddenly surprised by an extraordinary roaring in the woods, resembling the crashing and detonation of loud and incessant thunder, while at the same instant the atmosphere became thickly darkened with smoke. They had scarcely time to ascertain the cause of this awful phenomenon, before all the surrounding woods appeared in one vast blaze.

In less than an hour, Douglas Town and Newcastle were in a blaze, and many of the wretched inhabitants, unable to escape, perished in the flames. The following account was obtained and printed in the papers, for public information, a few days afterwards:—

“More than a hundred miles of the shores of Miramichi are laid waste, independent of the north-west branch, the Baltibog and the Nappan Settlements. From 100 to 200 people have perished within immediate observation, whilst thrice that number are miserably burnt, or otherwise wounded; and at least 2000 of our fellow-creatures are left destitute of the means of subsistence, and thrown at present upon the humanity of the province of New Brunswick.

“The number of lives that have been lost in the remote part of the woods, among the lumbering parties, cannot be ascertained for some time to come; for it is feared that few are left to tell the tale.

“It is not in the power of language to describe the unparalleled scene of ruin and devastation which the parish of Newcastle, at this moment, presents. Out of upwards of 250 houses, public buildings, and stores, only fourteen of the least considerable remain.

“The loss of property is incalculable; for the fire, borne upon the wings of a hurricane, rushed on the wretched inhabitants with such inconceivable rapidity, that the preservation of their lives could be their only care.

“Among the vessels on the river, a number were cast on shore: others were fortunately extinguished, after the fire had attacked them.

“At Douglas Town, scarcely any kind of property escaped the ravages of the fire, which swept off the surface every thing coming in contact with it, leaving but time for the unfortunate inhabitants to fly to the shore; and there, by means of boats, canoes, rafts of timber, timber logs, or any article, however ill calculated for the purpose, they endeavoured to escape from the dreadful scene, and reach the town of Chatham: numbers of men, women, and children, perishing in the attempt.

“In some parts of the country the cattle have all been destroyed, or suffered greatly; and the very soil is, in many places, parched and burnt up, while scarcely any article of provision has been rescued from the flames.

“The hurricane raged with such dreadful violence, that large bodies of timber on fire, as also trees from the forest, and parts of the flaming houses and stores, were carried to the rivers with amazing velocity, to such an extent, and affecting the water in such a manner, as to occasion large quantities of salmon and other fish, to resort to land; hundreds of which were scattered on the shores of the south and west branches.”

It is impossible to tell how many lives were lost, as many of those who were in the woods among the lumbering parties, had no friends or connections in the country to remark their non-appearance. Two hundred have been computed as the least number that actually perished in the flames.

The destruction of bears, foxes, tiger-cats, martens, hares, and other wild animals, was very great. These, when surprised by great fires, are said to lose their usual sense of preservation, and becoming, as it were, either giddy or fascinated, often rush into the face of inevitable destruction. Even the birds, except those of very strong wing, seldom escape; some, particularly the partridge, become stupefied; and the density of the smoke, the great velocity of the flames, and the violence of the winds, effectually prevent the flight of most others.—*Macgregor's British America.*

rapidity with which fires rage through the forests of America, during a dry hot summer or autumn: at which period the broken underwood, decayed vegetable substances, fallen branches, bark, and withered trees, are as inflammable as the absence of all moisture can render them. To such irresistible food for combustion we must add the almost boundless fir forests, every tree of which contains in its trunk, bark, branches, and leaves, vast quantities of inflammable resin. When one of these great fires once extend over a few miles of the forest, the surrounding air soon becomes highly rarified, and the wind, consequently, increases to a hurricane. The fire then advances with extraordinary celerity, the flames ascend from one to two hundred feet above the highest trees; the heavens immediately above present a thick cloud of dark or gray smoke, driven furiously onward by the hurricane; the whole forest presents one vast blaze, rolling forward and spreading with inconceivable speed: presenting the terribly sublime appearance of an impetuous flaming ocean, which cracks and roars, resembling thunder, while the giant trees of the forests are falling and crashing before its destructive and tempestuous power.

CHAPTER VIII.

THEORY OF THE CLIMATE OF NORTH AMERICA.

THE temperature of the climate of British America, as well as that of the United States, is extremely variable, not only in regard to sudden transitions from hot to cold, and *vice versâ*, but in respect to the difference between the climate of one colony or state, and that of another.* In remarking generally on the climate of America, we consider the countries lying between 40° and 47° north, as those to which the mean character of the different seasons in America more immediately applies: a great part of Pennsylvania may be also included within it.

The natural climate of the regions within those latitudes will not differ much from the following outline of the character and temperature of the seasons of America. Countries to the south of those places, have warmer atmospheres, while those to the north experience proportionably much more intense cold; until we have the temperature of the tropics in the one, and that of the arctic regions in the other.

In America, the seasons have generally, though erroneously, been reduced to two—summer and winter. The space between winter and summer is, indeed, too short to claim the appellation of spring, in the sense understood in England, but

* It is said of Pennsylvania, that it is a compound of all the countries in the world.

the duration of autumn is as long as in countries under the same latitude in Europe, and is, over the whole continent of North America, the most agreeable season of the year.

The climate of America is colder in winter, and hotter in summer, than under the same parallels of latitude in Europe, and the daily variations of temperature, which depend on the winds, are also greater; but the transitions from dry to wet weather are by no means so sudden as in England; and we may always tell in the morning whether it will be fair all day or not, except in the case of thunder showers, which come on frequently during hot weather, in the evening, when not the smallest appearance of a cloud can be seen before mid-day.

The trade winds, which drive the vapours of the Atlantic into that vortex of suction, the Gulf of Mexico, spread afterwards into currents, and blow in different directions, as diverted by the inequality of the islands and continent of America. These winds are warm; those blowing from the northern regions cold and piercing. Rain falls in America in heavier storms, and in greater quantities than in Europe, but not so frequently.

The summer season may be said to commence about the middle of April, or as soon as the ice disappears in the bays and rivers; further south somewhat earlier, north of 47 deg. later. In May, the weather is generally dry and pleasant; but it rarely happens that summer becomes firmly established, without a few cold days occurring after the first warm weather. This change is occasioned by the wind shifting from south to north, or to north-east, which brings down along the sea-coast large fields of ice, and which carries along also the cold evaporations that arise in the Hyperborean regions. This interruption seldom lasts for more than three or four days, during which the weather is either dry and raw, or cold and wet.

When the wind shifts to the southward, the temperature soon changes, as the cold vapours are either driven back, or dissipated by the heat of the sun, which now becomes powerful.

In latitudes south of 50 deg. north, the southerly winds at this period combat and overcome, as it were, those of the north, and, restoring warmth to the air, fine weather becomes permanent. All the birds, common in summer, make their appearance early in May, and enliven the woods with their melody, while the frogs, those American nightingales, or, as they are often called, bog choristers, also strain their evening concerts. Vegetation proceeds with surprising quickness; wheat and oats are sown; the meadows, pastures, and deciduous trees assume their verdure; various indigenous and exotic flowers blow; and the face of nature and the temperature are delightful.

In June, July, and August, the weather is excessively hot, even as far north as Quebec, sometimes as hot as in the West Indies: the mercury being 90 deg. to 100 deg. Fahrenheit. Showers from the south-west, sometimes accompanied with

thunder and lightning, occur during these months about once a week, or every ten days, which generally shift the wind to the north-west, and produce for a short time an agreeable coolness.

The nights at this season exceed in splendour the most beautiful ones in Europe. To portray them in their true colours, would require more than any language can accomplish, or any pencil, but that of imagination, can execute. The air, notwithstanding the heat of the preceding day, is always pure; the sea and lakes generally unruffled, and its surface one vast mirror, reflecting with precision every visible object, either in the heavens or on the earth. The moon shines with a soft, silver-like brilliancy, and during her retirement, the stars are seen in their utmost effulgence. Fishes of various species sport in the water; the singular note of the whip-poor-will is heard from the woods; the fire-fly floats on the air, oscillating its vivid sparks; and, where the hand of man has subdued the forest, and laid the ground under the control of husbandry, may be heard the voice of the milk-maid, or the "drowsy tinkling of the distant fold." In another direction may often be seen the light of the birch torch, which the Indian uses in the prow of his canoe, while engaged with his spear in fishing.

In September, the weather is extremely pleasant; the days are very warm until the middle of the month; but the evenings are agreeably cool, followed by dews at night; and about, but generally after, the autumnal equinox, the severity of the season is interrupted by high winds and rain. At this period the wind generally blows from a south-easterly point, and the weather usually clears up with the wind from the opposite direction.

The season from this time to the middle or latter part of October, is generally a continuation of pleasant days, moderately warm at noon, and the mornings and evenings cool, attended sometimes with slight frosts at night. Rain occurs but seldom, and the temperature is, perhaps, more agreeable at this time than at any other, being neither unpleasantly hot nor cold. About the end of this month, the northerly winds begin to acquire some ascendancy over the power of the south, and there appears in the atmosphere a determination to establish cold weather, and to accomplish a general change of temperature.

Rain, sunshine, evaporations, and slight frosts, succeed each other, and the leaves of the forest from this period change their verdure into the most brilliant and rich colours, exhibiting the finest tints and shades of red, yellow, and sap green, blended with violet, purple, and brown. The peculiar charm and splendour which this change imparts to American scenery, produce one of the richest landscapes in nature; and never could the pencil of an artist be engaged on a more interesting subject.

After this crisis, the air becomes colder, but the sky continues clear, and a number of fine days usually appear in November. There are frosts at night, but

the sun is warm in the middle of the day; the evenings and mornings are pleasant but cool, and a fire becomes agreeable.

This period is termed all over America, the "Indian summer," and is always looked for, and depended on, as the time to make preparations for the winter season. The French Canadians and Acadians, say the atmospheric warmth at this time is caused by the heat of the great blaze of the prairies set on fire by the Indians, west of the lakes, to destroy the grass. However absurd this belief is, it has acquired a firm credence among an ignorant people.

About the end of November, or a little after, the frosts become more severe, and the northerly winds more prevalent; the sky, however, continues clear, and the weather dry, with the exception of a rainy day once in a week, or in every ten days. This month, and often the whole of December pass away before severe frosts or snows become permanent, which, the old inhabitants say, never takes place until the different ponds or small lakes are filled with water by the alternate frosts, thaws, and rains that occur, or until a little after the wild geese depart for the south.

Towards the end of December, or the beginning of January, the winter season becomes firmly established; the bays and rivers* are frozen over, and the ground covered to the depth of a foot or more with snow; the frost is extremely keen during the months of January, February, and the earlier part of March—the mercury being frequently several degrees below zero. A thaw and mild weather generally occur for a day or two about the middle of January, and sometimes in February. Thaws take place whenever the wind shifts for any time to the south, and the weather that immediately succeeds, is always extremely cold. The ice then becomes as smooth as glass, and affords a source of delightful amusement to those who are lovers of skating.

The deepest snows fall towards the latter part of February, or the beginning of March; at which time, boisterous storms sweep the snow furiously along the surface of the earth, leaving some places nearly bare, and raising immense banks in others. While these last, it may be imprudent to travel, at least, on the ice, or over tracts where there is no wood, as it is impossible to see any distance through the drift. The duration of these storms, however, is seldom longer than one or two days; and then the frost is by no means so severe as when the sky is clear. The effects of the cold in winter is sometimes fatal. In clear frosty weather there is little danger; but the traveller often experiences, particularly during a snow-storm, or even in clear weather, a drowsiness, and an indifference to consequences, an inclination to sleep, and at the same time, little sensibility to cold. Yielding to this influence, to which the whole frame becomes as agreeably disposed, as if

* Halifax, Passamaquody, and several others on the Atlantic coast, between Louisiana and New York, are very seldom rendered unnavigable by ice. All those within the gulf and river St. Lawrence and the lakes, are closed by being frozen from three to, sometimes, five months.

the person were falling asleep on a feather-bed, is inevitably fatal to life, which appears to be abstracted, with the principle of caloric, from the body, by the surrounding cold, and without the least pain. The fluids of the body gradually congealing, until the whole becomes a frozen mass. Exertion alone, until the traveller reaches a house, can save him. Few people at present, perish in America during winter, the roads being more frequently travelled; and the inhabitants guarding more effectually against the cold than formerly.

The fine sand-like dust, which consists of snow, in the most minute, but intensely frozen particles, and which searches, when whirled along by the impetuosity of the wind, through the smallest chinks of window frames, or the least opening in a house, often leaves large heaps of snow on the floor, in the course of a few hours. The Canadians and Acadians call this kind of drift, *La Poudre*.

When any part of the body is frost bitten, the most effectual remedy—and that which removes the effect of being frozen, which is much the same as being burnt—is rubbing the part affected, before approaching a fire or warm room, with snow.

A phenomenon appears frequently during winter, known by the appellation of silver frost. When a fine misty rain takes place, with the wind east or north-east, (the frost not being sufficiently keen to congeal the rain, until it falls) the moment it rests on any substance it adheres and freezes, incrusting every tree, shrub, or whatever else is exposed to the weather, with ice. The forest assumes, in consequence, the most magnificent splendour, and it continues in this state until it thaws, or until the icy shell is shaken off by the winds. The woods thus robed, especially if the sun shines, exhibit the most brilliant appearance—every tree is loaded, as if with a natural production of gems or silver spangles; and there is not, probably, any thing in the appearance of nature that would more effectually baffle the powers of a landscape painter.

The vernal equinox commonly brings on strong gales from the south, accompanied by a mighty thaw, which dissolves all the snow on the cleared lands, and weakens the ice so much, that it now opens where there are strong currents. Clear weather, with sharp frosts at night and sunshine during the day, generally succeeds and continues to the end of March, or the first week in April, when a snow storm frequently comes on, and severe and disagreeable weather lasts for two or three days. This is the final effort of expiring winter, and is immediately followed by a warmth of temperature, which breaks up the ice and dissolves the snows. The heat of the sun, which now becomes powerful, dries up the ground in a few days; after which ploughing begins, and the summer season commences.

Although this outline of the general system of the climate is as near the truth as can probably be stated, yet the weather is often different at the same period in one year from that of another. This difference arises chiefly from the winter season, setting in earlier or later; and the same may be observed as regards the commence-

ment of summer. Thus the winter has been known to set in with unusual severity, on the beginning of December, and sometimes not until the middle of January. In some winters thaws occur oftener than in others; and deeper snows are known in one season than for some years before. The ice breaks up one year as early as the 1st of April, at Montreal, and the harbours within the Gulf of St. Lawrence; and it has been known strong enough on the 1st of May, opposite Charlotte Town, Prince Edward Island, to bear a man across an arm of the sea, the Hillsborough. It is also generally observed, that mild winters are always succeeded by cold springs. Halifax harbour has seldom been frozen over; the bay and harbours of Passamaquody are always open to shipping, while those south, including New York, are often obstructed by ice.

It cannot, however, with all these variations of climate, be said, with propriety, that the duration of winter is more than four months. Many prefer the winter to the same season in Europe, north of Paris; and, taking the year throughout, give the preference to the climate.* Though the cold is intense for nine or ten weeks, the air is dry and elastic, and free from the chilling moisture of a British winter, or the dry bitterness of the north-east winds of France. On the Atlantic coast, where the frost is less intense, there is more humidity.

It is maintained by some writers that the air and earth undergo a considerable alteration in temperature when the land is cleared of the wood; first, from the ground being exposed to the sun's rays, which cause the waters to evaporate more copiously; second, by lessening the quantity and duration of snow; and third, by introducing warm winds through the openings made. From the observations of old people, who have lived fifty or sixty years in America, as well as from the writings of those who visited the new continent many years ago, it would appear that the climate has become milder, and that the duration of winter is now shorter.† Whether this may be attributed to clearing the land of the wood, or to some unknown process going forward in the system of nature, may always remain doubtful.‡ Opening and drying the lands must at least produce a favourable local influence.

* We have spent several years in America,—and we have seen as deep snows between the Rhone and the Loire, as we have ever seen in America; and we have found the cold winds in December between Marseilles and Avignon more piercing, and we suffered more from severe cold in travelling in France and parts of Italy, than in the countries we describe in America.

† It must be remembered, however, that the natural dreariness of a wilderness country, especially during winter, and the slight houses of the settlers, must have had some weight in their accounts of the climate.

‡ That enterprising traveller, Sir Alexander Maekenzie, considered that clearing the land of wood occasioned no very sensible diminution of cold. The Baron la Hontan, it is also recorded, left Quebec, in 1690, on the 20th of November. If that be true, it is as late as a vessel can or will leave that port at the present time. Potrin-court and Champlain, on a Sunday early in January, 1607, sailed in a boat six miles up Port Royal (Annapolis, Nova Scotia) to visit a corn-field—winter wheat—dined in the sunshine, enjoyed music in the open air, &c. No winter since has been milder.

Dr. Forry denies that the climate, either of Europe or America, has undergone any great degree of amelioration. He admits that clearing the lands of trees and cultivating and drying the soil, settlements, population, &c., have a subordinate influence in ameliorating the temperature.

Mr. Jefferson, in his Notes on Virginia, observes:—"A change in our climate, however, is

We know that dense forests prevent the sun's rays acting on the soil,—that snows lie deeper and longer in the woods than on cleared lands, and that the temperature of the soil exposed to the sun's ray in summer is warmer than that which is covered with wood. But the natural causes of cold and heat are well known to be too powerful to allow much general influence to artificial causes.

Winters in America are well known to exceed in severity their mean temperature, at irregular periods, to a degree that none have been able to account for. In 1779-80, cavalry and artillery passed on the ice from New York to Staten Island. In the interior the streams were all frozen, and the grist-mills were stopped; the snows rendered the roads impassable for some weeks: the ravines and narrow valleys were filled so deeply with snow, that the trees were covered. In many places the inhabitants could only leave their houses from the roofs, and for forty days the frost continued so intense, that no water dropped from the eaves of the houses. The winter thus described, and that of 1842, are the most severe recorded: during both, Long Island Sound was frozen over.

That brilliant phenomenon, aurora borealis, appears at all seasons, and in various forms. At one time faintly, in distant rays of light; at another, it assumes the appearance of bright floating standards, but more frequently, in the form of a broad crescent of light, with its extremities touching the horizon, and the inner line strongly marked; the space within it being much darker than any other part of the heavens. Its brilliancy in this form is truly beautiful; and after retaining this appearance a short time, it generally changes into magnificent columns of light, which move majestically from the horizon towards the zenith,

taking place very sensibly. Both heats and colds are becoming much more moderate within the memory of even the middle-aged. Snows are less frequent and less deep; they do not lie below the mountains more than one, two, or three days, and very rarely a week. They are remembered to have been formerly frequent, deep, and of long continuance. The elderly inform me that the earth used to be covered with snow about three months in every year. The rivers which seldom failed to freeze over in the course of the winter, scarcely ever do so now. This change has produced an unfortunate fluctuation between heat and cold in the spring of the year, which is very fatal to fruits."

Dr. Rush remarks:—"From the accounts which have been handed down to us by our ancestors, there is reason to believe that the climate of Pennsylvania has undergone a material change. The springs are much colder, and the autumns more temperate, insomuch that cattle are not housed so soon by one month, as they were in former years. Rivers freeze later, and do not remain so long covered with ice."

Mr. Williams, the historian of Vermont, says,—“When our ancestors came to New England, the seasons and the weather were uniform and regular; the winter set in about the end of November, and continued till the middle of February. During this period, a cold, dry, and clear atmosphere prevailed, with little variation. Winter ended with the month of February; and when spring came, it came at once, without our sudden and repeated variations from cold to heat, and from heat to cold. The summer was suffocatingly hot; but it was confined to the space of six weeks. Autumn began with September, and the whole of the harvest was got in by the end of that month. The state of things is now very different in the part of New England inhabited since that time: the seasons are totally altered; the weather is infinitely more changeable; the winter is grown shorter, and interrupted by great and sudden thaws. Spring now offers us a perpetual fluctuation from cold to hot, and from hot to cold, extremely injurious to vegetation: the heat of summer is less intense, but of longer continuance; autumn begins and ends later, and the harvest is not finished before the first week in November: in fine, winter does not display its severity before the end of December.”

till after having lighted the firmament with the most luminous colours, it suddenly vanishes, but soon re-appears and again vanishes; and so continues to fade—re-appearing, and changing infinitely, until its brilliancy intermingles with, and fills the atmosphere, and then insensibly disappears altogether. It is frequently said, that a hissing, resembling the rustling of silk, is heard during a brilliant display of aurora. We have seen it appear in a still more luminous and magnificent style than here described, in Labrador; but we never did, nor those with us, observe it accompanied with any noise, although it is by no means improbable.

The winds all over North America vary frequently, and blow at all seasons from every point of the compass. No wind, however, is so rare as a due north one; a due south wind is also rare, but more frequent than its opposite. Cold, sharp, and dry winds, blow from the north-west, and sometimes bring on light showers of snow in the beginning of winter. Winds from the north-east and east bring on snow storms in winter, sleet and wet weather in spring, and heavy rains in summer and autumn. Thaws take place in winter with a south-easterly wind; after which the wind shifts to the north-west, the sky clears up, and severe frosts follow.* South-west winds, inclining sometimes a point or two southward or westward, prevail through the summer and autumn. These winds are always warm, and usually spring up and blow fresh about noon, and calm off towards evening; at other times a temporary gale comes on, with the wind at south-west, and bringing on heavy rain, for two or three hours, which clears by the wind shifting round to north-west, blowing cold and dry. Westerly winds incline in summer to the south, and towards the north in winter; and are, throughout the whole year, more frequent than any other wind.

As the changes of the temperature of the climate of America depend chiefly on the winds, the formation of that continent is evidently one of the principal causes of the frosts being more intense than in countries under parallel latitudes in Europe; a consequence arising partly from the much greater breadth of America towards the Pole. The winds change their character in America. North-easterly winds, which are cold and dry in Europe, are wet and truly disagreeable in America. North-westerly winds are, on the contrary, cold and dry, and frequent during winter, in America, much about the same periods that north-easterly winds prevail in England. Another great cause of cold in America, is the directions of the mountainous ranges and basins of country, which conduct or influence the course of the winds.

While the sun is south of the equator, the winds, less under solar influence, prevail from the north-west, following, however, the great features of the continent. These winds, blowing over the vast regions of the north, are always piercing and intensely cold. The return of the sun again, by the diffusion of heat, agitates the atmosphere, and alters the winds which blow from a contrary direc-

* The keen north-west wind, during winter, is often called the "harber" in America.

tion, until an equilibrium is produced. This does not, however, appear to require much time, as the winds seldom blow direct from any one point for more than thirty hours.

As there is a great similarity in the climate of the western coast of Europe and that of the western coast of North America,—and also in the climate of the eastern coast of America, and that of the eastern coast of Asia, we are led to inquire into the causes. The great body of water carried from the tropics round to and from the Gulf of Mexico, flows with its accompanying warm atmosphere to the coasts of Northern Europe; and so great is its influence on the climate, that not only are the harbours of Bergen, but those of Finmark, to the North Cape, never frozen, but the fisheries of Hammerfest and other ports are carried on by open boats during the long night, and nights, of winter. An arctic stream conveying down great fields of ice and a cold atmosphere, imparts its cold and more frigid influence to the climate of the east coast of North America.

The prevalence on the western coast of North America of south-westerly winds, bringing along a warm atmosphere, and greater average warmth of sea on the western, than in parallel latitudes on the eastern coasts of North America, will account for the warmer temperature of the climate of the former.

The phenomenon of thunder and lightning is accompanied in America with a more splendid though terrific sublimity, than is known in England. The clouds appear to receive from the earth greater doses of inflammable gas, and to be more abundantly saturated with caloric.

The ascent and expansion of a thunder-cloud, from a small spot in the western horizon, has more of the awful majesty of sublimity, than any other phenomenon that we have ever beheld. It commences rising about noon, when it is hot and calm, in the form of the summit of a snow-clad mountain, in the distant south-western horizon, the sun shining gloriously, and every other part of the sky brightly blue. A little after, a light breeze usually springs up from a point directly opposite to the thunder-cloud, which now gradually and slowly moves its white summit, and which not unfrequently exhibits the appearance of immense snow mountains reared over each other, among which imagination easily pictures valleys, ruins, and appearances the most romantic. Meantime the black, gloomy base of the cloud spreads along the horizon; and as it approaches, we hear the growling of distant thunder. The wind still blows from a contrary direction until the sun is overcast, and the cloud reaches the zenith; the wind then immediately shifts, the lightning flashes in broad sheets, or in streams of liquid fire, darting in zig-zag serpentine shapes; and the immediate and tremendous detonation of the atmosphere seems to shake the foundation of worlds, while the rain comes down in such torrents as to threaten a second deluge. During these storms, accidents seldom occur; and in the course of two or three hours the heavens clear up beautifully bright, and the most delightful evening that fancy can create usually succeeds. The vegetable world is refreshed; the animal king-

dom recovers from the lassitude occasioned by the oppressive heat of the meridian sun; the birds hop, chirping, from bough to bough; the cattle turn out from the shade to graze; and the purified air of the evening is sufficiently cooled to be truly agreeable.

In regard to the salubrity of the climate, Volney, speaking of that of the United States, says, "Autumnal intermittent fevers, or quotidian agues, tertian, quartan, &c., constitute another class of diseases that prevail in the United States, to a degree of which no idea could be conceived. They are particularly endemic in places recently cleared, in valleys on the borders of water, either running or stagnant, near ponds, lakes, mills, dams, marshes, &c. These autumnal fevers are not directly fatal, but they gradually undermine the constitution, and very sensibly shorten life. Other travellers have observed before me, that in South Carolina, for instance, a person is as old at fifty as an European at sixty-five or seventy; and I have heard all the Englishmen with whom I was acquainted in the United States say, that their friends who have been settled a few years in the southern or central states, appear to them to grow as old again as they would have done in England or Scotland.

"If these fevers fix on a person at the end of October, they will not quit him the whole winter, but reduce him to a state of deplorable languor and weakness. Lower Canada, and the cold countries adjacent, are scarcely at all subject to them."

During the *summer*, or *sickly season*, the yellow fever is the principal and most fatal disease at New Orleans, and other places in southern latitudes. In 1839, and 1841, this epidemic appeared in its most malignant form at New Orleans, Mobile, Pensacola, St. Augustine, Charleston, and Augusta. The congestive fever, or *cold plague*, is generally fatal, and the intermittent fevers, which formerly prevailed, and still appear occasionally near or on the alluvial or malarial soils of the New England states, with the other fevers alluded to by Volney, continue to afflict, annually, the population of the malarial and alluvial districts of the western and middle states.

Excepting such fevers as usually accompany severe colds, the only fever that has hitherto, as far as we have been able to trace, made its appearance in a fatal form, in the countries east of the Hudson, is typhus. It is not, however, dangerous, unless it be among the very lowest classes, who pay no regard to cleanliness and diet; and it seldom proves fatal even to them. This fever is by no means so alarming as it is in Europe; it appearing usually as "typhus mitior," and not in the form of "typhus gravior." We have been informed that erysipelas has also appeared in the northern states and in New Brunswick in a dangerous shape; the instances in the northern colonies must have been very rare. Agues are still common in the low and alluvial grounds of Upper Canada.

What M. Volney observes regarding premature old age among the inhabitants of the southern states, is but too true, as well as what he says about another

disease—defluxion of the gums, and rotten teeth, common in those countries. We have not observed among the settlers in the northern parts evident marks of premature old age; and we believe that in few countries do the inhabitants, except those who recklessly expose themselves to the weather, retain their faculties or health and strength longer; yet there is no doubt that young people arrive at maturity earlier than in England, and, generally speaking, lose the colour and bloom of youth sooner. We think, too, although it cannot be by any means considered a prevailing disease, that decayed teeth are more common than in Britain. It is truly distressing to see a blooming maid of eighteen, or a young wife, either without front teeth, or with such as are black and decayed. Rheumatism is more common among the labouring classes in America than in England. This arises from greater exposure to the cold atmosphere at the beginning and end of winter. Colds may certainly be considered the prevailing generators of diseases, particularly of *chronic bronchitis*, and consumption, which proves as frequently fatal to young married women and girls, at the age of youth and beauty, as in England or France. Bilious complaints are seldom known. Nervous disorders, the prime curse of civilisation and ease, are common in the United States and in parts of British America; but not so general in either as in England.

We perfectly concur with other travellers, and with many of the soundest thinkers in the United States, that the hosts of gloomy, low-educated preachers, who wander throughout America, are prolific causes of nervous affections. These men, whom we will in charity call fanatics, shake the nerves of young innocent women, by roaring out their perpetual theme of preaching—the doctrine of the severity and horrors of eternal punishment, and dwelling but feebly on the reasonable principles of God's merciful justice.

The climate of Florida is recommended to those affected with pulmonary disease. Catarrhal diseases, influenza, *chronic bronchitis*, are found to be the most general maladies, where the contrasts of summer and winter are greatest. Consequently, the northern states are the most subjected to catarrhal diseases: pleuritis and pneumonia are declared to be more prevalent in the middle and southwestern districts of the middle states, than in the New England states, and *phthisis pulmonalis*, or consumption, is also, contrary to the usual belief, more prevalent in the southern than in the northern latitudes of America. The greatest ratio being in the climate between Delaware Bay and Savannah.

Rheumatism is a prevalent but not a fatal complaint in the United States; and like pulmonary consumption, it is more prevalent in the colder and drier atmosphere of the interior than near the sea coasts, or in the neighbourhood of the great lakes.

Intermittent and remittent fevers and agues, are confined chiefly to the

regions of river alluvions, to the low shores of lakes, and to low swampy districts. Yellow fever is by some regarded as a remittent fever, by others as the typhus fever of the malarial hot regions. It is considered by the doctors to be originally endemic, but they say it soon becomes contagious.

It prevails in July, August, and September, and is said never, in the hottest climates, to be known at an elevation of 2500 feet above the sea. It is said by the medical profession to be, with the congestive fever, or *cold plague*, almost the only dangerous malady of the southern and south-western states. Typhus and other inflammatory fevers occur in all the northern states, and in the British provinces, and many diseases, common to Europe, as dropsies, common spasmodic cholera, cholice, dropsy, and hepatic affections also occur, but they are not regarded, with the exception of fevers, as dangerous. Epidemic cholera raged in 1822, with destructive effects. It carried off 6000 out of 55,000 inhabitants in New Orleans. It appeared in many other places, but in a less destructive character.

The temperature of the climate of Canada is much colder at Quebec, and along the river St. Lawrence, to the eastward, than at Montreal or Upper Canada. The duration of winter is frequently two months longer. Severe frosts commence in November, and ice seldom disappears until the last week in April. In summer the heat is as intensely oppressive as in the southern states; but when the wind shifts to the north the temperature, particularly below Quebec, changes sometimes from 120 Fahrenheit to 60 deg. or under. The average summer heat in the shade is about 82 deg.; it is sometimes 120 deg. Snow falls in great quantities at one time, but long periods of clear frosty weather intervene between snow storms. In 1790, mercury froze at Quebec. It is often 60 deg. Fahrenheit below the freezing point; 20 deg. is about the average. Some years ago an officer of the royal artillery tried several experiments at Quebec with bomb shells in order to ascertain the expansion and consequent power of freezing water. The shells were nearly filled with water, and an iron plug was driven into the fuse hole by a sledge hammer; the temperature was 51 deg. Fahrenheit below the freezing point. When the water froze, the plug was forced out with great velocity and a loud report. When a plug was used that had notched springs, which expanded within the cavity, the shell always burst. A plug, two and a half ounces weight, was thrown four hundred and fifteen yards, with the elevation of the fuse axis at 45 deg. Rocks, particularly those of the calcareous, schistous, and sandstone, order, are often rent by the expansive force of intense frosts. The climate of Montreal and the Upper country is nearly in every respect similar to the general system and theory of the climate, as treated of in the first part of this chapter. The temperature of the region, south and west of the bend of the Ottawa at Bytown, lying between Lakes Ontario, Huron, and Erie, is milder in winter, but in some parts less salu-

rious in summer. Fogs are unknown. A light mist, occasioned by the condensation at night, and evaporation in the morning, appears occasionally about sunrise, but soon dissipates.

Canada is eminently blessed with a remarkably clear atmosphere. The sky at Montreal, both in summer and winter, is beautifully bright. Rains, in the summer and autumn, are far from being frequent, but they fall in great quantities at one time. Water spouts are sometimes formed on the great lakes. Thunderstorms, although of short duration, are remarkably violent, particularly at and about Quebec. Squalls of wind are frequent on the lakes and rivers in the vicinity of high lands. Strong gales of wind occur in Canada, about the 20th of October. They sometimes, particularly on the great lakes, resemble perfect hurricanes.

Volney observes, that there is a correspondence of time and action between these storms and those of the Gulf of Mexico; and Dr. Franklin, remarking on this periodical disturbance of the air, inferred that the focus of the movement existed in the Gulf of Mexico. Others deny the truth of these inferences: but there is no doubt of the combined influence of the Gulf of Mexico and of the great lakes, over the climate of the basins of the Mississippi, Missouri, and Ohio.*

In summer, Fahrenheit's thermometer ranges, in Upper Canada, from 72 deg. to 100 deg., while it blows in the prevailing directions from south to west; but on shifting to the north, the mercury soon after sinks to 50 deg., and sometimes lower. The climate is remarkably dry.

In winter scarcely a day occurs, except when it rains, and that seldom, in which people do not work in the woods. A very mild winter is always considered a disadvantage in Upper Canada.

The climate, already described as milder in summer, and its severity of much shorter duration in winter, than that of Lower Canada, is also considered, in some respects, less salubrious.

The climate, however, generally speaking, is healthy; and the exceptions are, like the fens of Lincolnshire in England, low wet tracts, and still water, in which vegetable substances in progress of decomposition are deposited. These are found in low lands and marshes, where agues and lake fevers are common in summer and autumn. As the country is opened, and these places drained, periodical diseases will likely disappear, as they seldom prevail on the *dry* lands. The author of a very useful little book, who says he has long resided in Upper Canada, says—

“The notoriously unhealthy parts chiefly occur between the Rideau Lake

* Dr. Forry, who considers that much of what Mr. Jefferson and Volney have said on the climate west of the Alleghany Mountains, is disproved by meteorological observations, says,—“If land were substituted for the area of the great lakes (94,000 square miles), that region would become, from cold, as far as the social state of man is concerned, scarcely habitable.”

and Lake Ontario; between the Bay of Quinté and the Lake; and at some marshy tracts at each end of Lake Erie."

Fevers and agues are also prevalent around Lake St. Clair. Occasionally, like the influenza in England, and other epidemics, aguish fevers break out generally in the province. In the remarkably hot summer of 1828 the lakes appeared, like fresh water kept long on shipboard, in a state of putrefaction; and in the course of the disengagement which restored their usual limpid purity, threw up a noxious slime. Fever and ague, in almost every part of Upper Canada followed.

Intemperance and careless exposure of the person while in a state of perspiration, or in and after over-exertion, certainly dispose the constitution to agues. This was manifest among the workmen along the Rideau Canal. Drinking cold water when the weather is very hot is also dangerous; a little brandy or other spirit should be moderately mixed with water, when taken on being thirsty. Quinine is the general specific; a little sulphur mixed with a glass of spirits, wholesome diet, proper attention to clothing and cleanliness, will also effect a cure. Consumptions are not nearly so prevalent as in England, or the northern states.

Along and off the eastern and southern coasts of Newfoundland, Cape Breton, and Nova Scotia, dense fogs prevail when the winds blow from off the sea. These fogs, which hover over those coasts, and which form an almost perpetually thick stratum over the great banks of Newfoundland, are caused by the tropical waters brought along by the force which impels the gulf stream, until they meet the waters driven down from the polar regions by the prevailing winds, and by the force of the currents rebounding from off the northern coasts of Europe. These streams come in contact with each other, on the banks of Newfoundland, and form those eternal fogs by the difference of their temperatures, and that of their accompanying atmospheres, producing the double effect of evaporation and condensation. A dense fog is, in consequence, suspended closely over the surface, while the sky above is clear and bright, often as near as the topmast-head of the ship, which is sailing through an obscurity underneath, so dark that the fore part of the vessel is scarcely visible from the quarter-deck.

Unless it blows a strong gale or a storm, there is not usually, as is generally supposed, a high sea on the banks of Newfoundland, except within a few miles over its outer edges: where the cold, thick, piercing fog appears, on approaching it from the eastward, rising like land enveloped in mist. A thermometer will as accurately ascertain the moment the ship is over the bank, as the then sounding-lead: the temperature of the water being 10 deg. to 14 deg. colder than the deep Atlantic Sea, immediately without the precipitous eastern edges of the great bank.

Along the coast there is a strong counter-current, running within, and contrary to, the gulf stream; and on making voyages, navigators usually direct their

course so as to have the advantage of these currents. The current of the gulf stream is so powerful, that it abridges, on an outward voyage, if the ship does not work within it into the counter-current, the distance sailed from forty to fifty miles a day; while, on the homeward voyage, it increases the distance of ground passed over so greatly, that sailors term returning from America to Europe "a voyage down hill."

CLIMATE OF NEWFOUNDLAND.—The climate has generally been misrepresented, and declared to be unusually severe, humid, and disagreeable. On the east and south coasts, when the winds blow from the sea, humidity certainly prevails, and during winter the cold is severe.

The harbours on the Atlantic shore are not so long frozen over as the most southerly of those within the Gulf of St. Lawrence. On the west coast, from Cape Ray north, and in the interior, the atmosphere is generally clear, and the climate is much the same as that of the district of Gaspé, in Lower Canada. There is no country where the inhabitants enjoy better health, or where, notwithstanding the fatigue and hardships to which a fisherman's life is subjected, more of them attain to longevity.*

During the summer months the days and nights are, with few exceptions, very pleasant. The temperature of the atmosphere is, indeed, frequently hot about mid-day, and often oppressively so; but in the mornings and evenings, and at night, exceedingly agreeable.

As there are nearly five degrees of latitude between the southern and northern points of Newfoundland, it follows that there is considerable difference in the duration and severity of the winter. The climate of Conception Bay may probably be considered as possessing the mean temperature of the island. The most disagreeable periods are the setting in and breaking up of winter, and especially at the time when the large fields of ice, formed in the hyperborean regions, are carried along the coast by northerly winds and currents.

In comparing Newfoundland with any other country, we consider that the Western Highlands of Scotland bear a striking resemblance to many parts of it; and there is nothing that the latter will produce, but what will grow, with the same care and cultivation in the former. The winters in Newfoundland, it is true, are colder; but in summer and autumn, the weather is, for two or three months so hot, as to bring many fruits to perfection that will not ripen in Scotland.

CLIMATE OF PRINCE EDWARD ISLAND.—The climate of Prince Edward Island, owing to its lying within the Gulf of St. Lawrence, partakes in some mea-

* There was, in 1829, living on the island of Marasheen, Placentia Bay, a man named Martin Galten, more than 100 years old, in excellent health, and who caught that year, in a boat with his brother, ninety quintals of cod-fish. He piloted Captain Cook into Placentia Bay, about seventy years before. There are many extraordinary instances of longevity in the same place; among whom Nancy Tibean, the mother of four living generations; and a Mrs. Tait, who died in 1819, was 125 years old, and was, along with her third husband, at the siege of Quebec.

sure, of the climate of the neighbouring countries ; but the difference is greater than any one who has not lived in the colony would imagine.

The atmosphere of this island is noted for being free of fogs. A day foggy throughout, seldom occurs during a year ; and, in general, not more than four or five times on a summer or autumnal morning, occasioned by the exhalation of the dew that falls during the night, but which the rising sun quickly dissipates.

The absence of fogs in this colony has been variously accounted for, but never yet, from what I conceive a true cause ; and which I consider to be, in the first place, that the waters which wash the shores of the island, do not come in immediate contact with those of a different temperature ; and secondly, that Cape Breton and Newfoundland, both of which are high and mountainous, lie between it and the Atlantic. These islands arrest the fogs, which would otherwise be driven by strong easterly winds from the banks to Prince Edward Island. Fogs are, it is true, occasionally met with at the entrance of the River St. Lawrence ; but these are produced by known natural causes. A strong current of cold water runs from the Atlantic, through the Strait of Belle Isle ; its principal stream passes between the Island of Anticosti and the coast of Labrador, and coming in contact with the warmer stream of the St. Lawrence, a fog is produced.

Prince Edward Island lies so far within the deep bay, formed between Cape Rosier and the north cape of Cape Breton, that the waters which surround it, do not mix within many miles of its shores, with those of the Atlantic.

THE CLIMATE OF CAPE BRETON AND NOVA SCOTIA differs from that of Prince Edward Island, in its being subject, particularly on the Atlantic coast, to fogs, and in the inland parts, to a more humid atmosphere, which may be accounted for by its geographical position, and the interior abounding with lakes and arms of the sea, while the soil, owing to its stiffness, does not so readily absorb the rain, nor the water which remains on the ground after the snow melts. Fogs are not, however, frequent in the interior of Cape Breton and Nova Scotia, or within the Bras d'Or, and a clear sky is generally visible, even when fogs prevail, which seldom rise high from the surface of the land or sea. Halifax, and several other harbours in Nova Scotia, are but rarely frozen over during winter. To the direct influence of the Atlantic, and the warm current and vapours of the gulf stream, we must attribute the open winter navigation of the south-eastern ports of Nova Scotia.

The bays and rivers of Cape Breton which open to the Atlantic, are not so long frozen over as those within the gulf ; the difference at the beginning and termination of winter, may be considered, at each period, from fifteen to twenty days. On the Atlantic coast of Cape Breton and Nova Scotia, wet weather prevails much more during the year than within the Gulf of St. Lawrence, and in Canada. The climate, however, is salubrious ; and while unhealthy

subjects are exceedingly rare, instances of longevity, from ninety to one hundred years, are common. In the southern and western parts of Nova Scotia, the climate assimilates to that of New Brunswick, but is rather milder.

THE CLIMATE OF NEW BRUNSWICK is salubrious; the epidemic fevers of the southern states are unknown; and colds, and their consequent diseases, can only be considered as common in this province. Consumption, although not apparently so common as in New England, is the principal cause of death among the young, or those between twenty and thirty. Fevers, generally in the form of mild typhus, occur frequently in the beginning of winter: most probably from want of proper attention in fortifying the body, in time, with additional clothing against the sudden change from warm to cold weather.

In a country like New Brunswick, where the inhabitants expose themselves to all the varieties of climate, and to the waters of the sea and rivers, rheumatism often afflicts the working classes, especially the lumberers, who are often, during fall and spring, drenched in the remarkably cold waters of the rivers. The diseases, however, that are most fatal to life, such as fevers, small-pox, and measles, are brought to the province from other countries, principally by passengers' ships. Generally speaking, the climate may be considered at least equally healthy with that of England.

The temperature of the climate of the southern parts is much milder than that of those parts which border on the Gulf of St. Lawrence, the Bay de Chaleur, and Lower Canada. Sea fogs frequently envelope the shores of the Bay of Fundy, and render the culture of wheat near the coast uncertain, but do not appear to cause any unhealthy consequences.

With the difference of more humidity on the southern coast and a few miles inland, and that the harbours within the Bay of Fundy, at least from St. John to the state of Maine, are seldom obstructed with ice, and the frosts in the northern parts being somewhat more severe, what we have observed, in treating of the climate of America generally, will apply equally to this province. The Bay and harbours of Passamaquoddy are much less affected by frost than the port of New York. The great tides of the Bay of Fundy, which carry inwards a portion of the waters and vapours of the gulf stream, have a great influence in moderating the temperature of the sea-coasts of the north-eastern parts of Maine, and of both sides of this bay: while winter seldom passes, without the Hudson being frozen over, down nearly to New York. In 1840-1, at a distance of 100 miles above New York, the Hudson was frozen over, from the latter part of December to the end of March.

CLIMATE OF THE ATLANTIC COAST OF THE UNITED STATES.—The climate of Maine and the New England states, and of New York, assimilates with graduating mildness, southward, to the general system of the climate of America which we have described. The navigation of Philadelphia and Baltimore is often impeded by ice. Delaware in the latitude of Naples is generally frozen over for

about five weeks. The Potomac is also frozen over for some weeks.* Warmth increases as we proceed south of the Potomac; but during winter, slight frosts occur, even in Florida and Louisiana; the climates of which, in other respects, as well as the productions, may be considered tropical, although some of the grains, and many of the trees of the temperate latitudes, grow in both these states. The thermometer, which in the shade stands at 84 deg. Far. in East Florida, will often sink at night to 45 deg.†

CLIMATE OF THE BASINS OF THE MISSISSIPPI AND MISSOURI.—We may class four distinct climates, between the sources and the mouths of the Mississippi. The first, commencing at its sources, and terminating at Prairie du Chien, corresponds pretty accurately to the climate of the countries between Montreal and Boston; with this difference, that the quantity of snow falling in the former is much less than in the latter region. The mean temperature of the year would be something higher on the Upper Mississippi. The vegetation, the time of planting, and ripening, may be considered nearly the same. Potatoes are raised in this climate in the utmost perfection. Wheat, clover, and the usual grasses succeed well. The apple and the pear tree require fostering, and southern exposure, to bring fruit to perfection. The peach-tree requires a sheltered declivity, with a southern exposure, to succeed at all. Five months in the year may be considered winter: during which cattle require shelter in severe weather, and the still waters remain frozen.

"The second climate," says Mr. Flint, "includes the opposite states of Missouri and Illinois, in their whole extent, or the country, between 41 and 37 deg. N. Lat. Cattle, though much benefited by sheltering, and often needing it, seldom receive it. It is not so favourable for cultivated grasses, as the preceding region. Gourd-seed corn (maize) is the only kind extensively planted. The winter commences with January, and ends with the second week in February. The ice, in the still waters, after that time thaws. Wheat, the inhabitant of a variety of climates, is at home, as a native, in this. The persimon and the papaw are found in its whole extent. It is the favoured region of the apple, the pear, and the peach-tree. Snows neither fall deep nor lie long. The Irish potato succeeds to a certain extent, but not so well as in a higher climate; and this disadvantage is supplied by the sweet potato, which, though not at home in this climate, with a little care in the cultivation flourishes. The grandeur of vegetation, and the temperature of March and April, indicate an approach towards a southern climate.

* Dr. Forry says, the region of Pennsylvania, as though it were the battle-ground on which Boreas and Auster struggle for mastery, experiences, indeed, the extremes of heat and cold.

† The foregoing view of the theory of the climate of North America, was chiefly written in 1832, and the greater part incorporated in my work on "BRITISH AMERICA." The remaining observations on the climate of America are chiefly on the authority of a most instructive work on the climate by Dr. Forry, New York, 1842. We have also had recourse to Humboldt, and to an article on climate in the "Book of the United States," written by Mr. Flint; and to various statements which we collected on the climate of the British Provinces, in America.

"The third climate extends from 37 to 31 deg. N. Below 35 deg. N., in the rich alluvial soils, the apple-tree begins to fail in bringing its fruit to perfection. We have never tasted apples worth eating, raised much below New Madrid. Cotton, between this point and 33 deg., is raised, in favourable positions, for home consumption, but is seldom to be depended upon for a crop. Below 33 deg. commences the proper climate for cotton, and it is the staple article of cultivation. Festoons of long moss hang upon the trees, and darken the forests. The palmetto gives to the low alluvial grounds a grand and striking verdure. The muscadine grape, strongly designating climate, is first found here. Laurels have become common in the forest, retaining their foliage and their verdure through the winter. Wheat is no longer seen as an article of cultivation. The fig-tree brings its fruit to full maturity. Below this climate, to the gulf, is the region of the sugar-cane and the sweet orange-tree. It would be, if it were cultivated, the region of the olive. Snow is no longer seen to fall, except in a few flakes, in the coldest storms. The streams are never frozen. Winter is only marked by nights of white frost, and days of north-west winds, which seldom last longer than three days in succession, and are followed by south winds and warm days. The trees are generally in leaf by the middle of February, and always by the first of March. Bats are hovering in the air during the night. Fire-flies are seen in the middle of February. Early in March the forests are in blossom. The margins of the creeks and streams are perfumed with meadow pink, or honeysuckle, yellow jessamine, and other fragrant flowers. During almost every night a thunder-storm occurs. Cotton and corn are planted from March to July. In these regions the summers are uniformly hot, although there are days when the mercury rises as high in New England as in Louisiana. The heat, however, is more uniform and sustained, commences much earlier, and continues much later. From February to September thunder-storms are common, often accompanied with severe thunder, and sometimes with gales or tornadoes, in which the trees of the forests are prostrated in every direction, and the *tract of country*, which is covered with the fallen trees, is called a "*hurricane*." The depressing influence of the summer heat results from its long continuance, and equable and unremitting tenour, rather than from the intensity of its ardour at any given time. It must, however, be admitted, that at all times the unclouded radiance of the vertical sun of this climate is extremely oppressive—such are the summers and autumns of the southern divisions of this valley.

"The winters, in the whole extent of the country, are variable, passing rapidly from warm to cold, and the reverse near the Mississippi, and where there is little to vary the general direction of the winds, they ordinarily blow three or four days from the north. In the northern and middle regions, the consequence is cold weather, frost more or less severe, and, perhaps, storm, with snow and sleet. During these days the rivers are covered with ice. The opposite breeze

alternates. There is immediately a bland and relaxing feeling in the atmosphere. It becomes warm; and the red birds sing on those days, in January and February, as far north as *Prairie du Chien*. These abrupt and frequent transitions can hardly fail to have an unfavourable influence upon health. From forty to thirty-six degrees the rivers almost invariably freeze, for a longer or shorter period, through the winter. At *St. Louis*, on the *Mississippi*, and at *Cincinnati*, on the *Ohio*, in nearly the same parallels, between thirty-eight and thirty-nine degrees, the two rivers are sometimes capable of being crossed on the ice for eight weeks together.

"Although the summer over all this valley must be admitted to be hot, yet the exemption of the country from mountains and impediments to the free course of the winds, and the circumstances, that the greater proportion of the country has a surface bare of forests, and probably, other unexplained atmospheric agents, concur to create, during the sultry months almost a constant breeze. It hence happens, that the air on these wide prairies is rendered fresh, and the heats are tempered, in the same manner as is felt on the ocean."*

The annual and mean quantity of rain that falls in the United States is much greater than in most countries of Europe, certain mountainous regions and heads of gulfs excepted. This has been ascertained by numerous and accurate observations made on different parts of the Atlantic coast.

It is said, on the authority of tabular views, that on a medium, one-third less rain falls in Europe than in the United States; yet *Dr. Holyoke* in his "Memoir on the Climate of the United States," observes, "twenty cities in Europe, which at a mean of twenty years, have had one hundred and twenty days of rain; while *Cambridge* has had but eighty-eight days. *Salem* ninety-five days of rain, and *Philadelphia* seventy-six days, at a medium of twenty years. The mean annual quantity of rain at *Philadelphia*, is very little more than the mean annual quantity at *Glasgow*, for a term of thirty years preceding 1790. The above greater quantity of rain in fewer days, in America, indicates the rain to be much heavier there than in Europe. On the other hand, it is equally well ascertained, that the evaporation of these rains proceeds much quicker in America than in Europe; and that, consequently, the air is habitually drier, and less calm, unless *Charleston* be taken as an exception. It has been found that the mean annual quantity of evaporation at *Cambridge*, near *Boston*, was fifty-six inches for a term of seven years; while in seven German and Italian cities, on a mean of twenty years, the annual evaporation was forty-nine inches, or seven of difference; although the Italian cities are in a much more favourable situation for evaporation than the vicinity of *Boston*, adjacent to the Atlantic Ocean. The same fact of greater evaporation was also observed to take place in Upper Louisiana, and along the higher *Missouri*, as far as the *Rocky Mountains*, by *Captain Lewis*.

* Flint on the climate of the Mississippian regions.

"The dryness of the American climate increases as we advance west and north-west from the Missouri, where there frequently is not a drop of rain for six months. This is owing to the great distance from any sea, the superior elevation and comparative want of timber, combined with the greater intensity and longer duration of the north-west wind, which sweeps with unobstructed force over the naked plains. It appears then, that more rain falls in fewer days, in America than in Europe; and that there are fewer cloudy days, more fair days, and quicker evaporation. It is to this last circumstance we must ascribe those immense dews, unknown in European climates, which occur in America, and which are so copious in summer, as to resemble heavy showers of rain. But it must also be observed, that dews are comparatively unknown in the tract watered by the Upper Missouri; and which, in all probability, is owing to the want of timber: wood being limited to the banks of the rivers, which are commonly bordered with trees."*

Dr. Forry's work on the climate of the United States, and its endemic influences is based chiefly, as he tells us, on the "Army Meteorological Register," and the "Statistical Report on the Sickness and Mortality in the Army of the United States, during the years 1819 to 1839, inclusive." He classifies the principal phenomena, physically considered, of the climate, and then traces the medical relation of those laws, in order to establish a classification of climates, based upon actual observations. His work is the most curious and interesting that has appeared; not even excepting Volney's celebrated work, on the "Soil and Climate of the United States;" and although scientific, and especially theoretic, men may not always arrive at the same conclusions as Dr. Forry, we consider it, as a whole, a most valuable production. In general principles he follows Humboldt, Arago, and Daniell.

He illustrates the results of his labours by *Isothermal* (or, equal summer temperature), *Isothermal* (or, equal annual temperature), and *Isocheimal* (or, equal winter temperature) lines. These are all based upon the meteorological observations kept at the different military posts, or as they are called forts, in the United States: for instance, he traces from one point, Fort Vancouver, on the River Columbia, in latitude 45 deg. 50 min. N., and longitude 43 deg. W. from Washington, three lines, viz., an isothermal line of 65 deg., an isothermal line of 51 deg. 75 min., and an isocheimal line of 41 deg. The *first* of these linear temperatures followed irregular curves, ascending as high as 48 deg. 40 min. N. latitude, winding eastward, through Green Bay, in latitude 45 deg.; then through Lake Michigan, in latitude 44 deg. 30 min.; Lake Huron, in about 43 deg. 30 min.; Lake Ontario, in about 43 deg. 40 min.; then curving north, to 44 deg. 40 min.; and then south, until it strikes the Atlantic in about latitude 43 deg. 25 min. The second line, starting from the same point as the first, curves to the south, passing through Fort Armstrong, on the Mississippi, in latitude 41 deg. 40 min.,

* Book of the United States.

then nearly due east, passing close to the southern end of Lake Michigan, and through the southern part of Lake Erie, and close to the military college at West Point, and thence nearly direct to the Atlantic south of Cape Cod, in about latitude 41 deg. 42 min. The third line, starting from the same westerly point as the two first, curves to the south as far as 36 deg. 50 min. N. crossing the Arkansas river in about latitude 37 deg. N., and the Mississippi in about 37 deg. 30 min. N., about forty miles south of Jefferson Barracks, and passes across Chesapeake Bay to the Atlantic in about latitude 38 deg. N. An isothermal line of temperature of 81 deg., starting from Key, West Florida, in latitude 24 deg. 50 min. N., curves to the north through Fort Brook in about latitude 28 deg. N., Fort King in latitude 29 deg., and thence north-west to Fort Gibson on the Arkansas, in latitude 35 deg. 30 min., still following a north-westerly direction. An isocheimal line of 26 deg. starting from the Atlantic at the same point, 43 deg. 25 min. N., with the *first* isothermal line of 65 deg., curves south to 42 deg. 30 min., then curves gradually to the north, crossing the Hudson, and passing through the middle of Lake Ontario, and north of Lake Erie, curving irregularly south, near Fort Gratiot, at the entrance of Lake Huron, and thence south and irregularly north, crossing Lake Michigan in latitude 43 deg. 15 min., then south-west through Fort Armstrong in latitude 41 deg. 50 min., and, as far as traced, to latitude 40 deg. N.

The military posts at which the observations were made which furnish the thermometrical data are, **FIRST**, the **NORTHERN**, divided into *three classes*, or *systems of climate*, viz.: 1. Posts on the coasts of New England, extending as far south as the harbour of New York. 2. Posts on the northern chain of lakes. 3. Posts remote from the ocean and inland seas. **SECOND**, the **MIDDLE**, divided into *two classes*, viz.: 1. Posts on the Atlantic coast from Delaware Bay to Savannah. 2. Posts at the interior stations. The **THIRD**, or **SOUTHERN**, divided into *two classes*, viz.: 1. Posts on the lower Mississippi. 2. Posts in the Peninsula of Florida. The **FIRST**, or **NORTHERN**, comprehends the region in which a low temperature predominates. The **THIRD**, or **SOUTHERN**, that in which a high temperature prevails; and the **SECOND**, or **MIDDLE**, that which partakes of the temperature of both.

Dr. Forry examines with great pains, the influence which the configuration of America, and especially the great fresh water lakes, have on the temperature of the climate of the different regions of that continent. He estimates the waters of all the lakes and basin of the River St. Lawrence, at 94,000 superficial square miles, from the calculations of Douglass Houghton, the state geologist of Mexico, and that they contain 11,300 cubic miles of waters, or more than half of all the fresh water of the globe. It is remarkable that, though the surface of Lakes Huron and Superior are about 600 feet above the level of the sea, it is supposed that the deepest part of their bottoms is at least as low as that of the ocean; for some of their deep chasms have been sounded with lead and lines, to the depth of 1800 feet, or 300 fathoms, without reaching the bottom.

On the coasts of the New England states, the influence of the sea modifies the mean temperature of the seasons, and in the same parallels of the interior, the extreme range of temperature is found greatly to increase, and the seasons of heat and cold to be violently contrasted; while on coming within the influence of the great lakes, the temperature is found to resemble that of the sea coast. On passing inland, beyond the great fresh water lakes, an excessive range of temperature is found to characterise the climate. So that the climate of countries near great bodies of water, whether fresh or salt, is not subject to the great ranges from high to low temperatures,—to the extreme heat and intense cold, which prevail in countries under the same latitude, not within the influence of the sea or of great lakes. The differences of the temperatures of the climate of countries under the same latitude, explodes the general conclusions which would be made, if we confined our descriptions, and calculations, to the astronomical divisions of climate, into the torrid zone, or within the tropics, and to the two temperate, and two frozen zones. The only approach to truth, in respect to the climate of a country, is, therefore, to be arrived at by a series of meteorological observations, and by a knowledge of the vegetation of the localities. From these data, especially the former, we are enabled to ascertain the *Isothermal* and *Isocheimal* curves, and the *Isothermal* lines, connecting places having the same mean annual temperature, which have been adopted by Humboldt, and applied by Dr. Forry to the climate of the United States, and which may be said to correspond with the *Climat Physique*, of Malte Brun, in contradistinction to the astronomical climate, or that of the five zones. Dr. Forry, too, judiciously remarks:

“That the mean temperature of the earth’s surface gradually increases from the poles to the equator, and decreases from the level of the sea upwards, is a general law, which, it has been seen, is greatly modified by the agency of physical geography. Among the causes which determine the deviations, of the isothermal, isocheimal, and isothermal lines, from the same parallels of latitude, the following are regarded as the principal:—1. The action of the sun upon the surface of the earth; 2. The vicinity of great seas, and their relative position; 3. The elevation of the place above the level of the sea; 4. The prevalent winds; 5. The form of lands, their mass, their prolongation towards the poles, their temperature and reflection in summer, and the quantity of snow which covers them in winter; 6. The position of mountains relatively to the cardinal points, whether favouring the play of descending currents, or affording shelter against particular winds; 7. The colour, chemical nature, and radiating power of soil, and the evaporation from its surface; 8. The degree of cultivation and the density of population; and 9. Fields of ice, which form, as it were, circumpolar continents, or drift into low latitudes.

“The winters of the isothermal curve of 68 deg.,” says Humboldt, “are not found upon that of 51 deg., and the winters of 51 deg. are not met with on the curve of 42 deg. In considering separately what may be regarded as the same systems of climate, for example, the European Region, the Transatlantic Region, or that of Eastern Asia, the limits of variation become still more narrow. Wherever in Europe, in 40 deg. of longitude, the mean temperature rises—

To	deg.		deg.	deg.		deg.	deg.		
	59.—	} The winters are from	44.60	to	46.40	} And the sum- mers from	73.—	to	75.—
	54.50		36.50		41.—		68.—	73.—	
	50.—		31.10		37.40		62.60	69.80	
	45.50		28.40		36.10		57.20	68.—	
	41.—		20.30		26.80		55.40	66.20	

"In the United States, if the comparison is confined to the same system of climates, as for example the posts on the ocean or lakes, or those remote from the agency of largo bodies of water, the limits of variation, as in Europe, are also narrow; but if the whole extent of our domain is embraced, the results are strikingly diverse. Thus:

	Mean Temperature.		
	Annual.	Winter.	Summer.
Fort Vancouver, Oregon Territory . . .	deg. 51.75	deg. 41.33	deg. 65.00
Council Bluffs, junction of Platte and Missouri	51.02	24.47	75.82
Difference	0.73	+16.86	-10.82

"But this contrast is exhibited in a still more marked degree, by comparing the difference between the mean temperature of winter and summer, the former being 23 deg., 67 min.; whilst the latter is 51 deg., 35 min.

"In tracing five isothermal lines between the parallels of Rome and St. Petersburg,' continues Humboldt, 'the coldest winter presented by one of these lines is not found again on the preceding line. In this part of the globe, those places whose annual temperature is 54 deg. 50 min., have not a winter below 32 deg., which is already felt upon the isothermal line of 50 deg.'

"In the European climate, two points having the same winter temperature, may differ as much as 11 deg. in latitude. Thus in Scotland, in latitude 57 deg., and isothermal line 45 deg. 50 min., the winters are more mild than at Milan, in latitude 45 deg. 28 min., and isothermal line 55 deg. 80 min. Consequently the lines of equal winter cut isothermal lines which differ 10 deg. At the isle of Mangeroe, at the northern extremity of Europe, under the parallel of 71 deg., the winters are 7 deg. milder than at St. Petersburg, latitude 59 deg. 56 min. In the United States, embracing the whole region between the Atlantic and the Pacific, as great a contrast no doubt exists. The mean winter temperature of Fort Vancouver, Oregon Territory, latitude 45 deg. 37 min., is found about 9 deg. further south, at a point intermediate to Fort Gibson and Jefferson Barracks; but if the observations, like those in Scotland just referred to, were made on the Pacific coast, (Fort Vancouver being seventy miles distant from the ocean,) the winter temperature would necessarily be still higher. As the mean annual temperature of Fort Vancouver is 51 deg. 75 min., and that of the assumed point between Fort Gibson and Jefferson Barracks, is about 61 deg., it follows that the lines of equal winter cut isothermal lines which differ more than 9 deg. Fahrenheit.

"In tracing the isothermal line round the northern hemisphere, beyond the tropics, it presents on the east side of both continents, concave, and on the west side, convex summits. Following the mean temperature of 55 deg. 40 min. Fahrenheit, around the whole globe, we find it passes on the—

"Eastern coast of Old World, in N. lat. 39 deg. 54 min., E. long. 116 deg. 27 min., near Pekin.

"Eastern coast of New World, in N. lat. 39 deg. 56 min., W. long. 75 deg. 16 min., Philadelphia.

"Western coast of Old World, in N. lat. 45 deg. 46 min., W. long. 37 min., near Bordeaux.

"Western coast of New World, in N. lat. 44 deg. 40 min., W. long. 104 deg., Cape Foul-weather, south of the mouth of Columbia.

"On comparing the two systems, the concave and convex summits of the same isothermal line, 'we find,' says Humboldt, 'at New York the summer of Rome and the winter of Copenhagen; and at Quebec, the summer of Paris and the winter of Petersburg. In China, at Pekin, for example, where the mean temperature of the year is that of the coast of Brittany, the scorching heats of summer are greater than at Cairo, and the winters are as rigorous as at Upsal.'"

The difference of climate between Europe and Eastern America, as determined by Humboldt in a paper on *Isothermal Lines and the Distribution of Heat over the Globe*, is as follows:—

The isothermal line of 32 deg. passes in—
Europe, between Uleo and Enontakies, Lapland, lat. 66 deg. to 68 deg. E. long. 19 deg. 22 min.

America, through Table Bay, Labrador, lat. 54, deg., W. long. 58 deg.

The isothermal line of 41 deg., passes in—
Europe, near Stockholm, lat. 60 deg., E. long. 18 deg.

America, the Bay of St. George, Newfoundland, lat. 48 deg., W. long. 59 deg.

The isothermal line of 50 deg., passes in—
Europe, through Belgium, lat. 51 deg., E. long. 2 deg.

America, near Boston, lat. 42 deg. 30 min., W. long. 70 deg. 59 min.

The isothermal line of 59 deg., passes in—
Europe, between Rome and Florence, lat. 43 deg., E. long. 11 deg. 40 min.

America, near Raleigh, North Carolina, lat. 36 deg., W. long. 76 deg. 30 min.

Between the western part of Europe and the eastern coast of North America, the following differences generally obtain:—

Latitude.	Mean Temperature of West of Europe.	Mean Temperature of Eastern Coast of North America.	Difference.
deg.	deg. min.	deg. min.	deg. min.
30	70 52	66 92	3 60
40	63 14	54 50	8 64
50	50 90	37 94	12 96
60	40 60	23 72	16 92

It is thus seen that the difference increases in proportion as high latitudes are attained. On the opposite coasts of the two hemispheres, the mean annual temperature decreases in the following ratio:—

Latitude.		Temperature.	Temperature.
deg.	deg.	deg.	deg.
From 0 to 20	} West of the Old World.	3.60	} East of the New World.
20 — 30		7.20	
30 — 40		7.20	
40 — 50		12.60	
50 — 60		9.90	
0 — 60		40.50	

The comparative difference of the seasons, from the equator to the polar circle, is exhibited in the following table:—

ISOTHERMAL LINES.	Europe, Long. 1 deg. W. to 17 deg. E.			America, 58 deg. to 72 deg. W. Long.		
	Mean Temperature.			Mean Temperature.		
	Winter.	Summer.	Difference.	Winter.	Summer.	Difference.
deg.	deg.	deg.	deg.	deg.	deg.	deg.
68	69	80.60	21.60	53.60	80.60	27.00
59	44.60	73.40	28.80	39.20	75.80	36.60
50	35.60	68	32.40	30.20	71.60	41.40
41	24.80	60.80	36	14	65.20	51.20
32	14	53.60	39.60	1.40	55.40	54

These various relations determined by Humboldt, are as correct as his data would warrant. The isothermal line of 41 deg., which, according to this philosopher, passes through the Bay of St. George in Newfoundland, in latitude 48 deg., if correctly ascertained, sinks as it penetrates towards the interior of the continent; for at Hancock Barracks, Maine, in latitude 46 deg. 10 min., at the distance of 150 miles from the Atlantic, the mean annual temperature is 41.21 deg., and at Fort Brady, at the outlet of Lake Superior, in latitude 46 deg. 39 min., it is 41.39 deg.; and, proceeding to the western coast of America, we find that at Fort Vancouver, Oregon Territory, in latitude 45 deg. 37 min., the mean temperature, like similar parallels in western Europe, is as high as 51.75 deg.

Mean of the United States.....	50,516	30	22	136,108	2882	

It thus appears that in the northern division, the mortality, according to the adjutant-general's returns, is $1\frac{3}{10}$ per cent, and, according to the medical returns, $0\frac{9}{10}$ per cent; and in the middle and southern divisions, according to the former, the mean is $4\frac{2}{10}$ per cent; and according to the latter, $3\frac{4}{10}$ per cent. In this calculation, the deaths from epidemic cholera have been excluded from both classes of returns; and from the medical reports, such deaths also as arose from homicide, suicide, asphyxia from cold, submersion, &c. The former exhibits the ratio of mortality from *all* causes, with the exception of Asiatic cholera, as reported in the post returns by the commanding officer; whilst the latter, as it shows the mortality arising from diseases chiefly, may be regarded as a pretty fair expression of climatic influence.

* As this is the mean of 10 years, from 1824 to 1839 inclusive, it may be well to present the monthly averages.
 Jan. Feb. March. April. May. June. July. Aug. Sep. Oct. Nov. Dec. Annual Result.
 † Average of six years, including 1833, 1834, 1835, and 1836. ‡ Mean of five years, ending with 1830.

Although fair weather prevails both on the sea-coast and the interior, remote from large bodies of water, yet a marked difference obtains in regard to the relative proportion. Thus, during the year, the proportion of days is—

	Fair.	Cloudy.	Rain.	Snow.
Sea-coast	202	108	45	9
Interior, remote from Lakes	240	77	31	16

Comparing the climate of the lakes with that of the same region beyond their influence, the contrast is yet more striking, the prevailing weather of the former being cloudy, and the latter fair; thus, during the year, the proportion of days is—

	Fair.	Cloudy.	Rain.	Snow.
Lakes	117	139	63	45
Remote from Lakes	216	73	46	29

The relative proportion of rainy and cloudy days during the year is, therefore, in the former locality 247, and in the latter 143.

The following comparative view shows the difference between the mean temperature of winter and summer on the eastern and western coast of the two continents:—

Points of Comparison.	Isothermal Line.		Difference between mean temp. of Winter and Summer.	
	deg.	min.	deg.	min.
America, eastern coast	53	60	43	60
Asia, eastern coast	53	60	55	80
Europe, western coast	53	60	28	30
America, western coast	51	75	23	70

The first three results on the same isothermal line are furnished by Humboldt. Unable to obtain the same annual temperature on our Pacific coast, it becomes necessary to take a lower isothermal line (that of Fort Vancouver), which of course gives a contrast in the

* Observations made with the Register Thermometer.

seasons correspondently greater. The table, however, shows conclusively that the climate of the New World, viewed in its general features, is, contrary to general opinion, less excessive than that of the Old. Comparing our eastern coast with that of Asia, the difference between the mean temperature of winter and summer is found to be 12 deg. 20 min. less; and comparing our western coast, notwithstanding the isothermal line is lower, with that of Europe, a difference of 4 deg. 60 min. less is exhibited. It may be necessary to add that, with the exception of the last, the author is not aware of the local position of these points of comparison—a consideration of some importance, inasmuch as the northern division of the United States presents, on the same isothermal line, a difference between the mean temperature of winter and summer, varying from 38 deg. to 54 deg.

Connected with this subject is the question frequently agitated, whether the Old Continent is warmer than the new. Volney and others have attempted its solution by a comparison of the mean annual temperatures of different places on both sides of the Atlantic; but to this mode of determining it, the objection at once presents itself, that the points of comparison represent opposite extremes in the climate of each continent. Indeed, the question in itself involves an absurdity; for, as the laws of nature are unvarying in their operation, and as similar physical conditions obtain in corresponding parallels of both continents, the same meteorological phenomena will be induced. It shows in lively colours the truth of the remark, that every physical science bears the impress of the place at which it received earliest cultivation. In geology, for example, all volcanic phenomena were long referred to those of Italy; and in meteorology, the climate of Europe has been assumed as the type by which to estimate that of all corresponding latitudes. In making a comparison of the two continents, it is, therefore, necessary that both points have the same relative position. Fort Sullivan, Maine, notwithstanding it is more than 11 deg. south of Edinburgh, Scotland, exhibits a mean annual temperature of 5½ deg. lower; Bordeaux, which is parallel with Fort Sullivan, has an annual temperature 15 deg. higher; and the mean of Stockholm, in lat. 59 deg. 20 min., is about the same as that of Fort Sullivan, in lat. 44 deg. 44 min. These are not, however, legitimate points of comparison. Peking and Philadelphia, each on the eastern coast of its respective continent, are fair examples, having the same latitude, a similar relative position, and consequently the same mean annual temperature. The same coast of each northern hemisphere, it has been seen, present little difference as regards annual temperature; but in the New World, by the same comparison, the seasons are less contrasted.

Does the climate of a locality, in a series of years, undergo any permanent changes?

The duration of winter at the city of New York is exhibited in the following table:—

	First Ice Formed.	First Snow Fell.	Last Ice Formed.	Last Snow Fell.
1831	Oct. 20	Nov. 3	April 10	April 30
1832	Nov. 3	Dec. 12	April 10	Mar. 17
1833	Oct. 31	Dec. 15	Mar. 29	Mar. 1
1834	Oct. 30	Nov. 15	May 15	Mar. 1
1835	Nov. 13	Nov. 27	April 18	April 25
1836	Oct. 26	Nov. 24	April 12	April 16
1837	Oct. 14	Nov. 14	May 1	April 13
1838	Oct. 31	Oct. 31	April 17	April 4
1839	Nov. 20	Nov. 10	Mar. 31	April 24
1840	Oct. 26	Nov. 18	Mar. 26	April 17

Consequently the mean continuance of winter is 164 days, or about 5½ months; and as the earliest formed ice, in the ten years, was on the 14th of October, and the latest on the 15th of May, the extreme duration of frost is 213 days, or about seven months. In the more excessive climate of the interior of the state of New York, however, as for example at Albany, no month of the year is exempt from frost.

In Dr. Forry's work he traces with great pains the endemic influences of the climate and soil. To the latter, as much as to the former, the fevers of the country are to be attributed. In regard to malarial districts he recommends that they should either be thoroughly drained or submerged. Epidemics and endemics are found in America, as they are in Europe, to enter first into the habitation of the poor man.

The following table, drawn up by him, exhibits the ratio of pulmonary diseases:—

NORTHERN REGION OF THE UNITED STATES.	Ratio of cases per 1000 of mean strength.					Deaths.							
	Mean Strength.	Catarrh and Influenza.	Pneumonia.	Pleuritis.	Phthisis Pulmonalis.	Total.	Catarrh and Influenza.	Pneumonia.	Pleuritis.	Phthisis Pulmonalis.	Hæmoptysis.	Total per Medi- cal Returns.	Cases not specified.
Atlantic Posts	3,130	233	22	26	9	200	—	1	—	—	—	140	16
Posts on the Lakes	5,973	300	19	30	9	338	1	4	1	15	—	65	12
Posts remote from the ocean and the Lakes	12,604	552	17	28	5	602	—	3	1	22	1	119	16
Total	21,707	439	18	28	7	490	1	8	1	46	1	324	44
SOUTHERN REGION.													
Coast from Delaware to Savannah	3,199	371	25	32	13	341	—	1	1	19	—	196	18
South-western Stations	11,140	290	39	52	11	392	—	31	2	61	2	458	75
Posts on the Lower Mississippi	3,381	218	22	28	9	277	—	2	2	10	—	178	30
East Florida	4,607	143	15	24	9	191	—	—	1	9	—	131	17
Total	22,327	246	29	10	10	236	—	34	6	99	2	963	140

It is thus seen that, with the exception of catarrh and influenza, the annual ratio of pulmonary diseases is lower in the northern than in the southern regions of the United States. It is in the middle districts of the United States, however, that pneumonia, pleuritis, and phthisis pulmonalis, are most prevalent, the peninsula of Florida having a lower average than any other region. It is found, too, that the same law obtains in regard to the mortality arising from this class of diseases, the deaths per 1000 of mean strength being as under:—

<i>Phthisis Pulmonalis.</i>		<i>Pneumonia, Pleuritis, and Catarrh.</i>	
Northern Region	2.1		0.5
Southern Region	4.4		2.8

BOOK II.

CHAPTER I.

EXTENSION OF TERRITORY, AREA, AND PROGRESS OF THE POPULATION OF THE UNITED STATES.

THE States which, on the ratification of independence, formed the American Republican Union were thirteen; viz.,

Massachusetts, New Hampshire, Connecticut, Rhode Island, New York, New Jersey, Delaware, Maryland, Pennsylvania, Virginia, North Carolina, South Carolina, and Georgia.

The foregoing thirteen states (the whole inhabited territory of which, with the exception of a few small settlements, was confined to the region extending between the Alleghany mountains and the Atlantic) were those which existed at the period when they became an acknowledged separate and independent federal sovereign power. The thirteen stripes of the standard or flag of the United States, continue to represent the original number. The stars have multiplied to twenty-six, according as the number of states have increased.

The territory of the thirteen original States of the Union, including Maine and Vermont, comprehended a superficies of 371,124 English square miles; that of the whole United Kingdom of Great Britain and Ireland, 120,354; that of France, including Corsica, 214,910; that of the Austrian Empire, including Hungary and all the Imperial States, 257,540 English square miles.

The present superficies of the twenty-six constitutional states of the Anglo-American Union, and the district of Columbia, and territories of Florida, include 1,029,025 square miles; to which, if we add the north-west, or Wisconsin territory, east of the Mississippi, and bound by Lake Superior on the north, and Michigan on the east, and occupying at least 100,000 square miles, and then add the great western region, not yet well defined territories, but, at the most limited calculation, comprehending 700,000 square miles; the whole, unbroken in its vast length and breadth by foreign nations, comprehends a portion of the earth's surface equal to 1,729,025 English, or 1,296,770 geographical square miles.

The thirteen New States were admitted when their population as territories increased first to 400,000, and from 1832 until 1840, to 47,700 in the following

order and periods, taking their number after the thirteen original states already enumerated.

Fourteenth, Vermont, admitted in 1791, with only one legislative assembly, and the executive lodged in a governor—both elected annually.

Fifteenth, Kentucky, admitted in 1792, with a house of representatives elected annually, and a governor and senate for four years—votes in this state are given openly, and not by ballot.

Sixteenth, Tennessee, admitted in 1796 with a governor, senate, and house of representatives, all elected every two years.

Seventeen, Ohio, in 1803, with a governor and senate, elected every two years, and a house of representatives annually.

Eighteenth, Louisiana, which was purchased in 1803, for 15,000,000 dollars, from France, was admitted as a state into the union in 1812. The governor and senate are elected for four, and the representatives for two years; the purchase of this country from France gave legal, as well as actual possession of all the countries watered by the Mississippi, and Missouri, as well as of a vast sea-coast along the Gulf of Mexico, to the United States; it might have been easily conquered, but it was far cheaper, exclusive of the justice, to have purchased the possession.

Nineteenth, Indiana, admitted in 1816, has its administration vested in a governor and senate, elected every three years, and a house of representatives annually.

Twenty, Mississippi, was admitted as an independent state in 1817, with a governor, elected for two years, a senate, elected one-third annually for three years, and an annually elected house of representatives.

Twenty-first, Illinois, admitted into the Union in 1818, has a governor and senate, elected every four, and a house of representatives every two years.

Twenty-second, Alabama, admitted in 1819, has a governor, elected for two years, and a senate and house of representatives. The latter and one-third of the senators are elected annually.

Twenty-third, Maine, admitted in 1820, elects its governor, council, and representatives annually by ballot.

Twenty-fourth, Missouri, which forms part of the territory purchased from France, was admitted into the Union in 1821. The governor and senate are elected to serve four, and the representatives for two years.

Twenty-fifth, Michigan, framed its constitution in May, 1835, and elected its governor and legislature in October following. The population amounted, by the census taken during the end of 1834, to 85,856, but from the unprecedented flow of emigration, arising from speculation in its fertile lands, the population

during the summer of 1839, exceeded 200,000. In 1810, the whole white population was under 5000. In 1820, they increased to 8896. In 1830, to 31,067. Such is the amazing progress of the far west.

Twenty-sixth, Arkansas, adopted a constitution in 1836, and has been since then admitted into the union. All elections are *vivá voce*. The governor to hold office for four years, the senate to be elected for the same period, and the representatives for two years. The population of Arkansas amounted in 1810 to 1062. In 1820, to 14,273. In 1830, to 30,388. In 1835, to 58,134.

Besides the twenty-six states, which send representatives in number according to their population, to congress, there are the local governments of,

First, The district of Columbia, under the immediate administration of the congress, being set apart distinctly as a sort of common ground in which Washington, the capital of the republic and the seat of the supreme court, is situated.

Secondly, The territory of Florida ceded by Spain in 1821 to the United States; its government is vested in a governor and council.

Fourthly, Wisconsin territory, which previously was in its civil government under Michigan, but, in consequence of a population of 30,000 having suddenly flowed into it, an act of congress, passed in 1836, erected it into a territorial government, with a governor, who is also a superintendent of Indian affairs, a secretary, a chief-justice, and two assistant-justices. The position of this territory, and its soil and natural productions, leave no doubt that in less than five years it will have a population which will entitle it to claim admission as a representative state into the federal union.

The extension of settlements by the population of the United States does not, however, confine itself to the vast regions we have enumerated. In December, 1835, a meeting of ninety persons, chiefly Americans, assembled at Bahia, or Goliad, in Texas, and made a declaration of its independence. In March following forty-four delegates, three of whom only were Mexicans, or natives of the country, assembled at a place named Washington, and formally declared the state a republican government, independent of Mexico. Since that period the Mexicans have on every occasion been repulsed, and even their president, Santa Anna, was made prisoner; but afterwards released.

The vast territory of Texas, extending between Louisiana and the river Bravo del Norte, occupies 301,000 square miles, or 192,000,000 acres of the most fertile regions in America, watered by numerous rivers, and its soil and climate adapted to the culture of cotton, rice, sugar-cane, indigo, tobacco, and all the productions of warm and hot countries. Here oak and other valuable and durable timber abounds. Its independence, as a sovereign republic, has been acknowledged by France, Holland, and England.

The statistics of the old provinces were obscure and uncertain at the com-

mencement of the revolution: but the population at that time could not have amounted to more than 2,500,000. After the peace, a census of the population has been taken every ten years.

In 1790 the number of inhabitants in the old states amounted to 3,929,326, including 629,697 slaves, and also the population of Vermont, which had increased to 85,530; and that of Kentucky, into which emigration rushed with rapidity from the New England states, amounting to 173,677. The slave population were distributed as follows:—156 in New Hampshire; 16 in Vermont; 948 in Rhode Island; 2764 in Connecticut; 21,324 in New York; 11,423 in New Jersey; 8887 in Delaware; 3737 in Pennsylvania; 103,036 in Maryland; 292,627 in Virginia; 100,572 in North Carolina; 107,094 in South Carolina; 29,264 in Georgia; 12,430 in Kentucky; and 3417 in different territories. Total slaves in 1790,—629,697.

In 1800 the population increased to 5,319,762, including 896,849 slaves.

In 1810 the census gave 6,048,539 free, and 1,191,364 slaves. Total, 7,239,903.

In 1820 the number of freemen were 8,100,108, and of slaves 1,538,118. Total, 9,638,166.

In 1830, the returns gave 10,857,177 free, and 2,009,043 slaves. Total 12,866,020 inhabitants.

By this census it appears that *Vermont*, with 280,622 free inhabitants, was the only state or district without a slave. *Massachusetts* had one registered slave, 610,477 free. *Maine*, 2 slaves, 399,953 free. *Indiana*, 3 slaves, 343,025 free. *New Hampshire*, 3 slaves, 269,325 free. *Ohio*, 6 slaves, 937,897 free. *Rhode Island*, 17 slaves, 97,181 free. *Michigan*, 32 slaves, 31,607 free. *Illinois*, 747 slaves, 156,698 free. *New Jersey*, 2254 slaves, 318,569 free. *Delaware*, 3292 slaves, 73,456 free. *Arkansas*, 4576 slaves, 25,812 free. District of *Columbia* (the territory of the capital of the land of freedom), 6119 slaves, 33,715 free. Territory of *Florida*, 15,501 slaves, 19,229 free. *Missouri*, 25,091 slaves, 115,364 free. *Mississippi*, 65,659 slaves, 70,962 free. *Maryland*, 102,994 slaves, 344,046 free. *Louisiana*, 109,588 slaves, 106,151 free. *Alabama*, 117,549 slaves, 191,978 free. *Tennessee*, 141,603 slaves, 540,301 free. *Kentucky*, 165,213 slaves, 522,704 free. *Georgia*, 217,531 slaves, 299,292 free. *North Carolina*, 245,601 slaves, 492,386 free. *South Carolina*, 315,401 slaves, 265,784 free. And *Virginia*, 469,757 slaves, 741,648 free. Thus it appears that there were, in 1830, of the whole population, nearly one-fifth slaves.

By the census of 1840, the total number of the population was 17,068,666, consisting of 7,249,266 free males, and 6,939,842 free females. Total free, 14,189,108, and of 186,467, free coloured males, and 199,778 free coloured females. Total free coloured, 386,245: of 1,246,408 male slaves, and 1,240,805 female slaves. Total slaves, 2,487,213.

In *Maine*, *Massachusetts*, *Vermont*, and *Michigan*, there were no slaves; in *New Hampshire*, 1 female slave; in *Rhode Island*, 5 male slaves; in *Connecticut* 17 female slaves; in *New York*, 4 slaves; in *Ohio*, 3 slaves; in *Indiana*, 3 slaves; in *New Jersey*, 674 slaves; in *Pennsylvania*, 64 slaves; in *Delaware*, 2505 slaves; in *Maryland*, 89,495 slaves; in *Virginia*, 449,187 slaves; in *North Carolina*, 245,317 slaves; in *South Carolina*, 327,038 slaves; in *Georgia*, 280,944 slaves; in *Alabama*, 253,530 slaves; in *Mississippi*, 195,211 slaves; in *Louisiana*, 167,822 slaves; in *Tennessee*, 183,058 slaves; in *Kentucky*, 182,258 slaves; in *Illinois*, 271 slaves; in *Missouri*, 58,240 slaves; in *Arkansas*, 19,953 slaves; in *Florida* territory, 25,713 slaves; in *Wisconsin* territory, 11 slaves; in *Iowa* territory, 16 slaves; in the district of *Colombia*, 4696 slaves.

The decennial increase per cent of the population has been as follows: viz., in the ten years ending 1800, 35.01 per cent; 1810, 36.45 per cent; 1820, 33.35 per cent; 1830, 33.26 per cent; 1840, 32.67 per cent. The total population of 1845, which will include an increase of nearly six years, may be estimated at about 20,000,000.

In 1850, if the population of the United States shall have increased, as is probable, in the same ratio as during the ten years ending 1840, the total number will be about 22,500,000, of which number the slaves will amount probably to not more than *three* millions; as no slaves are imported, and as the slave population has not increased in the same ratio as the free. The numbers of male and female slaves at present are about equal.

TABLE I.—Showing the Population by Census of 1830 and 1840—the numerical increase and the ratio per cent increase in Ten Years, in each State and Territory.

STATES.	Total population in 1830.	Total population in 1840.	Numerical increase since 1830.	Ratio per cent increase in ten years.	STATES.	Total population in 1830.	Total population in 1840.	Numerical increase since 1830.	Rate per cent increase in ten years.

POPULATION OF CITIES AND TOWNS, ARRANGED BY PROFESSOR TUCKER.

The proportion between the rural and town population of a country, is an important fact in its interior economy and condition. "It determines, in a great degree, its capacity for manufactures, the extent of its commerce, and the amount of its wealth. The growth of cities commonly marks the progress of intelligence and the arts, measures the sum of social enjoyment, and always implies increased mental activity, which is sometimes healthy and useful, sometimes distempered and pernicious. If these congregations of men diminish some of the comforts of life, they augment others: if they are less favourable to health than the country, they also provide better defences against disease, and better means of cure. From causes both physical and moral, they are less favourable to the multiplication of the species. In the eyes of the moralist, cities afford a wider field both for virtue and vice; and they are more prone to innovation, whether for good or evil. The love of civil liberty is, perhaps, both stronger and more constant in the country than the town; and if it is guarded in the cities by a keener vigilance and a more far-sighted jealousy, yet law, order, and security, are also, in them, more exposed to danger, from the greater facility with which intrigue and ambition can there operate on ignorance and want. Whatever may be the good or evil tendencies of populous cities, they are the result to which all countries, that are at once fertile, free, and intelligent, inevitably tend."

The following table shows the population of the towns in the United States, of 10,000 inhabitants and upwards, in 1820, 1830, and 1840; their decennial increase, and the present ratio of the town population, in each state, to its whole population:—

TOWNS.	STATES.	Population of Towns in			Decennial Increase.		Ratio of Town Population, per cent.	
		1820	1830	1840	1830	1840		
Portland	Maine	8,581	12,601	15,218	63.9	20.8	3.

* Lowell had no existence before 1822.

† The decline of population here indicated, was the effect of very destructive years.

It appears, from the preceding table, that the population in all the towns of the United States, containing 10,000 inhabitants and upwards, is something more than one-thirteenth

By thus extending our estimate to all the "principal towns" mentioned in the census, we find that the number is increased from 31 towns to 250, and that the proportion of town population is augmented from about a thirteenth to near a seventh, with a yet greater disparity among the states than was shown as to the towns of more than 10,000 inhabitants. But this state of facts is, in part, fallacious. It involves an important error, resulting from the application of the term "towns," in New England, to those subdivisions of a country, which are generally called "townships" or "parishes;" and whose whole population in New England, though the greater part is essentially rural, has, by reason of this inconvenient provincialism, been returned by the census as town population. For the want of adequate means of separating the inhabitants of the town or village, from those of the township, (which moreover would, from the irregular dispersion of the buildings, be not always easy to those on the spot,) the census has been implicitly followed as to these "principal towns" in New England; though, from the proportion of their inhabitants who are agricultural, it seems probable that more than half their population should be deducted from the town population here estimated.

In New York, where the same provincialism extensively prevails, the census has erred in an opposite way, by noticing in the northern part of the state none but incorporated cities; and thus busy and compactly built towns, here called "villages," of 5000 inhabitants and upwards, have been omitted in one-half the state, while, in the other, much smaller towns, and even townships, have been occasionally noticed; though in neither district has it descended to towns of but 2000 inhabitants. To supply these omissions, the estimate made of the town population of New York, in "William's Register," for 1837, has been adopted. At the time of taking the last census, they probably contained, on an average, from 10 to 15 per cent more inhabitants than are here assigned to them; and some ten or twelve other towns or villages, which had not then reached 2000 inhabitants, such as Batavia, Brockport, Little Falls, and a few others, are likely now to exceed that number. The town population, therefore, of New York may be from 25,000 to 30,000 more than it is here estimated.

Similar omissions of small towns may have also occurred in other states, which we have not the same means of correcting. They, altogether, cannot equal the omissions in New York.

If these errors were corrected, the three more southern New England states would still have the largest proportion of town population of any of the states. The circumstances which determine this proportion in a state, are the density of its population, the extent of its commerce, and that of its manufactures. It is mainly owing to the first cause that all the New England and the middle states have a greater town population than the other divisions. It is from their extensive commerce that Maryland and Louisiana exceed the neighbouring states in the same way, and that Massachusetts exceeds the rest of New England. It is to the want both of commerce and manufactures that Indiana, Tennessee, and North Carolina, have so few and such small towns. It is, indeed, from their exclusive pursuit of agriculture, in the slaveholding states, as well as their difference in density, that the number of their town inhabitants, with the exception of Delaware, Maryland, and Louisiana, rarely exceeds a twentieth, and will not average more than a thirtieth of their whole population. If the proportion in the whole United States could be correctly ascertained, by the correction of the errors adverted to, it would probably be found that those who live in towns and villages containing at least 2000 inhabitants, are not much more nor much less than one-eighth of the entire number.

The effect of railroads, and of transportation by steam generally, is to stimulate the growth of towns, and especially of large towns. It is, therefore, likely that our principal cities will, at the next census, show as large a proportional increase as they have experienced in the last decennial period."

The Population of each State and Territory, as exhibited by Six Enumerations in Fifty Years, with its Decennial Rate of Increase during the same period.

* By the change of the day of taking the census from the 1st of August to the 1st of June, the periods referred to in the two last columns want two months of the terms mentioned.

The great disparity exhibited in the preceding table between the ratio of increase in the three first divisions, which comprise the thirteen original states, and that of the two western divisions, is chiefly to be attributed to migration, the Atlantic states losing more than they gain by emigrants, and the western states acquiring largely both from foreign and domestic emigration.

DISTRIBUTION of the Population into the Three Classes of Whites, Free Persons of Colour, and Slaves, at each Census; with the Decennial Increase of each Class.

CLASSES.	1790	1800	1810	1820	1830	1840	Decennial Increase per cent in				
							1800	1810	1820	1830	1840
Whites	3,172,464	4,304,489	5,902,004	7,972,711	10,537,373	14,180,555	35.7	36.2	34.3	33.8	34.7
Free Coloured	50,466	106,395	180,446	238,107	319,809	390,318	32.3	72.2	27.7	31.2	20.9
Slaves	697,897	893,041	1,101,304	1,543,038	2,090,043	2,387,355	27.0	83.4	29.6	30.1	23.8
Total free	3,231,930	4,412,884	6,048,450	8,110,908	10,866,072	14,576,903	36.4	37.	34.1	33.7	34.1

No discrimination of the sexes in the coloured population at these enumerations.

It appears by the preceding table, that while both in the white and the slave population, the males always exceed the females, commonly between three and four per cent, in the free coloured portion the females exceed the males from seven to eleven per cent. This diversity is to be ascribed principally to the roving habits of the free class, many of whom take to a seafaring life, and some travel and even settle abroad. It will be also perceived, that there was, both in 1830 and 1840, a greater preponderance of males on the part of the whites than of the slaves, owing partly to the excess of males, of the white emigrants from Europe, and partly to the diminution of male slaves by running away.

Of the whites, the excess of males was the greatest in 1800; being to the females as 100 to 95.3. This was probably owing to the great number of French emigrants who thronged to the United States about the close of the last century. A similar flow of emigrants from Europe, between 1830 and 1840, has caused the like excess of white males, that is shown by the last census.

By this it appears that there has been a steady increase in the proportion of females during the last forty years. But the greater disproportion between the sexes, which is shown by the two first enumerations, than that which appears in the three last, seems to

require explanation. Perhaps it is to be found in the interruption given to navigation from 1806 to 1815, by which the number of boys formerly going to sea, or on board fishing vessels and coasters, being diminished, augmented the proportion of males.

The proportion of males to females in the different races, under the two last enumerations, were:—

	In 1830.	In 1840.
The white males under 10, were to the females, as 100 to	95.3	95.4
The free coloured males	97.2	97.4
The slaves	98.4	99.7

If we suppose that the excess of boys over girls, among the emigrants from Europe, is gradually decreasing in its relative influence, that would apply only to the whites. The only solution that occurs, as applicable to both races, is, that those occupations by which the lives and health of boys are more exposed than are those of girls, have been slightly but gradually increasing; and it may be remarked, that the excess of males under ten is less, in the New England states, which are most maritime, than in the southern and western states, which are least so.

It deserves notice, that in the slave population, although the females, between fourteen and twenty-six, in the fourth census, approach to or exceed the males, yet after twenty four, the preponderance of the males is restored. In the fifth census, too, of the slaves between twenty-four and thirty-six, the females slightly exceed the males, but with all those at both the earlier and later periods of life, the males exceed the females; from which it would appear that the diversity in their respective employments, which takes place in the vigour of manhood, abridges life with males more than with females; but that in subsequent periods the chance of life is in favour of the male sex. According to the sixth census, the two sexes approach to equality in the slaves between ten and twenty-four, but at all other ages the males exceed the females.

INCREASE OF POPULATION FROM EUROPE TO AMERICA.

Emigration from the old world to the new, from which nearly the whole present population of the United States is directly or remotely derived, still continues.

“This tide of European emigration ceases to be an object of wonder, when it is recollected that labour and skill are more than twice as well rewarded in the United States as in Europe; that capital receives nearly twice the profits; and, above all, that land can be here purchased in absolute property at a smaller cost than would there be its annual rent. In addition to these strong inducements, which apply to nearly all Europeans, the British and Irish emigrants find here the language, laws, usages, and manners to which they have been accustomed. They, therefore, constitute the larger part of the emigrants from Europe to the United States. Next to these, the Germans are the most numerous; for they, too, with the recommendations of cheap land and high-priced labour, meet in many of the states thousands whose language* and manners are the same as those they have left behind. From the time that the first German settlers came to this country, in 1682, under the auspices of William Penn, there has been a steady influx of emigrants from Germany, principally to the middle states, and, of late years, to the west.

“The coloured part of the population, which also owes its origin exclusively† to the old continent, has, since 1808, received no accessions from abroad; but is, on the contrary, constantly losing by emigration a part of what it gains by natural increase.

“It is obvious, that if the number of persons thus migrating to and from the United States could be ascertained, the census, periodically taken, would enable us to determine

* As early as 1739, a journal, in the German language, was established at Germantown, in Pennsylvania. From that time to the present, the number of German newspapers has continued to increase in that state.

† The number of Indians, or descendants of Indians, comprehended in the decennial enumerations of the people of the United States, is too small to deserve to be regarded as an exception. It certainly would not amount to a thousandth, perhaps not to a ten-thousandth, part of the whole population.

the precise rate of our natural multiplication. But such certainty is, as yet, unattainable. Of the coloured race, we have no means of knowing the loss sustained, either from the free portion who settle abroad, or from runaway slaves; and our estimates of the whites who migrated hither before 1819, were purely conjectural. In that year, indeed, an act of congress required accounts to be taken by the collectors at the seaports of all passengers who arrived from abroad, distinguishing foreigners from citizens, and to be returned to the office of the secretary of state. But even this regulation has not afforded the desired certainty, for, besides that the returns are defective, a part of the British emigrants who arrive at New York, take that route to Canada, in preference to a voyage up the St. Lawrence; whilst, on the other hand, a part of those who pass directly from Great Britain or Ireland into Canada, migrate thence by land into the United States; and the numbers of neither portion have we any means of ascertaining. With these sources of uncertainty, our estimates of the amount of emigration to and from the United States, with all the collateral aid to be derived from the census, can be considered only as approximations to the truth.

"Let us first estimate, from such data as we possess, the number of white persons who have migrated to the United States from 1790 to 1840.

"In the twenty years between the census of 1790 and that of 1810, Dr. Seybert supposes the number of foreign emigrants to the United States to be 120,000, averaging 6000 per annum. From 1810 to 1820, I have been able to procure no data, except Dr. Seybert's estimate for the year 1817, founded on the records of the custom-houses at the principal seaports; according to which estimate, the number of passengers who arrived in the United States that year, was 22,840. He supposes that the number, in any preceding year, did not amount to 10,000, except, perhaps, in 1794. In three of the years of this decennial term, that is, during the war with Great Britain, migration to this country was almost totally suspended. If, then, we suppose that in the three years from 1818 to 1820, both inclusive, the number of passengers was the same as in 1817, and if we deduct from the whole number 2840 (1840 for the American citizens, that being about the proportion at that time,) we shall have 84,000 for the number of foreign emigrants to the United States for those four years. If we further suppose that in the remaining six years the number was 30,000,* we shall have 114,000 for the whole number of white emigrants from 1810 to 1820.

"From 1820 to 1830, when the collectors of the customs were required to report to the state department the number of foreigners who had arrived in their respective ports by sea, we might have expected entire accuracy; but these reports are so much at variance with other documents entitled to respect, and are confessedly so defective, that they cannot be relied on. Thus, to give an example, the number of emigrants who left the United Kingdom in 1829 for the United States, was, according to the British official returns, 15,678; yet the whole number of foreign emigrants from all parts of the world, reported to the state department in the same year, was but 15,285, there being, besides less important omissions, that of New York for the third quarter. Again, the number of foreign emigrants returned to the state department for 1830, is but 9466, though 30,224 landed in New York alone, in that year, for the whole of which the proper officer had failed to make any return. In consequence of these and like instances of failure of duty, the number of foreign emigrants returned to the state department for the six years from 1825 to 1830, both inclusive, was only 87,140; † whilst the number who emigrated from the United Kingdom to the United States for the same six years, according to the official accounts in that country, was 80,522, which allows but 6618 for the number of emigrants from all

* That is, 10,000 per annum for three years, excluding the three years of war. I have not ventured to go beyond 10,000 a year, from respect to Dr. Seybert's opinion; and I could not take a less number, from a regard to the progressive increase of immigration both before and after this period.

† This number is obtained partly by computation, that is, by adding to the official number returned for five and a quarter years, (from the 30th Sept. 1825, to the 31st Dec., 1830,) three-fourths of the number returned for the year 1825. This was necessary, as the annual returns to the state department were, before 1828, closed on the 30th September, and subsequently, at the end of the year.

the other parts of the world, though it is known that these (including the emigrants from the rest of the British dominions) are nearly equal to the number from the United Kingdom.

"The more accurate returns, subsequently made to the state department, furnish us with some data for correcting these errors. By the official returns of British consuls residing in America, the number of emigrants from Great Britain and Ireland to the United States, for the five years from 1833 to 1837, was 163,447; but according to the reports of the collectors here to the state department, the whole number of foreigners who came to the United States, in the same period, was 324,750, which is very nearly double the number of those who were from Great Britain and Ireland.

"If, then, we suppose that the British accounts were not less accurate in the last period of five years than in the first period of six, (and they were probably more so,) and that the emigrants from other countries to the United States, bore as large a proportion to those from Great Britain and Ireland in the first period as the last, (which there is no reason to question,) then the British returns of emigrants to the United States would be to the whole number from all parts of the world in the ratio of 163,447 to 324,750, unless it were proper to make a deduction from the last number for those British emigrants who took their route to Upper Canada by way of New York.

"To some, this deduction may not seem to be necessary, because they would consider that the number of those who came to the United States from Canada was likely to equal those who went to Canada by the route of New York, and especially during the civil commotions that broke out within the five years in question. Yet, as since 1834 the proportion of British emigrants who take the New York route is said to be "considerable," let us assume, in the absence of all precise data, that as many as one-third of those emigrants who land in New York afterwards proceed to Canada, and see how far the above-mentioned ratio is affected by that proportion.

"The number of British and Irish emigrants who arrived at New York from 1833 to 1837, inclusive, was 152,164; and the number of those who left Canada for the United States, in the years 1834, 1835, 1836, and 1837, was 10,256. Supposing the number, in 1833, to have been in the same proportion, the whole number for five years would be 12,820. With these facts, the whole number of emigrants to the United States would be thus reduced, viz. :—

The total number who arrived in the United States	324,750
British emigrants who left New York for Canada, one-third of 152,164	50,821
Deduct for those who left Canada for the United States	12,820
	<hr/>
	38,001

286,749

"On this liberal estimate, then, of the number of British emigrants from New York to Canada, the proportion which the number from the United Kingdom to the United States bears to the whole number from all countries, is as 163,447 to 286,749, or nearly as 4 to 7. Applying, then, this rule to the 80,522 who emigrated from the United Kingdom to the United States, from 1825 to 1830, we have 141,300 for the whole number of immigrants for the same six years. In the remaining four years, from 1821 to 1824, the number of foreign emigrants returned to the state department was 31,158, which we may presume bore the same proportion to the actual number as 87,140 to 141,300, and consequently would be 50,500. This number for the four years, added to 141,300 for the six years, would give us 191,800 for the whole number of immigrants from 1820 to 1830. If we make a lower estimate of the number who proceed from New York to Canada, as probably we ought, and allow something for deficient returns to the state department, we cannot suppose the whole number to be short of 200,000, and I shall accordingly so consider it.

"From 1830 to 1840, we have better materials than in any preceding decennial term, for estimating the number of foreign emigrants to this country. The following is a summary of the returns that have been made to the state department of the number of passengers who arrived in the United States in that period :—

POPULATION OF THE UNITED STATES.

Years.	Americans.	Foreigners.
1831	1,256	15,713
1832	1,155	34,970
1833	1,251	58,262
1834	2,114	64,916
1835	3,320	45,444
1836	4,029	76,923
1837	3,813	79,205
1838	3,964	42,731
1839	4,171	70,494
1840	5,810	86,338
Total	30,883	574,996

It appears, however, that this account, though far more accurate than any preceding it, is not free from errors, some of which are considerable. Thus, the numbers of foreigners in the preceding statement for 1831 and 1832, are set down at 15,713 and 34,970, making together 50,683; whereas the number who arrived in New York alone in those years, at 80,328. If to this number we add one-fourth for the ordinary proportion arriving at other ports, we shall have 107,104, thus showing omissions in those two years amounting to 56,421. The omissions in the subsequent years are believed to be comparatively small. Correcting, then, these errors, the whole number of emigrants who arrived at all the ports in the United States from all parts of the world, between 1830 and 1840, would be 631,417. Allowing the number of those who left New York for Canada to be in the same proportion as before, that is, as 38,000 to 324,750, we have 58,690 for the number of persons thus migrating in the whole ten years. Deducting this number, and 100,000 for the emigration of American citizens to Texas and Canada, from 631,417, we have 472,727 for the whole gain to the white population by immigration in the same period.

"To the number of foreign emigrants in the several decennial terms should be added their probable natural increase during each term. If the number was the same every year of a decennial term, and if the number of females was in the same proportion as in the year of the population, we might estimate the increase at half its ordinary amount in ten years, or at about 16 per cent.

Emigrants from the United Kingdom to Quebec, in 1834 and 1837.

Years.	Males.	Females.	Children under 14.	Total.
1834	13,565	9,687	7,681	30,933
1837	11,740	6,079	4,082	21,901
Total	25,305	15,766	11,763	52,834

"Thus the females over 14 were about 30 per cent of the whole number. But inasmuch as the females between 16 and 45 constitute but about 19 per cent of the whole population, and as a very small proportion of the female immigrants are over 45, if we make a deduction for the excess, and also for the number between 14 and 16 years of age (which does not exceed 2½ per cent of the whole number), we shall find the proportion of women within the child-bearing ages greater with the emigrant class than with the whole population. Thus:

The proportion of women over 14, was	29.8 per cent.
Deduct the proportion over 45, suppose	2.
That between 14 and 16	2.5
	4.5
The proportion between 16 and 45	25.3

"After making some deduction for the decrease of this proportion, the number of females under 16 not being sufficient to keep up the number of marriageable women, we should be justified in estimating the average increase of the emigrants for the ten years at 20, instead of 16 per cent.

"Applying these principles, and dividing the supposed number of emigrants in the two first decennial terms (120,000), into 50,000 for the first term, and 70,000 for the second, the number, with their increase at each term, would be as follows:

From 1790 to 1800—number of emigrants	50,000	
Increase, 20 per cent on 40,000	8,000	
	<hr/>	58,000
From 1800 to 1810—number of emigrants	70,000	
Increase, 20 per cent on 60,000	12,000	
	<hr/>	82,000
From 1810 to 1820—number of emigrants	114,000	
Increase, 20 per cent on 97,000	19,400	
	<hr/>	133,400
From 1820 to 1830—number of emigrants	200,000	
Increase, 20 per cent on 157,000	31,400	
	<hr/>	231,400
From 1830 to 1840—number of emigrants	472,727	
Increase, 20 per cent on 336,363	67,273	
	<hr/>	540,000

"Thus, while the whole population had, in 50 years, increased about fourfold, the average annual immigration had increased more than nine-fold in the same time. So great and so disproportionate an increase may seem to some improbable, but the deductions have been made on so liberal a scale that the preceding estimate rather falls short of the truth than exceeds it. The steady extension of our settlements into the western wilderness continues to multiply the opportunities of buying land at prices as low as ever, without being placed more beyond the benefits of civilisation and commerce; and the rapid growth of our cities and manufacturing industry is constantly enlarging the field of employment for tradesmen and artisans. Whilst these circumstances present to the indigent and enterprising foreigner more and more points of attraction, the long peace in Europe seems to have given a proportionate increase to the repellent force that is there felt.

"Of that part of the coloured race who emigrate from the United States, we have no means of estimating the number, except by comparing the rate of increase in the last decennial terms with that of the first term, when there were few emigrants of this description, and when they were probably balanced by the Africans then imported. In making this comparison, it is assumed that the rate of natural increase has continued unchanged, which fact there seems no reason to doubt, at least as to the six-sevenths who are slaves.

"From 1790 to 1800, the increase of the coloured population was 32.2 per cent, which, for the reason mentioned, we consider to indicate the rate of its natural increase in the United States. In the next ten years, from 1800 to 1810, the increase was 37.6 per cent; but in that time the increase was enhanced by the acquisition of Louisiana, and by the increased importation of slaves, both on account of the increased demand for them for the cultivation of cotton and sugar, and because it was known that the further importation of them would cease after 1807. The accessions from these combined causes, beyond what was lost by emigration, was 5.4 per cent on 1,001,436 persons, equal to 54,000. In the following term, from 1810 to 1820, the increase declined to 29.6 per cent, owing principally to the slaves who escaped to the British during the war. From 1820 to 1830, it was 30.7 per cent; and from 1830 to 1840, it sunk to the unprecedented rate of 23.4 per cent.

"These rates of decennial increase since 1810, compared with that between 1790 to 1800, show the loss by emigration, exclusive of their probable increase at each term, as follows:—

		Emigrants.
From 1810 to 1820, the decrease (32.2—29.3) is 2.9 per cent	=	29,300
" 1820 to 1830, " (32.2—30.7) is 1.5 "	=	20,600
" 1830 to 1840, " (32.2—23.4) is 8.8 "	=	204,900

"From the number in the last decennial term, a considerable deduction should be made for the extraordinary mortality of the slaves sent to Alabama, Mississippi, and Louisiana,

POPULATION OF THE UNITED STATES.

during a part of the term, and, perhaps, their slower rate of increase. The census shows an increase of the slaves in those three states, between 1830 and 1840, of 324,399 on a population of 292,796, which is 230,000 more than the probable natural increase; and it is known that, during a part of the term, disease made frightful ravages among the negroes brought from other states. The remainder of the 204,900 is to be referred to emigrations to Texas, and to the unusual number both of the free coloured and slaves, who betook themselves to Canada in the ten years preceding 1840.

"In conclusion, we may say that, without attempting a computation in which we must yet further rely on conjecture, the facts here stated are sufficient to satisfy us that, after deducting what the country has lost by emigration, the foreign emigrants and their descendants in fifty years, now add above a million to its population."

TABLE showing the Number of White Females, of White Children under Ten Years of Age, and of Persons to a Square Mile, in Twenty States, in 1800 and 1840; the Proportion of Children to Females, at the same periods; the Increase in the Number of Persons, and the Decrease in the Proportion of Children during the Forty Years; and the Average Decrease in Ten Years.

* As the number of females is very nearly one-half of the population, one-half the numbers in this column may be taken as the several proportions of the children to the whole population in each state.

The following Table gives the same comparative view of the preceding Twenty States, when comprehended under five divisions, viz:—

LOCAL DIVISIONS.	Years.	Females.	Children under Ten.	Persons to a Square Mile.	Increase of Persons.	Proportion of Children.	Decrease of Proportion.	Decrease in Ten Years.
New England States	1800	608,795	386,728	19.2	15.6	63.5	19.4	3.1
	1840	1,113,453	569,348	34.8		51.1		
Middle States	1800	784,068	554,783	15.3	26.3	70.7	15.	3.75
	1840	2,181,944	1,327,362	43.6		52.7		
Southern States	1800	1,190,4	412,276	8.9	7.	73.	6.8	1.6
	1840	2,40,317	637,510	15.9		67.8		
South-western States of Mississippi and Tennessee	1800	46,791	38,630	1.3	12.4	77.6	2.1	0.5
	1840	397,011	299,960	3.7		75.5		
North-western States of Kentucky, Ohio, and Indiana	1800	106,513	92,155	2.3	23.2	84.9	11.1	3.8
	1840	1,303,351	662,193	25.5		73.8		

The natural increase of the population is inversely as its density; and this is apparent, whether we compare the increase of the same state at different periods, or the increase of one state or one division with another. Thus, in New England, where, with the exception of Maine, which is comparatively a newly-settled state, the population is most dense, averaging 50 to a square mile, the proportion of children is the smallest, 48.8 per cent of the females; in the middle states, the population is 43.6 to a square mile, and the proportion of children 55.7 per cent; in the southern states, the population is 15.7 persons to the square mile, and the proportion of children 67.8 per cent; in the south-western states, the population is 13.7 persons to the square mile, and the proportion of children 75.5 per cent; and if the north-western states seem to be an exception to the rule, in having a greater proportion of children than the southern states, while they have also a denser population by 9.6 persons to the square mile, it is owing to the extraordinary fertility of those states, whereby 25 persons to the square mile does not indicate so great a relative density as 16 to the square mile in the southern states.

This rule of the rate of natural increase acts so uniformly, that we may perceive the falling off in the rate, not only in 40 years, as we have seen, but also in each decennial term, of which the largest states in the five great divisions may serve as examples; viz.,

STATES.	Proportion of Children under 10 per cent.				
	1800	1810	1820	1830	1840
Massachusetts	58.9	57.6	55.	48.	46.9
New York	75.7	72.8	67.2	63.2	58.1
Virginia	71.2	69.6	68.	65.4	65.
Tennessee	84.6	82.9	78.8	75.	74.4
Ohio	88.7	83.1	79.	74.2	73.3

What is true in these states will be found true in the others; and there are not more than two or three cases, out of near a hundred, in which the comparison can be made, that the proportion of children, and consequently the rate of increase, is not less at each census than at the census preceding.

When we perceive the causes of the diminution of increase operating so steadily, and so independently of the greater or less facility of procuring subsistence, we are warranted in assuming that the diminution will continue to advance at the same moderate rate it has hitherto done, until all the vacant territory in the United States is settled, after which, another law of diminution and an accelerated rate may be expected to take place.

In conformity with the preceding views, we may conclude that the future increase of the population of the United States will not greatly differ from the following series during the next half century, if immigration continues to advance as it has done; viz.,

1850.	1860.	1870.	1880.	1890.	1900.
32 p. cent.	31.3 p. cent.	30.5 p. cent.	29.6 p. cent.	28.6 p. cent.	27.5 p. cent.
22,400,000	29,400,000	38,300,000	49,600,000	63,000,000	80,000,000

If, however, immigration were to continue as it is, or have but a moderate increase, the ratios of increase might be thus reduced:—

1850.	1860.	1870.	1880.	1890.	1900.
31.8 p. cent.	30.9 p. cent.	30 p. cent.	29 p. cent.	27.9 p. cent.	26.8 p. cent.
22,000,000	28,800,000	36,500,000	46,500,000	59,800,000	74,000,000

At which time the population will not exceed the average density of from 35 to 40 persons to the square mile, after making ample allowance for the Rocky Mountains and the tract of desert lying at their eastern base.

The preceding estimates suppose a slower rate of increase than has been commonly assumed in our political arithmetic, and, for a part of the time, even by those who have set the lowest limit to our future numbers; but this rate cannot be much augmented without overlooking some of the facts or laws deducible from our past progress, or gratuitously assuming some new and more favourable circumstances in our future progress. The lowest estimate, however, ought to satisfy those whose pride of country most looks to its physical power; for, at the reduced rate of increase supposed, our population would, in a century from this time, or a little more, amount to 200,000,000, and then scarcely exceed the present density of Massachusetts, which is still in a course of vigorous increase. In these estimates, the increase of the coloured population is supposed likely to continue as it has been, or with such small changes as will not materially vary the result.

Though the natural increase of the free coloured class is less than that of the slaves or the whites, yet, by its accessions from emancipation, its actual increase is far greater than that of either of the other two classes, as may be thus seen in the following:

TABLE, showing the Increase of the White and the Coloured Population in the Slaveholding States.

CLASS.	1790	1800	1810	1820	1830	1840	Decennial Increase per cent in				
							1800	1810	1820	1830	1840
Whites	1,271,692	1,702,080	2,208,783	2,842,341	3,600,758	4,631,098	33.9	29.7	28.7	26.8	26.6
Free Coloured	32,635	61,241	88,676	133,294	182,070	211,889	87.7	44.8	52.6	37.7	16.4
Slaves	637,047	1,857,095	1,163,734	1,524,220	1,999,758	2,486,220	30.4	35.8	31.0	31.6	24.3

The increase in the whole 50 years has been as follows:—

Whites, as 100 to	364.2
Free coloured, "	649.3
Slaves, "	378.4
Total coloured, "	391.2

THE INCREASE OF THE ATLANTIC AND WESTERN SLAVEHOLDING AND NON-SLAVEHOLDING STATES COMPARED.

The several states and territories have been differently divided, according to circumstances. Sometimes they are classed, as we have seen, under five divisions, as they severally agree in climate, products, and in the prevailing habits and pursuits of their people. Sometimes, again, they are divided into Atlantic and western states; and lastly, into slaveholding and non-slaveholding states.

The following tables show the population, area, number of persons to the square mile, and increase at each enumeration since 1810, of the four divisions, composed of the Atlantic and western states, slaveholding and non-slaveholding:

Twenty States,

Decrease of Proportion.	Decrease in Ten Years.
13.4	3.1
15.	3.75
6.8	1.6
2.1	0.5
11.1	3.8

It is apparent, the increase of the exception is most dense, 48.8 per cent of and the proportion 7 persons to the western states, the 75.5 per cent; giving a greater denser population of those states, density as 16 to

may perceive the each decennial impulses; viz.,

Catholics.—The first Catholic bishop in the United States, (John Carroll, D.D., of Baltimore,) was consecrated in 1790. The Catholics increase rapidly, mostly by emigration from Europe. They have now 16 dioceses, 1 archbishop, 15 bishops, 4 coadjutors; and, according to the "Catholic Almanac" for 1843, 575 churches and chapels, 477 stations, 579 clergymen, 22 ecclesiastical seminaries, 18 literary institutions for young men, 32 female religious institutions, 43 female academies, 60 charitable institutions, and 13 periodical publications "devoted to the cause of Catholicity."

Catholic *Ecclesiastical Seminaries* with the number of students, as stated in the

"Catholic Almanac:"—Philadelphia, 33; Baltimore, 20; Emmitsburg, 25; Frederick, 20; Charleston, 9; Parish of Assumption, La., 10; Vincennes, 17; St. Louis, Missouri, 6; Rose Hill, N. Y., 31; Richmond, Va., 13.

3. *Methodist Episcopal Church.*—Bishops—Joshua Soule, Elijah Hedding, James O. Andrew, Beverly Waugh, and Thomas A. Morris.

The following is a general Recapitulation of the extent of the Church in 1842, as embraced within the various Conferences:—

In 1842, the number of travelling preachers was 4244; of local preachers, 7621. Total, 11,865.

4. *Lutheran Church.*—It appears from the statistics given in the "Lutheran Almanac," for 1843, that there are in the United States, 1 general synod, 19 district synods, 424 ordained and licensed ministers, 1371 congregations, and 146,300 communicants.

During the year ending July, 1842, there has been an addition of 58 to the ministry, of 9022 to the membership by confirmation, of 17,766 adults and infants by baptism, and of 9000 by immigration. Three new synods have been formed, 88 congregations organised, and 76 churches erected.

5. BAPTISTS.

(From the "Baptist Almanac" for 1843.)

* Seventeen churches, 16 ministers, and 786 members in this State, are included in the Mississippi Association.

6. *The Free-Will Baptist Connexion.*—As it appears from their register for the year 1843, this connexion embraces 95 quarterly meetings, 1057 churches, 714 ordained preachers, 184 licentiates, and 50,688 church members. During the past year, there has been an increase of 8 quarterly meetings, 76 churches, 67 ministers, 12 licentiates, and 3371 church members.

7. *Presbyterians (old school).* [From the minutes of the General Assembly.]—There has been an increase of ministers in 1842, amounting to 118, making the whole number 1434; the number of licentiates reported is 183, being 9 less than the number reported last year; the number of candidates is 314, being 85 more than reported last year; the number of churches, 2092, being an increase of 188.

There have been added to the church during the year, upon a profession of faith, 16,354, and the whole actual increase to the church has been 18,519. There have been reported,

Baptisms of adults	4,337
" of children	10,483
Money collected for religious purposes	147,867 dollars.
Ordinations	51
Installations	72
New churches organised	37

8. *Congregationalists.* [From the "Christian Freeman."] Connecticut.—Churches, 252; pastors, 200; stated supplies, 24; vacant churches, 37; communicants, 35,600; licentiates and ministers without charge, 137.

Vermont.—Churches, 203; pastors, 103; stated supplies, 42; vacant churches, 50 or 60.

Rhode Island.—Churches, 16; pastors, 13; members, 2599.

Maine.—Churches, 200; pastors and stated supplies, 140; members, 18,000.

Massachusetts, not complete.—From 19 out of 24 associations, churches, 303; ministers, 255.

New Hampshire.—No statistics.

Then leaving out New Hampshire and a small part of Massachusetts, there are in New England, congregations, 971; ministers and licentiates, 774.

9. *Universalists.*—The following statistics are published in the Universal Register for 1843.

There are in the United States and territories, 1 general convention, 1 historical society, 13 state conventions, 63 associations, 918 societies, 577 meeting-houses, and 476 preachers.

During the past year, the denomination has gained 1 state convention, 3 associations, 53 societies, 46 meeting-houses, and 48 preachers.

In the state of New York, universalists have 1 state convention, 1 literary institution, 15 associations, 230 societies, 136 meeting-houses, and 133 preachers; showing an increase during the past year, of 12 societies, 15 meeting-houses, and 13 preachers.

						Total	874	86.37	7.09	25.27	

"The preceding table shows that the number of college students amounts to somewhat more than a ninehundredth part of the white population; that the scholars of the academies and grammar schools are ten times as numerous as the college students; that the scholars of the primary schools are near twelve times as numerous as the last; and that the scholars of every description were equal to one-seventh of the white population; and that the relative numbers, distributed in centesimal proportions, were as follows:—

College students	0.8 per cent.
Scholars in grammar schools	8.1 "
" primary schools	91.1 "
	100.

"If the free coloured be added to the white population, as that class furnishes a proportion of the scholars in the primary schools, the proportion which each description of scholars bears to the free population would be thus reduced; viz, college students, 1 to 8.98; scholars in grammar schools, as 1 to 88.70; scholars in primary schools, as 1 to 7.10; and the scholars of every description, as 1 to 7.10.

"The diversity among the states, as to the proportion of scholars, is principally in those of the primary schools. In the number of college students, no division of the states has greatly above or below the average of 1 to 874 of the white population; and in the scholars of the grammar schools, the north-western states differ widely from the other divisions. But in the primary, or elementary schools, the proportion in New England is nearly double that of the middle states, nearly three times that of the north-western states, and between six and seven times as great as those of the southern and south-western states. The difference as to the number of illiterate, is yet greater. If the other divisions be compared with New England, the number who cannot read and write is three and a half times as great in the middle states; seven times as great in the north-western states; twelve times in the south-western states; and nearly fifteen times in the southern states.

"These diversities are attributable to several causes, but principally to the difference in density of numbers, and in the proportion of town population. In a thinly-peopled country, it is very difficult for a poor man to obtain schooling for his children, either by

his own means, or by any means that the state is likely to provide ; but where the population is dense, and especially in towns, it is quite practicable to give to every child the rudiments of education without onerously taxing the community. This is almost literally true in all the New England states and New York, and is said to be the case in the kingdom of Prussia. It is true that, in the north-western states, and particularly those which are exempt from slaves, the number of their elementary schools is much greater than that of the southern or south-western states, although their population is not much more dense ; but, besides that, the settlers of those states, who were mostly from New England or New York, brought with them a deep sense of the value and importance of the schools for the people ; they were better able to provide such schools, in consequence of their making their settlements, as had been done in their parent states, in townships and villages. We thus see that Michigan, which has but a thin population even in the settled parts of the state, has schools for nearly one-seventh of its population. The wise policy pursued first in New England, and since by the states, settled principally by their emigrants, of laying off their territory into townships, and of selling all the lands of a portion before those of other townships are brought into market, has afforded their first settlers the benefits of social intercourse and of co-operation. In this way, they were at once provided with places of worship, and with schools adapted to their circumstances.

“ In some states, the primary schools are supported by a tax, as Massachusetts, Maine, New Hampshire, and Vermont ; in others, by a large public fund, as in Connecticut, Virginia, and some others ; and others, again, partly by the public treasury, and partly by private contribution, as in New York. In both the last cases, the children are not considered as educated at the public expense, though the difference between them and the first class of cases is essentially the same, so far as regards the public bounty.

“ Of the three descriptions of schools, the elementary, by their great number, seem to be far the most deserving of consideration, if we look merely to their direct influence on individuals ; but if we regard the political and general effects of each, it is not easy to say which contributes most to the well-being of the community. The primary schools give instruction and improvement to the bulk of the voters, the great reservoir of political power. The grammar schools educate that class whose views and feelings mainly constitute public opinion on all questions of national policy, legislation, and morals, and who thus give political power its particular directions. It is from the least numerous class—the collegiate—that the most efficient legislators, statesmen, and other public functionaries are drawn, as well as those professional men who take care of the health, the rights, and the consciences of men.

“ There is an important class of instructors, of which the census takes no separate notice : that is the ministers of religion, who, once a week or oftener, besides performing the rites of worship, each according to the modes of his sect, indoctrinate large congregations in articles of faith, and inculcate man's religious and moral duties. The number of ministers of every denomination was computed to exceed 20,000, at the taking of the last census, and the deeply-interesting character of the topics on which they treat gives to this class of teachers a most powerful influence over the minds of men ; but fortunately it is so divided by the mutual counteractions of rival sects, that it can no longer upheave the foundations of civil society, or seriously affect the public peace ; yet the influence of the ministers over their respective followers is rather enhanced than diminished by the rivalry of different sects, and the more as they are all improving in information and oratorical talent. They now bear away the palm of eloquence, both from the bar and the deliberative assemblies. If this vast moral power spends its force yet oftener on speculative subtleties, than on awakening emotion or influencing conduct ; if it aims, in a word, more to teach men what to think, than how to feel or to act, this circumstance affords, perhaps, as much matter of congratulation as regret, when we recollect how easy the pure, mild, and healthy influence which religion might exert, and which we sometimes see it exert, could be converted into bitter intolerance and the excesses of wild fanaticism.

“ There is yet another source of popular instruction—the periodical press—which is noticed by the census as a branch of manufacturing industry, and which is exclusively occupied, not only with worldly affairs, but with the events of the passing hour. It keeps every part of the country informed of all that has occurred in every other, that is likely to touch

men's interests or their sympathies—volcanoes, earthquakes, tempests, conflagrations, and explosions. Nor, in attending to the vast, does it overlook the minute. No form of human suffering escapes its notice, from the miseries of war, pestilence, and famine, to the failure of a merchant, or the loss of a pocket-book. Every discovery in science or art, every improvement in husbandry or household economy, in medicine or cosmetics, real or supposed, is immediately proclaimed, as are all achievements in any pursuit of life, whether in catching whales or shooting squirrels, or in riding, running, jumping, or walking. There scarcely can be an overgrown ox or hog make its appearance on a farm, or even an extraordinary apple or turnip, but their fame is heralded through the land. Here we learn every legislative measure, from that which establishes a tariff to that which gives a pension—every election or appointment, from a president to a postmaster—the state of the market, the crops, and the weather. Not a snow is suffered to fall, or a very hot or very cold day to appear, without being recorded. We may here learn what every man in every city pays for his loaf or his beefsteak, and what he gives, in fact, for almost all he eats, drinks, and wears. Here, deaths and marriages, crimes and follies, fashions and amusements, exhibit the busy, ever-changing drama of human life. Here, too, we meet with the speculations of wisdom and science, the effusions of sentiment, and the sallies of wit; and it is not too much to say, that the jest that has been uttered in Boston or Louisville, is, in little more than a week, repeated in every town in the United States: or that the wisdom or the pleasantry, the ribaldry, or the coarseness, exhibited in one of the halls of congress, is made by the periodical press to give pleasure or distaste to 100,000 readers.

"Nor is its agency limited to our own concerns. It has eyes to see, and ears to hear, all that is said and done in every part of the globe—and the most secluded hermit, if he only take a newspaper, sees, as in a telescope, and often as in a mirror, every thing that is transacted in the most distant regions; nor can any thing memorable befall any considerable part of our species, that it is not forthwith communicated, with the speed of steam, to the whole civilised world.

"The newspaper press is thus a most potent engine, both for good and evil. It too often ministers to some of our worst passions, and lends new force to party intolerance and party injustice.

'Incenditque animum dictis, atque aggeratiras.'

"But its benefits are incalculably greater. By communicating all that is passing in the bustling world around us, whether it be little or great, virtue or crime, useful or pernicious, pleasurable or painful, without those exaggerations and forced congruities which we meet with in other forms of literature, it imparts much of the same just knowledge of men and things as experience and observation. Its novelties give zest to life. It affords occupation to the idle, and recreation to the industrious. It saves one man from torpor, and relieves another from care. Even in its errors, it unconsciously renders a homage to virtue, by imputing guilt to those it attacks, and praising none to whom it does not impute merit and moral excellence. Let us hope that it will, in time, without losing any of its usefulness, less often offend against good taste and good manners, and show more fairness in political controversy.

"According to the census of 1840, there were then in the United States 138 daily newspapers, 1142 issued weekly, and 125 twice or thrice a week, besides 227 other periodical publications."—*Professor Tucker's Progress of Population, &c.*

DISTRIBUTION OF THE INDUSTRIOUS CLASSES.

In 1820, for the first time, the census enumerated the number of persons who were severally employed in agriculture, commerce, and manufactures. In the succeeding census, no notice was taken of the occupations of the people; but that of 1840 gave a fuller enumeration of the industrious classes, distinguishing them under the several heads of mining, agriculture, commerce, manufactures, navigating the ocean, internal navigation, and the learned professions. The result of each census is given in the following tables:—

TABLE I.—Showing the Number of Persons engaged in Agriculture, Commerce, and Manufactures in the several States, according to the Census of 1820.

merce, and Ma-
20.

Taking all the employments together, the number employed is 355 in every 1000 of the whole population: there is but a very small proportion of males who are not occupied in some mode of profitable industry.

The whole number of persons employed in agriculture, commerce, and manufactures, bears nearly the same proportion to the whole population as the following enumerations: being in each, about 28 per cent: a large proportion, when it is considered that only a very small number of females are so employed; and that one-half, or very nearly half of the males, are under seventeen years of age.

In comparing the numbers employed in the United States, with those employed of the inhabitants of Great Britain, it will be necessary to deduct, according to Professor Tucker, "from the whole number returned by the census of 1840, the slaves comprehended under that class, the free coloured persons, the white females, the white males under

of 41
214
145
261
304
516
1122

twenty years of age, and the professional men, for none of which deductions, except the last, have we any data at once precise and authentic."

The result, made out by the Professor, is as follows :—

In all the departments of industry	persons	4,798,870
Deduct, for two-fifths of the coloured population		1,149,598
" the white females employed in manufactures		54,806
" white males under 20 years of age		575,519
" professional men		65,255
		<hr/>
		1,845,178
The whole number of white males above 20 years of age, employed in trade and manual labour		2,953,692

Professor Tucker observes, "Whilst all civilised countries are so much alike as to the amount of labour put in requisition to satisfy human wants, they differ very greatly as to the distribution of that labour among the three principal branches of industry; and the difference is very great in this respect, not only between the several states, but in the whole United States, in 1820 and 1840. The proportion of labour employed in agriculture and commerce had diminished; while that employed in manufactures had, in twenty years, increased from 13.7 per cent to 17.1 per cent of the whole. The positive increase in that time, was from 349,506 persons employed in 1820, to 791,749 employed in 1840.

"This increase was greatest in the New England states, whose manufacturing population had enlarged from 21 per cent in 1820, to 30.2 per cent, in 1840; in which time the same class of population had nearly trebled in Massachusetts, and more than trebled in Rhode Island. In the south-western states, alone, the proportion of agriculture had increased; in all the others it had diminished. In the middle and north-western, the proportion employed in commerce experienced a small increase. In several of the states, not only was the proportion less in 1840 than it had been in 1820, but the number of persons actually employed in commerce was less. This was the case in Maine, Massachusetts, Connecticut, Maryland, and, to a smaller extent, in Delaware, North Carolina, and South Carolina. Is this falling-off to be attributed solely to the loss of our legitimate share of the West India trade since 1830, or in part, also, to some difference in the mode of taking the census, by which a part of the seamen, who, in 1840, were separately numbered, were, in 1820, reckoned among the persons employed in commerce?

"If the whole labour of Great Britain is distributed among the several departments of industry in the same proportions as the labour of the males above twenty years of age, in that country, agricultural labour is but 31.5 per cent of the whole; here, it is 77.5 per cent. In that country, manufactures and trade employ 28.8 per cent of the whole labour; here, they employ but 18.9 per cent. Each country employs its industry in that way which is most profitable, and best suited to its circumstances.

"Two-thirds of the mining labour is in the middle and southern states. The southern states stand foremost in agricultural labour, though they hold but the third rank in population. The middle states employ the least labour in agriculture, in proportion to their numbers. In commerce, however, they employ the most, and next to them the New England States. The same two divisions take the lead in manufactures, they contributing nearly two-thirds of the labour employed in this branch of industry. Three-fourths of the seamen are furnished by New England, of which nine-tenths belong to Massachusetts and Maine. More than half the labour employed in inland navigation is in the middle states, and, next to them, are the north-western states.

"Of that department of industry which comprehends the learned professions, and which is at once the best fruit of civilisation, and the most powerful agent of its further advancement, the New England and middle states have the largest proportion, though there is less diversity in this than in the other industrious classes."

New York, Pennsylvania, and Virginia, employ the greatest number in mining; in agriculture, New York, Virginia, and Ohio; in commerce, New York, Pennsylvania, Louisiana, and Massachusetts; in navigating the ocean, New York ranks next to Massachusetts and Maine. In internal navigation, New York, Pennsylvania, Ohio, and Virginia, give occupation to 20,000 out of about 30,000 employed.

In connection with tables I. and II. it is necessary to make an addition on account of the naval force of the United States, which is stated at 6100 in the censuses for 1840. The grand total of the whole population of the United States therefore in 1840, was as follows:—

Persons employed in the naval service of the United States.....	6,100
Total Population of the United States.....	17,069,433

CHAPTER II.

DESCRIPTION AND STATISTICS OF EACH OF THE UNITED STATES OF AMERICA.

THE United States comprise all the varieties of fertile and sterile soils and formations; from that of the rocky granite ridges to that of the deepest and most extensive swamps,—from that of stiffest clays to the lightest sands.*

The American writers have usually classed the soils of the various regions in sections, but it is remarkable that Jefferson, in his judicious notes on Virginia, omits, certainly not from ignorance, any description of the soil; while the great Washington was not only a most thorough practical farmer, but a thorough observer of the various kinds of soils as far as then known within the territories of the United States.

General Washington, in a reply to a letter from Sir John Sinclair, who proposed removing as a practical farmer to cultivate the soil of America, describes the soils, &c., as follows:—

“The near view which you have of the revolution in France, and of the political state of things in Europe, especially those of Great Britain, has enabled you to form a judgment with so much more accuracy than I could do of the probable result of the perturbed state of the countries which compose that quarter of the globe, and of the principal actors in that theatre, that it would be presumptuous in me, at the distance of 3000 miles, to give an opinion relatively to either men or measures; and therefore I will proceed to the information required in your private letter of the 11th of September, which I will give from the best knowledge I possess, and with the candour you have a right to expect from me.

“The United States, as you well know, are very extensive, more than 1500 miles between the north-eastern and south-western extremities; all parts of which, from the Seaboard to the Appalachian mountains (which divide the eastern from the western waters), are entirely settled, though not as compactly as they are susceptible of; and settlements are progressing rapidly beyond them.

“Within so great a space, you are not to be told that there are a great variety of climates; and you will readily suppose, too, that there are all sorts of land, differently improved, and of various prices, according to the quality of the soil; its contiguity to, or remoteness from, navigation; the nature of the improvements, and other local circumstances. These, however, are only sufficient for the formation of a *general* opinion; for there are material deviations, as I shall mention hereafter.

* The authorities for the general description of each of the United States, which we have compiled in this work are, the returns made by the marshals of the several states, of the population, employments, trades, productions, &c., which were kindly transmitted us by the Honourable Daniel Webster. Various accounts of the resources of several states, viz.—“The Book of the United States,”—“The United States Gazetteer for 1844,” a most valuable work, by Daniel Hasckel, A.M., late President of the University of Vermont, and J. Calvin Smith, geographer, &c. The following articles from “Hunt’s Mercantile Magazine,” viz.,—1. Maryland, and its resources, by W. G. Lyford. 2. Michigan and its resources. 3. Resources of the United States, by James H. Lanman. 4. Missouri and its resources, by C. C. Whittisley. 5. Massachusetts, and its resources, by the Hon. Judge Hudson, member of congress. 6. Illinois, and its resources. 7. Commerce and resources of New Hampshire. Also various papers and reports presented to congress. Improvements in agriculture, &c., by the Hon. Henry L. Ellsworth, U.S., commissioner of patents. “Notes on the Western States,” by Judge Hall. Professor Tucker’s “Progress of Population and Wealth in the United States,” and from numerous official returns, published by the legislatures of the respective states.

"In the New England states, and to Pennsylvania inclusively, landed property is more divided than it is in the states south of them.

"The farms are smaller; the buildings and other improvements generally better; and, of consequence, the population is greater: but then, the climate, especially to the eastward of Hudson's river, is cold; the winters long, consuming a great part of the summer's labour in support of their stock during the winter. Nevertheless, it is a country abounding in grass, and furnishes much fine beef, besides exporting many horses to the West Indies.

"A mildew or blight (I am speaking now of the New England states particularly) prevents them from raising wheat adequate to their own consumption, and of other grains they export little or none; fish being their staple. They live well notwithstanding, and are a happy people. Their numbers are not augmented by foreign emigrants; yet, from their circumscribed limits, compact situation, and natural population, they are filling the western parts of the state of New York, and the country on the Ohio, with their own surplusage.

"New Jersey is a small state, and all parts of it, except the south-western, are pleasant, healthy, and productive of all kinds of grain, &c. Being surrounded on two sides by New York, and on the other two by the Delaware River and the Atlantic, it has no land of its own to supply the surplus of its population; of course, their emigrations are principally towards the Ohio.

"Pennsylvania is a large state; and, from the policy of its founder, and of the government since, and especially from the celebrity of Philadelphia, has become the general receptacle of foreigners from all countries, and of all descriptions, many of whom soon take an active part in the politics of the state; and coming over full of prejudices against their own governments, some against all governments, you will be enabled, without any comment of mine, to draw your own inference of their conduct.

"Delaware is a very small state, the greater part of which lies low, and is supposed to be unhealthy. The eastern shore of Maryland is similar thereto. The lands in both, however, are good.

"But the western parts of the last-mentioned state, and of Virginia, quite to the line of North Carolina, above tide-water (and more especially above the Blue Mountains), are similar to those of Pennsylvania, between the Susquehanna and Potomac rivers, in soil, climate, and productions; and in my opinion will be considered, if it is not considered so already, as the garden of America; so far as it lies between the two extremes of heat and cold, partaking in a degree of the advantages of both, without feeling much the inconveniences of either; and, with truth it may be said, is among the most fertile lands in America east of the Apalacia mountains.

"The uplands of North and South Carolina and Georgia are not dissimilar in soil; but as they approach the lower latitudes, are less congenial to wheat, and are supposed to be proportionably more unhealthy. Towards the seaboard of all the southern states (and further south, the more so) the country is low, sandy, and unhealthy; for which reason I shall say little concerning them; for, as I should not choose to be an inhabitant of them myself, I ought not to say any thing that would induce others to be so.

"This general description is furnished that you may be enabled to form an idea of the part of the United States which would be most congenial to your inclination. To pronounce, with any degree of precision, what lands could be obtained in the parts I have enumerated, is next to impossible, for the reasons I have before assigned; but upon pretty good data it may be said, that those in Pennsylvania are higher than those in Maryland (and, I believe, in any other state), declining in price as you go southerly, until the rice swamps of South Carolina and Georgia are met with; and these are as much above the medium in price, as they are below it in health. I understand, however, that from thirty to forty dollars per acre (I fix on dollars because they apply equally to all the states, and because their relative value to sterling is well understood,) may be denominated the medium price in the vicinity of the Susquehanna, in the state of Pennsylvania; from twenty to thirty on the Potomac; * and less, as I have noticed before, as you proceed southerly. But, what may appear singular, and was alluded to in the former part of this letter, the lands in the parts of which I am now speaking, on and contiguous to tide-water (with local exceptions), are in lower estimation than those which are above and more remote from navigation. The causes, however, are apparent: 1, the land is better; 2, higher, and more healthy; 3, they are chiefly, if not altogether, in the occupation of farmers; and 4, from a combination of all these, purchasers are attracted, and of consequence the prices rise in proportion to the demand. The rise in the value of landed property in this country has been progressive ever since my attention has been turned to the subject, now more than forty years; but for the last three or four of that period, it has increased beyond all calculation; owing, in part, to the attachment to, and the confidence which the people are beginning to place in, their form of government, and to the prosperity of the country from a variety of concurring causes, none more than to the late high prices of its produce.

* Both in what is called the Valley; that is, lying between the Blue Mountain and North Mountain, which are the richest lands we have.

" From what I have said, you will have perceived that the present prices of land in Pennsylvania are higher than they are in Maryland and Virginia, although they are not of superior quality. Two reasons have already been assigned for this: first, that in the settled part of it the land is divided into smaller farms, and more improved; and secondly, being in a greater degree than any other the receptacle of emigrants, these receive their first impressions in Philadelphia, and rarely look beyond the limits of the state. But besides these, two other causes, not a little operative, may be added; namely, that until congress passed general laws relative to naturalisation and citizenship, foreigners found it easier to obtain the privileges annexed to them in this state than elsewhere; and because there are laws here for the gradual abolition of slavery, which neither of the two states above-mentioned have at present, but which nothing is more certain than that they must have, and at a period not remote.

" Notwithstanding these obstacles, and although I may incur the charge of partiality in hazarding such an opinion at *this time*, I do not hesitate to pronounce that the lands of the waters of the Potomac will in a few years be in greater demand, and in higher estimation, than in any other part of the United States. But as I ought not to advance this doctrine without assigning reasons for it, I will request you to examine a general map of the United States, and the following facts will strike you at the first view: that they lie in the most temperate latitude of the United States; that the main river runs in a *direct* course to the expanded part of the western country, and approximates nearer to the principal branches of the Ohio than any other eastern water, and of course must become a great, if not (under all circumstances) the best highway into that region: that the upper seaport of the Potomac is considerably nearer to a large portion of the state of Pennsylvania, than that portion is to Philadelphia; besides accommodating the settlers thereof with inland navigation for more than 200 miles; that the amazing extent of tide navigation afforded by the bay and rivers of Chesapeake, has scarcely a parallel. When to these are added, that a site at the junction of the inland and tide navigation of that river is chosen for the permanent seat of the general government, and is in rapid preparation for its reception; that the inland navigation of the river is nearly completed to the extent above-mentioned; and that its lateral branches are capable of great improvement, at a small expense, through the most fertile parts of Virginia in a southerly direction, and crossing Maryland and extending into Pennsylvania in a northerly one, through which (independent of what may come from the western country) an immensity of produce will be water-borne, thereby making the federal city the great emporium of the United States—I say, when these things are taken into consideration, I am under no apprehension of having the opinion I have given relative to the value of land on the Potomac controverted by impartial men.

" There are farms always, and everywhere for sale: if, therefore, events should induce you to cast an eye towards America, there need be no apprehension of your being accommodated to your liking; and if I could be made useful to you therein, you might command my services with the greatest freedom.

" Within full view of Mount Vernon, separated therefrom by water only, is one of the most beautiful seats on the river for sale; but of greater magnitude than you seem to have contemplated. It is called Belvoir, and did belong to George William Fairfax, Esq., who, were he living, would now be Baron of Cameron, as his younger brother in this country (he, George William, dying without issue) at present is, though he does not take upon himself the title. This seat was the residence of the above-named gentleman before he went to England, and was accommodated with very good buildings, which were burnt soon after he left them.

" There are near 2000 acres of land belonging to the tract, surrounded in a manner by water. The mansion-house stood on high and commanding ground. The soil is not of the first quality; but a considerable part of it lying level, may, with proper management, be profitably cultivated. There are some small tenements on the estate, but the greater part thereof is in wood. At present it belongs to Thomas Fairfax, son of Bryan Fairfax, the gentleman who will not, as I said before, take upon himself the title of Baron of Cameron. A year or two ago, the price he fixed on the land was, as I have been informed, 33½ dollars per acre: whether not getting that sum, or whether he is no longer disposed to sell it, I am unable with precision to say; for I have heard nothing concerning his intentions lately.

" With respect to the tenements I have offered to let, appertaining to my Mount Vernon estate, I can give no better description of them, and of their appurtenances, than what is contained in the printed advertisement herewith enclosed; but, that you may have a more distinct view of the farms, and their relative situation to the mansion-house, a sketch from actual survey is also inclosed; annexed to which I have given you, from memory, the relative situation and form of the seat at Belvoir.

" The terms on which I have authorised the superintendent of my concerns at Mount Vernon to lease the farms there, are also inclosed; which, with the other papers, and the general information herein detailed, will throw all the light I am enabled to give you upon the subject of your inquiry.

" To have such a tenant as Sir John Sinclair, however desirable it may be, is an honour I

dare not hope for; and to alienate any part of the fee-simple estate of Mount Vernon is a measure I am not inclined to, as all the farms are connected, and form parts of a whole.

"With very great esteem and respect, I have the honour to be, Sir,

"Your most obedient and obliged humble servant,

"Philadelphia, Dec. 11, 1796.

G. WASHINGTON."

In order to avoid repetitions, we have compiled from various authorities, a descriptive and statistical account of each state; after which will be found a general summary of the productions, agriculture, trade, navigation, manufactures, finance, &c., of all the states united.

FIRST. THE NORTHERN ATLANTIC STATES—viz: 1. Maine; 2. New Hampshire; 3. Vermont; 4. Massachusetts; 5. Rhode Island; 6. Connecticut; 7. New York; 8. New Jersey; 9. Pennsylvania.

I. MAINE.

Maine is bounded north by Lower Canada; east by New Brunswick, from which it is separated by the St. Croix river, and a line due north from the monument, at the source of the St. Croix river, following the exploring line run and marked by the surveyors of the two governments in the years 1817 and 1818, to its intersection with the St. John's river, and to the middle of the channel thereof; thence up the middle of the main channel of the said river St. John, to the mouth of the river St. Francis; thence up the middle of the channel of the said river St. Francis, and through the lakes through which it flows to the outlet of the lake Pohenagamook; thence south-westerly, in a straight line to a point in the north-west branch of the river St. John, which point shall be ten miles distant from the main branch of the St. John, in a straight line, and in the nearest direction; but if the said point shall be found to be less than seven miles from the nearest point or crest of the highlands, that divide the rivers which empty themselves into the river St. Lawrence, from those which fall into the river St. John, to a point seven miles in a straight line from the said summit or crest; thence in a straight line in a course about south 8 deg. west, to the point where the parallel of lat. 46 deg. 25 min. north, intersects the south-west branch of the St. John; thence southerly by the said branch to the source thereof, in the islands at the Metjarmette portage; thence down along the said islands, which divide the waters which empty themselves into the St. Lawrence, from those which fall into the Atlantic Ocean, to the head of Hall's stream; thence down the middle of said stream till the line thus run at the 45 deg. of north latitude, and which has been known and understood to be the line of actual division between the states of New York and Vermont on the one side, and the British province of Lower Canada on the other; and from the said point of intersection west along said dividing line, as heretofore known and understood, to the Iroquois, or St. Lawrence river. Such are the terms of the late treaty, now ratified by both governments. This state lies between 43 deg. 5 min., and 47 deg. 20 min. north latitude, and between 66 deg. 50 min., and 70 deg. 55 min. west longitude. It is computed to contain 30,000 square miles, or 19,200,000 acres. It was under the jurisdiction of Massachusetts until 1820, when it was made an independent state. The population was in 1840, 501,793. Of these 252,989 are free white males; 247,449 ditto females; free coloured males, 720; ditto females, 635. Employed in agriculture, 101,630; in commerce, 2921; manufactures, 21,879; navigating the ocean, 10,091; learned professions, 1889. Augusta, at the head of sloop navigation, on the Kennebec river, 50 miles from its mouth, is the seat of government.

Maine is divided into 13 counties, which, with their population and capitals, are as follows:—York, 54,034, C. Alfred; Cumberland, 68,658, C. Portland; Lincoln, 63,517, C. Wiscasset; Hancock, 28,605, C. Ellsworth; Washington, 28,327, C. Machias; Kennebec, 55,823, C. Augusta; Oxford, 38,351, C. Paris; Somerset, 33,912, C. Norridgewock; Pe-

nobscot, 45,705, C. Bangor; Waldo, 41,509, C. Belfast; Piscataquis, 13,138, C. Dover; Franklin, 20,801, C. Farmington; Aroostook, 9,413, C. Houlton. These counties contain about 498 townships, or settlements, some of which have but few inhabitants.

This state is hilly rather than mountainous. East of the White Mountains, in New Hampshire, an irregular chain of highlands extends eastwardly to the north of the sources of the Kennebec and Penobscot rivers, and passing south of the sources of the Aroostook river, terminates on the eastern boundary of the United States, at Mars Hill, near the river St. John. Katahdin Mountain is the most elevated summit of the chain, and rises between the east and west branches of the Penobscot river. It is 5335 feet high. A chain of highlands extends in a north-west direction, from near the north-west source of the Connecticut river, dividing the waters which flow into the St. Lawrence, from those which flow into the Atlantic Ocean and the Bay of Fundy. This continuous and somewhat irregular chain is of an average height of about 1400 feet, and in many parts much higher. The new road from Hallowell to Quebec crosses this range, over an elevation of 2000 feet. The interior of Maine rises so rapidly from the sea-coast as to prevent the flow of the tide far up its navigable rivers.

The rest of Maine is hilly, though the hills are not generally very elevated. The country along the sea-coast, and inland from ten to twenty miles, consists of rocks, water, woods, and generally a poor soil, with some fertile spots. The best lands are between the Penobscot and Kennebec rivers. The mountainous region in the north-west has a poor soil. East of the Penobscot river the soil is rocky and sterile, excepting around the sources of the St. John's river and its tributary streams, and especially in the territory formerly in dispute.

The soil, where once properly cultivated, is adapted to the growth of Indian corn, or maize, rye, barley, oats, peas, hemp, flax, potatoes, turnips, and most kinds of kitchen vegetables. Wheat is also grown, but not in large quantities. The forests consist chiefly of white pine and spruce trees, in large quantities, suitable for masts, boards, and shingles; and also of maple, beech, white and gray oak, and yellow birch. The land between the Kennebec and Penobscot rivers is well adapted to the purposes of agriculture and grazing. With good cultivation land of average quality yields forty bushels of maize to the acre, from twenty to forty bushels of wheat, and from one to three tons of hay. Apple, pear, plum, and cherry trees flourish; the peach tree does not thrive.

Bounty paid on quantity of wheat raised in 1837; viz., on 1,019,906 bushels, 77,314 dollars; in 1838, bounty paid on 1,107,849 bushels of wheat, 87,352 dollars; bounty paid in 1838 on 1,630,996 bushels of Indian corn, 66,328 dollars.

"Previously to the year 1807, when the wars in Europe gave to the United States a great share of the carrying trade of the world, commerce was so profitable, and the facilities for carrying it on in Maine were so great, that agriculture was greatly neglected for this superior source of wealth; but afterward, when an embargo, and non-intercourse, and war, crippled the resources of commerce, the inhabitants of Maine were driven from the seaboard on to the lands in the interior; and from that time the agricultural resources of the state have been more extensively developed. Much of the land is well adapted to grazing, and cattle and sheep are raised in great perfection. Sometimes the crop of Indian corn suffers from the shortness of the season. Among the fruits, apples, pears, plums, and melons succeed well.

"The facilities which Maine enjoys for commerce are very great. The rivers are extensively navigable, and numerous bays and inlets on the coast, protected as they often are by islands, furnish more good harbours than are found in any other state in the union. Ships are extensively built, not only for their own use, but for a foreign market. The fisheries furnish employment to many of the inhabitants, and are not only a source of wealth, but a nursery of seamen. LIME is exported, chiefly from Thomaston, to the amount of about 1,000,000 dollars annually. A fine building granite, chiefly from Hallowell, which is of a light colour, is also extensively exported. Maine, in point of shipping, is the third state in the union.

"The climate of Maine, though subject to great extremes of heat and cold, is generally favourable to health. The cold of winter, though severe, is steady, and is less injurious to the constitution than the sudden changes so frequent in many parts of the country. Near the ocean the heat of summer is greatly tempered by the sea breezes. The season of vegetation, at its greatest length, extends from April 21st to October 16th, though the vigour of vegetation does not continue more than three months and a half. On July 9th, 1838, the thermometer rose to 100 deg. above zero, and on January 26th, 1837, it sunk to 27 deg. below zero, which may be regarded as the extremes of temperature. Such extremes are of short continuance.

"Maine has a number of fine rivers. Among these is the Penobscot, 250 miles long, and navigable for large ships to Bangor, 52 miles from the ocean. The tide here rises from 20 to 25 feet, and is of itself sufficient to float large ships, and greatly facilitates the entrance and departure of vessels. The Kennebec has a course of about 250 miles, and is navigable for large ships to Bath, 12 miles from the ocean; and for vessels of 150 tons to Hallowell, 40 miles from the sea; and for sloops of 100 tons two miles farther, to Augusta; and for boats to Waterville, 18 miles above Augusta. The Androscoggin rises in New Hampshire, but runs chiefly in Maine, and unites with the Kennebec, 20 miles from the ocean. The Saco rises in the White Mountains in New Hampshire, but soon enters Maine, and, pursuing a south-eastwardly direction, discharges itself into Saco Bay. It is navigable for ships six miles to Saco falls. The Damariscotta is chiefly an arm of the sea, has a tide of ten feet, and is navigable for large vessels 18 miles, to Nobleboro. The Sheepscot is a small river, with a large bay at its mouth, which forms the harbour of Wiscasset, one of the finest in the state. All these, above the navigation for vessels, as well as many others, have numerous falls, and furnish many excellent mill seats. The Piscataqua river forms the boundary of Maine on the west, but runs chiefly in New Hampshire.

"Maine has numerous lakes and ponds in the interior. The largest lakes are Moosehead, which is 50 miles long, and from 10 to 15 broad; and Umbagog, which lies partly

in New Hampshire, and is 18 miles long and 10 broad. But so numerous are the smaller lakes and ponds, that it is computed that one-tenth of the surface of the state is covered with water.

"The coast of Maine abounds with islands, the largest of which is Mount Desert, in Frenchman's bay, and is 15 miles long and 12 broad. Long island, Deer island, and Fox islands, are on the west side of Penobscot bay. The principal bays are Penobscot, 30 miles long and 18 wide; Casco bay, extending 20 miles between Cape Elizabeth and Cape Small Point, containing many islands; and Passamaquoddy bay, lying between Maine and New Brunswick, six miles deep and 12 wide. The shores of Maine are bold and rocky, and have many inlets."—*United States' Gazetteer for 1840.*

The most commercial cities and towns are Portland, on Casco bay; Bangor, on the Penobscot; Hallowell, on the Kennebec; Thomaston, on the St. George river; Bath, on the Kennebec; Belfast, on a branch of Penobscot bay; and Wiscasset, on a bay at the mouth of the Sheepscot; also Augusta, Gardiner, Brunswick, Waldoborough, Frankfort, Prospect, Bucksport, Camden, Gorham, Wells, and Eastport.

COMMERCIAL ESTABLISHMENTS.—There were in Maine, in 1840, 70 commercial and 14 commission houses engaged in foreign trade, employing a capital of 1,646,926 dollars; and 2220 retail dry goods and other stores, with a capital of 3,973,593 dollars; 2068 persons were employed in the lumber trade, with a capital of 305,850 dollars; 123 persons were employed in internal transportation, who, with 56 butchers, packers, &c., used a capital of 95,150 dollars; 3610 persons were engaged in the fisheries, with a capital of 526,967 dollars.—*Official Returns.*

MANUFACTURES.—The value of home-made or manufactures in the farmers' or other houses, in 1840, was 804,397 dollars. There were 24 woollen manufactories, employing 532 persons, producing goods to the value of 412,356 dollars, and employing a capital of 316,105 dollars; 6 cotton manufactories, with 29,736 spindles, employing 1414 persons, producing goods to the value of 970,397 dollars, with a capital of 1,398,000 dollars; 16 furnaces produced 6122 tons of cast iron, and 1 forge for bar iron, employing 48 persons, and a capital of 185,950 dollars; 15 persons employed, produced 50,000 bushels of salt, with a capital of 25,000 dollars; 280 persons produced granite and marble to the value of 98,720 dollars; 6 paper manufactories employed 89 persons, producing to the value of 84,000 dollars, with a capital of 20,600 dollars; 37 persons manufactured tobacco to the value of 18,150 dollars, with a capital of 6050 dollars; hats and caps were made to the value of 74,174 dollars, and straw bonnets to the value of 8807 dollars, together employing 212 persons, and a capital of 28,050 dollars; 395 tanneries employed 754 persons, and a capital of 571,793 dollars; 530 other leather manufactories, as saddleries, &c., produced articles of the value of 443,846 dollars, and employed a capital of 191,717 dollars; 21 potteries employed 31 persons, and manufactured articles to the value of 20,850 dollars, with a capital of 11,353 dollars; 864 persons manufactured bricks and lime to the value of 261,586 dollars, with a capital of 300,822 dollars; 339 persons produced machinery to the value of 69,752 dollars; 119 persons produced hardware and cutlery to the value of 65,555 dollars; 4 rope walks, employing 34 persons, produced cordage to the value of 32,660 dollars, with a capital of 23,000 dollars; 779 persons produced waggons and carriages to the amount of 174,310 dollars, and employed a capital of 75,012 dollars; flouring, saw, and other mills, employed 3630 persons, producing manufactures to the amount of 3,161,592 dollars, with a capital of 2,900,565 dollars. Ships were built to the amount of 1,844,902 dollars; furniture was manufactured to the amount of 204,875 dollars, employing 1453 persons, and a capital of 668,558 dollars; 34 brick, and 1674 wooden houses were erected, employing 2432 persons, and cost 733,067 dollars; 34 printing offices, 14 binderies, 3 daily, 2 semi-weekly, 30 weekly newspapers, 5 periodicals, the whole employing 196 persons, and a capital of 68,200 dollars. The whole amount of capital employed in manufactures in the state, was, by official returns, 7,147,224 dollars.—*Official Returns.*

EDUCATION.—Among the institutions for education, are Bowdoin college, at Brunswick, named after the Honourable James Bowdoin, who founded it in 1794. It has been liberally endowed by Massachusetts, and by Maine, and is a flourishing institution. It has 11 masters, 165 students, and a library of 20,000 volumes. Waterville college, founded in 1820, is under the control of the Baptists. It has 6 masters, 65 students, and

a library of 7000 volumes. The Bangor theological seminary was established in 1816, is under the direction of the Congregationalists, for a classical and theological education, preparatory to the ministry. It has 3 masters, 43 students, and 7000 volumes in its library. The Methodists have an institution at Readfield, denominated the Maine Wesleyan seminary, founded in 1822. There were in the state, in 1840, 86 academies, with 8477 students, and 3385 primary and common schools, with 164,477 scholars. There were 3241 persons, over 20 years of age, who could neither read nor write.

RELIGIOUS DENOMINATIONS.—The three principal religious denominations in Maine, are the Baptists, the Methodists, and the Congregationalists. In 1836, their numbers were as follows:—Baptists, 222 churches, 145 ordained ministers, 15,000 communicants; Methodists, 115 travelling preachers, 15,493 communicants; Congregationalists, 161 churches, 119 ministers, 12,370 communicants. Besides the above, there are some Free-Will Baptists, Friends, Universalists, Unitarians, Roman Catholics, and Episcopalians.

BANKS.—There were on the 1st of January, 1840, 48 banks in Maine, with a total capital of 4,671,500 dollars; and a circulation of 1,224,658 dollars. At the close of 1840 the state debt amounted to 1,687,367 dollars.—*Official Returns.*

In the state prison at Thomaston, the convicts are constantly employed in quarrying and hewing stone.

PUBLIC WORKS.—The Cumberland and Oxford canal was completed in 1829. This canal, which connects Portland with Sebago Pond, is 20½ miles long, and has 25 locks. By another lock in Saco river, it is extended through Brandy and Long ponds, making its whole length 50 miles, and its whole cost was about 250,000 dollars. Bangor and Orono railroad was completed in 1836, and connects the two places, being 12 miles long. The Portland, Saco, and Portsmouth railroad was incorporated in 1837, and communicates with the railroad from Boston to Portsmouth. A railroad has been projected from Portland to Bangor, a distance of 132 miles, to complete the great chain of railroads along the sea-coast. Several routes have been explored from the sea to Quebec, the nearest and least expensive of which is from Belfast.* A regular and quick communication is established between the several parts of Maine, and the countries to the south, by steamboats or railroads, and the progress of settlement and improvement has been rapid. The most fertile and best wooded part of this state, is comprised in the extensive district which was comprehended within the long disputed territory. It abounds in fertile soils, rivers, pine, and various other magnificent timber trees.

* The progress of all new countries is extremely interesting, the following picture (communicated to the press by a traveller), of proceeding from one place to another, some years ago in Maine, compared with the present facilities of moving by steam power, is curious:—

"In leaving Bangor in a steamboat, though only for a short trip, I am thereby reminded of the difference which has taken place in our city, and throughout the country, in the mode of travelling between the present time and only twenty years since. I say twenty years, because it is about twenty years since I left the parental home, and in the good sloop 'Betsy' took passage for Bangor, where we arrived in safety, after eight days' toil. The usual mode of travelling then, from Bangor, was by the lumber coasters; in which passengers, male and female, were stowed away in the few berths in the cabin, or *sprawled* around upon the uncarpeted floor. There was indeed, a *semi-packet*, with a few extra berths hung round, with a narrow and rather scanty red bombazette frill. But mean as these accommodations may now be considered, they afforded the best means of conveyance between Bangor and Massachusetts, and during the rainy seasons in the spring and fall—the only conveyance; for instead of three daily stages west, as now, the mail was carried once a week only, and then on horseback between Bangor and Augusta. During the winter, to be sure, Moses Burley conveyed the mail, and occasionally a passenger or two in a sleigh with a tandem team; and during the summer in a rickety covered waggon! We remember them well! For they frequently required to be patched in their upper stories, and as I was the younger knight of the awl and thread, it became my duty to perform it! Then there was no small mail route to any of the towns above Bangor, and the old register in the monthly advertisement of the postmaster, of two fingers long, enumerated letters for the whole region round about. These reminiscences (?) have brought vividly to mind the appearance of the village as it then was. There were but five brick buildings erected, including the old distil house, that has since been removed to give place to the City Point Block. There were but eighteen stores—a few mechanics' shops—one bridge, and that the Kenduskeag, where toll was required—the court house, now city hall—a wooden gaol—three taverns, and a few dwellings. The largest religious

PUBLIC DEBT OF MAINE.

The bank commissioners of Maine, in their annual report, say that a sum equal to the entire aggregate circulation of their bank passes through Boston, and is redeemed there five times every year. From this it appears that the average time which a bill issued from a Maine bank is in circulation, until it is again returned to the bank for redemption, is only about two months.

society, now comprising the societies under the pastoral charge of Mr. Pomroy and Mr. Maltby, assembled for religious worship in the court house, under the charge of that excellent man, the Rev. Mr. Loomis; the Baptist society held their occasional meetings in the hall of Leavitt's brick store, now occupied by Pond and French; and the Methodist society occupied occasionally, an old wooden school house that stood on State-street. But enough of old times. The present, so far as Bangor is concerned, is too well known to require a word from me.

"The steamer, Portland, capable to my certain knowledge, of carrying about four hundred persons, and giving them a good breakfast, now pushes its way along,

'Against the wind, against the tide,'

on the bosom of the Penobscot, bearing her precious freight amid the most enchanting scenery, on one of the loveliest mornings that ever opened its eyes to light and bless our world."

COMMERCE AND NAVIGATION OF MAINE.

The trade and navigation of Maine is chiefly a fishing and coasting trade, and a trade in wood, fish, and a few other articles, to the southern states, and British colonies. The trade with Nova Scotia consists in bringing gypsum for manure from Nova Scotia, and some other articles from both provinces, exporting, in return, the produce of the United States. There is little or no intercourse between the ports of Maine and countries in Europe.

Previous to 1820, the trade and navigation of this state is included in the commercial accounts of Massachusetts.

According to a statement in the *Portland Advertiser*, 1841, the quantity of lumber which came to market down the three principal rivers of the state during the year 1841, was as follows, viz. :

On the Penobscot,	100 millions of feet,
On the Kennebec,	40 " "
On the Androscoggin,	20 " "

making 160 millions of feet, which, at an average value of ten dollars per M., will yield 1,600,000 dollars. The quantity which was floated down the Saco, Union, Narraguagus, Machias, and St. Croix rivers, was calculated at 65,000,000 millions of feet, value 650,000 dollars, and makes the aggregate value of timber sold 2,250,000 dollars.

NAVIGABLE RIVERS, SEAPORTS, AND TOWNS OF MAINE, chiefly on the authority of the *United States' Gazetteer* for 1844, the *Book of the United States* for 1842, and from local descriptions.

RIVERS.

The **PENOBSCOT** is the largest river of Maine, and divides into two main branches. The larger, or western branch, rises in the western highlands, which divide Maine from Canada, and not far from the sources of the Chaudiere river, which flows into the St. Lawrence. It winds downwards to the east, until it falls into Chesumcook lake, out of which it flows south-east, through Pemadumcook and other lakes, and unites with the eastern branch. This branch, called the Sebocis, rises in some small lakes near the head waters of the Aroostook river, and flows nearly south to its junction with the other branch, fifty-four miles above Bangor. The confluent stream then runs south-easterly until it receives Mattawamkeag river from the north-east, which is its principal tributary on the east. Its flood is then south-south-west, until it receives the Piscataquis, its chief western tributary; it then flows south by west, until it falls into Penobscot bay. Its upper portions have many falls and rapids, excellent as mill sites. It is about 275 miles long from its source to the sea. It is navigable fifty miles from the ocean to Bangor, for large vessels, and for boats, to a considerable distance above that town. The tide rises at Bangor more than twenty feet, to which the same causes contribute, which effect the high tides of the Bay of Fundy—the form of the bay, and the lateral rise of the sea caused by the rapid force and breadth of the gulf stream. There are a number of islands in the river above Bangor, the principal of which is Oldtown, the residence of the Penobscot tribe of Indians, who own all the islands in the river as far as the Forks, several miles above Mattawamkeag river, several of which are considerable and fertile. They have a considerable annuity secured to them by the state. There are several flourishing towns on the Penobscot bay and river. On the east side are Castine, Bucksport, and Orrington. On the west side are Thomaston, Camden, Belfast, Prospect, Frankfort, Hamden, Bangor, and Orono. Penobscot bay is a spacious body of water, and extends from the ocean at Owl's Head to Belfast bay, about twenty miles. Across the mouth of the bay, from Owl's Head to Burnt Coat Island, is about thirty miles. It contains a number of fine islands, the principal of which are Deer Island, Fox Islands, Isle of Haut, Long Island, and some others. From a hill above Camden, and from other points, the view of this bay, with its islands and numerous vessels, is beautiful. The bay and river contain many good harbours, the principal of which are Castine, Belfast, Bucksport, Bangor, and others.

The **KENNEBEC** is, next to the Penobscot, the most important river in the state: its principal source is the outlet of Moosehead lake; twenty miles below, it receives the Dead river, which is a longer branch, and rises within five miles of the Chaudiere, which flows into the St. Lawrence. Its general course is south by east, with several long and occasionally sudden windings. Its course from its source to the sea is about 200 miles. Its largest tributary is the Androscoggin, which enters it from the west, eighteen miles from the ocean. It is navigable for large ships twelve miles to Bath, for sloops of 150 tons, forty miles to Hallowell, and for sloops, two miles farther to Augusta, to which the tide rises; and for boats to Waterville, eighteen miles above Augusta. It has important falls at Waterville, and at three other places above, affording great water power. There are bridges, at Augusta, at Canaan, and at Norridgewock. It is generally closed with ice four months in the year at Hallowell, but usually open at all seasons below Bath. The most important towns on the river are, Bath, Hallowell, Augusta, Waterville, and Norridgewock. It flows through a fertile country, and is the medium of an extensive trade.

The **SACO** rises in the White mountains, N. H., within a few rods of the source of Ammonoosuc river, flowing west to Connecticut river, and east through the celebrated mountain *Notch*, with a rapid, foaming current, and frequent cascades. It enters Maine at Fryburg, and winds

in a south-easterly direction, until it enters the Atlantic, between Saco and Biddeford. It has four principal falls in Maine, of seventy, twenty, thirty, and forty-two feet respectively, which afford immense water power. Pine timber grew extensively on its banks, furnishing supplies for numerous saw mills; but this useful wood is disappearing rapidly by the axe of the timber cutter, and the fires of the new settlers. The other rivers are the St. Croix, Union, Machias, Androscoggin, Memumack, and numerous lesser streams.

PASSAMAQUODDY bay lies partly in the state of Maine, and partly in the British province of New Brunswick. Its entrance is about six miles wide from north to south, and its length is about twelve miles. Campobello Island divides the entrance into two passages. Deer Island and some smaller islands lie also within, and Grand Manan to the south, off the entrance of this bay. The bay is well sheltered, has everywhere a sufficient depth of water for the largest vessels, and is never closed by ice. Its waters abound with mackerel, cod, herring, and other fish. The rise of tide varies from twenty-five to thirty-three feet. The boundary of the United States passes on the west side of Campobello Island into the St. Croix river, which enters the north-west part of this bay.

From this bay to Portsmouth, near the boundary of New Hampshire, the coast of Maine presents bays, harbours, and inlets of the sea, rugged islands, and shores. Penobscot is the largest bay, and Mount Desert the largest island.

PRINCIPAL SEAPORTS AND TOWNS.

AUGUSTA is situated on both sides of the Kennebec river, forty-three miles from the ocean, at the head of sloop navigation, 44 deg. 18 min. 43 sec. north latitude, 69 deg. 50 min. west longitude, 163 north-north-east of Boston, Massachusetts, and 595 north-east of Washington. Population of the township, 1810, 1805; 1820, 2475; 1830, 9990; 1840, 5314. First settled, 1771, incorporated, 1797. The township is eight by six miles. The two parts of the town, or, as it, with many others, is in the *United States' Gazetteer* called, village, are connected by a bridge across the Kennebec, 520 feet long, which cost 28,000 dollars. It is regularly laid out; the ground rises on each side of the river; it has many fine buildings, and the streets are ornamented by trees on each side. Its agriculture, commerce, and manufactures are flourishing. Its tonnage is over 3000. The state house is a white granite building on a commanding eminence, half a mile south from the village. The apartments for the senate, house of representatives, and state offices, are spacious and well constructed. Before it, is a park, ornamented with walks and trees. The United States arsenal is a large stone edifice on the east side of the river, surrounded by seventy acres of large granite edifice with wings, on the east side of the river, surrounded by seventy acres of ground, and cost 100,000 dollars. The Augusta high school is a large brick building, sixty-five by fifty feet, two stories high, with a doric portico, and cost 7000 dollars. There is a strong dam erected across the Kennebec, half a mile above the village, with locks to facilitate navigation, completed in 1837, at an expense of 300,000 dollars. Its sluices constitute great water power. In constructing the dam, 2,500,000 feet of timber, and 75,000 tons of stones and gravel were used. The lake formed by this dam extends sixteen miles, and covers 1200 acres. It has sixty-four warehouses and shops, called *stores*, capital 141,650 dollars; three tanneries, one distillery, four grist mills, four saw mills, two oil mills, capital in manufactures, 66,550 dollars; two academies, 150 students; twenty-six schools, 1129 scholars.—*Official Returns, U. S. Gaz.*

BANGOR is situated at the head of the tide navigation, on the west side of the Penobscot river, sixty miles from the ocean. It is in 44 deg. 47 min. 50 sec. north latitude, and 68 deg. 47 min. west longitude, 230 miles north-east from Boston, Massachusetts; 663 miles from Washington. Population, 1790, 169; 1800, 277; 1810, 850; 1820, 1221; 1830, 2868; 1840, 8627. Kenduskeag, a stream 190 yards wide at its mouth, divides the city into two parts, which are connected by bridges. This stream has falls about one mile above the city,* which affords many mill seats. Close to, and above

* We shall follow in our description the names or terms used by the people and writers of the United States. Corporate towns are usually called *cities* in the United States, although places called villages, and others called corporate towns, are often more populous. Liverpool, in England, is, in a higher degree than many ancient cities, a corporate town, but no one gives it, nor hundreds of great corporate towns in England, Germany, France, and Italy, the bombastic term *city*; though the term itself has nothing objectionable in it, excepting its *ostentatious* application in the United States and British America. In olden times Boston was called a *town*. In modern, under a new corporate form, a *city*. We were some years ago charged with extreme ignorance by some American (colonial) paper, for saying incidentally, for the active timber trading "city of St. John," New Brunswick, the "town of St. John;" which city, by the bye, is not even the capital of the province. The Member of Parliament who would say *City of Liverpool*, or the Deputy who would say *City of Havre*, would both be laughed at, probably incur nicknames for the remainder of their lives. It is true that charters in America, incorporate some places as *towns*, and others as *cities*; but we can trace nothing in the latter, which could not, with equal utility and common sense, be included in the former.

the city, is a bridge across the Penobscot river, 1920 feet long, connecting it with Orrington, which cost 50,000 dollars. The harbour, which is at and below the mouth of the Kenduskeag, is capacious; the tide rises seventeen feet, and is sufficient to float large vessels. The principal article of trade is lumber, which comes down the river in large rafts. 1200 vessels, over 100 tons burden each, are employed in the lumber trade, besides a large number of vessels engaged in the coasting and foreign trade. The city occupies a pleasant situation, affording a full view of the river and surrounding country. The buildings, both public and private, are neat, many of them handsome. Steamboats regularly ply between this place and Portland and Boston, while the river is open, which is the case during about eight months in the year. Bangor has seven churches, one Congregational, one Episcopal, one Baptist, one Methodist, one Lutheran, one Universalist, and one Roman Catholic. It was incorporated as a town in 1791; as a city, in 1834. The Bangor Theological Seminary, originally called the "Maine Charity School," and first established at Hampden, six miles south, was opened in 1816. It proposes to give a classical and theological education for the ministry, in a shorter time than is ordinarily required in a collegiate and theological course, and is under the direction of the Congregationalists. It has three professors, forty-three students, 139 alumni, and 7000 volumes in its libraries. Bangor had, in 1840, eleven commercial and commission houses in foreign trade, capital, 98,500 dollars; 134 retail stores, capital, 318,500 dollars; value of lumber produced, 305,500 dollars; one tannery, two grist-mills, forty-two saw-mills, three printing offices, one daily, two weekly newspapers; capital in manufactures, 101,800 dollars; two academies, twenty-nine students, twenty-five schools, 1647 scholars. One of its manufactures is tarpaulin hats for fishermen and sailors, of which about 1800 per month are often made by men and women.—*Official Returns, U. S. Gaz.*

PORTLAND is situated on a peninsula at the western extremity of Casco bay, in 43 deg. 39 min. north latitude, and 7 deg. 20 min. west longitude from Greenwich, and 6 deg. 45 min. east from Washington. It is 110 miles north-north-east from Boston, 545 north-east from Washington. The population in 1800 was 3677; in 1810, 7169; in 1820, 11,581; in 1830, 12,601; in 1840, 15,218. Engaged in commerce, 397; in manufactures and trades, 1092; navigating the ocean, 726; in the learned professions, &c., 101. It extends three miles from east to west, and has an average width of three-fourths of a mile. This city presents an imposing appearance from the sea: rising like an amphitheatre between two hills. It is regularly laid out, and handsomely built, and has several public buildings, among which are a court-house, a spacious city hall, a gno, and sixteen churches. It has also a custom-house, six banks, a theatre, and an atheneum, containing a library of 4000 volumes. It has on a point at the entrance of the harbour, called Portland Head, a lighthouse, which is of stone, seventy-two feet high, built in 1790. On an eminence, on which Fort Sumner formerly stood, there is an observatory seventy feet high, which commands a view of the harbour and its islands. The harbour, which is among the best in the United States, is easy of entrance, spacious, and safe, being protected by islands at its entrance from the violence of storms. It is rarely obstructed by ice. It is defended on the opposite sides of the ship channel by Forts Preble and Scammel, on islands a mile and a half from the lighthouse. It is well situated for trade, having an extensive back country. There were, in 1840, forty commercial and eight commission houses, with a capital of 658,500 dollars; 256 retail stores, with a capital of 574,450 dollars; two lumber yards, capital 4000 dollars; fisheries, capital 11,300 dollars; machinery produced, 3000 dollars; one furnace, capital 5000 dollars; two tanneries, capital 9000 dollars; two potteries, capital 4000 dollars; two ropewalks, capital, 18,000 dollars; nine printing offices, five binderies, two daily, seven weekly, three semi-weekly newspapers, and three periodicals, employing ninety-four persons, and a capital of 34,500 dollars. Total capital in manufactures, 215,350 dollars. Eleven academies and grammar schools, 1118 students, thirty-two common schools, 1976 scholars. The registered tonnage in 1840 was 56,135, and that of the coasting trade about 20,000 tons. The principal articles of export are lumber and fish, with beef, butter, &c. The natural facilities of communication which Portland enjoys have been increased by the Oxford canal, which extends from it twenty miles to Sebago pond,* and, by a lock in Songo river, is extended into Brady and Long ponds, thirty miles farther. The trade of the city is chiefly with the West Indies and Europe, and its coasting trade greatly, though not altogether, with Boston. To the latter there is a railroad. Portland was formerly a part of Falmouth, and 130 houses, constituting two-thirds of the village, were laid in ashes by the British in October, 1775. It was incorporated with its present name in 1786, and received a city charter in 1832.—*Official Returns, U. S. Gaz.*

BELFAST is situated at the head of Belfast bay, on the west side of the Penobscot river, thirty miles from the sea. Incorporated in 1773. A small river, over which there is an extensive bridge, flows through the town. The harbour is safe and spacious, rarely obstructed by ice, and

* Small lakes, or lagunes, are usually called ponds in the United States and in British America. The English reader must not associate any thing so mean as a *horse pond* or *mill pond*, with an *American pond*.

sufficiently deep for vessels of the largest class. It is engaged in the foreign and coasting trade, in the fisheries, and in ship-building. Its principal exports are lumber and fish. Its registered tonnage in 1840 was 38,218. As the river above the town freezes, Belfast concentrates the principal winter trade of the Penobscot river. It had, in 1840, forty-two stores, capital 110,000 dollars; two fulling mills, four tanneries, two grist mills, five saw mills, one printing office, and one weekly newspaper. Capital in manufactures, 92,300 dollars. One academy, forty students, twenty-one schools, 1217 scholars. Population—1810, 1259; 1820, 2026; 1830, 3077; 1840, 4186.—*Official Returns*.

CASTINE, situated on a peninsula, on the east side of Penobscot bay, opposite Belfast, was first settled by the French in 1667, and by the English in 1760. It has a spacious, safe harbour, accessible at all seasons of the year, for ships of the largest burthen. It might easily be fortified, so as to make it a place of strength; the British had possession of it in the revolutionary and late war. It has a considerable trade in lumber, and shipping in the coasting trade and the fisheries. There were, in 1840, in the town twenty-seven stores, capital 97,400 dollars; 10,200 dollars invested in the fisheries; two tanneries, and one grist mill. Capital in manufactures, 14,050 dollars; seven schools, 406 scholars. Population, 1188.—*Official Returns, U. S. Gaz.*

GARDNER is situated on the west side of Kennebec river. Cobbescoate river enters the Kennebec near the town. With a continued succession of falls, it affords abundant water power. There were, in 1840, an Episcopal and a Methodist church, a bank, and a lyceum, thirty-four stores, capital 63,450 dollars; one fulling mill, one woollen factory, two paper factories, one sixteen saw mills. Capital in manufactures, 87,050 dollars. One academy, seventy students, twenty-one schools, 2086 scholars. Population, 5042.—*Official Returns, U. S. Gaz.*

HALLOWELL is situated on the west side of Kennebec river. The principal streets are parallel with the river, and crossed by others which rise from the river to the height of 200 feet. The principal trading street is near the river, and contains several brick stores and warehouses. The houses are well built. Vessels of 150 tons, and drawing nine feet of water, load or discharge at the wharfs. Its shipping is engaged chiefly in the coasting trade. Steamboats ply between this place and Portland and Boston. Granite is quarried here, and extensively exported. It is of a light colour, and is easily wrought. The town extends on both sides of the river. It has four tanneries. Capital in manufactures, 13,500 dollars. One academy, thirty-six students, twenty-nine schools, 950 scholars. Population, 4654.—*Official Returns, U. S. Gaz.*

MACHIAS, situated on the east side of the west branch of Machias river, near the falls, contains a court house, gaol, and numerous mills. Vessels of 250 tons ascend to the saw mills, and carry away the deals and lumber. It had, in 1840, ten stores, capital 38,250 dollars; two tanneries, two grist mills, twenty-three saw mills. Capital in manufactures, 132,939 dollars. Eleven schools, 382 scholars. Population, 1351. Tonnage of the district, 11,847.—*Official Returns, U. S. Gaz.*

NEWPORT, near a large pond, into which several streams empty, and the outlet of which forms the source of Sebasticook river, had, in 1840, four stores, capital 4800 dollars; one tannery, one grist mill, one saw mill. Capital in manufactures, 11,930 dollars. Eight schools, 471 scholars. Population, 1138.—*Official Returns, U. S. Gaz.*

PENOBSCOT is situated on the east side of the Penobscot river. An arm of its bay affords facilities for navigation. A large pond lies partly in its north-east part. It exports lumber. Incorporated in 1817. It had, in 1840, two stores, capital 1300 dollars; three grist mills, three saw mills. Capital in manufactures, 1930 dollars. Thirteen schools, 526 scholars. Population, 1474.—*Official Returns, U. S. Gaz.*

SACO is situated on the east side of Saco river, along which there is rich alluvial, or interval land. This village is situated at the falls, six miles from the mouth of the river, where it forms a cataract of forty-two feet, of great water power. The village contains a Congregational church, a bank, an academy, numerous mills, moved by water power, many handsome dwellings, and has considerable navigation and trade, particularly in lumber. Just below the falls there is a large pool, where vessels take in their cargoes. Along the shore there is a fine beach, four miles long, with a beautiful view of the ocean, and is resorted to for a pleasant drive in warm weather. There were, in 1840, thirty-eight stores, capital 68,050 dollars; three cotton factories, 17,760 spinners; three tanneries, two printing offices, two weekly newspapers, two grist mills, two saw mills. Capital in manufactures, 1,020,932 dollars; five academies, 246 students; twenty-one schools, 800 scholars; population, 4,408; tonnage, in 1840, 9358.—*Official Returns, U. S. Gaz.*

The capital stock of the York Manufacturing Company, at Saco, is 1,000,000 dollars. They have in operation three mills, one of which is 210 feet in length, forty-five in width, and five stories in height, including the basement and attic. The other two are 145 feet in length, and the same width and height as the first mentioned—containing, in the whole, 17,800 spindles, and 570 looms.

The number of females employed during the last year was, on an average	800
The number of males	200

Yards of cloth made per week.....	102,200
Bales of cotton used	100
Tons Anthracite coal per year.....	900
Cords of wood per year	300
Tons potato starch, per year	80
or more than 1200 lb. per week.	
Gallons oil used per week	100

The average amount of the wages paid is 3000 dollars per week, or about 150,000 dollars per annum. The annual cost of raw cotton at the present prices is 250,000 dollars. The boards used in making boxes for packing the goods amount to more than 1000 feet per day.

The quantity of copperas and other dyestuffs, constitute the other principal outlay for raw materials used. The amount of tonnage employed for freight of bales, received or shipped, is equal to about 100 tons per week.

No person, male or female, is employed under fourteen years of age, and very few under sixteen. None are admitted until they have been properly instructed in reading and writing, and in order to show their proficiency, they are, in all cases, required to write their names before going into the mills. Writing schools are generally kept in the evening for the improvement of those who desire it.

It is a general regulation of the company that those in their employment, or living in their houses, who have not had the cow-pox, should be vaccinated, and a physician is employed for that purpose. An arrangement is also made with the physicians of the place, at the expense of the company, to attend, in case of sickness, upon all females in their employment, without charge to them for medical advice or attendance.—*Official Returns, Boston Advertiser, &c. &c.*

THOMASTON is situated between Penobscot bay on the east, and St. George's river on the west. It contains an abundance of limestone, and lime is made to the amount of 300,000 casks annually. Large ships come up the St. George's river to this town, twelve miles from the ocean. The Maine state prison is situated on the bank of St. George's river, on which is found a blue granite, which the prisoners are extensively employed in cutting, and preparing for exportation. The buildings, which are spacious and commodious, have attached to them ten acres of ground. Major-General Henry Knox, of the revolutionary army, died here in 1807, and was buried in the middle of a thick cedar grove, on his own ground, near his dwelling. This town had, in 1849, ninety stores, capital 131,400 dollars; three lumber yards, capital 1050 dollars; two fulling mills, one pottery, two printing offices, two weekly newspapers, three grist mills, one saw mill. Capital in manufactures, 211,410 dollars; one college, fifteen students, three academies, 166 students, twenty-seven schools, 2423 scholars. Population, 6227.—*Official Returns, U. S. Gaz.*

YORK.—On the sea coast the surface of this post township is rocky and rough; the soil generally barren, but fertile near the valley. Watered by York river, which enters the Atlantic by a wide mouth, and Cape Neddock river. Agamenticus mount lies in its north-west part, a noted landmark for seamen, the summit of which presents an extensive prospect. Incorporated in 1653. The village on the north side of York river was formerly the capital of the county. It has a good harbour, which admits vessels of 250 tons, and is regularly laid out, with streets crossing each other at right angles. It has some shipping, employed chiefly in the fisheries. It was originally designed for a large city, but has not equalled the expectations of its early founders. On Cape Neddock, a rocky promontory, is a light-house. It had, in 1840, eleven stores, capital 7750 dollars; two fulling mills, one tannery, five grist mills, five saw mills. Capital in manufactures, 2975 dollars; 866 scholars in schools. Population, 3111.—*Official Returns, U. S. Gaz.*

BRIDGETON is situated on Long Pond, from which there is a communication by boats to Portland, through the Oxford and Cumberland canal. The place is well situated for trade with the interior. It had, in 1840, nine stores, capital 11,800 dollars; three fulling mills, four tanneries, one pottery, five grist mills, seven saw mills. Capital in manufactures, 16,350 dollars. One academy, eighty students, eighteen schools, 769 scholars. Population, 1987.—*Official Returns, U. S. Gaz.*

CALAIS is situated at the head of the navigation on the St. Croix or Schoodic river, nearly opposite to St. Andrews, New Brunswick. It has an upper and a lower village, which are about two miles apart, and connected by a railroad. The falls in the river here afford abundant water power. Below the lower falls is a bridge, which crosses to the British side. The tide here rises twenty feet, and vessels of the largest class ascend to the lower village. It had, in 1840, three foreign commercial houses, capital, 370,000 dollars; thirty stores, capital, 81,005 dollars; six lumber yards, capital, 71,000 dollars; one grist mill, twenty saw mills. Capital in manufactures, 130,820 dollars. Ten schools, 1217 scholars. Population, 2934.—*Official Returns, U. S. Gaz.*

EASTPORT is situated on Moose Island, four miles long; which, with several smaller islands in Passamaquoddy bay, constitute the township. A bridge on the north-west connects it with Perry, and a ferry of three miles with Lubec. It has a capacious dock. The village contained in 1840, five churches, forty stores, a garrison, and about 2000 inhabitants, who are chiefly en-

gaged in the lumber trade and the fisheries. There are in the town forty-nine stores, capital, 180,250 dollars; one tannery. Capital in manufactures, 8900 dollars. One academy, thirty students, eleven schools, 560 scholars. Population, 2876.—*Official Returns, U. S. Gaz.*

FREEMANT, pleasantly situated at the head of Casco bay, has a small harbour, with some coasting trade and ship building. There were, in 1840, eleven stores, capital, 11,900 dollars; one tannery, two grist mills, one saw mill. Capital in manufactures, 3100 dollars. Eighteen schools, 806 scholars. Population, 2662.—*Official Returns, U. S. Gaz.*

NORRIDGEWOCK is situated on both sides of the Kennebec river. The surface of the adjoining lands is moderately hilly; soil, generally fertile, and adapted to the culture of grain. The village is situated on the north side of Kennebec river, across which there is a bridge, connecting it with a village on the south side. It contains a court house, gaol, a Congregational church, and a female academy. Its trade is extensive with the back country. There were, in 1840, seven stores, capital 18,500 dollars; one fulling mill, two tanneries, one weekly newspaper, one grist mill, one saw mill, one oil mill. Capital in manufactures, 18,725 dollars. One academy, twenty-five students, twenty schools, 835 scholars. Population, 1805.—*Official Returns, U. S. Gaz.*

PHIPPSBURG is situated at the mouth of the Kennebec, on a peninsula, between the Kennebec river on the east, and New Meadow bay on the west, with the Atlantic on the south. It has several vessels, employed chiefly in the fisheries. Ship building forms a considerable business. It had, in 1840, seven houses in trade, capital 2850 dollars; one grist mill, thirty three saw mills. Capital in manufactures, 143,417 dollars. Nine schools, 654 scholars. Population, 1657.—*Official Returns, U. S. Gaz.*

PROSPECT, situated on the west side, and at the mouth of the Penobscot river, was incorporated in 1794. It had, in 1840, fifteen stores, capital 41,700 dollars; one fulling mill, two tanneries, two grist mills, twelve saw mills. Capital in manufactures, 35,350 dollars. Twenty schools, 1416 scholars. Population 3492.—*Official Returns.*

SIDNEY.—Kennebec river runs on its east border, and Snow's pond lies on its west border, which receives the waters of several other large ponds, and flows north through Waterville into Kennebec river. Incorporated in 1792. The soil is fertile, adapted to grain. It had, in 1840, two stores, capital 1450 dollars; one fulling mill, two tanneries, two grist mills, eight saw mills. Capital in manufactures, 35,899 dollars. Eighteen schools, 833 scholars. Population, 2190.—*Official Returns, U. S. Gaz.*

TURNER.—The Androscoggin river flows on its eastern border. The surface is pleasantly diversified: soil, generally fertile. Incorporated in 1786. It had, in 1840, ten stores, capital, 7300 dollars; two lumber yards, capital, 900 dollars; two fulling mills, one tannery, five grist mills, eight saw mills, one oil mill. Capital in manufactures, 21,685 dollars: one academy, eighty students, seventeen schools, 1067 scholars. Population, 2479.—*Official Returns, U. S. Gaz.*

VASSALBOROUGH.—The outlets of two large ponds, on its eastern border, afford water power. By means of the dam across the Kennebec river, at Augusta, and the lock at that place, vessels from the ocean ascend to this place. Incorporated in 1771. It had, in 1840, nine stores, capital, 9200 dollars; two fulling mills, one woollen factory, six tanneries, one paper factory, seven grist mills, seven saw mills. Capital in manufactures, 51,335. One academy, 100 students, twenty-two schools, 1164 scholars. Population, 2952.—*Official Returns, U. S. Gaz.*

WISCASSET has a port of entry, with a safe harbour at the mouth of the Sheepscot river, sufficient for vessels of the largest size, and seldom obstructed by ice. Its shipping are engaged in the foreign and coasting trade, and in the fisheries. Ship building is a leading business. The township has a court-house, several churches, a number of stores, a printing office issuing a weekly newspaper, and many large and handsome dwellings. It is one of the most important seaports of the state. There were, in 1840, five commercial houses, capital, 103,600 dollars; twenty-one stores, capital 27,800 dollars; one furnace, two tanneries, one pottery, two grist mills, one saw mill. Capital in manufactures, 71,150 dollars. Eight schools, 933 scholars. Population, 2314.—*Official Returns, U. S. Gaz.*

SCARBOROUGH.—Capital in manufactures, in 1840, 4260 dollars; fourteen schools, 854 scholars. Population, 2172.—*Official Returns.*

WATERVILLE is situated at Teconic falls on the Kennebec, which are eighteen feet in height, where there is a bridge across the river. It contains four churches, an academy, and various mills and manufactories. The Kennebec is navigable to this place from Augusta, for boats of forty tons. Emerson's stream, a tributary of the Kennebec, has a very high fall, and affords good water power, where there is a manufacturing village. Waterville College, under the direction of the Baptists in this township, was founded in 1820, has a president, and five professors or other instructors, 145 alumni, of whom thirty have been ministers of the gospel, sixty-five students, and 7000 volumes in its libraries. It has two edifices containing rooms for students, a chapel and a commons hall. There were, in 1840, thirty-nine stores, capital 129,800 dollars; two fulling mills, one college, ninety-four students, two academies, 262 students, nineteen schools, 1274 scholars. Population, 2971.—*Official Returns, U. S. Gaz.*

DAISIZOL is situated in a township. It lies east of the Damariscotta river, and south upon

the Atlantic. Pemaquid river supplies it with water power. The township has good harbours, and considerable shipping, engaged chiefly in the coasting trade and the fisheries. The first settlement in Maine was commenced in 1625, and incorporated in 1765. It had, in 1840, seven stores, capital, 4900 dollars; one fulling mill, four tanneries, two grist mills, five saw mills; capital in manufactures, 17,300 dollars; nineteen schools, 1014 scholars. Population, 2945.—*Official Returns, U. S. Gaz.*

BRUNSWICK is situated on the south side of the Androscoggin river, at the lower falls, where there is abundant water power. The river below is navigable for boats to Bath. A great quantity of lumber and deals comes down to Androscoggin. There are thirteen saw mills and a cotton factory at this place. A bridge connects it with Topsham.

Bowdoin college, a well-endowed institution, in this place, was founded in 1794. It has a president and ten professors or other instructors, 649 alumni, 165 students, and about 20,000 volumes. A medical school is attached to the institution, with four professors and seventy students. Its philosophical apparatus, and its cabinets of mineralogy and natural history are highly spoken of. The commencement of term is on the first Wednesday in September. The town had, in 1840, thirty stores, capital 34,150 dollars; one fulling mill, one woollen factory, one cotton factory, 4000 spinners, two tanneries, one pottery, one flouring mill, five grist mills, thirteen saw mills, one printing office, one periodical; capital in manufactures, 220,825 dollars; two academies, sixty-six students, thirty-two schools, 1065 scholars. Population, 4259.—*Official Returns, U. S. Gaz.*

WEST BROOK, through which the river Presumpscot flows from west to east, contains the manufacturing village of Sacarappa, and another called Stroudwater, which has some vessels employed in the coasting-trade and the fisheries. The Cumberland and Oxford Canal passes through the township, in which there were, in 1840, twenty-four stores, capital, 13,850 dollars; two fulling mills, two furnaces, eight tanneries, ten grist mills, thirteen saw mills; capital in manufactures, 236,460 dollars; two academies, eighty students, fifteen schools, 1439 scholars. Population, 4116.—*Official Returns, U. S. Gaz.*

Buxton had, in 1840, twelve stores, capital, 6650 dollars; two fulling mills, six tanneries, one pottery, two grist mills, twelve saw mills; capital in manufactures, 24,138 dollars; fifteen schools, 1271 scholars. Population, 2688.—*Official Returns, U. S. Gaz.*

ELLSWORTH is a township watered by the Union river, with soil adapted to grain and to grazing. Its village is situated on both sides of Union river, where it is crossed by a bridge, at the head of tide navigation, and to which large vessels ascend. It contains a court-house, and other county buildings. There were, in 1840, fifteen stores, capital, 4300 dollars; five grist mills, nineteen saw mills; capital in manufactures, 4000 dollars; one academy, twelve students, nineteen schools, 670 scholars. Population, 2263.—*Official Returns, U. S. Gaz.*

FRANKFORT is a township with fertile and commercial advantages. The river Penobscot at this place remains open through the year. The principal village of this township is on Marsh bay. There were in all, in 1840, thirty-six stores, capital, 35,500 dollars; one commercial house, capital, 2000 dollars; eighteen lumber yards, capital 54,400 dollars; two fulling mills, three tanneries, five grist mills, fifteen saw mills; capital in manufactures, 70,495 dollars; twenty-three schools, 953 scholars. Population, 3603.—*Official Returns.*

GORHAM, first settled in 1736. It has a well-endowed academy, and contained, in 1840, one tannery, one powder mill, three grist mills, four saw mills; capital in manufactures, 13,920 dollars; one academy, 309 students, twenty-three schools, 1160 scholars. Population, 3001.—*Official Returns.*

BIDDEORD town is connected with the town of Saco by a bridge. It extends to the sea, and has a revolving light off the mouth of the Saco river. It had, in 1840, fifteen stores, capital, 7500 dollars; one furnace, one fulling mill, two tanneries, one pottery, two grist mills, nine saw mills; capital in manufactures, 16,450 dollars; thirteen schools, 563 scholars. Population, 2574.

BATH.—This town had, in 1840, a population of 5741 inhabitants. It is situated on the Kennebec, twelve miles from the sea. The river at the town is seldom frozen over. Ship-building is extensively carried on. Registered tonnage, in 1840, 64,035. It has also an active coasting trade by sailing vessels and steam boats. It had, in 1840, three churches, two banks, seventy-five stores, capital 223,300 dollars; two furnaces, two tanneries, fifteen saw mills; value of ships built that year, 220,000 dollars; one printing office, one newspaper, five academies, 120 students, twenty schools, 1010 scholars.

SOUTH BERWICK is situated on the Salmonfall river. In 1840 it had a population of 2314 inhabitants, one fulling mill, three woollen factories, one cotton factory, 6912 spindles, three tanneries, two grist mills, five saw mills, sixteen stores; capital 24,300 dollars; capital in manufactures, 223,400 dollars, one academy, seventy-three students, fourteen schools, 871 scholars.

BUCKSPORT is a thriving town on the Penobscot river, with a good harbour. In 1840 it contained 3015 inhabitants, five foreign commercial houses, eighteen stores, one fulling mill, two tanneries, three grist mills, eight oil mills; capital in manufactures, 15,700 dollars. Exports lumber.

CAMDEN, on the Penobscot, had, in 1840, a population of 3005 inhabitants, eleven stores; capital in manufactures, 105,600 dollars, and several ship-building yards, with an active fishery and coasting trade.

KENNEBUNK is situated near the entrance of the river of the same name, and has a good har- bour, shipping, coasting trade, and fisheries. In 1840, population, 2323 inhabitants, seventeen stores, one cotton factory, one printing office and newspaper, one grist mill, three saw mills, &c.

MINOR, on the Androscoggin, had, in 1840, a population of 3550 inhabitants, fifteen stores, two fulling mills, and one furnace.

NORTH YARMOUTH, situated on Casco bay, has a coasting trade and fisheries. It contained, in 1840, a population of 2824 inhabitants, four churches, one academy, eighteen schools, fifteen stores, two fulling mills, five tanneries, three potteries, three grist mills, and three saw mills.

POLAND, with a village of agricultural Shakers, is a township on the Little Androscoggin. Population, 2360.

There are several smaller towns and villages in Maine.

NAVIGATION AND TRADE OF THE PORTS OF MAINE.

The navigation of the ports of this state is confined nearly altogether to British, colonial, and United States' shipping; the former chiefly in the trade between this state and the British colonies. In 1843 there arrived in Portland 116 British vessels, chiefly schooners, and all with cargoes of gypsum, for manure, and some wood from Nova Scotia and New Brunswick. They returned with flour and some West India produce, and many in ballast. The tonnage of those vessels amounted to 7312 tons, crews 506. Invoice value of cargoes imported, only 16837.; of cargoes exported, 12647.

Five hundred and eighty-one British vessels arrived from Nova Scotia and New Brunswick, during the same year, within the customs district of Passamaquoddy bay, Maine; tonnage, 33,509 tons; crews, 2424. Invoice value of cargoes, 97267. Cargoes consisted chiefly of gypsum, some timber, grindstones, and cargoes of coal; the latter from Picton. They sailed chiefly in ballast; a few carried to the British colonies, flour; and some wood to the West Indies. Value of exports, 90977. 110 British vessels arrived at Portsmouth, Maine, with gypsum, coal, wood, and some Poblas from Nova Scotia and New Brunswick. Tonnage, 5182 tons; crews, 388. Invoice value of cargoes, 9607.; of cargoes exported, only 4017. 10 British vessels arrived at the port of Bath, with gypsum, value 1497.; tonnage, 663 tons, crews, 38. Three arrived at the port of Belfast, one only loaded. Value of cargo, gypsum, 167.

The coasting trade, the fisheries, and carrying timber to the southern ports of the neighbouring states; and gypsum, grindstones, and coal from Nova Scotia and New Brunswick, constitute the chief carrying trade and employment of the vessels belonging to the state of Maine. The following table does not include the shore fisheries, or the coasting trade of the state.

GROSS RETURN of British and Foreign Trade, at the principal Ports within the Consulate of Maine and New Hampshire, during the Year ending December 31st, 1843.

II. NEW HAMPSHIRE.

NEW HAMPSHIRE is bounded on the north by Lower Canada, on the east by Maine, on the south-east by the Atlantic, on the south by Massachusetts, and on the west by Vermont, and by the Connecticut river. It extends from 42 deg. 41 min. to 45 deg. 11 min. north latitude, and from 70 deg. 40 min. to 72 deg. 28 min. west longitude. It is 160 miles long, and from 20 to 90 broad. Area 9280 square miles, or 5,930,200 acres. The population in 1790 was 141,885; in 1800, 138,858; in 1810, 214,460; in 1820, 244,161; in 1830, 269,328; in 1840, 284,574. Of these, 139,004 were free white males, 145,032 free white females, 248 free coloured males, 290 free coloured females. Engaged in agriculture, 77,941; in commerce, 1379; in manufactures and trades, 17,826; navigating the ocean, 455; navigating lakes and rivers, 198; learned professions, 1640.—*Official Returns to Congress for 1840.*

CONCORD is the seat of government, situated on the Merrimac river, sixty-three miles north-west from Boston, with which it has a boat communication, by means of the river and the Middlesex canal.

The state is divided into ten counties, which, with their population and capitals, were in 1840 as follows:—Rockingham, 45,771, C. Portsmouth and Exeter; Merrimac, 36,253, C. Concord; Hillsborough, 42,494, C. Amherst; Cheshire, 26,420, C. Keene; Sullivan, 20,340, C. Newport; Strafford, 23,166, C. Dover and Rochester; Belknap, 17,988, C. Guildford; Carroll, 19,973, C. Ossipee; Grafton, 42,311, C. Haverhill and Plymouth; Coos, 9849, C. Lancaster. These contain about 323 townships.—*Official Returns.*

New Hampshire extends only eighteen miles along the sea-coast, and the shore is generally a sandy beach, bordered in front by salt marshes, and indented by creeks and coves, which form harbours for small craft. There are only two heights on the coast, Great and Little Boar's Heads, both in the town of Hampton. The country, for twenty or thirty miles from the sea, is generally

sea, is generally

level or moderately undulated. Elevated hills and vales succeed; and toward the northern part the country becomes mountainous. The most elevated summits are the highest in the United States, east of the Rocky mountains. The principal chain rises between the Connecticut and Merrimac rivers, and passes north of the sources of the Merrimac. The highest points are Grand Monadnock, toward the south-west part of the state, 3254 feet above the level of the sea; Sunapee mountain, near Sunapee lake; and, farther north, Moosehillock, 4636 feet high; beyond which the White mountains rise to the height of 6428 feet, the most elevated summit being denominated Mount Washington. The Gap in the White mountains, called the Notch, is in some places not more than twenty-two feet wide, with lofty precipices on both sides, presenting wild and grand scenery. A road passes through this Gap, being the only pass over, or rather through, the mountains. By this road the products of the north part of New Hampshire, and the north-east part of Vermont, are carried to Portland; and so important is this communication considered by Maine, that its legislature has sometimes made grants for its improvement. One of the streams of the Saco river flows through the Gap.—*U. S. Gaz.*

The elevated lands of New Hampshire afford grazing, and the valleys and the banks and plains of the rivers, and especially the alluvians and plains of the Connecticut are fertile and remarkably productive. In the uncultivated part of the state the quality of the soil is ascertained by the various kinds of timber which grow upon it. Land upon which white oak grows is hard and stony; black and yellow birch, white ash, elm, and alder, grow on a deep, fertile, and moist soil, on which grass seeds and grain may be sown without ploughing; red oak grows best on heavy soils. Agriculture and pasturage have always been the chief pursuits of the people of New Hampshire. Apples and pears are the principal fruits. Each farm has usually an orchard. The principal productions are grass, wheat, rye, Indian corn; and beef, pork, mutton, and butter and cheese, are produced in great quantities. According to the census of 1840, the live stock consisted of 43,892 horses and mules, 275,562 neat cattle, 617,390 sheep, 121,671 swine. Value of poultry, 107,092 dollars. The agricultural products were, 422,124 bushels of wheat, 121,899 bushels of barley, 1,296,114 bushels of oats, 308,148 bushels of rye, 105,103 bushels of buck-wheat, 1,162,572 bushels of Indian corn, 243,425 lbs. of hops, 6,206,606 bushels of potatoes, 496,107 tons of hay, 26½ tons of hemp and flax, 1,162,368 lbs. of maple sugar. The products of the dairy were 1,638,543 dollars; of the orchard, 239,973 dollars; of lumber, 433,217 dollars; the sheep yielded 1,260,517 lbs. of wool.

The Merrimac river is rendered navigable by dams, locks, and canals, from Concord until it meets the Middlesex canal. By this route the produce of the southern part of the state is conveyed to Boston. From the western part, much of the produce is carried by the Connecticut river to Hartford. From the upper counties the produce is exported to be sold at Portland. Portsmouth is the most commercial town in the state. The principal articles of export are lumber, fish, beef, pork, horses, neat cattle, sheep, flax-seed, pot and pearl ashes.

The climate of New Hampshire partakes of the extremes of heat and cold, but the air is generally salubrious.* In the month of November the rivers are generally frozen over, and the snow usually lies on the ground until April, and in the northern and mountainous parts until May.

The principal rivers are the Connecticut, navigable for boats to the fifteen mile falls, near Bath, 250 miles above Hartford, in Connecticut; the Merrimac, navigable for boats to Concord. The

* Many instances of longevity, above 100 years of age, are recorded in this state. Among others, was Henry Langstaff, who had been eighty-four years in New England, and who died 18th of July, 1705, "above 100 years of age." His death was occasioned by a fall. Rev. Mr. Pike, of Dover, says in his journal, that he was "a hale, strong, hearty man, and might have lived many years longer, but for the accident which occasioned his death."

William Perkins, of Newmarket, who died in 1732, at the age of 116, was a native of the West of England. Governor Burnet, when on his way to New Hampshire, visited him, and examined him closely concerning events of the civil war in England. His son died in 1757, aged 87; and a great grandson died in 1824, at the age of 91.

William Scory, of Londonderry, died in 1754, aged 110. He was vigorous and active to the close of life. When 104, he walked from Londonderry to Portsmouth, thirty-six miles, and back again by another route twenty-five miles farther, "in order to see how many children his grand-children's grand-children had, for they had been married several years."—*Boston Weekly Post-Boy*, March 6, 1749.

Robert Metlin, of Wakefield, who died 5th February, 1787, aged 115, was a native of Scotland, lived many years at Portsmouth, where he carried on the business of a baker, and was noted as a pedestrian. He used to go on foot to Boston, then about sixty miles, performing the distance usually in a single day, where, after purchasing his flour, and putting it on board a coaster, he would walk home on the following day. He was 80 years old when he last performed this feat. The journey was thought, in those days, a good day's work for a horse.

John Lovewell, of Dunstable, lived to be about 100 years of age. He was a man of such

Saco, the Androscoggin, and the Piscataqua, rise in, and run through part of this state. The other rivers are the Upper and Lower Ammonoosuc, Sugar, Ashuelot, Contoocook, Maragalloway, and Nashua. By means of the Piscataqua, a navigation for small craft is opened to Newmarket, Durham, and Exeter.

The lakes are numerous; but few of them are large. Lake Winnipiseogee, near the centre of the state, is twenty-three miles long, and from two to ten broad; which, with Umbagog, which lies partly in Maine, Ossipee, Sunapee, Squam, and Newfound, are the principal.

The harbour of Portsmouth is one of the best in America. It has forty feet depth of water at low tide, and is easily accessible for the largest ships. The principal towns are Dover, Concord, Portsmouth, Nashua, Keene, Exeter, Manchester, Peterborough, Walpole, Claremont, Gilmanton, Meredith, Hanover, and Haverhill.—*U. S. Gaz.*

There were in 1840, in New Hampshire, eighteen commercial, and six commission houses engaged in foreign trade, with a capital of 1,330,600 dollars; 1075 retail dry goods and other stores, employing a capital of 2,602,422 dollars; 117 persons engaged in internal transportation, who, with thirty-eight butchers, packers, &c., employed a capital of 54,120 dollars; 626 persons employed in the lumber trade, with a capital of 29,000 dollars; 399 persons employed in the fisheries, with a capital of 59,680 dollars.

There were, in 1840, home-made, or goods made in the houses of families, manufactured to the value of 538,303 dollars. There were sixty-six woollen manufactories, and 132 fulling mills, employing 893 persons, producing goods to the value of 795,784 dollars, with a capital of 740,345 dollars; fifty-eight cotton manufactories, with 193,173 spindles, employing 6991 persons, producing goods to the value of 4,142,304 dollars, and employing a capital of 5,323,200 dollars; fifteen furnaces produced 1320 tons of cast iron, and two forges of 125 tons of bar iron, together employing 121 persons, and a capital of 98,200 dollars; one smelting-house, employing two persons, produced 1000 lbs. of lead; thirteen paper manufactories produced articles to the value of 150,600 dollars; and other paper manufactories to the value of 1500 dollars, the whole employing 111 persons, with a capital of 104,300 dollars; hats and caps were manufactured to the value of 190,526 dollars, and straw bonnets to the value of 9379 dollars, together employing 2048 persons, and a capital of 43,852 dollars; seventeen persons manufactured tobacco to the value of 10,500 dollars, with a capital of 2100 dollars; 251 tanneries employed 776 persons, and a capital of 386,402 dollars; 2131 other manufactories of leather, as saddleries, &c., produced articles to the value of 712,151 dollars, and employed a capital of 230,649 dollars; five distilleries produced 51,244 gallons, one brewery 3000 gallons, together employing seven persons, and a capital of 15,998 dollars; three glass houses employed eighty-five persons, producing to the value of 47,000 dollars, with a capital of 44,000 dollars; fourteen potteries employed twenty-nine persons, producing 19,100 dollars, with a capital of 6840 dollars; twenty persons manufactured soap to the amount of 10,900 lbs., and tallow candles to the amount of 28,845 lbs., and spermaceti or wax candles to the amount of 50,000 lbs., with a capital of 13,550 dollars; 191 persons produced machinery to the value of 106,814 dollars; forty-seven persons produced musical instruments to the amount of 26,750 dollars, with a capital of 14,050 dollars; 197 persons manufactured hardware and cutlery to the amount of 124,460 dollars; fifty-five persons manufactured granite and marble to the amount of 21,918 dollars; 236 persons manufactured bricks and lime to the amount of 63,166 dollars; 450 persons produced carriages and waggons to the amount of 232,240 dollars, employing a capital of 114,762 dollars; seven powder mills, employing eleven persons, produced 185,000 lbs. of gunpowder, with a capital of 58,000 dollars; mills of various kinds employed 1296 persons, and produced articles to the value of 758,260 dollars, with a capital of 1,149,193 dollars; ships were built to the amount of 78,000 dollars; the manufacture of furniture employed 233 persons, producing articles worth 105,827 dollars, and employing a capital of

venerable appearance, that the Indians regarded him with reverence, and never offered to molest him.

Samuel Welch, of Bow, who died the 5th of April, 1823, in the 113th year of his age, was born at Kingston, 1st September, 1710, and is supposed to have been the oldest native of New Hampshire, of European descent, who ever died in the state.

The oldest female in New Hampshire, Hannah Belknap, died in 1784, at the age of 107, lacking one month. When 105, she rode from Atkinson to Plaistow, on horseback, on a "pillion," behind her son, Obadiah Belknap. Her husband died at the age of 95.

Though more females live to an advanced age than males, yet fewer females in this country have attained extreme old age than males. Of the 163 persons who have lived in New Hampshire to the age of 100 years and upwards, 101 were females. Of those, one was nearly 107, three were 106, five were 105, four were 104, six were 103, nine were 102, twenty-four were 101, and the remainder 100, or in their hundredth year. Of the males, one was 117, one 116, one 115, one 112, six 105, four 103, four 102, eight 101, and the remainder 100, or in their hundredth year.

59,984 dollars. There were built ninety brick and 494 wood-houses, employing 985 persons, valued at 470,715 dollars. There were thirty-six printing offices, twenty-two binderies, twenty-seven weekly newspapers, six periodicals, the whole employing 250 persons, and a capital of 110,830 dollars. The whole amount of capital employed in manufactures was 9,252,448 dollars.

—*Official Returns.*

The principal institution for education in the state, is Dartmouth College, Hanover, founded in 1770. There is attached to it a medical department. The Gilmanton theological seminary, at Gilmanton, was founded in 1835. In these institutions, there were in 1840, 433 students. There were in the state 68 academies, with 5799 students; and 2127 common and primary schools, with 82,632 scholars. In the state, there were 942 white persons, over twenty years of age, who could neither read nor write.

The principal religious denominations are the Congregationalists, Baptists, and Methodists. In 1836, the Congregationalists had 159 churches, 142 ministers, and 18,982 communicants; the Baptists had 90 churches, 64 ordained ministers, and 6505 communicants. The Free-will Baptists had 100 congregations, and 81 ministers. The Methodists had 75 ministers. Besides these, there are Presbyterians, Unitarians, Universalists, Episcopalians, some Roman Catholics, and two societies of Shakers.

The public works of this state are chiefly those for the improvement of the Merrimac river, by dams, locks, and short canals. They are, Bow falls, three miles below Concord, three quarters of a mile long; Hookset falls, one-eighth of a mile; Amoskeag falls, one mile; Union falls, nine miles; and Sewell's falls, a quarter of a mile. The Eastern railroad extends from Massachusetts' line to Portsmouth, 15½ miles; the Nashua and Lowell railroad, from Nashua, New Hampshire, to Lowell, Massachusetts, incorporated in 1836. The Boston and Maine railroad extends from Massachusetts line to Exeter, fourteen miles.—*U. S. Gaz.*

Mr. J. B. Moon, in his interesting account of the commerce and resources of New Hampshire, says, "That this state has but one seaport, and that is situated in the south-easterly corner of the state, isolated in a considerable degree from a larger portion of the natural trade of the interior, which finds its way down the valleys of the Merrimac to Massachusetts, or of the Connecticut to Hartford. Neither is New Hampshire, by nature, an agricultural state. The elements of her early prosperity were found in the extensive forests of timber which once covered the state; and after those disappeared, in the unsurpassed water-power which exists in every county of the state. Doctor Franklin, some years before the revolution, remarked, that the great water-power possessed by this then colony, must in the end form the source of its prosperity. The establishment of the large manufacturing towns of Dover, Nashua, Newmarket, &c., and of the new manufacturing town at Amoskeag, which is growing up to be in the end the rival of its elder sister, Lowell, attest the wisdom of his observation.

"Wherever manufactures spring up into life, there better markets are created for the farming community; and agriculture, which before drooped, revives, and its beneficial results are multiplied. The hardy soil of New Hampshire has been improved and cultivated by as industrious a community, perhaps, as ever lived, until the products of that state, notwithstanding the disadvantages alluded to, have risen to a relative amount and value scarcely inferior to those of any other state. It should be borne in mind in examining the results of the products in the accounts of 1840, here given, that the whole area of this state embraces but a little more than 6,000,000 of acres, including the lakes and ponds, and those vast piles of mountains which have, not inappropriately, given it the name of the *granite state*.

"Returns of the polls and rateable estate in New Hampshire are made under the requisition of the state, once in four years, for the purpose of equalising the proportion of taxes among the different towns. The returns made to the legislature in November, 1840, exhibit the following aggregates:—

* *Travelling in the Last Century.*—*The Boston Evening Post* of April 6, 1761, contains the following paragraph, giving notice of the great improvements which had been made, by a spirit of enterprise which always distinguished our ancestors, in the mode of travelling between Portsmouth and Boston:—

"We learn from Portsmouth, New Hampshire, that for the encouragement of trade from that place to this town, a large stage-chaise, with two good horses, well equipped, will be ready by Monday week next, to set out from thence to this place, to perform once a week; to lodge at Ipswich the first night; from thence through Salem and Medford to Charlestown ferry; to tarry again the Monday following morning, so as to return to Portsmouth the next day, and set out 13s. 6d. sterling."

It thus appears, that a week was occupied by this *fast vehicle*, drawn by "two good horses," in going to Boston and returning. A man is now, 1844, able to visit the city from Portsmouth before breakfast, transact his business, and return to dinner!

"The growth of the manufacturing villages may be seen by the following data. In 1820, the population of Dover was 2871; it is now 6458. Dunstable (now Nashua) then numbered a population of 1142; now 6054. Somersworth, in 1820, had 841 inhabitants, where there are now 3283; Newmarket, 1083, where there are now 2746; and in Manchester (Amoskeag,) where, in 1830, there were only 887 inhabitants, there are now 3235. *In the same proportion that the growth of manufactures has been fostered, has the value of all the surrounding country been increased. The farmer has found a better market for his surplus productions and better prices. His lands have trebled in value, and he has become independent and wealthy from these causes.* He finds a ready demand for any thing he may have to sell, in his own neighbourhood, often at his own doors. The enlightened legislators of New Hampshire have foreseen the advantages of protecting the interests of the manufacturer, as identified with that of the agriculturist; and will, no doubt, continue to extend all proper encouragement to that branch of industry, as the best means of ensuring the permanent wealth and prosperity of the state.

"In estimating the natural resources of New Hampshire, its deposits of iron and copper, and immense quantities of granite suited to the purposes of building, claim consideration. A geological survey, under the authority of the state, is now in progress, conducted by one of the most skilful geologists of New England. His examinations have already brought to light the existence of several extensive beds of iron, and a valuable one of limestone, not hitherto known, which will prove sources of great profit to the state. Iron exists in many parts of the state. The ore which has hitherto been chiefly worked is at Franconia and Lisbon, in the northerly part of the state, and is considered one of the richest in the United States, yielding from 60 to 75 per cent. Ores of copper are found also at Franconia, Warren, Eaton, and other places, which want only a judicious investment of capital and labour to develop their treasures. The zinc ore mines of Warren, in this state, are described as abundant and rich. A very rich mine of tin ore has been discovered by the state geologist, in the town of Jackson, near the foot of the White Mountains, which promises to yield from 30 to 60 per cent in pure worked ore. This is the first workable tin mine that has been discovered in the United States. In the town of Eaton, there are also extensive deposits of ores of zinc and lead, mixed in some of the strata with veins of silver, which are worth being wrought.

"There is no state which possesses greater quantities of granite suited to the purposes of architecture, than New Hampshire.† At various points on the very margins, or near the banks of the

* Under the direct tax appraisals made by authority of the United States in 1798, 1813, and 1815, the valuation of real estate in New Hampshire was as follows:—

Value of lands, houses, &c., in 1798—23,175,046-93 dollars; in 1813—86,957,825 dollars; in 1815, 38,745,974 dollars.

The total number of dwelling-houses in New Hampshire in 1798, was 11,142.

† The largest stones found in the ruins of Balbec measured seventy-two feet long by eight feet square. A visit to the Quincy Granite Quarries would enlighten some upon this subject. I have a few days ago returned from a ramble in that part of the country. I called upon Mr. Willard, architect, of Boston, and engineer of these extensive quarries, which belong to the Exchange Company of New York; he kindly showed me the works—here the materials for the erection of the exchange are obtained: at the time I was on the spot, Mr. Willard was getting out two blocks of granite, each measuring eighty-two feet long by eight feet square; the same might have been obtained sixteen feet square if it had been necessary. These immense blocks, with the apparatus used, they appear to handle with as much ease as a stick of cord wood. The columns for the new custom-house at Boston are much larger than those above mentioned. Mr. Willard pointed out a spot where a stone of 600 tons might be got without any difficulty. The men were also employed in getting out an entrance for a burial-ground in Tremont-street, in the Egyptian style, of massive blocks, with some neat carving—*Public Ledger.*

Merrimac and Connecticut, are found immense and apparently exhaustless ranges of this stone. It is of the best texture and colour, and some of the quarries are quite free from those oxides or other mineral properties, which, on exposure to the atmosphere, mar the beauty of much of the New England granite. There is a single ledge of granite, remarkable for its extent and the quality of the stone, situated in Concord, the capital of the state, and within 200 rods of the Merrimac, which is navigable hence to Boston by way of the Middlesex canal. This ledge presents a surface of massive primitive granite, of more than 4000 square rods. The rift of the stone is very perfect, smooth, and regular, and splits are easily made to the depth of twelve to twenty feet, and of almost any required length. The face of this great ledge, which parts to the south-east, rises at an angle of about forty-five degrees from a plane of the horizon, to the height of about 350 feet—and the entire mass, from all that appears, and its quality has been tested at all points, is of the very best description of building-stone. This is mentioned merely as a sample of the building material which abounds in New Hampshire.

"*Finances.*—This state has no public debt, and, as a government, has no fixed revenues. It has no income derived from any railroad or canal, or any corporation whatever, excepting a tax of one-half per cent per annum on the capital stock of banks, which is appropriated for the support of free schools. The state has no revenue from lands, or auctions, or duties of any description, if we may except a small fee on civil commissions, all of which goes into the treasury, after deducting the salary (500 dollars) of the secretary of state. The government is supported by a direct tax levied upon the people, generally of about 60,000 dollars a year, which covers all the expenses of the government, civil, judicial, and miscellaneous. There are few states in the union where the laws are more promptly and fairly administered, or where there is, on the part of the government, a more zealous care for the interests, and profound regard for the will of the people, than in New Hampshire."

COMMERCE AND NAVIGATION OF NEW HAMPSHIRE.

The early trade of New Hampshire, as well as of the other New England states, consisted chiefly in catching, curing, and exporting fish, chiefly to Spain ; the exporting of furs, purchased at the trucking houses posted on the banks of the Merrimac and other rivers, and lastly in exporting timber, especially masts, after the year 1660. For a century after that period, New Hampshire supplied most of the white pine masts for the navy. Live oak and other kinds of oak, white and red oak staves, hoops, shingles, and clapboards, manufactured by the farmers during winter, were exchanged for manufactured goods. For a long time, the taxes were paid for in wood and provisions, the prices being fixed by official authority. The prices, in 1680, were white pine merchantable boards, the 1000 feet. White oak pine staves, 3*l.* the thousand ; red oak hoghead staves, 25*s.* the thousand ; Indian corn, 3*s.* per bushel ; wheat, 5*s.* ; malt, 4*s.* ; silver being then valued at 6*s.* 8*d.* per ounce.

The quality of the New Hampshire timber is extolled. Mr. J. B. Moon, in a recent article, which we have already quoted, on the commerce and resources of New Hampshire, states :—

"The timber used in the construction of the Constitution frigate, the famous 'Old Ironsides,' was taken from the woods of Allentown, on the border of the Merrimac, fifty miles from the shipyard. So of the Independence, 74 ; the Congress, and several other vessels of war. Ships of war were also built at Portsmouth, in early times, viz. : the Faulkland, of 54 guns, in 1690 ; the Bedford galley, 32 guns, in 1696 ; the America, of 40 guns, in 1749 ; the Raleigh, 32 guns, in 1776 ; the Ranger, 18 guns, in 1777 ; and a ship of 74 guns, called the America, was launched at Portsmouth, November 5, 1782, and presented to the King of France, by the congress of the United States.

"Ship-building has always been a considerable branch of business at Portsmouth. Prior to the revolution, European traders came thither to build ships, which they could do much cheaper than at home, by reason of the large profit on the goods which they brought out with them. The

merchants of Portsmouth also built numerous ships, of 200 and 300 tons, for the West India trade. Most of these were freighted with lumber, fish, live-stock, &c., and having proceeded to the islands, the cargoes were exchanged for sugars, which were taken to England in the same ships, and there sold for merchandise for the colonies. Other vessels, laden with spars and timber, proceeded directly for the British ports, and were sold, with their cargoes, for the same purpose. The coasting trade to the southern ports was an exchange of West India productions for corn, rice, flour, and naval stores, portions of which were re-exported to Newfoundland and Nova Scotia.

"The foreign trade, properly so considered, of New Hampshire, before the revolution, was very inconsiderable. Two or three vessels in a year would go to the free ports of the French and Dutch West Indies, with cargoes of lumber, fish-oil, and provisions, and bring home molasses to be distilled in the *only* distillery in New Hampshire. One vessel a year, perhaps, would go to the Azores, or the Canaries, with pipe staves, fish, and provisions, and return with a cargo of wine, the balance of which was paid in cash or bills; and sometimes a ship, which had been to England, would get a freight to Lisbon, or Cadiz, and return laden with salt and fruit. The foreign entrances and clearances at the port of Portsmouth, for the nine years preceding 1773, were as follows:—

YEARS.	Entries.	Clearances.	YEARS.	Entries.	Clearances.
1764.....	112	150	1769.....	128	151

1767.....	112	170	1772.....	108	136
1768.....	124	183			

"During the period of the war, not only this branch of trade, but the domestic and lumber trade, were suspended; and the people were thrown back upon the resources of agriculture. And it is worth mentioning, as a fact illustrating the fertility of the soil and the industry of the people, that they not only produced sufficient to sustain themselves in a period of war, under all the burdens it imposed, but *exported* large quantities of corn; while, before the revolution, considerable quantities were *imported* for necessary consumption.

"There are records existing which go to show that in addition to the exports above-mentioned, nearly half as much more was smuggled from New Hampshire during the revolution, chiefly into Nova Scotia—the country which, according to Lord Sheffield's calculation, was to supply the West Indies with provisions!

"As early as 1668, the government of Massachusetts (which then included New Hampshire,) passed an order, reserving for public use all white pine trees measuring twenty-four inches in diameter at three feet from the ground. In the reign of William III., a surveyor of the woods was appointed by the crown; and an order was sent to the Earl of Bellemont to cause acts to be passed for the preservation of white pine trees in New Hampshire, Massachusetts, and New York. Under Queen Anne, the people were forbidden to cut any such trees without leave of the surveyor, who was ordered to mark all such as were fit for the use of the navy, and keep a register of them. A perpetual struggle was kept up between the people and the surveyors; fines were exacted; mast trees were purposely destroyed; and the subject was perpetually dwelt upon by the royal governors in their despatches home.

"In the province of New Hampshire, were great numbers of pitch pine trees, unfit for masts, but capable of yielding tar and turpentine. A company of merchants of Portsmouth, in 1718, undertook to monopolise the manufacture, and they employed a great many labourers; but after many thousand trees had been prepared for use, such was the hatred of monopoly among the backwoodsmen, that a greater portion of the trees were secretly destroyed by unknown hands. A law was then passed making tar at 20s. per barrel, receivable in payment of public taxes, which encouraged the manufacture for a time. But another law being soon afterwards passed laying a penalty on the injuring of trees for drawing turpentine, only provoked a wanton spirit of resistance; the trees were destroyed; and the manufacture, which for a time was a source of considerable profit to the colony, was soon afterwards discontinued altogether.

"In the answers to the queries of the Lords of Trade and Plantations, prepared in 1730, the following account of the trade, &c., of New Hampshire is given.

the West India proceeded to the same ships, and timber, for the same purpose, and Nova

revolution, was the French and molasses to, would go to cargo of wine, en to England, The foreign 1773, were as

"Ans. 4. The trade of the province is lumber and fish. The number of shipping belonging to the province are five, consisting of about 500 tons; and there are about 300 or 400 tons of other shipping that trade here (annually) not belonging to the province. The seafaring men are about forty. The trade is much the same as it has been for some years past.

"5. The province makes use of all sorts of British manufactures, amounting to about 5000*l*. sterling, annually, in value, which are had principally from Boston.

"6. The trade of this province to other plantations, is to the Carribbee islands, whither we send lumber and fish, and receive for it rum, sugar, molasses, and cotton; and as to the trade from hence to Europe, it is to Spain or Portugal, from whence our vessels bring home salt.

"The natural produce of the country is timber (of various kinds, viz., principally oak, pine, hemlock, ash, beech, and birch) and fish, and they are the only commodities of the place. The timber is generally manufactured into beams, planks, knees, boards, clapboards, shingles, and staves, and sometimes into house frames; and the value of those commodities annually exported from hence to Europe and the West India islands, is about 1000*l*. sterling. Besides what is above-mentioned, the coasting sloops from Boston, carry from hence thither, in fish and timber, about 5000*l*. per annum.

"At this period (1730) the population of the province of New Hampshire was about 10,000; and a large portion of their trade then passed through Massachusetts, as has been the case down to the present day.

"It will be seen from the preceding remarks, that comparatively little is known of the statistics of the New England colonies prior to the revolution. No general account was kept of the articles of produce, or of the state of agriculture, manufactures, and commerce. People were thinly scattered over a wide space of country, and mainly occupied in subduing the forests and procuring the means of subsistence. The custom-house records were rarely if ever published, and many of them were lost. The returns published in London, in some respects imperfect, present the only view of the exports and imports of New England which can be found prior to 1750. These returns do not designate the commerce of the separate colonies, all the New England settlements being included in one general return. The proportion, however, which New Hampshire bore, prior to the revolution, in the commerce of the country, was greater than it has been at any subsequent period, excepting, perhaps, the periods of the non-intercourse, embargo, and war."

VALUE of Exports and Imports of the New England Colonies at different periods.

After the close of the revolutionary war, the commerce of New Hampshire gradually increased until the period when the acts of non-intercourse, embargo, and other steps preceding the war of 1812, took place. During the war a large number of vessels were laid up, some were lost, others sold or broken up, and their registers surrendered. On the conclusion of peace the tonnage of the port again went up to its former amount; the fishing business was resumed, and the carrying and coasting trade increased. For a few years past the navigation of Portsmouth has increased, and the trade coastwise and to Europe has nearly doubled.

The American tonnage employed in the fisheries is almost exclusively owned in New England, and principally in Massachusetts; the proportion held by that state, in a series of twenty years, having been rather more than four to one, as compared to the whole population; but the proportion of tonnage employed in these pursuits, held by the citizens of Portsmouth, the only port in New Hampshire, when compared with that of Boston, the principal mart of Massachusetts, is very nearly equal; that for Portsmouth being about four 12-95 tons to each inhabitant, and that of Boston being only about four 58-95.

For some years considerable attention has been given to the mackerel fishery, and also to the whale fishery, by a company formed for that purpose. The quantity of dried and smoked fish produced in 1839, was 28,257 quintals; and of whale and other fish oils, 45,234 gallons.

Ship building, though less extensively pursued than in some former years, is carried on to some extent at Portsmouth. The following table exhibits the number, class, and tonnage, of those built within the last few years.

YEARS.	Ships.	Briga.	Schooners.	Total Number.	Total Tonnage.
1830.....	3	11	14	1,000 94
1831.....	3	3	6	1,117 56
1832.....	3	3	3	9	2,023 17
1833.....	5	1	3	9	2,990 75
1834.....	5	2	7	2,730 58
1835.....	3	1	4	1,805 65
1836.....	5	1	3	9	3,280 16
1837.....	5	2	7	2,780 51

The value of the ships and vessels built in 1839, is estimated at 78,000 dollars.

PRINCIPAL TOWNS IN NEW HAMPSHIRE.

CONCORD lies on both sides of the Merrimac river, in 43 deg. 12 min. 29 sec. north latitude, 71 deg. 29 min. west longitude, 65 miles north-north-west of Boston, Massachusetts, 146 south-west of Augusta, Maine, 97 south-east of Montpelier, Vermont, 153 north-east of Albany, New York, 481 from Washington. There are two bridges across the Merrimac. The village, containing 200 houses, is on the west side of the river, and extends nearly two miles between the

bridges. There are also two other small villages in the township. Through Concord river, which is made navigable for boats, by dams, locks, and canals, and the Middlesex canal, and a railroad recently finished, a communication is formed with Boston, where its trade centres. There are five churches, and a court-house, gaol, &c. The state house is built of hewn granite. It is 126 feet by 49, with a projection in the centre of four feet on each front; it cost 80,000 dollars. The state prison is a solid structure of granite, 70 feet by 36, surrounded by a high stone wall. The falls in the Merrimac, and the locks at this place, afford great water power. There were in 1840 the thirty-six stores, capital 149,900 dollars; hardware and cutlery produced, value 40,810 dollars; one fulling mill, one woollen factory, capital 12,000 dollars; three tanneries, capital 5000 dollars; two potteries, four grist mills, thirteen saw mills, one paper factory, ten printing offices, five binderies, six weekly newspapers, one periodical, capital 48,950 dollars. Capital in manufactures, 197,000 dollars. One academy, 180 students, twenty-eight schools, 1180 scholars. Population, 4897.

DOVER is situated on the west side of the Piscataqua river, in 43 deg. 13 min. north latitude, 70 deg. 54 min. west longitude, 12 miles north-west-by-north of Portsmouth, 39 east of Concord, 50 south-west of Portland, 60 north of Boston, 495 from Washington. Population, 1820, 2871; 1830, 5449; 1840, 6458. It is watered by the Cocheco and Black rivers, tributaries of the Piscataqua. It is the oldest town in the state, the first settlement having been made in 1623, on a beautiful peninsula, between the Black and Piscataqua rivers, for the purposes of fishing. The pretty village of Dover is built around the lower falls of Cocheco, where the water descends suddenly 32½ feet, affording abundant water power, and the river never rises so as to endanger the mills on it. These falls are at the head of tide water, twelve miles from the ocean, admitting ordinary river craft up to the mills, and larger vessels within a quarter of a mile. This town has a court house, gaol, a bank, several churches, and several manufactures, and owns shipping and small craft. It is one of the most flourishing places in the state. There were, in 1840, sixty stores, capital 248,581 dollars; one fulling mill, one woollen factory, capital 20,000 dollars; four cotton factories, 28,666 spindles, one dyeing and printing establishment, with a capital of 1,056,000 dollars; three furnaces, two tanneries, one distillery, capital 10,888 dollars; four grist mills, three saw mills, three printing offices, three weekly newspapers, and one periodical. Total capital in manufactures, 1,166,644 dollars. Three academies, ninety-eight students, twenty-seven schools, 1193 scholars.—*Official Returns, U. S. Gaz.*

HANOVER is situated on the Connecticut river, over which is a bridge, connecting it with Norwich, Vermont. The surface is pleasantly diversified, and the soil is fertile. Moose mountain, an elevated ridge, crosses the east part of the town from north to south. The village is pleasantly situated on a plain, half a mile east of the river, and has a considerable number of neat buildings, mostly ranged round a square of about twelve acres. It contains a Congregational church, several stores, and the buildings of Dartmouth College, an old and highly respectable institution. It was founded in 1770, and contains, including the Medical Institution, a president, fifteen professors or other instructors, has had 2052 alumni, has 340 students, and 16,500 volumes in its libraries. The commencement is on the last Thursday in July. The Medical Institution was instituted in 1797, when there were but three others existing in the United States, has six professors, seventy-two students, and has had 577 graduates. The annual course of lectures commences on the first or second Thursday in August. There are three buildings of the institution: the centre or principal one of wood, 150 feet by 50, for under-graduates; a medical building, 75 feet by 31, north of it, and a chapel, &c., a corresponding building, south. There are in the town ten stores, capital 30,200 dollars; one tannery, one fulling mill, two grist mills, eight saw mills, two printing offices, one weekly newspaper, one periodical. Capital in manufactures, 28,850 dollars. One college, 404 students, sixteen schools, 512 scholars. Population, 2613.—*Official Returns, U. S. Gaz.*

Haverhill is situated on the east side of the Connecticut river. Incorporated in 1764. Watered by Hazen's and Oliverian brooks, which flow into the Connecticut river. The principal village, called Haverhill Corner, is pleasantly situated on the south side of Oliverian brook, near its entrance into the Connecticut river. It contains a court house, gaol, banking house, &c. academy, a Congregational church, a printing office, and about sixty dwellings, many of them hand-printing office, one weekly paper, four grist mills, nine saw mills. Capital in manufactures, 40,075 dollars. Nine schools, 532 scholars. Population, 2784.—*Official Returns, U. S. Gaz.*

MANCHESTER.—Merrimac river runs on its west border, and affords an extensive water power. Massabesic pond, a large body of water, lies on its east border. The canal around Amoskeag falls, in the Merrimac, is in this town. The soil is light and sandy, but fertile on the river. Incorporated in 1751. A flourishing manufacturing village is rising up at the falls. There were, in 1840, one fulling mill, one woollen factory, one brewery, two printing offices, three weekly newspapers, four grist mills, five saw mills. Capital in manufactures, 569,512 dollars. Eight schools, 950 scholars. Population, 3235.—*Official Returns, U. S. Gaz.*

MEREDITH.—Winnipiseogee lake bounds it on the east, and in the north part is a large pond connected with it, two miles long and one wide. Great bay projects into its south part. Over the

age.

ec. north lati- chusetts, 146 east of Albany, the village, con- s between the

outlet of Winnepesaukee lake is a bridge. Here is a neat village, which contains a court house, an academy, a Congregational church, a bank, several mills and manufactories, and about fifty dwellings. The township had, in 1840, twenty stores, capital 49,200 dollars; three tanneries, one grist mill, three saw mills, twenty schools, 787 scholars. Population, 3351.—*Official Returns, U. S. Gaz.*

NASHUA is situated on the west side of the Merrimac river. It is level on the east and uneven on the west. The soil is fertile. Watered by the Nashua river. The village is situated on the north side of the Nashua river, near its entrance into the Merrimac, and contains eight churches, fifty stores, and several dwellings. The river falls sixty-five feet in two miles, and produces an extensive water power, and here are large cotton factories. There were, in 1840, in the town, fifty stores, capital 129,706 dollars; five cotton factories, 34,348 spindles, one tannery, one pottery, two printing offices, two weekly newspapers, three saw mills. Capital in manufactures, 1,294,500 dollars. One academy, 214 students, thirty-six schools, 1476 scholars. Population, 6054.—*Official Returns, U. S. Gaz.*

PORTSMOUTH is situated in 43 deg. 5 min. north latitude, and 70 deg. 45 min. west longitude, from Greenwich, and 6 deg. 23 min. east longitude from Washington. It is 14 miles east-north-east from Exeter, 24 north from Newburyport, 45 east-south-east from Concord, 54 south-south-west from Portland, 54 north from Boston, and 493 from Washington. The population in 1810 was 6934; in 1820, 7327; in 1830, 8082; in 1840, 7887. It is the largest town and the only sea-port in the state, situated on a peninsula on the south side of the Piscataqua river, three miles from the ocean. The situation is pleasant and healthy, the land rising gradually from the harbour. It is well built, and many of the houses are large and handsome. The public buildings and institutions are, chiefly, eight churches, a court house, a goal, an academy, an atheneum, with a library, collections in natural history, &c., an almshouse, and a state lunatic asylum. It has an excellent harbour, with forty feet of water in the channel at low tide, and protected by its islands and headlands from all winds. The Piscataqua, opposite the town, is from one-half to three-fourths of a mile wide; and the tide, which rises ten feet, flows with so rapid a current as to keep the harbour free from ice. The main channel is on the east side of Great island, or Newcastle, and is defended by Fort Constitution, on Great island, and Fort McClary, in Kittery, opposite. There are also Fort Sullivan and Fort Washington on two other islands, which are not garrisoned in time of peace. There is also an entrance on the south side of Great island, called Little Harbour, but the water is shallow. There is a lighthouse on Great Island. This island contains 458 acres, and constitutes the township of Newcastle, and it is connected to Portsmouth by a bridge, erected in 1821. Portsmouth is also connected to Kittery by two bridges, one of which is 1750, and the other 480 feet in length.—*U. S. Gaz.*

There is a national dockyard on Navy Island, and several mercantile shipping yards. Portsmouth carries on the fisheries and foreign as well as coasting trade. The registered tonnage of the port in 1843, amounted to 13,918 tons; and the licensed, or fishing and coasting, 8790 tons; total, 22,079 tons, being a decrease since 1840, of 5297 tons. Notwithstanding the known wealth of the town, the population has, it will be observed, diminished. This is accounted for, from enterprise removing from it to a more extended field for employment. In 1840, there were in Portsmouth eighteen foreign commercial, and six commercial houses; capital employed, 1,251,500 dollars; 137 retail stores, capital, 278,500 dollars; capital employed in all manufactures, 187,000 dollars; six lumber yards, four furnaces, one woollen factory, one fulling, two flour, two grist mills, one rope walk, three printing offices, three book binderies, two weekly newspapers, three academies, 188 students, sixteen schools, 2222 scholars.—*Official Returns.*

GOFFSTOWN is situated sixteen miles south of Concord, on the Piscataqua. In 1840, population 2376, with eight stores, two fulling mills, one woollen, and three cotton factories, three tanneries, three grist mills, and nine saw mills; capital employed in manufactures, 119,515 dollars.—*Official Returns.*

HOKKENTON, on the Contoocook, had, in 1840, 2455 inhabitants, eight stores, one fulling mill, one tannery, four grist, and eleven saw mills; capital employed in manufactures, 21,300 dollars.

KEENE, situated on a plain on the east side and near Ashuelot river, contained, in 1840, a court house, church, twenty-five stores, one furnace, one fulling mill, one woollen factory, two glass factories, two tanneries, one bindery work, two printing offices, two weekly papers, and three periodical works, three grist, one oil, and seven saw mills; capital employed in manufactures, 98,262 dollars; two academies, 261 students, thirteen schools, 695 scholars.

SOMERSWORTH township contains Great Falls Village, to within a mile of which vessels of 250 tons ascend from the sea. In 1840 it contained four churches, with 2500 inhabitants. The whole township contained thirty stores, two grist mills, twelve fulling mills, one woollen factory, four cotton factories, with 40,121 spindles; capital employed in manufactures, 996,250 dollars.

PETERBOROUGH.—The surface of this township is uneven; soil fertile, and excellent near the streams. Drained by Contoocook river and its branches, which afford good water power. Chartered in 1738. It has six stores, capital 21,800 dollars; two fulling mills, two woollen factories,

court house, an

EXETER.—The soil of this township is moderately good, and well cultivated. The village is situated on Exeter river, a branch of the Piscataqua, at the head of tide water. The falls here afford great water power. It contains a court house, gaol, bank, three churches—two Congregational and one Baptist—and a well endowed academy. The river is navigable to this place for vessels of 500 tons burden. The township, in 1840, contained thirty stores, capital 67,240 dollars; four tanneries, one powder mill, three potteries, one paper factory, four printing offices, two binderies, three weekly newspapers, four academies, 275 students, twelve schools, 610 scholars. Population, 2925.—*Official Returns.*

ROCHESTER.—Salmon Falls river, which bounds this township on the north-east, and Cochecho river, which drains it, afford water power. The surface is uneven, and much of the soil is fertile. Incorporated in 1722. There is a considerable village at the falls on Cochecho river. It had, in 1840, eleven stores, capital 23,300 dollars; four fulling mills, three woollen factories, two tanneries, two grist mills, four saw mills, two oil mills. Capital employed in manufactures, 76,450 dollars. Seventeen schools, 788 scholars. Population, 2431.—*Official Returns.*

III. VERMONT.

Vermont is bounded on the north by Lower Canada; on the east by New Hampshire; on the south by Massachusetts; and on the west by New York; from which it is chiefly separated by Lake Champlain. It lies between 42 deg. 44 min., and 45 deg. north latitude, and between 71 deg. 38 min., and 73 deg. 26 min. west longitude. It is 157 miles long from north to south, and 90 miles broad on the northern boundary, and 40 on the southern, and contains 10,212 square miles, 6,535,680 acres. The population in 1790, was 85,589; in 1800, 154,465; in 1810, 217,895; in 1820, 235,764; in 1830, 280,679; in 1840, 291,948. Of these, 146,378 are white males; 144,840 are white females; 364 coloured males; 366 coloured females. Employed in agriculture, 73,150; in commerce, 1303; in manufactures and trades, 13,174; navigating the ocean, rivers, &c., 187; learned professions, &c., 1563.—*Official Returns, U. S. Gaz.*

The state is divided into fourteen counties, which, with their population in 1840, and their capitals, were as follows:—Addison, 23,583, C. Middlebury; Bennington, 16,872, C. Bennington and Manchester; Caledonia, 21,891, C. Danville; Chittenden, 22,977, C. Burlington; Essex, 4226, C. Guildhall; Franklin, 24,531, C. St. Alban's; Grand Isle, 3883, C. North Hero; Lamolite, 10,475, C. Hydepark; Orange, 27,873, C. Chelsea; Orleans, 13,634, C. Irasburg; Rutland, 30,699, C. Rutland; Washington, 23,506, C. Montpelier; Windham, 27,442, C. Newfane; Windsor, 40,356, C. Windsor and Woodstock.—*Official Returns.*

Vermont is a hilly or mountainous country. To the distance of from five to ten miles east of Lake Champlain the country is moderately uneven, and generally very fertile. The soil is generally deep, rich, moist, of a dark colour, loamy, and seldom parched with drought.

On the border of the streams it is alluvial and most productive, although some of the uplands are almost of equal fertility. Wheat is extensively cultivated, particularly on the west side of the mountains. Barley, rye, oats, peas, flax, and potatoes, flourish in all parts of the state. Indian corn thrives, and apples are abundantly produced; much of the mountain territory afford excellent grazing, and great numbers of cattle are annually driven from the state for sale.

A chain of mountains, called the Green mountains, from which the state takes its name, runs almost the whole length of the state, being in the south part from ten to fifteen miles wide, with some intervening valleys. Near the centre of the state the range divides into two parts; the western continues north, and, though broken, has the highest summits; while the eastern passes in a north-east direction, in an unbroken chain. It is a curious fact that this immense barrier has a passage through it, without even any high hills. The southern branch of Onion river, which flows into Lake Champlain, has its source very near to if not in the same swamp with the head of White river, which flows into the Connecticut. The road passes along these streams from Burlington through Montpelier to Hartford, Vermont, without any considerable elevations or depressions, and is called the valley road, presenting much grand and beautiful scenery. It passes near the base of Camel's Rump, one of the highest peaks of the Green mountains. Before the mountain divides, Killington Peak, 3675 feet above the level of the sea, is the highest summit, but there are two higher summits after it divides, which are in the western range. These are Camel's Rump, on the south side of Onion river, which is 4188 feet high, and Mansfield mountain, the highest of all, on the north side of Onion river, which is 4279 feet high. The land in the part of the state east of the mountain ridge, is more hilly than that on the western side. The natural growth of the soil, on the east of the mountains, is birch, beech, maple, ash, elm, and butternut; and on the west the growth of hard wood is intermixed with pine and other evergreens.—*U. S. Gaz.*

In 1840, there were in this state, 62,402 horses and mules; 384,341 neat cattle; 1,081,819 sheep; 203,800 swine; poultry to the value of 131,378 dollars. There were produced 493,800 bushels of wheat; 54,781 bushels of barley; 2,222,584 bushels of oats; 230,993 bushels of rye; 228,416 bushels of buckwheat; 8,869,751 bushels of potatoes; 1,119,678 bushels of Indian corn; 336,739 tons of hay; 29 tons of hemp and flax; 4286 pounds of silk cocoons; 3,699,235 pounds of wool; 4,647,934 pounds of sugar; 48,137 pounds of hops; 4660 of wax. The products of the dairy amounted in value to 2,008,737 dollars; of the orchard, to 213,944 dollars; of lumber, to 349,939 dollars; 718 tons of pot and pearl ashes were made.—*Official Returns.*

The exports consist of pot and pearl ashes, beef, pork, butter, cheese, flax, live cattle, grain, &c. The export trade east of the highlands, is chiefly to Boston and Hartford; and of the country west the produce is exported south to New York, and north to Montreal: to the latter it has a ready access through Lake Champlain, and to the former by the Champlain canal to the Hudson river.

The climate is healthy, though the winters are severely cold. The snow generally lies on the ground from December to March, and is often from two to six feet deep on the mountains. The temperature in winter is several degrees colder on the eastern than on the western side of the islands. Lake Champlain is generally frozen over until about the 1st of February.

The principal rivers flow into Lake Champlain. They are the Otter Creek, 85 miles long, and navigable for sloops six miles to Vergennes. Onion river is 80 miles long, and runs into the lake four miles north of Burlington. Lamoille is 70 miles long, and Missisque about the same length. Small boats ascend these streams to their lower cascades, of which there are several, which furnish abundant water power for mills. The principal rivers on the east side of the highlands, which flow into the Connecticut, are Deerfield, White, Black, and Passumpsic streams.

The area of Lake Champlain, about two-thirds of which is within Vermont, is estimated at about 600 square miles. Lake Memphremagog, which lies partly in Vermont and partly in Canada, is forty miles long, and seven or eight broad. Lake Bombazine and Salisbury Pond are considerable bodies of water. The islands of Lake Champlain are numerous, and some of them are large, fertile, and inhabited. The harbours on Lake Champlain, are St. Alban's, Burlington, and Vergennes.—*U. S. Gaz.*

Burlington is the largest and most commercial town in the state. The other principal towns are Middlebury, St. Alban's, Rutland, and Bennington, on the west, Montpelier in the centre, and Windsor, Woodstock, Danville, and Newbury, on the east side of the highlands.

TRADE AND MANUFACTURES.—There were in Vermont, in 1840, 747 retail stores, groceries, &c., which employed a capital of 2,964,060 dollars. There was employed in the lumber trade, a capital of 45,506 dollars. The home-made or domestic manufactures amounted in value to 674,548 dollars. There were 95 woollen manufactories, and 239 fulling mills, which employed 1450 persons, and produced fabrics to the value of 1,331,953 dollars, with a capital employed of 1,406,950 dollars; seven cotton manufactories with 7254 spindles, which manufactured fabrics to the value of 113,000 dollars, and a capital employed of 118,100 dollars; 26 furnaces which produced 6743 tons of cast iron, and 14 forges which produced 655 tons of bar iron, employing 788 persons, and a capital of 664,150 dollars; hats and caps were manufactured to the value of 62,432 dollars, and straw bonnets to the value of 2819 dollars, employing 126 persons, and a capital of 32,875 dollars; 17 paper manufactories produced paper to the value of 179,720 dollars; all other manufactories of paper yield the value of 35,000 dollars; all the paper mills employ 195 persons, and a capital of 216,500 dollars; two glass houses employed 70 persons, producing articles to the value of 55,000 dollars, with a capital of 35,000 dollars; eight potteries produced articles to the value of 23,000 dollars, with a capital of 10,350 dollars; 261 tanneries employed 509 persons, with a capital of 403,093 dollars; 399 other leather manufactories manufactured articles to the value of 361,468 dollars, with a capital of 168,090 dollars; granite and marble were manufactured to the value of 62,515 dollars; bricks and lime were made to the value of 402,218 dollars; two distilleries and one brewery employed five persons, and a capital of 8850 dollars; 87 persons produced machinery to the value of 101,354 dollars; 33 persons produced hardware and cutlery to the value of 16,650 dollars; 437 persons produced carriages and waggons to the value of 162,097 dollars, with a capital of 101,370 dollars; 190 persons manufactured furniture to the value of 83,275 dollars, with a capital of 49,850 dollars; 72 stone or brick houses, and 468 wooden houses, were built by 912 persons, at the cost of 344,896 dollars; 42 persons manufactured 1158 small arms; the value of vessels built were to the amount of 72,000 dollars; 29 printing offices, 14 binding works, two daily newspapers, 26 weekly newspapers, two semi-weekly newspapers, and three periodicals, employed 156 persons, and a capital of 194,200 dollars. The total value of capital employed in manufacture in the state was 4,326,440 dollars.—*Official Returns for 1840.*

EDUCATION.—The university of Vermont, in Burlington, was founded in 1791; Middlebury college, in 1800; and Norwich university in 1834. In these institutions, there were in 1840, 233 students. There were in the state 46 academies, with 4113 students; and 2402 primary and common schools, with 82,817 scholars; and 2270 persons over twenty years of age who could neither read nor write.—*Official Returns.*

and the Methodists. In 1830, the Congregationalists had 186 places of worship, 114 ministers, 20,575 communicants; the Baptists, 125 places of worship, 78 ministers, and 10,525 communicants; the Methodists had 75 itinerant preachers; the Episcopalians, one bishop and eighteen ministers. Besides which are Universalists, and a few Unitarians and Roman Catholics.

There is a Penitentiary at Windsor.

Vermont has no state debt.

BANKS—In September, 1839, there were 19 banks, with an aggregate capital of 1,325,530 dollars, and a circulation of 1,966,812 dollars.—*Official Returns.*

NAVIGATION—The vessels belonging to Vermont, are those which ply on Lake Champlain, and are licensed or enrolled at the port of Burlington. The tonnage, in 1843, amounted to 2762 tons. There is an active trade carried forward, chiefly by American citizens, on Lake Champlain—and the steam-boats are splendid vessels; a great portion of the produce of the western parts of Vermont is carried down the lake, and the River Chamby, to the St. Lawrence, for the Canadian market.

COMMERCE of Vermont, from 1791 to 1843, inclusive.

* For the final nine months only. The financial and commercial year for 1843-4 to commence afterwards on the 1st of July each year, instead of on the 1st of October; in pursuance of an Act of Congress passed the 26th of August, 1842.

the Baptists,

PRINCIPAL TOWNS IN VERMONT.*

MONTPELLIER, the capital of Washington county, and of the state of Vermont, is situated on an alluvial plain, at the junction of the north and south branches of the Winooski river, surrounded by elevated hills, in 44 deg. 16 min. north latitude, and 71 deg. 39 min. west longitude. Population, in 1830, 1792; 1840, 3725. The surface is uneven. The principal village is situated in the south-west part of the township, and about ten miles north-east of the centre of the state. It became the capital of the state in 1805. The Winooski, or Onion river and its branches afford good water power. The township was chartered in 1780, and first settled in 1786, on the present site of the village. The road through the Green mountains, which passes through this place, is not obstructed by high hills, and Montpelier is a great thoroughfare. The village contains a court-house, gaol, an academy, four churches—two Congregational, one Methodist, and one Universalist—and 1700 inhabitants. Among the public buildings is the state-house, a granite building, 150 feet long; the centre, including the portico, 100 feet deep; and the wings, seventy-two feet deep. The front in the centre has a fine Doric portico of six columns, six feet in diameter at the base, and thirty-six feet high. The edifice is surmounted by a dome, 100 feet high at the top, from the ground. In the interior are convenient state offices, and spacious rooms for the senate and house of representatives. There are in the township twenty-two stores, capital, 127,900 dollars; one furnace, one fulling mill, one tannery, three grist mills, five saw mills, one paper mill, six printing offices, one bindery, two dally and six weekly newspapers, and one periodical. Capital in manufactures, 82,775 dollars, one academy, 101 students, twenty schools, 975 scholars.

BURLINGTON is situated in 44 deg. 27 min. north latitude, and 73 deg. 10 min. west longitude. Population, 1830, 3525; 1840, 4271. This charming village is situated on a bay on the east side of Lake Champlain. Toward the south part of the village the shore is low, but towards the north it rises to a high bluff, on the level top of which barracks were situated during the last war, and on the slope of which was a battery. From the south part of the village, the ground rises, by a gradual slope, for the distance of a mile, to its eastern boundary, which is 250 feet above the level of the lake. The streets extend from east to west to the lake shore, and are crossed by others at right angles, dividing the whole into regular squares. Near the centre is a handsome public square on which the court-house is situated. The place contains many handsome houses, generally surrounded by shrubbery, with gardens in the rear; and many large and commodious stores and warehouses. It has a fertile and extensive back country, and is the largest and most commercial place in the state. A steamboat from Whitehall to St. John's stops daily at this place. There are three substantial wharfs, and on Juniper island, which contains about eleven acres of ground, and four miles from the shore, is a lighthouse. The United States have also erected a breakwater here, as a protection against westerly winds. The lake is here ten miles across, with several islands in view; and a more beautiful sheet of water cannot well be conceived. The view from the cupola of the college, as respects natural scenery, is second to none in the United States. In addition to the beautiful village, the meanderings of the Onion river, the broad water view of the lake with its islands, its vessels, and its steamboats, it has in front, on the opposite shore of the lake, in the state of New York, the grand Adirondack mountains, nearly or quite as high as the White mountains; and on the east, in full view, the Green mountains, with their two highest peaks, Camel's Rump, and Mansfield mountain. This mountain scenery elevates the beautiful into the sublime, and contributes to form an assemblage of objects which never becomes tame by familiarity.

The buildings of the university of Vermont, four in number, are on high ground at the east side of the village. This institution was founded in 1791, and received as an endowment from the state about 30,000 acres of land, located in the various towns granted by the state of Vermont. It has a president and five professors, or other instructors, 241 alumni, 110 students, and 9200 volumes in its libraries. The commencement is on the first Wednesday in August. It has a medical department attached to it, and is flourishing.

Here is a court-house, a gaol, two banking houses, six churches, for Congregationalists, Episcopalians, Unitarians, Methodists, and Roman Catholics, some of which are elegant buildings, an academy, and a female seminary, which are fine edifices.

About a mile and a half north-east of the court-house is a manufacturing village, on the falls of the Onion river, denominating Winooski city. Beside rapids, the river here has a perpendicular fall of about twenty feet, and affords a great water power. This village is situated partly in Burlington, and partly in Colchester, and connected by a fine covered bridge across the Onion river. The mills and manufactories of this place are already considerable.

The township contains some good land, and some less fertile. The first had a natural growth of hard wood, and the latter of pine. The first permanent settlement was made in 1783. It has forty-nine stores, capital, 352,830 dollars; one tannery, one rope factory, one brewery, one

* Condensed from the *United States' Gazetteer and Official Returns of 1840.*

glass factory, one pottery, one grist mill, three saw mills, three printing offices, two weekly newspapers. Capital in manufactures, 84,408 dollars; one academy, 104 students, seventeen schools, 835 scholars.—*Official Returns, U. S. Gaz.*

BENNINGTON is in 42 deg. 42 min. north latitude, and 73 deg. west longitude. Population, 1790, 2400; 1830, 3419; 1840, 3420. It was chartered in 1749 by Benning Wentworth, then the royal governor of New Hampshire, from whom it was named and settled in 1761. It is drained by branches of Hoosick river, which afford good water power. The soil is fertile, and marble, iron ore, and yellow ochre are found. The principal village is on elevated ground, and has a court house, a Congregational church, and an academy. A little to the east is a manufacturing village. It has fourteen stores, capital 55,670 dollars; three fulling mills, two cotton factories, 1608 spindles, three furnaces, four tanneries, one pottery, one paper factory, three grist mills, two saw mills, one oil mill, one printing office, one weekly newspaper. Capital in manufactures, 111,700 dollars. Two academies, 150 students, twelve schools, 419 scholars. Population, 3420.—*Official Returns, U. S. Gaz.*

Woodstock.—The surface of this township is picturesquely diversified, and drained by Otta Queechee river and its branches, and by Beaver brook, all of which afford water power. It contains two villages. The north or main village is one of the largest in the county, built around a public green. It contained, in 1840, a court-house, gaol, five churches—one Congregational, one Episcopal, one Methodist, one Christian, and one Universalist—the Vermont Medical College, twenty stores, two printing offices, 325 dwellings, and 1400 inhabitants. The south village is five miles south of the court house, and contains one church, two stores, and a number of mechanic shops. There were, in 1840, in the township twelve stores, capital 58,500 dollars; one fulling mill, two woollen factories, three tanneries, two printing offices, two weekly newspapers, three grist mills, five saw mills. Capital in manufactures, 127,505 dollars. One academy, twenty-five students, sixteen schools, 1042 scholars. Population, 3315.—*Official Returns, U. S. Gaz.*

WINDSOR.—The surface of this township is uneven, the soil fertile. Connecticut river bounds it on the east. Drained by Mill river, which affords water power. The village is situated on the west side of Connecticut river. Between the village and the river is a rich meadow, one-fourth of a mile wide. It contains three churches, a court house for United States' courts, a seminary for young gentlemen and ladies, a bank, a state prison, nine stores, one grist mill, one saw mill, a printing office, issuing a weekly newspaper, and many houses, ornamented with trees and shrubbery. Mill river has a fall of sixty feet in one-third of a mile, and affords good water power. Brownsville village, in the west part of the township, contains a Methodist church and two stores; and Sheddsville, in the same part, has a church common to the Freewill Baptists and Universalists. The township contained, in 1840, 2428 sheep. On the south border of the town is Ascutney mountain, 3320 feet above tidewater. There are in the town nine stores, capital 40,500 dollars; three fulling mills, two woollen factories, one furnace, three tanneries, one printing office, two periodicals, two weekly newspapers, five grist mills, eight saw mills. Capital in manufactures, 35,490 dollars. Eighteen schools. Population, 2744.—*Official Returns, U. S. Gaz.*

ST. ALBANS is bounded on the west by Lake Champlain, with a surface moderately uneven, and the soil a fertile loam, well cultivated. The village is situated three miles east of the lake, on elevated ground, and contains a court house and gaol, on a handsome public square, thirty by twenty-five rods, three churches—one Congregational, one Episcopal, and one Methodist—a bank, an academy, a printing office, publishing a weekly newspaper, and about 100 dwellings. It has a good landing-place on St. Albans bay, with a wharf and several storehouses. The business of the place, with a fertile back country, is extensive. There were, in 1840, in the town twenty stores, capital, 80,000 dollars; two tanneries, two printing offices, two binderies, two weekly newspapers, four saw mills; capital in manufactures, 20,500 dollars; one academy, eighty students, fourteen schools, 315 scholars. Population, 2702.

The other principal towns or townships are:

DANVILLE, with a population of 2693 inhabitants.

MIDDLEBURY, with a population in 1840 of 3162 inhabitants, a college, two academies, and twelve schools; sixteen stores, two woollen factories, one cotton factory, two tanneries, one furnace, two printing offices. Capital in manufactures, 172,700 dollars.

NEWBURY, with a population, in 1840, of 2578 inhabitants.

VERGENNES City, incorporated as such in 1788. It is situated seven miles up Otter creek, or rather a branch of Lake Champlain, as vessels of 300 tons can ascend to the city. In 1840 it contained 1013 inhabitants, three churches, thirteen stores, two fulling mills, one woollen factory, three tanneries, and iron works.

BATTLEBOROUGH, with a population of 2624 inhabitants, situated on the west branch of the Connecticut river, and is renowned for its "Typographic Company," established in 1836, with a capital of 150,000 dollars, which manufactures paper, and print and publish works upon a most extensive scale. The township had, in 1840, twenty stores, and a capital of 237,600 dollars in its paper and other factories.

ROCKINGHAM, with, in 1840, a population of 2330. Capital, in woollen and other manufactures, 119,937 dollars.

RUTLAND.—The surface of this township is uneven; soil, various, from a strong loam to a light sand, but generally fertile. Drained by Otter creek and its branches, which afford water power, and by a branch of Castleton river. The principal village, on an elevated situation, contains a court house, gaol, a bank, one Congregational and one Episcopal church, twelve stores, a printing office, issuing a weekly newspaper, and about 100 dwellings, many of them handsome. In the west part of the township is another village, containing a Congregational church, and about thirty dwellings. The Baptists and Methodists also have churches. Chartered in 1761. There were, in 1840, in the township eleven stores, capital, 28,700 dollars; one tannery, one printing office, one bindery, one weekly newspaper; capital in manufactures, 23,450 dollars; sixteen schools, 963 scholars. Population, 2708.—*Official Returns, U. S. Gaz.*

IV. MASSACHUSETTS.

MASSACHUSETTS is bounded on the north by Vermont and New Hampshire; on the east by the Atlantic; on the south by the Atlantic, Rhode Island, and Connecticut; and on the west by New York. This state lies between 40 deg. 23 min. and 43 deg. 52 min. north latitude, and 60 deg. 50 min. and 73 deg. 10 min. west longitude. It is 190 miles long and ninety broad. Its area is about 7500 square miles, or 4,800,000 acres. The population in 1790 was 393,727; in 1800, 422,845; in 1810, 472,040; in 1820, 523,287; in 1830, 610,408; in 1840, 737,699.—*Official Returns for 1840.*

The climate of this state is favourable to health, and about one in seven of the inhabitants live to seventy years of age. The extremes of temperature are from 20 degrees below to 100 degrees above zero; but such extremes are rare and of short continuance.

Massachusetts is divided into fourteen counties, viz., Suffolk, population, 95,773, C. Boston; Essex, population, 94,437, C. Salem, Crewbury Port, and Ipswich; Middlesex, population, 106,611, C. Cambridge and Concord; Worcester, population, 95,313, C. Worcester, 30,897, C. Northampton; Hampden, 37,366, C. Springfield; Franklin, 28,812, C. Greenfield; Berkshire, 41,745, C. Lenox; Bristol, 60,164, C. New Bedford and Taunton; Plymouth, 47,373, C. Plymouth; Barnstable, 32,548, C. Barnstable; Dukes, 3958, C. Edgartown; Nantucket, 9012, C. Nantucket; Norfolk, 53,140, C. Dedham.—*Official Returns for 1840.*

The mountain or hilly ranges of Vermont and New Hampshire branch into parts of Massachusetts, crossing the western part of the state into Connecticut. East of these highlands, the lands are hilly and sterile, except in the southern districts, where the soil is level and sandy. On the sea-coast the land is sterile and rocky, particularly in the south-east. The lands in the valleys of the Connecticut and Housatonic rivers are alluvial and fertile. Agriculture has been carefully and skilfully attended to in this state. No extensive or alluvial tracts occur in Massachusetts; although limited spots occur on the banks of most of the streams, and, with the adjoining elevated woodlands and pastures have, by skilful industry, been brought under profitable cultivation, and form the best farms in the state. There are numerous uncultivated swamps. The greater part of the soil of Massachusetts is diuvial and ungenerous. By clearing away the stones and rocks, and by the extensive application of manure, many of the originally sterile districts have been converted into productive farms.

The principal rivers are the Connecticut, which winds for about fifty miles in this state. Deerfield and Westfield rivers enter it from the west, and Miller's and Chickapee rivers from the east. The Housatonic rises in Berkshire county, in the western part of the state, and flows into the state of Connecticut. The Merrimac has a course of fifty miles in the north-east part of the state, and falls into the ocean at Newburyport. It is navigable for large vessels, fifteen miles up to Haverhill.

Massachusetts bay extends from Cape Ann on the north, forty miles, to Cape Cod on the south, and includes Boston and Cape Cod bays. Buzzard's bay, on the south shore of the state, is thirty miles in length. Boston harbour is one of the finest in the world, easy of entrance, safe and capacious, and easily and well defended. New Bedford, on Buzzard's bay, has a fine harbour. The other principal maritime towns are Salem, Newburyport, Gloucester, and Nantucket. The other principal towns are Lowell, Plymouth, Worcester, Springfield, Pittsfield, and Northampton.

There are several important islands off the south shore of Massachusetts. The largest is Nantucket, fifteen miles long and eleven broad. It constitutes a county of its own name. Martha's Vineyard, to the west of Nantucket, is twenty miles long, and from two to ten broad. This, with Elizabeth's Islands, in Buzzard's bay, and some other small islands, constitutes Duke's county.

EDUCATION.—Massachusetts has three colleges and two theological seminaries. Harvard Uni-

tivation, be equal to the average of all the states. The live stock and products of agriculture were, by the returns of 1840, as follows:—

Number of horses	61,500	Number of pounds of wool.....	942,000
Ditto neat cattle	283,000	Ditto, ditto, cocoons	21,300
Ditto sheep	378,000	Ditto, ditto, sugar	549,000
Ditto swine	143,000	Ditto, ditto, hops	255,000
Ditto bushels of wheat	210,000	Ditto tons of broom-corn.....	600
Ditto, ditto, Indian corn.....	2,203,000		dollars.
Ditto, ditto, barley	156,000	Value of poultry	178,000
Ditto, ditto, rye.....	563,000	Ditto the products of the dairy ...	2,374,000
Ditto, ditto, buckwheat	102,000	Ditto, ditto, orchards	390,000
Ditto, ditto, potatoes	4,850,000	Ditto, ditto, market-gardeners ...	384,000
Ditto tons of hay.....	683,000	Ditto, ditto, nurseries and florists ..	112,000

"Massachusetts," observes the Hon. Mr. Hudson, member of congress from the state, "has no great staple, like the cotton of the south, or the wheat of the middle and western states. What she raises, she consumes at home; and she procures large supplies of some of these articles from her sister states, as we shall show hereafter. But, although Massachusetts is not distinguished for her agricultural products, the attention paid to agriculture has increased within a few years. The agricultural societies which have been established in the different counties, and which have enjoyed, to a small extent, the patronage of the government, have exerted a salutary influence. Several papers devoted to this subject are published within the commonwealth, and are well sustained. Within a few years, an agricultural and a geological survey of the state have been made by gentlemen well qualified for those purposes, who were appointed by the government, to which they made their reports. These reports, having for their object a development of the agricultural resources of the state, were published by the order of the legislature, and distributed in all parts of the commonwealth; and have contributed, with other causes, to give to the agriculture of the state a more scientific character. New systems of husbandry have been introduced—swamps, formerly useless, have been reclaimed—the nature of soils, and the kind of manure best adapted to each, are beginning to be better understood—an improved race of animals has been introduced or reared up, and great improvements have been made in most of the implements of husbandry; from all which, we infer that the cultivation of the soil in this ancient commonwealth will keep pace with the improvements of the age."

Among other measures passed by the legislature of the state, that of granting premiums for growing wheat, appear to us a great fallacy. We, on principle, object to bounties of every description, as no branch of industry has ever thriven by such artificial support, against permanent natural obstacles. Suppose we grant bounties, in England, for growing pine apples and grapes, will these delicious fruits afterwards become acclimated, so as to ripen in the same perfection in the open air?—*Official Returns, U. S. Gaz., and various American authorities.*

MANUFACTURES OF MASSACHUSETTS.

The first colonists of New England were compelled by necessity to turn their attention to some species of household manufacture, such as shoes and hats. As early as 1700, the people of Massachusetts having commenced manufacturing in their families coarse woollens for their own wear, and a mixed article of flax and wool, called *linsey-woolsey*, principally for women's wear. These articles were dyed with maple, walnut, butternut, and other kinds of bark, moss, and vegetables. Some attempts were made to manufacture other necessary articles; but the condition of the country, and the exclusive policy of the mother country, prevented any considerable progress being made in manufactures before the revolution.

The first cotton manufactory in the United States, was established by a company at Beverley, in Massachusetts, in 1783. On the following year, this company was incorporated. A periodical of the day, describing this factory, says, "that an experiment was made with a complete set of machines for carding and spinning cotton, which answered the warmest expectations of the proprietors. The spinning-jenny spins sixty threads at a time, and with the carding-machine forty pounds of cotton can be well carded in a day. The warping-machine, and the other tools and machinery, are complete, performing their various operations to great advantage, and promise much benefit to the public, and emolument to the patriotic adventurers." But this company soon abandoned the business as a corporate body, and it was carried on by individuals, who subsequently erected a mill for the purpose of spinning cotton by water; but the undertaking was not successful.

Soon after the establishment of the factory at Beverley, a more successful effort was made by Mr. Samuel Slater, who is called "the father of American manufactures," at Pawtucket. Cotton cloth was first made in the country, at this factory, by water-power machinery. The Newburyport woollen manufactory was incorporated in 1794, and the calico-printing manufactory, at the same place, in

same place, in

1796. They do not appear to have succeeded. In 1800, the Salem Iron Factory Company was chartered, with power to hold landed and personal estate to the value of 330,000 dollars. In 1802, the Danvers and Beverley Iron Company was incorporated, with a like capital of 330,000 dollars. In 1805, the Amesbury Nail Factory Company was chartered, with a capital of 450,000 dollars. In 1809, two companies were formed for the manufacture of glass. Previously to the end of 1815, there were about fifty companies incorporated; chiefly for the manufacture of cotton, or of cotton and wool. These cotton mills were chiefly employed in manufacturing cotton-twist, which was afterwards woven by handloom weavers. The cotton and wool factories did little more than weave sattinets, a common cloth made of cotton and wool.

In 1812, the Waltham Manufacturing Company, with a capital of 450,000 dollars, began working. It was the only establishment of any note at the close of the war, in 1815, and it has continued to prosper.

It was not until about 1812, that woollen manufactures were established, to any important extent, in Massachusetts. The restrictive measures which preceded the late war with Great Britain, and that war, created those woollen factories. They did not grow up naturally; and when peace came on, most of the proprietors were ruined. From 1815 to 1828, the woollen manufactures of this state did not, though persevered in, flourish; nor can they be said to be now, in any important degree, prosperous. They were all undertaken with the idea of being protected by a heavy tariff on foreign woollens.

Massachusetts is pre-eminent among all the states in the manufacture of boots and shoes, soap and candles, hardware and cutlery, refined sugar, paper, powder, and fire-arms; and ranks after New York and Pennsylvania in the manufacture of machinery, drugs, paints, and dyes, and ranks after New York; after Kentucky, in cordage; after New York, in musical instruments, hats, caps, and bonnets; after Connecticut, in silk; and is the third state in the manufacture of glass, leather, flax, and salt. In capital employed in manufactures of all kinds, Massachusetts owns nearly one-sixth of the whole manufacturing capital of the country, New York being the only state with a larger capital employed. Several of the principal manufacturing establishments in Maine and New Hampshire are owned, to a considerable degree, by capitalists in Massachusetts.—Official Returns, &c.

A STATEMENT of the Manufactured Products of Massachusetts in 1837, taken from the Statistics published by order of the Legislature.

ARTICLES MANUFACTURED.	Value.	Hands employed.	Capital invested.	ARTICLES MANUFACTURED.	Value.	Hands employed.	Capital invested.

				Total	dollars 85,742,027	117,352	52,008,865

The value of capital though not enumerated, is estimated at about 3,000,000 dollars.

According to the returns made to congress for 1840, the manufactories and the value of their fabrics, are given as follows:—

The value of family and home-made manufactures in 1840 was 231,942 dollars; there were 207 fulling-mills, and 144 woollen manufactories, employing 5076 persons, producing goods to the amount of 7,082,898 dollars, and employing a capital of 4,179,850 dollars; 278 cotton manufactories, with 665,095 spindles, employing 20,928 persons, producing articles to the value of 16,553,423 dollars, and employing a capital of 17,414,099 dollars; forty-eight furnaces produced 9332 tons of cast iron, sixty-seven forges, rolling mills, &c., produced 6004 tons of bar iron, the whole employing 1097 persons, and a capital of 1,232,875 dollars; eighty-two paper manufactories, employing 967 persons, produced articles to the value of 1,659,930 dollars, and other paper manufactures to the value of 56,700 dollars, and the whole employed a capital of 1,082,800 dollars; 463 persons produced salt to the amount of 376,596 bushels, with a capital of 502,980 dollars; hats and caps were manufactured to the value of 918,438 dollars, and straw bonnets to the value of 821,646 dollars, the whole employing 6656 persons, and a capital of 602,292 dollars; 355 tanneries employed 2446 persons, and a capital of 1,024,699 dollars; paints and drugs were produced to the value of 405,725 dollars, and turpentine and varnish to the value of 25,820 dollars; 1532 saddleries, and other leather manufactories, produced articles to the value of 10,553,826 dollars, and employed a capital of 3,318,544 dollars; four glass houses, employing 372 persons, produced articles to the value of 471,000 dollars, with a capital of 277,000 dollars; twenty potteries, employing seventy-one persons, produced articles to the value of 44,450 dollars, with a capital of 27,975 dollars; two sugar refineries produced articles to the value of 1,025,000 dollars; chocolate was manufactured to the value of 31,500 dollars; and confectionery to the value of 137,300 dollars; fourteen powder mills employed sixty-nine persons, and produced 2,315,215 pounds of gunpowder, with a capital of 255,000 dollars; 913 persons produced machinery to the value of 926,975 dollars; 1109 persons produced hardware and cutlery to the value of 1,881,163 dollars; thirty-seven distilleries produced 5,177,910 gallons, and seven breweries produced 429,800 gallons, employing 154 persons, and a capital of 963,100 dollars; 397 persons produced fifty cannon and 22,652 small-arms; 1402 persons produced carriages and waggons to the value of 803,999 dollars, with a capital of 334,660 dollars; 274 persons wrought granite and marble to the value of 217,180 dollars; and 758 persons manufactured bricks and lime to the value of 310,796 dollars; mills of various kinds employed 1808 persons, and manufactured to the value of 1,771,185 dollars, with a capital of 1,440,152 dollars; ships were built to the value of 1,349,994 dollars; fifty-one rope walks employed 672 persons, producing articles to the value of 852,200 dollars, with a capital of 550,100 dollars; furniture employed 2424 persons, producing the value of 1,090,008 dollars; 246 persons manufactured musical instruments to the value of 243,760 dollars, with a capital of 555,100 dollars; 324 brick and 2249 wooden houses employed 2947 persons, and cost 2,767,134 dollars. There were 104 printing offices, seventy binderies, ten daily newspapers sixty-seven weekly, and fourteen semi-weekly, and fourteen periodicals, the whole employing 922 persons, and a capital of 416,200 dollars. The whole amount of capital employed in manufactures was 41,774,446 dollars.—*Official Returns to Congress, 1840.*

COMMERCE OF MASSACHUSETTS.

Massachusetts, in the extent of her foreign commerce, stands the second state in the union, and is the first in the amount of her registered shipping tonnage. There were imported into Massachusetts, during the commercial year, 1841, foreign goods, wares, and merchandise to the value of 20,318,000 dollars, being nearly one-sixth of the whole value brought into the country, and about twice as much as was imported into any other state, with the exception of New York, whose importations amounted to 75,713,000 dollars. The importations into New York are more than three times as great as into Massachusetts; but it appears, that the importations into New York during that year were about 74 per cent on foreign account, while the importations into Boston were only about 17 per cent on foreign account—making a difference of 57 per cent in favour of Boston. This fact would bring the American commerce of New York down to nearly the standard of that of Massachusetts. A considerable share of the commerce of New York is on Massachusetts account; while very little, if any, of the Massachusetts commerce, is on New York account. A considerable share of the trade of New York, is carried on by Massachusetts ships, navigated by Massachusetts seamen: especially in the East India trade, as appears by the following statement:—

The number of vessels which arrived in New York from Canton and Manilla was,			
In 1839.....	21,	of which	7 belonged to Massachusetts,
1840.....	29	"	14 "
1841.....	15	"	4 "
1842.....	26	"	11 "
Total	91		36

In the import trade from Calcutta about twenty ships are employed. The whole number of arrivals were—

In 1840.....	18, of which 15 arrived in Massachusetts.
1841.....	20 " 17 " "
1842.....	26 " 21 " "

During the same years several cargoes arrived at New Orleans from Calcutta, on Massachusetts account.

"From fifty to seventy cargoes enter the United States annually from Russia, a large share of which are on Massachusetts account. In 1839, the number of American vessels which arrived at St. Petersburg was fifty-two, of which thirty-seven were on Massachusetts account. The whole number of arrivals in the United States from St. Petersburg and Riga the same year was fifty-three, of which twenty-six came into Massachusetts, and twenty-three into New York. Of the twenty-three which came into New York, ten were Massachusetts vessels, and a portion of these cargoes were on Massachusetts account. In 1840 there were sixty-four American vessels which arrived at St. Petersburg, of which forty-nine were on Massachusetts account. In the same year the arrivals in the United States from Russia were sixty-five, of which thirty-two came into Massachusetts, and twelve into New York; of which twelve, five were Massachusetts vessels, and a portion of their cargoes was on Massachusetts account. The great supply of foreign sugars into St. Petersburg for the Russian empire is chiefly from Cuba; of this supply nearly one-half is carried in Massachusetts vessels, and a considerable portion on Massachusetts account. The United States are supplied with pepper almost entirely by Massachusetts ships; and a large portion of the exports from Sumatra to Europe is carried in Massachusetts vessels, and on Massachusetts account.

"The annual document from the secretary of the treasury, detailing the commerce and navigation of the country, shows only the imports into the different states, without designating on whose account the importation is made; and it will be seen at once that such tables do not show the exact commerce of each state. One state may be situated inland, as Indiana, for example, and hence be represented as having no commerce; and another state, as Louisiana, which happens to be the outlet of the great Mississippi Valley, may be so situated as to have the credit for much that is owned and shipped by the people of other states. The facts we have already presented, clearly demonstrate that these tables do not do full justice to the state of Massachusetts. Her vessels, which enter at New York and clear from the same port, are set down to the credit of New York, though the vessel be owned in Massachusetts, the crews are from Massachusetts, and the cargo is on Massachusetts account. It will also be seen, by the facts above presented, that a large share of the distant, and in some respects the most important commerce, is carried on by the Massachusetts merchants. A cargo which is the result of a long voyage, is in one respect, more important to the country than any other. A cargo from the West Indies, worth 100,000 dollars at the port where it is entered, might require for its purchase 95,000 dollars of specie or our domestic products; and so the cargo would be a drain upon the country to that amount. But a cargo from the East Indies, worth 100,000 dollars at the port where it is entered, may draw from the country but 90,000 dollars. Massachusetts commerce, as we have seen, is to a great extent, with the most remote nations, and hence more productive of the interests of the country than any other.

"We have already seen that the importations into Massachusetts, during the last commercial year amounted to 20,318,000 dollars—her exports during the same year were 11,487,000 dollars, being nearly one-tenth of the whole export of the country, and more than was exported from any state except New York and Louisiana: and it is worthy of remark that both of these states, from their local situation, export a larger amount of the products of other states than Massachusetts. The amount of tonnage owned in Massachusetts, as compared with other states, shows at once that she performs a large share of their carrying. The entire registered and licensed tonnage of Massachusetts, as compared with several of the great states, is as follows:—

Massachusetts.....	545,900	Pennsylvania	118,900
New York	474,700	Louisiana.....	145,700

"Here it will be seen that Massachusetts owns 71,200 tons of shipping more than New York; 427,000 more than Pennsylvania; 400,200 more than Louisiana; and about one-fourth of the aggregate tonnage of the United States. As Louisiana exports about three times as much as Massachusetts, and owns but about one-fourth as much shipping, it would seem to follow, with a good degree of certainty, that much of the carrying trade of Louisiana was performed by Massachusetts; and every person acquainted with the subject, knows that Massachusetts vessels are largely engaged in the cotton, flour, pork, bacon, and lard trade of New Orleans.

"The number of vessels which entered in Massachusetts in 1841, was 2119—being twice as many as entered in any other state, except New York, and more than one-sixth of the aggregate shipping which entered in the United States. The number of ships built in Massachusetts in the same year, was 112, with an aggregate tonnage of 28,653, being a larger amount of tonnage than that produced by any other state, and nearly one-fourth of the aggregate of the whole United States, as will be seen by a comparison of Massachusetts with some of the principal ship-building states:—

Massachusetts	28,653	Ohio	7,178
Maine	26,874	Pennsylvania.....	6,970
New York.....	17,438	The United States	118,893
Maryland	10,737		

"From a comparison of the ships built in the several states, with the ships owned in the states respectively, it will be seen that Massachusetts not only owns more shipping than any other state, but

that her territory is, to a considerable extent, the ship-yard, and her labourers the shipwrights, of several of the commercial states. In seamen, Massachusetts is still more prolific. By the returns of registered seamen, made to the secretary of state annually, it appears that Massachusetts furnishes more than twice as many as any other state, and more than one-third of the whole number furnished by the whole country. By the returns for 1841, the only one on which we can, at this time, lay our hands, it appears that the registered seamen stand as follows:—

Massachusetts	4031	Maryland	383
New York	1815	Louisiana	398
Maine	1026	All other states	1764
Pennsylvania	706		

“From this view of her commerce, it will be seen that Massachusetts is second only to New York, if indeed she does not rival that great state. The opening of the Western railroad, which connects Boston with Albany and the great west, and the establishing of the line of packets between Boston and Liverpool, must inevitably increase greatly the commercial importance of Massachusetts.”—*Massachusetts and her Resources*. By the Hon. Charles Hudson, Member of Congress from the State.

In 1842, the quantity of ice shipped for distant ports, at the wharfs in Boston and Charlestown, on board 140 vessels, was upwards of 30,000 tons; all of which, with the exception of about 6000 tons, was brought from Fresh Pond, Roxbury. And it is stated, that if greater facilities for transporting it were offered by a railroad, the quantity would be increased. The Lowell railroad has, therefore, obtained a grant from the legislature, for an extension of the road to the Pond.

FISHERIES OF MASSACHUSETTS.

The whale fishery commenced in Massachusetts as early as 1672. In 1840, it appears that there were 588 vessels engaged in the whale fishery, of which 425 belonged to Massachusetts. By the last annual return of the commerce and navigation of the United States, the amount of tonnage employed in the cod fishery was 66,551 tons; of which 29,529 tons, being about the same as the state of Maine, and about four times as much as all the rest of the union, belonged to Massachusetts. Massachusetts had about 10,000 tons of shipping engaged in the mackerel fishery, while that employed in the fisheries by all the other states of the union amounted to only 1200 tons. The tonnage, in 1840, employed in the whale fishery, by all the United States, was 157,405 tons. The tonnage, in 1840, employed 120,474, or being more than three-fourths of the whole.

The capital which Massachusetts invested in the fisheries, amounted to 11,725,850 dollars; employing 16,000 sailors and fishermen in this hardy enterprise. To show the relative importance of this branch of industry, the produce of the fisheries of Massachusetts, and of some of the principal states, was as follows; viz.,

Quintals of Smoked or Dried Fish.

United States	773,947	New Hampshire	28,257
Massachusetts	389,715	Rhode Island	4,034
Maine	279,156

Massachusetts.....	16,429,620	New York	1,077,157
Connecticut.....	11,725,850		949,250
	1,301,640		

Of dry fish, Massachusetts cured as much as all the rest of the United States; of pickled fish, more than one-quarter of the whole amount; of spermaceti oil, more than three-quarters; of whale and other oils, nearly one-half; of whalebone, more than one-third; and of capital, nearly two-thirds of the whole capital invested in the fisheries by the United States. In addition to all the fish consumed in the state, a large surplus is exported, amounting, in 1840, to more than 3,000,000 dollars; being in value greater than that of any other article exported from the United States, except cotton, tobacco, and flour. It has been estimated that those employed in the whale fisheries, except cotton, tobacco, and flour. It has been estimated that those employed in the whale fisheries, consume annually, 54,000 barrels of beef and pork, being equal to one-half of the average export of these articles for the last ten years. They also consume a large quantity of flour, corn, butter, cheese, rice, &c. &c. The oil and whalebone brought into the country, in 1841, has been estimated in value at 7,360,000 dollars. Whatever may be the value of all the fisheries of the United States, one-half of the amount may be placed to the account of Massachusetts.

QUARRIES AND MINERALS OF MASSACHUSETTS.

Massachusetts is not, as far as discovered, rich in minerals. *Iron* is found in various parts of the state, and is manufactured to a small extent, employing a capital of about 1,232,800 dollars, and about 1000 hands. The produce is about 9300 tons of cast iron, and 6000 tons of bar iron, annually. *Granite*, of excellent quality for building, abounds in Quincy and its vicinity, and is extensively quarried, and shipped to nearly every Atlantic port in a greater or less degree. The Astor House in New York, the front of the Tremont House in Boston, and Bunker Hill Monument, are built of this stone. Granite, suitable for building, is also found in large quantities at Gloucester, Fall River, Fitchburg, and many other places, in great abundance. *Gneiss*, nearly answering the same purpose, is found in many parts of the state. *Serpentine*, suitable for ornamental architecture, exists in Middlefield, Westfield, Newbury, and in several other places, but it has not been wrought to any extent.

Limestone is found in various places, and is particularly abundant in the county of Berkshire. Berkshire is renowned for the fine marble which it produces, denominated primitive marble. Its prevailing colour is white, and this is the variety most extensively wrought. Some of the varieties admit of a very fine polish. From the pure white the colour changes, by imperceptible gradations, to gray and dove colour. More or less is quarried in almost every town in Berkshire, except on the eastern side. It is most extensively wrought in West Stockbridge, Lanesborough, Ashfield, Sheffield, New Marlborough, and Adams. The City Hall in New York was built chiefly of this marble. The marble for the Girard College, in Philadelphia, is also obtained from the quarries in Berkshire.

Soapstone, remarkable for its softness and power to resist heat, is found in abundance in various parts of the state, but is not extensively wrought. *Argillaceous*, or *roof slate*, is found in different sections of the state, but the quality is not remarkably good, nor is it much used for roofs. *Potter's clay*, used for common pottery, tiles, and bricks, abounds; and *porcelain clay* has been found in several places. *Peat* is used for fuel in many towns in the eastern portion of the state; and what adds to its importance is, it is generally situated where wood is scarce. *Anthracite coal* has been discovered at Worcester and Mansfield; but the mine at Worcester has not been thoroughly explored, and at Mansfield the vein is supposed to be too thin to justify the expense of mining.

PUBLIC WORKS AND INTERNAL IMPROVEMENTS.

The common public roads, some good and many very bad, are among the earlier as well as among the more recent public works. The first canal and the first railroad in the United States, were constructed and opened in Massachusetts. Middlesex canal, from the Merrimac river

to Boston harbour, and the Quincy railroad, from the Neponset river to the Quincy quarries, were constructed before any other works of the kind in the United States. The Western railroad extends from Worcester, forty-four miles by railroad from Boston, to Greenbush, on the Hudson, opposite to Albany. It crosses the high lands of Worcester county, and the summit between Boston and Connecticut river, at an elevation of 907 feet above tide water, and the Green Mountain range in Washington, the summit between the Connecticut and the Hudson, at an elevation of 1459 feet above tide water. The greatest inclination is eighty-three feet per mile. The length of the railroad within the state is 118 miles; but as the road from the line of the state to Albany was built by this company, and as they have a long lease of it, and the pre-emption of purchase, it may be considered as belonging to Massachusetts. Its length in New York is thirty-eight miles: being 156 miles. At Worcester this road connects with the Boston and Worcester road, which is forty-four miles in length; so that the Western road opens a direct communication by railroad from Boston to Albany, making a continuous line of 200 miles of road.

There are several other railroads, situated partly in the state and partly in the adjoining states, as the Norwich and Worcester, the Nashua and Lowell, and the Boston and Maine, which were built mostly by Massachusetts capital, aided by Massachusetts scrip. But we shall give the length, cost, &c., of that part of the road situated in Massachusetts, except in the case of the Western, for reasons already stated. The following table will give a general view of the different roads:—

CORPORATE NAME.	Length in Miles.	Cost of Road and Appurtenances.	Cost of Road per Mile, including Appurtenances.	1842			Distance run by Trains.	1843		
				Receipts for past Year.	Expenditures for past Year.	Nett Profits during past Year.		Expenditure during the Year.	Receipts during the Year.	Excess of Receipts & Expenditures.

Total.....	416	18,583,833	1,212,397	1,379,676

The Boston and Lowell and the Boston and Worcester roads have each double tracks, the rest single. The Berkshire road rail being a plate instead of an edge rail, the cost of construction appears small. The Boston and Worcester, Boston and Providence, and Eastern roads have each a branch of a few miles, the cost and income of which are included in the sums stated. The Charlestown branch was constructed mainly for the transportation of ice, but the winter of 1841-2 being unusually open, that business almost entirely failed. Besides these railroads, there is the Quincy railroad, of a few miles in length, used for the transportation of granite from the quarries to water carriage; and the West Stockbridge, about two and a half miles in length, being an extension of the Hudson and Berkshire road. The Fitchburg railroad, now in the course of construction, which, with the Charlestown branch, will continue the railroad about forty-five miles towards Vermont. These roads are all the property of private companies, except the Western, in which the state owns one-third of the stock. The state, however, has loaned its stock as scrip, to several of these corporations, and taken a mortgage as security. The railroads in Massachusetts are all well constructed.

The Berkshire road was built, in part, by contract, and has been leased to the Housatonic Company. The Charlestown Branch corporation have entered into a contract with the Fitchburg corporation, which is now constructing a railroad to Fitchburg. A charter is about being granted to extend this road to Brattleborough, Vermont, and thence through that state to Lake Champlain.

Two bills are before the legislature of Massachusetts for the incorporation of railroad companies. The route of one is from Athol, through Greenfield, to Brattleborough.

TABLE, showing the Lengths of Railways radiating from, and in connexion with, the City of Boston.

	Miles.
From Boston, <i>via</i> Albany, to Buffalo	518
" " Portsmouth, to Portland, Maine	104

Troy to Ballston	20
Schenectady and Saratoga	2½
Lockport, Niagara Falls, and Buffalo	43
Total number of Miles	1203½

REVENUE, EXPENDITURE, PUBLIC CREDIT, AND DEBT, OF MASSACHUSETTS.

The government and citizens of Massachusetts have at all times maintained the public credit of the state, and honourably and faithfully fulfilled its engagements. Massachusetts may be said to have no state debt. A trifling obligation exists of about 170,000 dollars, which arose from extraordinary expenditures, incurred by the state during the last ten or eleven years: such as revising her statutes, building a new state prison, and a state lunatic hospital; but the ordinary revenue of the state will soon pay it.

Massachusetts has loaned her credit, in the form of scrip, to the Norwich and Worcester, Eastern, and Boston and Maine railroad companies, to the amount of 1,050,000 dollars, and as security has a mortgage upon each of these roads, with their appurtenances, which have cost the companies more than 3,350,000 dollars. If these companies should fail to redeem the scrip when it shall fall due, the commonwealth would come in possession of a property worth at least three times as much as it would have cost her. There surely can be nothing in this which can impair her credit, or create alarm.

Besides this, the state has lent 4,000,000 dollars of scrip to the Western railroad corporation, and as security has taken a mortgage on the road and all the property of the corporation, which cost, as we have seen already, 7,566,000 dollars. And besides, the statute granting the scrip requires that all which is realised in its sale above its par value, together with 1 per cent on the amount of the scrip, shall, by the corporation, be set apart annually for a sinking fund, with which to redeem or to aid in the redemption of the scrip, when it becomes due. That fund already amounts to more than 200,000 dollars; and as it must go on increasing from year to year, it will, in 1870, when the scrip is redeemable, be nearly sufficient of itself to discharge the debt the corporation owes to the state. With this fund in its own keeping, and a mortgage upon a property costing nearly twice as much as the amount of the scrip loaned, the state is perfectly secure.

The state is also indebted to the amount of 600,000 dollars for scrip issued to pay the assessments on its own shares of the stock of the Western railroad, and to purchase Charles' River bridge. So far as the scrip to purchase Charles' River bridge is concerned, the state can remunerate itself in the space of two years, at any time, by tolls upon that bridge and Warren bridge; and to redeem the scrip issued to pay her assessments on her railroad stock, she has the income of one-third of the road, and more than two millions of acres of land in the state of Maine.

Direct taxation has become almost an *obsolete* idea in Massachusetts. Such has been the prosperous state of her finances, that for the last twenty years she has imposed upon

the people only three small state taxes, the aggregate amount of which is less than one-sixth of the sum she imposed upon herself in 1782, when her resources were nothing compared with what they are at present. Nor have we alluded to the sums due and appropriated by the general government, growing out of the late treaty, and the sales of the public lands; for Massachusetts has resources of her own amply sufficient to meet all her liabilities. Let her impose, annually, a tax equal in amount to the average tax paid from the adoption of her constitution up to 1824, and she could meet all her liabilities from that source alone, if the security which she holds should, by any possibility, prove worthless. The valuation of the state, as fixed in 1841, shows the amount of taxable property to be 299,878,360 dollars, being nearly one-third more than it was in 1831. With such an amount of taxable property, with the security she holds, with the business, enterprise, and industry of her people, and, above all, with their high character for punctuality, and the sacredness with which they have ever regarded plighted faith in contracts, it would be idle, nay, it would be madness, to countenance the idea for a moment, that she would suffer her scrip to be dishonoured, or even her credit to be suspected. Sharp-sighted capitalists, who are generally the best judges in such cases, have always preferred the stock of Massachusetts to that of any other state. In fact, while the stocks of some of the states have been selling at ruinous discounts, the stock of this state has generally commanded its par value, and has frequently sold at a premium.

"There is another view to be taken of this state, which, although it cannot be classed with her resources, shows her importance in the union. She furnishes one of the greatest home markets of any state in the union. From the most thorough and extensive inquiry, we have no hesitation in saying, that Massachusetts consumes, of the products of other states in the union, an annual amount of more than 40,000,000 dollars, being equal to one-half of the average of the domestic exports of the United States, if we except manufactured articles. In a national point of view, this is of great importance. Cut off the market of this commonwealth, and the effect would be sensibly felt in most of the states. We would go into this subject in detail, but our limits will not permit."—*Resources of Massachusetts.*

INSURANCE COMPANIES IN MASSACHUSETTS.

According to the several returns by order of the house of representatives, there were in February, 1836, twenty-seven offices in Boston, and eighteen out of Boston. Total, forty-five offices; with an aggregate capital of 9,225,000 dollars. The average annual dividends were 9 3-5 per cent.

On the 1st of December, 1837, there were twenty-nine offices in Boston, and nineteen out of Boston. Total, forty-eight offices; with a capital of 9,415,000 dollars.

On the 1st of December, 1838, there were twenty-four offices in Boston, and nineteen out of Boston. Total, forty-three offices; with a capital of 8,316,000 dollars.

ABSTRACT of the Annual Returns of the several Insurance Companies in the Commonwealth of Massachusetts, showing the state of said Corporations on the 1st day of December, 1840. Compiled from the Report of the Secretary of State.

* A gentleman who has been acquainted with the history of the coasting trade between Portsmouth and Boston for fifty years, informs us that in that time there have been but two coasters lost in the business. For the last twenty-five years, about ten coasters have plied regularly, making on an average about fifteen trips in the season. Thus we see that the risk, from past experience, is only about 1 to 3000. On this comparative safety, it is not surprising that insurance was not made on the Planter, or on most of her cargo.

The Planter had about 20,000 dollars' worth of merchandise on board, not 1000 dollars' worth of which was insured. With the exception of a quantity of iron and some casks of spirit, the cargo has been so damaged, as to make it almost worthless.

BANKS OF MASSACHUSETTS.

There are about 20,000 persons who are interested as stockholders in the banks of Massachusetts, and it will be difficult to find an individual in the state who is not directly nor indirectly interested in them. There is hardly any thing whose influence is so completely felt in all the ramified relations of society. They in a great degree control the price of all kinds of property and of labour, regulate agriculture, trade, and manufactures, and, in a series of years, show their effects on the progress of civilisation.

The following tables are condensed from the bank returns as published by the secretary of state.

AVERAGE of the last Semi-Annual Dividends per Cent, of the Banks of Massachusetts, for Thirty-two Years, from 1808 to 1839.

Aggregate average of the last semi-annual dividends in 32 years.....	3 04 233-250		3 12 3-64		3 08 245-512	
Estimated average, per annum, for 32 years.....		6 16 245-256	

"According to the foregoing table, the average of the last semi-annual dividends of all the banks, for five years, from 1808 to 1812, inclusive, was 3 dollars 72 $\frac{1}{2}$ cts. per cent on the capital stock; since the one-half of one per cent has been semi-annually paid under the name of a bank tax to the state, the average for twenty-seven years, from 1813 to 1839, has been 2 dollars 96 $\frac{1}{2}$ cts.; and during these two periods, embracing thirty-two years, it has been 3 dollars 8 $\frac{1}{2}$ cts., or about 6 dollars 17 cts. per annum

"It has been estimated that the loss to stockholders in the banks of Massachusetts, in thirty-two years from 1808 to 1839 inclusive, or the amount which it is probable those banks which have wound up, and which are winding up, have failed, or will fail, of paying par on the stock, will be about 2,000,000 dollars,—scarcely a dollar of which loss had occurred till within the years 1837, 1838, 1839, and 1840. If we take from this sum the surplus of interest received over six per cent, which the banks have paid in dividends to stockholders during this time, 925,310 dollars 44 cts., we shall have the sum of 1,074,689 dollars 56 cts. as the remaining loss. This loss will reduce the average dividends during this period about three cts. per annum, on 100 dollars, and make the annual average dividends to have been 5 dollars 97 cts. per cent, half of which has been semi-annually received on the capital stock over and above the loss to stockholders.

"The loss to bill-holders and to depositors, though it may have pressed very heavily on a very few individuals, has not probably exceeded 650,000 dollars in the aggregate, or about one-third of the loss to stockholders. The mass of stockholders have been as innocent of the mismanagement as the confiding bill-holder and depositor. The bill-holder generally has it in his power to dispose of the bills for nearly their par value, and, with the depositor, must be fully paid before the stockholders can receive any thing on their stock.

NUMBER of Banks, the aggregate Capital, Specie, Circulation, Ratio of Specie to the Circulation, Deposits not on Interest, and Ratio of Specie to the Circulation and Deposits, in Boston, for Thirty-seven Years, from 1803 to 1839, inclusive, according to the Bank Returns.

PRINCIPAL COMMERCIAL AND MANUFACTURING CITIES AND TOWNS IN MASSACHUSETTS.

When we compare the great increase in the number and the population of the towns of Massachusetts, with the natural resources of this state, and the generally medium affluent condition of the inhabitants, the result is highly creditable to the industry, thrift, and virtue of the latter. The following description of the capital is so correct and interesting, that we insert it without alteration, from the recent valuable work, "United States' Gazetteer," from which, and the recent official returns, the descriptions of the other towns of Massachusetts are also principally taken.

"Boston city, the capital of Massachusetts, in Suffolk county, is principally situated on a peninsula, three miles long and one broad, at the western extremity of Massachusetts Bay. It lies in 42 deg. 21 min. 23 sec. north latitude, and 71 deg. 4 min. 9 sec. west longitude, from Greenwich, and 5 deg. 58 min. east longitude from Washington. It is 115 miles south-south-west from Portland, Maine; 63 miles south-south-east from Concord, N. H.; 158 miles east by south from Albany; 40 miles north-north-east from Providence, R. I.; 97 miles east-north-east from Hartford, Ct.; 207 miles north-east by east from New York; and 440 miles north-east from Washington. The population in 1790, was 18,038; in 1800, 24,937; in 1810, 33,250; in 1820, 43,298; in 1830, 61,391; in 1840, 93,383. Employed in commerce, 2040; in manufactures and trades, 5333; in navigating the ocean, 10,813; navigating canals and rivers, 19; learned professions and engineers, 586.

" Boston consists of three parts, Old Boston on the peninsula ; South Boston, formerly a part of Dorchester, but united to Boston in 1804 ; and East Boston, formerly Noddle's Island. The only original communication of the peninsula with the main land was denominated the " Neck," a little over a mile in length, which connected it with Roxbury. By the fortification of this neck, at the commencement of the revolutionary war, the British were able to control the intercourse between Boston and the surrounding country. But by a number of bridges a communication is now opened in various directions. Charles River bridge, 1503 feet long, connects Boston to Charlestown ; West Boston bridge, 2758 feet, with a causeway 3432 feet, leads to Cambridge ; South Boston bridge, 1550 feet, leads from the " Neck" to South Boston ; Canal bridge, 2796 feet, leads to East Cambridge, from the middle of which an arm extends to States' Prison Point, in Charlestown ; Boston Free bridge, 1828 feet, connects Boston with South Boston ; Warren bridge, 1390 feet leads to Charlestown. Besides these, the Western avenue, a mile and a half long, leads to Brooklyn, and constitutes a tide-dam, enclosing a pond of 600 acres, which, by a partition, makes an avenue from the main dam to Roxbury, and forms a full and receiving basin ; so that the flowing of the tide creates a great water power, at all times available.

" The peninsula of Boston had originally an uneven surface ; and the necessity of the ease, and the good taste of the inhabitants, have extensively prevented the attempt to level these inequalities of surface ; and from various points of view, the city presents a picturesque appearance. The streets, however, were originally laid out upon no systematic plan ; and accommodated to the convenience of the ground, they are often crooked and narrow ; though modern improvements have greatly remedied these inconveniences. The Common, originally a cow pasture, has escaped a private appropriation, and is one of the finest public grounds in any city of the United States. The numerous eminences, rising from 50 to 110 feet above the level of the sea, furnish many admirable sites for buildings. Some of the public buildings are commanding, but are exceeded by some in other principal cities ; but many of the private residences are unsurpassed in elegance and taste by those of any other city of the union.

" South Boston extends about two miles along the south side of the harbour. It contains about 600 acres, regularly laid out into streets and squares, with a diversified surface. About in the centre of this tract are the " Dorchester Heights," 130 feet high, famous in the revolutionary war as the site of a fortification which compelled the British to abandon the harbour.

" East Boston is on an island, containing about 660 acres of land, and a large body of flats. Its connexion with Old Boston is by a steam ferry, which starts every five minutes from each side. It is connected to Chelsea on the main land by a bridge of 600 feet ; and the Eastern railroad commences here. This portion of the city has wholly grown up since 1833. The surface is agreeably diversified. A wharf 1000 feet long is devoted to the use of the Liverpool steam-ships.

" These several parts of Boston, with the town of Chelsea, constitute the county of Suffolk.

" The harbour of Boston is one of the best in the United States, being spacious, safe, and easily and well defended. The whole passage to it is not more than four miles in width, with several islands obstructing it, so that the main entrance will scarcely admit two vessels to pass abreast ; while within, 500 vessels may ride at anchor, with a good depth of water. The outer harbour has about forty small islands, about fifteen of which afford excellent pasture.

" The wharfs of Boston are extensive and convenient, and some of them are very long. Long wharf, at the termination of State-street, is 1650 feet long ; and Central wharf is 1240 feet.

" Among the public buildings, the State-house is the principal. It was built in 1798, and has a fine location on Beacon-hill, 110 feet above the level of the sea, and fronting the spacious common. It is 173 feet long and 61 wide, built of brick, but painted to imitate stone ; and has a fine dome 52 feet in diameter, and a eupola 230 feet above the level of the harbour, from which the view is probably the finest in the United States, and scarcely surpassed in the world. From this grand elevation, the spectator looks down

upon the city as upon a map; before him stretches the extensive harbour and bay on the east, sprinkled over with islands; and in other directions, numerous beautiful villages, and a highly cultivated country, with many elegant country seats, are visible. Faneuil-hall Market is built of granite, 536 feet long, 50 feet wide, and two stories high; and is the most elegant market-house in the United States. Faneuil-hall is in Dock-square, 100 feet long by 80 feet wide, three stories high, and is celebrated as the spot where the revolutionary orators roused the people to resist British oppression. The hall is seventy-six feet square, with deep galleries on three sides. The City-hall, or old State-house, is another venerable building of revolutionary memory, and is used for public offices. The Massachusetts hospital, in the western part of the city, is a beautiful granite building, 168 feet long and 54 feet wide, with an open ground of four acres around it, on the bank of Charles river. The custom-house, near the head of Central wharf, is a splendid granite building of Grecian architecture. The houses of industry, correction, and reformation, are valuable establishments, situated in South Boston. Trinity church, and St. Paul's church, are considered fine specimens of architecture; and Park-street church has a lofty and beautiful steeple. The Tremont house is one of the finest hotels in the United States.

"Among the public places, the Common is by far the most distinguished. It occupies the southern declivity of Beacon-hill, and contains nearly fifty acres of ground, surrounded by a wall, shaded by trees. The whole is enclosed by an iron fence about one mile in length, on the outside of which is a broad street. A botanical garden of twenty-five acres is on the western side of the Common.

"Boston, in point of commerce, is the second place in the union. Her wealth and enterprise have long been actively employed in foreign commerce, to which her fine harbour has materially contributed. Several large steamships form an important packet line between this city and Great Britain, stopping at Halifax. This line has generally performed its trips in the short space of 12½ days. Lines of packets exist to every port of importance throughout the United States, making about fifty in the whole. And by means of the Middlesex canal, which extends to the Merrimac, it has a boatable communication to Concord, New Hampshire; and recently a railroad communication has been completed to Albany, which will enable it to share in the vast trade of the west. The capitalists of Boston are large proprietors in the manufacturing establishments at Waltham and at Lowell.

"The tonnage of Boston, in 1840, was 220,243 tons. The imports are about 16,000,000 dollars; and the exports about 10,000,000 dollars. There were, in 1840, 142 commercial houses, and eighty-nine commission houses engaged in foreign trade, with a capital of 11,676,000 dollars; 572 retail stores, with a capital of 4,184,220 dollars; thirty-one lumber yards, with a capital of 371,010 dollars; capital in fisheries, 25,000 dollars; machinery manufactured to the amount of 135,900 dollars; precious metals, 26,650 dollars; various metals, 284,400 dollars; six furnaces, capital 130,000 dollars; seventeen distilleries and two breweries, with a capital of 820,000 dollars; paints, drugs, &c., capital 20,000 dollars; three glass factories, capital 37,000 dollars; two sugar refineries, three rope walks, capital 101,500 dollars; one grist mill, capital 50,000 dollars; furniture to the amount of 329,000 dollars. There were built 217 brick and stone, and 148 wooden houses, to the value of 1,061,100 dollars; twenty-four printing offices, twenty-eight binderies, seven daily, eleven weekly, and seven semi-weekly newspapers, and seven periodicals, employing 437 persons, with a capital of 236,450 dollars. Total amount of capital in manufactures, 2,770,250 dollars. There were fifteen academies, or grammar schools, with 2629 students, 137 common and primary schools, with 14,003 scholars.

"There are twenty-five banks, with an aggregate capital of 17,300,000 dollars; and twenty-eight insurance companies, with a capital of 6,600,000 dollars.

"Boston has long been celebrated for the excellence of its schools. About a quarter part of the inhabitants are kept at school throughout the year, at an expense of 200,000 dollars. In addition to numerous private schools, the public free schools are a Latin grammar school; a high school, in which the mathematics and higher branches of learning are taught; ten grammar and writing schools; seventy-five primary schools, and one African school.

"The medical branch of Harvard university has its seat in Boston, where its professors reside. It was founded in 1782, has six professors and eighty-eight students, and a library of over

5000 volumes. There is a highly respectable institution for the blind, which has a handsome edifice. The Boston atheneum has two large buildings, one containing a library of about 30,000 volumes, the other a picture gallery, and a hall for public lectures, and other rooms for scientific purposes. This city has about 100 literary, religious, and charitable societies. Among the literary societies of a high order, are the American academy of arts and sciences, which has published four volumes of transactions; the Massachusetts historical society, which has published twenty-two volumes of collections; and the Boston Natural History Society, which has a fine cabinet. Among the religious and charitable societies, are the American Board of Commissioners for Foreign Missions, which has an agency, and holds its anniversaries in the city of New York; the Baptist Board of Foreign Missions; the American Education Society; the American Unitarian Association; the American Peace Society; the Seamen's Friend Society; the Massachusetts Bible Society; the Prison Discipline Society; and various others.

"There are (1842) thirty newspapers published in Boston, eight of which are daily. Besides these, there is a number of magazines and reviews, the most important of which is the North American Review, which has long had a high reputation, not only in the United States, but in Europe.

"There are seventy five churches, of which fifteen are Unitarians; twelve Congregationalists; eight Episcopalians; eleven Baptists; nine Methodists; four Universalists; four Roman Catholics; three Freewill Baptists; two African, one of which is Baptist and the other Methodist. There are also some New Jerusalem, German Protestants, and Friends, and a few others.

"There are two theatres in Boston, the Tremont and the National Theatre.

"This city continued a town, and was governed by a body of select men, according to the common custom of the towns of New England, until 1821. Before this, the people could not be brought to consent to adopt a city government. But the vote was at length carried, and the city has since been governed by a mayor, eight aldermen, and a common council of forty-eight members. Besides these, each ward has one warden, one overseer of the poor, one clerk, five inspectors, and two school committee men."—*United States' Gazetteer for 1844.*

Charleston town, as well as Cambridge, Chelsea, and some other nearly adjoining places, may be almost included as forming parts of Boston, and the population of each, according to the census of 1840, was, Boston, 93,833; Charleston 11,484; Cambridge, 8409; Chelsea, 2390, formerly one of the Boston wards; Roxbury, 9089, nearly a continuation of one of the streets of Boston; Dorchester, 4875; Brighton, 1425; Brooklyn, 1365; Medford, 2475; all within the circuit of five miles: which would make the actual population of Boston and its environs in 1840, about 135,000. The town of Lynn, with a population of 9367, is within nine miles; that of Quincy, 3486, within nine miles; that of Newtown, with 3351, within seven miles, and the total population in the city and within ten miles of Boston, in 1840, must have exceeded 160,000. Before introducing an account of the commerce and navigation of Boston, we will therefore describe briefly, on the authority chiefly of the "*United States' Gazetteer*," for 1844, and of the official returns of 1840, the principal towns which, from their near vicinity, are most connected with, or interested in, the general trade and navigation of the capital of Massachusetts.

CHARLESTOWN is situated on a peninsula, formed by the Charles and Mystic rivers, one mile north of Boston, with which the former town is connected by the Charles and Warren bridges. There are two other bridges across the Mystic river, one of which connects it with Chelsea, and the other with Malden. There is another which connects it with Craigie's bridge, leading to Cambridge. The streets, though not laid out with great regularity,

are wide, and ornamented with trees. The public buildings are, a state prison, on the most improved model, the Massachusetts insane hospital, called, from a distinguished benefactor, M'Lean Asylum, an almshouse, town-house, and nine churches—three Congregationalists, two Baptists, one Methodist, two Universalists, and one Roman Catholic—a United States' navy-yard, in the south-east part of the place, with a dry dock built of hewn granite. The navy-yard covers sixty acres of land, on which are erected a marine hospital, a spacious warehouse, an arsenal, powder magazine, and a house for the superintendent, all of brick; and two immense wooden edifices, under which the largest vessels of war are built. Bunker Hill is immediately in the rear of the place, where a bloody battle was fought at the commencement of the revolution, June 17, 1775, in which the Americans lost, in killed and wounded, 449, and the British, 1055. To commemorate this important event, a granite obelisk has been erected on the spot, which is thirty feet square at the base, 220 feet high, and fifteen feet square at the top, ascended within by a winding staircase, estimated to cost about 100,000 dollars.—*United States' Gazetteer.* Charlestown, in 1840, had three commercial and eight commission houses, capital, 125,000 dollars; seventy-eight stores, capital, 346,000 dollars; six lumber yards, capital, 82,000 dollars; five printing offices, one bindery, one weekly newspaper, four tanneries, three distilleries, one brewery, three potteries, three rope walks, five grist mills, four saw mills, one oil mill, twenty-four schools, 2202 scholars. Population 11,484.—*Official Returns.*

CAMBRIDGE, three miles north-west from Boston, is one of the early towns of New England, having been first settled in 1631, under the name of Newtown. It is the seat of Harvard University, formerly called Harvard College, the oldest college in the United States, having been founded in 1638, which was less than twenty years after the first landing of the Pilgrims at Plymouth. Cambridge contains a court house and gaol, state arsenal, and five churches—two Unitarian, one Episcopalian, one Baptist, and one Universalist. The courts are alternately held here and at Concord. The court house and gaol are at East Cambridge, at Lechmere's Point, a village at the south-east extremity of the town, which is connected with Boston and Charlestown by bridges. Here is a large glass manufactory.

Harvard University has a president and twenty-seven professors, or other instructors; has had 5546 alumni, of whom 1406 have been ministers of the gospel; has 246 classical students, and 53,000 volumes in its libraries. The commencement is on the fourth Wednesday in August. The philosophical and chemical apparatus are very complete, as well as its cabinet of minerals. It has an excellent anatomical museum, and a botanical garden of eight acres, richly stored with an extensive collection of trees, shrubs, and plants, both native and foreign. The university buildings are extensive and commodious, situated on a beautiful plain, where is a neat village. The irregularity in the position of the edifices, renders them less imposing in their appearance than they otherwise would be, but not less adapted to their purposes. They are University Hall, an elegant granite building, 140 by 50 feet, and forty-two feet high, containing the chapel, dining halls, and lecture rooms; Harvard Hall, containing the library, philosophical apparatus, museum, &c.; four spacious brick edifices, containing rooms for students, and several other buildings for the accommodation of the president, professors, and students; Divinity Hall, for the accommodation of the theological students; and the Medical College in Boston, a Law School, a Theological Seminary, and a Medical School, are attached to the institution, the last of which is located in Boston. The Law School has 115, the Theological twenty-six, and the Medical eighty-six students. The whole number of students attached to the institution resident graduates, is 478. This institution is more richly endowed than any other similar institution in the United States.—*United States' Gazetteer.* There were, in 1840, in the town, one commercial and one commission house, capital, 40,000 dollars, twenty-seven stores, capital, 93,950 dollars; eight lumber yards, capital, 85,000 dollars; three rope factories, two printing offices, one bindery, five periodicals, one university, 341 students, two academies, forty-five students, sixteen schools, 2455 scholars. Population, 8409.—*Official Returns.*

ROXBURY, two miles south of Boston, is joined to Boston by a neck of land, which constitutes a broad avenue, and may be regarded as a continuation of Washington-street, Boston. In the west part of the township is Jamaica plains, a level tract, with elegant

country seats, and well-cultivated gardens. Here is a pond by which the Boston aqueduct is supplied. It is four miles from Boston, with four trains of east-iron pipes, the aggregate length of which is forty miles. The town or village contains five churches—one Unitarian, one Congregational, one Baptist, one Episcopal, and one Universalist,—two banks, and many beautiful residences.—*United States' Gazetteer*. There were, in 1840, ten churches in the township; eighty-three stores, capital, 755,000 dollars; four lumber yards, capital, 60,000 dollars; five tanneries, two printing offices, two binderies, one weekly newspaper, five grist mills, and four saw mills. Capital in manufactures, 350,000 dollars. Twelve academies, 350 students, twenty schools, 881 scholars. Population, 9089.—*Official Returns*.

DORCHESTER, four miles from Boston, lies on Dorechester bay, in Boston harbour. First settled in 1630. The surface is uneven and rough; but the soil is fertile, and highly cultivated. Neponset river runs on its south border, and furnishes water power, and facilities for navigation. The vessels owned here, are employed chiefly in the whale and cod fisheries. It has also considerable manufactures. In a part of this town, now belonging to Boston, are Dorechester heights, on which Washington, in March, 1776, directed a fort to be erected, by which the British were driven from Boston harbour. The first settlers of the Connecticut colony, at Windsor and Hartford, 100 in number, came from Dorechester, through the wilderness, in 1636.—*U. S. Gazetteer*. It had, in 1840, ten commercial and commission houses in foreign trade, capital 326,000 dollars; fifty-seven stores, capital 609,200 dollars; three lumber yards, capital 17,000 dollars; two cotton factories, 4000 spindles, one dyeing and printing establishments, seven tanneries, one pottery, one rope factory, two grist mills, one saw mill, four paper factories, two printing offices, one weekly newspaper, one academy, 119 students; twenty-two schools, 1247 scholars. Population, 4875.—*Official Returns*.

CHELSEA, four miles north-east from Boston, was formerly a ward of Boston. It has considerable manufactures, and is connected with Charlestown by a bridge. It has one commission house, capital 20,000 dollars; eleven stores, capital 29,000 dollars; three lumber yards, capital 13,000 dollars; two tanneries, one pottery, one grist mill, one printing office. Capital in manufactures, 55,350 dollars. One academy, twenty students; nine schools, 574 scholars. Population, 2290.—*Official Returns*.

BRIGHTON, about four miles and a half from Boston, is distinguished for its cattle market, and its many handsome country houses.

BROOKLINE, about four miles west of Boston, in a highly cultivated country, decked with country seats, had, in 1840, 1365 inhabitants, fourteen commercial houses, capital 70,000 dollars; seventeen retail stores, capital 50,000 dollars; and 20,000 dollars invested in manufactures; with several academies and common schools.—*Official Returns*.

MEDFORD, five miles from Boston, with a population of 2478 in 1840, is on the river Myster, and has ship-building yards, lumber yards, an oil mill, pottery, distillery, &c.; and had, in 1840, 117,007 dollars invested in them and a few other manufactures.

NEWTON, seven miles west from Boston, lies on a bend of Charles river, which surrounds it on three sides, and furnishes extensive water power, having two falls, at each of which is a village. The village at the Upper Falls contains two churches—one Baptist and one Methodist—a nail factory, rolling mill, machine fabric, and about seventy dwellings. The river descends thirty-five feet in half a mile, and, in one place, falls over a ledge of rocks twenty feet high. The village at the lower falls lies partly in Needham, and contains one Episcopal church, five paper mills, and about fifty dwellings. The Boston and Worcester railroad passes through it. The Newton Theological Seminary, under the direction of the Baptists, was founded in this town in 1825, and has a brick edifice eighty-five feet long, forty-nine wide, and three stories high, which cost about 10,000 dollars; three houses for professors, and a mansion house for boarding the students. It has three professors, thirty-three students, 137 graduates, and 4000 volumes in its libraries. There were in 1840 in the township fifteen stores, capital 29,600 dollars; one cotton factory, 5712 spindles, three paper factories, two grist mills. Capital in manufactures, 318,000 dollars. Four academies, 114 students, eleven schools, 509 scholars. Population, 3351.—*Official Returns, U. S. Gaz.*

DEDHAM, thirteen miles south-south-west from Boston, is situated on Charles river, which affords good water power. Neponset river runs on its east border, and a small stream runs from Charles river into Neponset river. The township is well cultivated, and contains four Congregational churches, one Episcopal, and one Baptist. The village is pleasantly situated on Charles river, and contains two of the Congregational churches, and the Episcopal, a granite court house, a gaol, a bank, two printing offices, and more than 100 dwellings, many of them elegant. The Boston and Providence railroad passes through the township, and a railroad from the village, two miles long, connects with it. It had, in 1840, twelve stores, capital 17,000 dollars; three woollen factories, two cotton factories, 4200 spindles, two tanneries, four grist mills, four saw mills, one paper factory, two printing offices, one weekly newspaper. Capital in manufactures, 249,700 dollars. Three academies, sixty-eight students, eleven schools, 725 scholars. Population, 3290.—*Official Returns, U. S. Gaz.*

WALTHAM, ten miles west-by-north of Boston. The surface of this township is level, or gently undulated; the soil indifferent, but, being well cultivated, is rendered productive. Charles river affords water power. It contains six churches—two Congregational, one Unitarian, one Methodist, one Universalist, and one Roman Catholic. The village is pleasantly situated on a plain, with one street a mile long, and contains 150 dwellings, many of them elegant, and beautifully ornamented with trees, shrubbery, and gardens. It has cotton and woollen manufactures. There were, in 1840, in the township eleven stores, capital 29,000 dollars; three cotton factories, 11,000 spindles, one paper factory, one printing office, one weekly newspaper, two grist mills. Capital in manufactures, 463,500 dollars. Two academies, thirty-six students, nine schools, 500 scholars. Population, 2504.—*Official Returns, U. S. Gaz.*

QUINCY, nine miles south-by-east from Boston. The surface of this township is diversified, soil fertile, and well cultivated. It contains tracts of salt meadow. Three miles back from the bay is an elevated range, in some parts rising over 600 feet above the sea, containing an inexhaustible supply of excellent granite, which is extensively exported. A railroad extends from the quarry three miles, to tidewater on Neponset river, constructed in 1826, and was the first work of the kind in the United States. First settled in 1625. Separated from Braintree and chartered in 1792. Some vessels are owned here, employed chiefly in the fisheries. It has fifteen stores, capital 27,600 dollars; four lumber yards, capital 19,400 dollars; two tanneries, one printing office, one weekly newspaper. Capital in manufactures, 112,150 dollars. Eight academies, 137 students, six schools, 708 scholars. Population, 3486.—*Official Returns, U. S. Gaz.*

BRAINTREE, fourteen miles south of Boston. The surface is diversified, and the soil a fertile gravelly loam. It has considerable manufactures, and some shipping employed in the coasting trade and the fisheries. Manticomet river affords water power. A fine qua-

lity of granite is obtained here. First settled in 1625, incorporated in 1640. It had, in 1840, one Congregational and one Unitarian church. The elder President Adams was born here. It has sixteen stores, capital 24,300 dollars; one woollen factory, one cotton factory, 1000 spindles, one tannery, one paper factory, six grist mills. Capital in manufactures, 124,145 dollars. Thirteen schools, 564 scholars. Population, 2168.—*Official Returns, U. S. Gaz.*

LYNN, nine miles north-east of Boston. The ocean washes its south border, and in the south-east is excellent salt marsh. Watered by Saugus river. The surface is level, with rocky hills to the north. The village contains eight churches—three Methodists, two Congregational, one Friends, one Baptist, and one Universalist; two banks, besides one for savings, and an academy. The peninsula of Nahant is a rocky promontory in the ocean, connected with a smaller peninsula, called Little Nahant, by a beach, and both are connected with the shore by a beach a mile and a half long, barely sufficiently elevated not to be overflowed. A splendid hotel, containing 100 rooms, at the east end of the peninsula, receives numerous visitors in the summer season. Carriages run, and a steamboat plies between it and Boston, and the rides on the firm sandy beach are very agreeable; whilst, on the other side, the sea often roars furiously against the rocks. Lynn has long been celebrated for the manufacture of ladies' shoes, and produces over 2,500,000 pairs annually. It had, in 1840, thirty-six stores, capital 134,000 dollars; one rope factory, three grist mills, one saw mill, two printing offices, four weekly newspapers. Capital in manufactures, 408,700 dollars. Six academies, 133 students; ten schools, 1035 scholars. Population, 9367.—*Official Returns, U. S. Gaz.*

THE COMMERCE OF BOSTON.

Boston is the commercial emporium of New England. Although no deep, great navigable rivers flow from the interior into its port or its vicinity, the people of Massachusetts have, by the construction of railroads, connected the port with the principal marts of trade, and opened a cheap, rapid, safe, and convenient means of transportation from and to the remotest parts of the state and its depôts, and thence to the principal markets and entrepôts of the north, the south, and the west, and upon the Atlantic coast, upon the rivers, and upon the lakes. The enterprise of the seaport towns carry into its warehouses the products of the fishery, and its port is the chief entrepôt of shipping, and of export north of New York. "But the principal advantage of Boston for the security of vessels, and it is one that distinguishes this port from other principal ports of our country, are its commodious docks, which are constructed with solid strength, and run far up into the city. These are bordered by continuous blocks of warehouses, either of brick or Quincy granite, which have an appearance of remarkable uniformity, solidity, and permanence. By the arrangement of these docks, the numerous vessels, whose tracery of spars and cordage line them on either side, may unship their cargoes at the very doors of the bordering warehouses, and receive in return their supplies for foreign ports with the utmost security and despatch. Indeed, the substantial appearance of these warehouses, is quite similar to the mercantile houses in the other parts of the city, which have a like solidity and massiveness in the materials of which they are built, as well as in their construction."—*Commerce of Boston*; by Lanman. The wharfs, or piers, of Boston are among the best and longest in the world, and afford the greatest convenience to its shipping and trade.—See *Description of Boston*.

COMMERCE AND NAVIGATION OF BOSTON FOR TWENTY YEARS, 1820 TO 1839, INCLUSIVE.

The number of foreign arrivals during the last twenty years was as follows:—1820, 816; 1821, 854; 1822, 763; 1823, 832; 1824, 852; 1825, 817; 1826, 870; 1827, 728; 1828, 680; 1829, 663; 1830, 642; 1831, 766; 1832, 1064; 1833, 1067; 1834, 1156; 1835, 1302; 1836, 1452; 1837, 1591; 1838, 1813; 1839, 1553; from January 1, to July 31, 1840, 839; during the corresponding time of the previous year, 814—increase, 25.

CLEARANCES.—The number of foreign clearances during the last twenty years was:—1820, 531; 1821, 613; 1822, 584; 1823, 600; 1824, 633; 1825, 652; 1826, 614; 1827, 524; 1828, 527; 1829, 495; 1830, 561; 1831, 679; 1832, 943; 1833, 935; 1834, 1003; 1835, 1221; 1836, 1333; 1837, 1383; 1838, 1132; 1839, 1389; from January 1 to July 31, 1840, 746; during the same time of the previous year, 770.

TONNAGE.—The registered and enrolled tonnage in the district of Boston, for the year 1820, was 153,087 tons. The registered and enrolled tonnage in Boston for the year 1839, was 205,009—increase of tonnage, 51,922 tons.

Annual recapitulation of the aggregate number of vessels reported by the telegraph stations in the lower harbour to the telegraph establishment at the Observatory, Central Wharf, Boston, from 1824 to 1840, inclusive:—

ARRIVALS IN 1843.

Foreign—ships, 128; barques, 154; brigs, 508; schooners, 898. Coastwise—ships, 97; barques, 153; brigs, 664; schooners, 3915; sloops, 135. Total number of arrivals for the year 1843—ships, 225; barques, 307; brigs, 1172; schooners, 4813; sloops, 135.

Of the above, 2 ships, 5 barques, 100 brigs, 750 schooners, were British; 2 barques, 2 brigs, Sicilian; 2 brigs Russian; 1 brig French; 1 brig Spanish; 1 brig Bremen. The remainder were American.

CLEARANCES IN 1843.

Foreign—ships, 77; barques, 146; brigs, 481; schooners, 885. Coastwise—ships, 156; barques, 163; brigs, 544; schooners, 1545; sloops, 76. Total number of clearances for the year 1843—ships, 233; barques, 309; brigs, 1025; schooners, 2430; sloops, 76.

Of the above, 2 ships, 5 barques, 103 brigs, 745 schooners, were British; 2 barques, 2 brigs, Sicilian; 1 barque, 1 brig, Swedish; 2 brigs, Russian; 1 brig, French; 1 brig, Spanish; 1 brig, Bremen, and the remainder American.

The above are exclusive of a large number of wood-coasters, and vessels sailing under licences, and which neither enter nor clear at the custom-house. The disparity between the arrivals and clearances is owing to this fact. A great number of vessels arrive which do not clear at the custom-house before sailing.

During the year, the royal mail steamships Caledonia and Acadia, running between Boston and Liverpool, have entered and cleared at the custom-house five times each. The Hibernia has entered five, and cleared four times. The Britannia has entered and cleared

three times. The Columbia entered and cleared twice, and was lost on her passage to Halifax, July 2d.

There have also been in port during the year (having arrived from foreign ports), British steamship North America, steamers Portland and Penobscot, her Britannic Majesty's surveying steamship Columbia, and her Britannic Majesty's frigate Spartan. Also, a number of vessels belonging to the United States navy.

The following statements exhibit the imports into Boston of some of the principal articles of Merchandise during the year 1843, commencing on the 1st of January, and ending on the 31st of December:—

IMPORTS of United States Coal into Boston.

Year.	tons.	bushels.	Year.	tons.	bushels.
1843.....	117,331	150,813	1830.....	90,483	114,475

English refined, imported in 1843		223,467

The tonnage belonging to the citizens of Boston is not confined to her own port, but it is well known that one-third of the commerce of New York, from the year 1839 to 1842, was carried on either upon Massachusetts account, or in Massachusetts vessels; and the ships of Massachusetts also carry on a considerable portion of the trade of New York, particularly with the East India trade. From the report of the secretary of the treasury, Mr. Spencer, it appears that the tonnage of Boston, during the year ending the 30th of September, 1842, was as follows:—

Registered tonnage, 157,116.70-95ths; enrolled and licensed tonnage, 36,385.48-95ths: the total tonnage being 193,502.23-95ths. There were also thirty-eight vessels built within that year.

"The principal exports of domestic, or coarse woven cottons from the port of Boston, are to the East Indies, the West Indies, Mexico, South America, Turkey, Smyrna, Central America, Hayti, the South Pacific, Canton, and Honduras. Although a late exportation of cotton goods to Canton was attended with an alleged loss, still that particular consignment is stated to have been made with but little care, as the goods were of inferior quality. In order to supply the manufactures of cotton goods, within the vicinity of Boston, the great bulk of the cotton to be worked up in those establishments must be carried into her own port. As the cotton thus imported is distributed into the interior by railroad and other conveyances, and as it is nearly all consumed in the neighbouring factories, the increase of manufactures may be judged from the following returns:—

IMPORTATION of Cotton into Boston, for Fourteen Years.

"This trade in cotton forms, by railway and canal, the chief source of the trade between Boston and Lowell.

"Another important source from which the commerce of Boston is derived, and, indeed, the branch of commerce in which the state of Massachusetts takes the lead, is the fisheries. This fact is owing to the circumstance of its proximity to the fishing grounds of the northern part of our coast, the banks of Newfoundland, and other fishing stations. The populous towns that are scattered along the neighbouring coast, from its port to Cape Cod, and the mouth of the Penobscot, have each a large number of vessels employed in the cod, herring, and mackerel fisheries; and these fishing vessels sail from those ports to the various fishing stations, not only upon our own coast, but even to the banks of Newfoundland, returning to pour into the port of Boston the products of this most important branch of our maritime enterprise. From the port of Boston, the products of the cod, the herring, and the mackerel fishery, are distributed not only into various parts of the interior, but likewise to the prominent ports of the frontier, even to the mouth of the Mississippi, a considerable portion being exported abroad."—*Lanman's Commerce of Boston.*

Of the 773,947 quintals of smoked and dried fish, the total product of the union; the state of Massachusetts furnished 389,715 quintals. Of the total product of 472,359 barrels of pickled fish, the total product of the United States, Massachusetts furnished 124,755 barrels. Of the 4,764,708 gallons of spermaceti oil, the product of the United States, Massachusetts supplied 3,630,973 gallons; and of the whale and fish oils furnished by the United States, and amounting to 7,536,778 gallons, Massachusetts alone contributed 3,364,725 gallons. A more prominent fact may be stated, that, of the 16,429,623 dollars, the capital invested throughout the United States in the fisheries, Massachusetts alone supplies 11,725,850 dollars of that capital.—*Official Returns. Lanman.*

In the India trade Boston exceeds any other port of the United States. It appears that, during the year 1843, eight of the arrivals at the latter port consisted of ships belonging to Boston merchants, while others were freighted on Boston account. Eight vessels belonging to the port of Boston were cleared from the harbour of New York. The East India trade, formerly prosecuted to a considerable extent from the port of Salem, has been diverted to other ports, and Boston now holds the larger share. There were cleared from the port of Boston, for ports in the East Indies and ports beyond Cape Horn, during the year 1843, twenty-eight arrivals, from the following places: viz., eleven from Calcutta, nine from Manilla, two from Canton, one from Singapore, two from the Sandwich Islands, one from California, and two from Valparaiso. During the same year, there were cleared at Boston twelve vessels for Canton, fifteen for Calcutta, four for Sumatra, six for Manilla, two for Batavia, one for Singapore, four for the Sandwich Isles, one for Madras and Calcutta, one for Cape Town and Manilla, one for Hong-Kong (China), two for the north-west coast, via Europe, one for Cape Town and Calcutta, one for Cape Town, one for New South Wales and Manilla, seven for Valparaiso, one for Batavia and Manilla, one for Batavia and Canton, two for California, one for Sumatra, via Amsterdam, one for Monte Video and Batavia, and one for Manilla and Mauritius, the total number of clearances to those ports being sixty-six.—*Lanman.*

The first export of cotton goods to China was made in 1827, and it consisted chiefly of yarn, amounting in value to about 9000 or 10,000 dollars, since which time the trade has gradually increased. As late as 1841, it amounted to 173,775 dollars, the succeeding year it had advanced to the value of 497,318 dollars, and in 1843 it was estimated in Boston that it had reached 2,000,000 dollars during that year. From returns now before us, it appears that, in 1842, there were exported from the United States to China, goods to the value of 737,509 dollars, much the greater part of which consisted in the product of the cotton manufactures, it comprising nearly one-half of the total export. The imports during that year amounted in value to 8,790,735 dollars. They consisted of teas, coffee, and other articles, the balance of the trade with that government during the year being a little more than 8,000,000 dollars. The principal imports of China to this country, are tea, silks, and nankeens.—*Lanman. Official Returns, &c.*

LOWELL is situated twenty-five miles north-north-west from Boston, on the south side of the Merrimac, below Pawtucket falls, and where the Concord joins the former river. In 1820, its population was under 200 inhabitants; value of the property about 100,000 dollars; in 1826, incorporated as a town; and, in 1836, as a city; population, in 1830, 6474; in 1840, 20,796; in assessed value of property, 12,400,000 dollars. The natural water power is great, and is extended by a canal sixty feet wide, eight feet deep, and a mile and a half long, from Pawtucket falls to Concord river. From the main canal the water is carried off, by lateral ones, to the mills. "The whole fall for this extent of the Merrimac is thirty feet, and the quantity of water never falls short of 2000 cubic feet per second, and is very rarely so low as that. This quantity of water is estimated to move 286,000 spindles, with all the preparatory machinery. There is, therefore, an unimproved water power at this place, sufficient to carry eleven mills of the usual size, making the whole number of mills thirty-nine, when all the water is improved."

The Merrimac corporation owns the Pawtucket canal, which supplies all the water power, and have purchased all the lands adjoining the river on both sides of the falls. The company is *landlord* and *grantor* of nearly all the other corporations. They have an extensive machine shop, of brick, five stories high, and 250 feet long; an iron foundry, a saw mill, a planing machine, with ample workshops, furnaces, and outbuildings. "They

give constant employment to the most skillful mechanics, who manufacture the machinery for the mills, and cars and locomotives for railroads, which are sent to every part of the union. When a new company is formed, it contracts with the Proprietors of Locks and Canals, for land and for water power, sufficient to drive the contemplated number of spindles; for which an annual rent is paid. They then contract with the proprietors to erect the desired number of mills, and to fill them with machinery ready for running; and to erect counting-houses, warehouses, and boarding-houses, sufficient for all operatives to be employed in the mills. For the whole, a gross sum is paid; and the new company has little concern in the matter, excepting to see that every thing is done according to contract, until the first mill is ready to run. This arrangement is found advantageous to both parties. The machine shop can furnish machinery complete for a mill of 5000 spindles, in four months. All the mills, warehouses, counting-houses, and boarding-houses, excepting the boarding-houses of the oldest company, are of brick, neatly and substantially built, and are about 157 feet long, forty-five feet broad, and from four to seven stories high. These works were founded, and are still maintained, by the capitalists of Boston.

"Eleven incorporated manufacturing companies in this city, with an aggregate capital of 10,500,000 dollars, are supplied with water by the Pawtucket canal, from the original company, above named. The whole number of mills which belong to the eleven corporations, exclusive of print works, is thirty-two; the number of spindles, 166,044; and 5183 looms. Females employed, 6480; males, 2077. Very few children are employed, probably not 200, under fifteen years of age. The companies produce 58,233,000 yards of cloth annually. They consume 19,255,000 pounds of cotton, or 53,340 bales a year. Two companies have print works and dye houses, and together produce 13,780,000 yards of dyed and printed cloth annually.

"The goods manufactured at Lowell are sheetings, flannels, drillings, prints, shirtings, negro-cloth, carpets, rugs, broadcloths, waterproof woollens, and cassimeres.

"For manufacturing purposes, 200 chaldrons of smiths' coal are consumed in a year; 11,460 tons of anthracite coal; 500,000 bushels of charcoal; 3510 cords of wood; 3000 barrels of flour for starch; 600,000 pounds of starch; 65,289 gallons of oil, of which 5000 gallons are olive oil.

"Besides the above-named companies, there are in the city, the Lowell Bleachery, with a capital of 50,000 dollars; Whitney Mills, capital 100,000 dollars, for the manufacture of milled blankets; and extensive powder mills, which make superior gunpowder. There are also various mills and manufactories, owned by individuals. New companies and manufactories are continually springing up; and much water power is unimproved.

"The average wages of female operatives, exclusive of board, is two dollars a week, but some of them earn double that; the males, on an average, earn eighty cents a day, exclusive of board. All the corporations and private companies pay off their hands once a month, but on different days. The whole amount of wages paid to operatives in each month, is 160,000 dollars on an average; a very considerable portion of which is deposited by the receivers in the 'Lowell Savings' Institution."—*U. S. Gaz.*, 1844.

The following statistics of the manufactures of Lowell, on the 1st of January, 1844, are compiled, by Mr. Lanman, from authentic sources. There are eleven companies or corporations: viz., the Lock and Canal, Merrimac, Hamilton, Appleton, Lowell, Middlesex, Suffolk, Tremont, Lawrence, Boot, and Massachusetts. We give statistics of each company as follows:—

Lock and Canal, incorporated 1792, commenced operations 1822, capital stock, 600,000 dollars; has two shops, smithey and furnace; employs 500 males; manufactures 1225 tons of wrought and cast iron per annum, consisting of machinery, railroad cars, and engines; and consumes 15,000 bushels of charcoal, 200 chaldrons of smiths' coal, 400 tons of hard, 200 cords of wood, and 2300 gallons of oil per annum.

Merrimac, incorporated in 1822, commenced operations in 1823, capital stock, 2,000,000 dollars; has five mills and print-works, 40,384 spindles, and 1300 looms; employs 1250 females, and 550 males; makes 250,000 yards of cotton per week, and uses 150 bales of cotton in the same time, or 56,000 lbs.; yards dyed and printed, 210,000. The kind of goods manufactured by this company are prints and sheetings, No. 22 to 40.

Consumes per annum, of anthracite coal, 5000 tons; of wood, 200 cords; of oil, 13,000 gallons.

Hamilton, incorporated in 1825, commenced operations same year, capital stock, 1,000,000 dollars; has three mills and print-works, 21,248 spindles, and 590 looms; employs 650 females, and 250 males; makes 100,000 yards per week; uses 100 bales, or 42,000 lbs.; prints and dyes 63,000 yards. The kind of goods manufactured are prints, flannels, sheetings, &c., from Nos. 14 to 20. Consumes 3000 tons of anthracite coal, 500 cords of wood, and 6500 gallons of oil.

Appleton, incorporated in 1828, commenced operations the same year, with a capital of 600,000 dollars; has two mills, 11,776 spindles, and 400 looms; employs 340 females, and sixty-five males; manufactures 100,000 yards per week; uses ninety bales of cotton, or 36,000 lbs. The kind of goods manufactured by this company are sheetings and shirtings. Consumes 300 tons of anthracite coal, and 3440 gallons of oil.

Lowell, incorporated in 1828, commenced operations the same year, with a capital stock of 600,000 dollars; has two mills, one cotton and one carpet; has 6000 cotton spindles, besides wool; 152 cotton looms, fifty power carpet, and forty hand-loom; employs 400 females, and 200 males; manufactures per week 2500 yards; carpets, 150; rugs, 85,000; uses 110 bales, and 40,000 lbs. of cotton wrought per week. The kind of goods manufactured are carpets, rugs, and negro cloth. Consumes 500 tons of anthracite coal, 500 cords of wood, 4000 gallons of olive oil, and 4000 gallons of sperm oil per annum.

Middlesex, incorporated in 1830, commenced operations the same year, capital stock, 750,000 dollars; has two mills, and two dye-houses; 7200 spindles; thirty-seven looms for broadcloth, and 122 for cassimere; employs 550 females, and 250 males; makes per week 9000 yards of cassimere, 1800 yards of broadcloth; consumes 1,000,000 lbs. wool, and 3,000,000 teasels; uses 600 tons of anthracite coal, and 1500 cords of wood; 15,000 gallons of lard oil, and 5000 gallons of sperm oil.

Suffolk, incorporated in 1830, and commenced operations in 1832; capital stock 600,000 dollars; has two mills, 11,776 spindles, and 352 looms; employs 340 females, and seventy males; makes 90,000 yards of drillings per week; uses ninety bales of cotton, or 32,000 lbs.; consumes 300 tons of anthracite coal, seventy cords of wood, and 3500 gallons of oil.

Tremont, incorporated in 1830, commenced operations in 1832; capital stock, 600,000 dollars; has two mills, 11,520 spindles, and 409 looms; employs 360 females, and seventy males; makes 115,000 yards of sheeting and shirting per week; consumes seventy-five bales, or 30,000 lbs. of cotton per week; uses 250 tons of anthracite coal, and sixty cords of wood per annum.

Lawrence, incorporated in 1830, and commenced operations in 1833; capital stock, 500,000 dollars; has five mills, 32,640 spindles, and 950 looms; employs 900 females, and 170 males; makes 210,000 yards per week, and consumes 180 bales, or 65,000 lbs. of cotton per week. The goods manufactured are printed cloths, sheetings and shirtings, Nos. 14 to 30. Consumes 650 tons of anthracite coal, 120 cords of wood, and 8217 gallons of oil per annum.

Boot, incorporated in 1835, commenced operations in 1836; capital stock, 1,200,000 dollars; has four mills, 31,524 spindles, and 910 looms; employs 780 females, and 130 males; makes 180,000 yards per week; uses 145 bales, or 59,000 lbs. of cotton per week. The goods made, are drillings, shirtings, and printed cloth. Consuming 750 tons of anthracite coal, seventy cords of wood, and 7100 gallons of oil per annum.

Massachusetts, incorporated in 1839, commenced operations in 1840; capital stock, 1,200,000 dollars; has four mills, 27,008 spindles, and 882 looms; employs 725 females, and 160 males; makes 260,000 yards per week, and consumes 200 bales, or 80,000 lbs. of cotton. The goods made are sheetings, shirtings, and drillings. Consumes 7.5 tons of anthracite coal, seventy cords of wood, and 7100 gallons of oil per annum.

financial affairs of the manufacturing companies, most of which pay their operatives in its bills.

"The territory of Lowell does not exceed two miles square. The Indian name of it was *Wamsit*, the seat of a tribe of *praying* Indians, at the breaking out of Philips' war, in 1765. It was named in honour of Francis C. Lowell, of Boston, distinguished for his efforts to introduce the cotton manufacture into the United States.

"That a place which, twenty years since, had not a 'local habitation, nor a name,' should have become the second place in population in Massachusetts, the fourteenth in the United States, larger than any city south of the Potomac, excepting Charleston and New Orleans, is proof of what manufactures, properly conducted, can accomplish. Nor have these manufacturers benefited themselves more than they have promoted the public interest. Cottons which, twenty years since, would have cost thirty cents a yard, can now be purchased for six cents; and such establishments as those at Lowell, have wrought this change."—*U. S. Gaz.*, 1844.

In 1840, there were 191 stores, capital 373,300 dollars; five lumber yards, capital 19,000 dollars; one furnace, capital 3500 dollars; four fulling mills, eight woollen factories, capital 551,300 dollars; twenty-six cotton factories, 166,000 spindles; three dyeing and printing establishments, total capital 8,000,000 dollars; three powder mills, capital 150,000 dollars; one paper factory, capital 5000 dollars; one flouring mill, three grist mills, one saw mill, capital 50,000 dollars; two printing offices, two binderies, three weekly newspapers, two semi-weekly newspapers, and one periodical, capital 10,000 dollars. Total capital in manufactures, 8,837,460 dollars.—*Official Returns to Congress.*

SALEM is situated in 42 deg. 34 min. north latitude, and 70 deg. 5 min. west longitude from Greenwich, and in 6 deg. east longitude from Washington. It is fourteen miles north-north-west from Boston, and 454 miles north-east from Washington. The population, in 1810, was 12,613; 1820, 12,731; 1830, 13,866; 1840, 15,082. Employed in commerce, 287; manufactures and trades, 1188; navigating the ocean, 1301; learned professions, &c., 52.

It stands chiefly on a tongue of land formed by two inlets of the sea, called North and South rivers: over the former there is a bridge, upwards of 1500 feet long, connecting it with Beverley. The harbour in South River has good anchorage ground, but vessels drawing more than twelve or fourteen feet of water are partly unloaded before they can come to the wharfs. The situation of Salem is low, but healthy. It is well built, and most of the houses which have been recently erected are of brick. The streets are irregular. In the northern part of the town there is a public square or common, containing about ten acres, surrounded by a public walk, ornamented with trees. An aqueduct supplies the city with excellent spring water. Salem was long the second town in New England in wealth, commerce, and population. Providence and Lowell now exceed it in population, and New Bedford in shipping. It was long pre-eminent for its East India trade, by which it was chiefly enriched; but this branch of commerce, though still carried on, is far less extensive than formerly. On a peninsula below the town are Fort Pickering and Fort Lee; and on Baker's Island there is a lighthouse. The tonnage of this port in 1840, was 37,020 tons.

The public buildings are, a court house, a gaol, an almshouse, a market house, an East India Marine Museum, a lyceum, &c. It has nine banks, with an aggregate capital of 2,000,000 dollars; six insurance companies, with a total capital of 950,000 dollars; a marine insurance company, and an institution for savings. There are two public libraries, an atheneum, containing 10,000 volumes, and a mechanics' library, containing 1200 volumes. There are sixteen churches—four Unitarian, four Congregational, two Baptist, one Episcopal, one Methodist, one Christian, one Roman Catholic, one Friends', and one Universalist.

There is a marine society, formed, in 1841, of those who, as captains or supercargoes, have doubled the Cape of Good Hope or Cape Horn, for the relief of the families of its members, and for advancing the knowledge necessary for the East India trade. It has a museum, consisting of curiosities collected from all parts of the world. To this museum strangers have free access, when introduced by a member.—*U. S. Gaz. Official Returns.*

There were, in 1840, forty-five commercial houses, eighty retail stores, with a capital

of 480,000 dollars; capital invested in the fisheries, 200,000 dollars; seventeen tanneries, capital 75,000 dollars; four distilleries, capital 35,000 dollars; paints, drugs, &c., capital 140,000 dollars; four rope walks, capital 83,000 dollars; two grist mills, two saw mills, capital 50,000 dollars; three printing offices, two weekly and two semi-weekly newspapers, capital 9000 dollars. Total capital in manufactures, 1,439,000 dollars. One academy, thirty-two students, seventy-seven schools, 2965 scholars.—*Official Returns.*

ANDOVER is on the south-west side of the Merrimac river, and is watered also by the Shawsheen. The streams furnish good water power, which is extensively employed in manufacturing. It had, in 1840, fourteen stores, capital 4700 dollars; five fulling mills, six woollen factories, one furnace, one tannery, three grist mills, five saw mills. Capital in manufactures, 417,700 dollars. The south village contains five churches—one Congregational, one Episcopal, one Baptist, one Universalist, and one Methodist; a bank, a savings' institution, an insurance office, Philips' Academy, and the Andover Theological Seminary. Philips' Academy was founded in 1788, by the Hon. Samuel and John Philips. It has funds to the amount of over 50,000 dollars. The number of students is limited to 130, which is its usual number, all of whom study the learned languages, under a principal and three assistants. The academic building is of brick, eighty feet by forty, on a range with the theological buildings, forty rods distant. This is the best endowed academy in the state.

The Andover Theological Seminary was founded in 1807, and opened in the autumn of 1808. The buildings consist of three dwelling-houses for professors, a steward's house, containing a dining-hall; and three public edifices of brick; Philips' Hall, ninety feet by forty, four stories, containing thirty-two rooms for students; Bartlet Chapel, ninety-four feet by forty, containing a chapel, library, and three lecture-rooms; and Bartlet Hall, 104 feet by forty, four stories, containing thirty-two suites of rooms for students. The institution is under a president and four professors: the associate professor of sacred literature, the Abbott professor of Christian theology, the Bartlet professor of sacred rhetoric, and the Brown professor of sacred rhetoric and ecclesiastical history. The students on entering are required to have a liberal education, and testimonials of good character and talents, and complete their course in three years. They are divided into the junior, middle, and senior classes. Tuition and room rent are free to all, and further aid is furnished to the indigent. A public examination and commencement are held on the fourth Wednesday of September. It has 142 students; 785 have completed their education here since its first establishment; and the libraries contain 17,500 volumes. The whole amount contributed by its donors is about 400,000 dollars. A seminary for teachers was founded in Andover in 1830, which gives a thorough education, and promises to be of great use in preparing competent teachers for schools. Manual labour is connected with the institution. Population, 1830, 4540; 1840, 5207.—*Official Returns. U. S. Gaz.*

ABINGTON had, in 1840, twenty stores, with a capital of 27,400 dollars; hardware and cutlery manufactories, 34,533 dollars; of leather, 621,100 dollars. It has one tannery, five grist mills, nine saw mills. Capital in manufactures, 163,650 dollars. Ten schools, 673 scholars. Population, 3214.—*Official Returns.*

ADAMS, is situated 132 miles north of Boston, on a branch of the Hoosack river, over a branch of which there is a natural bridge, sixty feet above the surface of the stream. This place consists of two villages, in both of which there were, in 1840, 3703 inhabitants; a bank, with a capital of 200,000 dollars; eighteen stores; fourteen cotton manufactories; with 18,320 spindles; one dyeing and printing establishment; value of cotton manufactures produced, 481,107 dollars; capital employed, 316,000 dollars; exclusive of 172,900 dollars capital employed in saw mills, leather, and other manufactories.—*Official Returns.*

AMESBURY, forty-four miles north-east of Boston, is situated on the north side of the Merrimac. A pond, covering about 1000 acres, ninety feet above tidewater, furnishes, by its outlet, extensive water power. Powow river runs through it, and furnishes mill seats. This river is navigable to the falls, and large ships are built here, and floated through the Merrimac to the ocean. There were in the township fifteen stores, capital 18,170 dollars; ten fulling mills, two woollen factories, three tanneries, one pottery, four grist mills, two saw mills. Capital in manufactures, 246,715 dollars. One academy, forty students, fifteen common schools, 646 scholars. Population, 2471.—*Official Returns.*

AMHERST, eighty-two miles west of Boston. Two branches of the Connecticut river furnish good water power. It had, in 1840, fourteen stores, capital 48,000 dollars; two woollen factories, one tannery, two grist mills, two saw mills. Capital in manufactures, 62,400 dollars. It was separated from Hadley, and incorporated in 1759. It is the seat of Amherst College, a flourishing institution, which was founded in 1821, and incorporated in 1823. It has a president and ten professors, or other instructors. The whole number of alumni is 613, of whom 137 have been ministers of the gospel. It has (1841) 157 students and 15,000 volumes in its libraries. Its philosophical apparatus is very complete, and it has a fine cabinet of natural history, including mineralogy. The necessary expenses are from 113 dollars to 137 dollars annually. The rooms of indigent students are supplied with furniture. The commencement is on the fourth Wednesday of August. The buildings are convenient and commanding. The institution has been supported chiefly by private liberality. Amherst has two parishes, in each of which is a pleasant village and a Congregational church. It has one academy, eighty-seven students, eight schools, 586 scholars. Population, 2550.—*Official Returns. U. S. Gaz.*

ATHOL, sixty-nine miles west-north-west of Boston. Incorporated, 1762. It is watered by Miller's river, which affords an extensive water power. It has five stores, capital 20,000 dollars; one furnace, two tanneries, three grist mills, nine saw mills. Capital in manufactures, 48,625 dollars. Population, 1591.—*Official Returns.*

ATTLEBOROUGH, thirty miles south of Boston. Incorporated, 1694. Branches of the Pawtucket river pass through the township, and afford extensive water power. It has eight stores, six cotton factories, with 9846 spindles; value produced, 150,000 dollars; two grist mills, three saw mills, one button manufactory. Total capital in manufactures, 280,000 dollars. Population, 3585.—*Official Returns.*

BARNSTABLE, township and harbour, seventy-four miles from Boston, on the south side of Barnstable bay, within Cape Cod; tonnage of the port in 1840, 56,556. It has twenty-nine stores, and 57,000 dollars employed in the fisheries; and 30,050 dollars in salt and leather manufactures. Population of the township, which includes the best lands of Cape Cod, amounted, in 1840, to 4301 inhabitants. The harbour has only seven to eight feet of water over the bar.—*Official Returns.*

CAPE COD harbour, within Race point, and near Provincetown, is considered a harbour well adapted for shelter to vessels of the larger class. Among the documents which have been published by order of the Massachusetts house of representatives, is a map of the extremity of Cape Cod, including the towns of Provincetown and Truro, with a chart of the adjoining coast, and of Cape Cod harbour, from surveys and drawings made under the direction of Major J. D. Graham, of the United States topographical engineers. It is drawn on a scale of six inches to a mile, making a large map of four sheets. We find it stated in a note appended to the chart, that "this harbour affords every convenience as a watering station for shipping; the greatest abundance of pure fresh water being obtained in the village of Provincetown, from wells sunk in the sand." The inhabitants of Cape Cod and the whole of its bay, and the harbours along its external course, facing the Atlantic, are chiefly employed in the fisheries. The following, exclusive of Barnstable, are the most important places. First, within the bay:

PROVINCETOWNS, by land 123 miles from Boston. Situated on the extreme north-west point of Cape Cod. The surface consists of beaches, sand hills, eight shallow ponds, and a number of swamps. The harbour within the curve of the cape is easy of access, spacious and safe, with a sufficient depth of water for the largest ships. The village is inhabited chiefly by fishermen, and the cod and mackerel fisheries employ about 1000 men and boys. The houses are chiefly on one street, two miles long, following the course of the beach. It contains three churches—one Congregational, one Methodist, and one Universalist. The soil is a loose sand. Salt is extensively manufactured, and there are many windmills to raise the water into vats for evaporation. Good water is obtained at a moderate depth, a little distance from the shore. There are in the town, fifteen stores, capital 30,100 dollars; two lumber yards, capital 3750 dollars. Capital in manufactures, 13,200 dollars. Population, 2122.—*Official Returns.*

TRURO, sixty-five miles by sea, and 112 miles by land, from Boston; has four places of worship; 1920 inhabitants, employed variously.

WELFLEET has a tolerably good harbour within the bay, a scattered population of 2377 inhabitants, employed chiefly in the cod and mackerel fisheries, and in manufacturing salt. The principal village is surrounded by sand hills.

DENNIS has several vessels engaged in the fisheries and coasting trade; in 1840, capital in fisheries, 36,300 dollars. Population, 2942.

SANDWICH, situated on the isthmus of Cape Cod, between Buzzard's and Cape Cod bays. It is the most agricultural township in the county, with some light and unproductive land. It has a number of ponds, which afford fishing and fowling. Deer are still found in this vicinity. The principal village is situated on Cape Cod bay, and contains four churches—one Congregational, one Unitarian, one Methodist, and one Roman Catholic; and an academy, a large glass factory, and about 100 dwellings. There are, in other parts of the town, six other churches—four Methodist, one Congregational, and one Friends. A ship canal five miles long, through level ground, would connect Buzzard's and Cape Cod bays, and save the tedious navigation around the cape. A considerable quantity of salt is manufactured in this township. There were, in 1840, seventeen stores, capital 23,750 dollars; one tannery, one glasshouse, seven grist mills, one saw mill. Capital in manufactures, 283,350 dollars. Population, 3719.—*Official Returns. U. S. Gaz.*

SANDY RIVER, rises in Franklin county. The yards and buildings of the glass works cover six acres of ground. It employs 225 workmen, who, with their families, occupy sixty dwelling houses. The raw materials used per annum, are glass 600 tons; red lead, 700,000 lbs.; pearlash, 450,000 lbs.; saltpetre, 79,000 lbs. They consume 1100 cords of pine wood, 700 cords of oak wood, and 100,000 bushels of bituminous coals. Seventy tons of hay and straw are used in packing the glass. The value of glassware manufactured, is 300,000 dollars per annum; said to be superior to any in Europe. By the application of heated air from the steam engine, to pans containing sea water, they manufacture about 3000 bushels of salt per annum; and all the ashes are bleached, and the lye converted to potash. It is said, that the mere saving to the company, by this species of economy, which is carried through every department, is sufficient to pay a handsome dividend on the stock.—*Official Returns.*

The chief places within the district of Cape Cod, without the bay, are:

EASTHAM, population, in 1840, 9546; engaged chiefly in the fisheries and in making salt.

CHATHAM has a harbour within a bay formed by a long beach. In 1840, population, 2334; employed chiefly in fishing and making salt.

YARMOUTH, in 1840, population, 2534; employed in fisheries and salt works.

HYART'S PORT has a good harbour and a breakwater, constructed by the United States government.

BICESTER is a fishing town, with about 1600 inhabitants.

HANNAH.—In 1840, population engaged in making salt, and in the fisheries.

FALMOUTH, seventy-five miles south-by-east of Boston, is situated on the south-west point of Cape Cod, between Buzzard's bay and Vineyard sound. The soil is light, but the most fertile on the cape. It has several good harbours, of which the best is Wood's Hole, in the south-west part of the township, which has from three to six fathoms of water. Two small streams in the township afford water power. It has some manufactures, but more shipping: much of which is employed in the coasting trade and the fisheries. There were, in 1840, 38,180 bushels of salt produced, and 150,000 dollars invested in the fisheries; sixteen stores, capital 29,500 dollars; two lumber yards, capital 2500 dollars; two fulling mills, one woollen factory, one tannery, five grist mills. Capital in manufactures, 39,150 dollars. Population, 2071.—*U. S. Gaz. Official Returns.*

ORLEANS.—In 1840 the number of inhabitants was 1974, engaged chiefly in fisheries and salt-making.

The other principal places and towns in Massachusetts are—

BARRE, sixty-five miles west of Boston. In 1840, population, 2751. One cotton factory, 2500 spindles.

BEVERLY, sixteen miles north-east of Boston, lies north of Salem, to which it is connected by a bridge 1500 feet long. The inhabitants are chiefly employed in commerce and the fisheries, though they have also considerable manufactures. Incorporated in 1688.

The village has four churches—two Congregational, one Baptist, and one Unitarian; a bank, and an insurance office. There were, in 1840, in the township, one commercial house, capital 10,000 dollars; twenty-two stores, capital 43,000 dollars; one rope factory, two grist mills, one saw mill. Capital in manufactures, 38,500 dollars. Population, 4689.—*Official Returns.*

BRADFORD, thirty-five miles north of Boston, lies on the Merrimac river. The surface is uneven, but the soil is good. Johnson's creek affords water power. A bridge across the Merrimac, 650 feet long, connects this place with Haverhill. It has various manufactures, chiefly of boots and shoes. It had, in 1840, three churches—two Congregational and one Free; twelve stores, capital 13,500 dollars; four tanneries, two grist mills, one saw mill. Capital in manufactures, 76,000 dollars; 65,700 dollars of which is employed in leather manufactures. Population, 2222.—*Official Returns.*

BROOKFIELD, sixty miles west of Boston, is a flourishing agricultural town, well adapted to grazing. It has seven stores, capital 16,700 dollars; one fulling mill, one tannery, one furnace, three grist mills, three saw mills, one printing office. Capital in manufactures, 24,150 dollars. Population, 2472.—*Official Returns.*

BELCHERSTOWN, seventy-eight miles west of Boston. Population, in 1840, 2554.

BRAINTREE, fourteen miles south of Boston. Population, in 1840, 2168. It has some manufactures, and a coasting trade.

BRIDGEWATER, twenty-five miles south-east of Boston. Population, in 1840, 2131.

CHARLTON, fifty-three miles south-west of Boston. Population, in 1840, 2117; had one cotton mill, 716 spindles, one fulling mill, eight stores, one tannery, seven grist mills, and ten saw mills.—*Official Returns.*

CANTON, sixteen miles south-by-west of Boston. Population, in 1840, 1995. A railway passes through it, by a granite viaduct, sixty-seven feet high and 600 feet long, over one of its streams. Nine stores, three furnaces, five forges, two woollen factories, four cotton mills, with 1868 spindles.—*Official Returns.*

DANVERS, sixteen miles north of Boston. The soil is fertile, and well cultivated. The principal village is a continuation of the streets of Salem, of which it is virtually a suburb. It contains three churches—one Congregational, one Unitarian, and one Universalist—and a little to the west is another Congregational church. There is another village further north, on the Beverly river, which contains a Congregational and a Baptist church. At this village ship building is a considerable business. Both these villages can be approached by vessels, and have considerable manufactures, and some trade. It has fifteen stores, capital 57,600 dollars; twenty-one tanneries, four potteries, one grist mill, one saw mill. Capital in manufactures, 362,800 dollars, principally in leather. Population, 5020.—*Official Returns. U. S. Gaz.*

DARTMOUTH, a seaport sixty-five miles south of Boston, on Buzzard's bay. In 1840, it had 4135 inhabitants, carries on a considerable whale fishery, and coasting trade, and has salt manufactories, ship yards, twelve stores, one woollen factory, three tanneries, one oil mill, five grist mills, and eight saw mills.—*Official Returns.*

DRACUT, opposite to Lowell, on the Merrimac. Population, in 1840, 2188.

DUXBURY, thirty-six miles south-south-east of Boston, on Massachusetts bay. Population, in 1840, 2798; had one woollen factory, one rope-walk, three tanneries, two grist mills, and six saw mills. Capital in manufactures, 95,800 dollars; twelve stores, capital 37,750 dollars.—*Official Returns.*

EASTON, twenty-four miles south of Boston, is watered by two branches of the river Taunton. It had, in 1840, ten stores; five cotton factories, with 1996 spindles. Capital in manufactures, 57,500 dollars. Population, 2074.—*Official Returns.*

EAST BRIDGEWATER, twenty-five miles south-east of Boston. It had, in 1840, seven stores, one furnace, two forges, one cotton factory, 904 spindles, three grist mills, seven saw mills. Capital in manufactures, 142,070 dollars. Population, 1950.—*Official Returns.*

FAIR HAVEN, fifty-nine miles south-by-north of Boston, is situated opposite New Bedford, on Acushnet river, over which there is a bridge 3960 feet long. It has a whale fishery, bank, and insurance company. In 1841, it had thirty-one stores, one lumber yard, two woollen factories, two cotton factories with 1760 spindles.—*Official Returns.*

all river, at its

entrance into Mount Hope bay, a branch of Narraganset bay. Fall river consists of the outlet of Watuppa pond, which is eleven miles long and one mile broad, two miles east of the town, and is an unfailing stream. It falls 140 feet within 100 rods, and affords great water power. The village contained, in 1840, eight churches—one Congregational, one Episcopal, one Christian, one Baptist, one Friends, one Methodist, one Unitarian, and one Roman Catholic; two banks and an insurance office. It has considerable shipping em- ployed in the whale fishery. There were, in 1840, in the township, fifty-eight stores, capi- tal 105,000 dollars; four lumber yards, capital 15,000 dollars; one furnace, one large iron works, two print works, six fulling mills, one woollen factory, nine cotton factories, 32,680 spindles, two tanneries, one pottery, two printing offices, two weekly newspa- pers, three grist mills, four saw mills. Capital in manufactures, 1,436,300 dollars. Population, 6738.—*U. S. Gaz.*

FRAINGHAM, twenty-two miles south-west of Boston. In 1840, population, 3030. Capital in four woollen and other factories, 396,900 dollars.

FITCHBURG, forty-six miles west-north-west of Boston, on a branch of the Nashua, which supplies plenty of water power. In 1840, it had seven stores, twelve fulling mills, two woollen factories, four cotton factories, with 3820 spindles; one tannery, three paper factories, two binderies, two planing mills, two grist mills, six saw mills. Popu- lation, 2604.—*Official Returns.*

GLOUCESTER, a port of entry, thirty miles north-east of Boston; it has a fine har- bour, open at all seasons of the year, and its inhabitants are extensively engaged in naviga- tion and the fisheries. Tonnage, in 1840, 17,072 tons. On the south side of the penin- sula, and on Thatcher's island, on the south-east, are two light-houses. A canal is cut across the isthmus which connects the capo with the main land. It had, in 1840, four commercial houses, capital, 107,000 dollars; thirty-two stores, capital 57,775 dollars; two lumber yards, capital 23,000 dollars; one printing office, one weekly, and one semi- weekly, newspaper, four grist mills, three saw mills. Capital in manufactures, 52,495 dol- lars. Population, 6350.—*Official Returns.*

GRAFTON, thirty-six miles south-west of Boston, watered by streams which afford water power. In 1840, it had six stores, four fulling mills, one woollen factory, five cotton mills, 22,930 spindles. Capital in manufactures, 130,400 dollars. Population, 2943.—*Official Returns.*

GREAT BARRINGTON, 131 miles west of Boston. The Housatonic river flows through it. In 1840, it had seven stores, one furnace, one fulling mill, two woollen factories, three cotton mills, with 6094 spindles; two tanneries. Population, 2704.—*Official Returns.*

GROTON, thirty-three miles north-west of Boston. Capital in manufactures, 18,000 dollars. In 1840, population, 2139.—*Official Returns.*

HAVERHILL, thirty-two miles north-by-west of Boston, opposite New Bedford, on the Merrimac, by which vessels of 100 tons ascend to the bridge. In 1840, it had thirty-one stores, two fulling mills, one woollen factory. Capital in manufactures, 345,450 dollars. Population, 4336.—*Official Returns.*

HINGHAM, fifteen miles south-east of Boston. Situated on the south side of Boston bay. It contains several churches, one of which was erected in 1680, and is still a substau- tial building, a bank, an insurance office, a savings' bank, and two academies. It has about eighty vessels employed in the fisheries and the coasting trade. Several packets com- municate regularly with Boston, and a steamboat daily, in the summer season. It had, in 1840, thirty-two stores, capital 46,600 dollars; two lumber yards, capital 6000 dollars; one furnace, three tanneries, one printing office, one weekly newspaper, two grist mills, one saw mill, one oil mill. Capital in manufactures, 105,800 dollars. Population, 3564.—*U. S. Gaz.*

HOPKINTON, twenty-nine miles west-south-west of Boston, watered by branches of Charles and Mill rivers, which afford water power. The Boston and Worcester railroad, and the Blackston canal, run near it. In 1840, it had seven stores, capital 15,100 dollars; three cotton factories, 3952 spindles, one tannery, four grist mills, five saw mills. Capital in manufactures, 127,400 dollars. Population, 2245.—*Official Returns.*

IRSWICH, twenty-six miles north-east-by-north of Boston, is a port of entry, with a number of vessels engaged in the coasting trade and fisheries. In 1840, registered ton-

nage, 3739 tons; seven stores, one lumber yard, one fulling mill, two cotton mills, 2640 spindles. Capital in manufactures, 110,000 dollars. Population, 3000.—*Official Returns.*

LANCASTER, thirty-six miles west-by-north of Boston, on the river Nashua. In 1840, it had one woollen factory, two cotton mills. Capital in manufactures, 17,830 dollars. Population, 2019.—*Official Returns.*

LEOMINSTER, forty-four miles west-north-west of Boston. In 1840, capital in manufactures, 13,825 dollars. Population, 2069.

LEE, 128 miles west of Boston. In 1840, it had one cotton mill, 888 spindles, thirteen paper factories. Capital in manufactures, 267,528 dollars. Population, 2428.

MARBLEHEAD, is situated eighteen miles north-east of Boston, on a rocky point projecting three or four miles into Massachusetts bay. Its harbour is good, of easy access, and it has about 100 vessels employed in the fisheries and foreign coasting trade, estimated at 12,478 dollars. It had, in 1840, a population of 6575. Two banks, with a capital of 220,000 dollars; two insurance companies, capital 100,000 dollars; and twenty-nine stores.—*Official Returns.*

MARLBOROUGH, twenty-seven miles west of Boston. Population, 2101.

MEDWAY, twenty-eight miles south-west of Boston, watered by Charles river, which affords good water power. In 1840, the township contained eight stores, capital 12,850 dollars; six cotton factories, 2859 spindles, four grist mills, eight saw mill's. Capital in manufactures, 86,800 dollars. Population, 2043.—*Official Returns.*

MENDON, thirty-three miles south-west of Boston. In 1840, it contained ten stores, five fulling mills, six cotton factories, 19,003 spindles. Capital in manufactures, 420,075 dollars.

METHUEN, twenty-six miles north-by-west of Boston. Situated on the north side of Merrimac river, watered also by Spicket river, which has a fall of thirty feet, two miles above its entrance into the Merrimac, affording extensive water power. In 1840, the township contained four stores, capital 15,000 dollars; two cotton factories, 4588 spindles, one tannery, two paper factories, two grist mills, two saw mills. Capital in manufactures, 260,500 dollars. Population, 2251.

MIDDLEBOROUGH, forty miles south-by-east of Boston. It has several ponds, the outlets of which afford extensive water power, and flow into Taunton river. In 1840, it had eight stores, capital 51,000 dollars; one fulling mill, two cotton factories, 2500 spindles, one furnace, two forges. Capital in manufactures, 122,000 dollars. Population, 5085.—*Official Returns.*

MILLBURY, forty-three miles west-by-south of Boston. In 1840, it had eleven fulling mills, five woollen factories, three cotton factories, with 4960 spindles. Capital in manufactures, 261,600 dollars. Population, 2171.—*Official Returns.*

MONSON, seventy-five miles south-west of Boston. Capital in manufactures, 16,903 dollars. Population, 2151.

NEW BEDFORD is a port of entry fifty-eight miles south of Boston, to which it is connected by railroad, in 41 deg. 38 min. 7 sec. north latitude, and 70 deg. 55 min. 49 sec. west longitude. Population, in 1820, 3947; 1830, 7592; 1840, 12,087. New Bedford is on an arm of the sea, which sets up from Buzzard's bay. The ground rises rapidly from the water, and gives the upper part of the town, which contains many handsome dwellings, a commanding situation. A bridge, near the centre of the place, connects it with Fairhaven. It contains a court house; four banks, capital 1,300,000 dollars; three insurance offices, capital 350,000 dollars, and a savings' institution; fourteen churches, one Baptist, three Congregational, one Episcopal, two Christian, one Friends, two Methodist, one Roman Catholic, one Unitarian, one Universalist, one Bethel, and one African. There are seventeen candle houses and oil manufactories. The harbour is safe and spacious. The surrounding country affords few exports, and the inhabitants and capital of the place are chiefly devoted to the whale fishery. Its tonnage, in 1840, was 89,089 tons, being the second district in this respect in the state. There were, in 1840, 174 stores, capital 482,350 dollars; six lumber yards, capital 34,800 dollars; capital employed in the fisheries, 4,512,000 dollars; salt produced, 13,100 bushels; three tanneries, four grist mills, two saw mills, one rope-walk, one paper factory, three printing offices, one bindery, two daily and two weekly newspapers. Capital in manufactures, 527,800 dollars.

—*U. S. Gaz. Official Returns.*

The following table shows the number of ships, brigs, schooners, and sloops, together with the amount of tonnage belonging to the district of New Bedford, on the 30th of September in each year:

YEARS.	Ships.	Brigs.	Schooners	Sloops.	TOTAL.	Tonnage.
1822.....	53	11	48	174	236	
1823.....	154	33	49	196	347	69,524
1824.....	191	32	50	103	384	76,655
1825.....	194	24	49	79	366	73,607
1826.....	300	21	47	94	562	78,207
1827.....	217	17	51	85	370	80,475
1828.....	224	30	54	59	367	83,884
1829.....	228	27	57	71	383	85,400
1830.....	258	31	45	72	386	89,277

NEWBURY, situated on the south side of Merrimac river, is thirty-one miles from Boston. Population of the township in 1840, 3789. The surrounding country is well cultivated.

NEWBURYPORT, a port of entry, thirty-eight miles north-by-east of Boston, is beautifully situated on a gentle acclivity, on the south bank of the Merrimac river at its entrance into the Atlantic. It contains a territory of one mile square of excellent land. The streets are wide, intersecting each other at right angles, and it has a brick court house, a stone gaol, a custom house of rough granite, with a fine wrought Grecian Doric portico and pilasters on the sides, which cost 25,000 dollars; eight churches—two Presbyterian, one Congregational, one Independent, one Episcopal, one Baptist, and one Methodist; an academy, three banks, with a capital of 700,000 dollars, besides a bank for savings; three insurance companies, almshouse, and lyceum. In 1840, it had a population of 7161 inhabitants; fifteen commercial houses, capital 781,000 dollars; 116 stores, capital 225,000 dollars; four lumber yards, four cotton factories, with 17,736 spindles, two distilleries, three printing offices, one weekly, one semi-weekly, and one daily paper. Capital in manufactures, 647,800 dollars.—*Official Returns. U. S. Gaz.*

NORTH BRIDGEWATER is twenty-two miles south-by-east of Boston. Population, in 1840, 2615.

NORTHAMPTON, on the west bank of the Connecticut river. The public buildings are a court house, gaol, and five churches, some of which are spacious and handsome—two Congregational, one Baptist, one Episcopal, and one Unitarian, and a female seminary. The Round Hill School is a celebrated seminary, on the plan of a German gymnasium. There is a bank and an insurance company. A fine bridge, 1080 feet long, and twenty-six wide, supported on piers, some of them forty feet high from the bottom of the river, completed in 1826, connects this place with Hadley. A canal, which here joins the Connecticut river, connects Northampton with Newhaven county. Mount Tom, in this town, and Mount Holyoke on the opposite side of the river, are lofty summits, often visited for their commanding prospects. This stream passes through the centre of the town, which affords good water power. There were, in 1840, in the township, thirty-four stores, capital 125,700 dollars; two fulling mills, two woollen factories, capital 110,000 dollars; one tannery, one flouring mill, three grist mills, eleven saw mills, one paper factory, four printing offices, two binderies, three weekly papers. Capital in manufactures, 254,800 dollars; one academy, fifty-six students, twenty-one schools, 937 scholars. Population, in 1830, 3613; 1840, 3750.—*U. S. Gaz. Official Returns.*

PALMER, eighty-one miles west of Boston, on the Wore and Swift rivers. In 1840, there were 2139 inhabitants, eight stores, two cotton factories, 22,000 spindles, three grist mills, three saw mills. Capital in manufactures, 315,100 dollars.—*Official Returns.*

PITTSFIELD, 131 miles west of Boston; is drained by branches of the Housatonic river, which affords good water power. The railroad from Boston to Albany passes through it. Agriculture has been greatly improved in this township. The village near the centre is one of the largest and best built in the county. The houses are generally of wood, neatly painted white, and ornamented with shrubbery. It lies chiefly on two streets crossing each other at right angles, and has a central square of four acres, ornamented by a lofty elm tree in the middle, the remains of the original forest. It contains four churches—one Congregational, one Episcopal, one Baptist, and one Methodist; a bank, a printing

office, a male and a female academy, 350 dwellings, and 2500 inhabitants. The Berkshire Medical Institution, located here, was founded in 1823, has five professors, seventy-four students, 4/3 graduates; and the lectures commence on the first Thursday in September. It is connected with Williams' College, at Williamstown. There were, in 1840, in the township, one cotton factory, 1500 spindles, three tanneries, one brewery, one printing office, one weekly newspaper, two grist mills, eight saw mills. Capital in manufactures, 111,200 dollars. Population, 3747.

PLYMOUTH, thirty-eight miles south-east of Boston. The soil near the coast is generally good; the rest is barren, and still remains a forest, mostly pine, with some oak. The township is of great extent, and contains a large number of ponds. The village is pleasantly situated and well built, chiefly of wood. It contains a court house, gaol, six churches—two Congregational, one Unitarian, one Baptist, one Methodist, and one Universalist—two banks, an insurance company, and Pilgrim Hall. The harbour is spacious, but shallow, and about forty-five vessels are employed in the cod and mackerel fisheries, and others are employed in the West India and European trade. This is the oldest town in New England, and was settled on December 22, 1620, by 101 emigrants, who fled from religious persecution in England, first to Holland, and then to New England. The rock on which they landed was conveyed in 1774 to the centre of the town. The anniversary of the landing is celebrated annually; and for the accommodation of the pilgrim society, Pilgrim Hall, a neat building, has been erected. There are in the town forty-six stores, capital 76,000 dollars; five commercial houses, capital 138,000 dollars; four cotton factories, 40,004 spindles; one tannery, two printing offices, two weekly newspapers, four grist mills, one saw mill. Capital in manufactures, 265,400 dollars. Population, 5281.—*U. S. Gaz. Official Returns.*

MARTHA'S VINEYARD lies off the south shore of Massachusetts. It is twenty-one miles long, two to five broad; area about 120 square miles. The population are chiefly employed in the fisheries, carried on from its three small towns, viz., Roguntuo, population in 1840, 1736; Tesbury, 1520; Milmath, 702.—*Official Returns. U. S. Gaz.*

NANTUCKET ISLAND lies ten miles off Martha's Vineyard, and thirty miles south of Cape Cod, in the Atlantic ocean, and is fifteen miles long, with an average breadth of four miles, containing fifty square miles. Some of the soil is very productive, but most of it is sandy and sterile. The land is chiefly held in common, and a large number of sheep and cows are fed on the commons. The inhabitants are chiefly employed in navigation, and particularly in the whale fishery. The south part of the island is a plain, elevated not more than twenty-five feet above the level of the sea. On the north part the land rises in hills about forty feet high, but one peak is eighty feet high. With a few small adjoining islands, it constitutes Nantucket county. On the south-east of the island are Nantucket shoals, fifty miles long and forty-five broad, where numerous vessels have been wrecked. There were on the island, in 1840, neat cattle 528, sheep 7500, swine 278; wheat ninety-one bushels, produced Indian corn 521 bushels, barley 374 bushels, oats 354 bushels, potatoes 4525 bushels; thirty-three stores, capital 142,000 dollars. Capital invested in fisheries, 2,826,000 dollars; one fulling mill, two woollen factories, four rope factories, three grist mills, two printing offices, two weekly, one semi-weekly, newspapers. Capital in manufactures, 1,181,411 dollars; five academies, 630 students, twenty-eight schools, 2060 scholars. Population, 9012.—*U. S. Gaz. Official Returns.*

NANTUCKET, the capital of Nantucket county, is 119 miles south-south-east of Boston. It is situated on the north side of the island, at the bottom of a bay. It has an excellent harbour, which is nearly land-locked by two projecting points of beach, about three-fourths of a mile apart, on one of which, Brant Point, is a light-house. Nearly two miles north of the harbour there is a bar, with nine feet of water only in depth at low tide. About 150 vessels belong to the port. Tonnage, in 1840, 31,915 tons. Sir Isaac Coffin, of the British Navy, founded a naval academy here in 1827, called the Coffin School, and bequeathed 2500*l.* sterling to it. Most of the inhabitants were distantly related to him. There is a daily steamboat connexion with New Bedford.—*U. S. Gaz.*

The inhabitants of Nantucket have retained more than any others the manners and customs of the early New Englanders. A recent visitor informs a Boston editor, "that the first thing which strikes the traveller, is the appearance of pristine simplicity which the

town presents. With some few exceptions, the buildings are of wood, unpainted, covered with shingles instead of clapboards, bearing the marks of Time's antiquating finger, and constructed in a great variety of fashions, and facing all points of the compass.

"The fences made of rough boards, have, like the houses, grown venerably sombre from buffeting the elements, and the streets follow the track of the flocks, which, time out of mind, have made this island another Goshen.

"The nature of the soil renders it futile to do much for the improvement of the streets, without great expense, and hence, with the exception of a few, which are paved, they are composed of a deep sand, like the beach which surrounds the island.

"There are, however, some good and straight streets, and some edifices, public and private, which are very creditable to the taste and liberality of the inhabitants.

"They have ten houses for public worship, two belonging to the Quakers, and the remainder divided among the Methodists, Baptists, Calvinists, Unitarians, Episcopalians, &c.

"The sandy roads, in connexion with the quiet habits of the people, and the isolated situation of the territory, which prevents the passing through it of persons beyond its borders, render it perhaps the stillest region for its population in the country. Scarcely any sound is heard in most of its streets, by day or night, excepting the shrill voices of the juvenile venders of vegetables and fruit, as they thread the mazy avenues in the well-known vehicle of the island.

"This vehicle (a small greer cart, with high sides, and generally without springs or mounting step) is dignified by the cognomen of *calash*, and is in almost universal use, for the various purposes of carrying produce, merchandise, or parties of pleasure; and maintains its respectability among the inhabitants generally, although the chaise is not unfrequently seen, and the *caryall* barouche, and coach even, are known there.

"But while few modern improvements have reached this island, there is one which redounds greatly to the credit of its people—I mean its schools. Since the Board of Education was established, and its gifted secretary has made his annual visit to the island, an impulse has been given to the subject of school instruction, which puts to the blush most of the large towns in continental Massachusetts.

"Grades of schools have been established, answering to English High Grammar, and Primary, with an additional one called *Introductory*, as preparatory to the primary department; and these are taught and managed by skilful and well-paid teachers of both sexes, in spacious, airy, light, well-ventilated buildings, admirably situated, and worthy to be models for other towns in the state. The principal of the High School receives a compensation of 1400 dollars per annum.

"The internal arrangements of his school are excellent, with the exception of the writing desks, which have horizontal tops, and, consequently, must endanger the health of the pupils, who stoop over them, for hours in the day, in performing their personal exercises. The orderly department and perfect decorum of the pupils of both sexes, found in these schools, are alike honourable to the teachers and the scholars, as well as delightful to the beholder.

"Besides its churches, public schools, &c., Nantucket has a very neat and commodious building for its Athenæum, containing an ample lecture-room, library, and museum.

"The library is select and sufficiently extensive for its present purposes, and contains many choice works, all kept in fine order.

"The contents of the several cabinets in the museum, are respectable for variety, and neatly and scientifically arranged—all indicating an enlightened taste in those who have them in charge."

By the last valuation, it was estimated that the property of the island amounted to 7,000,000 of dollars; 5,000,000 of which were owned by 121 persons; and the 2,000,000 by the remainder; there being between 9000 and 10,000 inhabitants.

"It would seem by this, that property is very unequally divided, which is doubtless the case; as one-half the taxable persons pay merely a poll-tax. Still, there is a remarkable degree of industry and contentment, very few paupers, (about eighty adults only) and a healthy state of public morals.

"The great ambition of most of the boys, is to arrive at the honour of harpooning a whale; and this they cherish from a very tender age; which often makes them impatient

of the restraints of the school-room, and they become as skilful boatmen at the age of ten or twelve, as the boys of the Sandwich islands.

"The great business and principal source of wealth of Nantucket (*See Fisheries*), is the whale fishery, which, in the great variety of labour it provides for, employs a large portion of the population; every department of industry and traffic, however, finds its votaries, who secure thereby a comfortable subsistence, and many do much more than this.

"Much of the soil is very thin, and sand is the principal element in it; still, there is not wanting excellent land for vines and fruits, for vegetables and grass. Several farms are cultivated, a few miles from town, which pay an annual clear profit of twenty per cent; and thus offer better encouragement to the agriculturist than almost any farms on the main. Would that more of the land was appropriated to similar objects, instead of being devoted (as a large share of the island is) to the purpose of a sheep pasture.

"In the ride to Siasconset, at the east end of the island, seven miles from town, (a summer retreat for many of the wealthy inhabitants) one is impressed with the peculiarity of the scene. A wide expanse of territory presents itself, with neither house, nor tree, nor fence, nor bush, within the reach of the eye; while the road, consisting of five or six pairs of parallel tracks, where wheels have left their marks in deep ruts, with the path for the horse in the centre, and ridges of grass rising up between, is the only guide to the little settlement. One stretches up the rock in vain to find some earthly boundary on either side. As at sea the ocean seems to touch the sky, so here the horizon is formed in almost every direction, by the meeting of the blue azure and the land.

"Passing Siasconset, the land appears better; there is at present, more verdure, and the sheep (a few only of which were found on our drive) were here numerous. The expediency of devoting so much territory to the use of the sheep may be called in question; as may also the humanity of the practice of leaving them exposed to the rigours of the climate, during the winter. It is said that the temperature of the island is, on an average, ten degrees lower in summer, and as many degrees higher in winter, than with us; still, in severe seasons, many of the sheep perish for lack of food and shelter. And seldom, if ever, are they fat enough to butcher; but, in this region of the woolly race, the inhabitants are dependent on their neighbours of the continent, for their supplies of mutton, while the land is, from year to year, becoming poorer and poorer, and the prospect is, that in no long time, it will be rendered wholly worthless, by the trampling browsing of its thousand tenants. Since the opening of the New Bedford railroad, and the connexion with it of the steamboat to Nantucket, the travel to the island has much increased."

RANDOLPH, sixteen miles south of Boston. In 1840 there were in the township twenty stores, capital 96,400 dollars; one tannery, one grist mill, four saw mills. Capital in various manufactures, 235,985 dollars. Population, 3213.

READING, twelve miles north of Boston. Population, in 1840, 2193; has numerous manufactures of boots, shoes, and house furniture.

REHOBOTH, forty miles south by-west of Boston. It had, in 1840, five stores, capital 6600 dollars; two cotton factories, 1840 spindles; four grist mills, four saw mills. Capital in manufactures, 30,100 dollars. Population, 2169.

ROCKPORT, thirty-two miles north-east of Boston, is a port for small vessels, and for the coasting trade and fishery. Population, 2650.

ROCHESTER, fifty-four miles south-south-east of Boston. Population, in 1840, 3864; a good seaport, with ship yards and several large ships engaged in the whale fisheries. Salt is also made in this place.—*See Fisheries hereafter.*

SALISBURY, forty-two miles north-north-east of Boston. The Atlantic bounds it on the east, the Merrimac river on the south, and the Powow river on the west. The railroad from Boston to Portsmouth passes through this township. There are in the township twenty-three stores, capital 13,650 dollars; sixteen fulling mills, three woollen factories, three tanneries, one printing office, one weekly newspaper, three grist mills, two saw mills. Capital in manufactures, 561,450 dollars. Population, 2739.

SCITUATE, twenty-six miles south-east-by-south of Boston. The harbour is small and of difficult access, but as many as thirty fishing and coasting vessels are owned here. The village contains about thirty dwellings. The township has sixteen stores, capital 16,900

dollars; nine grist mills, nine saw mills. Capital in manufactures, 50,400 dollars. Population, 3886.

SHEFFIELD, 138 miles west-south-west of Boston. It is the oldest township in the county, having been chartered in 1733, reduced to its present limits in 1761. In 1840 there were in the township eight stores, capital 22,000 dollars; two fulling mills, three tanneries, three distilleries, one grist mill, eight saw mills. Capital in manufactures, 10,000 dollars. Population, 2322.

SPRINGFIELD, on the east side of the Connecticut river, twenty-four miles north of Hartford, ninety-one west of Boston. Population, in 1830, 6784; 1840, 10,985. Watered by the Chickapee and Mill rivers. On the river are rich alluvial meadows. The main street extends along the river between two and three miles. The houses are well built. Springfield has a court house, gaol, seven places of worship, two banks, and the principal government manufactory of arms in the country. The armoury is situated on elevated ground, half a mile east of the village. The buildings stand on a large square, and consist of one brick edifice 240 feet by thirty-two, two stories high, occupied by lock files, stockers, and finishers; a brick forging shop, 150 feet by thirty-two; a brick building, sixty feet by thirty-two, two stories high, the second story forming a spacious hall, devoted to religious worship; a brick building 100 feet by forty, and two stories high, used as a depository of arms, and numerous smaller stores and shops. The water works are situated on the Mill river, about one mile south of the armoury, on three different sites, called the Upper, Middle, and Lower Water shops, the whole comprising five workshops, twenty-eight forges, ten trip-hammers, eighteen water-wheels. The whole establishment employs from 240 to 250 workmen, who make about forty-five muskets daily. The muskets made on the old model cost, as stated by a correspondent of the *New York Journal of Commerce*, 11 dollars 70 cents, and that those on the new model would cost about two dollars more, or 53s. to 55s.; an enormous price compared with the cost of English muskets. The iron used (which is malleable) is obtained for the most part from the Salisbury mines in Connecticut; it is brought in bars three inches and three quarters wide, and three quarters of an inch thick, and eight or ten feet long, the length not being material. The gun stocks are manufactured from black walnut, obtained in Pennsylvania; it is purchased roughly sawed somewhat in the shape of a musket. The steel and many tools used in the workshops, are purchased chiefly in the city of New York: each part of the musket, even to a screw, being made at the works. Many of the tools and much of the machinery are also made there, as the old decay, or as improvements are suggested. Most of the work of the stock is done by means of water power, and it comes from the machinery nearly ready to be united with the barrel. There were in Springfield, in 1840, sixty-eight stores, capital 250,000 dollars; value of machinery manufactured, 120,000 dollars; hardware and cutlery, 25,000 dollars; thirty cannon and 14,000 small arms; eight cotton factories, 43,700 spindles, capital 1,650,000 dollars; three tanneries, two breweries, three grist mills, three saw mills, four paper factories, seven printing offices, four weekly newspapers. Capital in manufactures, 2,631,500 dollars; three academies, 140 students, thirty-six schools, 1512 scholars.—*Official account*. At the mouth of the Chickapee river, where it enters the Connecticut, lies Chickapee, four miles north of Springfield, a manufacturing village in the township of Springfield, which has four cotton factories, one paper factory, 150 houses, and about 1200 inhabitants.

WEST SPRINGFIELD, ninety-three miles west of Boston. Bounded on the east by the Connecticut river, over which there is a bridge, connecting it with Springfield. It has spacious streets, bordered by lofty elms, and handsome buildings. The Boston and Albany railroad passes through it. In 1840, there were in the township ten stores, capital 20,700 dollars; one fulling mill, one cotton factory, 3400 spindles, twenty-seven schools, 791 scholars. Population, 3626.

SOUTHBURIDGE, sixty-one miles south-south-west of Boston. Population, in 1840, 2031; one woollen factory, eight cotton factories, 14,600 spindles; capital in manufactures, 160,875 dollars.

STURBRIDGE, sixty-one miles west-south-west of Boston. It had, in 1840, five stores, capital 14,000 dollars; one fulling mill, five cotton factories, 11,412 spindles; two tan-

neries, three grist mills, eight saw mills. Capital in manufactures, 138,300 dollars. Population, 2005.

SUTTON, forty-six miles west-by-south of Boston. It contained, in 1840, six stores, capital 10,800 dollars; one fulling mill, one woollen factory, four cotton factories, 6928 spindles. Population, 2370.

TAUNTON, thirty-two miles south of Boston. Population, in 1840, 7645. Situated on the Taunton river, navigable up to the town for small vessels; had one dyeing and one printing establishment, one fulling mill, six cotton factories, with 19,956 spindles; furnaces, forges, fabrics of hardware and cutlery, pottery, and paper. Capital in manufactures, 620,950 dollars.

UXBRIDGE, thirty-eight miles south-west of Boston. In 1840, population 2004; it had twelve fulling mills, five woollen factories, three cotton factories, 5500 spindles. Capital in manufactures, 163,000 dollars.

WATHOM, ten miles west of Boston. In 1840, population 2504; it had eleven cotton factories, with 11,000 spindles; and fabrics of wool, paper, &c. Capital in manufactures, 463,500 dollars.

WAREHAM, fifty-three miles south-south-east of Boston. In 1840, population 2005; had one cotton factory, and some other factories, with some shipping and trade.

WESTPORT, is fifty-nine miles south of Boston. In 1840, population 2820; it had then one cotton factory, 2000 spindles: and various small fabrics. Capital in manufactures, 19,600 dollars.

WESTFIELD, 100 miles west from Boston. In 1840, population 3526; it had one tannery, four powder factories, two paper factories. Capital in manufactures, 102,000 dollars.

WEYMOUTH, twelve miles south-south-east of Boston. In 1840, population 3738. Capital in various manufactures, 219,400 dollars.

WILLIAMSTOWN, 131 miles west-by-north of Boston. It is the seat of Williams College, founded in 1793, which has a president and seven professors or other instructors, 933 alumni, of whom 331 have been ministers of the gospel, 155 students, and 7500 volumes in its libraries. In 1840, there were in the township, seven stores, capital 24,000 dollars; one fulling mill, two cotton factories, 1788 spindles, two tanneries, two grist mills, five saw mills. Capital in manufactures, 49,700 dollars. Population, 2153.

WORCESTER, forty-two miles west-by-south of Boston. Population, in 1830, 4172; 1840, 7497. The surface of the township is agreeably diversified, and the soil is generally fertile and well cultivated. The village is one of the largest of the inland towns of New England. The houses, many of which are of brick, are chiefly on one broad street, a mile in length. It contains a court house, which cost 20,000 dollars, four banks, seven churches—three Congregational, one Unitarian, one Baptist, one Methodist, and one Roman Catholic; and the hall of the American Antiquarian Society, with a library of 6000 volumes of rare and valuable books, and a cabinet: the Massachusetts Lunatic Asylum is a spacious edifice. Worcester enjoys great facilities for communication and for trade. The Blackstone canal connects it with Providence. The railroad from Boston to Springfield and Albany passes through the place; and a railroad to Norwich, Connecticut, is connected with steamboats, forming a daily communication with New York, which renders Worcester one of the greatest thoroughfares in the country, and cannot but add to its growth and prosperity. It is surrounded by a fertile and well cultivated country. It had, in 1840, ninety stores, capital 413,000 dollars; machinery produced to the value of 90,000 dollars; one furnace, one woollen factory, capital 40,000 dollars; one cotton factory, 1672 spindles; two grist mills, two saw mills, two paper factories, four printing offices, four weekly newspapers, one periodical. Capital in manufactures, 400,000 dollars. Three academies, 120 students; thirty schools, 1488 scholars.

WRENTHAM, thirty-two miles south-south-west of Boston. In 1840, population 2915; four cotton factories, 3500 spindles. Capital in manufactures, 46,825 dollars.—*Official Returns, U. S. Gaz.*

The foregoing include all the principal seats of trade and manufacturing industry: being the object chiefly of this work in giving any account of towns.

V. RHODE ISLAND.

RHODE ISLAND, originally called Rhode Island and Providence Plantations, is situated between 41 deg. 22 min., and 42 deg. 3 min. north latitude; and between 71 deg. 6 min., and 71 deg. 38 min. west longitude; and between 5 deg. 7 min., and 5 deg. 54 min. east from Washington. It is the smallest of the United States, being only about forty-nine miles long, and twenty-nine broad, containing an area of 1360 square miles: of which Narraganset bay occupies 130 square miles.

The number of inhabitants in 1790, was 58,825; in 1800, 69,122; in 1810, 76,931; in 1820, 83,059; in 1830, 97,212; in 1840, 108,830. Of these, 51,362 were white males; 54,225 white females; coloured free males, 1413; coloured females, 1825. Employed in agriculture, 16,617; in commerce, 1348; manufactures and trades, 21,271; navigating the ocean, 1717; learned professions, &c., 457.

This state is divided into five counties, which, with their population, in 1840, and their capitals, were as follows: Providence, 58,073, C. Providence; Newport, 16,874, C. Newport; Bristol, 6476, C. Bristol; Kent, 13,083, C. East Greenwich; Washington, 14,324, C. South Kingston.

Newport and Providence are the principal seats of government; but the legislature meets annually at the former in May, and at the latter, alternately with South Kingston, in October.

The north-west part of the state is hilly, sterile, and rocky. Hills, though not elevated, pervade the northern third of the state; the other parts are level, or generally undulating; especially near Narraganset bay, and on the islands within it. The soil is in many parts arable, and the farmers affluent. The lands are generally better adapted for grazing than for corn, and it is renowned for the excellence of its cattle and sheep, and its butter and cheese. Maize, or Indian corn, rye, barley, oats, and, in some places, wheat, are grown; but scarcely in sufficient quantity for home consumption. Fruits, and culinary vegetables are produced in great perfection and abundance.

The climate is healthy, and more mild, particularly on the islands, than in any other part of New England. The sea-breezes moderate the heat of summer and the cold of winter; and Newport is a favourite resort, particularly during the summer.

There were, in 1840, in the state, 8024 horses and mules; 36,891 neat cattle; 90,146 sheep; 30,659 swine. There were raised 3098 bushels of wheat; 66,490 bushels of barley; 171,517 bushels of oats; 34,521 bushels of rye; 2979 bushels of buckwheat; 450,498 bushels of Indian corn; 183,830 lbs. of wool; 911,973 bushels of potatoes; 383 tons of hemp and flax. The products of the dairy amounted to 223,229 dollars; of the orchard, 32,098 dollars; of lumber, 44,455 dollars.

The exports consist chiefly of flax-seed, horses, cattle, beef, pork, fish, poultry, onions, butter, cheese, barley, and cotton goods. The manufactures exceed those of any other state, in proportion to its population, the principal of which is cotton. There are also woollen manufactures, iron, cordage, &c.

The principal rivers are Pawtucket, Providence, Pawtuxet, Pawcatuck, and Wood. Narraganset bay extends from north to south over thirty miles into the state, and contains a number of fine islands. The principal are Rhode Island, fifteen miles long, with an average width of two miles and a half; Canonicut, eight miles long and one broad; Prudence, six miles long; and Block Island, ten miles out in the Atlantic, eight miles long, and from two to four broad. Newport, on the south-west part of Rhode Island, has one of the finest harbours in the world, being spacious, safe, and easily accessible. Providence, at the head of Narraganset bay, thirty-six miles above Point Judith, is accessible by large ships. In population, commerce, and wealth, this is the second city in New England. It has been extensively engaged in the West India, and also in the East India, trade. Bristol, on the east side of the bay, fifteen miles north of Newport, has a safe and commodious harbour, and considerable trade. Pawtucket, four miles north of Providence, and Pawtuxet village, ten miles south of Providence, have extensive manufactures.

There were, in 1840, in the state of Rhode Island, forty-four commercial and fifty-seven

commission houses engaged in foreign trade, with a capital of 2,048,507 dollars; 930 dry goods and other retail stores, employing a capital of 2,810,125 dollars; fifty-eight persons engaged in transportation, with eighty-three butchers, packers, &c., employing a capital of 71,050 dollars; 262 persons engaged in the lumber trade, employing a capital of 254,900 dollars; 1160 persons employed in the fisheries, and a capital of 1,077,157 dollars.

Home-made, or family made goods were produced to the value of 51,180 dollars; forty-one woollen manufactories, with forty-five fulling mills, employing 961 persons produced goods to the value of 842,172 dollars, with a capital of 685,350 dollars; 209 cotton manufactories, with 518,817 spindles, employed 12,086 persons, producing articles to the amount of 7,116,792 dollars, and employed a capital of 7,326,000 dollars; twenty-seven persons produced 1000 tons of anthracite coal, with a capital of 6000 dollars; five furnaces produced 4126 tons of cast iron, and had a capital of 22,250 dollars; two paper mills produced articles to the value of 25,000 dollars, and other paper manufactures produced to the value of 8500 dollars, employing fifteen persons, and a capital of 45,000 dollars; hats and caps were manufactured to the value of 92,465 dollars, and straw bonnets to the value of 86,106 dollars, the whole employing 411 persons, and a capital of 66,427 dollars; twenty-seven tanneries employed eighty-nine persons, and a capital of 72,000 dollars; forty-four saddleries and other leather manufactories produced to the value of 182,110 dollars, with a capital of 70,695 dollars; forty-three persons manufactured granite and marble to the value of 36,202 dollars; 113 persons produced bricks and lime to the value of 66,000 dollars; 534 persons produced machinery to the value of 437,100 dollars; 164 persons produced hardware and cutlery to the value of 138,720 dollars; 179 persons manufactured the precious metals to the value of 283,500 dollars; fifty-seven persons produced 1,237,050 lbs. of soap, 157,250 lbs. of tallow candles, 264,500 lbs. of spermaceti or wax candles, with a capital of 252,628 dollars; 161 persons manufactured carriages and waggons to the value of 78,811 dollars, with a capital of 36,661 dollars; various mills produced articles to the value of 83,683 dollars, employing 166 persons, and a capital of 152,310 dollars; nine rope-walks employed forty-five persons, and produced cordage to the value of 49,700 dollars, with a capital of 28,300 dollars; ships were built to the value of 41,500 dollars; 195 persons produced furniture to the value of 121,131 dollars, with a capital of 83,300 dollars; four distilleries produced 885,000 gallons, and three breweries 89,600 gallons, with a capital of 139,000 dollars; six brick and 292 wooden houses were built, employing 887 persons, at a cost of 379,010 dollars; there are sixteen printing offices, eight binderies, two daily, four semi-weekly, and ten weekly, newspapers, and two periodicals, the whole employing 122 persons, and a capital of 35,700 dollars. The whole value of capital employed in manufactures in the state, was 10,696,136 dollars.

EDUCATION.—Brown University, at Providence, was founded in 1764, at Warwick, and was removed to Providence in 1770. A majority of the corporation are required to be of the Baptist denomination. In common school education this state is accused of being in arrear of the other states of New England, but its number of common schools is increasing. In 1840 there were in Brown University, and in a high school, which partakes of the nature of a college, 324 students; fifty-two academies and grammar schools, with 3664 students; 434 common and primary schools, with 17,355 scholars. By an act of the general assembly, in 1828, a permanent school fund was created and founded.

Since 1838, regular returns have been required. The following is a comparative statement of a portion of these returns:

YEARS.	SCHOLARS.		EXPENDED FOR	
	Male.	Female.	Incidentals.	Instruction.
1839.....	2,112	5,636	dollars.	dollars.
1840..	16,202	7,550	2,971 50	32,283 36
1841.....	11,233	9,000	4,102 80	36,093 96
1842.....	12,479	9,372	5,312 64	40,816 91
1843.....	11,960	8,132	5,896 55	42,944 29

There is a literary institution at Providence, called the "Providence Athenæum," the library of which contains 9693 volumes. Another, at Newport, called the "Redwood Library," contains 4500 volumes.

RELIGION.—The principal religious denominations are the Baptists, the Congregationalists, the Episcopalians, and the Methodists. In 1836 the Baptists had twenty congregations and eighteen ministers, besides nine others of a different denomination; the Congregationalists had sixteen congregations, sixteen ministers, and 2100 communicants; the Episcopalians had sixteen congregations, eighteen ministers, and 1655 communicants; the Methodists had ten ministers. Besides these, there are some Friends, Unitarians, Roman Catholics, Universalists, and Christians.

BANKS.—In the commencement of 1840, this state had sixty-two banks, with an aggregate capital of 9,880,500 dollars, and a circulation of 1,719,230 dollars. The banks are numerous, averaging two to a town, yet they have preserved their credit unimpaired.

PUBLIC WORKS.—Several works of internal improvement contribute to the prosperity of this state. The Blackstone canal, which connects Providence with Worcester, Massachusetts, lies partly in this state. The same is true of the Providence and Boston railroad. This connects with a line of steamboats to the city of New York. The Providence and Stonington railroad lies chiefly in this state, and is forty-seven miles long. This road also connects with a line of steamboats to the city of New York. When the Long Island railroad shall have been completed through the island, this road will become of great importance. Coal has been discovered, and a mine is worked near the north end of the island.

FINANCES.

Rhode Island has no Public Debt.—The revenue of this state is derived from a tax on banks, pedlars, lottery grants, sales of lottery tickets, spirit licences, auction duties, bank bonuses, courts, civil commissions, and dividends on bank stocks.

The expense of suppressing the insurrectionary movement in 1842 was 102,949 dollars 63 cents, which was defrayed from the United State "Deposit Fund." The permanent school fund, invested chiefly in shares of the Mechanics' and Globe Banks, amounts to 55,711 dollars 42 cents. The Surplus Revenue Deposit Fund, invested in loans to cities, bank stocks, &c., before the cost of the insurrection in 1842, was subtracted from it, amounted to 382,335 dollars 30 cents.

REVENUE and Expenditure of the State in 1843-4.

RECEIPTS.	dollars.	EXPENDITURES.	dollars.
Balance in May, 1843	15,003 08	Salaries	3,600 00

FISHERIES.

The Providence Journal says, that the annual value of fish taken in the waters of Rhode Island is estimated as high as the annual interest on one or even on two millions of capital. In the Point Judith an. Westerly Ponds alone, the value of fish caught during the preceding season was more than 30,000 dollars. In Point Judith ponds the value of bass taken was 16,000 dollars; smelts, 200 dollars; eels, 720 dollars; herrings, 500 dollars; oysters, 500 dollars; perch, 100 dollars:—in Westerly, bass, 8000 dollars; smelts, 1000 dollars; scup and menhaden, 2000 dollars; and so on. The above is exclusive of Petaquamscutt and other ponds, and the sea bass, cod, mackerel, lobster, and shell fisheries in Washington county. The lobster and shell fishery is very valuable, but we have no data from which to form an estimate. Now, take into consideration the immense shell fishery in Kent county, and the oyster fishery in Providence river, which is estimated at 30,000 dollars yearly, besides seventy-five boats or more, constantly employed in the Narragansett bay, in the season of catching them, and the shad and mackerel fishery at Block Island, the menhaden and other fisheries in this state, and the whole value will exceed the annual interest on two millions of capital.—See Fisheries of America, hereafter.

PRINCIPAL SEAPORTS AND TOWNS IN RHODE ISLAND.

BRISTOL, port of entry, eighteen miles south-by-east of Providence, on the east side of Narragansett bay, has a good harbour, with coasting trade and the fisheries. Here, on Mount Hope, the celebrated King Philip, chief of the Pequods, and the terror of the early colonists, held his court. In 1840, shipping, 15,890 tons. Nine foreign commission houses, capital 130,200 dollars; forty-one stores, capital 70,075 dollars; capital in fisheries, 220,000 dollars; one cotton factory, 6000 spindles, three grist mills, one rope-walk, one printing office, one weekly newspaper. Capital in manufactures, 155,706 dollars. Population, 3490.

BURRIVILLE, nineteen miles south-west of Providence. In 1840, population 1982. Two woollen factories, one cotton mill, 1050 spindles. Capital in manufactures, 39,860 dollars.

COVENTRY, thirteen miles south-west of Providence, on a branch of the Pawcatuck. In 1840, population 3433; one fulling mill, two woollen factories, fourteen cotton factories, 24,612 spindles. Capital in manufactures, 393,800 dollars.

CRANSTOWN, five miles south-west of Providence. In 1840, population 2962; had one furnace, one fulling mill, four cotton factories, 3176 spindles, two dyeing works. Capital in manufactures, 275,705 dollars.

EXETER, twenty-four miles south-west of Providence. In 1840, population 1776; one fulling mill, three woollen factories. Capital in manufactures, 83,860 dollars.

FOSTER, nineteen miles west-by-south of Providence. In 1841, population 2181. It had one fulling mill, and one cotton factory, with 624 spindles. Capital, 18,645 dollars.

GLOUCESTER, sixteen miles west-south-west of Providence. In 1840, population 2304. Two cotton factories, 1668 spindles, one tannery, four grist mills, twelve saw mills. Capital in manufactures, 43,600 dollars.

GREENWICH, EAST, fourteen miles south of Providence. Population, in 1840, 1509; had eight fulling mills and one woollen factory, capital 9502 dollars.

GREENWICH, WEST, eighteen miles south-west of Providence. Population, in 1840, 1415; it had three cotton factories, 2374 spindles, capital 6000 dollars.

HOPKINTON has valuable water power, and it has cotton, woollen, and iron manufactures. The soil is fertile, adapted to grain and to grazing. The Pawcatuck river affords fisheries of shad and alewives. Hopkinton city is a flourishing village, situated on a branch of the Charles river. It had, in 1840, one woollen factory, five cotton factories, 4300 spindles; two tanneries, two grist mills, one saw mill. Capital in manufactures, 76,750 dollars. Population, 1726.

KINGSTON, NORTH, twenty-one miles south of Providence. Population, in 1840, 2909; four woollen factories, five cotton factories, with 5756 spindles. Capital in manufactures, 71,650 dollars.

KINGSTON, SOUTH, thirty miles south-west of Providence. Population, in 1840, 3717; ten woollen factories, one cotton factory, 1000 spindles. Capital in manufactures, 181,500 dollars. Its fisheries and navigation are considerable.

NEWPORT, thirty miles south-by-east of Providence, situated on the south-west side of Rhode Island, five miles from the ocean. The harbour is one of the best in the United States, being safe, easy of access, and capacious, and sufficiently deep for vessels of the largest class. The harbour is defended by Fort Adams, situated on Brenton's Point, Rhode Island, a mile and a half west-south-west of the town, and is garrisoned by four companies of United States Artillery. The site of the town is a beautiful and gentle acclivity, which rises gradually from the harbour, exhibiting it to great advantage, as it is approached from the water. The pleasantness of its situation, and the healthfulness of its climate, its fine views, and its cooling ocean breezes, have rendered it a favourite summer resort to the inhabitants of the cities and of the southern states. It contained, in 1840, a state house, market house, theatre, almshouse, a library, containing over 3000 volumes; three academies, with over 100 students; seven banks, twelve churches—four Baptist, two Congregational, two Episcopal, one Friends, one Moravian, one Methodist, and a Jews' synagogue; 1200 dwellings, and 8333 inhabitants. The commerce of Newport is considerable with Europe, the East and West Indies, in the coasting trade, and the fisheries. It had, in 1840, five commercial and two commission houses, capital 126,700 dollars; 104 stores,

capital 346,515 dollars; three lumber yards, capital 26,800 dollars; one fulling mill, two woollen factories, four cotton factories, 20,290 spindles; three tanneries, one distillery, one brewery, three printing offices, two binderies, three weekly newspapers, seven grist mills. Capital in manufactures, 726,983 dollars. Eight schools, 265 scholars. Tonnage, in 1840, 10,924 tons.—*Official Returns, U. S. Gaz.*

NORTH PROVIDENCE.—This township contained, in 1840, thirty stores, capital 65,700 dollars; one lumber yard, capital 15,000 dollars; two furnaces, two fulling mills, twenty cotton factories, 30,000 spindles; two tanneries, two printing offices, one bindery, one weekly newspaper, five grist mills, one saw mill. Capital in manufactures, 319,500 dollars. Two academies, eighty students, eight schools, 265 scholars. Population, 4207.

PROVIDENCE is situated at the head of Narragansett bay, thirty-six miles from the ocean, in 41 deg. 51 min. north latitude, 71 deg. 16 min. west longitude. Its commerce is rather important, and its navigation extends to China. Population, in 1840, 23,171; twenty-three foreign commercial houses, and fifty-five commission houses, capital 1,582,850 dollars; 329 retail stores, capital 1,758,040 dollars; eighteen lumber yards, capital 170,150 dollars; fisheries, capital 130,000 dollars; value of machinery manufactured, 270,200 dollars; of precious metals, 257,000 dollars; of various metals, 147,550 dollars; one fulling mill, one woollen factory, thirty-two cotton factories, 76,550 spindles; eight dyeing and print works, three tanneries, two distilleries, two breweries, manufactories of paint, drugs, &c. &c. Total capital in manufactures, 3,012,588 dollars. Providence has an university and numerous institutions, and an active intercourse, by steamboats and railroads, with other parts of the union.

The integrity of its inhabitants has been very justly extolled; and it is stated—"As evidence of the integrity and solvency of the merchants, and the vigilance and honesty of the officers of the customs in this district, we state as a matter of fact, that, since the adoption of the constitution of the United States by Rhode Island, there has been collected and paid into the treasury of the general government, up to this time, more than *twelve millions of dollars*; and that the whole amount of loss to the country, during said time, upon bonds or otherwise, accruing from this office, will not exceed *four hundred dollars.*"—*Providence Courier.*

The city tax for 1840 was 65,000 dollars.

This tax is assessed on a valuation of above 17,000,000 dollars, being at the rate of 37 cents and 8 mills on each 100 dollars of valuation.

One hundred and nineteen persons, or estates, pay over 100 dollars each of the tax; their aggregate valuation is 8,342,500 dollars; aggregate taxes, 30,867 dollars 25 cents.

	dollars.
18 individuals and estates are taxed for	100,000 or over.
27 " "	50,000 "
19 " "	40,000 "
18 " "	35,000 "
21 " "	30,000 "
16 " "	25,500 "

Of the three largest estates, one is taxed for 659,000 dollars, one for 592,000 dollars, and one for 583,000 dollars.

The next largest is taxed for 186,000 dollars; the next, 170,000 dollars; the next, 163,300 dollars; the next, 163,000 dollars; the next, 162,600 dollars; making only eight estates valued as high as 150,000 dollars, or over.—*Official Returns.*

PORTSMOUTH, Rhode Island, seven miles north-west of Newport. Population, in 1840, 1706; who are engaged in agriculture, fisheries, coasting trade, and some manufactures.

PAWTUCKET, four miles north of Providence. It is situated on both sides of the Pawtucket river, and is partly in Rhode Island and partly in Massachusetts. It is a large and flourishing manufacturing village. It had, in 1840, three banks, two in Rhode Island; twelve cotton factories, 35,000 spindles, and over 1000 looms, and about 6000 inhabitants. The river is navigable to this place.

RICHMOND, thirty miles south of Providence. Population, in 1840, 1361. It had

then two fulling mills, three woollen factories, six cotton factories, 70,768 spindles. Capital in manufactures, 113,400 dollars.

SMITHFIELD, sixteen miles north of Providence. There were, in 1840, in the township thirty-three stores, capital 48,800 dollars; ten fulling mills, one woollen factory, thirty-one cotton factories, 88,208 spindles; one paper factory, thirteen grist mills, nineteen saw mills. Capital in manufactures, 1,764,000 dollars. One academy, forty students, forty-five schools, 1841 scholars. Population, 9534.

SCITUATE, twelve miles west of Providence. Population, in 1840, 4090; fifteen stores, one fulling mill, one woollen factory, eleven cotton factories, 19,654 spindles. Capital in manufactures, 411,180 dollars.

TIVERTON, thirteen miles north-east of Newport. Its navigable waters afford great facilities for navigation, employed chiefly in the fisheries. It has several ponds, well stored with fish, the outlets of which afford water power. A stone bridge, 1000 feet long, connects it with Rhode Island. It had, in 1840, fourteen stores, capital 10,575 dollars; two woollen factories, six cotton factories, 1600 spindles; eight grist mills, four saw mills. Capital in manufactures, 132,900 dollars. Population, 3183.

WARREN, sixteen miles south-east of Providence, on the east side of Narragansett bay. Population, in 1840, 2437. It has a harbour for vessels of 300 tons, a considerable trade, thirteen wharfs, seven commercial and commission houses, capital 184,000 dollars; twenty-two stores, capital 60,500 dollars.

WARWICK, eleven miles south-west of Providence. There were, in 1840, sixty-eight stores, capital 152,000 dollars; three lumber yards, capital 9000 dollars; two woollen factories, twenty-eight cotton factories, 73,041 spindles; two tanneries, eight grist mills, two saw mills. Capital in manufactures, 1,252,200 dollars. Five academies, 186 students, thirty-six schools, 1320 scholars. Population, 6726.

WESTERLY, forty-two miles south-south-west of Providence. The surface is uneven and rough; soil, gravelly loam, adapted to grazing. Bounded on the south by the Atlantic, and on the west by Connecticut. Pawcatuck river runs on its north and west border, and affords water power. Pawcatuck village is situated on Pawcatuck river, in its west part, six miles from the ocean, and contains three churches—one Episcopal, one Baptist, and one free; two banks, two academies, eight or ten stores, one cotton factory, and about sixty dwellings. Ship building is a considerable business. Vessels of forty tons come to the place, and of eighty tons two miles below. A bridge crosses to Stonington, where is a small connected village. The Providence and Stonington railroad passes through the place. There are in the township twelve stores, capital 24,500 dollars; two fulling mills, four woollen factories, two cotton factories, 2536 spindles; two tanneries, three grist mills, two saw mills. Capital in manufactures, 106,450 dollars. Fourteen schools, 574 scholars. Population, 1912.

VI. CONNECTICUT.

CONNECTICUT is bounded on the north by Massachusetts, on the east by Rhode Island, on the south by Long Island Sound, and on the west by New York. It lies between 41 and 42 deg. 2 min. north latitude, and 71 deg. 20 min. and 73 deg. 15 min. west longitude. Its area, 4674 square miles, or 2,991,360 acres.

The population, in 1790, was 237,946; in 1800, 251,002; in 1810, 261,942; in 1820, 275,248; in 1830, 297,711; in 1840, 300,015. Of these 148,300 were white males, 153,556 white females, 3881 free coloured males, 4214 free coloured females. Employed in agriculture, 56,955; in commerce, 2743; manufactures and trades, 27,932; navigating the ocean, 2700; navigating the rivers, &c., 431; learned professions and engineers, 1697.

The state is divided into eight counties, viz:—Fairfield, population 49,917, capitals Fairfield and Danbury; Hartford, population 55,629, capital Hartford; Litchfield, population 40,448, capital Litchfield; Middlesex, population 24,879, capital Middletown; New Haven, population 48,582, capital New Haven; New London, population 44,463, capitals New London and Norwich; Tolland, population 17,980, capital Tolland; Windham, population 28,080, capital Brooklyn. These are subdivided into 144 cities and townships

Connecticut is chiefly an undulated and hilly, but not a mountainous, country. In the north-west parts of the state only are the hills called mountains. The soil is generally good, but more adapted to grazing than to agriculture. The alluvial or interval land on the Connecticut river is remarkably fertile, and easily tilled. The arable lands are carefully tilled, and yield Indian corn, rye, some wheat, oats, barley, buckwheat, flax, some hemp, potatoes, pumpkins, turnips, peas, beans, tobacco, &c. The state abounds with orchards, apples especially, and some other fruits. Horned cattle, horses, sheep, butter, and cheese, are produced extensively.

Live Stock and Agricultural Produce.—In 1840 there were in the state 34,650 horses and mules, 283,650 neat cattle, 403,462 sheep, 131,961 swine; poultry to the amount of 176,629 dollars. There were produced 87,009 bushels of wheat, 33,759 bushels of barley, 1,453,262 bushels of oats, 737,424 bushels of rye, 303,043 bushels of buckwheat, 1,500,441 bushels of Indian corn, 889,870 lbs. of wool, 3,414,238 bushels of potatoes, 426,704 tons of hay, 83,764 lbs. of hemp and flax, 471,657 lbs. of tobacco, 17,538 lbs. of silk cocoons, 51,764 lbs. of sugar. The products of the dairy amounted to 1,376,534 dollars, and of the orchard to 296,232 dollars; value of lumber, 147,841 dollars; and 2666 gallons of wine were made.—*Official Returns.*

The sea coast of this state is indented with numerous bays and harbours. Long Island, which extends before the whole length of the state, facilitates the coasting trade, by sheltering the vessels sailing along its sound from the gales of the Atlantic. The principal trade is that with the West Indies and the whale fishery. The exports of this state consist of beef, pork, horses, cattle, mules, butter, cheese, Indian corn, rye, flax seed, fish, candles, and soap.

Iron ore of an excellent quality is mined in the counties of Salisbury and Kent; the iron made from the ore of the former is used, on account of its quality, for making anchors. Good marble is found in Milford and the vicinity. Freestone, quarried in Chatham and Haddam, is extensively used for basements, lintels, &c.

The principal rivers are the Connecticut, navigable for vessels drawing about eight feet of water fifty miles to Hartford, from the sound between Saybrook and Lyme; the Housatonic, navigable for twelve miles for small vessels; the Thames, navigable fourteen miles up to Norwich, and flowing into the Atlantic at New London.

Trade.—The value of exports from this state, in 1840, amounted in value to 518,210 dollars, and that of the imports to 227,072 dollars. There were ten commercial and thirteen commission houses engaged in foreign trade, with a capital of 565,000 dollars; 1630 retail dry goods and other stores, with a capital of 6,687,636 dollars; 582 persons in the lumber trade employed a capital of 438,425 dollars; 293 persons engaged in transportation, with seventy-six other persons as butchers, packers, &c., employing a capital of 162,065 dollars; 2215 persons were employed in the fisheries, with a capital of 1,301,640 dollars.—*Official Returns.*

Manufactures.—There were, in 1840, home-made or family goods produced to the value of 226,162 dollars; 119 woollen manufactories, employing 2356 persons, producing articles to the value of 2,494,313 dollars, and employing a capital of 1,931,335 dollars; 116 cotton factories, with 181,319 spindles, employing 5153 persons, producing articles to the value of 2,715,964 dollars, and employing a capital of 3,152,000 dollars; twenty-eight furnaces, producing 96,405 tons of cast iron, and forty-four forges and rolling mills, producing 3632 tons of bar iron, the whole employing 895 persons, and a capital of 577,300 dollars; thirty-six paper manufactories, produced articles to the value of 596,500 dollars, and other paper manufactures produced 64,000 dollars, the whole employing 454 persons, with a capital of 653,800 dollars; hats and caps were manufactured to the value of 649,580 dollars, and straw bonnets to the value of 236,730 dollars, the whole employing 1814 persons, and employing a capital of 350,823 dollars; 197 tanneries employed 1359 persons, with a capital of 494,477 dollars; 408 other leather manufactories, as saddleries, &c., produced articles to the value of 2,017,931 dollars, and employed a capital of 829,267 dollars; two glass houses, with sixty-four persons, value of fabrics produced, 32,000 dollars, with a capital of 32,000 dollars; fourteen potteries, employing forty-four persons, produced 40,350 dollars, with a capital of 31,880 dollars; eight powder mills, employing twenty-six persons, produced 662,500 pounds of powder, with a capital of 77,000 dollars; 335

persons produced machinery to the value of 319,680 dollars; 1109 persons produced hardware and cutlery to the value of 1,114,725 dollars; fifty-five persons manufactured granite, marble, &c., to the value of 60,866 dollars; bricks and lime were produced to the value of 151,446 dollars; soap, and tallow and wax candles employed a capital of 46,000 dollars; 1299 persons produced carriages and waggons to the value of 929,301 dollars, with a capital of 513,411 dollars; seven flouring mills produced 13,500 barrels of flour, and with grist mills, saw mills, and other mills, employed 895 persons, and manufactured articles to the value of 543,509 dollars, and employed a capital of 727,440 dollars; seventy distilleries employed forty-two persons, and produced 215,892 gallons of spirits, with a capital of 50,380 dollars; ships were built to the value of 428,900 dollars; sixteen ropewalks employed 107 persons, and produced articles to the value of 150,775 dollars, with a capital of 85,700 dollars; 786 persons manufactured furniture to the value of 253,675 dollars, with a capital of 342,770 dollars; ninety-five brick and 517 wooden houses were erected by 1599 men, value 1,086,295 dollars; there were thirty-six printing offices, and seventeen binderies, two daily, twenty-seven weekly, and four semi-weekly newspapers, and eleven periodicals, the whole employing 368 persons, and a capital of 217,075 dollars. The whole value of capital employed in manufactures was 13,669,139 dollars.—*Official Returns.*

Education.—Yale college, at New Haven, is one of the oldest institutions of the kind in the United States. It was founded in 1701, and removed from Saybrook to New Haven, in 1717. Washington college, at Hartford, under the direction of the Episcopalians, was founded in 1826. The Wesleyan university, at Middletown, is under the direction of the Methodists. The Asylum for the Deaf and Dumb, at Hartford, is the oldest and most useful institution of the kind in the United States, with about 130 students. In 1840 there were in those colleges, 700 students; there were 127 academies and grammar schools, with 4865 students; 1619 common and primary schools, with 63,739 scholars; and 526 persons over twenty years of age who could neither read nor write, the least number of any state in the union. Connecticut has a larger school fund, in proportion to its population, than any other state, amounting to about 2,000,000 dollars. It is invested in bonds, contracts, bank stock, &c., and yields about 118,000 dollars per annum. This growing fund originated chiefly from the sale of the Western Reserve land, which constituted a large part of the northern portion of the state of Ohio, included in its original charter, and ceded to it by the United States, by way of compromise, 1840. The revenue of the school fund, according to Governor Ellsworth's speech, was appropriated to the instruction of 82,676 children. In 1842, this number increased to 84,233.—*Official Returns, U. S. Gaz.*

The principal religious denominations are the Congregationalists, the Baptists, the Episcopalians, and the Methodists. In 1836 the Congregationalists had 232 churches, 271 ministers, and 29,579 communicants; the Baptists, ninety-two churches, ninety ministers, and 10,039 communicants; the Episcopalians, one bishop, and sixty-three ministers; the Methodists, seventy-three ministers. Besides these, there were a few Roman Catholics, Unitarians, and Universalists.

There is a state prison at Wethersfield, erected in 1826.

Public Works.—The principal internal works are the Farmington canal, extending from New Haven, fifty-six miles, to the north line of the state, whence it is continued to Northampton, Massachusetts; at Enfield a canal extends around the falls in the Connecticut river of five miles and a half, which, without her improvements above, is designed to render the river navigable for boats and steamboats to the White river, in Vermont; the Norwich and Worcester railroad, fifty-eight miles and a half, extends from Norwich north through the state; the New Haven and Hartford railroad, thirty-six miles, connects those two places, and is to be extended to the Western Massachusetts railroad at Springfield; the Housatonic railroad commences at Bridgeport, and extends to North Canaan, at the north line of the state, seventy-three miles, and is continued to meet the Western railroad of Massachusetts, at West Stockbridge.—*Official Returns, U. S. Gaz.*

FINANCES FOR 1842—43.

This state owes no debt, and has, beside the school fund, a permanent productive bank stock amounting to 400,000 dollars.

WAYS and Means for 1842-43, from *Official Returns*.

	dollars.
Balance in Treasury, April 1st, 1842	19,878.81

* The above is the ascertained tonnage.
 † Total tonnage in 1839, including enrolled or coasting and fishing tonnage.

In 1843 the registered tonnage of Connecticut amounted to 31,415.59 tons, the enrolled and licensed tonnage to 28,794.29 tons. Total, 60,209.86-95ths tons.
 For 1843 the trade is only for nine months, ending June 30, the commercial year ending, by recent law, on that date.

PRINCIPAL SEAPORTS AND TOWNS IN CONNECTICUT.

NEWHAVEN, is very pleasantly situated around part of a bay, which enters the state from Long Island Sound, in 41 deg. 18 min. north latitude, and 72 deg. 56 min. west longitude. The population, in 1810, amounted to 5772 inhabitants; in 1840, to 12,960 inhabitants. This city extends about three miles from east to west, and two from south to north. It is laid out with great regularity, and consists of two parts, the old town, and the new township. The old town was laid out in the form of a square, half a mile on a

side, divided into nine smaller squares, each fifty-two rods on a side, separated by streets four rods in width. The squares have generally been divided into four parts, by streets intersecting them. The central square was reserved for public purposes, and is divided into two parts by Temple-street. The eastern half of this square is unoccupied by buildings, but ornamented by lofty trees. On the square on the west side of Temple-street are three elegant churches; two Congregational, of brick, and one Episcopal, of stone, the latter of Gothic architecture; and a finer row of churches are nowhere found in the United States. A little to the west of Temple-street, on the western half of the square, is the state house, a large and splendid edifice, of Grecian architecture, built of brick. On the west side of the square, and fronting toward the east, is the row of buildings belonging to Yale college, of very commanding appearance, with handsome trees in front. The whole square, with its fine public buildings, and its lofty and graceful elms, presents an assemblage of beauty unsurpassed by any public ground of any city in the country. The houses of the city are generally built of wood, and neatly painted, and surrounded by court yards and gardens, ornamented by shrubbery and fruit trees; but many of the houses recently built are of brick, and constructed generally with elegance and taste. The whole city has a quiet and rural aspect, scarcely elsewhere to be found in so large a place. The new township is regularly laid out, and finely built, and has a fine public ground called Wooster-square, containing five acres. At the north-east corner of the old town is the public cemetery, containing over seventeen acres, intersected by avenues and alleys at right angles with each other, and divided into family lots, thirty-two feet in length, and eighteen feet broad. All the avenues and alleys are bordered by railings painted white, with the names of the owners of the lots inscribed on them. The cemetery contains many elegant monuments, and is beautifully ornamented by shrubbery, and deservedly attracts much public attention.—*U. S. Gaz.*

The harbour is shallow, and gradually filling up with mud. It has about seven feet depth of water over the bar at low tide, and the common tides rise to six feet, and the spring tides about seven or eight feet. Long wharf, the longest in the United States, is 3943 feet in length. There is less depth of water at its termination now, than there was in 1765, when it was only twenty rods long. There is another wharf, which has a basin, in which, by means of flood-gates, the water is always kept at the elevation of high tide. The foreign and coasting trades are considerable. The southern sealing business, connected with the China trade, formerly brought considerable wealth into the city. At present its foreign trade is chiefly with the West Indies. The tonnage of the port, in 1840, was 11,500 tons. A line of steamboats and several lines of sailing packets ply between this city and New York. The Farmington canal connects this place with Northampton, Massachusetts, and Connecticut river near it; and a railroad connects it with Hartford. There are also a custom house, a museum, four banks, and a savings' institution, various benevolent societies, the Young Men's Institute, and an institution for popular lectures, with one of the best libraries in the union. Yale college is one of the oldest and most useful institutions in the United States. It was founded in 1701, originally at Killingworth. It was removed to Saybrook in 1707, and to Newhaven in 1717. It has more students, and has educated more men than any other college in the country. In 1841, the officers were thirty in number. Of these, besides the president, seventeen were professors, and the remainder were tutors or subordinate officers; fifteen are connected with the college proper. The whole number of students of all descriptions was 550. Of these 410 were under-graduates; fifty-nine theological students; thirty-one law; forty-seven medical; and three resident graduates. The whole number of graduates is over 5000, of whom nearly 1400 were ministers. The number of volumes in the various libraries is 33,000, among which are many old and rare, as well as many splendid modern works.—*Official Returns, U. S. Gaz.*

HARTFORD is situated on the west side of Connecticut river, fifty miles from its mouth, at the head of the navigation for sloops and small sea-going vessels, in 41 deg. 45 min. north latitude, and 70 deg. 50 min. west longitude. It is thirty-four miles north-north-east from Newhaven, and 123 north-east from New York. The population, in 1810, was 3955; in 1820, 4726; in 1830, 7076; in 1840, 9468, and, including the lower city, 12,793. Engaged in commerce, 575; in manufactures and trades, 1091; learned professions, 112.—*Official Returns.*

The compact part of the city is more than a mile in length, and three-fourths of a mile wide. The ground rises gradually from the river. The streets are not laid out with much regularity. Main-street, which passes through the place in a north and south direction, about sixty rods from the river, is broad, and well built. Hartford is well situated for a commercial capital. Connecticut river, which has been made navigable for boats, 220 miles, to the mouth of Wells river, in Newbury, Vermont, opens an extensive country to the north. A covered bridge, 1000 feet long, and which cost about 100,000 dollars, connects the city with East Hartford, which has 2389 inhabitants. A line of steamboats ply to and from New York; and a railroad extends thirty-eight miles to Newhaven. There were, in 1840, three foreign commercial and ten commission houses, capital 383,000 dollars; 245 retail stores, capital 1,954,250 dollars; six lumber yards, capital 76,000 dollars; machinery produced 6000 dollars; five furnaces, capital 54,000 dollars; precious metals produced 27,000 dollars; various metals 121,500 dollars; silk, capital 30,000 dollars; one tannery, capital 500 dollars; manufactures of leather, capital 130,370 dollars; one pottery, capital 12,000 dollars; one ropewalk, capital 6000 dollars; one flouring mill, one grist mill, two saw mills, capital 43,000 dollars; eleven printing-offices, six binderies, one daily, ten weekly, and three semi-weekly newspapers, six periodicals, employed 191 persons, capital 43,775 dollars. Total capital in manufactures, 578,195 dollars.—*Official Returns, U. S. Gaz.*

ASHFORD, thirty-two miles east from Hartford. In 1840, population, 2651; had two woollen factories. Capital in manufactures, 84,400 dollars.

BRIDGEPORT, seventy-five miles south-south-west of Hartford, stands on the west side of an arm of Long Island sound. The harbour is eighty rods wide at high water, but not more than twelve of it has water at low tide. The bar, at its mouth, has thirteen feet at high tide. There is a lighthouse on Fairweather Island. A mile and a half above its entrance, the harbour is crossed by a toll bridge, 1237 feet long. It had, in 1840, two banks, and twenty vessels engaged in the coasting trade, and five in the fisheries. Its manufactures, particularly of carriages and saddles, are extensive. The Housatonic railroad connects this place with West Stockbridge, where it meets the railroad from Boston to Albany. Daily steamboats communicate with New York. It contained, in 1840, seventy-three stores; capital 323,500 dollars; six fulling mills, one woollen factory, one cotton factory, 3500 spindles, two tanneries, one pottery, one rope-walk, two grist mills, three printing offices, two weekly papers. Capital in manufactures, 436,300 dollars. Population, 4570.—*Official Returns, U. S. Gaz.*

BERLIN, ten miles south-by-west of Hartford, and 327 from Washington. The soil is fertile. The Hartford and Newhaven railroad passes through it. It had, in 1840, twelve stores, capital 79,100 dollars; one fulling mill, two cotton factories, 1000 spindles, one tannery, four grist mills, three saw mills. Capital in manufactures, 330,050 dollars. Population, 3411.—*Official Returns.*

BRISTOL, seventeen miles south-west of Hartford. Population, in 1840, 2109; four fulling Berlin mills, one woollen factory, seven clock and button fabrics. Capital in manufactures, 160,000 dollars.—*Official Returns.*

CANAAN, forty-two miles north-west of Hartford. Iron has been extensively manufactured and wrought here; but the ore is brought from the west part of Salisbury, on the border of the state of New York. It had, in 1840, eight furnaces, ten stores; capital, 21,400 dollars; three fulling mills, two woollen factories, three tanneries, three grist mills, ten saw mills. Capital in manufactures, 61,925 dollars. Population, 2166.—*Official Returns.*

CANAAN (NEW), seventy-four miles west of Hartford. Population, in 1842, 2217. Capital, in various minor manufactures, 81,700 dollars.

CHATHAM, sixteen miles south of Hartford. In 1840, capital in manufactures, 96,600 dollars. Population, 3413.

COLCHESTER, twenty-four miles south-south-east of Hartford. Capital in manufactures, 1800 dollars. Population, 2101.

COVENTRY, seventeen miles east of Hartford. It had, in 1840, four stores, capital 9100 dollars; three fulling mills, two woollen factories, two cotton factories, 830 spindles, two

tanneries, one paper factory, three grist mills, six saw mills. Capital in manufactures, 196,137 dollars. Population, 2018.

DANBURY, sixty-eight miles south-west of Hartford. It had, in 1840, thirteen stores, capital 34,400 dollars; one tannery, five grist mills, three saw mills, one printing office, one weekly newspaper. Capital in manufactures, 192,200 dollars. Population, 4504.

DERBY, forty-four miles south-west of Hartford. It had, in 1840, thirteen stores, capital 32,800 dollars; one lumber yard, capital 8000 dollars; six fulling mills, two woollen factories, three cotton factories, 2378 spindles, three tanneries, four distilleries, one rope factory, two paper factories, one flouring mill, one grist mill, seven saw mills. Capital in manufactures, 260,700 dollars, principally in metals. Population, 2851.

ENFIELD, eighteen miles north-by-east of Hartford. There is a Shaker's settlement in this township, who have 1000 acres of land under high cultivation. It had, in 1840, eight stores, capital 15,000 dollars; one woollen factory, three tanneries, two distilleries, two grist mills, five saw mills. Capital in manufactures, 260,200 dollars. Population, 2648.

FARMINGTON, nine miles west-by-south of Hartford. The Farmington canal, extending from Newhaven to Northampton, Massachusetts, passes through it. There are, in the township, eight stores, capital 37,000 dollars; one paper factory, three grist mills, six saw mills. Capital in manufactures, 39,500 dollars. Population, 2041.

FAIRFIELD, fifty-eight miles south-west of Hartford. Black Rock harbour, distant one mile and a half; next to New London, one of the best harbours on the sound, having nineteen feet water. There is a lighthouse on Fairweather Island.

GLASTONBURY, six miles south of Hartford. In 1840, population, 3077; had three fulling mills, four woollen factories, two cotton factories, 5360 spindles. Capital in manufactures, 216,400 dollars.

GRANBY, sixteen miles north-north-west of Hartford. In this township are the Simsbury copper mines, formerly wrought, but afterwards occupied as the Connecticut state prison. The pit, or cavern, fifty feet deep, was the place of nocturnal confinement; but this miserable hole has been exchanged for a fine state prison at Wethersfield. It had, in 1840, six stores, capital 34,500 dollars; two fulling mills, one woollen factory, three tanneries, eighteen distilleries, three grist mills, seven saw mills. Capital in manufactures, 85,200 dollars. Population, 2611.

GREENWICH, eighty-two miles south-west of Hartford; incorporated by the Dutch in 1665, and claimed by New York. It had, in 1840, thirteen stores, capital 34,400 dollars; one forge, three grist mills. Capital in manufactures, 9800 dollars. Population, 3921.

GRISWOLD, fifty miles east-south-east of Hartford. In 1840, it had seven stores, capital, 11,000 dollars; seven cotton factories, 9667 spindles; two tanneries, three grist mills, four saw mills. Capital in manufactures, 297,450 dollars. Population, 2165.

GROTON, situated on the east side of the Thames river, at its mouth, opposite to New London. It has a good harbour on the Mystic river, and some whaling and other vessels are owned here. Fort Griswold, one of the fortifications for the defence of the harbour of New London, is on Groton Heights. It had, in 1840, fourteen stores, capital 22,300 dollars; four grist mills, four saw mills. Capital in manufactures, 13,710 dollars. Population, 2963.

HADDAN, twenty-three miles south of Hartford. In 1840, population, 2599. Capital in various manufactures, 71,700 dollars.

EAST HADDAN, thirty miles south-south-east of Hartford. The surface is uneven and rocky; soil, fertile. It contained, in 1840, three stores, one saw mill, one cotton factory, and about twenty dwellings. There were in the township, in 1840, twelve stores, capital 46,000 dollars; two lumber yards, capital 12,000 dollars; three fulling mills, seven cotton factories, 6546 spindles. Population, 2620.

LEBANON, thirty-one miles east-south-east of Hartford. It had, in 1840, three stores, capital, 6700 dollars; two fulling mills, two woollen factories, one tannery, four grist mills, seven saw mills. Capital in manufactures, 2000 dollars. Population, 2194.

LITCHFIELD, thirty-two miles west of Hartford. There were, in 1840, in the township twenty-one stores, capital 67,000 dollars: seven fulling mills, five woollen factories, six

tanneries, one forge, one paper factory, two printing offices, two weekly newspapers, six grist mills, four saw mills, one oil mill. Capital in manufactures, 57,550 dollars. Population, 4038.

KILLINGBY, forty-seven miles east of Hartford. Population, in 1840, 3685; one woollen factory, sixteen cotton factories, 21,998 spindles, moved by water power. Capital in manufactures, 404,950 dollars.

MANSFIELD, twenty-five miles east of Hartford. Population, in 1840, 2276; silk grown, and made into sewing silk; one woollen factory, one cotton factory, 1000 spindles. Capital in manufactures, 66,133 dollars.

MIDDLETOWN is pleasantly situated on the west bank of the Connecticut river, thirty-four miles above its mouth, in 41 deg. 33 min. 8 sec. north latitude, and 72 deg. 39 min. west longitude, fourteen miles south of Hartford, twenty-four miles north-east of New Haven, thirty-five miles north-west of New London, 326 miles from Washington. Population, in 1820, 2618; including the township, 6479; in 1830, 2965; including the township, 6892; in 1840, 3511; including the township, 7010. The ground rises gradually from the river, and the principal streets run parallel with it, and are crossed by others running at right angles with them. The city is well built, chiefly of brick, and in the back parts are many elevated and fine situations, with a commanding view of the river and surrounding country. It is at the head of ship navigation, and any vessels which can cross the bar at the mouth of the river, can come up to its wharfs, which have ten feet of water. It has a daily communication with Hartford and the city of New York by steamboats. A ferry boat connects the city with Chatham. Middletown has considerable commerce and manufactures. There were, in 1840, thirty-seven stores, capital 269,500 dollars; three lumber yards, capital 40,000 dollars; one fulling mill, one woollen factory, one cotton factory, 11,000 spindles; one dyeing and printing establishment, two tanneries, one powder mill, two grist mills, five saw mills, one rope-walk, four printing offices, one bindery, two weekly newspapers, one periodical. Capital in manufactures, 379,600 dollars. Tonnage of the port, 14,230 tons.—*U. S. Gaz. Official Returns.*

MILFORD, forty-five miles south-south-west of Hartford. There were, in 1840, in the township eleven stores, capital 16,500 dollars; one lumber yard, capital 2000 dollars; one tannery, four grist mills, three saw mills. Capital in manufactures, 330,050 dollars. Population, 2455.

NEW MILFORD, fifty-one miles west of Hartford. Population, in 1840, 3974; one cotton factory, 1500 spindles. Capital in manufactures, 37,900 dollars.

MYSTIC BRIDGE, fifty-six miles south-east of Hartford. Situated on the west side of the Mystic river, in a village called Portersville, which is connected with Mystic village on the opposite side of the river, by a toll-bridge. The united villages are on the Mystic river, two miles from its mouth, and contain ten stores, about 150 dwellings, and a mariner's church, in Portersville, free to all denominations. The river is navigable for vessels of 400 tons to the bridge. A number of whale ships and coasting vessels are owned here. Several vessels are employed along the coast as wreckers, and cruise as far as the West Indies. About 300 men and boys, in both villages, are employed in navigation. Ship building is carried on at the head of Mystic river.

NEW LONDON, is a port of entry, situated on the Thames, three miles from its entrance into Long Island sound, and is in 41 deg. 24 min. north latitude, and 72 deg. 30 min. west longitude from Greenwich. It is forty-four miles south-east of Hartford. The population, in 1810, was 3238; in 1820, 3330; in 1830, 4356; in 1840, 5519. It is not in general very well built, but there are some houses recently erected, which are neat and elegant. There are three banks and two insurance offices. A daily line of steamboats communicates with New York and Norwich, and connects New London with the railroad to Worcester. There are also several lines of packets. The harbour is the best in Connecticut, and one of the best in the United States. It has a depth of thirty feet, and is spacious and safe. It is defended by two forts. There is a lighthouse on a projecting point of land which divides the harbour from Long Island sound, three miles below the city. The harbour is rarely obstructed by ice. New London has not an extensive back country, the trade of which naturally flows to it; but it serves in some measure as a port to the Connecticut river, which is not generally navigable to vessels of the largest class, nor at all for a

portion of the winter. The foreign trade of New London is chiefly with the West Indies, and its coasting trade with the southern states. The fisheries, and particularly the whale fishery, have extensively engaged the attention, and employed the capital and enterprise of its inhabitants. About 1,000,000 dollars are devoted to the prosecution of this fishery. The tonnage of the port, in 1840, was 44,822 tons. There were, in 1840, forty retail stores, capital 220,000 dollars; three lumber yards, capital 30,000 dollars; capital employed in the fisheries, 830,000 dollars; machinery produced, 20,000 dollars; hardware and cutlery, 61,000 dollars; one tannery, capital 3000 dollars; three rope-walks, capital 10,000 dollars; one printing office, one bindery, one weekly paper. Total capital in manufactures, 91,300 dollars.—*Official Returns, U. S. Gaz.*

NORWICH, situated at the head of the tide navigation on the Thames river, in 41 deg. 33 min. north latitude, and 72 deg. 7 min. west longitude, thirteen miles north of New London, thirty-nine miles south-east of Hartford. Population, in 1830, city, 3144; total in township, 5179; in 1840, city, 4200; and including the township, 7239. It consists of three parts—Chelsea Landing, or Norwich City, the Town, and Westville, formerly called Bean Hill. Norwich City, or the Landing, is situated on the point of land between the Shetucket and Yantic rivers, which here unite to form the Thames. The site is singularly romantic, on the steep declivity of a high hill, which causes the streets to rise above each other like terraces, and the houses in the rear to overlook those in front. In the north-west part of the city, on the road to Hartford, is Westville, which contains a number of pleasant dwellings and several manufacturing establishments. A cove sets up about a mile from the Thames, over the mouth of which is a bridge. At the head of this cove the Yantic river enters it by a singularly romantic cataract, affording a fine site for mills and manufactories. A mile east of the landing, on the Shetucket, is Greenville, a flourishing manufacturing village. Steamboats ply between Norwich and New York, and a railroad connects it with Worcester, Massachusetts, and thence with Boston. There were in Norwich, in 1840, ninety-seven stores, with a capital of 337,000 dollars; five lumber yards, with a capital of 32,000 dollars; hardware produced to the amount of 50,000 dollars; one fulling mill, one woollen factory, capital 35,000 dollars; one cotton factory, 4000 spindles, capital 100,000 dollars; one tannery, one pottery, two grist mills, one oil mill, two rope-walks, two paper factories, three printing offices, two binderies, and two weekly newspapers. Capital in manufactures, 408,700 dollars. Three academies, seventy-one students, thirteen schools, 908 scholars. In the township, without the city limits, are fourteen stores, capital 36,000 dollars; six fulling mills, five woollen factories, one cotton factory, with 4626 spindles; one tannery, one pottery, eleven grist mills, two paper factories. Capital in manufactures, 453,500 dollars.—*Official Returns, U. S. Gaz.*

NEWTON, sixty-two miles south-west of Hartford. Population, in 1840, 3184; it had three woollen factories, one cotton factory, 300 spindles. Capital in manufactures, 70,100 dollars.

NORTH STONINGTON, fifty-three miles north-east of Hartford. Population, in 1840, 2269. Capital in manufactures, 13,710 dollars.

PLAINFIELD, forty-five miles east of Hartford. Population, in 1840, 2383; it had two woollen factories, seven cotton factories, 15,900 spindles; nine oil mills. Capital in manufactures, 364,000 dollars.

PLYMOUTH, twenty-three miles west of Hartford, celebrated for its manufacture of clocks. There were, in 1840, in the township seven stores, capital 32,000 dollars; one fulling mill, one woollen factory, one cotton factory, 2650 spindles, two furnaces, one tannery, two grist mills, eight saw mills. Capital in manufactures, 84,400 dollars. Population, 2205.

RIDGEFIELD, eighty-one miles south-west of Hartford. It had, in 1840, twelve stores, capital 26,000 dollars; one lumber yard, capital 6000 dollars; one furnace, one fulling mill, two tanneries, two grist mills, four saw mills. Capital in manufactures, 93,100 dollars. Population, 2474.

SAYBROOK, forty-two miles south-south-east of Hartford. Population, in 1840, 3417. Capital in manufactures, 131,250 dollars. Ship building and the shad fishery are carried on.

STAFFORD.—Population, in 1840, 2469. Capital in manufactures, chiefly woollen, 82,200 dollars.

SALISBURY, fifty-three miles west of Hartford. It had, in 1840, seven stores, capital 29,500 dollars; three furnaces, ten forges, two tanneries, three grist mills, four saw mills. Capital in manufactures, 38,950 dollars. Population, 2561.

SHARON, forty-eight miles west of Hartford. There were, in 1840, in the township six stores, capital 20,300 dollars; one cotton factory, 720 spindles; one furnace, one forge, two tanneries, two grist mills, three saw mills. Capital in manufactures, 77,225 dollars. Population, 2407.

STAMFORD, seventy-seven miles south-west of Hartford. It had, in 1840, seventeen stores, capital 32,750 dollars; two lumber yards, capital 5500 dollars; one furnace, one forge, one tannery, one printing office, one weekly newspaper. Capital in manufactures, 23,200 dollars. Population, 3516.

STONINGTON, sixty miles south-east of Hartford. The borough, or principal village, is on a rocky point of land, which projects half a mile into the east end of Long Island sound, and has a good harbour, protected by a breakwater, constructed by the United States, at an expense of 50,000 dollars. It contains two churches, two academies, a bank, 150 dwellings, and about 1000 inhabitants. It has considerable navigation, employed chiefly in the whaling and sealing business. A railroad connects this place with Providence, which, with the Long Island railroad, not yet completed, will form the most direct route from New York to Boston. There were, in 1840, in the township eighteen stores, capital 49,300 dollars; two lumber yards, capital 11,500 dollars; one fulling mill, four woollen factories, one tannery, four grist mills. Capital in manufactures, 86,025 dollars. Two academies, 103 students, fifteen schools, 807 scholars. Population, 3898.

SUFFIELD, seventeen miles north of Hartford. Population, in 1840, 2669. Capital in manufactures, 111,337 dollars.

THOMPSONVILLE, twenty miles north of Hartford. Situated on the Freshwater river, at its entrance into the Connecticut river, about one mile north of Enfield bridge. It has a large manufactory of carpets, with 120 looms, producing 800 yards daily. The village only contains 800 inhabitants.

THOMPSON, forty-three miles south-east of Hartford. Population, in 1840, 3535. Capital in various manufactures, 424,650 dollars.

WALLINGFORD, twenty-four miles south-by-west of Hartford. There were, in 1840, in the township two woollen factories, one tannery, two grist mills, four saw mills. Capital in manufactures, 43,050 dollars. Population, 2204.

WATERBURY, fifty-two miles south-south-west of Hartford. The township had, in 1840, seventeen stores, capital 88,370 dollars; five fulling mills, three woollen factories, three cotton factories, 570 spindles; two tanneries, three distilleries, five grist mills, sixteen saw mills. Capital in manufactures, 718,309 dollars. Population, 3668.

WATERFORD, forty-six miles south-east of Hartford. It had, in 1840, four stores, capital 4000 dollars; one tannery, three grist mills, one oil mill. Capital in manufactures, 11,500 dollars. Population, 2329.

WESTERFIELD, four miles south of Hartford. Population, in 1840, 3844. Capital in manufactures, 157,033 dollars.

WILLOU, seventy-four miles west of Hartford. Population, in 1840, 2053. Capital in manufactures, 9600 dollars.

WESTON, sixty-three miles south-west of Hartford. There were, in 1840, in the township eight stores, capital 12,000 dollars; one flouring mill, eight grist mills, thirteen saw mills. Capital in manufactures, 17,050 dollars. Population, 2651.

WINDHAM, thirty-one miles east of Hartford. There were, in 1840, in the township eleven stores, capital 48,000 dollars; two fulling mills, three woollen factories, five cotton factories, 11,950 spindles; one tannery, two paper factories, three grist mills, seven saw mills. Capital in manufactures, 361,350 dollars. Population, 3382.

WINDSOR, seven miles north of Hartford. There were, in 1840, in the township six stores, capital 18,600 dollars; one fulling mill, one woollen factory, three cotton factories, 570 spindles; one tannery, three paper factories, five grist mills, two saw mills. Capital in manufactures, 155,300 dollars. Population, 2283.

EAST WINDSOR, seven miles north-east of Hartford. There were, in 1840, in the township thirteen stores, capital 26,800 dollars; five fulling mills, three woollen factories, four distilleries, one paper factory, four grist mills, five saw mills. Capital in manufactures, 129,300. Population, 3600.

WOODSTOCK, forty-three miles east-north-east of Hartford. There were, in 1840, in the township sixteen stores, capital 33,000 dollars; two fulling mills, three woollen factories, three cotton factories, 3292 spindles. Population, 3053.—*Official Returns, U. S. Gaz.*

VII. STATE OF NEW YORK.

THE STATE OF NEW YORK is bounded on the north by Lake Ontario, the river St. Lawrence, and Lower Canada; on the east by Vermont, Massachusetts, and Connecticut; on the south by the Atlantic, New Jersey, and Pennsylvania; and on the west by Pennsylvania, Lake Erie, and Niagara river. It lies between 39 deg. 45 min. and 45 deg. north latitude, and between 73 deg. and 79 deg. 55 min. west longitude. It is about 316 miles long, and 314 miles broad; its area is about 46,000 square miles, or 11,040,000 acres; being more than one-third of the area of Great Britain and Ireland. The population in 1790, was 340,120; in 1800, 586,050; in 1810, 959,049; in 1820, 1,372,812; in 1830, 1,913,508; in 1840, 2,428,921, viz.: 853,929 white males, 816,276 white females; 6435 free coloured males, 6428 free coloured females. There were employed in mining, 1898; in agriculture, 455,954; in commerce, 28,468; in manufactures and trades, 173,193; in navigating the ocean, 5511; in navigating lakes and canals, 10,167; in learned professions, 14,111. The number of inhabitants in this state on the 1st of January, 1845, may be estimated at, or nearly 3,000,000 inhabitants; which, considering the general fertility of the soil, the internal navigation, and the numerous sources of employment that are capable of development, is not one-fifth the number of persons that this extensive and productive state is capable of adequately maintaining.

Sub-Divisions.—The state is divided into fifty-eight counties; in 1840, its population and capitals were as follows; viz.—Albany, 68,593, C. Albany; Alleghany, 40,975, C. Angelica; Broome, 22,338, C. Binghamton; Cattaraugus, 28,872, C. Ellcottsville; Cayuga, 50,338, C. Auburn; Chautauque, 47,975, C. Mayville; Chemung, 20,732, C. Elmira; Chenango, 40,785, C. Norwich; Clinton, 28,157, C. Plattsburgh; Cortland, 24,607, C. Cortlandville; Delaware, 35,396, C. Delhi; Erie, 62,465, C. Buffalo; Essex, 23,634, C. Elizabethtown; Franklin, 16,518, C. Malone; Fulton, 18,049, Johnstown; Genesee, 59,587, C. Batavia; Hamilton, 1907, C. Lake Pleasant; Herkimer, 37,477, C. Herkimer; Jefferson, 60,984, C. Watertown; Lewis, 17,830, C. Martinsburg; Livingston, 35,140, C. Genesee; Madison, 40,008, C. Morrisville; Monroe, 64,902, C. Rochester; Montgomery, 35,818, C. Canajoharie; Niagara, 31,132, C. Lockport; Oneida, 85,310, C. Utica, Rome, Whitestown; Onondaga, 67,911, C. Syracuse; Ontario, 43,501, C. Canandigua; Orleans, 25,127, C. Albion; Oswego, 43,619, C. Oswego, Pulaski; Otsego, 49,628, C. Cooperstown; Rensselaer, 60,295, C. Troy; Saratoga, 40,553, C. Ballston; Schenectady, 17,387, C. Schenectady; Schoharie, 32,358, C. Schoharie; Seneca, 24,874, C. Ovid, Waterloo; St. Lawrence, 56,706, C. Canton; Steuben, 46,138, C. Bath; Tioga, 20,527, C. Owego; Tompkins, 37,948, C. Ithaca; Warren, 13,422, C. Caldwell; Washington, 41,080, C. Salem, Sandy Hill; Wayne, 42,057, C. Lyons; Yates, 20,444, C. Penn Yan; Columbia, 43,252, C. Hudson; Dutchess, 52,398, C. Poughkeepsie; Greene, 30,446, C. Catskill; Kings, 47,613, C. Brooklyn; New York, 312,710, C. New York; Orange, 50,739, C. Goshen, Newburg; Putnam, 12,825, C. Earmel; Queens, 30,324, C. North Hempstead; Richmond, 10,965, C. Richmond; Rockland, 11,975, C. Clarkstown; Suffolk, 32,469, C. Riverhead; Sullivan, 15,629, C. Monticello; Ulster, 45,822, C. Kingston; Westchester, 48,686, C. Bedford, White Plains. The counties are subdivided into 807 townships.—*Official Returns.*

Surface and Configuration.—Two ranges of highlands, or ramifications of the Alleghany chain, traverse the eastern part of the state of New York. Round Top, the highest peak of the Catskill mountains, is 3804 feet high. Several other summits approach to mountainous heights. The highest summits west of Lake Champlain, are

Whiteface, about 5000 feet, and Mount Marcy, 5460 feet high. The country in the eastern part of the state is generally hilly and undulated, near the western boundaries of Pennsylvania; and the land in the western part of the county is generally flat.

Soil and Products.—The soil in the eastern and south-eastern parts is generally dry, and in some parts loamy. This section is considered as best adapted to grazing, and the western to arable culture. All the hilly and mountain districts afford excellent pasturage. The soil of the alluvions along the rivers, and of innumerable valleys, is remarkably fertile. The valleys of the Mohawk and the Genesee are among the best wheat-growing soils in the world. A clayey soil prevails round parts of Lake Champlain. Marshes, bogs, and sandy plains, are met with in some parts west of Albany. The west end of Long Island, and Dutchess and Westchester counties, are extolled for good culture and productive crops. The principal are, wheat, Indian corn, grass, rye, barley, oats, buckwheat, and potatoes. Beef and pork, butter and cheese, horses and cattle, pot and pearl ashes, flax seed, peas, beans, and lumber, form the great articles of export. Orchards abound. The apples, pears, plums, and peaches are delicious and abundant. In the state there were, in 1840, 474,543 horses and mules; 1,911,244 neat cattle; 5,118,777 sheep; 1,900,065 swine; poultry to the value of 1,153,413 dollars. There were produced 12,286,418 bushels of wheat; 2,520,060 bushels of barley; 20,675,847 bushels of oats; 2,979,323 bushels of rye; 2,287,885 bushels of buckwheat; 10,972,286 bushels of Indian corn; 9,845,295 pounds of wool; 447,250 pounds of hops; 30,123,614 bushels of potatoes; 3,127,047 tons of hay; 1735 pounds of silk cocoons; 10,048,109 pounds of sugar. The products of the dairy amounted in value to 10,496,021 dollars; and of the orchard, to 1,701,935 dollars; of lumber, to 3,891,302 dollars. There were produced 6799 gallons of wine; and of pot and pearl ashes, 7613 tons; tar, pitch, turpentine, &c., 402 barrels.—*Official Returns, &c.*

In the extensive level country west of the mountains, the climate is more mild than in the same latitude in the east.

Rivers.—The principal rivers are the Hudson, 324 miles long, navigable for ordinary small-decked sea-going vessels, 156 miles to Troy; the Mohawk, 135 miles long, which joins the Hudson a little above Troy; the Genesee, 125 miles long, and enters Lake Ontario, having at Rochester, five miles from its mouth, two falls of ninety-six and seventy-five feet, furnishing many of the best mill seats; the Black river, which rises near the sources of the Hudson, and flows 120 miles, into Lake Ontario; the Saranac, sixty-five miles long, enters Lake Champlain at Plattsburgh; the Oswegatchie, flows 100 miles, into the St. Lawrence; the Oswego proceeds forty miles, from Oneida lake into Lake Ontario; the Au Sable rises in the Adirondack mountains, and, after a course of seventy-five miles, enters Lake Champlain. The St. Lawrence forms a part of the northern boundary of the state. The head branches of the Susquehanna, the Alleghany, and the Delaware, also rise in New York.

Lakes.—The state has numerous lakes which lie wholly within it, besides Lake Ontario on the north, and Lake Champlain on the east, which are but partly within it. Besides these, Lake George, in the north-east, thirty-three miles long and two miles broad, is a beautiful sheet of water, surrounded by the most picturesque scenery, and has an outlet into Lake Champlain. In the western part of the state are Oneida lake, twenty miles long and three miles and a half wide; Skeneateles lake, fifteen miles long, and from one mile, to one mile and a half broad; Owasco lake, eleven miles long, and one to two miles broad; Cayuga lake, thirty-eight miles long, and one to four miles broad; Seneca lake, thirty-five miles long, and two to four miles broad; Crooked lake, eighteen miles long, and one to one mile and a half broad; Canandaigua lake, fourteen miles long, and one mile broad. These lakes all discharge their waters into Lake Ontario. In the extreme west part of the state is Chautauque lake, eighteen miles long, and one to three miles broad; situated near Lake Erie, but discharging its waters south, into the Alleghany river.

Islands.—Long Island, 120 miles long from west to east, and about ten miles is its average breadth. Staten Island, south-west of the harbour of New York, is eighteen miles long, and eight miles wide, and constitutes the county of Richmond. Manhattan Island, on which the city of New York stands, is fifteen miles long, and about one mile and a half wide, at an average breadth. Grand Island, in Niagara river, is twelve miles long, and from two to seven miles wide, and extends to within one mile and a half of the falls.

Harbours.—*New York*, the first commercial place and seaport of the United States, is accessible all the year. The *Hudson* is navigable for large ships, about 130 miles to Hudson. On the bar, at Sandy Hook, it has a depth of from twenty-one to twenty-seven feet, and is deeper above. Sag Harbour on the east, and Brooklyn on the west end of Long Island, are good harbours. Sacketts Harbour has a good natural, and Oswego a good artificial, harbour, on Lake Ontario. Buffalo, Erie, and Dunkirk, are harbours on Lake Erie.

Brooklyn, on Long Island, opposite New York, Albany, Rochester, Troy, Buffalo, and Utica, are large and flourishing cities. Poughkeepsie, Newburg, Hudson, Catskill, and Lansingburgh, on the Hudson; Schenectady, on the Mohawk; Geneva, Syracuse, Auburn, Lockport, and Ithaca, in the west, and Plattsburg in the north, are large and flourishing places.

Trade of the State.—In the year 1840, there were 469 commercial and 1044 commission houses engaged in foreign trade, with a capital of 49,583,001 dollars; 12,207 retail dry goods and other stores, with a capital of 42,135,795 dollars; 9592 persons engaged in the lumber trade, with a capital of 2,694,170 dollars; 7593 persons engaged in internal transportation, and 804 butchers, packers, &c., the whole employing a capital of 2,833,916 dollars; the fisheries employed 1228 persons, and a capital of 949,250 dollars.

Manufacture.—The manufactures of the State of New York are also extensive. Home-made or family goods were produced, amounting in value to 4,636,547 dollars; 323 woolen manufactories, with 890 fulling mills, employing 4636 persons, produced articles to the value of 3,537,337 dollars, and employed a capital of 3,469,349 dollars; 117 cotton manufactories, with 211,659 spindles, employed 7407 persons, and a capital of 4,900,772 dollars; 332 persons produced 2,867,884 bushels of salt, employing a capital of 5,601,000 dollars; 186 furnaces produced 29,088 tons of cast iron, and 120 forges, &c., produced 53,693 tons of bar iron, consumed 123,677 tons of fuel, employed 3456 persons, and a capital of 2,103,418 dollars; nine smelting houses produced 670,000 lbs. of lead, employing 333 persons, and a capital of 221,000 dollars; seventy-seven paper mills produced articles to the value of 673,121 dollars, and other paper manufactures produced to the value of 89,637 dollars, the whole employing 749 persons, and a capital of 703,550 dollars; hats and caps were manufactured to the value of 2,914,117 dollars, and straw bonnets to the value of 160,248 dollars, the whole employing 3880 persons, and a capital of 1,676,559 dollars; 1216 tanneries employed 5579 persons, and a capital of 3,907,348 dollars; other leather manufactories, as saddleries, &c., produced articles to the value of 6,232,924 dollars; and employed a capital of 2,743,765 dollars; thirteen glass houses, and eleven glass cutting establishments, employed 498 persons, produced articles to the value of 411,371 dollars, and employed a capital of 204,700 dollars; forty-seven potteries employed 197 persons, producing articles to the value of 159,292 dollars, and employed a capital of 88,450 dollars; machinery was produced to the value of 2,895,517 dollars, employing 3631 persons; hardware and cutlery employed 962 persons, and produced articles to the value 1,566,974 dollars; 112 cannon and 8308 small-arms were manufactured by 203 persons, to the value of 1,106,203 dollars; 1713 persons manufactured the precious metals to the value of 1,106,203 dollars; 1447 persons manufactured granite and marble to the value of 966,220 dollars; 489 persons manufactured 11,939,834 lbs. of soap, 4,029,783 lbs. of tallow candles, and 533,000 lbs. of spermaceti candles, with a capital of 618,875 dollars; 669 persons manufactured tobacco to the value of 831,570 dollars, with a capital of 395,530 dollars; 212 distilleries produced 11,973,815 gallons, and eighty-three breweries produced 6,059,122 gallons, the whole employing 1486 persons, and a capital of 3,107,066 dollars; 4710 persons manufactured carriages and waggons to the value of 2,364,461 dollars, with a capital of 1,485,023 dollars; 338 flouring mills manufactured 1,861,385 barrels of flour, and with other mills produced articles to the value of 16,953,280 dollars, employing 10,807 persons, and a capital of 14,648,814 dollars; ships were built to the value of 797,317 dollars; furniture was manufactured to the value of 1,971,776 dollars, employing 3660 persons, and a capital of 1,610,810 dollars; 3160 persons produced bricks and lime to the value of 1,198,527 dollars; 1233 brick and 5198 wooden houses were built by 16,768 persons, and cost

7,265,844 dollars; 321 printing offices, and 107 binderies, thirty-four daily, thirteen semi-weekly, or tri-weekly, and 198 weekly newspapers, and fifty-seven periodicals, employed 3231 persons, and a capital of 1,876,540 dollars. The whole amount of capital employed in manufactures, in 1840, was 55,252,779 dollars, or 11,500,000*l.* sterling.

Education.—Columbia College (formerly King's) was founded in New York in 1754, and is conducted by the Episcopalians; Union College, at Schenectady, was founded in 1795; Hamilton College, in Clinton, was founded in 1812; Geneva College, conducted by the Episcopalians, was founded in Geneva, in 1823; the University of the City of New York was founded in 1831. The Hamilton Literary and Theological Seminary was founded in Hamilton, by the Baptists, in 1819. The Theological Institute of the Episcopal Church was founded by the Episcopalians, in New York, in 1819; the New York Theological Seminary, connected with the University, was founded by the Presbyterians, in 1836; the Theological Seminary at Auburn, was founded by the Presbyterians, in 1821; the Hartwick Seminary, at Hartwick, in Otsego county, was founded by the Lutherans, in 1816; the Theological Seminary of the Associate Reformed Church was founded at Newburg, in 1836; the College of Physicians and Surgeons, in the city of New York, was founded in 1807; the Albany Medical College was founded in 1839. All these institutions had, in 1840, 1285 students; besides, there were in the state 505 academies, with 34,715 students; and 10,593 common and primary schools, with 502,367 scholars; and 44,452 persons over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

COMMON SCHOOLS in 1843 (compiled from the Annual Report of the Superintendent Jan. 13, 1843).

Whole number of school districts		10,893
Number of districts that have made reports		10,645
Number of children from five to sixteen years old in these districts		*601,765
Ditto ditto who have attended the public schools		*571,130
Ditto ditto attending public schools in the city of New York		27,619
Ditto ditto actually attending when the schools were visited		†280,076
Amount of public money paid to the teachers	dollars	588,506.32
Ditto ditto paid for school libraries	do.	98,290.47
Amount paid to teachers besides the public money	do.	468,688.22
Number of incorporated select and private schools		596
Average number of pupils in these schools		30,709
Number of male teachers		†4,152
Number of female teachers		†4,890
Number of teachers under eighteen years of age		†903
Average monthly pay of teachers, males	dollars	17
Ditto ditto, females	do.	7
Number of schoolhouses in good repair		3,426
Ditto ditto in bad or indifferent repair		2,676
Productive capital of the common school fund	dollars	1,968,290.72

Religious Professions.—Of the religious denominations, in 1838, the Presbyterians and Congregationalists had 564 ministers, and 86,000 communicants; the Baptists had 483 ministers, and 67,183 communicants; the Methodists had 591 ministers, and 30,700 communicants; the Dutch Reformed, 142 ministers, and 15,800 communicants; the Episcopalians had 207 ministers, and about 10,000 communicants; the Associate Reformed had thirty ministers; the Lutherans, twenty-seven ministers; the Roman Catholics, thirty-two ministers; the Universalists, twenty-five ministers; the Unitarians, eight ministers; besides a few others.—*U. S. Gaz.*

Public Works.—New York has taken the lead, and is certainly in advance of all the other states in works of internal improvement; but Massachusetts, and some others, have not failed to profit by the example.

* Excluding the city of New York, from which no returns on this head have been received.
 † Partly from estimate. ‡ Not including all the counties.

1. *Canals.*—The Erie canal was commenced in July, 1817, and completed in 1825. It extends from Albany to Buffalo, 363 miles, and cost originally 7,143,789 dollars. This cost will be more than doubled by the present widening of it. The Champlain canal, from Albany to Whitehall, seventy-nine miles, was carried on simultaneously, and cost 1,257,604 dollars. The Oswego canal, from Syracuse to Oswego, thirty-eight miles, was completed in 1828, at a cost of 565,437 dollars. The Cayuga and Seneca canal, from Montezuma to Geneva, twenty-one miles, was completed in 1828, at a cost of 236,804 dollars. The Chemung canal, extends from Elmira to Seneca lake, including a feeder to Painted Post, thirty-nine miles, and cost 331,693 dollars. The Crooked lake canal extends from Crooked lake to Seneca lake, eight miles, and cost 156,776 dollars. Chenango canal extends from Binghamton to Utica, ninety-seven miles, and cost 2,270,605 dollars. The above are all branches of the great Erie canal, and their united length is 655 miles; and the cost of the whole 11,962,711 dollars. The Black River canal extends from the Erie canal, at Rome, to the foot of the high falls in Leyden, on Black river, thirty-five miles, with a navigable feeder of eleven miles; the cost, including the improvement of the navigation of the river, forty miles, to Carthage, 1,068,437 dollars. The Genesee and Alleghany canal extends from Rochester to Olean, on the Alleghany, 107 miles, with a branch of fifteen miles, estimated to cost 2,002,285 dollars. The Delaware and Hudson canal commences at Eddyville, on the Rondout creek, near the Hudson, and reaches to Honesdale, on the Lackawaxen river, passing to, and through Delaware river, 109 miles, and cost 2,231,320 dollars.—*Official Reports, U. S. Gaz. See Tabular Statements of Canal Returns, hereafter.*

2. *Railroads.*—Of the railroads projected in the state, the following have been completed. The Harlem railroad from New York to Fordham, twelve miles; the Long Island railroad from Brooklyn to Suffolk station, forty-one miles, to be continued through the island to Greenport; the Hudson and Berkshire railroad from Hudson to West Stockbridge, thirty-three miles; the Catskill and Canajoharie railroad, to connect the two places, seventy-eight miles, partly completed; the Rensselaer and Saratoga railroad from Troy to Ballston, twenty-three miles; the Mohawk and Hudson railroad connects Albany and Schenectady, sixteen miles; the Saratoga and Schenectady, twenty-one miles and a half, connects the two places; the Utica and Schenectady connects these places, seventy-seven miles; the Syracuse and Utica continues this road, fifty-three miles west, to Syracuse; the Syracuse and Auburn railroad continues this road to Auburn, twenty-six miles; the Auburn and Rochester railroad continues it, eighty miles west, to Rochester. The Towanda railroad connects Rochester and Attica, forty-five miles, and is now being continued to Buffalo. Buffalo and Niagara Falls railroad connects the two places, twenty-three miles. Lockport and Niagara Falls railroad connects these places, twenty miles. Ithaca and Oswego railroad joins the two places, twenty miles; the Rochester railroad from Rochester to Port Genesee, three miles; Bath railroad from Bath to Crooked lake, five miles; Port Kent and Keesville railroad connects the two places, four miles and a half. The New York and Erie railroad is one of the greatest undertakings of the kind in America. It commences at Piermont, twenty-two miles above New York, on the Hudson, and is to extend through the southern counties of the state, 350 miles, to Dunkirk, on Lake Erie. The estimated cost of the work is 5,473,000 dollars. This road is completed to Goshen, forty-five miles from Piermont, and other sections of it are completed or in great progress.—*Official Returns, U. S. Gaz.*

FINANCES OF THE STATE OF NEW YORK.

This state has, during all the embarrassments of a commercial crisis, faithfully discharged its public obligations; and the merchants and others engaged in navigation, trade, and manufactures, as well as the banks and public companies, have as honourably discharged their liabilities and contracts, as those of any country in Europe. Some defaulters may, it is true, be named; but not a

greater number in proportion to the whole population, than in the United Kingdom, or any other trading country.

The following tabular statements exhibit the elements of taxation, and the revenue and expenditure of the state of New York.

VALUATION OF REAL AND PERSONAL PROPERTY OF NEW YORK.

It will be seen that the value of real estate in the State at large, is nearly double what it was in 1828, and in the city more than double. The personal property has increased in nearly the same ratio.

At 6 per cent interest..	1,170,000 00	70,200 00	Pays no interest (6 1/2 of '37.)	12,771 27			
At 7 per cent interest..	490,358 28	34,325 08					
Total	5,124,389 55	282,928 14	Total Canal debts...	19,613,359 42	1,058,692 00		
			Total treasury debt.	5,124,389 55	282,928 14		
			Aggregate	24,737,749 00	1,341,620 14		

The principal of this debt is payable as follows:—

	dollars.	cts.		dollars.	cts.
On demand	118,390	49	In the year 1861	1,300,000	00
In the year 1843	227,327	00	" 1862	900,000	00
" 1844	235,379	07	" 1865	28,000	00
" 1845	4,234,201	61	Payable at pleasure	693,074	27
" 1846	571,304	00			
" 1847	11,000	00	Total	24,737,749	00
" 1848	1,954,993	00	Available means in the		
" 1849	1,766,700	00	hands of the Commis-		
" 1850	1,256,000	00	sioners of the Canal		
" 1851	50,000	00	Fund, applicable to pay-		
" 1852	20,000	00	ment of the debt, 1845	1,407,655	85
" 1854	500,000	00			
" 1855	4,000,000	00	Total	23,330,083	15
" 1858	3,546,305	34			

There is, in addition to the preceding available means, the sum of 514,869 dollars 62 cents unavailable, and which consists of loans to insolvent banks.

The contingent debt of the state, that is, the stock issued on the faith of the people and loaned to railroad and canal companies, is as follows:—

	Redeemable.	Rate of Interest.	Amount.
Delaware and Hudson Canal Company	1847	5 per cent.	dollars.
Delaware and Hudson Canal Company	1848	4 1/2 "	500,000
Auburn and Syracuse Railroad Company	"	5 "	300,000
Auburn and Rochester Railroad Company	"	5 1/2 "	300,000
Long Island Railroad Company	"	6 "	100,000
Hudson and Berkshire Railroad Company	1865	5 1/2 "	150,000
Tioga Coal Company	"	5 1/2 "	70,000
Tonawanda Railroad Company	"	5 1/2 "	100,000
Schenectady and Troy Railroad Company	1867	6 "	100,000
Total			1,720,000

Canal debt, 30th Sept. 1843, 20,411,291 dollars; annual interest, 1,111,662 dollars. General fund debt, 5,423,009 dollars; interest, 265,599 dollars. Total whole debt, 25,834,706 dollars; or about 5,500,000*l.* sterling. This is exclusive of the above contingent debt.

ORDINARY RECEIPTS AND EXPENDITURES.

The whole amount of receipts paid into the Treasury, from ordinary sources of revenue, during the year ending September 30, 1842 (excluding temporary loans), was 643,276 dollars 95 cents; of which the principal items were as follows:—

	dollars.	cts.		dollars.	cts.
Auction duty	200,284	52	Surplus from canal fund	200,000	00
Salt duty	114,966	99	Banking associations (act of 1838)	21,023	08
Register and clerk fees	40,279	59	Arrears of county taxes	27,578	10

The whole amount of expenses "annual in their nature," during the same period, was 647,958 dollars 77 cents; of which the chief items were as follows:

	dollars.	cts.
Salaries of officers	50,216	11
Legislature	106,214	67
Clerks in court and chancery	40,930	62
Interest	227,234	44
Printing for the state	50,310	72
Support of the deaf and dumb	15,444	71
Hospital, New York	16,875	00
Foreign poor, in New York	10,000	00
State prison expenses	10,142	69
Court of errors	19,103	90

SUMMARY.

	1840.		1843.	
	dollars.	cts.	dollars.	cts.
Total amount of real estate	4,521,068	71	7,200,309	73
Total amount of capital stock	40,380,504	34	45,939,245	93
	45,901,573	05	53,139,555	66
Add for railroads, not included in the table :				
Real estate	2,550,291	40	7,423,735	01
Capital stock	172,000	00	428,453	54
Aggregate	48,623,864	45	60,991,744	21

Of the increase from 1840 to 1843, more than five millions and a half of dollars is caused by including the free banks in the assessments of 1843, and not in the 1840.

	dollars.	cts.
The total sum paid for taxes in 1843, by the incorporated companies included in the table, was	360,726	15
Paid by railroad companies	20,646	74
	381,372	89

The Delaware and Hudson Canal, and turnpike and bridge companies are not included.

NEW YORK BANKS.

The general banking system of New York is considered restrictive. We shall defer our account of the chartered, the free, and the safety-fund banks of this state, until we bring them under view hereafter in a general account of the banking systems of the United State. We shall therefore confine the subject under the present head to the following opinion of the Comptroller on the general bank law of New York, and to the annual report of the bank commissioners.

COMPTROLLER'S OFFICE, Albany, July 30th, 1841.

1. That I am of opinion the restriction in the third section of the act of 1840, which prohibits the commencing of banking until securities to the amount of 100,000 dollars shall have been deposited with the comptroller, applies only, as you contend, to an "association of persons," and not to an individual banker, and therefore, that the comptroller would be bound, under the general provisions of the act, to issue circulating notes to an amount equal to the current market value of the securities, although the securities deposited should not amount to 100,000 dollars.

2. I find nothing in the act, however, that authorises an individual banker, or "any person" as distinguished from an association of persons, to assume any fictitious name as the name of his bank, and I think there is manifest propriety in requiring, in such case, that the circulating notes delivered to an individual banker, should be in his individual, and not in an assumed name.

The obvious intent of the statute is, that the individual banker shall be held personally liable upon his circulating notes. They are, it is true, to be "in the form and similitude of bank bills," and to be countersigned, numbered, and registered, and are to bear the stamp which is to indicate that they are secured in the manner contemplated by the act; but the holder of such notes, in case the bills are not paid or redeemed according to law, can resort for his indemnity not only to the securities deposited in the hands of the comptroller, but to the maker or individual banker personally.—He is to "execute and sign the circulating notes" so as "to make them obligatory promissory notes, payable on demand at his place of business." How can the signature by his president and cashier, and in the assumed name of a bank, be deemed a compliance with this provision?

If "any number of persons" associate for the purpose of banking, they are required to file a certificate in the office of the secretary of state, and in the office of the clerk of the county, specifying:

1. The "name assumed" to distinguish such associations.
2. The place where the business is to be carried on.
3. The amount of capital and number of shares.
4. The names and places of residence of the shareholders, and the number of shares held by each.
5. The period at which such association shall commence and terminate.

Such associations are to carry on the business of banking, as provided for by the act, and in the manner specified in their articles of association, and to choose one of their number as president, and to appoint a cashier.

All contracts made by such "association" and all notes and bills by them issued, must be signed by the president or vice-president, and suits by, or against them, are to be prosecuted in the name of the president, and a judgment against him, can only be enforced against the joint property of the association; and no shareholder of "any such association" is liable in his individual capacity, unless the articles of association signed by him, shall have so declared.

The annual statement too, required by the 26th section of the original act of 1838, applies only to such "associations" and not to individual bankers, although the act of the last session in terms includes individual bankers. Many other of the restrictions and limitations can only be deemed applicable to associations.

The law of 1841, directing the manner of commencing suits against "associations," has no reference to individual bankers, and suits against the latter, upon their circulating notes, should, as I suppose, be commenced and prosecuted as against other individuals, and be enforced like any other private demand, the holders of the notes having, however, the additional remedy against the securities in the hands of the comptroller—to which, perhaps, a court of chancery might compel him to resort in the first instance.

If you desire to avail yourself of this law in obtaining circulating notes from this department, and to commence the business of banking, under its provisions, as an individual banker, the notes must be prepared and issued in your individual name, and bear your individual signature.—You will then be entitled, upon depositing the securities contemplated by the act, to circulate notes equal to the market value of the securities deposited.

THE FREE BANKS OF THE STATE OF NEW YORK.

By the annual report of the comptroller, dated January 7, 1841, there were seventy-six associations and banks named in the report of last year; thirteen have been struck from the list, as either closed or closing, and there have been added six, which have been established since the 1st of December, 1839; leaving now in operation sixty-nine, several of which have indicated a disposition to close their operations as speedily as circumstances will admit. It is much to the credit of the free banks, that of the great number of them, they have all, with but one exception (the Millers' Bank), complied with the terms of the act of the last session, relating to the redemption of bank notes; and consequently, the circulating bills of all the associations and individual bankers (with the one exception) have been taken at par for all state dues, at the several points where those dues are payable. Many of the associations, and some individual bankers, have found it necessary materially to curtail their circulation, as will be seen by comparing the amount in 1839 with that in 1840.

On the 1st of December, 1839, the circulation of the free banks (or, the amount issued from this office) was **6,012,009** dollars.
 On the 1st of December, 1840, there was outstanding **5,353,567**

Making a diminution of **658,442**

STATEMENT of the Banks under the General Banking Law, December 1, 1840.

† Individual banks.

By the annual report of the bank commissioners of January 30, 1843, it appears that on the 1st of January, 1840, and after the second suspension of many of the banks, south and west of New York, which occurred before the end of that year, the returns exhibited a diminution of loans and discounts, on the part of the ninety chartered banks of the state, to the amount of 15,512,000 dollars; and a reduction of 8,743,365 dollars, the circulation, as compared with the reports of the same institutions on the 1st of January, 1839.

During the year ending on the 1st of January, 1843, the loans and discounts of all the chartered banks, eighty-five in number, as compared with the same banks on the 1st of January, 1842, have diminished 2,959,602 dollars.

The discounted debt of forty-three banking associations has increased within this period 974,263 dollars, making an aggregate of diminution, in all the banks of the state, of 1,985,339 dollars.

The circulation of the chartered banks has also been reduced 2,027,810 dollars, and the free banks, 60,794 dollars, showing the whole decrease of circulation to be 2,088,604 dollars.

The specie of the chartered banks has increased 2,094,602 dollars, and the free banks, 974,000 dollars, making the whole increase of specie, 3,068,602 dollars.

The following table exhibits a comparative view of the resources and liabilities of all the chartered and free banks for the years 1841 and 1842, excluding the La Fayette Bank in the City of New York, the Watervliet Bank, the Clinton County Bank, the Bank of Lyons, and the North River Bank, whose charter has expired, and which has since gone into operation under the general banking law, together with the James Bank, the Farmers' Bank of Malone, and the Manufacturers' Bank at Ulster; which last-named association did not make any returns.

Total Resources	88,862,248	88,322,498	88,322,498	88,322,498	Grand Total	88,862,248	88,322,498	88,322,498	88,322,498

The cash items in the line of resources in the New York banks, embraces a large amount of Treasury notes. The reports of the eighty-one safety fund banks, exhibit nominal profits on hand to the amount of 3,399,772 dol. On deducting therefrom the aggregate expenses and contributions to the fund, amounting to 1,484,716 dollars the balance will be 1,875,054 dollars, being a little over 6 per cent.

To determine the circulation of all the banks, the amount of notes of other banks contained in the statements, should be deducted. This account would then stand, in relation to the specie in the banks, as follows:—

The 131 banks which have made returns, show the circulation to be	dollars.
Deduct notes held by banks	12,031,871
Actual circulation	4,868,587
Specie	7,142,884
Excess of specie over circulation	8,447,076
Excess of specie over circulation	1,334,193

The loans of the banks were never so high as now, with the exception of the two years 1836-37; and the deposits never were so high, with the exception of the year 1837. The specie in August last was, to the circulation and deposits, as 1 to 2.75. It is now as 1 to 5.50, showing a great extension of credits. The proportion in which the movement has been made by the city banks, as distinguished from those of the country, may be seen by comparing the aggregate of each, as seen in the following table of the leading features in August last, when the specie was at its greatest point of accumulation, and at the present returns. These aggregates compare as follow:—

	CITY BANKS.		COUNTRY BANKS.	
	August.	May.	August.	May.

* In 1843, the imports are only for the nine months ending the 30th of June; the other years being for the twelve months ending each year on the 30th of September. For the registered and a nulled tonnage of the state, see tables of the tonnage of the United States hereafter.

PRINCIPAL COMMERCIAL AND MANUFACTURING CITIES AND TOWNS IN THE STATE OF NEW YORK.

ALBANY, the capital of the state of New York, is situated on the Hudson river, 145 miles, by the course of the river, above the city of New York, in 42 deg. 39 min. 3 sec. north latitude, and 73 deg. 32 min. west longitude, 164 miles west-by-north of Boston, 230 miles south of Montreal, 370 miles from Washington. The population, in 1810, was 9356; in 1820, 12,630; in 1830, 24,238; in 1840, 33,721. Of the latter there were, in 1840, employed in agriculture, 144; manufactures and trades, 1621; navigating the ocean, eight; navigating rivers and canals, 106; in the learned professions, 237. State-street, one of the early streets, from the meeting of Court and Market-streets, is from 150 to 170 feet wide, and has a steep ascent, at the head of which the capitol, which fronts it, has a

commanding position. Many of the private, and especially the public buildings of Albany, overlook an extensive and beautiful landscape.

The capitol is a large stone edifice, 115 feet long and ninety feet broad, fronting east on a spacious square. It contains excellent apartments for the senate and assembly, and numerous rooms for other public purposes. The City Hall, on the east side of the same square, is a large marble building, with a gilded dome. The State Hall, a superb edifice for the public offices, is a corresponding building on the same side of the square. The Albany Academy, built of freestone, has a park in front of it, adjoining the public square; and both are surrounded by an iron paling, and are laid out with walks and ornamented with trees. The other public buildings are a Medical College, a Female Academy, the Albany Exchange, a large building of granite at the foot of State-street, and the county gaol.

The Albany Academy has 400 students. The Albany Female Academy has obtained a deserved celebrity, and has from 300 to 350 pupils. The Albany Library contains 9000 volumes. The Young Men's Association, established for mutual improvement, occupies rooms in the exchange building, and has 1500 members. It has a reading-room, liberally furnished, a library of 3200 volumes, and during the winter season an able course of lectures is delivered. The Albany Orphan Asylum generally maintains eighty or ninety male and female children. The poorhouse, situated in the south-west part of the city, consists of several large buildings, and has a farm of 150 acres, cultivated by its inmates. St. Joseph's Orphan Asylum is a Roman Catholic institution, for females only, and numbers about forty orphans, under the Sisters of Charity.

Albany has about 100 streets and alleys built on, eleven public squares, three markets, ten public schools, containing also dwellings for the teachers, and eleven engine houses, all built of brick.

The city contains thirty places of worship, of which the Presbyterians have four, the Associate Reformed one, the Dutch Reformed three, the Methodists four, the African Methodists one, the Episcopalians three, the Baptists two, the coloured Baptists one, the Lutherans two, the Universalists one, and the Roman Catholics two. There are one Independent church, one Mission church, one Bethel church, one Friends' meeting-house, and two Jewish synagogues.

The old state hall on the south side of State-street, has been converted into a geological cabinet museum, collected by the state geologists in their surveys. The Albany Institute is a respectable scientific association, with a library and cabinet.

Albany is advantageously situated on the Hudson for trade. The Erie and the Champlain canals extend also to it a ready access to all the vast regions to the north and west. The Boston railroad adds to these advantages. The Mohawk and Hudson railroad terminates here, and connects with other lines to the west. The Erie canal, comprising also the Champlain canal, enters the city in its north part, and flows into a spacious basin, formed by a pier built in the river, a mile and a quarter long, which produces a safe harbour, not only for boats, but also for vessels, to defend them against the ice in the spring floods. There are in the city fifty-three commission houses, thirty-five importers, 137 wholesale houses, 440 retail stores, and 612 grocery and provision stores. There are eight banks, with an aggregate capital of 2,751,000 dollars; four insurance companies, with a total capital of 700,000 dollars.

There are fifteen manufactories of carriages, some of them very extensive; twenty of hats and caps, producing articles to the value of 900,000 dollars annually; four of tobacco, two of morocco leather, five rope walks, fifteen manufactories of soap and candles; five of musical instruments, two of combs, twenty of copper, tin, and sheet iron, and a great many others. There are two type foundries, one stereotype, two manufactories of oil cloth, eight of stoves, four of carpets, &c. There are ten furnaces, three steam sawing and planing machines, four planing manufactories, one manufactory of philosophical instruments, and one of coach lace. There are three malting houses and nine breweries. According to the late census, there were in Albany, in 1840, forty-seven commission houses, engaged in foreign trade, with a capital of 650,000 dollars; 976 retail dry goods and other stores, with a capital of 975,000 dollars. The total capital employed in manufactures was 1,735,500 dollars. In 1840, twenty steamboats and fifty-one towboats regularly plied between Albany and New York, and the intermediate places on the river. A great number of small craft

also navigate the river. It is estimated that above 1000 persons arrive at, and depart from, Albany daily, by its various lines of communication.—*Official Returns, U. S. Gaz.*

AUBURN is situated 173 miles south of Washington, on the outlet of Owasco lake, seven miles south of Erie canal. It has a state prison, which is considered a model for such institutions. In 1840, there were fifty-nine stores, capital 341,447 dollars; one woollen factory, one cotton factory, two tanneries, one distillery, one brewery, four flouring mills, two saw mills, three furnaces, four printing offices, four newspapers, one daily and three weekly. Capital in manufactures, 643,550 dollars. Population, 5626.—*U. S. Gaz. Official Returns.*

BLACK ROCK is situated near the lower end of Lake Erie, two miles and a half below the city of Buffalo, of which it may be considered a suburb, and with which it is connected by a railroad. It contains 300 dwellings, and about 2000 inhabitants. It had, in 1840, ten stores and groceries, five warehouses, four flouring mills, with twenty-five run of stones, two saw mills, two oil mills, two distilleries, one iron foundry, one machine shop, and various other manufacturing establishments. The harbour is formed by an immense stone pier, projecting into Niagara river, built by the state of New York, for the double purpose of forming a safe and convenient harbour for vessels and the canal boats, which here enter the lake, and also for securing to the Erie canal an abundance of water, directly from the lake, eastward, as far as Montezuma, nearly half its entire length. There were received in 1840, 511,984 bushels of wheat, and 244,700 barrels of flour. There is a ferry here across to Waterloo in Canada. Population of township, in 1840, 3625.

BUFFALO, a port of entry, lies on the outlet of Lake Erie, at the head of Niagara river, and on Buffalo creek, which constitutes its harbour, 288 miles west of Albany, 363 miles by the Erie canal, twenty-two miles south-south-east of Niagara Falls. Population, in 1810, 1508; in 1820, 2095; 1830, 8653; 1840, 18,213. In 1840, employed in commerce, 771; in manufactures and trades, 1851; in navigating the ocean, 71; canals, lakes, and rivers, 347; learned professions and engineers, 211. The land rises, by a gentle ascent, for about two miles from the water to a plain, and from the higher parts of the city, command extensive views of the lake, of Niagara river, of the Erie canal, and of Canada. The city has broad and regular streets, Main-street is two miles long, and 120 feet wide, and is lined with large stores, dwellings, and hotels; other parts of the city are well built. There are three public squares, which add to the salubrity and beauty of this rapidly built and peopled town. The public buildings are, a court house, gaol, and county clerk's office, two markets, in the second floor of one of which are the city offices; seventeen churches, of which the Presbyterians have three, the Episcopalians two, the Baptists one, the German Protestants three, the Methodists one, the Roman Catholics two, the Unitarians one, the Universalists one; there are also one Bethel, and two African churches. There are, an orphan asylum, two banking houses, an insurance company, a theatre, and several good hotels. The Young Men's Association have a library of 3500 volumes, and there are public schools, under the control of the common council, for the education of the whole population, without charge for tuition. Buffalo has become a great entrepôt between the east and the west. The harbour of Buffalo is spacious and safe, with twelve to fourteen feet of water, a mile from its entrance into the lake. To protect the harbour, the breakwater or pier has been constructed of wood and stone, by the United States, extending 1500 feet from the south side of the mouth of the creek, upon the end of which there is a light-house erected, twenty feet in diameter at its base, and forty feet high. The great obstruction to the harbour arises from the breaking up of the lake ice, which is driven into it by the strong westerly winds, and frequently obstructs the entrance after the ice has altogether disappeared in the lake. "There are fifty or sixty steamboats, and 300 schooners and other craft which navigate Lake Erie and the connected lakes, engaged in the commerce between Buffalo and the west. The tonnage in 1840, was 4916 tons. The arrivals of steamboats and other vessels in 1840, were 4061; clearances, 4851. The amount of property sent east on the Erie canal from Buffalo, at the same date, was 177,607 tons. The amount of goods, including domestic manufactures, salt, &c., received by the canal, and shipped to the west, was 98,733 tons. Tolls received amounted to 376,417 dollars. Buffalo is connected with Black Rock, and with Niagara Falls, by railroads."—

U. S. Gazeteer. In 1840, there were twenty-three foreign commission houses, capital 94,000 dollars; 231 retail stores, capital 736,335 dollars; one woollen factory, three tanneries, two distilleries, one pottery, four flouring mills, one grist mill, two saw mills, two oil mills, ten printing offices, five daily, four weekly, one semi-weekly newspapers, and six periodicals. Capital in manufactures, 630,300 dollars.—*Official Returns.* Buffalo was originally laid out by the Holland Land Company, in 1801. It was burnt by the British in 1814, excepting two buildings. It then contained 200 dwellings. The inhabitants, however, received 80,000 dollars from congress as a compensation for their losses. The rapid growth and great importance of this place, may be dated from the opening of the Erie canal.—*U. S. Gazeteer.*

FISHKILL, eighty-eight miles south of Albany. It had, in 1840, twenty-nine stores, capital 98,600 dollars; two lumber yards, capital 6000 dollars; one fulling mill, two woollen factories, three cotton factories, 11,912 spindles, five tanneries, seven flouring mills, six grist mills, seven saw mills. Capital in manufactures, 817,050 dollars. Three academies, forty-nine students; twenty schools, 887 scholars. Population, 10,437.

HUDSON, a port of entry, is situated on the east side of Hudson river, at the head of ship navigation, 116 miles north of New York, twenty-nine miles south of Albany, in 42 deg. 14 min. north latitude, 73 deg. 46 min. west longitude. Population, 1820, 2900; 1830, 5392; 1840, 5672. "Its front consists of a bold promontory, rising sixty feet above the level of the river, which has been formed into a pleasant promenade, commanding a fine view of the river and of the surrounding country. On either side of this promontory is a spacious bay, with a sufficient depth of water for the largest vessels. The city is regularly laid out, with streets crossing each other at right angles; with the exception of two streets near the river, which follow the direction of the shore. The main street extends south-east more than a mile to Prospect hill, 200 feet high, to which the ground gradually rises. On the north side of this street, towards its upper end, is a public square. There is another square in the south part of the city, on which the court house is situated: It is 116 feet long, the central part forty feet by sixty feet, and sixty feet high, surmounted by a dome, and entered by a portico of six Ionic columns. The wings are thirty-four feet front and forty feet deep, and two stories high. There are eight churches—one Presbyterian, one Episcopal, one Baptist, one Methodist, two Friends, two Universalist—the Hudson Academy, Hudson Female Seminary, the Franklin Literary Association, with a respectable library and philosophical apparatus, the Hudson Lunatic Asylum, and a number of select schools. The city is supplied with pure water, brought two miles in iron pipes from a spring at the foot of Becraft's mountain. This city was formerly much engaged in the West India trade, which has, latterly, chiefly given place to the whale fishery. It has seven or eight whale ships, four steamboats, with freight barges, and a number of sloops. A steam ferry-boat plies between this city and Athens, on the opposite side of the river. The Hudson and Berkshire Railroad connects this city with West Stockbridge, Massachusetts, and thence with Boston. Several streams in the immediate vicinity afford considerable water power, which is improved in manufacturing.—*U. S. Gaz.* There were in 1840, 116 stores, capital 410,450 dollars; four lumber yards, capital 29,000 dollars; capital employed in the fisheries, 330,000 dollars; one furnace, one tannery, one distillery, one brewery, three printing offices, and two weekly newspapers, two periodicals. Capital in manufactures, 135,650 dollars.—*Official Returns.*

ITHACA, 162 miles west-by-south of Albany, situated on a plain one mile and a half south of the head of Cayuga lake. Cayuga inlet, a small creek, is navigable for large canal boats from the lake. It contains about 700 houses, a court house and goal in the same building, a county clerk's office, six places of worship, an academy, and a lyceum. Fall creek, Cascadilla creek, and Six Mile creek, in descending from the hills, have falls that furnish very extensive water power, which is employed in manufacturing establishments. Fall creek descends 438 feet in the course of a mile, having three successive falls—one of seventy feet, another of fifty feet, and a third, which is peculiarly grand, of 116 feet—in an unbroken sheet. Other falls in the vicinity are little less surprising. Its facilities for trade are numerous. Through Cayuga lake and Seneca canal it communicates with the Erie canal on the north, and by the Ithaca and Owego railroad, thirty miles long, it communicates with Owego and the Susquehanna, where it will unite with the Erie railroad,

which will afford it a winter communication with the seaboard. Its trade with Pennsylvania is considerable, receiving iron and coal in exchange for plaster, salt, lime, flour, and merchandise. A steamboat for passengers plies daily between Ithaca and Cayuga bridge, forty-two miles.—*U. S. Gaz.* There were in the township in 1840, twenty-four stores, capital 141,300 dollars; two lumber yards, capital 81,000 dollars; value of machinery produced, 20,000 dollars; two woollen factories, capital 30,550 dollars; one cotton factory, 1572 spindles, capital 25,000 dollars; three tanneries; one brewery, one paper factory, capital 16,000 dollars; two flouring mills, one grist mill, ten saw mills, one oil mill, four printing offices, two binderies, two weekly newspapers. Capital in manufactures, 279,250 dollars. Population in 1830, 3324; 1840, 5650.

LANSINGBURG, ten miles north-east of Albany, is situated on the east side of Hudson river, at the head of sloop navigation. In 1840 it contained nine dry goods, eight produce, and twenty grocery stores, one copper and iron foundry, two oil floor-cloth factories, three brush factories, one plaster mill, one flouring mill, two gun and rifle factories, six malt houses, two printing offices, an academy, 450 dwellings, and 3000 inhabitants. Several sloops and towboats are employed in the river trade. The state dam, 1100 feet long and nine feet high, with a lock between this and Troy, enables sloops to come to this place, and forms a spacious basin. A bridge across the Hudson connects it with Waterford. There are in the township forty-seven stores, capital 240,100 dollars; one tannery, one brewery, two printing offices, one weekly newspaper, one grist mill. Capital in manufactures, 204,700 dollars. Population, 3330.

LITTLE FALLS is ninety-one miles west-by-north-west of Albany. The village is situated on both sides of the Mohawk river, in a most romantic situation, and contained, in 1840, five churches, two printing offices, one bank, thirty stores and groceries, one woollen factory, three paper mills, three flouring mills, two plaster mills, one trip-hammer works, four furnaces, one machine shop, one distillery, one brewery, one fulling mill, and one sash factory. The river here has a fall of forty-two feet in half a mile, affording great water power. The Erie canal has a feeder, which crosses the river in an aqueduct, 214 feet long and sixteen wide, with walls fourteen feet high, upheld by one arch of seventy feet span, and two others of fifty feet each. The canal passed the brow of a mountain, which reached to the border of the river, by expensive digging and embankment. In widening the canal, more ample room is obtained by occupying a part of the bed of the river, between an island and the south bank. There were in the township thirty-four stores, capital 88,500 dollars; three furnaces, two forges, one fulling mill, four tanneries, one distillery, one brewery, three paper factories, two printing offices, one weekly newspaper, one periodical, one flouring mill, two grist mills, four saw mills. Capital in manufactures, 166,850 dollars. Population, 3881.

LOCKPORT is 277 miles west-by-north of Albany. The village, incorporated, is situated on the Erie canal, and contains two banks, eighty stores and groceries, four flouring mills, one grist mill, one cotton factory, with 2100 spindles, two woollen factories, nine saw mills, two plough factories, two plaster mills, one sash factory, two furnaces, one machine shop, two carriage factories, two tanneries, and one fanning mill and threshing machine factory, 800 dwellings, and about 6500 inhabitants. An immense water power is here created by the surplus water of the Erie canal, which here rises sixty feet, by five double locks. A railroad proceeds from this place to Niagara falls and Buffalo. There were, in 1840, in the township one commission house, capital 500 dollars; sixty-five stores, capital 209,830 dollars; three tanneries, one distillery, one brewery, one pottery, one paper factory, four printing offices, one bindery, five flouring mills, nine grist mills, forty-five saw mills, one oil mill. Capital in manufactures, 268,010 dollars. Population, 9125.

NASSAU, is twelve miles south-east of Albany. It had, in 1840, five stores, one grist mill, one carriage factory, fifty dwellings, and about 400 inhabitants. There are in the township ten stores, capital 2300 dollars; three fulling mills, six woollen factories, two cotton factories, 3158 spindles, three tanneries, one flouring mill, six grist mills, twelve saw mills. Capital in manufactures, 74,780 dollars. Population, 3236.

NEWBURG is sixty miles north of New York. The Hudson river bounds it on the east. The village is pleasantly situated on the west bank of Hudson river, on rising ground. It contained, in 1840, three banking houses, 150 stores, nine storehouses, five freighting establishments, three flouring mills, three plaster mills, one brewery, and numerous mechanical

and manufacturing establishments, 1000 dwellings, and about 6000 inhabitants. It has four steamboats and two freight barges, which run between it and New York city, and one steamboat running to Albany, besides a number of sloops trading to different places on the river. There is a steam ferry between this place and Fishkill, on the opposite side of the river. Washington had his head-quarters here, for a time, during the revolutionary war, and the house is standing in which he and his family resided; and here the American army was disbanded, June 23, 1783.

Oswego is a port of entry, and semi-capital of Oswego county, and lies on both sides of the Oswego river, at its entrance into Lake Ontario, 160 miles west-north-west of Albany. It is regularly and handsomely laid out with streets 100 feet wide, crossing each other at right angles. The two parts are connected by a bridge, 700 feet long, which cost 6000 dollars. It has a court house, a custom house, two banks, with an aggregate capital of 400,000 dollars, and an insurance company. The Oswego canal, thirty-eight miles long, connects it with the Erie canal at Syracuse. A part of the way the Oswego river constitutes the canal, and has a tow-path on its bank. Next to Sackett's Harbour, Oswego has the best harbour on the south side of Lake Ontario. It is sheltered by a pier, built by the United States, of wood, filled in with stones on the outside, on the lake side. This pier is 1219 feet in length, with an entrance 250 feet wide. On the end of the west pier is a lighthouse, and there is another on the hill, on the east side of the river, near the fort. The water within the pier has a depth of from ten to twenty feet, and the harbour is spacious. There are owned at this place six steamboats and seventy schooners, averaging 100 tons burden, and a large number of canal boats. The canal boats are generally built in a very substantial manner, with decks, and capable of being towed through the lake. A considerable portion of the trade between New York and the west, passes through Oswego and the Welland canal, in Canada, around the Falls of Niagara. The salt from Salina, destined to the west, mostly passes this way. The tonnage of Oswego, in 1840, was 8346 tons. A feeder dam, seven feet and a half high, three-fourths of a mile above the village, furnishes an abundance of surplus water, which is taken from the canal, with a fall of nineteen feet, on the east side of the river. A canal has also been constructed on the west side, sixty-two feet wide and seven feet deep, at a cost of 75,000 dollars, which has a fall at the village of nineteen feet. Various manufacturing establishments now exist, and many more might be accommodated. The township of Oswego had, in 1840, mostly in the village of Oswego, three commercial and four commission houses in foreign trade, capital 246,000 dollars; thirty-two retail stores, capital 92,150 dollars; two lumber yards, capital 4000 dollars; two tanneries, five flouring mills, two grist mills, six saw mills, three printing offices, and four weekly newspapers. Capital in manufactures 323,135 dollars. Population, 4665; of the village of Oswego, 4500. As a considerable portion of the village of Oswego lies in the township of Scriba, part of the following statistics of that town belong to the village of Oswego. Two stores, capital 5500 dollars; one lumber yard, capital 7000 dollars; one tannery, four flouring mills, three grist mills, one saw mill. Capital in manufactures, 172,816 dollars. Population, 4051. Daily lines of steamboats, for the conveyance of passengers, run between Oswego and Lewiston, Kingston, Canada, Sackett's Harbour, and Ogdensburgh, stopping at the intermediate places. On the east side of the river, near the lake, a tract of land has been ceded to the United States, on which is situated Fort Oswego.

PLATTSBURG, 163 miles north of Albany, is situated on both sides of the Saranac river, at its entrance into Cumberland bay, an indentation of Lake Champlain. It contained, in 1840, about 2600 inhabitants, and with the township, 6416. The Saranac has here a succession of falls, about forty feet total descent, which affords extensive water power. It contains a United States' military post a little south of the village. Here a brave defence was made against 14,000 British troops, under Sir George Prevost, September 11, 1814, and at the same time the British fleet was captured by Commodore M'Donough, in the bay before the village. There were, in 1840, in the township, forty-five stores, capital 188,130 dollars; four fulling mills, three woollen factories, two cotton factories, 12,000 spindles, one furnace, four forges, five tanneries, two printing offices, two weekly newspapers, one flouring mill, three grist mills, twenty-five saw mills. Capital in manufactures, 126,255 dollars.

PAUGH-KEEPSIE is delightfully situated on the east bank of the Hudson river, seventy-one miles below Albany. In 1840, the population of the township amounted to 10,006 inhabitants, and of the town or village to 7500. It possessed eighty stores, two breweries, two saw mills, two flouring mills, three plaster, two carpet, two soap and candle, three machine, two pin, two gun, and nine carriage and wagon factories; three cotton mills, 4088 spindles, three iron foundries, two potteries, and numerous other fabrics. It is one of the most flourishing places in the state.

ROCHESTER is situated on both sides of the Genesee river, seven miles south of Lake Ontario, 220 miles west-by-north of Albany. Population, in 1820, 1502; in 1830, 9269; in 1840, 20,191. It contains an area of 4324 acres, and was incorporated as a village in 1817, and as a city in 1834. It is well built, and contains many large stores and many neat dwelling houses, to many of which beautiful gardens are attached, ornamented with shrubbery. The number of dwelling houses is about 2000. The east and west parts of the city are connected by three bridges. The Erie canal passes through the centre of the place, and crosses the Genesee river by an aqueduct. The Genesee Valley canal, now constructing, also terminates here, connecting it with the Erie canal. The great western railroad passes through the place. It had, in 1840, six banking houses, one savings bank, and one mutual insurance company.

Rochester owes its great advantages, and its rapid growth especially, to a vast water power created here by the falls in the Genesee river, which are 268 feet within the bounds of the city, in which are three successive perpendicular falls of ninety-six, twenty, and 105 feet, besides rapids. On these rapids and falls are many large flouring mills, and other hydraulic works. It is estimated that, independently of the capital invested in these mills, it requires 2,000,000 dollars annually to keep them in operation, and that they produce annually about 3,500,000 dollars. Vessels come up the Genesee river to Carthage, which is two miles and a half below the centre of the city, where steamboats daily arrive and depart, and to which there is a railroad. The river is also navigable for boats forty-five miles above the city, to Mount Morris. The Erie canal gives it access to the east and west, and the Genesee Valley canal, when completed, will connect it with Olean on the Susquehanna, and greatly add to its advantages. It has a railroad communication eastward to Boston, Massachusetts, and westward to Batavia, which will soon be extended to Buffalo. These facilities for transportation have completed the advantages derived from its immense water power, and the rich agricultural country by which it is surrounded.—*U. S. Gazetteer.*

There were in the city, in 1840, one commercial and one commission house, capital 15,100 dollars; 266 retail stores, capital 1,238,890 dollars; two lumber yards, capital 30,000 dollars; machinery manufactured, value 48,000 dollars; four fulling mills, four woollen factories, capital 58,616 dollars; one cotton factory, 3000 spindles, capital 50,000 dollars; three tanneries, capital 128,500 dollars; three distilleries, three breweries, capital 60,300 dollars; one pottery, one rope walk, twenty-two flouring mills, eight saw mills; one oil mill; total capital, 945,600 dollars; two paper factories, nine printing offices, one bindery, four daily, five weekly, and one semi-weekly newspaper, two periodicals; sixty-one brick and stone, and sixty-eight wooden houses, built at a cost of 401,270 dollars. Total capital in manufactures, 1,963,017 dollars. Four academies, 662 students, thirty-eight schools, 2870 scholars.—*Official Returns.*

In 1812 there were only two wooden frame buildings on the spot, each consisting of a single room; and when, a few years before, a proposal was made in the state legislature to build here a bridge across the Genesee, a member declared it was a God-forsaken place, inhabited by muskrats, and visited only by a few straggling trappers. With the exception of Lowell, no other place has flourished so rapidly.—*U. S. Gazetteer.*

ROME, 107 miles north-west of Albany, on the Mohawk river and the Erie canal, contains one bank, a United States arsenal, with a magazine and workshops, twenty-five stores, one cotton factory, one flouring mill, one saw mill, one brewery, one blast furnace, 350 dwellings, and about 2500 inhabitants. The Black river canal unites here with the Erie canal, and the Syracuse and Utica railroad passes through the village. There were, in 1840, in the township, thirty-three stores, capital 227,130 dollars; two fulling mills, one woollen factory, one cotton factory, 900 spindles; one furnace, three tanneries, one brewery,

two potteries, one printing office, one weekly newspaper, two grist mills, fifteen saw mills. Capital in manufactures, 148,860 dollars. Population, 5680.

SACKETT'S HARBOUR, 174 miles north-west of Albany, is on Black river bay, near the foot of Lake Ontario, twelve miles from the lake. It is one of the most secure and best harbours on the lake, and was a great naval station during the last war with Great Britain. It had, in 1840, a banking house, twenty-four stores, four forwarding houses, a ship yard, and rope walk, three saw mills, two furnaces, one machine shop, one plaster mill, one tannery, 300 dwellings, and about 2000 inhabitants. Here are the Madison Barracks, erected in 1814. Great power is obtained by a canal brought from Black river. Tonnage, in 1840, 3367 tons.

SALINA, 133 miles west-by-north of Albany. It contains the most celebrated salt springs in the state. The village is situated on the east end of the Onondaga lake, and contained, in 1840, one banking house, twenty stores and groceries, one flouring mill, two saw mills, one machine shop, one furnace, and large salt manufactories, in which 1,107,825 bushels were manufactured in 1840, being nearly one half of what was manufactured in the township. The salt springs are owned by the state, which receives a duty of six cents a bushel from the manufacturers. There were manufactured 2,622,305 bushels of salt in 1840 in the township. Population, 11,013.—*U. S. Gazetteer*.

SAND LAKE, seventeen miles east of Albany. The village contained, in 1840, two stores, two cotton factories, two sating factories, one blast furnace, one saw mill, one tannery, and about twenty-five dwellings. There were, in 1840, in the township eleven stores, capital 14,900 dollars; one cotton factory, 1000 spindles; two tanneries, one glass factory, one flouring mill, four grist mills, twenty-seven saw mills. Capital in manufactures, 91,825 dollars. Population, 4303.—*U. S. Gazetteer*.

SCHAGHTICOKE, twenty miles north of Albany, is situated on the Hoosic river, four miles east of the Hudson river, and contained, in 1840, six stores, two cotton factories, 6000 spindles, 150 looms; one machine shop, one grist mill, one saw mill, one clothier's works, two powder mills, 175 dwellings, and about 1400 inhabitants. It possesses a great water power. The township had, in 1840, ten stores, capital 18,700 dollars; one fulling mill, four cotton factories, 5807 spindles; two powder mills, two grist mills, three saw mills. Capital in manufactures, 209,550 dollars. Population, 3389.—*Official Returns, U. S. Gaz.*

SCHENECTADY, city, sixteen miles north-west of Albany. Situated on the south bank of the Mohawk river. It is an ancient place, having been settled by the Dutch as a trading post in 1620. It contained, in 1840, a city hall, gaol, clerk's and surrogate's office, a market, lyceum, female academy, three banking houses, besides a savings bank; nine churches—one Dutch Reformed, one Presbyterian, one Episcopal, one Baptist, one Methodist, one Cameronian, one Universalist, one Roman Catholic, and one African—100 stores and groceries, one cotton factory, two flouring mills, two iron foundries, one brewery, one tobacco factory, one steam flouring mill, three tanneries, two machine shops, one plough and waggon factory, 1000 dwellings, and 6784 inhabitants. The buildings of Union College, three in number, and spacious, are pleasantly situated on an eminence, half a mile east of the city.—*U. S. Gazetteer*.

SENECA FALLS, four miles east of Waterloo, 166 west of Albany, is situated on both sides of the outlet of the Seneca lake, and contained in 1840 twenty stores, one cotton factory, eight grist mills, five saw mills, two plaster mills, one distillery, two iron foundries, two pump factories, one sash factory, one paper mill, one axe factory, one cloth-dressing works, one tannery, and one boat yard, 400 dwellings, and about 3000 inhabitants. Gypsum is found in the vicinity, and ground for market. The water power is great, having a descent of forty feet in the distance of one mile. The Seneca and Cayuga canal, which unites with the Erie canal at Montezuma. There were, in 1840, in the township, twenty-eight stores, capital 113,700 dollars; one lumber yard, capital 4000 dollars; three fulling mills, one cotton factory, 2500 spindles; one tannery, two distilleries, one brewery; two potteries, one paper factory, two printing offices, two weekly newspapers, seven flouring mills, one grist mill, three saw mills, one oil mill. Capital in manufactures, 436,918 dollars. Population, 4281.—*U. S. Gaz. Official Returns*.

SING SING, 116 miles south of Albany, is situated on elevated and uneven ground, and

has four landings, from which steamboats and vessels ply daily to New York. It contained, in 1840, eighteen stores, one ship yard, one iron foundry, 250 dwellings, and about 2500 inhabitants. Sing Sing furnishes great quantities of fine marble for building. The quarries are chiefly wrought by convicts of the state prison, located here. It is situated half a mile south of the village. The main building is eighty-four feet long and forty-four feet wide, five stories high, containing 1000 cells. In front and rear are various workshops, with the keeper's house, a chapel, hospital, kitchen, and storehouses. There is a separate building, constructed of marble, of the Ionic order, for female convicts, with well furnished apartments for the matrons. Attached to the whole are 130 acres of land.—*U. S. Gaz.*

SYRACUSE, 131 miles west-by-north of Albany, situated on the Erie canal, at the junction of the Oswego canal, contains a court house, clerk's office, gaol, two banking houses, 130 stores of different kinds, two flouring mills, one saw mill, one plaster mill, three machine shops, three iron foundries, one tannery, 800 dwellings, and 6500 inhabitants. This village and its township are celebrated for the great quantity of fine salt manufactured from brine springs. Coarse salt is also produced by solar evaporation. The total amount of salt of all kinds in 1840, was 524,461 bushels. A new spring was discovered in 1840, of great strength, of which thirty gallons of water produced one bushel of fine salt. The situation of this place, on the line of the western railroad, and at the junction of two important canals, gives it great facilities for trade, and its growth has been rapid.—*U. S. Gaz.*

TROY, a city and port of entry, pleasantly situated on the east side of the Hudson river, six miles north of Albany, 151 miles north of New York. Population, in 1810, 3895; 1820, 5264; 1830, 11,405; 1840, 19,334: of these 796 were employed in commerce, 2279 in manufactures and trades, 208 navigating the ocean, rivers, &c., 218 in learned professions. It rises moderately above the level of the river, and is bordered on the east by hills, from which descend two considerable streams, denominated Poesten Kill, and Wyant's Kill, which have cataracts and cascades, and afford extensive water power for mills and machinery. The city is laid out with great regularity. The main business street follows the course of the river and is curved, but the other streets are straight, and cross each other at right angles. There are fifteen streets running north and south; these are crossed by nineteen others running east and west. The streets are generally sixty feet wide, well paved, and have good sidewalks, and are generally ornamented by trees, and well lighted. The houses are mostly built of brick. The court house is a large marble building with a Grecian front. There is a brick gaol, and a county poorhouse with a farm of 200 acres. The Rensselaer Institute is designed to give a scientific and practical education, and the Troy Female Institute has been very celebrated. There are also several other schools of a high order, and a lyceum of natural history, with a good library, and a cabinet of minerals and natural history; a Young Men's Association, with a library, cabinet, and reading-room. There are two market houses. Some of the churches are handsome buildings. The Episcopal is of Gothic architecture. There are eighteen places of worship—seven Presbyterian, three Episcopal, two baptist, two Methodist, one Roman Catholic, one Universalist, one Friends' meeting house, and one African. There are six banks, with an aggregate capital of 1,568,000 dollars; and two insurance companies.

This place is well situated for trade. Being at the head of the tide on the Hudson, sloops and steamers ascend to its wharfs. Sixty sloops, three large and two smaller steamboats, five steam tow-boats, and twenty-two barges are engaged in the trade between this city and New York. It has a rich and extensive back country to the north and north-east, with which it is connected by good roads, and it also participates in the advantages of the Erie and the Champlain canals. There were, in 1840, forty-four commercial and thirteen commission houses engaged in foreign trade, with a capital of 2,274,621 dollars; 270 retail stores, capital 944,963 dollars; eight lumber yards, capital 206,000 dollars; 17,000 furnaces, eight forges, capital 279,000 dollars; machinery manufactured, value 17,000 dollars; hardware and cutlery, 925,400 dollars; three fulling mills, one woollen factory, capital 50,000 dollars; seven cotton factories, 35,500 spindles, capital 352,150 dollars; seven tanneries, capital 91,000 dollars, one distillery, three breweries, capital 110,000 dollars; manufactures of leather, capital 489,525 dollars; one pottery, one rope-walk, thirteen flouring mills, two saw mills, three paper factories, four printing offices, two binderies,

two daily, three weekly, one semi-weekly newspaper, and one periodical; forty-one brick and stone, and twenty-one wooden houses were built, and cost 190,430 dollars. Capital in manufactures, 2,423,135 dollars; eleven academies, 446 students, forty schools, 1261 scholars.—*U. S. Gaz. Official Returns for 1840.*

The water power of Troy is derived from the streams which flow from the hills on the east, and from a dam with a lock across the Hudson, which facilitates navigation, and renders most of the water of the river available for manufacturing purposes. A railroad connects the city with Ballston Spa, where it joins the Schenectady railroad to Saratoga. In 1820 a disastrous fire swept over and destroyed the richest part of the city.

WEST TROY, or Watervliet town, on the west side of the Hudson river, though in a different county, is properly a suburb of Troy, with which it is connected by a bridge and two ferries. This growing village contains 800 dwelling houses, and 5000 inhabitants. It has eight churches; the Watervliet bank, with a capital of 150,000 dollars, and an extensive United States' arsenal.—*Official Returns for 1840.*

UTICA, city, is on the south side of the Mohawk river, in 43 deg. 10 min. north latitude, 74 deg. 13 min. west longitude; ninety-two miles west-by-north from Albany, 140 miles from Rochester, 202 miles from Buffalo, seventy-six miles from Oswego. Population, in 1820, 2972; in 1830, 8323; in 1840, 12,782. The city stands on an inclined plain, rising south from the Mohawk. The buildings, chiefly of brick, are good. The streets are neat and spacious, many of them 100 feet wide. It has eighteen places of worship—three Presbyterian, one Dutch Reformed, two Episcopal, four Baptist, three Methodist, two Roman Catholic, one Universalist, one African, and one Friends' meeting house. There is an Exchange building, numerous charitable institutions, a County Medical Society, two incorporated academies, one for males and the other for females, a museum, the Utica library, the mechanics' association, and the apprentices' library. There are four banks, with an aggregate capital of 900,000 dollars, besides a bank for savings, and an insurance company, with a capital of 200,000 dollars, and a mutual insurance company. The State lunatic asylum is about a mile west of the centre of the city. The Erie canal, here widened to seventy feet, and seven feet deep, passes through the central part of the city, and is crossed by a number of elevated bridges. The Chenango canal connects this place with Binghamton. The great western railroad from Albany passes through it. There are also good roads in various directions, north and south, on which numerous stages run. Utica is in the midst of a rich and highly cultivated country, and of an extensive trade. In 1794, there were only three or four poor houses in the place. There were, in 1840, two commercial and three commission houses in foreign trade, capital 58,000 dollars; 188 retail stores, capital 1,678,595 dollars; three lumber yards, capital 41,000 dollars; five furnaces, capital 59,000 dollars; value of machinery manufactured 166,555 dollars; six tanneries, capital 103,000 dollars; two breweries, one flouring mill, two grist mills, two saw mills, one paper factory, six printing offices, six weekly newspapers, sixty-one brick and stone, and thirty wooden houses, cost 253,000 dollars. Capital in manufactures, 496,130 dollars; ten academies, 670 students, thirty-six schools, 981 scholars.—*Official Returns, U. S. Gaz.*

WATERTOWN, 164 miles north-west of Albany, is situated on the south side of the Black river, and is connected by covered bridges with Williamstown and Juhelville villages on the opposite side. In 1840 it contained twenty-six stores of different kinds, various mechanic shops, 700 dwellings, and about 4000 inhabitants. The river has a fall of eighty-eight feet in one mile, with seven dams and five natural cascades. Here are one flannel factory, one broadcloth and satin factory, one cotton factory, two negro cloth factories, three carding and clothiers' mills, five flouring mills and grist mills, one paper mill, two iron furnaces, three machine shops, four saw mills, two tanneries, one morocco dressing factory, four waggon and carriage factories, and various other mechanical establishments, one brewery, and one distillery. There were in the township, in 1840, forty-five stores, capital 200,000 dollars; three lumber yards, capital 5000 dollars; five woollen factories, one cotton factory, 1000 spindles, four tanneries, one brewery, one paper factory, three printing offices, three weekly newspapers, four grist mills. Capital in manufactures, 269,500 dollars. Population, 5027.—*Official Returns.*

WHITESTOWN, is ninety-six miles west-north-west of Albany, situated on the south side

of the Mohawk river, contains a court house, gaol, eight stores, one large cotton factory, 3000 spindles, one large flouring mill, an academy, 300 dwellings, and about 1800 inhabitants. It is built chiefly on one street, more than a mile long, finely shaded with trees, with gravelled side walks. There were in the township, in 1840, twenty-four stores, capital 114,700 dollars; ten fulling mills, five woollen factories, two cotton factories, 15,100 spindles, two tanneries, one paper factory, one printing office, one weekly newspaper, two flouring mills, two grist mills, five saw mills, one oil mill. Capital in manufactures, 652,020 dollars. Population, 5156.—*Official Returns.*

WHITE HALL, seventy-three miles north of Albany, situated at the head of Lake Champlain, contains a bank, thirty stores and groceries, two forwarding houses, one woollen factory, one grist mill, two saw mills, one planing machine, one machine shop, two ship yards, and two dry docks, one tannery, 300 dwellings, and 2400 inhabitants. Two large steamboats ply from and to this place for the conveyance of passengers and merchandise, and two steam tow boats, fifty sloops and schooners, and seventy canal boats. Two daily lines of canal packets, when the canal is open, leave for Troy. This is the northern termination of the Champlain canal. There are in the township, twenty-seven stores, capital 94,000 dollars; one tannery, one printing office, one weekly newspaper, one grist mill, two saw mills. Capital in manufactures, 18,550 dollars. Population, 3813.—*Official Returns for 1840.*

New York is situated on the south end of New York or Manhattan Island, at the confluence of the Hudson or North river, and a strait called the East river, which connects Long Island sound with the harbour of New York. The City Hall is in 40 deg. 42 min. 40 sec. north latitude, and 71 deg. 1 min. 8 sec. west longitude from Greenwich. It is eighty-six miles north-east from Philadelphia; 210 miles south-west from Boston; 225 miles north-east from Washington; 670 miles north-east from Charleston, S. C.; 1397 miles north-east from New Orleans; 145 miles south from Albany; and 372 miles south from Montreal. The population, in 1697, was 4302; in 1756, 13,040; in 1774, 22,750; in 1790, 33,131; in 1800, 60,489; in 1810, 96,373; in 1820, 123,706; in 1830, 202,589; in 1840, 312,710. Of the latter number there were employed in commerce, 11,365; in manufactures and trades, 43,390; in navigating the ocean, 2736; in navigating rivers, lakes, and canals, 716; learned professions and engineers, 2929.

According to "*The New York Directory for 1841*," there were in the city 500 importers of merchandise; 500 commission merchants; 250 dry goods jobbers; 231 wholesale grocers; sixty hardware dealers; 176 clothiers; 343 brokers; forty-one banks; sixty insurance companies; 600 lawyers; fifty newspapers; fifty-one periodicals; forty-three foreign consuls.

The city and county comprise the whole island, which is in length from the Battery, on the south, thirteen miles and a half to Kingsbridge on the north, with an average width of one mile and three-fifths. The greatest breadth is two miles and one-eighth, and the area of the whole island about 14,000 acres. It is separated from the main land by Harlem river, through which the tide flows. The East river separates it from Long Island on the east; on the south is the bay and harbour; and on the west, Hudson river, which separates it from New Jersey. Three bridges across Harlem river connect the island with the main land. There are several islands in the harbour, and in the East river.

The port is safe and commodious, and vessels of the largest size come up to the wharfs. The entrance over the bar at Sandy Hook, has a depth of water from twenty-one to twenty-seven feet; and thence to the city the channel is from thirty-five to fifty feet deep. The rise of tide is only about six feet. The entrance to the harbour, between Staten Island, on the west, and Long Island, on the east, called the Narrows, is about one-third of a mile broad, and is well defended by strong fortifications. There are also batteries on Bedlow's and Ellis's islands; and strong fortifications on Governor's Island, which contains seventy acres of ground, and is distant 3200 feet from the city, at the Battery. Castle Williams, on the west side of the island, is a round tower, 600 feet in circumference, and sixty feet high, with three tiers of guns. Fort Columbus is on the highest point of the island; and on the east side is a battery to defend the entrance through Buttermilk channel.

The highest ground on the island of New York, is 238 feet above high water. The city extends about three miles on each river, and in its compact parts has a circumference of about nine miles. The streets were originally laid out according to the surface of the ground; some of them were crooked, and many of them were narrow. They have been widened and improved at a great expense; and in the new parts of the city care has been taken to lay out the streets regularly, and of sufficient width. Broadway, eighty feet wide, is the principal thoroughfare, and extends from the Battery, at the south, nearly three miles, to Union-square, where it joins the Bloomingdale road and the fourth avenue, which extends through the island to Harlem. Broadway is straight along its whole length, and occupies the height of land between the North and East rivers. Greenwich-street, is wide and handsomely built. Pearl-street is of a crescent form, more than a mile in length, contains many spacious warehouses, and is, with the adjacent, the principal seat of the dry goods and hardware business. Front and Water streets, between Pearl-street and the East river, are occupied chiefly by wholesale grocers, commission merchants, and mechanics connected with the shipping business. South-street, extending along the margin of the East river, are the offices and warehouses of the principal shipowners, &c. Banks, insurance offices, brokers' offices, and the offices of the public press, are chiefly in Wall-street, where also stands the merchants' exchange. The other principal streets are, the Bowery, East Broadway, Henry, Madison, Bleeker, Bond streets, &c. Canal-street, half a mile north of the City Hall, is a wide street, with a large canal under it, from which it receives its name, is occupied by stores, and is the seat of an extensive retail trade. It crosses Broadway nearly at right angles, and extends to the North river. In the year 1800, the site of this street was a large pond, extending nearly across the island, and which received the drainage of 400 acres of ground.—*U. S. Gaz.*

The shipping resort principally to the side of New York on the East river: many vessels lie also on the side next the North river; and there are usually not less probably than from 800 to 1000 vessels lying at the wharfs and in the harbour. New York is by the Americans considered the second commercial city in the world, and in its harbour are generally to be found vessels, not only from the principal ports of the United States, but from most commercial nations. Its insular situation extends to it great capacity as a port, and it is rarely obstructed or much incommoded by ice. Besides the steam packets established between Liverpool and New York, several lines of magnificent sailing packets connect it with London, Liverpool, and Havre. The New York and Liverpool line consists

* A TABLE, showing the Draft and Tonnage of various Classes of Vessels which entered the Port of New York, when laden, in 1843.

of twenty ships of the first class, with a large capacity for freight, and elegant accommodations for passengers; and one vessel sails from each place every sixth day. The New York and London packets consist of twelve large ships, one of which sails from each place every ten days. One line of the New York and Havre packets consists of twelve ships of the first class, one of which sails from each place every eight days; another line, of six ships, sails from each place monthly. Lines of sailing and of steam packets are also established to all the important ports on the coast of the United States. There are also lines to some ports in the West Indies, in Mexico, and in South America.

The most splendid public edifice in the city is the Merchants' Exchange, in Wall-street. It covers the whole space between Wall, William, Exchange, and St. William streets, is constructed of blue Quincy granite, and is 200 feet long by 171 and 144 feet wide, and seventy-seven feet high to the top of the cornice, and 124 feet to the top of the dome. The front, on Wall-street, has a recessed portico of eighteen columns, thirty-eight feet high and four feet four inches in diameter, each consisting of one block of stone weighing forty-three tons. The centre, or exchange room, is circular, and eighty feet in diameter. It has four recesses, and the whole breadth is 100 feet, and the height eighty feet. The custom-house is a magnificent Doric edifice of white marble. It occupies the site of the house in which General Washington was inaugurated as first president of the United States. It is 200 feet long, ninety feet wide, and eighty feet high. Each of the north and south fronts has a portico of eight columns, five feet eight inches in diameter, and thirty-two feet high. The great business hall is a splendid circular room, of sixty feet in diameter, with recesses and galleries. Exclusive of the ground on which it stands, and of its furniture, it cost 950,000 dollars. The entire cost, including the ground, is estimated at 1,175,000 dollars. Both the above buildings are fireproof.

The City Hall, a richly ornamented structure, stands in the middle of the park, where it appears to great advantage. It is 216 feet long, and 105 broad, and has the Ionic, Corinthian, and Composite orders rising above each other. The front and both ends above the basement are built of white marble; the back of brown freestone. It is surmounted by a cupola, on the top of which is a colossal figure of Justice. A large brick building behind the City Hall contains numerous public offices and courts, and the hall of the American Institute, with its library and models of machinery.

The Hall of Justice, situated between Leonard, Elm, Franklin, and Centre streets, is an imposing granite building, in the Egyptian style. The House of Detention or Prison adjoins it.

The Hall of the University of New York stands on Washington-square. It is a handsome, and rather rich Gothic structure, 180 feet long, by 100 feet wide. Columbia College is a handsome building, situated in the lower part of the city. Trinity Church, on Broadway, fronting Wall-street, is another imposing and florid Gothic structure. St. Paul's Episcopal Church, in Broadway, with a steeple 234 feet high; and St. John's Episcopal Church, on St. John's-square, with a steeple 240 feet high; the Dutch Church, on Washington-square, is a splendid Gothic building; and many other churches, as the French Protestant Church, in Franklin-street, St. Patrick's Cathedral in Prince-street, the Society Library, Gothic Hall, and St. Thomas's Episcopal Church, in Broadway, and the Baptist Church, in Broome-street, are among the other edifices which justly adorn New York, and of which the citizens may very pardonably be proud.

Of the numerous large hotels, the Astor House, Broadway, is the most distinguished. It is built of Quincy granite, and contains 390 rooms. We believe it to be the largest hotel in the world.

Of the public places, those most worthy of notice are the Battery, a beautiful public ground, on the south point of the island, in the form of a crescent, containing eleven acres; the park, in the centre of the lower part of the city, containing ten acres and three-quarters, laid out with walks, shaded with trees, and surrounded with a neat iron fence, and a large fountain, supplied by the Croton water; St. John's-square, in the west part of the city, containing four acres, laid out with walks and trees, and surrounded by an iron fence; Washington-square, one mile and a half north of the city hall, containing nine acres and three-quarters; Union-square, with an elliptical enclosure, at the termination of Broadway on the north, and ornamented by a fountain, supplied by the Croton water.

Most of the streets, stores, and other buildings of the city are lighted with gas. The expense of gas and lamps, in 1840, was 120,676 dollars; of city watch, was 223,950 dollars; and of cleaning the streets, 149,931 dollars.—*U. S. Gaz. City Returns, &c.*

An approximate estimate of the annual value of sales of articles of country produce in the city of New York, for the consumption of the inhabitants:—

	dollars.
Fresh Beef	1,470,000
„ Veal	365,000
„ Mutton and Lamb	335,000
„ Pork	600,000
„ Poultry, Game, Eggs, &c.	1,100,000
Salted Beef, Pork, and Hams	1,200,000
Vegetables and Fruit	1,200,000
Milk	1,000,000
Butter, Cheese, and Lard	1,500,000
Flour, Meal, and other Breadstuffs	3,000,000
Hay and Oats	750,000
Fuel (wood and coal), exclusive of steam fuel	2,500,000
Articles not enumerated, not including any building materials.	580,000
Total value	15,600,000

The Harlem railroad extends from the City Hall through Centre-street to Broome-street; turns at right angles to the Bowery, where it turns again nearly at right angles, and follows the Bowery to the fourth Avenue, on which it extends to Harlem, eight miles; and it is continued several miles further to Fordham. A part of its course is a deep cut through solid rock, with a short tunnel and high embankments. It has a double track the whole length, and is the most expensive railroad, for the distance, in the United States.—*U. S. Gaz.*

Columbia College, founded in 1750, has a president, ten professors, about 140 students, and about 14,000 volumes in its libraries. The New York University was founded in 1831, and has a chancellor, and twelve professors, about 125 students, and a good library and philosophical apparatus. The General Theological Seminary of the Episcopal Church was established in 1819, has five professors, and seventy-five students, and 7260 volumes in its library. The New York Theological Seminary, instituted in 1836, has three ordinary, and four extraordinary professors, 108 students, and a library of 16,000 volumes. The Public School Society had under its direction, in May, 1840, sixteen schools, with male and female and primary departments; and forty six primary schools, and 22,955 scholars. The Rutgers Female Institute, in Madison-street, instructs about 450 girls. The Mechanics' School, in Crosby street, has 550 pupils. The Protestant Episcopal School is another useful institution. The College of Physicians and Surgeons; the New York Eye Infirmary; the New York Hospital; the New York Lunatic Asylum; and the Deaf and Dumb Asylum are all creditable to the city, and to its government and people.

The New York Society Library, in Broadway, has 35,000 volumes; the New York Historical Society has a library of 10,000 volumes, with numerous coins and medals; the Lyceum of Natural History has a library and museum; the National Academy of Design, containing the sculpture and statuary of the Academy of Fine Arts, has a collection of the paintings of living artists; Clinton Hall Association, for the promotion of literature, science, and the arts; the Mercantile Library Association, for the special benefit of merchants' clerks, with a library of about 23,000 volumes, and an annual course of lectures through the winter; the Apprentices' Library has 12,000 volumes, for the use of 1800 apprentices; the American Institute holds an annual fair, and distributes premiums; the New York Lyceum, with a library and reading-room.

The American Bible Society; the American Tract Society; the Home Missionary Society; the American Board of Commissioners; the American and Foreign Bible Society (Baptist); the Baptist Home Missionary Society, are among the many institutions which distinguish New York.

There are 168 places of worship in the city, viz: thirteen Dutch Reformed, two German Reformed, twenty-seven Episcopal, twenty-four Presbyterian, three Congregational, three Reformed Presbyterian, four Associate Reformed, three Associate churches, eighteen Baptist, one Welch Baptist, seventeen Methodist Episcopal, one Indian Methodist, three Associate Protestant Methodist, two Primitive Methodist, one Calvinistic Methodist, one German Methodist, three Lutheran, one Moravian, four Friends, three Universalists, two Unitarian, one Mariners, eleven Roman Catholic, seven Jews' Synagogues, two New Jerusalem, one Christian, one Providence Chapel, one Congregation of Disciples, one Congregation of Primitive Christians, one Morion, or Latter-Day Saints, and nine African, viz., one Episcopal, two Baptist, two Presbyterian, and four Methodist.

The number of banks is about thirty, with an aggregate capital of about 30,000,000 dollars; ten marine insurance companies, with a capital of 3,800,000 dollars; twenty-two fire insurance companies, with a capital of 6,360,000 dollars. There are four banks for sav. ra. There were, in 1840, in the city, 417 commercial houses, and 918 commission houses, engaged in foreign trade, with a capital of 45,941,200 dollars; 3620 retail dry goods and other stores, with a capital of 14,648,595 dollars; sixty-one lumber-yards, with a capital of 731,500 dollars; four furnaces have a capital of 23,000 dollars; machinery manufactured to the value of 1,150,000 dollars; hardware and cutlery, 135,300 dollars; precious metals, 932,760 dollars; of various metals, 1,087,800 dollars; eighteen cotton factories, and two dyeing and printing establishments, with a capital of 61,300 dollars; one spermaceti oil and candle factory, capital 100,000 dollars; eleven distilleries, and fifteen breweries, with a total capital of 575,076 dollars; paints, drugs, &c., with a capital of 648,650 dollars; three glass factories, and six glass-cutting establishments, with a capital of 53,000 dollars; one paper factory; seven sugar refineries, produced articles to the value of 385,000 dollars; rope walks, capital 9800 dollars; two grist mills, eight saw mills, capital 146,800 dollars; cabinet furniture to the amount of 916,675 dollars. There were built 542 brick and stone, and fifty-nine wooden houses, to the value of 1,889,100 dollars; 113 printing offices, forty-three binderies, ten daily, forty-five weekly, and five semi-weekly newspapers, and twenty-eight periodicals, employed 2029 persons, and a capital of 1,285,320 dollars. Total capital in manufactures, 11,223,894 dollars. There were four colleges, 430 students, 148 academies or grammar schools, 7207 scholars, 209 common and primary schools, 32,867 scholars.—*Official Returns, U. S. Gaz.*

The city has six theatres, two museums, and numerous other places of amusement. Four steam ferries ply from the city to Brooklyn, three to Williamsburg, two to Jersey City, and three to Hoboken.

The government of New York is administered by a mayor and common council. The city is divided into seventeen wards, each of which elects an alderman, an assistant alderman, two assessors one collector, and two constables.

New York was settled in 1612 by the Dutch, and in 1623 they built a fort at the south point of the island, and in 1642 a Dutch church within the fort. In 1664 it was surrendered to the English. In 1688, the assessors' valuation of property in the whole city was 78,231*l*. The British had possession of the city during most of the revolutionary war. They evacuated it November, 25th, 1783, when the troops under General Washington entered it. The first congress met here in 1785; and here Washington was inaugurated as first President of the United States, April 30th, 1789. The yellow fever prevailed in 1795 and 1805; and the cholera in 1832, when 2467 persons died in July, and 2206 in August. On the night of December 16th, 1835, a dreadful fire swept over forty acres, covered with stores filled with valuable merchandise, and destroyed property to the amount of nearly 18,000,000 dollars. The burnt district has been entirely rebuilt with increased convenience and beauty.—*U. S. Gaz.—Various returns and accounts.*

Of the many and expensive public works undertaken and executed by the city authorities is the Croton water-works: a gigantic aqueduct commencing at the Croton river, five miles from the Hudson river. The dam is 250 feet long, seventy wide at bottom, and seven at top, and forty feet high, built of stone and cement. It elevates the water, so as to form a pond five miles long, covering 400 acres, and contains 500,000,000 gallons of water. From this dam the aqueduct is continued in some parts by tunnelling through solid rocks, and crossing valleys by embankments, and brooks by ducts,

to the Harlem river, a distance of thirty-three miles. "It is built of stone, brick, and cement, arched over and under, six feet nine inches wide at bottom, seven feet five inches at the top of the side-walls, and eight feet five inches high, has a descent of thirteen inches and a quarter per mile, and will discharge 60,000,000 of gallons in twenty-four hours. It will cross the Harlem river on a magnificent stone bridge, 1450 feet long, with fourteen piers, eight of eighty feet span, and seven of fifty feet span, 114 feet from high-tide water to the top, and which will cost more than 900,000 dollars. This bridge is in progress, and for the present the water is brought across the river in an iron pipe, laid as an inverted syphon. The receiving reservoir is at 86th street, thirty-eight miles from the Croton dam, and covers thirty-five acres, and contains 150,000,000 of gallons. The water is conveyed to the distributing reservoir on Murray's hill, 40th street, in iron pipes. It covers four acres, and is built of stone and cement, forty-three feet high above the street, and holds 20,000,000 of gallons. Thence the water is distributed over the city in iron pipes, laid so deep under ground as to be secure from frost. The whole cost of the work will be about 12,000,000 dollars. The water is of the finest kind of river water. No city in the world is now more plentifully supplied with pure and wholesome water than the city of New York; and the supply would be abundant, if the population were five times its present number."—*U. S. Gaz.*

BROOKLYN is situated on the west end of Long Island, opposite the lower part of the city of New York. Population, in 1810, 4402; in 1820, 7175; in 1830, 15,396; in 1840, 36,233. Employed in commerce, 1673; in manufactures and trades, 4666; navigating the ocean, 978; ditto canals and rivers, 302; learned professions and engineers, 307.—*Official Returns.* It is separated from New York by an arm of the sea, three-fourths of a mile wide, generally called the East river, which connects the bay of New York with Long Island sound. Brooklyn is regularly laid out. The streets, with the exception of Fulton-street, are generally straight, sixty feet wide, and cross each other at right angles. Some of the streets have a greater width. Fulton-street, the principal thoroughfare, though crooked, has been widened to an ample breadth; the old houses with which it was formerly lined near the ferry, have been replaced by rows of lofty brick buildings, and present an entrance to the city quite as imposing as any entrance to the city of New York. It is considered one of the best built cities in the United States. Its beautiful situation, good air, and excellent water, have made it a favourite place of residence to many who do business in New York, as it is nearer to the centre of trade, than residences in the upper parts of the city. The increase of population, from 1830 to 1840, was 20,917. Brooklyn is connected with New York by four steam ferries, on each of which several commodious boats continually ply. The time of crossing is generally from four to five minutes. Brooklyn is divided into nine wards, and is governed by a mayor and common council. It had, in 1840, thirty churches—seven Presbyterian, seven Episcopal, three Dutch Reformed, two Baptist, seven Methodist, two Roman Catholic, one Unitarian, and one Friends. It has three banks, with an aggregate capital of 1,000,000 dollars, besides a savings bank. There are three insurance companies, with a total capital of 452,000 dollars. The Lyceum, in Washington-street, is a handsome granite building, with a spacious lecture room. The library, with 3000 volumes, has a good reading room, open daily. The Hamilton Literary Association, composed of young men, is a useful institution.

There were, in 1840, five foreign commercial houses, capital 109,500 dollars; 154 retail stores, capital 353,000 dollars; several lumber yards, capital 40,000 dollars; products of the dairy, 197,000 dollars; machinery, 182,000 dollars; hats and caps, 102,000 dollars; one tannery, manufacture of leather, 162,600 dollars; five distilleries, one brewery, capital 357,000 dollars; paints, drugs, &c., capital 322,000 dollars; one glass house, employing 100 persons, capital 15,000 dollars; four rope walks, capital 65,000 dollars; three printing offices, one daily, two weekly, one semi-weekly newspapers. Capital in manufactures, 1,386,500 dollars. Nineteen academies, 1121 students, thirty-eight schools, 4683 scholars.—*Official Returns.* *U. S. Gaz.*

The United States Navy Yard, situated on Wallabout bay, covers forty acres of ground, inclosed by a brick wall on the land side, and contains two large ship houses, seven extensive timber sheds, built of brick, and several workshops, offices for the officers, and extensive storehouses. A dry dock will soon be constructed at this place. Connected with the Navy

Yard is the United States Naval Lyceum, a flourishing institution, which has a valuable library and museum. The Naval Hospital occupies a commanding eminence, half a mile east of the Navy Yard, and has a large building, surrounded by thirty-three acres of cultivated ground, inclosed by a brick wall. The Atlantic Dock Company are constructing a large basin, within Red Hook Point, which will contain forty-two and a half acres, and the outside pier of which will extend 3000 feet, fronting on Buttermilk channel, and the depth of which will accommodate the largest ships; the whole estimated to cost 624,527 dollars. This additional wharf room is rendered necessary by the crowded state of the docks at New York. At the foot of Brooklyn Heights, the finest water is obtained from wells and reservoirs for the supply of the shipping of New York harbour.—*U. S. Gaz.*

GOVERNOR'S ISLAND is situated in the harbour of New York, 3200 feet south of the Battery, and contains seventy acres of ground, belonging to the United States. Castle Williams, which stands on the north-west point of the island, is a round tower, 600 feet in circumference and sixty feet high, with three tiers of cannon; Fort Columbus, on the summit of the island, mounts 105 heavy cannon, and a battery on the south-west part, commanding the entrance through Buttermilk channel. There are extensive barracks, with houses for the officers, occupied by a small garrison.

STATEN ISLAND lies, at about four miles south-west of the city of New York. It is fourteen miles long, and from four to eight wide, and is divided into four townships. The surface towards the north is hilly, but more level to the south. Richmond hill is elevated 307 feet above the ocean, and the view from its summit is extensive and beautiful, commanding the city of New York, with its harbour, islands, and fortifications, Long Island, and the shores of New Jersey, together with the lower bay, and a wide expanse of the Atlantic, continually enlivened by numerous vessels and steamboats. Several steam ferry-boats are continually plying between the island and the city of New York; and the steamboats which ply to Newark stop at several landing places on its north side. Scale and shell-fish are taken on its shores.—*U. S. Gaz.*

LONG ISLAND is situated between the Atlantic on the south, and Long Island sound on the north, off the coast of Connecticut. It is divided into three counties, and its area is about 1500 square miles. A chain of hills runs from west to east, on the north of which the surface is somewhat hilly and broken; on the south it is level. The north shore is rather bold; on the south it is a beach of sand and gravel, inclosing bays, with various inlets, admitting vessels of sixty or seventy tons, and abounding with fine shell and other fish. At the east end is Gardiner's bay and island, and Montauk point, a bold promontory, on which is a lighthouse. The north shore has several lighthouses.

The census of 1840 shows, that the population of Long Island had increased nearly sixty per cent in ten years, or more than twice the average per cent increase of the whole state. The following has been the population of the island at each census taken during the present century:—

1800.....	42,365	1830.....	60,893
1810.....	48,732	1835.....	95,461
1820.....	56,978	1840.....	110,406
1825.....	58,705		

Increase in fifty years, 160 per cent.

PROGRESS of Population in the several Counties of the Island.

YEARS.	King's.	Queen's.	Suffolk.	YEARS.			
				King's.	Queen's.	Suffolk.

1825.....	14,079	20,331	23,695				

The construction of the Long Island railroad will greatly increase the prosperity of the island. Its population now is greater than that of either of the states of Rhode Island, Delaware, or Arkansas.

LONG ISLAND SOUND is a large body of water extending the entire length of Long Island, and separates it from Connecticut. It communicates with the Atlantic on the east by a rapid strait, and west by the East river and New York bay. Its breadth is from two to twenty miles, and its length 110.

TRADE AND NAVIGATION OF THE PORT OF NEW YORK.

THE early trade of New York commenced with the first voyages of the Dutch to the River Hudson, and the settlement of *Beaver Wyth*, now Albany, in the year 1623, for the purpose of exchanging European wares for the skins of the beaver and of other wild animals. The Swedes and Fins, who had settled on some of the lands on the Hudson, became agriculturists; but the Dutch did little more than carry on trade and navigation. So tardy, however, were their voyages, that we are informed that they sailed from Holland in the beginning of the summer of one year, with a cargo of assorted European goods, to New Netherlands, and returned with furs, wood, &c., during the summer of the following year.

When Governor Stuyvesant surrendered to General Nicholl, *Nieu Amstel*, now New York, consisted of several narrow streets lined with low houses. Smith, in his "History of New York," printed in 1757, says, "The city of New York consists of about 2500 buildings; it is a mile long, and about half a mile in breadth. No part of America is better supplied with markets, abounding with greater plenty and variety. We have beef, pork, mutton, poultry, butter, wild fowl, venison, fish, roots and herbs of all kinds in their seasons. Our oysters are a considerable article in the support of the poor; their beds are within sight of the town. A fleet of 200 small craft are seen there at a time, when the weather is mild in winter, and this single article is computed to be worth annually about 2000*l*. This city is the metropolis and great mart of the province, and, by its commodious situation commands also the trade of the western part of Connecticut, and that of East Jersey. No season prevents our ships from launching into the ocean. During the greatest severity of winter an equal, unrestrained activity runs through all ranks, orders, and employments. The inhabitants of the city of New York are a mixed people, but mostly descended from the original Dutch settlers." (The population in 1756 being about 13,500 souls, including about 2500 negroes.) "The city is divided into seven wards, and is under the government of a mayor, recorder, seven aldermen, and as many assistants and common councilmen. The mayor, sheriff, and coroner, are annually appointed by the governor; the recorder has a patent during pleasure. The annual revenue of the corporation is nearly 2000*l*." We have few statistical data as to the extent and value of the trade at this period. Comparing it with the population of the city and of the province, it certainly was, in its various branches, of great magnitude. The imports were, manufactures from England; tea to the value of 10,000*l*. per annum, by the East India Company; wines from Madeira and Portugal. The payments were made in dollars, received from the Spaniards in the West Indies, and in dyewoods, rum, sugars, and molasses, received in payment for provisions sold in those countries by the merchants of New York; and in furs, wood, &c., received in exchange for British and East and West Indian wares, and in flax seed; of which latter there were shipped for

Ireland, between the 9th of December, 1755, and the 23rd of February following, 12,528 hogsheads; during the year ending the 29th of September, 1756, 23 ships, 22 brigs, 45 brigantines, 31 sloops, and 11 schooners, entered; and 36 ships, 28 brigs, 58 brigantines, 150 sloops, and 14 schooners, sailed from the port of New York. Copper ore mined in New Jersey, and shipped from New York, was sold for 40l. per ton at Bristol: 6731 tons of provisions, chiefly flour, were exported, besides grain, enumerated by bushels, and not by tons. About 800 pipes of Madeira were imported annually, in payment for which Indian corn, flour, timber and other articles sent to Portugal and Madeira. 2654 barrels of tar were brought from North Carolina were among the exports. Before 1756 about 80,000 barrels of flour from America were exported. (See general view of the Trade and Navigation of America hereafter.)

The extraordinary growth of New York, and the increase and prosperity of its navigation and trade are chiefly owing to its situation and its port, near the mouth of a magnificent navigable river, and to the great advantages of the communication which has been extended from the Hudson, by canals and by railroads, to the great lakes and rivers of the northern and western regions of America.

STATEMENT of the Number of Arrivals and Tonnage of Vessels at the Port of New York, from 1810 to 1840, inclusive; from Official Authority.

In addition to these arrivals, which are from foreign and coastwise ports, there are about 1050 schooners, sloops, &c., employed in coasting inland, not included in the above, averaging about seventy-five tons, making 78,750 tons. These vessels are here probably every week during the season of navigation, and about seventy-five steamboats, which probably are here about every other day; tonnage, 30,760.

STATEMENT of Arrivals at the Port of New York from Foreign Countries in the Year 1841, prepared by Mr. Thorn, of the Revenue Department. Compared with the Navigation of 1840, there is an increase of ninety-one American Vessels, twenty-seven British, fifteen Swedish, four Dutch, three Danish, &c. Of French vessels there are eight less than in 1840.

NATIONS.	Number of Vessels.	NATIONS.	Number of Vessels.	NATIONS.	Number of Vessels.

" brigs	23	Norwegian barks		

The whole number of passengers from foreign ports, in 1841, was 57,377.

Number of Coastwise Arrivals in 1840.—Ships, 157; barks, 29; brigs, 554; schooners, 2921; total, 3661; which, added to the foreign, 1953, makes a total for the year, of 5614; total number last year, 6487; decrease, 873.

In the above, there are no sloops included, which, if added to the many schooners from Philadelphia and Virginia, with wood and coal, which are never boarded, (owing to the remoteness of the points at which they come in,) would make the number much greater.

STATEMENT of the Number of Vessels and Passengers which arrived at the Port of New York from Foreign Countries, during the Year 1843, by Mr. Thorn, United States revenue boarding-officer:—

IMPORTS into the Port of New York, for the Year ending the 20th of September.

	1843			1844		
	Free.	Dutiable.	TOTAL.	Free.	Dutiable.	TOTAL.
Fourth quarter.....	dollars. 2,706,821	dollars. 3,574,731	dollars. 6,281,552	dollars. 2,050,484	dollars. 7,071,622	dollars. 16,032,106
First quarter.....	2,799,149	5,996,016	8,795,165	2,070,877	16,959,728	19,050,605
Second quarter.....	2,145,115	6,979,755	16,124,910	4,865,383	15,063,974	19,649,357
Third quarter.....	2,442,987	13,112,758	15,555,745	2,763,558	23,926,600	26,690,218
Total.....	17,094,072	29,573,900	46,667,972	11,470,302	63,021,984	75,092,286
Increase.....	34,946,084	28,424,314
Decrease.....	5,623,770

The decrease in free goods is mostly in specie. The total increase in consumable goods is above 116 per cent, and the duties collected have been as follow :—

CUSTOMS DUTIES, Port of New York, 1843 and 1844.

YEARS.	Fourth Quarter.	First Quarter.	Second Quarter.	Third Quarter.	TOTAL.
1843.....	dollars. 1,158,080	dollars. 1,876,874	dollars. 2,578,855	dollars. 4,310,814	dollars. 9,334,523
1844.....	2,534,163	5,537,023	5,478,588	7,829,946	21,379,720
Increase.....	1,365,483	3,660,149	2,899,733	3,519,132	11,444,797

EXPORTS from the Port of New York, for 1843 and 1844.

	1843			1844		
	Domestic Goods.	Foreign Goods.	TOTAL.	Domestic Goods.	Foreign Goods.	TOTAL.
Fourth quarter.....	dollars. 4,030,468	dollars. 1,105,050	dollars. 5,135,517	dollars. 4,910,771	dollars. 1,998,887	dollars. 6,915,658
First quarter.....	3,875,286	715,507	4,570,793	6,335,089	899,876	7,214,925
Second quarter.....	4,755,386	1,470,378	6,225,764	8,201,835	1,612,474	9,804,169
Third quarter.....	4,868,395	2,110,816	6,989,211	8,000,000	3,900,000	11,900,000
Total.....	19,649,435	5,410,760	22,360,195	27,593,495	6,741,197	34,334,692

The exports from the port of New York form no index whatever to the export trade of the country; because the proportion of the whole export sent from this port is so small, and fluctuates to so great an extent. The imports, on the other hand, form very generally two-thirds of the whole amount brought into the United States. The drawback on imported goods has been as follows :—

DRAWBACK on Foreign Goods Re-exported from New York.

YEARS.	Fourth Quarter.	First Quarter.	Second Quarter.	Third Quarter.	TOTAL.
1843.....	dollars. 138,006	dollars. 112,137	dollars. 183,021	dollars. 163,877	dollars. 596,041
1844.....	132,134	113,898	172,635	203,000	641,667

VALUE of Quarterly and Annual Imports into the Port of New York.

1843.....	8,705,765	16,124,010	15,455,745	6,281,552	46,567,072
1844.....	19,030,608	19,649,337	20,690,218	10,022,106	69,392,269

NOTE.—The imports of the second and third quarter of 1844 have been larger, it appears, than in any year since 1839. These goods have been, added to the increased production of American manufacturers, greater than can find sale; and the dependence upon bank facilities to work them off, has increased the business of the institutions.

COMPARATIVE Statement of the Number of Cases of the principal Merchandise Exported from Havre to New York, in the Packet Ships, during the Years 1839, 1840, and 1841.

And on responsibilities incurred.....	2½	Receiving and forwarding goods—on the value.....	½
		The same when entered for duty or debenture.....	1
		Remittances in all cases, in bills.....	½

“The above commissions to be exclusive of the guarantee of debts for sales on credit, storage, brokerage, and every other charge actually incurred. The risk of loss by fire, unless insurance be ordered, and of robbery, theft, and other unavoidable occurrences, if the usual care be taken to secure the property, is in all cases to be borne by the proprietor of the goods. When bills are remitted for collection, and are returned under protest, for non-acceptance or non-payment, the same commission to be charged as though they were duly honoured. On consignments of merchandise, withdrawn or re-shipped, full commission to be charged to the extent of advances or responsibilities incurred, and half commission on the residue of the value.”

HOSPITAL MONEY.—The first section of “An act to amend the Revised Statutes in relation to the Marine Hospital,” passed the 18th of April, 1843, is hereby amended, so as to read as follows:—From the master of every vessel from a foreign port, for himself, one dollar and fifty cents; and for every cabin passenger, two dollars; for each steerage passenger, fifty cents; and for each mate and sailor, fifty cents.

Sec. 2. Whenever the health commissioner shall collect and receive any money, under protest or notice on the part of the payer of an intention to contest the right of the state to such moneys, it shall be his duty to pay the monies so received into the treasury of this state, making, at the same time, and delivering to the treasurer, a written statement

of the circumstances under which the same was received, and the objections made by the payer.

Sec. 3. It shall be the duty of the comptroller, whenever it is ascertained and established, by the judgment and decree of a competent court, that the monies so received into the treasury, under protest, have been illegally collected, and do not belong to the state, to draw his warrant on the treasurer for such monies, in favour of the party entitled thereto.

Sec. 4. The health commissioner who shall pay into the treasury of this state public monies collected by him under protest, shall be saved harmless against the consequences of any action brought against him for the recovery of monies so received and paid : Provided, That such health commissioner shall, within five days, give notice to the comptroller and attorney-general of any suit brought against him for the recovery of monies paid under protest, and shall submit the management of the suit to the attorney-general ; and all costs and charges connected with the defence of said suit shall be paid from the treasury, in the same manner as if the suit was against the people of the state.

Sec. 5. The monies collected by the late commissioner, under protest, shall be paid into the treasury ; and the two preceding sections shall apply to him and the monies thus paid into the treasury.

Sec. 6. Title one, of part one, of chapter fourteen, section twelve, of the Revised Statutes, is hereby amended, so as to read as follows :—The resident physician shall receive an annual salary of twelve hundred and fifty dollars, to be paid out of the monies appropriated to the use of the Marine Hospital.

Sec. 7. The health officer shall, annually, on or before the 1st of January, report to the comptroller, under oath, the receipts and expenditures of the Marine Hospital ; together with all the receipts and perquisites of his office, and the items connected therewith.

MARINE INSURANCE.—MINIMUM PREMIUMS.

Adopted by the Board of Underwriters of New York, January 1st, 1840, furnished for the "Merchants' Magazine," by Walter R. Jones, Secretary to the Board.

Risks from Atlantic Ports to Europe.

	<i>vice versa</i> , 1 1/2
On specie, either way	1 1/2
On risks from ports in the United States to ports to leeward of Porto Rico, including Jamaica, Cuba, and ports on the Main, north and west of and including Lagaira	1 1/2
	<i>vice versa</i> , 1 1/2
If from Havanna or Matanzas, with special averages, less than the whole shipment, an additional premium of	1/2
	on specie, 1/2
On risks clearing after the 10th of July for or from the West India islands, on and after the 15th of July, and prior to the 5th of October, an additional premium is to be charged of 1/4 per cent on specie, and 1/2 per cent on other risks.	

South American Risks.

On risks from northern ports in the United States to Rio Grande or Buenos Ayres	2
Ditto ditto to Montevideo	2
	<i>vice versa</i> , 1 1/2
Ditto ditto to other ports in Brazil	1 1/2
	<i>vice versa</i> , 1 1/2

Cape Horn and Cape of Good Hope Risks.

On risks to a port beyond the Cape of Good Hope	1 1/2
Ditto ditto, with liberty of one or more ports, an addition, outward, of	1 1/2
	homeward, 1/2
On risks to a port round Cape Horn, if not north of Lima	2
Ditto ditto, if north of Lima	2 1/2
	out and home, double rates.

On risks on the return passages, the same premiums, except specie, $\frac{1}{2}$ per cent less than other merchandise from round Cape Horn.

On risks (excepting whaling risks) to ports round the Cape of Good Hope, 4 per cent per annum. If to ports round Cape Horn, 4 per cent per annum. If north of Lima, 5 per cent per annum.

All renewals or extensions to be charged at not less than the new rates.

All risks on deck, treble the under deck premiums.

Risks on cargo by vessels bound round Cape Horn not to be insured in series of less than twenty packages of dry goods, and each description of other goods.

In policies covering two passages, or on out and home risks, the premiums for both the single passages are to be united.

Specie by vessels of war not included in the aforesaid rates.

Particular Averages.

Cotton to be classed in parcels of not less than ten bales each, according to the succession of the marks and numbers in the invoice, and the average shall be allowed on each parcel exclusively, if amounting to five per cent on such parcel, and not otherwise. The excesses over the parcels of ten bales each to form a separate class, and to be subject to average, if damaged, to the extent of five per cent on ten bales.

Sugar, not less than fifty boxes, or twenty hogsheads, of successive numbers, as above, if amounting to seven per cent.

Coffee, not less than one hundred bags, if amounting to ten per cent, or twenty hogsheads or fifty barrels, if amounting to five per cent, of successive numbers, as above, or five per cent on the whole shipment, provided the whole shipment be not less than two hundred bags.

Rice, not less than fifty tierces, of successive numbers, as above.

Tobacco, subject to ten per cent, average, in lots of not less than ten hogsheads, ditto.

Tobacco stems, not to be insured, subject to a less average than twenty per cent on the entire lot.

Cigars and Indian meal, not to be insured subject to a less average than ten per cent on the entire lot.

Russia duck, diapers, burlaps, and ticklenburgs, if from Europe, ten per cent on the entire lot, and average ten per cent.

Grain, coastwise, ditto, ten per cent.

On Cargo to Marseilles.

Sugar, coffee, rice, cocoa, pepper, and pimento, warranted free from particular average, if the property is discharged at the port of Marseilles.

Voyages beyond the Cape of Good Hope.

Silks and other dry goods to be classed in parcels of not less than ten packages each, according to the succession of the marks and numbers in the invoice; and each kind of teas to be considered as one class, and to be subject to average, as if separately insured, on such of the classes as may amount to five per cent, and not otherwise.

Cassia (except in boxes) and floor matting, if insured separately from other cargo, to be free of average under twenty per cent on the entire lot.

Warranted free from loss or expense by capture, seizure, or detention by the Chinese, and also free from loss by blockade; but if turned off, the ship to proceed to a near open port.

General Regulations.

If goods are designated by different marks, without being numbered successively, and the average of the marks do not fall below the quantity on which partial loss is allowed as above, each mark may be separately insured.

Policies terminating outwards, with a return premium—and policies with a return premium, for ports not used—and policies on time—to have the words added after the return of premium—"no loss being claimed."

In policies on time, with liberty to extend the same—such extension to be for a definite time, instead of stipulating to bring the vessel into port under the original agreement. A return premium, however, to be allowed for each entire month of the extended time not used—no loss being claimed.

No conditional liberties shall be stipulated for, unless the premium thereon is paid or secured at the time the risk is taken.

No fire risk on shore to be taken prior to the inception of the marine risk, except at a premium of one-half per cent

Damaged goods to be sold on the same credit as the sound; or if sold for cash, the appraisalment of sound value to be for cash, and certificates of the sound value and of damages to be under oath.

In cases of total loss, affidavits to be required as to other insurances, and in cases of claims for returns of premiums exceeding the sum of twenty dollars, an affidavit to be required stating the fact on which the claim is founded.

No damage to be allowed for goods injured by spots, without evidence of actual contact with sea water.

RATES of Premiums on Lake Risks.

PILOTAGE.—For the Port of New York there are nine branch, and nine deputy pilots, and as many registered boats.

According to the law regulating the pilotage of the port—
 Section 2.—All pilots' bills shall be certified, before collected, by one or more of the said commissioners or their secretary, except where a pilot receives his pilotage outward-bound from

the master of the vessel at Sandy Hook, in which case the pilot shall report to the said commissioners according to law.

4.—The said commissioners shall fix and determine the compensation of pilotage to be received by the pilots; 1st, for piloting vessels from the quarantine to New York; 2dly, for transporting a vessel from one river to the other; 3dly, for hauling a vessel into the stream from the wharf to her anchorage, or from her anchorage to a wharf.

5.—The pilotage on vessels outward shall be as follows:—for every vessel drawing less than fourteen feet water, one dollar and fifty cents per foot; for every vessel drawing fourteen feet and less than eighteen feet, one dollar and seventy-five cents per foot; for every vessel drawing eighteen feet and upwards, two dollars and twenty-five cents per foot; and on foreign merchant vessels, not entitled by the laws of the United States to enter on the same terms as ships or vessels of the United States, shall be increased by adding one-fourth to the above rates.

Inward.—For piloting any merchant vessel bound to New York, and not exempted from pilotage by virtue of this act, from the southward or eastward of the white buoy on the eastern edge of the outer middle near the bar to her anchorage, moorings, or to a wharf, for every vessel drawing less than fourteen feet of water, two dollars per foot; drawing fourteen feet and less than eighteen feet, two dollars and fifty cents per foot; drawing eighteen feet and upwards, three dollars per foot.

Fees.—For piloting between the eastward or southward of the white buoy, and the ports of Jersey city, Newark, Perth, Amboy, or within Sandy Hook—

	per foot—dollars.	cts.
Vessels drawing less than fourteen feet	2	00
Ditto between fourteen and eighteen feet	2	50
Ditto more than eighteen feet	3	00
Vessels of war	5	00
Vessels foreign, not entering as United States vessels, one-fourth addition.		
Ditto taken charge of to the westward of the white buoy, half pilotage.		

Between the 1st days of November and April, in addition to the above, for vessels drawing ten feet and upwards, four dollars; less than ten feet, two dollars; and one-half of these additional sums for half pilotage. Commissioners' fees not charged.

Hell Gate Pilots.

	per foot—dollars.	cts.
<i>Fees.</i> —From or to Sand's Point, for schooners or sloops	1	50
Ditto ditto square-rigged vessels	1	75
From or to Hell Gate, for schooners or sloops	1	00
Ditto ditto square-rigged vessels	1	25
From the 1st day of November to the 1st day of April, in addition to the above, for every ship, bark, or brig	2	00
Ditto ditto schooner or sloop	1	00

AUCTIONS, SALES, AND COMMISSIONS.

Auctions.—The system of sales by auction is common in New York and other commercial towns in the United States; and in most cases where the law interposes between the owner of property and the purchaser, it directs the sales to be made at public auction. The object is the protection of him whose property has been taken to satisfy the demands of his creditors. "Although public sales have thus been, from time immemorial, adopted and sanctioned by legislators and judges, yet," observes a writer on the question of the auction system of New York in "Hunt's Merchants' Magazine," "as a system, public auctions for the extensive sale of imported goods have not found favour with the great mass of importers and jobbing merchants in this and other cities. The appointment of auctioneers has an early date in the history of the country, and laws have, from time to time, been passed, regulating the manner in which they should conduct their business, and fixing the amount of duties which they should pay to the government. The law of 1817, however, in the state of New York, created a new era in the history of auctions; and the appropriation afterwards, by the new constitution, of the duties to the payment of the state debts, gave character and permanency to the system. For many years after that, however, a fierce warfare was carried on between the importing and jobbing merchants and the auctioneers.

"Strong applications were, in consequence, made to the state legislature to repeal or alter the auction laws, but the state was reaping too great a harvest from the auction duties, and the solemn appropriation of the revenue from this source afforded good grounds for not interfering.

"In the year 1829, the committee of the state senate, to whom the subject was referred, say in their report, that 'they assume it as a principle which, under existing circumstances, can hardly be questioned, that the revenue derived from sales by auction is too important in itself, and in

its present destination too sacred, to be lightly given up.' But it was said, that the auction system promoted the interests of non-residents at the expense of the resident merchant; and to this the committee of the assembly in the same year say,—that they beg leave to submit, whether non-resident consignors do not pay as great a tax as resident merchants. An agent receives 50,000 dollars of goods on consignment, and sells at auction—if beyond the Cape of Good Hope, the duties are 500 dollars; from the West Indies or Enrope, 750 dollars; and if spirits, 1000 dollars. The committee proceed to say, that if the system were abolished, the state revenue would be the only loser, and the jobbing merchants the only gainers, by the change. It then rests with the legislature to decide, whether they will stand with folded arms and suffer a revenue of 257,000 dollars per annum to be wrested from them, without using every exertion in their power to preserve it.

"The state legislature having been hostile to any change of the system, urgent memorials were addressed to Congress, praying that a heavy duty might be imposed, which would amount to a prohibition. Such memorials were addressed in 1817, 1818, 1819, 1820, 1821, 1824, 1828, 1829, 1831. Resolutions were adopted at the meetings of a denunciatory character. At the meeting in 1829, it was resolved, that the auction system furnished facilities for concealment, encouraged smuggling, and induced perjury.

"A committee of auctioneers replied in an address to members of Congress, in which they say, that the profits of their business are insignificant when compared with the value of reputation, and they deny that the system leads to fraud and perjury; and they add, 'For ourselves, we most solemnly declare, that we are not aware of any circumstances connected with the auction business which renders its pursuit incompatible with honest pride and vigorous integrity. We consider that the times and circumstances have passed away in which the character of an auctioneer was justly the theme of ridicule to the writers of farces. It is not now his business to extol a pretended original, or a counterfeit gem, but he finds himself engaged in a profession which requires character and skill; and he is surrounded by the evidences that, with these aids, every post of honour, and every grade of social life, is within his reach.'

"In all anti-auction meetings strong grounds were taken, and it was insisted that the influence of the auction system was bad upon morals, and would also act most injuriously upon the growth and prosperity of the city of New York. We think upon the subject, that it would be no difficult matter to combat and refute most of the arguments used on these occasions.

"We close this article with an extract from a letter from Abraham G. Thompson, Esq., of this city, New York—the man to whom the auction system is, no doubt, greatly indebted, and who has lived to see the end of the war, and to enjoy the abundant fruits of his energy and industry. The letter was addressed by Mr. Thompson, some few years since, to his fellow-citizens, and was printed for private circulation.

"I had repeated interviews with the governor on the subject of auctions, and the final result was, the preparation of a law, under my supervision, which was afterwards passed, reducing and fixing the rates at a duty of one per cent on East India, and one and a half per cent on European goods. In a conversation with the governor, I told him, that if such a reduction should take place, I would pay the first year, myself, 6000 dollars, in advance, for the duties on sales of India goods alone (being more than for any two years since 1783). The result justified my calculations. Previous to the passage of the act of 1817, the duties were one per cent, two per cent, and three per cent, and the revenue to the state was small compared with after years. Soon after the passage of the bill in 1817, a Boston ship from the East Indies was sent to New York (all previous cargoes having been sold in Boston), the auction duties on the cargo of which amounted to upwards of 6000 dollars, and the revenue to the state the first year, upon India goods, amounted to between 32,000 and 33,000 dollars. All the India vessels afterwards were sent here, and from that time to this, but one attempt has been made to sell a cargo of India goods east of New York, and that was a failure. The revenue from auction duties gradually increased, until it has amounted to between 200,000 and 300,000 dollars per annum, a revenue which has aided materially the state of New York in her payment of the canal debt, and a revenue which grew out of a business which drew merchants or purchasers from all parts of our widely-extended country, which tended directly to enhance the value of houses, stores, and lots—multiply the business of the shipper, importer, and jobber, and which has filled our city with palaces, and made our merchants princes.

"In 1817, and after the passage of this law, as business begets business, also was commenced the first regular packet line between New York and Liverpool, by Isaac Wright and Francis Thompson. To this cause the success of New York was ascribed, and packet lines were established from Boston and from Philadelphia, but in neither instance were they successful. The truth was, that both in Boston and Philadelphia, the free and absolute sale of goods by auction was not encouraged. (It did not appear to be understood.)

"In Philadelphia, goods were allowed to be offered, and withdrawn, free from state duty, and the purchaser went to auction rooms of that city with no certainty of making his purchases. He was not certain that the goods would be sold to the highest bidder.

"In my opinion, the auction law of 1817 gave the first impulse to the extensive trade of this

city, and followed, as it was afterwards, by the establishment of lines of packets, and the construction of the Erie canal in 1825, together with: all the natural advantages of New York, it was eminently successful and advantageous."

AUCTION LAW.—The following analysis of this law, comprehends all that is necessary for the information of the sellers and buyers of goods at auctions.

Any citizen of the state of New York may become an auctioneer, in the county in which he resides, on executing and depositing with the comptroller an approved bond in the penalty of ten thousand dollars, with sureties for the payment of the auction duties and the faithful performance of the duties of his office. The bond runs to the people of the state, and the sureties must be two sufficient freeholders; if the bond be executed by an auctioneer appointed in a city, it must be taken and approved by the mayor, or recorder of such city; if executed by an auctioneer appointed for a county, by any judge of the county courts of such county. The officer taking the bond, must endorse upon it a certificate of his approbation, and of the day it was taken, and deliver it thus endorsed to the auctioneer, who within ten days thereafter must pass it to the comptroller. Every officer taking such bond, must transmit a notice to the comptroller without delay, stating the name of the auctioneer and his sureties entering into the bond, and the day it was executed and approved.

An express clause is inserted in the bond, subjecting the same to forfeiture, in case the obligor shall not render a true and accurate account quarterly of all goods sold or struck off by him, dated on the first days of April, July, October, and January, in the year for which he is appointed. Each account must state minutely and particularly—

1st. The sums for which any goods or effects were sold at every auction held by him, or in his behalf, from the time of his entering into such bond, or the date of his last quarterly account.

2d. The days of sale, amount of each day's sale, designating sales made by himself or in his presence, and those made in his absence by a partner or clerk acting in his behalf, and specifying the causes of such absence.

3d. The amount of all private sales made by himself or any of his partners, on commission, and the days of such sales.

4th. The amount of duties chargeable under the provisions of law, in all the sales, public and private, mentioned in the account.

5th. A distinct statement of all goods struck off, but not actually sold. On all goods so struck off, the auction duties must be paid.

Every such account, within twenty days after its date, must be exhibited, if made out by an auctioneer appointed in a city, to the mayor or recorder thereof; if by an auctioneer appointed for a county, to any judge of the county courts of such county. The account must be sworn to by the auctioneer; the oath must be reduced to writing, endorsed on the account, and be subscribed by the auctioneer taking it. Every partner of such auctioneer, and every clerk or other person whatever, in any way connected in business with such auctioneer, who shall have made any sale contained in said account, must make and subscribe an oath to be endorsed on the account, that he believes it to be a just and true account in every particular.

Every partner or clerk, who shall have made any sale in behalf of an auctioneer, must, in the account rendered by such auctioneer, set his name, or the initials thereof, opposite to each sale made by him, mentioned in such account; and make and subscribe an affidavit to be annexed to such account, stating that sales so noted are all the sales liable to auction duties, public or private, made by him within the time mentioned in the account, and that the account of such sales, so therein stated, is just and true; that such sales were made by him, in the absence of such auctioneer, who was unable to attend from the causes specified in his account; and that in all acts performed by him, in behalf of such auctioneer, during the time aforesaid, he had endeavoured to conform to the intent and meaning of the laws regulating sales by auctioneers.

The auctioneer must pay the duties accrued on the sales mentioned in his account, together with the additional sum of two and one-half per cent on the whole amount of such duties, within ten days after the exhibition of his account, for the use of the state; and immediately after such payment, he must deliver or transmit his account, with the affidavits endorsed thereon, and annexed thereto, to the comptroller, to be filed in his office. Every such payment, if by an auctioneer appointed for any other place than the city of New York, must be made to the treasurer of the state; and by every auctioneer in the city of New York, to such bank in the city, as shall be designated by the comptroller, as entitled to the state deposits by law; and the receipt of the proper officer of the bank must be taken therefore; which receipt, the auctioneer must immediately transmit to the comptroller, who shall certify thereupon, such payment to the treasurer, and charge him with the amount.

Every auctioneer, who within the period limited for his accounting, shall have made no sales, public or private, of property liable to auction duties, must make and subscribe an affidavit of

those facts, before any officer to whom his account, had such sales been made by him, might have been exhibited, and must transmit a copy of such affidavit, certified by the officer taking it, to the comptroller within the same time that an account is required to be rendered. Every auctioneer, partner, or clerk of an auctioneer, and every person whatever in any way connected in business with an auctioneer, who shall refuse or neglect to perform any act or duty, which are required by any of the provisions above recited, commencing with the requisition that he shall make out his quarterly account on the first days of April, July, &c., is subject to a penalty. And every such refusal or neglect by an auctioneer, shall be certified and published by the comptroller, in the state paper; and from the time of publication, the delinquent auctioneer therein named, shall be deemed to have forfeited his appointment, and shall be incapable of doing any act by virtue thereof.

All goods, wares, and merchandise, and every other species of property, with the exceptions hereinafter mentioned, are subject each and every time they are struck off at public auction, within this state, to duties at the following rates:—

1. All wines and ardent spirits, foreign or domestic, at the rate of two dollars in every 100 dollars.

2. All goods, wares, merchandise, and effects imported from any place beyond the Cape of Good Hope, and sold in packages, bales, trunks, or casks, as imported, at the rate of one dollar on every 100 dollars.

3. All other goods, wares, merchandise, and effects, at the rate of one dollar and fifty cents on every 100 dollars. The duties are calculated on the sums for which the goods so exposed to sale shall be respectively struck off, and must in all cases be paid by the person making the sale.

All goods must be struck off to the highest bidder, and where the auctioneer or owner, or any person employed by them or either of them, shall be such bidder, they shall be subject to the same duties as if struck off to any other person; but this does not render valid any sale, that would otherwise be fraudulent and void. All articles except those to be hereafter mentioned, sold on commission, by an auctioneer or clerk of an auctioneer, or by a person in any way connected in the auction business, or in auction sales with an auctioneer, whether at auction or private sale, are liable to the duties before enumerated.

No auction duties are payable upon the following goods and articles: ships and vessels; utensils of husbandry, horses, neat cattle, hogs, and sheep; articles of the growth, produce, or manufacture of this state, except distilled spirits; all fabrics of cotton, wool, hemp, and flax, manufactured within the jurisdiction of the United States; goods and chattels, otherwise liable to the auction duties, are exempt therefrom, if sold under the following circumstances:—

1st. If they belong to the United States or to this state.

2d. If sold under any judgment or decree of any court of law or equity, or under a seizure by any public officer, for or on account of any forfeiture or penalty, or under a distress for rent.

3d. If they belong to the estate of a deceased person, and be sold by his executors or administrators, or by any other person duly authorised by a surrogate.

4th. If they are the effects of a bankrupt or insolvent, and be sold by his assignees appointed pursuant to law, or by a general assignment for the benefit of all the creditors of such bankrupt or insolvent.

5th. If they are goods damaged at sea, and be sold within twenty days after they shall have been landed, for the benefit of the owners or insurers.

All sales at public auction in the city of New York, not under the authority of the United States, and all such sales in other parts of the state, where duties are payable on the effects to be sold, must be made by an auctioneer who shall have given the security required, as was hereinbefore mentioned, or by a co-partner or clerk of an auctioneer duly authorised under the provisions of law; but where no duties are payable, all such sales except in the city of New York, may be made by any citizen of the state.

When an auctioneer cannot attend an auction by reason of sickness, by duty as a fireman, by military orders, or necessary attendance in a court of justice, or when he is temporarily absent from the place for which he is appointed, he may employ a partner or clerk to attend in his name and behalf; such partner or clerk having previously taken an oath, to be filed with the clerk of the county in which such auctioneer shall reside, fully and faithfully to perform the duties incumbent upon him; and which oath must also contain a true statement of the connexion that exists between him and the auctioneer. Goods damaged at sea and sold for the benefit of the owners or insurers, shall be sold in New York, under the direction of the wardens of the port.

Every auctioneer who, during his term of office, shall accept an appointment as auctioneer from any other state, or who shall be concerned as principal or partner in selling any merchandise, or effects, in any other state by public auction, or who shall receive any compensation, or benefit, for or on account of any such sale, shall be deemed guilty of a misdemeanour.

No auctioneer in any city of this state can at the same time have more than one house or store, for the purpose of holding his auctions; and every such auctioneer, before he enters on the

execution of his office, must designate, in a writing signed by him, such house or store, and also name therein the partner or partners, if any, engaged with him in business, and file such writing with the clerk of the city for which he shall be appointed.

No auctioneer shall expose to sale by public auction any goods or articles liable to auction duties, at any other place than that designated in the writing so deposited by him, except goods sold in original packages as imported, household furniture, and such bulky articles as have usually been sold in warehouses, or in the public streets, or on the wharfs.

The common council of each city may designate such place or places, within such city, for the sale by auction of horses, carriages, and household furniture, as they shall deem expedient.

Every auctioneer in the city of New York must, under his own name, give previous notice in one or more of the city newspapers, of every auction sale that may be lawfully made by him; if connected with any person or firm, his name must, in all cases, precede separately and individually the name of such person or firm, and the title of the firm under which he transacts business.

No auctioneer, co-partner, or clerk of an auctioneer, or any other person in the city of New York, shall advertise a sale by auction, in any other manner than as above described, or be concerned in any sale by auction not advertised in such manner.

No auctioneer shall demand or receive more than two and a half per cent commissions on the amount of any sales, public or private, made by him, unless by a previous agreement in writing, between him and the owner or consignee of the goods sold.

No auctioneer on the day and at the place where his auction shall be held, nor any person whatever, on the same day and place, shall sell at private sale any goods liable to auction duties.

When goods are struck off at auction, and the bargain shall not be immediately executed by the payment of the price, on the delivery of the goods, it is the duty of the auctioneer to enter in a sale-book, to be kept by him for the purpose, a memorandum of the sale, specifying the nature, quantity, and price of the goods, the terms of sale, and the names of the purchaser, and of the person on whose account the sale is made.

All sales of goods by public auction, in the city of New York, shall be made between sunrise and sunset, excepting books or prints, and goods sold in the original package as imported, according to a printed catalogue, of which samples shall have been opened and exposed to public inspection at least one day previous to the sale.

A conviction of fraudulent practices for ever disqualifies an auctioneer from exercising the rights or pursuing the business of an auctioneer; he shall be deemed guilty of a misdemeanour, punishable by fine, not exceeding five hundred dollars, and imprisonment not exceeding one year, or either, in the discretion of the court. And if, after said conviction, he undertakes to act as an auctioneer, he shall be deemed guilty of a misdemeanour for each offence, and punishable as above. And any person who shall transact the business of an auctioneer, without having first complied with the provisions of the law, is punishable in like manner.

— in serons.....do.	6	70 lbs. or upwards.....do.	20
Indigo, in ditto.....do.	10	Every box of other tea, between 50 and	
Nails, in casks.....do.	8	70 lbs.....do.	18
Pimento, in bags.....do.	3	Ditto ditto, if 80 lbs.....do.	20
Pepper, in ditto.....do.	2	Ditto ditto, from 80lbs. and upwards.....do.	22
Sugar, other than loaf sugar, in casks.....do.	12		

The above to include ropes, canvass, and other coverings. On all other boxes of teas, according to the invoices, or actual weights thereof.

Port Wardens.—Vessels and goods arriving in a damaged state, and required to be sold by auction, for the benefit of underwriters out of the city of New York, must be under the inspection of the wardens, who are to certify the cause of damage, and amount of sale and charges.

Fees.—One and a half per cent on gross amount of sales; and for each survey on board of any vessel, at any store, or along the docks or wharfs, three dollars, on damaged goods; each survey on hull, spars, rigging, &c., five dollars; each certificate, one dollar twenty-five cents; ditto of

* For tares allowed by customs see Tariff of United States, *hereafter*.

distress of said vessel, two dollars fifty cents; same services for vessels paying foreign duties and tonnage, double.

Harbour Master.—The office of harbour master was created in 1808, by legislative enactment, with power to regulate and station all vessels in the harbour, or at the wharfs, to accommodate vessels wishing to discharge their cargoes, and to decide promptly all disputes connected with the foregoing subjects. Resisting his authority subjects to a fine of fifty dollars and costs, for the benefit of the New York Hospital.

Fees.—On vessels unloading, one and a half cent per ton; vessels paying foreign duties and tonnage, double; which must be paid within forty-eight hours after arrival. Schooners and sloops in the coasting trade, two dollars; for adjusting any difference respecting situation, two dollars.

Pilots must register their vessels, names, and places of abode in his office; and are obliged to put to sea whenever ordered by him. The penalty for refusing is five dollars, and loss of licence.

Passengers.—When passengers arrive from foreign countries, an entry must be made at the custom house of their names, clothes, implements of trade or profession (all of which are exempt from duty), and an oath taken respecting them, the form of which, and the entry, may be had at the office, gratis. Cabin passengers make this entry themselves, and pay twenty cents each for a permit, on exhibiting which to the officer on board, they are allowed to remove their baggage, after it has been inspected. Only one entry and permit is necessary for a family, and only twenty cents demanded, whatever be the number of the family. Remains of sea stores, such as tea, sugar, foreign spirits and wines, are liable to pay duties; but unless these are of great bulk, or quantity, they are generally allowed to pass free.

An entry is usually made by the master of the vessel of the storage passengers and their baggage: they pay twenty cents for a permit. When entry is made by any person not the owner, he gives bond for payment of the duties, if any; and if, after entry is made at the custom house, and the oath taken, any article is found belonging to a passenger, liable to pay duty, not specified in the entry, it is forfeited, and the person in whose baggage the article is found subjected in treble the value.

Besides making entry at the custom house, it is provided by a law of the state, that every master of a vessel arriving from a foreign country, or from any other port of the United States, shall within twenty-four hours after entering his vessel at the custom house, make a report in writing on oath, to the mayor, and in case of his sickness, or absence, to the recorder of the said city, of the name, age, and occupation of every person who shall have been brought as passenger in such ship or vessel on her last voyage, upon pain of forfeiting for every neglect or omission to make such report, the sum of seventy-five dollars for every alien, and the sum of fifty dollars for every other person neglected to be so reported as aforesaid.

Masters of ships bringing passengers to New York, must also pay a dollar on account of each passenger to the corporation, as commutation money, or give bond that none of them shall become chargeable on the city poor rates for the space of two years. They almost uniformly prefer paying the commutation.

Wharfage.—Wharfs in New York are not the property of any corporation, but of private persons. Vessels under fifty tons, 50 cents per day=2s. 3d.; and for every fifty tons more, 12½ cents additional=7d.

RATES of Storage, chargeable per Month, as established by the New York Chamber of Commerce.

	cents.		cents.
Almonds, in frails or packages, per cwt.	40	Cheese, casks, boxes, or loose, per cwt.	3

Ditto whole shot of 14 and not exceeding 15 inches	24 0
Ditto half shot of like dimensions	12 0
Ditto whole shot of 15 inches	32 0
For every cable half shot of 15 inches	16 0
* Goods, wares, merchandise, or other articles not herein enumerated, per load	2 0

In all cases where the distance exceeds half a mile, and not two miles, one-half in addition to be allowed.

Portage.—For any distance not exceeding half a mile, 12 1/2 cents; over half a mile, and not exceeding a mile, 25 cents; and in that proportion for any greater distance.

For carrying a load upon a hand-barrow, for any distance not exceeding half a mile, 25 cents; over half a mile, and not exceeding a mile, 44 cents; and in that proportion for any greater distance.

Hand-carried.—For any distance not exceeding half a mile, 15 1/2 cents; over half a mile and not exceeding a mile, 31 1/2 cents; and in that proportion for any greater distance.

(continued)

QUANTITY OF GOODS TO COMPOSE A TON.

(Extract from the Bye-Laws of the New York Chamber of Commerce.)

Resolved,—That when vessels are freighted by the ton, and no special agreement is made between the owner of the vessel and freighter of the goods, respecting the proportion of tonnage which each particular article shall be computed at, the following regulation shall be the standard of computation:—

That the articles, the bulk of which shall compose a ton, to equal a ton of heavy materials, shall be in weight as follows:—568 lbs. of coffee in casks, 1830 ditto in bags; 1120 lbs. of cocoa in casks, 1307 ditto in bags.

933 lbs. of pimento in casks, 1110 ditto in bags.
8 barrels of flour, 196 lbs. ea. b.
6 barrels of beef, pork, tallow, pickled fish, pitch, tar, and turpentine.

20 cwt. of pig and bar iron, potashes, sugar, logwood,

fustic, Nicaragua wood, and all heavy dye-woods, rice, honey, copper ore, and all other heavy goods.

16 cwt. of coffee, cocoa, and dried codfish, in bulk, and 12 cwt. of dried codfish in casks of any size.

6 cwt. of ship bread in casks, 7 cwt. in bags, and 8 cwt. in bulk.

200 gallons (wine measure) reckoning the full contents of the casks, of oil, wine, brandy, or any kind of liquors.

22 bushels of grain, peas, or beans in casks.

36 bushels of ditto in bulk.

36 bushels of European salt.

31 bushels of salt from the West Indies.

29 bushels of sea coal.

40 feet (cubic measure) of mahogany, square timber, oak plank pine and other boards, beaver, furs, peltry, bees' wax, cotton, wool, and bale goods of all kinds.

1 hoghead of tobacco, and 10 cwt. of dry hides.

8 cwt. of China raw silk, 10 cwt. nett bohea, and 6 cwt. green tea.

VIII. NEW JERSEY.

NEW JERSEY is bounded on the east by the Hudson River and by the Atlantic Ocean, on the south by the Atlantic, on the north by New York, and on the west by the bay and river of Delaware. This state lies between the northern latitudes of 39 deg. and 41 deg. 24 min., and the longitudes west of Greenwich of 74 deg. and 75 deg. 20 min. Its area is computed at 8320 square miles, or 5,324,000 English statute acres.

The eighteen counties into which the state is divided are, with their population and capital (in 1840), as follow:—

Atlantic, 8726, C. May's Landing; Bergen, 13,223, C. Hackensack; Burlington, 32,831, C. Mount Holly; Cape May, 5324, C. Cape May C. H.; Cumberland, 14,374, C. Bridgetown; Essex, 44,621, C. Newark; Gloucester, 25,438, C. Woodbury; Hudson, 9483, C. North Bergen; Hunterdon, 24,789, C. Flemington; Mercer, 21,502, C. Trenton, Middlesex, 21,893, C. New Brunswick; Monmouth, 32,909, C. Freehold; Morris, 25,844, C. Morristown; Passaic, 16,734, C. Patterson; Salem, 16,024, C. Salem; Somerset, 17,455, C. Somerville; Warren, 20,366, C. Belvidere; Sussex, 21,770, C. Newton.

In 1840 the number of inhabitants amounted to 373,315; viz: 177,055 white males; 174,533 white females; 10,789 free coloured males; 10,264 free coloured females; 303 male, and 371 female slaves. Numbers employed in mining, 266; in agriculture, 56,701; commerce, 2283; trades and manufactures, 27,004; navigating the sea, 1143; navigating rivers, lakes, and canals, 1625; hand professions, &c., 1627.

The northern section of New Jersey is mountainous or hilly; the central parts are diversified by hills and valleys; and the southern part is flat, sandy, and sterile. The natural growth of the soil is shrub oaks, yellow pines, marsh grass, shrubs, &c. With the exception of this barren, but, by industry and manuring, in some parts, cultivated district, the soil of New Jersey affords good pasture and arable land. The produce is chiefly wheat, rye, Indian corn, buckwheat, potatoes, oats, and barley. Apples, pears, peaches, plums, and cherries, are grown in great perfection. In the mountainous districts cattle are of good breed and size, and large quantities of butter and cheese are made. The produce of this state finds a market chiefly at New York and Philadelphia. The principal exports are wheat, flour, horses, cattle, hams, cider, lumber, flax-seed, leather, and iron. In 1840, there were in the state 70,502 horses and mules; 220,202 neat cattle; 219,285 sheep; 261,443 swine. There was bred poultry to the value of 336,953 dollars. Of grain the quantities grown were 774,203 bushels of wheat; 12,501 bushels of barley; 3,083,521 bushels of oats; 1,665,820 bushels of rye; 856,117 bushels of buckwheat; 4,361,975 bushels of Indian corn. There were also produced 697,207 lbs. of wool; 4531 lbs. of hops; 10,061 lbs. of wax; 2,072,069 bushels of potatoes; 334,861 tons of hay; 2165 tons of flax and hemp; 1966 pounds of silk cocoons. The products of the dairy amounted in value to 1,328,032 dollars; and of the orchard to 464,006 dollars; of lumber to 271,591 dollars; 9416 gallons of wine were made; and 2200 barrels of tar, pitch, turpentine and resin were produced.

The part of the state open to the sea has a mild climate; and the cold in the winter is only very severe in the mountainous region.

The Hudson and Delaware rivers, on the east and west sides, flow partly through the state. Besides these, there are the Raritan, navigable for sloops, seventeen miles, to New Brunswick, flowing into the Atlantic below Staten Island; the Passaic, navigable for small vessels, ten miles, to Newark, and falls into Newark bay; the Hackensack, navigable fifteen miles, which falls into Newark bay; Great Egg Harbour river, navigable twenty miles, for small craft, and entering into the Atlantic. The principal bays are Newark bay, north of Staten Island, and Raritan bay, between Staten Island and Sandy Hook. Perth Amboy, at the head of this bay, is the principal seaport. Delaware bay belongs in part to this state. The two principal divisions in this state are

Cape May, on the north side of Delaware bay, and Sandy Hook, which is a low, sandy island, about three miles long, south of New York bay. The principal towns are Newark, New Brunswick, Paterson, Trenton, Burlington, Bordentown, Elizabethtown, and Perth Amboy.

In 1840, there were in the state two commercial and eight commission houses engaged in foreign trade, with a capital of 99,000 dollars; there were 1504 retail dry goods and other stores, employing a capital of 4,113,247 dollars; 1280 persons engaged in the lumber trade, employing a capital of 410,570 dollars; 423 persons employed in internal transportation, who, with thirty butchers, packers, &c., invested a capital of 204,900 dollars; 179 persons engaged in the fisheries, with a capital of 93,275 dollars. Home-made or family goods were produced to the value of 201,625 dollars; thirty-one woollen manufactories, and forty-nine fulling mills, employing 427 persons, producing goods to the value of 440,710 dollars, with a capital of 314,650 dollars; forty-three cotton manufactories, with 63,744 spindles, employing 2408 persons, manufacturing articles to the value of 2,086,104 dollars, with a capital of 1,722,810 dollars; twenty-six furnaces, producing 11,114 tons of cast iron, and eighty forges, &c., producing 7171 tons of bar iron, employing 2056 persons, and a capital of 1,721,820 dollars; forty-one paper manufactories produced articles to the value of 562,200 dollars, and other paper manufactures produced the sum of 7000 dollars, the whole employing 400 persons, and a capital of 460,100 dollars; hats and caps were manufactured to the value of 1,181,562 dollars, and straw bonnets to the value of 23,220 dollars, the whole employing 957 persons, and a capital of 332,029 dollars; 159 tanneries employed 1090 persons, and a capital of 415,728 dollars; and 478 other leather manufactories, as saddleries, &c., produced articles to the value of 1,582,746 dollars; twenty-three glass-houses, and four glass-cutting establishments, employed 1075 persons, producing articles to the value of 904,700 dollars, with a capital of 589,800 dollars; twenty-two potteries employed 122 persons, producing articles to the value of 256,807 dollars, with a capital of 135,850 dollars; 932 persons produced machinery to the value of 755,050 dollars; 219 distilleries produced 334,017 gallons, and six breweries produced 206,375 gallons, employing 394 persons, with a capital of 280,870 dollars; 123 persons produced hardware and cutlery to the value of 83,575 dollars; seventy-one persons manufactured 2010 small-arms; seventy persons manufactured drugs and paints to the value of 127,400 dollars, and turpentine and varnish to the value of 43,000 dollars, with a capital of 140,800 dollars; 1834 persons produced carriages and waggons to the value of 1,397,149 dollars, with a capital of 644,966 dollars; sixty-four flouring mills manufactured 168,797 barrels of flour, and with other mills employed 1288 persons, and a capital of 2,641,200 dollars; eight rope-walks employed sixty persons, and produced cordage to the value of 93,075 dollars, with a capital of 37,305 dollars; ships were built to the value of 344,240 dollars; furniture employed 517 persons, producing to the value of 176,566 dollars, with a capital of 180,525 dollars; 572 persons produced bricks and lime to the value of 376,805 dollars; 205 brick and 861 wooden houses were built by 2086 persons, at a cost of 1,092,052 dollars. The whole amount of capital employed in manufactures in the state was 11,517,582 dollars.

Education.—The college of New Jersey, or Nassau Hall, was founded in 1798, and is one of the principal colleges in the county. It has educated many distinguished men, and is flourishing. Connected with it is the Princeton Theological Seminary, supported by the Presbyterians, and which is their principal place of theological education. Rutgers' College (formerly Queen's College), in New Brunswick, was founded in 1770, and has latterly been a growing institution. Connected with it is a theological seminary, established by the Dutch Reformed church, in 1784, which is a respectable institution. In these institutions there were, in 1840, 443 students; there were in the state sixty-six academies, with 3027 students; 1207 primary and common schools, with 52,583 scholars; and 6385 persons over twenty years of age who could neither read nor write.

	dollars.	cts.		
School fund in 1841	336,068	66	Number of districts returned	894
Ditto in 1842	344,495	63	Number of children in the returned	
Ditto in 1843	350,058	02	districts	71,849

There are about 1500 school districts.

The sum of 30,000 dollars was duly distributed to the several county collectors from the income of the state fund.

The whole amount of moneys paid by the township collectors to the trustees of districts in townships, from which reports have been received, is 60,330 dollars 55 cents.

Religion.—Of the principal religious denominations, in 1835, the Presbyterians had 105 ministers; the Dutch Reformed, forty-eight churches and forty-two ministers; the Baptists, eighty churches and about as many ministers; the Episcopalians, thirty ministers, including one bishop; the Methodists about seventy ministers, and a greater number of congregations; the Friends, sixty-seven meetings. Besides these, there were a few Congregationalists, Roman Catholics, and Universalists.

Banks.—In January, 1840, this state had twenty-six banks, with an aggregate capital of 3,822,607 dollars, and a circulation of 1,414,708 dollars.—*Official Returns. U. S. Gaz.*

Of this amount, 11,090 dollars 85 cents is unproductive, and of doubtful value.					

Debt.—New Jersey may be considered as without a state debt; for, in 1840, the total debt due amounted only to 83,283 dollars=17,697*l.* 13*s.* sterling.

Public Works.—The Morris canal was begun in 1824, and completed in 1836, and cost about 2,500,000 dollars. It extends from Easton, on the Delaware, to Jersey city, 101 miles. A large amount of coal, from the coal region of Pennsylvania, is transported on it. It has recently been widened at a great expense. The Delaware and Raritan canal extends from New Brunswick, on the Raritan, to Bordentown, on the Delaware, below Trenton, and is forty-three miles in length. It forms part of an important communication between the cities of New York and Philadelphia. Salem canal extends from Salem creek, four miles to Delaware river.

Railroads.—The railroads of this state are more important even than her canals. The Camden and Amboy railroad was incorporated in 1829, and completed in 1832, extending from Camden, on the Delaware, opposite to Philadelphia, to South Amboy, at the mouth of the Raritan, sixty-one miles. The New Jersey railroad was incorporated in 1832, and opened in 1836, extending from Jersey city, through Newark, New Brunswick, and Trenton, to Bordentown, where it forms a junction with the Camden and Amboy road. The Paterson railroad was incorporated in 1831, and completed in 1834, and branches off from the New Jersey railroad at Bergen Hill, and extends fifteen miles to Paterson. The Morris and Essex railroad extends from Newark to Morristown, twenty miles. The Elizabethport and Somerville railroad communicates between the two places, twenty-five miles. The Camden and Woodbury railroad extends from the one place to the other, nine miles.

TRADE and Commerce of New Jersey, from 1791 to 1843, Compiled from Official Documents.

* For nine months only, the end of the current year being charged from the 30th of September to the 30th of June.

PRINCIPAL PORTS AND TOWNS IN NEW JERSEY.

BELLEVILLE, three miles and a half north-east of Newark, sixty-nine miles north-east of Trenton, situated on the west side of the Passaic river. It has fine mill streams, and various mills and manufactories. The township had, in 1840, twelve stores, capital 22,250 dollars; four fulling mills, two woollen factories, one cotton factory, 1000 spindles, one dyeing and printing establishment, one paper factory, two flouring mills, one grist mill. Capital in manufactures, 479,450 dollars. Population, 2466.

BURLINGTON, city, port of entry, twelve miles south of Trenton, seventeen miles north-east of Philadelphia, in 40 deg. 5 min. 10 sec. north latitude, and 72 deg. 52 min. 37 sec. west longitude. Population, in 1830, 2670; in 1840, 3434. It is pleasantly located on the east bank of the Delaware. Encircled on the south and east by a small stream, so as to form an island, one mile and a quarter long, and three quarters of a mile wide, connected with the main land by four bridges and causeways. It had, in 1840, six churches—one Episcopal, one Presbyterian, one Friends, two Methodist, and one Baptist—a city hall, a lyceum, a bank, a library, three extensive boarding schools, and a free school, established in 1682. It is regularly laid out, with streets intersecting each other at right angles. The bank of the river is a beautiful grassy plain, bordered by elegant

dwellings, chiefly country seats of gentlemen of Philadelphia. The residence of the Bishop of New Jersey is a handsome Gothic structure. Burlington was founded in 1678, and incorporated as a city in 1784. Tonnage, in 1840, 3851. It had fifteen stores, capital 57,500 dollars; one tannery, one pottery, four grist mills, two saw mills. Capital in manufactures, 89,650 dollars.

CAMDEN, city, and port of entry, twenty-nine miles south-south-west of Trenton. It is situated on the east side of the Delaware river, opposite to Philadelphia. The city consists of three parts—a central or principal part, and a northern and southern village or suburb—from each of which is a ferry to Philadelphia. The ship channel is on the Philadelphia side, but ships of the largest class come up to the lower village, and vessels of 150 tons to the central parts of Camden, at high tide. Camden has six churches—one Baptist, one Episcopal, two Methodist, and two Friends—an academy, a bank, 400 dwellings, and seventy or eighty buildings occupied in manufactures, and considerable commerce. It has several public gardens. The Camden and Amboy railroad, leading from New York city, terminates here. A railroad also proceeds south to Woodbury. There were, in 1840, thirteen stores, capital 28,400 dollars; two lumber yards, capital 18,000 dollars; one turpentine factory, one grist mill, five saw mills, three printing offices, three weekly newspapers, one periodical, capital in manufactures, 224,050 dollars. Population, 3371.

ELIZABETHTOWN, forty-four miles north-east of Trenton, situated on the Elizabethtown creek, two miles and a half from its entrance into Staten Island sound. The New Jersey railroad, and the Elizabethtown and Somerville railroad, pass through it. It contains a court house, gaol, a bank, an insurance office, twelve stores, and about 500 dwellings. Vessels of thirty tons come up to the place, and of 300 tons to the port at the mouth of the river. It contains about 2500 inhabitants.

JERSEY CITY, fifty-eight miles north-east of Trenton, situated on the west side of the Hudson river, opposite to New York, with which it is connected by a ferry, on which three steamboats are constantly plying. The ground on which it is built projects into the Hudson river, having bays north and south of it. It is handsomely laid out, with broad streets, crossing each other at right angles. It contained, in 1840, a bank, an extensive pottery, where delfware is produced to the annual amount of 200,500 dollars; a flint glass factory, which employs 100 hands, producing plain and cut glass to the amount of 200,000 dollars annually; three lumber yards, with a capital of 3000 dollars; two iron foundries, and 300 dwellings, many of them large and elegant. The New Jersey railroad, which is continued to Philadelphia, and the Paterson and Hudson railroad commence here, and have a fine depot; and the Morris canal, 101 miles long, connecting the Delaware and Hudson rivers, terminates here, with a large basin. The Thatched Cottage Garden is a beautiful place of summer resort. It had, in 1840, twenty-three stores, capital 27,000 dollars; two printing offices, one bindery, two weekly newspapers. Capital in manufactures, 203,000 dollars. Eleven schools, 339 scholars. Population, 3072. Directly west of Jersey city is a settlement called Harsimus, which contained, in 1840, one iron foundry, one rope walk, one starch factory, and about twenty-five dwellings. To the north of this is another considerable settlement, called Pavonia, which contains three carpet factories, and about fifty dwellings. Both of these may be considered as suburbs of Jersey City.

NEW BRUNSWICK, city, twenty-nine miles south-west of New York, twenty-seven miles north-east of Trenton, 193 miles from Washington, situated on the west bank of the Raritan river, fourteen miles from its entrance into Raritan bay, at Amboy. The streets immediately on the river are narrow, and the ground is low. The streets on the upper bank are wide, and contain many fine buildings. A toll bridge here crosses the Raritan, rebuilt in 1811, and cost 86,687 dollars. A railroad bridge crosses the river a little above. It contained, in 1840, a court house, gaol, seven churches—one Dutch Reformed, one Presbyterian, one Episcopal, one Baptist, one Methodist, one coloured Methodist, and one Roman Catholic—two banks, 120 stores, 800 dwellings, and 8693 inhabitants. It is the seat of Rutgers College, founded in 1770, which has a president, ten professors or other instructors, 370 alumni, of whom seventy-seven have been ministers of the gospel, eighty-two students, and 1200 volumes in its libraries. The Delaware and Raritan canal commences here, extending forty-three miles to Trenton, is seventy-five feet wide and seven feet deep, admitting the passage of sloops of from seventy-five to 100 tons burden. The New Jersey railroad passes through the city, forming a part of the chain of railroads from New York to Philadelphia, Baltimore, and Washington.

NEWARK, city, port of entry, nine miles west of New York, forty-nine miles north-east of Trenton, is situated on the west side of the Passaic river, three miles from its entrance into Newark bay, and is the most populous and flourishing place in the state. It is in 40 deg. 44 min. north latitude, and 2 deg. 44 min. east longitude from Washington. The population, in 1830, was 10,950; in 1840, 17,290. Of these, 206 were employed in commerce, 2424 in manufactures and trades, fifty-nine in navigating the ocean, rivers, &c., 101 in the learned professions.

The river is navigable to this place for vessels of 100 tons burden, and the Morris canal passes through it. There is a communication, a great part of the year, twice a day by steamboat to New York, and several times a day by railroad. The place is regularly laid out, the streets are generally broad and straight, and many of the houses are neat and elegant. Two

to the 30th of

east of Trenton mills and four fulling establishments, 479,450

north-east of Trenton longitude. The Delaware one mile and four bridges Friends, two five boarding intersecting and by elegant

large public grounds, bordered by lofty trees and bounded by the principal avenues, add much to the beauty of the place. The city is abundantly supplied with pure water, brought by a company from a fine spring, two miles distant, and distributed in the city in iron pipes of a total length of seven miles. Several of the churches are handsome buildings. The court house is built of brown freestone, in a commanding position in the west part of the city, and is a large and elegant building of the Egyptian architecture.

There are seventeen places of worship—five Presbyterian, one Associate Reformed, two Baptist, three Methodist, one Episcopal, one Dutch Reformed, one African Methodist, one Roman Catholic, one Bethel, and one Universalist. There were, in 1840, three banks, with an aggregate capital of 1,450,000 dollars, of which not more than two-thirds have been paid in. There is an apprentices' library, a circulating library, a mechanics' association for scientific and literary improvement, who have a valuable library and philosophical apparatus, and who support public lectures; and a young men's literary association.

The commerce of Newark is considerable and increasing. The coasting trade employs sixty-five vessels of 100 tons each. A whaling and sealing company was incorporated in 1833, which is prosecuting the business. The tonnage of this port, in 1840, was 6687 tons. There were, in 1840, two foreign commercial and two commission stores, capital 15,000 dollars; 114 retail stores, capital 321,250 dollars; six lumber yards, capital 38,000 dollars; fisheries, capital 60,000 dollars; precious metals, value produced, 154,312 dollars; manufactures of leather, capital 285,951 dollars; two breweries, capital 13,000 dollars; carriages, capital 218,700 dollars; five printing offices, two binderies, one daily, and three weekly newspapers, and three periodicals; capital 32,300 dollars. Total capital in manufactures, 1,511,339 dollars.

This town was first settled in 1666, by a company from Guilford, Branford, Milford, and New Haven, Connecticut. They purchased the territory, including several neighbouring towns, of the Indians, for 130*l.* New England currency, twelve Indian blankets, and twelve guns. They formed a government, and administered it, often disputing the claims of the proprietaries, by holding to an original and superior right.

PATERSON, situated on the Passaic river, near the great falls, and four miles from tidewater, thirteen miles north of Newark, seventy-five miles north-east-by-north of Trenton, seventeen miles north of New York. It was established by a society, incorporated in 1791, with a capital of 1,000,000 dollars, for the establishment of manufactures, projected by Alexander Hamilton. The plans of the company, after heavy expenditures, through the many obstacles with which manufactures had then to struggle, in a great measure failed, and were abandoned. But their successors took up the work, and have carried it forward to distinguished success. By a dam in the river, four feet and a half high, and a canal round the falls, a vast water power is afforded, and a great manufacturing village has grown up. It has a court house and gaol, and many spacious manufactories, built chiefly of stone. The Morris canal, which passes near the village, and a railroad to Jersey city, give it an easy access to the city of New York. The falls of the Passaic, at this place, by their picturesque beauties, attract many visitors. The river has a perpendicular fall of seventy-two feet, and when the water is high, the fall is not only beautiful but grand.

There were, in 1840, 104 stores, capital 192,950 dollars; machinery manufactured, value 607,000 dollars; four fulling mills, one woollen factory, capital 20,000 dollars; nineteen cotton factories, 45,036 spindles; with two dyeing and printing establishments, capital 926,000 dollars; one tannery, two paper factories, capital 82,000 dollars; one saw mill, two printing offices, two binderies, two weekly newspapers. Capital in manufactures, 1,792,500 dollars. Population, 7596.

PERTH AMBOY, city, and port of entry, forty-six miles north-east of Trenton. Situated at the head of Raritan bay, at the confluence of Raritan river with Arthur kill, or Staten Island sound. The harbour is spacious and safe, easy of access, with twelve feet of water in the estuary, and from twenty-four to twenty-six feet in the main channel. It was laid out in 1698, and an effort was early made to constitute it the capital of the province. Its present city charter was given in 1784. It had, in 1840, one pottery, nine stores, capital 38,500 dollars. Population, 1903. The collection district includes all the east part of New Jersey south of Elizabethtown, excepting the district of Little Egg harbour. Tonnage, in 1840, 17,843.

PORT ELIZABETH, seventy-three miles south-south-west of Trenton. Situated on the Manamuskinn creek, near its entrance into the Maurice river, fourteen miles from Delaware bay. It had, in 1840, four stores, one glass factory, four grist mills, three saw mills in the vicinity, and 100 dwellings. Vessels of 120 tons come to the place, and wood and lumber are extensively exported.

PRINCETON, eleven miles north-east of Trenton, is pleasantly situated, and neatly built, chiefly on one extended street, and contained, in 1840, numerous stores, 200 dwellings, and about 1200 inhabitants, exclusive of those connected with the literary institutions. The Delaware and Raritan canal runs within one mile of the bay, and the office of the company is established here. It derives its greatest importance from the College of New Jersey, founded in 1746, at Elizabeth-

town, removed to Princeton in 1757, which has a president, and twelve professors or other instructors, 2183 alumni, of whom 444 have been ministers of the gospel, 263 students, and 11,000 volumes in its libraries. Its buildings are neat, convenient, and spacious. The Princeton Theological Seminary of the Presbyterian church is located here, founded in 1812, has five professors, 113 students, 714 educated, and 7000 volumes in its libraries. Its buildings are neat and extensive. There were, in 1840, in the township nine stores, capital 47,600 dollars; one lumber yard, capital 2500 dollars; one tannery, two printing offices, one bindery, one weekly newspaper, two grist mills, one saw mill. Capital in manufactures, 67,300 dollars. Population, 3055.

SOUTH AMBOY has a good harbour. The Camden and Amboy railroad runs through and terminates here, and is connected by a steamboat line with the city of New York. It contains a large manufactory of stoneware, from excellent clay in the vicinity, three stores, one pottery, one paper factory, one grist mill, one saw mill. Capital in manufactures, 24,100 dollars. Population, 1825.

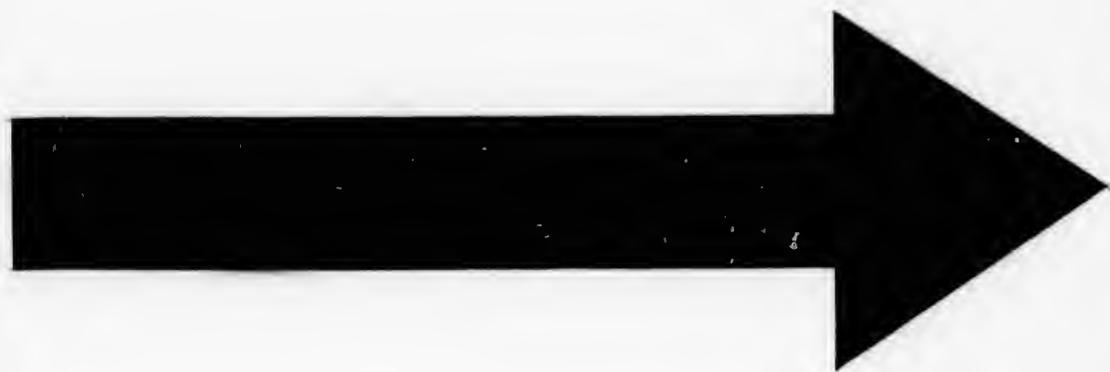

TRENTON, city, is situated on the east side of the Delaware, opposite the falls, and is in 40 deg. 13 min. north latitude, and 75 deg. 48 min. west longitude from Greenwich, and 2 deg. 16 min. east longitude from Washington. It is ten miles south-west of Princeton, twenty-six miles south-west of New Brunswick, thirty miles north-east of Philadelphia, sixty miles south-west of New York, 166 miles from Washington. The population, in 1810, was 3003; in 1820, 3942; in 1830 3925; in 1840, 4035. Of these, 103 were employed in commerce, 571 in manufactures and trades forty-one in the learned professions. The city is at the head of steamboat and sloop navigation. It is regularly laid out, and has many good houses, stores, and other buildings. The villages of Mill Hill, Bloomsbury, and Lambertson, combined in the borough of South Trenton, extending a mile and a half down the Delaware, are suburbs of the city, and in a general description, should be considered as belonging to it. In the city proper, there were, in 1840, a state house, 100 feet by sixty feet, built of stone, and stuccoed in imitation of granite; it is beautifully situated on the bank of the Delaware, and commanding a fine view of the river and the surrounding scenery; a house for the residence of the governor of the state, and three fire-proof offices; two banks, a public library, established in 1750, a lyceum, seven churches—one Presbyterian, one Dutch Reformed, one Episcopal, two Friends, one Methodist, and one African Methodist; and in South Trenton, a court house, state prison, four churches—one Baptist, one Reformed Baptist, one Methodist, and one Roman Catholic—and about 2000 inhabitants. There were, in 1840, fifty retail stores, capital 196,300 dollars; four lumber yards, capital 49,000 dollars; three tanneries, one brewery, one pottery, three paper factories, capital 30,000 dollars; one rope walk, two flouring mills, two grist mills, three saw mills, three printing offices, two binderies, two weekly and one semi-weekly newspapers. Total capital in manufactures, 247,800 dollars. Four academies, 104 students, ten schools, 314 scholars.

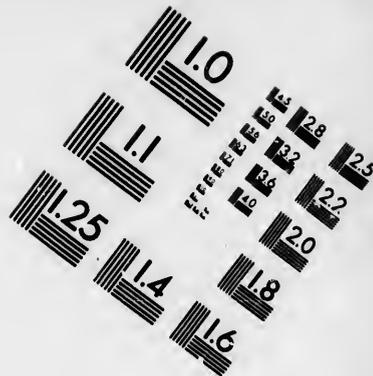

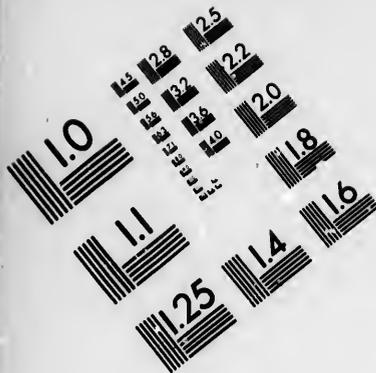

At the foot of the falls or rapids a beautiful covered bridge crosses the Delaware, 1100 feet long, resting on five arches, supported on stone piers. The Delaware and Raritan canal, forming a sloop navigation from Trenton to Brunswick, passes through the city, and is here entered by a feeder taken from the Delaware, twenty-three miles above the city. The canal crosses the Assunpink creek east of the town, in a fine stone aqueduct. Above the falls the Delaware is navigable for large boats as far as Easton, which adds much to the commercial advantages of Trenton. The New Jersey railroad passes through the place. A company has been chartered, with a capital of 200,000 dollars, for the purpose of taking the water from the river by means of a dam and raceway, and carrying it along and below the city, with outlets for mills, which will create a very extensive water power for manufacturing purposes. The Assunpink creek also, which enters the Delaware below the city, furnishes some water power.

This town was first settled about the year 1720. It is memorable for the "Battle of Trenton," December the 25th, 1776, when 1000 Hessians were captured by the Americans under General Washington.

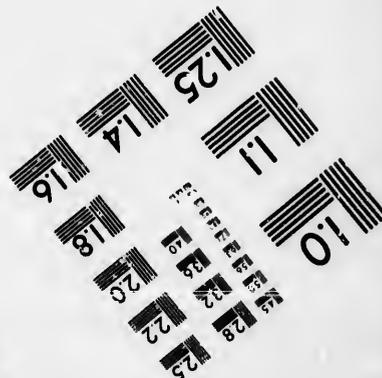

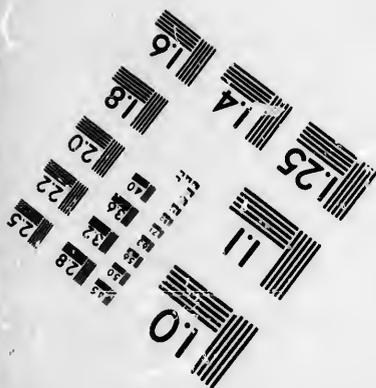

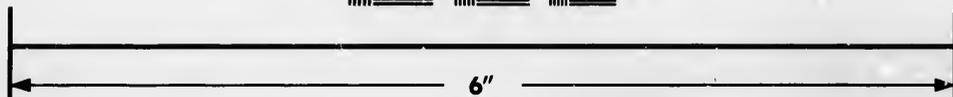

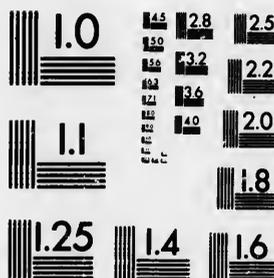

IX. PENNSYLVANIA.

PENNSYLVANIA is bounded north by New York and Lake Erie; east by New Jersey, from which it is separated by the Delaware river; south by Delaware, Maryland, and Virginia; and west by Virginia and Ohio. It lies between 39 deg. 43 min. and 42 deg. north latitude, and between 74 deg. and 80 deg. 40 min. west longitude; and between 3 deg. 31 min. west, and 2 deg. 18 min. east from Washington. It is about 307 miles long, and 160 broad; its area comprises about 46,000 square miles, or 29,440,000 acres. The number of its inhabitants, in 1790, was 434,373; in 1800, 602,545; in 1810, 810,091; in 1820, 1,049,313; in 1830, 1,347,672; in 1840, 1,724,033. Of the total number, 844,770 were white males; 831,345 white females; 22,752 free coloured males; 25,102 free coloured females. Employed in agriculture, 207,533; in commerce, 15,338; in manufactures and trades, 105,883; in mining, 4603; navigating the ocean, 1815; navigating the lakes, rivers, &c., 3951; learned professions, &c., 6706.

The state is divided into fifty-five counties, which, with their population, in 1840, and their capitals, are as follow: *Eastern District*—Adams, 23,044, C. Gettysburg; Berks, 64,569, C. Reading; Bucks, 48,107, C. Doylestown and Bristol; Chester, 57,515, C. West Chester; Cumberland, 30,953, C. Carlisle; Dauphin, 30,118, C. Harrisburg; Delaware, 19,791, C. Chester; Franklin, 37,793, C. Chambersburg; Lancaster, 84,203, C. Lancaster; Lebanon, 21,872, C. Lebanon; Lehigh, 25,785, C. Allentown; Monroe, 9879, C. Stroudsburg; Montgomery, 47,241, C. Norristown; Northampton, 40,996, C. Easton; Perry, 17,096, C. Bloomfield; Philadelphia, 258,037, C. Philadelphia; Pike, 3832, C. Milford; Schuylkill, 29,053, C. Orwigsburg; Wayne, 11,848, C. Honesdale; York, 47,010, C. York. *Western District*—Alleghany, 81,235, C. Pittsburg; Armstrong, 28,365, C. Kittanning; Beaver, 29,368, C. Beaver; Bedford, 29,335, C. Bedford; Bradford, 32,769, C. Towanda; Butler, 22,378, C. Butler; Cambria, 11,236, C. Ebensburg; Centre, 20,492, C. Bellefonte; Clearfield, 7834, C. Clearfield; Clinton, 8323, C. Lock Haven; Columbia, 24,267, C. Danville; Crawford, 31,724, C. Meadville; Erie, 31,344, C. Erie; Fayette, 33,574, C. Union; Greene, 19,147, C. Waynesburg; Huntingdon, 35,484, C. Huntingdon; Indiana, 20,782, C. Indiana; Jefferson, 7253, C. Brookville; Juniata, 11,080, C. Mifflintown; Luzerne, 44,006, C. Wilkesbarre; Lycoming, 22,649, C. Williamsport; McKean, 2975, C. Smithport; Mercer, 32,873, C. Mercer; Mifflin, 13,092, C. Lewistown; Northumberland, 20,027, C. Sunbury; Potter, 3371, C. Cowdersport; Somerset, 19,650, C. Somerset; Susquehanna, 21,195, C. Montrose; Tioga, 15,498, C. Wellsborough; Union, 22,787, C. New Berlin; Venango, 17,900, C. Franklin; Warren, 9278, C. Warren; Washington, 41,279, C. Washington; Westmoreland, 42,699, C. Greensburg.

Soil and Agriculture.—The Alleghany mountains traverse the state from south-west to north-east, and several ramifications branch from, or run parallel with the principal range. Mountainous tracts over the central parts of the state comprehend nearly one-seventh of its whole area. The south-east and north-west districts are generally level or undulating. The soil east of the mountains is generally fertile and rendered highly productive. The south-east, on both sides of the Susquehanna, the lands are rich, and having been long settled, it is nearly all under high cultivation. Between the head-waters of the Alleghany and Lake Erie, the soil is also very fertile. In the mountainous region the formation of the soil is often rugged, and in many parts sterile; except in the valleys, which are very rich; west of the Alleghany, and especially near the streams of the Ohio. Some authorities consider Pennsylvania better adapted for grazing than for the plough. The authors of the "United States' Gazetteer" are of a different opinion, and observe, "The most important production of the state by far, is wheat, which grows here in great perfection; and next in value is Indian corn. Rye, barley, buckwheat, oats, hemp, and flax, are also extensively cultivated. Cherries, peaches, and apples, are abundant, and much cider is made. Although the state is better adapted to grain than to grazing, yet in many parts there are large dairies, and fine horses and cattle are raised."

In 1840, there were in the state, 361,558 horses and mules; 1,161,576 neat cattle; 1,755,597 sheep; 1,485,360 swine. There was produced poultry to the value of 681,979 dollars. There were raised 12,993,218 bushels of wheat; 206,858 bushels of barley; 20,485,747 bushels of oats; 6,544,654 bushels of rye; 2,096,016 bushels of buckwheat; 14,077,363 bushels of Indian corn; 3,028,657 lbs. of wool; 48,694 lbs. of hops; 32,708 lbs. of wax; 9,477,343 bushels of potatoes; 1,302,685 tons of hay; 2644 tons of hemp and flax; 325,018 lbs. of tobacco; 7262 lbs. of silk cocoons; 2,265,755 lbs. of sugar. The products of the dairy amounted to 3,152,987 dollars; and of the orchard, to 810,512 dollars. There were made, 14,328 gallons of wine. The value of lumber was 1,146,355 dollars.—*Official Returns.*

Minerals.—Iron ore is abundant, and has been extensively wrought. West of the Alleghany ridge, bituminous coal is found, of an excellent quality, and in inexhaustible fields. In Pittsburg and the vicinity it is extensively used for manufacturing purposes. In this region salt springs occur, which afford a strong brine. The anthracite coal region, east of the Blue ridge, and between it and the north branch of the Susquehanna, is extensively wrought. The Mauch Chunk, Schuylkill, and Lynken's valley coal-field, extends from the Lehigh, across the head waters of the Schuylkill, and is sixty-five miles in length, with an average breadth of about five miles. The Lehigh coal, procured at the northern portion of this field, is heavy, hard, and ignites with difficulty. At Mauch Chunk this coal is found near the surface, and extends to the depth of from twelve to fifty or sixty feet. The Schuylkill coal burns with less difficulty than the Lehigh. The Lackawanna coal-field extends from Carbondale, on the Lackawannock, to ten miles below Wilkesbarre, on the Susquehanna. This field is accessible by the Carbondale railroad and the Delaware and Hudson canal, extending to the Hudson river. Limestone is abundant in all parts of the state, and in the south-east parts, marble of good quality is quarried.

Climate.—In the mountainous region of Pennsylvania the winters are severe. The weather is colder on the western than the eastern side of the Alleghany, and in both the rivers are frozen between one and two months in the year. In the south-east parts the winters are mild, and the climate is generally considered healthy.

Rivers.—The Delaware river which flows along the eastern border of Pennsylvania, is navigable for

able for the Delaware, Philadelphia, Chesapeake, Alleghany, miles along the gahela, small river.

gable for large ships to Philadelphia. The Lehigh, after a course of seventy-five miles, flows into the Delaware, at Easton. The Schuylkill, 130 miles long, joins the Delaware, six miles below Philadelphia. The Susquehanna rises in New York, flows south through this state, and enters Chesapeake bay, in Maryland. It is obstructed by falls and rapids. The Juniata rises in the Alleghany mountains, and after a course of 180 miles, falls into the Susquehanna, eleven miles above Harrisburg. The Alleghany river, flowing 400 miles from the north, and the Monongahela, 300 miles from the south, unite at Pittsburg, and form the Ohio. The Youghiogony, a small river, flows into the Monongahela.

Trade.—In 1840, there were in the state 194 commercial and 178 commission houses engaged in foreign trade, with a capital of 3,662,811 dollars; 6534 retail dry goods and other stores, with a capital of 35,629,170 dollars; 5064 persons engaged in the lumber trade, employing a capital of 2,241,040 dollars; 2146 persons employed in internal transportation, who, with 466 persons employed as butchers, packers, &c., employed a capital of 727,850 dollars; fifty-eight persons were employed in the fisheries, with a capital of 16,460 dollars.—*Official Returns.*

Manufactures.—In 1840, there were manufactured home-made or family goods to the value of 1,292,429 dollars; 235 woollen manufactories, and 337 fulling mills, employing 2909 persons, producing articles to the value of 2,298,861 dollars, and employed a capital of 1,500,546 dollars; 106 cotton manufactories, with 146,494 spindles, employed 5522 persons, produced articles to the value of 3,013,007 dollars, and employed a capital of 3,325,400 dollars; 2977 persons mined 859,686 tons of anthracite coal, with a capital of 4,334,102 dollars; 1798 persons produced 11,620,654 bushels of bituminous coal, with a capital of 300,416 dollars; 213 furnaces, produced 98,395 tons of cast iron, and 169 forges, &c., produced 87,244 tons of bar iron, employed 11,522 persons and a capital of 7,781,471 dollars; eighty-seven paper manufactories produced to the value of 792,335 dollars, and other paper manufactures to the value of 95,500 dollars, the whole employed 794 persons and a capital of 581,800 dollars; hats and caps were manufactured to the value of 819,451 dollars, and straw bonnets to the value of 80,512 dollars, employing 1467 persons and a capital of 449,107 dollars; 1149 tanneries employed 3392 persons, and a capital of 2,729,536 dollars; 2132 other leather manufactories, such as saddleries, &c., produced articles to the value of 3,453,249 dollars, and employed a capital of 1,249,923 dollars; thirty powder mills manufactured 1,184,225 lbs. of powder, employed fifty-eight persons and a capital of 66,800 dollars; drugs, paints, &c., employed 519 persons, producing articles to the value of 2,179,625 dollars, and turpentine and varnish to the value of 7865 dollars, the whole employed 519 persons, and a capital of 2,179,625 dollars; twenty-eight glass-houses, and fifteen glass cutting establishments, employed 835 persons, produced articles to the value of 772,400 dollars, with a capital of 714,100 dollars; 182 potteries employed 322 persons, produced articles to the value of 157,902 dollars, and employed a capital of 75,562 dollars; 1969 persons produced machinery to the value of 1,993,752 dollars; 763 persons produced hardware and cutlery to the value of 783,492 dollars; 168 persons produced five cannon and 21,571 small-arms; 245 persons manufactured the precious metals to the value of 2,679,075 dollars; 536 persons worked granite and marble to the value of 443,610 dollars; 3858 persons made bricks and lime to the value of 1,719,796 dollars; 2770 persons manufactured carriages and waggons to the value of 1,203,732 dollars, with a capital of 559,831 dollars; 1005 distilleries produced 6,228,768 gallons, and eighty-seven breweries produced 12,765,974 gallons, employed 1601 persons and a capital of 1,585,771 dollars; 725 flouring mills produced 1,181,530 barrels of flour, and with other mills, employed 7916 persons, produced articles to the value of 9,232,515 dollars, and employed a capital of 7,779,784 dollars; 353 persons manufactured 5,097,690 lbs. of soap, 2,316,843 lbs. of tallow candles, and 5002 lbs. of spermaceti candles, and employed a capital of 294,442 dollars; ships were built to the value of 668,015 dollars; 2357 persons manufactured furniture to the value of 1,151,167 dollars, with a capital of 714,817 dollars; 1991 brick houses, and 2406 wooden houses, were built, employed 9881 persons, and cost 5,339,530 dollars; 221 printing offices, forty-six binderies, twelve daily, ten semi-weekly, and 162 weekly newspapers, and forty-two periodicals, employed 1702 persons and a capital of 680,340 dollars. The whole amount of capital employed in manufactures in the state, was 31,629,415 dollars.—*Official Returns.*

Education.—The following are the names of the numerous colleges of Pennsylvania, and the date of their foundation: University of Pennsylvania, Philadelphia, 1755; Dickinson College, Carlisle, 1783; Jefferson College, Cannonsburg, 1802; Washington College, Washington, 1806; Alleghany College, Meadville, 1815; Pennsylvania College, Gettysburgh, 1832; Lafayette College, Easton, 1832; Marshall College, Mercersburg, 1836. Besides these are the Medical Department of the University of Pennsylvania, 1765; Jefferson Medical College, Philadelphia, 1824; Medical Department of Pennsylvania College, Philadelphia, 1839. The Theological Seminary of the Lutheran church, Gettysburgh, 1826; German Reformed, York, 1825; Western Theological Seminary, at Alleghany, 1828; Theological Seminary at Cannonsburg; and Theological Seminary at Pittsburg. In all these seminaries there were 2034 students, in 1840. There

were in this state 290 academies, with 15,910 students; 4968 primary and common schools, with 179,989 scholars. There were 33,940 persons over twenty years of age, who could neither read nor write.

"In the first school district, embracing the city and county of Philadelphia, the number of schools in 1843 was 215; of which, one is the high school, forty grammar schools, eighteen secondary, seventy-six primary, and eighty not classified. The whole number of teachers, including the professors of the high school, is 499; eighty-seven males, and 412 females. The aggregate amount of salaries is 136,843 dollars; average to each, 274 dollars 28 cents. The number of pupils is 33,384, exhibiting an increase of 6222 since the last report. A number of schools for coloured children are embraced in the above summary, which is taken from an abstract from the semi-annual returns. The expenses of the board of control for all purposes, except the erection and fitting-up of school houses, have been 288,766 dollars 66 cents for a year and a half; or an average of 192,511 dollars 18 cents per annum. This includes cost of tuition, fuel, books, stationery, and supplies of every description; also, the expenses of the secretary of the board and the comptroller, repairing school houses, and all the other items which are included by the auditors under the head of general expenses. Divide this sum by 33,384 (the total number of scholars,) and it will be seen that the annual average expense of each pupil for all the purposes above stated, has been 5 dollars 76 cents. The total amount of expenditure in 1842 was 255,852 dollars 92 cents. The expenditure from January the 1st to June the 30th, 1843, was 118,028 dollars 76 cents."—*American Almanac.*

Religious Denominations.—In 1836, the Presbyterians, including the Associate Reformed, had about 400 ministers; the Baptists, 140; the Methodists, about 250; German Reformed, 73; Episcopalians, 70; and the Quakers, 150 congregations. There were several other denominations less numerous. The principal have gradually increased since that time.

Public Works: Canals.—The canal from Philadelphia, including a railroad from Johnstown to Hollidaysburg, thirty-seven miles, over the Alleghany to Pittsburgh, is 400 miles long. There is a tunnel on the railroad 870 feet long, 200 feet below the top of the mountain. The Schuylkill Navigation canal extends 108 miles from Philadelphia to Port Carbon; the Union canal, eighty-two miles from Reading to Middletown; the Lehigh, eighty-four miles from Easton to Stodartsville; the Lackawaxen, twenty-five miles from Delaware river to Honesdale; the Conestoga, eighteen miles from Lancaster to Safe Harbour; the Codorus, eleven miles from York to Susquehanna river; Bald Eagle, twenty-five miles from West Branch canal to Bellefonte; the Susquehanna, forty-five miles from Wrightsville to Havre de Grace, and several small canals.—*U. S. Gaz. See also Debt and Finances of Pennsylvania, hereafter.*

Railroads.—The Columbia, eighty-one miles from Columbia to Philadelphia; Valley, twenty miles from Norristown to Columbia railroad; Harrisburg and Lancaster, thirty-five miles; Cumberland Valley, fifty miles from Harrisburg to Chambersburg; Westchester, ten miles from Columbia railroad to Westchester; Franklin, thirty miles from Chambersburg to Williamsport; York and Wrightsville, thirteen miles; Strasburg, seven miles from Cumberland Valley railroad to Strasburg; Philadelphia and Reading, ninety-five miles from Reading to Pottsville; Little Schuylkill, twenty-three miles from Port Clinton to Tamaqua; Danville and Pottsville, forty-four miles and a half from Pottsville to Sunbury; Little Schuylkill and Susquehanna, 106 miles from Tamaqua to Williamsport; Beaver Meadow branch, twelve miles from Lardner's Gap to Beaver Meadow railroad; Williamsport and Elmira, seventy-three miles and a half between the two places; Corning and Blossburg, forty miles between the two places; Mount Carbon, seven miles and a quarter from Mount Carbon to Norwegian Creek; Schuylkill Valley, ten miles from Port Carbon to Tuscarora; branches of Schuylkill Valley, fifteen miles; Schuylkill, thirteen miles from Schuylkill to the Valley; Mill Creek, nine miles from Port Carbon to Coal Mine; Mine Hill and Schuylkill Haven, twenty miles from Schuylkill Haven to Mine Hill Gap; Mauch Chunk, nine miles from Mauch Chunk to Coal Mine; branches of Mauch Chunk, sixteen miles; Room Run, five miles and a quarter from Mauch Chunk to Coal Mine; Beaver Meadow, twenty miles from Parrisville to Coal Mine; Hazelton and Lehigh, eight miles from Hazelton Mine to Beaver Meadow railroad; Nesquehoning, five miles from Nesquehoning Mine to Lehigh river; Lehigh and Susquehanna, nineteen miles; and a half from Whitehaven to Wilkesbarre; Carbondale and Honesdale, seventeen miles and a half, connects the two places; Lykin's Valley, sixteen miles and a half from Broad Mountain to Millersburg; Pine Grove, four miles from Pine Grove to Coal Mine; Philadelphia and Trenton, twenty-six miles and a quarter from Philadelphia to Morrisville; Philadelphia, Germantown, and Norristown, seventeen miles from Philadelphia to Norristown; Germantown branch of ditto, four miles; Philadelphia and Wilmington, twenty-seven miles from Philadelphia to Wilmington.—*U. S. Gaz. See also Debt and Finances of Pennsylvania, hereafter.*

PUBLIC DEBT, RESOURCES, AND FINANCES OF PENNSYLVANIA.

The great extent of territory—being more than four times as large as Holland—the large number of the population, the fertility of the soil, the abundance of coal and iron, the navigable rivers and seaports of Pennsylvania, ought to render this state as rich and as honourable in fulfilling her public and private engagements as any country in the world. If we have extolled the dignified public and private integrity of Massachusetts, a state, the greater part of which is naturally barren—and of New York, and the other states north-east of the Delaware:—if we have in a former work described the public and private honour of the people of Holland, in all periods of their history, it is painful to be compelled to refuse that tribute of respect to the citizens of the country founded by William Penn. That there are among them, many who are as honourable and as virtuous as among the best people in the world, we readily admit, and we know that this is a fact. But let not the most honest or the most virtuous among them, soothe themselves with the belief, that they are not, by the world, classed with the delinquents. They may, on the contrary, rest assured, that a knowledge of the productive resources of the state they inhabit,—and of the power that the people have, by their suffrages, to pass honest laws, and to raise an adequate revenue, will, until they purge themselves of the obligations which they continue to refuse to fulfil, cause every citizen of Pennsylvania to be viewed with distrust,—and in the moral scale, far, immeasurably far, beneath the citizens of New England, New York, New Jersey, Delaware, and the other states, who have sacredly paid their debts. We have lately heard revived that which was nearly forgotten, that an unwillingness to pay was an early characteristic of the inhabitants,—that they, from their defalcation in paying that which was more than due from them to the great and virtuous founder of the country, allowed him to suffer, in old age and infirmity, the bitter evils of poverty.

We would, therefore, urge upon every father, upon every mother, among the citizens of this delinquent state, however virtuous they may be individually, to combine proudly and unceasingly, until they, by discharging that which is due by the whole to others, acquire an honest dignity among the nations of the earth. If they do not, although they may pay their individual debts, and live and die otherwise as virtuous men—as Christians—still the world will hereafter consider the children of the best among them, and their children's children, as the offspring of disreputable parents. We make these observations with no invidious feeling; we do so with sorrow, when we speak or write of the country planted by William Penn.

We believe, however, that the state debt of Pennsylvania will be paid; and shall add nothing further, than a view of the Resources, Finances, and Debts of the state, which we have taken altogether from American statements and accounts.

RESOURCES OF PENNSYLVANIA AND HER CREDIT.

The following statement is contained in an article published (in 1841) in the "Harrisburg (Pennsylvania) Intelligencer," and presents various important facts, in reference to the resources and credit of the state.

"The state of Pennsylvania is inhabited by 1,724,033 free people, industrious and enterprising. In 1790, the number was only 434,373.

"We have more than 28,000,000 of acres of land, and under better cultivation than any in this union, and constantly improving. It is worth at least 700,900,000 dollars. We have more than 300,000 houses, worth 300,000,000 dollars; and barns, workshops, stores, furnaces, forges, factories, and mills, worth 200,000,000 dollars more. Nor has our public debt been contracted for nothing. Our railroads and canals extend, not only to our coal and iron mines, but are designed to connect the waters of the great lakes and the great Ohio and Mississippi valleys, with the waters of the Delaware and the Chesapeake. They intersect the state in every direction, from west to east and from north to south. Including state and company works, we have more than 1000 miles of canals and 700 miles of railroads completed, and in operation, and costing more than 100,000,000 dollars. Some portions of these works are not yet profitable, in consequence of the unfinished links, and yet the tolls will this year, on the state works of about 700 miles, exceed 1,000,000 dollars.

"The value of the anthracite coal mines upon the Schuylkill, the Lehigh, the Swatara, the Wisconsin, the Shamokin, the Susquehanna, and the Lackawanna, which are but just beginning to pour down their mineral wealth to the markets upon the ocean, is incalculable. In 1820 the trade commenced, and 365 tons were sent to market from the Lehigh. In 1825 the trade commenced upon the Schuylkill. The Schuylkill canal was then finished. There are now about fifty-five miles of railroads, branching from the canal to the several mines, and forty-five miles of railroads under ground. About 1800 cars are employed in conveying the coal from the mines to the canal, and between 800 and 900 boats are used in conveying the coal to Philadelphia. The arrivals of vessels annually in the Schuylkill, for the conveyance of Schuylkill coal to other states, will number about 3100. 170 sloops, schooners, and barges, arrived in two days last week. The Schuylkill mines will this year produce more than 500,000 tons, and the other anthracite mining districts about the same quantity, making 1,000,000 tons, of which about 800,000 tons will be exported to other states.

"The coal trade is yet in its infancy, and increasing rapidly. The use of anthracite coal in steamboats is taking the place of wood in the eastern waters, and will be used in the steamers of the ocean as the cheapest and safest fuel. It is also coming into use in driving machinery and making iron. The mines upon the Swatara are capable of producing as much as the Schuylkill, and so are those of the Lehigh, the Wisconsin, the Shamokin, and the Susquehanna; and the Schuylkill is capable of producing four times the amount that is now mined. Improvements will soon be completed in all these mining districts. What then will be the annual worth of the anthracite coal of Pennsylvania that will be carried upon her public works?

"But we have not only anthracite, but, according to our state geologist, more bituminous coal than all Europe. Our state canals intersect this bituminous coal field in all directions. All Europe contains about 2000 square miles of bituminous coal land. Pennsylvania has 10,000 square miles, or 6,400,000 acres. It is estimated, by our state geologist, that the great western bituminous coal field of Pennsylvania contains *three hundred thousand millions of tons!* Ten thousand times more than England, Scotland, Wales, and Ireland!

"This vast mineral wealth, without the public improvements, would have been dead capital for ever. According to the returns of the county commissioners to the secretary of the commonwealth, there were mined, in 1838, in Pennsylvania, west of the Alleghany mountain, more than 2,000,000 tons of bituminous coal! Not one ton of this reached the Atlantic market. About nine-tenths of it was consumed in domestic purposes at home, in furnaces and rolling mills, and in driving machinery. One-tenth, or 200,000 tons, were shipped down the Ohio and the Mississippi. What this trade will be when the great valley is filled with population, wealth, and refinement—when Western Pennsylvania becomes the manufacturing dependence of the western states—can hardly be conjectured.

"Nor is this great bituminous coal field entirely separated from the Atlantic. We have abundance of bituminous coal, the nearest in the United States, of any quantity, to tidewater. The Virginia and Maryland mines on the Potomac, are from 180 to 200 miles from sloop navigation at Georgetown. The completion last year of the tidewater canal from Havre-de-Grace, in Maryland, to the Pennsylvania canal at Columbia, has this year, for the first time, opened a navigation for the bituminous coal of the Juniata, and the west branch of the Susquehanna, to the Chesapeake. It is estimated that the trade will this year reach 100,000 tons. The amount is unlimited which can be sent from these places on our canals to market. A railroad has been constructed,

forty miles long, from the northern end of our coal basin to Corning, on the Chemung canal of New York, leading into the Seneca lake. There are now six locomotives, and between 300 and 400 cars on this road, conveying coal from our Blossburg mines into the state of New York.

"The quantity of iron produced in Pennsylvania is equal to about one-third of the product of the whole union. Her iron is superior in quality to any other. According to the remarks of the Hon. John Irvin, in a late speech in congress, we had, in 1839, 210 charcoal furnaces, producing 98,350 tons of pig metal, and 70,000 tons of this was converted into bar iron by forges and rolling mills. More than 15,000 workmen, together making 90,000 people with their families, consume annually 7,000,000 dollars, worth of agricultural produce and merchandise. The number has increased greatly since by the establishment of anthracite furnaces.

"The amount of bar and pig iron is now worth about 7,000,000 dollars. According to the returns to the secretary of the commonwealth, there was manufactured, in 1838, 50,758 tons of castings in thirty-six counties, valued at 5,805,599 dollars. Add estimated value of cast iron in sixteen counties, at least 1,194,401 dollars, and the amount of bar, pig, and cast iron in Pennsylvania is worth 14,000,000 dollars. A considerable amount of Jersey iron is made into castings and rolled into bars in Philadelphia, and a quantity of the pigs of Western Virginia, Ohio, and Kentucky are made into castings and rolled into bars at Pittsburg.

"Having now glanced at some of the sources of the great wealth of our state, we will enumerate the following items taken from the returns of the marshals in taking the late census, from the returns of the commissioners to the secretary of the commonwealth, and other sources. The returns of the marshals are much too low, owing to a neglect of duty on their part, and the great reluctance on the part of the people to answer the questions put to them, it being circulated, for party purposes, that it was a forerunner of direct taxation by the general government. We have, however, taken these returns for our calculations, in most instances. The amount of the products of the dairy, and also the value of lumber annually produced in Pennsylvania is so manifestly untrue, that we have taken the returns of the county commissioners to the secretary of the commonwealth as our authority.

	dollars.
Value of land in Pennsylvania, including mines (28,000,000 acres)...	700,000,000
Value of 300,000 houses.....	300,000,000
Value of barns, workshops, stores, taverns, forges, and factories	200,000,000
1700 miles of canals and railroads	100,000,000
Total real estate	1,300,000,000

"Here is real estate to the amount of 1,300,000,000 dollars. A tax of three per cent upon it would pay the 35,000,000 dollars of the public debt of Pennsylvania in a single year, and leave in the treasury 4,000,000 dollars besides.

"The state has laid a tax, which is estimated by William B. Reed, an intelligent state senator from Philadelphia, to produce annually, 1,800,000 dollars; more than enough to pay the interest on our debt. The tolls on our public works will this year exceed 1,000,000 dollars, which sum, will from year to year increase, and the dividends, from bank stock, auctions, &c., will far more than defray the expenses of the government. Where, then, is the cause for alarm or despondency? Besides all this, the bill for the distribution of the proceeds of the public lands among the states must pass congress, and Pennsylvania will be entitled to a tenth of the whole. The quantity of public lands to which the Indian title is extinguished, after deducting the reserves to the new states, and which remains unsold, exceeds 220,000,000 of acres, and the quantity to which the Indian title has not yet been extinguished, exceeds 730,000,000 of acres.

"The personal property in the state we shall not undertake to estimate. We select the following items,

Neat cattle	1,146,418
Sheep	3,396,431
Swine	1,450,581
Horses and mules	338,565

"Let us now look at the annual products of the state. We produce one-sixth of all the wheat in the union.

" Thus it will be seen, that the annual products of the state exceed *one hundred and sixty millions of dollars*, one per cent on which will pay the interest of our state debt.*

" To conclude, who does not feel proud of this picture of Pennsylvania? She has all the resources of a great nation within herself, for happiness in peace, for power in war. She is capable of maintaining 30,000,000 of people within her borders, of feeding and clothing them herself, and making the surrounding states her tributaries. Her water power upon the Susquehanna and her hundred branches, upon the Delaware and Schuylkill and their tributaries, and upon the streams that make up the Alleghany and Monongahela, is capable of performing the labour of 400,000,000 men. What her steam power can do in her anthracite coal fields, and upon her 10,000 square miles of bituminous coal lands, let the scoffers at her credit calculate. She paid her semi-annual interest in specie on the first day of August, and this in the very crisis of the financial difficulties of the country, before our tax could be made available. A safer and better investment cannot be made than in the public stocks of Pennsylvania. They are based upon resources that will be permanent for ever. Those who depreciate them, are either ignorant of their value, or dishonest enough to speculate upon the timid. There are no people in the world who have so many advantages and so few burdens. The public debt is a trifle in this rich and powerful commonwealth. *We can pay it, and never feel the burden. Our population is industrious, thriving, and honest.*" (?)—Why, therefore, not prove to the world that you are honest? You are able, you say, yet you do not pay your debts. The world will never acknowledge that you are honest, until you pay what you owe.

* Governor Porter, of Pennsylvania, states in his recent message (January, 1845), that the whole amount of tax assessed for the past four years at 3,013,742 dollars, of which only 1,825,050 dollars has been received, leaving 8,188,674 dollars still outstanding on the 1st of December. Of this sum, together with the 800,000 dollars outstanding for 1844, the Governor thinks 1,260,000 dollars will be received; and that,

" If the provisions of the act of 1844 be fairly carried into effect, in the valuation of property, and the collection and prompt payment of the tax be enforced, the annual revenue hereafter to be derived from that source will amount to at least 1,500,000 dollars. This sum, with the other resources of the Commonwealth, will be entirely adequate to furnish the necessary amount to discharge the interest upon the public debt, and thus ensure the fidelity of the State to her engagements."

The following statements prepared from official accounts, are taken from the "United States Almanac," edited by Freeman Hunt, Esq., from "Hunt's Merchants' Magazine;" and from the "Boston Americans' Statistical Almanac" for 1844 and 1845.

TABLE of the Progress of the Debts of the State of Pennsylvania.

YEARS.	Total of State Liabilities at the close of each Year.	Pennsylvania Debt at the close of Year.	YEARS.	Total of State Liabilities at the close of each Year.	Pennsylvania Debt at the close of Year.

1833.....	8,127,636	30,655,003			

The total receipts during the year ending November 30, 1842, including a balance of 1,110,884 dollars 25 cents, on hand from the last year, were 3,890,540 dollars 64 cents. The principal items were as follow:

Loans	dollars. cts.	934,764 83	Tax on stocks	dollars. cts.	37,046 59
Auction duties, &c.	77,387 38		" real or personal estate	486,635 63	
Dividends on stocks	35,778 79		Tavern licences, &c.	56,275 59	
Tax on bank dividends	44,980 50		Tolls, canal, and railroad	907,093 12	
Collateral inheritance tax	38,717 44		Retailers' licences	64,178 87	

The payments during the year amounted to 3,336,359 dollars 51 cents; leaving a balance, December 1, 1842, of 554,181 dollars 13 cents. The chief items of expenditure were as follow:

Commissioners of Internal Improve- ment Fund	dollars. cts.	1,987,353 29	Common schools.....	dollars. cts.	247,606 55
Domestic creditors	209,589 43		Loans paid	221,284 33	
Pensions and gratuities	44,151 66		Interest on other loans	44,757 79	
Government expenses	329,337 61		Colleges, academies, &c.	46,677 66	

In 1841, the assessed value of real estate, horses, cattle, &c., was 343,687,422 dollars; of personal property, 24,969,566 dollars. The state tax was assessed at 582,828 dollars 53 cents. — From the Report of the Auditor-General, January 2, 1843.

The following exhibits the Debt of the State of Pennsylvania, as reported in the Governor's Message in January, 1843.

The whole amount of the present funded debt of the state, exclusive of the deposit of the surplus revenue, is 37,937,788 dollars 24 cents. This debt is reimbursable as follows:

Balance of loan per act of the 14th of April, 1838	dollars. cts.	15,000 00	In the year 1869	dollars. cts.	2,265,400 00
" 1841	56,623 60		" 1863	306,000 00	
" 1844	62,500 00		" 1864	2,515,000 00	
" 1846	4,194,242 08		" 1865	2,756,616 00	
" 1847	72,335 66		" 1868	2,524,000 00	
" 1850	1,000,000 00		" 1870	1,957,362 15	
" 1853	2,000,000 00		At the expiration of certain bank charters.....	575,737 50	
" 1854	3,000,000 00		Interest due the 1st of August last, for which certificates have been issued, redeemable in Aug., 1843.	871,075 53	
" 1856	2,783,161 88				
" 1858	7,676,661 44		Total.....	dollars	37,937,788 24
" 1859	1,250,000 00				
" 1860	2,648,658 00				
" 1861	130,000 00				

This debt has been contracted for the following purposes, viz :

	dollars.	cts.	dollars.	cts.
For canals and railways	30,833,629	15		
To pay interest on public debt.	4,410,125	03		
For the use of the treasury ...	1,371,689	00		
Turnpikes, state roads, &c.	930,000	00		
Union canal	300,000	00		
Eastern penitentiary	120,000	00		
Franklin railroad	100,000	00		
Pennsylvania and Ohio canal ..	50,000	00		
Insane asylum	22,335	06		
	37,937,768	24		
The value of our public improvements estimated at cost, is	30,533,029	15		
The state owns bank stock, which cost at par.	3,108,700	00		
" turnpike and bridge stock ..	2,836,208	45		
" canal and navigation stock ..	842,778	66		
" railroad stock	365,370	90		
Money due on unpatented lands, estimated at	1,000,000	00		
	37,086,047	16		

The foregoing does not include the amount due to domestic creditors; and a portion of the property included in the statement has since been disposed of at public auction.

REAL ESTATE.

The Value of the Real Estate and Personal Property in Pennsylvania, according to an Estimate made from the Returns of the Marshals in taking the late Census, and from Returns of the County Commissioners, is stated as follows, in an Article published in the "Protector":

	dollars.
Value of 30,000,000 acres of land in Pennsylvania, including water-power, quarries, mines of iron, salt, coal, and all other minerals	732,000,000
Value of 300,000 dwelling-houses	300,000,000
" barns, work-shops, stores, furnaces, rolling-mills, forges, and factories ..	248,000,000
" 2165 miles of railroads and canals..	70,253,673

	dollars.
Value of public buildings of all kinds, bridges, gas, and water-works	29,746,327
Total value of real estate	1,400,000,000

PERSONAL PROPERTY.

Value of 365,120 horses and mules, at 00 dols.	21,507,740
" 1,173,050 neat cattle, at 15 dollars ..	17,595,975
" 1,767,620 sheep, at 2 dollars 50 cents.	4,419,450
" 1,503,904 swine, at 3 dollars 50 cents.	5,263,874
" poultry	685,801
" furniture of 300,000 houses, including plate, jewelry, watches, clocks, and wearing apparel	135,000,000
Value of carriages, stages, wagons, farmers' implements, mechanics' tools, books of all kinds, ships, brigs, barges, schooners, canal boats, railroad cars, stationary and locomotive steam-engines and steamboats	300,000,000
Value of goods, wares, merchandise, stocks, money, and all other personal property, at least	315,133,160
Value of personal property	700,000,000
Total value of the state	2,100,000,000

ANNUAL PRODUCTS.

In the same article the estimated value of the annual products is as follows:

	dollars.
Value of 113,395 tons of pig iron, at 30 dols. ..	3,401,850
" additional, by various manufactures	17,852,283
" anthracite coal mined	5,000,000
" bituminous coal mined	4,000,000
" agricultural products	126,620,617
" manufactures, except iron	43,131,843
Annual products of the state	200,026,563

FINANCES of the State in 1843; from the "American Almanac" for 1845.

"The tax bill, which passed both houses of the legislature, in 1844, has received the signature of Governor Porter, and has consequently become a law. It levies a tax of three mills on every dollar of the valuation of real and personal property in the state, which it is estimated will exceed 600,000,000 dollars. The tax, of course, will amount to over 1,800,000 dollars. The revenue derived from other taxes will amount to 400,000 dollars, and the net income of the public works, is estimated, at the minimum, at 550,000 dollars, making an annual revenue, in all, of 2,750,000 dollars. The interest on the public debt of every description, is about 2,000,000 dollars, and the expenses of government, including appropriations to the public schools, less than 600,000 dollars. Ample provision is, therefore, made to enable the state hereafter to meet its engagements, and for the restoration of the public credit."

NAVIGATION AND TRADE OF PENNSYLVANIA.

The foreign trade of Pennsylvania was of no importance until after colonisation by William Penn, in 1682. The following account of the navigation and trade of Pennsylvania, is condensed from an interesting and able article, written for "Hunt's Merchants' Magazine."*

"Prior to Penn's embarkation for America, he disposed of 20,000 acres of land to an association, entitled the Free Society of Traders of Pennsylvania, which was formed in England, and confirmed by patent, for the avowed purpose of promoting the interests, not only of the stockholders of the company, but of all concerned in the trade of the colony. This company attempted to establish various manufactures and other industrial pursuits in the province. In a letter from Penn to the committee of the society, residing in London, dated 'Philadelphia, 16th of 6th month, called August,' we find mention made of a tannery, a saw mill, and a glass house, a whalery, and a dock, as belonging to it; and also that Penn advised them to attempt the culture of the vine for wine, and the manufacture of linen. These attempts to introduce the culture of the vine, the manufacture of glass and linen, and the whale fishery, amongst the colonists, did not prove successful; of the further operations of the company we know little or nothing.

"In the first year of the establishment of the colony, twenty-six ships arrived with passengers and emigrants, and forty trading vessels great and small. These latter were, no doubt, laden with provisions, furniture, and stores of various kinds for the colonists, and took little if any export cargo. In the next two years, twenty-four more ships arrived with emigrants. For the first few years the attention of the settlers was, necessarily, very much engrossed by the clearing of land, and the culture of grain, for the consumption of the colony; but 'trade and commerce, in which the Quakers were known to excel,' soon claimed their notice. A trade was opened with the Indians, for furs and skins; and the culture of tobacco was carried on so extensively, that in one year, (1688-9,) there were exported fourteen cargoes of the weed. In this branch of agriculture, however, Virginia and Maryland were found two powerful rivals; and it was soon abandoned for the culture of wheat, barley, oats, rye, &c., and the grazing of cattle and cutting of timber; the exports of the province undergoing a corresponding change.

"The war between England and France, commencing in 1688 and terminating in 1697, operated injuriously on the interests of the colony. About the latter end of this period, we find allusion made to the poverty of the province, and to the impediments to its commerce, consequent upon the war; and it is stated, that 'in Philadelphia even, pieces of tin and lead were current for small change.'

"The course of trade, from this early period until the separation of the province from the British empire, appears to have undergone but little change, although extended in its range. The exports, consisting of grain, salt provisions, pipe staves, &c., and at a later date, including flour, bread, flaxseed, iron, &c. were not wanted in England, at that time a great grain-exporting country; but found a market in the neighbouring provinces and the West Indies; and subsequently also in Portugal, Spain, several European and African ports in the Mediterranean, and the various groups of islands in the North Atlantic adjacent to Africa. The returns from these various branches of foreign trade, excepting a small portion required for the consumption of the province and its trade with the Indians, were all carried to England; or the produce received was sold in other foreign countries, and the proceeds remitted to England, where all the available funds of the province were required to pay for the manufactures imported thence, which, from

* As the British North American colonies were entirely independent of each other, until after the severance of their connexion with the mother country, the trade of Pennsylvania with the others, prior to 1776, is properly included in the foreign trade.

the restrictions imposed by parliament on manufacturing in the colonies, were to a very great amount, embracing almost every article of clothing, and household utensils, even of the most simple and common kinds.

"The following table exhibits the vast excess of imports over exports, in the trade of the province with Great Britain, from 1697 to the commencement of the war of independence, and also shows the effect of war and other operative causes, on the amount of importations.

"During the war between Great Britain on the one part, and France and Spain on the other, which continued from 1702 to 1713, the commerce of the province was exposed to repeated depredations by privateers. In 1707-8, the capture of vessels off the capes of the Delaware were so frequent, as almost wholly to interrupt the trade, which had in addition, about this period, to bear the exaction of dues for the privilege of navigating the Delaware, levied by order of Governor Evans, at a fort erected at New Castle.

"The war between Great Britain and Spain, in 1717 and 1718, does not appear to have materially affected the colony.

"The year 1722, was one of great commercial embarrassment in the province. The importations appear to have been too great, the country was drained of specie for remittance to England, and there was consequently a deficiency in the circulating medium. The payment of debts was procrastinated, lawsuits multiplied, produce was made a legal tender in payment of debts, executions for debt were stayed, the rate of interest was reduced from eight to six per cent, and the value of coin was raised twenty-five per cent. These measures naturally tended to destroy confidence in the results of all trading operations; but did not, as was intended, prevent the exportation of specie.

TRADE of Pennsylvania with Great Britain, from 1697 to 1776, inclusive.

"To remedy the evil, in the latter part of this year, a scheme for a paper currency was first laid before the assembly of Pennsylvania; and in March following, after much controversy, a law was enacted for the issue of 15,000*l.* currency, in bills of credit of from 1*l.* to 1*l.* in value, to be loaned in sums of from 12*l.* to 100*l.* at an interest of five per cent per annum, on pledge of real estate, ground rents, or plate, of double the value of the advance; said bills to be a legal tender. In the latter part of the same year, a further issue of 30,000*l.* was authorised. By this timely relief, and doubtless still more by the increase of industry and economy, induced by the recent *hard times*, the commerce of the province was soon revived.

"The effect produced may be observed, by reference to the amounts of imports and exports, as well as by the examination of the annexed statement of the commerce of the province, and tonnage built during these years.

YEARS.	Vessels Built.	Tonnage.	Vessels Cleared.	Tonnage.
	number.	tons.	number.	tons.
1719.....	129	4,514
1720.....	140	3,982
1721.....	111	3,711
1722.....	10	424	96	3,331
1723.....	13	507	99	3,042
1724.....	19	939	119	5,430
1725.....	140	6,665

"At various subsequent periods, in 1729, 1739, 1745, and 1746, acts were passed for creating or re-issuing bills of credit. In 1746, when the amount outstanding was 85,000*l.* currency, or 53,333*l.* sterling, a bill to increase the issues was brought before the assembly; but was postponed on account of an attempt, at that time being made in parliament, to restrain all the American colonies from issuing bills of credit as a circulating medium. In the bill which passed parliament in 1751, prohibiting the northern colonies from creating or reissuing bills of credit, except on extraordinary occasions, Pennsylvania was not included; her bills having remained at par, or nearly so, while those of Massachusetts, owing to excessive issues, had depreciated to less than one-seventh their original value. Encouraged by this favour shown them, the assembly, in 1752, prepared a bill for a fresh issue of 40,000*l.* Franklin, who was chairman of the committee to which the matter was referred, stated, in a very forcible and lucid manner, the advantages which had accrued to the province, and which might still be anticipated, from a moderate issue of paper currency; the measure, however, being in opposition to the wishes of the proprietaries, did not meet with the approval of the governor, but led to long and angry discussions between him and the assembly. No further issues were made until the war with the French on the western frontiers, in 1755, rendered them absolutely necessary. In 1730, the imports were to a very large amount, and, probably, to assist in liquidating claims on account of a portion of these, an insolvent law was passed. The exportation of the staples of the province, about this period, was as follows:—

YEARS.	Wheat.	Flour.	Bread.	Value of Wheat, Flour, Bread, and Flaxseed.
	bushels.	barrels.	casks.	£ sterling.
1720.....	74,800	35,438	9,730	62,473
1730.....	38,643	38,570	5,622	57,500
1731.....	53,320	36,539	12,436	62,882

"In this latter year, the population of Philadelphia was estimated at 12,000. The commerce of the province annually employed about 6000 tons of shipping; and about 2000 tons were annually sold in foreign ports, principally West Indian.

"The commerce of the province, from March 25, 1735, to March 25, 1736, was as follows:—

"Of the arrivals, fifty-one were ships, thirteen snows, forty-four brigs, and the remainder smaller vessels.

"Hostilities between Great Britain and Spain were recommenced in 1739; and in the following year, the enemy kept several privateers off the American coast, which cruised successfully against the colonial commerce. In 1743, war was declared between Great Britain and France. In 1746, the enemy, finding the Delaware unprotected, made many captures, ascending the river as high as New Castle, and even threatening Philadelphia. In May, 1748, the city was again thrown into a state of great alarm, and batteries were erected for its defence, owing to the appearance of a Spanish privateer in the bay. To retaliate in some measure upon the enemy, two privateers, the Wilmington and the Delaware, were fitted out and sent on a cruise.

"The restoration of peace, in 1749, gave a powerful impulse to commerce. The imports from Great Britain, in this one year, were nearly equal in amount to those of any three consecutive years preceding. The values of exports of wheat, flour, bread, and flaxseed, were as follow:— in 1749, 148,104*l.* currency; in 1750, 155,175*l.*, and in 1751, 187,457*l.*; and the number of vessels cleared from 1749 to 1752, averaged annually, 403; the population of Philadelphia being estimated at 15,000. This activity in trade continued, despite the refusal of the governor to increase the paper currency, until the difficulties with the French and Indians on the western frontier, in 1755.

"During the continuance of the *seven years' war* (which was commenced by a collision between the English and French troops on the western frontier of Pennsylvania, in 1755, although war was not declared until the following year), the commerce of the province suffered severely; the value of imports from Great Britain, varying from 144,456*l.* sterling in 1755, to 707,998*l.* sterling in 1760. This latter sum, it is probable, from its vast amount, included military stores. Serious losses were occasioned to the mercantile community, by the provincial government prohibiting the exportation of provisions and military stores to French ports, in 1756 and 1757.

"The restoration of peace with France and Spain, in 1763, removed many restrictions from commerce; but found the province burdened with a heavy debt, incurred in carrying on the war, her people impoverished, her merchants largely indebted to those of the mother country for goods imported, and trade generally depressed.

"The continuance of difficulties with the Indians on the western frontier, after the restoration of peace with France, for some time kept the province in a state of excitement (the boldness of the incursions alarming even the Philadelphians), and tended to increase the embarrassment of trade.

"The effect of these disturbing influences had not passed away, when the British parliament, in 1764, commenced a course of injustice and oppression towards the North American colonies, which at length forced them into open rebellion, and resulted in their independence. With a fixed determination to resist the collection of all taxes imposed without their consent, the colonists met the repeated attempts of the home government to force these odious measures upon them, by non-consuming and non-importation agreements, and at length by open resistance. Our limits preclude more than a passing notice of these exciting events, which, however, are detailed in every history of the American revolution. The influence of the non-importation agreements on commerce, may be seen by contrasting the value of imports from Great Britain, in 1769 (199,909*l.* sterling), when these agreements were generally adopted throughout the rebellious colonies, with that of the imports in 1771 (728,744*l.* sterling), when the non-importation restrictions were removed, see in reference to tea.

"The following view of the trade of the province, given by Franklin, in 1766, during his examination before the British House of Commons, in reference to the repeal of the stamp act, shows it to have been so completely tributary to that of Great Britain, as to leave little cause for regret at the separation of the two governments, which shortly followed. The imports from Great Britain into the province, he says, are computed at more than 500,000*l.* sterling, annually, and the exports to Great Britain at only 40,000*l.* sterling, the balance being paid by the produce of the province, carried to the British, French, Spanish, Danish, and Dutch West India Islands; to New England, Nova Scotia, Newfoundland, Carolina, and Georgia; and to different parts of Europe, as Spain, Portugal, and Italy; for which either money, bills of exchange, or other commodities, suitable for a remittance to England, are received. These, together with the profits of the merchants and mariners, as well as the freights earned in their circuitous voyages, all finally centre in Great Britain, to pay for British manufactures used in the province, or sold to foreigners by the American traders.

"Notwithstanding the measures of the home government, calculated, if not intended, to injure the province, her resources were rapidly developed; and commerce, despite the many vexatious restrictions imposed, prospered, until stopped by a state of open warfare. We append a statement of the commerce in the years 1771, 1772, and 1773; the exports in the years 1774 and 1775, being to a still greater amount.

YEARS.	VALUE OF EXPORTS.	CLEARANCES.		Total Tonnage.

1773.....	720,135	426	370	46,972

" From 1776 until 1788 Pennsylvania had little or no foreign trade ; her merchants, however, were not idle ; but amongst the foremost in patriotically sustaining the struggle for independence, by their example, their money, and their personal services.

" The first bank established in the United States, was opened at Philadelphia, July 17, 1780, under the title of the Bank of Pennsylvania, with a capital of 300,000*l.* currency ; the especial object of its creation being to supply the army with provisions. This bank, we believe, continued in existence until the Bank of North America went into operation, January 7, 1782. The latter was the only bank in Pennsylvania, until the United States Bank commenced business, in 1791.

" With the restoration of peace, in 1783, commerce was resumed ; but much remained to be done, in order to place it in a prosperous condition.

" A new era now opened to the commerce of the United States, in which the wars occasioned by the French revolution exerted a most powerful influence. By reference to the following table of imports, exports, duties, drawbacks, tonnage, and arrivals, from 1791 to 1841 inclusive, the effect produced on the foreign trade, by causes to which we shall allude, may be noted.

" In 1792, France commenced her wars with the other European powers, and, excepting an interval of peace of about fourteen months, in 1802-3, continued them without intermission until the abdication of Napoleon in 1814. On the return of the emperor in 1815, hostilities were renewed, and finally terminated in this year.

" The vast numbers, in Europe, diverted from agricultural and other industrial pursuits by these wars, created a large market for the produce of Pennsylvania ; while the immense naval armaments of the combatants, in all parts of the ocean, rendering it necessary to employ neutral ships to carry the produce of the French, Spanish, and Dutch colonies to the parent states, gave profitable employment to a large amount of her tonnage. Nor did her merchants rest satisfied with acting merely as carriers ; they embarked in the trade on their own account, and also imported largely from China and India, for re-exportation to European markets ; that is, in 1806, there arrived at Philadelphia from Canton, twelve ships and one brig, of an aggregate tonnage of 4226 tons, all with very valuable cargoes. Large fortunes were rapidly made ; and many persons, before engaged in other employments, were induced to turn merchants. The commerce of the United States prospered to a degree unprecedented in the history of any nation, and in this prosperity Philadelphia, through which passed the whole foreign trade of the state, shared largely, her population increasing from 42,000 in 1790, to upwards of 96,000 in 1810.

" Shortly after the declaration of hostilities between France and England, these two nations commenced issuing decrees and orders in council, and laying embargoes of a most unjust and arbitrary character, for the avowed purpose of restricting the trade of neutrals with the enemy. Nor were the two great maritime powers of Europe alone in these restrictive measures ; but by their influence or commands, Spain and other European governments followed in their footsteps.

" In 1794 a treaty was concluded with England, by which she engaged to pay 10,000,000 dollars to the United States, as a compensation for property illegally taken, under her orders in council.

" In 1798, in consequence of the arbitrary measures of the French government, commercial relations between the United States and that nation were suspended, and partial hostilities followed, but no declaration of war ensued. These difficulties were settled by treaty in 1800.

"The peace of Amiens, in 1802, restoring quiet to Europe, materially reduced the exports of Pennsylvania; but by the resumption of hostilities, in the following year, a fresh impetus was given to her commerce, which was only stayed by the embargo, to which we shall presently refer.

"Non-intercourse with Great Britain was resumed by the United States government, November 10, 1810, and, after several engagements between the armed vessels of the two nations, war was declared June 19, 1812, four days after of which the orders in council were repealed.

"During the war, the commerce of Pennsylvania was limited in its extent, and, in addition to the enemy abroad, had to contend with an evil at home, almost as disastrous in its effects, viz.: a deranged currency. With the expiration of the charter of the United States Bank, in 1811, a mania arose for the creation of banks, under the influence of which forty-one, with an aggregate capital of 17,000,000 dollars, were chartered by Pennsylvania, in 1814; thirty-seven of these going into operation. In the autumn of this year, a general suspension of specie payments, by all the banks south and west of the New England states, followed. The issues of their irredeemable paper were increased, and on July 1, 1816, the paper of the Philadelphia banks was at a depreciation of 17 to 18 per cent; while that of the banks at Pittsburg, and the western part of the state, was at 25 per cent discount. That this undue expansion of the currency exerted a powerful influence on commerce, can scarcely be doubted. To this cause, in some degree, at least, may be attributed the vast amount of imports into the United States, in 1815-16; paying a

handsome profit to the early operators, but entailing heavy losses and bankruptcy upon a much larger number.

"The second Bank of the United States commenced operations, January 7, 1817; and in February, entered into a compact with the state banks along the seaboard, in accordance with which they immediately resumed specie payments. Efficient measures for a contraction of the paper currency to a sound state do not appear, however, to have been taken until 1819; when the distress consequent upon this course of action was severely felt, not only by commercial men, but by the community of Pennsylvania generally.

"On the restoration of peace, in 1815, the foreign trade of Pennsylvania had to seek new channels. The great European powers being now at peace, turned their attention to the encouragement and protection of their own commerce and navigation.

"Pennsylvania and Philadelphia have not derived nearly so great a benefit in their trade with the west, from the construction of these internal improvements, as has accrued to the state and city of New York, nor, unless the cost of transportation on the Pennsylvania works can be put at an equally low rate with that on those of the neighbouring states, can it be doubted, that Philadelphia must take her rank amongst the great manufacturing, rather than the commercial cities of the union.

"In concluding this historical sketch of the foreign trade of Pennsylvania, we append a tabular statement exhibiting its condition, along with that of the foreign trade of the United States, as shown by the exports at three several periods: first, for five years, previous to the long embargo; secondly, for five years subsequent to the late war; and thirdly, for five years from 1837 to 1841.

AGGREGATE Exports from Pennsylvania to Foreign Countries.

FIVE YEARS.	Domestic.	Foreign.	TOTAL.	Year.	Estimate Population of Philadelphia.	Estimate Population of Pennsylvania.

	dollars.	dollars.	dollars.		
1803 to 1807.....	216,913,759	222,381,482	438,945,241	1805	6,200,000
1816 to 1820.....	309,616,311	58,997,033	402,797,344	1819	9,100,000
1837 to 1841.....	515,410,482	85,461,675	600,872,157	1839	10,600,000

"By the above statements it appears that the exports of the produce of the United States from Pennsylvania were less in the last than in either of the former periods, while the exports of domestic goods from the United States have been steadily and rapidly increasing. In the re-exportation of foreign goods the falling off is much greater.

"The subjoined statement of exports and imports at Philadelphia (through which passes the whole foreign trade of the state, excepting a very small trade at Presque Isle), for the fiscal year 1842, shows a still further decline.

VALUE of Exports and Imports at Philadelphia for the Year ending September 30, 1842.

"Our limits preclude the specification of the articles forming the principal items of export and import to and from the several countries named. Of domestic exports, flour manufactured in Pennsylvania, Delaware, and Ohio, forms by far the largest item. Corn meal, wheat, and corn, from the two first-named states, are also exported largely. Tobacco, cotton, pork, lard, naval stores, rice, bark, &c., from the western and southern states; fish, oil, sperm candles, cotton manufactures, &c., from the New England states; manufactures of iron, refined sugar, soap, and candles, manufactured tobacco, furniture, and various other manufactures of Philadelphia; lumber, butter, cheese, and numerous articles, the agricultural produce of Pennsylvania, compose the principal part of the remaining sum. The imports consist principally of manufactures of wool, iron, and other metals, silk, cotton, linen, &c., from England and continental Europe; coffee, sugar, molasses, rum, hides, mahogany, dyewoods, manufactured tobacco, &c., from South America, and the West Indies.

"The total exports in 1842, exceed those of only three years since 1803, omitting the period of the war with Great Britain. The exports of domestic produce in 1842, exceed those of seven years during the same period. The imports for 1842 are less in amount than those of any year since 1821, when official records of value were first made.

"The Domestic Trade.—The constitution of the United States prohibits all transit duties on goods passing from one state of the union to another, and releases vessels employed in the coasting trade from the necessity of entering. By this wise provision for the extension of trade, custom-houses between the different states are rendered unnecessary, and those on the seaboard, or at the great commercial emporiums of the interior, take no account of the merchandise passing from one section of the union to another. In the absence of official data as to the extent of this important branch of trade, we purpose giving a hasty sketch of its course, or the channels through which it flows.

"With the increase of population and of facilities for the transportation of merchandise, by the improvement of county roads, and the construction of turnpike roads, canals, and railroads, the interchange of commodities with neighbouring states has steadily and rapidly increased; while the application of steam to river navigation has rendered doubly valuable the noble streams of Pennsylvania, as a means of extending her commercial operations. By these various channels of trade, and by the waters of the Atlantic, together with those of the various navigable streams emptying into it, the produce of the state, to an amount far exceeding that exported to foreign countries, is distributed through a large portion of the union.

"The domestic trade of Northern Pennsylvania is very limited in its extent, this region being but thinly populated. Its principal exports are lumber, coal, oats, and neat cattle, together with some wool and butter. By means of the port of Erie or Presque Isle, a communication is opened between the western part of this region and the great lakes, and trade is carried on with many of the towns on their shores. The tonnage of Presque Isle has been as follows, in the years 1832 to 1841 inclusive:—

Years.	tons.	Years.	tons.
1832	967	1837	2993
1833	981	1838	3310
1834	1303	1839	3632
1835	1730	1840	3369
1836	1877	1841	2829

"The Blossburgh and Corning railroad, the Alleghany and Susquehanna rivers, and the turnpike and county roads, at wide intervals traversing this section of the state, facilitate interchange of commodities with the neighbouring counties and some of the large towns, in the interior of New York state. No inconsiderable portion of the produce of the western part of this region passes down the Alleghany river to the towns bordering on the Ohio river, although a much

larger part finds a market at Pittsburg. From the head waters of the Susquehanna river, large quantities of lumber are annually sent to Baltimore.

"The imports of this region, excepting the large supplies derived by internal trade with Pittsburg, are principally from New York city and state, and are similar in character to those hereafter mentioned as taken by the north-eastern section of the state.

"Western Pennsylvania, with its coal, iron, flour, wheat, lumber, wool, and manufactures of various kinds which are exported to a great amount, has access to the interior of Ohio and to the lakes, by means of the Pennsylvania and Ohio or Cross-cut canal and the Sandy and Beaver canal; by the National road to Wheeling on the one hand, and Baltimore on the other; by the internal improvements of the state to the city last-named or *via* Philadelphia, to ports on the Atlantic; and by the Ohio river to all parts of the valley of the Mississippi.

"Pittsburg, the great manufacturing city and commercial emporium of western Pennsylvania, sends her manufactures of iron, glass, cotton, &c., throughout the vast extent of country bordering on the Ohio and Mississippi rivers, as well as to the rapidly improving region extending along the lakes. In return are received drafts on the Atlantic cities or New Orleans, or the varied produce of the several states, viz.: pork, beef, lard, butter, flour, hemp, tobacco, cotton, sugar, molasses, &c.; together with a large part of her supply of coffee, imported at New Orleans. A portion of the above-named articles, as pork, lard, flour, hemp, and tobacco, is re-exported from Pittsburg to Baltimore; and a still larger portion finds a market in Philadelphia, for home consumption or exportation. With the proceeds of the sales of these articles, and of large quantities of flour and wool, the produce of western Pennsylvania, together with drafts on the Atlantic cities received from sales to the west, she purchases in the Atlantic cities, for the consumption of her own citizens or the supply of a large extent of country in western Pennsylvania and Ohio, the cotton, woollen, and leather manufactures, the bonnets, and other articles the manufactures of New England, and various foreign imports; that is, manufactures of wool, silk, cotton, linen, steel, and other metals; porcelain and earthenwares, tea, spices, dried fruit, wine, brandy, &c.

"Annexed is the tonnage of the port of Pittsburg in the years 1832 to 1841 inclusive. The sudden reduction observable in some of the years may be accounted for by the sale of steamboats, great numbers of which are built here for towns on the Ohio and Mississippi rivers.

Years.	tons.	Years.	tons.
1832	10,992	1837	12,652
1833	11,713	1838	11,865
1834	13,272	1839	11,865
1835	13,272	1840	12,000
1836	10,767	1841	10,343

"According to Harris's Directory, the number of steamboats owned in whole or in part, in the district of Pittsburg, in 1841, was eighty-nine, of an aggregate tonnage of 12,436 tons.

"Southern Pennsylvania, whose exports consist principally of grain, flour, iron, leather, &c., finds a market for a large part of these in Baltimore, and the neighbouring counties of Maryland and Virginia. The National road, connecting with the internal improvements of Maryland, opens a communication between Baltimore and the western part of this region; while the eastern portion sends its produce by the Baltimore and Susquehanna or Franklin railroads, or by several turnpikes, into Maryland; or by the internal improvements of Pennsylvania and the Susquehanna river, or Tidewater canal to Baltimore, or more largely to Philadelphia for exportation or home consumption. In return are received goods of a description similar to those above mentioned as purchased in the Atlantic cities for Pittsburg.

"Central Pennsylvania, embracing the greater part of the valley of the Susquehanna and the country bordering on the main line of the internal improvements of the state, west of the Susquehanna river, makes use of this river and these canals and railroads, together with the Tidewater canal, as outlets for its large exports. A market is found for its produce, consisting of wheat and other grains, flour, iron, lumber, coal, &c., at Baltimore, and to a greater extent, probably, *via* Philadelphia, at the other various Atlantic ports. The goods imported are of a character similar to those taken at Pittsburg.

"North-Eastern Pennsylvania, embracing a portion of the anthracite coal fields of the state, exports lumber and some agricultural produce, principally oats, to the neighbouring towns of New York and New Jersey; neat cattle and butter also to the same markets, and to New York city; and coal in large quantities to New York city and intermediate places, and to the Atlantic New England states. The principal channels for its exports, which are moderate in amount, are the Lehigh river, the Delaware and Hudson canal, and several turnpike roads. In return, articles, such as enumerated as taken by Pittsburg, excluding the more expensive and luxurious, are received from New York city.

"South-Eastern Pennsylvania—embracing the earliest settled and most populous counties of the state, rich in agricultural products; together with other counties, abounding in anthracite coal and iron—passes most of its exports through Philadelphia.

"New York and the New England States bordering on the Atlantic take the largest amount of this produce, consisting principally of coal, flour, wheat, corn, &c. The demand for Pennsylvania bread stuffs in Boston has, however, diminished since the completion of the railroad connecting it with Albany.

"In return, Philadelphia receives from the New England states their manufactures of cotton and wool, shoes, bonnets, fish, oil, and various other articles, the produce or manufactures of these states; together with many foreign goods: and from New York, English, French, Chinese, and various other foreign goods too numerous to specify: the balance being greatly against Philadelphia, both in her trade with New England and New York.

"To the neighbouring states of New Jersey and Delaware the exports are to a large amount, consisting of coal, lime, iron, and various manufactures of Pennsylvania; and the manufactures and produce of the New England states and foreign countries generally, especially manufacture of cotton, wool, leather, and iron; sugar, coffee, and tea.

"The imports from New Jersey consist of agricultural produce generally, and those from Delaware, of flour, corn meal, wheat, corn, bark, &c.

"The trade with Maryland is to a very limited extent, and similar in its character to that with Delaware. Most of the freight passing between Philadelphia and Baltimore consists of goods in transitu between the latter city and New York, or the New England states.

"The exports from Philadelphia to Virginia are to a moderate amount, and consist of articles much the same as those specified in reference to Pittsburg. In return, tobacco, wheat, corn, and some bituminous coal and cotton yarn are received.

"To North Carolina, South Carolina, Georgia, and Alabama, the exports are similar in character to those sent to Virginia; but to a very small amount. From North Carolina are received naval stores, lumber, and some little cotton and cotton yarn; from South Carolina and Georgia, cotton and rice; and from Alabama, cotton.

"Louisiana takes to a moderate extent, for her own consumption, of the manufactures of the New England states and Pennsylvania, and the manufactures and produce of foreign countries; and sends to Philadelphia large quantities of sugar and molasses, and some cotton, her own produce. Large quantities of heavy goods, destined for the western states, are forwarded by way of New Orleans; and by the same route Philadelphia receives large supplies of the produce of those states; viz., cotton, tobacco, pork, lard, hemp, lead, &c.

"The most important branch of the domestic export trade of Philadelphia is that with Ohio, Kentucky, Missouri, Tennessee, Indiana, Illinois, Mississippi, and Arkansas, especially the six first named, and consists of articles similar to those taken by Pittsburg, the principal portion being imports from the New England states, and from foreign countries, a large part of the latter, as before stated, being received via New York and Boston.

"In addition to the articles above enumerated as being forwarded by way of New Orleans, Philadelphia receives from this vast and fertile region, now rapidly filling with an enterprising and industrious population, large quantities of flour, pork, lard, tobacco, hemp, neat cattle, and horses, and some beef, furs, wool, &c., viz Pittsburg and the internal improvements of the state; these, however, would be vastly greater in quantity, and the purchases of goods in return proportionally increased, if the cost of transportation from Pittsburg to Philadelphia were still further reduced. The balance of this great branch of her trade being in favour of Philadelphia, is paid by drafts on New Orleans and New York.

"With Michigan, Philadelphia has little or no trade.

"Annexed is a statement of the enrolled and licensed tonnage, being that engaged in the coastwise trade of Philadelphia for the years 1832 to 1841.

Years.	tons.	Years.	tons.
1832	31,147	1837	42,592
1833	30,529	1838	45,080
1834	32,086	1839	48,298
1835	34,857	1840	51,676
1836	40,871	1841	56,425

"We also append a list of the coastwise arrivals at Philadelphia for the years 1787 to 1842, much the greater portion of the large number appearing in recent years being vessels engaged in carrying coal, or barges laden with merchandisc, passing between the north-eastern and south-western markets of the union, benefiting the mercantile community of Philadelphia but little.

"The Internal Trade.—In the preceding article, on the course of the domestic trade of Pennsylvania, allusion has been made to the extent of business between Philadelphia and Pittsburg, and between those two cities and a large portion of the state. This forms but a very small part of the internal trade of Pennsylvania, which embraces all the interchanges between sections adjacent, or widely separated, of every variety of merchandise, the produce of agriculture, the mine, or the forest; or the manufacture of the factory or workshop. Of its amount no other than a very vague estimate can be formed; it, however, vastly exceeds both that of the domestic and of the foreign trade, although it may be said to be yet in its infancy.

"No state of the union contains the elements of wealth more diversified in character or unlimited in extent than Pennsylvania; and with a virtuous, intelligent, and industrious population, to develop the resources of her rich and varied soil and countless mineral treasures, she cannot fail, in time, to possess within her borders a manufacturing interest, equal, if not superior, to the agricultural. A home market for her agricultural produce will thus be created; while her exports will consist of manufactures sent to the western and southern states of the union, and probably, in

considerable quantities to foreign countries. This anticipated development of the internal trade of Pennsylvania must be promoted, in no small degree, by the state canals, railroads, and other facilities for the transportation of produce, in the judicious management of which, those engaged in the domestic and foreign, as well as this branch of trade, have a deep interest.

PRINCIPAL SEAPORTS AND TOWNS OF PENNSYLVANIA.

PHILADELPHIA, the second city in the United States, is situated on a plain which rises in some parts sixty-four feet above the high-water level. The city lays between the Delaware and the Schuylkill rivers, extending two miles from the one to the other, and four miles and a half along the Delaware, five miles above their junction, and 120 miles by the course of the Delaware from the ocean. It contained, in 1790, 42,500 inhabitants; in 1800, 70,287; in 1810, 96,664; in 1820, 119,325; in 1830, 167,811; in 1840, 220,423. Of the latter there were employed in agriculture, 693; in commerce, 7912; in manufactures and trades, 24,900; navigating the ocean, rivers, &c., 2050; learned professions, &c., 1549.

The plan of the city is nearly in the form of a parallelogram, having the Delaware on the east, the Schuylkill on the west, Vine-street on the north, and South or Cedar-street on the south. There are five adjoining districts which belong as much to Philadelphia as Southwark and Westminster do to London: those districts have incorporations and municipal authorities distinct from the city, and from each other. They are the Northern Liberties, Kensington, and Spring Garden on the north, and Southwark and Moyamensing on the south.

The compactly built part of Philadelphia is about nine miles in circumference. The two principal streets are Market or High-street, which extends from the Delaware to the Schuylkill, east and west, through the middle of the city; and Broad-street, which runs north and south, crossing Market-street at right angles, near the centre of the city plan. The other streets of this portion cross each other at right angles. Market or High-street is 100 feet broad, and Broad-street is 113 feet; Arch or Mulberry-street is sixty-six feet wide; the other streets are fifty feet. The adjoining districts have not the same regularity in their plan. The whole number of streets in the city and districts is above 600. Common sewers convey the filth of the streets into the Delaware river. The houses are built with uniformity and neatness, and the streets are kept very clean.

The largest ships ascend the Delaware river to the city, where it is nearly a mile wide to Camden, which lies opposite, in New Jersey. The Schuylkill river is also navigable for smaller vessels to the bridge, where it is 500 feet wide. Both rivers are usually frozen over for some time during the winter, and the ice then forms an obstacle which considerably impedes navigation.

Generally, the architecture of Philadelphia is simple and not imposing. Several of the public buildings are, however, exceptions. That in which was transacted the business of the late United States Bank, in Chestnut-street, is in imitation of the Pantheon. On the failure of that bank, so fatal to its creditors, this edifice was sold for 300,000 dollars. The Bank of Pennsylvania, in Second-street, is 125 feet by 51 feet. It has two Ionic porticoes of six columns each. The United States Mint, corner of Chestnut and Juniper-streets, has Ionic porticoes of more than 120 feet long on each front. The Merchants' Exchange, between Dock, Walnut, and Third-streets, is ninety-five feet by fourteen feet wide, with a portico of four Corinthian columns on one front, and a semi-circular portico of eight columns on the other. The basement contains various offices, with the post-office. The great hall is embellished by paintings and ornamental devices. All the above noticed edifices are built of white marble. The Girard Bank, in Third-street, below Chestnut-street, has a front of white marble, with a portico of six Corinthian columns of the same material. It has extensive grounds neatly laid out and ornamented. The United States Naval Asylum or Marine Hospital, is 386 feet in front and 175 feet deep. It has a portico in the centre of eight Ionic columns. There are 180 dormitories, capable of lodging 400 persons. The whole is surrounded by ornamental grounds. The almshouse, on the west bank of the Schuylkill river, consists of a centre building with wings, together with two detached buildings, one at each end. It has 180 acres of ground, ten of which are occupied by its enclosures. Girard College, about one mile from the city, consists of a centre building, including the portico, 160 feet by 218 feet, and is surrounded by a colonnade, with pillars six feet in diameter, and fifty-five feet high, with Corinthian capitals; and two other buildings, each fifty-two feet wide and 125 feet long. This establishment, solely for the education of orphan children, was founded by a bequest of the late Stephen Girard, of over 2,000,000 dollars. Among the public buildings of Philadelphia is the State House in Chestnut-street, erected in 1735, in which the Congress sat which declared the independence, and where the convention sat that drew up the constitution of the United States, should not be overlooked. The room in which they sat is carefully preserved without alteration. The original bell, cast many years before the declaration of independence, is preserved in the tower of the steeple, and has this inscription, "Proclaim LIBERTY throughout this land, unto all the inhabitants thereof."—*Leviticus*, xxv. 10.

Philadelphia has several public squares, none of great extent. They are generally well laid out and ornamented.

Among the public works of the city, the Fairmount Water Works, on the east bank of the Schuylkill, two miles north-west from the city are conspicuous. They occupy an area of thirty acres, consisting mostly of a hill 100 feet high. On the top of the hill are four reservoirs, capable of holding 22,000,000 gallons. A dam is constructed across the Schuylkill river, and the water from the pond moves forcing pumps, which raise the water of the river to the reservoirs, from which it is distributed through pipes over the city. At the western termination of Market-street is a substantial bridge over the Schuylkill river, 1350 feet long, including the abutments, and forty-two feet wide. There is a viaduct over the Schuylkill, built by the Philadelphia, Wilmington, and Baltimore railroad company, which also admits the passage of ordinary carriages. These are the only bridges which cross the Schuylkill river near the city.—*U. S. Gaz.*

Steamboats and sailing vessels afford a constant and easy communication with New York and Baltimore; and railroads in various directions render Philadelphia a great thoroughfare. By the Pennsylvania canal, and a short railroad over the Alleghany, Philadelphia communicates with Pittsburgh, and the great valley of the Mississippi.—*U. S. Gaz.*

Trade and Manufactures.—In 1840, there were 184 foreign commercial, and forty-four commission houses, with a capital of 2,049,501 dollars; 1791 retail stores, with a capital of 17,082,384 dollars; forty-eight lumber-yards, with a capital of 1,118,500 dollars; two furnaces, with a capital of 259,050 dollars; machinery was manufactured to the value of 915,864 dollars; hardware and cutlery, 154,400 dollars; the precious metals, 2,651,510 dollars; of various metals, 876,060 dollars; fifteen woollen factories, capital 185,100 dollars; seventeen cotton factories, with 17,922 spindles; fourteen printing and dyeing establishments, with a total capital of 474,000 dollars; eight tanneries, with a capital of 117,500 dollars; eleven distilleries, sixteen breweries, with a capital of 415,200 dollars; paints and drugs, 1,839,050 dollars; one glass factory, and one glass-cutting establishment, with a capital of 23,500 dollars; six potteries, with a capital of 24,000 dollars; twelve sugar refineries produced refined sugar to the value of 890,000 dollars; six paper factories produced 31,250 dollars; twelve rope-walks, with a capital of 82,900 dollars; one saw mill, one flouring mill, one grist mill, capital 8000 dollars; furniture to the amount of 526,200 dollars; 808 brick and stone houses, and sixty-two wooden houses, cost 2,751,383 dollars; forty-six printing offices, twelve binderies, eight daily, sixteen weekly, seven semi-weekly newspapers, and twenty-six periodicals, employed 911 persons, with a capital of 252,600 dollars. Total capital in manufactures, 8,796,998 dollars.—*Official Returns.*

Institutions.—The institutions of Philadelphia are numerous. Pennsylvania hospital was founded in 1750, through the instrumentality of Dr. Franklin and others. The state granted 20000, and the same sum was raised by subscription, and the building was commenced in 1755. In an area in front of the hospital, stands a full length statue of William Penn, in bronzed lead. This institution is well managed; and they have recently erected a separate institution for the insane. The House of Refuge for juvenile delinquents; the Institution for the deaf and dumb; the Institution for the blind, and the Philadelphia Orphan Asylum, are all useful establishments.

Banks.—In 1841, there were in the city and liberties, thirteen banks, with an aggregate capital of 14,550,000 dollars, besides the United States Bank of Pennsylvania, whose capital was 35,000,000 dollars, and twenty-three insurance companies.—(See Banks of the United States hereafter.)

Education.—The University of Pennsylvania was founded in 1791, by the union of two previous institutions, the first of which was instituted in 1755. It has fourteen instructors, 116 students, and 5000 volumes in its library. The most flourishing department is the medical, which has seven professors, and over 400 students, and is the most distinguished institution of the kind in the United States. Jefferson Medical College was formerly connected with the college at Canonsburg, but is now independent, founded in 1824; it has seven professors and 145 students. The medical department of Pennsylvania College, founded in 1839, has six professors and sixty students. The American Philosophical Society was founded in 1740, chiefly through the exertions of Dr. Franklin. In 1769, it was united with another similar society. It has an excellent library and a collection of minerals. The Academy of Natural Sciences, founded in 1817, has a library of over 9000 volumes. The Franklin Institute was founded in 1824, and consists of 3000 manufacturers, artisans, and mechanics. The Athenæum, founded in 1815, has a good library and reading-room. The Mercantile Library, formed in 1822, has 5000 or 6000 volumes, chiefly relating to commerce and its kindred subjects. The Historical Society has issued many useful publications relating to the early history of Pennsylvania. The Philadelphia Library Company, established through the influence of Dr. Franklin, has a library of over 42,000 volumes.—*U. S. Gaz.*

Religion.—There are about 100 churches in the city, of which the Presbyterians have twenty-four; the Episcopalians nineteen; the Methodists nineteen; the Baptists seventeen; the Roman Catholics six, &c.

Among the places of amusement there are four or five theatres, a number of public gardens, and the Philadelphia Museum.—*U. S. Gaz.*

The government of the city of Philadelphia is vested in the hands of a mayor, a select council of twelve, and a common council of twenty members. One-third of the select, and the whole of the common council, are chosen annually by the people, and the councils elect a mayor. The aldermen, who are fifteen in number, are appointed by the governor to act, with the mayor, as judges, during good behaviour; and the aldermen act as justices of the peace. The whole legislative power is vested in the councils, of which the select council forms a kind of senate.

Philadelphia was surveyed and founded in 1682. It had previously been in possession of the Swedes, some of whom came into the country bordering on Delaware bay as early as 1627. It was named after a city in Asia Minor, and the plan is said to have been suggested by that of ancient Babylon, and according to the original design of William Penn, its original founder and proprietor, was designed to have equalled that ancient capital in extent; but the idea was soon abandoned, and the charter of 1701 restricted it to the present boundaries of the city proper. Penn's country residence was at Pennsburg Manor, above Bristol, in which was a large hall of audience, where he held treaties with the Indians, and the oak arm-chair in which he sat, is now in the Pennsylvania hospital.—*U. S. Gaz.*

KENSINGTON, which constitutes a suburb of Philadelphia, in the north-east part, along the Delaware river, though it has a separate government, under fifteen commissioners, contains various manufacturing establishments of cotton, woollen, iron, and glass, and considerable ship building. In 1840, there were, one commission house, and 112 stores, capital 107,900 dollars; seven lumber yards, capital 116,500 dollars; nine woollen factories, fifteen cotton factories, 700 spindles, three tanneries, one brewery, one glass factory, four rope factories. Capital in manufactures, 721,600 dollars. Population, 22,514.—(See Philadelphia.)

SPRING-GARDEN, opposite Philadelphia, is also a constituent part of the latter, though under a separate charter, and governed by thirteen commissioners, elected for three years. It contains the Fairmount water-works, the eastern penitentiary, the house of refuge, the city hospital, an extensive floor-cloth factory. It had, in 1840, five commission houses, capital 25,000 dollars; 106 retail stores, capital 234,650 dollars; thirteen lumber yards, capital 271,000 dollars; four woollen factories, four cotton factories, 7802 spindles; five dyeing and print establishments, three tanneries, one distillery, three breweries, one pottery, one paper factory, one rope factory, one flouring mill, one grist mill. Capital in manufactures, 1,178,000 dollars. Population, 27,640.

SOUTHWARK was separated from the municipal government of Philadelphia, for local purposes, in 1782. The act of separation was confirmed in 1794, when it was incorporated, to be governed by fifteen commissioners, five of whom are elected annually, for the term of three years. It contains about 5000 dwelling-houses, many of them well built and commodious, but a large proportion are frame or brick buildings of two stories. Most of the streets are paved and lighted, and have a watch. It is supplied with water from the Schuylkill water-works. The navy yard, several ship and boat yards, and a marine railway are on the Delaware river. A brick shot-tower is a lofty and conspicuous structure. There were, in 1840, five commercial and commission houses, capital 80,000 dollars; 252 stores, capital 262,109 dollars; nine lumber yards, capital 203,000 dollars; two dyeing and printing establishments, one tannery, seven distilleries, two breweries, two potteries, one sugar refinery, four rope factories, two printing offices, one weekly and one semi-weekly newspaper. Capital in manufactures, 890,560 dollars. Population, 27,548.—(See Philadelphia.) The *Northern Liberties*, were incorporated in 1803, and governed by five commissioners.

Port and Trade Regulations and Charges at Philadelphia, from the Municipal Laws, and the Resolutions of the Chamber of Commerce.

Port Regulations.—If any master of a vessel, or other person, shall refuse or neglect to comply with the directions of the harbour master, in matters within the jurisdiction of his office, such person shall, for each and every such offence, severally forfeit and pay any sum not exceeding 100 dollars. The harbour-master shall for his services receive from the master, owner, or consignee of each vessel arriving at the port of Philadelphia (coasting vessels not exceeding the burden of seventy-five tons excepted), one dollar for each and every voyage by such ship or vessel performed, and no more.

Every vessel that may arrive, and anchor in the stream anywhere between Almond and Vine-streets, having previously landed all gunpowder she may have had on board, may remain in that situation twenty-four hours, and no longer, taking care to lie as near to the island, or sand bar, as may be consistent with safety. But if, from a vessel having servants on board, or from any other cause, it may be thought necessary to lie a longer time in the stream, then, and in every such case, the person having charge of such vessel shall remove her from opposite the city, and cause her to be moored, to the northward of Vine-street, with

one anchor and cable up, and one anchor and cable down the stream; and in both the above-mentioned situations, the regulation contained in the succeeding article to be attended to.

If any vessel, properly moored in the stream, shall have her anchor or cable overlaid by any other vessel in anchoring or mooring, the master or person having the care or direction of such last-mentioned vessel shall immediately, or as soon as may be after application made to him by the party aggrieved, cause the said anchor or cable so overlaying to be taken up and cleared. When any ship or vessel shall be hauled into any wharf or dock, or alongside of another vessel that may be lying at such wharf or dock, the owner, master, pilot, or whoever may have the command, care, or direction of her, shall have her securely made fast; and if outside of another vessel, shall get one good fast from each end of the vessel to the shore, with sufficient fenders between them and the inside vessel; and shall cause the flukes of their anchors to be taken in board; and, within twenty-four hours thereafter, cause her jib-boom, spritsail-yard, main boom, spanker and ringtail booms, if any they have, to be rigged in, and their lower yards topped up.

No outward-bound vessel, putting off from a wharf, shall lie longer in the stream between Vine-street and Almond-street, in the district of Southwark, above-mentioned, than twenty-four hours. And if vessels lying at the end of wharfs so much interlock with each other as to prevent vessels hauling in and out of docks, the master, owner, pilot, or other person having the charge of the same, shall, immediately on application from any person so wanting to haul his vessel in or out of docks, have the vessel or vessels so interfering, moved to accommodate the one applied for; in which case the vessel making room for another to haul in or out, shall have liberty to make her warps fast to the most convenient place adjacent, for a reasonable time; and all sea vessels, when wanting to haul into a wharf or dock, or to make sail in order to proceed to sea, shall have the same privilege.

A vessel lying alongside any wharf, and not taking in or discharging, shall make way for any vessel that wants to unload or load, to come inside, next the wharf, until she discharges or loads her cargo; and the said vessel, when so discharged or loaded, shall haul outside and give way to the vessel that first occupied the wharf; provided that, from the 10th of December to the 1st of March, no vessel shall be compelled to move from her berth (only those at Gloucester Point piers), excepting to let vessels in and out of docks.

No ship or vessel loading or discharging hemp shall have any fire on board; neither shall any vessel lying outside or near her be permitted to have fire on board, while it may be considered dangerous. And no tar, turpentine, rosin, or pitch, shall be heated on the wharf, or on board any vessel lying at any wharf within the limits of the city.

Pilotage.—Every vessel arriving from, or bound to, a foreign port, is required by law to receive a pilot, or to pay half pilotage in the warden's office, where the master of every such vessel is required, under a penalty of ten dollars, to make report within thirty-six hours after his arrival, and again before his departure.

RATES OF PILOTAGE.

Every vessel of seventy-five tons and upwards arriving from, or bound to, any port within the United States, and the master of all such vessels, are bound to pay as above.

The pilot must inform the master of his having to report at the warden's office. As vessels obliged to receive a pilot are required to pay ten dollars in addition, as winter pilotage, from the 20th of November to the 10th of March, both days inclusive.

The vessels of foreign countries, which are not exempt by treaty, must pay two dollars sixty-seven cents in addition to other pilotage.

Every pilot detained more than twenty-four hours by any master, owner, or consignee, is entitled to two dollars per day for every day he is so detained.

Every pilot detained more than forty-eight hours by the ice, after he has conducted his vessel to a place of safety, is entitled to two dollars for every day he is detained.

Every pilot compelled to perform quarantine is entitled to two dollars for every day he is so detained, and cannot be discharged in less than six days, without his consent.

Every pilot obliged by stress of weather to proceed to another port, is entitled to his pilotage; and if there discharged, to eight cents for every mile he has to travel home.

Every pilot is required, under a penalty of twelve dollars, to send a report, within forty-eight hours, to the warden's office, of every vessel he conducts to the city.

COMMISSION CHARGES.

	Foreign.	Domestic.	
	per cent.	per cent.	
Merchandise, sales	5	2½	on gross amount.
Purchase and shipment, or accepting bills for purchases....	2½	2½	on cost and charges.
Landing and reshipping goods from vessels in distress.....	2½	2½	on current value.
Reselling and forwarding	1	1	on ditto.
Besides.....	2½	2½	on responsibilities incurred.
Vessels, sale or purchase.....	2½	2½	on gross amount.
Procuring freight or chartering to proceed to another port...	2½	2½	on ditto.
Collecting freight or general average.....	2½	2½	on amount collected.
Paying outfits or disbursements.....	2½	2½	on aggregate amount.
Marine insurance, effecting, when the premium does not exceed ten per cent.	½	½	on amount insured.
When the premium exceeds ten per cent.	5	5	on amount of premium.
Adjusting and collecting losses without litigation	2½	2½	on amount recovered.
Fire insurance, effecting.....	5	5	on amount of premium.
Adjusting and collecting losses.....	1	1	on amount recovered.
Foreign and inland bills of exchange and notes of hand, drawing or indorsing and negotiating, in all cases.....	2½	2½	on the proceeds.
Purchase without indorsing.....	1	1	on cost and charges.
Sale ditto.....	1	1	on the proceeds.
Collecting	1	1	on amount collected.
Paying over the amount.....	1	1	on amount paid over.
Remitting.....	1	1	on amount remitted.
Public stocks, specie, bank notes, or drafts not current, sale	1	1	on proceeds.
Purchase.....	1	1	on cost and charges.
Collecting dividends on public stock.....	1	1	on amount collected.
Advances in money, or by coming under acceptance, in all cases	2½	2½	on amount advanced.
Accounts, collecting disputed or litigated accounts, or claims on insolvent estates.....	5	5	on amount recovered.
Monies, receiving, from which no other commission is derived...	1	1	on amount received.
Paying ditto.....	1	1	on amount paid.
Paying and receiving ditto.....	1	1	on amount received.
Guarantee, in all cases	2½	2½	on the amount guaranteed.

On bills remitted for collection under protest for non-acceptance or non-payment, one-half commission to be charged.

On consignment of merchandise withdrawn or reshipped, full commission to be charged to the extent of advances or responsibilities incurred, and one-half commission on the current value of the residue.

On sales of merchandise originally consigned to another house, but withdrawn, and where no responsibilities are incurred, only one-half commission to be charged.

The current value, in all cases, to be settled by certificates of two respectable merchants, auctioneers, or brokers.

The above commissions to be exclusive of guarantee, brokerage, storage, wharfage, cartage, towboats, &c., and every other charge actually incurred.

The risk of loss by fire, unless insurance be ordered, and of robbery, theft, and other unavoidable occurrences: if the usual care be taken to secure the property, is, in all cases, to be borne by the proprietor of the goods.

§ War with Great Britain.

¶ Opening of the Chesapeake and Delaware canal.

Foreign Arrivals at Philadelphia, 1839.—Ships, 90; barks, 37; brigs, 274; schooners, 117; galliot, 1; mistico, 1; sloop, 1. Total, 521.

Of these vessels there were eighty-six belonging to foreign ports, viz.:—Austrian, 2; Bremen, 9; British, 56; Colombian, 3; Danish, 2; Dutch, 1; French, 2; Genesee, 1; Hamburg, 2; Haytian, 2; Portuguese, 1; Prussian, 1; Russian, 2; Spanish, 1; Swedish, 1. Total, 86.

In 1838, the total number of foreign arrivals was, ships, 79; barks, 19; brigs, 232; schooners, 132; mistico, 1; sloop, 1. Total, 464.

Value of Goods Imported, and Duties.—The value of the goods imported into this port during the years 1837 and 1838, and three quarters of 1839, has been as follows, viz.:—in 1837, 10,130,838 dollars; in 1838, 10,417,815 dollars.

The duties accruing to the United States from imports into this port during the fiscal years, 1838 and 1839, have been as follow, viz.:—in 1839, 2,971,122 dollars 97 cents; in 1838, 1,917,108 dollars 80 cents.

For trade and navigation of this port, and also for previous years, see General Trade and Navigation of Pennsylvania.

CARLEISLE. Population, in 1840, 4351. The Cumberland Valley railroad, extending from Harrisburg to Chambersburg, passes through this place. In 1840, there were forty-two stores, capital 90,440 dollars; two lumber yards, capital 2000 dollars; six tanneries, three distilleries, two breweries, three printing offices, one bindery, three weekly papers. Capital in manufactures, 68,750 dollars.

CHAMBERSBURG, situated in the valley of Conococheague creek, a branch of the Potomac river. It had, in 1840, thirty-eight stores, capital 135,400 dollars; one tannery, one pottery, one paper factory, one cotton factory, one woollen factory, one oil mill, one edge tool factory, two flouring mills, in one of which straw paper is also manufactured, four printing offices, one of which belongs to the German Reformed church of the state, four weekly and one semi-weekly newspapers, an insurance company, a saving fund society, and numerous mechanic and manufacturing establishments. Capital in manufactures, 131,450 dollars. Population, in 1840, 3239; 1842, 4030. The Conococheague and Falling Spring creeks, unite in the borough, and afford good water power.

EASTON, situated on the west side of Delaware river, at the junction of the Leligh, fifty-eight miles north of Philadelphia. Population, in 1820, 2370; 1830, 3529; 1840, 4865. It is built on a point of land formed by the Delaware and Leligh rivers, and Bushkill creek. The streets are laid out along the cardinal points, crossing each other at right angles, with a square in the centre, on which stands the court house, erected in 1758. The part of the village on the Delaware is

level, but considerably elevated above the river, and the ground rises gradually from the river toward the west to a considerable height. There is a fine bridge over the Delaware, 570 feet long, which cost 80,000 dollars; a chain bridge over the Lehigh; and two bridges over the Bushkill. The Delaware, Morris, and Lehigh canal form a junction at this place. There were, in 1840, two banks, seventy stores, capital 272,650 dollars; three lumber yards, capital 15,000 dollars; one woollen factory, capital 20,000 dollars; three tanneries, three distilleries, two breweries, two rope factories, seven flouring mills, two saw mills, two oil mills, three printing offices, two binderies, four weekly newspapers. Capital in manufactures, 177,295 dollars.

ERIE, is beautifully situated on Presque Isle bay, Lake Erie, and is one of the best harbours on the lake. The depth of water on the bar is eight or ten feet, and within much more. It contained, in 1840, one bank, forty-five wholesale and retail stores, six forwarding and commission warehouses, two flouring mills, two iron foundries, one fulling mill, two tanneries, three printing offices, one bindery, four weekly newspapers, two grist mills, one saw mill. Capital in manufactures, 31,200 dollars. Population, 3412.—(See Interior Trade of the United States hereafter.)

HARRISBURG, city, capital of the state of Pennsylvania, is situated on the east bank of the Susquehanna, ninety-eight miles north-west by west of Philadelphia. Population, in 1820, 3000; 1830, 4307; 1840, 5980. Its situation is commanding, having a fine view of the river and surrounding country. The houses are well built, and generally of brick. "The bridge, a fine covered structure, extending to an island in the river, and thence to the opposite bank, 2876 feet long, forty feet wide, fifty feet above the surface of the river, and cost 155,000 dollars; there is another recently built. There were, in 1840, three commission houses engaged in foreign trade, capital 23,500 dollars; seventy-six retail stores, capital 319,860 dollars; five lumber yards, capital 25,000 dollars; one forge, two tanneries, three breweries, two potteries, one saw mill, twelve printing offices, six binderies, eleven weekly newspapers, one periodical. Capital in manufactures, 195,450 dollars."—*U. S. Gaz.*

LANCASTER, formerly capital of the state, is situated one mile and a half west of Conestoga creek, which falls into the Susquehanna, nine miles south-south-west of the city. Population, in 1820, 6663; 1830, 7704; 1840, 8417. It is regularly laid out with wide streets, crossing each other at right angles. The streets are well paved and kept in a neat condition. It is surrounded by a very fertile, highly cultivated and populous country. The great western turnpike from Philadelphia to Pittsburg, and the Philadelphia and Columbia railroad, pass through the city. Its commerce and manufactures are considerable. There were, in 1840, two commission houses engaged in foreign trade, capital 38,000 dollars; thirty-two stores, capital 242,750 dollars; three lumber yards, capital 16,000 dollars; three furnaces; machinery manufactured, value 12,500 dollars; two tanneries, thirteen distilleries, four breweries, four potteries, two rope-walks, five printing offices, three binderies, six weekly newspapers. Capital in manufactures, 223,439 dollars. There were in the township, one cotton factory, 2000 spindles, five distilleries, three flouring mills, three grist mills, and two saw mills. Capital in manufactures, 90,000 dollars. Population, 809.

LOWER MERION, watered by Schuylkill river, and Mill and Cobb's creeks. It had, in 1840, nine stores, capital 13,950 dollars; two lumber yards, capital 6500 dollars; two woollen factories, three cotton factories, 1532 spindles, seven paper factories, three grist mills, three saw mills. Capital in manufactures, 117,170 dollars. Population, 2827.

MAUCH CHUNK, belongs chiefly to the Lehigh navigation and coal company, and contains several villages connected with the coal business. About 1200 of the inhabitants are employed in mining and shipping coal, and there is little agricultural cultivation in the neighbourhood, the provisions being brought from an average distance of twenty miles. An inclined plane, 700 feet long, rising 200 feet, and a railway, nine miles long, extends to the great coal mine. About thirty acres have been worked from this single vein, and have produced more than 1,200,000 tons. Here is a village called Coalville, of forty dwellings, occupied by miners. Below Mauch Chunk the coal is conveyed by the Lehigh canal. This township has seven stores, capital 41,000 dollars; three lumber yards, capital 7000 dollars; one printing office, one weekly newspaper, one grist mill, four saw mills. Capital in manufactures, 28,000 dollars. Population, 2193.

PITTSBURG, city, port of entry, and capital of Alleghany county, Pennsylvania, is situated at the confluence of the Alleghany and Monongahela rivers, where they form the Ohio, which is here a quarter of a mile wide. It is in 40 deg. 32 min. north latitude, and 80 deg. 2 min. west longitude; 230 miles west-north-west of Baltimore, 297 miles west by north of Philadelphia, 200 miles west-north-west of Harrisburg, 226 miles from Washington. Population, in 1810, 4768; 1820, 7248; 1830, 12,542; 1840, 21,115, being the second city in population in the state, and the thirteenth in the United States. "It is built on a beautiful plain between the two rivers, in the form of a triangle. About a mile back of the point it is encompassed by Grant's, Ayers', and Quarry hills. It is compactly built, with some handsome buildings, generally of brick; but a dingy appearance is given to them by the dust of the bituminous coal, so extensively used in manufactures and otherwise. The city was first laid out in 1765, on the north-east bank of the Monongahela, after the plan of Philadelphia, with streets running parallel with the river, and crossed by others at right angles. The streets on the Alleghany also run parallel with the river, and are crossed by streets at right

angles; and the cross streets meet each other obliquely, a few streets back from the river. A bridge crosses the Alleghany, and another the Monongahela river, the former of which cost 96,000 dollars, and the latter 102,000 dollars. The Pennsylvania canal crosses the Alleghany river in an aqueduct, and several ferries cross the Monongahela. The harbour of Pittsburg is chiefly on the Monongahela, where the water is deeper than in the Alleghany. There are eighty-nine steamboats, averaging over 125 tons burden, owned wholly or in part in the district of Pittsburg. The hills with which Pittsburg is surrounded are filled with bituminous coal, which is inexhaustible, and affords great aid to its manufactures. There are thirty-five churches—five Presbyterian, one Reformed Presbyterian, four Methodist, one Protestant Methodist, one Cumberland Presbyterian, three Baptist, two Episcopal, five Scots Presbyterian, two Lutheran, two Congregational, three Welsh Methodist, one Unitarian, one Disciples, three Roman Catholic, and one African. There are four banks, with an aggregate capital of 3,000,000, dollars, besides a bank for savings, and two insurance offices, with a total capital of 500,000 dollars.

Among the public buildings of Pittsburg, the new court house, situated on Grant's hill, is a splendid edifice, 165 feet long, and 100 feet broad, of Grecian Doric architecture, in a very commanding situation, and cost 200,000 dollars. The building of the Western University of Pennsylvania is also near Grant's hill, on the Monongahela side of the city. There is a spacious Roman Catholic cathedral on Grant's hill. There are a museum, which contains many aboriginal curiosities, and several splendid hotels. There are several literary societies, with small libraries, which would probably be more efficient, if united in one large institution. There are three market houses. The city is supplied with water raised from the Alleghany river, a very pure stream, by steam power, which supplies 1,500,000 gallons daily, and is sent over the city in pipes, in the whole nine miles and a quarter in length, and is to be further extended, and which cost 188,056 dollars. Pittsburg is alike distinguished for its commerce and manufactures. Tonnage, in 1840, 12,000 tons. It had, in 1840, seven commercial and thirty-two commission houses, with a capital of 1,241,119 dollars; 408 retail stores, capital 4,165,190 dollars; seventeen lumber yards, capital 167,000 dollars; twenty-five furnaces, five forges, capital 1,219,000 dollars; value of machinery manufactured, 443,500 dollars; hardware and cutlery, &c., 276,500 dollars; five cannon and 1350 small arms manufactured; precious metals, 14,860 dollars; various metals, 196,700 dollars; one fulling mill, one woollen factory, capital 10,000 dollars; two cotton factories, with 3000 spindles, four tanneries, five breweries, paints and drugs, capital 208,300 dollars; four glass factories, two glass cutting establishments, two flouring mills, five saw mills, one oil mill, eighteen printing offices, seven binderies, four daily, eleven weekly newspapers, fifty-three brick and stone houses, and fifteen wooden houses built, cost 161,200 dollars. Capital in manufactures, 2,057,952 dollars. One college, fifty students; nine academies, 755 students; eighteen schools, 2581 scholars.

There are several places in the vicinity of Pittsburg, which, though under different organisation, should be regarded as suburbs of it, the principal of which, Alleghany City, on the north-west side of the Alleghany river, with, in 1840, three cotton factories, and 10,039 inhabitants."—*U. S. Gaz.*

The following statistics of Pittsburg for 1842 and 1843, were published in "Hazard's Register."—It has twenty-eight furnaces for cast iron, number of tons produced, 6584; value manufactured, about 446,880 dollars. Number of bloomeries, forges, and rolling mills, for bar iron and nails, twelve; number of tons produced, 45,100; value manufactured, about 4,500,000 dollars; number of hands employed, including miners, 2805; amount of capital invested, 1,931,000 dollars. Glass department—number of glass houses, sixteen; cutting establishments, nine; men employed, 515; value of manufactured articles, including looking glasses, 520,000 dollars; amount of capital invested, 580,000 dollars. Hardware and cutlery department—value of hardware and cutlery manufactured, 351,500 dollars; number of men employed, 210; small arms made, 1350; men employed, thirteen. Precious metals—value manufactured, 4860 dollars; men employed, six.

	dollars.
Total amount of capital invested in manufactories (iron not included)	3,917,472
Iron department	1,931,000

Total capital in manufactories 5,848,472

BIRMINGHAM BOROUGH, on the south side of the Monongahela, which has one furnace, six glass factories, four glass cutting works, one pottery. Capital in manufactures, 155,750 dollars. Population, 1554.

POTTSVILLE, situated at the termination of Schuylkill canal, ninety-nine miles north-west of Philadelphia. In 1824, it had only five houses. In 1840, it had 4345 inhabitants. Capital in manufactures, 141,000 dollars. It owes its rise to the canal and coal trade.

NORRISTOWN, situated on the north side of Schuylkill river. It contained, in 1840, fourteen stores, capital 85,000 dollars; two lumber yards, capital 20,000 dollars; one for ge, three cotton factories, 19,064 spindles, one tannery, two printing offices, two semi-weekly newspapers, two flouring mills, one saw mill. Capital in manufactures, 297,475 dollars. Population, 2937.

READING, fifty-seven miles north-west of Philadelphia, on the east bank of Schuylkill river. The streets are spacious and straight, crossing each other at right angles, five running east and west, and nine north and south. There is a square in the centre, on which stands a court house, 220 feet long, by 220 broad. "Fifty-five thousand dozens of hats are manufactured annually, for the southern and western markets. Seven weekly newspapers are issued, two of them in German, one of which last has been published for forty years, with a large circulation. A rolling mill can roll 3500 tons of bar iron, and 1500 tons of nails can be manufactured annually. The fires are exclusively of anthracite coal. White wines, of an excellent quality, are made to the amount of 100 barrels annually. Two fine covered bridges cross the Schuylkill here, 600 feet wide, one of which cost 60,000 dollars. The Schuylkill and Union canal meet here, and the Philadelphia and Reading railroad passes through the place. It is abundantly supplied with spring water in pipes. Iron ore and limestone are found in the vicinity. It had, in 1840, twenty-three stores, capital 161,600 dollars; three lumber yards, capital 60,000 dollars; one forge, three tanneries, one distillery, two breweries, one pottery, one printing office, five weekly newspapers, two grist mills. Capital in manufactures, 66,759 dollars. Population, 8410.—*U. S. Gaz.*

X. DELAWARE.

DELAWARE is bounded on the north by Pennsylvania; east by Delaware river and bay; and south and west by Maryland. It is situated between 38 deg. 29 min. and 39 deg. 47 min. north latitude, and between 74 deg. 56 min. and 75 deg. 40 min. west longitude, and between 1 deg. 13 min. and 1 deg. 57 min. east from Washington. It is about ninety-two miles long, and twenty-three miles broad; its area is only about 2120 square miles, or 1,356,800 English statute acres. The number of inhabitants in 1790, was 59,094; in 1800, 64,272; in 1810, 72,674; in 1820, 72,749; in 1830, 76,739; in 1840, 78,085; of which 2605 were slaves; 29,259 were white males, 29,302 white females; 8626 free coloured males, 8293 free coloured females. Employed in agriculture, 16,015; in commerce, 467; in manufactures and trades, 4060; navigating the ocean, 401; navigating canals and rivers, 235; learned professions and engineers, 199.

This state is divided into three counties, which, with their population, in 1840, and capitals, are as follows; Kent, 19,872, C. Dover; New Castle, 33,120, C. Wilmington and New Castle; Sussex, 25,093, C. Georgetown. These counties are divided into twenty-four hundreds.

Dover, situated on Jones's creek, seven miles from its entrance into Delaware bay, is the seat of government.

Soil.—The lower part of this state is very level. The northern is undulated, and in some parts rises into high hills. An elevated table-land, near its western border, passes through the state, dividing the waters which fall into the Chesapeake, from those which flow into Delaware bay. This table-land abounds in swamps, in which most of the rivers and streams have their sources; some flowing west to the Chesapeake, and others east to the Delaware. "The swamps and stagnant waters, which are unfit for the purposes of agriculture, and injurious to the health of the inhabitants. At the southern extremity of the state is the Cypress swamp, a morass twelve miles in length and six in breadth, including an area of nearly 50,000 acres of land, the whole of which is a high and level basin, very wet, though undoubtedly the highest land between the sea and the bay. The swamp contains a great variety of trees, plants, wild beasts, birds, and reptiles. In the northern parts, along the Delaware river and bay, and from eight to ten miles into the interior, the soil is generally a rich clay, in which a great variety of the most useful productions can be plentifully reared; from thence to the swamps the soil is light, sandy, and of an inferior quality. In the central parts of the state there is a considerable mixture of sand; and in the southern part it renders the soil almost totally unproductive."—*Book of United States.* The principal productions are wheat, of a superior quality, Indian corn, rye, barley, oats, flax, buckwheat, and potatoes. The southern part affords some fine grazing land; and from the Cypress swamp on Indian river, large quantities of timber are exported. Wheat is the principal article of export, and the Brandywine mills, in the neighbourhood of Wilmington, are among the finest in the United States.—*U. S. Gaz.*

Live Stock and Agriculture.—In 1840, there were 14,421 horses and mules, 53,833

neat cattle, 39,247 sheep, 74,228 swine; poultry valued at 47,265 dollars. There were produced 315,165 bushels of wheat, 5260 bushels of barley, 927,405 bushels of oats, 33,546 bushels of rye, 11,299 bushels of buckwheat, 2,099,359 bushels of Indian corn, 64,404 lbs. of wool, 200,712 bushels of potatoes, 22,483 tons of hay, 1458 lbs. of silk cocoons. The products of the dairy amounted to 113,828 dollars, and of the orchard to 28,211 dollars.—

Official Returns.

Trade.—There were 327 retail dry goods and other stores, employing a capital of 967,750 dollars; 140 persons were engaged in the lumber trade, with a capital of 83,280 dollars; and 165 persons were employed in the fisheries, with a capital of 170,000 dollars.—*Official Returns.*

Manufactures.—There were home-made, or family articles produced to the value of 62,116 dollars; two woollen manufactories, employing eighty-three persons, producing articles to the value of 104,700 dollars, and employing a capital of 107,000 dollars; eleven cotton manufactories, with 24,492 spindles, employing 566 persons, producing articles to the value of 332,272 dollars, and employing a capital of 330,500 dollars; two furnaces produced seventeen tons of cast iron, and five forges produced 449 tons of bar iron, with a capital of 36,200 dollars; one paper mill produced to the value of 20,800 dollars, and other manufactures of paper to the value of 1500 dollars, the whole employing fifteen persons, and a capital of 16,200 dollars; nine persons manufactured pottery to the value of 4300 dollars, with a capital of 1100 dollars; hats and caps were manufactured to the value of 15,300 dollars, and straw bonnets to the value of 450 dollars, employing thirty-five persons, and a capital of 9075 dollars; eighteen tanneries employed sixty-six persons, and a capital of 89,300 dollars; seventy-five other manufactories of leather, as saddleries, &c., manufactured articles to the value of 166,037 dollars, employing a capital of 161,630 dollars; nine persons manufactured confectionary to the value of 6500 dollars, with a capital of 2500 dollars; twenty-seven powder mills, employing 145 persons, manufactured 2,100,000 lbs. of gunpowder, with a capital of 220,000 dollars; 299 persons manufactured machinery to the value of 314,500 dollars; ten persons manufactured hardware and cutlery to the value of 22,000 dollars; ten persons manufactured granite and marble to the value of 12,000 dollars; 116 persons produced brick and lime to the value of 56,536 dollars; 143 persons manufactured carriages and waggons to the value of 49,417 dollars, with a capital of 25,150 dollars; twenty-one flouring mills manufactured 76,194 barrels of flour, and with other mills, employed 288 persons, and produced to the value of 737,971 dollars, with a capital of 294,150 dollars; ships were built to the value of 35,400 dollars; 130 persons manufactured furniture to the value of 16,300 dollars, employing a capital of 34,800 dollars; forty-seven brick houses and 104 wooden houses built, employed 299 persons, and cost 145,850 dollars; six printing offices and two binderies, three weekly and three semi-weekly newspapers, and two periodicals, employed thirty-three persons, and a capital of 11,450 dollars. The whole amount of capital in the state employed in manufactures was 1,589,215 dollars.—*Official Returns.*

The climate of this state is generally mild, though in the northern part the winter season is sometimes considerably severe. It is generally healthy.

The rivers are small. Brandywine creek rises in Pennsylvania, is forty miles long, and uniting with Christiana creek, forms the harbour of Wilmington, one mile below the town, and two miles west of Delaware river. Duck creek, Mispillion creek, and Indian river, flow into the Delaware.

DELAWARE BAY washes the eastern part of the state. It has no good natural harbours in this part of it. To remedy this inconvenience, the government of the United States have undertaken the construction of the Delaware Breakwater, in front of Lewiston, near Cape Henlopen. It consists of two piers; an ice-breaker, 1500 feet long; and a break-water, 3600 feet long; and when completed, is estimated to cost 2,216,950 dollars.—*U. S. Gaz.*

Wilmington is the largest and most commercial town in the state. Vessels drawing fourteen feet of water, ascend to its wharfs; it has some trade, and several ships engaged in the whaling business. The other principal towns are Dover and New Castle.

Education.—There is one college in the state, Newark College, at Newark, which was founded in 1833, and had, in 1840, twenty-three students. Besides this, there were

in the state twenty academies, with 761 students; 152 primary and common schools, with 6924 scholars; and 4832 persons over twenty years of age who could neither read nor write.—*Official Returns.*

Religion.—The principal religious denominations are the Presbyterians, who, in 1836, had fifteen ministers; the Methodists, fifteen ministers; the Episcopalians, six ministers; the Baptists, nine churches and five ministers; and the Roman Catholics, two ministers; besides some Friends.

In January, 1840, the state had four banks, and four branches, with an aggregate capital of 1,071,318 dollars. The state had no state debt.—*Official Returns, U. S. Gaz.*

Public Works.—The Chesapeake and Delaware canal, is the most important internal improvement in Delaware. "It crosses the northern part of the state, commencing at Delaware city (which has only forty houses), forty-six miles below Philadelphia, and extends thirteen miles and a half to Back creek, a navigable branch of Elk river. Being sixty-six feet wide at the surface, and ten feet deep, it is navigable for sloops and steamboats. The Deep Cut in this canal is four miles in length, through a hill ninety feet high. This canal was commenced in 1824, and completed in 1829, at a cost of 2,200,000 dollars. The New Castle and Frenchtown railroad also forms a connexion between the Delaware and Chesapeake. It extends from New Castle on the Delaware river to Frenchtown on Elk river, is sixteen miles and a quarter long, and was finished in 1832, at an expense of 400,000 dollars."—*U. S. Gaz.*

PRINCIPAL TOWNS.

DOVER, capital of Delaware county, fifty miles south of Wilmington, is situated on high ground, between the two principal branches of Jones's creek, ten miles from its entrance into Delaware bay. It is regularly laid out with wide streets, at right angles with each other; and the houses, which are chiefly of brick, are generally neat and handsome. The state house stands on the east side of a large public square, and is an elegant building; and the other public buildings are built around the same square. It contains three churches—one Presbyterian, one Episcopal, and one Methodist—a bank, an academy, six stores, ninety dwellings, and about 600 inhabitants. Its trade is chiefly in flour, with Philadelphia. There are in the hundred, nine stores, capital 25,100 dollars; one printing office, one periodical paper, three grist mills, two saw mills. Capital in manufactures, 16,200 dollars. Population, 3790.

MILFORD, twenty-one miles south by east of Dover, situated on the north side of Mispillion creek, which enters Delaware bay. There are in the hundred, thirteen stores, capital 6990 dollars; two tanneries, six grist mills, three saw mills. Capital in manufactures, 24,000 dollars. Population, 2356.

NEW CASTLE, five miles south-south-west of Wilmington, situated on the west bank of Delaware river, thirty-two miles south-west of Philadelphia. It contains ten stores, 195 dwellings, and 1200 inhabitants. The New Castle and Frenchtown railroad have a large establishment here for the manufacture of steam-engines, locomotives, and other things connected with railroads, including an iron and brass foundry, &c., with a capital of 110,000 dollars. Population, 2737. Tonnage, in 1840, 3661.

WILMINGTON, port of entry, situated between Brandywine and Christiana creeks, one mile above their junction, two miles west of Delaware river, forty-seven miles north of Dover, twenty-eight miles south-west of Philadelphia, in 39 deg. 41 min. north latitude, and 75 deg. 28 min. west longitude. Population, in 1830, 6628; in 1840, 8367. It is regularly laid out, with wide streets crossing each other at right angles, and built on ground gradually rising to the height of 112 feet above tide-water, and the situation is healthy and pleasant. The houses are well built, generally of brick. The city contains a city hall, two market houses, three banks. Christiana creek is navigable for vessels requiring fourteen feet of water to the city. On Brandywine creek are some of the finest flouring mills in the United States, to which vessels drawing eight feet of water can come. Wilmington has considerable commerce. It is extensively engaged in the whale fishery. Tonnage, in 1840, 16,110. It has a daily communication with Philadelphia and Baltimore, by railroad. There were, in 1840, ninety-five stores, capital 344,850 dollars; three lumber yards,

SOUTHERN ATLANTIC STATES.—I. MARYLAND.

MARYLAND, is bounded north by Pennsylvania; east by Delaware and the Atlantic; and south and west by Virginia. It is between 38 deg. and 39 deg. 44 min. north latitude, and between 75 deg. 10 min. and 79 deg. 20 min. west longitude, and between 2 deg. 31 min. west and 1 deg. 58 min. east from Washington. It is 196 miles long, and 120 broad, containing 13,959 square miles, or 8,933,760 acres, of which one-fifth is water. The Chesapeake bay runs nearly through the state from south to north, dividing it into two parts, called the *Eastern Shore* and the *Western Shore*.

The population, in 1790, was 319,728; in 1800, 345,824; in 1810, 380,546; in 1820, 407,350; in 1830, 446,913; in 1840, 469,232, of which 89,495 were slaves. Of the free population 158,636 were white males; 159,081 white females; 29,173 were coloured males; 32,847 coloured females. Employed in agriculture, 60,851; in commerce, 3249; in manufactures and trades, 21,325; navigating the ocean, 721; navigating canals, lakes, and rivers, 1519; learned professions, 1647.

This state is divided into twenty counties, which, with their population, in 1840, and their capitals, were as follows: *Western Shore*—Alleghany, 15,690, C. Cumberland; Anne Arundel, 29,532, C. Annapolis; Baltimore, 134,379, C. Baltimore; Calvert, 9229, C. Prince Frederick; Carroll, 17,241, C. Westminster; Charles, 16,023, C. Port Tobacco; Frederick, 36,405, C. Frederick; Harford, 17,120, C. Bel Air; Montgomery, 14,662, C. Rockville; Prince George's, 19,539, C. Upper Marlboro; St. Mary's, 13,224, C. Leonardtown; Washington, 28,850, C. Hagerstown. *Eastern Shore*—Caroline, 7806, C. Denton; Cecil, 17,232, C. Elkton; Dorchester, 18,843, C. Cambridge; Kent, 10,842, C. Chestertown; Queen Anne's, 12,633, C. Centreville; Somerset, 19,508, C. Princess Anne; Talbot, 12,090, C. Easton; Worcester, 18,377, C. Snowhill.

Soil.—Near the eastern shores of the Chesapeake, the land is generally level, and in many places covered with stagnant waters, which, in the summer and autumn, cause agues and intermittent fevers. On the western shores of the Chesapeake the country is generally flat, and the soil resembles that of the eastern shores. As we ascend to where the rivers are broken by cataracts, the country is undulated and hilly; and in the western part of the state it is traversed by high ranges, under the names of South mountain, North mountain, Sideling hill, Warrior's, Evits', Willis', and Alleghany mountains. The soil of the state is generally a red loam, or clay, and much of it is excellent. Wheat and tobacco are the staple productions. Some cotton, of an inferior quality, is raised in the western counties, and, south of Baltimore, tobacco of superior quality, denominated *kitesfoot*, Hemp and flax are produced in considerable quantities. Apples, pears, peaches, melons, and plums, are abundant. The forests abound with various nuts, suitable for fattening hogs, which are suffered to run wild in the woods, and, when fattened, are killed and exported in great quantities. The climate, in the mountainous region, is salubrious; and in the valleys between the mountains is much fine land, adapted both to grain and to grazing.—*U. S. Gaz.*

Live Stock and Agricultural Products.—In this state there were, in 1840, 92,920 horses and mules, 225,714 neat cattle, 257,922 sheep, 416,943 swine, poultry to the value of 218,765 dollars. There were produced 3,345,783 bushels of wheat, 3594 bushels of barley, 3,534,211 bushels of oats, 723,577 bushels of rye, 73,606 bushels of buckwheat, 8,233,086 bushels of Indian corn, 488,201 lbs. of wool, 2357 lbs. of hops, 3674 lbs. of wax, 1,036,433 bushels of potatoes, 106,687 tons of hay, 24,816,012 lbs. of tobacco, 5673 lbs. of cotton, 2290 lbs. of silk cocoons, 36,266 lbs. of sugar. The products of the dairy amounted in value to 457,466 dollars; of the orchard, 105,740 dollars; of lumber, 226,977 dollars. There were made 7585 gallons of wine.—*Official Returns*.

In an article in "Hunt's Magazine," on the Resources of Maryland, in 1841, the writer gives the following table of live stock and products:—

Minerals.—The mineral riches of this state are described as very abundant. Iron ore is found in various parts of the state, and extensive beds of coal between the mountains in the western part. Copper ore is also found, and marble, granite, slate, asbestos, &c., abound.

Rivers.—The Potomac river, which divides this state from Virginia, is 550 miles long, and navigable about 300 miles to Washington. It is seven miles and a half wide at its mouth, and one mile and a quarter at Alexandria, 290 miles from its mouth. The Susquehanna is a large river, which enters into the head of the Chesapeake bay in this state. It is one mile and a quarter wide at its mouth, but is navigable only five miles, being, above that, much obstructed by falls and rapids. The Patapsco is a small river, navigable, however, fourteen miles to Baltimore for large ships. The Patuxent is 110 miles long, and is navigable, for fifty miles, for vessels of 250 tons. The other streams of any consequence are the Elk, Sassafras, Chester, Choptank, Nanticoke, and Pocomoke.

Chesapeake bay is 270 miles long, and from seven to twenty wide; and by its deep water and numerous inlets, furnishes several good harbours.—*U. S. Gaz.*

Trade.—In 1840, there were in the state, seventy commercial and 117 commission houses engaged in foreign trade, employing a capital of 4,414,000 dollars; 2562 retail dry goods and other stores, with a capital of 9,246,170 dollars; 1330 persons engaged in the lumber trade, employing a capital of 307,300 dollars; 103 persons employed in internal transportation, who, with 211 butchers, packers, &c., employed a capital of 28,880 dollars; 7814 persons employed in the fisheries, with a capital of 88,947 dollars.—*Official Returns.*

Manufactures.—The manufactures of home-made articles, made in the houses of families, amounted in value to 176,050 dollars; thirty-nine fulling mills and twenty-nine woolen manufactories, employing 388 persons, producing articles to the value of 235,900 dollars, and employing a capital of 117,630 dollars; twenty-one cotton manufactories, with 41,182 spindles, employing 2284 persons, producing articles to the value of 1,150,580 dollars, and employing a capital of 1,304,400 dollars; thirteen rope factories employed 198 persons, and produced articles to the value of 141,050 dollars; twelve furnaces, producing 8876 tons of cast iron, and seventeen forges, &c., producing 7900 tons of bar iron, the whole employing 1782 persons, and a capital of 793,650 dollars; seventeen paper manufactories produced to the value of 195,100 dollars, and other paper manufactories 3000 dollars, the whole employing 171 persons, and a capital of 95,400 dollars; ninety-three persons produced 1,865,240 lbs. of soap, and 731,446 lbs. of tallow candles, and 35,000 lbs. of spermaceti candles, employing a capital of 98,600 dollars; seventy-three distilleries produced 366,213 gallons, and eleven breweries produced 828,140 gallons, the whole employing 199 persons, and a capital of 185,790 dollars; hats and caps were manufactured to the value of 153,456 dollars, and straw bonnets to the value of 13,200 dollars, the whole employing 205 persons, and a capital of 76,620 dollars; 161 tanneries employed 1035 persons, and a capital of 713,655 dollars; 408 saddleries and other manufactories of leather, produced articles to the value of 1,050,275 dollars, with a capital of 434,127 dollars; one glass house, employing thirty-seven persons, produced articles to the value of 40,000 dollars, with a capital of 30,000 dollars; twenty-three potteries employed ninety

persons, producing to the value of 60,240 dollars, with a capital of 25,120 dollars; five powder mills employed forty-seven persons, and produced 669,125 lbs. of gunpowder, with a capital of 46,000 dollars; fifty-two persons produced drugs and paints to the value of 80,100 dollars, with a capital of 85,100 dollars; six sugar refineries produced 176,000 dollars; 102 persons produced confectionery to the value of 73,450 dollars; 278 persons manufactured tobacco to the value of 232,000 dollars, with a capital of 125,100 dollars; 247 persons manufactured granite and marble to the value of 152,750 dollars; 1042 persons produced bricks and lime to the value of 409,456 dollars; 723 persons produced machinery to the value of 348,165 dollars; thirty-six persons manufactured hardware and cutlery to the value of 15,670 dollars; 690 persons produced carriages and waggons to the value of 357,622 dollars, with a capital of 154,955 dollars; 189 flouring mills produced 466,708 barrels of flour, and, with other mills, employed 898 persons, producing articles to the value of 3,267,250 dollars, and employed a capital of 4,069,671 dollars; ships were built to the value of 279,771 dollars; 834 persons manufactured furniture to the value of 305,360 dollars, with a capital of 339,336 dollars; 389 brick or stone houses, and 592 wooden houses, were built, employing 2026 persons, and cost 1,078,770 dollars; forty-eight printing offices, and fifteen binderies, seven daily, seven semi-weekly, and twenty-eight weekly newspapers, and seven periodicals, employed 376 persons, and a capital of 159,100 dollars. The whole value of capital employed in manufactures in the state amounted to 6,450,284 dollars.—*Official Returns.*

Education.—Washington College, at Chestertown, was established in 1782; St. John's College, at Annapolis, in 1784. These two subsequently formed a university. St. Mary's College, at Baltimore, was founded in 1799, by the Catholics. The Baltimore Medical School was founded in 1807. In 1812, there were connected with it the faculties of general science, law, and divinity, and it received the name of the University of Maryland. Mount St. Mary's College was established near Emmetsburg, in 1830, by the Catholics. These institutions had, in 1840, about 400 students. Besides, there were 127 academies and grammar schools, with 4178 students; and 567 primary and common schools, with 16,932 scholars. There were 11,605 white persons, over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

Religion.—The first settlers of this state were Roman Catholics, and they are still numerous. They have an archbishop, who is metropolitan of the United States, and sixty churches. The Episcopalians have seventy-seven ministers; the Presbyterians, twenty-five; the Baltimore Methodist Conference, which extends into some other states, has 172 travelling preachers; the Baptists have twenty ministers; the German Reformed, nine; and there are some Lutherans, Friends, Unitarians, &c.—*U. S. Gaz.*

Banks.—There were in this state, in 1840, thirteen banks, with an aggregate capital of 9,106,031 dollars, and a circulation of 2,328,525 dollars.

Public Works.—Two of the greatest works of internal improvement in the United States have been projected and commenced by Maryland. The first is the Chesapeake and Ohio canals commencing at Georgetown, District of Columbia, and to extend to Cumberland, on the Potomac, and thence by Wills creek and the Youghiogheny and Monongahela rivers to Pittsburg, a distance of 341½ miles. It would require a tunnel through the Alleghany mountains four miles and eighty yards in length. The whole amount of lockage will be 3215 feet. The estimated cost is 9,347,408 dollars. The state of Maryland has subscribed 3,000,000 dollars, and the United States 1,000,000 dollars, towards the completion of the undertaking. A charter was granted by Virginia in 1824, and confirmed by Maryland and the congress of the United States in 1825, and the work was commenced in 1828. It has been nearly completed from Georgetown to Cumberland, 185 miles, and has been extended to Alexandria.—*U. S. Gaz.*

The second great work is the Baltimore and Ohio railroad, designed to extend from Baltimore to Wheeling, on the Ohio, 360 miles. It was incorporated by the legislature of Maryland, Virginia, and Pennsylvania, in 1827, and commenced July 4th, 1828. The state of Maryland has subscribed to the stock 3,000,000 dollars, and the city of Baltimore, 3,000,000 dollars. It is completed from Baltimore to Cumberland. The Washington branch extends thirty miles and a quarter from Potapscow river to Washington. The Baltimore and Port Deposit railroad extends thirty-six miles from Baltimore to Havre de

Grace. The Baltimore and Susquehanna railroad extends fifty-six miles from Baltimore to York, Pennsylvania. The Reistertown branch railroad commences six miles from Baltimore, and extends eight miles to Reistertown. The Wilmington and Susquehanna railroad extends from Havre de Grace thirty-two miles, to Wilmington, Delaware. The Annapolis and Elkridge railroad extends nineteen miles and three-quarters from Washington branch to Annapolis.—*U. S. Gaz.*

PRINCIPAL TOWNS OF MARYLAND.

ANNAPOLIS, city and port of entry, capital of Maryland, on the west side of the Severn, two miles from its mouth in Chesapeake bay, twenty-eight miles south-south-east of Baltimore, 39 deg. north latitude, 76 deg. 43 min. west longitude, and 31 min. east longitude from Washington. Population, 1830, 2623; 1840, 2792. "It has been the seat of government in Maryland, since 1699. The tonnage of the port, in 1840, was 4519. The state house is a fine building in the centre of the city, from which, and from the Episcopal church, the streets radiate as from two centres. There is an Episcopal and a Methodist church, a market house, bank, and theatre, and about 350 dwellings, stores, &c. The University of Maryland has one of its branches here, called St. John's college, chartered as a Roman Catholic institution in 1784; but as such became extinct; and has been resuscitated under different auspices. It has a president, four professors, or other instructors, 120 alumni, of whom six were ministers, twenty-seven students, and 4000 volumes in its libraries. Commencement 22nd of February. Aid is afforded to indigent students."—*U. S. Gaz.* In 1840, the city contained forty stores, capital 59,550 dollars; one tannery, two printing offices, two semi-weekly newspapers. Capital in manufactures, 12,150 dollars.—*Official Returns.*

FREDERICK, city, seventy-five miles west-north-west of Annapolis, the second place in importance in the state, being inferior only to Baltimore, is situated on Carroll's creek, a branch of Monococy creek, three miles west of the latter. It is regularly laid out, with wide streets, crossing each other at right angles, many of them paved; and contains public offices, twelve churches, several banks, literary and scientific institutions, about 800 dwelling houses, mostly of stone or brick, and 5182 inhabitants. The great road from Baltimore to Wheeling passes through the place; and a branch railroad, three miles long, connects it with the Baltimore and Ohio railroad, near the Monococy viaduct. The country around is exceedingly fertile, and the trade of this place is extensive.—*U. S. Gaz.* In 1840, it had three commission houses, and thirty-seven retail stores, capital 132,300 dollars; two lumber yards, capital 6000 dollars; three furnaces, one fulling mill, one woollen factory, ten tanneries, one brewery, one pottery, two rope factories, ten flouring mills, two grist mills, three saw mills, one oil mill, one paper factory, four printing offices, one bindery, one periodical, and four weekly newspapers. Capital in manufactures, 118,790 dollars.—*Official Returns.*

BALTIMORE, is situated on the north side of the Patapsco river, fourteen miles from its entrance into the Chesapeake bay, commanding elevations on the north and east. "As laid out it includes four miles square, and is built around a bay which sets up from the north side of the Patapsco. The streets are regular and spacious, and the houses are neat, most of them of brick, and some of them are splendid. The harbour, which is very fine, consists of three parts. The entrance to it, between Fort M'Henry and the Lazaretto, is about 600 yards wide, with twenty-two feet of water. This depth is continued, with an increased width, for a mile and a quarter, to near Fell's point. Opposite Fell's point, the width is contracted to one-fourth of a mile. This is the entrance to the second harbour, and is about twelve feet deep; but it widens above into an ellipsis, a mile long, half a mile broad, and fifteen feet deep. The third or inner harbour has a depth of ten feet, and penetrates to near the centre of the city. It is well defended by Fort M'Henry, at the entrance to the outer harbour, which was proved by a powerful attack that was made upon it and repulsed, in the last war with Great Britain. Jones's falls, a small stream from the north, divides the city into two parts, and over it are erected three elegant stone bridges and four wooden ones. Vessels of 500 or 600 tons can lie at the wharfs near Fell's point; but those of

200 tons can come up to the town in the inner harbour. The amount of the tonnage of this port, in 1840, was 76,022."—*U. S. Gaz.*

Among the public buildings, the city hall, on Holliday-street, occupied by the city council and several offices. The court house, corner of Monument-square and Lexington-street, appropriated to the city and county courts, with their appendant offices. There are six markets. The state penitentiary consists of three large buildings, besides workshops and some other buildings, and occupies four acres, containing gardens and walks, surrounded by a stone wall twenty feet high. The prisoners work together by day, and are confined in separate cells at night. The county prison is near the Penitentiary. The house of refuge is well fitted for its purpose. But the most imposing public structure is the Washington monument, at the intersection of Charles and Monument streets. The Battle monument, corner of Calvert and Fayette streets, was erected in 1815, in commemoration of the successful defence of the city against an attack of the British, in September, 1814.—*U. S. Gaz.*

Baltimore is well supplied with pure and wholesome water. In several parts of the city are public springs or fountains, accessible to all the citizens. These fountains are enclosed by circular railings, and covered by small, neat, open temples, consisting of columns supporting a dome. There is a rather abundant supply of water from an elevated part of Jones's falls, conveyed by an aqueduct half a mile long, to a reservoir on Calvert-street, whence it is distributed in pipes through the city. The harbour of Baltimore is accessible through a great part of the year, though sometimes obstructed by ice.—*U. S. Gaz.*

It possesses most of the trade of Maryland, much of that of Western Pennsylvania and a portion of that of the Western States. In its shipping, it is the fifth city in the union. It is the greatest market for tobacco in the United States, and the principal flour market in the world. Its tonnage, in 1840, amounted to 76,022. Jones's falls, though a small stream, has a succession of falls which afford considerable water power. The Patapsco, though not a large river, has a fall of about 800 feet in a course of thirty miles; and it affords many valuable mill sites. There are within twenty miles of the city, sixty flouring mills, besides numerous cotton manufactories, and other manufactories of cloth, powder, paper, iron, copper, glass, steam-engines, chemicals, tobacco, &c. There were, in 1840, seventy commercial and 108 commission houses, with a capital of 4,404,500 dollars; 1254 retail stores, capital 6,708,611 dollars; twenty lumber yards, capital 267,500 dollars; machinery manufactured to the amount of 284,000 dollars; hardware and cutlery, 10,300 dollars; precious metals, 13,000 dollars; of various metals, 310,000 dollars; one woollen factory, capital 20,000 dollars; one cotton factory, 3600 spindles; one dyeing and printing establishment, total capital 16,200 dollars; tobacco, capital 118,900 dollars; thirteen tanneries, capital 132,800 dollars; three distilleries, three breweries, capital 87,000 dollars; one powder mill, capital 30,000 dollars; paints, drugs, &c., capital 79,000 dollars; one glass factory, capital 30,000 dollars; nine potteries, capital 22,300 dollars; six sugar refineries produced to the value of 176,000 dollars; three paper factories produced 59,000 dollars; eight rope walks, capital 66,550 dollars; one grist mill, two saw mills, capital 27,000 dollars; furniture to the value of 268,200 dollars; 213 brick and stone houses, and one wooden house, employed 845 persons, and cost 548,400 dollars; nineteen printing offices, ten binderies, six daily, seven weekly, five semi-weekly newspapers, and six periodicals, employed 279 persons, and a capital of 119,900 dollars. Total capital in manufactures, 2,729,983 dollars.—*Official Returns.*

The Baltimore and Port Deposit railroad extends thirty-six miles to Havre de Grace, and there connects with a chain of railroads to Philadelphia, making the whole distance ninety-five miles. The Washington branch of the Baltimore and Ohio railroad extends thirty-eight miles to Washington city. The Baltimore and Ohio railroad is completed for more than eighty miles to Harper's ferry, and is to be continued to Wheeling, on the Ohio. It already brings much trade into Baltimore, and when completed will form the most direct communication which exists between the Atlantic coast and the Mississippi valley. The Baltimore and Susquehanna railroad extends to York in Pennsylvania, and connects with a chain of railroads to Philadelphia and Baltimore. There are lines of steam packets to Philadelphia and to Norfolk, and other packets to New York and to various parts of the Atlantic coast.—*U. S. Gaz.*

There were, in 1840, nine banks, besides savings' institutions, with an aggregate capital of 6,500,000 dollars.

There are in the city forty-two churches, of which the Episcopalians have five, the Roman Catholics have six, one of which is a splendid cathedral; the Presbyterians have three, the Scotch Presbyterians two, the Baptists four, the Methodists have nine, and there are various others.

There are various benevolent institutions, among which are the hospital, the building of which cost 150,000 dollars; the almshouse, 375 feet long, with spacious grounds; several dispensaries, and several orphan asylums, and some others. There are two theatres, a circus, a museum, with some other places of amusement.

Baltimore was first laid out as a town in 1729, and in 1765, it contained but fifty houses. It received a charter as a city in 1797.—*U. S. Gaz.*

COMMERCIAL REGULATIONS OF THE PORT OF BALTIMORE.

Extracts from the Ordinances now in Force—"It is incumbent on the harbour-master to collect all tonnage daily, and whenever two days' tonnage is due, and the payments not secured to his satisfaction, he shall enforce the payment thereof in the same manner as other city dues are collected.

"The sum of two cents per ton shall be, and is hereby assessed and levied upon every vessel of sixty or more tons, arriving at the port of Baltimore, which, by the laws of the United States, is required to report and enter at the custom house, and the collector of the port shall be and is hereby authorised to collect the same.

"Also the sum of two cents per ton shall be, and is hereby assessed and levied upon every vessel of sixty tons or more, arriving at the port of Baltimore, which, by the laws of the United States, is not required to report and enter at the custom house, and that the harbour-masters shall be and they are hereby authorised to collect the same, provided, nevertheless, that the sum of money assessed and levied by this section shall be collected from each vessel but once a month, although she may arrive more frequently.

Dockage.—"All vessels, except those with firewood, lying at or in any manner making use of any wharf belonging to or rented by the state, shall pay dockage according to the following rates:—

Those occupying the 1st tier, per ton, per day, 1 cent.

" 2d " " " 0 1/2 "

All beyond the 2d " " " 0 1/4 "

Wharfage.—"From and after the passage of this ordinance, all goods, wares, or merchandise landed on the public wharfs from on board any vessel or vessels lying at said wharfs, or placed thereon for the purpose of shipment or exposure for sale, shall pay the following rates of wharfage for each and every day the same may remain thereon, or any less time, (excepting, however, firewood and lumber, the rates of which are to be accounted for the whole time allowed by ordinance for the same to remain on the wharfs,) to be paid by the owner or consignee, or in event of there being none, the master of the vessel; and all goods shipped from one vessel to another, one-half price to be paid by the shipper or owner.

Anchors and chain cables.....per ton weight 25	cents.	Boxes lemons and oranges.....each 02	cents.

(continued)

"On consignments of merchandise withdrawn or reshipped, full commission to be charged on the amount of advances, or responsibilities incurred; and half commission on the residue of the value.

"The above commissions are exclusive of guarantee for sales on credit, auction duty and commissions, storage, brokerage, and every other expense actually incurred.

FREIGHT AND FREIGHTING.

"If a vessel is freighted by the ton, and no special agreement is made respecting the proportions at which each article shall be computed, the following shall be the standard of computation, and either parcel deemed equal to a ton, viz:—

2240 lbs. pig and bar iron, lead, copper, logwood, fuelle, and other heavy dyewoods.	1300 lbs. nett weight Kentucky ditto, in hogheads
2000 lbs. Nicaragua and Brazillille wood.	1000 " " " Maryland ditto, in ditto.
2240 " nett, sugar and rice, in casks.	8 barrels flour, of 100 lbs. nett.
1830 " " coffee, in bags.	7 " " beef, pork, and tallow.
1600 " " ditto, in casks.	7 " " naval stores and pickled fish.
1300 " " cocoa, in bags or bulk.	200 gallons, wine measure, estimating the full contents of the cask of oil, wine, brandy, &c.
1190 " " ditto in casks.	22 bushels grain, peas, beans, &c., in casks.
1110 " " pimento, in bags.	40 ditto ditto ditto, in hulk.
952 " " ditto, in casks.	40 " " Liverpool blown salt, in hulk.
800 " " ship bread, in bags.	34 " " ditto ground salt.
700 " " ditto ditto, in casks.	31 " " St. Ubes, Cape Verd, &c., in hulk.
1120 " " dried hides.	30 " " West India salt, in hulk.
800 " " weight, green teas, and China raw silk.	30 " " sea coal, in hulk.
1120 " " " behee, and other black tea.	40 cubic feet of plank, boards, timber, bale goods, packages, and boxes.
1500 " " " Virginia tobacco, in hogheads.	

"In estimating the contents in cubic feet of various packages and goods, the following shall be the standard:—

A flour barrel	5 feet
A tierce of rice	15 "
A hoghead of flaxseed	12 "
A hoghead of Virginia tobacco	45 "
A hoghead of Kentucky, Georgia, and Carolina do.	40 "
A hoghead of Maryland and Ohio do.	35 "
Five bushels of grain in bulk	5 "

"In computing boxes of candles and soap, kegs of butter and lard, hams and bacon, and generally all similar articles, 200 lbs. nett weight shall be considered equal to a barrel of five cubic feet.

"All goods brought to this port on freight must be delivered on a wharf, at the expense of the vessel bringing the same. A delivery, after due notice, on any good wharf at Fell's point, during business hours, is a delivery in the city and port of Baltimore. Hides and articles prohibited to be landed in the city at certain periods, may be landed where the public authorities may direct.

"In all cases when vessels are obliged (by the quarantine regulations, or city authorities,) to discharge their cargo in the stream, the expense of delivering the same east of Jones's falls, will be borne by the carrier only. But when requested by the consignee to be delivered west of Jones's falls, then the expense shall be equally borne by the carrier and consignee (each one half).

"If a vessel is chartered for a voyage out and home, each shipper shall be entitled to his fair proportion of the whole homeward freight, *pro rata*, of the bulk or space occupied by each shipper on the outward voyage.

"In all cases where a vessel is chartered or freighted for a voyage out and home, the freighter or charterer, is bound to furnish sufficient cargo to enable said vessel to return safely home, and the same from port to port, where the charter provides for more than one port. Provided, no agreement to the contrary is made by the parties.

STORAGE.	Per Month.	STORAGE.	Per Month.

“ The owners of goods to be at the expense of putting them in store, and delivering them. All goods stored to be subject to one month’s storage, if in store ten days. If less than ten days, to half a month’s storage. The risk of loss by fire, robbery, theft, and other unavoidable occurrences, is in all cases to be borne by the owner of the goods; and provided usual care be taken for the security of the property.

WEIGHTS AND TARES.

“ Sugar, coppers, alum, brimstone, shot, lead, iron, steel, hemp, dyewoods, and all other articles heretofore sold by the cwt. of 112 lbs., or ton of 2240 lbs., shall in future be sold by the decimal hundred of 100 lbs., or ton of 2000 lbs.

“ Tares shall be allowed as follow :—

Sugar, in hhd. or tierces, 12 per cent; in Cuba boxes, 15 per cent; in flour bls. 22 lbs. each; ditto in linen bags, 3 per cent; and in all other packages the actual tare.

Coffee, in linen, single gunny, and grass bags; 2 per cent; in flour bls. 20 lbs. each; in all other packages the actual tare.

Cocoa, in bags, 2 per cent.

Pepper, in linen or single gunny bags, 2 per cent; in other packages the actual tare.

Pimento, in linen or single gunny bags, 3 per cent; in other packages the actual tare.

Rice, in tierces and half tierces, 10 per cent.

Coppers, 10 per cent, in hogsheads.

Teas, green, whole chests, 20 lbs.; half ditto, the Canton tare; ditto black ditto ditto, 22 lbs.; ditto three-quarter chests, 18 lbs.; other packages the actual tare.

Cassia, in mats, 9 per cent; boxes, and other packages the actual tare.

Indigo, in ceroon, in single hides, 11 per cent; in all other cases the actual tare.

Alum, brimstone, ginger, nutmegs, mace, cloves, almonds, figs, cheese, soap, candles, chocolate, currants, prunes, starch, and all other articles not before mentioned, the actual tare.

No charge shall be made for casks, barrels, boxes, or other packages whatever.

Drafts, as follow :—

On all weights, *even beam*, $\frac{1}{4}$ per cent to be allowed of draft.

	dolls.	cts.
<i>Rates of Pilotage.</i> —For every vessel, either drawing nine feet water or upwards, or measuring seventy-five tons, custom-house tonnage, coming from the sea to the city of Baltimore, per foot	3	50
For every vessel of like draft, from Baltimore to sea	2	50
For the months of December, January, February, and March, in addition to every foot such vessel draws	0	75

“ Every master or owner of a merchant vessel going to sea, whether sailing under a coasting licence or registered, of the burden of 120 tons and upwards, shall be obliged to receive the first pilot who offers to conduct or pilot his vessel, and shall continue the same pilot to the capes, or shall pay to him half pilotage; provided the said pilot shall speak or board said vessel above Fort M’Henry, and shall be duly licensed to act as pilot; and provided further, that the pilot who shall have conducted any vessel from the capes into port shall be entitled to take charge of the same vessel as pilot to the capes on her next voyage.

"Any master or owner of a merchant vessel, sailing under a coasting licence or registered, of the burden of 100 tons and upwards, coming from sea, shall be obliged to take the first pilot who shall offer to conduct or pilot his vessel, and shall continue the same to the port of destination, or shall pay to him half pilotage; provided said pilot shall speak or board said vessel before Cape Henry lighthouse shall bear south; and provided also, the said pilot shall have a branch or licence to the destined port of said vessel.

"The owners of all vessels of the burden of seventy-five tons and upwards, not exceeding one hundred tons, before going to sea, shall apply to the board of pilots for a licence to navigate the Chesapeake bay, and shall pay to the said board, for such licence, at the rate of six cents per ton, and such licence shall be good for twelve months.

"The master of any vessel, for which a licence is made necessary by the preceding regulation, who shall navigate the same without such licence, shall subject himself to receive a pilot upon the same terms as is provided for in the first regulation."

COMMERCE OF BALTIMORE.

STATEMENT of Imports, Exports, Tonnage, &c., of the Port of Baltimore for the Year ending 30th of September, 1840.

IMPORTS.		Entered at the Custom-house, from ports within the United States, 820 vessels. These are exclusive of coasters which are not obliged by law to enter.	
Total value of imports 1839-40	dollars. 4,835,617	The number of arrivals from sea, which is of course exclusive of bay and river craft, and vessels through canals, were ships 70, barks 60, brigs 375, schooners 875, and sloops 11.—Total, 1391 vessels. Of the foregoing there were—	
" " 1838-39	6,952,618	American ships from foreign ports	40
Falling off of imports	2,117,001	" coastwise	9
Exports.		Foreign ships from foreign ports	20

PUBLIC DEBT OF MARYLAND.

Maryland, like Pennsylvania, has fallen into fiscal discredit, and has consequently acquired the ignominy of being a repudiating state. The remarks which we have applied to Pennsylvania bear with equal force against Maryland; with the exception, that from the far greater proportion of the debt of the latter to the resources of the state, there is much less probability of an early resumption of the payment of the interest.

ABSTRACT OF THE OFFICIAL STATEMENT OF THE FINANCES FOR 1842 AND 1843.

In the annual message of the executive, December, 1842, it is stated, "That the debt of the state amounts to 15,211,393 dollars 94 cents; or, deducting bonds issued for the purchase of railroad stock, not now chargeable on the treasury, to about *ten millions*. To this should be added the debt of the city of Baltimore, incurred in the cause of public improvement, which amounts to 4,780,000 dollars. Six per cent interest on these two sums is 870,000 dollars, annually chargeable upon the whole property of the state, assessed at 196,751,149 dollars, requiring a permanent tax of seventy-one cents on the hundred dollars for the city of Baltimore, and thirty-one cents for the residue of the state. Besides this permanent debt, there is 859,636 dollars due to the state banks, to the Barings, and to the holders of state bonds on December 1, 1842, for interest in arrears. The income from sources other than the direct tax, is about equal to the ordinary expenses.

" In view of these facts, the legislature passed a bill providing for the sale of the state's interest in all the works of internal improvement, the state receiving its own bonds in payment. The interest of the state in the following corporations was offered at the following prices, payment to be made in bonds bearing not less than five per cent interest.

	dollars.
Baltimore and Ohio Railroad Company	4,200,000
Chesapeake and Ohio Canal Company	5,000,000
Tide Water Canal Company	1,000,000
Baltimore and Susquehanna Railroad Company	1,500,000
Total	11,700,000

" If this sale should be effected, the debt, exclusive of the Baltimore loans, would be reduced to about 4,000,000, from which must be deducted also the amount of the sinking fund, or 1,179,276 dollars.

The following is the Official Statement of the Debt of the State of Maryland, as reported by Governor Thomas in his Message, in December, 1842.

	dollars.	Annual Interest. dollars.
Direct debt of the state	10,000,000	600,000
Baltimore improvement debt	4,830,000	270,000
Loan of state credit	5,211,293	312,683
	20,041,293	1,182,683

Amount of Interest accrued from that date to November, 30, 1843.	1,171,873
Total amount of debt, November 30, 1843	16,386,634
Annual demands against the treasury, on account of the debt, over and above the receipts from internal improvement companies	626,821
Amount of debt, November, 1844	17,013,455
The current expenses of the state amount to	450,000
Annual interest	626,821
Total annual charge	1,076,821
Tax, twenty-five cents on 100 dollars, on a taxable property of 178,108,496 dollars	445,271
Deficit	631,550
Arrears of interest	650,000
To be raised by taxation	1,281,550

" The greatest difficulty under which the state labours is, apparently, the want of some uniform system of assessment, by which the burden will fall equally upon the community." — *Official Returns, published in Hunt's Magazine.*

II. DISTRICT OF COLUMBIA.

THE DISTRICT OF COLUMBIA is a tract of land ten miles square, situated on both sides of the Potomac river, about 120 miles from its mouth, and was suggested by Washington for the seat of the general government, and ceded to the United States by Virginia and Maryland, in 1790. It includes the cities of Washington, Alexandria, and Georgetown, and is under the immediate government of Congress.

Population.—In 1800, the population was 14,093; in 1810, 24,023; in 1820, 33,039; in 1830, 39,858; in 1840, 43,712, of which 30,657 were whites, 8361 were free coloured persons, and 4694 were slaves.

Employed in agriculture 384, in commerce 240, in manufactures and trades 2278, navigating the ocean 126, navigating canals and rivers 80, learned professions and engineers 203.

POPULATION of the Principal Towns.

TOWNS.	1800	1810	1820	1830	1840
Washington	2210	8208	13,247	18,827	23,364
Alexandria	4196	7287	9,218	8,203	8,459
Georgetown	4048	7,560	8,441	7,312

The surface of the District is gently undulating; the soil is naturally sterile, but it possesses a healthy climate.

Live Stock and Agricultural Products.—In 1840, there were 2145 horses and mules, 3274 neat cattle, 706 sheep, 4673 swine, poultry to the value of 3092 dollars. There were produced 12,147 bushels of wheat, 294 bushels of barley, 15,751 bushels of oats, 5081 bushels of rye, 272 bushels of buckwheat, 39,485 bushels of Indian corn, 707 pounds of wool, 12,035 bushels of potatoes, 1331 tons of hay, 55,550 pounds of tobacco, 651 pounds of silk cocoons. The products of the dairy were valued at 5566 dollars, and of the orchard at 3507 dollars.—*Official Returns.*

Trade.—This district has become the centre of a considerable trade, though it cannot compete with Baltimore. Vessels of the largest class come up to Alexandria, six miles below Washington, where the Potomac is a mile wide, and from thirty to fifty feet deep; and vessels of a large size come up to the United States' Navy yard, at the junction of the East branch with the Potomac, at Washington. A very considerable quantity of flour and other produce comes down the Potomac, and centres chiefly at Alexandria, and some at Georgetown. The chief business of Washington city has relation to the accommodation of the national legislature, and of the officers of the general government.—*U. S. Gaz.*

The exports, in 1840, were 753,923 dollars, and the imports were 119,852 dollars. The tonnage of the district, in 1843, was as follows: registered, 13,788 tons; enrolled, 12,529 tons—total, 26,047 tons. There were seven commercial and two commission houses in the district for trade, employing a capital of 310,000 dollars; 285 retail dry-goods and other stores, capital 2,701,890 dollars; forty-eight persons engaged in the lumber trade, with a capital of 140,000 dollars; 527 persons were employed in the fisheries, with a capital of 64,500 dollars.—*Official Returns.*

Manufactures.—There were produced home-made or family articles, to the value of 1500 dollars; one paper mill produced to the value of 1500 dollars; nine persons manufactured pottery to the value of 6200 dollars; hats and caps were manufactured to the value of 47,200 dollars, employing forty-eight persons, and a capital of 22,100 dollars; three rope factories employed thirty-one persons, and a capital of 24,925 dollars; nine tanneries employing seventy-two persons, and a capital of 80,400 dollars; seven other manufactories of leather, as saddleries, &c., manufactured articles to the value of 110,450 dollars, with a capital of 66,750 dollars; eleven persons manufactured confectionary to the value of 7500 dollars, with a capital of 2800 dollars; forty-two persons manufactured machinery to the value of 60,300 dollars; 189 persons produced bricks and lime to the

value of 151,500 dollars; ninety-seven persons manufactured carriages and waggons to the value of 59,535 dollars, with a capital of 38,550 dollars; four flouring mills manufactured 25,500 barrels of flour, and, with other mills, employed thirty persons, and produced to the amount of 183,370 dollars, with a capital of 98,500 dollars; ships were built to the value of 20,257 dollars; 190 persons manufactured furniture to the value of 125,872 dollars, employing a capital of 85,000 dollars; sixty brick and thirty-three wooden houses built, employed 142 persons, and cost 168,910 dollars; twelve printing offices, ten binderies, three daily, five weekly, six semi-weekly newspapers, and three periodicals, employed 276 persons, and a capital of 150,700 dollars. The whole value of manufactures produced, was 1,005,775 dollars.—*Official Returns.*

Education.—Georgetown college, a Catholic institution, was founded in 1799. The Columbian college, under the direction of the Baptists, was founded in 1821. In these institutions there were, in 1840, 224 students; there were in the district twenty-six academies and grammar schools, with 1389 students; twenty-nine common and primary schools, with 851 scholars; and 1033 white persons, over twenty years of age, who could neither read or write.—*U. S. Gaz.*

Religion.—In 1836, the Presbyterians had fourteen churches, nine ministers, and 1134 communicants; the Episcopalians had seven churches; the Baptists had five churches, four ministers, and 533 communicants; the Methodists had several ministers; the Roman Catholics, six ministers; the Friends, two meetings; and the Unitarians, one minister. At the close of 1840, the debt of the district amounted to 1,500,000 dollars.—*U. S. Gaz.*

A branch of the Chesapeake and Ohio canal terminates at Washington. The Alexandria canal is a continuation of the Chesapeake and Ohio canal, seven miles and a quarter to Alexandria.

The district is divided into two counties; the county of Washington is on the north side of the Potomac, and the county of Alexandria is on the south side. In the former, the laws of Maryland are continued in force; in the latter, those of Virginia. The district has never been represented in Congress, though Congress makes laws.—See Constitution of the United States, and of each State and District.—*Official Returns, U. S. Gaz.*

ALEXANDRIA, city, seaport, forty-three miles south-south-west of Baltimore, 115 miles north of Richmond, seven miles from Washington, 38 deg. 48 min. north latitude, 0 deg. 3 min. west longitude of Washington. It is beautifully situated on the west side of the Potomac, which has a depth of water at Alexandria sufficient for vessels of the largest class. The population, in 1800, was 4196; in 1810, 7227; in 1820, 8218; in 1830, 8263; in 1840, 8459. The city is considerably elevated, ascending gradually from the river; the streets cross each other at right angles. This port has considerable shipping, and exports wheat, Indian corn, and tobacco, to a considerable amount. The tonnage of the port, in 1840, was 14,470. The Chesapeake and Ohio canal extends to this place. It has two banks, with an aggregate capital of 1,000,000 dollars; and one fire, and one marine insurance company. It is governed by a mayor and a common council of sixteen members.—*U. S. Gaz. Official Returns.*

WASHINGTON CITY, the capital of the United States, is situated on the east side of the Potomac, 295 miles from the ocean, by the course of the river and bay. The population, in 1800, was 3210; in 1810, 8208; in 1820, 13,247; in 1830, 18,827; in 1840, 23,364. Employed in commerce, 103; in manufactures and trades, 886; navigating the ocean, forty-five; navigating rivers and canals, twenty-six; learned professions, eighty-three.

The following description from the "United States Gazetteer," for 1844, we extract at full:—

"The city stands on a point of land between the Potomac and the Anacostia or Eastern branch. The city contains a little over eight square miles, and upwards of 5000 acres. The ground is in general about forty feet above the level of the river, and there are some moderate elevations, on two of which stands the Capitol and the President's house. The city is regularly laid out in streets running north and south, and crossed by others at right angles, running east and west. But the different parts of the city are connected by broad avenues, which traverse the rectangular divisions, diagonally. Where the intersection of these avenues with each other and with the streets would form many acute angles, considerable rectangular or circular open grounds are left, which, when the city

shall be built up, will give it an open appearance. The avenues and streets leading to public places are from 120 to 160 feet wide, and the other streets are from 70 to 110 feet wide. The avenues are named after the states of the union, and the other streets, beginning at the Capitol, are denoted by the letters of the alphabet, as A. north and A. south, B. north and B. south, &c.; and east and west, they are designated by numbers, as 1st east, 1st west, &c. Pennsylvania avenue, between the Capitol and the President's house, contains the most dense population, and is much the finest street in the city. Five of the avenues radiate from the Capitol, and five others from the President's house, giving these prominent places the most ready communication with all parts of the city. The buildings of Washington consist of scattered clusters; nor is it probable that the magnificent plan of the city will soon be built up. Three things are requisite to sustain a large city, one of which, it is to be hoped, will never be found in the United States. There must be extensive commerce, or manufactures, or an expensive and luxurious court, with the multitudes which a luxurious court draws around it, to expend their money. This last constitutes a great item in the support of some European cities. Washington cannot be expected to become a very great commercial or manufacturing place; and though the chief men of the government, and the national legislature, and the multitudes whom they draw around them, do much toward the prosperity of Washington, the money thus expended is too small in amount to constitute a main reliance of a large city. Baltimore, in the vicinity, will be likely to surpass Washington in commerce and manufactures, for a long time to come. The growth of Washington, however, has been considerably extensive, and it is continually increasing; and probably the bustle of a large city would not much improve it as a seat for the national congress. It enjoys the two important requisites for health, pure air and good water, and there is much elegant and refined society, rendering it a pleasant place of residence.

"The public buildings of Washington have a splendour becoming a great nation. The Capitol is probably the finest senate house in the world, and it is fit that the most august legislative assembly on earth should be thus accommodated. The ground on which the Capitol stands is elevated seventy-three feet above the level of the tide, and affords a commanding view of the different parts of the city, and of the surrounding country. The building, which is of freestone, covers an area of more than an acre and a half; the length of the front is 352 feet, including the wings; the depth of the wings is 121 feet. The centre building is surmounted by a lofty dome; and there are two less elevated domes, one toward each end. A projection on the east or main front, including the steps, is sixty-five feet wide; and another on the west front, with the steps, is eighty-three feet wide. In the projection on the east front, there is a noble portico of twenty-two lofty Corinthian columns; and in the west front there is a portico of ten Corinthian columns. The height of the building to the top of the dome is 120 feet. Under the dome in the middle of the building is the Rotunda, a circular room ninety-five feet in diameter, and of the same height, adorned with sculptures representing in relief Smith delivered by Pocahontas, the Pilgrims landing at Plymouth, Penn treating with the natives, and a fight of Boone with the Indians; and four magnificent paintings by Trumbull, with figures as large as life, representing the presentation to congress of the Declaration of Independence, the capture of Burgoyne, the surrender of Cornwallis, and Washington resigning his commission to congress. Another painting, the baptism of Pocahontas, by Chapman, has recently been added. The Rotunda has recently received a splendid additional ornament in Greenough's statue of Washington, a colossal figure in a sitting posture, twice as large as life. On the west of the Rotunda is the library-room of congress, ninety-two feet by thirty-four, and is thirty-six feet in height, containing, in arched alcoves, 20,000 volumes. In the second story of the south wing of the Capitol is the Hall of the House of Representatives, of a semi-circular form, ninety-six feet long and sixty high, with a dome supported by twenty-four beautiful columns of variegated marble from the Potomac, with capitals of Italian marble, of the Corinthian order. The circular wall is surrounded by a gallery for men, and the chord of the arc, back of the speaker's chair, has a gallery for the ladies. The room is ornamented with some fine statuary and paintings, and the whole furniture of it is elegant. The Senate Chamber is in the second story of the north wing of the Capitol, and is semi-circular like that of the Representatives, but smaller, being seventy-five feet

long and forty-four feet high. The vice-president's chair is canopied by a rich crimson drapery, held by the talons of a hovering eagle. A gallery of light bronze running round the arc in front of the vice-president's chair, is mainly appropriated to ladies. There is another gallery above and behind the chair, supported by fine Ionic columns of variegated marble. A magnificent chandelier hangs in the centre of the room, and the whole appearance and furniture of the room are splendid. Below the Senate Chamber, and of nearly the same form and dimensions, but much less elegant, is the room of the Supreme Court of the United States; and there are in the building seventy rooms for the accommodation of committees and officers of Congress. The grounds round the Capitol are spacious, containing twenty-two acres, highly ornamented with gravelled walks, shrubbery, and trees, a naval monument ornamented with statuary, and fountains, and the whole is enclosed by a handsome iron railing. The whole cost of the building has exceeded 2,000,000 dollars.

"The President's house, a mile and a half north-west from the Capitol, is an elegant edifice of freestone, two stories high, with a lofty basement, and is 170 feet long, and eighty-six wide, the north front of which is ornamented with a fine portico of four lofty Ionic columns, projecting with three columns. The outer intercolumniation is for carriages to drive under, to place company under shelter. It stands in the centre of a plat of ground of twenty acres, beautifully laid out, and highly ornamented. It is elevated forty-four feet above tide-water, and the southern front presents a grand and beautiful prospect. The apartments within are admirably fitted to their purpose, and splendidly furnished. On the east side of the President's house are two large buildings, and, on the west side, two large buildings for the departments of state, of the treasury, of war, and of the navy. The general post-office and the patent-office are also extensive buildings. These, with the new treasury building, have been recently erected, to supply the place of those which were burned a few years since. The new treasury building contains 150 rooms, and, when completed, will contain 250. It has a splendid colonnade, 457 feet in length. The general post-office contains about eighty rooms, and is of the Corinthian order, with columns and pilasters, on a rustic base. The patent-office, in addition to other spacious apartments, has one room in the upper story 275 feet by sixty-five, and, when completed by wings, according to the original design, will be upwards of 400 feet in length. It is considered one of the most splendid rooms in America, and is devoted to the grand and increasing collections of the National Institution. The portico of this building is of the same extent as that of the Parthenon, at Athens, consisting of sixteen columns, in double rows, fifty feet high. In the war-office was formerly kept the fine collection of Indian portraits, painted from the original heads by King. These valuable pictures are now in the custody, and adorn the collections of the National Institution, in the patent-office.

"The Navy yard is on the Eastern branch, about three-fourths of a mile south-east of the Capitol, and contains twenty-seven acres. It has houses for the officers, and shops and warehouses, and two large ship houses, a neat armoury, and every kind of naval stores. Several ships of war, some of which were of the largest class, have been built at this yard. There are also in the city an arsenal, a city hall, an hospital, a penitentiary a theatre, &c.

"Washington is separated from Georgetown by Rock creek, over which are two bridges. A substantial pile bridge, over a mile in length, crosses the Potomac, and leads to Alexandria. There is a bridge, also, over the Anacostia, or Eastern branch. This river has water of sufficient depth for frigates to ascend to the Navy yard, without being lightened. Vessels requiring fourteen feet of water can come up to the Potomac bridge. By means of the Chesapeake and Ohio canal, a communication is opened with a rich back country; and it may be expected that the commerce of Washington will increase. The Washington canal is a continuation of this canal through the city. It extends from the Chesapeake and Ohio canal, at 17th-street west, to which it is connected by a lock at that street, to the Eastern branch. The canal and all the basins are walled with stone on both sides. From 17th to 14th-street, is a spacious basin, 500 feet wide; from 14th to 6th-street, where there is another ample basin, its width is 150 feet; and from 6th-street to its termination in the Eastern branch, its width varies from forty-five to eighty feet; and its depth is four feet below tide throughout. At its eastern termination is another spacious basin and wharf,

which extends to the channel. This canal has been greatly neglected, and is much out of repair. The expense of this canal has been over 230,000 dollars.

"There were in the city, in 1840, 106 stores, capital 926,040 dollars; six lumber yards, capital 57,000 dollars; precious metals manufactured to the value of 13,000 dollars; various other metals 17,200 dollars; two tanneries, capital 2000 dollars; one brewery, capital 63,000 dollars; two potteries, capital 3250 dollars; one rope walk, one grist mill, eleven printing offices, nine binderies, three daily, five weekly, five semi-weekly newspapers, and three periodicals, capital 149,500 dollars; thirty brick and stone, and twenty-three wooden houses built, cost 86,910 dollars. Total capital in manufactures, 336,275 dollars.

"The Columbian college was incorporated, by an act of Congress, in 1821. It is delightfully situated on elevated ground, north of the President's house, about two miles and a half from the Capitol. The buildings are a college edifice, five stories high, including the basement and the attic, having forty-eight rooms for students, with two dormitories attached to each, two dwelling-houses for professors, and a philosophical hall, all of brick. It has a medical department attached. The Medical college is situated at the corner of 10th and E-streets, at equal distances from the Capitol and the President's house. In the several departments are a president, ten professors, and, in the college proper, about twenty-five students. There are about 4200 books in its libraries. The commencement is on the first Wednesday of October. The whole number of alumni is ninety-seven. It is under the direction of the Baptists.

"There were in the city, in 1840, twelve academies, with 609 students, nine primary and common schools, with 380 scholars.

"The National Institution for the Promotion of Science was organized in May, 1840. The President of the United States is patron; the heads of departments constitute six directors on the part of the government, and six literary and scientific gentlemen are directors on the part of the institution. Its stated monthly meetings are held in the patent-office building. Its collections are deposited in the grand hall of this building, 275 feet long, and sixty-five feet wide, and constitute a rapidly increasing scientific museum. The United States' exploring expedition has added largely to its curiosities. The Historical Society and the Columbian Institute have united with it, with their libraries and collections. They have a valuable mineralogical cabinet. It is proposed to bring out regularly volumes of transactions. If properly fostered, it may become an honour to the nation. The Union Literary Society has been in existence for many years, and holds a weekly discussion in the lecture-room of the Medical college, and is well attended. Sectarian religion and party politics are excluded from its discussions. The City library contains about 6000 volumes.

"The city contains twenty-one places of worship, of which the Presbyterians have four, the Episcopalians three, the Baptists three, the Methodists three, Protestant Methodists one, Roman Catholics three, the Africans two, and the Unitarians and Friends one each.

"There are two orphan asylums. There are three banks, with an aggregate capital of 1,500,000 dollars; and two insurance companies, with an aggregate capital of 450,000 dollars.

"The congressional burying ground is in the eastern section of Washington, about a mile and a half from the Capitol, and contains about ten acres of ground, near the Eastern branch. The grounds are tastefully laid out, and neatly kept. It has already received a number of distinguished men, and has some fine monuments, and a vault in which bodies are placed that are awaiting a removal.

"This city was fixed on as the future seat of the government, in accordance with the suggestion of the great man whose name it bears, and the ground on which it stands was ceded to the United States in December, 1788. The owners of the land gave one-half of it, after deducting streets and public squares, to the United States, to defray the expenses of the public buildings. Such grounds as should be wanted by the United States were to be paid for at the rate of 66 dollars 66 cents per acre. It was laid out by three commissioners, in 1791, and surveyed under the direction of Andrew Ellicot. The seat of the federal government was removed to this place in 1800. The north wing of the Capitol was commenced in 1793, and finished in 1800, at an expense of 480,202 dollars. The south wing was commenced in 1803, and finished in 1808, at an expense of 308,808 dollars. The centre

building was commenced in 1818, and finished in 1827, at an expense of 957,647 dollars. In August, 1814, Washington was captured by the British, under General Ross, who set fire to the Capitol, the President's house, and the public offices, with the exception of the patent-office, which was saved by the solicitation of its superintendent. The library of Congress was burned, and was afterwards replaced by the purchase of that of Mr. Jefferson, consisting of 7000 volumes, for 23,000 dollars, in 1815."

III. VIRGINIA.

VIRGINIA is bounded north by Pennsylvania and Maryland, from which it is separated by the Potomac; east by the Atlantic; south by North Carolina and Tennessee; west by Kentucky; and north-west by Ohio. It lies between 36 deg. 33 min. and 40 deg. 43 min. north latitude, and between 75 deg. 25 min. and 83 deg. 40 min. west longitude; and between 60 deg. 34 min. west, and 1 deg. 20 min. east longitude from Washington. It is 370 miles long, and 200 miles broad at its greatest width, comprising an area of 64,000 English square miles, or 40,960,000 English statute acres. The population, in 1790, was 747,610; in 1800, 886,149; in 1810, 974,622; in 1820, 1,065,366; in 1830, 1,211,272; in 1840, 1,239,797; of which 448,987 were slaves. Of the free white population, 371,223 were white males; 369,745 were white females; 23,814 were coloured males; 26,020 were coloured females. Of the population, in 1840, there were employed in agriculture, 318,771; in commerce, 6361; in manufactures and trades, 54,147; navigating the ocean, 582; navigating the canals, rivers, and lakes, 2952; learned professions, &c., 3866.—*Official Returns.*

This state is divided into 119 counties, and two districts, Eastern and Western. The following are the counties of the *Eastern District*, with their population in 1840, and their capitals:—Accomac, 17,096, C. Accomac; Albemarle, 22,924, C. Charlottesville; Amelia, 10,320, C. Soil and Configuration.—The extensive section of Virginia, which extends from the Atlantic to the lower falls of the rivers, for about 110 to 130 miles from the Atlantic, is low and flat, in some places marshy, naturally sterile and sandy, and generally covered with pitch pine trees. On the margin, near the banks of the rivers, the soil is usually fertile. The low country is unhealthy from August to October. The lands which extend from the rivers at the head of tidewater and Blue Ridge, are undulated and hilly; especially near the mountain ranges. The soil of this region is generally sandy and poor; part of it is fertile, particularly the margins of the rivers. Towards the mountains the country is stony and rough, with the soil rich. The mountains of Virginia rise generally about 150 miles from the ocean. Beyond which the country is generally mountainous, traversed by successive ridges of the Alleghany, which occupies a greater breadth of country in Virginia than in any other state. Between the various ridges, however, there are long valleys or table land, parallel with them, often of considerable breadth, and containing some of the best soil in the state. The farms among the mountains are smaller than in any other parts of the state, better cultivated, and there are fewer slaves. The climate in this region is very healthy.

The soil of the districts near the sea coast is generally poor, producing Indian corn, oats, and peas. Wheat is raised in some parts of it, and a little rice in the swamps in its southern part. Between the sea coast region, tidewater, and the mountains, is the tobacco country; but in the northern upland counties wheat has extensively superseded tobacco; and south of James river, sufficient cotton is raised for home consumption. The south-eastern counties produce apples and peaches in great abundance. Among the mountains, the farmers raise large numbers of horned cattle and hogs. Indian corn is cultivated throughout the state. The country west of the mountains towards the Ohio, is rough and wild; sometimes, but not generally, fertile; but very rich as a mineral region.—*Various accounts. U. S. Gaz.*

Live Stock and Agricultural Products.—There were in this state, in 1840, 326,438 horses and mules; 1,024,148 neat cattle; 1,293,772 sheep; 1,992,155 swine; poultry to the value of 754,698 dollars. There were produced 10,109,716 bushels of wheat; 87,430 bushels of barley; 13,451,962 bushels of oats; 1,482,799 bushels of rye; 243,822 bushels of buckwheat; 34,577,591 bushels of Indian corn; 2,538,374 lbs. of wool; 10,597 lbs. of hops; 65,020 lbs. of wax; 2,944,660 bushels of potatoes; 364,708 tons of hay; 25,594 tons of hemp and flax; 75,347,106 lbs. of tobacco; 2956 lbs. of rice; 3,494,483 lbs. of cotton; 3191 lbs. of silk cocoons; 1,541,833 lbs. of sugar. The products of the dairy were valued at 1,480,488 dollars; of the orchard, 703,765 dollars; value of lumber produced, 538,092 dollars; 13,911 gallons of wine were made.—*Official Returns. U. S. Gaz.*

Minerals.—Gold, copper, lead, iron, coal, salt, limestone, and marble, are found. In 1840, 2000 persons were employed in mining. The long, narrow district in which gold is

found direct is not places oite. Salt s on the a few sweet Produ

found, extends through Spotsylvania county and the adjacent country, in a south-west direction, passing into North and South Carolina, Georgia, and Alabama. The gold ore is not, however, sufficiently rich to render its mining or working, excepting in very few places. The coal fields are very extensive, and afford both the bituminous and the anthracite. Large quantities have been mined and exported from the vicinity of Richmond. Salt springs have been found in various places, and salt has been extensively manufactured on the Great Kanawha river, near Charleston. The warm springs, at Bath, the hot springs, a few miles distant, the sulphur springs, in Greenbrier and Montgomery counties, and the sweet springs of Botetourt county, are much resorted to.—*U. S. Gaz.*—(See also Mineral Productions of United States hereafter.)

Rivers.—The Potomac separates this state from Maryland. James river is the largest which flows through the state. It is 500 miles in length, and flows from the mountains in the interior behind the Blue Ridge, through which it passes. It is navigable for sloops 120 miles, and for boats much farther, and falls into Chesapeake bay. The Appomattox is 130 miles long, and enters James river 100 miles above Hampton roads, and is navigable twelve miles, to Petersburg. The Rappahannock rises in the Blue Ridge, is 130 miles long, is navigable 110 miles for sloops, and falls into the Chesapeake. York river enters the Chesapeake thirty miles below the Rappahannock, and is navigable forty miles for sloops. The Shenandoah enters the Potomac just before its passage through the Blue Ridge. Of the rivers west of the mountains, the Great Kanawha rises in North Carolina, passes through this state and enters the Ohio. The Little Kanawha also falls into the Ohio. The Monongahela rises in this state, though it runs chiefly in Pennsylvania.

The lower part of Chesapeake bay lies wholly in this state, is fifteen miles wide at its mouth, and enters the Atlantic between Cape Charles and Cape Henry. Norfolk, eight miles from Hampton roads, has a fine harbour, much the best in the state; it is spacious, safe, and well defended; and it is the most commercial place in Virginia; but Richmond and Petersburg are more populous, and have an extensive trade. Besides these, Wheeling, Lynchburg, Fredericksburg, and Winchester, are principal places.—*U. S. Gaz.*

Trades.—There were thirty-one commercial and sixty-four commission houses engaged in foreign trade, with a capital of 4,299,500 dollars; 2736 retail dry-goods and other stores, with a capital of 16,684,413 dollars; 1454 persons employed in the lumber trade, with a capital of 113,210 dollars; 931 persons engaged in internal transportation, who, with 103 butchers, packers, &c., employed a capital of 100,680 dollars; 556 persons employed in the fisheries, with a capital of 28,383 dollars.—*Official Returns.*

Manufactures.—In 1840, there were domestic or family manufactures to the value of 2,441,672 dollars; forty-one woollen manufactories and forty-seven fulling mills, employing 222 persons, producing articles to the value of 147,792 dollars, with a capital of 112,350 dollars; twenty-two cotton manufactories, with 42,262 spindles, employing 1816 persons, producing articles to the value of 446,063 dollars, with a capital of 1,299,020 dollars; forty-two furnaces, producing 18,810 tons of cast-iron, and fifty two forges, &c., producing 5886 tons of bar-iron, the whole employing 1742 persons, and a capital of 1,246,650 dollars; eleven smelting houses employed 131 persons, and produced gold to the value of 51,758 dollars, employing a capital of 103,650 dollars; five smelting houses employed seventy-three persons, and produced 878,648 pounds of lead, employing a capital of 21,500 dollars; twelve paper manufactories, producing articles to the value of 216,245 dollars, and other paper manufactories producing 1260 dollars, the whole employing 181 persons, and a capital of 287,750 dollars; 3342 persons manufactured tobacco to the value of 2,406,671 dollars, employing a capital of 1,526,080 dollars; hats and caps were manufactured to the value of 155,778 dollars, and straw bonnets to the value of 14,700 dollars, the whole employing 340 persons, and a capital of 85,640 dollars; 660 tanneries employed 1422 persons, and a capital of 838,141 dollars; 982 other manufactures, as saddleries, &c., produced articles to the value of 826,597 dollars, and employed a capital of 341,957 dollars; four glass-houses, and two glass-cutting establishments, employed 164 persons, producing articles to the value of 146,500 dollars, with a capital of 132,000 dollars; thirty-three potteries employed sixty-four persons, producing articles to the value of 31,380 dollars, with a capital of 10,225 dollars; thirty-six persons produced drugs, paints, &c., to the value of 66,633 dollars, with a capital of 61,727 dollars; 445 persons produced machinery to the

value of 429,858 dollars; 150 persons produced hardware and cutlery to the value of 50,504 dollars; 262 persons manufactured 9330 small arms; forty persons manufactured granite and marble to the value of 16,652 dollars; 1004 persons produced bricks and lime to the value of 393,253 dollars; carriages and waggons were manufactured to the value of 647,815 dollars, employing 1592 persons, and a capital of 311,625 dollars; 1454 distilleries produced 865,725 gallons, and five breweries produced 32,960 gallons, employing 1631 persons, and a capital of 187,212 dollars; 764 flouring mills produced 1,041,526 barrels of flour, and with other mills employed 3964 persons, producing articles to the value of 7,855,499 dollars, with a capital of 5,184,669 dollars; ships were built to the value of 136,807 dollars; 675 persons manufactured furniture to the value of 289,391 dollars; 402 brick or stone, and 2604 wooden houses were built, employing 4694 persons, and cost 1,367,393 dollars; fifty printing offices and thirteen binderies, four daily, twelve semi-weekly, and thirty-five weekly newspapers, and five periodicals, employed 310 persons, and a capital of 168,850 dollars. The whole amount of capital employed in manufactures in the state was 11,360,861 dollars.—*Official Returns.*

Education.—William and Mary college, at Williamsburg, is the oldest in the state, and one of the oldest in the country, and was founded in 1691. Hampden Sydney college, in Prince Edward county, was founded in 1783, and is flourishing. Washington college, at Lexington, was founded in 1812. Randolph Macon college, was founded at Boynton, in 1832. There are theological schools at Richmond, in Prince Edward county, and in Fairfax county. But the most important literary institution in the state, is the university of Virginia, at Charlottesville, founded in 1819. Its plan is extensive, its endowment has been munificent, and it is a prosperous institution. In all these, with a few smaller institutions, there were, in 1840, 1097 students; there were in the state, also, 382 academies, with 11,083 students; 1561 common and primary schools, with 35,331 scholars; and 58,787 white persons over twenty years of age, who could neither read nor write.

Religion.—The Baptists, the most numerous religious denomination, have about 437 churches; the Presbyterians 120; the Episcopalians, sixty-five ministers; the Methodists 170. There are also a few Lutherans, Catholics, Unitarians, Friends, and Jews.

Banks.—In January, 1840, there were in this state eight banks and branches, with a capital of 3,637,400 dollars, and a circulation of 2,513,412 dollars. At the close of the same year the public debt amounted to 6,857,161 dollars.

Public Works.—Virginia has undertaken several important works of internal improvement, by chartering private companies, several of which have been liberally aided by the state. The Dismal Swamp canal connects Chesapeake bay with Albemarle sound, extending from Deep creek to Joyce's creek, twenty-three miles, at a cost of 879,864 dollars. It has branches of eleven miles. The Alexandria canal extends seven miles and a quarter from Georgetown to Alexandria. The James river and Kanawha canal extends 175 miles, from Richmond to Buchanan. The Richmond, Fredericksburg, and Potomac railroad extends seventy-five miles, to Aquia creek. Louisa branch, twenty-five miles from Richmond, proceeds forty-nine miles, to Gordonsville. Richmond and Petersburg railroad, from Richmond, extends twenty-three miles, to Petersburg. Petersburg and Roanoke railroad extends from Petersburg, fifty-nine miles, to Weldon. Greensville railroad extends from near Hicks, for eighteen miles, to Gaston, North Carolina. City Point railroad extends from Petersburg, twelve miles, to City Point. Chesterfield railroad extends from Coal Mines, thirteen miles and a half, to Richmond. Portsmouth and Roanoke railroad extends from Portsmouth, eight miles, to Weldon, North Carolina. Winchester and Potomac railroad extends from Harper's Ferry, thirty-two miles, to Winchester.—*Official Returns. U. S. Gaz.*

PRINCIPAL SEAPORTS AND TOWNS.

VIRGINIA, although the earliest settled, has very few, and no very large, towns.

CHARLOTTESVILLE is situated on Moore's creek, two miles from its entrance into the Rivana river. The plan is irregular, but it is well-built, chiefly with brick. It contains about 230 buildings of every kind, and about 1000 inhabitants. It has twenty-two stores, two book-stores, and a printing-office, from which a weekly newspaper is issued. There are

several flouring mills in the vicinity. It derives its chief importance from the university of Virginia, of which it is the seat. This institution was planned by Mr. Jefferson. It was designed to be more on the plan of European universities than most American colleges. The university buildings are various in their architecture, and arranged on three sides of a grassy parallelogram, at the upper end of which stands a large rotunda, containing lecture rooms and the library. The philosophical and chemical apparatus, and the mineralogical cabinet, and anatomical and general museum, are extensive. It has a fine astronomical observatory on the apex of a hill in the vicinity. It was founded in 1819, has a president and eight professors, or other instructors, has had 200 alumni, has 290 students, and 16,000 volumes in its libraries. The commencement is on the 4th of July. It is munificently endowed by the state.

FREDERICKSBURG is situated on the south-west side of Rappahannock river, 110 miles above the Chesapeake, in 34 deg. 44 min. north latitude, and 77 deg. 38 min. west longitude, 66 miles east of North Richmond. Population, in 1830, 3307; 1840, 3974. The city is regularly laid out, and presents a beautiful appearance from the heights by which it is surrounded. It is supplied with excellent water from the Rappahannock, in pipes laid by a joint-stock company. The falls of the Rappahannock, in the vicinity, afford good water-power. It has a flourishing trade, exporting grain, flour, tobacco, Indian corn, &c. Its exports have been computed at above 4,000,000 dollars annually. It was named in honour of Prince Frederick, father of George III. There were, in 1840, seventy-three stores, capital 367,961 dollars; two tanneries, paints, drugs, &c., capital 37,000 dollars; one grist mill, two printing-offices, four semi-weekly newspapers. Capital in manufactures, 141,200 dollars. Five academies, 256 students, seven schools, 156 scholars.

HARPER'S FERRY, 173 miles north of Richmond. Situated at the junction of the Shenandoah river, with the Potomac river, at the passage of the united stream through the Blue Ridge, so well described by Mr. Jefferson. There is, probably, not a more picturesque spot in the United States. It contains twelve stores, one of the largest flouring mills in the union, one iron furnace, 810 dwellings, and a national armoury, where 8850 small-arms are annually manufactured, employing 240 hands. In the armoury, 80,000 or 90,000 stand of arms are usually kept, and as they are sent away replaced by others from the factories. The Chesapeake and Ohio Canal passes along the north bank of the Potomac. The Baltimore and Ohio railroad passes through this place. The Potomac is here crossed by a bridge, 750 feet long between the abutments, connecting the village with the Maryland side.—*U. S. Gaz.*

NORFOLK is a port of entry on the north-east bank of the Elizabeth river, just below the confluence of its two branches, eight miles above its entrance into Hampton roads, and thirty-two miles from the ocean, 110 by water, below City point, 106 east-south-east from Richmond, 230 from Washington, 36 deg. 50 min. 50 sec. north latitude, and 76 deg. 18 min. 47 sec. west longitude. The situation is low, the streets are crooked and irregular, and most of the houses are not remarkable for elegance. It has two banks, two insurance offices, an academy, an orphan asylum, an athensium, with a respectable library, and, in the vicinity, a marine hospital, and a United States navy-yard. At the latter is a dry dock, constructed of hewn granite, which cost 974,536 dollars. The harbour is spacious and safe, having eighteen feet depth of water. The entrance to it, above a mile wide, is defended by forts Monroe and Calhoun. It has more foreign trade than any other place in the state. The tonnage, in 1840, was 19,079. The Dismal Swamp canal connects Chesapeake bay with Albemarle sound, and opens an extensive water communication from Norfolk to the south. There were in this place, in 1840, eight foreign commercial and eight commission houses, capital 202,000 dollars; thirty-five retail stores, capital 1,590,500 dollars; two printing-offices, one bindery, two daily, and one semi-weekly newspapers. Capital in manufactures, 178,300 dollars. Eighteen academies, 515 students, seventeen schools, 604 scholars. Population, in 1830, 9816; in 1840, 10,920.—*Official Returns, U. S. Gaz.*—(See Trade of Virginia hereafter.)

PETERSBURG, port of entry, on the south bank of the Appomattox river, twelve miles above its entrance into James river, at the City point, in 37 deg. 13 min. 54 sec. north latitude, and 77 deg. 20 min. west longitude twenty-three miles south by east of Richmond. Population, in 1830, 8322; in 1840, 11,136. The river is navigable to this place for vessels of

100 tons, and the falls immediately above it afford extensive water power. A canal is cut round these falls for the purpose of navigation. The borough contains, besides Petersburg, the village of Blandford, in Prince George county, and of Pocahontas in Chesterfield county. The great southern chain of railroads passes through it and adds to its importance. It is one of the handsomest and most leading towns in the state, and exports tobacco and flour. The tonnage, in 1840, was 3098. There were six commercial and eight commission houses engaged in foreign trade, capital 875,000 dollars; 121 retail stores, capital 1,026,250 dollars; two lumber yards, capital 6000 dollars; one furnace, six forges, one woollen factory, two cotton factories, 7520 spindles, one pottery, two rope-walks, two flouring mills, one grist mill, two saw mills, two printing-offices, one semi-weekly newspaper. Capital in manufactures, 726,555 dollars. In July, 1815, a disastrous fire destroyed 400 buildings, and property estimated at 2,000,000 dollars. It has been rebuilt on an improved plan.

RICHMOND, city and port of entry, is situated on James river, at the lower falls, at the head of tidewater, and is in 37 deg. 30 min. north latitude, and 77 deg. 31 min. west longitude from Greenwich, and 0 deg. 27 min. west longitude from Washington. It is twenty-three miles north from Petersburg, and 117 miles south-by-west from Washington. The population, in 1800, was 5737; in 1810, 9785; in 1820, 12,067; in 1830, 16,060; in 1840, 20,153. It is situated directly opposite to Manchester, to which it is connected by two bridges. The situation is healthy and highly picturesque. The deaths do not exceed one in eighty-five of the population annually. Shockoe and Richmond hills stand opposite to each other, and Shockoe creek, a rapid stream, passes between them; and the city is spread over these hills, and along the margin of the creek. The elevations present many picturesque views of the city, of James river, and of the surrounding country. The city contains about 1400 houses, a large proportion of which are of brick, with slated roofs. It is regularly laid out, the streets generally crossing each other at right angles. And in the western division of the city, on an elevated plain, denominated Shockoe hill, stands the Capitol. It has a very commanding situation, in the centre of a beautiful public square, of an oblong form, containing about eight acres, ornamented with grass plats and gravelled walks. In the centre of a spacious hall, in the middle of the building, stands a marble statue of Washington, executed in Paris. Near it is a marble bust of Lafayette. In one angle of Capitol-square stands the City hall, decorated at each end by a fine Doric portico of four columns. On the eastern part of Capitol-square is a house erected for the residence of the governor of the state. In another angle of the same square is the county court house. In the western suburbs of the city is the state penitentiary, a large building, in the form of a hollow square, 300 feet long and 110 feet broad, with several acres of ground connected with it. In the suburbs of the city, on the north, is the almshouse, a spacious building surrounded by extensive grounds. The other public buildings are a county and a city goal, an orphan asylum, a theatre, a museum, two markets, an armoury 320 by 280 feet, an academy, and a masonic hall. The city is supplied by water, which is elevated by water power, and two forcing pumps, into three large reservoirs, containing 1,000,000 gallons each, from which it is distributed over the city, and forms a great resource in case of fire, as well as a supply for the inhabitants—*U. S. Gaz.*

Richmond is well situated for trade. Vessels drawing ten feet of water come to Rockets, about a mile below the centre of the city; and those drawing fifteen feet to Warwick, three miles below the city. The falls in James river are obviated by the canal, and above them it is navigable for boats 220 miles. Regular lines of packets ply to and from New York and other places, and it communicates by steamboats to Norfolk. The principal articles of exportation are wheat, flour, and tobacco. The exports amount to about 3,000,000 dollars annually. The tonnage of this port, in 1840, was 6911.

The manufactures of Richmond are also extensive. The falls of the James river afford a water power of unlimited extent. There were, in 1840, seventeen foreign commercial and twenty-nine commission houses, capital 3,062,000 dollars; 256 retail stores, capital 1,646,450 dollars; three lumber yards, capital 24,000 dollars; four furnaces and eight forges, &c., capital 317,900 dollars; machinery produced amounted to 128,000 dollars; one cotton factory, 5810 spindles, capital 175,000 dollars; tobacco manufactories, capital 492,250 dollars; one paper factory, capital 75,000 dollars; twenty-one flouring mills, two grist mills, three saw mills, total capital 61,000 dollars; eight printing-offices, one bindery,

one daily, six weekly, and two semi-weekly newspapers, and one periodical, capital 48,700 dollars. Total capital in manufactures, 1,372,950 dollars.—*Official Returns. U. S. Gaz.*—(See Trade of Virginia hereafter.)

FINANCES.

According to the last report of the finance committee, "The state debt, including what was created for subscription to banks, and the war debt, and diminished by the amount of the sinking fund, and by the state stock held by the Board of Public Works, amounts to 7,409,166 dollars. The annual interest on this debt is 433,960 dollars. The ordinary expenses of government, as estimated for 1843, amount to 457,000 dollars; making the whole annual charge 890,960 dollars. The income of the state for the year is estimated at 872,030 dollars, of which 652,500 is produced by taxes and ordinary sources, 49,242 dollars by the bonus on bank capital, and 153,160 dollars by the income of bank stock owned by the state. In addition to the amount of indebtedness above-mentioned, the state is liable through its guarantee of the James river and Kenawha company bonds, the old James river company dividends, and to the Baltimore and Ohio railroad, for 2,872,520 dollars; making the total debts and liabilities of the commonwealth, 10,281,686 dollars.

State Debt.—Amount of state debt as reported by the governor in his message at the last meeting of the legislature, 7,650,000 dollars, which is held as follows:

	dollars.	dollars.
By individuals		2,600,000
„ banks		770,000
„ state and state institutions		1,400,000
„ citizens of other states		610,000
The remainder by subjects of Great Britain, France, Germany, and Scotland, say	2,270,000	
		7,650,000

The property of the state is invested in bank and other stocks, and amounts to 12,500,000

TRADE AND NAVIGATION OF VIRGINIA.

The principal articles of *export* are tobacco, cotton, wheat, flour, mazel, or Indian corn, Indian corn meal, blackeye peas, naval stores, staves, shingles, and lumber of various kinds.

Of Import.—Dry goods, iron, copper, and other metals; glass, coal, hardware, earthenware, salt, rum, sugar, molasses, coffee, and all other West India produce; hides, dyewoods, wines, gin, brandy, and other liquors; chiefly furnished by Great Britain, France, Spain, Holland, Russia, the Mediterranean ports, different colonies, and South America.

The *foreign* trade of this state has not increased, but has rather declined for several years past; nor does there, at present, appear much prospect of improvement.

This decline may be attributed to several causes. In regard to the exports, it is to be remarked, that a very large portion of the two principal, and most valuable commodities, tobacco and cotton, formerly shipped from this direct to England, France, Holland, and other parts of Europe, is now sent coastwise to New York, and the other large cities of this country, where it either finds a market and ready sale, enabling the owner at once to realise his funds, and invest them in return articles suitable to the demand in this quarter; or their tobacco and cotton are reshipped to the foreign market at a lower freight, and upon more moderate terms, than has been done from Virginia—the immense capital and tonnage concentrated, especially at New York, affording facilities and advantages over those of the middle and southern states. It is further to be observed, that there is now a much larger quantity of both the named articles used at the American manufactories, and, in that way, much more retained in the country than formerly.

The foregoing remarks have more especial reference to the trade with the different parts of Europe. That with the West Indies and other British colonies, previously carried on to an immense extent, has, since the emancipation of the negroes, decreased in a still greater ratio than the other, and the quantity of lumber and coarser descriptions of provisions, furnished from this state for that market, is now hardly more than one-half of what it was five years ago. The number of vessels in that trade (especially British) have diminished in proportion. This does not apply, however, to flour, of which the quantity now admitted to the West Indies is greater than before, it appearing that the same class of persons are not disposed to put up with the coarse food with which they were supplied as slaves.

Port Charges—The port charges (custom-house) are generally moderate, but depend entirely upon the number and nature of the documents that may be required; they amount, inward and outward together, to about from four to eight dollars upon a vessel.

As hospital money, seamen of all American vessels are subject to the payment of twenty cents per month, deducted from their wages, and paid by the master at the custom-house, on entering or clearing; but no such charge attaches to seamen of foreign vessels.

There are no “warehousing ports,” so denominated, in the United States; but all the larger districts, thus included, have public stores, where foreign merchandise may be deposited for exportation, and without the exaction of any duty.

Pilotage.—The pilotage regulations are regulated by the state legislature. The following are abstractions from the existing laws:—

AN ACT to amend the several Acts, concerning Pilots, passed March 23, 1836.

Be it enacted by the General Assembly, that every registered vessel owned by a citizen or citizens of the United States, or by citizens or subjects of any foreign state, whose vessels are, by treaty with the government of the United States, placed on the same footing as vessels of the United States, shall pay the following rates of pilotage in lieu of those now established by law; to wit: from sea to Hampton roads, if the vessel be boarded by such pilot twenty miles to the east of Cape Henry, one dollar and fifty cents per foot; if forty or more miles to the east of Cape Henry, twenty-five cents per foot, in addition to the above rates; if less than twenty miles to the east of the Capes, one dollar and twenty-five cents per foot; from Hampton roads to sea, one dollar per foot; from Hampton roads to Norfolk and Portsmouth, eighty-eight cents per foot; from Hampton roads to Sleepy hole or Look Out, one dollar and three cents per foot; from Hampton roads to Pagan creek, eighty-eight cents per foot; from Hampton roads to James town, or any place between Pagan creek and James town, one dollar and ninety-four cents per foot; from Hampton roads to City point or Bermuda hundred, or any place between James town and City point or Bermuda hundred, two dollars and eighty-seven cents per foot; from Hampton roads to Turkey island, three dollars and forty-eight cents per foot; from Hampton roads to Warwick, or any place between Turkey island and Warwick, four dollars and thirty-four cents per foot; from Hampton roads to Richmond or any place between Richmond and Warwick, four dollars and sixty-three cents per foot.

Be it further enacted, that the same rates of pilotage shall be demanded for conducting a vessel from each of the places mentioned in the foregoing section, to Hampton roads, as are demandable for conducting such vessel from Hampton roads to the said places respectively.

Be it further enacted, that all foreign vessels, not placed by treaty with the government of the United States on the same footing as vessels of the United States, shall pay one-fourth in addition to the rates of piloting therein prescribed.

Be it further enacted, that every master of a vessel, sailing under a coasting licence, and of the burden of seventy tons, shall be compelled to take the first pilot who offers to the east of Cape Henry, to conduct his vessel, and in case of refusal on the part of the said master to take such pilot, he shall be compelled to pay half pilotage to the first port to which such vessel is bound.

Be it further enacted, that any master of a vessel who shall give a pilot notice to attend his vessel, and the pilot shall attend accordingly, such pilot shall receive one dollar and seventy-five cents for every day he shall be detained.

Be it further enacted, that pilots may appoint an agent in the city of Richmond and borough of Norfolk, state their accounts and prove the same before any justice of the peace, or alderman of said city or borough; and lodge the same with such agent for collection, who is hereby authorised to collect and receive the money on the same, for which he shall account to such pilot or pilots, as in other cases for money had and received, for the use of the party claiming the same.

Be it further enacted, that the eleventh section of the act, entitled an act reducing into one the several acts concerning pilots and regulating their fees, passed the 10th day of February, 1819, shall be, and the same is hereby repealed.

Be it further enacted, that the rates of pilotage for vessels of war shall be as follows:— to wit, from sea to Hampton roads, two dollars and seventy-five cents per foot; from Hampton roads to sea, two dollars and seventy-five cents per foot; from Hampton roads to Norfolk or Portsmouth, one dollar and twenty-five cents per foot, and from Norfolk or Portsmouth to Hampton roads, one dollar and twenty-five cents per foot; and for every day a pilot shall be detained on board a vessel of war, three dollars.

Be it further enacted, that no master of a vessel shall be required to take the pilot who may have conducted his vessel from sea; to conduct his vessel from her port of entry or other place of departure to sea.

Be it further enacted, that if any person, although he may have received a branch according to the provisions of the act, entitled an act reducing into one, the several acts concerning pilots and regulating their fees, passed the 10th day of February, 1819, shall

undertake to conduct any vessel required by law to take a pilot, from sea to any of the places mentioned in the first section of this act, or thence to sea, unless he shall be attached to some lawful pilot boat, and shall actually cruise therein, he shall forfeit and pay the sum of 150 dollars for every such offence, which may be recovered by action of debt, in any court of record in this commonwealth, by any person who shall sue for the same, in which action, the person so offending may be held to bail; and if any person who shall not have obtained such branch shall undertake to conduct any vessel, required by law to take a pilot from sea to any of the places mentioned in the first section of the act, as aforesaid, or thence to sea, he shall forfeit and pay the sum of 200 dollars for every such offence, which may be recovered by action of debt as aforesaid, in which action bail may be demanded. Provided, that nothing herein contained shall be so construed as to prevent any person from assisting a vessel in distress, if he shall deliver up such vessel to any lawful pilot who may offer to conduct her; for which assistance so rendered, the person so assisting, shall and may demand and receive from the said pilot, half the fees allowed for pilotage by this act.

Be it further enacted, that if any pilot shall apprehend and confine in gaol any runaway slave found on board of any vessel departing or about to depart from any part of this commonwealth, he shall be entitled to a reward of twenty dollars; which sum may be recovered by action of debt in any court of record, from the owner or owners of such slave, or from the executors, administrators, or committee of the estate to which such slave may belong. And, moreover, the master, shipper, or owner of the vessel in which such slave may be found and apprehended as aforesaid, shall forfeit and pay the sum of 500 dollars, in addition to the penalties now prescribed by law, which sum may be recovered by action of debt in any court of record as aforesaid, by such pilot, his executors or administrators, in which action bail may be demanded.

Be it further enacted, that all acts and parts of acts coming within the purview of this act, and contrary hereto, shall be, and the same are hereby repealed.

This act shall be in force from and after the 1st day of May next.

AN ACT concerning Pilots. Passed March 29, 1837.

Be it enacted by the General Assembly, that every vessel sailing under a coasting licence of the burden of seventy tons or more, bound up James river, shall be compelled to take the first pilot that may offer his services (Cape Henry bearing west of south), to conduct such vessel to her port of destination. It shall be lawful for the captain of such vessel to discharge such pilot in Hampton roads by paying the pilot that conducted him to said roads two dollars per foot; if the captain of such vessel should take the pilot to his port of destination he shall then pay the fees imposed upon registered vessels by the act passed the 23rd day of March, 1836; but if in case such captain should refuse to take a pilot when spoken, he shall pay to such pilot or his agent the sum of ten dollars; and it shall be lawful for the pilots to appoint an agent in the city of Richmond to collect their fees and pilotage.

And be it further enacted, if any captain or master shall refuse or fail to pay to the agent, within three days after demand made, the amount which may be due to any pilot, he shall be bound to pay the further sum of five dollars; which sums may be recovered by warrant before a magistrate of any county or corporation, in which the defendant may be found; and if the captain or master of any vessel shall conceal or obscure the name thereof, and shall refuse to disclose the same when spoken by a pilot, he shall forfeit and pay to the pilot the further sum of five dollars to be recovered as above stated.

This act shall be in force from its passage.

The foregoing is a true copy from the original.

April 1, 1837.

IV. NORTH CAROLINA.

NORTH CAROLINA is bounded north by Virginia; east by the Atlantic; south by South Carolina; and west by Tennessee. It is situated between 33 deg. 50 min. and 36 deg. 30 min. north latitude, and between 75 deg. 45 min. and 84 deg. west longitude; and between 6 deg. 20 min. west, and 1 deg. 33 min. east from Washington. It is 430 miles long, and 180 broad, and comprises an area of 48,000 English square miles, or 30,720,000 English statute acres.

The population, in 1790, was 393,754; in 1800, 478,103; in 1810, 555,500; in 1820, 638,829; in 1830, 738,470; in 1840, 753,419, of which 245,817 were slaves. Of the free population, 240,047 were white males; 244,823 were white females; 11,226 were coloured males; 11,505 were coloured females. In 1840, there were employed in agriculture, 217,095; in commerce, 1734; in manufactures and trades, 14,322; navigating the ocean, 327; navigating canals, rivers, &c., 379; learned professions, 1086.—*Official Returns.*

This state is divided into sixty-eight counties, which, with their population in 1840, and their capitals, are as follow:—Anson, 15,077, C. Wadesborough; Ashe, 7467, C. Jefferson; Beaufort, 12,225, C. Washington; Bertie, 12,175, C. Windsor; Bladen, 8022, C. Elizabeth; Brunswick, 5265, C. Smithville; Buncombe, 10,084, C. Asheville; Burke, 15,799, C. Morganton; Cabarrus, 9259, C. Concord; Camden, 5663, C. Jonesborough; Carteret, 6591, C. Beaufort; Caswell, 14,693, C. Yanceyville; Chatham, 16,242, C. Pittsborough; Cherokee, 3427, C. Murphy; Chowan, 6693, C. Edenton; Columbus, 3941, C. Whitesville; Craven, 13,438, C. Newbern; Cumberland, 15,284, C. Fayetteville; Currituck, 6703, C. Currituck; Davidson, 14,606, C. Lexington; Davie, 7574, C. Mocksville; Duplin, 11,182, C. Kenansville; Edgecombe, 15,708, C. Tarborough; Franklin, 10,980, C. Louisburg; Gates, 8161, C. Gatesville; Granville, 18,817, C. Oxford; Greene, 6595, C. Snow Hill; Guilford, 19,175, C. Greensborough; Halifax, 16,865, C. Halifax; Haywood, 4975, C. Waynesville; Henderson, 5129, C. Hendersonville; Hertford, 7484, C. Winton; Hyde, 6458, C. Lake Landing; Iredell, 15,685, C. Statesville; Johnston, 10,599, C. Smithfield; Jones, 4945, C. Trenton; Lenoir, 7605, C. Kingston; Lincoln, 25,160, C. Lincolnton; Macan, 4869, C. Franklin; Martin, 7637, C. Williamston; Mecklenburg, 18,273, C. Charlotte; Montgomery, 10,780, C. Lawrenceville; Moore, 7988, C. Carthage; Nash, 9047, C. Nashville; New Hanover, 13,312, C. Wilmington; Northampton, 13,369, C. Jackson; Onslow, 7527, C. Onslow; Orange, 24,356, C. Hillsborough; Pasquotank, 8514, C. Elizabeth City; Perquimans, 7346, C. Hertford; Person, 9790, C. Roxborough; Pitt, 11,806, C. Greenville; Randolph, 12,875, C. Ashborough; Richmond, 8909, C. Rockingham; Robeson, 10,370, C. Lumberton; Rockingham, 13,422, C. Wentworth; Rowan, 12,109, C. Salisbury; Rutherford, 19,202, C. Rutherfordton; Sampson, 12,157, C. Clinton; Stokes, 16,265, C. Germanton; Surry, 15,079, C. Rockford; Tyrrel, 4657, C. Columbia; Wake, 21,118, C. Raleigh; Warren, 12,919, C. Warrenton; Washington, 4525, C. Plymouth; Wayne, 10,891, C. Waynesborough; Wilkes, 12,577, C. Wilkesborough; Yancey, 5962, C. Burnsville.

Raleigh, situated near the centre of the state, six miles west of the Neuse river, is the seat of government.

Soil and Configuration.—Sandy downs extend along the whole coast of North Carolina. This ridge of sea sand is separated from the main land in some places by narrow, and, in other places, by broad sounds and bays. The inlets are shallow and dangerous, with shallow bars at their entrances, and Ocracoke inlet is the only one through which vessels pass. Off capes Hatteras and Lookout, shoals extend far into the sea, which render those land promontories the most dangerous navigation on the coast of the United States. The country, for sixty or eighty miles from the shore, is tame and flat, abounding with swamps and marshes, and the streams are thick and sluggish. The soil is sandy and poor, excepting on the margins of the rivers, where it is frequently rich. The natural wood of this region is pitch pine, which is much larger than the same kind of tree in the northern

states. This wood affords tar, pitch, turpentine, and lumber, which constitute an important export from the state. In the swamps rice of an excellent quality is raised. Behind the flat country, and extending to the lower falls of the rivers, there is a belt of about forty miles wide, of a moderate uneven surface, a sandy soil, and of which the pitch pine is the prevailing natural growth. Above the falls the country is undulated, the streams more rapid, the country more fertile, and produces wheat, rye, barley, oats, and flax. The western part of the state is an elevated table land, about 1800 feet above the level of the sea, with some high ranges, and elevated summits. Black mountain, in Yancey county, is 6476 feet high, the highest land in the United States east of the Rocky mountains. Roan mountain is 6038 feet, and Grandfather mountain is 5556 feet high. The soil of this region is generally good, but west of the mountains it is still more fertile. Throughout the state Indian corn is raised, and, in some parts, cotton. In the low country, grapes, plums, blackberries, and strawberries grow spontaneously; and, on the intervals, canes grow luxuriantly; and, their leaves continuing green through the winter, furnish food for cattle. The low country is unhealthy, but in the elevated parts the air is pure and salubrious. In the hilly and mountain country, oak, walnut, lime, and cherry trees, of a large growth, abound. In the northern part of this state, and in Virginia, is the great Dismal swamp, which is thirty miles long, and ten broad, and covers a surface of 150,000 acres. In the centre of it, and within the state of Virginia, is Lake Drummond, fifteen miles in circuit. A canal passes through this swamp, with a feeder five miles long from Lake Drummond. This swamp is thickly wooded with pine, juniper, cypress, and, in its drier parts, with white and red oak. In some parts, the thickness of the growth renders it impervious. South of this, between Albemarle and Pamlico sounds, is Alligator swamp, which has a lake in the centre. It is computed that 2,500,000 acres of swamp in this state might be easily drained, and afford a rich soil for the growth of cotton, tobacco, rice, and Indian corn.

Live Stock, and Agricultural Products.—In 1840, there were in the state 166,608 horses and mules; 617,371 neat cattle; 538,279 sheep; 1,649,716 swine; poultry to the value of 544,125 dollars. There were produced 1,960,885 bushels of wheat; 3574 bushels of barley; 3,193,941 bushels of oats; 213,971 bushels of rye; 15,391 bushels of buckwheat; 23,893,763 bushels of Indian corn; 625,044lbs. of wool; 1063lbs. of hops; 118,923lbs. of wax; 2,609,239 bushels of potatoes; 101,369 tons of hay; 9879 tons of hemp and flax; 16,772,359lbs. of tobacco; 2,820,388lbs. of rice; 51,926,190lbs. of cotton; 3014lbs. of silk cocoons; 7163lbs. of sugar; the products of the dairy were valued at 674,349 dollars; of the orchard at 386,006 dollars; of lumber at 506,766 dollars. There were made 28,752 gallons of wine.—*Official Returns.*

Minerals.—The principal minerals of North Carolina are gold and iron. The gold region lies on both sides of the Blue Ridge, and extends east of the Yadkin. It exists in grains, and in small masses and lumps, some of them worth from 100 to 7000 or 8000 dollars, and in veins. A considerable amount is sent annually to the mint of the United States.—(See account of the Minerals generally of the United States hereafter.)

Rivers.—The principal rivers are the Chowan, 400 miles long, navigable for small vessels thirty miles; Roanoke; Pamlico, navigable for thirty miles; Neuse; Cape Fear, the largest river in the state, 280 miles long with eleven feet of water to Wilmington; the Yadkin, which forms a part of the Great Pedee in South Carolina; and the Catawba, which also passes into South Carolina. The sluggishness of the rivers as they approach the sea, and the sandy character of the coast, cause them to be extensively obstructed by bars at their mouths. As this state has few good harbours, much of its commerce is carried on through Virginia, South Carolina, Georgia, and Tennessee. Wilmington, on Cape Fear river, forty miles from the sea, is the most commercial place in the state. Newbern, on the Neuse, thirty miles from Pamlico sound, has some commerce. Fayetteville, at the head of boat navigation on Cape Fear river, has considerable trade.—*U. S. Gaz.*

Trade.—The exports of the state, in 1840, amounted in value to 387,484 dollars; and the imports to 252,532 dollars. There were four commercial houses and forty-six commission houses engaged in foreign trade, with a capital of 151,300 dollars; 1068 retail dry goods and other stores, with a capital of 5,082,835 dollars; 432 persons employed in the lumber trade, with a capital of 46,000 dollars; 213 persons employed in internal transportation,

who, with twenty-four butchers, packers, &c., employed a capital of 9000 dollars; 1784 persons employed in the fisheries, with a capital of 213,502 dollars.—*Official Returns.* In 1842 the exports amounted in value to 334,650 dollars; the imports to 187,404 dollars.

Manufactures.—In 1840, the value of home-made or family manufactures was 1,413,242 dollars; there were three woollen manufactories and one fulling mill, producing articles to the value of 3900 dollars, with a capital of 9800 dollars; twenty-five cotton manufactories, with 47,934 spindles, employing 1219 persons, producing articles to the value of 438,900 dollars, with a capital of 995,300 dollars; there were eight furnaces, producing 968 tons of cast iron, and forty-three forges, &c., producing 963 tons of bar iron, employing 468 persons, and a capital of 94,961 dollars; two smelting houses, employing thirty persons, and produced 10,000 pounds of lead; ten smelting houses employed 389 persons, and produced gold to the value of 255,618 dollars, with a capital of 9832 dollars; two paper-mills, producing articles to the value of 8785 dollars, with a capital of 5000 dollars; hats and caps were manufactured to the value of 38,167 dollars, and straw bonnets to the value of 1700 dollars, employing 142 persons, and a capital of 13,141 dollars; 353 tanneries employed 625 persons, with a capital of 271,979 dollars; 238 other leather manufactories, as saddleries, &c., produced articles to the value of 185,387 dollars, with a capital of 76,163 dollars; sixteen potteries employed twenty-one persons, producing articles to the value of 6260 dollars; with a capital of 1531 dollars; eighty-nine persons manufactured machinery to the value of 43,285 dollars; forty-three persons manufactured hardware and cutlery to the value of 1200 dollars; 698 persons manufactured carriages and waggon to the value of 301,601 dollars, with a capital of 173,318 dollars; 323 flouring mills produced 87,641 barrels of flour, and with other mills employed 1830 persons, producing articles to the value of 1,552,096 dollars, employing a capital of 1,670,228 dollars; vessels were built to the value of 62,800 dollars; 223 persons manufactured furniture to the value of 35,002 dollars, with a capital of 57,980 dollars; forty persons manufactured 1085 small arms; fifteen persons manufactured granite and marble to the value of 1083 dollars; 276 persons produced bricks and lime to the value of 58,336 dollars; 367 persons manufactured 1,612,825 lbs. of soap, 148,546 lbs. of tallow-candles, 335 lbs. of spermaceti and wax candles, with a capital of 4754 dollars; 2802 distilleries produced 1,051,979 gallons, and with breweries, which produced 17,431 gallons, employed 1422 persons, and a capital of 180,200 dollars; thirty-eight brick or stone, and 1822 wooden houses, employed 1707 persons, at a cost of 410,264 dollars; twenty-six printing offices, four binderies, twenty-six weekly, and one semi-weekly newspapers, and two periodicals, employed 103 persons, and a capital of 55,400 dollars. The whole amount of capital employed in manufactures was 3,838,900 dollars.—*Official Returns for 1840.*

Education.—The university of North Carolina, at Chapel hill, twenty-seven miles west-north-west from Raleigh, was founded in 1791. Davidson college, in Mecklenburg county, was founded in 1837. In these institutions there were, in 1840, 158 students. There were in the state 141 academies, with 4398 students, 632 common and primary schools, with 14,937 scholars; and 56,609 white persons over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

In the low country the Methodists and Baptists are the most numerous religious denominations. In the elevated country west are many Presbyterians. The Methodists and Baptists have each about 20,000 communicants; the Presbyterians about 11,000. The Episcopalians have a bishop and twenty ministers; the Lutherans have eighteen ministers, thirty-eight congregations, and 1886 communicants. Besides these, there are some Moravians, Roman Catholics, Friends, &c.

Banks.—There were in October, 1839, in this state, six banks and branches, with a capital of 1,500,000 dollars, and a circulation of 1,165,857 dollars.—(See Banks generally of United States hereafter.)

Public Works.—The Wilmington and Raleigh railroad extends from Wilmington 161 miles and a half to Weldon, on the Roanoke, and connects with the Portsmouth and Roanoke railroad. It was commenced in 1836, and completed in 1840. The Raleigh and Gaston railroad extends from Raleigh eighty-five miles to Gaston, on the Roanoke, where it unites with the Petersburg, Greenville, and Roanoke railroads. Northwest canal connects Northwest river, six miles, with the Dismal Swamp canal. Weldon canal extends twelve

miles round the falls of the Roanoke. Clubfoot and Harlow canal extends from the head waters of the Clubfoot, one mile and a half, to those of Harlow creek, near Beaufort.—*U. S. Gaz.* (Various accounts.)

The receipts of the railways for 1843 amounted to 122,108 dollars; expenses, 70,176 dollars; receipts by steamboats, 104,066 dollars; profits on both, 78,006 dollars.

PRINCIPAL TOWNS AND SEAPORTS.—There are no large towns, nor any good seaports in North Carolina.

WILMINGTON, situated on the east side of Cape Fear river, about thirty miles from the sea. Vessels of 300 tons can enter the river, and ascend to the town, but the entrance is dangerous. Population, in 1840, 4744. Shipping, 18,232 tons.

FAYETTEVILLE, situated about a mile from the west bank of Cape Fear river, at the head of uninterrupted boat navigation, in 35 deg. 3 min. north latitude, 79 deg. 58 min. west longitude. Population, in 1820, 3532; in 1830, 3868; in 1840, 4285. It is regularly laid out, with streets 100 feet wide. It has three churches, a court house, two banks, and a United States arsenal of construction. Its trade is in grain, flour, tobacco, and naval stores, and is considerable. In 1831, a most disastrous fire destroyed a considerable portion of the place, which so excited the sympathies of the people throughout the United States, that they contributed about 92,000 dollars for the relief of the sufferers. The place has in a great measure recovered from the disaster. There were, in 1840, fifty-two stores, capital 372,400 dollars; seven cotton factories, 13,234 spindles, one flouring mill, four grist mills, two saw mills, two oil mills, two printing offices, two weekly newspapers. Capital in manufactures, 384,000 dollars.—*U. S. Gaz.*

NEWBERN, situated on the south-west bank of the Neuse river, thirty miles above Pamlico sound. In 1840, it contained 3690 inhabitants, and fifty-three stores. Capital in manufactures, 151,650 dollars. It exports rum, pork, timber, tar, pitch, &c. A steamboat plies to and from Elizabeth city.

BEAUFORT has a tolerably good harbour, admitting vessels drawing about fourteen feet of water, and has considerable trade, though the population, in 1840, consisted only of 1100 inhabitants, and the tonnage of the port to 1974.

RALEIGH, the capital of the state, within a few miles of the Neuse river, 123 miles from Newbern, and thirty miles from the most navigable part of the river. It stands in a healthy elevated situation; and contained, in 1840, only 2240 inhabitants. The state house is a superb granite edifice, 166 feet long, ninety feet wide, and surrounded by massive granite columns. There were, in 1840, forty-three stores, capital 191,200 dollars; four printing offices, two binderies, five weekly and one semi-weekly newspapers. Capital in manufactures, 36,800 dollars. The former state house, containing a marble statue of Washington, by Canova, was burnt in 1831.

FINANCES.—This state owes no public debt.

* For nine months, ending 30th of June.

The direct foreign trade of this state has been rapidly declining; nor is it likely to increase.—(See General and Detailed Account of the Navigation, Tonnage, and Trade of the United States hereafter.)

V. SOUTH CAROLINA.

SOUTH CAROLINA is bounded north by North Carolina; south-east by the Atlantic; and south-west from Georgia, from which it is separated by the Savannah river. It is between 32 deg. 2 min. and 35 deg. 10 min. north latitude, and between 78 deg. 24 min. and 83 deg. 30 min. west longitude, and between 1 deg. 45 min. and 6 deg. 15 min. west from Washington. It is about 200 miles long and 125 miles broad. Its area comprises

about 25,000 square miles, or 16,000,000 square acres. The population, in 1790, was 240,000; in 1800, 345,591; in 1810, 415,115; in 1820, 502,741; in 1830, 581,458; in 1840, 594,398, including 327,028 slaves. Of the free population, in 1840, 130,496 were white males, 128,588 white females; 3864 were coloured males, 4412 coloured females. Employed in agriculture, 198,363; in commerce, 1958; manufactures and trades, 10,325; navigating the ocean, 381; navigating canals, rivers, &c., 348; learned professions, &c., 1481.

This state is divided into twenty-nine districts, which, with their population, in 1840, and their capitals, were as follows: Abbeville, 29,351, C. Abbeville; Anderson, 18,493, C. Anderson; Barnwell, 21,471, C. Barnwell; Beaufort, 35,794, C. Coosawhatchie; Charleston, 82,661, C. Charleston; Chester, 17,747, C. Chester; Chesterfield, 8574, C. Chesterfieldville; Colleton, 25,548, C. Walterborough; Darlington, 14,822, C. Darlington; Edgefield, 32,852, C. Edgefield; Fairfield, 20,165, C. Winnsborough; Georgetown, 18,274, C. Georgetown; Greenville, 17,839, C. Greenville; Horry, 5755, C. Conwaysborough; Kershaw, 12,281, C. Camden; Lancaster, 9907, C. Lancaster; Laurens, 21,584, C. Laurensville; Lexington, 12,111, C. Lexington; Marion, 13,932, C. Marion; Marlborough, 8408, C. Bennettsville; Newberry, 18,350, C. Newberry; Orangeburg, 18,519, C. Orangeburg; Pickens, 14,356, C. Pickens; Richland, 16,397, C. Columbia; Spartanburg, 23,699, C. Spartanburg; Sumter, 27,892, C. Sumterville; Union, 18,936, C. Unionville; Williamsburg, 10,327, C. Kingstree; York, 18,383, C. Yorkville.

Configuration and Soil.—The sea-coast is bordered with a chain of islands, between which and the shore there are navigable passages with inlets from the sea, affording great commerce for coasting vessels. The mainland is naturally divided into the Lower and Upper country. The low country extends from eighty to 100 miles from the sea-coast, and is covered with forests of pitch pine, called pine-barrens, the soil being unfit for agriculture: these low lands are interspersed with marshes and swamps. The banks of the large rivers, and on the creeks, are bordered with excellent land, producing cotton and Indian corn in abundance. The marshes and swamps, when drained and cleared of the canes, reeds, cypress, and other woods and shrubs, are formed into productive rice plantations. The salt marshes on the sea-coast are susceptible of being transformed into good arable lands; but they have been greatly neglected. Among the pine-barrens, are the *Savannas*, which naturally produce nothing but grass; and which afford tolerable pasturage.

Between the Low country and the interior region, there occurs a succession of little sand-hills. This district, sometimes denominated the Middle country, continues for fifty or sixty miles to the *Ridge*, or Upper country, the ascent to which is sudden, and in some places abrupt. The lower falls of the rivers occur along this ridge. The low grounds between the sand-hills and this region are suitable for agriculture and pasturage; but with these exceptions, the country below the ridge is barren, and scarcely fit for cultivation. Beyond the ridge a beautiful and healthy region of hills and dales, and streams of pure water, extends west to the mountains. This whole region may be regarded as an elevated table land, and is generally fertile. At the distance of 220 miles north-west from Charleston, the land is 800 feet above the level of the sea. From this the country rises gradually to the mountainous region to the west, where the great Alleghany range passes through the state, in several ridges, some of which have high peaks. Table mountain, one of the most conspicuous of these, is 4000 feet above the level of the sea. The staple productions of the state are cotton and rice, great quantities of which are exported. Rice was first introduced in 1693, and is raised only in the Low country, where the land can be irrigated by the tide, or the overflowing of the rivers. Indigo was formerly produced in large quantities, but it has given place to the more profitable crop of cotton. The sea-island cotton, produced in the islands along the shore, is of a superior quality, and is in great demand. The highlands in the north-western parts of the state, known by the name of Hickory and Oaklands, are described as fertile.—*U. S. Gaz.*

Livc Stock and Agricultural Products.—In 1840, there were in this state 129,921 horses and mules; 572,608 neat cattle; 232,981 sheep; 878,532 swine; poultry to the value of 396,364 dollars. There were produced 968,354 bushels of wheat; 3967 bushels of barley; 1,486,208 bushels of oats; 44,738 bushels of rye; 14,722,805 bushels of Indian

corn; 299,170 lbs. of wool; 15,857 lbs. of wax; 2,698,313 bushels of potatoes; 24,618 tons of hay; 51,519 lbs. of tobacco; 60,590,860 lbs. of rice; 61,710,274 lbs. of cotton; 2080 lbs. of silk cocoons; 30,000 lbs. of sugar. The products of the dairy were valued at 577,810 dollars; of the orchard, 52,275 dollars; of lumber, 537,684 dollars.—*Official Returns.*

Minerals.—The minerals in this state are gold, iron, various ochres, marble, limestone, and some lead, potter's clay, fuller's earth, useful fossils, &c.

Rivers.—The great Pedee river, 450 miles long, rises in North Carolina, and runs through the eastern part of the state. It is navigable for sloops for 130 miles. The Santee, formed by the junction of the Wateree and the Congaree, rises in North Carolina, and has a sloop navigation for about 130 miles. The Saluda is a branch of the Congaree. The Edisto is navigable for large boats for 100 miles. The Savannah washes the whole south-west border of the state, and is a noble stream. There are several smaller rivers, among which are Cooper, Ashley, and Combahee.—*U. S. Gaz.*

Education.—The most important literary institution in this state is the College of South Carolina, at Columbia, founded in 1804. There is a theological seminary connected with the institution. It had, in 1840, 168 students. Charleston college was founded in 1785, and has about sixty-five students. There were in this state, in 1840, 117 academies, or grammar schools, with 4326 students; and 566 common and primary schools. There were 20,615 free white persons, over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

Religion.—The Methodists, Baptists, and Presbyterians, are the most numerous religious denominations. At the commencement of 1836, the Methodists had 37,503 communicants; the Baptists had 314 churches, 226 ministers, and 36,276 communicants; the Presbyterians had ninety churches, seventy ministers; the Episcopalians had fifty churches, one bishop, and forty-three ministers. The Lutherans had, in 1840, twenty-four ministers, thirty-four congregations, and 1667 communicants. There are a few congregations of Roman Catholics, Unitarians, Friends, Universalists, and Jews.

Banks.—At the commencement of 1840, there were fourteen banks and branches in this state, with an aggregate capital of 11,584,355 dollars, and a circulation of 4,439,404 dollars. The state debt at the close of 1840, amounted to 3,764,734 dollars.

Trades.—There were forty-one commercial and forty-one commission houses engaged in foreign trade, with a capital of 3,668,050 dollars; 1253 retail dry goods and other stores, with a capital of 6,648,736 dollars; 1057 persons employed in the lumber trade, with a capital of 100,000 dollars; 125 persons employed in internal transportation, who, with forty-six butchers, packers, &c., employed a capital of 112,900 dollars; fifty-three persons employed in the fisheries, with a capital of 1617 dollars.

Manufactures.—The value of home-made or family manufactures amounted to 930,703 dollars; there were three woollen manufactories, employing six persons, producing articles to the value of 1000 dollars, with a capital of 4300 dollars; fifteen cotton manufactories, with 16,355 spindles, employing 570 persons, producing articles to the value of 359,000 dollars, employing a capital of 617,450 dollars; four furnaces, producing 1250 tons of cast iron, and nine forges producing 1165 tons of bar iron, employing 248 persons, and a capital of 113,800 dollars; five smelting houses, employing sixty-nine persons, producing gold to the value of 37,418 dollars, with a capital of 40,000 dollars; one paper manufactory, employing thirty persons, producing articles to the value of 20,800 dollars, with a capital of 30,000 dollars; twenty persons produced hats and caps to the value of 3750 dollars; ninety-seven tanneries, employing 281 persons, and a capital of 212,020 dollars; 243 other leather manufactories, as saddleries, &c., producing articles to the value of 109,472 dollars, employing a capital of 45,662 dollars; eight potteries, employing forty-nine persons, producing articles to the value of 19,300 dollars, with a capital of 12,950 dollars; 127 persons produced machinery to the value of 65,561 dollars; twenty-six persons produced hardware and cutlery to the value of 13,465 dollars; 420 persons produced carriages and waggons to the value of 180,270 dollars, with a capital of 132,690 dollars; 164 flouring mills produced 58,458 barrels of flour, which, with other mills, employed 2122 persons, producing articles to the value of 1,201,678 dollars, and employing a capital of

1,668,804 dollars; 1281 persons manufactured bricks and lime to the value of 193,408 dollars, with a capital of 72,445 dollars; 168 persons manufactured 586,327 lbs. of soap, and 68,011 lbs. of tallow candles; 251 distilleries produced 102,288 gallons, employing 219 persons, and a capital of 14,342 dollars; ships and vessels were constructed to the value of 60,000 dollars; 241 persons manufactured furniture to the value of 28,155 dollars, with a capital of 133,600 dollars; 111 brick or stone houses, and 1594 wooden houses were erected, employing 2398 persons, at a cost of 1,527,576 dollars; sixteen printing offices, and seven binderies, three daily, twelve weekly, and two semi-weekly newspapers, and four periodicals, employed 164 persons, and a capital of 131,300 dollars. The amount of capital employed in manufactures, was 3,216,970 dollars.—*Official Returns.*

Public Works.—South Carolina has some important works of internal improvement. The Santee canal extends twenty-two miles from Charleston harbour to the Santee river, and was finished in 1802, at a cost of 650,667 dollars. Through this canal and the improvement of the Santee and Congaree rivers, a boatable communication has been opened from Charleston to Columbia. Winyaw canal extends seven miles and a half from Winyaw bay to Kinlock creek, a branch of the Santee river. The navigation of the Catawba river has been improved by five short canals, with an aggregate length of about eleven miles and a half. Saluda canal extends from the head of Saluda shoals to Granby ferry, six miles and a quarter. Besides these, there are three other short canals, to avoid the obstructions of falls or shoals in rivers.

The South Carolina railroad commences at Charleston, and extends 135 miles and three-quarters to Hamburg. This road was commenced in 1830 and completed in 1834, at a cost of 1,750,000 dollars. It has since been sold to the Louisville, Cincinnati, and Charleston Railroad Company, for 2,400,000 dollars, paid for in the stock of the latter company. The entire length of this road from Charleston to Cincinnati will be 718 miles. The Branchville and Columbia railroad extends from Branchville, on the South Carolina railroad, sixty-six miles to Columbia. This is to form a part of the Charleston, Louisville, and Cincinnati railroad.—*U. S. Gaz.*

FINANCES.

STATEMENT of the Public Debt, 1844.

D A T E S.	Amount Outstanding.	Rate per Cent.	When reimbursable.	Object of the Loans.
	dollars. cents.			
1794-1795.....	133,501 85	3	At will.	Payment of revolutionary claims.

1839.....	200,000 00	6	1852	ditto ditto ditto.
	3,495,164 85			

Amount of surplus revenue deposited with the state, 1,051,422 dollars.

Amount of loan to the Louisville, Cincinnati, and Charleston railroad, guaranteed by the state, 2,000,000 dollars.

"It is highly probable," says Governor Hammond, "the state will never be called on to refund the surplus revenue, though her liability for it should never be forgotten, in an estimate of her debt. It is to be hoped that her guarantee of the railroad bonds is only nominal, and that in due season they will be discharged by the railroad company. I therefore deduct these items, in stating the public debt, for which certain and early provision must be made, at 3,500,000 dollars."

The receipts into the state treasury, in 1843, were 299,196 dollars 16 cents, and the

expenditures, 277,833 dollars 77 cents. The balance in the treasury, including an unexpended balance of previous appropriations, was about 57,000 dollars.

Exclusive of domestic productions of minor consideration, but which if included in the estimate, would swell the export of South Carolina, to at least 13,000,000 dollars,

Savannah exported the last year :—

199,842 foreign	} bales of short cotton.
76,299 coastwise	
10,537 from Darien.	

286,678 total at 30 dollars the bale	8,600,340 dollars.
8,108 Sea islands, at 75 dollars the bale	608,000 "
50,000 casks of rice, estimated at 20 dollars	1,000,000 "
	10,208,340 "

The exports, therefore, of South Carolina and Georgia, nearly the whole of which pass through the ports of Charleston and Savannah, amount in the aggregate, to 23,208,340 dollars.

PRINCIPAL SEAPORTS AND TOWNS.

COLUMBIA, the capital of the state, is but a small town, or rather village. It is situated on the Congaree river, 120 miles north-north-west of Charleston. Large boats ascend the river to the place, during high floods, and there is a railroad from Charleston to this place. The population of the whole township, in 1840, only amounted to 3500 inhabitants.

GEORGE TOWN is a port of entry on the west side of Winawa bay, with about 2800 inhabitants, and a harbour which admits vessels drawing eleven feet depth of water. It has rather an active trade. In 1840, the tonnage of the port was 4415.

CHARLESTON is the largest city in the Atlantic states south of the Potomac, and the ninth in population in the United States, and is situated on a tongue of land formed by the junction of Ashley and Cooper rivers. It is in 32 deg. 47 min. north latitude, and 79 deg. 64 min. west longitude from Greenwich; and 3 deg. west longitude from Washington. It is 124 miles south-south-east from Columbia; 118 miles north-east from Savannah; 590 miles south-south-west from Baltimore; 780 miles south-south-west from New York; 540 miles south-south-west from Washington. The population, in 1790, was 16,359; in 1800, 18,711; in 1810, 24,711; in 1820, 24,780; in 1830, 30,289; in 1840, 29,261; of which 14,673 were slaves; employed in commerce, 676; in manufactures and trades, 1025; in navigating the ocean, 292; learned professions, 226. Academies and grammar schools fourteen, with 861 students; thirteen common and primary schools, with 574 scholars, of which 568 were at the public charge. Five white persons over twenty could neither read nor write.—*Official Returns.*

"The bay formed at the junction of Ashley and Cooper rivers is two miles wide, and extends south of east seven miles to its entrance into the Atlantic, below Sullivan's island. Ashley is 2100 yards wide opposite the town, and Cooper is 1400; and both are deep and navigable for large vessels. A sand bar extends across the mouth of the harbour, but has four entrances, the deepest of which, passing very near Sullivan's island, has seventeen feet of water at high-tide. It is defended by Fort Moultrie, Fort Pinkney, on an island two miles below the city, and by Fort Johnson four miles below. The harbour is open to easterly winds, and storms from that quarter are often troublesome to the shipping at the wharfs. The ground on which Charleston is built is raised but about seven feet above high-tide, so that parts of the city have been overflowed, when the wind and tide have combined to raise the waters, though it has not often occurred. The streets, which are from thirty-five to seventy feet in width, extend from east to west, from the Cooper to the Ashley river, and are intersected by others at nearly right angles, running from north to south. Many of the houses are of brick, while others are of wood, many of them painted white, which, with the profusion of foliage, by which they are commonly surrounded, gives them a beautiful appearance. The houses are generally elegant, and they are often furnished with piazzas which extend to the roof, and are ornamented with vines. The gardens are adorned with

orange, peach, and other trees, and a variety of shrubbery; while the streets are often lined with the pride of India, and other beautiful trees. Refinement and hospitality characterise the society of Charleston; the city is considered more healthy during the summer months than the surrounding country. It contains twenty-four churches:—five Episcopal, four Presbyterian, four Methodist, three Roman Catholic, two Baptist, two German Lutheran, one French Protestant, one Jews' synagogue, and one Bethel.

"Among the public buildings are the city hall, the exchange, a court house, gaol, two arsenals, a theatre, two college halls, an almshouse, and an orphan asylum. The orphan asylum accommodates 150 destitute children. The literary and philosophical society has a fine collection of objects in natural history, and the academy of fine arts possesses some valuable paintings. The city library contains about 15,000 volumes.

"St. Philips parish, or the neck, virtually a part of the city, contains a population of 11,000; it is adorned with plantations in a high state of cultivation. Moultrieville, on Sullivan's island, at the mouth of the harbour, is a small but pleasant town, and the refreshing breezes from the ocean cause it to be much resorted to from the city during the summer and autumnal months."—*U. S. Gaz.*

Trade.—The commerce of Charleston is extensive, comprising that of nearly the whole of the state. Its tonnage in 1840 was 29,250.

There were, in 1840, twenty-seven foreign commercial and thirty-four commission houses, with a capital of 3,563,750 dollars; 428 retail stores, capital 3,317,450 dollars; seven lumber yards, capital 50,000 dollars; three grist mills, four saw mills, with a total capital of 334,000 dollars; eight printing-offices, five binderies, three daily, three weekly, and two semi-weekly newspapers, and four periodicals, with a capital of 120,000 dollars; eighty-four brick and stone houses, and twenty-six wooden, built at the cost of 927,700 dollars. Total capital in manufactures 770,500 dollars.—*Official Returns.*

"There are three lines of packets which ply between this city and New York. One line has six ships, one of which sails from each place every five days. Another consists of eight brigs, one of which sails every fourth day. There is another line consisting of six brigs. A canal of twenty-two miles in length, connects the harbour with the Santee river. A railroad extends 136 miles to Hamburg, on the Savannah.

"The College of Charleston has, in its scientific department, sixty students, and a library of 3000 volumes. There are in the city twenty churches, of which the Episcopalians have four, the Presbyterians three, the Methodists three, the Congregationalists two, the Roman Catholics two, and various others. There are six newspapers published here, three of which are issued daily, one semi-weekly, and two weekly. The city is divided into four wards."—*U. S. Gaz.*

Charleston exported during the year 1839:—

228,191 foreign	} bales of short cotton.
60,178 coastwise	

288,369

13,200 from Georgetown.

301,569 total, at 30 dollars the bale 9,047,070 dollars.

19,310 bales Sea islands at 75 dollars 1,458,250 "

100,000 tierces of rice, at 20 dollars 2,000,000 "

Total value 12,505,320 "

In 1842, the number of bales of cotton to foreign parts was 198,824, and coastwise 70,782 bales. George Town exported 12,617. Total exports, 282,224 bales.

" hags.....	1	"
And storage, while awaiting shipment, of 8 cents per week on bales, and whole and half casks, for the first and last weeks, * 4 cents for the intermediate weeks.		
On all other goods, the charges are usually paid in each particular case.— <i>Adopted, October, 1843.</i>		
<i>Standard of Freights.</i>		
When vessels are freighted by the ton, and no special agreement is made respecting the proportion of tonnage, the following standard shall regulate, viz: that the articles, the bulk of which shall compose a ton, be equal a ton of heavy material, shall be in weight as follows:—Coffee, in casks, 1368 lbs. nett; in bags, 1830 lbs. nett. Cocoa, in casks, 1120 lbs. nett; in bags, 1307 lbs. nett. Pimento, in casks, 952 lbs. nett; in bags, 1106 lbs. nett. All heavy goods, as bar, pig, and rod iron, 2240 lbs. nett. All heavy dye-woods, rice, sugar, and all other heavy goods, 2240 lbs. nett. Flour of 12 owt, 8 barrels. Beef, pork, fish, (pickled) tallow, 6 barrels. Pitch, tar, and turpentine, of the capacity of 32 gallons each, 6 barrels. Oil, wine, brandy,		

and other liquors, reckoning the full contents of casks, 200 gallons. Grain, in casks, 22 bushels. Salt (in casks), fine, 26, bushels, coarse, 31 bushels. Sea coal, 20 bushels. Mahogany, square timber, plank, boards, bale goods, and dry goods, in casks, boxes, and trunks, 40 cubic feet. Dried hides, 1120 lbs. nett. Raw silk, 800 lbs. nett. Tobacco, 1600 lbs. nett. Tobacco, in hids., 1200 lbs. nett.—*Adopted, March, 1843.*

Measurement of Goods.

Goods of measurement on freight from other ports, delivered here, if deemed incorrectly measured, may be remeasured here by the port-wardens, or other proper persons agreed on for that purpose, whose measurement shall be final and conclusive; and the charge incurred by measuring shall be paid by him who is found in error.

Adopted, March, 1823.

Losses on Goods by Fire, &c., and by Bad Debits.

Loss of goods arising from fire, robbery, theft, or accident, shall, in all cases, be borne by the owner thereof, unless a breach of orders to insure has been made, or negligence and inattention practised by the consignee or his agents.

Losses by bad debts, in the sale of goods, shall always be borne by the owners, unless sold contrary to written orders, or there be an express agreement to guarantee.—*Adopted, March, 1843.*

Goods sold by Weight and by the Thousand.

Goods sold by the weight, to be sold by the 100 lbs., instead of 112 lbs.; or by the ton of 2000 lbs., instead of 2240 lbs.—*Adopted, March, 1825.*

Staves, hoops, &c., by the short thousand.—*Adopted, May, 1839.*

Customs to the Staple Productions of South Carolina.

RICE.—The standard weight of a barrel is 500 lbs. nett. When the wharfinger weighs a barrel, the turn of the scale is allowed, and a draft of 4 lbs. per barrel. The tare is ascertained by weighing three barrels of a small parcel, and five of a large parcel, if required. The purchaser pays 50 cents for each barrel, and for any re-cooperage after having been once coopered, unless a special agreement is made to the contrary.

COTTON.—In hags and square bales, turn of the scale, and 1 per cent draft, but no tare for all necessary haling and roping, except for wooden hoops, the actual tare of which is allowed.—*Adopted, March, 1825.*

What shall be a Delivery of Goods by the Master of a Vessel.

In the absence of any express law on the subject, the Chamber recommends that the following regulations be adopted by all interested:—

That a notification in all the daily newspapers of the city, or other proper notice, be given by consignee or agents of vessels, at what time a vessel will be ready to discharge, and at what wharf; stating, also, that if goods shall be landed, and not taken in charge by the consignee or his agent, the master or agent of the vessel shall, at sunset, put such goods into the charge and possession of the wharfinger, who shall then store the same, at the expense and risk of the respective owners and claimants; and such delivery shall be sufficient to discharge the master from all future responsibility, and outtie him to his freight-money.

That in order more effectually to prevent disputes in regard to the proper delivery of goods from alongside the discharging vessel, it be recommended to ships' agents to have respectively, a clerk to deliver the goods, and to record the same in a book to be kept for that purpose. When goods are to be delivered to a drayman, an order shall be written by the consignee for such delivery, in which shall be inserted the name of the drayman, and the number of his licence.—*Adopted, 8th of February, 1839.*

Drafts and Taxes to be allowed to the Purchasers of Imported Articles for Internat Consumption.

SUGARS, in hids., one-half per cent draft, and twelve per cent tare.

SUGARS, in boxes, one-half per cent draft, and fifteen per cent tare.

SUGARS, in flour barrels, one-half per cent draft, and 20 lbs. each, tare.

SUGARS, in flour barrels, one-half per cent draft, and (if filled in Charleston), 18 lbs. each tare.

SUGARS, in bags of grass, one-half per cent draft, and two per cent tare.

Sugars, in mats or bales, one-half per cent draft, and two per cent tare.
 Coffee, in hds., one-half per cent draft, and twelve per cent tare.
 Coffee, in four barrels, one-half per cent draft, and 18 lbs. per barrel, tare.
 Coffee, in bags of grass, one-half per cent draft, and two per cent tare.
 Coffee, in bags of linen, two per cent tare.
 Coffee, in mats or bales, one-half per cent draft, and three per cent tare.
 Cocons, in casks, custom-house draft, and ten per cent tare.
 Cocons, in bags of linen, two per cent tare.
 Pimento, in bags of linen, two per cent tare.
 Pimento, in casks, custom-house draft, and sixteen per cent tare.
 Pepper, in bags of linen, two per cent tare.
 Tea, custom-house draft and tare.
 Indigo, of foreign growth, custom-house draft; tare, in casks, fifteen per cent; in barrels, twelve per cent; in ceroons, ten per cent; in bags, three per cent.
 Cotton, of foreign growth, covered with linen, custom-house draft, two per cent tare.
 All other articles, custom-house draft and tare.
 Cheese, candles, chocolate, soap, and all small articles sold by weight, the actual tare.
 Liquors are gauged by Gunter's scale, agreeably to the act of congress.—*Revised, May, 1844.*

Custom-House Drafts and Duties.

Drafts.—The following allowances are made by law for drafts on articles subject to duty by weight:—

Of any quantity of 1 cwt.....	lbs.	1
" above 1 cwt. and not exceeding 2 cwt.	2	2
" 2 cwt. " 3 cwt.	3	3
" 3 cwt. " 4 cwt.	4	4
" 4 cwt. " 5 cwt.	5	5
" 5 cwt. " 6 cwt.	6	6
" 6 cwt. " 7 cwt.	7	7
" 7 cwt. " 8 cwt.	8	8
" 8 cwt. " 9 cwt.	9	9
" 9 cwt. " 10 cwt.	10	10

[Act of 2nd March, 1793, Section 58.]

Notes.—When the draft established by law exceeds one-half per cent, then the custom-house allows only one-half per cent.

When the draft established by law is less than one-half per cent, then the custom-house allows only the draft according to the table.

The principle observed is always to allow the lowest rate, whether it be ascertained by the per centage or by the table.

Tares allowed by Law.

On shot in casks.....	3
On twine in casks.....	12
On twine in bales.....	3
On all other goods, paying a specific duty, according to the invoice thereof, or actual weight.	

On any of the preceding articles, the importer may have the invoice tare allowed, if he makes his election at the time of making his entry, and obtains the consent of the collector and naval officer thereto.—[Act of 2nd of March, 1793, Section 58.]

Presentation of Drafts Drawn at Sight.

Resolved,—That it has always been the practice of the merchants of Charleston to pay, on presentation, drafts drawn at sight.

Resolved,—That, in the opinion of this chamber, this practice establishes the legal right of the presenter of a sight draft to demand payment on presentation.—*Adopted, May 27, 1844.*

Regulations for the Public Assayer for the State of South Carolina.

I. The assayer shall accurately assay all gold and silver brought to him for that purpose, including coins, genuine and counterfeit.

II. He shall keep a book, and in it require persons bringing metals for examination to enter their names, their residence, and such other particulars as the assayer may deem advisable, and as may, from time to time, be required by the appointing powers.

III. He shall, if the parties desire it, make the gold or silver assayed into bars or ingots, on each of which shall be stamped—1st. Its regular number, beginning at No. 1. 2. The gross weight of the assayed bar or ingot. 3rd. The value per pennyweight of that bar or ingot, according to the mint standard. 4th. The amount in pennyweights of pure gold or silver in said bar or ingot. 5th. The date of the assay; and, 6th. The name of the owner.

IV. He shall keep a book, in which shall be entered, as specified above, the gross or specific weights of each bar or ingot, the amount of precious metals contained in it, the name of the person owning, and that of the person bringing it, the day it was entered in his book, and the number of the bar or ingot. A report of these particulars shall be lodged regularly in the bank of the state, where it shall be recorded for public inspection and reference.

V. In assaying the gold, the silver it contains is to be estimated and reckoned in fixing the value of the bar or ingot, under the second and third specifications of the third regulation above.

The charges shall not exceed the following rates:—

For Gold.—Ingots under 100 pennyweights, one dollar.
 Ingots between 100 and 400 pennyweights, per pennyweight, one cent.
 Ingots between 400 and 1000, ditto, one cent for the first 400, and one-quarter of a cent additional for each pennyweight over 400.
 Ingots over 1000 pennyweights, the same charge as the last, with one-eighth of a cent additional for all over 1000 pennyweights.

For Silver.—Sums under 100 dollars, one dollar.
 Sums between 100 dollars and 500 dollars, two dollars.
 Sums between 500 dollars and 1000 dollars, three dollars.
 Sums of 1000 dollars and upwards, four dollars.

If the gold should be in the form of grains, it is to be run into ingots or bars, at the expense of the assayer, provided it does not exceed 1000 pennyweights; and if it exceeds that weight, he has the privilege of charging three cents an ounce for the excess. The same is applicable to bars or ingots that it may be necessary to recast.

Charges for Examining Coins.—If it be simply to make such examination as to decide upon the genuine or counterfeit character of the coin, not to exceed fifty cents. If the coin should be counterfeit, and the exact composition be required, not to exceed two dollars.

VI. GEORGIA.

GEORGIA is bounded north by Tennessee and North Carolina; north-east by South Carolina; east by the Atlantic; south by Florida; and west by Alabama. It is between 30 deg. 30 min. and 35 deg. north latitude, and between 80 deg. 50 min. and 86 deg. 6 min. west longitude, and between 3 deg. 52 min. and 8 deg. 47 min. west from Washington. It is 300 miles long from north to south, and 240 miles broad from east to west. The area of this state comprises about 58,000 square miles, or 37,120,000 British statute acres. The population, in 1790, was 82,584; in 1800, 162,686; in 1810, 252,433; in 1820, 348,989; in 1830, 516,567; in 1840, 691,392, of which 280,944 were slaves. There were, in 1840, employed in agriculture, 209,283; in commerce, 2428; in manufactures and trades, 7984; mining, 574; navigating the ocean, 262; navigating canals, rivers, &c., 352; learned professions, 1250.

This state is divided into ninety-three counties, which, with their population, in 1840, and their capitals, were as follows:—Applying, 2052, C. Holmesville; Baker, 4226, C. Newton; Baldwin, 7250, C. Milledgeville; Bibb, 9802, C. Macon; Bryan, 3182, C. Bryan; Bullock, 3102, C. Statesborough; Burke, 13,176, C. Waynesborough; Butts, 5308, C. Jackson; Camden, 6075, C. Jeffersonton; Campbell, 5370, C. Campbellton; Carroll, 5252, C. Carrollton; Cass, 9390, C. Casville; Chatham, 18,801, C. Savannah; Chattooga, 3438, C. Summerville; Cherokee, 5895, C. Canton; Clarke, 10,522, C. Athens; Cobb, 7539, C. Marietta; Columbia, 11,356, C. Applington; Coweta, 10,364, C. Newnan; Dade, 1364, C. Trenton; Decatur, 5872, C. Bainbridge; De Kalb, 10,467, C. Decatur; Dooley, 4427, C. Vienna; Early, 5444, C. Blakeley; Effingham, 3075, C. Springfield; Elbert, 11,125, C. Elberton; Emanuel, 3129, C. Swainsborough; Fayette, 6191, C. Fayetteville; Floyd, 4441, C. Rome; Forsyth, 5619, C. Cumming; Franklin, 9886, C. Carnesville; Gilmer, 2536, C. Ellejay; Glynn, 5302, C. Brunswick; Greene, 11,690, C. Greensborough; Gwinnett, 10,804, C. Lawrenceville; Habersham, 7961, C. Clarksville; Hall, 7875, C. Gainesville; Hancock, 9659, C. Sparta; Harris, 13,933, C. Hamilton; Heard, 5329, C. Franklin; Henry, 11,756, M'Donough; Houston, 9711, C. Perry; Irwin, 2038, C. Irwinville; Jackson, 8522, C. Jefferson; Jasper, 11,111, C. Monticello; Jefferson, 7254, C. Louisville; Jones, 10,065, C. Clinton; Laurens, 5585, C. Dublin; Lee, 4520, C. Starkeville; Liberty, 7241, C. Hinesville; Lincoln, 5895, C. Lincolnton; Lowndes, 5574, C. Troupsville; Lumpkin, 5671, C. Dahlonega; Macon, 5045, C. Soil and Agriculture.—For an average of about seven miles distance from the main land the sea islands, intersected by inlets, communicating with each other, form a well sheltered inland navigation for vessels of 100 tons burden, along the whole coast. These islands consist of salt marsh, and land of a gray rich soil, which produces the well-known sea-island cotton. The natural growth of this soil is pine, hickory, and live oak. The principal islands are Tybee, Ossabaw, St. Catharines, Sapelo, St. Simons, and Cumberland. The soil on the main land, for four or five miles from the coast, consists of salt marsh. Beyond which there is a narrow margin of land, nearly resembling that of the islands; and further back the pine-barrens commence, interspersed with numerous inland swamps, on the verge of the creeks and rivers. These are partially or wholly overflowed at the return of the tide, and constitute the rice plantations. The pine-barrens extend from sixty to ninety miles from the coast. "Beyond this commences the region of sand hills, thirty or forty miles wide, interspersed with fertile tracts, and extending to the lower falls of the rivers. The part of the state, above the falls of the rivers, is called the Upper country, and has generally a strong and fertile soil, often inclining to a red colour, and further back, mixed with a deep black mould, producing cotton, tobacco, Indian corn, wheat, and other kinds of grain. Black walnut and mulberry trees grow abundantly in this soil. The forests also produce oak, pine, hickory, and cedar. The fruits are, melons, figs, oranges, pomegranates, olives, lemons, limes, citrons, pears, and peaches. The pine-barrens produce grapes of a large size and excellent flavour. The country on the north, near the boundary of Tennessee, becomes mountainous."—*U. S. Gaz.*

Live Stock and Agricultural Products.—In this state there were, in 1840, 157,540 horses and mules; 884,414 neat cattle; 267,107 sheep; 1,457,755 swine; poultry to the

value of 449,623 dollars. There were produced 1,801,830 bushels of wheat; 12,979 bushels of barley; 1,610,030 bushels of oats; 60,693 bushels of rye; 20,905,122 bushels of Indian corn; 371,303 lbs. of wool; 19,799 lbs. of wax; 1,211,366 lbs. of potatoes; 16,969 tons of hay; ten tons of flax and hemp; 162,894 lbs. of tobacco; 12,384,732 lbs. of rice; 163,392,396 lbs. of cotton; 2992 lbs. of silk cocoons; 329,744 lbs. of sugar. The products of the dairy were valued at 605,172 dollars; and of the orchard, 156,122 dollars; of lumber, 114,050 dollars. There were made, 8647 gallons of wine. The staple commodities are cotton and rice, of which great quantities are exported.—*Official Returns.*

Minerals.—Copper and iron have been found in this state, and there are several valuable mineral springs, but much the most valuable mineral production is gold, which is found in the north part of the state, in considerable quantities.—*U. S. Gaz.*

Trades.—In 1840, there were four commercial and eighty-two commission houses engaged in foreign trade, with a capital of 1,543,500 dollars; 1716 retail dry-goods and other stores, with a capital of 7,361,838 dollars; 442 persons were employed in the lumber trade, with a capital of 75,730 dollars; 194 persons were employed in internal transportation, who, with seventeen butchers, packers, &c., employed a capital of 12,885 dollars.

Manufactures.—In 1840, the value of home-made or family goods was 1,467,630 dollars. There was one woollen manufactory employing ten persons, producing articles to the value of 3000 dollars, with a capital of 2000 dollars; nineteen cotton factories, with 42,589 spindles, employing 779 persons, producing articles to the value of 304,342 dollars, employing a capital of 573,835 dollars; fourteen furnaces, producing 494 tons of east iron, employing forty-one persons, and a capital of 24,000 dollars; 130 smelting houses employed 405 persons, and produced gold to the value of 121,881 dollars, with a capital of 79,343 dollars; fifty-five persons manufactured hats and caps to the value of 22,761 dollars, with a capital of 7950 dollars; 132 tanneries employed 437 persons, and a capital of 127,739 dollars; 102 other leather manufactories, as saddleries, &c., produced articles to the value of 123,701 dollars, with a capital of 60,932 dollars; six potteries, employing twelve persons, produced articles to the value of 2050 dollars, with a capital of 790 dollars; 184 persons produced machinery to the value of 131,238 dollars; nineteen persons produced hardware and cutlery to the value of 7866 dollars; 555 persons produced bricks and lime to the value of 148,655 dollars; 2633 persons made 764,528 lbs. of soap, and 111,066 lbs. of tallow candles, with a capital of 27,126 dollars; 393 distilleries produced 126,746 gallons, which, with twenty-two breweries, employed 218 persons, and a capital of 28,606 dollars; 461 persons manufactured carriages and waggons to the value of 249,065 dollars, with a capital of 93,820 dollars; 114 flouring mills produced 55,158 barrels of flour, and, with other mills, employed 1581 persons, producing articles to the value of 1,268,715 dollars, with a capital of 1,491,973 dollars; ninety-five persons manufactured furniture to the value of 49,780 dollars, with a capital of 29,090 dollars; thirty-eight brick or stone houses, and 2591 wooden houses, were built by 2274 persons, at a cost of 693,116 dollars; twenty-four printing offices, and five binderies, five daily, five semi-weekly, and twenty-four weekly newspapers, and six periodicals, employed 157 persons, and a capital of 134,400 dollars. The whole value of capital employed in manufactures was 2,899,565 dollars.—*Official Returns.*

Climate.—The climate of Georgia is generally mild. In the low country it is unhealthy during the months of July, August, and September, excepting portions of the islands; but the Upper country is salubrious and healthy. Snow is seldom seen, and cattle subsist with very little food but what they obtain from the woods and savannas.—*U. S. Gaz.*

Rivers.—The rivers are—the Savannah, 600 miles long, bounding the state on the north-east, navigable for ships seventeen miles to Savannah, and, a part of the year, for steamboats, 250 miles to Augusta; the Altamaha, which is navigable for large vessels, twelve miles, to Darien, is formed by the junction of the Oconee and the Ocmulgee; and is navigable for sloops of thirty tons, by the former, to Dublin, 300 miles from the ocean; the Ogeche, 200 miles long, and navigable for sloops for forty miles; Flint river, which rises in the north-west part of the state, and, after a course of more than 200 miles, joins the Chattahoochee, forming the Appalachiocola; the Chattahoochee, on the west border of the state, which is navigable 300 miles by steamboat to Columbus; the St. Mary's river, in the south-west part of the state, rises in Okefinokce swamp, and is navigable, seventy

miles, for vessels drawing fourteen feet of water. Okfinokee swamp is about 180 miles in circumference, and has within it several fertile islands.—*U. S. Gaz.*

Education.—The University of Georgia is located at Athens, and is designed to have an academic branch in each county. A few only of these have been opened. It was founded in 1788, and has been well endowed. In this institution and its branches, there were, in 1840, 622 students. There were in the state, 176 academies or grammar schools, with 7878 students; and 601 common or primary schools, with 15,561 scholars. There were 30,717 free white persons, over twenty years of age, who could neither read nor write.

Religion.—The Baptists, Methodists, and Presbyterians, are the most numerous religious denominations. In 1835, the Baptists had 583 churches, 298 ministers, and 41,810 communicants; the Methodists, eighty travelling preachers, and 25,005 white, and 8436 coloured communicants; the Presbyterians, seventy-five churches, forty-five ministers, and 4882 communicants; the Episcopalians, four ministers; the Protestant Methodists, twenty congregations, and fifteen ministers. Besides these there were a number of Christians, Roman Catholics, Lutherans, Scotch Presbyterians, Friends, and Jews.

Banks.—In 1840, this state had thirty-seven banks and branches, with an aggregate capital of 15,119,219 dollars, and a circulation of 3,017,348 dollars. At the close of 1840, the state debt amounted to 500,000 dollars.—(See Banks of the United States hereafter.)

Public Works.—This state has several important works of internal improvement. The Savannah and Ogeechee canal extends sixteen miles, from Savannah to Ogeechee river, completed, in 1829, at an expense of 165,000 dollars. The Brunswick canal extends from tide water on the Altamaha, twelve miles to Brunswick, at a cost of 500,000 dollars.—*U. S. Gaz.*

The Georgia railroad extends from Augusta, 165 miles, to De Kalb county. The Athens branch extends from the Georgia railroad thirty-three miles to Athens. Cost of the whole, including the Athens branch, 3,300,000 dollars. The Western and Atlantic railroad continues the Georgia railroad from De Kalb county, 140 miles, to Chattanooga, on Tennessee river, at a cost of 2,130,000 dollars. The Central railroad extends from Savannah, 197 miles, to Macon, estimated to cost 2,300,000 dollars. The Monroe railroad extends from Macon, 101 miles, to Whitehall. The Ocmulgee and Flint river railroad, seventy-six miles in length, is designed to connect the navigable waters of these rivers, so as to form a communication from the Atlantic to the Gulf of Mexico.—(See Public Works of United States hereafter.)

PRINCIPAL SEAPORTS AND TOWNS.

AUGUSTA is situated on the south-west side of Savannah river, ninety-six miles from Milledgeville, 120 miles north-west from Savannah. Population, in 1830, 4000; in 1840, 6403. It is regularly laid out, and built chiefly of brick. The streets cross each other at right angles, and are ornamented with trees. It has a city hall, court house, gaol, theatre, arsenal, hospital, and a female asylum; seven churches—one Baptist, one Episcopal, one Methodist, one Presbyterian, one Roman Catholic, one Unitarian, and one African. It is connected with Charleston and Milledgeville by railroad. The back country is fertile. Its trade is active, and it sends a great amount of cotton, tobacco, and other produce, down the river to Savannah. In 1840, it contained twelve commission houses in foreign trade, capital 245,000 dollars; 265 stores, capital 1,281,870 dollars; two furnaces, two printing offices, two daily, four weekly, two semi-weekly newspapers, and two periodicals. Capital in manufactures, 44,500 dollars.—*Official Returns, U. S. Gaz.*

COLUMBUS, situated on the banks of the Chattahoochee river, at the head of steamboat navigation; immediately below the falls on the river, which descends 111 feet in a distance of four miles above. It is situated 300 miles above the junction of the Chattahoochee with Flint river, and 430 miles above Appalachicola bay. The river, under the falls, is only 354 feet wide, below which it widens to 250 yards. The town is elevated sixty feet above the ordinary height of the river, and covers 1200 acres. Two streets running parallel with the river, are 165 feet wide; six others are 132 feet wide. These are intersected by twelve other streets, at right angles, which are ninety-nine feet wide. It contained, in

1840, a court house, gaol, market house, five churches—one Presbyterian, one Episcopal, one Baptist, one Methodist, and one Roman Catholic—100 stores, about 700 dwellings. There is a flouring mill, and various mills and manufactories on the river. From thirteen to fifteen steamboats navigate the river, and steamboats ply to New Orleans. A steamboat drawing five feet of water can ascend to this place at any season. A bridge from the town crosses the Chattahoochee river to the opposite bank in Alabama. Population, in 1842, about 4000. There were, in 1840, six foreign commission houses, capital 80,000 dollars; 106 retail stores, capital 473,000 dollars; three printing offices, three weekly newspapers, and one periodical. Capital in manufactures, 39,800 dollars. Population, 3114.—*Official Returns, U. S. Gaz.*

DARIEN, situated on the north side of the Altamaha river, twelve miles above the bar, at the entrance of St. Simon's sound. It contains a court house, a gaol, an academy, a Presbyterian church, a bank, and a printing office. It has an extensive trade in cotton. The bar has over it fourteen feet depth of water. The Oconee branch of the Altamaha has a steamboat navigation to Milledgeville; and the Ocmulgee branch is navigable to Macon; so that Darien forms the focus of the trade of the central parts of the state.

MACON, situated on the west side of Ocmulgee river, at the head of tide navigation. A great quantity of cotton wool is shipped at this town; and about twelve steam-vessels, and several tow-boats, &c., employed in the trade. In 1822, there was only one hut in this place. In 1840, there were nine foreign commission houses, capital 75,000 dollars; eighty-two retail stores, capital 785,000 dollars; nine timber yards, building yards, &c. Population, 3927.

MILLEDGEVILLE, situated on the south-west bank of the Oconee river, at the head of steamboat navigation; had, in 1840, a population of 2095 inhabitants, and some trade.

SAVANNAH, port of entry, is situated on the south-west bank of the Savannah river, seventeen miles from its mouth, in 32 deg. 8 min. north latitude and 81 deg. 10 min. west longitude from Greenwich, and 4 deg. 10 min. west from Washington. It is 118 miles south-west from Charleston; 123 miles south-east from Augusta; 158 miles east-south-east from Milledgeville; 662 miles south-by-west from Washington. The population, in 1810, was 5195; in 1820, 7523; in 1830, 7776; in 1840, 11,214—of which 4694 were slaves. There were employed in commerce, 604; in manufactures and trades, 707; navigating the ocean, canals, &c., 241; learned professions, 131.

The city is built on a sandy plain, elevated about forty feet above the level of the tide. It was formerly considered unhealthy, supposed to arise chiefly from the rice grounds in the neighbourhood. On this supposition the citizens subscribed 70,000 dollars to induce the owners of the plantations to substitute a dry for a wet cultivation, by which the health of the place is said to have been much improved. This city is regularly laid out in the form of a parallelogram, with streets, many of them wide, crossing each other at right angles. There are ten public squares, containing two acres each, at equal distances from each other. These squares, and many of the streets, are bordered with trees, and particularly with the "Pride of India." Many of the houses are built of brick. On the east and west are marshes; and a pine-barren extends two miles to the south.

It has a good harbour. Vessels drawing fourteen feet of water come up to the wharfs of the city, and larger vessels come up to Fathom hole, three miles below. The city is defended by Fort Wayne on the east side, and by Fort Jackson at Fathom hole, three miles below. Much of the trade of Georgia centres in Savannah—the principal articles of which are cotton and rice. Twenty steamboats of a large size, and fifty steam tow-boats, navigate the river. On Tybee island, at the mouth of the river, is a lighthouse. One line of packets, consisting of two ships and four brigs, one vessel sailing from each place weekly—and another, consisting of six brigs, ply between this place and New York. The Savannah furnishes great facilities for internal trade, and this river is connected to the Ocmulgee by a canal sixteen miles long, which terminates at Savannah.—*U. S. Gaz.*

There are an exchange and two banks. The tonnage of the port, in 1840, amounted to 17,930. There were, in the same year, two foreign commercial and fifty commission houses, with a capital of 943,500 dollars; 191 retail stores, capital 855 190 dollars; eight lumber yards, capital 49,000 dollars; paints, drugs, &c., capital 35,800 dollars; three brick and forty-five wooden houses built, cost 138,100 dollars; four printing offices, two binderies,

three daily, three weekly, three semi-weekly newspapers, capital 22,000 dollars. Total capital in manufactures, 105,460 dollars.—*Official Returns.*

VII. FLORIDA.

THE territory of Florida is bounded north by Alabama and Georgia; east by the Atlantic; south and west by the Gulf of Mexico. It lies between 25 deg. and 31 deg. north latitude, and between 80 deg. and 87 deg. and 44 min. west longitude, and between 3 deg. and 10 deg. 44 min. west from Washington. It is about 385 miles long, and from fifty miles to 250 miles wide, comprising an area of 57,000 square miles, or 37,000,000 British statute acres. The population, in 1830, was 34,723; in 1840, 54,477, of which 16,456 were white males, 11,487 were white females; free coloured persons, males 398; free coloured persons, females 419; slaves, males 13,083; slaves, females 12,679. Employed in agriculture, 12,117; in commerce, 481; in manufactures and trades, 1177; navigating the ocean, 435; navigating canal and rivers, 118; learned professions and engineers, 204.

Florida is divided into twenty counties, which, with their population, in 1840, and their capitals, are as follows: *West Florida*—Escambia, 3993, C. Pensacola; Walton, 1461, C. Euchee Anna. *Middle Florida*—Gadsden, 5992, C. Quincy; Hamilton, 1464, C. Jasper; Jefferson, 5713, C. Monticello; Leon, 10,713, C. Tallahassee; Madison, 2644, C. Madison. *East Florida*—Alachua, 2282, C. Newmansville; Columbia, 2102, C. Lanca-ster; Duvall, 4156, C. Jacksonville; Hillsborough, 452, C. Fort Brooks; Leigh Reed, 73, C. New Smyrna; Nassau, 1892, C. H. Nassau; St. John's, 2694, C. St. Augustine. *South Florida*—Dade, 446, C. Key Biscayne; Monroe, 688, C. Key West. *Appalachicola District*—Calhoun, 1142, C. St. Joseph; Franklin, 1030, C. Appalachicola; Jackson, 4681, C. Marianna; Washington, 859, C. Roche's Bluff.

Soil.—The country is generally low and the surface undulating, except where swamps and numerous lakes occur. There are no mountains or high hills. A large portion is covered with pine trees, standing at a considerable distance from each other, without brush or underwood, but producing grass and flowers. The borders of the streams are usually skirted with hammocks, or clumps of hard wood covered with grape and other vines. A great part of Florida consists of pine-barrens, and a very poor soil; but there are many extensive tracts of table land, gentle elevations, and swamp, of the richest soil, well adapted to the cultivation of sugar, rice, cotton, Indian corn, tobacco, and fruits. The barrens afford extensive grazing land, usually intersected with streams of pure water. Many parts of the territory abound in yellow pine, hickory, and live oak timber. Majestic cedars, chesnuts, magnolias, with their large white flowers, and cypresses, with a straight stem of eighty or ninety feet are found. The fig, pomegranate, orange, and date, are among the fruits of Florida. Cotton forms the chief agricultural production. The peninsula, which constitutes the southern portion of the district, presents a singular alternation of savannas, hammocks, lagoons, and grass-ponds, called altogether the "everglades," which extend into the heart of the country for 200 miles north of Cape Sable, and are drained northwardly by the St. John's river. The sea coast of Florida, especially towards the south, is low and dangerous; shoals extend far into the sea. Several low islands lie off the coast. The "Florida Keys" have always been the dread of mariners, and many vessels are annually wrecked among these islands and along the coasts. There are few, or rather no good harbours on the Atlantic coast.

Harbours.—There are many bays on the western side of the peninsula, which form good harbours; the principal of which are Perdido, Pensacola, Choctawhatchee, St. Joseph's, Appalachicola, Appalachee, Tampa, Carlos, and Gallivans. On the eastern side, rivers, inlets, and sounds, afford harbours for coasting vessels. The principal capes are Canaveral, Florida, Sable, at the southern extremity, Roman's, and St. Blas. There are many islands scattered along the coast, particularly a cluster off the southern extremity, denominated the Florida Keys, extending, in a curved form, 200 miles. Key West, on one of these, named Thompson's island, is a naval station, has a good harbour, which is well sheltered, and admits the largest vessels.

Live Stock and Agricultural Produce.—There were in this territory, in 1840, 12,043

horses and mules; 118,081 neat cattle; 7198 sheep; 92,680 swine; poultry, valued at 61,007 dollars. There were produced 412 bushels of wheat; 13,829 bushels of oats; 898,974 bushels of Indian corn; 264,617 bushels of potatoes; 7285 lbs. of wool; 1197 tons of hay; 124 lbs. of silk cocoons; 75,274 lbs. of tobacco; 481,420 lbs. of rice; 12,146,533 lbs. of cotton; 275,317 lbs. of sugar. Value of the products of the dairy amounted to 23,094 dollars; and of the orchard, amounted to 1035 dollars.—*Official Returns.*

Trades and Manufactures.—There were twenty-three commercial and twenty-one commission houses in the foreign trade, employing a capital of 542,000 dollars; 239 retail dry goods and other stores, with a capital of 1,240,380 dollars; ninety-two engaged in the lumber trade, with a capital of 64,050 dollars; sixty-seven persons were employed in the fisheries, with a capital of 10,000 dollars. Home-made or family articles manufactured to the value of 20,205 dollars; hats and caps manufactured to the amount of 1500 dollars; three tanneries employed fifteen persons, and a capital of 14,600 dollars; ten other manufactories of leather, as saddleries, &c., manufactured articles to the value of 6200 dollars, employing a capital of 4250 dollars; 136 produced bricks and lime to the value of 37,600 dollars; fifteen persons manufactured carriages and waggons to the value of 11,000 dollars, with a capital of 5900 dollars; sixty-two grist mills, sixty-five saw mills, and two oil mills, employed 410 persons, and produced to the value of 189,650 dollars, with a capital of 488,950 dollars. Ships were built to the value of 14,100 dollars. The whole amount of capital employed in manufactures, was 669,490 dollars.—*Official Returns.*

Rivers.—“The principal river on the eastern side is the St. John’s, which rises within a short distance of the coast, and flows northwardly in a very circuitous course through several lakes. It is often from three to five miles wide, and at other times not one-fourth of a mile. It passes through a fine healthy country, and vessels drawing eight feet of water enter Lake George and Dun’s lake, 150 miles from its mouth, which has a bar of twelve feet, where it is only one mile wide. The Appalachian river is formed by the union of Chattahoochee and Flint rivers, about 100 miles above the Gulf of Mexico, to which place vessels drawing eight feet of water can proceed. The other principal rivers are the Escambia, Suwanee, Withlacoochee, Oscilla, Ocklocony, and Choctawhatchee. Rivers sometimes start out of the ground in a stream sufficient to turn a mill which seem to come from subterranean reservoirs, and sometimes suddenly sink into the ground and disappear.”—*U. S. Gaz.*

Education.—This territory has no college. There were, in 1840, eighteen academies and grammar schools, with 732 students, and fifty-one common and primary schools, with 925 scholars, and 1303 white persons, over twenty years of age, who could neither read nor write.

Religion.—The Episcopalians, Presbyterians, Methodists, and Roman Catholics, have each a few congregations and ministers.

Banks.—At the commencement of 1840, the district had five banks and branches, with an aggregate capital of 3,976,121 dollars, and a circulation of 418,778 dollars. At the close of 1840, the debt of the territory amounted to 3,900,000 dollars.

Public Works.—A railroad extends from Tallahassee, twenty-two miles, to St. Mark’s. One also extends from Lake Wicomico, twelve miles, to St. Joseph, and another from St. Joseph, thirty miles, to Iola, on the Appalachian. Several other railroads and canals have been projected.

PRINCIPAL TOWNS AND SEAPORTS.

TALLAHASSEE city and capital of Florida, situated on an eminence, twenty miles north of St. Mark’s, its port, 292 miles west of St. Augustine, 896 miles from Washington. A stream, flowing from several springs, runs along its east border, and falls fifteen or sixteen feet into a pool scooped out by its own current, and after running a short distance, sinks into a cleft of limestone rock. This city contains a state house, court house, gaol, a market house, a United States land office, an academy, a masonic hall, three churches—one Episcopal, one Methodist, and one Presbyterian; a bank, three printing-offices, three weekly newspapers, a tannery, about thirty stores, 400 dwellings, and 1616 inhabitants. In the winter of 1842

it contained about 2500 inhabitants. It is regularly laid out, and has several public squares.

SAINT AUGUSTINE is a seaport. It is situated two miles from the Atlantic shore, on the south point of a peninsula, connected with the main land by a narrow isthmus, protected from the swell of the ocean by Anastasia island, not sufficiently high to obstruct the sea breezes or a view of the sea. The site of the city, though scarcely twelve feet higher than the level of the tide, is healthy and pleasant. It is a favourite resort of invalids from the north. Snow rarely falls, and frost is felt only one or two months in the year, and in some seasons it is not perceived at all. In the summer the sea breezes temper the heat, and the land breezes render the evenings cool and pleasant. This place is laid out in the form of a parallelogram, fronting east on Matanzas sound, forming an harbour sufficiently capacious to contain a large fleet. But a bar at the mouth of the harbour has not more than nine feet of water at low tide, within which it is eighteen or twenty feet. The principal streets cross each other at right angles, and are narrow, and some of the streets are very crooked. The houses are generally built of stone, two stories high. A large square opens from the Matanzas into the town; and on the west side of the square stand the public buildings. In 1840, there were four churches, twenty stores, about 500 houses, and 2500 inhabitants. The trade is chiefly a coasting trade.

SAINT MARY'S, and a few other places which are settled along the Atlantic shores south to Key West, have a coasting trade, and many of the inhabitants are engaged as *wreckers*, and are described as leading far from creditable lives.

TAMPA BAY, called by the Spaniards *Espiritu Santo*, is the largest bay in the Gulf of Mexico. It is forty miles long, and in one place thirty-five miles wide, with from fifteen to twenty feet of water on the bar. It is easy of access, and affords a safe anchorage for any number of vessels. There are numerous islands at the mouth of the bay, and it abounds with wild fowl and fish.—*U. S. Gaz.*

APPALACHICOLA is a port of entry, 135 miles west of Tallahassee, situated on a bluff at the mouth of a river of the same name. It has a considerable export cotton trade. Several large and small vessels belong to the port, and more than twenty steamboats. The port is tolerably good, though intricate to approach; it has over its bar fifteen feet of water at low tide.

PENSACOLA, a port of entry, and a naval arsenal; has about 2500 inhabitants, a wharf extending 600 feet into the bay, which has places of anchorage for large frigates and smaller vessels.

KEY WEST is situated on an island four miles long and one wide, one of the "Florida keys." It has a good harbour, admitting vessels drawing twenty-seven feet of water, but dangerous to approach. The inhabitants are chiefly employed as wreckers, and in making sea salt. The average number of vessels wrecked annually on the Florida keys are stated to be about fifteen. The following is a description of the Florida reef and of the wreckers:—

"There is no portion of the American coast more dangerous to the mariner, or where more property is annually wrecked, than on the Florida reef. Its contiguity to the gulf stream, and forming a sort of Scylla to that Charybdis, the Bahama islands, are the main causes which make it so dangerous to, and so much dreaded by, seamen. Lying in the way, as it does, of much important commerce, many ships of the largest class are compelled to encounter its dangers, and run the risk of an inhospitable reception upon its rocky shores and sunken coral reefs.

"There is, on an average, annually wrecked upon the Florida coast, *about fifty vessels*, a very great proportion of which are New Orleans, Mobile, or other packets. The great destruction of property consequent upon this state of things, and the hope of gain, have induced a settlement at Key West, where, to adjudicate upon the wrecked property, a court of admiralty has been established. A large number of vessels, from twenty to thirty, are annually engaged as wreckers, lying about this coast to 'help the unfortunate,' and to help themselves. These vessels are, in many instances, owned in whole or in part by the merchants of Key West; the same merchant frequently acts in the quadruple capacity of owner of the wrecker, agent for the wreckers, consignee of the captain, and *agent for the underwriters*. Whose business he transacts with most assiduity, his own, or that of others, may be readily inferred.

"A residence of a few years on the Florida reef enables me to speak with some know-

ledge of the manner in which business is usually conducted about those parts; and to a community suffering as much as this does, I think a statement of facts may prove useful. The commercial world need, then, no longer remain inactive in seeking a redress of grievances, in consequence of an ignorance of their existence.

"The whole coast, from near Cape Carnaveral to the Tortuga, is strewed with small wrecking vessels, either sloops or schooners, that anchor inside of the reef, *out of sight* from vessels at sea, because, if they were seen by the unfortunate vessel who is making unconsciously too near an approach to the shore, they would apprise her of her danger, so that she would stand off to sea, and thus the victim would not be sacrificed. That the wrecker hails with delight the wreck of a vessel, is not to be wondered at. His gains are enormous; it is his business, and his interests are so much at stake, that all the softer feelings of humanity soon die away in his bosom, and he hails the stranding of the unfortunate vessel with delight. It is not to be supposed, then, that he will, seeing a vessel coming ashore, sail for her, and make known to her the danger she is encountering, but rather that he will endeavour, by every means in his power, if not to allure her, at least not to caution her. To the praise of the wreckers be it said, that they never have refused to listen to the calls of humanity, even when doing so has often been to their loss. The cases are numerous where they have left their wrecking ground, and carried wrecked passengers upwards of 100 miles, furnishing the passengers with food and passage free of charge. The wreckers have been accused of raising false lights to deceive vessels at sea. As a general rule, I do not believe this charge is true, and the strongest reason I have for disbelieving it is, that it is not to their interest to do so. As soon as a vessel sees a light on Florida shore, she knows she is as near to land, if not nearer than she ought to be, and of course would immediately haul off from the danger. The practice of the wreckers is quite the reverse. No lights are allowed to be burning in their vessels except in the binnacle, and this light is most *cautiously guarded, lest vessels at sea should descry it, and thereby discover their proximity to land.* Every morning, at break of day, the whole of the reef is scoured by some one or the other of the vessels, in search of 'a prize,' that may have come on the rocks at night. If a vessel is discovered on shore, and two wreckers descry her at the same time, every stitch of canvass is set, in order to be the first to board her and relieve her; if it is calm, the small boats are manned, and they pull as if for life. This looks charitable, but the charity begins at home. The captain of the wrecker jumps on board the unfortunate vessel, and inquires for her captain; and now commences a series of impositions upon the underwriters. 'Captain,' says the wrecker, 'are you insured?' 'Yes; well—to the full amount.' 'I suppose you know,' says the wrecker, 'that if you go into Key West to get repaired, the expenses are enormous, and your owners will be obliged, according to the rules of the underwriters, to pay *one-third* of the repairs; whereas if the vessel should be so unfortunate as to be a total loss, the insurers pay all, and that makes a clean and short business of it.' 'Certainly,' says the wrecked captain, 'that is very true, but I am bound to do the best I can.' 'All right, sir, but what can you do? you are hard and fast—the tide is at its height' (probably it is then dead low water), 'and you had better let me tako full charge, for if not got off this tide, she'll bilge the next. *I am a licensed wrecker.*' The licence is produced, signed by the *judge of the admiralty court*, at Key West. 'But,' continues the *unfortunate* captain, 'if my vessel earns no freight, I earn no wages.' 'Very true,' answers the complacent wrecker, 'and I pity your unfortunate case; it is truly deplorable that such injustice is done to such a worthy class of men, and, as I shall make something handsome by saving this property, if you give me and my consorts* the full business of wrecking the vessel, I could afford to pay you your wages, and make you a handsome present of three or four thousand dollars.' 'But will this all be right?' asks the wrecked captain. 'Certainly; you can, if you please, hand the three or four thousand dollars to the underwriters—that is left to yourself; if you say nothing about it, of course I shan't—I daro not—I should lose my salvage if I did.' Enough. The bargain is fixed, the captain has an order on the merchant for the cash, the stranded vessel is in the command of the wrecker, and there need not now be any fear that the owners will have to pay *one-third* for repairs—the vessel will soon be beyond repair. As to the underwriters, they have seen all they will of the bonus

* Consorting is for several vessels to go shares, and station themselves on different parts of the reef, and when one gets a wreck, he sends to the others to come and help.

paid the captain. An appearance of an effort to get the vessel off, must be kept up among the passengers and the crew, who have heard none of the foregoing conversation, which generally takes place in the captain's private state-room. The hatches are opened, and the articles taken out till she lightens. By this process she is driven still further on the reef; and when, by lightening her, she has got so far on that it is impossible to back her off, an attempt is made 'to pull her over.' To this effect, an anchor or two is carried off from her bows, and dropped on the reef; the windlass is then manned, and all hands put to work to drag her over, aided by her sails. It is soon found that is impossible, and she is now in the middle of the reef, beyond hope of getting forward or backward, and here she bilges.

"In unloading, one would suppose it was to the interest of all parties to save the property in as good a condition as possible—but it is not; the wreckers' interest is to have it a little wetted, inasmuch as a very large per centage as salvage is given on property saved wet, compared to that on the dry—fifty per cent, sometimes, on wet, and seven to ten on dry. And although the property is taken dry from the stranded vessel, some of it gets damaged on board the wrecker; a great quantity being put upon the decks of these small vessels, for each puts on board as much as he can, as they are paid by the quantity of goods saved and their value, and not by the number of loads. The passage from the wrecked vessel to Key West, is frequently boisterous, and always dangerous.

"The goods when they are landed at Key West, are consigned to some merchant—probably, as before stated, the owner of the wrecker. The captains of the wrecked and the wrecker are now, of course, 'hail fellows, well met.' The latter recommends his own merchant to the former, as his consignee, the merchant invites the captain to his house, makes no charge for his stay, and the captain, in the next paper, publishes a card of thanks for the merchant's 'disinterested hospitality.'

"All now is going on swimmingly. The marshal advertises the goods, (and here let me say, that the present marshal discharges his duty like a man and a Christian), the auction sale comes on, and 30,000 dollars' to 40,000 dollars' worth of goods are sold on an island containing about five or six merchants, nearly 100 miles from any inhabited land. Who is to blame? Not the marshal—the law points out his duty, and he pursues it. The advertisement generally consists of publication in a paper, the subscribers of which number about 300, nearly all wreckers, owned and supported by the merchants of the Key; and a few written advertisements stuck up around the island, added to this, completes the publication. The marshal can do no better; it is not that it is an unfair sale that is to be complained of, but the whole system is to be reprobated.

"The day of sale arrives. Who are the bidders? The aforesaid five merchants! How easily might these merchants agree not to run the one the other on his bid, and thus a whole cargo, worth 30,000 dollars, might be divided among them at the cost of about 2000 dollars each, or less. It is true, sometimes, advertisements are sent to the Havanna; but sometimes, also, the sales take place before the merchants from there have a chance to get over to Key West, and sometimes this may be known when the advertisement is sent; but then the sending to Havanna will have a good appearance when represented to underwriters and absent owners.

"The whole system from beginning to end is manifestly wrong, and ought to be changed. Underwriters are imposed upon by their own agents, the captains, and then they blame the wreckers and people of Key West. The latter, living as they do upon wrecks, and every one on the island being dependent upon them more or less as a means of subsistence, naturally work for their own interests in preference to that of others.

"He who censures a law or practice ought to be prepared to point out some mode of redress. I will conclude this article by doing so.

"In the first place, the underwriters should have a vessel or two on the reef, or a small steamboat would answer better. These crafts should be constantly going from one end of the reef to the other, and while one was scouring the lower portion, the other should be on the upper. They should all have lights at night at their mast-leads, which could be distinguished from the lighthouses, when not under way; their moving when sailing would be a sufficient notice that they were other lights than that of the beacon; in cases of fog, let them toll a bell or fire guns occasionally. The expense of a steamboat is raised as an objection to its employment. This is, indeed, penny wise and pound foolish. The ribs of many a noble ship would not now be lying in 'Rotten Row,' at Key West, could a steam-

boat have been procured to haul her off when she was but slightly on the rocks. *Nine times out of ten*, ships and cargoes that are made total losses might be saved by a steamboat taking off her deck load, and hauling her off by her steam-power. Again, in cases of wrecks, the steamboat, if strongly constructed, could lay alongside as well as a sloop or schooner, if not better, and she might take off her cargo and carry it on shore six times where a wrecker could once; and in case a vessel was ashore in a calm, then the steamboat could go when no sail vessel could. Small warehouses might be built on the islands, about five miles apart, where the goods could be safely stowed till all were out of the vessel, and then it need not be carried to Key West, as there is no necessity of adjudicating upon it; thus all this expense and sacrifice of property, which is very great, might be saved. A steamboat, or two, would save in this way to the underwriters annually from 200,000 to 300,000 or 400,000 dollars, and the cost would be a mere trifle compared with the expense of others, as the best of wood all along the coast is to be had for the cutting.

"Another remedy I would point out for the existing evils, is to make more ports of entry along the reef, and thus break up the Key West monopoly. One port might be made at Cayo Biscayno, and another at Indian Key. This would create competition, and one would watch the other with a jealous eye, and expose any improper conduct.

"Again, the judge of the court of admiralty should not be selected from among the lawyers of Key West, who have been for years acting for the wreckers, and received large fees from them. The connexion is too close between them, and the underwriters do not stand quite so good a chance.

"*Never let your captains leave cases to arbitration on Key West*; for ten to one the persons selected will be part secret owners of the wrecking vessels to whom they are going to award salvage; if not, then probably they have the supply of them, or they are otherwise too much interested to decide impartially.

"Establish an honest agent at Key West—send him there with a good salary, or else allow him a good per centage on the amount of all goods saved, after expenses are deducted; this will make it to his interest as well as his duty to oppose unnecessary expenses. Let there be established a board of underwriters, in case he has a salary to pay him, and let each insurance office pay the board in proportion to the losses they suffer.

"There is annually paid by the insurance offices about 6000 dollars for proctors' fees among the several lawyers. Concentrate this in *one*, and make him act as agent, then you will have an agent, and no additional expense.

"Have no property sold in Key West except perishable. Have it shipped to Havana, Mobile, New Orleans, Texas, Charleston, Savannah, or wherever it may bring the most by a fair competition.

"Let the judge of the admiralty court reverse his practice, and give high salvage where a vessel is got off without damage to her and her goods, and low in proportion to the bad state they are saved in. This will make it to the interest of the wreckers to save vessel and cargo in as sound a condition as possible.

"Let the underwriters abolish the system of making owners pay for one-third repairs—this loses many a noble vessel that would otherwise be saved. Pay captains their wages, wreck or no wreck, where they have done their duty. Do not leave them to choose between starvation of their family and the wrecker's 'bonus.' So also with the sailors, do not cut off their wages, and so lose their services when most wanted. This is most miserable policy."

VIII. ALABAMA.

ALABAMA is bounded on the north by Tennessee; east by Georgia; south by Florida, and the Gulf of Mexico; and west by Mississippi. It is between 30 deg. 10 min. and 35 deg. north latitude, and between 85 deg. and 88 deg. 30 min. west longitude, and between 8 deg. and 11 deg. 30 min. west longitude from Washington. It is 317 miles long from north to south, and 174 miles broad from east to west. Its area comprises about 46,000 square miles, or 28,160,000 British statute acres. The population, in 1810, was less than 10,000; in 1816, 29,683; in 1818, 70,544; in 1820, 127,901; in 1827, 244,041; in 1830, 308,997; in 1840, 590,756, of whom 253,532 were slaves. Free white males, 176,692; free white females, 158,493; free coloured males, 1030; free coloured females, 1009. Employed in agriculture, 177,439; in commerce, 2212; in manufactures and trades, 7195; navigating the ocean, 256; navigating canals, rivers, &c., 758; mining, 96; learned professions, 1514. It is divided into forty-nine counties, which, with their population, in 1840, and their capitals, were as follows: *Northern District*—Benton, 14,260, C. Jacksonville; Blount, 5570, C. Blountsville; Cherokee, 8773, C. Jefferson; De Kalb, 5929, C. Lebanon; Fayette, 6942, C. Fayette; Franklin, 14,700, C. Russellville; Jackson, 15,715, C. Bellefonte; Lauderdale, 14,485, C. Florence; Lawrence, 13,313, C. Moulton; Limestone, 14,374, C. Athens; Madison, 25,706, C. Huntsville; Marion, 5847, C. Pikeville; Marshall, 7553, C. Warrenton; Morgan, 9841, C. Somerville; Randolph, 4973, C. McDonald; St. Clair, 5638, C. Ashville; Talladega, 12,587, C. Talladega. *Southern District*—Autauga, 14,342, C. Kingston; Baldwin, 2951, C. Blakeley; Barbour, 12,024, C. Clayton; Bibb, 8284, C. Centreville; Butler, 8685, C. Greenville; Chambers, 17,333, C. Lafayette; Clarke, 8640, C. Macon; Conecuh, 8197, C. Sparta; Coosa, 6995, C. Rockford; Covington, 2425, C. Montezuma; Dale, 7397, C. Daleville; Dallas, 25,199, C. Cahawba; Greene, 24,024, C. Erie; Henry, 5787, C. Abbeville; Jefferson, 7131, C. Elyton; Lowndes, 19,539, C. Haynesville; Macon, 11,247, C. Tuskegee; Marengo, 17,264, C. Linden; Mobile, 18,741, C. Mobile; Monroe, 10,680, C. Monroeville; Montgomery, 24,574, C. Montgomery; Perry, 19,086, C. Marion; Pickens, 17,118, C. Carrollton; Pike, 10,108, C. Troy; Russell, 13,513, C. Crocketsville; Shelby, 6112, C. Columbiana; Sumter, 29,937, C. Livingston; Tallapoosa, 6444, C. Dadeville; Tuscaloosa, 16,583, C. Tuscaloosa; Walker, 4032, C. Jasper; Washington, 5300, C. Barryton; Wilcox, 15,278, C. Barbourville.

Soil.—The southern part of this state which borders on the Gulf of Mexico, for the space of fifty or sixty miles, is low and level, covered with pine, cypress, loblolly, and other trees. In the middle it is hilly, interspersed with prairies; in the north it is broken and somewhat mountainous. The soil in the southern part of the state is generally sandy and barren, but throughout a large part it is excellent. In the northern and middle sections, the natural growth is post, black and white oak, hickory, poplar, cedar, chesnut, pine, mulberry, &c. The Alleghany mountains terminate in the north-eastern section of Alabama, descending gradually from mountains to elevated hills which are succeeded by a low country. The climate in the southern part, and in the vicinity of the bottom land on the rivers, and near the muscle shoals in the Tennessee river, is unhealthy; but in the more elevated portions it is salubrious. The winters are mild, the streams being rarely frozen, and the heat of summer is tempered by refreshing breezes from the Gulf of Mexico.

—*U. S. Gaz.*

Productions.—Cotton is the staple production of the state; but Indian corn, rice, wheat, oats, &c., are produced. Iron ore is found in various parts of the state, and coal abounds on the Black Warrior and Cahawba rivers.

Live Stock and Produce.—There were in this state, in 1840, 143,147 horses and mules; 668,018 neat cattle; 163,243 sheep, 1,423,873 swine; poultry to the value of 404,994 dollars. There were produced 828,052 bushels of wheat; 7692 bushels of barley; 1,406,353 bushels of oats; 51,008 bushels of rye; 30,947,004 bushels of Indian corn; 220,353 lbs. of wool; 25,226 lbs. of wax; 1,708,356 bushels of potatoes; 12,718 tons of hay; 273,302 lbs. of tobacco; 149,019 lbs. of rice; 117,138,823 lbs. of cotton; 1592 lbs. of silk cocoons; 10,143 lbs. of sugar. The products of the dairy were valued at 265,200 dollars; and of the orchard at 55,240 dollars; of lumber at 169,008 dollars. There were made 117 gallons of wine.—*Official Returns.*

Trades.—There were fifty-one commercial and 101 commission houses engaged in foreign trade, with a capital of 3,355,012 dollars; 899 retail dry-goods and other stores, with a capital of 5,642,885 dollars; seventy-three persons employed in the lumber trade, and a capital of 1800 dollars; forty-nine persons engaged in internal transportation, who, with fifty-seven butchers, packers, and employed a capital of 93,370 dollars.—*Official Returns.*

Home-made, or family manufactures amounted in value to 1,656,119 dollars. There were fourteen cotton manufactories, with 1502 spindles, employing eighty-two persons, producing articles to the value of 17,547 dollars, and employing a capital of 35,575 dollars; one furnace producing thirty tons of cast iron, and five forges producing seventy-five tons of bar iron, the whole employing thirty persons, and a capital of 9500 dollars; thirty-one persons manufactured hats and caps to the value of 8210 dollars; 142 tanneries employed 300 persons, and a capital of 147,463 dollars; 137 manufactories of leather, as saddleries, &c., produced articles to the value of 180,152 dollars, and employed a capital of 58,332 dollars; fifteen persons produced confectionary to the value of 13,800 dollars, with a capital of 6120 dollars; forty-seven persons produced gold to the value of 61,230 dollars, with a capital of 1000 dollars; four persons produced drugs and paints to the value of 16,600 dollars, with a capital of 16,000 dollars; ninety-six persons produced machinery to the value of 131,825 dollars; forty-one persons produced hardware and cutlery to the value of 13,875 dollars; twenty persons manufactured four cannon, and 423 small-arms; seven persons manufactured the precious metals to the value of 1650 dollars; seventeen persons manufactured granite and marble to the value of 7311 dollars; 264 persons produced bricks and lime to the value of 91,326 dollars, with a capital of 95,370 dollars; 235 persons manufactured carriages and waggon to the value of 88,891 dollars, employing a capital of 49,074 dollars; 188 distilleries produced 127,280 gallons, and seven breweries produced 200 gallons, employing 220 persons, and a capital of 34,212 dollars; fifty-one flouring mills produced 23,664 barrels of flour, and with other mills, employed 1386 persons, manufacturing articles to the value of 1,225,425 dollars, and employing a capital of 1,413,107 dollars; fifty-three persons produced furniture to the value of 41,671 dollars, and employed a capital of 18,430 dollars; sixty-seven brick or stone houses, and 472 wooden houses employed 882 persons, and cost 739,871 dollars; twenty-two printing-offices, one bindery, three daily, one semi-weekly, and twenty-four weekly newspapers, employed 105 persons, and a capital of 98,100 dollars. The whole amount of capital employed in manufactures was 2,130,064 dollars.—*Official Returns.*

Rivers.—The Mobile is the principal river in the state. It is formed by the union of the Tombigbee and the Alabama, forty miles above the city of Mobile. The Alabama is a large river, and is navigable for vessels drawing six feet of water to Claiborne, sixty miles above its junction; 150 miles further to the mouth of the Cahawba, it has four or five feet of water; and to the junction of the Coosa and Tallapoosa, of which it is formed, it has, in its shallowest places, three feet of water. The Tombigbee is navigable for schooners 120 miles to St. Stephens, and for steamboats to Columbus, Mississippi. It is 450 miles long, and boatable for a greater part of its course. The Black Warrior forms a large branch of it, and is navigable to Tuscaloosa. The Chatahochee river forms a part of the eastern boundary of the state; and the Tennessee runs through the northern part. Alabama has only sixty miles of sea coast. But this includes Mobile bay, which is thirty miles long, and from three to eighteen miles broad.—*U. S. Gaz.*

Mobile, on the west side of Mobile bay, is the most commercial place in the state, and has an extensive trade, particularly in cotton. The other principal places are St. Stephens, Tuscaloosa, Cahawba, Montgomery, Wetumpka, Florence, and Huntsville.

Education.—The University of Alabama, at Tuscaloosa, was founded in 1820, has been liberally endowed by the state, and is a flourishing institution. La Grange college, in the county of Franklin, was founded in 1830. In these institutions there were, in 1840, 152 students. There were in the state 114 academies and grammar schools, with 5018 students; and 639 common and primary schools, with 16,243 scholars. There were 22,592 free white persons over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

Religion.—In 1835, the Baptists had 250 churches, 109 ministers, and 11,445 communicants; the Methodists had sixty ministers and 13,845 communicants; the Presbyterians had forty-five churches, twenty-nine ministers, and 2268 communicants. The Roman Catholics had one bishop and five ministers; and the Episcopalians had seven ministers.

Banks.—At the commencement of 1840, there was one bank in this state, with a capital of 3,389,739 dollars, and a circulation of 696,855 dollars.

Public Works.—The Muscle Shoals canal is designed to overcome the obstruction in the Tennessee river. It extends from the head of the falls, thirty-five miles and three-quarters, to Florence, and cost 571,835 dollars. But to extend the work to its completion will cost 1,361,057 dollars. The Huntsville canal extends from Triana on the Tennessee, sixteen miles, to Huntsville.

The Alabama and Florida railroad extends from Pensacola, 156 miles and a half to Montgomery, and cost 2,500,000 dollars. The Selma and Cahawba railroad is a branch of the Alabama and Florida railroad, extending from Selma ten miles to Cahawba.

The Montgomery and Westpoint railroad extends from Montgomery, the northern termination of the Pensacola and Montgomery railroad to Westpoint, at the head of the rapids of the Chattahoochee river, thirty miles above Columbus. It is eighty-seven miles long. The Tusculumbia, Cortland, and Decatur railroad extends from Tusculumbia, forty-four miles, to Decatur. The Wetumpka railroad extends ten miles, and is designed to connect, when completed, the Tennessee and Alabama rivers at Wetumpka.—*U. S. Gaz.*

FINANCES.—The total amount of outstanding bonds of the state of Alabama, on the 1st day of November, 1842, was 9,834,555 dollars, according to the report of the cashier of the State bank. The amount has not been increased.

The legislature, at its session in 1843, passed an act laying a tax of twenty cents per hundred dollars on real estate, and specific taxes upon other species of property, sales at auction, &c. It is supposed there will be realised from this tax about 250,000 dollars; which will be sufficient to defray the expenses of government, and leave a balance of about 100,000 dollars for other purposes. The following is a specimen of the items

Slaves under ten years of age, ten cents each; over ten years, unless superannuated, sick, or disabled, fifty cents; free negroes and mulattoes, one dollar each; white males between twenty-one and forty-five years, twenty-five cents; goods at auction, two per cent; monies at interest, one-fourth of one per cent; moneys employed in slaying, thirty cents per 100 dollars; exchange, fifty cents per 100 dollars; billiard-tables, fifty dollars each; bagatelle-tables, nine-pin alleys, &c., ten dollars each; commission merchants and factors, twenty cents per 100 dollars on amount of sales; tavern licences, ten dollars; licences to retail liquor, fifty dollars each; cotton stored in warehouses, one mill per bale.

PRINCIPAL TOWNS.

TUSCALOOSA, city, capital of the state, 160 miles south-south-west of Huntsville, 335 miles north of Mobile, by course of river 818 miles from Washington. Situated on the south-east side of Black Warrior or Tuscaloosa river at the lower falls, on an elevated plain, at the head of steamboat navigation on the river, 256 miles north of Mobile by land. It contains a handsome state house, a court house, goal, a United States land office, four churches:—one Presbyterian, one Episcopal, one Baptist, and one Methodist, a masonic hall, Washington and La Fayette academy, an atheneum for young ladies, a lyceum for boys, the Alabama institute, a number of stores, and 1949 inhabitants. The streets are broad, crossing each other at right angles, and the state house stands in the centre of a public square. About one mile east stand the halls of the University of Alabama, which was founded in 1828, has a president and seven professors, or other instructors, sixty-three alumni, four of whom have been ministers of the gospel, sixty students, and 6000 volumes in its libraries.—*U. S. Gaz.*

MOBILE, city, port of entry, and 1013 miles from Washington, situated on the west side of a river of the same name, at its entrance into Mobile bay, thirty miles north of Mobile point, at the mouth of the bay, fifty-five miles west-by-north of Pensacola, ten miles west-by-south of Blakeley, ninety miles by land, and 120 miles by water south of St. Stephens, 160 miles east-north-east of New Orleans, in 30 deg. 40 min. north latitude, 88 deg. 21 min. west longitude. Population, in 1830, 3194; in 1840, 12,672, of whom 3869 were slaves. It contains a court house, gaol, market house, custom house, city hospital, a United States naval hospital, three banks, Barton academy, seven churches—one Presbyterian, one Episcopal, one Baptist, two Methodist, one Roman Catholic, and one African. It is situated on a beautiful and extended plain, elevated fifteen feet above the highest tides, open to refreshing breezes from the bay, and commanding a beautiful prospect. Vessels drawing more than eight feet water pass up Spanish river, six miles, around a marshy island into Mobile river, and then drop down to the city. It has forty-six wharfs, and next to New Orleans, it is the greatest cotton mart of the south; 320,000 bales have been exported in a year. The exports amount to from 12,000,000 to 16,000,000 of dollars annually. Tonnage of the port, in 1840, 17,243. It is defended by Fort Morgan, formerly Fort Bowyer, situated on a long, low sandy point, at the mouth of the bay, thirty miles below the city, opposite to Dauphin island. It was surrendered to the Americans by Spain in 1813, chartered as a town in 1814, incorporated as a city in 1819. It has suffered severely by fire; 170 buildings were burned in 1827, and 600 in 1839. But it has been rebuilt, with additional beauty and convenience. Excellent water is brought in iron pipes, a distance of two miles, and distributed over the city.—*U. S. Gaz.*

Exports from Mobile.—For the foreign we are indebted to a friend in the custom house. The coastwise exports are confined to cotton, not having the means of ascertaining other articles, which are comparatively small. It will be seen that the value of the exports of this state, with a population of some 16,000, reaches the enormous sum of 16,749,498 dollars, being a little the rise of 3,500,000 dollars more than Charleston, numbering about 40,000 souls.

EXPORTS from Mobile, from the 30th of September, 1839, to September, 1840.

To Foreign Ports.		dollars.

LAW OF MOBILE.

"In consequence of 'divers and grievous complaints' having been made of the captains and masters of vessels coming into the port of Mobile, and throwing stone, gravel, and other ballast, from on board their vessels, to the great detriment of said harbour; and as the laws heretofore enacted have been found inefficient to prevent such offences; therefore, the senate and house of representatives of the state of Alabama have passed an act, containing the following provisions, which was approved by the governor, April 28th, 1841.

"1. That from and after the passage of this act, if any captain or master of any ship

vessel, or other water-craft, which shall hereafter come into the bay or harbour of Mobile, shall throw from on board of such ship, vessel, or other water-craft, into the waters of said bay or harbour, any stone, gravel, or other ballast, he shall forfeit and pay for every such offence the sum of 2000 dollars, and be imprisoned for a period not exceeding three months, nor less than three days, at the discretion of the court wherein such offender shall be sued; one half of said forfeiture to be paid to the first person who shall, on oath, before either of the officers hereinafter named, give information of such offence, and the other half to the harbour-master and port-wardens of the port of Mobile.

"II. That the said forfeiture may be sued for and recovered, by the harbour-master and port-wardens of the said port of Mobile, in any court having cognizance of the amount sued for, by process of attachment; to be issued in the same manner, and subject to the same rules of construction, provided and established in other cases of attachment; the said attachment to be issued by either of the officers hereinafter named, and to be levied upon the ship, vessel, or other water-craft, the captain or master of which shall be the alleged offender; provided, however, that oath be first made by the informer, or other credible person, of the commission of the offence, before some judge or justice of the peace, or clerk of the county or circuit court of the county of Mobile; and provided, also, that the said ship, vessel, or other water-craft may be replevied on, the captain, master, or consignee thereof giving bond with good and sufficient sureties, to be approved by the officer issuing the attachment, in treble the amount of forfeiture or penalty sued for, conditioned for the forthcoming of the said ship, vessel, or other water-craft, to satisfy such judgment as shall be recovered in the suit.

"III.—That it shall be the duty of every pilot and deputy pilot of the bay and harbour of Mobile, to inform the harbour-master and port-wardens of Mobile, of every violation of this act coming to their knowledge, as soon as possible after knowing thereof, and every pilot or deputy pilot knowing such offence to have been committed, and failing to give such information, shall forthwith be deprived of his licence, and be for ever thereafter disqualified for the office of pilot or deputy pilot of the said port and harbour of Mobile.

"IV.—That all laws contravening or impairing the provisions of this act, be and are hereby repealed; provided, however, that all suits commenced, or liabilities heretofore incurred, shall in no manner be affected by this act."

COMMERCIAL REGULATIONS OF MOBILE.

TARIFF of Charges, agreed upon and adopted by the Mobile Chamber of Commerce.

<i>General Tariff of Commissions, applicable to Foreign, Western, and Country business.</i>			
	per ct.		
On sales of cotton, hides, bees'-wax, and other articles, the products of the state.....	2½	Consignment of merchandise withdrawn, to pay full commission on amount of advances and responsibilities, and one-half commission on the invoice value of goods withdrawn. FREIGHTS.

When Vessels are chartered, or Goods shipped by the ton, and no special agreement respecting the proportion of lashing which each article shall be computed at, the following regulations shall be the standard:—

That the articles, the bulk of which shall compose a ton, to equal a ton of heavy materials, shall be on weight as follows:

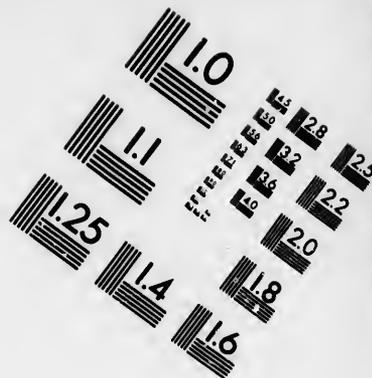

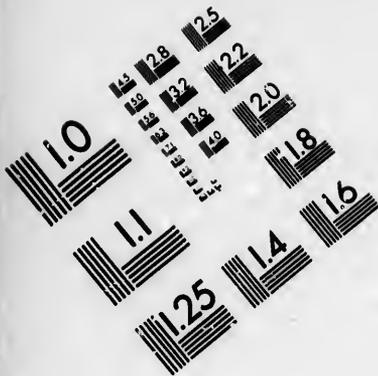

Coffee, in casks, 1568 lbs.; ditto, in bags, 1850 lbs.
Cocoa, in casks, 1120 lbs.; ditto, in bags, 1300 lbs.
Pimento, in casks, 950 lbs.; ditto, in bags, 1100 lbs.
Flour, 8 barrels, of 196 lbs. each.
Beef, pork, tallow, pickled fish, and naval stores, 6 barrels.
Pig and bar iron, lead, and other metals or ore, heavy dyewoods, sugar, rice, honey, and other heavy articles, 2240 lbs. gross.
Ship-bread, in casks, 672 lbs.; ditto, in bags, 684 lbs.; ditto, in bulk, 896 lbs.
Wines, brandy, spirits, and liquors generally, reckoning the full capacity of the cask, wine measure, 200 gals.
Grains, peas, and beans, in casks, 22 bushels; ditto, in bulk, 30 bushels.
Salt, European, in bulk, 36 bushels; ditto, in West India, 41 bushels.
Stone coal, 28 bushels.
Timber, plank, furs, peltry, in bales or boxes, cotton, wool, or other measurement goods, 40 cubic feet.
Dry hides, 1120 lbs.
When molasses is shipped by the hoghead, without any special agreement, it shall be taken at 110 gallons, estimated on the full capacity of the cask.

same wharf, into another vessel, barge, or flat, will be charged two wharfages; one to the owner or consignee, and one to the shipper.

No cotton allowed to be picked on the wharfs, on any consideration.

All rubbish, bricks, sweepings from vessels, &c., will be removed at the expense of whatever vessel, barge, or flat, may have deposited the same on the wharfs.

Cotton, firewood, lumber, bricks, staves, &c., will be entitled to remain on the wharf twenty-four hours after landing; after which time, if not removed, an additional wharfage will be made for each and every day remaining.

All vessels loading with cotton will be required to take their cargo on board as fast as it is sent to them, or tier it in such manner as not to lumber the wharfs.

All goods other than cotton must be removed on the same day on which they are landed, or they will be liable for an additional wharfage for every day they remain.

Flats will be allowed to remain at the wharfs two days after discharging, unless their place is particularly wanted. No flats will be permitted to be broken up in the slips without leave.

TARIFF OF CHARGES ADOPTED BY THE STEAM COTTON-PRESSES AT MOBILE.

Compressing.—Cotton, per bale, seventy-five cents; cotton intended to be compressed, twelve cents and a half for the first month, and six cents and a quarter for each subsequent week thereafter. Time computed from date of press receipt, until delivered to lighter or vessel.

Cotton brought from warehouses not attached to press, if ship-marked and compressed immediately, no charge for storage. Shippers will be charged eight cents per bale drayage, for cotton delivered at the wharf attached to the press.

Storage.—Cotton, per bale, for the first two weeks, twenty-five cents; for each subsequent week, six cents and a quarter. Cotton changing hands will in all cases be liable to new storage from date of order inclusive. Draymen who bring cotton into the yard are required to head the bales. Turning out for sampling or weighing, and restoring the same, eight cents per bale. Turning out and arranging all cotton not intended to be compressed, six cents and a quarter per bale.

Wantages to be assessed by press when the cotton comes in, and the amount assessed endorsed on the face of receipt. Any objection for overcharges to be made at the time. *Grass, tow, bark, or tarred ropes* will be considered unmerchantable and deficient. All deficient ropes will be charged at the rate of twelve cents and a half per rope. All bagging used will be charged at twenty-five cents per yard.

All cotton sent to press must be accompanied by a memorandum, specifying marks and number of bales, and whether for storage or compressing, for whose account, and for what vessel. The receipts then given will be considered as a voucher that the cottons are received in good order, unless expressly specified to the contrary on the face of the receipt, and to be delivered in like good order by the press.

Compressing bills payable in cash when cargo is complete. Storage and other bills payable monthly or upon delivery of cotton.

IX. MISSISSIPPI.

MISSISSIPPI is bounded north by Tennessee; east by Alabama; south by the Gulf of Mexico and Louisiana; and west by Pearl and Mississippi rivers, which separate it from the state of Louisiana and Arkansas. It lies between 30 deg. 10 min. and 35 deg. north latitude, and between 80 deg. 30 min. and 81 deg. 35 min. west longitude, and between 8 deg. and 11 deg. 30 min. west longitude from Washington. It is about 339 miles long from north to south, and 150 broad from east to west, comprising an area of about 45,760 square miles, or 29,286,400 British statute acres. The population, in 1816, was 45,929; in 1820, 75,448; in 1830, 136,806; in 1840, 375,651, of which 195,211 were slaves. Of the free population, 97,256 were white males; 81,818 white females; 715 were coloured males; 654 coloured females. Employed in agriculture, 139,724; in commerce, 1303; in manufactures and trades, 4151; navigating the ocean, thirty-three; navigating rivers, canals, &c., 100; learned professions, 1506.—*Official Returns.* This state is divided into fifty-six counties, which, with their population in 1840, and their capitals, were as follows: *Northern District*—Attala, 4303, C. Kosciusko; Bolivar, 1356, C.

Bolivar; Carroll, 10,481, C. Carrollton; Chickasaw, 2955, C. Houston; Choctaw, 6010, C. Greensborough; Coahoma, 1290, C. Coahoma C. H.; De Soto, 7002, C. Hernando; Itawamba, 5375, C. Fulton; Lafayette, 6531, C. Oxford; Lowndes, 14,513, C. Columbus; Marshall, 17,526, C. Holly Springs; Monroe, 9250, C. Athens; Noxubee, 9975, C. Macon; Octibbeha, 4276, C. Starkville; Ponola, 4657, C. Ponola; Pontotoc, 4491, C. Pontotoc; Tallahatchie, 2985, C. Charleston; Tippah, 9444, C. Ripley; Tishamingo, 6681, C. Jacinto; Tunica, 821, C. Peyton; Winston, 4650, C. Louisville; Yalabusha, 12,248, C. Coffeeville. *Southern District*—Adams, 19,454, C. Natchez; Amite, 9511, C. Liberty; Claiborne, 13,078, C. Port Gibson; Clarke, 2986, C. Quitman; Copiah, 8954, C. Gallatin; Covington, 2717, C. Williamsburg; Franklin, 4775, C. Meadville; Greene, 1636, C. Leakeville; Hancock, 3367, C. Shieldsborough; Harrison, —, C. Mississippi City; Hinds, 19,098, C. Raymond; Holmes, 9452, C. Lexington; Jackson, 1965, C. Jackson C. H.; Jasper, 3958, C. Paulding; Jefferson, 11,650, C. Fayette; Jones, 1258, C. Ellisville; Kemper, 7663, C. De Kalb; Lauderdale, 5358, C. Marion; Lawrence, 5920, C. Monticello; Leake, 2162, C. Carthage; Madison, 15,530, C. Canton; Neshoba, 2437, C. Philadelphia; Newton, 2527, C. Decatur; Perry, 1889, C. Augusta; Pike, 6151, C. Holmcsville; Rankin, 4631, C. Brandon; Scott, 1653, C. Hillsborough; Simpson, 3380, C. Westville; Smith, 1961, C. Raleigh; Warren, 15,820, C. Vicksburg; Washington, 7287, C. Princeton; Wayne, 2120, C. Winchester; Wilkinson, 14,193, C. Woodville; Yazoo, 10,480, C. Benton.

Soil.—The southern part of this state for about 100 miles from the Gulf of Mexico is mostly a sandy, level country, covered with a pine forest, interspersed with cypress swamps, prairies, water marshes, and a few hills of moderate elevation. This region is generally healthy, and where cultivated, produces cotton, Indian corn, indigo, sugar, plums, cherries, peaches, figs, and grapes. Further north, the country becomes gradually elevated and undulated; with a deep rich soil, producing cotton, Indian corn, sweet potatoes, indigo, peaches, melons, and grapes. The timber trees are poplar, hickory, oak, black walnut, sugar maple, cotton wood, magnolia, lime, and sassafras. The north part of the state is healthy and productive; and the lands watered by the Yazoo, along its whole course in the north-west, are very fertile. The Mississippi river, with its various windings, borders this state about 700 miles; and its margin consists of inundated swamp, covered with forest fir. Back of this, the surface suddenly rises into what are called bluffs; and behind these the country is a moderately elevated table land, with a diversified surface. Cotton is the staple of this state.—*U. S. Gaz.*

Live Stock and Agricultural Products.—In 1840, there were in this state 109,227 horses and mules; 623,197 neat cattle; 128,367 sheep; 1,001,209 swine; poultry to the value of 369,482 dollars. There were produced 196,626 bushels of wheat; 1654 bushels of barley; 668,624 bushels of oats; 11,444 bushels of rye; 13,161,237 bushels of Indian corn; 175,196 lbs. of wool; 6935 lbs. of wax; 1,630,100 bushels of potatoes; 83,471 lbs. of tobacco; 777,195 lbs. of rice; 193,401,577 lbs. of cotton. The produce of the dairy was valued at 359,585 dollars; of the orchard at 14,458 dollars; of lumber, 192,794 dollars; tar, pitch, &c., 2248 barrels.—*Official Returns*.

The climate is mild, but very variable. The extremes of heat and cold at Natchez, for 1840, were from 26 deg. to 94 deg. of Fahrenheit. The sugar cane and orange tree is not cultivated with success north of latitude 31 deg.

Rivers.—The Mississippi river flows along and bounds the whole western border of this state. The Yazoo is the largest river that has its whole course in the state. It rises in the north-west part, and, after a course of 250 miles, enters the Mississippi. The Pascagoula river, after a course of 250 miles, enters the Gulf of Mexico. At its mouth it widens into a bay, on which stands the town of Pascagoula. It is navigable for a considerable distance for small vessels. The Big Black river, after a course of 200 miles, enters the Mississippi just above Grand gulf. It has a boat navigation of fifty miles. Pearl river rises in the central part of this state and passes through it to the south, and in its lower part forms the boundary between this state and Louisiana, and enters the Rigolets between lakes Pontchartrain and Borgne. Its navigation is much impeded by shallows, sandbars, and obstructions of timber. Homochitto is a considerable river which enters the Mississippi. Besides these there are a few other small rivers and creeks. A chain of low sandy islands, six or seven miles from the shore, enclose several bays or sounds, the largest of which are Pascagoula sound and Lake Borne, which lies partly in Louisiana.—*U. S. Gaz.*

The coast, which extends along the Gulf of Mexico for about sixty miles, has no harbour but that of Mississippi city, which does not admit large vessels. The largest and most commercial town in the state is Natchez, on the east bank of the Mississippi, situated chiefly on a high bluff, 300 feet above the level of the river, and 300 miles above New Orleans. Vicksburg, 106 miles above Natchez, and twelve miles below the mouth of the Yazoo river, is a growing place and has an extensive trade. Its outlet is through New Orleans. The other principal places are Jackson, on Pearl river; Woodville, eighteen miles from the Mississippi, in the south-west part of the state; Port Gibson and Grand gulf, its port on the Mississippi; Columbus, on the Tombigbee; and Pontotoc and Hernando, in the north, and Mississippi city on the gulf shore.—*U. S. Gaz.*

Trade.—There were in this state, in 1840, seven commercial and sixty-seven commission houses engaged in foreign trade, with a capital of 673,900 dollars; 755 retail dry-goods and other stores, employing a capital of 5,004,420 dollars; 228 persons engaged in the lumber trade,

employing a capital of 192,175 dollars; forty persons employed in internal transportation, and fifteen butchers, packers, &c., employing a capital of 4250 dollars.—*Official Returns.*

Manufactures.—The value of home-made or family articles was 682,945 dollars; there were fifty-three cotton manufactories, with 318 spindles, employing eighty-one persons, producing articles to the value of 1744 dollars, with a capital of 6420 dollars; hats and caps were produced to the value of 5140 dollars, employing thirteen persons, with a capital of 3100 dollars; 128 tanneries employed 149 persons, and a capital of 70,870 dollars; forty-two other manufactories of leather, as saddleries, &c., produced articles to the value of 118,167 dollars, and employed a capital of 41,945 dollars; one pottery, employing two persons, produced to the value of 1200 dollars, with a capital of 200 dollars; four persons produced drugs and paints to the value of 3125 dollars, with a capital of 500 dollars; two persons produced confectionary to the value of 10,500 dollars; 274 persons produced machinery to the value of 242,225 dollars; 693 persons produced bricks and lime to the value of 273,870 dollars, with a capital of 222,745 dollars; there were produced 312,084 lbs. of soap, 31,957 lbs. of tallow candles, and ninety-seven lbs. of spermaceti candles; 132 persons produced carriages and waggons to the value of 49,693 dollars, with a capital of 34,345 dollars; sixteen flouring mills produced 1809 barrels of flour, and with other mills employed 923 persons, and manufactured articles to the value of 486,864 dollars, with a capital of 1,219,845 dollars; vessels were built to the value of 13,925 dollars; furniture was manufactured by forty-one persons, to the value of 34,450 dollars, with a capital of 28,610 dollars; fourteen distilleries produced 3150 gallons, and two breweries produced 132 gallons, employing twelve persons, and a capital of 910 dollars; 144 stone or brick houses, and 2247 wooden houses, were built by 2487 persons, and cost 1,175,513 dollars; twenty-eight printing offices, and one bindery, two daily, one semi-weekly, and twenty-eight weekly newspapers, employed ninety-four persons, and a capital of 83,510 dollars. The whole amount of capital employed in manufactures, was 1,797,727 dollars.—*Official Returns.*

Education.—There are three colleges in this state. Jefferson college, at Washington, six miles east of Natchez, was founded in 1802, and has been liberally endowed; Oakland college, at Oakland, was founded in 1831, and is a flourishing institution; Mississippi college, at Clinton, was founded in 1830. In these institutions, there were, in 1840, about 250 students. There were in the state seventy-one academies, with 2553 students; and 382 primary and common schools, with 8236 scholars. There were 8360 white persons, over twenty years of age, who could neither read nor write.

Religion.—The Methodists and Baptists are the most numerous religious denominations in this state. In 1835, the Methodists had fifty-three travelling preachers, 9707 communicants; the Baptists had eighty-four churches, thirty-four ministers, and 3199 communicants; the Episcopalians had four ministers; the Presbyterians of different descriptions had thirty-two churches, and twenty-six ministers.—*U. S. Gaz.*

Banks.—In the beginning of 1840, there were thirty-eight banks and branches in this state, with an aggregate capital of 30,379,403 dollars, and a circulation of 15,171,639 dollars. At the close of 1840, the state debt amounted to 12,400,000 dollars.—(See Banks of the United States hereafter.)

Public Works.—The following works of internal improvement have been undertaken. West Feliciana railroad extends from St. Francisville, in Louisiana, on the Mississippi, twenty-seven miles and three quarters, to Woodville in Mississippi, and cost 500,000 dollars. Vicksburg and Clinton railroad extends from Vicksburg, forty-five miles, to Jackson, the capital of the state, with a branch to Raymond, six miles and a half. The New Orleans and Nashville railroad will extend through this state. The Mississippi railroad to extend from Natchez, 112 miles, to Jackson, is finished to Malcolm, a distance of forty miles. The Jackson and Brandon railroad is fourteen miles long and connects these places. The Grand Gulf and Port Gibson railroad is seven miles and a quarter long, connecting the two places. Several other railroads are proposed, which are those from Natchez to Woodville, forty-one miles; from Manchester to Benton, fourteen miles; from Princeton to Deer creek, twenty miles; from Brandon to Mobile, and from Columbus to Aberdeen.—*U. S. Gaz.*—*American Almanac.*

PRINCIPAL TOWNS.

COLUMBUS, 141 miles north-east of Jackson, 885 miles from Washington. Situated on the east bank of the Tombigbee, 120 feet above the river, and at the head of steamboat navigation. It has two banks, a United States' land office, a market house, five churches, and a bridge across the Tombigbee. Population, 4000.

NATCHEZ, 100 miles south-west of Jackson, 1110 miles from Washington, is situated on the east bank of the Mississippi river, on a bluff, elevated 150 feet above the level of the river, 155 miles from New Orleans by land, and 292 miles by the course of the river. A part of the town is built on the margin of the river. It is laid out in the form of a parallelogram, with streets intersecting each other at right angles, but the site is very irregular. The houses are mostly of wood, and only one story high. Almost every house has a piazza and a balcony, and many of them have gardens ornamented with shrubbery and fruit trees. It has a court house, a gaol, four churches,

three banks, two steam oil mills for manufacturing oil from cotton seed, and 4800 inhabitants. Three miles from the city is a race course. The country around consists of cotton fields, and Natchez has become a great cotton mart, and has an extensive and an increasing trade.

Vicksburg, city and capital of Warren county, Mississippi, forty-one miles west by north of Jackson, and 1051 miles from Washington. Situated on the eastern side of the Mississippi river, 400 miles above New Orleans, and though of recent origin, it has become a large and flourishing place. It contains a court house, gaol, four churches—one Presbyterian, one Episcopal, one Methodist, and one Roman Catholic; three academies, two male and one female, fifty wholesale grocery and commission stores, fifty retail dry-good stores, a printing-office, and 3104 inhabitants. A number of boats are always lying in the harbour, and a great quantity of cotton is shipped here. The town is situated on the shelving declivity of high hills, and the houses are scattered in groups on the terraces. It is just below the Walnut hills. The country around is very fertile. Steamboats regularly ply between this place and New Orleans. A railroad extends from Vicksburg to Brandon, through Jackson.

Foreign Trade.—The Mississippi has scarcely any direct foreign trade. But imports and exports exclusively through New Orleans.—(Which see.—See also Internal Trade of the United States.)

FINANCES.

None of the United States have so boldly and disgracefully repudiated the payment of their public obligations as the state of Mississippi. No public document appears to us so disreputable, as the letter of Governor Mac Nuth, dated Jackson, 13th of July, 1841, to Messrs. Hope, of Amsterdam, in which he informs them that the state never will pay its bonds,—and founding this declaration upon the mere quibble, that they were when sold made payable in London in sterling money, at the rate of 4s. 6d. per dollar, which he considers unconstitutional. He does not, however, give the option to pay them in the current money of the United States, either in the state of Mississippi or elsewhere, but he declares that the state never will pay them. The interest which this state pays is only, on the small, 615,049 dollars, being outstanding warrants and funded scrip which constitute little more floating paper within the state. The 5,000,000 of state bonds, due chiefly to foreigners, the state absolutely repudiates, on the ground of a constitutional flaw, or rather loophole, of which foreigners must have been entirely ignorant. There is also a debt acknowledged by the state of 2,000,000 of planters' bonds, with 615,049 dollars outstanding warrants and scrip, which makes the non-repudiated debt 2,615,049 dollars, a very small part of the interest of which has only been paid.

REVENUE and Expenditure during the Fiscal Year ending March 1, 1843.

X. LOUISIANA.

LOUISIANA is bounded north by Arkansas and Mississippi; east by Mississippi, from which it is separated by the Mississippi river, to the 31 deg. north latitude, thence east on that parallel to Pearl river, and down that river to its mouth; east and south by the Gulf of Mexico; and west by Texas, from which it is separated by the Sabine river to 32 deg. north latitude, and thence due north to latitude 33 deg. north, the south boundary of Arkansas. It is 240 miles long from north to south, and 210 broad from east to west, comprising an area of about 45,350 square miles, or 29,024,000 British statute acres. The population, in 1810, was 76,556; in 1820, 153,407; in 1830, 215,575; in 1840, 352,411, of which 168,452 were slaves. Of the free population 89,747 were white males; 68,710 white females; 11,526 coloured males; 13,976 coloured females. There were employed in agriculture, 79,289; in commerce, 8549; in manufactures and trades, 7565 navigating the ocean, 1322; canals, lakes, &c., 662; learned professions, 1018.

This state is divided into thirty-eight parishes, which, with their population, in 1840, and their capitals, were as follows: *Eastern District*—Ascension, 6951, C. Donaldsville; Assumption, 7141, C. Napoleonville; Baton Rouge, e., 8138, C. Baton Rouge; Baton Rouge, w., 4638, w.,

C. Baton Rouge C. H.; Carroll, 4237, C. Providence; Concordia, 9414, C. Vidalia; Feliciana, n., 11,893, C. Clinton; Feliciana, w., 10,910, C. St. Francisville; Iberville, 8495, C. Plaquemine; Jefferson, 10,470, C. La Fayette; Lafourche Interior, 7303, C. Thibodeauxville; Livingston, 2315, C. Springfield; Madison, 5142, G. Richmond; Orleans, 102,193, C. New Orleans; Plaquemine, 5060, C. Fort Jackson; Point Coupée, 7898, C. Point Coupée; St. Bernard, 3237, C. St. Bernard C. H.; St. Charles, 4700, C. St. Charles C. H.; St. Helena, 3525, C. Greensburg; St. James, 8548, C. Bringiers; St. John Baptist, 5776, C. Bonnet Carré; St. Tammany, 4598, C. Covington; Terre Bonne, 4410, C. Houma; Washington, 2649, C. Franklinton. *Western District*—Avoyelles, 6616, C. Marksville; Caddo, 5282, C. Shreveport; Calcasieu, 2057, C. Lisbon; Caldwell, 2017, C. Columbia; Catahoula, 4955, C. Harrisonburg; Claiborne, 6185, C. Overton; La Fayette, 7841, C. Vermilionville; Natchitoches, 14,350, C. Natchitoches; Rapides, 14,132, C. Alexandria; St. Landry, 15,293, C. Opelousas; St. Martin's, 8676, C. St. Martinsville; St. Mary's, 8950, C. Franklin; Union, 1838, C. Farmersville; Washita, 4640, C. Monroe.

Configuration and Soil.—The Mississippi, immediately parallel of 31 deg. north latitude, divides into several branches, which flow sluggishly into the Gulf of Mexico. "The western of these outlets is the Atchafalaya, which leaves the main stream three miles below the mouth of Red river, and, inclining eastward, flow into Atchafalaya bay, in the Gulf of Mexico. About 128 miles below the Atchafalaya, is the outlet of Plaquemine, the main stream of which unites with the Atchafalaya; but other portions of it intersect the country in different directions. Thirty-one miles below the Plaquemine, and eighty-one above New Orleans, is the outlet of Lafourche, which communicates with the Gulf of Mexico by two mouths. Below the Lafourche, numerous other smaller streams branch off from the river at various points. On the east side of the Mississippi the principal outlet is the Iberville, which communicates with the Gulf of Mexico through lakes Mairépas, Pontchartrain, and Borgne. The whole territory between the Atchafalaya on the west, and the Iberville, &c., on the east, is called the Delta of the Mississippi. A large extent of country in this state is annually overflowed by the Mississippi. From latitude 32 deg. to 31 deg., the average width of the land inundated is twenty miles; from the latitude 31 deg. to the outlet of Lafourche, a little above latitude 30 deg., the width is forty miles. Below the Lafourche, the country generally is overflowed. The lands thus overflowed, including those on the Red river, amount to 10,890 square miles; though the inundation is not complete, but consists of innumerable canals and lakes, which are interspersed everywhere. The country actually submerged would not, probably, exceed 4000 square miles. More earth is deposited by the Mississippi in its overflow on its immediate margin than further back; and, consequently, the land is higher adjoining the river than it is in the rear of its banks. This alluvial margin, of a breadth from 400 yards to a mile and a half, is a rich soil, and to prevent the river from inundating the valuable tract in the rear, and which could not be drained, an artificial embankment is raised on the margin of the river, called the *Levee*. On the east side of the river, this embankment commences sixty miles above New Orleans, and extends down the river for more than 130 miles. On the west shore, it commences at Point Coupée, 172 miles above New Orleans. Along this portion of the river, its sides present many beautiful and finely cultivated plantations, and a continued succession of pleasant residences. The south-western part of the state consists of swamps, on the margin of the gulf, but of prairies further inland, some parts of which are barren, but others fertile, and containing flourishing settlements. This country is elevated not more than from ten to fifty feet above high tide. The country between the Mississippi, Iberville, and Pearl rivers, in its southern parts, is generally level, and highly productive in cotton, sugar, rice, corn, and indigo. The northern part has an undulating surface, and has a heavy natural growth of white, red, and yellow oak, hickory, black walnut, sassafras, magnolia, and poplar. In the north-western part, the Red river, after entering the state by a single channel, and flowing about thirty miles, spreads out into a number of channels forming many lakes, and islands, and swamps, over a space of fifty miles long and six broad. The bottoms on the river are from one to ten miles wide, and are very fertile. The timber on them is willow, cotton-wood, honey locust, pawpaw, and buckeye; on the rich uplands, elm, ash, hickory, mulberry, black walnut, with a profusion of grape vines. On the less fertile and sandy uplands of the state are white, pitch, and yellow pines, and various kinds of oak."—*U. S. Gaz.*

Live Stock and Products.—The staple productions of the state are cotton, sugar, and rice. In 1840, there were in the state, 99,888 horses and mules; 381,248 neat cattle; 98,072 sheep; 323,220 swine; poultry to the value of 283,559 dollars. There were produced sixty bushels of wheat; 107,353 bushels of oats; 1812 bushels of rye; 5,952,912 bushels of Indian corn; 834,341 bushels of potatoes; 24,651 tons of hay; 49,283 lbs. of wool; 1012 lbs. of wax; 119,824 lbs. of tobacco; 3,604,534 lbs. of rice; 152,555,368 lbs. of cotton; 119,947,720 lbs. of sugar. The products of the dairy were valued at 153,069 dollars; of the orchard at 11,769 dollars; of lumber at 66,106 dollars. There were made 2884 gallons of wine; and 2233 barrels of tar, pitch, &c.—*Official Returns.*

Climate.—The winters in this state are mild; though more severe than in the same latitude on the Atlantic coast. The summers in the wet and marshy parts are unhealthy. New Orleans has frequently been visited by the yellow fever. But a considerable portion of the state is healthy.—*U. S. Gaz.*

Rivers.—The Mississippi separates Louisiana from the state of Mississippi for a considerable distance, and flows by several channels through the Delta of Louisiana into the Mexican gulf. It is navigable for vessels of any size. The Red river runs through the state in a south-east direction, and discharges a vast quantity of water into the Mississippi, 240 miles above New Orleans. The Washita runs in a south direction in the north part of the state, and enters Red river, a little above its entrance into the Mississippi. Bayou Lafourche and Atchafayala are large outlets of the Mississippi. The other rivers are the Black, Tensas, Sabine, Calcasieu, Mermentau, Vermilion, Teche, Pearl, Amite, and Iberville.

Lakes.—The largest lakes are Pontchartrain, Maurepas, Borgne, Chetimachis, Mermentau, Calcasieu, and Sabine.—*U. S. Gaz.*

Trade.—There were twenty-four commercial and 381 commission houses engaged in foreign trade, with a capital of 16,770,000 dollars; and 2465 retail dry-goods and other stores, with a capital of 14,301,024 dollars; 597 persons were employed in the lumber trade, with a capital of 260,045 dollars; three persons employed in internal transportation, with 291 butchers, packers, &c., employed a capital of 144,523 dollars.—*Official Returns.*

Manufactures.—The value of home-made or family articles manufactured, was 65,190 dollars; two cotton manufactories, with 706 spindles, employed twenty-three persons, producing articles to the value of 18,900 dollars, with a capital of 22,000 dollars; six furnaces produced 1400 tons of cast iron, and two forges produced 1366 tons of bar iron, employing 145 persons, and a capital of 357,000 dollars; twenty-five tanneries employed eighty-eight persons, and a capital of 132,025 dollars; seven other manufactories of leather, as saddleries, &c., produced articles to the value of 108,500 dollars, with a capital of 89,550 dollars; one pottery employed eighteen persons, producing articles to the value of 1000 dollars, with a capital of 3000 dollars; five sugar refineries produced to the value of 770,000 dollars; 101 persons produced confectionary to the value of 20,000 dollars; machinery was produced to the value of 5000 dollars; and hardware and cutlery to the value of 30,000 dollars; fifty-one persons produced carriages and waggons to the value of 23,350 dollars, employing a capital of 15,780 dollars; mills of various kinds produced articles to the value of 706,785 dollars, employing 972 persons, and a capital of 1,870,795 dollars; vessels were built to the value of 80,500 dollars; 129 persons manufactured furniture to the value of 2300 dollars, with a capital of 576,050 dollars; five distilleries produced 285,520 gallons, and one brewery produced 2400 gallons, employing twenty-seven persons, and a capital of 110,000 dollars; seventy-five persons manufactured 2,202,200 lbs. of soap, 3,500,330 lbs. of tallow candles, 4000 lbs. of wax and spermaceti candles, with a capital of 115,500 dollars; 248 stone or brick houses, and 619 wooden houses, employed 1484 persons, and cost 2,736,944 dollars; thirty-five printing offices, five binderies, eleven daily, twenty-one weekly, and two semi-weekly newspapers, and three periodicals, employed 392 persons, and a capital of 193,700 dollars. The whole amount of capital employed in manufactures was 6,430,699 dollars.—*Official Returns.*

Education.—Louisiana college, at Jackson, was founded in 1825; Jefferson college, at Bringers, was founded in 1831; St. Charles's college, at Grand Coteau, is under the direction of the Catholics, Baton Rouge college, at Baton Rouge, was founded in 1838; Franklin college, at Opelousas, was founded in 1839. These institutions had, in 1840, 437 students. There were in the state, fifty-two academies, with 1995 students; 179 common and primary schools, with 3573 scholars, and 4861 white persons over twenty years of age who could neither read nor write.—*U. S. Gaz.*

Religion.—This state was originally settled by Catholics, who are still the most numerous denomination. In 1835, they had twenty-seven ministers. The Methodists, Baptists, Presbyterians, and Episcopalians exist in considerable numbers, and are increasing.—*U. S. Gaz.*

Banks.—At the commencement of 1840, there were forty-seven banks and branches in this state, with an aggregate capital of 41,736,768 dollars, and a circulation of 4,345,533 dollars.—(See Banks of the United States hereafter.)

Public Works.—This state has a number of important works of internal improvement. Pontchartrain railroad extends from New Orleans, four miles and a half, to Lake Pontchartrain, at a cost of 450,000 dollars. West Feliciana railroad extends from St. Francisville, twenty miles, to Woodville, Mississippi. New Orleans and Carrollton railroad extends from New Orleans, four miles and a quarter, to La Fayette. Orleans-street railroad, extends from New Orleans, four miles and a quarter, to the Bay of St. John's. The Mexico Gulf railroad, extends from New Orleans east, to Pascagoula sound. The Orleans Bank canal extends from New Orleans, six miles, to Lake Pontchartrain, and cost 1,000,000 dollars. Canal Carondelet extends from New Orleans, one mile and a half, to the Bay of St. John's. Barataria canal extends from New Orleans, eighty-five miles, to Berwick bay. Lake Veret canal extends from Lake Veret, eight miles, to Lafourche river. The New Orleans and Nashville railroad extends eighty miles in this state, and if completed, will be 564 miles in length. It is in progress.—*U. S. Gaz.*—*American Almanac for 1845.*

PRINCIPAL TOWNS AND SEAPORTS.

NATCHITOCHE (pronounced *Nakitosâ*), 368 miles north-west by west of New Orleans, 1287

miles from Washington. It is situated on the west side of Red river, 200 miles above its junction with the Mississippi river, at the foot of a bluff, and is built chiefly on one street. It has considerable trade. It was settled by the French in 1717, and half the present inhabitants are of French descent. Population, about 3400.

NEW ORLEANS, the capital of Louisiana, is situated on the left bank of Mississippi river, 105 miles from its mouth, by the course of the river, but only ninety miles in a direct line; 1132 miles from St. Louis, 1997 miles from New York, 1612 miles from Boston, and 1172 miles from Washington; in 29 deg. 57 min. north latitude, 90 deg. 6 min. west longitude from Greenwich, and 18 deg. 5 min. west longitude from Washington. The population, in 1810, was 17,242; in 1820, 27,176; in 1830, 46,310; in 1840, 102,193; of whom 23,448 were slave. Employed in agriculture, 1430; in commerce, 7392; in manufactures and trades, 4593; navigating the ocean, rivers, &c., 1590; learned professions, 438. Tonnage of the port, in 1840, 126,612.—*U. S. Gaz. Official Returns.*

"The old city proper is in the form of a parallelogram, of which the longer sides are 1820 yards long, and the shorter, toward the swamp in the rear, 700 yards. Above the city are the suburbs of St. Mary and Annunciation, and below are the suburbs of Marigny, Franklin, and Washington. These are called fauxbourgs. Between the city and the bayou St. John's, are the villages of St. Claude and St. Johnsburg. The old city proper was laid out by the French, and now forms not more than one-eighth of the city limits, and not more than one-third of its thickly settled parts. In 1836, the legislature passed an act, dividing the city into three municipalities, ranking them according to their population. The first includes the city proper, extending with that width from the river back to Lake Pontchartrain, and occupying the centre; the second adjoining it above, and the third below, both extending from the river to the lake. Each municipality has a distinct council for the management of its internal affairs, which do not encroach on the general government.

"The situation of New Orleans for commerce is very commanding. The length of the Mississippi river, and its connected waters, which are navigated by steam, is not less than 20,000 miles, and the country which they drain is not surpassed in fertility by any on the globe. Its advantages for communication with the country in its immediate vicinity are also great. By a canal, four miles and a half long, it communicates with Lake Pontchartrain, and its connected ports. This canal cost 1,000,000 dollars. There is also a canal, one mile and a quarter long, which communicates with Lake Pontchartrain through bayou St. John. A railroad, four miles and a half long, connects it with Carrollton. A railroad, four miles and a quarter long, connects the city with Lake Pontchartrain, one mile east of bayou St. John. The Mexican Gulf railroad extends twenty-four miles to Lake Borgne, and is to be continued to the gulf, at the South pass. The Mississippi, opposite to the city, is half a mile wide and from 100 to 160 feet deep, and continues of this depth to near its entrance into the ocean, where are bars, with from thirteen feet and a half to sixteen feet of water. The level of the city is from three to nine feet below the level of the river, at the highest water. To protect it from inundation, an embankment, called the *Levee*, is raised on its border, from four to ten feet high, and generally from twenty to forty feet broad; but in front of the second municipality, by the annual deposits made by the river, and the filling up by the corporation, it is extended to 500 or 600 feet broad. This forms a splendid promenade, and a very convenient place for depositing the cotton and other produce from the upper country, which can be rolled directly from the decks of the steamers to the bank of the river. The levee extends from forty-three miles below the city to 120 miles above it. The harbour presents an area of many acres, covered with flat-boats, and keel-boats, in its upper parts. Sloops, schooners, and brigs, are arranged along its wharfs, and present a forest of masts; and steamboats are continually arriving or departing. The amount of domestic articles exported, exceeds 12,000,000 dollars annually, being greater than those of any other city in the union, excepting New York. The houses of the city proper have a French and Spanish aspect, are generally stuccoed, and are of a white or yellow colour. A basement story, about six feet high, forms the only cellar, as none are sunk beneath the surface of the ground. The city proper and the fauxbourg St. Mary, are compactly and substantially built. The buildings in the fauxbourg St. Mary, and many other parts of the city, are mostly of brick, and resemble those of other cities of the United States. The city proper contains sixty-six complete squares; each square having a front of 319 feet in length. Few of the streets, excepting Canal-street, are more than forty feet wide. Many of the seats in the suburbs are surrounded with spacious gardens, splendidly ornamented with orange, lemon, magnolia, and other trees. No city in the United States has so great a variety of inhabitants, with such an astonishing contrast of manners, language, and complexion. The French population probably still predominates over the American, though the latter is continually gaining ground. The water generally used in the city is rain water, contained in cisterns holding from twenty to fifty hogsheads each. The Commercial Bank water works, which cost 455,000 dollars, raise the water twenty or thirty feet above the city, and distribute it by pipes, having an aggregate length of twelve miles. The city water works have a pipe one mile long, to furnish running water, in hot weather, through the gutters of the city, which cost 110,000 dollars. A draining company, with a capital of 640,000 dollars, has two steam engines for draining the marshes between the city and Lake Pontchartrain, of thirty-five square miles in extent. The land is thus made valuable, and

the health of the city improved—although it is still unhealthy, from July to the middle of October. The city contains a state house, custom house, two exchanges, a United States' mint, a United States' land office; five banks, with a capital of more than 10,000,000 dollars; a large and splendid Roman Catholic cathedral, ninety by 120 feet, with four towers; the Ursuline convent; three theatres; the College of New Orleans; a charity hospital, which has received 900 patients in a year; three other hospitals; an orphan asylum; and various other charitable institutions. There are two large and several smaller cotton presses, of great importance to the business of the city. There are fewer churches than in any other city in the union, in proportion to its size. The Roman Catholics have three, the Episcopalians two, the Presbyterians, Baptists, and Methodists, one each, and there is a mariners' church.—*U. S. Gaz.*

In 1840, there were eight commercial and 375 commission houses, with a capital of 16,490,000 dollars; 1881 retail stores, capital 11,018,225 dollars; thirty-two lumber yards, capital 67,800 dollars; six furnaces, capital 353,400 dollars; hardware manufactured to the value of 30,000 dollars; one cotton factory, 700 spindles, capital 20,000 dollars; tobacco manufactures, capital 60,000 dollars; one tannery, capital 50,000 dollars; two distilleries, capital 56,000 dollars; three sugar refineries, value produced 700,000 dollars; three steam saw mills, capital 175,000 dollars; eighteen printing offices, five binderies, nine daily, six weekly, and two semi-weekly newspapers, with a capital of 162,200 dollars; 201 brick and stone, and 210 wooden houses built, cost 2,234,300 dollars. Capital in manufactures, 1,774,200 dollars.—*Official Returns.*

New Orleans being the great outlet and inlet of the trade and products of, as well as of imports into, the western states, many of the statistical returns of its trade, will be found hereafter, in the tabular statements of the internal trade of the United States.

REGULATIONS OF TRADE AT NEW ORLEANS.

TARIFF of Charges agreed upon and adopted by the New Orleans Chamber of Commerce.

General Tariff of Commissions, applicable to Foreign, Northern, and Western business:—	The following Rates, in like manner, to be specially applicable to Western and Local Business:—
	per ct.
(In sales of sugar, molasses, cotton, tobacco and lead)	2½
All other produce or merchandise.....	3
Guarantee of ditto, if not exceeding six months....	2½
And for each month additional, over six.....	¼
Purchase and shipment of merchandise or produce	2½
Sales and purchase of stocks or bullion.....	1
Collecting and remitting dividends.....	1
If with guarantee of bills.....	2½
Selling vessels or steamboats.....	2½
Purchasing do. do.....	2½
Procuring freights.....	5
Collecting freights.....	2½
(On outfits and disbursements.....)	2½
Effecting marine insurance where the premium does not exceed 10 per cent on the amount insured..	½
If the premium exceeds 10 per cent, then on the amount of premium.....	5
Adjusting and collecting insurance, or other claims, without litigation.....	2½
— with litigation.....	5
Purchasing and remitting drafts, or requiring and paying money on which no other commission has been charged.....	1
If the bills remitted are guaranteed.....	2½
If bills and notes remitted for collection are protested and returned, the same commission to be charged, say.....	1
Landing, reshipping, and custody of merchandise or produce from vessels in distress.....	2
Ditto ditto bullion or specie.....	—
On general average.....	5½
Commissions of merchandise withdrawn, to pay full commission on amount of advances and responsibilities, and half commissions on the invoice value of the goods withdrawn.	
The above rates to be exclusive of brokerage and other charges actually incurred. —	
The following Rates to be specially applicable to European and other Foreign Business, any thing in the preceding General Tariff to the contrary notwithstanding—	per ct.
On remitting proceeds of sales in bills without guarantees.....	1½
Ditto, ditto, with guarantee.....	2

Freights

When vessels are chartered, or goods shipped by the ton, and no special agreement respecting the proportion of tonnage which each particular article shall be computed at, the following regulation shall be the standard. That the articles, the bulk of which shall compose a ton, to equal a ton of heavy materials, shall be in weight as follows:

Coffee	in casks, 1668 lbs.
"	in bags, 6830 "
Cocoa	in casks, 1120 "
"	in bags, 1300 "
Pimento	in casks, 950 "
"	in bags, 1100 "
Flour	8 barrels of 400 "
Beef, pork, tallow, pickled fish, and naval stores	6 barrels
Pig and bar iron, lead, and other metals or ore, heavy dye-woods, sugar, rice, honey, and other heavy articles	gross 2240 lbs.
Ship bread	in casks, 672 "
"	in bags, 22 "
"	in bulk, 800 "
Wines, brandy, spirits, and liquids generally, reckoning the full capacity of the casks, wine measure	200 gals.
Grain, peas, and beans	in casks, 22 bushels
"	in bulk, 36 "
Salt, European	do. 36 "
" West India	do. 31 "
Stone coal	do. 28 "
Timber plank, furs, peltry in bales or boxes, cotton, wool, or other measurement goods, 40 cubic ft.	1120 lbs.
Dry hides	1120 lbs.

When molasses is shipped by the hoghead, without any special agreement, it shall be taken at 110 gallons, estimated on the full capacity of the cask.

MOVING VESSELS.

From Canal-street to the lower tobacco warehouses at any point between the limits, and vice versa:—

Vessels under 100 tons.....	dollars.	10
" 200 " " ".....	"	15
" of 300 " and upwards.....	"	20

Vessels moved from the limits between Canal-street and the lower tobacco warehouses to any point in the second municipality:—

Vessels under 100 tons.....	dollars.	15
" 200 " " ".....	"	20
" 400 " " ".....	"	25
" of 400 " and upwards.....	"	30

Vessels moved from the limits between Millaudon's press and the lower tobacco warehouses to shipyards on the opposite side of the river, will be charged the same rates as if moved from Slaughterhouse Point to the Levee. From Slaughterhouse Point to the Levee at any point between Canal-street and the lower cotton warehouses, and vice versa:—

Vessels under 100 tons.....	dollars.	15
" 200 " " ".....	"	20
" 400 " " ".....	"	25
" of 400 " and upwards.....	"	30

Five dollars in addition with anchors down.

From Slaughterhouse Point to the Levee at any point between Canal-street and Millaudon's press, in the second municipality, and vice versa:—

Vessels under 100 tons.....	dollars.	20
" 200 " " ".....	"	25
" 400 " " ".....	"	30
" of 400 " and upwards.....	"	35

Five dollars in addition with anchors down.

All vessels to be charged for American tonnage. When foreign vessels are not measured, they will be charged twenty per cent in addition to their registered tonnage.

All vessels while in tow of the boats will be considered at their own risk; and vessels taken astern will be charged the same as if towed alongside, and in proportion to the distance they may be towed, should they be cast off in consequence of bad weather, or for any cause beyond the control of the master of the boat.

When any vessel is towed in or over the bar, and proceeds up the river under canvass, and the boat reserves a berth for her, she shall be bound to pay from the point where the engagement shall have been made.

Vessels on shore or in distress, that require the aid of a boat, will be charged as per agreement between the masters of the boat and vessel.

In all cases where cargo is received on board, it is understood to be at the risk of the ship or vessel, either as it regards damages or loss; neither will any receipts be given by the master or officer of said boats for goods received on board of them, but the masters of vessels may send such persons as they may think proper to take charge of them.

Vessels requiring the aid of two boats to get over the bar, will be charged as follows:—

All vessels under 450 tons.....	dollars.	50
Ditto over 450 tons.....	"	75

In the event of the boats not being able to get the ship or vessel over the bar, after a fair trial, such price will be charged for the services so rendered as the nature of the case requires; not, however, to exceed the prices above-named.

Vessels without rudders, or when the rudder is broken, so as to render them unserviceable in steering the ship or vessel, will, in all cases, be charged double the above rates.

All towage down will be payable on the arrival of the steamers at the Pilot's Station at the Southwest Pass, or Balize.

PASSENGERS.

Cabin Passengers from the Bar to the City.....	dollars.	10
Ditto ditto City to the Bar.....		9
Ditto ditto Fort Jackson to City.....		8
Ditto ditto City to Fort Jackson.....		4

Deck passengers half the above prices.

RATES OF PILOTAGE.

Three dollars and a half per foot, for all classes of vessels, in or out.

NEW ORLEANS LEVEE DUES.

The following ordinance, amendatory of existing ordinances concerning levee dues, in and for the port of New Orleans, was ordained by the General Council, and approved by the mayor, May 26, 1843:—

1. That from and after the 31st day of August next, the levee or wharfage dues on ships and other decked vessels, and on steam vessels arriving from sea, shall be as follows:—

On each vessel under 75 tons.....	dollars.	15	On each vessel of 500 tons, and under 550....	dollars.	135
" of 75 " and under 100....		20	" 550 " " 600....		130
" 100 " " 125....		25	" 600 " " 650....		135
" 125 " " 150....		30	" 650 " " 700....		145
" 150 " " 200....		40	" 700 " " 750....		160
" 200 " " 250....		50	" 750 " " 800....		175
" 250 " " 300....		60	" 800 " " 900....		190
" 300 " " 350....		70	" 900 " " 1000....		205
" 350 " " 400....		80	" 1000 " " 1100....		220
" 400 " " 450....		100	" 1100 " " 1200....		235
" 450 " " 500....		115	" 1200 and upwards.....		240

2. That from and after the 31st day of August next, the levee dues on steam vessels navigating on the river, and which shall moor or land in any part of the incorporated limits of the port, shall be as follows:

On each steamer under 75 tons.....	dollars.	15	On each steamer of 400 tons, and under 450....	dollars.	67
" of 75 " and under 100....		15	" 450 " " 500....		75
" 100 " " 150....		22	" 500 " " 550....		85
" 150 " " 200....		30	" 550 " " 600....		90
" 200 " " 250....		37	" 600 " " 650....		97
" 250 " " 300....		45	" 650 " " 700....		105
" 300 " " 350....		52	" 700 and upwards.....		120
" 350 " " 400....		60			

3. That hereafter it shall not be lawful for any pirogue, flatboat, bargeboat, or keelboat, to remain in port longer than twelve days, as fixed by the thirteenth article of an ordinance approved the 21st of October, 1839, under a penalty of twenty-five dollars; and it shall be the duty of the wharfingers of the several municipalities to cause to be removed beyond the limits of the port any pirogue, flatboat, barge, or other craft, found in violation of this ordinance, within the limits of their respective municipalities. The fines arising from any violation hereof shall be recoverable, before any court of competent jurisdiction, of the owner, agent, or consignee of such pirogue, flatboat, or other craft, for the benefit of the municipality within which the offence may be committed.

4. That hereafter it shall not be lawful for any flatboat, keelboat, barge, or old hull, to remain within the limits of the port longer than twenty-four hours after the discharge of its cargo, under a penalty of twenty-five dollars, recoverable as aforesaid; and after the expiration of said twenty-four hours, it shall be the duty of the wharfinger of either of the municipalities to cause to be removed beyond the limits of the port, or to turn adrift, without delay, any such flatboat, keelboat, or other craft in contravention.

5. That in case any captain, owner, or person in command of any steamboat, flatboat, barge, keelboat, or other craft, shall neglect or refuse to obey the orders of the wharfinger to conform to the ordinances regulating the port, he or they shall be liable to a fine of twenty-five dollars to fifty dollars for each offence, recoverable as aforesaid.

6. That from and after the 31st day of August next, all ships and other decked vessels, and steam vessels, arriving from sea, which shall have landed or moored in front of one municipality, and shall have paid or be liable to pay the levee dues to such municipality, and which shall afterwards remove from such municipality to one of the other municipalities, shall pay to the municipality to which they remove, the following dues:—

city of New Orleans, excepting sugar, molasses, and cotton, the staples of Louisiana, shall be fined in a sum of not less than fifty dollars, nor exceeding 100 dollars.

XVI. In case any person should furnish any false reports relative to the cargoes, owners, or consignees, or the date of such crafts entering the port, or in any manner interfere with or impede the officers of the several municipalities in the free exercise of the duties devolving on them, said person or persons so contravening shall, on conviction, pay a fine of not less than twenty dollars, nor exceeding 100 dollars, for each contravention.

XVII. It shall be obligatory on the part of captains of vessels and steamers, and also on masters, owners, and keepers of all crafts, flatboats, rafts, and floats, to pay the aforesaid duties on board of their respective vessels, a receipt for which shall be delivered to them by the proper officer of each municipality, in order to prove payment thereof, in case any of said vessels, craft, &c., be removed from one division of the port to another.

XVIII. All the fines imposed by this ordinance shall be for the benefit of the municipality within which any contravention thereof may have been committed; the same to be levied on the evidence of the wharfinger, and if voluntarily paid, the receipt for the same shall be given by the treasurer; but if they be resisted, then their recovery shall be effected by and before an authority or court of competent jurisdiction.

LAWS OF LOUISIANA RESPECTING THE PACKING OF BEEF AND PORK.

MESS PORK—Must consist of the sides of well-fattened, corn-fed hogs, weighing not less than 200 lbs.; and the flanks, with the flabby pieces cut off, may be admitted.

PRIME PORK—May be composed of three shoulders, three half heads, without the ears, snout, or trains; three tail pieces; some flanks and sides, sufficient to form the first and last layers in the barrel.

M. O. (MESS ORDINARY) PORK—Contains too small or lean pork, flabby pieces, or too much of the shoulder, or bony pieces.

P. O. (PRIME ORDINARY) PORK—Is an inferior quality, rendered so by lean meat, bad handling, or too many bony or bloody pieces.

SOFT PORK—Is such as is made from hogs fattened from mass or still slops, or sometimes by being heated. Each barrel must contain 200 lbs. of pork, be filled with the strongest brine, and then fifty lbs. of Turk's island salt added.

MESS BEEF—Must be composed of the choicest sides of well-fattened, stall-fed cattle; only one choice sirloin of rump may be admitted.

PRIME BEEF—May consist of the flanks, half a neck, and legs cut above the knee, and the balance good pieces, with sides enough to form the first layer.

Beef requires more salt than pork.

The charges for inspecting pork and beef are seventy-five cents per barrel, and storage eight cents per month, after the first three days. Sometimes, when the pork has been put up by experienced hands, and is of a superior quality, and contains the amount and quantity of salt required by law, the inspectors will brand the lot by inspecting one-tenth; and then their charges are only twenty cents for branding.

All beef and pork sent to New Orleans for sale, in barrels, is liable to be forfeited if sold without inspection. It may be shipped without inspection, if notice to that effect be lodged at the custom house within twenty-four hours after its arrival.

IMPORTATION OF TOBACCO.

By the law of the 25th of March, 1844, it is enacted:—

SECTION I.—That there shall be appointed by the governor and senate, from time to time, eight inspectors of tobacco for the city of New Orleans, and two inspectors of tobacco for Lafayette: That no owner, nor agent of owners of tobacco, shall offer the same for sale, until it shall have been inspected, under the penalty of fifty dollars for every such offence, and as to each and every hoghead of tobacco.

II. That the owner, or agent of owners of tobacco, brought into the city of New Orleans, and intended for sale therein, are hereby required to give notice to the said inspectors, at their office, that the same may be inspected; and that at least two of the said inspectors shall be present at every inspection, and, in case of disagreement as to quality, a third inspector shall be called to decide; and no inspector appointed in pursuance of this act shall, either directly or indirectly, buy or sell tobacco on his own account, nor act in the sale of tobacco as broker, agent, or factor, for any other person, under the penalty of 400 dollars for every such offence.

III. It shall be the duty of each and every inspector of tobacco, when a hoghead or cask of

tobacco is opened for inspection, to examine the same carefully, in at least three different places, and to have a true and just sample drawn therefrom (and neatly put up by the inspector), for the use of the vender and purchasers. That in no case shall the brand or other mark be affixed on the hogshead, cask, or sample, until at least two inspectors have agreed on the quality thereof; the brand or mark to be affixed on the hogshead or cask to correspond with that on the sample, and classed as follows:—Admitted or refused. That all tobacco shall be classed "Admitted," unless the same shall consist chiefly of ground leaves, decayed, wet, or damaged tobacco, or in a state too moist to keep. That if any hogshead be partially damaged, to an extent not exceeding ten per cent, said damage shall be cut off, and the samples be marked "Trimmed or cut," and the probable weight cut off, be marked on the label of the sample. That all tobacco shall be classed as "Refused," when damaged to an extent exceeding ten per cent on the nett weight of the hogshead, or when the same shall consist chiefly of ground leaves, lugs, wet or damaged tobacco, or tobacco in a state too moist to keep: *Provided*, That any person or persons requiring tobacco, in hogsheads or casks, inspected by stripping off the casks, to ascertain the actual tare thereof, and more fully to determine whether the tobacco is firmly packed, and free from trash, shall have that right granted to them by notifying the inspector to that effect. The inspector, in that case, shall cause the hogshead or cask to be up-ended by the necessary coopers and labourers supplied by the owner or consignee, so that the space of eighteen square feet shall be allowed by the warehouse-keeper for each hogshead or cask. The inspector shall then cause the hogshead or cask to be uncased or opened, and the empty hogshead or cask taken off and weighed, and the tare thereof inscribed thereon; after which, the empty hogshead or cask shall be returned on the tobacco from which it came, and coopered up in good shipping order, approved by the inspector; for which service the owner or owners, or consignee, shall pay, over and above the charges allowed by law, heretofore provided for, twenty cents per hogshead, additional fee, to the inspector, and forty cents to the coopers, for such extra labour, and it shall be the duty of the inspector to certify the actual tare in his certificate, and that the cask has been actually stripped.

IV. That if any person or persons shall alter or erase any brand or mark of said inspectors, every person so offending shall forfeit and pay the sum of 100 dollars for every cask, hogshead, or sample label, the brands or marks of which shall have been so altered or erased.

V. That nothing herein contained shall be construed to extend to tobacco in carrots, or to stripped or stemmed tobacco, or to tobacco stems in hogsheads, nor to leaf tobacco in hogsheads, boxes, or bales, intended for reshipment without sale, unless at the request of the owner of the same.

VI. That, on the passage of this act, the governor shall appoint, with the advice and consent of the senate, suitable tobacco inspectors, according to the provisions of this act, to serve until the 1st day of February, 1845, and for every two years thereafter; and, in case of death or resignation of any of said tobacco inspectors during the recess of the legislature, the governor shall make temporary appointments, which shall expire at the end of the next session thereafter.

VII. That the two inspectors appointed for the city of Lafayette shall be subject to the same duties and penalties, and receive the same compensations that are established and provided in this act for the inspectors of the city of New Orleans.

VIII. That from and after the 1st day of October next, all hogsheads or casks of tobacco, which shall be offered for sale in the city and port of New Orleans, shall be made of well-seasoned timber.

We have but very imperfect accounts of the trade of Louisiana before its cession to the United States, in 1803. The French attempts under M. Crozat, and afterwards under the famous Mississippi Company, did little towards developing the abundant valuable resources of the regions through which the Mississippi river and magnificent tributaries flow. They were, however, its discoverers and explorers. Our statistical accounts of this state begin with its occupation by the citizens of the United States, and in the following tables of its imports and exports, which pass nearly all through New Orleans, it must be considered, that the greater part of the foreign trade of the Western States is included.

Up to 1828, the greatest amount of tonnage which entered in one year was 57,000 tons. In 1838, ten years afterwards, the amount of tonnage entered at the custom house was—foreign vessels from foreign countries, 45,232 tons; American vessels from foreign parts, 137,242 tons; American coasting vessels, 257,259 tons.—Total, 446,716 tons.

The whole history of navigation does not exhibit so rapid an increase of shipping entering any port in the world. The foreign arrivals were chiefly British.

Speaking of the value of imports into New Orleans, a great authority, Mr. Littlefield, in a letter to Mr. Freeman Hunt, the editor of the "Merchants' Magazine," says: "As regards the value of imports into New Orleans for the year ending September 1, 1843, I went no farther than the specie, and the value of the most prominent articles received from the interior; which latter, according to a table which you will find in the annual statement, amounted, in round numbers, to about 54,000,000 dollars. Add to this the amount of specie, and you have a total value of 64,500,000 dollars, exclusive of all the imports of merchandise by sea, whether from foreign countries or

United States' ports, except cotton from Texas. No record exists of the value of the immense supplies of manufactured and other goods brought to our city from coastwise ports, from the extremity of Maine to the Gulf of Mexico. Could this be ascertained, and added to the amount of foreign merchandise received, it would, with the other items above-stated, probably give, as the value of imports into New Orleans, for the year ending September 1, 1843, a grand total of at least 80,000,000 dollars."

TONNAGE of Vessels entered in the Port of New Orleans during the Years 1832 to 1844.

Year	Tonnage	Year	Tonnage
1832	258,061 00	1839	439,408 00

Sugar produced.—The growth of the cane, though one of the most valuable, is the most uncertain. Of 126,400,310 lbs. of cane, maple, and other sugars produced in all the states, in 1843, Louisiana yielded 97,173,500 lbs. of cane sugar. There were, during that year, 668 sugar plantations; of which 301 worked by steam, and the number of slaves employed were about 26,000.

For further details of the Trade and Navigation of Louisiana and New Orleans, see Internal Trade, Cotton Trade, Sugar Trade, and general Foreign Trade and Navigation of the United States hereafter.

STATEMENT of Exports, by Sea, out of the State, from the Port of Franklin, District of Teche, 144 miles west of New Orleans, from the 30th of September, 1842, to the 30th of June, 1843.

TOWNS.—BATON ROUGE, on the east bank of the Mississippi, thirty miles above Donaldsonville, 120 miles above New Orleans, 150 miles below Natchez. It is situated on a bluff, or high land, extending to the Mississippi, mostly along one street, at the foot of the hill, about twenty-five feet above high water mark, which is a considerable elevation for this region. It had, in 1840, three banks, twenty-seven stores, one printing-office, and 500 dwellings. Population, 2269.

The statistics of the two following parishes of Baton Rouge, are characteristic of Louisiana.
 1. BATON ROUGE, EAST, parish, is the first land elevated above the overflow, in ascending the Mississippi. The productions are cotton, and Indian corn, and some sugar. There were, in 1840, neat cattle 9947, sheep 3690, swine 20,659; Indian corn 180,291 bushels produced, potatoes 23,371 bushels, rice 14,550 lbs., tobacco 4,016, 183 lbs., sugar 2,466,000 lbs.; thirty-four stores, capital 243,550 dollars; three grist mills, two saw mills, one printing-office, one weekly newspaper. Capital in manufactures 31,400 dollars. One college seventy students, five acad-

barrels.

mies 196 students, seven schools 168 scholars. Population, in 1830, 6693; in 1840, whites 3750, slaves 4206, free coloured 182. Total, 8138.

2. **BATON ROUGE, WEST**, lies opposite East Baton Rouge, on the west side of the Mississippi river. The surface is almost an entire level. The land on the streams, however, is a little elevated above the rest, and is the part, chiefly, which is capable of cultivation, and is very productive. Cotton is principally cultivated. The remainder is subject to be overflowed. There were, in 1840, neat cattle 2513, sheep 1773, swine 2835; Indian corn 122,971 bushels produced, potatoes 4149 bushels, cotton 3,180,875 lbs., sugar 1,947,400 lbs.; five stores, capital 18,300 dollars; two lumber yards, capital 15,000 dollars; two grist mills, two saw mills. Capital in manufactures 9650 dollars. Two academies fifty-one students, four schools forty-two scholars. Population, in 1830, 3084; in 1840, whites 1371, slaves 4638, free coloured 120. Total, 4638.

FINANCES OF LOUISIANA.

(From a Report to the Legislature, February 23, 1844.)

	dollars.
The receipts from January 1, 1843, to December 31, 1843	746,797.64
Expenditures during the same year	652,560.43
Balance, January 1, 1844	94,237.21
Of this balance, 42,157 dollars 14 cents are in notes and bonds at present unavailable.	
There was, however, at this date, a balance of interest due on bonds issued by the state for her own benefit, other than those issued to the property banks, amounting to	142,515.42
And appropriations due to schools	88,490.08
Making amount due January 1, 1844	231,005.50
The state is responsible on the various bonds issued by her, and on deposits made with her, for a sum amounting to 21,433,523 dollars 03 cents, exclusive of interest.	
From this should be deducted—	
1st. The amount of the surplus revenue of the federal government, deposited with the state	dollars. 477,910.14
2nd. The amount deposited for vacant estates	dollars. 27,692.89
	505,602.03
3rd. The amount of bonds issued to municipalities Nos. 2 and 3	529,920.00
	1,035,523.03

Which leave a balance of state liabilities for

20,398,000.00	
These liabilities consist of two distinct and separate classes:—	
1st. Such as were incurred by the state for administration purposes; for the purpose of sustaining and carrying on the government of the state; for the furtherance and prosecution of enterprises undertaken for the advantage of the citizens; or, for objects which seemed to promise pecuniary profits to the state. These, excluding interest, amount to 3,898,000 dollars.	
2nd. Such as were incurred by the state for the purpose of furnishing different corporate institutions with capital to be employed in banking.	
These consist of the following, viz.:—	
For the Union Bank	dollars. 7,000,000
For the Citizens' Bank	7,120,000
For the Consolidated Association	2,380,000

Making, exclusive of interest

16,500,000

The Union Bank has thus far faithfully paid the amount due on the bonds issued to her by the state. The two other institutions have failed, and gone into liquidation; but they hold notes, secured by mortgages of real estate, from which, it is believed, enough will ultimately be obtained to pay off all the bonds issued to them.

The state owns property which is thought to be abundantly sufficient for the redemption of the bonds issued for her own proper use and benefit. This property consists, first, of bank stock (bank of Louisiana, 2,000,000 dollars; Mechanics' and Traders' bank, 150,000 dollars; Louisiana state bank, 60,000 dollars), amounting to 2,210,000 dollars. Secondly, the right to select 300,000 acres from the unappropriated United States' lands remaining in the state, worth at least four dollars an acre. The value of these lands then is 2,000,000 dollars. Thirdly, various lands and public improvements, estimated at 650,000 dollars. The whole available property, then, is 4,860,000 dollars. It is proposed to sell this property as fast as it can be done without materially depreciating its value, and with the proceeds to pay off the state's own proper debt.

WESTERN STATES.—I. ARKANSAS.

ARKANSAS is bounded on the north by Missouri; east by the Mississippi river, which separates it from Tennessee and Mississippi; and west by the Indian territory. It lies between 33 deg. and 36 deg. 30 min. north latitude, and between 89 deg. 30 min. and 94 deg. 30 min. west longitude, and between 12 deg. 30 min. and 17 deg. 30 min. west longitude from Washington. It is about 240 miles long, and 228 miles broad, comprising an area of about 54,500 square miles, or 34,880,000 British statute acres. The population, in 1830, was 30,388; in 1840, 97,574, of which 19,935 were slaves. Of the free population, 42,211 were white males; 34,963 white females; 248 were coloured males; 217 coloured females. Employed in agriculture, 28,355; in commerce, 215; in manufactures and trades, 1173; navigating the ocean, three; navigating rivers, canals, &c., thirty-nine; learned professions, 301.

This state is divided into forty counties, which, with their population in 1840, and their capitals, were as follows:—Arkansas, 1346, C. Arkansas Post; Benton, 2228, C. Bentonville; Carroll, 2844, C. Carrollton; Chicot, 3806, C. Columbia; Clarke, 2309, C. Greenville; Conway, 2892, C. Lewisburg; Crawford, 4266, C. Van Buren; Crittenden, 1561, C. Marion; Desha, 1598, C. Belleville; Franklin, 2665, C. Ozark; Greene, 1586, C. Gainesville; Hempstead, 4921, C. Washington; Hot Springs, 1907, C. Hot Springs; Independence, 9669, C. Batesville; Izard, 2244, C. Towns.—Little Rock, on the south bank of the Arkansas, 300 miles from the Mississippi, 1065 miles from Washington, is the seat of government. It contains five places of worship, a state prison, two banks, an arsenal, land office, two printing offices, and about 2600 inhabitants. This state contains no other place ranking above a small village.

Soil.—In the eastern part of the state, bordering on the Mississippi and the rivers which fall into it, the country is low and swampy, with a heavy growth of timber, and is frequently overflowed. In the central part it is undulated and broken; and the Ozark mountains, rising sometimes to the height of 1000 or 2000 feet, cross the north-west part of the state. The Black hills rise north of the Arkansas, and the Washita hills north of the Washita river. The soil is of every variety, from the most productive to the most sterile, sandy, and rocky. On the margins of the rivers it is exceedingly fertile, beyond which the land is generally arid and unproductive. The numerous prairies are of great extent. In many parts there is a scarcity of water. Cotton and Indian corn are the staple productions; but the country is well adapted for rearing cattle. The buffalo, deer, elk, otter, beaver, rabbit, racoon, wild cat, catamount, wolf, bear, and wild geese, turkeys, and quails, abound. Near the centre of the state there are numerous hot-springs, the temperature of which sometimes rises nearly to the boiling point. Iron ore, gypsum, coal, and salt are found.

Live Stock and Agricultural Products.—In 1840, there were in this state 51,472 horses and mules; 188,786 neat cattle; 42,151 sheep; 393,058 swine; poultry to the value of 109,468 dollars. There were produced 105,878 bushels of wheat; 6219 bushels of rye; 4,846,632 bushels of Indian corn; 189,553 bushels of oats; 293,608 bushels of potatoes; 64,943 lbs of wool; 1079 lbs. of wax; 148,439 lbs. of tobacco; 5454 lbs. of rice; 6,028,642 lbs. of cotton; 1542 lbs. of sugar; 586 tons of hay; 1039 tons of hemp and flax. The products of the dairy were valued at 59,205 dollars; of the orchard, 10,680 dollars; of the forest, 176,617 dollars.—*Official Returns.*

Trade.—There were ten commercial and ten commission houses engaged in foreign trade, with a capital of 91,000 dollars; 263 retail dry goods and other stores, with a capital of 1,578,719 dollars; 263 persons employed in the lumber trade, with a capital of 12,220 dollars. The foreign trade of this state not being direct, is merged in that of other states, especially Louisiana.

Manufactures.—The value of home-made or family manufactures was 489,750 dollars; two cotton manufactories with ninety spindles, employed seven persons, and had a capital of 2125 dollars; seven persons produced 5500 bushels of bituminous coal, with a capital of 605 dollars; twenty-five persons produced 8700 bushels of salt, with a capital of 20,800 dollars; thirty persons produced granite and marble to the amount of 15,500 dollars; three persons produced hats and caps to the amount of 1400 dollars, with a capital of 400 dollars; thirty-seven tanneries employed seventy persons, and a capital of 43,510 dollars; 545 other manufactories of leather, as saddleries, &c., produced articles to the amount of 17,400 dollars, with a capital of 8830 dollars; fifty-one persons produced machinery to the amount of 14,065 dollars; sixty-six persons produced bricks

and lime to the amount of 319,696 dollars; six persons produced 142,775 lbs. of soap, and 16,541 lbs. of tallow candies, and 632 lbs. of wax or spermaceti candles, with a capital of 200 dollars; fifty-three distilleries produced 26,415 gallons, employing thirty-eight persons, and a capital of 10,205 dollars; fifteen persons produced carriages and waggon to the amount of 2675 dollars, with a capital of 1555 dollars; one powder mill made 400 lbs. of gunpowder, with a capital of 700 dollars; ten flouring mills produced 1430 barrels of flour, and with other mills employed 400 persons, producing articles to the amount of 330,847 dollars, and employing a capital of 288,257 dollars; forty-five persons manufactured furniture to the amount of 20,293 dollars, with a capital of 7810 dollars; twenty-one brick or stone houses, and 1083 wooden houses built, employed 1251 persons, and cost 1,141,174 dollars; nine printing offices, one bindery, three semi-weekly and six weekly newspapers, employed thirty-seven persons, and a capital of 13,100 dollars. The whole amount of capital employed in manufactures was 424,467 dollars.—*Official Returns.*

Climate.—In the eastern part of the state, particularly in the country bordering on the rivers, and especially on the Arkansas, the climate is moist and unhealthy. But toward the middle and in the western part, the climate becomes healthy.

This state is well situated for interior trade and commerce, by means of its rivers, with the Mississippi. The Arkansas, the principal river, rises in the Rocky mountains, and flows with a broad and deep current through the state, in a south-eastwardly direction. It is navigable for steamboats, 300 miles to Little Rock; and in time of high water, 350 miles further to Fort Gibson, which is west of the limits of the state. The Red river passes through the south-west part of the state. The St. Francis, the White, and the Washita, are other important rivers.

Arkansas, an old French settlement on the Arkansas; Columbia and Helena on the Mississippi; Batesville on White river; Fayetteville in the north-west part of the state; and Fulton on Red river, are conveniently situated, but are not sufficiently populous to be considered more than villages, which will soon become populous towns.

Education.—This state is too young to have done much for education in its higher departments. There is no college in this state. There were, in 1840, eight academies, with 300 students; and 113 common and primary schools, with 2614 scholars. There were 6567 white persons over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

Religion.—The Methodists and Baptists are the most numerous religious denominations though there are some Presbyterians, Episcopalians, and Roman Catholics.

At the commencement of 1840, there was one bank with three branches, and a capital of 1,501,888 dollars, and a circulation of 301,310 dollars.

At the close of 1840, the state debt was 3,755,362 dollars. It was formed for establishing banks.

No lotteries can be established, or lottery tickets sold. No debtor can be imprisoned, without strong presumption of fraud. The legislature may establish one bank with branches, and one banking institution to promote the interests of agriculture. It cannot emancipate slaves without the consent of their owners. Slaves have the right of trial by jury, and suffer the same degree of punishment for a crime as white persons, and no other. Courts of justice are obliged to assign to slaves counsel for their defence.—*U. S. Gaz.*

Arkansas was a part of the Louisiana purchase. It was made a separate territory in 1819, and was admitted to the union in 1836. It derives its name from the great river which runs through it.

II. TENNESSEE.

TENNESSEE is bounded on the north by Kentucky; on the east by North Carolina; on the south by Georgia, Alabama, and Mississippi; and on the west by the Mississippi river, which separates it from Arkansas and Missouri. It is situated between 35 deg. and 36 deg. 30 min. north latitude, and between 81 deg. 30 min. and 90 deg. 10 min. west longitude, and between 4 deg. 39 min. and 13 deg. 14 min. west from Washington. Its length is about 400 miles, and its mean breadth about 114 miles. Its area comprises 45,600 square miles, or about 29,184,000 British statute acres. The population, in 1790, was 35,691; in 1800, 105,602; in 1810, 261,727; in 1820, 422,813; in 1830, 681,904; in 1840, 829,210, of which 183,059 were slaves. Of the free population 325,434 were white males; 315,193 white females; 2796 free coloured males; 2728 free coloured females. Employed in agriculture, 227,739; in commerce, 2217; in manufactures and trades, 17,815; navigating the ocean, rivers, &c., 357; learned professions, 2042.—*Official Returns.*

This state is divided into twenty-two counties, which, with their population in 1840, and their capitals, were as follows: *Eastern District*—Anderson, 5658, C. Clinton; Bledsoe, 5676, C. Pikeville; Blount, 11,745, C. Marysville; Bradley, 7385, C. Cleveland; Campbell, 6149, C. Jacksborough; Carter, 5372, C. Elizabethtown; Claiborne, 9474, C. Tazewell; Coker, 6992, C. New-

port; Granger, 10,572, C. Rutledge; Greene, 16,076, C. Greenville; Hamilton, 8175, C. Dallas; Hawkins, 15,035, C. Rogersville; Jefferson, 12,076, C. Dandridge; Johnson, 2658, C. Taylorsville; Knox, 15,485, C. Knoxville; Marion, 6070, C. Jasper; Mc Minn, 12,719, C. Athens; Meigs, 4794, C. Decatur; Monroe, 12,056, C. Madisonville; Morgan, 2660, C. Montgomery; Polk, 3570, C. Bentonville; Rhea, 3985, C. Washington; Roane, 10,948, C. Kingston; Sevier, 6442, C. Sevierville; Sullivan, 10,736, C. Blountville; Washington, 11,751, C. Jonesborough. *Middle District*—Bedford, 20,546, C. Shelbyville; Cannon, 7193, C. Woodbury; Coffee, 8184, C. Manchester; Davidson, 30,509, C. Nashville; De Kalb, 5868, C. Smithville; Dickson, 7074, C. Charlotte; Fentress, 3550, C. Jamestown; Franklin, 12,009, C. Winchester; Giles, 21,494, C. Polaski; Hickman, 8618, C. Centerville; Humphreys, 5195, C. Reynoldsburg; Jackson, 12,872, C. Galnesborough; Lawrence, 7121, C. Lawrenceburg; Lincoln, 21,493, C. Fayetteville; Marshall, 14,555, C. Lewisburg; Maury, 28,186, C. Columbia; Montgomery, 16,927, C. Clarksville; Overton, 9279, C. Monroe; Robertson, 13,801, C. Springfield; Rutherford, 24,280, C. Mufreesborough; Smith, 21,179, C. Carthage; Sumner, 22,445, C. Gallatin; Stewart, 8587, C. Dover; Warren, 10,808, C. McMinnville; Wayne, 7705, C. Waynesborough; White, 10,747, C. Sparta; Williamson, 27,006, C. Franklin; Wilson, 24,460, C. Lebanon. *Western District*—Benton, 4772, C. Camden; Carroll, 12,362, C. Huntingdon; Dyer, 4484, C. Dyersburg; Fayette, 21,501, C. Somerville; Gibson, 13,689, C. Trenton; Hardeman, 14,563, C. Bolivar; Hardin, 8245, C. Savannah; Haywood, 13,870, C. Brownsville; Henderson, 11,875, C. Lexington; Henry, 14,906, C. Paris; Lauderdale, 3435, C. Ripley; Madison, 16,530, C. Jackson; McNairy, 9385, C. Purdy; Obion, 4814, C. Troy; Perry, 7419, C. Perryville; Shelby, 14,721, C. Raleigh; Tipton, 6800, C. Covington; Weakley, 9870, C. Dresden.

Soil.—Cumberland mountains traverse the middle of the state, from north-east to south-west, dividing the state into *East Tennessee* and *West Tennessee*. The western part of Tennessee is level, or gently undulating; in the middle it is hilly. Between the mountains there are valleys from five to ten miles wide. These valleys open passages for rivers and roads. Caves of great depth and extent are numerous.

"The soil is generally fertile. In the western part the soil is black and rich, in the middle there are large tracts of excellent land. In the eastern part the mountains are sterile, but the valleys of its creeks and streams are rich beyond any of the same description elsewhere in the western country. In East Tennessee it derives its fertility from the quantities of dissolved lime, and nitrate of lime that are mixed with it. In West Tennessee the strata are arranged in the following order: first, a loaming soil or mixtures of clay and sand; next yellow clay; then red sand and red clay; and lastly a white sand. In the southern parts of this state are found immense banks of uncommonly large oyster-shells, situated on high table grounds, remote from any water-course."—*Book of the United States*.

The principal forest trees are poplar, hickory, walnut, oak, beech, sycamore, locust, cherry, sugar-maple, &c., and in some parts a very thick and strong cane abound. Snake root, ginseng, Carolina pink, angelica, senna, anise, and spikenard, grow well. Cotton and tobacco are among the staple commodities of the state; also grain, grass, and fruit.

Live Stock and Agriculture.—In 1840, there were, in this state, 341,409 horses and mules; 822,851 neat cattle; 741,593 sheep; 2,926,607 swine; poultry valued at 606,969 dollars. There were produced 4,569,692 bushels of wheat; 4809 bushels of barley; 7,035,678 bushels of oats; 304,320 bushels of rye; 17,118 bushels of buckwheat; 44,986,188 bushels of Indian corn; 1,060,392 lbs. of wool; 850 lbs. of hops; 50,907 lbs. of wax; 1,904,370 bushels of potatoes; 31,238 tons of hay; 3844 tons of hemp and flax; 29,550,432 lbs. of tobacco; 7977 lbs. of rice; 27,701,277 lbs. of cotton; 1217 lbs. of silk cocoons; 258,073 lbs. of sugar. The products of the dairy were valued at 472,141 dollars; and of the orchard at 367,105 dollars; value of lumber produced 217,606 dollars; 3336 barrels of tar, pitch, &c., were made. Cattle are exported from the southern parts.—*Official Returns*.

Minerals.—There is an abundance of limestone. Gypsum in large quantities has been discovered. Copperas, alum, nitre, and lead, are among the minerals, and some silver has been found. Saltpetre forms a considerable article of commerce. There are numerous salt springs, and some mineral springs.

Climate.—The climate is mild and generally healthy. The winter in Tennessee resembles the spring in New England. Snow seldom falls to a greater depth than ten inches, or lies longer than ten days. Cumberland river has been frozen over but three or four times since the country was settled. Cattle are rarely sheltered during the winter. Some low grounds in the western part of the state are subject to bilious fevers, and fever and ague, but they comprise but a very small portion of the state.—*U. S. Gaz.*

Rivers.—The usual route to a market is down the Cumberland and Tennessee rivers to Ohio, and thence to New Orleans. Foreign goods are brought from the east through Pittsburg.

Tennessee river, though it has not its rise nor its entrance has its chief course in this state. It is 1200 miles long, and is navigable for steamboats to Florence in Alabama, 259 miles above its entrance into the Ohio, and for boats 250 miles further. Cumberland river rises in Kentucky, but

runs chiefly in Tennessee. It is navigable for steamboats 200 miles to Nashville, and for boats 300 miles further. It enters the Ohio in Kentucky, sixty miles from the Mississippi. The floe-ton, Clinch, French Broad, and Hiwassee, are branches of the Tennessee. Obion, Forked Deer, and Wolf rivers, in the western part of the state, flow into the Mississippi, and are navigable for boats.

Trade.—There were, in 1840, thirteen commercial and fifty-two commission houses engaged in foreign trade, with a capital of 1,495,100 dollars; 1032 retail dry goods and other stores, with a capital of 7,357,300 dollars; 1126 persons employed in the lumber trade, with a capital of 6700 dollars; thirty-one persons employed in internal transportation, who, with five butchers and packers employed a capital of 98,811 dollars. The trade of Tennessee with foreign states is necessarily indirect, or in transit through other states.—*Official Returns.*

Manufactures.—In 1840, the value of home-made or family goods was 2,886,661 dollars. There were twenty-six woollen manufactories and four fulling mills, employing forty-five persons, producing articles to the value of 14,290 dollars, with a capital of 25,600 dollars; thirty-eight cotton manufactories, with 16,813 spindles, employing 1542 persons, producing articles to the value of 325,719 dollars, with a capital employed of 463,240 dollars; thirty-four furnaces, producing 16,128 tons of cast iron, and ninety-nine forges, &c., producing 9673 tons of bar iron, employing 2266 persons, and a capital of 1,514,736 dollars; four persons produced gold to the value of 1500 dollars, with a capital of 400 dollars; two smelting houses for lead; twenty-one persons produced 13,942 bushels of bituminous coal; five paper manufactories produced articles to the value of 46,000 dollars; other manufactories of paper produced articles to the value of 14,000 dollars, the whole employing eighty-seven persons, and a capital of 93,000 dollars; 177 persons produced hats and caps to the value of 104,949 dollars; 454 tanneries employed 909 persons, and a capital of 484,114 dollars; 374 other leather manufactories, as saddleries, &c., produced articles to the value of 359,050 dollars, with a capital of 154,540 dollars; twenty-nine potteries employed fifty persons, producing articles to the value of 51,600 dollars, with a capital of 7300 dollars; 266 persons produced machinery to the value of 257,704 dollars; 142 persons manufactured hardware and cutlery to the value of 57,170 dollars; thirty-four persons manufactured 564 small arms; eleven persons manufactured the precious metals to the value of 28,430 dollars; ten persons manufactured granite and marble to the value of 5400 dollars; 417 persons produced brick and lime to the value of 119,371 dollars; 1426 distilleries produced 1,109,107 gallons, and six breweries produced 1835 gallons, the whole employing 1341 persons, and a capital of 218,182 dollars; 518 persons manufactured carriages and waggons to the value of 219,897 dollars, employing a capital of 80,878 dollars; twenty-eight rope-walks employed 208 persons, producing articles to the value of 132,630 dollars, employing a capital of 54,230 dollars; 255 flouring mills produced 67,881 barrels of flour, and, with other mills, employed 2100 persons, producing articles to the value of 1,020,664 dollars, and employing a capital of 1,310,195 dollars; 203 persons manufactured furniture to the value of 79,850 dollars with a capital of 30,650 dollars; 193 brick or stone houses, and 1098 wooden houses were built by 1467 persons, at a cost of 427,402 dollars; forty-one printing offices, five binderies, two daily, six semi-weekly, and thirty-eight weekly newspapers, and ten periodicals, employed 191 persons, and a capital of 112,500 dollars. The whole amount of capital employed in manufactures was 3,731,580 dollars.—*Official Returns.*

Education.—Greenville college, at Greenville, in East Tennessee, was founded in 1794; Washington college, in Washington county, was founded in 1794; the University of Nashville, in Nashville, the most important literary institution in the state, was founded in 1806; East Tennessee college, at Knoxville, was founded in 1807; Jackson college, near Columbia, was founded in 1830. The Southwestern Theological Seminary, at Marysville, was founded in 1821. The number of students in all these institutions, in 1840, was 369. There were in the state 152 academies, with 5539 students; and 983 common and primary schools, with 25,099 scholars. There were 58,534 white persons, above twenty years of age, who could neither read nor write. The University of Nashville has a permanent fund of about 45,000 dollars, which bears interest at six per cent, out of which interest and the tuition fees, the expenses of the institution are borne. Besides this, there is due to it about 15,000 dollars. These constitute the sum total of its endowments; and when we remember, that the first of these sums was derived from certain lands which Congress, by its act of 1806, c. 31, required the state to appropriate to the use of two colleges, one in East and one in West Tennessee, we are reduced to the mortifying necessity of admitting, that the institution owes nothing to the munificence of the state. The same remark is applicable to the University of East Tennessee, and, indeed to every literary institution in the state. The same act of Congress required the state to appropriate 100,000 acres of land in one body for the use of academies, one in each county in the state. By the act of the legislature of 1837, c. 107, sec. 8, the legislature appropriated the annual sum of 18,000 dollars to the academies, on condition that they should relinquish to the state all claims to those lands. This relinquishment was made, and in consideration of it, the faith of the state is pledged to the annual payment of the 18,000 dollars to those institutions.

A school fund having been created under various laws, and an act passed in 1837-38, "to esta-

lish a system of common schools in the state," were re-enacted and amended by an act passed at the session of 1839-40, by which it is made the duty of the superintendent every year, on the third Monday in July, to apportion the school monies to the counties, according to the ratio of their white children between the ages of six and sixteen years respectively, as compared with the white children of the whole state within those ages, ascertained by the county school commissioners.

The fund now consists of:—

	dollars. cts.
1. Bank Stock.	
Union Bank	48,894.00
Planters' Bank	244,500.00
Farmers' and Merchants' Bank of Memphis	700.00
Bank of Tennessee	821,594.40
2. Turnpike Stock	44,304.80
3. Real estate	3,060.00
4. Suspended Debt.	
Due from the Superintendent, Feb. 1, 1844	77,710.36
From County Agents, &c., Oct. 1, 1843, estimated	109,560.93
Total	1,350,324.49

The amount distributed on the third Monday, 15th July, 1844, was 117,087.40

The scholastic population was then 248,312 children, each of whom of course received about 47 1-7 cents.

Religion.—In 1836, the Methodists had 127 travelling preachers, and 34,266 communicants; the Baptists had 413 churches, 219 ministers, and 20,472 communicants; the Presbyterians had 120 churches, ninety ministers, and 10,000 communicants; the Episcopalians had one bishop and eight ministers. There were besides many Cumberland Presbyterians, and some Lutherans, Friends, Christians, and Catholics.

Banks.—At the commencement of 1839, there were in the state one bank and seven branches, with an aggregate capital of 2,292,757 dollars, and a circulation of 742,542 dollars.—(See Banks of United States hereafter.)

Public Works.—The internal improvements of Tennessee consist of several railroads. Lagrange and Memphis railroad extends from Memphis, on the Mississippi, fifty miles, to Lagrange, in Lafayette county. Somerville branch extends from the main road at Moscow, sixteen miles, to Somerville. The Hiwassee railroad extends from Knoxville, ninety-eight miles and a half, to the Georgia line, where it unites with the Western and Atlantic railroad of Georgia. The New Orleans and Nashville railroad is designed to pass through this state.—(See Railroads of the United States hereafter.)

NASHVILLE, capital of the state, is situated on the south side of Cumberland river, in 36 deg. 9 min. 39 sec. north latitude, and 86 deg. 49 min. 3 sec. west longitude, 110 miles north of Huntsville, 183 miles west of Knoxville, 250 miles south-west of Lexington, Kentucky, 909 miles south-west of New York, 684 miles from Washington. The population, in 1830, was 5566; in 1840, 6929. It has a court house, gaol, and market-house, eleven churches, two Baptist, one Christian, one Cumberland Presbyterian, one Presbyterian, four Methodist, one Episcopal, one Roman Catholic, three banks, the halls of the Nashville university, a lunatic asylum, and a state penitentiary, 310 feet long, 350 deep, and two stories high, containing 200 cells for convicts. The Nashville university was founded in 1806, has a president and five professors, or other instructors, 236 alumni, 292 students, and 10,000 volumes in its libraries. Cumberland river is opposite the town, navigable for vessels of from thirty to forty tons, and at high floods for ships of 400 tons. Fifteen steamboats are employed on the river, besides a great number of keelboats and flatboats. In 1840, there were three foreign commercial and eight commission houses, capital 235,000 dollars; seventy-five retail stores, capital 1,606,400 dollars; one forge, one tannery, one paper factory, four printing-offices, two binderies, one daily, five weekly, and three semi-weekly newspapers. Capital in manufactures, 151,000 dollars. Tonnage 4733.

KNOXVILLE, 183 miles east-by-south from Nashville, 498 miles from Washington, is situated on the north bank of Holston river, four miles below the junction of French Broad river, at the head of steamboat navigation. It contains a court house, a gaol, three churches, two academies, five wholesale and nine retail stores, about 200 dwellings, and 1500 inhabitants. The Hiwassee railroad extends from this place through Athens and Augusta to Charleston, South Carolina.

MEMPHIS, situated on an elevated bluff on the Mississippi, immediately below the mouth of Wolf or Loosahatchie river, contained, in 1840, fifty-three stores, 550 dwellings, and 3900 inhabitants. Its commerce is extensive, being equal to that of any town between St. Louis and New Orleans. A railroad to Lagrange is a part of the Charleston and Memphis railroad.

FINANCES OF TENNESSEE, 1843.

<i>Principal Items of Expenditure.</i>		<i>Chief Sources of Income.</i>	
	dollars. cts.		dollars. cts.
Salaries of executive officers	17,085.82	Direct taxes	119,661.67
Salaries of the judiciary	33,346.25	Bank tax	14,750.00
Incidental expenses of judiciary	2,921.09	Income of state funds	291,678.75

III. KENTUCKY.

KENTUCKY is bounded on the north by Ohio, Indiana, and Illinois, from which it is separated by the Ohio river; on the east by Virginia; on the south by Tennessee; and on the west by the Mississippi, which separates it from Missouri. It lies between 36 deg. 30 min. and 39 min. 10 deg. north latitude, and between 81 deg. 50 min. and 89 deg. 20 min. west longitude, and between 5 deg. and 10 deg. west longitude from Washington. Its greatest length is about 400 miles, and 170 miles its breadth, comprising about 40,500 square miles, or 25,920,000 British statute acres. The population, in 1790 was 73,677; in 1800, 220,959; in 1810, 406,511; in 1820, 564,317; in 1830, 688,844; in 1840, 779,828, of which 182,258 were slaves. Of the free population, 305,323 were white males; 284,930 white females; 3761 were coloured males; 3556 coloured females. Employed in agriculture, 197,738; in commerce, 3448; in manufactures and trades, 23,217; navigating the ocean, forty-four; canals, lakes, and rivers, 968; in mining, 331; learned professions, 2487.—*Official Returns.*

This state is divided into ninety counties, which with their population, in 1840, and their capitals, were as follows:—Adair, 8466, C. Columbia; Allen, 7329, C. Scottsville; Barren, 17,288, C. Glasgow; Bath, 9763, C. Owingsville; Boone, 10,034, C. Burlington; Bourbon, 14,478, C. Paris; Breathitt, 2195, C. Breathitt; Bracken, 7053, C. Augusta; Breckenridge, 8944, C. Hardingsburg; Bullitt, 6334, C. Shepherdsville; Butler, 3898, C. Morgantown; Caldwell, 10,365, C. Princeton; Calloway, 9794, C. Wadesborough; Campbell, 5214, C. Newport; Carroll, 3966, C. Carrollton; Carter, 2905, C. Grayson; Casey, 4939, C. Liberty; Christian, 15,587, C. Hopkinsville; Clark, 10,802, Winchester; Clay, 4607, C. Manchester; Clinton, 3863, C. Albany; Cumberland, 6090, C. Burkesville; Davies, 8331, C. Owensborough; Edmonston, 2914, C. Brownsville; Estill, 5535, C. Irvine; Fayette, 22,194, C. Lexington; Fleming, 13,268, C. Flemingsburg; Floyd, 6302,

C. Prestonburg; Franklin, 9420, C. Frankfort; Gallatin, 4008, C. Warsaw; Garrard, 10,480, C. Lancaster; Grant, 4192, C. Williamstown; Graves, 7465, G. Mayfield; Grayson, 4461, C. Litchfield; Greene, 14,212, C. Greensburg; Greenup, 6297, C. Greenupsburg; Hancock, 2581, C. Hawesville; Hardin, 16,357, C. Elizabethtown; Harlan, 3015, C. Mount Pleasant; Harrison, 12,472, C. Cynthiana; Hart, 7081, C. Mumfordsville; Henderson, 9548, C. Henderson; Henry, 10,015, C. New Castle; Hickman, 8968, C. Clinton; Hopkins, 9171, C. Madisonville; Jefferson, 36,346, C. Louisville; Jessamine, 9396, C. Nicholasville; Kenton, 7816, C. Independence; Knox, 5722, C. Barbourville; Laurel, 3079, C. London; Lawrence, 4730, C. Louisa; Lewis, 6306, C. Clarksburg; Lincoln, 10,187, C. Stanford; Livingston, 9025, C. Smithland; Logan, 13,615, C. Russellville; Madison, 16,355, C. Richmond; Marion, 11,032, C. Lebanon; Mason, 15,719, C. Maysville; Mc Cracken, 4745, C. Paducah; Meade, 5780, C. Brandenburg; Mercer, 18,720, C. Harrodsburg; Monroe, 6526, C. Tompkinsville; Montgomery, 8332, C. Mount Sterling; Morgan, 4603, C. West Liberty; Muhlenberg, 6964, C. Greenville; Nelson, 13,637, C. Bardstown; Nicholas, 8745, C. Carlisle; Ohio, 6592, C. Hartford; Oldham, 7980, C. La Grange; Owen, 8232, C. Owenton; Pendleton, 4455, C. Falmouth; Perry, 3089, C. Hazard; Pike, 3567, C. Pikeville; Pulaski, 9620, C. Somerset; Rockcastle, 3439, C. Mount Vernon; Russel, 4238, C. Jamestown; Scott, 13,668, C. Georgetown; Shelby, 17,768, C. Shelbyville; Simpson, 6537, C. Franklin; Spencer, 6581, C. Taylorsville; Todd, 9991, C. Elkton; Trig, 7716, C. Cadiz; Trimble, 4480, C. Bedford; Union, 6673, C. Morganfield; Warren, 15,446, C. Bowling Green; Washington, 10,596, C. Springfield; Wayne, 7399, C. Monticello; Whitley, 4673, C. Williamsburg; Woodford, 11,740, C. Versailles.

Soil.—The eastern counties are mountainous. A tract from five to twenty miles wide, along the Ohio river, through the whole length of the state, is hilly, and the soil generally fertile. The margin of the Ohio, for about a mile in width, consists of bottom or alluvial lands, which are overflowed when the floods rise. Between the hilly country, the more mountainous eastern counties and Green river, there intervenes a rich district, called the garden of the state. It is about 150 miles long, and from fifty to 100 wide. The soil is excellent, the surface is gently undulating, and the forest trees chiefly black walnut, black cherry, buckeye, pawpaw, sugar-maple, mulberry, elm, ash, cotton wood, white thorn, and an abundance of grape-vines. The country in the south-west part of the state, between Green and Cumberland rivers, is called "the barrens." In 1800, the legislature of the state made a gratuitous grant of this tract to actual settlers, under the idea that it was of little value; but it proves to be excellent corn land, and also well adapted to the raising of hogs and cattle. The whole state, below the mountains, has, at the depth of about eight feet, a bed of limestone, which has frequent apertures through which the waters of the rivers sink into the earth, and some of them to disappear for a time, and others are greatly diminished in the summer season. The banks have generally worn deep channels in the calcareous rocks over which they flow. The precipices formed by the Kentucky are in many places stupendous, presenting perpendicular banks of solid limestone 300 feet high, above which there is a steep and difficult ascent several times as high. In the south-west part of the state, between Green and Cumberland rivers, are several remarkable caves. One called the Mammoth cave, 180 miles from Lexington on the road to Nashville, is said to be eight or ten miles in length, with many diverging apartments. The earth at the bottom of it is strongly impregnated with nitre, which has been to a considerable extent manufactured from it.

Wheat, tobacco, and hemp are the staple productions; but Indian corn, rye, oats, barley, buckwheat, flax, and potatoes are extensively cultivated. Apples, pears, peaches, and plums, are the most common fruits. Horses, horned cattle, pork, bacon, and lard are extensively exported.—*Book of the United States.*

Live Stock and Agricultural Products.—In 1840, in this state, there were 395,853 horses and mules; 787,098 neat cattle; 1,008,240 sheep; 2,310,533 swine; poultry to the value of 536,439 dollars; there were produced 4,803,152 bushels of wheat; 17,491 bushels of barley; 7,155,074 bushels of oats; 1,321,373 bushels of rye; 8169 bushels of buckwheat; 39,847,120 bushels of Indian corn; 1,786,347 lbs. of wool; 742 lbs. of hops; 38,445 lbs. of wax; 1,055,095 bushels of potatoes; 88,306 tons of hay; 9992 tons of hemp and flax; 53,436,909 lbs. of tobacco; 16,376 lbs. of rice; 691,456 lbs. of cotton; 737 lbs. of silk cocoons; 1,377,835 lbs of sugar. The products of the dairy amounted to 931,363 dollars; of the orchard 434,935 dollars; of lumber 130,329 dollars. There were made 2209 gallons of wine.

Minerals.—Among the mineral productions of Kentucky, are iron ore, coal, salt, and lime. The salt licks, as the springs are called, from the fact that cattle and wild animals have been found of licking around them, are numerous, and salt is extensively manufactured, not only for home consumption, but for exportation. The greater part of the exports of this state pass down the Mississippi to New Orleans, and its chief imports are brought in steamboats by river and the Ohio, and other tributaries.

Climate.—The winters are mild, being only of two or three months' continuance, but the atmosphere at that season is moist. Spring and autumn are delightful; and on the whole, the climate is salubrious.

Rivers.—The Ohio, by its various windings, borders this state on the north for 637 miles. Cumberland and Tennessee rivers pass through the western part of this state as they approach their entrance into the Ohio. Cumberland river also rises in the eastern part of this state. The Big Sandy is 250 miles long, and, for a considerable distance, forms the boundary between this state and Virginia. It is navigable fifty miles for boats. The Kentucky river rises in the Cumberland mountains, and after a course, generally through a deep rocky bed, falls into the Ohio, seventy-seven miles above Louisville. It is navigable by steamboats sixty miles to Frankfort. Licking, Green, and Salt, are other considerable rivers. The Mississippi runs on the western border of the state.—*U. S. Gaz.*

Trades.—In 1840, there were in the state five commercial and fifty commission houses engaged in foreign trade, with a capital of 620,700 dollars; 1685 retail dry goods and other stores, with a capital of 9,411,823 dollars; 571 persons employed in the lumber trade, with a capital of 105,925 dollars; 101 persons employed in internal transportation, who, with 183 butchers, packers, &c., employed a capital of 183,850 dollars.—*Official Returns.*

Manufactures.—The value of home-made or family manufactures, was 2,622,462 dollars; there were forty woollen manufactures, employing 200 persons, manufacturing articles to the value of 151,246 dollars, with a capital of 138,000 dollars; fifty-eight cotton manufactures, with 12,358 spindles, employing 523 persons, producing articles to the value of 929,380 dollars, with a capital of 316,113 dollars; seventeen furnaces, producing 29,206 tons of cast iron, and thirteen forges, &c., producing 3637 tons of bar iron, employing 1108 persons, and a capital of 449,000 dollars; twenty-seven persons produced 2125 tons of anthracite coal, with a capital of 76,627 dollars; 291 persons produced 219,695 bushels of salt, with a capital of 163,585 dollars; 100 persons produced granite and marble to the value of 19,592 dollars, with a capital of 6212 dollars; seven paper mills employed forty-seven persons, and produced articles to the value of 44,000 dollars, employing a capital of 47,500 dollars; hats and caps were produced to the value of 201,310 dollars, and straw bonnets to the value of 4483 dollars, employing 194 persons, with a capital of 118,850 dollars; 587 persons manufactured tobacco to the value of 413,585 dollars, with a capital of 230,400 dollars; 387 tanneries employed 078 persons, and a capital of 567,954 dollars; 548 other manufactures of leather, as saddleries, &c., produced articles to the value of 732,646 dollars, with a capital of 369,835 dollars; one glass house produced articles to the value of 3000 dollars, with a capital of 500 dollars; sixteen potteries, employing fifty-one persons, produced articles to the value of 24,090 dollars, with a capital of 9670 dollars; eleven powder mills employed fifty-eight persons, and produced 282,500 lbs. of gunpowder, with a capital of 42,000 dollars; twenty-five persons produced paints and drugs to the value of 26,994 dollars, and turpentine and varnish to the value of 2000 dollars, with a capital of 16,630 dollars; twenty-eight persons produced confectionary to the value of 36,050 dollars, with a capital of 14,250 dollars; 111 rope walks employed 1889 persons, and produced cordage to the value of 1,292,276 dollars, with a capital of 1,023,180 dollars; six persons produced musical instruments to the value of 4500 dollars, with a capital of 5000 dollars; 149 persons produced machinery to the value of 46,074 dollars; thirty persons produced hardware and cutlery to the value of 22,350 dollars; 109 persons produced 2341 small arms, with a capital of 19,060 dollars; twenty-one persons manufactured the precious metals to the value of 19,060 dollars; 637 persons produced bricks and lime to the value of 240,919 dollars; 516 persons manufactured 2,282,426 lbs. of soap, 563,635 lbs. of tallow candles, and 315 lbs. of spermaceti or wax candles, with a capital of 28,765 dollars; 689 distilleries produced 1,763,685 gallons, and fifty breweries produced 214,589 gallons, the whole employing 1092 persons, and a capital of 315,308 dollars; 533 persons produced carriages and waggons to the value of 168,724 dollars, with a capital of 79,378 dollars; 258 flouring mills produced 273,088 barrels of flour, and with other mills employed 2067 persons, producing articles to the value of 2,437,937 dollars, with a capital of 1,650,689 dollars; 453 persons manufactured furniture to the value of 273,350 dollars, with a capital of 139,295 dollars; 485 stone or brick houses, and 1737 wooden houses employed 2883 persons, and cost 1,039,172 dollars; thirty-four printing offices, three binderies, five daily, seven semi-weekly, and twenty-six weekly newspapers, and eight periodicals, employed 226 persons and a capital of 86,325 dollars. The whole amount of capital employed in manufactures, was 5,945,259 dollars.—*Official Returns.*

Education.—The Transylvania university, at Lexington, was founded in 1798, and is an important institution. Centre college, at Danville, was founded in 1822; St. Joseph's college, at Bardstown (Catholic), was founded in 1819; Augusta college, at Augusta (Methodist), was founded in 1825; Cumberland college, at Princeton, was founded in 1825; Georgetown college, at Georgetown (Baptist), was founded in 1829; Bacon college, at Harrodsburg, was founded in 1836; St. Mary's college, Marion county (Catholic), was founded in 1837. There is a flourishing medical department connected with the Transylvania university, and a medical institution at Louisville. In these institutions there were, in 1840, 1419 students. There were in the state, 116 academics and grammar schools, with 4906 students; 952 common and primary schools, with

24,641 scholars; and 40,010 free white persons, over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

Religion.—In 1836, the Baptists, the most numerous denomination, had 500 churches, about 300 ministers, and 35,000 communicants; the Methodists, 100 travelling preachers, and 31,369 communicants; the Presbyterians, 120 churches, and 8000 or 10,000 communicants; the Episcopalians, one bishop and thirteen ministers; the Roman Catholics, one bishop and thirty-four ministers. There is also a considerable number of Cumberland Presbyterians, Reformed Baptists, two societies of Shakers, and one of Unitarians.—*U. S. Gaz.*

Banks.—At the commencement of 1840, this state had fourteen banks and branches, with an aggregate capital of 7,789,003 dollars, and a circulation of 3,476,367 dollars.—(See Banks of the United States hereafter.)

Public Works.—A short but most important work of internal improvement, is the Louisville and Portland canal, two miles and a half long, around the rapids in the Ohio river at Louisville. It admits steamboats of the largest class, is excavated ten feet deep, in solid limestone, and cost 730,000 dollars. The navigation of Kentucky, Licking, and Green rivers, has been extensively improved by dams and locks. The Lexington and Ohio railroad extends from Lexington to Frankfort, and is intended to be continued to Louisville. Several other railroads have been projected.—*U. S. Gaz.*

PRINCIPAL TOWNS.

LOUISVILLE, the most populous city in the state of Kentucky, is advantageously situated on the south bank of the Ohio river, at the head of the Rapids. In latitude 38 deg. 8 min. north; longitude, 85 deg. 26 min. west; 120 miles below Cincinnati, and 596 miles from Washington. It has increased and thriven with extraordinary rapidity. In 1800, the population consisted of about 600 inhabitants; increased in 1810, to 1357; in 1820, to 4012; in 1830, to 10,336; in 1840, to 21,210; and in 1845, the population may be estimated at about 30,000 inhabitants. In 1840, it contained twelve churches, 375 stores, several printing offices, published three daily and seven semi-weekly newspapers; twelve foreign trade houses, capital 192,000 dollars; value of goods sold annually, about 30,000,000 dollars. The Ohio is more than a mile wide opposite the town, and there is a constant and rapid arrival and departure of steamboats and river craft. Its trade has greatly increased since 1840.—(See Internal Trade of the United States hereafter.)

FRANKFORT, capital of the state, is situated on a plain, and on the east side of Kentucky river, sixty miles above its junction with the Ohio; twenty-two miles west-north-west of Lexington, fifty-one miles east of Louisville, 102 miles south-south-west of Cincinnati, 542 miles from Washington. In 38 deg. 14 min. north latitude, and 84 deg. 40 min. west longitude. Population, in 1810, 1099; in 1820, 1679; in 1830, 1680; in 1840, 1917. The river is, at this town, about eighty yards wide, and after heavy rains, frequently rises sixty feet. Steamboats of 300 tons come up to this place when the water is high, and a large quantity of foreign goods is brought here to supply the rich and fertile country around. The banks of the river here are high, and a chain bridge crosses it to the flourishing village of South Frankfort, which may be regarded as an appendage, though its population is not included in the above. Large vessels, designed to navigate the ocean, have been built here, and floated to New Orleans.

LEXINGTON, is situated on a branch of the Elkhorn river, in 38 deg. 6 min. north latitude, and 48 deg. 18 min. west longitude; twenty-four miles east-south-east of Frankfort, eighty-five miles south of Cincinnati, seventy-four miles east of Louisville, and 522 miles from Washington. Population, in 1820, 3279; in 1830, 6404; in 1840, 6997. It is the oldest town in the state, was formerly the capital, and is one of the best built places in the western states. It is regularly laid out, and some of the streets are paved. The main street is eighty feet wide, and one mile and a half in length, and the principal roads leading to the city are macadamised for some distance from it. Many of the streets are bordered with trees, and the environs are beautiful. There is a public square near the centre of the place, surrounded by fine brick buildings. The city contained, in 1840, about 1200 dwellings, ten churches, a masonic hall, the state lunatic asylum, the halls of Transylvania university, the libraries of which contained 12,242 volumes. It had, in 1840, two foreign commission houses, capital 35,500 dollars; seventy-two retail stores, capital 892,285 dollars; value of machinery produced, 12,800 dollars; hardware, cutlery, &c., 10,000 dollars; one woollen factory, nine rope-walks, capital 186,860 dollars; three tanneries, one brewery, four printing offices, one bindery, three weekly and two semi-weekly newspapers, and seven periodicals. Capital in manufactures, 428,340 dollars. In 1797, it contained only fifty houses. The country around Lexington is one of the most fertile districts in the United States.

MAYSVILLE, is situated on the south side of Ohio river, on a narrow bottom between the river, and the high hills which rise in its rear. It has three streets, running parallel with the river, and four crossing them at right angles. It contained, in 1840, three churches, about 500 dwellings,

and 2741 inhabitants. It has a good harbour for boats. Most of the goods imported into the north-east part of the state are landed here. There were, in 1840, nine commission houses, capital 111,600 dollars; twenty-nine stores, capital 133,000 dollars; two lumber yards, capital 10,500 dollars; one cotton factory, 1100 spindles, one tannery, one brewery, one flouring mill, one saw mill, two printing offices, three weekly and one semi-weekly newspapers. Capital in manufactures, 94,800 dollars.

Finances.—The state debt is 4,064,500 dollars, of which 615,000 dollars is at the rate of five per cent, and the balance at six per cent interest. The commissioners of the Sinking Fund have promptly paid the interest on the debt. Value of taxable property, in 1843, 196,729,033 dollars; white males over twenty-one, in 1843, 124,700. Total revenue, 312,235 dollars 86 cents, exclusive of bank stocks, tolls on rivers and roads, and profits of the Penitentiary. Surplus in the Treasury, October 10, 1843, 64,614 dollars 10 cents.

IV. MISSOURI.

MISSOURI is bounded north by Iowa territory; east by Illinois, Kentucky, and Tennessee, from which it is separated by the Mississippi river; south by Arkansas; and west by the Indian territory. It is between 36 deg. and 40 deg. 36 min. north latitude, and between 89 deg. and 95 deg. 30 min. west longitude, and between 12 deg. 17 min. and 17 deg. 28 min. west longitude from Washington. It is 287 miles long, and 230 miles broad, containing 64,000 square miles, or 40,960,000 acres. The population, in 1810, was 19,833; in 1820, 66,586; in 1830, 140,074; in 1840, 383,702, of which 58,240 were slaves. Of the free population, 173,470 were white males; 150,418 white females; 883 were coloured males; 691 coloured females. Employed in agriculture, 92,408; in commerce, 2522; in manufactures and trades, 11,100; in mining, 742; navigating the ocean, 39; navigating canals, rivers, &c., 1885; learned professions, 1469.

This state is divided into sixty-two counties, which, with their population, in 1840, and their capitals, were as follows:—Audrain, 1949, C. Mexico; Barry, 4795, C. M'Donald; Benton, 4205, C. Warsaw; Boone, 13,561, C. Columbia; Buchanan, 6337, C. Sparta; Caldwell, 1458, C. Far West; Callaway, 11,765, C. Fulton; Cape Girardeau, 9359, C. Jackson; Carroll, 2433, C. Carrollton; Chariton, 4746, C. Keytesville; Clark, 2846, C. Waterloo; Clay, 8282, C. Liberty; Clinton, 2724, C. Plattsburg; Cole, 9286, C. Jefferson City; Cooper, 18,484, C. Booneville; Crawford, 3561, C. Steelville; Daviess, 2736, C. Gallatin; Franklin, 7515, C. Union; Gasconade, 5330, C. Herman; Greene, 5372, C. Springfield; Howard, 13,108, C. Fayette; Jackson, 7612, C. Independence; Jefferson, 4296, C. Hillsborough; Johnson, 4471, C. Warrensburg; La Fayette, 6815, C. Lexington; Lewis, 6040, C. Monticello; Lincoln, 7449, C. Troy; Linn, 2245, C. Linneus; Livingston, 4325, C. Chillicothe; Macon, 6034, C. Bloomington; Madison, 3395, C. Fredericktown; Marion, 9623, C. Palmyra; Miller, 2282, C. Tusculumbia; Munroe, 9505, C. Paris; Morgan, 4407, C. Versailles; Montgomery, 4371, C. Danville; New Madrid, 4554, C. New Madrid; Newton, 3790, C. Neosho; Perry, 5760, C. Perryville; Pettis, 2930, C. Georgetown; Platte, 8913, C. Platte City; Pike, 10,646, C. Bowling Green; Polk, 8449, C. Bolivar; Pulaski, 6529, C. Waynesville; Ralls, 5670, C. New London; Randolph, 7198, C. Huntsville; Ray, 6553, C. Richmond; Ripley, 2856, C. Van Buren; Rives (named changed to Henry), 4726, C. Clinton; St. Charles, 7911, C. St. Charles; St. Francis, 3211, C. Farmington; St. Genevieve, 3148, C. St. Genevieve; St. Louis, 35,979, C. St. Louis; Saline, 5258, C. Marshall; Scott, 5974, C. Benton; Shelby, 3056, C. Shelbyville; Stoddard, 3153, C. Bloomfield; Taney, 3264, C. Forsyth; Van Buren, 4693, C. Harrisonville; Warren, 4253, C. Warrenton; Washington, 7213, C. Potosi; Wayne, 3403, C. Greenville. There have been several new counties erected since 1840.

Soil.—This state presents a great variety of surface and of soil. Alluvial, or bottom soil, extends along the margin of the rivers; receding from which, the land rises in some parts imperceptibly, in others very abruptly, into elevated barrens, or rocky ridges. In the interior, bottoms and barrens, naked hills and prairies, heavy forests and streams of water, may often be seen at one view, presenting a diversified and beautiful landscape. The south-east part of the state has a very extensive tract of low, marshy country, abounding in lakes,

and liable to inundation. Back of this a hilly country extends as far as the Osage river. This portion of the state, though not generally distinguished for the fertility of its soil, though it is interspersed with fertile portions, is particularly celebrated for its mineral treasures.—*U. S. Gaz.*

Between the Osage and Missouri rivers, is a tract of country very fertile, and agreeably diversified with woodland and prairie, and abounding with coal, salt springs, &c. The country north of the Missouri is emphatically "the garden of the west." There is no country where a greater extent of territory can be traversed more easily, when in its natural state. The surface is for the most part undulated. The scenery diversified by picturesque hills, and extensive prairies, interspersed with shady groves and clear rivers and streams. Almost every acre of this country is susceptible of high agricultural improvement, and the soil and climate capable of producing all the products of even the southern states, except sugar. The chief productions are tobacco, cotton, Indian corn, wheat, rye, oats, barley, and grasses. Large numbers of horses, mules, horned cattle, sheep, and hogs, are annually raised for exportation. "All that part of the state north of Missouri river, and that south of the Missouri and west of the Gasconade, may be called rolling prairie, nearly the whole of which is capable of cultivation. That part of the state between the Gasconade and Mississippi rivers, may be called hilly, but it affords good grazing, and abounds in mineral wealth. The soil generally, throughout the state, is deep and rich, produced by the decayed vegetable matter of centuries. Wherever the prairie fires are kept down, there springs up a thick underbrush, which, in a few years is converted into a forest. Some parts of St. Louis county, which, a few years ago, were prairie, are now covered with timber, so that hardly any prairie can now be found in the county. And so it is throughout the state. The country on the St. François river, which was formerly capable of cultivation, has, by the effects of the earthquake which destroyed New Madrid, become marshy, but it might again be capable of cultivation, by clearing out the St. François, and by draining; but at present, while so much good land is to be obtained at the government price, it would be unprofitable. There is no doubt, however, that this part of the country will, in the course of time, be all drained and cultivated. Timber is found in larger or smaller quantities throughout the state. The river bottoms throughout the state, are covered with a thick growth of cotton wood, oak, elm, ash, black and white walnut, hickory, &c. The head waters of the Gasconade are covered with a thick growth of the yellow pine, of which large quantities are sawed into lumber and floated to market. The value of lumber produced, according to the census of 1840, in the state, was 70,355 dollars, of which Pulaski county furnished 25,300 dollars, and Cooper 10,580 dollars. The amount has more than doubled since that time, and the annual value produced for 1842, was at least 200,000 dollars. In 1840, 356 barrels of pitch, tar, &c., were produced."—*Hunt's Magazine.*

Live Stock and Agricultural Produce.—In the year 1840, there were in this state, 196,132 horses and mules; 433,875 neat cattle; 348,018 sheep; 1,271,161 swine; poultry valued at 270,647 dollars. There were produced 1,037,386 bushels of wheat; 9801 bushels of barley; 2,234,947 bushels of oats; 68,608 bushels of rye; 15,318 bushels of buckwheat; 17,332,524 bushels of Indian corn; 562,265 lbs. of wool; 56,461 lbs. of wax; 783,768 bushels of potatoes; 49,083 tons of hay; 18,010 tons of hemp and flax; 9,067,913 lbs. of tobacco; 121,121 lbs. of cotton; 274,853 lbs. of sugar. The products of the dairy were valued at 100,432 dollars; of the orchard at 90,878 dollars; of lumber at 70,355 dollars.

Climate.—The climate of this state, though generally healthy, is subject to great extremes of heat and cold. The Missouri is frozen so hard for a number of weeks in the winter, as to be safely crossed with loaded waggons. In the summer the heat is often great, but the air is generally pure, dry, and salubrious.

Minerals.—Of the minerals and fossils already discovered, the principal are lead, coal, plaster, iron, manganese, zinc, antimony, cobalt, various kinds of ochre, common salt, nitre, plumbago, porphyry, jasper, chalcedony, and marble. Lead is extensively found; a district 100 miles long and forty miles broad, the centre of which is seventy miles south-west of St. Louis, and about thirty-five miles from Herculaneum, is the part of the state where it is procured in the greatest abundance. This lead region covers an area of more than 3000 square miles. The ore is of the richest kind, and exists in quantities more than sufficient to supply the demand of the whole United States. The iron mines are scarcely

less remarkable than the lead. In St. Francis county exists the celebrated "mountain" of micaceous oxide of iron, which has an elevation of 300 feet above the surrounding plain, is a mile and a half across its summit, and yields eighty per cent of pure metal. Five miles south is another magnificent pyramidal "mountain," denominated the Pilot Knob, 300 feet high, with a base a mile and a half in circumference, of the same rich species of iron ore. This pyramid is not in plates, but huge masses of several tons in weight, which yields also eighty per cent of pure metal. Washington county is a perfect bed of metallic treasures. Throughout the mineral district are found beds of rich, red, marl clay, which proves to be the very best manure for the soil.

Rivers.—The Mississippi winds along the entire eastern boundary of the state, for a distance of 400 miles, and receives in its course the waters of the great Missouri, which, indeed, deserves to be regarded as the main stream. Through the central and richest part of the state the Missouri rolls its immense volume of water, being navigable for steam-boats, 1800 miles from its entrance into the Mississippi, for four or five months in the year. The La Mine, Osage, and Gasconade, on the south, and the Grand and Chariton on the north side, are navigable tributaries of the Missouri. Maramec river runs through the mineral district, is a navigable stream, and enters the Mississippi eighteen miles below St. Louis. Salt river, which is also navigable, enters the Mississippi eighty-five miles above the Missouri. The White and St. Francis drain the south-east, and the tributaries of the Neosho the south-west part of the state.—*U. S. Gaz.*

Towns.—St. Louis is much the largest and most commercial place in the state. It is situated on the west bank of the Mississippi, eighteen miles below the mouth of the Missouri. St. Genevieve, about 100 miles west of the Mississippi, and sixty-four miles below St. Louis, is settled principally by French, and has considerable trade, particularly in lead. Potosi, in the mining district, is a flourishing town. Herculeanum is the principal place of deposit for lead from the mines. New Madrid is the most noted landing-place for boats on the Mississippi, above Natchez, and Clarkesville and Hannibal, north of St. Louis. St. Charles, on the Missouri, twenty miles above St. Louis, is an important place, and Booneville, Lexington, Liberty, and Independence, in the west part of the state. Jefferson city, the capital, on the Missouri, 134 miles from St. Louis, is a growing place.—*U. S. Gaz.*

Trade.—There were, in 1840, three commercial and thirty-nine commission houses engaged in foreign trade, with a capital of 746,500 dollars; 1107 retail dry goods and other stores, with a capital of 8,158,802 dollars; 345 persons employed in the lumber trade, with a capital of 318,029 dollars; seventy-nine persons engaged in internal transportation, who, with 128 butchers, packers, &c., employed a capital of 173,650 dollars.

Manufactures.—In 1840, the value of home-made or family manufactures was 1,149,544 dollars; there were nine woollen manufactories, employing thirteen persons, producing articles to the value of 13,750 dollars, and employing a capital of 5000 dollars; two furnaces producing 180 tons of cast iron, and four forges, &c., producing 118 tons of bar iron, the whole employing eighty persons, and a capital of 79,000 dollars; twenty-one smelting houses, producing 5,295,455 lbs. of lead, employing 252 persons, and a capital of 235,806 dollars; sixty-nine persons produced 249,302 bushels of bituminous coal, employing a capital of 9488 dollars; thirty-six persons produced 13,150 bushels of salt, with a capital of 3550 dollars; twelve potteries produced articles to the value of 12,175 dollars, employing thirty-three persons, and a capital of 7250 dollars; 191 persons produced machinery to the value of 190,412 dollars; forty-eight persons produced 959 small-arms; twelve persons manufactured the precious metals to the value of 5450 dollars; seventy-three persons produced granite and marble to the value of 32,050 dollars; 671 persons produced bricks and lime to the value of 185,234 dollars; 293 distilleries produced 508,368 gallons, and seven breweries produced 374,700 gallons, the whole employing 365 persons, and a capital of 189,976 dollars; 201 persons produced carriages and waggons to the value of 97,112 dollars, with a capital of 45,074 dollars; one powdermill, employing two persons, produced 7500 lbs. of gunpowder, with a capital of 1050 dollars; eight persons produced drugs and paints to the value of 13,500 dollars, with a capital of 7000 dollars; sixty-four flouring mills produced 49,363 barrels of flour, and, with other mills, employed 1326 persons, producing articles to the value of 960,058 dollars, with a capital of 1,266,019 dollars;

413 brick or stone houses, and 2202 wooden houses, were built by 1966 persons, and cost 1,441,573 dollars; forty printing offices, six daily, five semi-weekly or tri-weekly, and twenty-four weekly newspapers, employed 143 persons, and a capital of 79,350 dollars. The whole amount of capital employed in manufactures was 2,704,405 dollars.

Education.—The University of St. Louis (a Catholic institution), at St. Louis, was founded in 1829; St. Mary's college at Barren's (also Catholic), was founded in 1830; Marion college, at New Palmyra, was founded in 1831; Missouri university, at Columbia, was founded in 1840; St. Charles college, at St. Charles, is a Methodist institution, founded in 1839; Fayette college, at Fayette, is a new institution. In all these colleges there were, in 1840, 495 students. There were in the state, forty-seven academies, with 1926 students; and 642 primary and common schools, with 16,788 scholars. There were 19,457 white persons over twenty years of age, who could neither read nor write.

Religion.—In 1840, there were fifty-one Methodist itinerant preachers, who travelled 8692 miles. The Baptists had 146 churches and eighty-six ministers; Presbyterians thirty-three churches, seventeen ministers; Roman Catholics, one bishop, thirty priests; Episcopalians three ministers.

SAINT LOUIS is situated on the west bank of the Mississippi, eighteen miles by water below the junction of the Missouri. It lies in 38 deg. 36 min. north latitude, and 89 deg. 56 min. west longitude from Greenwich, and 13 deg. 14 min. west longitude from Washington; thirty miles below the junction of the Illinois; 200 miles above that of the Ohio; 1132 miles, by the course of the river, above New Orleans; 1100 miles below the falls of St. Anthony; 120 miles east of Jefferson city; 808 miles from Washington. The population, in 1810, was 1600; in 1820, 4598; in 1830, 6694; in 1840, 16,469, of whom 1531 were slaves. Employed in commerce, 845; in manufactures and trades, 2012; navigating rivers, &c., 891; in the learned professions, &c., 188.—*U. S. Gaz.*

"The situation of the city is pleasant and healthy. The ground rises gradually from the first to the second bank of the river; and on the second bank, which is about forty feet higher than the first, the city is chiefly built. It presents a beautiful appearance as seen from the opposite side of the river, or as it is approached on the river. At the distance of about half a mile from the river, the ground attains its highest elevation, and spreads out in a plain to the west. There are five principal streets running parallel with the river, which are crossed by many others, at right angles. Two streets along the river are narrow, but those which have been more recently laid out, on the second bank, are regular and spacious, and present many commanding situations. The compact part of the city extends about a mile and a half along the river; but there are suburbs on the north and south making the whole extent five miles. It contains many neat, and some elegant buildings. The more recent houses have been built of brick, made of an excellent quality in the immediate vicinity; some are of stone, quarried on the spot, and generally white-washed. Many of the houses have spacious and beautiful gardens attached to them.

"Front-street is open on the side toward the water, and on the other side is a range of warehouses four stories high, built of limestone, which have a very commanding appearance, and are the seat of a heavy business. In First-street, the wholesale and retail dry goods stores are located; and in the streets back of this are the artisans and tradesmen.

"The city is watered from the Mississippi. The water is raised by steam power to a reservoir situated on an elevated ancient mound, whence it is distributed in iron pipes through the city. A company is also formed for lighting the city with gas. The country around St. Louis, and west for fifteen miles, is a very fertile prairie.

"The city is admirably situated for commerce, and already surpasses in its trade every other place north of New Orleans. The Mississippi and the Illinois to the north, the Ohio and its tributaries to the south-east, and the Missouri to the west, give it a ready access to a vast extent of country; and to the south the Mississippi furnishes an outlet to the ocean for its accumulated productions. It is the principal western depôt of the American Fur company, who have a large establishment in the place, and nearly 1000 men in their employ. A vast amount of furs of every description is here collected; and 10,000 dried buffalo tongues have been brought in in a single year.—(See Fur Trade hereafter.) Numerous steamboats ply from this place in various directions. The steamboat arrivals,

in a single year, have amounted to over 800, with a tonnage of over 100,000. The total tonnage of this port, in 1840, was 11,259.

"Among the public buildings, the city hall, a splendid building of brick, several of the churches, and particularly the Roman Catholic cathedral, deserve notice. The cathedral is 136 feet long, eighty-four feet wide, and the walls are forty feet high. The front of the edifice is fifty-eight feet high, above which the tower of the steeple rises twenty feet square to the height of forty feet. This is surmounted by an octagon spire covered with tin, crowned with a brass gilt ball five feet in diameter, surmounted by a cross of gilt brass ten feet high. In the steeple is a peal of six bells, the three largest of which weigh from 1600 lbs. to 2600 lbs. each. The front of the building is of polished freestone, with a portico of four massive Doric columns. There is also a United States' land office, a theatre, and a concert hall.

"There are several literary and benevolent institutions in the city. The St. Louis university is under the direction of the Catholics, and has fifteen instructors, sixty students, and 7900 volumes in its libraries. It has a spacious building in the city, and is amply endowed. Kemper college is under the direction of the Episcopalians, and is beautifully situated four miles from the city, with extensive grounds around it. Its medical department is within the city, and has a spacious building capable of accommodating 400 students, a hall for lectures, chemical laboratory, &c. The Western academy of sciences has an extensive museum of natural history and mineralogy, &c. There is also a museum, containing Indian antiquities, fossil remains, and other curiosities.

"The Convent of the Sacred Heart is an institution of nuns, for conducting female education. The Protestant ladies conduct an Orphan Asylum; and there is a Catholic Orphan Asylum, conducted by the Sisters of Charity.

"There are fourteen churches in the city—two Episcopal, two Methodist, two Presbyterian, two Roman Catholic, one Associate Reformed Presbyterian, one German Lutheran, one Baptist, one Unitarian, one African Methodist, and one African Baptist."—*U. S. Gaz.*

The city has a bank and two insurance companies. In the southern limits of the city is a United States' arsenal, and fourteen miles distant from it are the United States' Jefferson barracks, capable of accommodating 600 or 700 men.

Trades.—There were, in 1840, one foreign commercial and twenty-four commission houses, with a capital of 717,000 dollars; 214 retail stores, with a capital of 3,875,050 dollars; seventeen lumber yards, with a capital of 287,529 dollars; forty persons employed in internal transportation, together with thirty-seven butchers and packers, employed a capital of 141,500 dollars; furs, skins, &c., valued at 306,300 dollars; machinery, 169,807 dollars; two tanneries, capital 54,500 dollars; one distillery, and six breweries, capital 48,800 dollars; one rope walk, capital 10,000 dollars; two flouring mills, one grist mill, six saw mills, one oil mill, capital 106,500 dollars; twenty-two printing offices, six daily, seven weekly, and five semi-weekly newspapers, employed a capital of 49,650 dollars; 210 brick and stone, and 130 wooden houses, cost 761,980 dollars. Total capital in manufactures, 674,250 dollars. Ten academies, 577 students; seven schools, 713 scholars. —*Official Returns.*

St. Louis was founded, in 1764, by the French from Canada, as a trading post with the Indians; but during the French and Spanish possession of it, it remained an inconsiderable village.—*U. S. Gaz.*

In an article on the Resources of Missouri, in "Hunt's Magazine," it is remarked, that "many thriving towns have sprung up, within a few years, in this state, and which bid fair to become of some importance—situated on the banks of our large rivers, and shipping ports for large and fertile districts of country. Among these may be mentioned Hannibal, Booneville, Independence, Weston, Rocheport, and several others. St. Louis, however, is destined to be the largest city in the state; and, in all probability, will become the largest west of the Alleghanies, next to that of New Orleans. Any one who will glance at the map of the Mississippi and Missouri valleys, will see that its geographical position, and natural advantages, ensure this. Situated on the first bluff below the mouth of the Missouri, it is the first point, below that stream, that affords a good site for a city. The Mississippi, below this point, is navigable for boats of the largest class, at nearly all seasons of the year:

some of which carry from 800 tons to 1000 tons of freight, down stream. Above this point, the rivers are shallower, so that freight, to be sent either up or down, must be here landed and reshipped. The Missouri, a few miles above, runs westwardly—navigable for steamboats for 1000 miles, draining one of the most fertile states of the union. North, runs the Mississippi, to the falls of St. Anthony, between the fertile and rapidly growing territories of Iowa and Wisconsin, and the state of Illinois. A few miles above the mouth of the Missouri, is the Illinois river, running for 300 miles to the north-east, through the fertile state of Illinois. It is to be hoped that, in the course of a few years, a canal will unite this river with the waters of Lake Michigan; which will open the trade of the eastern part of Wisconsin, and western part of Michigan, to the markets of St. Louis. The trade of the whole of this part of the country passes by St. Louis, and it is constantly increasing. Groceries of all kinds will seek this market, to be reshipped to the north, east, and west. Instances have been known of persons purchasing cigars and coffee in St. Louis, shipping them to Peru, on the Illinois, by steamboats, and waggoning thence to Chicago; and selling them there at lower prices than those brought from New York, by a continuous water navigation. From this point is shipped nearly all the lead produced at the mines in Illinois and Wisconsin.

"The population of St. Louis, within the present city limits, is more than 30,000; when, by the census of 1840, it was but little above 24,000. The imports and exports, for 1841, exceeded 30,000,000 dollars. From the 1st of January, 1841, to the 1st of January, 1842, the number of steamboats visiting St. Louis amounted to 1928, with an aggregate tonnage of 262,281. The number of boats, in 1842, was 2050, with a tonnage of 302,698."—(See Internal Trade of the United States hereafter.)

FINANCES OF MISSOURI.

<i>Principal Items of Expenditure.</i>		<i>Chief Sources of Income.</i>	
	dollars.		dollars.
Salaries of executive officers.....	9,150	Direct taxes.....	130,000
Expenses of executive	4,000	Income of state funds	32,270
Salaries of judiciary.....	22,550		
Expenses of legislature*.....	56,000	Amount of state debt	922,000
Interest on state debt.....	71,000	Annual interest on debt	71,000
Common schools	12,000		
Charitable establishments	160		

The expenditure of the state is generally equal to its income, leaving little or no balance for a sinking fund.

V. ILLINOIS.

ILLINOIS is bounded north by Wisconsin territory; east, by Lake Michigan and Indiana; south, by the Ohio river, which separates it from Kentucky; and west, by Missouri and Iowa territory, from which it is separated by the Mississippi river. It is between 37 deg. and 42 deg. 30 min. north latitude, and between 87 deg. 17 min. and 91 deg. 50 min west longitude, and between 10 deg. 20 min. and 14 deg. 21 min. west longitude from Washington. It is 350 miles long by 180 miles broad, comprising an area of about 50,000 square miles, or 32,000,000 acres. The population, in 1810, was 12,282; in 1820, 55,211; in 1830, 157,575; in 1840, 476,183; of which 255,235 were white males; 217,019 white females; 1876 were coloured males; 1722 coloured females. Employed in agriculture, 105,337; in commerce, 2506; in manufactures and trades, 13,185; in mining, 782; navigating the ocean, 63; navigating lakes, rivers, and canals, 310; learned professions, 2021.

This state is divided into eighty-seven counties, which, with their population, in 1840, and their capitals, were as follows:—Adams, 14,476, C. Quincy; Alexander, 3313, C.

* The legislature sat, in 1842-43, 100 days.

Unity; Bond, 5060, C. Greenville; Boone, 1705, C. Belvidere; Brown, 4183, C. Mount Sterling; Bureau, 3067, C. Princeton; Calhoun, 1741, C. Gilead; Carroll, 1023, C. Savannah; Cass, 2981, C. Virginia; Champaign, 1475, C. Urbana; Christian, 1878, C. Edinburg; Clarke, 7453, C. Marshall; Clay, 3228, C. Lewisville; Clinton, 3718, C. Carlyle; Coles, 9616, C. Charleston; Cook, 10,201, C. Chicago; Crawford, 4422, C. Palestine; De Kalb, 1697, C. Sycamore; De Witt, 3247, C. Clinton; Du Page, 3535, C. Naperville; Edgar, 8225, C. Paris; Edwards, 3070, C. Albion; Effingham, 1675, C. Ewington; Fayette, 6328, C. Vandalia; Franklin, 3682, C. Benton; Fulton, 13,142, C. Lewiston; Gallatin, 10,760, C. Equality; Greene, 11,951, C. Carrollton; Hamilton, 3945, C. McLeansborough; Hancock, 9946, C. Carthage; Hardin, 1378, C. Elizabethtown; Henry, 1260, C. Morristown; Iroquois, 1695, C. Montgomery; Jackson, 3566, C. Brownsville; Jasper, 1472, C. Newton; Jefferson, 5762, C. Mount Vernon; Jersey, 4535, C. Jerseyville; Jo-Davies, 6180, C. Galena; Johnson, 3626, C. Vienna; Kane, 6501, C. Geneva; Knox, 7060, C. Knoxville; Lake, 2634, C. Little Fort; La Salle, 9348, C. Ottawa; Lawrence, 7092, C. Lawrenceville; Lee, 2035, C. Dixon; Livingston, 759, C. Pontiac; Logan, 2333, C. Postville; Macon, 3039, C. Decatur; Macoupin, 7826, C. Carlinville; Madison, 14,433, C. Edwardsville; Marion, 4742, C. Salem; Marshall, 1849, C. Lacon; McDonough, 5308, C. Macomb; McHenry, 2578, C. McHenry; McLean, 6565, C. Bloomington; Menard, 4431, C. Petersburg; Mercer, 2352, C. Millersburg; Monroe, 4481, C. Waterloo; Montgomery, 4490, C. Hillsborough; Morgan, 19,547, C. Jacksonville; Ogle, 3479, C. Oregon city; Peoria, 6153, C. Peoria; Perry, 3222, C. Pinckneyville; Pike, 11,728, C. Pittsfield; Pope, 4094, C. Goleonda; Putnam, 2131, C. Hennepin; Randolph, 7944, C. Kaskaskia; Rock Island, 2610, C. Rock Island; Sangamon, 14,716, C. Springfield; Schuyler, 6972, C. Rushville; Scott, 6215, C. Winchester; Shelby, 6659, C. Shelbyville; Stark, 1673, C. Toulon; Stephenson, 2800, C. Freeport; St. Clair, 13,631, C. Belleville; Tazewell, 7221, C. Tremont; Union, 5524, C. Jonesborough; Vermilion, 9303, C. Danville; Wabash, 4240, C. Mount Carmel; Warren, 6739, C. Monmouth; Washington, 4810, C. Nashville; Wayne, 5133, C. Fairfield; White, 7919, C. Carmi; Whiteside, 2514, C. Sterling; Will, 10,167, C. Juliet; Williamson, 4457, C. Bainbridge; Winnebago, 4609, C. Rockford.

Soil.—The surface of this state is generally level. There is no mountain in its whole extent, though the northern and southern parts are hilly and broken. The portion of the state south of a line from the mouth of the Wabash to the mouth of the Kaskaskia, is generally covered with timber, but, north of this, the prairie country predominates. The eye sometimes wanders over immense plains, covered with grass, with no other boundary of its vision but the distant horizon, though the view is often broken by occasional woodlands. The dry prairies are generally from thirty to 100 feet higher than the bottom land on the rivers, and frequently no less fertile. A range of bluffs commences on the margin of the Mississippi, a short distance above the mouth of the Ohio, and extends north beyond the Des Moines rapids, sometimes rising abruptly from the water's edge, but generally a few miles distant from it, leaving, between the bluffs and the river, a strip of alluvial formation of inexhaustible fertility. The banks of the Illinois and Kaskaskia, in some places, present sublime and picturesque scenery. Several of their tributary streams have excavated for themselves deep gulfs, particularly those of the Kaskaskia, whose banks, near the junction of Big Hill creek, present a perpendicular front of solid limestone 140 feet high.—*U. S. Gaz.*

The peninsula between the Mississippi and Illinois rivers has been surveyed as military bounty lands by the United States, making an area equal to 240 townships of six miles square, which would be equal to 8640 square miles, or nearly to 5,530,000 acres. These lands are said to be of excellent quality. The soil throughout the state generally may be considered as fertile.

Live Stock and Agricultural Produce.—In 1840, in this state there were 199,235 horses and mules; 626,274 neat cattle; 395,672 sheep; 1,495,254 swine; poultry, valued at 309,204 dollars. There were produced 3,335,393 bushels of wheat; 82,251 bushels of barley; 4,988,008 bushels of oats; 88,197 bushels of rye; 57,884 bushels of buckwheat; 22,634,211 bushels of Indian corn; 650,007 lbs. of wool; 17,742 lbs. of hops; 29,173 lbs. of wax; 2,025,520 bushels of potatoes; 164,932 tons of hay; 1976 tons of

hemp and flax; 564,326 lbs. of tobacco; 460 lbs. of rice; 200,947 lbs. of cotton; 1150 lbs. of silk cocoons; 399,813 lbs. of sugar. The products of the dairy were valued at 428,175 dollars; of the orchard, at 126,756 dollars; of lumber, 203,666 dollars. Value of skins and furs, 35,412 dollars. There were made 474 gallons of wine.—*Official Returns.*

Climate.—The climate is generally healthy, the air pure and serene, but the winters cold. The average temperature through the year is from 50 deg. to 53 deg. of Fahrenheit. In the neighbourhood of low and wet lands, particularly near the mouths of the Wabash and the Ohio, the country is unhealthy. The summers in the southern part of the state are warm.

Rivers.—The Illinois is the largest river in the state. Fox and Des Plaines rivers, its two largest branches from the north, rise in Wisconsin, and with Kankakee river, from Indiana, form the Illinois, and after a course of more than 400 miles, it enters the Mississippi twenty miles above the Missouri. It is navigable a distance of about 250 miles. Rock river rises in Wisconsin, and after a course of 300 miles, mostly in Illinois, it falls into the Mississippi. The Kaskaskia rises near the middle of the state, and after a south-westwardly course of 250 miles, enters the Mississippi, sixty-three miles below the Missouri. It is navigable for boats for 150 miles. The Wabash forms a part of the east boundary. (See Indiana.) The Little Wabash, after a course of 130 miles, enters the Wabash a little above its confluence with the Ohio. Peoria lake, through which the Illinois river flows, about 200 miles from its mouth, is a beautiful sheet of water, twenty miles long, and two miles broad.

The principal commercial depôt in the north is Chicago, on Lake Michigan, at the mouth of Chicago river, with a tolerable harbour, which has been improved by piers extending into the lake. The most commercial place on the Mississippi is Alton, two miles and a half above the Missouri. It has a fine landing-place, with a natural wharf consisting of a flat rock, well suited to the purpose. The other principal places are Springfield, Quincy, Galena, Peoria, Vandalia, and Kaskaskia.

Trade.—There were in this state, in 1840, two commercial and fifty-one commission houses engaged in foreign trade, with a capital of 333,800 dollars; 1348 retail dry goods and other stores, with a capital of 4,904,125 dollars; 405 persons employed in the lumber trade, with a capital of 93,350 dollars; 117 persons employed in internal transportation, who, with 268 butchers, packers, &c., employed a capital of 642,425 dollars.—*Official Returns.*

Manufactures.—The value of home-made or family manufactures was 993,567 dollars. There were four fulling mills, and sixteen woollen manufactories, employing thirty-four persons, producing goods to the value of 9540 dollars, with a capital of 26,205 dollars; four furnaces produced 158 tons of cast iron; twenty smelting houses produced 8,755,000 lbs. of lead, employing seventy-three persons, and a capital of 114,500 dollars; twenty-two persons produced 20,000 bushels of salt, with a capital of 10,000 dollars; three persons produced confectionery to the value of 2240 dollars; one paper mill produced 2000 dollars; twenty-four persons manufactured tobacco to the value of 10,139 dollars; sixty-eight persons manufactured hats and caps to the value of 28,395 dollars, and straw bonnets to the value of 1570 dollars, employing a capital of 12,918 dollars; twenty-three potteries, employed fifty-six persons, producing articles to the value of 26,740 dollars, with a capital of 10,225 dollars; 155 tanneries employed 305 persons, and a capital of 155,679 dollars; 626 other manufactories of leather, as saddleries, &c., produced articles to the value of 247,217 dollars, with a capital of 98,503 dollars; seventy-one persons produced machinery to the value of 37,720 dollars; twenty persons produced hardware and cutlery to the value of 9750 dollars; twelve persons produced twenty cannon and 238 small arms; seven persons manufactured the precious metals to the value of 2400 dollars; twenty-six persons manufactured granite and marble to the value of 116,112 dollars; 995 persons produced bricks and lime to the value of 263,398 dollars, with a capital of 104,648 dollars; twenty-five persons produced 519,673 lbs. of soap, and 117,698 lbs. of tallow candles, with a capital of 17,345 dollars; 150 distilleries produced 1,551,684 gallons, and eleven breweries 90,300 gallons, the whole employing 233 persons, and a capital of 138,155 dollars; 307 persons produced carriages and waggons to the value of

144,862 dollars, with a capital of 59,263 dollars; ninety-eight flouring mills produced 172,657 barrels of flour, and, with other mills, employed 2204 persons, and manufactured articles to the value of 2,417,826 dollars, with a capital of 2,147,618 dollars; vessels were built to the value of 39,200 dollars; 244 persons produced furniture to the value of 84,410 dollars, with a capital of 62,223 dollars; 334 brick or stone houses, and 4133 wooden houses were built by 5737 persons, and cost 2,065,255 dollars; forty-five printing offices, and five binderies, three daily, two semi-weekly, and thirty-eight weekly newspapers, and nine periodicals, employed 175 persons, and a capital of 71,300 dollars. The whole amount of capital employed in manufactures was 3,136,512 dollars.—*Official Returns.*

Education.—The Illinois college, at Jacksonville, was founded in 1829; Shurtleff college (Baptist), in Upper Alton, in 1835; M'Kendree college (Methodist), in Lebanon, in 1834; McDonough college, at Macomb, in 1837. In these institutions there were, in 1840, 311 students. There were in the state forty-two academies, with 1967 students; 1241 common and primary schools, with 34,876 scholars; and 27,502 white persons over twenty years of age who could neither read nor write.

Religion.—The Methodists have 160 travelling preachers; the Baptists have 160 ministers; the Presbyterians, of different descriptions, about 100 ministers; the Episcopalians ten churches, and the Roman Catholics twelve; and there are some of other denominations.

Banks.—At the beginning of 1840, there were, in this state, nine banks and branches, with an aggregate capital of 5,423,185 dollars, and a circulation of 3,724,092 dollars. At the close of 1840, the state debt amounted to 13,465,682 dollars.—(See Banks of United States hereafter.)

Public Works.—This state has undertaken an extensive system of internal improvements. The Illinois and Michigan canal extends from Chicago 106 miles to near Peru, at the head of steamboat navigation on the Illinois. This distance includes a navigable feeder of four miles, and a few miles of river navigation. It was commenced in 1836, and is estimated to cost 8,654,337 dollars. A railroad extends from Meredosia, fifty-three miles, to Springfield. Coal Mine Bluffs railroad extends from the Mississippi river, six miles, to the coal mine. Besides these, a large system of railroads has been projected, and partly executed, the principal of which is denominated the Central railroad, extending from Cairo, at the junction of the Ohio and Mississippi, and terminating near the south termination of the Illinois and Michigan canal; and thence extending in a north-west direction to Gallena; the whole distance being 457 miles and a half, at an estimated cost of 3,800,000 dollars. This is designed to be intersected by railroads to the east and west, some of them crossing the state. But none of these works are yet completed.

The French, in 1720, from Canada, settled at Kaskaskia and Cahokia, where their descendants are still found. By the treaty of peace between Great Britain and France, in 1763, this country came into the possession of the British. Nearly all the settlements in this state, by emigrants from other states, have been made since 1800. In 1789, it constituted a part of the north-west territory. In 1800, Indiana and Illinois became a separate territory. In 1809 Illinois was made a separate territory under its present name; and in 1818 it was admitted to the union as an independent state, being the twenty-third to that time admitted.—*U. S. Gaz.*

The fertility and resources of Illinois are described in a recent number of "Hunt's Merchant's Magazine" as follows, viz. :—

"Its southern extremity is consequently nearly on a parallel with Richmond, Virginia, and its northern with Albany, in the state of New York. In consequence of this great extent from north to south the climate is various, but there is little essential variation in the inexhaustible richness of its soil, whether it sinks into 'bottoms,' rises into 'bluffs,' or spreads into 'prairies' or 'barrens.'

"It will be seen by a glance at the map, that its situation is exceedingly favourable to a commercial intercourse with the surrounding states. The Mississippi meanders along its western border for 700 miles; the Ohio washes it on the south; and on the east it lies against Lake Michigan and the Wabash. Besides this very extensive water communication along its borders, its interior is also traversed by several large navigable rivers. The Illinois, which is formed by the junction of the Des Plaines and Kankakee, two rivers

which gather their head waters within a few miles of Lake Michigan, sweeps through the state in a south-westerly direction, and joins the Mississippi a few miles above the mouth of the great Missouri. It is navigable for steamboats at a moderate stage of water to Peru, a distance of more than 200 miles, without reckoning the windings of the channel in navigation; from which point the Illinois and Michigan canal, 100 miles long, connects it with Lake Michigan, thus opening to a great portion of the state a market through the Lakes and Erie canal to New York. Rock river rises in Wisconsin, and after traversing the north-western part of the state, empties into the Mississippi above the 41st degree of north latitude. It is navigable, with the exception of one or two obstructions in the shape of rapids for near 200 miles. The Kaskaskia, another large river, waters the southern part of the state, and enters the Mississippi about midway between the Missouri and Ohio. The Muddy is still further south, and also discharges its waters into the Mississippi. The large streams on the eastern side of the state are the Iroquois, a tributary of the Kankakee; the Vermilion, emptying into the Wabash; and the Embarras and Little Wabash, both of which also find their way into the Wabash. Besides these are many smaller streams, crossing the country in every direction, some of which, particularly at the north, afford a valuable water-power for propelling machinery.

"These extensive channels of intercommunication have been still further extended by artificial means. The public authorities commenced a system of internal improvements, some years ago, on an extended scale, which, although checked for the present by the embarrassments under which the state is labouring, will, doubtless, ultimately be completed, making every part of the state accessible, and opening to the great markets of the union the inexhaustible productions of the rich interior. Among these the most important is the Illinois and Michigan canal, connecting, as we have already stated, the waters of the Illinois river with those of the lake. It was commenced as a state work in 1836, and congress, to advance its construction, contributed every alternate section of land on each side of the canal, the value of which, when the work is completed, will, it is thought, more than defray the expense of construction. The work is still in progress, notwithstanding the embarrassments of the state, and will probably be completed in the course of the next two years (in 1846). It passes through a region of inexhaustible fertility, and when finished will give a powerful stimulus to the producing interests of the state. It is a curious fact, strongly indicative of the character of the country, that this canal, the length of which is about 100 miles, will be supplied with water for the greater part of this distance from Lake Michigan.

"The low lands lying between the bluffs and the margins of the rivers are called 'bottoms,' and have been formed by the alluvial deposits of the streams.

"These 'bottoms' constitute the richest land in the west. The soil is often twenty-five feet deep, and when thrown up from the digging of wells, produces luxuriantly the first year. The most extensive and fertile tract of this description of soil is what is called the 'American Bottom,' commencing at the mouth of the Kaskaskia, on the Mississippi, and extending northward to the bluffs at Alton, a distance of ninety miles. Its average width is five miles, and it contains about 288,000 acres. The soil is an argillaceous or a silicious loam, according as clay or sand happens to predominate in its formation. This tract, which received its name when the Mississippi constituted the western boundary of the United States, is covered on the margin of the river with a strip of heavy timber, having a thick undergrowth, from half a mile to two miles in width, but from thence to the bluffs it is principally prairie. It is interspersed with sloughs, lakes, and ponds, the most of which become dry in autumn. The land is highest near the margin of the stream, and consequently when overflowed retains a large quantity of water, which is apt to stagnate and throw off miasma, rendering the air deleterious to health. The soil is, however, inexhaustibly productive. Seventy-five bushels of corn to the acre is an ordinary crop, and about the old French towns it has been cultivated and produced successive crops of corn annually for more than 100 years. Besides the American Bottom, there are others that resemble it in its general character. On the banks of the Mississippi there are many places where similar lands make their appearance, and also on the other rivers of the state. The bottoms of the Kaskaskia are generally covered with a heavy growth of timber, and are frequently inundated when the river is at its highest flood. Those of the Wabash are of various qualities, being less frequently submerged by the floods of the river as you ascend

from its mouth. When not inundated they are equal in fertility to the far-famed American Bottom, and in some instances are preferable, as they possess a soil less adhesive.

"These bottoms, especially the American, are the best regions in the United States for raising stock, particularly horses, cattle, and swine. The roots and worms of the soil, the acorns and other fruits from the trees, and the fish of the lakes, are sufficient to subsist and fatten the swine; and the horses and cattle find inexhaustible supplies of grass in the prairies and pea vines, buffalo grass, wild oats, and other herbage in the timber during the summer, and rushes in the winter. The soil is not so well adapted to the production of wheat and other small grain as of Indian corn. They grow too rank, and fall down before the grain is sufficiently ripened to harvest. They are also all, or nearly all, subject to the very serious objection of being unhealthy.

"A large part of Illinois consists of the lesser prairies, which spread out between the creeks, rivers, and timber lands, being mostly undulating, dry, and extremely fertile. They are, however, sometimes level, and in other cases wet. In the southern part of the state they are small, varying in size from those of several miles in width to those which contain only a few acres. As you advance to the north they widen and extend on the more elevated ground between the water-courses, and are frequently from six to twelve miles in width. Their borders are by no means uniform. Long points of timber often project into the prairies, and points of prairie project into the timber between the streams. In many instances there are copses and groves of timber embracing from 100 to 2000 acres in the midst of the prairies, like islands in the ocean. This is a common feature in the country between the Sangamou river and Lake Michigan, and in the northern parts of the state generally. The lead mine region, especially abounds with these groves. These prairies are devoid of timber, and are covered with rank grass, over which the fire annually sweeps, blackening the surface, and leaving a deposit of ashes to enrich the soil. The tough sward which covers them, effectually prevents the timber from taking root; but when this is destroyed by the plough, the surface is soon covered with a thick growth of timber. There are large tracts of country in the older settlements, where thirty or forty years ago the farmers cut their winter's supply of hay, which are now covered with a forest of young and thrifty timber. The prairies have a rich, productive soil; are generally favourable to the preservation of health; and are well adapted to all the various purposes of cultivation.

"Another kind of land which abounds in this state is called, in the dialect of the west, 'Barrens.' In the early settlement of Kentucky, the inhabitants, observing that certain portions of the country had a dwarfish and stunted growth of timber scattered over the surface or collected in clumps, with hazel and shrubbery intermixed, inferred that the soil must necessarily be poor, and hence called these tracts barrens. It was, however, soon ascertained, that so far from their being barren, they were really among the most productive lands in the state. The name has, however, been retained, and received a very extensive application throughout the west. In general, the barrens of Illinois have a surface more uneven or rolling than the prairies, and which more frequently degenerates into ravines and 'sink-holes.' They are almost invariably healthy; have a greater abundance of pure springs, and possess a soil better adapted to all the purposes of cultivation and the different changes of seasons than either the bottoms or prairies. They are covered with wild grass, and with oak and hickory trees and shrubs, which are scattered over their surface, and are gnarled and dwarfish, in consequence of the repeated fires which sweep over them; but when these are stopped, healthy sprouts shoot up from the mass of roots which have accumulated in the earth, and grow with amazing rapidity, so that the want of timber on these tracts can easily be supplied.

"What is called forest, or timber land also abounds in Illinois, but is very unequally distributed over the state. Where the prairie predominates timber is, of course, a desideratum, but as it shoots up with great strength and rapidity as soon as the soil is broken by the plough, this circumstance does not prove a bar to the settlement of the country. The kinds of timber most abundant are oaks of various kinds, black and white walnut, ash, elm, sugar maple, honey locust, hackberry, linden, hickory, cotton wood, pecan, mulberry, buckeye, sycamore, wild cherry, box, elder, sassafras, and persimmon. In the southern and eastern parts of the state are yellow poplar and beech; near the Ohio are eypress; and on the Calamich, near Lake Michigan, is a small tract covered with white pine. The under-

growth consists of red-bud, pawpaw, sumach, plum, crab-apple, grape vines, dog-wood, spic-bush, green brier, hazel, &c. For ordinary purposes, there is now timber enough in the state without resorting to artificial cultivation.

"The more uneven portions of the country are divided into knobs, bluffs, ravines, and sink-holes. Knobs are ridges of flint limestone intermingled and covered with earth, and elevated 100 or 200 feet above the common surface. They are of little value for cultivation, and have a thin growth of dwarfish trees like the barrens. The steep hills and natural mounds that border the alluvions have obtained the name of bluffs. Some are in long parallel ridges, others like cones and pyramids. They are sometimes formed of precipices of limestone rock from fifty to 100 feet high. The ravines are the depressions formed between the bluffs, and often leading from the prairies down to the streams. Sink-holes are circular depressions of various sizes, from ten to fifty feet deep, and from ten to 100 yards in circumference. They frequently contain an outlet for the water received by the rains, and indicate a substratum of secondary limestone.

"There are but few tracts of ground in the state where loose stones are scattered over the surface or imbedded in the soil, and these are chiefly in the northern part. There are, however, quarries of stone in the bluffs, along the ravines, and on the banks of the streams. The soil throughout the state is mostly porous, easy to cultivate, and exceedingly productive. There are no mountains; no ranges of hills; but few ledges; and only a small amount of irreclaimable wastes of any kind in the state. Its capabilities of production are therefore immense, and probably greater than those of any other state, comparing area with area.

"Among the products of the soil, grapes, plums, crab-apples, wild cherries, persimmons, pawpaws, black mulberries, gooseberries, strawberries, and blackberries, are indigenous, and grow wild in great profusion. Of the cultivated fruits, apples, pears, quinces, peaches, and grapes, thrive well, and can be raised in abundance. The cultivated vegetable productions of the field are Indian corn, wheat, oats, barley, buckwheat, Irish potatoes, sweet potatoes, turnips, rye, tobacco, cotton, hemp, flax, the castor bean, &c. Maize, or Indian corn is the staple. No farmer can live without it, and many raise little else. It is cultivated with great ease; produces ordinarily fifty bushels to the acre; often seventy-five; and not unfrequently reaches even to 100. Wheat is a good and sure crop, especially in the middle part of the state, and in a few years Illinois will probably send immense quantities to market. Hemp grows spontaneously, but is not extensively cultivated. Cotton is raised in the southern part of the state, and in 1840, 200,000 pounds were produced; 30,000 pounds of rice were gathered in the same year, and 2591 pounds of hops.

"The stock of the farmer consists principally of horses, neat cattle, swine, and sheep. Horses are more used here than in the eastern states. They do much the greater proportion of the ploughing, and off from the stage routes the travelling is chiefly performed on horseback. Illinois possesses fine grazing lands, and raises for market considerable quantities of beef, which is sold in the western states. In Alton alone, 5000 beeves were killed during the past winter, prior to the first of February. Pork is one of the staples, and thousands of hogs are produced almost without trouble or expense, as they are raised on the fruits and nuts which grow wild in the woods. Near 70,000 were slaughtered in Alton last fall (1842). Sheep have not been hitherto raised in very great numbers, but the flocks of the Illinois farmers are rapidly increasing, and the number in the state now amounts to 486,751. Poultry are raised in great abundance. Ducks, geese, and other aquatic birds, visit the lakes and streams during winter and spring, and prairie hens (grouse) and quails are very numerous, and are taken in great abundance."

Minerals.—"The resources of Illinois do not stop with her large and navigable rivers, the inexhaustible fertility of her soil, or the abundance of her animal and vegetable productions. She is also rich in minerals. Coal, secondary limestone, and sandstone, are found in almost every part of the state. Iron has been found in the south, and is also said to exist in considerable quantities in the north. Marble and granite are found in several counties, and the quantity quarried in 1839 amounted in value to 71,778 dollars. Copper has been found in small quantities on Muddy river, and in the bluffs of Monroe county; and in greater abundance on the Peekatonokee, near the northern boundary of the state. Crystallised gypsum has been discovered in small quantities in St. Clair county, and quartz

crystals in Gallatin county. Gold is found in Jo-Davies's and Fulton counties, from which gold was produced in 1839 to the value of 5250 dollars. Silver is also supposed to exist in the vicinity of Silver creek, and in early times a shaft was sunk here by the French, and it is said that large quantities of this metal were obtained.

"But of all the mineral productions of the state, lead is the most abundant. In the northern part of Illinois and the territory adjacent, are the richest lead mines hitherto discovered on the globe. They lie principally north of Rock river and south of the Wisconsin, but some have also been found on the west side of the Mississippi. For many years the Indians and French traders were accustomed to dig lead in these regions, but they never penetrated much below the surface. In 1823, the late Colonel James Johnson obtained a lease of the United States government, and made arrangements to prosecute the business of smelting, which he commenced with considerable energy the following year."—(See Account of the Minerals of the United States, hereafter.)

PRINCIPAL TOWNS.

SPRINGFIELD, capital of the state of Illinois, 105 miles north by east of St. Louis, 780 miles from Washington. Situated near the centre of the state, four miles south of Sangamon river, on the border of a beautiful and extended prairie. It was laid out in 1822, and in 1823 contained thirty families, living in log cabins. It contained, in 1840, a state house, for the erection of which 50,000 dollars has been appropriated, a court house, and market house, on a fine public square, a United States' land office, six churches—two Presbyterian, one Episcopal, one Baptist, one Baptist Reformed, and one Methodist—three academies, thirty-four stores, capital 266,000 dollars; one iron foundry, four carding machines, three printing offices, each issuing a weekly newspaper, and 2579 inhabitants.

CHICAGO, 204 miles north-north-east of Springfield, and 717 miles from Washington, is beautifully situated on level ground, sufficiently elevated to secure it from ordinary floods, on both sides of a river of the same name, between the junction of its north and south branches and its entrance into Lake Michigan, a distance of three quarters of a mile. It extends along the lake shore for a mile. The river is here from fifty to seventy-five yards wide, and from fifteen to twenty-five feet deep. The bar at the mouth has only about three feet of water. An artificial harbour has been made by the construction of piers, which extend on each side of the entrance of the river for some distance into the lake, to prevent the accumulation of sand upon the bar. Numerous steamboats and vessels ply between this place and Buffalo, and the various intermediate places on the upper lakes. Behind the city, toward Des Plaines river, is a fertile prairie, which for the first three or four miles is elevated and dry. Along the north branch of the Chicago and the lake shore there are extensive bodies of fine timber. White pine lumber is obtained from the regions about Green bay and Grand river, in Michigan, and across the lake from St. Joseph's river. The canal now in progress from this place to the Illinois river will add to its importance and business. It is sixty feet wide at top, and six feet deep, 105 miles in length, including a feeder of four miles, and five miles of river navigation, and is estimated to cost 8,654,337 dollars. It had, in 1840, four foreign commission houses, with a capital of 35,300 dollars; ninety-seven retail stores, capital 400,300 dollars; eleven lumber yards, capital, 38,900 dollars; one furnace, capital 20,000 dollars; one distillery, two flouring mills, three printing offices, one bindery, two daily, and two weekly newspapers, and one periodical, fourteen brick and stone houses, and forty-one wooden houses, built during the year, and cost 57,500 dollars. Capital in manufactures, 61,950 dollars. Eleven schools, 397 scholars. Population, 4470.—(See Internal Trade, hereafter.)

QUINCY, 104 miles south of Springfield, and 884 miles from Washington, is situated on a bluff, on the east side of Mississippi river, 125 miles above the mouth of Illinois river by water, and contains a court house, four churches, twenty-five stores, a United States' land office, a large steam flouring and saw mill, a carding machine, about 200 dwellings, and 1500 inhabitants. The court house stands on a fine public square. There are about 300 steamboat arrivals annually; and pork is annually exported to the amount of 100,000 dollars.—*U. S. Gaz.*

om Wash-

ington, is situated on the east bank of the Mississippi, two miles and a half above the mouth of the Missouri, eighteen miles below the mouth of the Illinois. It has the best landing for steamboats on the east bank of the Mississippi. A flat rock level with the surface of the ground, forms an excellent natural wharf. The finest timber surrounds it for several miles. Bituminous coal exists in great abundance, near the town. Limestone, freestone, and water limestone, exist in abundance. The corporate bounds of the city extend two miles along the river, and half a mile back. There are five squares reserved for public purposes, and a large reservation at the landing place. Market-street is 150 feet wide, and other streets from sixty to 180 feet, regularly laid out. Seven or eight steamboats are owned here. The growth of this place has been exceedingly rapid. There were, in 1840, four foreign commission houses, capital 22,000 dollars; thirty-eight stores, capital 319,800 dollars; one brewery, one flouring mill, three saw mills, three printing offices, two weekly newspapers, and one periodical. Capital in manufactures, 80,175 dollars. Population, 2340.—*U. S. Gaz.*

GALENA, capital of Jo-Davies's county, 230 miles north-west from Springfield, 882 miles from Washington. It is pleasantly situated on Fève, or Bean river, and is the metropolis of the great lead region. It is six miles above the mouth of the river, which is navigable to this place, at all stages of the water, for the largest steamboats. It has an intercourse by steamboats with St. Louis, New Orleans, Louisville, Cincinnati, and other places on the Mississippi and Ohio rivers. It contained, in 1840, thirty-five stores, one academy, one flouring mill, one saw mill, various mechanic establishments, 300 dwellings, and about 1500 inhabitants. First settled in 1826. In this region there were produced, in 1841, 22,000,000 lbs. of lead, most of which finds a market in this place. The manufacture of copper is also becoming important, and three furnaces are engaged in smelting it.—(See Minerals of the United States, hereafter.)

NAUVOO, 124 miles north-west from Springfield, 891 miles from Washington. It is situated on the east bank of the Mississippi river, which is here about two miles wide, and where is a good steamboat landing. In consequence of a curve in the river, it bounds the place on the north-west and south. It is 181 miles above the mouth of Illinois river, and the city limits include a space four miles long and three miles wide, at its greatest width, covered with streets of ample width, and crossing each other at right angles. Its buildings, at the end of three years from the time of its establishment, amount to 1000, consisting chiefly of white-washed log cabins, with some frame and brick houses. Its public buildings are the *Nauvoo House*, a spacious hotel, fronting on two streets, 120 feet on each, forty feet wide, and three stories high above the basement. In this building Joe Smith, the pretended prophet and leader of these "Latter-day Saints" was provided, before his murder, with a suite of rooms. The *Nauvoo Temple*, not yet entirely completed, will be 130 feet long, and 100 feet wide. In the basement is a baptistry, or brazen sea, supported on twelve gilded oxen, the model of which is derived from the brazen sea of Solomon. Their property is held as private; but a large farm, without the city is occupied and cultivated in common. The *Nauvoo Legion* consists of from 2000 to 3000 men, armed and disciplined. They have a university, which contains a president, a professor of mathematics and English literature, a professor of the learned languages, and a professor of church history. The population amounts to 7000, within the city limits, a large number of whom are from England, besides about 3000 who belong to the fraternity, in the vicinity. The city is divided into four wards, and has a mayor, and, from each of the wards, two aldermen, four common councilmen, and a constable.—*U. S. Gaz. for 1844.*

Finances.—This is one of the non-paying states.

The debt of Illinois is as follows:—

	dollars.
Internal improvement debt	5,614,196
Canal debt	4,338,907
State house	116,000
School, college, and seminary funds	808,085
Due state bank for warrants	294,190

Total debt upon which interest accrues 11,171,378

"The *improvement debt* was for railroads and other matters. The taxes of the state were twenty cents per 100 dollars of valuation for state purposes, and ten cents for the interest on this improvement debt. This latter tax has been repealed, and the only resource to which the holders of this 10,000,000 dollars of canal and improvement debt are to look for their money, is the completion of the canal, for the construction of which the canal stock was issued. The state offers that canal and its property to those who will advance 1,000,000 dollars to complete it. The value of the property of the canal is as follows, according to the engineer:—

	dollars.
230,467 acres canal lands, at 10 dollars	2,304,670
Lots at Chicago	350,000
Lots at Lockport	300,000
Lots at Ottawa	350,000
Lots at La Salle	500,000
Lots at Juliet and La Page	300,000

Total value canal property 4,104,670

"It is proposed to give this property into the hands of trustees or those who will advance the new loan, to be sold for cash when the canal is completed, and applied to the payment of the loan, principal, and interest. The revenue of the completed canal then to pay the interest of the old canal bonds, and then that of the improvement bonds.

"The land of Illinois comes under taxation five years after its purchase, and the taxable acres are as follows :

	acres.		acres.
1840	7,960,000	1843	14,271,000
1841	10,060,000	1844	15,000,000
1842	13,250,000	1845	16,132,876

"The following is a statement of the taxable property, amount of state tax, and taxes, including town and county tax, in three states:—

	taxable property.	rate of tax.	state tax.	total tax.
Illinois	69,881,419	20 cents.	182,800	331,330
Indiana	100,000,000	46 "	405,000	725,000
," poll tax		75 "	75,000	
Ohio	134,000,000	50 "	917,153	2,350,000

"At the present rate, it will be observed, that taxes are much lighter than in the other states.

"Since 1840, as seen in the above table, 1,110,000 acres have been settled, or twelve per cent of the whole amount taxable in 1840. In 1837, Illinois *bought* provisions of Ohio. In 1841, she exported several millions. This shows the rapid progress of settlement and produce. The completion of the canal will give value and activity to the whole mass, giving wealth to the citizens, and *ability* and *will* to pay taxes for the remaining debts."—*United States Almanac for 1845.*

VI. INDIANA.

INDIANA is bounded north by Michigan lake and state; east by Ohio; south by Kentucky, from which it is separated by the Ohio river; and west by Illinois. It is between 37 deg. 45 min. and 41 deg. 52 min. north latitude, and between 84 deg. 42 min. and 87 deg. 49 min. west longitude, and between 7 deg. 45 min. and 11 deg. west from Washington. Its length is about 260 miles, and breadth about 140 miles; comprising an area of about 36,000 square miles, or 23,040,000 British statute acres. The population, in 1800, was 5641; in 1810, 24,520; in 1820, 147,178; in 1830, 341,582; in 1840, 685,866. White males, 352,773; white females, 325,925; coloured males, 3731; coloured females, 3434. Employed in agriculture, 148,806; in commerce, 3076; in manu-

factures and trades, 20,590 ; in mining, 238 ; navigating the ocean, 89 ; navigating canals, rivers, and lakes, 677 ; learned professions, 2257.

This state is divided into eighty-seven counties, which, with their population, in 1840, and their capitals, were as follows :—Adams, 2264, C. Decatur ; Allen, 5942, C. Fort Wayne ; Blackford, 1226, C. Hartford ; Bartholomew, 10,042, C. Columbus ; Boone, 8121, C. Lebanon ; Brown, 2364, C. Nashville ; Benton, C. Benton C.H. ; Carroll, 7819, C. Delphi ; Cass, 5480, C. Logansport ; Clarke, 14,595, C. Charlestown ; Clay, 5567, C. Bowling Green ; Clinton, 7508, C. Frankfort ; Crawford, 5282, C. Fredonia ; Davies, 6720, C. Washington ; Dearborn, 19,327, C. Lawrenceburg ; Decatur, 12,171, C. Greensburg ; De Kalb, 1968, C. Auburn ; Delaware, 8843, C. Muncytown ; Dubois, 3632, C. Jasper ; Elkhart, 6660, C. Goshen ; Fayette, 9837, C. Connersville ; Floyd, 9454, C. New Albany ; Fountain, 11,218, C. Covington ; Franklin, 13,349, C. Brookville ; Fulton, 1993, C. Rochester ; Gibson, 8977, C. Princeton ; Grant, 4875, C. Marion ; Greene, 8321, C. Bloomfield ; Hamilton, 9855, C. Noblesville ; Hancock, 7535, C. Greenfield ; Harrison, 12,459, C. Corydon ; Hendricks, 11,264, C. Danville ; Henry, 15,128, C. New Castle ; Huntington, 1579, C. Huntington ; Jackson, 8961, C. Brownston ; Jasper, 1267, C. Rensselaer ; Jay, 3863, C. Portland ; Jefferson, 16,614, C. Madison ; Jennings, 8829, C. Vernon ; Johnson, 9352, C. Franklin ; Knox, 10,657, C. Vincennes ; Kosciusko, 4170, C. Warsaw ; La Grange, 3664, C. Lima ; Lake, 1468, C. Crown Point ; La Porte, 8184, C. La Porte ; Lawrence, 11,782, C. Bedford ; Madison, 8874, C. Andersonstown ; Marshall, 1651, C. Plymouth ; Marion, 16,080, C. Indianapolis ; Martin, 3875, C. Mount Pleasant ; Miami, 3048, C. Peru ; Monroe, 10,143, C. Bloomington ; Montgomery, 14,438, C. Crawfordsville ; Morgan, 10,741, C. Martinsville ; Noble, 2702, C. Augusta ; Orange, 9602, C. Paoli ; Owen, 8359, C. Spencer ; Parke, 13,499, C. Rockville ; Perry, 4655, C. Rome ; Pike, 4769, C. Petersburg ; Porter, 2162, C. Valparaiso ; Posey, 9683, C. Mount Vernon ; Pulaski, 561, C. Winnamac ; Putnam, 16,843, C. Green Castle ; Randolph, 10,684, C. Winchester ; Ripley, 10,392, C. Versailles ; Rush, 16,456, C. Rushville ; Scott, 4242, C. Lexington ; Shelby, 12,005, C. Shelbyville ; Spencer, 6305, C. Rockport ; St. Joseph, 6425, C. South Bend ; Stark, 149, C. Stark C.H. ; Steuben, 2578, C. Angola ; Sullivan, 8315, C. Benton ; Switzerland, 9920, C. Vevay ; Tippecanoe, 13,724, C. Lafayette ; Union, 8017, C. Liberty ; Vanderburg, 6250, C. Evansville ; Vermilion, 8274, C. Newport ; Vigo, 12,076, C. Terre Haute ; Wabash, 2756, C. Wabash ; Warren, 5656, C. Williamsport ; Warwick, 6321, C. Booneville ; Washington, 15,269, C. Salem ; Wayne, 23,290, C. Centreville ; Wells, 1822, C. Bluffton ; White, 1832, C. Monticello ; Whitley, 1237, C. Columbia.

Soil.—There are no mountains in Indiana. The country bordering on the Ohio is hilly and undulated. A range of hills runs parallel with the Ohio, from the mouth of the Great Miami to Blue river, alternately approaching to within a few rods, and receding to the distance of two miles. Immediately below Blue river, the hills disappear, and then a large tract of level land succeeds, covered with a heavy growth of timber. Bordering on all the principal streams, except the Ohio, there are strips of bottom and prairie land, from three to six miles in width. Remote from the rivers the country is broken, and the soil light. Between the Wabash and Lake Michigan, the country is generally level, interspersed with woodlands, prairies, lakes, and swamps. The shore of this state, which extends along the southern end of Lake Michigan is lined with sand hills, about 200 feet high, behind which there are sandy hillocks, on and between which grow some pine and a few other trees. The prairies bordering on the Wabash are rich, having ordinarily an excellent vegetable soil from two to five feet deep. The natural growth of this soil consists of several kinds of oak, ash, beech, buckeye, walnut, cherry, maple, elm, sassafras, linden, honeylocust, cotton wood, sycamore, and mulberry. The principal productions are wheat, rye, Indian corn, oats, buckwheat, barley, potatoes, beef, pork, butter, cheese, &c.

—*U. S. Gaz.*

Live Stock and Agricultural Products.—In 1840, there were in this state 241,036 horses and mules ; 619,980 neat cattle ; 675,982 sheep ; 1,623,608 swine ; poultry to the value of 357,594 dollars. There were produced, 4,049,375 bushels of wheat ; 28,015 bushels of barley ; 5,981,605 bushels of oats ; 129,621 bushels of rye ; 43,019 bushels of buckwheat ; 28,155,887 bushels of Indian corn ; 1,237,919 lbs. of wool ; 38,591 lbs. of

hops; 30,647 lbs. of wax; 1,525,794 bushels of potatoes; 178,029 tons of hay; 8605 tons of flax and hemp; 1,820,306 lbs. of tobacco; 3,727,795 lbs. of sugar. The products of the dairy were valued at 742,269 dollars; of the orchard, at 110,055 dollars; of lumber, at 420,791 dollars. There were made 10,265 gallons of wine; and value of skins and furs, 220,883 dollars.—*Official Returns.*

Minerals.—Iron and coal have been found in this state, and there are some salt springs, and Epsom salts are found in a cayo near Corydon; but the mineral productions have no great interest.

The climate is generally healthy and pleasant; the winters are mild in the southern, and more severe in the northern parts.

Rivers.—The Ohio river washes the whole southern border of this state, and furnishes great facilities for trade. The Wabash is the largest river in this state, being 500 miles in length. It rises in Ohio, and passes westwardly and south-westwardly through the state, when it forms a part of the western boundary for 120 miles, and enters the Ohio thirty miles above Cumberland river. It is navigable for steamboats to Lafayette, 300 miles, a part of the year. White river, its largest branch, is 200 miles long, and is navigable in its west fork for steamboats to Indianapolis, in season of floods. It consists of an east fork and west fork, which unite about thirty miles above its junction with the Wabash. The White Water river runs in the eastern part of the state, and enters the Great Miami a little above its mouth. The St. Joseph's river enters the north part of the state from Michigan, and after a course of forty miles, passes through Michigan into Michigan lake. Lake Michigan touches this state in its north-west part.—*U. S. Gaz.*

Trades.—There were in the state, in 1840, eleven commercial and twenty-six commission houses engaged in foreign trade, with a capital of 1,207,400 dollars; 1801 retail dry goods and other stores, with a capital of 5,664,687 dollars; 767 persons employed in the lumber trade, with a capital of 90,374 dollars; 2705 persons engaged in internal transportation, who, with 237 butchers, packers, &c., employed a capital of 582,165 dollars.—*Official Returns.*

Manufactures.—The value of home-made, or family manufactures, was 1,289,802 dollars. There were twenty-four fulling mills, and thirty-seven woollen manufactories, employing 103 persons, producing goods to the value of 58,867 dollars, and employing a capital of 77,954 dollars; twelve cotton manufactories, with 4983 spindles, employing 210 persons, producing articles to the value of 135,400 dollars, with a capital of 142,500 dollars; seven furnaces, producing 810 tons of cast iron, and one forge, producing twenty tons of bar iron, employing 103 persons, and a capital of 57,700 dollars; forty-seven persons produced 242,040 bushels of bituminous coal, with a capital of 9300 dollars; three paper manufactories, producing to the value of 86,457 dollars, and other manufactures of paper producing to the value of 54,000 dollars, the whole employing 100 persons, and a capital of 68,739 dollars; 261 persons manufactured flax to the value of 6851 dollars; eighty-eight persons manufactured tobacco to the value of 65,659 dollars, with a capital of 24,706 dollars; hats and caps were manufactured to the value of 122,844 dollars, and straw bonnets to the value of 2048 dollars, the whole employing 183 persons, and a capital of 69,018 dollars; 428 tanneries employed 978 persons, and a capital of 399,627 dollars; 579 other manufactories of leather, as saddleries, &c., produced articles to the value of 730,001 dollars, and employed a capital of 247,549 dollars; forty-five potteries employed seventy-nine persons, produced articles to the value of 35,835 dollars, with a capital of 13,685 dollars; twenty-six persons produced drugs and paints to the value of 47,720 dollars, with a capital of 17,984 dollars; 120 persons produced machinery to the value of 123,808 dollars; eighty-three persons produced hardware and cutlery to the value of 34,263 dollars; forty-seven persons manufactured 885 small arms; two persons manufactured the precious metals to the value of 3500 dollars; twenty-eight persons manufactured granite and marble to the value of 6720 dollars; 1007 persons produced bricks and lime to the value of 206,751 dollars, with a capital of 140,469 dollars; thirty persons made 1,135,560 lbs. of soap, 228,938 lbs. of tallow candles, 111 lbs. of wax and spermaceti candles, with a capital of 13,039 dollars; 323 distilleries produced 1,787,108 gallons, twenty breweries produced 188,392 gallons, the whole employing 500 persons, and a capital of 292,316 dollars; five rope walks, employing eleven persons, produced cordage to the value of 5850 dollars, with a capital of 2270

dollars; 481 persons manufactured carriages and waggons to the value of 163,135 dollars; with a capital of 78,116 dollars; 204 flouring mills manufactured 224,624 barrels of flour, and, with other mills, employed 2224 persons, producing articles to the value of 2,329,134 dollars, and employing a capital of 2,077,018 dollars; vessels were built to the value of 107,223 dollars; 564 persons produced furniture to the value of 211,481 dollars, with a capital of 91,022 dollars; 346 brick or stone houses, and 4270 wooden houses, employed 5519 persons, and cost 1,241,312 dollars; sixty-nine printing offices, six binderies, four semi-weekly, and sixty-nine weekly newspapers, and three periodicals, employed 211 persons, and a capital of 58,505 dollars. The whole amount of capital employed in manufactures was 4,132,043 dollars.—*Official Returns.*

Education.—Indiana college, at Bloomington, was founded in 1827; South Hanover college, at South Hanover, was founded in 1829; Wabash college, at Crawfordsville, was founded in 1833; the Indiana Asbury university, under the Methodists, was founded in 1839. In these institutions there were, in 1840, 322 students. There were in the state fifty-four academies, with 2946 students; and 1521 common and primary schools, with 48,189 scholars. Of white persons over twenty years of age, 38,100 could neither read nor write.—*U. S. Gaz.*

Religion.—In 1836, the Baptists had 334 churches, and 218 ministers; the Presbyterians had 109 churches and seventy ministers; the Methodists about seventy preachers. The Lutherans, in 1840, had thirty congregations, and eight ministers. Besides these, there is a considerable number of Friends, and some Episcopalians, Roman Catholics, and some Presbyterians, Methodists, and Baptists of different descriptions.—*U. S. Gaz.*

Banks.—In the commencement of 1840, there was one bank, with twelve branches, in the state, with a capital of 2,595,221 dollars, and a circulation of 2,985,370 dollars. At the close of 1840, the state debt amounted to 13,667,433 dollars.—(See Banks of United States hereafter.)

Public Works.—The greatest work of internal improvement undertaken by this state is the Wabash and Erie canal, which extends from Lafayette, on the Wabash, 187 miles to Lake Erie, at Toledo, on the Maumee bay; eighty-seven miles and a quarter of it being in Ohio, and ninety-nine miles and three-quarters in Indiana. The White Water canal extends from Lawrenceburg, thirty miles to Brookville. This canal, when completed, will connect Cambridge, on the national road, with the Ohio river, the entire length being seventy-six miles, at an estimated cost of 1,400,000 dollars. The Central canal is designed to connect the Wabash and Erie canal at Peru, with the Ohio river at Evansville, passing through Indianapolis. The entire length will be 290 miles, and the estimated cost 3,500,000 dollars. Parts of this work have been completed. Terre Haute and Eel River canal will connect Terre Haute, the southern termination of the Wabash and Erie canal, with the Central canal in Greene county, at a distance of forty miles and a half, and an estimated expense of 629,631 dollars. This work is not completed. The Madison and Indianapolis railroad extends from Madison, on the Ohio river, ninety-five miles to Indianapolis. It is nearly completed. Several other canals and railroads have been projected.—*U. S. Gaz.*

PRINCIPAL TOWNS.

LA FAYETTE, seventy miles north-west of Indianapolis, is situated on the east side of the Wabash river, ten miles below the mouth of the Tippecanoe river, at the head of steamboat navigation on the Wabash. In 1840 it contained a court house, gaol, market house, bank, seven churches, an academy, twenty-one stores, two flouring mills, two saw mills, one paper mill, one carding and fulling mill, 400 dwellings, and about 2000 inhabitants. The Wabash and Erie canal connects it with Lake Erie.

MADISON, situated on the north bank of the Ohio, 560 miles north-west of Washington. It has an active trade, principally in exporting pork, and other produce; 15,000 hogs have been annually killed. There is a cotton factory, a steam engine factory and some other fabrics. In 1840, there were fifty stores, two iron foundries, two banks, and 3798 inhabitants. The houses are well built, chiefly of brick.

INDIANAPOLIS, capital of the state of Indiana, is situated on the east side of White

river, which is navigable to this town in time of high water. It contains a state house, governor's house, court house, a United States' land office, six churches, a female institute, a county seminary, a steam flouring and saw mill, and 2692 inhabitants. The *national* road passes through the place; and the most important roads in the state centre here. The place was originally laid out on a mile square, with streets crossing each other at right angles, and additions have been made to it on the different sides. In the centre, is a circular area of several acres, from which four streets diverge, crossing the other streets diagonally. In the centre of the circular area was originally a mound, on which stands the governor's house, in a very commanding situation, with a circular street around it, eighty feet wide. The state house is 180 feet long, by eighty feet wide, and forty-five feet high from the ground to the cornice, with an appropriate dome. A bridge crosses White river. In 1840, there were thirty stores, capital 92,600 dollars; one fulling mill, one cotton factory, 500 spindles, two tanneries, one brewery, two printing offices, two binderies, two weekly and one semi-weekly newspapers, one flouring mill, four grist mills, nine saw mills, two oil mills. Capital in manufactures, 31,630 dollars. Population, 1452.

TERRE HAUTE, on the east bank of the Wabash, is another famous place, with about 2500 inhabitants.

EVANSVILLE, 172 miles south-west by south of Indianapolis, is situated on the north bank of the Ohio river, at the great north bend, below the entrance of Green river, and contained, in 1840, a court house, gaol, a bank, eight churches, a steam flouring mill, one foundry, forty-five stores, 500 dwellings, and 2500 inhabitants.

FORT WAYNE, 131 miles north-north-east of Indianapolis, beautifully situated on the south side of the Maumee river, and contained, in 1840, a court house, gaol, five churches, four academies, nine stores, 500 dwellings, and about 2000 inhabitants. It is on the line of the Wabash and Erie canals, and surrounded by a rich and fertile country.

LOGAN'S PORT, at the head of the steamboat navigation on the Wabash, seventy-two miles from Indianapolis, and at the junction of the Erie and Wabash canal, is a flourishing and increasing town, with about 2000 inhabitants.

NEW ALBANY, situated on the north bank of the Ohio, 121 miles south-by-east of Indianapolis. In 1840, population 4226; had fifty stores, one iron foundry, one steam engine factory, one hemp bagging factory, ten to fifteen steamboats, besides sloops and schooners, built annually. This place is rapidly increasing.

Finances.—The revenue paid in for the year ending October 31st, 1843, was 213,716 dollars 66 cents. The amount of the common school fund, derived from bank dividends, was 59,243 dollars 44 cents. The number of acres of land assessed in 1843 was 14,674,599. The value of all property taxed, was 103,709,853 dollars. The number of polls taxed was 121,919. The internal improvements of the state consist of one railroad, three turnpike roads, and five canals. The amount of the state debt was 13,899,000 dollars; of which sum, 1,527,000 dollars accrued from bank stock, and the balance for internal improvements. The expenses of government, in 1843, were 90,897 dollars; for 1844, they are estimated at 100,000 dollars. The income is estimated at 240,000 dollars, mostly paid in state treasury notes.

VII. OHIO.

Ohio is bounded north by Michigan and Lake Erie; east, by Pennsylvania and Virginia; south, by the Ohio river, which separates it from Virginia and Kentucky; and west by Indiana. It lies between 38 deg. 30 min. and 42 deg. north latitude, and between 80 deg. 35 min. and 84 deg. 47 min. west longitude, and between 3 deg. 31 min. and 7 deg. 41 min. west longitude from Washington. It is about 210 miles long from north to south, and 200 miles broad from east to west; comprising an area of about 40,000 square miles, or 25,600,000 British statute acres. The population, in 1790, was 3000; in 1800, 45,365; in 1810, 230,760; in 1820, 581,434; in 1830, 937,637; in 1840, 1,519,467; being the third in population in the United States. Of these, 775,360 were white males; 726,762 white females; 8740 were free coloured males; 8602 free

coloured females. Employed in agriculture, 272,579; in commerce, 9201; in manufactures and trades, 66,265; in mining, 704; navigating the ocean, 212; navigating rivers, canals, and lakes, 3323; learned professions, 5663.—*Official Returns.*

This state is divided into seventy-nine counties, which, with their population in 1840, and their capitals, are as follows:—Adams, 13,183, C. West Union; Allen, 9079, C. Lima; Ashtabula, 23,724, C. Jefferson; Athens, 19,109, C. Athens; Belmont, 30,901, C. St. Clairsville; Brown, 22,715, C. Georgetown; Butler, 28,173, C. Hamilton; Carroll, 18,108, C. Carrollton; Champaign, 16,721, C. Urbana; Clark, 16,882, C. Springfield; Clermont, 23,106, C. Batavia; Clinton, 15,719, C. Wilmington; Columbiana, 40,378, C. New Lisbon; Coshocton, 21,590, C. Coshocton; Crawford, 13,152, C. Bueyrus; Cuyahoga, 26,506, C. Cleveland; Darke, 13,282, C. Greenville; Delaware, 22,060, C. Delaware; Erie, 12,599, C. Sandusky City; Fairfield, 31,924, C. Lancaster; Fayette, 10,984, C. Soil.—The interior of the state, and the country bordering on Lake Erie, are generally level, and in some places marshy. From one-quarter to one-third of the state, comprehending the eastern and south-eastern part, bordering on the Ohio river, is generally hilly and broken. Most of the hills have a deep rich soil, and are capable of being cultivated to their highest summits.

“There is no elevation which deserves the name of a mountain, in the whole state. The interval lands on the Ohio, and several of its tributaries, have great fertility. On both sides of the Scioto, and of the Great and Little Miami, are the most extensive bodies of rich and level land in the state. On the head waters of the Muskingum and Scioto, and between the Scioto and the two Miami rivers are extensive prairies, some of them low and marshy, producing a great quantity of coarse grass, from two to five feet high; other parts of the prairies are elevated and dry, with a very fertile soil, though they are sometimes called barrens. The height of land which divides the waters which fall into the Ohio from those which fall into Lake Erie, is the most marshy of any in the state; while the land on the margins of the rivers is generally dry. Among the forest trees are black walnut, oak of various species, hickory, maple of several kinds, beech, birch, poplar, sycamore, ash of several kinds, pawpaw, buckeye, cherry, and whitewood, which is extensively used as a substitute for pine. Wheat may be regarded as the staple production of the state, but Indian corn and other grains are produced in great abundance. Although Ohio has already become so populous, it is surprising to the traveller to observe what an amount of forest is yet unsubdued.”—*U. S. Gaz.*

Climate.—“The summers are warm and pretty regular, but subject, at times, to severe drought. The winters are generally mild, but much less so in the northern than in

the southern part of the state. Near Lake Erie, the winters are probably as severe as in the same latitude on the Atlantic. In the country for fifty miles south of Lake Erie, there are generally a number of weeks of good sleighing in the winter; but in the southern part of the state, the snow is too small in quantity, or of too short continuance, to produce good sleighing for any considerable time. In the neighbourhood of Cincinnati, green peas are produced in plenty by the 20th of May. In parts of the state near marshes and stagnant waters, fevers, and agues, and bilious and other fevers, are prevalent. With this exception, the climate of Ohio may be regarded as healthful.—*U. S. Gaz.*

Live Stock and Agricultural Products.—In 1840, there were in this state 430,527 horses and mules; 1,217,874 neat cattle; 2,028,401 sheep; 2,099,746 swine; poultry, to the value of 551,193 dollars. There were produced 16,571,661 bushels of wheat; 212,440 bushels of barley; 14,393,103 bushels of oats; 814,205 bushels of rye; 633,139 bushels of buckwheat; 33,668,144 bushels of Indian corn; 3,685,315 lbs. of wool; 62,195 lbs. of hops; 38,950 lbs. of wax; 5,805,021 bushels of potatoes; 1,022,037 tons of hay; 9080 tons of hemp and flax; 5,942,275 lbs. of tobacco; 4317 lbs. of silk cocoons; 6,363,386 lbs. of sugar; the products of the dairy were valued at 1,848,869 dollars; of the orchard, at 475,271 dollars; of lumber, 262,821 dollars. There were made 11,524 gallons of wine; and 6809 tons of pot and pearl ashes.—*Official Returns.*

Minerals.—Salt springs have been found on Yellow creek, in Jefferson county; on the waters of Killbuck, in Wayne county; on Muskingum river, near Zanesville; and at various other places. "Bituminous coal is found in great quantities in the eastern part of the state, particularly near Massilon, in Stark county, and in Tallmadge, in Summit county. This coal is delivered to consumers in Cleveland for fifteen cents a bushel. Iron ore is found in various places, particularly near Zanesville, and on Bush creek, in Adams county."—*U. S. Gaz.*

Rivers.—The Ohio, which gives name to the state, flows along its entire southern border. This river is 908 miles long, from Pittsburg to its mouth, by its various windings, though it is only 614 miles in a straight line. Its current is gentle, with no falls, excepting at Louisville, Kentucky, where there is a descent of twenty-two feet and a half in two miles, but this has been obviated by a canal. For about half the year, it is navigable for steamboats of a large class through its whole course. The Muskingum, the largest river which flows entirely in the state, is formed by the junction of the Tuscarawas and Walholding rivers, and enters the Ohio at Marietta. It is navigable for boats 100 miles. The Scioto, the second river in magnitude, flowing entirely within the state, is about 200 miles long, and enters the Ohio at Portsmouth. Its largest branch is the Whetstone or Olentangy, which joins it immediately above Columbus. It is navigable for boats 130 miles. The Great Miami is a rapid river in the western part of the state, 100 miles long, and enters the Ohio in the south-west corner of the state. The Little Miami has a course of seventy miles, and enters the Ohio seven miles above Cincinnati. The Maumee is 100 miles long, rises in Indiana, runs through the north-west part of this state, and enters Lake Erie at Maumee bay. It is navigable for steamboats to Perrysburg, eighteen miles from the lake, and above the rapids is boatable for a considerable distance. The Sandusky rises in the northern part of the state, and, after a course of about eighty miles, it enters Sandusky bay, and thence into Lake Erie. The Cuyahoga rises in the north part of the state, and, after a curved course of sixty miles, enters Lake Erie at Cleveland. It has a number of falls which furnish valuable mill seats. Besides these, Huron, Vermilion, Black, Grand, and Ashtabula rivers fall into Lake Erie.—*U. S. Gaz.*

Harbours.—Lake Erie borders this state for about 150 miles, and has several harbours, among which the largest are within Maumee and Sandusky bays. Besides these, are the harbours of Huron, Cleveland, Fairport, and Ashtabula.—*U. S. Gaz.*

Trades.—The direct foreign exports of this state, in 1840, amounted to 991,954 dollars; and the imports to 4915 dollars. There were fifty-three commercial and 241 commission houses engaged in foreign trade, with a capital of 5,928,200 dollars; 4605 retail dry goods and other stores, with a capital of 21,282,225 dollars; 2891 persons employed in the lumber trade, with a capital of 373,268 dollars; 854 persons engaged in internal transportation, who, with 1061 butchers, packers, &c., employed a capital of 4,617,570 dollars.—*Official Returns.*

Manufactures.—In 1840, the value of home-made or family manufactures was 1,853,937 dollars; there were 130 woollen manufactories, and 206 fulling mills, producing goods to the value of 685,757 dollars, employing 935 persons, and a capital of 537,985 dollars; eight cotton manufactories, with 13,754 spindles, employing 246 persons, producing articles to the value of 139,378 dollars, and employing a capital of 113,500 dollars; seventy-two furnaces produced 35,236 tons of cast iron, and nineteen forges, &c., produced 7466 tons of bar iron, consuming 104,312 tons of fuel, employing 2268 persons, and a capital of 1,161,900 dollars; 434 persons produced 3,513,408 bushels of bituminous coal, with a capital of 45,525 dollars; fourteen paper manufactories, employing 305 persons, produced articles to the value of 270,202 dollars, with a capital of 208,200 dollars; thirty-one persons manufactured flax, producing the value of 11,737 dollars, with a capital of 242 dollars; hats and caps were manufactured to the value of 728,513 dollars, and straw bonnets to the value of 3028 dollars, the whole employing 963 persons, and a capital of 369,637 dollars; 812 tanneries employed 1790 persons, with a capital of 957,383 dollars; 1160 other manufactories of leather, as saddleries, &c., produced articles to the value of 1,986,146 dollars, with a capital of 917,245 dollars; 187 persons manufactured tobacco to the value of 212,818 dollars, with a capital of 68,810 dollars; ninety-nine potteries employed 199 persons, manufacturing to the value of 89,754 dollars, employing a capital of 43,450 dollars; 858 persons produced machinery to the value of 875,731 dollars; 289 persons produced hardware and cutlery to the value of 393,300 dollars; seventy persons produced three cannon, and 2450 small-arms; thirty-seven persons manufactured the precious metals to the value of 53,125 dollars; 589 persons manufactured other metals to the value of 782,901 dollars; seventy persons produced drugs and paints to the value of 101,880 dollars, with a capital of 126,335 dollars; 401 persons manufactured granite and marble to the value of 256,131 dollars; 1469 persons produced bricks and lime to the value of 712,697 dollars; thirteen persons, in two powder mills, produced 222,500 lbs. of powder, with a capital of 18,000 dollars; 105 persons manufactured 3,603,036 lbs. of soap, 2,318,456 lbs. of tallow candles, 151 lbs. of spermaceti and wax candles, employing a capital of 186,780 dollars; 390 distilleries produced 6,329,467 gallons, and fifty-nine breweries produced 1,422,584 gallons, the whole employing 798 persons, and a capital of 893,119 dollars; twenty-one rope-walks, employing sixty-six persons, produced articles to the value of 89,750 dollars, with a capital of 37,675 dollars; eleven persons produced musical instruments to the value of 8454 dollars, with a capital of 5000 dollars; 1490 persons manufactured carriages and waggons to the value of 701,228 dollars, with a capital of 290,540 dollars; 536 flouring mills produced 1,311,954 barrels of flour, and with other mills employed 4661 persons, producing articles to the value of 8,868,213 dollars, with a capital of 4,931,024 dollars; vessels were built to the value of 522,855 dollars; 1928 persons manufactured furniture to the value of 761,146 dollars, employing a capital of 534,317 dollars; 970 brick or stone houses, and 2764 wooden houses, employed 6060 persons, and cost 3,776,823 dollars; 159 printing-offices, forty-one binderies, nine daily, seven semi-weekly, and 107 weekly newspapers, and twenty periodicals, employed 1175 persons, and a capital of 446,720 dollars. The whole amount of capital employed in manufactures, was 16,905,257 dollars.—*Official Returns.*

Education.—The principal literary institutions, are the University of Ohio, at Athens, founded in 1821; the Miami university, at Oxford, founded in 1809. These institutions have been endowed with large grants of lands. The Franklin college, at New Athens, founded in 1825; the Western Reserve college, at Hudson, founded in 1826; Kenyon college, at Gambier (Episcopal), was founded in 1826; Granville college, at Granville (Baptist), founded in 1832; Marietta college, at Marietta, founded in 1832; the Oberlin Collegiate institute, at Oberlin, founded in 1834; Cincinnati college, at Cincinnati, founded in 1819; as was also Woodward college, at the same place. Willoughby university, at Willoughby, is a medical institution, with a college charter. Lane Theological seminary, at Cincinnati, founded in 1829. There are also theological departments in Kenyon, Western Reserve, and Granville colleges, and in the Oberlin institute; a Lutheran theological school at Columbus; two medical and one law school at Cincinnati. At all these institutions, there were in 1840, 1717 students. There were in the state seventy-three academies, with 4310 students; 5186 common and primary schools, with 218,609 scho-

lars. There were 35,394 white persons over twenty years of age, who could neither read nor write.—*U. S. Gaz.*

Religion.—In 1836, the Presbyterians had 247 ministers; the Methodists had 200 ministers; the Baptists had 170 ministers; the Lutherans had forty-seven ministers; the Episcopalians had one bishop and twenty-five ministers; the German Reformed had twenty-six ministers. Besides these there are a considerable number of Friends and Catholics, and a few others.—*U. S. Gaz.*

Banks.—There were in this state, at the commencement of 1840, thirty-seven banks and branches, with an aggregate capital of 10,507,521 dollars, and a circulation of 4,607,127 dollars. The state debt, in September, 1840, was 991,954 dollars.—(See Banks of the United States hereafter.)

Public Works.—The Ohio canal extends from Cleveland, on Lake Erie, 307 miles to Portsmouth, on the Ohio. It has a navigable feeder of fourteen miles to Zanesville; one of ten miles to Columbus; and one of nine miles to Lancaster; one to Athens of fifty miles; the Walholding branch of twenty-three miles; the Eastport branch of four miles, and the Dresden of two miles. This great work was begun in 1825, and was finished in 1832, at a cost of 5,000,000 dollars. The Miami canal extends from Cincinnati, 178 miles, to Defiance, where it meets the Wabash and Erie canal. The cost was 3,750,000 dollars. The whole distance to Lake Erie is 265 miles. The Warren canal, a branch of the above, extends from Middletown, twenty miles to Lebanon. The Sandy and Beaver canal is to extend from the Ohio canal, at Bolivar, seventy-six miles, to Ohio river, at the mouth of Little Beaver creek. Cost estimated at 1,500,000 dollars. The Mahoning canal extends from the Ohio canal, at Alron, eighty-eight miles, eight miles of which are in Pennsylvania, to Beaver river, at a cost of 764,372 dollars. Milan canal extends from Huron, three miles, to Milan, to which steamboats now ascend. The Mad river and Sandusky city railroad extends from Tiffin, thirty-six miles, to Sandusky city. The Ohio railroad extends from Manhattan, forty miles, to Sandusky city.—*U. S. Gaz.*, and *American Almanac.*

PRINCIPAL TOWNS.

CINCINNATI, the most populous city west of the Alleghany mountains, is situated on the Ohio river, 504 miles, by the windings of the river, above its confluence with the Mississippi. It lies in 39 deg. 6 min. 30 sec. north latitude, and 84 deg. 27 min. west longitude from Greenwich, and 7 deg. 24 min. 45 sec. west from Washington. It is 116 miles south-west from Columbus; 250 miles from Cleveland; 120 miles from Indianapolis; 270 miles from Nashville, Tennessee; 860 miles from New Orleans; 350 miles from St. Louis; 105 miles from Louisville; 518 miles from Baltimore; 298 miles from Pittsburgh; 617 miles from Philadelphia; 492 miles from Washington; 900 miles from New York, by Lake Erie, and 600 miles from Charleston, South Carolina. In 1795, it contained 500 inhabitants; in 1800, 750 inhabitants; in 1810, 2540 inhabitants; in 1820, 9642 inhabitants; in 1830, 24,831 inhabitants; in 1840, 46,338 inhabitants; in 1845, the number of inhabitants may be estimated at about 55,000, probably, at nearly 60,000. Besides which, there is usually in the town a floating population of from 2000 to 3000. In 1840, there were engaged in commerce, 2226; in manufactures and trades, 10,866; learned professions, 434. This city is built on an elevated plain, on the north bank of the Ohio, 540 feet above the level of tide water at Albany, and twenty-five feet below the level of Lake Erie; but low water mark is 432 feet above tide-water, and 133 feet below the level of Lake Erie. "The shore of the Ohio here forms a good landing for boats at all seasons of the year, the principal landing being paved to low water mark in a substantial manner, and supplied with floating wharfs, rendered necessary by the great rise and fall of the river at different times. The descent from the upper part of Cincinnati to low water mark on the Ohio, is 108 feet. The city is near the eastern extremity of a pleasant valley, about twelve miles in circumference, skirted to the north by a circular ridge of hills, the summits of which are not more than 300 feet above the plain, but of picturesque appearance. The ground on which the city stands consists of two plains, the rear one elevated fifty or sixty feet above the front, though the ascent, by grading, has been extensively

reduced to a gradual slope. The view of the city is beautiful from the hills in the rear ; but as approached by water it is neither extensive nor commanding.

"Excepting on the margin of the river, it is regularly laid out in streets and alleys, crossing each other at right angles. The streets running east and west, are denominated proceeding from the river, first, second, &c., while those running north and south, are named after the native trees, as walnut, sycamore, &c. Main-street extends from the steamboat landing on the river directly north, to the northern boundary of the city. Fourteen streets, seven in each direction, are sixty-six feet wide, and 396 feet apart. The central portion of the city is compactly built, with handsome houses and stores ; but the extensive plan in its outer parts, is but partially built up, and the houses are irregularly scattered. Many of the streets are well paved, and extensively shaded by trees. The houses are generally of stone or brick. The climate is changeable, and subject to considerable extremes of heat and cold, but is on the whole healthy.

"The court house, on Main-street, is fifty-six feet by sixty feet, and 120 feet high to the top of the dome. The edifice of the Franklin and La Fayette banks of Cincinnati has a splendid portico of eight Doric columns, after the model of the Parthenon at Athens, but is in a confined situation. It is seventy-nine feet long, and sixty-nine feet deep exclusive of the portico. Several of the churches are fine specimens of architecture, and a number of the hotels are spacious and elegant. There are four market houses, a bazaar, a theatre, a college, an Athenæum, a medical college, a mechanics' institute, two museums, a lunatic asylum, a high school, and a number of large and commodious houses for public schools. Within the last year 800 buildings have been erected, among which are many large warehouses and stores, and several beautiful churches.

"Cincinnati college was founded in 1819, and had, in 1840, eight instructors, and eighty-four students. It has academical, medical, and law departments. The medical college of Ohio has trustees appointed by the legislature every three years, and it has eight professors and 130 students. The College of Professional Teachers was formed in 1832, and has for its object the improvement of schools in the western country, and holds an annual meeting in October. The Mechanics' institute is formed for the improvement of mechanics in scientific knowledge, by means of popular lectures and mutual instruction. It has a valuable philosophical apparatus, a respectable library, and a reading-room, much frequented by young men. The Cincinnati lyceum furnishes an instructive and fashionable place of resort to the citizens, by its popular lectures and debates through the winter season. It has a good library and a reading-room. The Athenæum is a respectable literary institution, under the direction of the Catholics, in which the mathematics, philosophy, and the classics, as well as the modern languages, are taught by competent professors. It has over seventy students, and a large and splendid edifice. The Lane seminary, at Walnut hills, two miles from the city, has three professors, sixty-one students, and a library of 10,300 volumes. It has a literary as well as theological department. Woodward High School, named after its founder, gives education, in part gratuitously, to a large number of students. It has four instructors, and a large and commodious building. There is a great number of respectable private schools, and twenty public schools for males and females, in which there are 2000 pupils. There are forty-three churches in Cincinnati, of which three are old school Presbyterian, four new school Presbyterian, two Scots Presbyterian, two Episcopal, three Baptist, seven Methodist, two Protestant Methodist, two Catholic, two Friends, and various others."—*U. S. Gaz.*

Cincinnati is an important manufacturing place. Its want of good water-power has been supplied by that of steam mills. In 1840, there were forty-two foreign commercial, and thirty-six commission houses, with a capital of 5,200,000 dollars ; 1035 retail stores, with a capital of 12,877,000 dollars ; nineteen lumber yards, capital 133,000 dollars ; 245 persons were engaged in internal transportation, who, with 790 butchers, packers, &c., employed a capital of 4,071,930 dollars ; fourteen furnaces, capital 478,000 dollars ; value of machinery manufactured, 545,000 dollars ; hardware, cutlery, &c., 289,000 dollars ; precious metals 48,000 dollars ; various other metals, 713,000 dollars ; four woollen factories, capital 39,000 dollars ; one cotton factory, capital 6000 dollars ; tobacco manufactures, capital 61,000 dollars ; thirteen tanneries, capital 156,000 dollars ; manufactures of leather, as saddleries, &c., capital 552,000 dollars ; two distilleries and six breweries, with a capital of

152,000 dollars; paints, drugs, &c., capital 26,000 dollars; four rope walks, capital 34,000 dollars; carriages and waggons, capital 68,000 dollars; ten flouring mills, eight saw mills, two oil mills, total capital 367,000 dollars; vessels built, value 403,000 dollars; furniture amounted to 459,000 dollars; 264 brick and stone, and seventy-four wooden houses built, cost 1,196,000 dollars; thirty-two printing offices, thirteen binderies, produced 3800 daily newspapers, 33,100 weekly, 1800 semi-weekly, and 17,200 periodicals, with a capital 266,000 dollars. Total capital in manufactures, 7,469,912 dollars. Two colleges, eighty students, two academies, 120 students, fifty-one schools, 5445 scholars. There were five incorporated and two unincorporated banks, with an aggregate capital of nearly 6,000,000 dollars. — *Official Returns.*

Good roads, canals, and the river, bring the products of the surrounding country to this market. The Miami railroad extends from Cincinnati, eighty-five miles and a half to Springfield, and the Miami canal, from Cincinnati, 178 miles, to Defiance, where it joins the Wabash and Erie canals. The internal trade of Cincinnati is thus very extensive. The tonnage of the port, in 1840, was 12,052. There are seven daily papers, which are also issued weekly, or tri-weekly; eight weekly papers, a large number of magazines, issued semi-monthly or monthly, and a number of religious magazines, published monthly.

The municipal government of the city consists of a president, recorder, and twenty-one councillors—three for each of the seven wards into which the city is divided.

Cincinnati was founded in 1789, by emigrants from New England and New Jersey, on the site of Fort Washington. It has grown with great rapidity, and now ranks as the sixth place in population in the United States; and, it being the great emporium of the West, it must continue to increase with the growth of the rapidly rising country with which it is connected. — *U. S. Gaz.*

CHILICOTHE, forty-five miles south of Columbus, 400 miles from Washington, is situated on the west bank of Scioto river. The Scioto washes its northern limit, and Paint creek its southern, here three-quarters of a mile apart. The principal streets follow the course of the river, and these are crossed by others at right angles, extending from the river to the creek. It has a court house and gaol, two market houses, a United States' land office, twenty-three stores, a banking house, four churches. Population, 3977. The Ohio canal passes through it. — *U. S. Gaz.*

CIRCLEVILLE, twenty-six miles south of Columbus, 396 miles from Washington, is situated on the site of an ancient fortification, on the east bank of the Scioto river. The Ohio canal passes through the place, and crosses the large aqueduct. It has a brick octagonal court house, a gaol, market house, six public offices, four churches, thirteen stores, five canal warehouses, an academy, about 250 dwellings, and about 2000 inhabitants. The country around is very fertile, and a great water power is concentrated at this place, by several creeks, and by the canal. In 1840, there were in the township fifteen stores, capital 62,000 dollars; one fulling mill, one furnace, three tanneries, one distillery, one brewery, three printing offices, two binderies, two weekly and one semi-weekly newspapers, one flouring mill, five saw mills, one oil mill. Capital in manufactures, 37,050 dollars. Population, 2972.

DAYTON, sixty-eight miles west-by-south of Columbus, 461 miles from Washington. Population in 1810, 383; in 1820, 1139; in 1830, 2954; in 1840, 6067; and in the township, 10,335. Watered by Great Miami river and its tributaries, south-west branch of Mad river and Wolf creek. Mad river is here turned into a race, about a mile above its mouth, and, after being used as mill power, flows into the Miami, partly above and partly below the village. In and near the village are four cotton factories with 5000 spindles. There is a gun-barrel factory, with a capital of 15,000 dollars; a large iron foundry, four machine shops, producing articles to the value of 100,000 dollars annually; a clock factory, in which are annually made about 2500 clocks; an extensive paper factory, a carding and fulling mill, seven flouring mills, seven saw mills, five distilleries, and various other mills and manufactories. Capital in manufactures, about 100,000 dollars. The Miami canal passes through the place, and connects it with Cincinnati. — *U. S. Gaz. Official Returns.*

COLUMBUS, capital of the state, 139 miles south-west of Cleveland, 110 miles north-east of Cincinnati, 175 miles south of Detroit, Michigan, 184 miles south-west of Pitts-

burg, Pennsylvania, 393 miles from Washington. It is in 39 deg. 47 min. north latitude, and 83 deg. 3 min. west longitude, and 6 deg. west longitude from Washington. It is situated on the east bank of Scioto river, immediately below the confluence of Whetstone river. When this place was selected for the seat of the legislature, in 1812, it was a wilderness. The land rises gradually from the river, and the streets cross each other at right angles. Broad-street extends from the bridge along the national road, a little south of east on the north side of the public square of ten acres, to the east limit of the city, and is 120 feet wide. High-street, 100 feet wide, crosses Broad-street at the north-west corner of the public square, at right angles, and passes through the city in that direction. This is the principal business street of the city. All the other streets are eighty-eight feet wide, and the alleys thirty-three feet wide. A convenient wharf, 1300 feet long, has been erected along the margin of the river. The public buildings are, a state house on the south-west corner of the public square, a brick edifice, seventy-five feet by fifty feet, of two lofty stories, with a steeple 106 feet high. Immediately north of the state house is a building for the public officers of the state, 150 feet by twenty-five feet. Still further north, in a line with the others, is the federal court house. There are five churches—one Presbyterian, one Baptist, one Methodist, one Episcopal, and one German Lutheran. Several of these churches are elegant buildings. The state penitentiary is a spacious edifice, on the bank of the Scioto, half a mile north of the centre of the city. The asylum for the deaf and dumb is a brick building, fifty feet by eighty feet, three stories high, half a mile east of the state house, with Doric porticoes. There is a lunatic asylum, an institution for the blind, a German Lutheran theological seminary, a fine banking house of stone, with a Doric portico of stone. The private houses are neat and substantial. The national road passes through the town, and a canal of eleven miles in length connects it with the Ohio canal. A bridge across the Scioto connects the place with Franklinton. There were, in 1840, in Columbus, and its township, three commission and four commercial houses in foreign trade, capital 63,000 dollars; fifty-eight retail stores, capital 319,750 dollars; three lumber yards, capital 12,000 dollars; five tanneries, two distilleries, three breweries, one pottery, four printing offices, three binderies, one daily, three weekly, one semi-weekly newspapers. Capital in manufactures, 257,850 dollars. Population, 6048.—*U. S. Gaz. Official Returns.*

CLEVELAND, port of entry, 146 miles north north-east of Columbus, 359 miles from Washington. Cleveland is the emporium of northern Ohio, and, next to Cincinnati, the most important town in the state. It stands in a commanding situation, on the southern shore of Lake Erie, at the mouth of the Cuyahoga river, and at the northern termination of the Ohio canal, by which it is connected with Ohio river; in 41 deg. 31 min. north latitude, and 81 deg. 46 min. west longitude from Greenwich, or 4 deg. 44 min. west from Washington. It is 130 miles north-west of Pittsburg, 146 miles north-east of Columbus, 200 miles by water from Buffalo, 130 miles from Detroit, 359 from Washington. The population, in 1799, consisted of one family; in 1825, about 500 inhabitants; in 1830, 1000; in 1834, 4300; in 1840, 6071.

Excepting a small portion of it immediately on the Cuyahoga river, the city is situated on a gravelly plain, elevated about eighty feet above the level of the lake, of which it has a very commanding prospect. The streets cross each other at right angles. The location is dry and healthy, and the view of the meanderings of the Cuyahoga river, and of the steamboats and shipping in the port, and leaving or entering it, and of the numerous vessels on the lake, presents a prospect exceedingly interesting, from the high shore.

"Near the centre of the place is a public square of ten acres, divided into four equal parts by intersecting streets, neatly enclosed, and shaded with trees. The court house and the first Presbyterian church front on this square.

"The harbour of Cleveland is one of the best on Lake Erie. It is formed by the mouth of the Cuyahoga river, and improved by a pier on each side, extending 425 yards into the lake, 200 feet apart, and faced with substantial stone masonry. Cleveland is the great mart of the greatest grain-growing state in the union, and it is the Ohio and Erie canals that have made it such, though it exports much by the way of the Welland canal to Canada. It has a ready connexion with Pittsburg, through the Pennsylvania and Ohio canal, which extends from the Ohio canal at Akron to Beaver creek, which enters the Ohio

below Pittsburg. The natural advantages of this place are unsurpassed in the west, to which it has a large access by the lakes and the Ohio canal. But the Erie canal constitutes the principal source of its vast advantages; without that great work, it would have remained in its former insignificance."—*U. S. Gaz. Official Returns.*

The total number of pounds on which toll was charged, and which arrived at Cleveland, in 1840, was 280,233,820, in which was included 2,151,450 bushels of wheat, 504,900 barrels of flour, 23,000 barrels of pork, 782,033 lbs. of butter, 513,452 lbs. of lard, 683,499 lbs. of bacon, 1,154,641 lbs. of pig iron, 2,252,491 lbs. of iron and nails, 643,954 pieces of staves and heading.

The number of pounds' weight of all property on which toll was paid by weight, and which cleared from Cleveland by way of the canal, in 1840, was, 9,563,396 lbs. of merchandise, 1,163,167 lbs. of furniture, 1,770,016 lbs. of gypsum, 1,265,656 feet of lumber, 76,729 barrels of salt, 8959 barrels of lake fish, 2,560,000 shingles, twenty-one pairs of mill-stones.

The number of voyages of boats cleared, was 4137; but there were only 312 different boats. In the year 1840, 1344 vessels, exclusive of steamboats, entered the port; and 1344 vessels, and 1020 steamboats, cleared. There were owned at Cleveland, sixty-seven schooners, two brigs, three sloops, eleven steamboats; the total tonnage, in 1840, was 9514. There were, in 1840, twenty-one foreign commission houses, with a capital of 58,000 dollars; sixty-six retail stores, capital 139,700 dollars; three lumber yards, capital 3000 dollars; one furnace; value of machinery made, 3000 dollars; two distilleries, and one brewery, capital 32,000 dollars; one flouring mill, manufactured flour to the value of 125,000 dollars; five printing-offices, three binderies, one daily and four weekly newspapers, and one periodical, employed a capital of 9700 dollars. Total capital in manufactures, 128,632 dollars.—*Official Returns.*

There were two banks, with an aggregate of capital of 800,000 dollars; and an insurance company, with a capital of 500,000 dollars. There is a light-house on the bank of the lake, and another at the entrance of the harbour.

OHIO CITY, situated on Lake Erie, at the mouth of the Cuyahoga river, opposite to Cleveland. The ground on which it stands is uneven, and presents many fine situations, which overlook the lake, the city of Cleveland, and surrounding country. It has an Episcopal, a Presbyterian, and other churches, a considerable number of stores and buildings. A bridge crosses the Cuyahoga a little above the place, and a floating bridge and ferry connect it with Cleveland. It contains a large iron foundry, and a number of mechanic shops. It enjoys the harbour, at the mouth of the Cuyahoga, in common with Cleveland. It has seven stores, capital 13,500 dollars; seven commission houses, capital 2000 dollars; two furnaces. Population, 1577.

SANDUSKY, port of entry, 110 miles north of Columbus, 414 miles from Washington, is situated on the south shore of Sandusky bay, fronting the opening into Lake Erie, of which it has a beautiful view. The town is built upon an inexhaustible quarry of the best stone, which has been extensively used in the erection of its edifices. At all times of the year, excepting three winter months, the wharfs are thronged with steamboats and other vessels. It contains four churches; an academy of stone, three stories high; twenty-six stores, besides groceries and provision houses; a ship-yard, where steamboats and other vessels are built; 300 dwellings, and about 1200 inhabitants.

MADISON, 190 miles north-east by north of Columbus, and 349 miles from Washington. Situated on both sides of Grand river. Large quantities of iron are manufactured here into hollow ware, mill irons, &c., and exported. It has nine stores, capital 11,800 dollars; three tanneries, one distillery, two grist mills, and nine saw mills. Capital, in manufactures, 5950 dollars. Twenty schools, 1250 scholars. Population, 2800.

MOUNT VERNON, fifty-one miles north-east of Columbus, and 376 miles from Washington. Situated on Vernon river, or Owl creek. Contains a court house, gaol, four churches, twenty stores, three flouring mills, two saw mills, one oil mill, two printing offices, 250 dwellings, and 2362 inhabitants.

SPRINGFIELD, forty-three miles west of Columbus, and 436 miles from Washington, is situated on the national road, and on the east fork of Mad river, which affords extensive water power. It contains a court house, four churches, thirty stores, one paper mill, one

grist mill, one carding and fulling mill, one brewery, one distillery, one printing office, which issues a weekly newspaper, fifteen schools, 793 scholars, 400 dwellings, and about 2062 inhabitants. Population, 2349.

STUBENVILLE, 141 miles east-north-east of Columbus, and 264 miles from Washington, is situated on the west bank of Ohio river, and contains six churches, a town house, a market, a bank, an academy, thirty stores, one steam paper mill, two woollen factories, three carpet factories, two cotton factories, three iron foundries, three steam-engine factories, one brass foundry, three machine shops, three steam flouring mills, one silver plating factory, one steam saw mill, two breweries, three copperas factories, one comb factory, one chemical factory, one rope walk, one boat yard, two printing offices, each issuing a weekly newspaper, and about 700 dwellings.—*U. S. Gaz. Official Returns.*

FINANCES.

The following is a detailed Statement of the Public Debt of the State, as stated in the Auditor's Report of December, 1844.

	dollars.	cts.
Foreign debt	12,876,321	11
Temporary loans	890,425	86
Scrip issued in canal and railroad companies	772,515	00
Domestic debt	1,383,584	61
Amount of surplus revenue from counties	53,000	86
Amount of surplus from auditor of state	29,200	39
Domestic bonds, yet outstanding	321,042	05
Amount due turnpike companies on subscription	621,331	84
Indebtedness of the public works to the sinking fund, rising	2,000,000	00
Total	18,747,325	12
To which we add the amount due the contractors on the public works	800,000	00
Balance remaining in the Treasury, November 15th, 1842	64,361	25
Amount collected and paid by county treasurers, in the year ending November 15th, 1843	199,468	72
Miscellaneous items of revenue	64,440	31
Total receipts	328,270	28
Expenditure during the year	233,462	36
Balance in the treasury, November 15, 1843	94,807	92

The following are some of the chief items of expenditure :

	dollars.	cts.		dollars.	cts.
State officers	7,600	00	Lunatic Asylum	19,000	00
Judges and Reporter	25,800	00	Institution for the Blind	10,300	00
Ohio Legislature	43,072	00	Board of Public Works	3,600	00
Deaf and Dumb Asylum	9,814	73	State Printer	18,491	18

Amount of taxable property, and of taxes assessed during the year 1843.

	dollars.		dollars.	cts.
Number of acres of land, 22,625,808.		State and canal tax	934,899	19
Value, including houses	84,440,180	County and school tax	606,358	38
Value of town lots and buildings	21,056,202	Road tax	190,979	30
Number of horses, 368,457.		Township and poor tax	185,428	88
Estimated value	14,738,240	Corporation and bridge tax	194,257	59
Number of cattle, 700,654.		Physicians' and lawyers' tax	6,276	92
Estimated value	5,613,799	School-house tax	17,097	92
Capital and money at interest	7,120,998	Delinquencies	226,604	93
Number of pleasure carriages, 11,997.		Total taxes	2,361,842	81
Estimated value	694,975			
Total amount of taxable property 133,663,794				

The whole amount of the state debt was, at that date, 18,668,321 dollars 61 cents. Of this, however, 1,406,267 dollars 46 cents are owned by the state itself, being a part of the permanent school fund; 14,345,212 dollars 50 cents bear interest at six per cent, 1,500,000 dollars at seven per cent, and 550,000 dollars at five per cent. The annual interest on this debt is regularly paid, being provided for by the proceeds of the public works, and by a permanent tax imposed by law.

Common school funds accruing during the year 1843.

	dollars.	cts.
Five per cent interest on surplus revenue	100,314	05
Tax, &c., for common school purposes	99,814	32
Interest on special funds for common schools	28,387	98
Interest on proceeds of the 16th section in every township	56,133	92
Total	284,521	91

VIII. MICHIGAN.

THE state of MICHIGAN, comprises two peninsulas; the principal of which, or Michigan proper, is bounded north by the Straits of Michilimackinac, which connect Lakes Michigan and Huron; east by Lake Huron, St. Clair river, Lake St. Clair, Detroit river, and Lake Erie, which separate it from Upper Canada; south by Ohio and Indiana; and west by Lake Michigan. This main section of the state is about 288 miles long, and about 190 miles average breadth. The area contains about 38,000 square miles, or 24,320,000 British statute acres. The other, and geographically, distinct peninsula of this state, lies north-west of the former, and is bounded north by Lake Superior; on the east by St. Mary's river; on the south by Lake Michigan, Green Bay, and Menomonee river; and west by Montreal river, which enters Lake Superior. This division of the state is about 320 miles long, and from thirty miles to 160 miles broad, comprising about 28,000 square miles; making the whole territory of the state about 66,000 square miles. In 1810, the population was 4528; in 1820, 9048; in 1830, 31,639; in 1840, 212,267. Of these, 113,395 were white males; 93,165 white females; 393 coloured males; 314 coloured females. Employed in agriculture, 56,521; in commerce, 728; in manufactures and trades, 6890; navigating the ocean, 24; navigating canals, lakes, and rivers, 166; mining, 40; learned professions, 904.

In 1840, the number of counties were thirty-two, which, with their population and capitals, were as follows:—Allegan, 1783, C. Allegan; Barry, 1078, C. Hastings; Berrien, 5011, C. St. Joseph; Branch, 5715, C. Branch; Calhoun, 10,599, C. Marshall; Cass, 5710, C. Cassopolis; Chippewa, 534, C. Sault St. Mary; Clinton, 1614, C. De Witt; Eaton, 2379, C. Charlotte; Genesee, 4268, C. Flint; Hillsdale, 7240, C. Jonesville; Ingham, 2498, C. Vevay; Ionia, 1923, C. Ionia; Jackson, 13,130, C. Jackson; Kalamazoo, 7380, C. Kalamazoo; Kent, 2587, C. Grand Rapids; Lapeer, 4265, C. Lapeer; Lenawee, 17,889, C. Adrian; Livingston, 7430, C. Howell; Macomb, 923, C. Mount Clemens; Michilimackinac, 9716, C. Mackinac; Monroe, 9922, C. Monroe; Oakland, 23,646, C. Pontiac; Oceana, 208, C. Oceana; Ottawa, 496, C. Grand Haven; Saginaw, 892, C. Saginaw; St. Clair, 4606, C. St. Clair; St. Joseph, 7068, C. Centreville; Shiawassee, 2103, C. Corunna; Van Buren, 1910, C. Pawpaw; Washtenaw, 23,571, C. Ann Arbor; Wayne, 24,173, C. Detroit. Several new counties remain to be organised.

Configuration and Soil.—The surface of the lower or southern peninsula is generally level, having few elevations which may be denominated hills. Along the shores of Lakes Huron, Michigan, St. Clair, and Erie, the land is generally low for from eight to fifteen miles back. This region is covered with forest trees, except the district of Sand-hills. The interior is gently undulating, rising gradually from the lakes to the centre of

centre of

the peninsula. This central region may be regarded as a table land, elevated about 300 feet above the level of the lakes, interspersed with forests of timber, oak plains, and beautiful prairies. Along the eastern shore of Lake Michigan are sand hills, thrown by the winds into innumerable fantastic forms, sometimes covered with stunted trees and scanty vegetation, but most generally bare. On the shore of Lake Huron there are some high sand bluffs. The point formed by Lake Huron and Saginaw bay is generally low and swampy. A large part of the soil of this peninsula is fertile, and well adapted to the purposes of agriculture. The principal forest trees are the oak, hickory, walnut, ash, linden, sugar maple, elm, poplar, and pine. The "oak openings" are green districts with clumps or single trees of oak growing at various distances of from ten to 100 feet apart. Streams and small rivers flow through these openings. In other parts, are small plains with a rich brown soil, dotted with burr oaks. Differing from these districts, we meet with dry prairies, without any wood, but with a remarkably fertile soil. The wet prairies are generally barren swamps. There are also very extensive districts of sterile country in this peninsula, called the "barrens." These consist of an undulated region of sandy soil, with a growth of stunted oaks and bushes. These barrens are not, however, incapable of being cultivated. The soil is well adapted to the culture of wheat, rye, oats, barley, flax, hemp, garden vegetables, and grasses. No part of the United States is better supplied with fish, aquatic fowls, and wild game. The fish of the lakes and rivers are chiefly the white fish and salmon trout, both of which are taken and put up in large quantities for exportation. The trout weigh from ten to seventy pounds, and the white fish are equally large. There are many other varieties, as sturgeon, pike, three varieties of bass, codfish, maskmonge, pukins, mullet, lake herrings, &c.—(See Fisheries of America hereafter.)

Of the northern peninsula, Mr. Schoolcraft says, "portions of it are the mere development of sublime scenery, which appertains to that comparatively elevated portion of the continent. Mountains and lakes, plains, rivers, and forests, spread over it, with a boldness of outline, which may be said to constitute almost a peculiar type of North American geography. This division embraces the mineral district of the region. Much of it falls under the influence of causes which render it of little or no value in an agricultural point of view; but it may be regarded as the seat of future mineral operations. Accuracy with respect to either kind of soil, either in acres or miles, must be the result of exploration and survey. The northern shores of Lakes Michigan and Huron, as far as Point Detour, are exclusively limestone, where rock is at all visible, and this rock is characterised by the usual indications of gypsum and brine springs. The growth of trees in this newly acquired boundary is as various as the soils, and is, in general, an accurate index of its fertility. The sugar maple is interspersed throughout the tract, being separated by the sand plains, the mountain masses, and by tracts of spruce lands. This tree, however, forms so considerable a portion of the growth, that the natives can always, by a timely removal of their camps, rely on the manufacture of sugar. The beech tree is found as far north as Point Iroquois, at the outlet of Lake Superior. I regard the white oak, however, as a surer test of climate and soil together, than any other of our forest trees. I doubt whether this tree ever attains to its full size in a climate not decidedly congenial to agriculture. The rock maple and red oak are found, at intervals, throughout the northwest; I have seen both species at the sources of the Mississippi, but have not observed the beech north of the locality mentioned, nor the white oak north of the Straits of Mackinac. The interior abounds in minor lakes, and enjoys a singular advantage of intercommunication by streams and portages. The areas included between the three great lakes north of Mackinac, which will probably hereafter be denominated the upper peninsula of Michigan, embraces the present settlements at Mackinac and Sault St. Mary. Taking the whole extent of the annexed territory from Menomonee river, following the curves of the coast to the north-west limits of the state, the mouth of Moniauw or Montreal river of Lake Superior, it affords not less than 720 miles of additional coast navigation; and embraces, in the distance, several large bays and excellent harbours. About forty large and sixty small streams discharge their waters into the three lakes constituting portions of the boundary."

Rivers.—The southern peninsula of Michigan is drained by several rivers and streams, which rise in the table or highlands, and flow in an easterly or westerly direction, with the exception of the Cheboigan, and three or four smaller streams, which flow in a

northerly direction. The larger streams are navigable by boats and canoes nearly to their sources. Raisin and Huron rivers flow into Lake Erie; Rouge into the Detroit strait; Clinton and Black rivers into the Strait of St. Clair. Saginaw river, formed by the junction of Titibawassee, Hare, Shiawassee, Flint, and Cass rivers, enters into Saginaw bay. Thunder Bay river and Cheboigan, with several smaller streams, flow into the northern part of Lake Huron. St. Joseph, Kalamazoo, Grand, and Maskegon rivers, and several smaller streams, flow in a westerly direction into Lake Michigan. The counties of Oakland, Livingston, Washtenaw, Barry, Jackson, and Kalamazoo abound with small clear lakes, well stocked with fish.—*U. S. Gaz.* "Michigan and its Resources" in the *Merchants' Magazine*.

Live Stock and Agricultural Products.—There were in the state, in 1840, 30,144 horses and mules; 185,190 neat cattle; 99,618 sheep; 295,890 swine; poultry to the value of 82,730 dollars. There were produced 2,157,108 bushels of wheat; 127,802 bushels of barley; 2,114,051 bushels of oats; 34,236 bushels of rye; 113,592 bushels of buckwheat; 2,277,039 bushels of Indian corn; 153,375 lbs. of wool; 11,381 lbs. of hops; 4533 lbs. of wax; there were produced 2,109,205 bushels of potatoes; 130,805 tons of hay; 755 tons of hemp and flax; 1602 lbs. of tobacco; 266 lbs. of silk cocoons; 1,329,784 lbs. of sugar; the products of the dairy were estimated at 301,052 dollars; and of the orchard at 16,075 dollars; and of lumber at 392,325 dollars.—*Official Returns*.

Lakes.—Michigan lake is the largest lake that lies wholly within the United States, being 360 miles long, and sixty broad, containing 17,000 square miles, including Green bay, a large branch of it in the north-west. The Straits of Michilimackinac, forty miles long, connect this lake with Lake Huron. Saginaw bay is a large branch of Lake Huron, sixty miles long by thirty-two miles wide.—*U. S. Gaz.*

Trades.—The exports of Michigan, in 1840, amounted to 162,229 dollars; and the imports to 138,610 dollars. There were twenty-six commission-houses engaged in foreign trade, with a capital of 177,500 dollars; 612 retail dry goods and other stores, with a capital of 2,228,988 dollars; 312 persons employed in the lumber trade, with a capital of 45,600 dollars; 453 persons employed in the fisheries (lake), with a capital of 28,640 dollars.—*Official Returns*.

Manufactures.—In 1840, the value of home-made or family manufactures was 113,955 dollars; there were sixteen fulling mills, and four woollen manufactories, employing thirty-seven persons, producing articles to the value of 9734 dollars, and employing a capital of 34,120 dollars; fifteen furnaces, producing 601 tons of cast iron, employing ninety-nine persons, and a capital of 60,800 dollars; one paper mill, employing six persons, produced to the value of 7000 dollars, with a capital of 20,000 dollars; twelve persons manufactured tobacco to the value of 5000 dollars, with a capital of 1750 dollars; hats and caps were produced to the value of 30,463 dollars, and straw bonnets to the value of 659 dollars, employing forty-two persons, and a capital of 20,007 dollars; thirty-eight tanneries employed ninety-nine persons, and a capital of 70,240 dollars; 101 other manufactories of leather, as saddleries, &c., produced articles to the value of 192,190 dollars, with a capital of 69,202 dollars; one glass-house employed thirty-four persons, producing articles to the value of 7322 dollars, with a capital of 25,000 dollars; three potteries employed four persons, producing articles to the value of 1100 dollars, with a capital of 625 dollars; three persons produced confectionary to the value of 3000 dollars, with a capital of 1200 dollars; sixty-seven persons produced machinery to the value of 47,000 dollars; seven persons produced hardware and cutlery to the value of 1250 dollars; one person manufactured the precious metals to the value of 5000 dollars; six persons manufactured granite and marble to the value of 7000 dollars; 298 persons produced brick and lime to the value of 68,913 dollars; six persons produced 78,100 lbs. of soap and 57,975 lbs. of tallow candles, with a capital of 6000 dollars; thirty-four distilleries produced 337,761 gallons, and ten breweries produced 308,696 gallons, the whole employing 116 persons, and a capital of 124,200 dollars; fifty-nine persons produced carriages and waggons to the value of 20,075 dollars, with a capital of 13,150 dollars; ninety-three flouring mills produced 202,880 barrels of flour, and, with other mills, employed 1144 persons, producing articles to the value of 1,832,363 dollars; with a capital of 2,460,200 dollars; vessels were built to the value of 10,500 dollars; sixty-five persons manufactured furniture to the value of 22,494 dollars, with a capital

of 28,050 dollars; thirty-nine brick or stone houses, and 1280 wooden houses were erected, and employed 1978 persons, and cost 571,005 dollars; twenty-eight printing-offices, two binderies, six daily, and twenty-six weekly newspapers, and one periodical, employed 119 persons, and a capital of 62,900 dollars. The whole amount of capital employed in manufactures was 3,112,240 dollars.—*Official Returns.*

Education.—The Michigan university, at Ann Arbor, has departments of literature, science, and the arts, of law, and of medicine. It is designed to have academic branches, spread over the state, and they have been already established at Detroit, Pontiac, Monroe, Niles, Kalamazoo, Grand Rapids, Jackson, White Pigeon, and Tecumseh. This institution has been well endowed by large grants of lands. Marshall college, at Marshall, has been established; and St. Philip's college, near Detroit, is a Catholic institution. These institutions had, in 1840, 158 students. There were in the state twelve academies, with 485 students; and 975 common and primary schools, with 29,701 scholars. There were in the state 2173 white persons over twenty years of age who could neither read nor write.—*U. S. Gaz.*

Religion.—In 1836, the Presbyterians had forty-two churches and nineteen ministers; the Baptists had seventeen churches and eleven ministers; the Roman Catholics one bishop and eighteen ministers; the Episcopalians one bishop and four ministers; and the Methodists were considerably numerous.—*U. S. Gaz.*

Banks.—At the commencement of 1840 there were in this state nine banks, and one branch, with an aggregate capital of 1,229,200 dollars, and a circulation of 261,296 dollars. At the close of 1840, the state debt amounted to 6,011,000 dollars.

Internal Public Works.—Michigan has projected and commenced an extensive system of internal improvements. The Central railroad extends from Detroit, forty-four miles, to Ann Arbor, and when completed is designed to extend 194 miles to St. Joseph on Lake Michigan. The Erie and Kalamazoo railroad extends from Toledo, thirty-three miles, to Adrian. This road is designed to be continued until it meets the Central railroad, which it will leave at Kalamazoo and terminate at Allegan. The whole distance from Toledo to Kalamazoo is 183 miles. The Ypsilanti and Tecumseh railroad leaves the Central railroad at Ypsilanti, and connects with the Erie and Kalamazoo railroad at Tecumseh, twenty-five miles. The Detroit and Pontiac railroad extends from Detroit, twenty-five miles, to Pontiac. Numerous other railroads have been laid out and commenced; and also the Clinton and Kalamazoo canal is designed to unite the waters of Lake Michigan and St. Clair. The whole length is 216 miles, and is estimated to cost 2,250,000 dollars. But this, with several other proposed canals, is for the present suspended.—*American Almanac.*

PRINCIPAL TOWNS.

DETROIT, capital of the state, 302 miles west of Buffalo, 524 miles from Washington, rises in a pleasant and healthy situation, on the river or strait of the same name, thirty feet above its surface, and commands a fine view of the surrounding country. It is seven miles below the outlet of Lake St. Clair, and eighteen miles above the west end of Lake Erie, in 42 deg. 19 min. 53 sec. north latitude, and 82 deg. 58 min. west longitude, and 5 deg. 56 min. 12 sec. west longitude from Washington. Population, in 1810, 770; in 1820, 1422; in 1830, 2222; in 1840, 9102. It extends for the distance of a mile along the river, and three-fourths of a mile back. "For 1200 feet back of the river its plan is rectangular. From this point eight avenues, 200 feet wide, radiate, dividing it into triangular portions, all terminating at a large open area, called the Grand Circus. The principal public and private offices, and dry goods stores, are located on Jefferson avenue, a fine street running parallel with the river. There are several public squares, the most noted of which is called the Campus Martius. The city is drained by public sewers. The city is partially supplied with water from an elevated reservoir, filled with water, raised by steam power from the river. Detroit is among the earlier settlements of North America, having been founded by the French from Canada, in 1683. Among the public buildings are the state house, of brick, of the Ionic order, ninety feet by sixty feet, with six columns in front, and pilasters on the sides. The dome presents an extensive and fine view of the surrounding country.

The city hall of brick, is a neat edifice 100 feet by fifty feet. The lower story is a market, and the second contains a spacious hall, in which the courts are held. It contains eight churches—one Presbyterian, one Episcopal, one Methodist, one Baptist, one German Lutheran, two for coloured people, supplied by clergymen of different denominations, and two Roman Catholic. Some of these churches are large and splendid buildings. The bank of Michigan is a fine stone edifice, of Grecian architecture, fifty-six feet by forty feet. There are three other banks, and the whole capital of the banks is 2,250,000 dollars. There are a United States' land office, three markets, a theatre, a museum, a public garden, state penitentiary, government magazine, and mechanics' hall. There are various charitable and benevolent institutions. The Protestants and the Roman Catholics have each an orphan asylum. The ladies free school society educate 200 indigent children. There are several literary and scientific societies. There are three female institutes of a high order, and several equally respectable schools for boys, besides twelve public schools, attended by about 500 children.

"Detroit is admirably situated for trade, and is becoming a great commercial emporium. The navigation of the river and lake are open about eight months in the year. The arrivals of vessels and steamboats at this place are about 300 annually, and the clearances are as many. The tonnage of the port, in 1840, was 11,432. The first steamboat arrival at this place was in August, 1818. Now, several of the largest class arrive and depart daily. The Central railroad, which is destined to extend across the peninsula, is finished forty-four miles from Detroit to Ann Arbor. Detroit was incorporated as a city in 1815. It has several times suffered severely by fires." There were, in 1840, eleven commission houses in foreign trade, capital 123,000 dollars; 113 retail stores, capital 412,760 dollars; four lumber yards, capital 31,500 dollars; three furnaces, one tannery, two breweries, one pottery, three printing offices, two binderies, three daily, and four weekly newspapers. Capital in manufactures, 172,375 dollars.—*U. S. Gaz. Official Returns.*

ADRIAN, situated opposite the junction of Beaver creek with the Raisin river, sixty-seven miles from Detroit. It has three churches. It is one of the most flourishing towns in the state, and has twenty-seven stores, capital, 116,800 dollars; three grist mills, six saw mills, two printing offices, two weekly newspapers. Population, in 1840, 2496. A railroad between this place and Toledo was opened in 1836.

TECUMSEH, fifty-seven miles south-west of Detroit. Watered by Raisin river. It had, in 1840, three commission houses, capital 7000 dollars; twelve stores, capital 70,350 dollars; one tannery, one distillery, one printing office, one weekly newspaper, two flouring mills, two grist mills, two saw mills. Capital in manufactures, 160,000 dollars. Population, 2503.

MACKINAC, 300 miles north-north-west from Detroit. Situated on the south-east extremity of an island of the same name, and contains a court house, gaol, one Presbyterian, and one Roman Catholic church, ten stores, a school of the American Board of Foreign Missions, a Roman Catholic missionary school, and a branch of the University of Michigan. Fort Mackinac stands on a rocky eminence, 150 feet immediately above the village, which it commands. The harbour is safe and spacious, capable of accommodating 150 vessels. About 3000 barrels of trout and white fish are annually exported, and it is the seat of an extensive fur trade.—(See fisheries and fur trade hereafter.)

YPSILANTI, thirty miles west of Detroit, on the Huron river, and near the Central railway. Population, in 1840, 2419.

MONROE, thirty-seven miles south-south-west from Detroit, 486 miles from Washington, is situated on the Raisin river, two miles and a half from its mouth. It contains a court house, gaol, two banks, a United States' land office, seven churches—two Presbyterian, one Episcopal, one Baptist, one Methodist, and two Roman Catholic; seven storage and forwarding houses, twenty-four stores, one woollen factory, one iron foundry and edge tool factory, two flouring mills, three saw mills, one fulling mill, one paper mill, one tannery, two printing offices, each issuing a weekly newspaper, a branch of the University of Michigan, and two female academies, a reading-room and library of 1200 or 1500 volumes, 500 dwellings, and about 2500 inhabitants. The river affords extensive water power. A canal, 100 feet wide and twelve feet deep, is constructed from the town to the lake. Steamboats and

other vessels continually ply between this place and other places on the lakes. A railroad extends seventy miles west to Hillsdale.

ST. JOSEPH, is a small town, important from its position on the west coast of Michigan. It has a wharf 2000 feet long, from which steamboats, and other craft, ply to and from various ports of Lake Michigan.

SAGINAW, on Saginaw river, which falls into the bay of same name. Population, about 1000. Steamboats navigate the river.—*U. S. Gaz. Official Returns.*

FINANCES.

1. *General fund.* Estimated annual current expenses of state government for 1844 :—

Salaries of governor and executive officers	dollars.	
Judiciary, including attorney-general and reporter		12,300
Legislature		9,900
Printing laws, documents, &c.		20,000
Expenses of the state prison, over earnings		3,000
Miscellaneous appropriations		8,000
Interest on 100,000 dollars, general fund stock, and 60,000 dollars, penitentiary ditto		2,500
„ on about 20,000 dollars delinquent tax stock		9,600
„ on warrants, &c., payable from general fund.		1,400
		3,000
		<hr/>
		70,000

Estimated revenue for current expenses for 1844 :—

State tax of two mills, for 1843		55,336
Specific tax on banks, brokers, and pedlars		1,500
Office charges on delinquent taxes		3,000
Interest collected on delinquent taxes, say		12,000
		<hr/>
		71,836

2. *Internal Improvement Debt.*—The state has received, or acknowledges due on her, five million loan debt, including interest from July 2, 1841, to July 1, 1845, funded, or proposed to be funded, the sum of 2,987,000 dollars, or nearly 3,000,000; the annual interest of which, at six per cent, will be about 180,000 dollars. The annual receipts on the Central and Southern railroads, on which the state relies for the payment of the above interest, are estimated, when the former shall be completed to Kalamazoo, at from 350,000 dollars to 400,000 dollars, one-half of which, or more, when the roads are fully stocked with locomotives and cars, will be net profits, amounting to 175,000 dollars, or 200,000 dollars.

3. *University Stock.*—The interest on this stock, 100,000 dollars at six per cent, or 6000 dollars per annum, is met regularly from the income of the university fund, which now averages about 8000 dollars a year.

4. *Loans to Railroad Companies.*—The only other stocks of this state, not enumerated above, were issued in pursuance of two loans to railroad companies, for which the state is contingently liable; one of 100,000 dollars to the Detroit and Pontiac railroad company, and one of 20,000 dollars to the Palmyra and Jackson railroad company. For the principal of the latter loan, and 6300 dollars of back interest, the state sold the road in June, 1844, and bid it in at 22,000 dollars. Fifteen miles of it, from Palmyra to Clinton, had been finished for two years or more, except ironing, and had been used some time on the wooden superstructure. It is supposed, that that part of the road lying north of the southern railroad of the state will be ironed by the state, and converted into a branch of that road. On the loan of 100,000 dollars to the Detroit and Pontiac railroad company, it is expected that the state will receive pay before the close of the year 1846; if not, the lien which the state has on the road is deemed ample security.—*American Almanac for 1845.*

IX. WISCONSIN.

WISCONSIN is bounded north by the British possessions ; north-east by Montreal and Menomonee rivers, and a line connecting their sources, separating it from northern Michigan ; east by Lake Michigan, separating it from Michigan proper ; south by Illinois ; and west by the Mississippi, separating it from Iowa territory. It lies between 42 deg. 30 min. and 49 deg. 30 min. north latitude, and between 86 deg. 50 min. and 96 deg. west longitude ; being 600 miles long, and 150 miles broad. It contains about 90,000 square miles, or 57,600,000 acres. In 1828, it contained 18,440 inhabitants ; in 1830, 30,747 ; in 1840, 30,945 ; of these, 18,757 were white males ; 11,992 were white females ; 101 were coloured males ; eighty-four were coloured females. Employed in agriculture, 7047 ; in commerce, 479 ; in manufactures and trades, 1814 ; in mining, 794 ; navigating the ocean, rivers, lakes, &c., 223 ; learned professions, &c., 259. In 1842, the population was 46,978 ; and, according to an article on Wisconsin in "Hunt's Merchants' Magazine" for June, 1844, the tide of emigration to Wisconsin has been so great, that the population is estimated at 110,000, and, in 1845, that it would equal 140,000 to 150,000.

It is divided into twenty-two counties, which, with their population, in 1840, and their capitals, were as follows :—Brown, 2107, C. Green Bay ; Calumet, 275, C. Calumet ; Crawford, 1502, C. Prairie du Chien ; Dane, 314, C. Madison ; Dodge, 67, C. Dodge ; Fond du Lac, 139, C. Fond du Lac ; Grant, 3926, C. Lancaster ; Green, 933, C. Monroe ; Iowa, 3978, C. Mineral Point ; Jefferson, 914, C. Jefferson ; Manitowoc, 235, C. Manitowoc ; Marquette, 18, C. Marquette ; Milwaukee, 5605, C. Milwaukee ; Portage, 1623, C. Fort Winnebago ; Racine, 3475, C. Racine ; Rock, 1701, C. Rockport ; St. Croix, 809, C. St. Croix ; Sauk, 102, C. Prairie du Sac ; Sheboygan, 133, C. Sheboygan ; Walworth, 2611, C. Elkhorn ; Washington, 343, C. Washington ; Winnebago, 135, C. Oshkosh.

Madison, between the third and fourth of the four lakes which discharge their waters into Rock river, in Dane county, is the seat of government, and beautifully situated. It is regularly laid out as a town, and will rapidly increase.

Soil and Configuration.—The surveyed part, south of Green bay, Fox, and Wisconsin rivers, is composed of timbered and prairie lands, with some swamps or wet prairies, having a vegetable soil of from one to ten feet deep. North of the Wisconsin commences a hilly region, ascending, as we proceed north, into a mountainous country, with a rugged and broken surface, with many rapids and falls in the streams, and affording many wild and picturesque views. Near the sources of the Mississippi there is an elevated table land, abounding with lakes and swamps, in which fish are abundant, and wild rice grows. Bordering on the Mississippi and Wisconsin rivers the soil is rich, and the surface is generally covered with a heavy growth of timber. The white pine is found on the Upper Mississippi. All the productions common to this latitude can be cultivated with success, and the great range of pasturage on the prairies renders the country peculiarly favourable for raising cattle.

Live Stock and Products.—In 1840, there were in this territory 5735 horses and mules ; 30,269 neat cattle ; 3462 sheep ; 51,333 swine ; value of poultry produced 16,167 dollars. There were produced 212,116 bushels of wheat ; 11,062 bushels of barley ; 406,514 bushels of oats ; 1965 bushels of rye ; 10,654 bushels of buckwheat ; 379,359 bushels of Indian corn ; 419,608 bushels of potatoes ; 6777 lbs. of wool ; 1474 lbs. of wax ; 135,288 lbs. of sugar. The products of the dairy were valued at 35,677 dollars.

Minerals.—The south-western part of Wisconsin is exceedingly rich as part of the mineral region, which extends into Illinois and Iowa. Lead ore, yielding seventy-five per cent of metal, is abundant ; and copper ore is also extensively found. The former has long been, and the latter is beginning to be wrought. Iron ore also exists.

Rivers.—The principal rivers are the Mississippi, washing its western border ; the Wisconsin, 500 miles long ; a large tributary of the Mississippi ; Chippeway river, which enters the Mississippi further north-west, and is a large river ; Rock river, which rises and runs partly in this state ; Neenah or Fox river, which passes so near the Wisconsin, that in time of high water the country between them is often overflowed, and can be passed in boats,

passes through Lake Winnebago, and enters Green bay; though obstructed by rapids, boats pass up it 180 miles.—*U. S. Gaz. Official Returns.*

The following is the latest account we have of this territory:—

“Numerous lakes are scattered over the face of the territory, which, if anywhere else than in the vicinity of those great internal waters by which Wisconsin is surrounded, would render our territory famous. Green bay, though not properly called a lake, as it is connected on the north with Lake Michigan by a channel some twenty miles in width, filled with small islands, is 120 miles in length, by twenty broad, and receives into its waters all those rivers that rise in the north-east part of the territory, and flow in an easterly direction. Lake Winnebago, ten miles in width, by thirty in length, is situated, as has been remarked, forty miles south-west of Green bay; and is most known, as, till lately, it marked the boundaries of the settlements. It is surrounded by a beautiful country, adapted to agricultural purposes, and over its waters must pass the commerce that will soon find an outlet at Green bay. Lake De Flambeau, upon the western side, in the midst of a broken country, gives rise to one of the branches of the Chippewa, and averages about forty miles in length by ten in width. The country around this lake is highly diversified, resembling more the New England scenery than the general monotonous aspect of the west. The Lake of the Desert, ten by twenty miles in size, formerly supposed to be the source of the Montreal, and the boundary between the Michigan claim and the territory, is now known to give rise to the Wisconsin. Lakes Tomahawk, Courtoireille, and Cli Tac, average in size eight by twenty miles, and give rise to separate branches of the Chippewa. Lake St. Croix, thirty-six miles by three, receives the waters of the St. Croix, and discharges them into the Mississippi, by a channel two miles in length. Besides these, there are numerous smaller lakes, varying in size from ten to fifty square miles.

“The face of the country presents very different aspects in its different divisions, offering all the variety of mountain, plain, and valley. The southern portion of the territory is comparatively level, the greater part of it alternating between the prairie and the oak openings, the latter of which consist of burr oaks scattered from ten to fifty feet apart, perfectly free from underbrush, and resembling more an ancient park than the forests of a new country. Singular in their growth and position, they are often found running for miles in narrow ridges, parallel to each other, divided by belts of prairie, varying from a few feet to miles in width.

“The prairies have a deep black, and exceedingly fertile soil, but are not generally esteemed as highly for the cultivation of wheat as the warmer and more protected surface of the oak openings. They are, however, improved by frequent tillage; and, if secured a few years from the annual fires that sweep over them, will generally be found covered with a thick growth of timber. The centre of the territory, between Illinois and Lake Superior, assumes a more hilly appearance, and as we approach the north, the larger timber becomes more abundant; though, even upon the shores of Lake Superior, and thence extending south, are to be found prairies of respectable size. Numerous tamarack swamps are also to be found in this section, that render the exploration of the country, without roads, somewhat difficult.

“It is said by the Honourable Alfred Brunson, who made a report to the last legislature of his travels in the interior of the territory, that ‘after ascending the Black and Chippewa about thirty miles, the general face of the country is some 300 feet lower than the bluffs of the rivers and the ridges that divide their waters. These lowlands, as they may be called, though 200 feet above the rivers, are generally level or gently rolling, of a sandy soil, with but little timber, and present the appearance of having been once the bottom of large lakes, formed by the rivers, shut in by the Mississippi bluffs from that stream, but cutting their way through the bluffs, and a channel through the sandy bottoms left the plains far above the present channels of those streams. If this was ever the case, the lake formed by the Chippewa must have been some 300 miles in circumference, nor could that formed by the Black river have been much less.’

“The agricultural facilities of the more northern part of the territory are not much known. It is unquestionably good for grazing; and the region between the St. Louis and the Montreal is said to be suited to the raising of wheat, and to afford farming sites, excelled by none, even in the west. Hitherto, however, it has only been traversed by the

trapper, or the adventurer in pursuit of mineral wealth; and the numerous rivers are the thoroughfares, upon which, in bark canoes, they seek their journey's end. Few demands have been made upon the soil for its fruits, except in the scanty patches, cultivated around the trading posts; and, therefore, little can be said of its capabilities, except by report, which characterises the north as an agricultural section scarcely inferior to the south, and richer by far in mines, timber, fisheries, and water power.

"Private enterprise is in a fair way to develop some of the resources of the north. Bands of men have recently penetrated to the borders of Lake Superior, allured by the brilliant descriptions of its mineral wealth. Mines of lead, copper and iron, have been represented as abounding, of extraordinary richness, and easy of access; and specimens of silver have been exhibited, as a promise of what Wisconsin can afford of the more precious metals. And though time has not sufficiently elapsed to determine with certainty the result of their enterprise, yet the huge boulders of virgin metal, already extracted from the borders of Lake Superior, and the reports of others, of even greater size and purity, attest the uncontradicted accounts of its mineral wealth and varied resources; so much so, that the secretary of war, in his last report, recommends the construction of a ship-canal around the Falls of St. Mary, that there may be an uninterrupted ship-communication from the lower lakes to the vast mineral region of Lake Superior, and announced the taking possession of the mining country with a military force; so that the enterprise of individuals, has not only to contend with the fastnesses of nature, but with the physical force of the general government."—*Wisconsin and its Resources, by Josiah Bond, of Wisconsin.*

The most important place in this state is Milwaukee, on Lake Michigan. It is frequented by steamboats, and is an important commercial entrepôt. It is the only good harbour between Chicago and Green bay. Green bay is near the mouth of Neenah or Fox river, at the head of Green bay, and has a good harbour and an extensive trade. Racine and Sheboygan, on Lake Michigan, and Prairie du Chien, on the Mississippi, just above the mouth of the Wisconsin, are considerable places.

Trades.—There were in this territory, in 1840, one commercial and seven commission houses engaged in foreign trade, with a capital of 63,000 dollars; 178 retail dry goods and other stores, with a capital of 661,550 dollars; 133 persons employed in the lumber trade, with a capital of 21,180 dollars; sixty-two persons engaged in internal transportation, who, with three butchers, packers, &c., employed a capital of 14,100 dollars. The statistics of the Erie canal, for the five years ending 1843, exhibit the following amount of furniture as having passed that thoroughfare destined for Wisconsin: in 1838, only forty-two tons; in 1839, 742 tons; in 1840, 816 tons; in 1841, 1190 tons; and in 1842, 1985 tons.—*Official Returns.*

Manufactures.—The value of home-made or family manufactures was 12,567 dollars. There were one furnace, capital 4000 dollars; forty-nine smelting houses produced 15,129,350 lbs. of lead, employing 220 persons, with a capital of 664,600 dollars; three distilleries and three breweries employed a capital of 14,400 dollars; four flouring mills, twenty-nine grist mills, 124 saw mills, capital 561,650 dollars; seven brick, 509 wooden houses were built, and cost 212,085 dollars; six printing offices and six weekly newspapers employed a capital of 10,300 dollars. Total capital in manufactures, 635,926 dollars.—*Official Returns.*

Education.—No college has been established in this territory. There were, in 1840, two academies, with sixty-five students; and seventy-seven common and primary schools, with 1937 scholars.

In January, 1840, this territory had one bank, with a capital of 100,000 dollars, and a circulation of 109,185 dollars.

The government was organised in 1836. The governor is appointed by the president of the United States, with the advice and consent of the senate, and is ex-officio superintendent of Indian affairs. The legislative assembly consists of a council of thirteen members, elected for four years; and a house of representatives of twenty-six members, elected for two years. Their pay is three dollars a day, and three dollars for every twenty miles' travel. The Congress of the United States have appropriated 20,000 dollars for the erection of public buildings, and 5000 for a library.

Public Works.—This territory has a few works of internal improvement. The United

States commenced, in 1838, the Portage canal, one mile and a quarter long, to connect the Wisconsin and Fox rivers, which completes a steamboat navigation from Lake Michigan to the Mississippi. The Milwaukee and Rock river canal, sixty miles in length, to connect Rock river with Lako Michigan, is in progress.—*U. S. Gaz. Official Returns.*

INDIAN OR WESTERN TERRITORY.

THE INDIAN TERRITORY is situated on the west of the settlements of the United States, and has been set apart by the general government, for the permanent residence of those Indian tribes that have been removed, chiefly from the south-western states of the union. They are guaranteed in having governments of their own choice, subject to no other control from the United States, than such as may be necessary to preserve peace on the frontiers, and between the several tribes. The country is about 600 miles long, from south to north, and from 300 miles to 600 miles in breadth, from east to west. It has the river Platte on the north, the states of Missouri and Arkansas on the east, the Red river on the south, and a desert country on the west. This region comprises, within the habitable districts, an area of 120,000 square miles, or 76,800,000 British statute acres. The number of the different tribes now occupying this territory, is about 70,000, exclusive of the wild tribes of the prairies. "The country, for about 100 miles west of the eastern boundary, is in general fertile, moderately elevated, and gently undulating, but not hilly, except in the south-eastern parts, where it is traversed by several ranges of hilly and elevated lands. The principal rivers are Red river, Canadian, Arkansas, Neosho, Kansas, and Platte rivers, with their tributaries. The largest of these rivers rise in the Rocky mountains, and flow east into the Missouri and the Mississippi. A considerable portion of the country is prairie, but the margins of the streams are generally covered with wood. Red river and the Arkansas are navigable at certain seasons to within the Indian territory by steamboats, and the Kansas by boats. The climate of this region is generally healthy, rather cold in the winter, in the northern part, as it is exposed to an extensive sweep of the west winds, over the vast plains, from the mountainous region; but in the southern part, the winters are mild. All the productions of the United States, of the same latitude, can be here raised; and the grass on the prairies is particularly favourable to the raising of cattle. The country contains coal, some lead and iron ore, and many saline springs, from which a great amount of salt could be manufactured. Although the Indians felt a reluctance to removal, as it was natural they should regret leaving the scenery of their childhood and the graves of their fathers, yet it will be their own fault, if they do not better their condition by their change of residence. To break up the establishments of incipient civilisation, and to commence anew, was in itself a great evil; but removed from the demoralising influence of profligate white men, they are favourably situated for carrying on the work which they had successfully begun."—*U. S. Gaz.*

The Chickasaws and the Choctaws, who were friendly tribes on the east side of the Mississippi, dwell together in the same territory in the west. Their country is bounded north by the Canadian and Arkansas rivers, east by the state of Arkansas, south by the Red river, and west by the western territory of the United States. Their territory is about 200 miles long and 150 miles broad. The Choctaws are extensively engaged in agriculture, and have good houses and well inclosed fields. They raise large quantities of Indian corn; and, in the southern part, considerable cotton. They have nine cotton gins, and several grist and saw mills erected on the Red river and other streams; and they raise large stocks of cattle, horses, sheep, and swine. They are governed by a written constitution and laws. The nation is divided into four districts, each of which elects a chief every four years. The general council consists of forty members, and assembles on the first Monday of October annually, and is chosen by the qualified voters of each district. The council passes the laws, and the chiefs have a veto power, which can be overruled by a vote of two-thirds of the council. The council chooses its speaker, clerks record the proceedings, and the speaker is addressed, and the business transacted with the customary forms of legislative proceedings. The council generally continues in session about two weeks, and the members are paid from the funds of the nation, two dollars a day. They have a large

and commodious council house. The nation is divided into judicial districts, and trial by jury and appeal to the highest judicial tribunal are instituted. There is no enforcement of the payment of debts; but this is left to honour, which is generally observed. The military department of the nation is intrusted to a general, elected by the people, with thirty-two captains in each district. Spinning and weaving are carried on in many parts of the country; blacksmiths are furnished by the United States, according to treaty stipulations—many of the principals, and all the assistants, belonging to the Indians. The Choctaws may be regarded as among the most intelligent of the Indian tribes; and it is their boast, that, in war they never shed the blood of an American. They have frequently entered the military service of the United States.

The Chickasaws have settled promiscuously among the Choctaws; and by an agreement between them, the Chickasaws have the privilege of forming a district within the Choctaw nation, governed by the same laws. They now form the fourth district, with a proportional representation in the national council. They receive their annuity separately. The American Board of Foreign Missions have five stations, four missionaries, and ten assistants among these tribes; the Baptists have one station, the Methodists one, and the Presbyterians have four stations.

The Creeks inhabit the country bounded on the north and east by that of the Cherokees; and south by that of the Choctaws and Chickasaws, from which it is separated by the Canadian river. Their lands are fertile, and they grow Indian corn, beans, potatoes, rice, wheat, pumpkins, melons, &c. Indian corn is their principal crop, and they supply large quantities to the garrison at Fort Gibson. They are industrious, have built for themselves comfortable houses, and have productive gardens, orchards, and well-cultivated fields. They dwell generally in towns, and cultivate their lands in common. The government of the United States has furnished them with live stock, according to treaty stipulations, consisting of cattle and hogs, from the breeding of which they will be able hereafter to supply themselves. Blacksmiths, wheelwrights, and waggon makers, are furnished by treaty. Their country is not so well watered or healthy as that of their neighbours, but it is equally productive. The north-western winds, blowing from the mountains and frozen regions over the prairies, are cold in winter, and they sometimes suffer from drought in summer. They have elected a principal chief, and are engaged in building a council house, where representatives of the whole people will meet annually to pass laws. The Baptists have, among the Creeks, two missionary stations, the Board of Foreign Missions one, and the Methodists one station.

The Seminoles are considered a part of the Creek nation, and speak the same language. They are by agreement settled among the Creeks, between the Arkansas and the Deep Fork of the Canadian river, above the Cherokee settlement. They have made some improvements, and have raised some corn; but in general, they dislike labour. They have a blacksmith, under treaty stipulations. They are so well satisfied with their country, that they are anxious that their brethren who remain in Florida, and have been maintaining a hopeless contest with the United States, may be induced to join them. The slaves that they have been permitted to bring into the country, have occasioned great difficulty.

The country of the Cherokees, is north and east of that allotted to the Creeks. They have advanced further in civilisation than the other tribes. They have a fertile agricultural country, comfortable houses, and well-cultivated farms, producing in abundance the necessaries of life; and they raise large stocks of cattle and good horses, for which their extensive prairies afford abundant pasture and fodder. They have but few mills, as their streams, at certain seasons, fail. Salt springs exist, and salt is manufactured. The Cherokees are governed by written laws; they elect annually members to the general council, which meets on the first Monday in October annually; they have an upper and lower house. A speaker and clerk are elected, and the usual legislative forms are observed. Courts are held throughout the country, which is laid out in judicial districts. They have sheriffs, and other officers, and collect debts in the customary way, reserving certain property, such as a bed, a work horse, a cow, &c., from execution. They manufacture most of their own clothing, dress in the English manner, and speak the English language. They have blacksmiths, wheelwrights, and waggon makers, furnished by the United States government, and a large sum has been invested by the United States, from which they receive an annuity, the proceeds of the sale of their lands east of the Mississippi,

and applied to the improvement of their new country. The Board of Foreign Missions have five stations, four missionaries, and other assistants, making the whole number twenty-four. They have also a printing press. The United Brethren have also a mission among them.

The Osages occupy a territory north of the Cherokees. The United States have laboured, by supplying them with agricultural implements, and live stock, and erecting mills, and supplying blacksmiths, to persuade them to a settled life, and to industrious habits, which would secure in abundance, in their fertile country, the comforts of life. But they are impatient of labour and dislike agriculture, and, in general, prefer their nomade habits; and, as the buffaloes are become scarce, or have moved to the west, the Osages do not scruple to kill the cattle belonging to other tribes. A few of the Osages, however, by their industry, and the comforts which they secure, may persuade others to follow their example. They are among the least civilised of the Indians in this territory.

The Shawnees are settled the country between the Osage and Kansas rivers. They are an industrious, frugal, and agricultural people, and have good farms, producing an abundance of Indian corn, wheat, oats, and a variety of culinary vegetables; and they raise horses, cattle, and hogs. They have a blacksmith, furnished by treaty stipulation, and a grist and saw mill. The Senecas are distributed among them. The Methodists and Baptists have missionary stations among them, and the latter have a printing press.

West of the Missouri, and north of the Shawnees, are the Delawares. They resemble the Shawnees, and have Methodist and Baptist missions.

The Kansas are settled, or rather roving in the country between the Shawnees and the Delawares, and are indolent and poor.

The Pawnees, the Omahaws, and the Ottos, inhabit the country about the Platte, and retain most of their original habits. The Baptists and Methodists have missionary stations among them.—*U. S. Gaz.*

TABLE showing the Number and Condition of the several Tribes, in the Indian Territory of the United States, east of the Rocky Mountains, November 25th, 1841.

NAMES OF TRIBES.	Number of each tribe indigenous to the country west of the Mississippi.	Number of each tribe whose removal to the west is completed.	Number of each removed and not yet completed.	Number of each remaining east, on the 25th of November, 1840.	NAMES OF TRIBES.	Number of each tribe indigenous to the country west of the Mississippi.	Number of each tribe whose removal to the west is completed.	Number of each removed and not yet completed.	Number of each remaining east, on the 25th of November, 1840.
Appachees.....	20,280				Omahas.....	1,600			
Arickees.....	2,750				Ottowas & Chippewas	5,026
Arrapahas.....	3,000				Ottowas and Chippewas of the lakes.....	2,964
Assinatoins.....	15,000				Ottowas of Maumee.....	482	52
Blackfeet.....	30,000				Ottos and Missourias	1,000			
Caddoes.....	2,000				Osages.....	5,120			
Cherokee.....	19,200		25,911	1,000	Pagans.....	30,000			
Cheyenes.....	3,200				Pawnees.....	12,500			
Ghickssaws.....	4,600	400	Peorias & Kaskaskias.....	132		
Chippewas, Ottowas, and Pottawatomies, and Pottawatomies of Indians.....	5,207	2,087	Plankeshaws.....	162		
Choctaws.....	15,177	3,333	Poncus.....	900			
Creeks.....	24,504	744	Quapaws.....	476			
Crows.....	3,000				Sacs.....	4,800

* Six hundred and twenty-three Florida Indians were removed since 25th of November, 1840. Nine died on the journey.
 † Destroyed by the small-pox, in 1837. The few left no longer exist as a tribe, but have become members of other bands.

IOWA TERRITORY.

THE territory of Iowa is bounded on the north by the British territory of the Hudson Bay company, east by Wisconsin territory and Illinois, from which it is separated by the Mississippi river, and a line due north from its source in Itaska lake to the British possessions; south by the state of Missouri; and west by the Missouri river to the entrance of White-earth river, and following this, north, to the British possessions. It lies between 40 deg. 30 min. and 49 deg. north latitude, and between 90 deg. and 102 deg. west longitude, and between 14 deg. and 26 deg. west longitude from Washington. It is about 600 miles long, and, at a medium, 250 miles broad, comprising about 150,000 square miles, or 96,000,000 British statute acres. To a considerable portion of this territory the Indian title has not yet been extinguished. The population, in 1840, was 43,111. Employed in agriculture, 10,469; in commerce, 355; in manufactures and trades, 1629; in mining, 217; navigating the ocean, rivers, and canals, ninety-one; learned professions, 365.

This territory is divided into eighteen counties, which, with their population, in 1840, and their capitals, were as follows:—Cedar, 1253, C. Tipton; Clayton, 1101, C. Prairie la Porte; Clinton, 821, C. Comanche; Delaware, 168, C. Delaware C. H.; Desmoines, 5577, C. Burlington; Du Buque, 3059, C. Du Buque; Henry, 3772, C. Mount Pleasant; Jackson, 1411, C. Bellevue; Jefferson, 2773, C. Fairfield; Johnson, 1491, C. Iowa City; Jones, 471, C. Edinburg; Lee, 6093, C. Fort Madison; Linn, 1373, C. Marion; Louisa, 1927, C. Wappello; Muscatine, 1942, C. Bloomington; Scott, 2140, C. Davenport; Van Buren, 6146, C. Keosauqua; Washington, 1594, C. Washington. Iowa City, on Iowa river, thirty-three miles west-north-west of Bloomington, is the capital.

Soil.—The surface of the country is undulated, without mountains or high hills. There is a district of rather elevated table land, which extends over a considerable part of the territory, dividing the waters which fall into the Mississippi from those which fall into the Missouri. The lands near the rivers and creeks, extending back from one to ten miles, are generally covered with timber, and farther back the country is an open prairie, without trees. By the frequent alternations of these two descriptions of land, the face of the country is greatly diversified. The prairies occupy nearly three-fourths of the territory, and, although they are destitute of trees, present a great variety in other respects. Some are level, and others are undulated; some are covered with a luxuriant grass, well suited for grazing; others are interspersed with hazel thickets and sassafras shrubs, and, in the proper season, decorated with beautiful flowers. The soil, both on the bottom and prairie land, is generally good, consisting of a deep black mould, intermixed in the prairies with sandy loam, and sometimes with a red clay and gravel. The cultivated productions are Indian corn, wheat, rye, oats, buckwheat, potatoes, pumpkins, melons, and all kinds of garden vegetables. The soil and climate are favourable to the cultivation of fruit. Wild raspberries, plums, strawberries, and grapes, are abundant.

Live Stock and Agriculture.—In 1840, there were 10,794 horses and mules; 38,049 neat cattle; 15,354 sheep; 104,899 swine; poultry to the value of 16,529 dollars. There were produced 154,693 bushels of wheat; 728 bushels of barley; 216,385 bushels of oats; 3792 bushels of rye; 6212 bushels of buckwheat; 1,406,241 bushels of Indian corn; 23,039 lbs. of wool; 2132 lbs. of wax; 234,063 bushels of potatoes; 17,953 tons of hay; 313 tons of hemp and flax; 8076 lbs. of tobacco; 41,450 lbs. of sugar. The products of the dairy were valued at 23,609 dollars; of the orchard, fifty dollars; of lumber, 50,280 dollars. Value of skins and furs, 33,594 dollars.

Climate.—The climate, except on the low, miasmatic lands, near rivers and streams, is salubrious; the rivers are not sluggish, and their borders are more healthy than in some portions of the western country. Winter commences in December, and ends in March; the weather is variable, and sometimes severe, but less so than is common in the same latitude. Summer is not oppressively hot, and refreshing showers are frequent.

Minerals.—The great lead region of the northern part of Illinois, and the southern part of Wisconsin, crosses the Mississippi, and comprehends, in Iowa, about eighty townships, or about 2380 square miles. It borders upon the Little Makoqueta river, about twelve miles from east to west, and extends a considerable distance south, and still

further north along the Mississippi. Zinc and iron ore also abound in this region; some of the latter is magnetic. Limestone is abundant, and some beautiful marble is found.

Rivers.—The Mississippi flows along the whole eastern boundary of this territory, and is navigable, in time of high flood, for steamboats to the mouth of the St. Peter's. The latter river rises near the sources of Red river, and, after a course of 230 miles, enters the Mississippi nine miles below the falls of St. Anthony. The Des Moines river runs through the southern part of the territory, and, forming a part of its south-west boundary, falls into the Mississippi. At high flood it is navigable for steamboats 100 miles, and for keel-boats at all times. Checauque, or Skunk river, after a course of 150 miles, enters the Mississippi. Iowa river is 300 miles long, and is navigable for steamboats twelve miles from its entrance into the Mississippi, and for keel-boats to Iowa city. Red Cedar, the main branch of the Iowa, is navigable for keel-boats, in high water, 100 miles above its junction. The Wapipinecon has a winding and rapid course 200 miles to its entrance into the Mississippi, and affords much good water power. The Makoqueta bounds the mineral region on the south, and falls into the Mississippi, furnishing, during its course, the greatest water power in the territory. Turkey river, winding for 150 miles, then falls into the Mississippi. It is not navigable. James and Sioux rivers flow into the Missouri. Red river, which rises near the head waters of the Mississippi, runs northwardly into Lake Winnipeg, and finally into Hudson's bay.

Towns.—Burlington, on the Mississippi, 1429 miles above New Orleans, is a place of much trade. Du Buque is the metropolis of the mineral region. Fort Madison, and Bloomington, and Davenport, on the Mississippi, are places of considerable business; and Iowa City, in the interior, the seat of government, is a growing place.

Trades and Manufactures.—There were, in 1840, fourteen commission houses engaged in foreign trade, with a capital of 92,300 dollars; 157 retail dry goods and other stores, with a capital of 437,550 dollars; twenty-nine persons were employed in the lumber trade, with a capital of 16,250 dollars; home-made, or family manufactures, were produced to the value of 25,966 dollars; three tanneries, with a capital of 4400 dollars; two distilleries, capital 1500 dollars; six flouring mills, thirty-seven grist mills, seventy-five saw mills, the whole employing a capital of 166,650 dollars; fourteen brick and stone, and 483 wooden houses, were built at an expense of 135,987 dollars; four printing offices, and four weekly newspapers, employed a capital of 5700 dollars. Total capital in manufactures, 199,645 dollars.

Education.—The University of Iowa, at Mount Pleasant, in Henry county, has been chartered by the territorial legislature, under the direction of twenty-one trustees. Seven academies have been incorporated. In 1840, one academy was in operation, with twenty-five students. There were sixty-three common and primary schools, with 1500 scholars.

Religion.—The Methodists, Baptists, and Presbyterians, are the most numerous religious denominations. There are some Episcopalians, Friends, and Roman Catholics.

The chief Indian tribes of this region are the Sacs and Foxes, the Chippewas, Ottawas, and Pottawatomies. The Sioux also inhabit the north part of the territory.

In 1832, this country was purchased of the Indians, and, in 1833, the territory began to be settled by white emigrants. Since that time the population has greatly increased, towns have been built, and improvement has been rapid.—*U. S. Gaz., Official Returns.*

MANDAN DISTRICT.

THE District of Mandan is situated between the British possessions on the north, Wisconsin territory on the east, the Indian territory on the south, of which the north fork of Platte river may be considered the boundary, and the Rocky mountains, separating it from the Oregon territory on the west. It comprises an area of about 300,000 square miles, extending about 520 miles from north to south, and 600 miles from east to west. This extensive region has been but imperfectly explored. "The surface is chiefly an elevated plain, or table land, consisting of vast prairies, on which large herds

of the bison, elk, and deer, range; and though the soil is generally light and thin, it affords abundant grass and herbage for their support, and it is undoubtedly capable of supporting an equal number of domestic cattle. The principal rivers are the Missouri and Yellow Stone, with their numerous branches, including their sources. The largest branch of the Yellow Stone is the Big Horn, which rises in the south-west part of the territory. The source of the Missouri in this territory is about 3100 miles above its junction with the Mississippi, in about 43 deg. 30 min. north latitude. Within about three-quarters of a mile from this point are found the head waters of the north branch of Lewis's river, which flows into the Columbia river. The principal elevations east of the Rocky mountains are the Black hills, covered with shrubby cedars, which commence in the southern part of the territory, extending north-east. The most interesting feature of this region is the capacity which it affords for a pass and a road across the Rocky mountains. It appears that all the points of departure are situated in the vicinity of the Black hills, between the forty-third and the forty-fifth parallels of latitude; and that among these passes across the mountains, there is one, and probably but one, sufficiently gradual in its ascents and descents, and sufficiently open, to admit of the passage of wheel carriages, and consequently of the ready construction of a convenient and good road. This pass goes through an opening in the Black hills, at about 44 deg. 30 min. north latitude, and, keeping between these hills and Big Horn mountain, it crosses the tributaries of the Yellow Stone from the south, and finally the Yellow Stone itself. It then crosses the Missouri, or rather the three forks of that river, a short distance above their junction, from whence it pursues a south-westwardly direction, until arriving at the head waters of Bitter Root river; thence down the valley of this river to its junction with the Salmon, or Lewis's river, and thence down the valley of this last river to its junction with the Columbia. The point of departure above-mentioned is about 650 miles north-westwardly from the Council Bluffs, on the Missouri; and the direction of that river, for 300 miles, is nearly parallel with the route above described, and the Missouri would afford the means of transportation for 300 miles, from the Council Bluffs, on the route."—*U. S. Gaz.* The principal aboriginal tribes are the Pawnees, Riccarees, Crows, Blackfeet Indians, &c. They own a great number of horses, and they hunt, as equestrians, the buffalo, and transport on horses their baggage from place to place. A greater part of this region is destitute of wood; but as the rivers descend toward the east, various kinds of trees skirt their banks. The Mandan Indians, who formerly inhabited a part of this territory, were nearly all carried off by the small-pox in 1837; and those who survived have amalgamated with other tribes. To perpetuate the memory of the race, its name has been given to the district.

OREGON TERRITORY.

THE Oregon Territory comprises a great but not strictly defined region, lying between the Rocky mountains and the Pacific ocean, and drained by the Columbia river and its tributaries. The natural boundaries of this territory are—on the east, the Rocky mountains, extending about 900 miles from the 41 deg. to the 54 deg. north latitude; on the south, the Snowy mountains, extending from the Rocky mountains to Cape Mendocino, on the Pacific, in 40 deg. north latitude; on the west, the Pacific ocean, about 500 miles due north to Cape Flattery, at the entrance of the Strait of Fuca, about latitude north 48 deg.; and on the north, by a line extending from Cape Flattery about 120 miles north-east, and thence a line along the highlands separating the waters of the Columbia from those of Fraser's river, to the Rocky mountains. The country thus described contains about 350,000 square miles. The United States claim the country from the 42 deg. to the 54 deg. of north latitude; while the British urge their claim to the country, as far south as the Columbia river; and both parties still occupy the country.

Configuration and Soil.—“The territory drained by the Columbia presents a constant succession of mountain ridges and valleys, or plains of small extent. The principal ridges are two in number, besides the Rocky mountains, running nearly parallel to each other and to the coast; and the country is thus divided into three great regions, which differ

materially in climate, soil, and productiveness. The first region, or low country, is that between the coast and the chain of mountains nearest to the sea; the second region is between the mountains nearest the sea and the middle ridge, called the Blue mountains; and the third region or high country, is between the Blue mountains and the Rocky mountains. All these divisions are crossed by the Columbia, the main stream of which is formed in the middle region, by the union of several branches flowing from the Rocky mountains, and receiving in their course supplies from innumerable smaller tributaries, draining the intermediate countries.

"The distance from the coast to the nearest chain is, in some places, 100 miles; in others much less. The intervening country is crossed in various directions by low ridges connected with the principal chain, some of them parallel to it, and others stretching toward the ocean. From this region the Willamette river comes more than 200 miles, in a direction nearly due north, and enters the Columbia on its south side. The valley through which it passes is said to be the most delightful and fertile in north-western America. The climate of the region between the ocean and the first range, though not unhealthy, is not very favourable to agriculture. The summer is warm and dry. From April to October, while the westerly winds prevail, rain seldom falls in any part of Oregon; during the other months, when the south wind blows constantly, the rains are almost incessant in the lower region, though sometimes the dry season continues there longer. Further from the Pacific, the rains are less frequent and abundant; and near the Rocky mountains they are reduced to a few showers in the spring. In the valleys of the low country snow is rarely seen, and the ground is so little frozen that ploughing may generally be done during the whole winter. Most of the productions of the northern states, excepting Indian corn, succeed tolerably well. Horses and neat cattle will subsist without fodder through the winter. The second bottoms of the rivers, being above inundation, are extremely fertile, and prairies are considerably numerous and extensive. The forests on the uplands, although the soil is tolerably good, abound with such enormous trees, as almost to defy cultivation. A fir-tree growing near Astoria, on the Columbia, eight miles from the sea, was forty-six feet in circumference, ten feet from the ground, and 153 feet in length before giving off a single branch, and not less than 300 feet in its whole height. Another tree of the same species, on the banks of the Umqua, was fifty-seven feet in circumference, and 216 feet in length below its branches; and sound pines from 200 to 280 feet in height, and from twenty to forty feet in circumference, are not uncommon.

"The middle region of Oregon, between the mountains nearest the coast and the Blue mountains on the east, is more elevated and dry, and less fertile than the low country. It consists chiefly of plains, between ridges of mountains, the soil of which is generally a yellow sandy clay, covered with grass, small shrubs, and prickly pears. Timber is very scarce; the trees are of soft and useless woods, such as cotton wood, sumac, and willow, which are found only in the neighbourhood of streams.

"The climate is salubrious, the air is dry in summer, the days warm, and the nights cool. The rain begins later and ends sooner than in the lower country. This country is poorly adapted to cultivation, but is well suited to grazing, the grass being abundant in a green or dry state through the year. Horses are here reared in abundance by the Indians, some of whom own hundreds of them. The Blue mountains on the east of this region extend through the whole territory of the Columbia, though frequently broken into several ridges. These mountains are steep, with a volcanic appearance, and their highest peaks are covered with perpetual snow.

"The third and last division of Oregon lies between the Blue mountains on the west, and the Rocky mountains on the east. The southern part of this region is a desert of steep rocky mountains, deep narrow valleys, and wide plains, covered with sand and gravel. There is little snow in the valleys in the winter, but much on the mountains. It rarely rains, and no dew falls. The difference between the temperature at sunrise and at noon in summer, is often forty degrees."—*U. S. Gaz.*

Rivers.—The northern branch of the Columbia retains the name of the principal stream. It rises in the Rocky mountains, in about 54 deg. of north latitude, and flows in a southern course to latitude 52 deg., where it is joined by two other streams, one from the south along the base of the Rocky mountains, and the other rising in a gorge of that chain

in latitude 53 deg., in a small lake, which is within a few feet of another, whence the waters run into the Athabasca, one of the branches of McKenzie's river, which flows into the Arctic sea. Two hundred miles south of the junction, the Columbia receives McGillivray's river, and a little lower down Clark's river, which, at the point of union, is nearly as large as the Columbia. "The sources of Clark's river are near those of the Missouri, and the intervening ridge is not very high, allowing of an easy pass across the mountains. In its course, Clark's river spreads out into a lake, thirty-five miles long, and five or six miles broad, situated in a rich valley, surrounded by snow-clad mountains of great elevation. Just before the passage of the Columbia through the Blue mountains, Clark's river enters it; and just above its entrance are the Kettle falls in Clark's river. Thence the Columbia flows west 100 miles to its junction with the Okanagan, a large stream from the north. In latitude 46 deg. 8 min. the Columbia is joined by Lewis's river, in its great southern branch. It rises in an angle formed by the junction of the Rocky and Snowy mountains, between the 42nd deg. and 44th deg. of north latitude, near the sources of the Colorado, the Platte, the Yellow Stone, and the Missouri rivers. It thence flows along the foot of the Snowy mountains to the Blue mountains, through one ridge of which it passes near the 43rd deg. of latitude, having there the Salmon or Fishing falls. It then runs north-west to its junction with the Columbia, having received several small rivers in its course, the largest of which are Wapitiacos and Salmon rivers from the east. The Columbia, just below the junction of its two great branches, receives the Walla-walla, Falls, and other rivers from the south, and then passes the range of mountains nearest the Pacific, in latitude 46 deg. Below the mouth of the Walla-walla, and before passing the mountains, the Columbia has rapids, impassable at low water, but passable at high water, both up and down. Five miles below them are the *Dalles*, or narrows, where the river rushes through a space not more than 150 feet wide, walled in by basaltic columns on both sides; and thirty-six miles lower down are the *Cascades*, which are falls impassable at all times. The tide comes up to the foot of the Cascades, and the navigation is good for vessels not drawing more than fourteen feet water, to this point, which is 125 miles from the ocean. The Multnomah or Wallamette enters the Columbia from the south, about twenty miles below Fort Vancouver, and is navigable twenty-five miles to the falls. From thence the Columbia proceeds ninety miles in a north-westerly course to its entrance into the Pacific ocean."—*U. S. Gaz.*

The passes through the Rocky mountains are in this territory.

"It appears that the points of departure, on the eastern side of the mountains, within the jurisdiction of the United States, of all the passes across, are situated in the vicinity of the Black hills, and between the 43rd and 45th parallels of latitude; and that, among these passes across the mountains, there is one, and probably but one, sufficiently gradual in its ascents and descents, and sufficiently open, to admit of the passage of wheel carriages, and, consequently, of the ready construction of a convenient and good road. This pass goes through an opening in the Black hills, at about 44 deg. 30 min. north latitude; and, keeping between these hills and 'Big Horn mountain,' it crosses the tributaries of the Yellow Stone from the south, and, finally, the Yellow Stone itself. It then crosses the Missouri, or rather the three forks of that river, a short distance above their junction; from whence it pursues a south-westwardly direction, until arriving at the head waters of 'Bitter Root river;' thence down the valley of this river to its junction with the 'Salmon, or Lewis's river;' and thence down the valley of this last river to its junction with the Columbia. From these facts, then, the vicinity of the Black hills has to be attained, in order to cross the Rocky mountains from the east; and the best passage of these mountains, at present known, is the one just described. This vicinity is about 650 miles in a north-westwardly course from the position of Council Bluffs. But, from Council Bluffs, the course of the Missouri, by the latest and most authentic observations, is also north-westwardly, and, for about 300 miles, nearly parallel to the direction from the Bluffs to the Black hills. The Missouri, therefore, would afford water transportation for about 300 miles of this route."—*Report of the Sec. of War, 1842.*

Lakes.—There are many lakes in this country, some of which discharge their waters into the sources of the Columbia, and some, having no outlet, are salt.

Harbours.—The Columbia river, between Cape Disappointment or Hancock and Point

Adams at its mouth, is seven miles wide. From each of these points, a sand-bar runs into the water, and the waves of the Pacific, meeting the current of the Columbia with great violence, produce a line of breakers, which renders the navigation hazardous, when the wind is at all high. The bar at its mouth is five miles across, and the channel, in one place, only half a mile wide, with a depth of from four and a half to eight fathoms.

The rise and fall of the tides at the mouth of the Columbia is about eight feet, gradually diminishing up until you come to the mouth of the Willamette, where little or no difference in the tides is perceptible. At present, or until the channel is buoyed out, and a light-house erected on Cape Disappointment, it is unsafe for vessels of a greater draught of water than from ten to twelve feet to attempt entering the Columbia between the months of November and April, on account of the prevalent westerly winds, which make heavy breakers on the bar.

Inhabitants.—The inhabitants of this region are the several Indian tribes, amounting, in the whole, to from 40,000 to 60,000; and there are establishments formed by the British Hudson's Bay Company, for trading with the Indians; together with a few missionary establishments from the United States. "The colony from the United States is situated on the Willamette, a branch of the Columbia, about ninety miles from the mouth of the river, which is undoubtedly the finest grazing and wheat country in Oregon. At present (1841), it consists of about seventy families, who raise considerable grain, and have about 3000 head of cattle. The mission last year raised 1000 bushels of wheat, and made butter, cheese, &c., enough for their own use. They have 500 head of cattle, and 200 horses; and last year they sowed 400 bushels of wheat, 120 bushels of peas, and planted a large quantity of potatoes and vegetables of all descriptions. They have hogs, poultry, &c., in abundance. Last year they raised over 1500 bushels of potatoes. The extent of the country comprising the Willamette valley is about 300 miles long, and 200 miles broad, interspersed with ravines of wood, generally of sufficient quantities for fuel and fencing. The land, in its natural state, is usually ready for the plough, and is very fertile, producing from twenty-five to forty bushels of wheat to the acre; and the climate is so mild, that the cattle subsist in the fields without fodder or shelter of any kind being prepared or provided for them through the winter. Salmon can be taken at Willamette falls, with little trouble, from May to September, in almost any quantity."—*U. S. Gaz.*

Fort Vancouver, on the north bank of the Columbia, ninety miles from the ocean, is the principal seat of the British fur trade. It has an inclosure thirty-seven rods long, and eighteen rods wide, strongly stockaded, within which are eight substantial buildings, and many smaller ones. This place has a considerable farming establishment. There are large fertile prairies, which they occupy for tillage and pasture; and forests for fencing materials, and other purposes. In the year 1835, there were at this post 450 neat cattle; 100 horses; 200 sheep; forty goats; and 300 hogs. They have a garden of five acres, abounding with esculent vegetables; with fruits, such as peaches, apples, grapes, strawberries; and some exotics, as figs, oranges, and lemons; and various ornamental plants and flowers. There is a flour mill worked by ox power, and a saw mill, from which boards are sent even to the Sandwich Islands. There is a school here for the children of the establishment. There are shops for blacksmiths, joiners, carpenters, and a tinner. Fort George, or Astoria, is eight miles from the mouth of the Columbia; has two buildings, and a garden of two acres. Fort Walla-walla is on the south side of the Columbia, ten miles below the entrance of Lewis's river. On the Willamette river, fifty-five miles above its entrance into the Columbia, is McKey's settlement; and twelve miles above is Jarvis's settlement, which contain about twenty families. They consist mostly of the retired servants of the Hudson's Bay Company, with their half-bred families, and a few Americans. Fort Covin is on the south side of Clark's river, below the Kettle falls, just before it enters the Columbia. Here is a considerable farming establishment. Fort Okannagan is at the entrance, into the Columbia, of the river of that name, 100 miles below Clark's river. The Hudson's Bay Company have also several other trading posts in this territory. The American Board of Commissioners for Foreign Missions has seven stations—viz.: 1st, *Astoria*; 2nd, *Multnomia*, or *Willamette*. The 3rd station is on the Columbia river, 140 miles from its mouth; the river is navigable for large vessels up to this place; above this it becomes rapid and rocky. 4th, *Fugel's Sound*—Here is a fine harbour, which will one day render it an important

position, in a commercial point of view; it is on the coast, 140 miles north of Columbia river. 5th, On the Wallamette, forty miles above its junction with the Columbia. There is a fall in the Wallamette at this point, supplying great water power; small craft can ascend to this place. 6th, *Clatsop*, a new station, near the mouth of the Columbia. 7th, On the Umqua river, which empties into the Pacific some 200 miles south of the Columbia.

The Americans claim the right by discovery, and, it is stated in the *U. S. Gaz.*, that "On the 7th of May, 1792, Captain Robert Gray, in the ship Columbia, of Boston, discovered and entered the Columbia river; to which he gave the name of his vessel. He was the first person that established the fact of the existence of this great river, and this gives to the United States the right of discovery. In 1804-5, Captains Lewis and Clark, under the direction of the government of the United States, explored the country from the mouth of the Missouri to the mouth of the Columbia; and spent the winter of 1805-6 at the mouth of the Columbia. This exploration of the River Columbia, the first ever made, constitutes another ground of the claim of the United States to the country. In 1808, the Missouri Fur Company, at St. Louis, established a trading post beyond the Rocky mountains, on the head waters of Lewis's river, the first ever formed on any of the waters of the Columbia. In 1810, the Pacific Fur Company, under John Jacob Astor, of New York, was formed; and, in 1811, they founded Astoria, at the mouth of the Columbia, as their principal trading post, and proceeded to establish others in the interior. A little later in the same year, the North West Company sent a detachment to form establishments on the Columbia; but when they arrived at the mouth of the river, they found the post occupied. In consequence of the exposure of Astoria by the war of 1813, the post was sold out to the North West Company. At the close of the war, Astoria was restored, by order of the British government, to its original founders, agreeably to the first article of the treaty of Ghent. Various attempts have been made, since the war, to renew the fur trade in Oregon. In 1821, the Hudson's Bay and North West Company, who had previously been rivals, were united, and, since that time, have greatly extended their establishments in the region of Oregon. The British and American governments have not yet been able to settle, by negotiation, their conflicting claims to the country. By the treaty for the purchase of Florida, in 1819, the boundary between the Spanish possessions and the United States was fixed in the north-west, at the 42nd deg. of north latitude, and the United States succeeded to all the title to Oregon which Spain had by right of discovery. At present, the subjects of Great Britain and of the United States exercise equally the right to occupy this country, and navigate its rivers for the purposes of trade, until the subject is disposed of by negotiation. In the mean time, the great capital, and the complete organisation of the Hudson's Bay Company, enable them to reap nearly all the advantages of the fur trade in the territory of Oregon."—*U. S. Gaz.*

CHAPTER III.

MINERAL RICHES OF THE UNITED STATES.

NEARLY, if not all, the known minerals, have been found in the United States. Some of them in great abundance.

GOLD.—The gold region, which commences in Virginia, extends south-west through North Carolina, along the northern part of south Carolina, thence north-westwardly into Alabama, and terminates in Tennessee. In 1825, Professor Olmsted published an account of the gold region of North Carolina. It has since then been found to be far more extensive, but the richest mines are still worked in the region which he described.

He describes the soil of the gold region of North Carolina, as for the most part barren, and the inhabitants generally poor and ignorant. He observes, "that the traveller passes a day without seeing a single striking or beautiful object, either of nature or of art, to vary the tiresome monotony of forest and sand-hills, and ridges of gravelly quartz, either strewed coarsely over the ground, or as gravel. These ridges have an appearance of great natural sterility, which is, moreover, greatly aggravated by the ruinous practice of frequently burning over the forests, so as to consume all the leaves and undergrowth." The principal mines are three—the Anson mine, Read's mine, and Parker's mine.

The *Anson Mine*, situated in the county of the same name, near the waters of Richardson's creek, a branch of Rocky river, was discovered by a "gold hunter," one of a people that are now considered a distinct class. A rivulet winds from north to south between two gently sloping hills that emerge towards the south. The bed of the stream, entirely covered with gravel, is left almost naked during the dry season; the period which is usually selected by the miners for their operations. On digging from three to six feet into this bed, the workman comes to a stratum of gravel and blue clay, which is considered the repository of gold. The stream usually gives indications of the richness of the bed over which it flows, by disclosing pieces of the metal shining among its pebbles or sands. Very large pieces were found by those who first examined Anson's mine, and the highest hopes were entertained, until it was ascertained that part of the land was not held by a good title. It has since then been the subject of constant litigation, which has greatly retarded the mining operations.

Read's Mine, in Cabarras, was the first wrought, and occupies the bed of a branch of Rocky river, in a level between two hills, which rise on either side of the creek, leaving a space of between from fifty to a hundred yards in breadth. This space has been thoroughly dug over. The surface of the ground, and the bed of the creek, are occupied by quartz, and by sharp angular greenstone rocks.

Large pieces of gold are found, but not frequently, in this region. Masses weighing 400, 500, and sometimes 600 pennyweights are occasionally met with, and one piece was found that weighed, in its crude state, twenty-eight pounds avoirdupois. This was dug up by a negro at Read's mine, within a few inches of the surface of the ground. The place where it was found has been thoroughly dug over without any further success.

Another mass, weighing 600 pennyweights was found on the surface of a ploughed field in the vicinity of the Yadkin, twenty miles or more north of Read's mine. Specimens of great beauty are occasionally found. Although fragments of greenstone, and of several argillaceous minerals, occur among the gravel of the gold stratum, yet the miners never find it attached to any other mineral than quartz. It is seldom attached to any substance, but found scattered promiscuously among the gravel. Its colour is generally yellow, with a reddish tinge, though the

surface is not unfrequently obscured by a partial incrustation of iron or manganese, or adhering particles of sand.

Parker's Mine is situated on a small stream, four miles south of the river Yadkin. Excavations were first made in the low grounds adjacent to the stream; but the earth containing gold was taken for washing from a ploughed field in the neighbourhood, elevated about fifty or sixty feet above the stream. The gold contained in this earth is chiefly in flakes and grains. Occasionally, however, pieces are met with that weigh 100 pennyweights, and upwards; and one mass has been discovered that weighed four pounds and eleven ounces.

Gold uncoined forms a currency in the mining districts. Almost every man carries about with him a goose-quill or two, filled with gold dust or grains, and a small pair of scales. The value is ascertained by weight.

The greatest part of the gold collected at these mines is bought up by dealers at ninety to ninety-one cents a pennyweight. They carry it for sale to Fayetteville, Cheraw, Charleston, and New York. Much of it is bought up by the jewellers; some is deposited in the banks, and a considerable quantity has been received at the mint of the United States.—(See Coinage of United States hereafter.)

VIRGINIAN GOLD.—Since the year 1827, the gold mines of Virginia have attracted considerable attention. The Virginian gold region abounds in quartz, which contains cubes of sulphuret of iron. These cubes are often partly or totally decomposed; and the cells are sometimes filled with gold. The gold is found on the surface and in the quartz, but in the greatest abundance resting upon and in the fissures of slate. The method of obtaining the metal is by filtration, or washing the earth, and by an *amalgam* of quicksilver. The average value of the earth yielding gold, is stated at twenty cents a bushel.

GEORGIAN GOLD.—Habersham and Hall counties are the chief seat of the gold mines of Georgia. Its discovery has been recent, and successful. In the Cherokee country, which was separated by the Chestetee river, the indications of gold were not great, but report exaggerated them; at one time about 5000 adventurers were engaged in digging up the face of the country. The owners of the gold soil in Habersham and Hall counties were many of them poor and destitute, and, with the exception of a few tracks, the most valuable parts were sold to speculators. Many of these districts have frequently changed owners at increased prices, and four companies are engaged in mining operations.

SILVER.—This metal and its ores are not of frequent or extensive occurrence in the United States.

QUICKSILVER, has been found native in Kentucky, and more abundantly as a sulphuret in Ohio and the Michigan territory, more particularly on the shores of Lakes Michigan, Huron, St. Clair, Detroit river, and Lake Erie, to the mouth of Vermilion river. It occurs in the form of black and red sand, but is

usually more abundant in ferruginous clay. Near the mouth of Vermilion river, it is in the form of a very fine powder, or in grains and small masses in clay. It yields about sixty per cent of mercury.

COPPER, in various forms, is found in the United States, but the ores are not much sought after, except in Maryland, where, in 1839, about forty tons of ore yielded thirty per cent of pure metal. On the shores of Lake Superior it is not so abundant as was anticipated; but specimens of copper ore have been found at different places in the Mississippi valley. Pieces of pure and malleable copper had been obtained, one of which, said to have been found in Illinois, weighed three pounds.

IRON.—Iron ores are abundant in the United States. Those hitherto worked are chiefly the magnetic oxide, brown hematite, and the argillaceous oxide, particularly bog ore. The more important ores are the following, viz.: in New Hampshire, the magnetic oxide; in Vermont, brown hematite, and bog ore; in Massachusetts, bog ore; in Rhode Island, brown hematite; in Connecticut, brown hematite and bog ore; in New York, the magnetic, specular, and argillaceous oxides; in New Jersey, the magnetic and argillaceous oxides; in Pennsylvania and the states south and west, the magnetic oxide, brown hematite, and the argillaceous oxide. Iron ores abound also in Maryland.

To these may be added the carbonate of iron, which has recently been successfully smelted, and which produces iron having the carbonaceous impregnation of steel, whence it has been called steel ore. In New York, New Jersey, and Pennsylvania, the ore is found in abundance, and of a quality not exceeded in Sweden. The Connecticut and Virginia iron is highly esteemed.—*Book of the United States.*

LEAD.—Ores of lead are extensively found in the north-west territories; and in Ohio it is said to have been met with, forming slips, or slender prismatic masses in crystallised galena. This mineral is found in various places, from the Arkansas river to the North-west territory, the precise line of the Ozark and Shawnee mountains, a tract which seems to constitute one of the most important and extensive deposits of lead hitherto known. On the Arkansas, the ore is smelted by the Osage Indians for bullets. To the northward, some mines at Prairie du Chien are imperfectly worked by the proprietors of the soil. The most important mines are those of Cape Girardeau, known as the lead mines of Missouri. This district is situated between two prominent ridges of sandstone which bound the valley of Grand river, or the basin of Potosi.

The richest lead mines in the world are asserted to be in the north-west part of the state of Illinois. The lead district comprises a tract of above 200 miles in extent, and the ore is said to be inexhaustible.

“It lies in beds or horizontal strata, varying in thickness from one inch to several feet. It yields seventy-five per cent of pure lead. For many years the Indians and hunters were accustomed to dig for the metal; they never penetrated much below the surface, but obtained great quantities of the ore, which they sold to the traders. The public attention was drawn

to this quarter, and from 1826 to 1828, the country was filled with miners, smelters, merchants, speculators, and adventurers. Vast quantities of lead were manufactured; the business was overdone, and the markets nearly destroyed. At present, the business is reviving, and there were, in 1830, 8,323,998 lbs. of lead made at the mines. The whole quantity obtained, from 1821 to 1830, 40,088,860 lbs. The principal mines are in the neighbourhood of Galena."—*Book of the United States.*

COAL.—"The different kinds of coal found in the United States, has been classed by Professor Eaton under the following heads; first, the genuine anthracite, or *glaunce* coal, found in the transition argillite, as at Worcester in Massachusetts, and Newport in Rhode Island; also in small quantities in the north and south range of argillites along the bed and banks of the River Hudson. Second, coal destitute of bitumen, usually called anthracite, but differing greatly in its character from the anthracite found in argillite. It may be called *anasphaltic* coal. This is embraced in slate rock, being the lowest of the lower series of secondary rocks. This coal formation is equivalent to the great coal measures of Europe. The principal localities of this coal are in the state of Pennsylvania; as at Carbondale, Lehigh, Lackawanna, and Wilkesbarre. Third, the proper bituminous coal, as at Tioga and Lycoming. This coal is embraced in a slate rock, which is the lowest of the series of upper secondary rocks. The fourth formation is the lignite coal, which is found in a very extensive stratum in the state of New Jersey, along the south shore of the Bay of Amboy.

"The anthracite of Pennsylvania is found in the Wyoming and Lackawanna valley, situated between the Blue Ridge and the Susquehanna. The coal district is chiefly occupied by mountains which run parallel to the Blue Ridge, and are 1500 feet high. But little of this surface, with the exception of a few narrow valleys, invites cultivation. These mountains are mostly in a wild state, and offer a secure retreat to cougars, wolves, bears, and other animals.

"The rocks of the above described region are of a transition class, and present little diversity. Graywacke slate occurs in abundance, loose on the surface and in ledges. It is sometimes based on old red sandstone, and surmounted by unstratified rock, and aggregate of quartz, pebbles of various dimensions, with a cement principally silicious. In the Blue Ridge, in addition to the above described rock, a silicious graywacke, resembling fine grained granular quartz, is common. It appears in some places massive, but is often slaty. Its cement is chiefly silicious; some alumine, however, is indicated in its composition.

"The beds and veins of anthracite range from north-east to south-west, and may often be traced for a considerable distance by the compass. The veins have the inclination of the adjacent strata of graywacke, with which they often alternate, usually between twenty and forty-five degrees. In a few places they are horizontal and vertical. The beds and veins of anthracite have narrow strata of dark coloured, fine grained, argillaceous schist, for the roof and floor. This slate generally contains sulphuret of iron, and disintegrates on exposure to the air. The sulphates of iron and alumine are often observed in the schist, and it frequently presents impressions of plants and sometimes of marine shells. Impure pulverulent coal is usually connected with this slate, and is said to be a good material for printers' ink.

"Anthracite has been found in the greatest quantity in sections of coal regions most accessible by water. Extensive beds and veins range from the Lehigh to the Susquehanna, crossing the head-waters of the Schuylkill and Swatara, about ten miles north-west of Blue Ridge, and it abounds contiguous to the Susquehanna and Lackawanna. But in no part of the district does anthracite occur in such apparently inexhaustible beds, or is so abundantly raised, as in the vicinity of Mauch Chunk, a village situated on the Lehigh, thirty-five miles from Easton, and 108 miles by water from Philadelphia.

"The coal is there excavated on the flat summit of a mountain that rises nearly 1500 feet above the ocean. It is of good quality, and presents beds of unparalleled extent; is disclosed for several miles on the summit, wherever excavations have been made, and is indicated in many places by a coal slate in a pulverulent state, on the surface. The mountain rises with a steep acclivity, particularly on the north-west side, and when penetrated at various altitudes, discloses coal at about the same distance from the surface. Strata of graywacke slate, containing mica, sometimes rest on the coal, parallel with the mountain side. In the deep excavations made on the summit, no termination of the coal bed has been found,

and it is not improbable that the anthracite forms the nucleus of the mountain for a considerable distance.

"This coal mountain range is described as extending in a south-west direction to the Susquehanna. To the north-east, beyond the Lehigh, it is connected with the Broad Mountain, the first considerable elevation west of the Blue Ridge. The Lehigh from Mauch Chunk to the water gap, eleven miles, winds between rocky mountains, with a brisk current, but presents no falls. The road usually runs near the stream, and sometimes at a considerable elevation above, on the side of the steep mountain. In its passage through the Kittetany, or Blue Ridge, the river has a tranquil but slightly inclined course. On the adjacent elevation, yellow pine, hemlock, and spruce, are interspersed with deciduous trees. From the water gap to the Delaware, the river pursues its course in a deep ravine, seldom with alluvial borders of much extent. In this district of country, the soil generally rests on limestone sinks, indicating caves; and fissures in the rocks are often observed, that must, in some places, render canalling difficult. From the confluence of the Lehigh with the Delaware to tide-water, the descent is 150 feet.

"The village of Mauch Chunk is situated on the western bank of the Lehigh, in a deep romantic ravine, between rocky mountains that rise in some parts precipitously to 800 or 1000 feet above the stream. Space was procured for dwellings by breaking down the adjacent rocks and filling up a part of the ravine of Mauch Chunk creek. A portion of this stream has been transferred to an elevated railway, and is used to propel a grist-mill. Within a few years the Lehigh company have erected, and are proprietors of, a large number of dwellings and buildings of every description, including a spacious hotel, a store, furnaces, grist mills, and several saw-mills: about 800 men are employed by the company.

"Next to Mauch Chunk, Mount Carbon, or Pottsville, as it is now called, situated at the head of the Schuylkill canal, has been worked the principal anthracite coal fields. Many large veins are worked within three miles of the landing; and some have been opened seven miles to the north-east, in the direction of the Lehigh beds.

"On almost every eminence adjacent to Pottsville, indications of coal are disclosed. The veins generally run in a north-east direction, with an inclination of about forty-five degrees, and are from three to nine feet in thickness; commencing at or near the surface they penetrate to an unknown depth, and can often be traced on hills to a considerable distance, by sounding in a north-east or south-west direction. Some veins have been wrought to the depth of two hundred feet without the necessity of draining; the inclined slate roof shielding them from water.

"Where the ground admits, it is considered the best mode of working veins, to commence at the back of a coal eminence, or as low as possible, and work up, filling the excavation with slate and fine coal, leaving a horizontal passage for the coal barrows. A section of a wide vein near Pottsville has been wrought by this mode several hundred feet into the hill. The same vein is explored from parts of the summit by vertical and inclined shafts. The coal and slate are raised by horse-power, in waggons, by a railway that has the inclination of the vein.

"The western part of Pennsylvania is abundantly supplied with bituminous coal, as the eastern is with anthracite. It is found on the rivers Conemaugh, Alleghany, and Monongahela, and in numerous places to the west of the Alleghany ridge, which is generally its eastern boundary; it occurs on this mountain at a considerable elevation and elsewhere, in nearly a horizontal position, alternating with gray sand-stone, that is often micaceous and bordered by argillaceous schist. The veins are generally narrow, rarely over six feet in width. This mineral is abundant, and of good quality near Pittsburg, where it is valuable for their extensive manufactures. Beds of bituminous coal are reported as occurring in Bedford county, in the north-west part of Luzerne, and in Bradford county. In the last county, nine miles from the Susquehanna, there is an extensive bed of coal, regarded as bituminous. It has been penetrated thirty feet without fathoming the depth of the strata.

"Bituminous coal is abundant in Tioga county, New York. The summit level is forty-four feet above the river, and upwards of 400 feet above the lake. It occurs on the Tioga, and on the Chemung, a branch of that river. Bituminous coal exists on the nu-

merous streams that descend the western side of the extensive peninsula, situated between the north and west branches of the Susquehanna.

"The appearance of the Tioga, or bituminous coal, differs but little from the best Liverpool or Newcastle coal. Its colour is velvet black, with a slight resinous lustre, its structure is slaty or foliated, and its layers, as in the best English coal, divided in prismatic solids, with bases slightly rhomboidal; it is easily frangible, and slightly soils the finger. It burns with a bright flame and considerable smoke, with a slight bituminous smell, a sort of ebullition taking place, and, as the heat increases, an appearance of semi-fusion, leaving a slight residue or scoria."—*Book of the United States.*—*Various authorities.*

The coal region of Mandan is at present one of the unproductive districts. It is generally *bituminous*, and lies chiefly in Alleghany county. "The expense already incurred in providing means for bringing it to market, by opening a canal from the Potomac river, at Georgetown in the District of Columbia, denominated the Chesapeake and Ohio canal, having exceeded the estimates of engineers previously employed in the service; and a yet further heavy expense to complete it to the coal beds being ascertained to be necessary before a profit can be realised, have placed the prospects of the party prosecuting very far in the background; at such a distance that, under existing circumstances, it is quite uncertain when this work of internal improvement will be completed. The distance yet to be opened is about fifty miles; and unfortunately, being the western terminus, the site is more than ordinarily broken, rocky, and even mountainous. That which is denominated the Frostburg Coal basin, is particularly noticed by Professor DuRoi, the state geologist, and his remarks in reference thereto, shows in part the character of the region to which it is intended the canal shall extend. This basin is forty miles in length, and five miles in width, and contains 86,847 acres; which, at 4840 square yards to the acre, and fifteen yards in depth, as it is known the bed of coal is, gives 6,305,137,287 cubic yards: and as one ton of coal occupies by estimation, one cubic yard, there is, in the basin named, the number of tons of coal as expressed by the aforesaid figures."—*Hunt's Magazine.*

"Kennel coal is said to have been discovered in Kentucky.

"*Graphite* or *Plumbago*, commonly, but improperly called black lead, occurs extensively in primitive and transition rocks; from that which is obtained in New York excellent pencils have been made. There are also numerous localities of Petroleum, or mineral oil. It usually floats on the surface of springs, which in many cases are known to be in the vicinity of coal. It is sometimes called Seneca or Genessee oil. In Kentucky it occurs on a spring of water in a state sufficiently liquid to burn in a lamp; it is collected in considerable quantities.

"Salt appears to be abundant in the United States, but it has not been found as rock salt. It is principally obtained from springs. The brine contains, besides the muriate of soda, a considerable proportion of muriate of lime and magnesia. Recently bromine has also been detected in the brine of salina, by Dr. Silliman. *Saltpetre* is abundant in the west, being found in numberless caves along the Missouri; and the shores of the Arkansas are almost covered with nitre. The testimony of Mr. Schoolcraft, in relation to the recent formation of quartz crystals is very striking. They have been found, it appears, upon the handle of a spade, and the edge of some old shoes, which had been left for some years in an abandoned lead mine of the Shawnee mountains. Crystals of great beauty and dimensions have been found in numerous localities."—*Book of the United States, &c.*

PRODUCE OF THE MINES OF THE UNITED STATES.

1. *Iron.*—This metal was first produced in the province of Virginia, during the year 1715. In Scrivenor's "History of the Iron Trade," speaking of the colonies, a writer of that period says, "that they," the colonies, "have iron-stones all along the continent, from the southernmost part of Carolina to the northernmost part of New England, in great plenty, and no part of the world abounds more with prodigious quantities of wood, nor with more rivers and streams;" and he adds, "Had we a full supply of it from our plantations, we might not only ballast our ships with it, but export great quantities to those countries, and even to Africa and India." This view of the colonial trade in iron was regarded in a very different light by the proprietors of British iron works, who viewed

them with jealousy, as the formidable rival of their own establishments, and opposed all those measures that were calculated to favour the production of iron in the colonies of America. In 1719, a bill was introduced into parliament, one of the most prominent features of which was, that "none of the plantations should manufacture iron wares of any kinds, out of any sows, pigs, or bars, whatsoever, under certain penalties;"* and to this another clause was added by the house of peers, establishing that "no forge, going by water, or other work whatsoever, should be erected in any of the plantations, for making sows, pigs, or cast-iron into rod or bar-iron." The necessary consequence of this policy must have been to drive away every forge from the infant colonies of the country, and to blow out the fire and manacle the hands of every smith, by prohibiting him from making a bolt, a spike, or a nail. A great controversy existed during the period of 1737, upon the propriety of allowing the exportation of iron from the British American colonies to the parent country, and on that question there sprung up two powerful and opposing parties.

These were first the merchants on the one side, who were favourable to the importation of iron, as well as hemp from the colonies, upon the ground that they were two articles of very great importance to the navy and mercantile shipping of the British empire; and to obtain which, they presented to parliament very urgent petitions for this object. The other party consisted of the proprietors of the English iron works, and the owners of English woodlands. It was maintained by the merchants that, inasmuch as the importation of iron into England was of great amount, and introduced from Sweden and Russia, the principal part being paid for in money, and since the iron of the British colonies was equal in quality to the foreign iron, good policy should warrant the importation into England of American iron, as the price could be paid in British manufactures required in the colonies; and, moreover, from the enhanced price of cord wood, in consequence of the amount required in refining iron stone, the importation of more pig-iron from America would enable them to make more bar-iron in England. It was also maintained that the most direct mode of preventing the manufactures of the American colonies from interfering with those of England, was the granting to us encouragement to produce rough materials like that of the coarser species of iron. It was proposed that, in order to further the policy last named, an additional duty should be laid on all foreign bar-iron imported, and to repeal those which existed on the importation of iron from the American colonies. The policy of the merchants at length prevailed, and in the year 1750, an act was passed, a prominent clause of which was, "that pig-iron made in the British colonies in America, may be imported duty free, and bar-iron into the port of London; no bar-iron so imported to be carried coastwise, or to be landed at any other port, except for the use of His Majesty's dock-yards, and not to be carried beyond ten miles from London." A clause was, however, inserted in the same bill, prohibiting the manufacture of iron in the colonies. A long series of petitions and remonstrances soon sprung from this legislation, on the part of the merchants, as also the proprietors of the woodlands and the iron foundries; the one side claiming that the tendency of that measure would be a very great injury to the interests of the producers of this article, and to that of the kingdom, and the other advocating the probable existence of directly opposite consequences. The result of these several petitions and remonstrances, was a report to the house of commons, of a committee that was appointed to prepare a bill, maintaining that the importation of bar-iron from the British colonies in America, into the port of London, should be extended to all the other ports of Great Britain, and that so much of that act as related to this clause, should be repealed; which was done in a subsequent act of 1765, permitting the American colonies to export their iron also to Ireland. Such were the prominent features of the legislation of the British government respecting the colonial iron trade. The occurrence of the revolution, in 1775, severed our colonial dependence upon the mother country, and for ever terminated the legislation of the crown over the colonial products.—Iron Trade of the United States in *Merchants' Magazine*.

Iron works which had been created during the revolutionary war, afterwards languished. In 1810 we have the earliest authentic accounts of the quantity of iron produced in the United States; when, according to Adam Seybert, who collects from official documents, from 153 furnaces, were made 53,908 tons of pig-iron; from 330 forges were

* See Scrivenor's "History of the Iron Trade."

made 24,541 tons of bar-iron; from 410 naileries, were made 15,727,914 lbs. of nails; and there were 316 trip hammers, and thirty-four rolling and slitting-mills, which required 6500 tons of iron; and the total value of the manufactures of iron was 14,364,526 dollars; and 19,000 muskets were annually made at the two public armories of Springfield and Harper's Ferry. In this stage of its manufacture, the elevation given to the price, by the restrictive legislation, operated onerously on the consumer, and tended to repress industry, and diminish consumption. The duty was:

	In 1818.	In 1824.	In 1828.
	dls. cts.	dls. cts.	dls. cts.
On bar-iron, rolled, per ton . . .	30 00	30 00	37 00
„ „ hammered do.	15 00	18 00	22 40
On pig-iron	10 00	10 00	12 50

but even, under this high protection, the production did not exceed in twenty years 191,536 tons of pig-iron, from 239 furnaces, according to the statement of the committee appointed to report on iron, by Congress, in 1830. There were then made 112,866 tons of bar-iron, and 25,520 tons of castings; in the manufacture of which, 25,254 men were employed.

While the war of 1812 was pending, an extraordinary impulse was given to the production of iron, as well as some other branches of domestic industry, from the stoppage nearly altogether of foreign trade; the capital which had been employed in other adventures, was directed to home production; workshops, mills, and machinery sprang up, and foreign artisans were encouraged to settle in various parts of the country. According to the returns of the marshals, the quantity of bar-iron produced, in 1810, was 24,471 tons, which were then valued at 2,640,778 dollars; of which quantity, 10,969 tons were yielded in the single state of Pennsylvania.* Ores of iron had been at that period discovered in most of the states of the union, and mines having been worked in the states of New Hampshire, Vermont, Rhode Island, Connecticut, New Jersey, Pennsylvania, Virginia, and North Carolina.

“The state of Massachusetts had at that time an extensive establishment for the manufacture of arms, New Hampshire iron works sufficient for the consumption of the state, and Vermont possessed forges, furnaces, and slitting mills, which yielded many tons of bar-iron. In Rhode Island, there had been early established a slitting mill, three anchor forges, and machines for cutting nails; while the state of New York possessed many forges, furnaces, and bloomeries; Connecticut contributed its hollow iron ware, nails, tinned plates, and iron ware, and its modicum of fire-arms; and New Jersey its bar-iron and nail-rods, hollow ware and castings. Pennsylvania also exhibited extensive manufactures of iron, slitting-mills, and foundries, and its manufacture of steam-engines; and Delaware, Maryland, Virginia, Ohio, Indiana, Kentucky, Tennessee, North Carolina, and South Carolina had already begun to lay the foundation of extensive iron manufactures.

“Prior to the establishment of the tariff of 1828 however, a committee was appointed by congress to examine and to exhibit the facts connected with our domestic manufactures, and particular evidence was adduced upon the subject of iron. In 1828, it appears, there were at that time manufactured in that state 21,800 tons of bar-iron, and 47,075 tons of cast metal, of which 37,200 tons were used in making bar-iron, and 14,365 tons of castings—100 tons of iron being converted into nails. It was also stated, that at that time, there were 3000 tons of bar-iron manufactured in the neighbourhood of Lake Champlain. It was alleged, that in the state of New York there were, within a circle of thirty miles in diameter, eighty-one forge fires in use, each forge having two fires and one hammer; that the capital invested in 110 forge fires in operation, was 1,210,000 dollars, each fire capable of producing from twenty-five to thirty-five tons per annum, employing 5720 hands; and that in the counties of Morris, Bergen, and Sussex, in New Jersey, there were manufactured 2050 tons. Such was the substance of the evidence elicited by the official investigation of 1828, and resulting in the augmentation of the protective duties of the country.

“In 1830, the iron manufacturers of Philadelphia petitioned the senate and house of representatives, praying—1st. That all the existing duties on pig-iron, scraps, boiler plates, and all other iron in loops, slabs, blooms, or any other state but manufactured and

* See Pitkin's Statistics of the United States.

bar-iron, be abolished or repealed, and the importation on the same be admitted free of duty. 2nd. That all bar-iron manufactured by hammering, be admitted, subject to the duty of April 27, 1816, on its importation, to wit, at the rate of forty-five cents per cwt. 3rd. That all descriptions of iron manufactured by rolling, including bar, bolt, rod, sheet, and hoop, of every size and quality, be admitted subject to a duty not exceeding that now imposed on the importation of hardware, namely, twenty-five per cent. 4th. That wire of iron or steel, of all sizes and numbers, be admitted subject to the same duty as the manufactures of wire now are on their importation, namely, twenty-five per cent. 5th. That the duty now imposed on railroad iron, when purchased in the United States, be remitted, or a drawback of the existing duty be allowed thereon, on all sums exceeding fifty dollars. And lastly, that the existing duties on steel be abolished or repealed, and the importation of the same admitted free of duty. Opposed to the advocates of a change of the tariff, a delegation from several states of the Union, entitled the friends of domestic industry, assembled in convention at New York, maintaining in their address to the people of the country, the right of Congress to impose duties for protection of domestic manufactures as well as for revenue. A committee consisting moreover of members from Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania and Maryland, were appointed to draft a report upon the production and manufacture of iron and steel in the United States, a document which contained much valuable matter, collected with great care.

"The subjoined tables exhibit the result of their investigations upon the subject:

STATES.	1828			1829			1830		
	Fur-naces.	Pig-iron.	Castings.	Fur-naces.	Pig-iron.	Castings.	Fur-naces.	Pig-iron.	Castings.
	No.	tons.	tons.	No.	tons.	tons.	No.	tons.	tons.
Pennsylvania	44	24,822	3,093	44	27,425	4,564	45	31,056	5,506
New Jersey	11	1,733	6,264	11	1,941	5,998	10	1,671	5,615
Maryland	3	2,247	483	5	1,715	1,065	6	3,163	1,359
Virginia	2	400	50	2	702	72	2	538	43
Ohio	7	5,400	250
Delaware	1	450	350	1	450	350	1	450	350
Missouri	2	590	250
Total	63	29,652	10,840	63	32,233	12,049	73	42,868	13,273

"In addition to the seventy-three furnaces mentioned in the preceding table, from which detailed returns had been received, the committee had information of 129 furnaces, in the states of Pennsylvania, New York, Vermont, Massachusetts, Connecticut, Tennessee, New Hampshire, Virginia, and Ohio, in actual operation, but from them had then received no returns. Taking the production of the seventy-three furnaces, from which returns have been received, as the rate for estimating the whole, and the following would be the result:

YEARS.	Furnaces.	Pig-iron.	Castings.	TOTAL.
	No.	tons.	tons.	tons.
1828	192	90,368	33,056	123,404
1829	192	98,234	36,720	134,954
1830	202	118,020	36,728	155,348

"But as the greater part of the furnaces, not included in the returns, are situated in districts where but few castings are made, the committee have not felt authorised to estimate the quantity of castings made at them at more than about five per cent of their entire production, which would give the following proportions and result:

YEARS.	Furnaces.	Pig-iron.	Castings.	TOTAL.
	No.	tons.	tons.	tons.
1828	192	108,564	74,840	123,404
1829	192	118,404	65,349	134,954
1830	202	137,075	66,273	158,348

"From the best information the committee have been able to collect on this subject, they estimate, that of the pig-iron made in these years, about 10,000 tons per annum

have, upon an average, been converted in the air furnaces and cupolas into castings, leaving to be manufactured into bar-iron—

In 1828, of pig-iron,	98,564 tons,	making of bars	70,403 tons.
1829	"	108,405	" 77,432 "
1830	"	127,075	" 90,768 "

"And which quantities severally correspond with remarkable proportional accuracy with the returns from 132 forges, which accompanied the returns from the seventy-three furnaces first mentioned.

"In East Jersey, is a part of Connecticut, in a large district of New York, and in Vermont, bar-iron is extensively made by the process technically denominated 'blooming,' or by a single operation from the ore, without the intervention of the blast-furnace.

"The returns already received, justify the committee in putting down this description of bar-iron, for the year 1828, at 5341 tons; 1829, 5654 tons; 1830, 5853 tons; of which 2197 tons in East Jersey—making a total of bar-iron for 1828, of 75,744 tons; 1829, 83,086 tons; 1830, 96,621 tons; and the entire quantity of iron, in its first stage, as shown in the following table:

DESCRIPTION OF IRON.	1828	1829	1830
Pig-iron	tons. 108,564	tons. 118,405	tons. 137,075
Castings from blast furnaces.....	14,840	16,540	18,273
Bloomed bar-iron, for the years respectively, reduced to pig-iron, at 28 cwt. to the ton of bars.....	7,477	7,916	8,104
Total iron in pigs and castings....	130,881	142,870	163,542

Steel.—As the manufactures of steel is intimately connected with that of iron, it may be important to state that the report on that subject, made at the same time, exhibits the number of steel furnaces then existing in the United States, to have been fourteen, and established in the following places, namely, two at Pittsburg, one in Baltimore, in Philadelphia three, in New York three, in York county, Pennsylvania, one, in Troy one, in New Jersey two, and in Boston one, all capable of producing annually 1600 tons.

England, however, continues to supply the United States with the superior qualities of steel, viz.:

1. Blister-steel, from iron of the Danamora mines, in Sweden. 2. Sheer-steel, of the same origin. 3. Cast-steel.

It is estimated that the average annual quantity of hammered iron that was imported into the United States, from the year 1821 to 1830, was about 26,200 tons, besides 5600 tons of rolled iron; in all 31,800 tons, which were valued at 1,762,000 dollars.

GENERAL recapitulation of the Iron business in 1830.

	By the report.	Supplementary returns.	TOTAL.
Bar-iron made in the United States..... tons.	96,621	16,345	112,966

	1,391	Steel.....	cwt. 24,472 201,937

"Nearly all the iron, with its manufactures imported, was received from England, except the hammered bar and bolt iron, of which 21,912,702 lbs. were from Russia, 45,206,082 lbs. from Norway and Sweden, 984,399 lbs. from England, leaving less than a million of pounds for all other places.

"The tariff regulating the import of iron remained in the same condition until 1832, when the act was passed on the 14th of July of that year, providing a more fixed policy upon the subject, an act, the duties levied by which, brings us down to the year 1841.

"By the operation of this tariff, the duty on English bars was gradually reduced from thirty dollars per ton, in 1832, to twenty-seven dollars in 1834, twenty-four dollars in 1836, twenty-one dollars in 1838, eighteen dollars in 1840, fourteen dollars in the first six months of 1842; and, finally, to seven dollars fifty cents per ton, in July and August of 1842, and on other kinds in similar proportion."

STATEMENT exhibiting the State of the Iron Mines and Iron Trade of the United States in 1840.

	dollars. cts.	dollars. cts.
There were, in 1840, in the United States, 450 furnaces, producing 347,700 tons of cast-iron, one quarter of which was made into hollow ware, stove plates, plough castings, machinery, and such forms, which, when so made, was worth	5,738,080 00	
The remaining pig-iron was converted into wrought iron, and is merged in the 197,233 tons mentioned below.		
According to the same authority, there are 797 bloomeries, forges, and rolling mills, which produce 197,233 tons of iron, rod, hoop, sheet, and other wrought iron, which is worth in market eighty-five dollars per ton	16,701,805 00	
According to the report of the secretary of the treasury for 1840, there were 5515 tons of pig-iron imported in that year, which was converted into forms at an average expense of fifty dollars per ton	275,750 00	
The whole value of iron made in the United States in 1840	22,778,635 00	
The labour bestowed on the manufacture of a ton of pig-iron varies in different localities, it depends on the convenience of contiguity to each other of the various materials required. It will average, including mining, coaling, hauling, transportation, and all other charges, 20 dollars per ton, which on 71,726 tons, as above mentioned, which are used for casting forms	1,434,520 00	
Labour bestowed in converting 71,726 tons of pig-iron made in the United States, as per foregoing statement, into cast forms, such as hollow ware, machinery, stove plates, plough castings, and other articles of use made of cast-iron, including labour in mining, and procuring fuel, and all other things necessary, will average at least 30 dollars per ton	2,151,780 00	
Labour bestowed in converting 5515 tons of pig-iron imported in the United States, at 30 dollars per ton	165,450 00	
Labour bestowed in making wrought iron, in procuring the materials and consolidating them, varies even more than in pig-iron, because the materials are more numerous, and are liable to be farthes sander, and the description of iron is more diverse. If, however, the mineral coal used in the product of the United States, all the labour, including smelting, mining, coaling, hauling, transportation, and all other incidental and necessary charges for labour, will average at least 60 dollars per ton, which, on 197,233 tons, as set forth in the census, amount to	11,833,850 00	
Whole expense of labour bestowed annually in making iron in the United States	15,935,730 00	
According to the census, the number of men employed in producing the above iron, including miners of iron, is 20,497. To this number may be added miners of coal, and limestone, wood choppers, and charcoal colliers, carriers and carters, blenders and millwrights, and other incidental workmen, which will probably increase it to 42,701; and, at this number, each workman will receive one dollar per day, which is believed not far from the truth. It will be remembered that all the work in manufacturing iron, and incidental thereto, is heavy, and requires the strength and physical power of men; consequently women and children are excluded from this employment, and most of the men have large families. It may be assumed, without extravagance, that, as an average, each man has a woman and three children depending upon him for support. It is true that some have no families, but others have a dozen children, enough to verify the above supposition. Allowing this supposition, the whole number of persons sustained by the labour on and incidental to the manufacture of iron, including men, women, and children, is 213,563. Allowing each of these persons to consume each day 24 cents worth of agricultural products, and the whole amount consumed in 365 days, is	9,741,106 00	
According to the census, the capital employed in manufacturing the above iron is a little less than the amount of the product, which is what might be inferred by every man of practical experience, to wit 20,432,131	20,432,131 00	
It is believed, from facts and data ascertained and admitted, that there are in the United States about 450 blast furnaces, and that the average yield of each is 712 tons per annum, (this is the ascertained average of seventy-three furnaces), making an aggregate of 347,400 tons, worth in the market thirty dollars per ton	10,422,000 00	
It is believed that one-fourth of this quantity (to wit, 86,850 tons) is converted into forms, such as hollow ware, machinery, plough castings, stove plates, and other articles of use made of cast-iron, and, when so converted, is worth, on an average, in addition to the worth of the pig-iron, fifty dollars per ton	4,312,500 00	
In addition to the 86,850 tons above mentioned, there were imported into the United States, according to the report of the secretary of the treasury, for 1840, 5515 tons of pig-iron, which was also converted into forms, and was worth, when so converted, fifty dollars per ton more than pig-iron	275,750 00	
There are 797 bloomeries, forges, and rolling mills, in the United States. The remaining three-fourths of the 347,400 tons of pig-iron made in the United States, as shown above, that is not remelted and

cast into form, to wit, 260,550 tons, is converted (allowing 20 per cent for waste) into 208,440 tons of bar, rod, hoop, sheet, and other wrought iron, by puddling and refining, which is worth in market eighty-five dollars per ton.....	17,717,400
From which deduct for 260,550 tons of pig-iron, reckoned in first item above at thirty dollars per ton.....	7,816,500
To the wrought iron mentioned in the foregoing article may be added 11,774 tons of bloomed iron, worth in market seventy dollars per ton.....	824,180 00
Whole value of wrought and cast-iron in market, made in the United States in 1840.....	25,765,330 00
The labour bestowed on the manufacture of a ton of pig-iron varies in different locations. It depends on the convenience and contiguity to each other of the various materials required. It will average, including mining, coaling, hauling, transportation to market, and all other charges, twenty dollars per ton, which, on 347,400 tons, assumed as the manufacture of the United States, is.....	6,949,060 00
Labour bestowed in converting 86,850 tons of pig-iron, made in the United States, as shown in the foregoing statement, into cast forms, such as hollow ware, machinery, stove plates, plough castings, and other articles of use made of cast-iron, including labour in mining and procuring fuel, and all other things necessary, will average at least thirty dollars per ton....	2,605,500 00
Labour bestowed in converting 6515 tons of pig-iron, imported into the United States, calculated, as in the last foregoing article, at thirty dollars per ton.....	165,450 00
Labour bestowed in converting pig into wrought iron, in procuring the materials and consolidating them, varies even more than in making pig iron, because the materials are liable to be further assorted, and the descriptions of iron are more diverse. If, however, the mineral coal used in the product of the United States, all the labour, including mining and procuring fuel, hauling, transportation, and all other incidental and necessary charges for labour, will average at least forty dollars per ton, which, on 208,440 tons, as set forth above, amounts to.....	8,337,600 00

Labour bestowed in blooming 11,774 tons of wrought iron, including coaling, hauling, transporting to market, and all the incidental and necessary charges, as set forth in the foregoing article, will average sixty dollars per ton.....	706,440 00
Whole amount paid for labour, annually, for the manufacture of iron in the United States.....	18,769,990 00

It is believed that the number of men employed in manufacturing the above iron, including miners of iron, of coal, and of limestone, wood-choppers and charcoal colliers, carriers and carters, builders and millwrights, and other incidental workmen, is 61,405; this number will each receive 365 dollars per year. It will be remembered that all the work in manufacturing iron, and incidental thereto, is heavy, and requires the strength and physical power of men; consequently, women and children are excluded from this employment, and most of the men have large families. It may be assumed, without extravagance, that, as an average, each man has a woman and three children depending on him for support. It is true that some have no families; but others have a dozen children—enough to verify the above assumption. Allowing this supposition, the whole number of persons sustained by the labour on, and incidental to, the manufacture of iron, including men, women, and children, is 237,025. Allowing each of these persons to consume, each day, the worth of 12½ cents of agricultural products, and the whole amount consumed in 365 days is... 11,726,766 00

This falls a little short of the facts actually ascertained at several establishments, owing principally to grain and forage fed to horses and cattle employed in the business.

It is ascertained that the capital employed in the manufacture of iron at several establishments is a little less than the amount of the annual product of those establishments; and it is believed that this rule will hold true throughout the country, if we exclude the value of the large quantities of woodland held in connection with many of the furnaces and bloomeries. The capital employed will therefore amount, according to this rule, to about..... 22,500,000 00

"The iron district, which spreads through New Jersey, Pennsylvania, Maryland, and Western Virginia, traverses regions exuberant with coal, and abounding in water-power; and, travelling further west, we find in Ohio, Kentucky, and particularly in Missouri, immense stores of metalliferous wealth, adjacent to the most fertile agricultural districts. It is, to Pennsylvania, however, we must chiefly direct our attention, where two-fifths of all the iron in the United States is made. The United States contain 80,000 square miles of coal, which is about sixteen times as great as the coal measures of Europe. A single one of these gigantic masses runs from Pennsylvania to Alabama, and must embrace, itself, 50,000 square miles. Out of fifty-four counties of Pennsylvania, no less than thirty have coal and iron in them; and out of the 46,000 square miles of Pennsylvania, which form its superficies, there are 10,000 miles of coal and iron; while all Great Britain and Ireland have only 2000; so that Pennsylvania, alone, has an area of coal and iron five times as great as that of Great Britain. The quality of the coal and iron is as rich as that of Great Britain, and they have the advantage of lying near the water level; while those of the latter country are sometimes more than 1000 feet below the surface, and are excavated through subterranean passages.

"The coal frontiers, forming an amphitheatre, intersected at intervals with streams of water, are accessible through ravines, to which they converge; thus inviting the labour of the miner, by the facility of access and transportation. The coal of Wyoming lies conveniently for the supply of the lake frontier, and the whole of the northern part of New York; and the Lehigh, Schuylkill, Wilkesbarre, and Cumberland coal-fields, for the

supply of the Atlantic border, and the domestic and manufacturing purposes of the interior.

"Mr. W. Lyman first put in successful operation, at Pottsville, Pennsylvania, in 1839, a furnace for smelting iron by anthracite coal and the hot blast. In 1840, Messrs. Biddle, Chambers, and Co. erected extensive works in Dansville, Pennsylvania, on the same principle, and Messrs. Reeves and Whitaker changed their furnace, at Phoenixville, Pennsylvania, from the use of charcoal to anthracite coal.

"Mr. Lyman's furnace yielded thirty-five tons of cast iron per week, but Mr. Thomas, the agent of Mr. Crane, superintended some works, erected about the same time by the Lehigh Coal Company, at Allentown, Pennsylvania, called 'Crane Works,' from which were obtained, when first in blast, sixty tons per week; and now, in that state, seventeen furnaces, employing anthracite coal and hot blast, producing 47,000 tons per annum. In that state, anthracite coal is always used in smelting with hot air, and in puddling, in most instances, the process undertaken is the ignited gas, on the principle of Detnold's patent, obtained in England. In Maryland, bituminous coal is used in puddling, in New York, charcoal—the 'black diamond' not being one of the constituents of the mineral wealth of the empire state. And west of the Alleghany ridge we find only the bituminous formation, except in the Cumberland region.

"At Brady's Bend Iron Works, are two blast furnaces, capable of producing 5000 tons cast iron per annum, each; a rolling-mill, which has twelve puddling furnaces, from the whole of which could be obtained 8500 tons iron per annum; one scrap, and three balling furnaces, for merchant mill, or finishing rolls; and a nail factory, capable of manufacturing three tons per day, of assorted nails; besides works for sheet and boiler plate, &c.; and the manager of these works, P. Raymond, Esq., solicits orders for the heavy H, T, and V rails, at even lower rates, it is stated by Niles's Register, than the Mount Savage Works. At these latter works, situated in Maryland, at the foot of Mount Savage, nine miles from Cumberland, is erected a rolling-mill, calculated to produce weekly 150 tons iron, including boiler, plate, sheet, hoop, band, and railroad iron, where the heavy edge rail is offered to be made for fifty-nine dollars to sixty dollars per ton.

"In New Jersey, are twelve furnaces, yielding 12,000 tons pig-iron per annum; and in Bergen and Morris counties sixty-five forges, which make annually 3000 tons bloomery bar iron; and this last description of iron, which is made by a single operation from the ore, without the intervention of the blast furnace, technically called 'blooming,' is prosecuted to some extent in Connecticut, Vermont, New York, and Pennsylvania, as well as East Jersey. New Jersey obtains her coal by the Morris canal, from Pennsylvania, and supplies even that state with pig-iron, reduced from her rich ores. In New York, in Clinton county, the legislature has determined on constructing a prison where convict labour may be employed in manufacturing iron in the Catalan forge; and the heat, which has heretofore been suffered to escape, is now availed of, by a system of conduction, to generate steam, which drives the trip-hammers while melting the ore. As this operation is performed at the mouth of the mine, without the cost of transportation of the ore and coal to a distant water-power, the preparation and conversion of the ore, through the various stages of manufacture, can be conducted, by the convicts in the prison-yard, at a very reduced cost.

"In 1810, 11,000 tons bar-iron only were made in Pennsylvania, when there were forty-four blast furnaces, seventy-eight forges, and 175 naileries.

"At the present moment there are 13,000 tons bar-iron made in the state of New York, chiefly in Essex and Clinton counties. Near Baltimore city, twenty furnaces are in operation, giving 20,000 tons per annum; and so great has been the impetus given to the iron trade, that in every direction new furnaces are being constructed, and those out of blast again becoming active, in Pennsylvania. In the vicinity of Danville 40,000 tons or 50,000 tons of coal have illumined the hearths of the furnaces in that region last year. The Montour Iron Company have three of the largest furnaces in the country, the product of which is about 4000 tons cast iron, each, per annum.

"The trade, at present (1845), is in a very flourishing condition. We have taken great pains to arrive at an approximate enumeration of the iron works now in that state, and the annual quantity of iron producing from each, and we now give the result:—23½ furnaces, yielding 211,500 tons pig-iron; 187 forges, rolling and slit-ting-mills, bloomeries,

&c., converting the above pig-iron into 105,000 tons bar, bloom, boiler sheet, nail, nail plate, rod iron, &c. ; and the rapid increment of these works is very perceptible, as by the governor's message it appears there were transported, by the several state lines of improvement, for the fiscal year, ending November 30, 1844, 71,406 tons iron ; against the same time, 1843, 38,022 tons. In 1843, however, there was not much activity in the iron trade. By an account of the iron works in Pennsylvania, appeared in the Philadelphia Commercial List, for the year 1841, there were then 210 furnaces, and 170 forges, rolling-mills, &c., and seven foundries, which produced 4580 tons castings, 300 tons iron (description unknown), 103,450 tons pig-iron, and 70,040 tons bar and bloom iron.

"From all the information we can obtain, we believe the following to be nearly a correct statement of the whole product (1845) of the United States :—540 blast furnaces, yielding 486,000 tons pig-iron ; 954 bloomeries, forges, rolling and slitting-mills, &c., yielding 291,600 tons bar, hoop, and sheet boiler, and other wrought iron, 30,000 tons blooms, and 121,500 tons castings, such as machinery and stove plates, hollow-ware, &c., which, at their present market value, would stand thus :—

	dollars.
291,600 tons wrought iron, at eighty dollars per ton	23,328,000
121,500 " castings, at seventy-five dollars per ton	9,112,500
30,000 " bloomery iron, at fifty dollars per ton	1,500,000
To which must be added the quantity imported, say—	
46,000 tons bar-iron, rolled, at sixty dollars per ton	2,760,000
17,500 " " hammered, at eighty dollars per ton	1,400,000
26,050 " pig-iron, converted into castings, at seventy-five dollars per ton	1,953,750
5,570 " scrap iron, at thirty-five dollars per ton	201,950
4,157 " sheet hoop, &c , at 130 dollars per ton	540,410
2,800 " steel, at 335 dollars per ton	938,000
<hr/>	
102,277 tons	
443,100 "	
<hr/>	
545,377 tons.	Consumption 41,734,610

So that the consumption of iron in the United States, in nearly the crude state, approximates 42,000,000 dollars per annum, nearly equal to the whole value of raw cotton produced in the United States at present prices. We are rapidly outstripping the continental countries in the growth of this great sinew of national power, for, according to Mr. Virlet, France, Sweden, Russia, and all the civilised powers on the continent, only produce about 700,000 tons per annum.

"It is important that a commodity of such universal use should be abundant and cheap. The present duties on the quantity imported, which has averaged about 100,000 tons per annum, for five years, excluding 1843, amount to from fifty to 150 per cent on the first cost ; and it is evident that so large a proportion of the consumption would not be taken from abroad, if our domestic iron-masters were prepared to supply the demand. Under these circumstances, we consider such exorbitant imposts onerous and impolitic. For, whether it be true or not, that the higher the duty the higher the price, it is certainly true, the lower the duty the lower the price, where the domestic and foreign articles come fairly into competition. The effect of a moderate reduction would be, to compel the domestic manufacturer of iron to accede to lower terms, in order to rival in sales the foreign article, and the consumer would be benefited. The present price of American bars is from seventy-five to eighty dollars per ton. We know they can be laid down here for fifty-seven dollars fifty cents, and the rapid increase in the number of works, in Pennsylvania, is ample testimony to the remunerative character of the business.

"The consumption will increase with the diminution of price ; and now that the appropriations of this metal are becoming more multiform, it is unwise to keep it up to a fictitious level by exclusive legislation. It is not only being used in the construction of houses in England, but extensively in ship building, steam frigates, and the commercial marine, made of this material, are preferred for their durability, lightness of draft, and economy. There is one steamboat building in New York, we understand, for the North

river, of iron; and when she has performed a few trips, we predict that not many more will be made of wood.

"What would tend more, however, perhaps, than any other circumstance to make iron cheaper, and extend the consumption of both domestic and foreign, would be the increase of facility in communication with the interior by railroads. M. de Villefosse properly remarks, 'What they call, in France, the question of the price of iron, is, properly speaking, the question of the price of wood, and the question of the means of interior communications by means of roads, streams, rivers, and canals.' The cheap and rapid communication of railways is what so bulky an article requires; and the only point to consider is, whether it would be more advantageous to wait until this country can make it, or import it from Great Britain. The manufacture of the heavy-edge rail calls for such a large outlay of capital, so much more experience and manipulation, than any other species of fabrication, that it would retard the progress of the country too seriously, we apprehend, to stand still till the banking attained maturity.

"It has been stated that the heavy-edge rail can be made here, in Maryland, for sixty dollars per ton, which is about the cost of bars laid down at the seaboard. It appears, from English invoices, the heavy T rail has always cost seven dollars twenty-five cents per ton more than the common bar, and that, too, where the manufacture is brought to perfection.

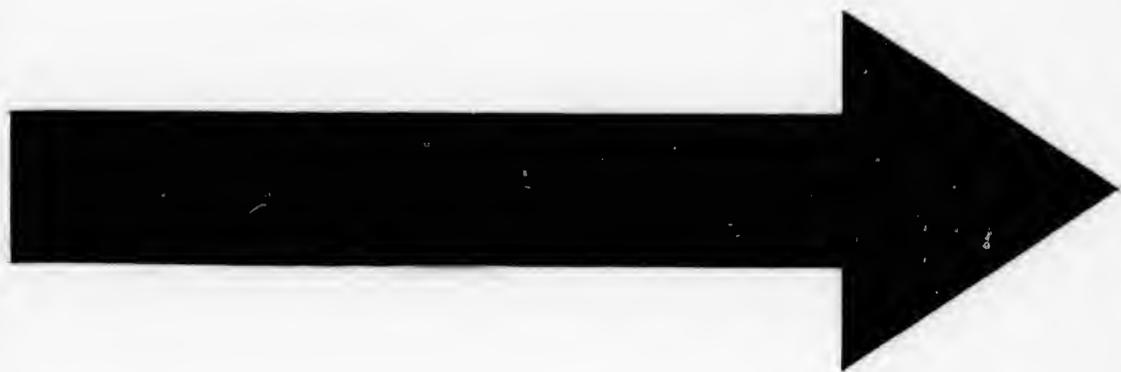

YEARS.	Average price of merch. bar, per ton.	Average price of rails per ton.	YEARS.	Average price of merch. bar per ton.	Average price of rails per ton.
1831.....	£ s. d.	£ s. d.	1836.....	£ s. d.	£ s. d.

"We cannot, therefore, understand how it can be made near the price of common bars here. In consequence of the great demand for railways in Great Britain and the continent, the price now of the T rails is 7l. 10s. per ton, or thirty-six dollars per ton, to which add eight dollars for freight, insurance, commission, &c., makes the cost of importation forty-four dollars per ton.

"As the edge rail will replace the flat bar in this country, on 2500 miles, or say 250,000 tons, the difference between forty-four dollars and seventy dollars, the present price, is 6,500,000 dollars. The sum the country would save, if the present duty of twenty-five dollars per ton were abolished.

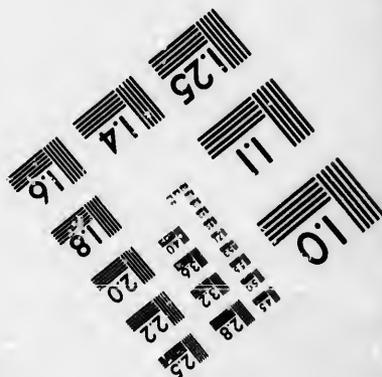

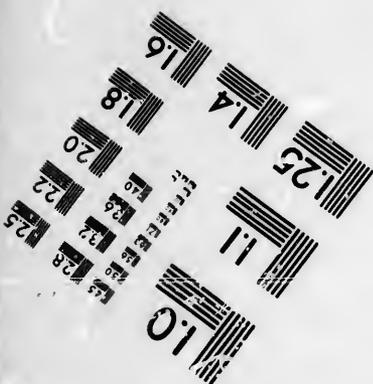

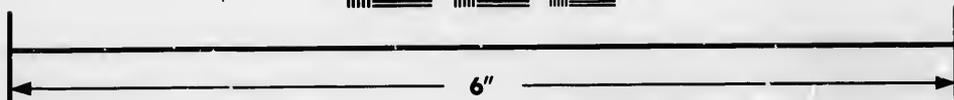

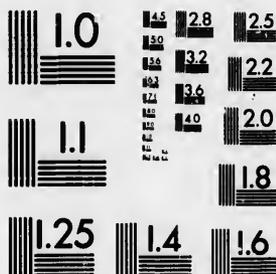

"The importation of 90,000 tons of bar and pig-iron per annum (comparatively crude articles), shows that the country is not yet prepared for the manufacture of the more complicated and expensive edge rail; and, at present, until the avenues of transit have placed the existing works in more complete communication with the various markets, we think a high duty on rails highly inexpedient; besides, the railroads would not only facilitate the progress of the manufacture, by placing the ore, the fuel, and the flux, the furnace, the forge, and the rolling-mill, now in many sections of the country, at some distance from each other, by giving between each a cheaper and easier communication, but they would furnish considerable employment in the making of locomotives, cars, and all kinds of work connected with railways. Many of the richest portions of the union remain undeveloped for want of the means of transportation. Professor Shephard, of Yale college, says, that in many parts of Missouri the iron ore is so devoid of foreign materials, as scarcely to require the preliminary process of roasting, to dissipate the volatile ingredients, or the subsequent addition of large doses of flux, to effect the withdrawal of other impurities; and, that a mountain exists there, whose circuit is two miles, and whose elevation is 350 feet, consisting of specular iron, so pure that only a few solitary crystals of feldspar can be discovered, which would yield seventy per cent of pure iron, and the region is amply supplied with charcoal.

"Unlike the precious metals, which, when once separated from the ore, cease to contribute to the productive industry of the country, iron, through its various transformations, from the ore to the finished utensil, acquires an accession of value, calls for additional

mechanical labour, and gives occupation and reward to different avocations. This dormant treasure lies imbedded to an inexhaustible amount, through a vastly extended region; and we will take a rapid glance at its richness and variety. The most valuable—the magnetic oxide of iron—characterises the stratified primary rocks of New England, and is prolonged across New York, New Jersey, and Pennsylvania, to a remarkable degree. It occurs abundantly at Winchester and Franconia, in New Hampshire; at Cumberland, Rhode Island, whence it is taken to Massachusetts to be smelted; at Somerset, in a range of talc slate, twenty miles north of Massachusetts; at Hawles and Bernardstown, in Massachusetts. In New York it occurs in the northern primary district in abundance, especially near the valley of Ausable river. In the Highlands, and in the neighbourhood of Ringwood, thick beds, averaging ten feet of solid ore, are seen—in Morris county, New Jersey, near Succasunny, and at intervals as far as the Delaware river, and on the northern side of Berks and Lancaster counties, Pennsylvania. Its average thickness is from five to twelve feet, and it yields sixty-five per cent of metallic iron.

“In Pennsylvania, where the various ores are profusely distributed, besides the magnetic or oxydulated iron ore, the brown and yellowish argillaceous or hematite ore is found principally along the borders of the limestone valleys, containing from forty-five to fifty-five per cent of metallic iron; the fossiliferous ore, from the variegated shale formation, containing from forty to sixty per cent of metallic iron; and the ore of the coal region, similar in character to the clay iron-stone of England and Wales, yielding from thirty to fifty per cent of metallic iron, and is highly useful from its general dissemination through those districts where the other ores are not encountered.

“Railways would not only cheapen the manufactured article by affording a quick vehicle of conveyance, but open new markets to the iron master, and widen consumption. From the difficulties of transit, the north and west branches of the Susquehanna, and of Clinton and Essex counties, New York, would consider sixty dollars per ton for bars a poor compensation, but with railways would be able to compete more successfully with foreign supplies. The rolling-mill at Mount Savage owes its existence to the Baltimore and Ohio railway of imported iron. So that, independent of the considerations attached to railways as a means of national defence and a bond of union, the interests of the iron manufacturer seem to demand the free admission of railroad iron. The two establishments now in existence for the manufacture of this branch, cannot possibly supply the demand that will exist for this method of locomotion and conveyance; for it appears that not only will 250,000 tons be required at once of heavy rails to replace the worn out flat rails, but 4378 miles are undertaken for railroads, besides those already in use throughout the United States.

“Agriculture, into which the consumption of iron so extensively enters, and which forms the preponderating interests of the country, has sacrificed much to support the protective policy, in the high prices created thereby. The price of most of the products of agriculture is at present depressed, and it would materially relieve its burdens if the duty were in some measure relaxed on all descriptions of iron; and we do not believe, under the existing profitable rates, any moderate reduction would injure a single manufactory within the influence of foreign importations. Besides, the quantity which comes in collision with foreign iron is but a minor proportion of our whole production. Of 300,000 tons wrought iron made in the United States, only one-third, or 100,000 tons is calculated to reach the seaboard; the other two-thirds, or 200,000 tons being despatched to the western markets.

“We do not advocate any extravagant or sudden abatement of duties, but it is not just to the interests of the other states, nor the large consuming mass, that any particular branch of national industry should be protected beyond the requisitions of government, for efficient public service, or what is necessary to counteract the regulations of foreign nations; but it is expecting too much from the people to suppose that they will submit to a perpetuity of the system, when the temporary and incidental protection has enabled the domestic to vie with the foreign manufacturer in his own market, and the revenue raised by this means is no longer necessary for the administration. The effect of this abatement would be, that the manufacturer would be obliged to reduce his profits in the price lest he should be undersold by the foreign article; and the consumer would reap the benefit of the competition. We now subjoin the table before alluded to:—

Import of Iron and Steel into the United States, from 1828-29, to 1843-44, inclusive, ending on the 30th of September of each Year.
