Letter-bags are kept for the reception of ship-letters, at Gilpin's Reading Room, Merchants' Exchange; and Hale's Ship Letter Office, No. 58, Wall-street, for New York; Amsterdam; Barbadoes; Carthagea; Constantinople; Curacao; Galveston; Guayaquil; Hamburg; Havana; Havre; Kingston, Jamaica; Liverpool; London; Madeira; Manila; Naples; New Orleans; Palermo; Panama; Port-au-Prince; Rio Janeiro; Rotterdam; Sandwich Islands; Smyrna; Stettin; St. John's, N. F.; St. Pierre, Martinique; St. Vincent; Turk's Island; Valparaiso; Vera Cruz.—(See Post Office of the United States, generally; New Post Office Law; Miscellaneous Statements.)

The following statement includes the names and tonnage of the principal British and American vessels which arrived at the port of London from the United States, during the first six months of the year 1845, though not comprehending

half the number actually engaged in trade between those ports and the United States.

From New York.—BRITISH: Clutha, 498 tons. AMERICAN: Prince Albert, 980 tons; Washington, 300 tons; Westminster, 608 tons; St. James, 617 tons; Northumberland, 990 tons; Gladiator, 674 tons; Mediator, 647 tons; Switzerland, 590 tons; Quebec, 655 tons; Robert Fulton, 550 tons; Wellington, 703 tons; Hendrick Hudson, 821 tons; Talisman, 350 tons; Jessore, 500 tons; Arethusa, 336 tons; Toronto, 609 tons.

From Boston.—BRITISH: none. AMERICAN: Talisman, 350 tons; Vespasian, 400 tons; Ellen, 400 tons.

From Charleston.—BRITISH: Marion, 427 tons. AMERICAN: Ark, 400 tons; Abagin, 350 tons; Brontes, 400 tons.

From Baltimore.—BRITISH: none. AMERICAN: Laura, 300 tons.

Names and tonnage of principal British and American vessels which arrived at Liverpool, during the same period.

From New York.—BRITISH: Brothers, 537 tons. AMERICAN: Europe, 613 tons; Aderon Dark, 608 tons; Samuel Hicks, 818 tons; New York, 972 tons; Toronto, 609 tons; St. Patrick, 896 tons; Liverpool, 1129 tons; Siddons, 900 tons; Columbus, 664 tons; Sea, 800 tons; Ashburton, 1077 tons; Ann, 218 tons; Stephen Whitney, 995 tons; Yorkshire, 1058 tons; Cambridge, 877 tons; Patrick Henry, 982 tons; St. Lawrence, 425 tons; Paul Jones, 650 tons; Oxford, 707 tons; Rochester, 845 tons; Indiana, 607 tons; Garrick, 900 tons; George Washington, 609 tons; Ohio, 757 tons; St. George, 845 tons; Montezuma, 982 tons; Virginian, 650 tons; Montecello, 390 tons; Hottinguer, 1000 tons; Kalamazoo, 798 tons; Lancashire, 600 tons; Roscius, 1067 tons; John R. Skiddy, 908 tons; Adirondack, 761 tons; Sheffield, 564 tons; Independence, 800 tons; Isabella, 745 tons; Waterloo, 900 tons; Henry, 434 tons; Southerton, 700 tons; Pacific, 600 tons; Henry Clay, 1300 tons; Shenandoak, 750 tons; Queen of the West, 1334 tons; Sheridan, 1000 tons; Tarolinta, 570 tons; Caledonia, 545 tons; Haidee, 647 tons; Empire, 1000 tons; London, 700 tons.

From Boston.—BRITISH: none. AMERICAN: Iberias, 329 tons; Concordia, 641 tons; Ashburton, 553 tons; Barnstable, 873.

From Philadelphia.—BRITISH: none. AMERICAN: Savannah, 816 tons; Monongahela, 500 tons; Thomas P. Cope, 845; Saranak, 816 tons; Susquehanna, 560 tons.

From Charleston.—BRITISH: Mandane, 360 tons; Safeguard, 290 tons; Conrad, 367 tons; Creole, 455 tons; Sarah Stewart, 365 tons; Borneo, 458 tons; John Reuwick, 402 tons; Promise, 446 tons; Macao, 482 tons; Selina, 258 tons; Sarah, 517 tons; Jessie, 679 tons; Chieftain, 325 tons; Burrell, 402 tons; Lavinia, 374 tons; Corsair, 476 tons; Sir Henry Pottinger, 426 tons; Lady Bagot, 455 tons; Robert Ker, 357 tons; Ann Kenny, 486 tons; Lady Sale, 736 tons; Cremona, 506 tons; Wilson, 281 tons; Lady Fitzherbert, 386 tons; Lord Ashburton, 1009 tons; Cambridge, 494 tons; Ross, 645 tons; Consbrook, 423 tons; Conqueror, 657 tons; Thetis, 584 tons; Constitution, 558 tons; Janet, 320 tons; Portland, 541 tons; Leonard Dobbin, 611 tons; Morgiana, 354 tons; Kingston, 431 tons; Johnstone, 436 tons; Evergreen, 574 tons; Kilty, 388 tons. AMERICAN: Lochinvar, 635 tons; Swanton, 709 tons; Augusta, 708 tons; Thomas Bennett, 505 tons; Shenandoah, 700 tons; John Baring, 430 tons; Arabella, 696 tons; Harriett and Jessie, 453 tons; Victor, 394 tons; Columbia, 344 tons; Xaylon, 420 tons; Elsinore, 597 tons; John Fehrman, 428 tons; Delia Walker, 494 tons; Tartar, 573; Susquehanna, 560 tons; B. Aylmar, 437 tons; Marengo, 426 tons; Richmond, 475 tons; Tretou, 428 tons; Ambassador, 452 tons; Virginia, 612 tons; Peter Hatrick, 355 tons; St. Mark, 545 tons; Roger Sharman, 496 tons; Persia, 438 tons; Thames, 372 tons; Southport, 499 tons; John Baring, 550 tons; Swatra, 747 tons; Republic, 644 tons.

From Savannah.—BRITISH: Oronocto, 609 tons; Ben Nevis, 955 tons; Douglas, 650 tons; Kingston, 431 tons; Coronation, 739 tons; Ocean Queen, 568 tons; Myrene, 244 tons; Envoy, 481 tons; Devonport, 767 tons; Primrose, 553 tons; Syria, 580 tons; Leander, 813 tons; Ottawa, 562 tons; Fanny, 367 tons; Robert, 665 tons; Acadia, 800

BRITISH NAVIGATION WITH THE NORTH AMERICAN COLONIES.

The Transatlantic ships employed in trade between the United Kingdom and the British North American colonies, are adapted in size to the cargoes which they carry, and the depth of water in the colonial or British ports, in which they land and discharge.

The ships which carry timber from the ports of the St. Lawrence, Chaleur bay, Miramichi, and the Bay of Fundy, range from 150 tons to above 1000 tons. The principal ships laden with timber, &c., from the North American colonies, which discharged their cargoes at the ports of London and Liverpool, during the first six months of the year 1845, were the following, viz. :—

PORT OF LONDON.—The *Themis*, of St. John's, New Brunswick, from St. John's, 1004 tons, 30 men. The *Schoodiac*, of St. Andrew's, New Brunswick, from St. Stephen's, 1005 tons, 31 men. *Princess Royal*, of St. John's, New Brunswick, from St. John's, 1096 tons, 29 men. *Indus*, of Glasgow, 822 tons, 26 men. *Manchester*, of Quebec, 825 tons, 25 men. The greater number of the other ships in this trade, and those which discharge at the port of London, the Clyde, Leith, Bristol, Cork, &c., range from 300 tons to 700 tons. Those which are laden at the shallow ports of the North American colonies, with timber and deals, and discharge at the shallow ports of the United Kingdom, range as low as from 300 tons to about 120 tons.

Vessels employed in the trade between the United Kingdom and Newfoundland, are seldom above 200 tons, and frequently of much less burden. Those trading with Nova Scotia, Cape Breton, and Prince Edward Island (some of the timber ships excepted), are usually of moderate burden.

WEST INDIES.—The ships engaged in the West India trade would formerly be considered of very large burden; but compared with those engaged in the North American trade, they are not usually half the capacity.

SOUTH AMERICAN TRADE.—Generally, the trade carried on with South America, is in small ships and brigs.

EAST INDIES AND CHINA.—The most splendid ships belonging to the British empire are those employed in the trade with India and China. This was at all times the case. These magnificent ships are built chiefly in the river Thames, the Tyne, the Mersey, and the Clyde. The following vessels are among the principal ships which arrived during the first six months of the year 1845, from India, &c., in the port of London, viz. :—

From CALCUTTA, the *Wellesley*, of London, 1013 tons, 60 men. *Monarch*, of London, 1282 tons, 84 men. *Prince of Wales*, of London, 1541 tons, 84 men. The

Queen, of London, 1244 tons, 82 men. *Gloriana*, of Newcastle, 1056 tons, 62 men, *Ellenborough*, of Newcastle, 1031 tons, 62 men. *Owen Glendower*, of London, 989 tons, 67 men. *Bucephalus*, of Newcastle, 985 tons, 64 men. *Southampton*, of London, 971 tons, 68 men. *Maidstone*, of London, 938 tons, 52 men. *Seringapatam*, of London, 870 tons, 65 men. *Somes*, of London, 785 tons, 29 men. *Union*, of London, 750 tons, 27 men. *Westminster*, of London, 610 tons, 26 men. *China*, 658 tons, 28 men. Besides a great many other ships of from 400 tons to 600 tons.

From **MADRAS**, the *Equestrian*, of London, 800 tons, 37 men. The *Neptune*, of London, 645 tons, 30 men. The *Larkins*, 700 tons, 25 men. Besides other ships of from 300 tons to 600 tons.

From **BOMBAY**, the *Universe*, of Dundee, 719 tons, 26 men. The *Nelson*, of Glasgow, 603 tons, 24 men. The *Carnatic*, of London, 632 tons, 32 men. Besides others of less burden.

From **CANTON**, the *Hindustan*, of London, 708 tons, 37 men. The *Castle Eden*, of London, 930 tons, 52 men. The *Royal Albert*, of Greenock, 507 tons, 17 men. The *L'Arne*, of Liverpool, 577 tons, 21 men. Besides other ships from 400 tons to 500 tons.

In the trade with Singapore, New South Wales, and other eastern places, the ships vary in size from 250 tons to 600.

The ships employed in the trade between the ports of Liverpool, the Clyde, and the Mersey, and ports in the East Indies, China, and other eastern places, vary in their size from 300 tons to 700 registered tons.

The following summary of the cargoes discharged by some of the principal ships arriving from the *United States*, and from other parts of the world, in the ports of London and Liverpool, will be found curious and instructive.

The cargo discharged in February, 1845, at the St. Katherine's Dock, London, by the American ship *Victoria*, of 938 tons, 30 men, from New York, exhibits the variety of exports: viz., 4164 barrels of turpentine, 2300 barrels of oil cake, 17 casks of oil, 66 tierces, 19 half-tierces, and 1 hogshhead of tobacco, 2629 bushels of Indian corn, 174 tierces of beef, 70 barrels, 48 half-barrels of pork, 161 cases, 64 casks of cheese, 26 barrels of tallow, 161 cases, 64 casks of general merchandise, 20 barrels of sarsaparilla, 75 cases of cloths, 25 boxes of black weights, 1 case, 1 cask of specie, 30 boxes of broom corn, 30 boxes and 17 casks of broom handles, and 6 dozen brooms and whips.

The *Prince Albert*, of New York, 980 tons, 37 men, from New York, discharged a month previously in the port of London, 44 casks, 23 cases, 12 bales of general merchandise, 25,440 staves, 122 logs of cedar, 1050 casks of oil-cake, 303 casks of oil, 20 barrels of lard oil, 16 casks of spermaceti, 1492 barrels of turpentine, 30 barrels of spirits of turpentine, 79 pigs of lead, 1 case of worsted, 7 hogshheads of furs, 11 casks and 50 kegs of tobacco, 235 bales of hemp, 4901 bushels and four casks of Indian corn, 110 barrels of pork, 125 tierces of beef, 1054 cases, and 296 casks of cheese, 1 tierce of hams, 2 hogshheads of tallow, 10 kits of salmon, 1 cask of tongues, 5 hides, 3 boxes, and 1 barrel of bread.

The *Northumberland*, of New York, 990 tons, 32 men; discharged a cargo of nearly similar articles, with the addition of 197 bundles of whalebone.

The *Wellington*, the *Hendrick Hudson*, the *Westminster*, the *St. James*, the *Quebec*, the *Mediator*, the *Switzerland*, the *Gladiator*, the *Robert Fuller*, &c., discharged similar cargoes, and all these will comprehend a view of the imports from America into the port of London, if we add tobacco, and an occasional vessel from Boston, Charleston, and Baltimore. The outward cargoes consist chiefly of British manufactures.

Talisman, of Boston, discharged in London, 60,000 lbs. of oil-cake, 2 tons of horn tips, 3 cases of merchandise, 1 case of hoops, 39 bales of hemp, 6 barrels of isinglass, 23½ tuns of oil, and 500 tons of ice.

The *Louisa*, of the United States, from Baltimore, 300 tons, 11 men, discharged 577 tierces of beef, 584 barrels and 164 tierces of pork, 9 casks of grease, 100 kegs of tongues, 51 casks of tallow, 1 barrel and 50 half barrels of suet, 227 tierces of beef, 100 barrels of pork, 21 hogshheads of quercitron bark, 3 tierces of bones, 14 tierces of

CHAPTER XXXI.

TARIFF AND CUSTOMS' LAW OF THE UNITED STATES, PASSED AT THE SECOND SESSIONS OF THE TWENTY-SEVENTH CONGRESS (1842).

SECTION I.—Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That from and after the passage of this act in lieu of the duties heretofore imposed by law on the articles hereafter mentioned, and on such as may now be exempt from duty, there shall be levied, collected, and paid, the following duties, that is to say:—

1st.—On coarse wool unmanufactured, the value whereof at the last port or place whence exported to the United States, shall be seven cents, or under per pound, there shall be levied a duty of five per centum *ad valorem*; and on all other unmanufactured wool, there shall be levied a duty of three cents per pound, and thirty per centum *ad valorem*: Provided, That when wool of different qualities of the same kind or sort, is imported in the same bale, bag, or package, and the aggregate value of the contents of the bale, bag, or package, shall be appraised by the appraisers, at a rate exceeding seven cents per pound, it shall be charged with a duty in conformity with such appraisal: Provided further, That when wool of different qualities, and different kinds or sorts, is imported in the same bale, bag, or package, the contents of the bale, bag, or package, shall be appraised at the value of the finest or most valuable kind or sort, and a duty charged thereon accordingly: Provided further, That if bales of different qualities are embraced in the same invoice, at the same price, the value of the whole shall be appraised according to the value of the bale of the best quality: Provided further, That if any wool be imported having in it dirt, or any material or impurities, other than those naturally belonging to the fleece, and thus be reduced in value to seven cents per pound or under, the appraisers shall appraise the said wool at such a price as, in their opinion, it would have cost had it not been mixed with such dirt or impurities, and a duty shall be charged thereon in conformity to such appraisal: Provided also, That wool imported on the skin shall be estimated as to weight and value as other wool.

SECTIONS II., V., VI., VIII., and IX., enumerate the various duties, payable on the several articles in the annexed table.

SECTION III.—And be it further enacted, That, from and after the passage of this act, there shall be levied, collected, and paid on the importation of the articles hereinafter mentioned, the following duties, that is to say:—

1st.—On all manufactures of silk not otherwise specified, except bolting cloths, two dollars and fifty cents per pound of sixteen ounces; on silk bolting cloths, twenty per centum *ad valorem*. Provided, That if any silk manufacture shall be mixed with gold or silver, or other metal, it shall pay a duty of thirty per centum *ad valorem*.

SECTION III., clause 3rd.—On cotton bagging, four cents per square yard or any other manufacture not otherwise specified, suitable for the uses to which cotton bagging is applied, whether composed in whole or in part of hemp or flax, or any other material, or imported under the designation of gunny cloth, or any other appellation, and without regard to the weight or width, a duty of five cents per square yard.

SECTION IV.—And be it further enacted, That, from and after the passage of this act, there shall be levied, collected, and paid, on the importation of the articles hereinafter mentioned, the following duties, that is to say:—

1st.—On iron in bars or bolts, not manufactured in whole or in part by rolling, seventeen dollars per ton; on bar or bolt iron, made wholly or in part by rolling, twenty-five dollars per ton. Provided, That all iron in slabs, blooms, loops, or other form, less finished than iron in bars or bolts, and more advanced than pig iron, except castings, shall be rated as iron in bars or bolt, and pay a duty accordingly. Provided also, That iron, imported prior to the 3rd day of March, 1843, in bars or otherwise, for railways and inclined planes, shall be entitled to the benefits of the provisions of existing laws, exempting it from the payment of duty on proof of its having been actually and permanently laid down for use on any railway or inclined plane prior to the 3rd day of March, 1843, and all such iron imported from and after the date aforesaid, shall be subject to pay the duty on rolled iron.

SECTION VII.—And be it further enacted, That, from and after the day and year aforesaid, there shall be levied, collected, and paid, on the importation of the articles hereinafter mentioned, the following rates of duty, that is to say:—

2nd.—On all books printed in the English language, or of which English forms the text, when bound, thirty cents per pound, when in sheets or boards, twenty cents per pound. Provided, That whenever the importer shall prove, to the satisfaction of the collector, when the goods are entered, that any such book has been printed and published abroad more than one year, and not republished in this country, or has been printed and published abroad more than five years before such importation, then, and in such case, the said books shall be admitted at one-half of the above rate of duties. Provided, That the said terms of one year and five years, shall in no case commence, or be computed at and from a day before the passing of this act; on all books printed in Latin or Greek, or in which either language forms the text, when bound, fifteen cents per pound; when unbound, thirteen cents per pound; on all books printed in Hebrew, or of which that language forms the text, when bound, ten cents per pound, and when unbound, eight cents per pound. Provided, That all books printed in foreign languages, Latin, Greek, and Hebrew excepted, shall pay a duty of five cents per volume, when bound or in boards, and when in sheets or pamphlets, fifteen cents per pound; and editions of works in the Greek, Latin, Hebrew, or English languages, which have been printed forty years prior to the date of importation, shall pay a duty of five cents per volume; and all reports of legislative committees, appointed under foreign governments, shall pay a duty of five cents per volume; on polyglots, lexicons, and dictionaries, five cents per pound; on books of engravings or plates, with or without letterpress, whether bound or unbound, and on maps and charts, twenty per centum *ad valorem*.

SECTION X.—And be it further enacted, That on all articles not herein enumerated or provided for, there shall be levied, collected, and paid a duty of twenty per centum *ad valorem*.

SECTION XI.—And be it further enacted, That an addition of ten per centum shall be made to the several rates of duties by this act imposed, in respect to all goods, wares, and merchandise, on the importation of which, in American or foreign vessels, a specific discrimination between them is not herein made, which, from and after the time when this act shall take effect and go into operation, shall be imported in ships or vessels not of the United States; and that a further addition of ten per centum shall be made to the several rates of duties imposed by this act on all goods, wares, and merchandise, which shall be imported from any port or place east of the Cape of Good Hope, in foreign vessels. Provided, That these additional duties shall not apply to goods, wares, or merchandise, which shall be imported after the day that this act goes into operation, in ships or vessels not of the United States, entitled by treaty or by any act or acts of Congress, to be entered in the ports of the United States, on the payment of the same duties as shall then be paid on goods, wares, or merchandise, imported in ships or vessels of the United States.

SECTION XII.—And be it further enacted, That on and after the day this act goes into operation, the duties on all imported goods, wares, or merchandise, shall be paid in cash: Provided, That in all

cases of failure or neglect to pay the duties, on completion of the entry, the said goods, wares, or merchandise, shall be taken possession of by the collector, and deposited in the public stores, there to be kept with due and reasonable care, at the charge and risk of the owner, importer, consignee, or agent; and if any such goods remain in public store beyond sixty days (except in the case of goods imported from beyond the Cape of Good Hope, remaining for the space of ninety days) without payment of the duties thereon, then said goods, wares, and merchandise, or such quantities thereof as may be deemed necessary to discharge the duties, shall be appraised and sold by the collector, at public auction, on due public notice thereof being first given, in the manner and for the time prescribed by a general regulation of the Treasury department; and at said public sale, distinct printed catalogues, descriptive of said goods, with the appraised value affixed thereto, shall be distributed among the persons at said sale; and a reasonable opportunity shall be given, before such sale, to persons desirous of purchasing, to inspect the quality of such goods; and the proceeds of said sales, after deducting the usual rate of storage at the port in question, together with all other charges and expenses, including interest on the duties from the date of entry at the rate of six per centum per annum, shall be applied to the payment of duties; and any balance of money remaining, over and above the full amount of duties, charges, and expenses and interest aforesaid, as well as such quantities of any goods, wares, or merchandise as may not have been sold for the purposes before-mentioned, shall be delivered, and the money paid over by the collector to the owner, importer, consignee, or agent, and proper receipts taken for the same:—

And provided, That if no claim be made by such owner, importer, consignee, or agent, for the portion of the goods which may remain in the hands of the collector, after such sale, the said goods shall be forthwith returned to the public stores, there to be kept at the risk and expense of the owner, importer, consignee, or agent, until claimed or sold for storage agreeably to law; and the proceeds of the sale for duties remaining unclaimed for the space of ten days after such sale, shall, after payment of duties and all expenses aforesaid, at the expiration of that period, be paid by the collector into the Treasury, in the manner provided for in the case of unclaimed goods in the next succeeding section of this act: And provided further, That when any goods are of a perishable nature, they shall be sold forthwith.

SECTION XIII.—And be it further enacted, That, previous to the sale of any unclaimed goods, the said collector shall procure an inventory and appraisement thereof to be made, and to be verified on oath or affirmation, by two or more respectable merchants, before the said collector, and to remain with him; and said collector shall afterwards cause said goods to be advertised and sold, in the manner provided for in this act, and, after retaining the duties thereon, agreeably to inventory and appraisement, and interest and charges aforesaid, shall pay the overplus, if any there be, into the Treasury of the United States, there to remain for the use of the owner or owners, who shall upon the due proof of his, her, or their property, be entitled to receive the same; for which purpose the collector shall transmit, with the said overplus, a copy of the inventory, appraisement, and account of sales, specifying the marks, numbers, and descriptions of the packages sold, their contents, the name of the vessel and master in which and of the port or place whence they were imported, and the time when, and the name of the person or persons to whom said goods were consigned in the manifest; and the receipt or certificate of the collector shall exonerate the master or person having the charge or command of any ship or vessel in which said goods, wares, and merchandise were imported, from all claim of the owner or owners thereof: Provided, That so much of the fifty-sixth section of the general collection law of 2nd of March, 1799, which provides for the storage of unclaimed merchandise, as conflicts with the provision of this act, shall be and is hereby repealed: Provided also, That when goods are of a perishable nature, they shall be sold forthwith.

SECTION XIV.—And be it further enacted, That on and after the day this law goes into effect, there shall be allowed a drawback on foreign sugar refined in the United States, and exported therefrom, equal in amount to the duty paid on foreign sugar from which it shall be manufactured, to be ascertained under such regulations as shall be prescribed by the Secretary of the Treasury, and no more; and on spirits distilled from foreign molasses, a drawback of five cents per gallon, till the 1st day of January, 1843, when it shall be reduced one per cent per gallon; and annually, on the 1st day of January thereafter, the said drawback shall be reduced one cent per gallon, until the same shall be wholly discontinued: Provided, That this act shall not alter or repeal any law now in force regulating the exportation of sugar refined, or spirits distilled from molasses in the United States, except as to the rates of duties and drawbacks.

SECTION XV.—And be it further enacted, That in the case of all goods, wares, and merchandise, imported on and after the day this act goes into operation, and entitled to debenture under existing laws, no drawback of the duties shall be allowed on the same, unless said goods, wares, or merchandise, shall be exported from the United States within three years from date of importation of the same; nor shall the additional rate of duty levied by this act on goods, wares, and merchandise, imported in foreign vessels, be refunded in case of re-exportation: Provided, That two and one-half per centum on the amount of all drawbacks allowed, except on foreign refined sugars, shall

be retained, for the use of the United States, by the collectors paying such drawbacks respectively; and in the case of foreign refined sugars, ten per centum shall be so retained.

SECTION XVI.—And be it further enacted, That in all cases where there is or shall be imposed any *ad valorem* rate of duty on any goods, wares, or merchandise, imported into the United States, and in all cases where the duty imposed shall by law be regulated by, or directed to be estimated or based upon, the value of the square yard, or of any specified quantity or parcel of such goods, wares, or merchandise, it shall be the duty of the collector, within whose district the same shall be imported or entered, to cause the actual market value or wholesale price thereof, at the time when purchased, in the principal markets of the country from which the same shall have been imported into the United States, or of the yards, parcels, or quantities, as the case may be, to be appraised, estimated, and ascertained, and to such value or price, to be ascertained in the manner provided in this act, shall be added all costs and charges, except insurance, including in every case charges for commission at the usual rates, as the true value at the port where the same may be entered, upon which duties shall be assessed. And it shall, in every such case, be the duty of the appraisers of the United States, and every of them, and every person who shall act as such appraiser, or of the collector and naval officer, as the case may be, by all the reasonable ways and means in his or their power, to ascertain, estimate, and appraise the true and actual market value and wholesale price, any invoice or affidavit to the contrary notwithstanding, of the said goods, wares, and merchandise, at the time purchased, and in the principal markets of the country whence the same shall have been imported into the United States, and the number of such yards, parcels, or quantities, and such actual market value or wholesale price of every of them as the case may require; and all such goods, wares, or merchandise, being manufactured of wool, or whereof wool shall be a component part, which shall be imported into the United States in an unfinished condition, shall, in every such appraisal, be taken, deemed, and estimated to have been, at the time purchased, and place whence the same were imported into the United States, of as great value as if the same had been entirely finished: Provided, That in all cases where goods, wares, and merchandise, subject to *ad valorem* duty, or on which the duties are to be levied upon on the value of the square yard, and in all cases where any specific quantity or parcel of such goods, wares, and merchandise, shall have been imported into the United States from a country in which the same have not been manufactured or produced, the foreign value shall be appraised and estimated according to the current market value or wholesale price of similar articles at the principal markets of the country of production or manufacture, at the period of the exportation of said goods, wares, and merchandise, to the United States.

XVII.—And be it further enacted, That it shall be lawful for the appraisers, or the collector and naval officer, as the case may be, to call before them and examine, upon oath or affirmation, any owner, importer, consignee, or other person touching any matter or thing which they may deem material in ascertaining the true market value or wholesale price of any merchandise imported, and to require the production, on oath or affirmation, to the collector or to any permanent appraiser, of any letters, accounts, or invoices, in his possession, relating to the same, for which purpose they are hereby respectively authorised to administer oaths and affirmations; and if any person so called shall neglect or refuse to attend, or shall decline to answer, or shall, if required, refuse to answer in writing any interrogatories, and subscribe his name to his deposition, or to produce such papers, when so required, he shall forfeit and pay to the United States the sum of 100 dollars; and if such person be the owner, importer, or consignee, the appraisement which the said appraisers, or collector and naval officer, where there are no legal appraisers, may make of the goods, wares, and merchandise, shall be final and conclusive, any act to the contrary notwithstanding; and any person who shall wilfully and corruptly swear or affirm falsely on such examination, shall be deemed guilty of perjury; and if he be the owner, importer, or consignee, the merchandise shall be forfeited: and all testimony in writing or depositions taken by virtue of this section, shall be filed in the collector's office, and preserved for future use of reference, or be transmitted to the secretary of the Treasury, when he shall require the same: Provided, That if the importer, owner, agent, or consignee, of any such goods, shall be dissatisfied with the appraisement, and shall have complied with the foregoing requisitions, he may forthwith give notice to the collector, in writing, of such dissatisfaction; on the receipt of which, the collector shall select two discreet and experienced merchants, citizens of the United States, familiar with the character and value of the goods in question, to examine and appraise the same, agreeably to the foregoing provisions; and if they shall disagree, the collector shall decide between them; and the appraisement thus determined shall be final, and deemed and taken to be the true value of said goods, and the duties shall be levied thereon accordingly, any act of Congress to the contrary notwithstanding: Provided also, That in all cases where the actual value to be appraised, estimated, and ascertained as herein before stated, of any goods, wares, and merchandise, imported into the United States, and subject to any *ad valorem* duty, or whereon the duty is regulated by or directed to be imposed or levied on the value of the square yard, or other parcel or quantity thereof shall exceed by ten per centum or more the invoice value, then, in addition to the duty imposed by law on the same, there shall be

levied and collected on the same goods, wares, and merchandise, fifty per centum of the duty imposed on the same, when fairly invoiced.

XVIII.—And be it further enacted, That the several collectors be, and they are hereby authorised, under such regulations as may be prescribed by the secretary of the Treasury, whenever they shall deem it necessary to protect and secure the revenue of the United States against frauds and under-valuation, and the same is practicable, to take the amount of duties chargeable on any article bearing an *ad valorem* rate of duty, in the article itself, according to the proportion or rate per centum of the duty on said article; and such goods, so taken, the collector shall cause to be sold at public auction, within twenty days from the time of taking the same, in the manner prescribed in this act, and place the proceeds arising from such sale in the Treasury of the United States: Provided, That the collector or appraiser shall not be allowed any fees or commission for taking and disposing of said goods, and paying the proceeds thereof into the Treasury, other than are now allowed by law.

XIX.—And be it further enacted, That if any person shall knowingly and wilfully, with intent to defraud the revenue of the United States, smuggle or clandestinely introduce into the United States, any goods, wares, or merchandise, subject to duty by law, and which should have been invoiced, without paying or accounting for the duty, or shall make out, or pass, or attempt to pass, through the Custom-house, any false, forged, or fraudulent invoice, every such person, his, her, or their aiders and abettors, shall be deemed guilty of a misdemeanour, and on conviction thereof shall be fined in any sum not exceeding 5000 dollars, or imprisoned for any term of time not exceeding two years, or both, at the discretion of the court.

XX.—And be it further enacted, That there shall be levied, collected, and paid, on each and every non-enumerated article which bears a similitude, either in material, quality, texture, or the use to which it may be applied, to any enumerated article chargeable with duty, the same rate of duty which is levied and charged on the enumerated article which it most resembles, in any of the particulars before-mentioned; and if any non-enumerated article equally resembles two or more enumerated articles, on which different rates of duty are chargeable, there shall be levied, collected, and paid, on such non-enumerated article, the same rate of duty as is chargeable on the article which it resembles paying the highest duty; and on all articles manufactured from two or more materials, the duty shall be assessed at the highest rates at which any of its component parts may be chargeable.

XXI.—And be it further enacted, That the collector shall designate on the invoice, at least one package of every invoice, and one package at least of every ten packages of goods, wares, or merchandise, and a greater number should he or either of the appraisers deem it necessary, imported into such port, to be opened, examined, and appraised, and shall order the package or packages so designated to the public stores for examination; and if any package be found by the appraisers to contain any article not specified in the invoice, and they, or a majority of them, shall be of opinion that such article was omitted in the invoice with fraudulent intent on the part of the shipper, owner, or agent, the contents of the entire package in which the article may be shall be forfeited; but if said appraisers shall be of opinion that no such fraudulent intent existed, then the value of such article shall be added to the entry, and the duties thereon paid accordingly, and the same shall be delivered to the importer, agent, or consignee: Provided, That such forfeiture may be remitted by the secretary of the Treasury, on the production of evidence, satisfactory to him, that no fraud was intended: Provided further, That if, on the opening of the package or packages of goods, a deficiency of any article shall be found, on examination of the appraisers, the same shall be certified to the collector on the invoice, and an allowance be made in estimating the duties.

XXII.—And be it further enacted, That where goods, wares, and merchandise, shall be entered at ports where there are no appraisers, the mode hereinbefore prescribed of ascertaining the foreign value thereof shall be carefully observed by the revenue officers, to whom is committed the estimating and collection of duties.

XXIII.—And be it further enacted, That it shall be the duty of the secretary of the Treasury, from time to time, to establish such rules and regulations, not inconsistent with the laws of the United States, to secure a just, faithful, and impartial appraisal of all goods, wares, and merchandise, as aforesaid, imported into the United States, and just and proper entries of such actual market value, or wholesale prices thereof, and of the square yards, parcels, or other quantities, as the case may require, and of such actual market value wholesale price of every of them.

XXIV.—And be it further enacted, That it shall be the duty of all collectors, and other officers of the customs, to execute and carry into effect all instructions of the secretary of the Treasury relative to the execution of the revenue laws; and in case any difficulty shall arise as to the true construction or meaning of any part of such revenue laws; and in case any difficulty shall arise as to the true construction or meaning of any part of such revenue laws, the decision of the secretary of the Treasury shall be conclusive and binding upon all such collectors and other officers of the customs.

XXV.—And be it further enacted, That nothing in this act contained shall apply to goods

shipped in any vessel bound to any port of the United States, actually having left her last port of lading eastward of the Cape of Good Hope or beyond Cape Horn, prior to the 1st day of September, 1842; and all legal provisions and regulations existing immediately before the 30th day of June, 1842, shall be applied to importations which may be made in vessels which have left such last port of lading eastward of the Cape of Good Hope or Cape Horn, prior to said 1st day of September, 1842.

XXVI.—And be it further enacted, That laws existing on the 1st day of June, 1842, shall extend to and be in force for the collection of the duties imposed by this act, on goods, wares, and merchandise, imported into the United States, and for the recovery, collection, distribution, and remission of all fines, penalties, and forfeitures, and for the allowance of the drawbacks by this act authorised, as fully and effectually as if every regulation, restriction, penalty, forfeiture, provision, clause, matter, and thing, in the said laws contained, had been inserted in and re-enacted by this act. And that all provisions of any former law inconsistent with this act, shall be, and the same are hereby repealed.

XXVII.—And be it further enacted, That it shall be the duty of the secretary of the Treasury, annually, to ascertain whether, for the year ending on the 30th of June next preceding, the duty on any articles has exceeded thirty-five per centum *ad valorem* on the average wholesale market value of such articles, in the several ports of the United States for the preceding year; and, if so, he shall report a tabular statement of such articles and excess of duty to Congress at the commencement of the next annual session thereof, with such observations and recommendations as he may deem necessary for the improvement of the revenue.

XXVIII.—And be it further enacted, That the importation of all indecent and obscene prints, paintings, lithographs, engravings, and transparencies, is hereby prohibited; and no invoice of packages whatever, or any part thereof, shall be admitted to entry, in which any such articles are contained; and all invoices and packages, whereof any such article shall compose a part, are hereby declared to be liable to be proceeded against, seized and forfeited, by due course of law, and the said articles shall be forthwith destroyed.

XXIX.—And be it further enacted, That wherever the word "ton" is used in this act, in reference to weight, it shall be deemed and taken to be twenty hundred weight, each hundred weight being 112lbs. avoirdupois.

XXX.—And be it further enacted, That so long as the distribution of the net proceeds of the sales of the public lands, directed to be made among the several states, territories, and district of Columbia, by the act entitled "An Act to appropriate the Proceeds of the Sales of the Public Lands, and to grant pre-emption Rights," shall be and remains suspended by virtue of this act, and of the proviso of the sixth section of the act aforesaid, the ten per centum of the said proceeds directed to be paid by the said act to the several states of Ohio, Indiana, Illinois, Alabama, Missouri, Mississippi, Louisiana, Arkansas, and Michigan, shall also be and remain suspended.

JOHN WHITE, Speaker of the House of Representatives.

WILLIE P. MANGUM, President of the Senate, *pro tempore*.

Approved August 30th, 1842.

JOHN TYLER.

TARIFF;

OR,

RATES OF DUTIES ON ALL GOODS, WARES, AND MERCHANDISE,
IMPORTED INTO THE UNITED STATES OF AMERICA.

We subjoin the *CI-DEVANT* TARIFF OF TEXAS, which is admirable for its simplicity, but most *unsound* and *pernicious* in its high system of duties, being generally as high as that of the Tariff of the United States, which will now extend over Texas. As far as duties are in question, no one can regret the union of Texas with the great American Republic.

IMPORT Duties as fixed by the Fifth Congress of Texas, and which took effect from and after the 1st of April, 1841.

AN ACT to authorise the Importation of Brandy in Casks of a capacity not less than Fifteen Gallons, and the Exportation of the same for the Benefit of a Drawback of the Duties.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this act, brandy may be imported into

the United States in casks of a capacity not less than fifteen gallons, any thing in any law to the contrary notwithstanding: Provided, however, that all the provisions of existing laws, not inconsistent with this act, relating to the importation of foreign spirits, be complied with: And provided further, That all brandy imported in casks, of a capacity less than ninety gallons, shall be deposited, at the expense and risk of the importer, in such public or other warehouses, as shall be designated by the collector or surveyor for the port, where the same shall be landed; and shall be removed therefrom in the manner prescribed by an act entitled, "An Act providing for the Deposit of Wines and distilled Spirits in Public Warehouses, and for other Purposes."

II.—Be it further enacted, That brandy imported in casks of a capacity not less than fifteen gallons, may be exported for the benefit of a drawback of the duties which shall have been paid thereon; and the exporter or exporters of brandy so imported, shall be entitled to receive a debenture or debentures, for the amount of such drawback, agreeably to the existing laws; and all acts now in force, regulating the exportation of spirits, and the allowance and payment of drawbacks and debentures, shall be deemed applicable to brandy, the importation of which is permitted by this act.

[Approved, 2nd of March, 1827.]

No goods, wares, or merchandise, subject to duty, can be imported into the United States, on the seaboard, in vessels of less than thirty tons' burden, under the penalty of the forfeiture of vessel and cargo; nor can a drawback of any duties be obtained on exportation except by sea; and in vessels of not less than thirty tons' burden.—Act of the 2nd of March, 1799, Section XCII.

Drawback not allowed on goods exported to any place immediately adjoining the United States, except to places westward or southward of Louisiana, and to the north-west coast of America; nor in any case, when exported in a vessel of less than thirty tons' burden.—Act of the 2nd of March, 1799, Sections LXXV. and XCII.; and Act of the 5th of January, 1805, Section II.

No refined lump or loaf sugar can be imported into the United States, except in ships or vessels of at least 120 tons' burden, and in packages containing at least 600 lbs., under the penalty of forfeiting the same, together with the ship or vessel.—Act of the 2nd of March, 1799, Section CIII.

To be entitled to drawback, the duties on the importation of the goods exported, must have been, at least, fifty dollars by one vessel, at the same time, and by the same person, and the merchandise be, at the time of exportation, in the same package, and same condition, including wrapper and original mark and number, as when imported.—Act of the 22nd of May, 1824.

DRAWBACK.

XIV.—And be it further enacted, That on and after the day this law goes into effect, there shall be allowed a drawback on foreign sugar refined in the United States, and exported therefrom, equal in amount to the duty paid on the foreign sugar from which it shall be manufactured, to be ascertained under such regulations as shall be prescribed by the secretary of the treasury, and no more; and on spirits distilled from foreign molasses a drawback of five cents per gallon, till the 1st day of January, 1843, when it shall be reduced one cent per gallon; and annually, on the 1st day of January thereafter, the said drawback shall be reduced one cent per gallon, until the same shall be wholly discontinued. Provided, That this act shall not alter or repeal any law now in force regulating the exportation of sugar refined or spirits distilled from molasses in the United States, except as to the rates of duties and drawbacks.

XV.—And be it further enacted, That in the case of all goods, wares, and merchandise, imported on and after the day this act goes into operation, and entitled to debenture under existing laws, no drawback of the duties shall be allowed on the same, unless said goods, wares, or merchandise, shall be exported from the United States within three years from the date of importation of the same, nor shall the additional rate of duty levied by this act on goods, wares, and merchandise, imported in foreign vessels, be refunded in cases of re-exportation: Provided, That two and one-half per centum on the amount of all drawbacks allowed, except on foreign refined sugars, shall be retained for the use of the United States, by the collectors paying such drawbacks respectively; and in the case of foreign refined sugars, ten per centum shall be so retained.—Act of the 30th of August, 1842.

No distilled spirits, except arrack, brandy in casks of not less capacity than fifteen gallons, and sweet cordial, can be imported in casks or vessels of less capacity than ninety gallons, wine measure; nor in casks which have been marked pursuant to any law of the United States, on pain of forfeiture of the same, together with the ship or vessel in which they were imported.—Act of the 2nd of March, 1799, Section CIII.

In all cases where there are more goods found on board a vessel than the master thereof has reported in his manifest, he shall, with the consent of the officers of the customs, make a post entry for the same, and pay two dollars therefore; and for every disagreement between his manifest and cargo, he is liable to a fine of 500 dollars.—Act of the 2nd of March, 1799, Section LVII.

Drawback is not allowed on the exportation of goods which shall have been imported in foreign vessels, from any of the dominions, colonies, or possessions of any foreign power, with which the

vessels of the United States are not permitted directly to trade.—Act of the 27th of April, 1816, Section IV.

No allowance of drawback on the exportation of iron cables, or parts thereof, butter, fish oil, playing cards, cordage if less than five tons, foreign dried and pickled fish, or other salted provisions, nor on sail duck if less than fifty bolts.—Act of the 14th of July, 1832.

Within twenty days after the clearance of a vessel, the exporter of goods by said vessel must swear to the export entry, and give a bond that they shall not be landed in any place or port within the limits of the United States, or forfeit the drawback.—Act of the 2nd of March, 1799. Extension of time to twenty days.—Act of the 1st of March, 1823.

Bounty is allowed on the exportation of pickled fish of the fisheries of the United States, cured and packed solely with foreign salt, on which the duty shall have been paid.—Act of the 2nd of March, 1799, Section LXXXIII.

All goods, on examination by the appraisers, not corresponding with the entry made of them, are liable to forfeiture.

The number of bushels of wheat is to be ascertained by actual measurement by the standard bushel, and not by weight.

REGISTER ACT.

Every owner of a vessel, residing within the limits of the United States, to swear (or affirm) to the register within ninety days after its being granted, or it becomes void, and the vessel and cargo pays foreign tonnage and duty.

For duty of appraisers, &c., see Section XVII., Act of the 30th of August, 1842, page 20.

Duties to be paid in cash.—See Section XII., Act of the 30th of August, 1842, page 18.

but they are to be found only by an examination of the numerous statute laws of the United States, or in the voluminous digests of the same.

Registered Vessels.—Vessels built in the United States, and wholly owned by citizens thereof; vessels captured in war by such citizens, and condemned as prizes; vessels adjudged to be forfeited for breach of the laws of the United States being wholly owned by such citizens; and no others may be registered. No vessel is entitled to registry, or if registered, to the benefits thereof, if owned in whole, or in part, by any citizen usually residing in a foreign country, during such residence, unless he be a consul of the United States, or an agent for, and a partner in, some house of trade or copartnership, consisting of citizens of, and actually carrying on trade within, the United States.

A registered vessel which by sale becomes the property of a foreigner, shall not be entitled to a new register, notwithstanding she may afterwards become American property. No vessel is entitled to registry, or its benefits, owned by a non-resident naturalised citizen if residing for more than one year in the country from which he originated, or for more than two years in any foreign country, unless he be a consul, or other public agent of the United States.

A vessel shall be deemed to belong to the port or near which the managing owner usually resides; and the name of the vessel, and of the place to which she belongs, shall be painted on her stern, on a black ground, with white letters of not less than three inches in length. The certificate of the master carpenter under whose direction the vessel is built, must be produced, prior to registry; which certificate is sufficient to remove a new vessel from one district to another in the same or an adjoining state, where the owner actually resides, provided it be with ballast only.

In order to the registry of a vessel, the owner, or one of the owners, must make oath to the property of the vessel, her name, burden, time when and place where she was built; and that there is no foreigner interested, directly or indirectly, in such vessel, or the profits thereof; and that the master is a citizen of the United States. The oath required to be taken by the owner, respects only the legal ownership of the property; and does not require a disclosure of any equitable interests vested in citizens of the United States, but only a denial that any subject or citizen of any foreign prince or state is directly or indirectly interested in the ship, or in the profits thereof. An agent or attorney may make oath, as agent, in case of registry, where the owner is fifty miles distant from the district to which, by virtue of purchase, the vessel should belong.

Steamboats may be registered or licensed in the name of the president or secretary of an incorporated company, without designating the names of the persons composing the company; but no part of such vessel can be owned by any foreigner. Vessels employed wholly in the whale fishery, owned by an incorporated company, may be registered as above, so long as they shall be wholly employed therein.

The issuing of certificates of record applies only to vessels built either by or for foreigners in the United States, and does not extend to vessels which, having been registered, are sold to a foreigner.

Any vessel entitled to registry, being in a port other than the one at which the owner usually resides, may be registered at the place where she may be at the time. And the oath required may be taken before the collector of the place to which the vessel belongs, or before the collector of the place in which she may be. When such vessel shall arrive within the district to which she belongs, the register so obtained shall be delivered up to be cancelled, and a permanent register granted in lieu thereof.

When a registered vessel is transferred to a foreigner, such transfer shall be made known by delivering up to a collector of a district, the certificate of registry, within seven days after such transfer of property; and if the transfer shall take place when the vessel is at a foreign port, or at sea, the master of the vessel shall within eight days after his arrival in any port of the United States, deliver up the register to the collector of such district. It is the practice not to destroy the register after it is cancelled; it is deposited in the register's office, and a duly certified copy is legal evidence.

If a master of a registered vessel be changed, the name of the new master is endorsed upon the register, upon his making oath that he is a citizen of the United States. If any certificate of registry or record shall be fraudulently or knowingly used, for any vessel not then actually entitled to the benefits thereof, she, with her tackle, &c., shall be forfeited to the United States. An enrolled or licensed vessel about to proceed on a foreign voyage, must surrender her enrolment and licence, and be duly registered, or she, together with the goods imported therein, will be liable to seizure and forfeiture. In case of the loss of a register, the master of the vessel may take oath to the fact, and obtain a new one.

Of the Transfer of Vessels.—When any registered vessel shall, in whole or in part be transferred to a citizen, or altered in form or burden, by being lengthened or built upon, or from one denomination to another by the mode of rigging, she shall be registered anew, or cease to be deemed a vessel of the United States.

If a registered vessel shall be sold in part to resident citizens of the United States, while at sea, without a bill of sale reciting the register, and without being then registered anew, she is not

liable with her cargo for higher duties than are payable by vessels of the United States. By the general maritime law, a bill of sale is necessary to pass the title of the ship. The inaccurate recital of the certificate of registry in the bill of sale, does not avoid the sale, but the vessel is thereby deprived of her American privileges. If a sea vessel be assigned to a foreigner, the effect is the same; but if it be a coaster, the sale is not thereby invalidated, but the vessel is subject to forfeiture. A regular bill of sale of a vessel at sea, will transfer the property. And, in general, where there can be no manual delivery, there should be a delivery of something as an *inducium* or token. A bill of sale is the proper title to which the maritime courts look, it is the universal instrument of transfer of vessels; it is made absolutely necessary by statute.

Enrolled Vessels.—Enrolled vessels are those over twenty tons' burden, employed in the coasting trade and fisheries; and are licensed annually for the employment or business authorised by the tenour of the licence. Vessels enrolled and licensed, bound on a foreign voyage, may be registered; and enrolled vessels, being in a port other than the one to which she belongs, on the expiration of the licence, may obtain temporary registry. Vessels under twenty tons' burden may be licensed for the coasting trade or fisheries. A vessel licensed for any employment, may surrender it at any time within the period for which it was issued.

All licences must be renewed within three days after the expiration thereof, if the vessel be within the district to which she belongs; if on a voyage at the time of expiration, within three days after her first arrival; if sold, in whole, or in part, the licence is vacated. Should a licence be lost or destroyed, a new one may be obtained, on the oath of the master to the loss, &c. On a transfer of an enrolled vessel, a new enrolment must be obtained, the requisites for obtaining which are similar to those for registered vessels.

Coasting Trade.—The United States is divided into three great districts: the first, between the eastern limits of the United States and the southern limits of Georgia; the second, to include all districts, &c., between the river Perdido and the western limits of the United States; and the third, all the ports, &c., between the southern limits of Georgia and the river Perdido.

Every vessel destined from a district in one state to a district in the same, or an adjoining state, with foreign merchandise in packages as imported, the value of which exceeds 400 dollars, or with foreign goods in original packages or otherwise, the aggregate value of which exceeds 800 dollars, must obtain a clearance. On the arrival of every such vessel at the port of destination, the master must enter the vessel and obtain a permit to unlade his cargo.

Vessels sailing with a coasting licence, laden with goods wholly of the produce or manufacture of the United States, are not required to clear, if bound from one to another port within either of the three great districts.

All registered vessels engaged in the coasting trade, are required to clear in going from one district to any other district, and also on their arrival in the other district to enter under similar regulations to those vessels under a licence. Since the act of 1828, chap. 109, the mackarel fishery cannot be lawfully carried on under a licence for the cod fishery.

The 32nd section of the act of February 18, 1793, forfeits a vessel licensed for the fisheries, if engaged in a business, of whatever nature, and with whatever object, which is not expressly authorised by the tenour of the licence. But vessels licensed for the mackarel fishery are not liable to the forfeiture imposed by the 5th and 32nd sections of the act of February 18, 1793, in consequence of any such vessel whilst so licensed having been engaged in catching cod or other fish.—But the owner of such vessel may not receive the bounty allowed to vessels in the cod fishery. A vessel to be entitled to the bounty must be actually employed at sea, in the cod fisheries, a certain specified time, and must dry cure the fish caught.

Fishing Bounties.—The fishing season is accounted from the last day of February to the last day of November; and the following allowances are paid on the last day of December, annually, to the owner or his agent, of each vessel that shall be duly licensed and qualified for the cod fisheries, and that shall have been employed four months of the fishing season, viz.:—To every vessel of more than five tons and not exceeding thirty tons' burden, three dollars fifty cents per ton; above thirty tons' burden, four dollars per ton; above thirty tons, with a crew of not less than ten persons, and employed three months and a half, three dollars and fifty cents per ton. The bounty on any one vessel cannot exceed 360 dollars. Vessels of more than five and less than twenty tons, must catch and land twelve quintals of fish per ton, during the season.

The skipper of each fishing vessel must make an agreement with every fisherman before proceeding on a voyage. By paying monthly wages in money in lieu of dividing the fish, or the proceeds of the fishing voyage, in the proportions provided for by law, the agreement is violated, and the bounty is forfeited. The oath of the master, at the time the vessel has been actually employed in the fisheries, is required by an act of July 29, 1813, sec. 6.

Fishing vessels wrecked may obtain the bounty in certain cases, by the act of 1824, chap. 152. Fishing vessels may obtain a licence to touch and trade at a foreign port, under the act of February 18, 1793.—But the mere proceeding to a foreign port, if within the customary range of a fishing voyage, is not proceeding on a foreign voyage, within the meaning of the act. The bounties granted

by law, are paid on such vessels only, the officers and three-fourths of the crew of which, shall be proved citizens of the United States.

The laws relating to the enrolling and licensing of vessels, as well as those relating to the registering and recording of them, require, that when a vessel is sold and transferred, in whole, or in part, her papers shall be given up to be cancelled, and that she shall be papered anew; that when a vessel employed in the coasting trade, cod fishery, or mackarel fishery, is at a port other than the one to which she belongs, whose licence has expired, she is required to surrender the enrolment and licence, a "temporary register," to enable the vessel to return to the port of ownership, even should that port be in an adjoining district, there again to be enrolled and licensed, in every particular as before the temporary register was granted: and when an enrolled vessel is at a port other than the one to which she belongs, and is destined for a foreign port, she is required to surrender all her papers, and procure a register, for the foreign voyage; and upon her return to the port where she is owned, she is again subject to the requirements of the enrolment and licence acts. This series of changes may be entirely avoided, and the whole business of registering, recording, and licensing vessels arranged in a simple and concise manner, by the enactment of a law authorising all vessels to be registered permanently, whether engaged in foreign trade, coasting, or fisheries, according to the form now in use for vessels bound on a foreign voyage. The several parts or proportions owned by each individual, ought also to be expressed in the register; and when a partial transfer of property is made, it should be endorsed on the register and the record; and when there is an hypothecation, by bottomry or otherwise, it should be recorded, to be valid; and thus make the register the real evidence of ownership. According to the present system, volumes of records are required to be kept, at great labour and expence, in consequence of the frequent and partial changes of property in vessels, and their changes of employment.

After a vessel is permanently registered, and is to be employed in the coasting trade or fisheries, a licence should be given for that particular employment, to be renewed annually; and when a vessel is taken from either of those employments, to be put into foreign trade, the licence should be surrendered, and a clearance granted to proceed on the voyage, under the original permanent document.

Copies of all registers and enrolments issued by the existing laws, must be transmitted to the register of the treasury, and a duplicate of each made for the records of the custom-house. Consequently, when a vessel is registered, enrolled, and licensed, and again registered, as often happens within a year, triplicate copies at each change are rendered necessary. By the mode suggested, the labour at the custom-houses would be greatly reduced; the records would at all times show the real *bonâ fide* ownership of vessels; and the mercantile community would be relieved of the onerous requirements imposed by every partial transfer of their property in vessels, and also those incident to their frequent changes of employment.

The acts upon which the existing system is based, are those of December 31, 1792; February 18, 1793; March 2, June 27, 1797; March 2, 1803; March 27, 1804; March 3, 1825; and February 11, 1830.

The following circular instructions to collectors of the customs, dated Treasury Department, April 10, 1845, are explanatory of the act of Congress, approved March 3, 1845.

Herewith you will receive an act entitled "An act allowing drawback upon foreign merchandise exported in the original packages to Chihuahua and Santa Fe, in Mexico, and to the British North American provinces adjoining the United States," approved the 3rd of March, 1845, accompanied with forms and instructions for carrying the same into execution.

The first six sections of the act apply to the exportation of merchandise "in the original packages as imported," to Chihuahua, in Mexico, or Santa Fe, in New Mexico, either by the route of the Arkansas river, through Van Buren, or by the route of Red river, through Fulton, or by the route of the Missouri river, through Independence. Consequently, foreign imported merchandise exported or conveyed to the places in Mexico or New Mexico, mentioned, by any other routes than those indicated in the act, will not be entitled to a drawback of the import duties. It is also to be remarked, that the exportation of merchandise by the routes and to the places before mentioned, can only be made from the original port of importation.

In pursuance of the authority vested in the secretary of the treasury, by the 11th section of the act, the following rules, regulations, and forms, are prescribed, and are to be strictly enforced.

First.—In regard to the exportation of merchandise to Chihuahua and Santa Fe:—

On first giving twenty-four hours' notice at the custom-house, of intention to export, the exporter must make due entry, and for that purpose must produce the invoice required by the 2nd section of the act. Said entry must recite the invoice in detail; and, in addition, give a particular description of the merchandise, whence and by whom imported, the name of the vessel, and the time of importation, with the original invoice value of the goods; and also state the destination,

and the route by which the merchandise is to be transported. The entry must, in all cases, be verified by the oath or affirmation of the person making the same, together with the oath or affirmation of the first importer, with that of any person through whose hands the merchandise may have passed, declaring the same to be in the original package or packages, and that the duties have been paid or secured. Inspection of the packages should also be carefully made by a proper officer of the customs, at the time of making the entry. The bond required by the fifth section of the act must be given by the exporter.

In consideration of the large inland transportation, and the consequent risk of injury, and defacing the marks on the packages, thereby rendering it difficult to identify them, it is deemed proper, for the more effectual security of the revenue, to require that each package shall be enclosed in a strong wooden box or covering, on which the same marks and numbers are to be placed as those on the inner package. The inner package is to be secured with a strong cord or rope, with the custom-house seal attached.

Forms of entry, invoice certificates, and oaths, are herewith transmitted, marked from A to D, inclusive.

Secondly.—The remaining sections of the act apply to the exportation of merchandise for benefit of drawback to the British North American provinces adjoining the United States, and enumerating certain ports, "declared ports from which foreign goods, wares, and merchandise, on which the import duty has been paid, or secured to be paid, may be exported to ports in the adjoining British provinces, and to which ports foreign goods, wares, and merchandise, may be transported, inland or by water, from the port of original importation, under existing provisions of law, to be thence exported for the benefit of drawback."

The course to be pursued in the transportation, inland, of foreign merchandise, in the original packages as imported, to the designated ports of exportation enumerated in the 7th section of the act, is to be similar to that prescribed in the 79th section of the general collection act of the 2nd of March, 1799; and all the legal requirements and forms of law must be strictly pursued, in cases arising under this act.

In the exportation by sea to ports in the adjoining British provinces, all the existing requisitions of law, regulating the exportation of merchandise to foreign ports, for the benefit of drawback, must be fully complied with.

On the arrival of merchandise transported inland, at either of the enumerated ports of exportation, a strict and thorough examination of the same must be made by an officer of the customs, to see that the goods are identical with those described in the accompanying transportation certificate, granted by the collector of the port from whence they may have been originally transported.

In the event of any detention of the merchandise, at the port of exportation, for any cause, said merchandise must be deposited either in the custom-house, or in some secure store-house, to be selected by the collector, the keys of which must be lodged in his hands. Any expense for storage must be defrayed by the owner or consignee of the goods. Before exporting the goods to their destined port in the adjoining British provinces, entry must be made according to the forms herewith marked E and F.

On the return of the manifest with the certificate thereon, in due form, to the collector of the port of exportation, it must be immediately transmitted to the collector of the district and port from whence the goods were originally transported, in order that the drawback of the duties may be duly paid by the collector of said port.

It is to be specially noted, that the law contemplating the probable retention of the original manifest at the foreign custom-house, requires a duplicate, or certified copy of the same, to be granted at the time of exportation, on which is to be endorsed the certificate of the foreign collector, and also the oath or affirmation of the master.

CANADA CUSTOM-HOUSE DUTIES CIRCULAR.

The following circular, dated "Inspector-general's Office, Montreal, April 7, 1845," addressed to the collectors of customs at the different ports in that province, and signed Joseph Carey, deputy inspector-general, refers to the act of Congress allowing drawback on goods exported to the territories adjoining the United States.

Sir.—With reference to a recent act of the Congress of the United States, allowing drawback on merchandise exported to the British provinces in North America, which, no doubt, has come under your notice, I have the honour to remind you that articles so exported from the United States, into this province, will be liable to the payment of the duties imposed by the acts of the provincial legislature, and also to the duties under the imperial act 5 and 6 Victoria, cap. 49, whe-

ther such goods are originally the growth, production, or manufacture of the United Kingdom, or of any of the British possessions in America, &c., or otherwise.

On this point, your attention is requested to the 27th section of the imperial act 3 and 4 William IV., cap. 59, which enacts "that no goods shall, upon importation into any of the British possessions in America, be deemed to be of the growth, production, or manufacture of the United Kingdom, or of any British possessions in America, unless imported from the United Kingdom, or from some British possessions in America." Consequently, all articles imported into this province, from or through the United States, are deemed foreign, although any of such articles may be the growth, production, or manufacture of the United Kingdom; which, when so imported, must be held to be liable to duty as foreign goods; that is, to the duties in full imposed both by the acts of the imperial parliament, and of the provincial legislature, imposing duties of customs, now in force, viz.: Imperial Act 5 and 6 Victoria, cap. 49, and Provincial Act 8 Victoria, cap. 3, and 6 Victoria, cap. 31, the one in addition to the other."

CHAPTER XXXII.

LIFE, FIRE, AND MARINE ASSURANCES, IN THE UNITED STATES.

WE have given tabular statements of assurance companies, and rates of assurances, under the heads of Boston and New York.

The practice of *underwriting* marine insurances, does not (as far as we have been enabled to ascertain), exist in the United States.

Life insurances may be divided into three classes. 1st. Common joint-stock companies, the *personal liability* of the members of which to pay over and above their shares in the joint-stock, depends in the United States upon the limitation allowed or imposed by the respective state legislatures. The first class merely engage to pay liabilities for policies, and then divide the annual profit or loss according to the amount of stock among the shareholders.

The second class are joint-stock companies with populous bodies, who instead of paying fixed sums at the termination of lives, first pay the stockholders an annual interest, and divide a portion of generally two-thirds of any balance of net profit among those who hold policies.

The third class is the mutual life insurance companies, formed much upon the same principles as in England. Each person assured receiving a share of the profits, and being liable for a share of the losses, and consequently a partner in the concern, or corporation.

The management of insurance companies in the United States, is intrusted usually, as in England, to a board of directors, with a president, vice-president, actuary, secretary, &c.

1st. The Massachusetts Life Insurance and Trust company, which is of the first or proprietary class, transacts its business under the following rules and regulations:—

"Every person desirous of making insurance on his own life, or upon the life of any other person, or who wishes to contract for reversionary payments on annuities, must

sign a declaration by himself or agent, according to a printed form to be furnished by the company, setting forth the age, occupation, place of birth, state of health, and other circumstances attending the life or lives insured, or the life upon the failure of which the reversionary payment of the annuity is to commence. The company may also require a certificate of the health of a person, from a physician of established reputation. An application for an annuity on a life, must state the age of the party to whom it is granted. Any misrepresentation in these declarations, vitiates the contracts.

"Policies of insurance and reversionary contracts are void, if the person whose life is insured shall die upon the seas, or upon any of the great lakes, or shall, without the consent of the company, previously obtained and endorsed upon his policy, pass beyond the settled limits of the United States, excepting into the settled limits of the British provinces of the two Canadas, Nova Scotia, or New Brunswick; or shall, without any such previous consent thus endorsed, visit those parts of the United States which lie south of the southern boundaries of the state of Virginia and Kentucky; or shall, without such previous consent thus endorsed, enter into any military or naval service whatsoever, the militia not in actual service excepted; or in case he shall die by his own hands in, or in consequence of, a duel, or by the hands of justice, or in the known violation of any law of these states, or of the United States, or of the said provinces." This last provision is rather vague. "A person must have an interest in the life he insures, if it be not his own life. No policy takes effect until the first premium shall be paid, and the annual premiums must be paid the day they fall due, otherwise the policy expires; but it may be revived at any time within fifteen days, the person on whose life the assurance was made, being then alive and in good health, by the payment of said premium, together with an additional sum of ten per cent upon such premium. All claims will be settled within sixty days after notice, and satisfactory proof of the claim shall be made. Annuities must be demanded by the annuitant in person, or satisfactory proof must be given that the annuitant is still alive. A charge of one dollar is made for each policy of a common form; but where a special contract is required, the expense of drafting it must be borne by the assured. The company reserves to itself the right of making any alterations, which the particular circumstances of applicants may, in their opinion, render expedient. Insurances for one year may, or may not, be renewed at the pleasure of the company." Their refusal may be obviated by insurance of seven years, or for life.

ANNUITIES.—"The company will grant annuities during the continuance of any given life or lives, and make the payments either quarterly, half yearly, or annually, as shall be agreed upon. The payments may commence immediately, or be deferred for any given time. There are two methods of making these contracts, upon principles which differ essentially from each other. In the one, a moderate rate of interest is allowed upon the capital paid (either in money or stock) for the annuity, and, at the expiration of the life, the whole of that capital is paid back (within sixty days from its falling in, and in the stock or property at fair valuation that the company has then on hand; the same is done in an endowment in trust) to the heirs of the annuitant, or to any person legally authorized to receive it. This contract may, for the sake of distinction, be called an annuity in trust." (It is a sort of savings' bank; the smallest sum so received is 500 dollars, and for any sum less than 2000 dollars, the interest is payable only annually; over that, they may purchase it in semi-annual or quarterly payments.) "In the other case, a large interest is allowed during the life of the party, and, at his death, the capital becomes the property of the company. A contract of this kind, is generally called an annuity on a life.

"In the preceding proposals, the company," say they, "have offered as favourable terms to the applicants as they could, consistently with the safety of the property intrusted to their care, which object has been constantly kept in view." (In trusts, they charge for management one-half of one per cent per annum, only.) "The annual return made to the governor and council, which, without expressing the particular sums deposited by individuals, will contain a schedule of the amount of capital stock and all the property in possession of the company, with the manner of its investment, will always be open to the inspection of any person transacting business with the company." The legislature direct the kind of property, in general, in which investments shall be made by the company; which consist in United States funded debt, or Massachusetts

State stock, the stocks of incorporated banks in that commonwealth, ground rents or mortgages, and notes secured by mortgages. The above are, generally, the regulations of all our American life offices.

2nd. The *Girard Life Assurance, Annuity, and Trust Company of Philadelphia*, which is of the second, mixed class, has similar rules and regulations, and profess to make insurance on the life of "a healthy person not engaged in any hazardous occupation, and residing within the settled limits of the United States, north of the southern boundary of Virginia and Kentucky, or within the settled limits of the two Canadas, Nova Scotia, or New Brunswick." They state that it is their object to offer to the public the following advantages:—

1. Assurers for life to participate in the income.
2. A moderate sale of premiums.
3. Increased facilities for effecting assurances.
4. An ample capital, this being a mixed company, and, in 1837, the only one in the United States of that kind, paid in for the security of the assured;
5. Prompt settlement of claims; without dispute or litigation.
6. Repurchase of policies, in certain cases.
7. Payments of premiums, received either in the whole sum, or in smaller weekly or monthly amounts.
8. The reception and management of trusts.

"The improvements which experience has introduced into the business of life insurance and trusts in England, will be adopted by the company. The income of the company will be apportioned between the stockholders and the assured for life." It does not mention the rates, but we presume the usual English apportionment of one-third to the former, and two-thirds of the net profits to the latter.

"The rates of insurance, annuities, and endowments, will be as low as the most modern experience will warrant, with a due regard to the safety of the insured."

The legislature of Pennsylvania insisted "That the whole capital of this company to be paid in within two years from the date of its incorporation, and has authorised investigations by the courts into the state of its affairs; affording, if properly carried out, the most ample security to all who do business with the office. The managers, for the still greater security of all interested, have, for the present, limited the amount of policies to be granted in each case. No person can be elected a manager who is not himself assured to a specified amount; nor can a person be a manager, unless he be a holder, in his own right, of at least one hundred shares of stock. No manager can borrow money of the company; which, in these days of logrolling and money nepotism in this republic, will perhaps be considered a transcendent item of security and safety. The company pays one-fifth the amount insured immediately, on satisfactory proof of the death of the assured; and the remainder of the claim within the period of sixty days."

Their charter authorises them to receive and manage estates and trusts of every description, that may be committed to their charge, whether by courts of justice, individuals, or corporate bodies. They are authorised to become guardians of the estates of minors and lunatics, and trustees under wills. From the moment a trust is accepted, the company becomes responsible for the safety of it, and the whole capital of the company is pledged for its repayment, with the proceeds or interest that may have been stipulated; and the by-laws and regulations of the managers are framed with a view to enforce that security. They also receive money in small or large sums in deposit, to remain one, three, six, or twelve months, or for a longer period, and subject to withdrawal at a short notice, on which interest will be paid; thus becoming a saving's-bank, as well as a bank of deposit. In the reception and execution of these various trusts, the company say they, having due regard to the security of the institution and the safe investment of its funds, will make the most liberal arrangements, as to the allowance of interest and charge of commissions, that the circumstances of each particular case may warrant.

3rd. The *Mutual Life Insurance Company of New York*, was incorporated the 12th of April, 1842. "Expecting to go into operation by the 1st of January, 1843, when the amount of 1,000,000 dollars will be applied to be insured, they having, at this period, the sum of between 700,000 and 800,000 dollars already entered on their books

in the short space of eight months. The act makes those asking for it, and all other persons who may hereafter associate with them, in the manner hereinafter prescribed, a body politic and corporate, by the name of the Mutual Life Insurance Company of New York. In addition to the general powers and privileges of corporations, as the same are declared by the third title of the eighteenth chapter of the first part of the revised statutes, the corporation thereby enacted shall have the power to ensure their respective lives, and to make all and every insurance appertaining to, or connected with, life risks, and to grant and purchase annuities. All persons who shall hereafter insure with the said corporation, and also their heirs, executors, administrators, and assigns, continuing to be insured in said corporation, as hereinafter provided, shall thereby become members thereof during the period they shall remain insured by said corporation, and no longer. The board of trustees shall consist of thirty-six persons. They shall, at their first meeting, divide themselves by lot into four classes, of nine each; the terms of each expiring successively, in one, two, three, and four years, so as always to have experienced men. They are re-eligible. The seats of these classes shall be supplied by the members of this corporation by a plurality of votes; an insurance of 1000 dollars, at least, entitling a member to a vote.

"Every person who shall become a member of this corporation by effecting insurance therein, shall, the first time he effects insurance, and before he receives his policy, pay the rates that shall be fixed upon and determined by the trustees; and no premium so paid, shall be withdrawn from said company, except as hereinafter provided, but shall be liable to all the losses and expenses incurred by this company during the continuance of its charter. The whole of the premiums received for insurance by said corporation, except as provided for in the following sections, shall be invested in bond and mortgages, or unincumbered real estate within the state of New York; the real property to secure such investment of capital shall, in every case, be worth twice the amount loaned thereon. In order to avoid a great land monopoly, all real estates as shall not be necessary for the accommodation of the company in the convenient transaction of its business, shall be sold and disposed of within six years from the time they acquire a title to the same. A certain portion of the premiums, not to exceed one-half, may be invested in public stocks of the United States, or of this state, or of any incorporated city in this state—New York. Suits at law may be maintained by said corporation against any of its members, for any cause relating to the business of said corporation; also, suits at law may be prosecuted and maintained by any member against said corporation, for losses by death, if payment is withheld more than three months after the company is duly notified of such losses.

"The officers of said company, at the expiration of five years from the time that the first policy shall have been issued and bear date, and within thirty days hereafter, and during the first thirty days of every subsequent period of five years, shall cause a balance to be struck of the affairs of the company, in which they shall charge each member with a proportionate share of the losses and expenses of said company, according to the original amount of premium paid by him, but in no case to exceed the amount of the premium. Each member shall be credited with the amount of said premium, and also with an equal share of the profits of the said company, derived from investments and earnings in proportion to said amount; and in case of the death of any member of said company, the amount standing to his credit at the last preceding striking of balance as aforesaid, together with the proportion which shall be found to belong to him at the next subsequent striking of said balance, shall be paid over to his legal representatives or assigns, within three months after the said last-mentioned balance shall be struck. Any member of the company, who would be entitled to share in the profits, who shall have omitted to pay any premium, or any periodical payment due from him to the company, may be prohibited by the trustees from sharing in the profits of the company; and all such previous payments made by him, shall go to the benefit of the company. A provision is made for an ample public statement of the details of business, losses, profits, investments, &c. No policy shall be issued by said company until application shall be made for insurance, in the aggregate, for 500,000 dollars at least; and the trustees shall have the right to purchase, for the benefit of the company, all policies of insurance, or other obligations issued by the company."

This company thought fit to exceed even the security required by the act of incorporation, and did not go into operation until there were applications for 1,000,000 dollars of life insurance.

Chancellor Kent states :—

"The terms and conditions of the English policies are more relaxed now than formerly ; but this is not the case with the American policies on lives." Even the old law requirement of an interest in the life assured, which is in full force here, and fortified by the English act of 14 George III., is now hardly looked to in some offices in England, as appears from their printed proposals. The statutes of Massachusetts make no provisions for life insurance companies by title, unless in case there is any want of provisions in their charter, which ought to set out especially their powers and liabilities. The first section of chapter thirty-seven of Massachusetts Revised Statutes, headed, like the Code of France, with the broad title "Insurance Companies," has this enactment : "All insurance companies that have been, or shall hereafter be incorporated in this commonwealth, may exercise the powers, and be subject to the duties and liabilities contained in this chapter, so far as may be consistent with the provisions of their respective charters." Section fortieth of this thirty-seventh chapter, contains provisions concerning the exercise of foreign agencies for insurances, still under that broad title ; upon this we have cursorily remarked before. The above chapter refer to chapter forty-four, which contains general statutory provisions concerning corporations.

"April 1st, 1840.—The people of the State of New York, represented in Senate and Assembly did enact as follows :—Section 1st. It shall be lawful for any married woman, by herself and in her name, or in the name of any third person, with his assent, as her trustee, to cause to be insured, for her sole use, the life of her husband for any definite period, or for the term of his natural life ; and in case of her surviving her husband, the sum or net amount of the insurance becoming due and payable by the terms of the insurance, shall be payable to her, to and for her own use, free from the claims of the representatives of her husband, or of any of his creditors ; but such exemption shall not apply where the amount of premium annually paid shall exceed 300 dollars.

"Section 2nd. In case of the death of the wife before the decease of her husband, the amount of the insurance may be made payable, after her death, to her children for their use, and to their guardian, if under age."

"Most of the insurance offices in the United States propose that they, in similar language to the Massachusetts Hospital Life Insurance Company, will enter into various contracts, so as to accommodate persons in almost every age and situation in life. An insurance may be made for one year, for several years, or for the whole life. It may be made on one life, on two, or on more lives ; to commence immediately, or at a future day. They will grant annuities upon two or more lives, in all the various forms of which they are susceptible ; as, for example, on the joint continuance of the lives (that is, an annuity which is to cease when any one of the lives fails), on the longest of the lives, on one life after the death of another ; as, for a wife after the death of her husband, or a child after the death of his father."

BANK OF ENGLAND.

Quarterly average of the weekly liabilities and assets of the Bank of England, from the 10th of December, 1839, to the 3rd of March, 1840, both inclusive, published pursuant to acts 3 and 4 William IV., chap. 98.

the last account there is an increase upon each item—on circulation, 167,000*l.*; on deposits, 326,000*l.*; on securities, 242,000*l.*; and on bullion, 307,000*l.* The actual stock of bullion in the bank at this moment, is estimated to be about 4,500,000*l.*

INSURANCE COMPANIES WEST OF THE ALLEGHANY.

It appears, from an article in the *Merchants' Magazine*, that the first insurance company established in the west, was at Lexington, Kentucky, which went into operation about 1816, but ceased to exist in one or two years. The second was the old Cincinnati Insurance Company, established in 1818, which issued some fifty or sixty policies, and in one or two years closed up its concerns. The third was the old Louisville Marine Insurance Company, which was established in or about the year 1818, and issued two hundred policies or upwards, and some years afterwards wound up its affairs. The fourth is the Cincinnati Equitable Fire Insurance Company, established in 1825, and is now in operation, and conducted on the principles of *mutual* insurance. The fifth was the Ohio Insurance Company, established in 1827, at which period there was no local insurance company in the west, with the exception of the Equitable Fire Insurance Company referred to, the Fire and Marine Insurance being at this period confined to the eastern offices, and their agencies in the west. To those familiar with the history of that period, it will be recollected that for several months pending the establishment of the Ohio Insurance Company, it was exceedingly doubtful whether it could be put in operation, from the difficulty of disposing of a sufficient amount of the stock; but having commenced its operations, its success was decided, and two years afterwards arose, in 1829, the Cincinnati Insurance Company.

These two companies had, by their charters, a capital of 250,000 dollars each. The same year, the Louisville Marine and Fire Insurance was organised, and went into operation, capital, 200,000 dollars. In 1830, three new offices were established in the west, viz.: the Louisville Mutual Fire Insurance Company, the Louisville Merchants' Insurance Company, and the Wabash Insurance Company, with an aggregate capital of 400,000 dollars. In 1831, two more were added, viz.: the Madison Insurance Company in Indiana, and the Missouri Insurance Company at St. Louis—aggregate capital, 200,000 dollars. In 1832, three more were added, viz.: the Fireman's Insurance Company at Cincinnati, the Lansingburgh Insurance Company, and the New Albany Insurance Company in Indiana—aggregate capital 400,000 dollars. In 1833, but one was added to the number, viz.: the Franklin Fire Insurance Company, at Frankfort, Kentucky—capital, 100,000 dollars. But in 1834, seven new offices were chartered at Warren, Dayton, and Cleveland, in Ohio; at Maysville and at Louisville, in Kentucky; and at Jeffersonville and Rising Sun, in Indiana—aggregate capital, 800,000 dollars. In 1835, nineteen additional offices were established, viz.: seventeen in Ohio, and two in Kentucky—aggregate capital 1,600,000 dollars. In 1836, fourteen more were chartered, viz.: eight in Ohio, three in Kentucky, two in Indiana, and one in Missouri—aggregate capital 1,800,000 dollars. In 1837, twenty-two more were chartered, viz.: two in Ohio, seven in Indiana, and thirteen in Missouri—aggregate capital, 4,000,000 dollars.

The foregoing enumeration, however, embraces only the offices chartered in the four western states of Ohio, Kentucky, Indiana, and Missouri. No office was established in Tennessee, Illinois, Western Pennsylvania, or Western Virginia, until 1832, since which, fifteen or twenty companies have been established in these states, with an aggregate estimated capital of 1,500,000 dollars. Mississippi and Louisiana have been omitted in the foregoing calculation, as our statistics do not furnish adequate data for the occasion, but we estimate the amount of capital in these two states at, perhaps, 300,000 dollars.

Thus, we perceive, that in 1826, twelve years since, there was no local insurance office in the western states, north of Natchez, except the Equitable Fire Insurance Company at Cincinnati; that in 1833, seven years after, there were only twelve, with an aggregate capital of 1,800,000 dollars; but that in the four succeeding years, to the spring of 1838, the number was increased to considerably more than one hundred, the whole wielding, in the aggregate, the immense capital of 15,000,000 dollars.

ASSURANCES AGAINST LOSSES BY FIRE.

The fire assurance or insurance companies in the city of New York are of two sorts : first, those that have a fixed capital determined by the legislature, and divided into a certain number of shares, which must be subscribed for and paid in, and secured according to the provisions of the charter. The number of directors is also fixed, from among whom one is selected to act as president. The directors are annually chosen by the stockholders for one year, and in case of death or resignation, others may be appointed as may be provided for by the by-laws. A company is not allowed to commence the business of insuring until the whole of the capital stock shall have been paid in and secured, and an affidavit of that fact been made by the president and secretary, and filed in the clerk's office. The whole assets of the company are liable for losses, so that in the event of a large loss, the stockholders forfeit all their interest before the insured is affected. Dividends are made out of the surplus profits arising from the interest on the capital, and from the receipt of premiums, after all losses, debts, and expenses are paid, provided the capital is unimpaired; but no dividend can be made while the capital stock is impaired, or until such deficiency or loss of capital is made good.

Charters which have been obtained in the state of New York, since the year 1830, usually have a clause inserted in them, that they "shall possess the general powers, and be subject to the provisions of the eighteenth chapter of the first part of the Revised Statutes, so far as the same are applicable, and have not been repealed."

The second class of insurance companies are those which are denominated mutual companies. In these every insurer becomes a stockholder during the period for which he shall remain insured, and in amount in proportion to the premium which he pays into the company; and for this amount he is liable in case of a loss. The capital is not fixed or determined, as in the case of the former companies, but is in proportion to the amount of premiums on hand, which constitute the capital stock. The profit or dividend is paid to the insurers or stockholders, in proportion to the amount of money paid in by them for premiums, in the same manner as shareholders in other companies. A president and board of trustees are elected in like manner, and for the performance of like duties, as the president and directors of those companies that are not mutual. There is a clause generally inserted in their charters, that no policy shall be issued until application for insurance shall have been made to a certain amount, so that they may be provided for a loss at their commencement, if any should happen to be sustained.

"In addition to the fire companies chartered by the legislature of New York, there are agencies of companies of other states and of England established in the city of New York, who insure through the intervention of agents. They generally take risks a degree lower

than the city offices, in order to secure a portion of the business; for most insurers prefer obtaining policies from companies chartered by this state, on account of the facility with which they can obtain a knowledge of their character and capability to sustain a loss, and the rules by which they are governed; but the most important reason is, in cases of litigation arising from a loss, the party insured would be obliged to prosecute his claim in another state or country, and be governed by laws and customs with which he is, perhaps, unacquainted; besides the additional trouble and expense attending such a necessity. There is also an advantage gained by insuring in foreign companies, in the event of an extensive conflagration; for they are likely to be more secure, on account of their having fewer risks in this city, as was seen in the case of the great fire in December, 1835. That event caused the failure of several of our offices, owing to their having a large amount of risks in that part of the city which was consumed. The ruin of some merchants who were insured in them was the consequence, while those insured in the foreign offices recovered in full; because these had not issued policies to any considerable amount, and therefore their losses were not so great as materially to impair their capital. It is due to our offices, however, to state, that they are very cautious in distributing their risks, so that nothing but an uncommonly great disaster, such as that above referred to, would endanger their safety, their custom being to insure not over from 5000 to 15,000 dollars, according to their capital, on any one building, without procuring reinsurance; and no more in the immediate neighbourhood of a previous risk, or where a fire would be likely to extend.

The following table shows the number of companies, and the amount of capital in this city at the respective dates. Some of the companies included here are of a mixed character, being not only fire companies, but also taking risks upon marine and inland navigation, and upon lives.

DATE.	Number of Companies.	Amount of Capital.	DATE.	Number of Companies.	Amount of Capital.
1808.....	5	2,500,000	1830.....	21	dollars.
1820.....	12	6,200,000	1835.....	26	7,990,000
1825.....	30	11,600,000	1840.....	23	9,700,000
					6,661,000

In addition to the above, there are at present several agencies of other companies, belonging to other states, established in this city, whose aggregate capital is equal to as much, if not more, than that of our own companies. By the above table it appears that the amount of insurance capital, properly belonging to this city, is not so great now as it was in 1825, 1830, 1835, and but little more than it was in 1820. This can be accounted for from the fact that the business of insuring has not been found profitable enough to support the different companies which have arisen during the last twenty years. Some old companies have suffered their charters to expire, and others have been destroyed by the fire.

At a proportionate increase of premium.

To add one-half per cent for each passage traversing the hurricane latitudes, viz.; within the parallels of 10 deg. and 28 deg. of north latitude, and 58 deg. and 86 deg. of west longitude, between the 15th of July and the 15th of October.

Risks on Vessels of smaller Sizes usually employed in the West India Trade and on short Voyages.

If engaged in more favourable employment, they may be placed under the rates of vessels of 200 tons and upwards, instead of the following.

ON VESSELS VALUED AT	RATE PER CENT PER ANNUM.
75 to 60 dollars per ton.	6 1-2 to 8 1-2 per cent per annum.
60 " 50 " "	8 1-2 " 9 1-2 " "
50 " 40 " "	9 1-2 " 10 1-2 " "
40 " 30 " "	10 1-2 " 11 1-2 " "
30 " 20 " "	11 1-2 " 12 1-2 " "
Under 20 " "	12 1-2 and upwards " "

To add two per cent if within the parallels of 10 deg. and 28 deg. of north latitude, and 58 deg. and 86 deg. of west longitude, between the 15th of July and the 15th of October.

If north of latitude 50 deg. north, and east of longitude 2 deg. east, between the 1st of October and the 1st of March, one per cent additional premium to be paid.

In all cases of over-insurance, ten per cent of the return premium is to be retained by the insurers, not exceeding one-half per cent on the amount of short property.

For a continuance of the risk beyond the year, half per cent shall be charged in addition to the *pro rata* premium for the time used.

If the policy be cancelled before the time expires, ten per cent of the whole premium to be paid in addition to the premium earned *pro rata* up to the time the policy is cancelled, but in case of the sale of a vessel, the policy may by consent be transferred, or the old policy may be surrendered without charging the ten per cent, provided the purchaser takes out a new policy at the same office on terms as favourable to the insurers; but no policy shall be cancelled merely because the vessel is to be employed in a business where the premium would be reduced below the annual rate charged, without the charge of ten per cent of the whole premium over the premium earned *pro rata*; but nothing contained in this regulation shall prevent any office from cancelling any risk such office may be desirous to get rid of, without any charge of premium, or extra premium.

One-quarter per cent to be added on hardware.

GENERAL REGULATIONS.

1. If there be any line on board on cargo, or on freight, fifty per cent to be added to the premium for the passage.
2. If any goods are shipped and insured as on deck, not less than double premium to be charged, with condition not to be liable for damage by wet or exposure, nor for partial loss under fifteen per cent.
3. The north-east, or unfavourable monsoon in the China seas for outward passages to China, is from the 1st day of October to the 1st day of April.
4. The south-west, or unfavourable monsoon for homeward passages, is from the 1st day of April to the 1st day of October.
5. The hurricane months in the West India latitudes, are from the 15th day of July to the 15th day of October, and said latitudes shall be considered as being within the parallels of 10 degrees and 28 degrees of north latitude, and 58 degrees and 86 degrees of west longitude.
6. The North Sea, as expressed for additional premiums for winter months (viz., from the 1st day of October to the 1st day of March), is considered north of latitude 50 degrees north, and east of longitude 2 degrees east.
7. For any other division or allowance of average for partial loss on the whole interest of the assured under deck, than is provided for in our printed form of policy, an additional premium shall be charged of not less than one-quarter per cent, except on the rates for such cases from Great Britain and Havre already provided for in this tariff; and except on risks north and east of Florida coastwise, on which not less than one-eighth per cent additional premium shall be charged.
8. To add not less than one-quarter per cent for each port used more than one, at either the beginning or the ending of the voyage, for each time used; except risks provided for in

the 14th article, and, except Elsineur, Anjer, St. Helena, and a port for advice in the British Channel.

9. In all cases of over-insurance, ten per cent of the return premium is to be retained by the insurers, not exceeding one-half per cent on the amount of short property.

10. Premiums on vessels and freights not to be less than those on cargoes of general merchandise for same voyages.

11. Specie and bullion, excepting to port or ports beyond the Cape of Good Hope or Cape Horn, to be insured as the parties may agree: provided, that it shall never be at a greater reduction than one-third from the rates herein fixed for merchandise on the same passage.

12. Specie and bullion, to port or ports beyond the Cape of Good Hope or Cape Horn, may be insured at one-quarter per cent less than merchandise.

13. When several passages are included in the same policy, the rates for each passage are to be added together.

14. If insurance be made from foreign ports to port or ports of discharge, or final port of discharge, in the United States, the coastwise premium to be added for each port used, more than one, in the United States.

15. With regard to risks not provided for in this tariff, it is agreed that the parties are to make contracts at discretion, but it is expected that companies will require rates equivalent to those named in this tariff on risks of like value, acting in good faith, and not taking one risk for a lower rate in consideration of receiving the tariff rates on another.

16. Copenhagen is considered as in the Baltic.

17. Gottenburg is not considered as in the Baltic.

INLAND NAVIGATION INSURANCES.—The Boston premiums for inland insurances are so nearly the same as those in the tariff of premiums which we have inserted under the head of "New York," that it would be superfluous to insert those of Boston here.

CLASSES OF HAZARDS AND RATES OF PREMIUMS FOR INSURANCE AGAINST LOSS OR DAMAGE BY FIRE, IN THE CITY OF NEW YORK, AS ADOPTED BY THE NEW YORK INSURANCE COMPANIES.

RULES.

1. When two buildings, having no interior communication, are offered for insurance, a specific sum must be insured on each, and in like manner on property in each; but two buildings, *having* interior communication, *and occupied by the same person, may be considered as one building.*

2. When a building, or two or more buildings communicating, are occupied by two or more tenants, either of whom requires the hazardous or extra-hazardous privilege, the other tenants, as well as each of the buildings, shall be subject to the same charge.

3. When two buildings adjoining, with separate walls through the roof, communicate by doors or other openings, *five cents* additional premium to be charged on such and their contents, if occupied by more than one tenant.

Note.—No charge to be made for want of coping on a separating wall on which the charge is made for communication.

4. Policies may be once renewed for the ratio of the premium required for the period of time for which the policy was originally made.

5. Policies, with the consent of the company, may be assigned, or may be transferred from one building to another, the difference in the risk, if any, being paid.

6. A policy may be cancelled by retaining the short rate for the time expired, but in no case for less than one month, and the premium for unexpired time allowed in a new insurance, or refunded.

7. Carpenters' risks for *fifteen days*, may be granted *once* during the existence of the

same policy, *gratis*; but if granted for more than fifteen days, and less than a year, to be charged according to the scale for short insurances.

8. No premium for *less than one month* shall in any case be charged, excepting for carpenters' risk, which may be taken for fifteen days at half the premium for one month.

CLASSES OF BUILDINGS, AND RATES OF ANNUAL PREMIUMS, IN THE CITY OF NEW YORK.

The rates affixed to the several classes, are the premiums on buildings when occupied for purposes not hazardous, or containing merchandise, or other property, not hazardous. When otherwise occupied, the following additional premiums are charged on the buildings, as well as on merchandise and other property therein :

Hazardous occupancy	cents.
Extra hazardous ditto	10
Specially hazardous, the premium that may be agreed on in each case, not less than	25
Merchandise, not hazardous, is charged in addition to the rate of the building containing it	50
Merchandise, and other articles, denominated hazardous or extra hazardous, and to which a star (*) is prefixed in the classes of hazards and minimum rates (such as paper in reams, books, stationery, watches, jewellery, &c.), are deemed not to affect the buildings in which they are contained, or other property therein.—The additional premium on those articles being charged, because of their peculiar liability to damage and loss.	5

DWELLING HOUSES.

1st Class. Buildings of brick or stone, roof of tile, slate, or metal, gable walls above the roof, and coped, per 100 dollars	cents.
If gable or party walls below the roof	30
2nd. Buildings of brick or stone, roof, tile, slate, or metal, and part wood	35
3rd. Buildings of brick or stone, roof, wood	45
4th. Buildings of wood, with brick front, and filled in with brick to the peak	50
5th. Buildings of wood, with brick front, filled in to the plate	65
Or buildings of wood, filled in to the peak	75
Or buildings of wood, adjoining brick walls on each side	75
6th. Buildings of wood, with hollow walls, and brick front	85
Or buildings of wood, filled in to the plate	85
Or buildings of wood, adjoining a brick wall on each side	85
7th. Buildings of wood, with hollow walls, fronting on the street	90
Or buildings of wood in the rear	115
<i>Note.</i> —Buildings which partake of two or more classes, to be charged a <i>fair proportionate</i> price.	

WAREHOUSES AND STORES.

Of the following description, will be insured, per 100 dollars, at	cents.
Situatd—in streets not less than fifty feet wide	30
Height—not exceeding forty feet	
Walls—brick or stone, independent, and twelve inches or more in thickness	
Or party walls, sixteen inches to the garret floor	
Or party walls, twelve inches to the garret floor, with projections	
The gable or party walls in each case carried above the roof, and coped	
No openings in the gable walls, excepting on the corner of a street	
Roof—tile, slate, metal, or cement	
Gutters—brick, stone, or metal	
Window shutters—solid iron, excepting the lower story fronting the street

CLASSES OF HAZARDS.

Not Hazardous.—Goods not hazardous are to be insured at five cents per 100 dollars in addition to the rate of the building in which they are contained; including coffee, flour, household furniture, indigo, linen, paints ground in oil, potash, rice, spices, sugars, teas, threshed grain, wine in casks, and such articles as are usually kept in dry goods' stores.

Hazardous.—The following trades and occupations, goods, wares, and merchandise, are considered *hazardous*, and are charged ten cents per 100 dollars, in addition to the rate or premium on the building, viz.:—*Basket-sellers; block and pump-makers; China or earthen or glass-ware, or plate-glass in boxes, crates, or casks; cotton in bales; fire crackers and other fire works; flax; grocers with any hazardous articles; gun-smiths; *hardware and cutlery; hat-finishers, hay pressed in bundles; hemp; liquor bottling cellars; *looking-glasses in boxes; Manilla grass; *milliners' stock; oil; *paper-hangings; *paper in reams; pitch; porter houses; rags in packages; sail-makers; saltpetre; cigar-makers; spirituous liquors; sulphur; tallow; tar; taverns; turpentine; victualling-shops; *window-glass in boxes; wine-dealers' stock, not including wine in glass, unpacked; *wine, in glass; in packages; *wooden-ware sellers.

Extra hazardous.—The following trades and occupations, goods, wares, and merchandise, are deemed *extra hazardous*, and will be charged twenty-five cents and upwards per 100 dollars, in addition to the rate of premium on the building, viz.:—Acids, inflammable; alcohol; apothecaries; basket-bleachers or makers; blacksmiths; boat-builders; *book-sellers' stock; brass founders; brush-makers' stock; *cabinet-makers' stock; carvers; China, or earthen, or glass ware, or looking-glasses unpacked, and buildings in which the same is packed or unpacked; chocolate-makers; colourmen's stock; *confectioners' stock; coopers; copper-plate printers; druggists; ether; fur dressers; grate-makers; *jewellers' stock; lamp manufactories; *lamp sellers' stock; lime unslaked; liquor, in glass, un-

ess.

packed. (*Note.*—To subject the building and its contents to hazardous charge only.) Morocco manufacturers; *optical, mathematical, and musical instrument makers', and perfumers' stock; painters' stock; phosphorus; *pictures and prints; platers or plated ware manufactories; plumbers and pewterers; *pocket-book makers' stock; printers of newspapers or engravings; rag stores; ship chandlers; *silversmiths' or stationers' stocks; snuff-makers; soap-makers; spirits of turpentine; stove manufactories; tin or sheet-iron workers; tobacco manufactories; *toy shop keepers' stock; type or stereotype founders; turners; upholstery manufactories; varnish; *watch-makers' stock, and tools; *window or plate glass, unpacked; wine, in glass, unpacked.

Specially hazardous.—The following are deemed specially hazardous, and will be charged, in addition to the rate of the building, as per table of minimum rates, viz.:—Bakers; bark-mills; bleaching-works; blind-makers; bookbinders; brewers; brimstone works; cabinet-makers; carpenters; chair-makers; chemists; coach-makers; comb-makers; confectionery-makers; corn-kills; copper-smiths; cotton mills; cotton unpacked; distillers; dyers; firework-makers; flax-mills; frame-makers; fringe makers; fulling-mills; gas makers or sellers; grist or flour mills; gunpowder; hat manufacturers; hay unpacked; houses building or repairing; ink-makers; iron founders; ivory-black manufacturers; lamp-black manufacturers; livery stables; lumber yards; mahogany yards; malt-houses; matches-makers; metal mills; musical instrument makers; oil boiling-houses; oil-mills; packing buildings and yards; paper-mills; perfumery-makers; planing or grooving mills; pocketbook-makers; powder-mills; printers of books and jobbing; rectifiers of liquors; rope-makers; sash makers; saw-mills; spirit-gas-makers or sellers; stables (private); steamboats; steam-engines in use; sugar refiners; tallow-melters or chandlers; tanners; tar boiling-houses; theatres and other places of public exhibition; timber yards; turpentine distillers; varnish-makers; wool-mills; and generally all mills and manufacturing establishments, and all trades and occupations requiring the use of fire heat, not before enumerated.

Country Houses.—Constructed of brick, stone, or wood, detached from, and not endangered by other buildings 60 cents per 100 dollars, or upwards.

If roof of slate or metal, 10 cents per 100 dollars may be deducted.

Barns and stables 85

Note.—When good and sufficient electric conductors are attached, "ten cents per 100 dollars may be deducted.

MINIMUM Rates for Hazardous, Extra Hazardous, and Specially Hazardous Risks, to be added to the Rate of the Building.

Note.—When goods, hazardous or extra hazardous, are stored in a building, or when a building is used for the purpose of carrying on any trade or vocation, classed as *hazardous*, *extra hazardous*, or *specially hazardous*, such building, as well as the goods contained therein, shall be charged with the *additional* premium to which such risks are subjected—excepting when a *star* (*) is prefixed, which is intended to denote that *such goods only* are to be charged,—but *not the building*, or other goods *not hazardous* therein.

The origin of the fires, during the year 1840, according to the classification of the commissioners' report, were:—

Supposed to be by incendiaries, forty-three; supposed to be by design, seven; accidental, twenty-three; cause unknown, two; by an incendiary, one; by sparks from chimneys, three; defect in chimneys, three; sparks from forge, two; lighted lamp, one; loco-foco matches, three; lighted candle, one; spirit lamp, one; defect in fire-place, one; cause not ascertained, two; from stove-pipe, one; sparks from candle, one; slack lime, one.

Description of Buildings in which Fire originated.—Frame buildings, forty-three; brick, thirty-four; stone, three; brick fronts, five; fire proof, thirteen.

PROFITS OF INSURANCE COMPANIES.

The Atlantic Insurance Company of New York has, in ten years, divided 249½ per cent, and had in 1841 a surplus on hand of 150 per cent, which, if divided, would give the stockholders their capital back, and 300 per cent; and if the interest on the dividends were added, the sum would be much larger.

The following are the dividends declared the first ten years:—

		per cent.			per cent.

LIGHTHOUSE ESTABLISHMENTS OF THE UNITED STATES.

(Extracts from Reports to Congress.)

Original Cost of Construction.—The committee have gone no further back than the year 1791, when the number of lighthouses were only ten, and the entire expense of that year was 22,000 dollars. From that period to the present, the increase has kept pace with the rapidly growing commerce and navigation of the country.

The present number of lighthouses is	256
" lightboats	30
" beacons without lights	35
" buoys, about	1000

The total cost of the lighthouse, lightboat, beacon, and buoy establishment (including cost of sites, buildings, repairs, maintenance, &c.), from 1791 to 1817, was (round numbers) dollars. 1,872,000

 " from 1817 to 1841 7,216,000

Total 9,088,000

Being an average per annum expense of about 180,000 dollars.

The total cost of building lighthouses (including cost of sites), lightboats, beacons, and buoys, from 1791 to 1817, was 305,000

 " 1817 to 1841 1,910,000

Total 2,215,000

Deduct cost of beacons and buoys 500,000

Total for 286 lighthouses and boats 1,715,000

Being an average of about 6000 dollars: showing, in the opinion of your committee, great economy in these constructions.* Probably truer economy would have been consulted by more liberal appropriations for these works, thereby adding to their solidity and permanency.†

Comparative Costs of Different Years.—The amount of expenditure of any given year, compared with that of another year, will appear more or less depending on the number of new constructions, either of houses or boats, in the respective years, the amount of repairs, cost of oil, &c. Some seasons are noted for the frequency and violence of their storms; in such years the expense of repairs will be great. The tables furnished us, therefore, will only enable us to draw conclusions for or against the economy of the general expenditure.

The entire expense of 1841 was 474,000 dollars; showing a large proportionate decrease of that of 1791, when, with ten lighthouses, the expense was, as before stated, only 22,000 dollars. Had the expense remained in the ratio of the increased number of lights, it would have been, in 1841, 643,000 dollars.

In 1820, the number of lighthouses, &c., were fifty-five. The whole expenditure for the year was 244,000 dollars. It should have been 842,000 dollars in 1841, if the increase of expenditure had been in the ratio of the increased number of lights. And so of 1835: number of houses, 201; expenditure, 382,000 dollars. The expenditure of 1841 should have been 549,000 dollars.

For the last four years the amount expended in comparison with previous years, for the building of houses and purchase of sites, has been great; but not, in the opinion of the committee, greater than the requirements of navigation demanded. From 1837 to 1841, the aggregate amount of expenditure for all purposes was 2,176,000 dollars. Of this amount there was expended, in the same time, for purchase of sites and buildings, 533,000 dollars; being more than one-fourth of the whole expenditure (1,992,000 dollars) for the same objects for twenty-five years, from 1816 to 1841.

It has been hardly possible that an unnecessary lighthouse could have been built since 1837. In that year Congress, for the first time, very wisely directed the Board of Navy Commissioners to cause thorough examinations and surveys to be made by competent officers of the navy of all the sites proposed for lighthouses mentioned in the Act of the 3rd of March, in that year. These examinations and surveys were made.

Comparative Cost of Construction.—From a report of the secretary of the treasury, made to Congress, in 1836 (Ex. Doc. 1835—36, vol. iii., No. 66), it appears that the cost of lighthouses in the United States is on an average 6000 dollars; while in England the cost is 19,000 dollars, and in France 8000 dollars. From a report of the Director-General of France (see Report of Select Committee to House of Commons, August 8, 1834, Appendix R.), it appears that the average cost of building thirteen lighthouses, &c., in 1832 and 1833, was more, by some hundreds of dollars, than the estimate of the secretary.

The same report shows (p. 7) that the average cost of twelve British lights, built from 1820 to 1834, also exceeds the calculation of the secretary.

* The expense of beacons and buoys, from 1791 to 1819, was 267,783 dollars; from 1819 to this period, the expense has no doubt been greater, annually. During the latter period, the lighthouse, and beacon, and buoy accounts, have been classed together, rendering it difficult to ascertain what the lighthouse establishment proper should be charged with. An expense of 10,000 dollars per annum, for beacons and buoys, from 1791 to 1841, is, no doubt, small enough; making in the aggregate 500,000 dollars.

† Since writing this report, the committee have received from the fifth auditor, the annexed statement (marked B), giving the number of lighthouses built since 1820, and the cost of each; from this statement it appears that the average cost of these lighthouses, including cost of sites, is less than 5300 dollars. The expenditures are less than the appropriations for these erections by more than 224,000 dollars.

From the statement furnished by the auditor, annexed (marked C), it appears that the cost of the construction of thirty-three lightboats averages about 9100 dollars, and that the expenditure for these constructions is less than the appropriations by 59,000 dollars, showing an aggregate expenditure for these objects of 283,000 dollars less than the appropriations.

The average cost of sites and building thirteen lights in Ireland under the Dublin Board, from 1820 to 1834, is more than 65,000 dollars.—(Ibid., p. 74.)

From an estimate made by M. Fresnel, French Director of Lights (Ibid., Appendix R., p. 236), it is shown, that—

Thirty-one lights, to be built in 1833, 1834, 1835, and 1836, would cost on an average about	dollars.	
Ditto, apparatus, lantern, lamps, &c.		20,000
Of these thirty-one lights, eighteen were to be of the first order, and would cost, on an average, for sites and building		4,500
Ditto, apparatus, lantern, lamps, &c.		27,000
		5,500

Expense of Establishment, compared with that of England and France.—From a report of the Fifth Auditor, made to Congress, October 1, 1835, it appears that—

The average expenses, per annum, of sustaining each lighthouse, including repairs, salaries of keepers, oil, &c., was	dollars.	
Ditto, lightboats		911
Ditto, lighthouses in England		2862
Ditto, lightboats in England		2268
		5922

From the report of the Select Committee referred to (p. 30), the average expense of each of the lights is as follows:—

Thirty-six lighthouses in England under Trinity Board	£	dollars.
Thirty-four ditto Ireland ditto ditto	511	
Thirty-two ditto Scotland ditto ditto	500	
	514	

Average	508 =	2450
American, as above		911
Difference in favour of America		1539

Expense of Light-Boats.

Thirteen boats in England	£	dollars.
Three ditto Ireland	1334	
	1080	

Average	1207 =	5841
American, as above		2862

Difference in favour of American boats 2979

From a report made by the Trinity Board, to which is intrusted the management of the British lights, made to the House of Commons, in 1837, the expenses are thus stated:—

Forty-two lighthouses, average expense	dollars.	
Thirteen floating lights ditto		2610
		8381

For the year ending June 30, 1837, the expenses for the same services in the United States were as follows:—

Two hundred and twelve lighthouses, average	dollars.	dollars.
Twenty-seven floating lights		1115
Average expense of British lights		2391
Ditto ditto American do.	5945	
	1753	

Difference in favour of American 3742

Being more than 200 per cent in favour of American economy in this branch of the public service.

Besides, in England, commerce is heavily taxed, in the form of light-money, by

the owners and lessees of lighthouses, for their own emolument and for the support of pensioners and charities. There are fourteen lighthouses thus owned. The promptings of individual sagacity and private interest will usually insure the performance of any enterprise or the sustaining of any establishment with an economy much exceeding that used by agents of governments. But the private lights in England are kept up at an expense much exceeding that of the United States.

Fourteen lights in hands of private persons in England, 1834:

	£
Gross amount of collections	79,676
Allowance for collection	£10,244
Expense of maintenance	9,100
	<hr/>
	19,344
Profits	60,332

Average expense of maintenance, 650*l.* (3140 dollars); 180 per cent more than American expenditure. (See same report, p. 37.)

The annual expense of maintaining private lights of the first class is much larger, being on an average 4760 dollars. (*Ibid.*, p. 41.)

The expense of the third (smallest) class of individual lights is (average) 2490 dollars, being more than 120 per cent more than the American lights, great and small.

This comparison is highly favourable to the economy of our system.

Comparison with French Lights.—The report of the select committee referred to (p. 31), states that the annual charge of maintaining a lens light of the first order to be 340*l.*, say 1640 dollars; but this is exclusive of repairs.

In all the French accounts of "expense of maintenance," repairs are excluded; so says M. Fresnel, principal engineer (see *Ibid.*, Appendix R.). M. Fresnel says: "These (the British) expenditures are found mixed up with each other (that is cost of maintenance and repairs); hence the impossibility of arriving, with any degree of certainty, at a comparative estimate of the two services (French and British)."

Our accounts are mingled in the same way; hence the like difficulty of instituting a comparison with the expenses of the French lights.

That the expenditure of the French establishment should be less than ours, or that of Great Britain, would excite no surprise, when the relative cost of labour and skill is taken into account.

The British committee (p. 31), after commenting on the unequal expenditure in the maintenance of French and British lights, say: "In explanation of this difference, it must be observed—

"1st. Salaries to light-keepers in England are understood to be nearly double those in France.

"2nd. The price of spermaceti oil used in England is stated to be double to the oil de colsa used in France."

Wages in this country are much higher than in England even; and we also use sperm oil. Yet notwithstanding the great inequality in the salaries of keepers and the cost of oil, it will appear from the evidence furnished by M. Fresnel, that the management of our light establishment cannot justly be reproached with want of prudence and economy. M. Fresnel says (see p. 229, Appendix) that

	francs.	dollars.
The annual expenditure of a light of the first class (exclusive of repairs) is	8500	= 1615
The annual expenditure of a light of the second class (exclusive of repairs) is	7000	= 1330
The annual expenditure of a light of the third class (exclusive of repairs) is	3600	= 684

Average

1209

Some nine per cent more than the cost of American lights, including cost of repairs.

The report (p. 233) gives the expenditure of some of the lights specifically, from which it appears that the cost of maintenance is much larger than the above account of M. Fresnel, viz.:

	francs.	dollars.
Cordovan light of the first order, ordinary annual expenditure	11,598	= 2204
Expense of repairs		950
		<hr/>
Total expense		3154

Ushant light, first order (p. 235), ordinary annual expenditure (exclusive of repairs) 9000 = 1710

St. Mathieu light, second order, ordinary expenses (repairs excluded) 6000 = 1140

The average annual expense of these three lights (exclusive of repairs) is 1685 dollars; exceeding, by fifty per cent, the average expense of American lights.

The most expensive American light is that on Frank's Island, having two keepers, and, in 1841, amounted to 180,623 dollars, as follows:

	dhrs.	cts.
Keeper's salary	600	00
Assistant	360	00
Oil 779 gallons	779	00
Tubes, glasses, &c.	68	23
Window glass and putty	9	00

The average expense of the Cordovan and Ushant lights, both of the first order, was 1957 dollars, being more, by 151 dollars than the Frank's Island light.

The little experience we have had in this country in the use of the French lenticular apparatus, induces the belief that our anticipation in regard to the saving of oil, will not be fully realised.

The two lights in the lens plan, at Neversink, consume per annum 1095 gallons of oil; they consumed, on the old plan (thirty-one argand lamps), 992 gallons of oil.

This consumption of oil is about the same as that of a lens light of the first order in France.

It is said in the report (*Ibid.*, p. 32) that "the consumption of oil in the Cordovan lighthouse is equal to that of seventeen argand lamps." The average consumption, per annum, of such a lamp, is thirty-five gallons, which gives to the Cordovan light a consumption of 595 gallons per annum; being nine per cent more than that of one of the Neversink lights.

The French manufacturer of the lenticular apparatus claims for it a great saving of oil. Further experience in this country may demonstrate the reality of this claim. But it remains to be proved to what extent, if any, such saving may be carried.

The communication of M. Lepaute, the manufacturer, to Governor Davis (See Senate Doc. 1st. Sess., 26th Congress, No. 474), in which he attempts to show the difference in the consumption of oil in the French and American lights, does not inform us on what authority the quantities of oil consumed in the American houses are given. With the best intentions to give the quantities correct, he may not have been in possession of the true account of them.

He puts down the quantity consumed at the two Neversink lights, under the old plan, at 1135 gallons; but the amount consumed was 992 gallons only—a mistake of fifteen per cent in favour of his statement. He also puts down for the use of lens lights at that place, 800 gallons, but we consume in them 1095—a mistake of thirty-seven per cent in favour of the lens lights. The two mistakes, combined, show more than fifty per cent in favour of the lenses.

In like manner he puts down the consumption of oil at Frank's Island light, at the mouth of the Mississippi, at 1,050 gallons, but the true amount is only 779 gallons, an error of thirty-five per cent. Should the same errors extend through the whole of his table (and the committee have examined these two cases, being the only ones before them showing the actual quantity of oil consumed) the result, as stated by him, will hardly bear close examination.

It has been said that the French lights are superior to those of any other nation. Their sea-lights are no doubt excellent. They have kept pace with the march of science and the improvements of the age; but it is doubted whether their claim to any considerable degree of superiority can be successfully maintained. The British select committee (*Ibid*, p. 31,) say the British lights are considered generally very good, and sufficient for the purposes they are intended for, and superior to the generality of French lights, many of which are harbour lights, and, perhaps, small in comparison with the sea-lights."

COMPARISON of American and French Lights in regard to Reach of Light.

The committee are unable to give the reach of visibility of all the lighthouses in the United States. The limits of those which have been ascertained warrant the conclusion that they are, on an average, larger than the French lights.

Professor Paine, of Cambridge College, in 1838, made a survey of twelve lighthouses in Boston bay and vicinity. (See House Report, Third Session, Twenty-fifth Congress, No. 187.) He says:—"I therefore feel myself warranted in drawing the following conclusions: that, in ordinary clear weather, our best lights, such as the Boston, Highland, Scituate, &c., are visible from the mast-head of a square-rigged vessel about twenty-five miles; that our second class of lights, such as those on Thatcher's island, Eastern point, the high light on Baker's island, and those on Plum island, are visible from twenty to twenty-two miles; and that the third class, such as those at Straitmouth island, Ipswich beach, Squam, Marblehead, and Long Island head, are visible from fifteen to eighteen miles."

Lieutenant Bache, in his report, to which reference has been made, gives the ranges of visibility of fifteen lights, varying from nineteen to twelve miles, and averaging fourteen miles. Of these lights, eight were of the third class, having only nine inch reflectors; five of the second class, having fourteen inch reflectors; and one of the first class, with eighteen inch reflectors. Mr. Lewis gives a statement of the portées of all the lights of the first class, from Passamaquoddy to South Pass entrance of the Mississippi, in November, 1839, ranging from fifteen to thirty miles, and averaging twenty-four miles.—(Senate Document, 1837—38, vol. ii., No. 138.) Mr. Frick, superintendent of lights at Baltimore, gives the portées of twelve lights in the Chesapeake, ranging from ten to twenty miles, averaging fifteen miles.—(*Ibid*.)

Mr. Anderson, superintendent at Portland, Maine, says, that fifteen harbour-lights in that vicinity can be seen from twelve to eighteen miles. These are not intended to be seen at sea. Also, that twelve coast-lights in the same vicinity can be seen from five to ten leagues.—(*Ibid*.)

It appears from a list of the lighthouses, published by the superintendent, in 1839, that the average "reach of light" of seventy-six lighthouses (that being the number whose reach is given) is nineteen miles. The average "reach" of six of our best lights (Neversink, Baker's island, &c.) is twenty-seven miles and a half.

The committee believe that the statements of average distances of extreme visibility made by Professor Paine, is true in regard to all our lights.

The average reach of light of 170 British lights, as shown in the British list, published at the Hydrographical office, Admiralty, in 1832, is less than fourteen miles. The

average reach of six of their best lights (Needles, Beachy Head, Lundy, &c.) is twenty-eight miles and a half.

In comparison with the progress of improvement in the old world, our march in this, as in almost every other useful establishment, has been extremely rapid. In the comparatively short period of fifty years, we have built 276 lighthouses and boats. Since 1812, the useful effect of our lights has been nearly doubled, and the consumption of oil lessened by more than fifty per cent. For centuries before our existence as a nation, England and France had been commercial nations; but, up to the close of the last century, no improvement had been made in the quality of their lights. About that period oil was substituted for coal. At the close of the year 1812, we had forty lighthouses fitted up with patent-lamps and parabolic reflectors. At that time, both England and France had not ten houses thus fitted up.

It is believed that, when the improvements now in progress shall have been effected (in connexion with a proposed change in the mode of inspection) our system will be more efficient, useful, and economical than that of any other nation.

Forty-four collectors act as superintendents of the lights in their respective districts. By the act of May 7, 1822, their maximum compensation per annum is 400 dollars. Some four or five receive that amount; the others receive from 100 dollars to 200 dollars each, per annum. These superintendents are required to visit the lighthouses but once each year. Captain Howland, who is in the employ of the department, also visits them once in each year, and makes reports of their condition, &c., to the fifth auditor.

Mode of Contracting for Building, Apparatus, and Oil.—Since 1816, all the lighthouses and light-boats have been built by contract, invited by notice in the public prints. The contracts invariably have been given to the lowest bidder, having the ability to guarantee its performance. A suitable practical mechanic is employed to oversee the work constantly. Nothing is paid or advanced to the contractor until he obtains the certificate of the overseer, that the contract has been faithfully performed. In like manner, proposals for fitting up the lighthouses with lamps, reflectors, &c., are invited, and the contracts given to the lowest bidder.

By this mode competition is elicited, and, in the opinion of the committee, economy most effectually promoted. No losses can occur, as no advances are made until the completion of the work.

In the same way all the oil is procured. It is the interest of the contractor to furnish the best quality; for if found bad, he not only gets no pay for it, but is bound to take it back, and substitute the best quality. Actual experiment by burning is the only true test of the quality of oil. The oleometer will not prove it. The practice now adopted of taking samples from each cask and submitting them to the test of the lamp, cannot but insure the best quality. That oil congeals in cold weather is no proof of its badness. Oil pressed in winter, when the thermometer is at a given degree, will congeal whenever the thermometer falls below that degree. A stove and oil heater are the only remedies.

A vessel in the employ of the department is constantly engaged in visiting the lighthouses, supplying them with oil and other necessary supplies and having on board a mechanic to make all proper repairs to the lighting apparatus. Captain Howland, in 1840, 1841, on board this vessel, visited 155 lighthouses, from Maine to the Sabine, and put them in repair. As a proof that the oil furnished by the contractors is good, he found but 900 gallons of oil in all of them bad, and much of this was mere settlings.

It has been objected by some who arraign the department for want of economy, that the average consumption of oil in our lighthouses is less than that consumed in the British houses. This is no doubt true. But the committee do not perceive the justice and consistency of the rebuke, especially as it appears that our lights are more efficient than those of Great Britain. It is said that the average annual consumption of oil per lamp in England is forty-three gallons. From the accounts given by Captain Howland it does not exceed thirty gallons per lamp; showing an economy in the use of oil of more than forty-three per cent over the British lights.

It will be seen by the above statement, that the average expense of the British

floating lights for 1838 was 7660 dollars, and that the average expense of the American floating lights, which, in general, are larger than the British, is 2399 dollars only; and it is asserted in the reports, "that the American floating lights are better adapted for the purpose than the British, and that the lights are seen (whilst the Trinity Board state theirs to be seen about nine miles only) from ten to fifteen miles. A comparison of the drawings of both nations, which is in the light department office, will convince any person of the superior excellence of the American plan."

CHAPTER XXXIII.

CURRENCY AND BANKING INSTITUTIONS OF THE UNITED STATES OF AMERICA.

If the rise and fatal consequences of the Mississippi scheme in France, and of the South Sea delusion in England, afford lessons of instruction to men who would act wisely as individuals, or to those who may be connected with speculative projects, and especially to those who are intrusted with the administrative, or legislative, affairs of a nation, we may assuredly refer to the history of "Currency and Banking" in America, for facts which ought to teach wisdom by experience.

In reviewing the history of the Currency and Banks of the United States, we shall confine ourselves to facts, to the opinions of leading men in and out of Congress, and to statistical tables; and, we shall refrain from introducing any speculative theory for improving the American system, or rather systems, of currency and banking: leaving the history of facts, and of results, as materials for instruction.

As early in colonial history as 1690, a paper currency was circulated under the designation of bills of credit. For the redemption of these bills, the colonies which issued them pledged their property and revenues. This appeared sufficient, or, at least, plausible, security for maintaining the standard value for which those paper bills were first exchanged. They might well be designated the Paper Currency of Expediency. Their nativity occurred in the gravest, and, as was believed, the most religious of the colonies—Massachusetts. That colony was, at the same time, strange as it may appear, the most warlike.

A maritime expedition was sent, in 1690, from New England against Quebec, attended, comparatively to the resources of the colony, with enormous expense. This expedition was placed under the command of Sir Wm. Phipps, and consisted of thirty-four vessels, and about 7000 men. The armament reached Quebec in safety, and attempted to bombard that fortress. After two gallant actions ashore, the New England forces were compelled to abandon the impracticable enterprise, and sailed down the St. Lawrence. Eight of the principal ships, with all on board, perished in the Gulf. Montreal was at the same time, to have been

attacked by land; but this design was frustrated by the defection of the Iroquois nations.*

To discharge the liabilities to which the colonial administration was pledged, for paying the expense of this disastrous crusade—for it partook of the latter character—bills of credit were used by Massachusetts. The other colonies soon followed this very convenient example. Whenever an emergency arose, no expedient could have been more, readily, suitable to those who did not reflect on future exigencies.

The bills of credit, however, notwithstanding the colonial pledges, soon depreciated, and gave birth to that pernicious variety of currencies, that is to say,—the differences between specie and paper values, which has not yet disappeared in America. At first they depreciated, so far only as to constitute a *legalised tender* for the payment of taxes and debts in New England, at the rates of six shillings paper for a *Spanish* silver dollar; in New York, at eight shillings; and in Pennsylvania, at seven shillings and sixpence for a silver dollar. But the depreciation did not halt at these rates, especially in New England and Carolina.

In 1745, another expedition of a semi-crusade character,† was fitted out in Massachusetts against Louisburg. It was successful in capturing that fortress; but the expense demanded a fresh issue of from 2,000,000*l.* to 3,000,000*l.* in bills of credit, which were declared *lawful money*, and Mr. Pitkin states the depreciation in 1748 as follows, viz.:—100*l.* sterling in specie, or a bill on London, was equivalent in value to *lawful paper money* of New England 1100*l.*, of New York 190*l.*, of East Jersey 190*l.*, of West Jersey 180*l.*, of Pennsylvania 180*l.*, of Maryland 200*l.*, of Virginia 125*l.*, of North Carolina 1000*l.*, of South Carolina 700*l.*‡

Great Britain soon afterwards ceded Louisburg to France, greatly to the mortification, but certainly to the advantage, of Massachusetts: for the latter received from the British treasury about 183,000*l.*, on account of the expenses of the Louisburg expedition; and with this sum compounded for the redemption of paper bills. The composition was under two shillings in the pound sterling: for *fifty shillings* in lawful paper money, one ounce of specie money was given.

The war of American independence, like all modern wars, rendered indispensable the borrowing of money, and the issuing of paper bills of credit. Bills of credit were issued by Congress in 1775 to the amount of 3,000,000 dollars large sums were added afterwards, and Mr. Pitkin observes,—“A depreciation in value was the natural consequence, although Congress made them a tender, in payment of all private debts, and declared a refusal to receive them to be an extinguishment of the debt itself. This depreciation began to be seriously felt,

* Macgregor's *British America*, vol. ii., p. 140. Second Edition.

† See *ibid.*, vol. i., p. 434.

‡ See also Hutchinson's *History of Massachusetts Bay*, vol. ii., page 436, *et seq.*

early in the year 1777; and increased with the increase of issues. In September 1779, these issues amounted to 160,000,000 dollars; when Congress declared, that, on no account, should they ever exceed 200,000,000 dollars: and bills to this amount were issued, before the close of that year; a sum too large to admit of a redemption at par, and in the course of the years 1780 and 1781, the bills entirely stopped circulation. Nor has any part of them ever been redeemed, except at one hundred for one, under the funding system, first established, by the present national government.

“Soon after the death of colonial money, at the suggestion of Robert Morris, superintendent of finance, Congress established a national bank, by the name of, ‘The President and Directors of the Bank of North America.’ This institution went into successful operation in December, 1781, with a capital of only 400,000 dollars, and under the management of its projector and others associated with him, contributed, as far as its limited means would allow, to relieve the financial distress of the country at that period.”

The Bank of North America was not a chartered bank. It was instituted under an ordinance, agreeably to the articles of confederation. Its capital was too limited; and, although managed with judicious wisdom and great ability, by Mr. Morris, it was unable to provide a circulating medium for the United Republic. The war, during its continuance, had annihilated a specie currency in America, by preventing the importation of money, which trade would have brought into the country, and by suppressing also the interchange of commodities, which would have produced much the same effects as the circulation of specie. Trade languished after the war ceased, as the products of labour, for a foreign market, and consequently commerce, are never suddenly brought into activity.

Several of the states resorted again to the colonial expedient of issuing bills of credit, and of framing *tender laws*. Under the latter, personal property was sometimes made a tender for the payment of individual debts: the value of the property being decided by appraisers.

On the adoption of the constitution of the United States, the issuing of bills of credit was abolished. Gold and silver were, alone, declared to be a legal tender, either for the payment of taxes, or of personal debts. This measure was prudent,—but it was embarrassing, when it was ascertained, that for a circulating medium there existed in specie only the savings of thrifty and non-speculating individuals, who would not consider it wise, under a new state of circumstances, to risk the fruits of non-expensive habits, and of industry; and that no more than 2,000,000 dollars constituted the banking capital of the whole United Republic. This capital was invested in the bank of North America; the bank of New York, in the city of New York; and, the bank of Massachusetts, in the city of Boston. It became absolutely necessary to provide for the general emergency. Mr. Alexander Hamilton, a high authority, was secretary of the

treasury in 1790. He boldly recommended the establishment of a national bank, under charter, to be granted in accordance with an act to be passed by Congress for the purpose. Washington was president. Both Jefferson and Maddison were, on constitutional grounds, strongly opposed to the projected institution. The power of calling into action the necessary and proper means of regulating the currency, undoubtedly vested in Congress by the constitution, was argued by the supporters of the national banks, as including the constitutional right to pass the law. Jefferson, Maddison, and others, who opposed the measure, contended that the meaning was restricted to *those means being absolutely necessary*.

It was opposed chiefly, on the ground that the government was restricted to the exercise only of those powers literally specified in the constitution; that the power to incorporate a bank was not specified as one of them; and "that the power given to Congress to pass all laws necessary to execute the specified powers must be confined to all the necessary means to accomplish the ends incidental to the nature of the specified powers. Upon the other side it was contended that incidental, as well as specified, powers belonged to the government; that where general objects were stated as within the province of the government, all the usual means necessary to accomplish those objects were incidental to them; and that a bank was a well-known, and usual, instrument for accomplishing the objects specified by the constitution." It was further maintained, that the power to incorporate banking institutions of any kind whatever was not among the enumerated powers, and that, "to go beyond the specified powers, prescribed by the constitution, was to take possession of a broad, undefined, and dangerous field of jurisdiction." The bank bill, however, was passed by the two houses of Congress, probably as much through the emergent necessity of regulating the currency, as from an absolute conviction of the constitutional right of Congress to pass a law for granting a charter of incorporation; but certainly not, until after its constitutional principle was argued with extraordinary ability in both houses. "It was also discussed on its constitutional grounds, with great and conflicting ability in the cabinet. The secretary of state and the attorney-general considered that Congress had *transcended its powers*; but a contrary opinion was maintained by the secretary of the treasury. After profound and able debates by his cabinet, the question was referred to President Washington, and he gave it as his deliberate conviction that the power was invested in the government by the constitution to incorporate a bank, and in conformity therewith the bank was established."*

It was not, however, until February, 1794 that the bank of the United States, in its corporate form, began its operations. The capital of the bank was above ten millions of dollars, of which eight millions were to be subscribed by indi-

* Kent's Commentaries, vol. i., p. 251.

viduals, and two millions by the United States. Two millions of the amount subscribed by individuals were to be paid in specie, and six millions in six per cent stock of the United States. The charter of the bank was limited to the 4th of March, 1811: during which period no other national bank was to be established. This institution was certainly beneficial to the country, and profitable to its stock-holders; for it paid them an annual dividend of $9\frac{1}{2}$ per cent.

As the charter of the bank would expire in February, 1811, Mr. Gallatin, secretary of the treasury, on the 3rd day of March, 1809, reported in favour of a renewal of the charter.

The general condition of the bank was stated by Mr. Gallatin, in his report, as follows:—

Cr. I. Debts due to the bank—	dollars.	dollars.
1. Six per cent stock, remaining part of the original subscription	2,230,000	
2. Loans to individuals, consisting chiefly of discounted notes, at sixty days	15,000,000	
3. Due by banks incorporated by the States	800,000	
		<hr/> 18,030,000
II. Specie in the vaults		5,000,000
III. Cost of lots of ground and buildings erected		480,000
		<hr/> 23,510,000
Dr I. Capital stock of the bank	10,000,000	
II. Moneys deposited by government and by individuals	8,500,000	
III. Bank notes in circulation	4,500,000	
		<hr/> 23,000,000
Leaving a balance for contingencies of		510,000

The secretary contended that this statement proved that, as a bank, its affairs "had been wisely and skilfully managed."

Mr. Gallatin proposed that, on the renewal of the charter, the capital should ultimately be increased to 30,000,000 dollars.

The report was laid before the senate, and Congress rose the same day. Various plans were brought forward the following year: one, which had few advocates, for establishing a national bank in the city of Washington. The charter of the bank of the United States was allowed to expire. Party feeling, it is alleged, as much as patriotism, prevented its renewal. Mr. Pitkin observes—

"The influence of state banks was also brought to bear on the great question then before Congress; and, when it is considered that the number of these banks had at that time increased to nearly ninety, located in most of the states, with a capital of more than forty millions, their influence could have had no inconsiderable weight. With this union of views and interest against the bank, it is not strange that the charter granting it should be suffered to expire."*

* Mr. Crawford, of the senate, as chairman of the committee on the bill, says, "The democratic presses in these great states (referring to the states opposed to the bank) have, for more than twelve months past, teemed with the most scurrilous abuse against every member of Congress, who has dared to utter a syllable, in favour of a renewal of the bank charter. The member who

War followed, and the state banks furnished to the government the greater part of its loans, in order to carry on the war, and, at the same time, aided in the collection and disbursement of the revenue. Increased issues of paper, and the depression of commerce, occasioned the banks south of New England to suspend payment in specie. Depreciation followed, and the government raised loans, for carrying on the war, upon the most disadvantageous terms.

During the session of Congress of September, 1814, Mr. Dallas, then secretary of the treasury, submitted a plan for a national bank. He contended that its direct tendency would be to restore and continue an uniform national currency: declaring, at the same time, that this object could not be effected by the state banks. The nation had been labouring under the evils of a disordered currency, and Congress, it was believed, felt disposed to organise an institution that might, if possible, afford relief, and establish the credit of the country upon a solid foundation.

Mr. Dallas, secretary to the treasury, brought forward in the session which met in September, 1814, a scheme for a national bank, with a capital of 50,000,000 dollars, divided into 100,000 shares of 500 dollars each; three-fifths of the capital, 30,000,000 dollars, to be subscribed by corporations or, by individuals, and two-fifths, 20,000,000 dollars, by the United States. Of the subscriptions by corporations or individuals, one-fifth, or 6,000,000 dollars, to be paid in specie, and four-fifths, or 24,000,000 dollars, either in specie or six per cent stock, issued since the declaration of war, and in treasury notes, in the proportion of one-fifth of the latter, and three-fifths of the former. The subscription of the United States to be paid in six per cent stock; the treasury notes subscribed might be paid in public six per cent stock; and no part of the public stock, which constituted a portion of the capital, was to be sold, during the then existing war, nor at any subsequent time, for less than par; nor, at any time, to an amount exceeding one moiety, without the consent of Congress. The bank was to be bound to lend to the United States treasury 30,000,000 dollars, at six per cent interest.—*Pitkin.*

A bill was afterwards submitted to the house, nearly in accordance with the above plan.

Differences of opinion, however, were soon manifested, as to some of the principles on which such a bank would be established. These differences involved the amount of capital, and whether it should chiefly consist of six per cent public stock, then issued, or of treasury notes to be issued; whether the United States treasury should hold stock in it, and have a direction in its management; whether the bank should be bound to lend the government 30,000,000

dars to give his opinion in favour of the renewal of the charter, is instantly charged with being bribed by the agents of the bank—with being corrupt—with having trampled upon the rights and liberties of the people—with having sold the sovereignty of the United States to foreign capitalists—with being guilty of perjury, by having violated the constitution."

dollars when required, and be prohibited from selling public stock, during the continuance of the war; and whether it should have power to suspend specie payments.

Mr. Calhoun proposed "that the capital should consist of 6,000,000 dollars in specie, and 44,000,000 dollars in treasury notes, to be *thereafter* issued, and which might be paid in six per cent stock, and sold at the pleasure of the bank; that the United States should not be a stockholder, or have any agency in the management of the institution; that it should not be bound to make loans to the government, nor have power to suspend specie payments." After much debate and division, the bill was amended so as to embrace the above propositions of Mr. Calhoun; and the capital was reduced to 30,000,000 dollars. The bill thus amended did not meet the approbation of the treasury department, nor that of a majority of the house, and was negatived.

"Soon after this, a bill for a national bank, in accordance with the plan proposed by the secretary of the treasury, was passed by the senate, and sent to the house. This bill contained a clause empowering the bank to suspend specie payments, in case, during the war, or one year after, there should be such a demand for gold and silver, as to 'induce a reasonable and probable belief' that it was intended to be exported, so as to endanger the specie capital of the bank, and of the country; or to be *wilfully* withdrawn from circulation, so as to 'embarrass, obstruct, and discredit the pecuniary transactions of the people and the government, as well as the bank itself; or should be demanded in consequence of a *wilful* accumulation of bills of the bank, with the intention of destroying the credit of the institution. The president of the United States was to have power to direct the bank to resume, or continue to suspend specie payments, as he might deem expedient."—*Pitkin*.

The details of this bill again became subjects of serious debate in the house, and every attempt to amend the bill, so as to make it a specie paying bank, was unsuccessful.

On the third reading, a motion was made by Mr. Webster "To recommit the bill to a select committee, with special instructions, to amend it by reducing the capital to 25,000,000 dollars, by striking out the provisions allowing the bank to suspend specie payments, making it obligatory on the bank to lend money to the government, and prohibiting it from selling its stock during the war." In support of this motion, Mr. Webster pointed out the defects of the bill, as it came from the Senate, and the ill effects it must necessarily have on the credit and currency of the country, with great force of argument, and with not a little sarcastic severity. "The loan of thirty millions," said Mr. Webster, "can only be made by an immediate issue of bills to that amount. If these bills should return, the bank will not be able to pay them. This is certain; and to remedy this inconvenience, power is given to the directors, by the act, to suspend, at their own discretion, the payment of their notes, until the president of the United States shall otherwise order. The president will give no such order, because the necessities of government will compel it to draw on the bank till the bank becomes as necessitous as itself. Indeed, whatever orders may be given or withheld, it will be utterly impossible for the bank to pay its notes. No such thing is expected from it. The first note it issues will be dishonoured on its return, and yet it will continue to pour out its paper, so long as the government can apply it, in any degree, to its purposes.

"What sort of an institution is this?" Mr. Webster asked; "it looks less like a bank than a department of government. It will be properly the paper money department. Its capital is government debts; the amount of its issues will depend on government necessities; government, in effect, absolves itself from its own debts to the bank,

and, by way of compensation, absolves the bank from its own contracts with others. This, indeed, is a wonderful scheme of finance. The government is to grow rich, because it is to borrow without obligation of repaying; and is to borrow of a bank, which issues paper, without liability to redeem it. If this bank, like other institutions which dull and plodding common sense has created, were to pay its debts, it must have some limits to its issues of paper; therefore, there would be a point beyond which it could not make loans to government. This would fall short of the wishes of the contrivers of this system. They provide for an unlimited issue of paper in entire exemption from payment. They found the bank, in the first place, on the discredit of government, and then hope to enrich government out of the insolvency of their bank. With them, poverty itself is the main source of supply, and bankruptcy a mine of inexhaustible treasure. They rely, not in the ability of the bank, but in its beggary; not in gold and silver collected in its vaults, to pay its debts and fulfil its promises, but in its locks and bars, provided by statute, to fasten its doors against the solicitations and clamours of importunate creditors. Such an institution, they flatter themselves, will not only be able to sustain itself, but buoy up the sinking credit of the government. A bank, which does not pay, is to guarantee the engagements of a government which does not pay! John Doe is to become security for Richard Roe. Thus, the empty vaults of the treasury are to be filled from the equally empty vaults of the bank; and the ingenious invention of a *partnership of insolvents*, is to restore and re-establish the *credit* of both."

The house divided, and the votes were eighty-one in the affirmative and eighty in the negative. The speaker, being opposed to the bill, gave his vote in the negative: the votes being equal, the bill was lost.

The bill was reconsidered the next day, and referred to a select committee, who soon after reported the same, with amendments, reducing the capital to 30,000,000 dollars, to consist of 5,000,000 dollars in specie, 15,000,000 dollars in treasury notes, and 10,000,000 dollars in stock of the United States, issued since the declaration of war, with a reservation of a right in the United States to subscribe an additional 5,000,000 dollars, payable in four per cent stock. Other amendments were also proposed by the committee, particularly by striking out the clauses relating to a compulsory loan, and the power of suspending specie payments. These amendments were substantially agreed to in the house, and the bill was passed by a large majority, 120 to 37; and was finally concurred in by the senate.

This bill was returned by the president, with his objections, not founded upon the question of constitutional power—a question which the president expressly waived, as being *fully settled*; but because, in his opinion, it was not calculated "to answer the purposes of reviving public credit, of providing a national medium of circulation, and of aiding the treasury, by facilitating the indispensable anticipations of the revenue, and by affording to the public more durable loans." The bill, not being *repassed* by two-thirds of the senate to which it was returned, did not become a law.* A national bank, how-

* In order to meet the expenses of carrying on the war, Mr. Jefferson recommended the issue, on the part of the government, of 200,000,000 dollars of paper money! Mr. Wharton, of Pennsylvania, in an ably written article on "Banking," observes:—"The suggestion of Mr. Jefferson was not adopted, but the principles involved in his scheme, namely, to carry on the war without disturbing the popularity of the administration, by the imposition of direct taxes—were attempted to be put in operation by the proposed establishment of a national bank. 'A bill,' says Mr. Gouge, in his excellent work, 'A History of Paper Money and Banking,' 'was got up in the senate to establish a bank with a capital of 50,000,000 dollars, of which 5,000,000 dollars were to be paid in coin, 15,000,000 dollars in six per cent stock, 20,000,000 dollars in treasury notes, and 10,000,000 dollars to be subscribed by government. In one paragraph, it was declared 'the said corporation shall be bound to lend the government, reimbursable at their pleasure, 30,000,000 dollars;' and in another paragraph, it was expressly provided; that 'until the first Monday in April, 1816, it shall not be obligatory on said corporation to pay its notes in specie.' Authority was also given to Congress to authorise, in certain contingencies, 'the suspension of specie payments, for such time or times as they may deem proper.'

This bill, it was observed, "which would have done honour to the repudiating legislation of Mississippi, or to the non-paying state of Pennsylvania," was passed, on the 13th of July, 1815, in the senate of the United States, by a vote of eighteen to sixteen.

ever, seemed the only resource left to restore public credit, and enable government to prosecute the war; the senate, therefore, immediately passed another bill, in accord-

"This scheme of paying the debts and the current expenditures of the government, not by means of taxation, but by incurring new liabilities—founded as it was on unsound principles of currency and banking, and still more unsound principles of morals—is thus forcibly characterised by Mr. Webster, at that day if not a leading member of Congress, certainly one of the most able of them:—

"From this miserably conceived, but plausible and popular scheme, founded on reasonings alike repugnant to the principles of currency, of banking, and finance; to the conclusions of common sense, and the dictates of common honesty, so happily exposed to the contempt, ridicule, and reprobation of the world; the country was only saved by the reception of news of peace with Great Britain, while the bill was on its passage through the lower branch of Congress. 'In the timely arrival of that intelligence,' says Mr. Gouge, 'we must attribute the delivery of the country from the curse of a national paper currency. If Mr. Madison, and the gentlemen of his cabinet, had been allowed to take their own way, we should have had a national bank with a paper capital of 50,000,000 dollars, issuing notes—redeemable in paper.'

"The unsound and immoral principles embraced in this plan of a bank contrived under the administration of Mr. Madison, and while Mr. Dallas was at the head of the treasury; a man wholly ignorant, as his writings and his conduct have shown, of the principles of currency and finance; or careless, if not thus ignorant of the mischievous consequences of his scheme; are similar to those on which the legislature of Pennsylvania acted, at the gratuitous suspension of specie payments in that state, in 1839. The banks of Pennsylvania were enabled, by an application to the legislature, to continue in a state of suspension, and, by so doing, to defraud their creditors; on the condition that the state, which was deeply in debt and in discredit, should have the privilege of defrauding the shareholders of the banks, by exchanging its almost worthless certificates of state debt, for the paper issues of those banks; for bank notes which, though unredeemable in coin, and depreciated, could be forced, as good money, on the creditors of the state, and on the people of other states.

"In such a dishonest and foolish copartnership, both parties, however, suffered. The banks have lost nearly all their capitals, while the debt of the state has risen since the suspension of 1839, from about 30,000,000 dollars to upwards of 40,000,000 dollars, and it is now accumulating at a rate which will double its present amount in less than ten years.

"So in respect to the operative effects of the financial principles laid down in the scheme of Mr. Madison and his cabinet. If it had prevailed, and the war expenditure been continued for a few years more, on the war scale of expenses; the national debt, at the termination of the war, instead of being 130,000,000 dollars, would have been five times, and perhaps ten times, that amount. It would, in any event, have required such a burdensome rate of taxation, direct, as well as indirect, as this nation have no practical knowledge of, and which might have made the doctrine of repudiation—or, at any rate, the doctrine of nonpayment of debt—as acceptable and popular in Congress and out of Congress, as both of them now are in some five or six or more members of the confederation.

"Of the debt incurred during the war with Great Britain, full one-fourth of it was the effect of our paper currency. From its great depreciation, the government was robbed of a considerable portion of its revenue, the taxes and duties having been paid, as they will always be in all such cases, in the cheapest circulating medium, namely, in those bank-notes which are the most depreciated in value. Secondly, their borrowings upon issues of stock certificates and treasury notes were received in the most depreciated notes in circulation, while the debt of 130,000,000 dollars was, after the conclusion of the war, paid in a sound and honest currency of the present standard value.

"But enormous as have been the direct and immediate expenses of the wars of Great Britain and of this country, considering their short duration—the indirect, collateral and remote pecuniary consequences, connected with wars and consequent upon them—have been much greater, and more burdensome; to say nothing of the political and moral evils, infinitely more destructive of the virtue and happiness of mankind, than can arise from any amount of pecuniary injuries which wars have ever occasioned.

"Of the economical effects of the wars referred to, between all our navigating and commercial competitors—in which this nation only participated for a short time—upon the production and consumption of one of our greatest staples, cotton—we shall, in the succeeding number, produce facts that will demonstrate the truth of our assertion—a truth which it is important to have sustained, admitted, believed, and felt—and what is that truth? Why, that the general, the great, the universal interests of this nation, and of other nations—limited even to the mere and mean consideration of pecuniary thrift—mean in comparison with other and higher considerations—are best promoted by a continuance of peace; of peace not merely between this country, and other countries—but a peace among all the nations of the earth."—*Letters to Cotton Manufacturers.*

ance with the views of the secretary of the treasury; and which was sent to the house on the 13th of February, 1815, and would, according to Mr. Pitkin, have then passed, but for the arrival of the news of peace with England. "At the very moment when the question was to be taken on the passage of the bill, the mail arrived from New York, bringing a letter to one of the members, put in as the mail was closing, informing him that a rumour had just reached the city of a vessel's being at the Hook, bringing news of peace. The house, apprised of this, immediately adjourned without taking the question; and the next day the news being confirmed, the bill itself, on motion of Mr. Lowndes, was postponed indefinitely; and the subject of a bank was no further agitated during the remaining short period of the session."—*Pitkin*.

Mr. Wharton, of Pennsylvania, author of several articles on commercial legislation, observes with reference to the chartering (in 1816), of the new bank of the United States—

"Congress met on the 4th of December, 1815, and while, by the great body of the people, the relief to be experienced from legislation was rated at the highest pitch, the legislature itself entered into the field with an ardour and enthusiasm unprecedented since the formation of the government. The return of peace had produced a buoyancy in the hearts of the great mass of the population, which is only to be compared with that experienced by a crowd of boys, who, on a bright March morning, throw open the windows of their school-room, and discover that the frost has already begun to loosen its nets from the face of the earth. Men looked northwards, and southwards, and westwards, at the great and fertile tracts which had just been reclaimed from the hazards of border war; and, as the want of the ancient mechanist had been once supplied—as a base had been discovered on which should rest the lever by which a world could be moved, the only thing remaining was, that the lever itself should be constructed. The capitol was looked up to as the necessary shop from whence the machinery should issue. By Congress a bank must be chartered, whose influence should counteract the costiveness which had impeded the inonetary circulation. To Congress was committed the task of removing, on the one hand, the national debt, and of cancelling, on the other, the existing taxes. Through Congress, not only the desolation which had followed a protracted war was to be remedied, but fresh and permanent springs of prosperity were to be opened. That wise and equal trust in personal industry and personal honesty, by which alone permanent prosperity can be insured, was forgotten, and the people rushed to the legislature for the production of a panacea which should restore the drooping energies of the land and multiply its resources.

"The tone and bearing of the new Congress was calculated to promote the popular expectation. The old lines of party demarcation vanished, and each interest, no longer checked by past professions or personal experience, was willing to enter with the fullest enthusiasm into the new plans of national aggrandisement. The old party leaders had retired from the stage, and in their place was found a generation who had known them not. There were but few members of either house who could date their legislative history to the days of the first president, and among them Mr. Rufus King, in the senate, and Mr. Randolph, in the house, were the only men whose parliamentary abilities equalled their parliamentary experience. The demolition of the federal party during Mr. Jefferson's administration, and the war enthusiasm under Mr. Madison, had gone a great way to destroy, in the minds of the statesmen who then rose into action, those restraints which party discipline or hereditary prejudice might have created. When we look over the votes of the thirteenth and fourteenth congresses, we are surprised to find that the old party landmarks are reversed, and that the nominal federalists are discovered battling against measures once deemed instinct with federalism, while the nominal democrats give their earnest support to plans at which the father of democracy shuddered. There was, in fact, a broad and defined boundary line between the statesmen of the revolutionary war, and those of the war of 1812. Ordinarily, the texture of the legislature preserves an aspect of uniformity from session to session, from the fact that though changes take place, they take place gradually, and that though new members must necessarily

arise, they appear, like fresh strands woven into a rope at intervals, so divided as to preserve unbroken the continuity of the series. But, at the time of the late war, the capitol received an instalment of young legislators, all of them about the same age, and most of them endowed with great ability."

On the 6th of December, 1816, a motion was made and agreed to, "that so much of the president's message as related to a uniform national currency be referred to a select committee; and it was ordered that Mr. Calhoun, of South Carolina, Mr. Macon, of North Carolina (who soon after was removed to the senate) Mr. Pleasants, of Virginia, Mr. Hopkinson, of Pennsylvania, Mr. Robertson, of Louisiana, Mr. Tucker, of Virginia, and Mr. Pickering, of Massachusetts, be the said committee. To their charge was committed the following passage from Mr. Madison's message:—

"The arrangements of the finances, with a view to the receipts and expenditures of a permanent peace establishment, will necessarily enter into the deliberations of Congress during the present session. It is true, that the improved condition of the public revenue will not only afford the means of maintaining the faith of the government with its creditors inviolate, and of prosecuting successfully the measures of the most liberal policy, but will also justify an immediate alleviation of the burdens imposed by the necessities of the war. It is, however, essential to every modification of the finances, that the benefits of a uniform national currency should be restored to the community. The absence of the precious metals will, it is believed, be a temporary evil; but, until they can again be rendered the general medium of exchange, it devolves on the wisdom of Congress to provide a substitute, which shall equally engage the confidence and accommodate the wants of the citizens throughout the union. If the operation of the state banks cannot produce this result, the probable operation of a national bank will merit consideration; and if neither of these expedients be deemed effectual, it may become necessary to ascertain the terms upon which the notes of the government (no longer required as an instrument of credit) shall be issued, upon motives of general policy, as a common medium of circulation."

On December 25, 1815, Mr. Calhoun, as chairman of the bank committee, received from the secretary a letter both long and elaborate, presenting a scheme for a national bank, which was reported without amendment to the house, and of which the following is an abstract:—

- I. *The charter of the bank.*—1. To continue twenty-one years.
2. To be exclusive.
- II. *The capital of the bank.*—1. To be 35,000,000 dollars at present.
2. To be augmented by Congress to 50,000,000 dollars, and the additional sum to be distributed among the several states.
3. To be divided into 350,000 shares of 100 dollars each, on the capital of 35,000,000 dollars; and to be subscribed—

	dollars.
By the United States, one-fifth, or 70,000 shares	7,000,000
By corporations and individuals, four-fifths, or 280,000 shares	28,000,000
Total	35,000,000
4. To be compounded of public debt, and of gold and silver, as to the subscriptions of corporations and individuals, in the proportions—

	dollars.
Of funded debt, three-fourths, equal to	21,000,000
Of gold and silver, one-fourth, equal to	7,000,000
Total	28,000,000

The subscriptions of 6 per cent stock to be at par.
 The subscriptions of 3 per cent stock to be at 56 per cent.
 The subscriptions of 7 per cent stock to be at 106.51 per cent.
 5. The subscriptions in public debt may be discharged at pleasure by the government, at the rate at which it is subscribed.

6. The subscriptions of corporations or individuals to be payable by instalments.

(1.) Specie, at subscribing—	dollars.
On each share, 5 dollars	1,400,000
At six months, 5 dollars	1,400,000
At twelve months, 5 dollars	1,400,000
At eighteen months, 10 dollars	2,800,000

Total 7,000,000

(2.) Public debt, at subscribing—

Each share, 25 dollars	7,000,000
At six months, 25 dollars	7,000,000
At twelve months, 25 dollars	7,000,000

Total 21,000,000

7. The subscriptions of the United States to be paid in instalments, not extending beyond a period of seven years; the first instalment to be paid at the time of subscribing, and the payments to be made at the pleasure of the government, either in gold and silver; or in 6 per cent stock, redeemable at the pleasure of the government; or in treasury notes, not fundable nor bearing interest, nor payable at a particular time; but receivable in all payments to the bank, with a right on the part of the bank to re-issue the treasury notes so paid, from time to time, until they are discharged by payments to the government.

8. The bank shall be at liberty to sell the stock portion of its capital, to an amount not exceeding —, in any one year; but, if the sales are intended to be effected in the United States, notice thereof shall be given to the secretary of the treasury, that the commissioners of the sinking fund may, if they please, become the purchasers at the market price, not exceeding par.

III. *The government of the bank.*—1. The bank shall be established at Philadelphia, with power to erect branches, or to employ state banks as branches, elsewhere.

2. There shall be twenty-five directors for the bank at Philadelphia, and thirteen directors for each of the branches, where branches are erected, with the usual description and number of officers.

3. The president of the United States, with the advice and consent of the senate, shall annually appoint five as the directors of the bank at Philadelphia.

4. The qualified stockholders shall annually elect twenty of the directors of the bank at Philadelphia, but a portion of the directors shall be changed at every annual election, upon the principle of rotation.

5. The directors of the bank at Philadelphia shall, annually, at their first meeting after their election, choose one of the five directors appointed by the president and senate of the United States to be president of the bank; and the president of the bank shall always be re-eligible if re-appointed.

6. The directors of the bank at Philadelphia shall annually appoint thirteen directors for each of the branches, where branches are erected, and shall transmit a list of the persons appointed to the secretary of the treasury.

7. The secretary of the treasury, with the approbation of the president of the United States, shall annually designate, from the list of the branch directors, the person to be the president of the respective branches.

8. None but resident citizens of the United States shall be directors of the bank or its branches.

9. The stockholders may vote for directors in person or by proxy; but no stockholder, who is not resident within the United States at the time of election, shall vote by

proxy; nor shall any one vote as proxy a greater number of votes than he would be entitled to vote in his own right, according to a scale of voting, to be graduated by the number of shares which the voters respectively hold.

10. The bank and its several branches, or the state banks employed as branches, shall furnish the officer at the head of the treasury department with statements of their officers, in such form and at such periods as shall be required.

IV. *The privileges and duties of the bank.*—1. The bank shall enjoy the usual privileges, and be subject to the usual restrictions of a body corporate and politic, instituted for such purposes, and the forgery of its notes shall be made penal.

2. The notes of the bank shall be receivable in all payments to the United States, unless Congress shall hereafter otherwise provide by law.

3. The bank and its branches, and state banks employed as branches, shall give the necessary aid and facility to the treasury for transferring the public funds from place to place, and for making payments to the public creditors, without charging commissions, or claiming allowances on account of differences of exchange, &c.

V. *The organisation and operation of the bank.*—1. Subscriptions to be opened with as little delay as possible, and at as few places as shall be deemed just and convenient. The commissioners may be named in the act, or appointed by the president.

2. The bank to be organised, and commence its operations in specie as soon as the sum of 1,400,000 dollars has been actually received from the subscribers in gold and silver.

3. The bank shall not at any time suspend its specie payments, unless the same shall be previously authorised by Congress, if in session, or by the President of the United States, if Congress be not in session. In the latter case the suspension shall continue six weeks after the meeting of Congress, and no longer, unless authorised by law.

VI. *The bonus for the charter of the bank.*—The subscribers shall pay a premium to the government for its charter. Estimating the profits of the bank from the probable advance in the value of its stock and the result of its business, when in full operation, at seven per cent, a bonus of 1,500,000, payable in equal instalments of two, three, and four years after the bank commences its operations, might, under all circumstances, be considered as about four per cent upon its capital, and would contribute a reasonable premium.

On Mr. Calhoun, as the chairman of the bank committee, did the duty devolve of presenting the charter to the house, and supporting it after it was presented. Mr. Calhoun, though not much beyond thirty years of age, had been present, and had taken an active part in the house during the two preceding sessions; and from his great ability, his boldness, his freedom from those points of offence which so often detract from the power of a parliamentary leader, he had been selected by the administration as its organ, not only on the bank question, but upon most of the remaining points to which the attention of Congress was directed.

There were objections to the bill urged, at the time, with great force. It was maintained that the establishment of the bank would in no degree facilitate exchanges. "Supposing that the paper of any one particular bank, state, or town, was fifteen per cent below par, and that it was necessary to purchase exchange on a distant point, it was deducible, from actual calculation, that to buy at once a draft on the place to be reached would cost no more than to exchange the depreciated paper into the notes of the national institution. In either case the fifteen per cent depreciation was to be overcome; and since the bank did not lessen the difficulty, the argument in its favour, drawn from exchange operations, was of no value."

It was agreed also, "that great danger would accrue from the want of responsibility of both president and directors. Great sums of money would constantly ebb and flow through their hands, and it was to be feared lest, by those temptations which in the strain of mercantile vicissitudes were presented, facilities so great might be abused. It was suggested that the directors should be salaried, and be made responsible; but so anxious was the house to pass a bill which would be acceptable to the new stockholders, that the proposition found little support. As the discussion progressed, however the doubts felt by a few at first began to be more generally entertained, and the

large minority which was found against the bill on its passage, exhibited the great reluctance of even the administration members to adopt in full the administration scheme.

"It was argued, in the third place, that all that the country wanted was to be left alone, and that it was most unwise to fasten upon her, for twenty-five years, a measure which was meant, and constructed to meet, a temporary emergency. The great exertions which the war had induced, had been succeeded by a state of lassitude and exhaustion; but was it just to suppose that such a state would continue, and to frame a system of stimulants, which must be used not only for the present, but for the future? If the country wants to be lifted up, apply the proper machinery for the purpose; but do not, after she is once upright, subject her to a continual upward strain. In the words of Mr. Hopkinson, 'In this young nation, with its vast resources and solid wealth, the remedies would come of themselves, in a great degree, if we have patience to wait for them.' The best policy, in such a case, is to let alone; to legislate, at all events, for the present and not for the future, and to trust much more to the active and permanent exertions of the people themselves, than to the insubstantial labours of their legislature."

On the appearance of the bill in the house, it was saluted by a series of amendments, the most of which were unsuccessful, and the bill was finally carried, and the charter signed by the president on the 10th of April, 1816.

The bank of the United States did not immediately commence business. It was considered necessary first to provide for the disordered state of the currency, and against future depreciations. A special agent was sent to Europe to contract for specie, 7,311,750 dollars value of which was, between July, 1817, and December, 1818, imported into the United States for the use of the national bank, at an expense of 525,277 dollars. Mr. Pitkin observes that—

"In addition to this expense, during the year 1817--18, a scheme of stock-jobbing was devised and carried on in the shares of the bank, highly injurious to the bank itself, as well as the public, in which some of the directors, and even some of those appointed by the government, were concerned.

"In this scheme, a large amount of the money of the bank was used, being loaned to those concerned in it, on pledges of the very stock purchased with the loan, at 125 dollars per share. In consequence of these profligate speculations, the price of shares, about the 1st of September, 1817, rose to 156½ dollars. The bubble, however, at last burst, and, in December, 1818, the price fell to 110 dollars per share.

"In consequence of this mismanagement, the bank lost between two and three millions of dollars; the loss at the office at Baltimore alone, amounted to 1,671,221 dollars; and the bank was unable for a long time to make dividends.

"On a change in its direction and presidency, the bank gradually recovered from its losses, and has since been managed in a manner, not only highly beneficial to the government, but greatly conducive to the interest of the community at large. In the course of sixteen years, this institution has collected and received in its vaults public money, to the amount of from three to four hundred millions of dollars; and this vast amount it has disbursed and distributed through the United States, in the payment, not only of the various ordinary expenses of the government, but the interest and principal of the public debt, and the numerous government pensions, &c.; and this has been done without the loss or expense of a single dollar to the government. It has also aided the government by temporary loans; and in this way, in one instance, saved the public credit. A large instalment, being the balance of the Louisiana debt, became due on the 21st of October, 1820, and was previously advertised to be paid on that day; but, in consequence of an unexpected defalcation in the receipts of the revenue, the funds of the government were insufficient to meet so large a payment. In this situation, the treasury department made application to the bank, stating that it 'had not the means of paying the balance,' at the time specified, and requesting it to 'advance the amount to the holders of the stock, or their agents, in such a manner as to save the public credit, and to satisfy the holders.

The bank immediately complied with this request, and made such arrangements as saved the credit of the public treasury.

"That this institution, with its twenty-five branches located in different parts of the union, has, in a variety of ways, essentially contributed to advance the United States to their present prosperous condition, no one acquainted with its operations and effect can entertain a doubt. It has afforded aid, either directly or indirectly, to the merchant, the manufacturer, and the agriculturalist; and thereby contributed to the advancement of the internal as well as external resources of the country. One of the great objects for which it was established, and which is of common benefit, has been accomplished—it has rendered and continued the currency as uniform as any currency consisting of paper can be. The aids it has afforded the merchant and the manufacturer, by loans, and by furnishing facilities for foreign and domestic remittances, are too common and too well known to be here noticed. Nor should it be forgotten, that this institution has also furnished the East India and China merchant with a credit in Europe, and thereby saved him the necessity of carrying so much specie to those distant markets; and the public has been thereby relieved from embarrassments, sometimes occasioned by a sudden demand of millions of dollars for exportation to those countries.

"In the message of President Jackson to Congress, in December, 1829, referring to the national bank, the message declared, that 'both the *constitutionality* and *expediency* of the law creating this bank are well questioned by a large portion of our fellow-citizens; and it must be admitted by all,' the message added, 'that it had failed in the great end of establishing a *uniform and sound currency.*' This declaration created no little surprise in the minds of all who had made themselves acquainted with the nature and benefit of banking operations, and, particularly, with the effects produced by the bank in question on the currency of the United States."

The Senate and House of Representatives appointed committees each to report on this communication, and they expressed opinions decidedly in opposition to those of the president.

On the 20th of January, 1833, the directors of the bank prepared and delivered to the committee of ways and means, a statement of their condition, which exhibited

This statement being considered highly satisfactory, the funds of individuals as well as of the government, continued to be intrusted to the national bank; and the price of its stock was a proof of the confidence in its condition and management. In loans and discounts, by the actual distribution and application of its capital, the southern and western states, that is, the states south and west of Philadelphia, had received an amount exceeding 43,000,000 dollars, in May of 1832, which were then in circulation. In the states bordering upon the Mississippi and its valleys and streams, it had exceeded 30,000,000 dollars, of which, nineteen or twenty were in discounting promissory notes, and the remainder was composed of discounts of bills of exchange, foreign and domestic.* President Jackson, in his message, December, 1832, not only called in question the constitutionality and expediency of the bank, but also its solvency. In 1833, the treasury withdrew from the bank 8,000,000 dollars, within a fraction. The national bank and the state banks curtailed, at the same time, the amount of credit upon which the business of the country was carried on. Property declined in value. Innumerable failures occurred in consequence of the want of bank accommodations. Those which stood, maintained their credit only by enormous sacrifices. Public works and private enterprises were arrested. The means of labour were cut off from those who most required it, and a general pecuniary distress seemed to pervade the country.

"When it was finally settled," observes Mr. Lawrence, in an article on banking in the United States (1844), "that no re-charter of the national bank was to be obtained, a plan was projected to combine the advantages of the long established correspondence, name, and machinery of the former bank, by incorporating its stock with a new institution, under the name of 'The President, Directors, and Company of the Bank of the United States of Pennsylvania,' which was chartered on the 18th of February, 1836, by the legislature of that state. The transfer of the funds of the old institution was made into the new state bank.† More than fifteen per cent was restored to the government, beyond its subscription, at the period of the transfer; and three and a half per cent had been paid to the treasury every six months, for a long course of years. In consequence of the advantages to be derived from the new state institution, the stockholders were content to subscribe anew in the state bank; and it is alleged that all of them might, at this juncture, have received their investments back, not only at par, but with a large advance. This the government actually did; and no power was possessed by the government, that was not equally enjoyed by every individual. Indeed, it was alleged by Mr. Nicholas Biddle (who had held the administration of the affairs of the state bank, as he had done that of the national bank), as recently as April, 1841, that the state

* Pitkin's Statistics—Webster's Speeches; vol. ii., p. 100.

† Mr. Pitkin observes: "The removal of the public deposits, from the vaults of the bank of the United States, produced a general distrust and want of confidence, not only in the moneyed concerns of the banks, but of individuals; and for a time occasioned such a derangement of the great money transactions, in their infinite ramifications, as to cause great pecuniary distress, throughout this extensive country. To a superficial observer, the cause appeared inadequate to the effect; not so, to those who had observed similar effects, even from slighter causes, in commercial countries, where credit was the basis of their various moneyed operations.

"Had the Chancellor of the Exchequer, in Great Britain, by royal mandate, removed the public money from the vaults of the Bank of England, who can doubt, that it would have produced, for a time in that country, such a distrust, panic, and pecuniary distress, as it had never before experienced."—p. 457.

-------	----

institution was prosperous down to the end of his administration in March, 1839. The downfall of the state institution, however, soon occurred, bringing disaster upon a large circle of stockholders who had intrusted their funds to its keeping. Without entering into a consideration of the particular causes of that event, it may be remarked that the period in which it occurred was a crisis bringing disaster upon the greater part of the stocks throughout the country; and it is believed that its fall arose out of causes which had not acted upon the national bank. From March, 1839, to March, 1841, the stock of the state bank declined from 116 to seventeen per cent; and this loss fell in considerable part upon those who had been the original stockholders of the bank of the United States, from which this was created. But that new institution did not rest upon the broad foundation of national aid; it was not backed by the national confidence; it had a more local and a narrow basis, and it is believed by many judicious and honest minds, that the facts to which we have alluded, were among the principal causes of its downfall."

We do not propose here to enter into a discussion of the various projects that have been urged on the one side and the other for or against a national bank. Since the expiration of the last national bank, in 1836, a bank charter, which passed both houses of Congress, was vetoed by President Jackson; and another bank bill, passed by both houses, was presented to and vetoed by President Tyler. The question, however, of a national bank and the tariff have been the source of more party discussion, of late years, than any subject. In regard to the general principles which should regulate the emission of bank paper, Mr. Webster, in June, 1844, in a speech delivered at Trenton, expressed the following opinions:—

"There are dangers and evils, as well as benefits and advantages, in that mixed circulation of coin and paper which now exists among us. That that mixed circulation will continue, seems certain. That far the greater part will consist of paper, until there shall come another day of disaster to the banks, seems certain, also. That this circulation, in its present state, while the banks which issue paper are solvent, and do not issue it in excess, is convenient, and as beneficial as any local circulation can be, may be also admitted. But neither of these things is more certain than that danger hangs round the system, calling for care and discretion, oversight and watchfulness from the government, or in the absence of the exercise of any powers of the government, from the banks themselves, and from the community. I have ever been and still am of opinion that this guardianship and superintendence of the currency, is one of the constitutional, appropriate, and necessary exercises of the authority of the national government. But that point I do not now propose to argue, or to touch. But I wish to state what I consider the danger to be, and whence it arises, to the end that the country may not be led to forget the existence of that danger, although it be not, at the present moment, standing in an appalling attitude before us.

"Gold and silver are the universal standard of value, and medium of payments, among all civilised nations. All the coin in the world belongs to all the commercial nations in the world, each having naturally a share of it, proportioned to its commercial business and use. If bills of exchange were unknown, then coin would exchange hands from country to country, in order to pay debts and settle balances, as the course of trade should have created such balance, on the one side or the other. Coin is the universal solvent of commercial balances, the general paymaster, whose office it is to square accounts, arising from the interchange of commodities. If produce exported becomes debtor to produce imported, coin must pay the difference; and where exports throw a credit over import, coin returns to adjust the accounts. All this is as simple, in the order of things, as is the proceeding of a farmer, who goes to the market town, with the produce of his farm, and with money in his pocket, if he wishes to buy more than he has to sell, or bringing home more money, if his sale exceed his purchases.

"But in the intercourse of nations, there are things which affect the simplicity of this proceeding, and render it a little more complicated, without changing its nature. The use of bills of exchange is universal. Bills of exchange prevent, in a very great degree, in a settled state of trade, the actual transmission of coin from country to country. They run the round of the whole mercantile world, bringing nations to a settlement, each one with all the rest, one paying its debts to another, by drawing on its funds in the hands of a third, and leaving coin to be called for, only where balances of debt are considerable, or appear to be accumulating at some one point. London may be regarded as the centre of exchanges for Europe, and the city of New York, for this country; Paris, Hamburg, and Amsterdam being auxiliaries to London; and Boston, Philadelphia, Baltimore, Mobile, and New Orleans, auxiliaries to New York.

"The state of exchange, then, at any time, between New York and London, shows substantially the state of trade, in the aggregate, between this country and Europe, and the balances actually existing, or soon to arise, on the one side or the other. Speculations founded on calculations respecting future events, such as the probable amount of the staple articles, for the year, or the results of manufacturing industry, the probable rise or fall of prices, and other such things, affect, to a certain degree, the actual rate at which bills of exchange are bought and sold, and thus qualify that which would otherwise be the mere result of facts, with more or less of the influence of opinion. Still, the general and the safe index of the state of trade is the state of the exchanges.

"To an accurate understanding of the subject, however, it is necessary to bear in mind that the nominal exchange between the United States and England does not correspond with the real commercial exchange; by reason of the difference which the laws of the two countries have established in regard to the value of gold, and of the incorrect estimate, usually made here, in the business of exchange, of the value of the pound sterling. In exchange the pound sterling is received at 4 dollars, 44 cents; its real value may be put at 4 dollars 80 cents, and so the laws of Congress regard it. This difference amounts to eight per cent. So that when a bill of exchange is bought in New York, payable in London, in sterling money, if the premium given for it do not exceed eight per cent, it is really purchased at about par; and in this state of exchanges there is no danger of the export of specie.

"Gold and silver, as I have already said, constitute the standard of value, and medium of payment among nations. The same is true, in effect, in domestic trade, and among individuals. But here comes in the modern use of bank paper as the representative of gold and silver, which supplies the place of coin, and almost supersedes it in domestic transactions. Most commercial countries authorise the circulation of paper, and this circulation is greater or less, according to circumstances, and to the habits of the people. In the United States and England it is large, in France it is less.

"I am not now speaking of government securities, irredeemable treasury notes, or any thing of that kind; I am speaking of bank notes, promising payment in specie on demand, and circulating as cash. In the United States such bank notes are issued by many hundred different banks. They pass from hand to hand, as money, and little gold and silver is seen in the daily business of life. This state of things is convenient, so far as local circulations are concerned, and while the use of paper is restrained within just limits. But then comes the question, what are the just limits, and who is to preserve them? What is the standard by which we are to decide the question of excess, or no excess? and who is to support the standard?

"Is there, or is there not, or may there be, or cannot there ever be, excess, so long as the banks are able to redeem their paper? What do we mean by excess, or over issues, or injudicious superabundance of paper?

"To answer these questions, we must remember that the true operation of bank paper is of a representative character. It represents coin. But this representative, like other representatives, sometimes forgets its constituents, and sets itself up to be somebody or something; when of itself, it is nobody, and nothing. The one dollar bill which you have in your pocket is no better than blank paper, except so far as you have confidence that it will, whenever you wish, bring a dollar into your hands.

"A bank note, professing to represent coin, and being a true representative, acts a

respectable part in the drama of commercial affairs; but when it sets up for itself, or offers itself in an independent character, it only 'presents the person of moonshine.' The security of paper, first against the insolvency of banks, and secondly against the general evil of over-issues and inflated circulation, consists in maintaining a just and direct relation between the amount of paper and the gold and silver which it represents. I do not, of course, say a relation of equality, but a just relation, and a direct relation. In other words, I mean to say that when the course of trade withdraws specie from the country, then the amount of circulating paper should be proportionally diminished.

"Bank notes will not pay foreign debts. Strangers will not trust this representative of coin. They cannot judge of his credentials, and, therefore, demand the presence of the constituent itself. Here, I think, lies one of the great temptations to excessive issues of paper. Then trade is such that balances are rising against us abroad, and the exportation of specie commences. There are those who always desire an enlargement of the paper circulation to supply the deficiency, and to keep up prices. But enlargement of paper issues under such circumstances, is the first step towards a crisis, commercial distress and revulsion. The country is full of enterprise. No people have more. Almost every man is active, while, at the same time, and for the same reason, capital is less abundant than in older countries.

"These circumstances keep up a demand for loans and discounts, especially in times of activity; and although it is doubtless true that a well-conducted system of paper circulation may, to some extent, act as expansion of capital, and in that way be useful in a new country, yet men are too apt to delude themselves with the idea that paper is currency.

"But I am now considering mainly, paper currency at home, in its consequences upon importations, and other branches of foreign trade, and a just limit to its, or these discounts.

"An opinion has prevailed, in England, and I suppose still prevails, that it is safe in banks to discount every good bill of exchange or promissory note, which bill or note is business paper, as it is called; that is, if it has been given in a real transaction of buying and selling. This has been, heretofore, the rule with the Bank of England.

"Now, if by this, no more were meant than it might be safe for the bank itself, and so far as its own interests are concerned, to discount all such paper, the proposition might be admitted. Business paper, generally speaking, may be regarded as safe paper. But that all good business paper may be discounted by banks, and the discount paid in bank notes, without danger of injury to the public from an excess in the paper circulation, is a proposition which I do not admit, and which I think of dangerous tendency. I am persuaded that enlightened bank directors, disposed to regard the public good, as well as the interests of their own stockholders, can never act on such a principle.

"It is a fundamental error; and in a country so full of enterprise, and so much disposed to activity as ours, its practical tendency is to stimulate business too highly, too inflate prices unnaturally, to cause overtrading, over production, and over action in all departments of business. It swells the amount of paper beyond its just relation to specie, and exposes the country to sudden revulsions. While specie is departing, to pay debts abroad, it is the effect of this shallow and short-sighted policy to increase the paper circulation at home. How can such a course of things terminate but in disaster and distress?

"We are now just recovering from a deep and long-continued depression. All branches of business give evidence of revival and of healthy action. The danger is that we shall not be content to make haste slowly; that a spirit of speculation may spring out of our state of prosperity when it shall become flushed. The danger is that paper will be issued to excess, prices become extravagant, and the symptoms of crisis be upon us before we are aware. All this may not happen; but the only security that it shall not happen lies in this, viz. :—that bank issues be kept within just bounds, *with direct reference to the amount of gold and silver.*

"Let me illustrate my meaning by a supposed case. Suppose the amount of coin in the banks of New York to be five millions. Suppose them to have issued, in paper, three millions for one, that is to say, fifteen millions. I do not intend to say that this is a just proportion, but it may be assumed, for illustration.

"Now, suppose the holders of one of these fifteen millions demand specie for it, for exportation. Then fourteen millions of paper remain resting on a basis of four millions. If a second million of specie be called for, then thirteen millions of paper rest on three millions of specie, and so on. Now, it is evident that if such a process as this begins, and threatens to go on rapidly without contraction, general distress, and perhaps explosions of the banks themselves, would be the inevitable and immediate consequences.

"This catastrophe, and the tendency of things toward it, is to be guarded against by just restraints upon the amount of discounts, by waiting the course of trade, and observing continually the index of exchange. It is not sufficient guard to look at the supposed responsibility of paper offered for discounts, or to inquire whether it arose in any case from real transactions of sale and purchases. If the exchanges indicate that exportation of specie may be apprehended, more caution is necessary; and when exportation ordinarily commences, it should be met by an immediate and corresponding diminution of the paper circulation. This will slacken that exportation, check it, and finally stop it. The process may be inconvenient for the moment. It may more or less depress prices, and dash men's hopes a little. But it is infinitely better to meet the occurrence by its proper remedy in the beginning, than to attempt to hold up against the natural course of things, to maintain trade in an artificial and forced state, tending every day to a final, ruinous, and overwhelming fall of prices, and to a general prostration of credit.

"That which every branch of industry in this country most needs, is reasonable and steady, not extravagant or fluctuating prices; sudden changes deprive men of employment, and distress families.

"Steady occupation, with reasonable gain, constant markets, with fair prices, with no apprehension of sudden change, and the security which a man feels that that is money which he has taken for money, freedom from alarm and panic, and no fear of disorder or violence; these things compose the elements of general and enduring prosperity among the industrious and producing classes of the community.

"In the present state of things, in the absence of all oversight by government, the continuance of the public prosperity very much depends on the banks themselves. Subject to no control but their own discretion, they ought to feel responsible for the exercise of that discretion.

"The great cities near to us, and other great cities, the sources of a great proportion of bank paper, are jointly called on to guard the country against such evils as it has already more than once experienced.

"There ought to be an understanding among the leading institutions, and a just disposition to discountenance everywhere either extravagant lending or extravagant borrowing. I do not presume to admonish the banks; but I hope they will receive these suggestions as made in a friendly spirit. If discretion and candour in this respect be not exercised, our present state of health will itself bring on disease; our very prosperity will plunge us in disorder. We are well instructed by experience—let us not be lost to experience. Let not all the good, all the comforts, all the blessings, which now seem in prospect for all classes, be blighted, ruined, and destroyed, by running into danger which we may avoid. The rocks before us are all visible—all high out of water. They lift themselves up, covered with the fragments of the awful wrecks and ruin of other times. Let us avoid them. Let the master, and the pilots, and the helmsman, and all the crew, be wide awake, and give the breakers a good berth."

Two prominent parties have arisen in the country, the one advocating the charter of a bank, on the ground that such an institution is constitutional and expedient, and the other opposing it upon opposite grounds. If we trace the political history of the national banks of the country back to the early controversies which have arisen upon the subject of their establishment, we find that the discussions have not always been made strictly party questions. The bank of 1791, as has been seen, was established under the auspices of President Washington, and was at that time deemed by him constitutional. The refusal of Mr. Madison to sign the bank bill of 1811, appears to have been founded in honest doubts as to its expediency, and the bill of 1816 was passed into a law with his approval. The vetoes of some of his successors seemed to have been based upon its alleged in-

expediency and unconstitutionality. It would seem that a solemn decision of the Supreme Court has fully set at rest the constitutionality of a national bank;* but its expediency, of course, must depend upon various considerations connected with its structure and operations.

During the existence of the charter of the late bank of the United States, banks multiplied in the respective states with reckless and fatal rapidity. On the adoption of the constitution of the United States, three state banks only existed, and their aggregate capital amounted to no more than 2,000,000 dollars, about 430,000/. On the 1st of January, 1811, their number had increased to eighty-eight, with an aggregate capital, real or fictitious, of 42,610,000 dollars. Between the 1st of January, 1811, to 1815, 120 new state banks appeared, with a presumed capital of 40,000,000 dollars. The secretary of the treasury, Mr. Crawford, estimated the paper circulation of the country, during the year 1816, at 99,000,000 dollars, and the specie circulation at 11,000,000 dollars, making the whole 110,000,000 dollars. Loans to the government were effected by some of the banks of the middle states during the war; and as those were made, for the most part, in bills, the issues must, through that means, have become greatly increased. The pressure before September, 1814, caused those banks to suspend the payment of specie for their bills.

The rapid depreciation of their bills was the natural consequence. The bills of the bank of Baltimore were at a discount of twenty per cent; those of the banks of the city of New York, of ten per cent; and in January of the following year, the discounts at Baltimore were twenty per cent, and at New York, fifteen per cent. In consequence, the revenue was paid in bills of unequal value, and loans could only with difficulty be procured by the general government. Peace, in February, 1815, restored confidence in the state banks; but they did not resume specie payments. The depreciation of their bills continued. The debts due to the United States, as well as those due for the payment of large importations after the peace, could only be paid in those depreciated bills. Gold and silver, it is true, constituted the only legal tender of payment after the charter of the first bank expired; yet necessity compelled the government and other creditors to receive depreciated bills in the absence of other payment. In consequence of this disordered state of the currency, it was found difficult, by the secretary of the treasury, to make payments in the various parts of the United States; and efforts were accordingly made to unite the state banks in resuming specie payments, but without success. The bills received in the different states in payment of the revenue, were of unequal value. When the United States bank was re-established in 1816, measures were adopted to collect the revenue in the new legal currency of the union; Congress instructed the secretary of the treasury to receive nothing in payment but the legal currency, or treasury notes, or notes of the national bank, or notes of banks that were paid in specie on de-

* *M'Culloch v. State of Maryland*, 4 Wheaton, 316.

mand. In 1817, an arrangement was agreed upon between the bank of the United States and the state banks of New York, Philadelphia, Baltimore, and Virginia, which enabled those banks to resume cash payments.

From 1811 to 1830, no less than 165 state banks, possessing an aggregate capital of about 30,000,000 dollars, either failed or discontinued their business; those failures occurring in nearly every state and territory of the union. The treasury had about 1,400,000 dollars deposited within their vaults: the greater portion of which it lost; while the loss to individuals was that of many millions,—the bulk of which fell upon widows and orphans, whose property had been intrusted to those banks. These failures arose in some cases from the multiplication of banks in places where they were not required; from injudicious discounts and over issues; from ignorance of the principles of banking, and the nature and operation of banking institutions; and, in some cases, from a desire of gain, at the expense of individuals and of the public.

In a recent letter written by Mr. Hamilton, of New York, on the subject of banks and the currency, and in which he proposes the creation of a state bank of issues, and the restriction of private banks to circulation, discounts, and deposits, addressed to the Legislature of the State of New York, that gentleman observes:—

“In the project I am about to suggest, there will, perhaps, be found no other recommendation than an attempt to reconcile the ultra speculations of an exclusive metallic currency with one of a representative character, based on absolute responsibility, convertible into specie.

“It may be asked why any effort should be made, at the outset of an experiment (the new banking law of New York), the advantages or defects of which could not have had an opportunity for development, that a project, essentially changing the whole system, should be brought forward. I, however, contend, inasmuch as the general banking law is only on trial, it is the duty of the legislature to have in view some substitute in the event of a failure, and not be taken entirely by surprise at the moment of embarrassment. In the present experiment, there is nothing of real novelty, except it be the extraordinary fact, that government has relinquished the control over one of the most delicate attributes of sovereignty,—the power to create money, and that, to an unlimited extent.

“The door has been thrown wide open for the issue of a paper currency; the old system and the new are in full operation, each dependant on the other for permanent existence, while, in fact, in their action, the several banks are heterogeneous, antagonist, independent. There are no two institutions having a common interest, and none governed with reference to the public welfare. The polar star of each is profit; this is the guide, aim, and object of private banking, and the legitimate pursuit, when restricted to honourable and honest operations. It is, nevertheless, equally correct, that, while these associations ought to be unlimited in the use of their capital, and its intelligent employment, they should never be intrusted with a power which, if abused, may shake the national prosperity to its foundation. Is not the reason as powerful now as at the recent crisis it was represented to be, that one of the chief causes of the embarrassment resulting in a suspension of specie payments, was the existence of an *inconsiderate multitude of currency purveyors*? If so, what is to be the influence of our general banking system? Does it tend to curtail or to expand the difficulty; or, has it, by some new light, been discovered that the paper medium is more stable in proportion to the sources of its creation? There is now no check to the creation of these money mints; any body and every body, with or without character, has a right to enter the fair field of competition. The

amount of corporate bank capital has no limits, and for the wants of the country the currency will prove equally redundant. The whole wealth of the community, in money, ingenuity, contrivance, and chicanery, will soon be monopolised by these prolific paper-money creating concerns; every species of disguise will be resorted to; and some, not less contemptible than the miserable trick of that respectable institution, the Delaware and Hudson, of issuing notes payable on DEMAND, six months after date, 'demand' in conspicuous letters, the residue scarcely legible, a fraud without any more honest motive than the gratification of a successful imposition on the unwary.

"It is not in the state of New York alone that the fascinating project of free banking is to be experimentally essayed; the speculative example has been infectious, and while the anomalous absurdity of unrestrained paper issues is preserved perfect, the modes of giving full effect to the scheme will be as varied as the capriciousness of legislative fancies shall dictate.

"Entertaining these views, I am induced to suggest a premonitory modification of our banking system, which, although radical, as it curtails the money creating powers of the banks, is nevertheless essentially established on the known and intelligent principles that have heretofore, in a different shape, proved so successful an auxiliary in the progress of our great national prosperity. The project I propose is, to preserve the good, and discard, as far as is compatible with prudence, a feebleness in our currency, which has, unfortunately, in some measure become identified with our established experience in fiscal economy. In my estimation, it would be absolutely impolitic, and equally pernicious, altogether to repudiate a paper currency, if such a measure were practicable; it is, notwithstanding, imperatively important that the public should resume the supervisory government of this subject. The superintendence of a power of such immense and vital consequence to the integrity, stability, and permanent interests of the public, as that of money making, ought not, in the very nature of its operation, to be legislatively lodged in the exclusive hands of individuals. The value of no man's property, much less that of a community, should ever be placed at the capricious will of private cupidity and speculation. To effect a permanent change, the private banks must be gradually shorn of their improvident and unconstitutional powers, before the public mind can settle down into any intelligent knowledge of its pecuniary responsibilities.

"In order to effect this object, and at the same time preserve the harmony of our fiscal operations, the legislature ought to establish a state bank of issues, and simultaneously convert the private banking associations into simple banks of circulation, discount, and deposit.

"In referring to the report of the secretary of the treasury of the United States, it will be found that there were in 1830 about 320 banks, with an aggregate capital of 145,192,263 dollars, with a circulation of 61,324,000 dollars; which, by January, 1837, were increased to 973 banks, with the immense capital of 324,240,293 dollars, sustaining a paper circulation of 185,782,506 dollars; to which the state of New York has, within one year, under the general banking system, prospectively added more than 200,000,000 dollars of capital.

"If we compare our condition with that of Great Britain, the contrast will present a most extraordinary contradiction. The national debt of that great and powerful nation is eighteen times larger than the entire public indebtedness of this country. In referring to official statements, the amount of our public stocks, exclusive of the 6,000,000 dollars of treasury notes of the federal government, are estimated at 200,000,000 dollars; while the sum due by Great Britain is about 3,600,000,000 dollars; and, on the other hand, her paper circulation does not exceed 140,000,000 dollars, while ours has been expanded to more than 190,000,000 dollars. What must be the conclusion from this exhibition? Does it not exhibit an inconsistency fatal to the permanency of our currency? The solution of the enigma resolves itself into the fact, that in proportion as we create bank capital, we expand an artificial currency without increasing the wealth or accommodation of the public.

"In the event of a renewed embarrassment, it is to be hoped that the suicidal course

pursued by the banks in the spring of 1837 may not be re-enacted. The commercial community will not again submit to be annihilated; there will be no discrimination between banks and merchants, the whole will be involved in a common chaos."

Mr. Henry Lee, of Boston, in his forthcoming work, "Letters to Cotton Manufacturers" (parts of which he has kindly forwarded to us), exposes, with great boldness and ability, the banking systems on which the majority of the banks of the United States were conducted. He contends that they have been founded and conducted on much the same principles as those inculcated and acted upon by Mr. Law, in France.

"The banking and currency hallucination," says Mr. Lee, "which extended through all the states at the period in question, was hardly less general, though perhaps much less violent, than the illusions which prevailed on the same subjects in France, during the banking operations of John Law, spreading as they did in England and Holland, where they produced effects similar to those experienced in the former country. In this country, the effects of managing the currency on principles similar to those of Mr. Law did not exhibit themselves so suddenly, and in such a destructive, such a terrific form, as they did in France, but, from their more frequent recurrence, and much longer duration, the practical operation of those principles has been infinitely more disastrous in their moral as well as economical consequences to the people of these states, than were produced in France and the neighbouring nations by the operation of the schemes of Mr. Law. Nor have there been in this country, as there was in France, any compensating effects experienced from the dreadful evils we have endured by a renunciation of the unsound, impracticable, and dishonest principles of currency and banking which have led to all our monetary embarrassments, difficulties, sufferings, and immoralities.

"In France, the historical record of the ruinous effects of Mr. Law's Mississippi scheme, and of his bank projects and bank bubbles, and the later and fresher reminiscence of the revolutionary *assignats*, have taught that intelligent nation valuable lessons on the subjects of banking, currency, and financiering, from which they have profited by the establishment of a permanently sound and practicable system. To the issue of those *assignats* the nation was driven, as it were, by the outbreak of a terrible revolution, the reaction of centuries of bad government, and whose convulsive and frenzied movements threw into a state of disorder and mismanagement, which continued for a considerable period of time, all the functions and powers of government under the various forms it assumed. In that difficult and distressing emergency, the French government resorted for relief to the use of an unlimited issue of paper money, which was forced, in its various stages of depreciation or worthlessness, upon the people of that country by the severest enactments of government. The people of this country, in their national capacity, resorted to similar expedients for relief, or for salvation in the difficult and trying circumstances in which they were placed at various periods of our revolutionary struggles for national independence.

"No such apology as we have suggested in favour of the French nation in the issue of their *assignats*, could be offered in alleviation of the criminal conduct of Mr. Law and the government of France who encouraged his scheme, and co-operated with him in promoting its success. The basis of Mr. Law's project for creating wealth was *confidence*—not confidence resting on a just and solid foundation—but having for its sole support a fraudulent reliance on the gross ignorance or the blind credulity of one portion of the nation who were to be its victims, and the base unprincipled cupidity of a smaller but more intelligent portion, who expected to profit by it. The means by which this stupendous fraud was practised upon the country, independently of the ignorance and credulity of one part of the nation, and the dishonesty of another portion of it, were derived from the unjust and arbitrary acts and decrees of the government. But, although the government, aided by speculators, gamblers, sharpers, ruined courtiers,

and other venal and unprincipled men, who expected to profit by the monetary and financial disorders caused by Mr. Law's nefarious contrivances, could raise the bubble, it was beyond their ability to prevent its explosion, or to save, from the ruin which it spread over the whole country, many of those persons who were among the most instrumental in its inflation.

"The proposed purposes of Mr. Law's plan of financing and banking were first, to enable the government to pay its debts without taxing the people; secondly, to enable every man in France to augment his property to any wished-for extent, and to do it solely by unlimited issues of paper money, by multiplying the *signs* of wealth, and considering them as equivalent to a corresponding augmentation of *wealth*—to regard the *sign* of a thing as the *thing* itself,—the *shadow* of a substance as the *substance* itself,—and consequently, as by increasing those *signs* of wealth, in the form of paper money, to twice or thrice their existing amount, or in any other given ratio, the wealth of a nation would be increased in a corresponding degree. Having given these fallacies the appearance of truth to the minds of the people of France, an appearance which they still maintain in the minds of the great mass of the American nation,* there was no further obstacle to the accomplishment of the designs of Mr. Law, and of the government which acted in concurrence with, and in support of, the designs of that unprincipled, or that insane projector.

"The system of banking and currency on which we have been acting and are still acting, is based, in a considerable degree, on the erroneous principles involved in the operations of Mr. Law. It is true that, theoretically, there are some guards against a similar abuse of the money-making power; but, practically they have been of but little benefit to the country. The revulsions in business, resulting from the alternations of an overflowing or of an insufficient currency, have become more frequent, more sudden, more violent, more ruinous, and more enduring in their consequences, as we have enlarged our banking capital, and extended the number of our creators and administrators of the circulating medium of the country.

"The managers of the banks, then, if they have learned any thing from experience, it has only been evinced, first, in their increased boldness of action,—showing therein a wider departure than formerly from the true principles of banking; and, secondly, when

* Mr. Gallatin, in his "Considerations on the Currency and Banking System," published in 1831, makes the following remarks upon the erroneous notions then current in respect to the nature, uses, and effects of paper money. "Some persons are yet found (says this able writer), who contend for issues of paper money to an indefinite amount, without regard to the fundamental principle, that the demand is for value, and that it is impossible to increase the amount of currency beyond certain limits, without producing a corresponding depreciation in its value. A recurrence to that principle is sufficient to dissipate the singular illusion under which that opinion is advanced.

"After having tried to discover what was meant by those who pretend to argue in support or excessive issues of paper money, we have found nothing but a repetition of the erroneous assertions on which the famous Law attempted to build the stupendous scheme which bears his name, and desolated France in the year 1720. He asserted, first, that gold and silver were only the representative or the sign of wealth; secondly, that paper might be that sign as well as the precious metals; thirdly, that by doubling or trebling the amount of that sign, the national wealth would be increased to that amount; fourthly, that such increase of the currency would reduce the rate of interest, and thereby promote industry. It is hardly necessary to show that those assertions are a series of errors. The precious metals are not merely the sign or representative of wealth; they have an intrinsic value, on account of the cost of their production, and of the demand for other uses than currency, and are, therefore, wealth itself. It is because they have an intrinsic and comparatively stable value, that they have become the standard of the value of every other commodity, or, according to Law's vocabulary, the representative or sign of wealth. A certain quantity of those signs is necessary for a circulating medium; but the quantity used adds nothing more to the wealth of any country than the intrinsic value of that quantity."

The mistaken views in reference to the qualities and uses of paper, on which Mr. Gallatin was commenting in 1831, have been signally manifested, since that period, in the operations of the 901 banks that were at one time in operation.

the evils have come upon the country which always flow from the mismanagement of a currency, in the increased dexterity that has been shown by those gentlemen in not only escaping the blame justly imputable to their ignorance or their imprudence, but of diverting public attention and public dissatisfaction from consequences wholly due to their acts, and to the principles on which they act, to the agency of other causes having, in reality, little or no connexion with the operations and the results of banking.

"In these remarks upon banks, we refer generally to the conduct of the eight or ten thousand *manufacturers* and *managers* of the currency of the country. That there are some honourable exceptions we cheerfully and gladly admit; but they are too few in number, and too divergent in their principles and practices of banking from the popular notions current in this quarter, and in every quarter of the country, to exercise any beneficial power or influence over the general banking concerns of the nation.

"The loss of a considerable portion, if not the entire capital of a bank managed on the principles of banking current among us is, sooner or later, one of the natural consequences flowing from the operations of these principles. If, in the midst of the frequent and violent revulsions in trade, with which the country is periodically afflicted, and which we shall continue to experience on the present system of banking, the capital of a bank is unimpaired and productive, it must be owing, either to fortunate accidents, or, what is more probable, to the circumstance of its being governed by men who, in spite of their *bad principles*—we use the term in an economical sense—have exercised a degree of prudence and skill, which have counterbalanced the usual and natural effects of the unsound and pernicious system on which their concerns are conducted.

"The popular notions of banking, then, generally entertained throughout the country, are in accordance with those acted upon in France by John Law; namely, that, by augmenting the *money* of a country, you increase the *wealth* of a bank.

"In Philadelphia, on the occasion of a third suspension of the banks of that city, within the space of a few years, there was a meeting of the '*friends of equal rights*,' at which, among other proceedings, the following propositions, relative to the rights of property were advocated, and unanimously adopted:—

"Resolved,—that the constituted authorities of the commonwealth are fully competent to support the institutions of the state created for banking purposes, in a liberal and proper exercise of their appropriate functions; and one of the chief of those functions is to furnish a circulating medium resting upon the confidence of the community, as much as upon the specie in the vaults and other assets of the banks for its use; and that all legislation calculated to strengthen and support such institutions in that particular, shall have our co-operation and confidence.

"Resolved,—that in order to enable the banks of the city and county of Philadelphia to be of service to the community in the present crisis, we would respectfully recommend to the legislature a repeal of those provisions of the existing laws, by which their charters may be forfeited, or other penalties imposed for the non-payment of their notes and obligations in specie, &c.

"Thus the banks of that city and state, having suspended specie payments—although in a better condition, according to their own statements, than the banks of New York city (which maintained specie payments)—for the purpose of accommodating themselves at the expense of their creditors—they were supported in this act by the '*Friends of Equal Rights*.' And what was the object of the friends of equal rights? Why, first, to applaud and sanction an act of folly and injustice; secondly, to require of the legislature of Pennsylvania, that they should, in their sacred character as legislators, sanction and legalise the impolitic and dishonest act, and thus protect them against the just demands of those persons who had, on the faith reposed in the honour and honesty of the banks, and in the laws of the state of Pennsylvania, trusted to their paper promises, under the guarantee of the laws of that state.

"The moral character of this proceeding, however low it may appear to men of sound and honest views of banking, and who have been taught to respect the rights of property,

was about on a level with similar proceedings in most of the other states,* and with the opinions generally current throughout the country in respect to the duties and obligations of banks, and of legislators by whose acts banks were brought into existence.

"These resolutions of the 'Friends of Equal Rights,' as they complacently described themselves, were assigned to a committee of gentlemen, one of whom was an alderman of the city, and another a judge of one of the courts of law, for the purpose of being presented to the legislature of Pennsylvania.

"That enlightened and honest assembly, in pursuance of the prayer of these 'Friends of Equal Rights,' and in conformity with petitions from other bodies, founded on a *similar regard for equal rights*, shaped their measures in accordance with the demands made upon them; and what has been the result of 'banking upon confidence,' as the petitioners recommended? and considering it as a 'substitute for specie in the vaults and the other ordinary assets of a bank?' This is a question which admits of a full and correct answer, by reference to notorious and indisputable facts, which shall now be added.

"A reference, then, to authentic statements of the market value of the shares of the sixteen banks of the city of Philadelphia, published in its best conducted journals, exhibits the following facts:—

"On the 14th of August, 1838, after the return of most of the banks in the country to specie payments, the shares of the sixteen banks were worth, in the market, payable in a sound currency, 63,565,430 dollars. In about twelve months afterwards, they had sunk to 15,065,910 dollars. In January, 1842, they had fallen to 7,119,520 dollars; allowing the shares of the United States Bank to be worth 1,050,000 dollars. Subsequently they sank to a still lower sum."

"This enormous destruction of bank capital is, however, not the largest item in the list of pecuniary losses which the state of Pennsylvania has sustained, directly and indirectly, from the workings of a bad system of banking and currency, since a considerable portion of the capital of the United States bank was owned in other states of the union and in foreign countries.

"If, then, it were possible to obtain all the data on which to found an estimate of the pecuniary loss of capital—by what are termed internal *improvements*, created at double the expense which they ought to have cost, and, in many cases, where they cannot become productive for a long period—and which were promoted by bank loans, and some of them originated by bank management. If to this waste of property, and misdirection of capital, be added the loss of bank capital, and a still larger sum, perhaps, for the injury sustained by all branches of industry, it might probably be found, that the state of Pennsylvania is, at this day, at least 100,000,000 dollars poorer than she

* On the influence of party feeling and party interests upon the subjects of currency and banking, Mr. Nathan Appleton, in his work on the currency, makes the following remarks:—

"Unfortunately the subject (currency and banking) has been connected with the party politics of the day. Nothing can be more unfavourable to the development of truth, on questions of political economy, than such a connexion. A good deal which is false, with some admixture of truth, has been put forward by political partisans on either side.

"The existence or non-existence of a national bank, has been so mingled with the contests of the political parties into which the country has been divided, that the attempt to discuss it on its own merits, without reference to its political bearing, may be considered rash, if not visionary. Yet it involves questions of political economy of the most difficult and abstruse nature, which can be little and imperfectly understood by the masses of the community. President Jackson made this question the symbol of party. The consequence has been, that for nearly ten years the mercantile business of the country has been agitated, and sometimes paralysed, by the connexion of banking operations with the struggles of party."

In Mr. Gallatin's last pamphlet there is the following reference to the same subject:—

"The fault, or error, originated with the people themselves. The traders and speculators have attempted to ascribe their disasters altogether to legislative acts; to those of the administration, or to other collateral causes, which have, indeed, aggravated the evils, but the effects of some of which have been exaggerated."

would have been under the action of a sound and steady system of banking and currency."

Mr. Lee, in exposing the reckless banking operations in the United States, makes the following observations:—

"It was about 1832 or 1833, that banks began to be multiplied, not for the purpose of supplying a currency for the country, or of safely and profitably loaning the funds intrusted to them by the stockholders, but to enable, in most cases, their managers, who either had no capital of their own, or an insufficiency of it, to get possession of the capitals of the stockholders. They succeeded in their efforts, and what have been the consequences as respects the shareholders in the 704 to the 901 banks that were in operation from 1835 to 1840? Why, of the aggregate amount of capitals which extended at one period to 358,442,692 dollars, not 200,000,000 dollars now remain, taking the shares of the banks still in existence at par. But would such an estimate be a correct one? Why, even in the city and state of New York, where banks, according to Mr. Gallatin's late pamphlet, have been managed as well as in any of the states, and far better than in most of them, something like a third of the bank capital has been sunk; nor are there many banks in the city or in the state of New York, whose shares will bring par; while in a large majority of them, they will not average 75 cents per 100. The banks in New England, as we apprehend, have not met with much better success, as may be seen by the current prices of their shares, and still more clearly by the actual results of their operations, whenever the stockholders have examined into them.

"The direct loss, however, of more than 200,000,000 dollars by banking, and perhaps 50,000,000 dollars in addition, from depreciation, or from the entire valueless condition of the immense amount of false and fraudulent issues of those banks—fraudulent, because in many cases based on nothing but the false promises borne on the face of them—is as nothing in comparison with the destructive effects of free and unlimited banking, and the free and reckless system of trusting, upon all the great branches of industry, and more especially upon the manufacturing interests of New England, exposed as they are from the manner in which we conduct our sales—to the worst consequences resulting from the action of a vicious system of banking, and its concomitant, an equally vicious system of trusting.

"A currency always tending to redundancy, and usually in that condition or in its opposite one—that of insufficiency—united with a long-credit system, both at the banks and between individuals, as has been the case in this country—must necessarily produce those sudden and extreme variations in the value of money, with all their direct and collateral evils—which have proved so injurious to the whole country, and so utterly ruinous to the most active and useful portion of it—whose stability and success depend almost entirely on the maintenance of an unfluctuating, *permanent measure of value*—the most important function of money—the currency of a country."

"For the past twelve months there have been but few failures in Boston, and business has been in a safe if not very prosperous condition; and, consequently, the banks ought to have done a fair if not a prosperous business. The returns, however, to the legislature, down to October, 1842, show an average dividend of only 4 52-100 per cent per annum. But even a portion of that dividend, if one may judge from the low prices of the stocks of some of the banks, may have been made from the capitals of some of the weak banks. And what are the future hopes of the stockholders founded upon—when the loans are now made at four or five per cent per annum, on capitals subject to from one and a half to two per cent charges, superadded to bad debts, which they can hardly expect to escape when the next revulsion arrives."—*Letter to Cotton Manufacturers.*

The following remarks are extracted from a communication of a gentleman who once enjoyed a higher degree of popularity in this community, among its most influential members, than any man in the country, on account of his skill in banking, borrowing, loaning, and regulating the currency—and, perhaps, continues to do so, since his principles of banking are generally acted upon among us. We mean Mr. Nicholas Biddle,

who, in his letters and other public communications, of the interference of the government in his banking concerns, and in the affairs of the business classes generally. To the interference and hostility of the executive, sustained by his followers and partisans, Mr. Biddle imputes the necessity imposed upon the banks of suspending cash payments. Mr. Biddle, after enumerating what he considers some of the leading causes of the suspension, adds:—

“Lastly and mainly, the alarm about bank-notes, propagated by the government, has been deeply spread through the country, till what was at first a passing outcry, has settled into an implacable hostility. No man, I think, can doubt for a moment that the executive of the United States seeks to maintain his power by exciting popular passion against the credit system—and that the whole influence of the government is employed to infuse into the minds of the people, distrust and hatred of all banks.

“I go further. There is an outcry abroad, raised by faction and echoed by folly, against the banks in the United States. Until it was disturbed by the government, the banking system of the United States was at least as good as that of any other commercial country.

“Now, supposing it true that men have bought much land. What right has the president to dictate to the citizens of this country, whether they buy too much land or too much broadcloth? They might be permitted to know and to manage their own concerns quite as well as he does, leaving the evil, if it be one, to correct itself by its own excess, &c.

“These troubles,” continues Mr. Biddle, “may not, however, be wholly useless, if we extract from them two great lessons. The first is, that we can have no permanent financial prosperity, while the public revenue is separated from the business of the country, and committed to rash and ignorant politicians, with no guides but their passions and interests. I have little doubt that the specific order is the revenge of the president upon Congress for passing the distribution law. I have less doubt that the dispersion of the revenue among a multitude of banks was to advance the obscure aspirations of some treasury Cæsar.

“The other lesson is—one a thousand times repeated and a thousand times forgotten—to distrust all demagogues of all parties who profess exclusive love for what they call the people. For the last six years, the country has been nearly convulsed by efforts to break the mutual dependence of all classes of citizens—to make the labourer regard his employer as his enemy, and to array the poor against the rich. These trashy declaimers have ended by bringing the country into a condition where its whole industry is subject, far more than it ever was before, to the control of the large capitalists—and where every step tends inevitably to make the rich richer, and the poor poorer.”

Mr. Lee observes, “By such representations as are here made by the ex-president of the United States Bank, the political party, who were desirous of overturning the administration, in order that their leaders might occupy the places that were then filled by their opponents, were made to believe that the monetary troubles, which began to be seriously felt in 1834, were caused almost wholly by the action of the government.

“In respect to what Mr. Biddle has said about ‘the demagogues of all parties,’ comprising, perhaps, a large majority of the men in power, and possibly a still larger portion of those who are seeking to displace them for the sake of obtaining their offices, few persons, we imagine, would contest the correctness of his description of their conduct and motives; for, independently of their own observations of passing events, and of the sentiments and acts of public men, great reliance may be placed, one might conceive, on the judgment of a man of Mr. Biddle’s shrewdness and observation, and whose experience in public concerns may have furnished him with extraordinary opportunities of verifying the truth of his remarks.

“Although one might be ready to fall in with Mr. Biddle’s opinions as to the importance of ‘distrusting demagogues of all parties, and rash and ignorant politicians, with no guides but their own passions and interests,’ yet that gentleman cannot be considered as a safe guide to the formation of opinions upon the causes which led to the suspension of 1837, and those which, in 1839 and 1841, succeeded that event. In commenting upon the ill effects of party ignorance, party spirit, and party venality, upon the general interests of the nation, Mr. Biddle could speak with an impartiality common to every independent and reflecting citizen interested in the prosperity and honour of his country, and who participated with that gentleman in the feelings of disgust and indignation which he has expressed at the meanness and immorality of that class of public men who are ready to desert or to sacrifice the great interests intrusted by the nation to their guardianship, to their own party and personal views, whenever they shall appear to them to stand in opposition to each other.

"The following extract from a communication of an experienced statesman, who has evinced more than common courage in the promulgation of wholesome but unpalatable truths to the people, and the rulers over the people, expresses opinions, coincident in some degree with those put forth by Mr. Biddle, in reference to the motives and conduct of party politicians—a description of persons comprising, we suppose, very nearly the whole of that class of patriotic citizens who are now in power, or who have been in power, in the latter stages of our history, or who are likely henceforth to be in power; judging upon the principles acted upon, although not professed, by most of the prominent candidates for public favour:—

"As our views of expedient action for the future might (says Mr. John Q. Adams in a letter to a correspondent) in a great degree depend upon the conclusions to which we have come upon the past, it is impossible that the measures which I should deem the only effective remedies for our complaints, should be acceptable to the ruling powers or the country. I am, and during a great part of my life have been, in a minority. It is the business of a majority to prepare and accomplish measures. It is too much the practice of minorities to expend all their energies upon devices to defeat the measures of the majority. *The question of right and wrong, so far as my experience goes, is of use to either party only for the purpose of making professions.*

"These are the reflections of a man of great abilities and of careful observation, who, for upwards of half a century, has been constantly engaged in the most important public employments that were within the gift of his own state and of the nation. These opinions are, no doubt, in accordance with those held by other intelligent and experienced persons, though, unfortunately for the good of the country, and equally so for the reputation of public men, they are too seldom manifested by those who, from the stations they occupy, are bound to proclaim to the nation the deficiencies, delinquencies, and corruption of their rulers.

"Having given Mr. Adams's views of the principle which governs the conduct of professing patriots and party politicians, we subjoin one other extract from the same communication, conveying some of his notions and feelings, in respect to the conductors of banks, who, by their imprudence, their ignorance, or their want of integrity, bring the institutions under their control into a predicament which renders it necessary or expedient for them to violate their duty to the country as administrators of the currency, although conferred upon them as a valuable privilege, and, at the same time, break the laws of the land, infringe the rights of property, and furnish an example to the country more depreciating in its effects to the standard of morals, than the act of suspension was to the currency of the country. 'The worst part of a suspension (observes Mr. Appleton in his pamphlet) is its moral effect on the community.' That is an assertion the truth of which, after the experience the public have had, few persons will call in question.

"We are now (says Mr. Adams, in referring to the suspension of 1837), in the midst of a national bankruptcy, occasioned by the insolvency of multitudes of individuals. We are told that all the banks in the United States have suspended specie payments—and what is the suspension of specie payments, but setting the laws of property at defiance? If the president and directors of a bank have issued a million of bills promising to pay five dollars to the holder of each and every one of them, the suspension of specie payments is, by one act, the breach of one million of promises. What is this but fraud upon every holder of their bills? And what difference between the president and directors of such a bank, and the skilful artist who engraves a bank bill, the fac-simile of the bill signed by the president and directors, and saves them the trouble of signing it, by doing it for them? The only difference that I can see in the two operations is, that the artist gives evidence of superior skill and superior modesty. It requires more talent to sign another man's name than one's own, and the counterfeiter does, at least, his work in the dark, while the suspenders of specie payments brazen it in the face of day, and laugh at the dupes and victims who have put faith in their promises."

In reference to some of the remedies which had been suggested for the purpose of overcoming the effects of the suspension, and restoring the currency to its natural and sound condition, Mr. Adams makes the following remarks:—

"I thought of this, as I thought of the dry dock, gun-boat, restrictive, and anti-navy system of Mr. Jefferson. It cost the country a terrible war to be delivered of that, but the nation was effectually cured of its hydrophobia. The war (1814) was a drastic-purge, but it effectually worked its cure. I fear that our present bankruptcy will need a more violent cure of alteratives, but the cure will come when the people are prepared to receive it. They are certainly not so now; they will most probably not be so during the remainder of my term of life. I hope you will live to witness and enjoy the convalescence."

Mr. Lee observes:—"Now, as to the suspension of the banks, it was contended by the managers of them, that such an act was necessary for the salvation of the business community, and the stockholders of the banks; and had it been otherwise, that their condition was such as to render it inevitable. We admit the truth of these allegations, and find no fault with the directors of those establishments for having yielded to the force of circumstances which, situated, as they were, they had no power of resisting.

"But the question arises, how came the banks in a condition which rendered a violation of

their duties to their creditors, to their stockholders, and to the public generally, a necessary, an unavoidable measure? The answer is an obvious one. Because the conductors of most of the banks, for the gratification of their own purposes, and alike regardless of the safety and interests of their constituents, and of a just sense of their obligations to the public, chose—ignorantly, wantonly, or dishonestly—to conduct their affairs in disregard of, or in opposition to, those principles of currency, credit, and banking, which ought always to guide men clothed with the important trust which they had assumed. And what was that trust?

“But it is often said, in exculpation of the directors of banks which have been badly managed, that, as they receive no compensation for their services, it would be unreasonable to hold them to strict account for their mismanagement. The want of compensation may furnish a sufficient cause for the refusal of a trust, but will not be admitted as a valid one for the neglect or abuse of a trust when once accepted.

“But, the office of bank director has not usually been pressed upon persons reluctant to serve in that capacity. It is a situation desired by men of influence and character. ‘The directors of banks (says Mr. Appleton) are selected from those of the highest standing in the mercantile community.’ In this view of the case, the directorship of a bank is a mark of confidence in the judgment and honesty of an individual, which is a sufficient compensation to many persons who have held that important, responsible, and useful station—and the only one which many of them have received or desired—for services ably and faithfully performed.

“The office of bank director has been eagerly sought for, and too often obtained, by persons who, destitute wholly of property, or having an insufficiency of it to carry on their enterprise, and schemes, were desirous of gaining the control of the capital of others. The necessary effect of having for the managers of banks men so circumstanced, and whose sole purpose it was to use the property intrusted to them for safe investments, for the prosecution of their own plans, was to throw upon the stockholders whatever losses might be incurred, while the gains, if any, would go into their own pockets. It is obvious, that a copartnership, where one partner has all the gain, while the other party bears all the losses, must always terminate injuriously, if not ruinously, to the lending party.

“Now, if there are persons who distrust the correctness of what has been asserted in regard to the abuse of confidence and power of a portion of the directors of banks, and the injurious results flowing therefrom to their constituents, we would refer them to the numerous reports of investigating committees, who, for the past thirty years, have been employed in searching into the condition and management of banks. Such an inquiry would show that the principal source of loss of bank capital may be traced to loans made to directors, and to their friends and connexions, upon improper and insufficient securities—upon lands, houses, ships, railroads, canals, stocks, and other kinds of property, or titles to property, which are generally inconvertible, and always so in a money pressure, when the wants of a bank require their immediate conversion into money.—Secondly, upon *accommodation notes or acceptances*—resting on nothing but the mere promises of the borrowing parties. Notes created and tendered to a bank—not for the purpose, as in the case of *business paper*, of anticipating the receipt of capital already in existence, but for the purpose of obtaining possession of the capital of the bank proprietors upon a mere piece of paper—founded, not upon capital passing between buyers and sellers, but on promises passing between borrowers and endorsers;—this fictitious paper is seldom resorted to except where the party using it is without capital, or having some capital has, in his operations, gone beyond his capital, and beyond his credit, everywhere but in the bank where, from his official influence and power, he is allowed to borrow without securities or without credit.

“We will not go the length of maintaining that loaning the capital, the credit, and the deposits of a bank, on the two classes of notes and securities referred to, is a fraud upon the stockholders and the public, because the usages of banks, under the direction of men of tried and unquestioned integrity, have given a sanction to the practice. Nevertheless, it is, we apprehend, a practice opposed to all sound and safe principles of banking—and the ill consequences experienced from its exercise, in this country, from the origin of the banking system to this day—have shown its unsoundness and its insecurity.

“It is no justification, to say, and to prove that accommodation notes may be as safe as notes founded on business transactions. It is admitted, that on our Exchange there are hundreds of individuals whose single promises might, and for a long period of credit, be considered as perfectly secure; whose promissory notes, without an endorser, would command more money than any state stocks in the union—and more than the United States stocks actually sold for till within six months. The objection, however, to discounting on paper of this description, is not to be overcome by showing its solidity in particular cases—although, we will add, that, under no circumstances would it be creditable to men in such high credit as we have imagined, to tender, to a bank, notes of that character, since it would be wholly unnecessary as a mode of obtaining money—and at the same time it would be requiring a bank to violate a sound principle—affecting the safety of property—which it is important to property men to maintain inviolate.

“The objection, then, to the practice in question, lies in the abandonment of a safe principle, and

one which, if disregarded in one instance, would be likely to be infringed in another case; or else bring upon an institution the charge and the odium of injustice or partiality. If mere safety in particular cases of individuals were to furnish a rule of action, why not loan upon mere verbal promises of highly responsible persons? It would not be from an apprehension of insecurity, since, in all the great Atlantic commercial cities, there are numerous individuals, whose verbal promises, recorded in a memorandum book at the bank, would command more money, at a given term of credit, than many of the notes of directors of banks—which pass freely at their own boards—although they should be covered with endorsers of the quality of the promissors. No intelligent man will dispute the correctness of that assertion; yet it would be inexpedient and improper for a bank to invest its capital and its credit, or any portion of them, in such recorded promises, although it would not be worth one-tenth part of the sum to guarantee their payment, which would be demanded to guarantee millions of business paper, or one-thousandth part of the premium which a prudent and intelligent person would require to insure the greatest portion of the accommodation paper discounted at most of the banks through the union between 1833 and 1842.*

"Matters," says Mr. Lee, "are differently managed in the banking institutions of this country from what they appear to have been in the Bank of England. The directors of many of the banks in the United States have been deeply concerned in speculations in the shares of the banks under their control, and in many cases without having been possessed of sufficient capital, or any capital of their own, to sustain the losses which may have resulted from those stock operations, or from any other transactions carried on with the money borrowed from banks upon insufficient or worthless securities.*"

"A very large proportion of the managers of banks seek the office for the sake of being in a position where they can borrow more money, and on more favourable terms, than they

* The president of the late United States Bank, Mr. Nicholas Biddle, in a communication before the public, makes the following remarks:—

"Banks are often directed," says this experienced banker, "by needy persons, who borrow too much, or by sanguine persons anxious only to increase the profits, without much pecuniary interest or personal responsibility in their administration. The constant tendency of banks, therefore, is to lend too much, and to put too many notes in circulation. Now, the addition of many notes, even while they are as good as coin, by being always exchangeable for coin, may be injurious, because the increase of the mixed mass of money generally occasions a rise in the price of all commodities.

"If a bank lends its money on mortgages or stocks, for long terms, and to persons careless of protests, it incurs this great risk, that, on the one hand, its notes are payable on demand, while, on the other, its debts cannot be called in without great delay—a delay fatal to its credit and character. This is the general error of banks, who do not always discriminate between two things essentially distinct in banking, a debt ultimately secure, and a debt certainly payable. But a well managed bank has its funds mainly in *short loans* to persons in business—the result of business transactions—payable on a day named, which the parties are able to pay, at any sacrifice, in order to escape mercantile dishonour. Such a bank has its funds, therefore, constantly repaid into it, and is able to say, whether it will, or will not lend them out again.

"Banks are the guardians of the currency, the depositories of the coin—and every feeling which can appeal to their own honour, as well as to their public duty, should urge them to maintain their credit at the sacrifice of their profits. To the Bank of the United States such considerations specially apply; but as that institution has set the example of the restriction, it forms naturally the principal subject of reproach among those who complain."

Again—after describing the process of correcting, through the operations of the banks, the evil tendencies and effects of a redundant currency, Mr. Biddle adds:—

"Such is the circle which a mixed currency is always describing. Like the power of steam, it is eminently useful in prudent hands, but of tremendous hazard when not controlled: and the practical wisdom in managing it lies in seizing the proper moment to expand and contract it—taking care, in working with such explosive materials, whenever there is doubt, to incline to the side of safety. These simple elements explain the present situation of the country. Its disorder is over-trading, brought on by over-banking. The remedy is to trade less and to bank less."

"How much cause has the country to regret, that a man whose theoretical views of banking were so correct, did not always adhere to them in the management of the institution under his direction and control? Mr. Biddle refers to the complaints against the restrictive measures of the Bank of the United States, coming, no doubt, from the local banks, whose operations would thereby be restrained—and he justifies the course the United States Bank had taken. Now, in reference to the returns of that bank, we find the following facts:—

otherwise would be able to do, and at the same time have an opportunity of accommodating their friends and dependents. This, in a country where money is frequently worth two or three per cent per annum beyond the bank rate of interest, and occasionally a much higher rate, is a strong inducement for men transacting a heavy business on a small capital, and in numerous instances merely on credit, to endeavour to obtain the

		dollars.
Loans.....		33,682,905
Circulation.....		9,855,677
Deposits.....		14,947,330
Coin.....		6,170,045

"The currency of the country, including the issues of the United States Bank, could not have exceeded 55,000,000 dollars of bank-notes—and the deposits may have been 45,000,000 dollars or 50,000,000 dollars: There are no returns published for that year, but as the circulation and deposits, by Mr. Gallatin's estimates, amounted, in 1830, to only 119,000,000 dollars, the inference is—since the currency of the country was not in a state of expansion—that the bank liabilities did not exceed 100,000,000 dollars, or 105,000,000 dollars.

"Now, if the currency could have been maintained at the point it was established, when Mr. Biddle thought it expedient to exercise his restraining power over the local banks, the country would have been saved from the immense injury, suffering, and disgrace, inflicted upon it by the subsequent over-issues and long loans of the banks.

"But, did the subsequent conduct of Mr. Biddle evince an adherence to the sound principles and the prudent course which he had, in the communication referred to, prescribed to himself and to others, intrusted—as he well remarks—with the guardianship of the currency? A reference to the returns of the Bank of the United States, furnishes a reply to that question.

"The liabilities and loans of the United States Bank, in 1828, the date of the publication of the letter from which extracts have been made, and which has always been ascribed to Mr. Biddle, have already been stated. The bank at that period, and for two years subsequently, appeared, by the returns, to have been carrying out the views presented to the public in Mr. Biddle's disquisition upon currency and banking. The returns after that time show a sudden and enormous extension of operations, as will be seen by the following figures:—

BANK RETURNS.	1830	1831	1832	1833
	dollars.	dollars.	dollars.	dollars.
Loans.....	40,663,805	41,032,057	66,293,707	61,695,913
Circulation.....	12,924,145	16,231,267	21,355,724	17,518,217
Deposits.....	16,045,780	17,297,041	22,761,434	20,347,740
Coin.....	7,608,076	10,508,040	7,038,023	8,951,847

"If the returns of 1828, when Mr. Biddle wrote his essay, be contrasted with those of 1832, the result will show, in a striking manner, how entirely all prudent considerations had been forgotten or disregarded by the conductors of the bank:—

BANK RETURNS.	1828	1832
	dollars.	dollars.
Loans.....	33,681,005	66,293,707
Circulation.....	9,855,677	21,355,724

Deposits.....	10,354,500	19,119,348
Coin.....	1,360,291	2,037,508

"The banks in most of the states made corresponding movements. The aggregate returns of all the banks, exhibiting the following results, show the extravagant, the insane movements of the banks, during which period prices of every commodity rose; first, from the effects of an augmen-

appointment of a bank director; and that being once effected, the situation may generally be held as long as will suit the purposes of the elected, or as the bank may happen to continue in existence. In cases where persons who are desirous of borrowing largely fail of being elected into an establishment already existing, it is not uncommon for them to found banks, in which they contrive to have the command of the elections, and when once incorporated they sell out their own shares in the corporation, purchased with borrowed money, and thus accomplish the object they have in view, namely, to get the control of the capital of the stockholders, who may have subscribed for shares with an intention of holding them as a permanent investment. Even in banks established on better principles, 'the direction,' says Mr. Gallatin, 'must necessarily be placed in the hands of a few men, who have comparatively but little interest in the bank. Most of them are selected amongst men in active business, in order that they may judge of the solidity of the paper offered for discount; and as they are not paid, it is impossible to expect that they should attend without deriving some compensation for the sacrifice of a portion of their precious time. This may consist in part of the discounts they obtain for themselves, which may always be kept within reasonable bounds. But the power and consideration attached to the office, can only be obtained by granting favours; whilst, on the contrary, refusal renders the directors unpopular. To this may be added a want of moral responsibility.'

"Take the opinion of another writer upon banking, Mr. Nathan Appleton.—From one of his pamphlets, we extract the following passage: 'It has not been uncommon for

tation of money as compared with exchangeable commodities; secondly, in consequence of a spirit of speculation and gambling, which will generally, if not always, follow and accompany such an expansion of credit and currency:—

BANK RETURNS.	1830	1837
	dollars.	dollars.
Bank liabilities	116,883,826	276,583,075
— loans	200,431,214	525,115,709
Capital	145,192,268	290,772,091
Coin	22,114,917	37,915,310

"Of this immense amount of loans, there is reason to believe, from the facts which have been brought to light by developments of the affairs of banks, that by far the largest proportion were made to men of bold enterprise, or, more commonly, to reckless speculators and unprincipled gamblers, who were trading, not upon capital, nor upon credit to which they were entitled, but upon the ignorance, credulity, or upon the fraudulent compliances of unfaithful and dishonest managers of banks. The largest portion of the unbankable, doubtful, and worthless securities which the banks discounted at the period referred to, were probably for the account of the officers and directors of banks, and their relations, friends, and associates.

"Of the two classes of favoured borrowers of bank capital and bank credit, a very large majority have failed of success, or were utterly ruined; and the bank stockholders, who had furnished them the means of doing business, were, of course, sufferers to the extent of the support given them. Such has been the manner in which the capitals of banks, in a majority of cases, have been disposed of. Nor is there any reason, suggesting itself to our mind, why they should not hereafter pursue a similar course, so long as the proprietors of bank capitals confide the care and management of them to persons who, from the position they are placed in, have an interest, to thus mismanage them, too powerful, judging from the past conduct of bank directors, to be restrained and over-ruled by considerations of duty to their constituents, the corporators, or, to the public, who have an interest in the safety and solvency of banks as holders of their paper issues.

"'Banks,' as Mr. Gallatin has told us, and it should never be forgotten, 'are governed rather by borrowers than lenders;' and, as we will add, the principal borrowers of banks, especially in a money pressure, are the directors of banks and their relatives, friends, and dependants. 'It is believed, that in all cases,' says Mr. Nathan Appleton, 'of bank failures in Massachusetts, the failure of the principal stockholders and directors has accompanied, or preceded, the failure of a bank.' 'Banks are too often directed by needy persons, who borrow too much, or by sanguine persons anxious only to increase the profits, without much pecuniary interest or personal responsibility in the administration. The constant tendency of banks, therefore, is to lend too much, and to put too many notes in circulation.' This is the opinion of Mr. Nicholas Biddle, and his experience of bad banking has been large enough to enable him to form a correct judgment on the point in question.

banks to have been gotten up, with a view to furnish funds for private speculation, or the private use of the principal stockholders; or the same object has been sometimes accomplished by buying up a majority of the stock, so as to control the choice of directors.*

* "That there is a considerable amount of banking capital, belonging to persons of great wealth we know to be the case, and if, we would ask, if any one can doubt that they all regret having placed their confidence in those institutions? It is true, however, that those capitalists who have been directors of banks, or who have been so much in the current of business as to be well informed of the principles on which they are conducted, avoid bank stocks as unsafe for a permanent investment of property. If they depart from that rule, occasionally, it is by compulsion as it were. It arises from the difficulty, of finding any better mode of investing trust property, owing to the restraints legally imposed on guardians, executors, and trustees, as to the class of securities on which property intrusted to them shall be loaned or invested. But, under any other circumstances, we imagine that the prudent and foreseeing capitalists shun investments in bank shares, not that they would be dissatisfied with a moderate rate of interest, but because they are afraid of losing their capital. 'It is a well known fact,' says Mr. Appleton, 'that the most intelligent and knowing capitalists avoid bank stock as an unprofitable investment; they can manage their funds better. An examination of the lists of stockholders in the large banks will show, that a very great proportion of the stock is the property of minors, widows, single women, and of charitable and religious societies, a class of persons and institutions entitled to the especial protection and care of government, rather than to be made to support the burdens which properly belong to others who are more able to take care of themselves.'

"These remarks were made in 1831, since which period the stockholders of banks have lost a much larger sum, by the mismanagement and the misconduct of bank directors, than the entire banking capital of the country, as it stood by the returns coming down to the close of the year 1830. What may remain of the wasted and impaired capitals of the 901 banks is a matter of uncertainty. There can be no doubt, we conceive, that a considerable portion is invested in state stocks, lands, mortgages, accommodation notes, and other uncertain securities—always difficult of realisation, and in a money pressure (which, as the bank managers are now proceeding, will sooner or later overtake them), are likely to become greatly depreciated or utterly worthless.

"The highest return of bank capital gave the enormous sum of 358,412,692 dollars. This was at the close of 1839. Now, as there had been a great number of bank failures previous to that time, the stockholders could hardly have failed losing some 30,000,000 dollars, or 40,000,000 dollars, between 1833 and 1839, by outright and ascertained bankruptcies.

"What may now be the actual value of the bank capital of the country, there is no means of ascertaining from any official statements before the public; but from a careful research into such returns as have been made and published, we should venture to say, that its market value, on the 1st of January, 1843, at the time the currency was in a sound state, and the spirit of speculation and gambling in stocks had not been revived, did not exceed 200,000,000 dollars to 225,000,000 dollars.

"If this be a correct view of the matter, or one approaching to correctness, then it follows, that the proprietors of bank stock have lost by bad banking, between 1833 and 1843, the enormous amount of from 163,000,000 dollars to 198,000,000 dollars.

"The author of this pamphlet, Mr. Isaac Bronson, pointed out the causes of the embarrassments in which the whole country was involved. Some of his remarks upon that point have already been cited, to which the following are added:—

"Just anterior to the prostration of business our manufactures and commerce were greatly extended, and conducted *mainly on credit*. Individuals and companies, with little or no capital, were often found to employ tens and hundreds of thousands. These borrowed means were supplied by the immense amount of paper currency furnished by the banks which had been established in the United States. The banks on the one hand and the men of business on the other, considered it for their respective interests to employ the greatest possible amount of paper money. As the profits of the banks were proportional to their discounts, and these were done by the issuing of paper, it is very obvious, that there would be a constant tendency to excess. This would be restrained by nothing but the necessity of redemption. But unless an adverse balance of trade, requiring remittances to foreign countries, or some other exigency out of the course of domestic business, should create a demand for specie, none would be exacted. Paper, being the more convenient currency, would be preferred in the common exchanges of trade, and the gold and silver would repose in the banks.

"In referring to the abandonment of the principles laid down by Mr. Biddle for the government of the bank over which he presided, we are far from ascribing to the course pursued by it, however imprudent or culpable it may justly be deemed, that extreme degree of importance which has been given it, by many of the local banks, and party politicians—in both cases influenced by hostility to that institution.

It is obvious that banks so situated, furnish a very unsafe circulating medium, since the solvency of the bank depends on the success and solvency of the principal stockholders, who, in such cases are usually the directors. It is believed, in all cases of bank failures, in Massachusetts, the failure of the principal stockholders and directors has accompanied or preceded the failure of a bank. The great point, therefore, to be guarded against, is the liability of banks to fall into few hands, to be used for their private speculations.

"Mr. Gallatin says, 'Of all the causes, however, which contribute to an improper extent of discounts, the most general and efficient, the most prolific source of the errors of bank directors, is the natural sympathy which they feel for men who are engaged in similar pursuits to their own. It may, upon the whole, be affirmed, that banks, though money lenders, are, in fact, governed rather by the borrowers than by the lenders.'"

"But we have no belief that Mr. Biddle, whatever may have been his disposition and his wishes, could, with the exercise of his admitted talents, and his skill in banking, have prevented the 901 local banks from extending themselves, sooner or later, and to a degree which must, in spite of the controlling power of the United States Bank, have brought the country to a suspension of payments.

"All the banks in the country were in favour of free issues, long credits, and free trustings, upon every species of security; and, above all, in favour of high prices. The business community concurred with the banks, and the whole country was deluded with the notions of John Law; that an advance in prices, from an increase of money, is equivalent to an augmentation of wealth corresponding to such an augmentation of price. From that delusion the country could only have been awakened by the re-action of the system, which we first experienced in 1837. Even with all the suffering accompanying and following that event, the nation at large have gained but little insight into the true causes of our troubles.

"The nation was persuaded by party men, and by the managers of banks, who had an interest in misleading them, or were, perhaps, in many instances, themselves misled by their own ignorance, to believe that what was caused by an overflow of currency, and an extravagant extension of the credit system, was the effect of the political measures of the government. They were further persuaded, that the only remedies for the pecuniary evils under which the country was labouring were, first, to remove the men in power, and fill the vacated places by persons who were in pursuit of official power and public support; secondly, to re-establish the credit of the 901 banks—a considerable portion of which were then, as events have since shown, in a state of insolvency; and, by further emissions of paper money, raise the fallen prices of commodities to the rates they bore from 1834 to 1837, when the currency was in excess, and constantly in a state of expansion.

"The remedies which had been recommended for the cure of our difficulties were adopted. The credit of the suspended and the ruined banks was restored. The country was blessed with increased issues of money, and with a transference of political power to other hands, followed, as might have been expected, by further revulsions and suspensions. It was, however, not till the final suspension of 1841, that the conductors of banks would admit, or the deluded public believe, that the primary and operative causes of the pecuniary difficulties and sufferings of the nation, and that, too, in the midst of abundant crops and all other means and signs of increasing wealth, might be traced to the receding movements of an exuberant currency; and the contraction of an extravagant and unwholesome system of bank credits and mercantile trustings, created and supported by the same class of persons who caused an extension of the bank machinery, and for similar purposes—namely, in order to take advantage of the ignorance and credulity of the public, for the promotion of their own pecuniary purposes; and from similar motives, will the same system be upheld and supported by that description of persons, so long as it will be endured by the country."—*Letter to Cotton Manufacturers.*

"If Mr. Biddle had acted upon those sound and conservative notions which have been promulgated by Mr. Gallatin, Mr. Gouge, Mr. C. C. Biddle, and by himself, to some extent, in the early stages of his career, he would have been cried down from one end of the country to the other, as a cold-hearted theorist—a visionary dreamer, who, having the power to make money plenty—credit a substitute for capital—and bold enterprise and inconsiderate rashness to stand in the place of prudent foresight and honest industry;—he would, we repeat, have rendered himself odious to men of all classes and parties, and especially to nearly all the conductors of the local banks—as a man possessed of the power of enriching every body, and yet withholding its exercise to gratify the theoretical notions of a philosopher.

"There was a time when Mr. Biddle acted, according to the views of Mr. Gallatin, with great prudence and judgment, but he was never less popular among men of influence engaged in trade and in banking than while so conducting his concerns. Such was, also, the feeling in regard to his

" Now, the gentlemen whom we have cited are not unfriendly to banks, nor can they have any motives to put them to a disadvantage with the public by a misrepresentation of facts. Mr. Gallatin, in common with the best writers on currency, is, to be sure, what he himself; in his correspondence with Mr. Robert Walsh, calls an '*ultra-bullionist*;' but believing that the nation are not yet ready for a currency in that state of perfection, he has made great efforts to correct the evils of the present system. It is to be regretted, that the excellent advice he has given, and the sound principles he has laid down in his pamphlets, have not been followed. Nevertheless, his labours through the press, and his personal influence and authority over the intelligent merchants of New York city, where he resides, have not been wholly lost. Mr. Gallatin, as is well known,

predecessor, Mr. Langdon Cheves. He restored the bank from a state of confusion and discredit, to a high degree of credit; but having done that service, he was complained of as too illiberal, too unenterprising, too conservative in his loans and issues, for the support and extension of the great interests of the country. This gentleman, whose conduct, while presiding over the concerns of the bank, merited the highest praise which has been bestowed upon it, was by no means *popular*; and although a man of too high a sense of character to be driven from his post by such a consideration, he resigned his office after four years' service, from disgust at the inability, or the disinclination, of the stockholders and the public, to give him that support which was necessary to enable him to persevere in the prudent, salutary, and honest course he had constantly pursued during his presidency.

" Mr. Cheves, in the management of the important trust confided to him, evinced the same independence of mind, and the same integrity of principle, that he had shown as a legislator, while a member of Congress, at an eventful period of our history; and though he may, in both instances, have parted with some portion of his popularity, he gained—what to men of elevated, just, and generous views, is of infinitely more value—an increase of reputation. ' Under the administration of Mr. Cheves,' says Mr. Appleton, ' by whose energy the United States Bank was barely saved from stopping payment, the currency was restored to its true character, by a rigid system of contraction, but accompanied with intense public suffering; which was, indeed, unavoidable, but made the bank and Mr. Cheves exceedingly unpopular in extensive portions of the country. It was during this period that many of the states attempted to expel the bank from operating within them, by taxing the branches, and by other modes of coercion.'

" In what a striking and melancholy contrast does the conduct of Mr. Cheves appear—under strong temptations, as a public man—to that of multitudes of ambitious, but low-minded and venal demagogues, with which the nation has been, and still is, afflicted? Some of whom, although in possession or in pursuit of the highest class of offices in the country, traverse the most sacred principles, under the slightest temptations, and with as much facility, and as little sensibility to shame, as is evinced in the indecent and mercenary gyrations of the most shameless of the public performers.

" The condemnation, on the part of political partisans, of the proceedings of the United States Bank, with whom it mostly originated, was *feigned*—because, at the moment they were contending against it, many of the leading persons among them were the managers of the local banks that were conducted on the most imprudent and dishonest principles, resulting in an entire loss of the capitals of some of them, as well as a heavy loss to depositors and bill holders. This was eminently the case in regard to some of the banks in Boston and its vicinity, as the stockholders, bill-holders, and depositors can unhappily testify.

" Again, as respects the policy of having a national bank; there was, to all appearances, no *sincere opposition* to the principle involved in the existence of such an institution, as fiscal agent of the government, and as a conservator of the general currency of the country."

Even President Jackson, with all the hostile feelings which he has evinced against the late United States Bank, was not opposed—to a bank. In his message, vetoing a renewal of the charter of that establishment, he thus expresses himself:—

" That a Bank of the United States competent to all the duties which may be required by the government, might be so organised as not to infringe on our delegated powers, or the reserved rights of the states, I do not entertain a doubt. Had the executive been called upon to furnish the project of such an institution, the duty would have been cheerfully performed. In the absence of such a call, it is obviously proper that he should confine himself to pointing out those prominent features in the act presented, which, in his opinion, make it incompatible with the constitution and sound policy."

That a large majority of the leading partisans of both political parties were, also, in favour of a national bank, was shown to be the fact, by the large majorities in Congress which, in the face of the strong objections of the executive, and in spite of his popularity, voted for a renewal of the charter.

acted a conspicuous and efficient part, in hastening the general resumption of cash payments in 1838, in which the city of New York took the lead.

"The suspension took place in New York, May 10th, 1837; and the resumption was effected in that city, and in the New England States, early in May, 1838, and in most of the other states in the three following months.

STATEMENT of the Condition of the Banks of the Union, according to Returns dated May, 1837 and 1838.

DESCRIPTION.	May, 1837.	May, 1838.
Bank loans.....	dollars. 521,331,364	dollars. 479,264,934
Ditto circulation.....	126,416,087	126,149,903
Ditto deposits.....	109,153,481	85,608,837

"Here is a very slight reduction in loans and liabilities, as compared with the returns of 1837. If we are guided by Mr. Gallatin's estimates of a sufficiency of bank paper, there should have been a curtailment of upwards of forty per cent in the bank issues to place the currency of the country in a natural, and, to borrow his phraseology, in a 'HEALTHY SITUATION.'

"The following extract from a speech of Mr. Webster exhibits his views of the destructive consequences of an ill-regulated and depreciated currency upon the interests of the labouring classes, and especially of that portion of them who have little else to rely upon than their daily wages. 'The currency of the country,' says Mr. Webster, 'is at all times a most important political object. A sound currency is an essential and indispensable security for the fruits of industry and honest enterprise. Every man of property or industry, every man who desires to preserve what he honestly possesses, or to obtain what he can honestly earn, has a direct interest in maintaining a safe circulating medium; such a medium as shall be a real and substantial representative of property, not liable to vibrate with opinions, not subject to be blown up and blown down by the breath of speculation, but made stable and secure by its immediate relation to that which the whole world regards as of permanent value. A disordered currency is one of the greatest political evils. It undermines the virtues necessary for the support of the social system, and encourages propensities destructive of happiness. It wars against industry, frugality, and economy; and it fosters the evil spirit of extravagance and speculation. *Of all the contrivances for cheating the labouring classes of mankind, none has been more effectual than that which deludes them with paper money.* This is the most effectual of inventions to fertilise the rich man's field by the sweat of the poor man's brow. Ordinary tyranny, oppression, excessive taxation, these bear lightly on the happiness of the mass of the community, compared with fraudulent currencies, and the robberies committed by depreciated paper. Our own history has recorded, for our instruction, enough, and more than enough, of the demoralising tendency, the injustice, and the intolerable oppression, on the virtuous and well-disposed, of a degraded paper currency, authorised by law, or in any way countenanced by government."

Mr. Lee very forcibly exposes a fallacious argument in favour of the existing monetary system of the United States, and says—

"It may seem superfluous to add, that down to this period of time, notwithstanding what has happened in reference to our pecuniary difficulties, the public have been satisfied of its soundness and its sufficiency—or they would not have continued to endure the system.

"This country has prospered in a higher degree than any other country.

"The currency consists almost entirely of paper promises, created without limits by banks, and administered by banks, without control, or without accountability;—therefore the monetary system on which the country has acted, and is now acting, is the cause of its unexampled prosperity.

"This is the reasoning process by which the country—by which a nation of 18,000,000 of people claiming more than a common share of general cultivation and

knowledge—have been persuaded—perhaps, we may rather say, *led*—not only to tolerate and endure, but to support and encourage a system which, whatever appearances may indicate to the contrary, has been productive of an enormous amount of pecuniary and moral evil.

“That the country has prospered—and that banks and paper promises have existed—are truths too evident to be denied; but the admission of the truth of these assertions does not necessarily imply a belief in the truth of the inference drawn from that admission.

“That the premises of these reasoners are true, it is admitted, but to establish their conclusions upon a sure foundation, it must be shown that what they term *cause*, is any thing more than a mere *coincidence*. This, so far as we have in remembrance the essays of the most ingenious advocates of the system, has never been attempted. They have relied on the ‘*argumentum ad ignorantiam*,’ and the ‘*argumentum ad populum*.’

“The inconclusiveness of the reasonings on the subjects of banking and currency to which reference has been made, may be illustrated by a case where its fallaciousness and absurdity will be made manifest to the most uninformed and the most unreflecting mind.

“The lands bordering on the river Nile, in Egypt, are remarkable for their fertility.

“The pyramids are near the banks of the Nile; consequently, the pyramids are the *cause of the extraordinary fertility of the lands on the borders of that river*.

“Here is an instance where the facts are so notorious, or so accessible—namely, that the extraordinary fertility of the land in question arises—not from the presence of the pyramids; but from the overflowing of the Nile—that no one could be deceived, or long remain ignorant of the true cause of that fertility; consequently, the falsity of the reasoning which attributes the quality of the soil to another cause, is instantly perceived and refuted.

“Nevertheless, in spite of the supposed power of the reasoning faculties over the opinions of men, is there any one who will doubt, after what has been seen in this country, that Mehemet Ali, if he were to summon his followers to a caucus, convention, or to a mass meeting;—is there, we repeat, any doubt that this friend of the people, with his priests and politicians, if he had any point to carry, favourable to his own views, and prejudicial to the welfare of his subjects, that he could demonstrate to their minds the unreasonableness of attributing the productiveness of the soil to the effects of the river inundations? Is there any doubt—on the supposition that the leading politicians and statesmen of Egypt are as remarkable for their extensive knowledge and their great logical powers, as have been evinced by many of our great men, on the questions of political economy—that the people might be prevailed upon to drain off or fill up the Nile—and to cover the country with pyramids, in order that the whole land might enjoy the fertilising effects which they had shown to have been caused by the pyramids already existing in the vicinity of the Nile?”

To the absolute measures of President Jackson, for they were as much so as if the spirit of Napoleon had directed them, has been imputed the ruin of the bank of the United States. The *prestige* which it possessed in public opinion as the deposit bank of the United States revenue, vanished immediately after the president transferred those deposits to the respective state banks. But its downfall could not be prevented, even by the most skilful management of the most influential, as well as most able of those who wielded the prevailing banking principles of the United States. Mr. Lee, speaking of this remarkable man, says:—

“Perhaps the most influential person in the United States upon the subject of banking is Mr. Nicholas Biddle; and though, from circumstances not necessary to detail, some of the influence and authority formerly exercised by him over the public mind may be diminished, yet the banking principles on which he acted are still those which are acted upon through the country—nor, as we have before said, could that gentleman have

retained his station at the head of the United States Bank, had he conducted its concerns on what might justly be considered safe and sound principles of banking.

"If the results of the operations of the United States Bank have been disastrous, so have been those of multitudes of smaller institutions which have not had so many obstacles to overcome and so many causes of embarrassment as a bank with an unwieldy capital and numerous branches—many of which were beyond the control of the parent bank. If the nation had been so unwise as to have established a third bank, with the enormous capital assigned to it in some of the schemes before the public, it is doubtful if the country would have escaped from the evil effects which must always flow from such an institution, without much more ruinous consequences than have been experienced from the mismanagement of the late United States Bank.

"In referring to Mr. N. Biddle's communications we go to the highest authority in the nation in support of the popular system of banking; and it is on his statements and reasons in defence of that system, that the prominent party men have leaned for their facts and arguments. This will readily be perceived to be the case on comparing their essays and speeches with his various writings upon the subject, except in some instances, where Mr. Biddle maintained doctrines in opposition to those which he has of late years advocated."

In a communication dated April, 1838, Mr. Biddle enumerated among other causes of the suspension, and it is the first which he put forward:—"The issuing of the specie circular, which forbade the receipt of any thing but gold and silver at the land offices."—In several of the speeches of Mr. Webster, the specie circular and its effects upon the currency, is the most prominent topic. In a debate upon a motion in the senate of the United States, to rescind the treasury order, on the 21st of December, 1836, Mr. Webster, in referring to the effects of that measure in preventing a flow of coin from the states where the proceeds of the lands were received, made the following remarks:—

"The agricultural state of Indiana, for example, is full of specie; the highly commercial and manufacturing state of Massachusetts is severely drained. In the mean time, the money in Massachusetts cannot be used. It is waiting for the new year. The moment the treasury grasp is let loose from it, it will turn again to the great marts of business; that is to say, the restoration of the natural state of things will begin to correct the evil of arbitrary and artificial financial arrangements. The money will go back to the places where it is wanted," &c. &c.

Mr. Lec denies that the specie circular had any such effects, and says that—

"The state of Indiana is one in which the land sales were made to the largest extent—and on that account it was probably selected by Mr. Webster as containing a considerable portion of that immense amount of coin of which the Atlantic states had been deprived by the specie circular. That document was issued on the 11th of July, 1836, and was to take effect on the 15th of August, succeeding—and consequently it had only been in operation about four months, during which time the coin must have been accumulating from the proceeds of the land sales. The question now is as to the amount of coin on deposit for the account of the government in the state in question. To ascertain that fact, there are no documents to which we can refer; but by an official statement we find that the whole amount of coin in the banks of Indiana, in November, 1836, was 1,204,737 dollars. There are no other returns till May, 1837, when the amount was reduced 1,196,187 dollars. Here, then, is the immense amount of treasure, on the supposition that the whole of it belonged to the government, from which such great relief was counted on by Mr. Webster, had it not been retained in Indiana by the specie circular. But how could even this insignificant sum be spared from the banks of Indiana, or be obtained from them, when their liabilities amounted to 4,709,000 dollars?"

Mr. Lee then describes the condition of the banks of Ohio, Illinois, Michigan, Alabama, Mississippi, and Florida, and then concludes:—

“From banks in such a condition, it would have been impracticable to have withdrawn much of their exhausted supply of coin without causing an immediate suspension. Indeed, the universal suspension of 1837 commenced in that quarter. The banks of New Orleans suspended *previously* to those of the city of New York—although in a much stronger condition than the New York banks.

“The banks of Louisiana, all of which are situated in New Orleans, were under liabilities, in May, 1837, to the amount of 16,739,689 dollars, and had reserves of coin amounting to 2,327,851 dollars. The returns from the banks in the state of New York, at the end of May, 1837, show deposits of coin to the amount of 3,033,209 dollars, to sustain their liabilities of 38,862,551 dollars. But the superior prudence exercised by the New Orleans banks, in comparison with those of the state of New York, is more strikingly evinced by a reference to the following statement of their condition four months anterior to the suspension of cash payments:—

BANK RETURNS.	New York, January 1, 1837.	NEW ORLEANS, January 1, 1837.
	dollars.	dollars.
Bank capital.....	37,101,463	36,769,465
Circulation.....	24,198,000	7,909,788
Deposits.....	30,883,170	11,487,431
Coin.....	6,537,020	3,108,416
Loans.....	79,313,188	59,108,741

“If the banks of New Orleans, which were in a much stronger condition, as far as a reliance can be placed on official returns, than those of New York, could not withstand the pressure upon them, with 2,327,851 dollars of specie in their vaults, how could it be expected that the banks in the inland states, to which we have referred, and that were in no better condition than the New Orleans banks, could withstand a run upon them for all, or for any considerable portion, of their deposits of treasure?

“The desperate condition of the banks of the four principal commercial cities on the Atlantic, which we have supposed may have been reinforced by the reception of the whole amount of coin in the states and territories, where the proceeds of lands were collected, will be seen by the following statement. The returns of the Massachusetts banks come down to October, 1836, and of the other banks to 1st of January, 1837:—

P L A C E S.	Loans.	Circulation.	Deposits.	Coin.	Capitals.
	dollars.	dollars.	dollars.	dollars.	dollars.
Massachusetts.....	50,643,171	10,892,249	8,784,516	1,455,230	31,478,110
Maryland.....	14,986,447	3,310,835	4,840,477	1,130,347	10,438,655
New York.....	70,313,188	24,198,000	30,883,179	6,533,020	27,101,463
Pennsylvania.....	101,995,062	25,242,082	15,234,550	5,732,439	58,750,338
Total.....	232,938,508	63,613,166	59,742,822	14,904,030	140,768,566

“Here is an official statement showing the condition of the class of banks, which formerly were considered as being conducted with more skill, prudence, and success, than any of the numerous institutions in the country, and, perhaps, with the exception of the banks in the city of Philadelphia, that was a correct opinion. And the banks of Philadelphia, save the United States Bank, were in no worse a situation than those of the other cities we have named, till after the suspension of 1837, when they became embarrassed by a connexion with the Bank of the United States, and with the state of Pennsylvania, which has proved ruinous to their shareholders. Until that period, we apprehend that the banks in the city of Philadelphia, going back to the origin of banks, were managed with rather more prudence than those of any other city in the union. We believe an investigation into the comparative banking results of every city in the country, will show the correctness of that assertion. As a corroboration of that fact, if it be a fact, we should venture to say, that in no city of the union had the general transactions of business been conducted with more industry, caution, prudence, and probity, and with better results, especially in its great inland commerce, than in Philadelphia.

The bankruptcies have been few in comparison with those in most of the great marts of trade, and especially among that portion of its community who are engaged in the regular and staple branches of industry. The losses by failures, we have reason to believe, from long personal experience, and, still more, from inquiries among persons having ample means of judging, to the manufacturers and merchants of New England, on whose account an immense amount is annually sold in Philadelphia, are smaller, in proportion to that amount, than in any other place in the union, not even excepting the capital of Massachusetts.—*Letters to Cotton Manufacturers.*

In regard to the operation of the United States Bank, in regulating the currency of the country, it has been generally admitted that its affairs were often far less discreetly managed than were those of many local banks. Mr. Appleton says:—

“The great and difficult problem in a currency of bank paper, is the prevention of those fluctuations to which experience shows such a currency is liable, in a far greater degree than a currency composed wholly of the precious metals.” “Severe revulsions,” the same writer observes, “took place in 1826, 1829, and 1832, in which the Bank of the United States took its full share in the expansions which preceded them.”

Mr. Lee remarks—

“The removal of the public deposits from the United States Bank to the local banks was the reason assigned for the extremely severe pressure in the money market, which existed between the autumn of 1833 and the summer of 1834. The removal of 10,000,000 dollars of the public deposits, rendered it necessary that the United States Bank should contract her loans and liabilities, but such an operation, performed as it was, or which it might have been, upon the previous notice given of such an intended transfer of the public funds, would not have caused any great inconvenience to the trading community, had not the United States Bank been placed in an insecure position by her previous over-issues and excessive loans. This assertion, namely, excessive issues of the United States Bank, does not rest upon conjecture, but on the official returns of that institution, as will be seen by the following statement:—

RETURNS.	1st of January, 1831.	1st of January, 1832.	1st of January, 1833.	1st of January, 1834.
	dollars.	dollars.	dollars.	dollars.
Loans.....	44,032,057	66,293,797	61,605,913	54,911,401
Circulation.....	16,231,267	21,353,734	17,518,217	19,208,379
Deposits.....	17,297,041	22,701,434	20,347,749	10,838,535
Coin.....	10,808,040	7,038,023	8,951,847	10,031,237

“The sudden and enormous extension of the liabilities and loans of the United States Bank, to the extent of fifty per cent on its loans and thirty-three per cent on its liabilities, within the period of one year, and, as may be seen by returns of the local banks, a somewhat, though a less extravagant, enhancement of their loans and liabilities—placed the currency in such an inflated condition as to have afforded a sufficient cause for the revulsion of 1834. It is true, the removal of the deposits hastened the measure of contraction which was the proximate cause of the pressure of 1834. If, however, the deposits had not been removed, either the contraction must soon have been made, or, by further issues of paper, such a measure would have been found unavoidable at a subsequent period; or, if otherwise, the universal bankruptcy of the banks which occurred in 1837, would have happened at a somewhat earlier period.

“But the statement we have furnished of the imprudent conduct of the United States Bank, while, according to the views commonly taken of the matter, that institution was regulating the currency and the exchanges of the country; the facts, we say, which have been adduced, discreditable as they are to the managers of a bank on which the country relied for its restraining power and its conservative principles—as respected the local banks—do not reveal the full extent of the folly and the imprudence of which that institution was guilty.

ments of these banks, was, in truth, a great and efficient *disturber* of their operations, more especially of the banks of New York and Baltimore, and above all the banks of Philadelphia.

"I am aware," says Mr. Van Buren, "it has been urged that this control (over the operations of the local banks), may be best attained and exerted by means of a national bank. The history of the late national bank, through all its mutations, shows that it was not so. On the contrary, it may, after a careful consideration of the subject, be, I think, safely stated, that at every period of banking excess it took the lead; that in 1817, and 1818, in 1823, in 1831, and in 1834, its vast expansions, followed by distressing contractions, led to those of the state institutions. It swelled and maddened the tides of the banking system, but seldom allayed or safely directed them. At a few periods only was a salutary control exercised, but an eager desire, on the contrary, exhibited for profit in the first place; and, if afterwards its measures were severe towards other institutions, it was because its own safety compelled it to adopt them. It did not differ from them in principle or in form; its measures emanated from the same spirit of gain; it felt the same temptation to over-issues; it suffered from, and was totally unable to avert, those inevitable laws of trade, by which it was itself affected equally with them; and at least, on one occasion, at an early day, it was saved only by extraordinary exertions from the same fate that attended the weakest institutions it professed to supervise. In 1837 it failed, equally with others, in redeeming its notes, though the two years allowed by its charter for that purpose had not expired, a large amount of which remains to the present time outstanding. It is true, that having so vast a capital, and strengthened by the use of all the revenues of the government, it possessed more power; but while it was itself, by that circumstance, freed from the control which all banks require, its paramount object and inducement were left the same—to make the most for its stockholders—not to regulate the currency of the country. Nor has it, as far as we are advised, been found to be greatly otherwise elsewhere. The national character given to the Bank of England has not prevented excessive fluctuations in their currency, and it proved unable to keep off a suspension of specie payments, which lasted for nearly a quarter of a century."—*Message*, 1839.

"Can any person having a common acquaintance with the subjects of currency and banking, be at a loss for a reason why there should have been a pressure on the money market arising out of such an enormous expansion of the loans and liabilities of this great institution, whenever it became necessary for its safety to make a reduction in its loans and liabilities? The imprudent conduct of this leading bank led to a somewhat corresponding over-banking in many, if not most, of the local banks. The primary and efficient cause, then, of the pressure of 1833 and 1834, arose from the enormous expansion of the loans and liabilities of the United States Bank and of the banks generally throughout the country, which rendered necessary a counteracting movement on the part of those banks to save them from a suspension of cash payments.

"The removal of the deposits, had the Bank of the United States been in a sound and safe condition, would not have disturbed the operations of that establishment, to any inconvenient degree, nor have placed the whole commercial community in a position which embarrassed or ruined an immense number of them; while that measure and its effect on the general monetary concerns of the country threw the general business transactions of the nation into a state of confusion and disorder that was productive of very injurious consequences.

"Notwithstanding the existence of these facts, which, however, were not, in 1834, generally known to the public, the monetary difficulties and embarrassments of that period were attributed by politicians, and generally by the mercantile community, wholly to a transfer of about 10,000,000 dollars from the United States Bank to some of the local banks in the places where that institution had its branches.

"But now that the facts are before the public—facts taken from the official returns of the United States Bank, which show its perilous condition previously to, and at the period of the removal of the public deposits—with such evidences, we say, of the folly and imprudence of that institution, it must, we conceive, be admitted by every candid mind, that the main, the effective cause of the monetary and commercial pressure which

existed between the autumn of 1833 and the summer of 1834, may be traced to the gross mismanagement of that establishment."—*Letters to Cotton Manufacturers.*

Mr. Lee, in remarking on Mr. Appleton's "Remarks on Currency and Banking," says,—

"Mr. Appleton, who, although a party man, in the proper and best sense of that term, is not the slave of a party, nor the tool of the leaders of a party, has argued the subjects of banking and currency upon their own worth, is among that, perhaps fortunately small body of persons who are pretty generally denounced by the true, well-drilled party men, for what they term a *pertinacious* adherence to sound doctrines and an honest policy, although convinced that they are not in unison with the current opinions of their political associates and personal friends; nor, what is of infinitely more importance, in accordance with the interests of their party.

"In some countries where the 'march of mind,' and the march of morals, has not been so rapid as in this enlightened and 'go ahead' federal republic, such evidences of intellectual independence and moral rectitude would be pardoned if not praised; but in a free, democratic country, whose citizens boast of a degree of liberty, and a species of liberty, heretofore unknown, nothing can be more unpopular than such a violation of party discipline, as is implied in the assertion of an opinion which runs counter to that of the party to whom one belongs. Such a mutinous proceeding is especially offensive, if the delinquent should be thought to be induced with an unusual share of moral and intellectual discernment, that would enable him quickly to distinguish, in difficult cases, truth from falsehood, and consequently who ought, upon party principles, to give the first example of party patriotism, by making the former subservient to the latter, whenever the interests of party, or of the party idols of the people, shall appear to require such a patriotic sacrifice of principle.

"Another argument most dwelt on (observes Mr. Appleton) in favour of a large national bank, is its necessity to equalise the exchanges. There is not much in this. There is no difficulty with the exchanges where the banks pay specie. There lies the whole difficulty. Let that be reformed, and there will be no complaint on that score. The exchanges soon regulate themselves where the currency is uniform, as is the legal currency of the United States. A large bank, with many branches, can manage the exchanges with *more profit to itself*, perhaps, than the local banks can do. The late United States Bank took care to charge the highest rates of exchange which the alternative of transporting specie would admit. For several years the exchange at New Orleans on northern bills was kept so high that considerable shipments of specie were made from Boston and New York for the purchase of cotton!

"When these remarks of Mr. Appleton's were written, the currencies of the whole country out of New York and New England, were in a depreciated condition,—and the nation was told, in thousands and tens of thousands of those instructive orations, delivered in Congress, in caucuses, and conventions, upon the currency question, that neither the currencies could be raised to their proper value, nor the exchanges brought to a par level, without the aid of a national bank—a central bank, which was to 'regulate the exchanges'—and how was it to be done? Why, by substituting acts of legislation, founded on the *wisdom of Congress*, for the *laws of trade*—laws emanating from a source for which legislators, as might seem from their sentiments, have usually shown very little reverence, and still less practical regard, in their legislative acts, upon the presumption that they are not wholly ignorant of the laws of trade, and all other laws, to which reflecting and honest men hold themselves accountable in the formation of these opinions and resolutions on which the actions of reasonable and reasoning beings are founded.

"In spite of the predictions of politicians and of bank managers, who, in most cases, concurred with them, or appeared to concur with them, the exchanges came round, namely, *came into their natural state*, as Mr. Appleton told his readers they would do as soon as cash payments were resumed."

Upon the same point, Mr. Gallatin, in the "Report of the Union Committee,"

of which he was the author, published March 18, 1834, makes the following remarks:—

“The threat of the removal of the deposits, and especially the actual removal, created apprehensions of danger, immediately to the bank itself, and more remotely to all the moneyed institutions and concerns of the country. Retrenchment at all, and rigorous enforcements of its claims at some points, were presumed to be indispensable to the safety of the bank; and the extent being conjectural, was exaggerated by timid capitalists, who, as a class, are more fearful than men of less wealth. Men saw that the relations between the government and the bank were henceforth to be hostile; that between it and the *selected banks* they were to be those of mistrust, and that without a national bank the stability and safety of the whole monetary system of the country would be endangered. This was the first instance in the history of our government of a direct interference of the president with one of its officers, in the performance of the duties which by law devolved exclusively on that officer. It was the more dangerous, as being in defiance of a solemn vote of the late Congress at their last session: and as if with the intention to forestall the opinion of that which must meet within sixty days after the interference was made, and as if to encroach on its legitimate rights.”

“If the facts which have been disclosed to the public, relative to the operations of that institution, had been before Mr. Gallatin when he drew up the report of 1834, he would, we conceive, have come to the conclusion that the enormous extension of the loans and liabilities of the bank must have soon forced upon it a large reduction of them, even if the deposits had not been removed. Or, if such a reduction had been protracted, the only effect would have been a general suspension in anticipation of that which actually occurred in May, 1837, in which the United States Bank would have led the way. It is admitted, that under Mr. Cheves' administration the bank was in a sound and safe position, and one from which she never should have materially departed, if it was the intention of the bank to be in a condition to prevent the over action of the local banks, and such always has been the professed purpose of that institution.

“Here is a comparison between the average returns of the bank for the years 1820, 1821, 1822, and 1823, the period of Mr. Cheves' presidency; and the years 1832 and 1833, the period preceding the monetary and commercial pressure that commenced towards the close of 1833, and continued till the summer of 1834:—

DESCRIPTION.	Average Returns, 1820 to 1823.	Average Returns, 1832 to 1833.
	dollars.	dollars.
Loans.....	40,032,057	63,994,810
Circulation.....	4,323,343	19,451,971
Deposits.....	7,340,203	21,534,891
Coin.....	5,055,517	7,894,945

“The loans in 1830 were 52,274,095 dollars; the circulation 12,924,145 dollars, and the deposits 16,045,782 dollars.

“It was this departure from all sound principles of action, which occasioned the transference of 10,000,000 dollars of deposits from the central bank to the local banks, to be so oppressive in its effects upon the business concerns of the country. It was also a like extension of its loans and issues in 1836 which, in connexion with the like overaction of the local banks, led to the suspension of cash payments in 1837. In 1836, the loans of the United States Bank, with a capital of 35,000,000 dollars, amounted to 59,232,445 dollars, and the circulation to the enormous amount of 23,075,422 dollars, being more than five times as large as the average amount of its issues during Mr. Cheves' administration. The same year, 1836, the banks of the six New England States, with an aggregate capital of 59,471,991 dollars, had in circulation 21,811,762 dollars, and yet her currency was in a redundant state, although, from the great money capital of this section, and the nature of its employments, a larger amount of currency is required to circulate its products, in proportion to its population, than in any other section of the union.”

Mr. Gallatin, in his publication of 1841, says:—

"It would be idle to inquire whether, if the charter of that institution (the United States Bank) had been renewed, and if it had been the sole place of deposit of the 40,000,000 dollars of public moneys, the suspension might have been prevented. That would have depended entirely on the manner in which the bank might have been administered.

"That institution had ceased to be a regulator of the currency as early as the years 1832, 1833, when its discounts and other investments were increased from 55,000,000 dollars to 65,000,000 dollars, that is to say, at the rate of eighty-five per cent beyond its capital; whilst those of the sound banks of our great commercial cities did not exceed the rate of sixty per cent beyond their capital. It is not necessary to inquire whether this expansion was the natural consequence of the course of trade; whether the Bank of the United States was in any degree influenced by considerations connected with its own existence; or whether the machinery carried away the directors instead of being governed by them. It is obvious, that it is only by keeping its discounts at a lower rate than those of the state banks, that these can be debtors; and that it is only by enforcing the payment of the balances that it can keep them within bounds, and thus regulate the currency. A contrary course will induce the state banks to enlarge their own discounts, and will engender excessive issues, followed by necessary contractions and unavoidable distress."

"The United States Bank had not only ceased, in 1832 and 1833, to be a regulator of the general currency of the country, as indicated by her excessive issues and excessive loans, but the affairs of that institution were, through most of its career, conducted with less prudence than those of the leading banks in the commercial cities. The existence of that bank was prejudicial in its effects, upon the currencies of all the Atlantic states, and especially upon the currency of Pennsylvania, most of which emanated from the banks of Philadelphia. It threw the business of the banks of that city into disorder, prior to the suspension of 1837, by encouraging an undue extension of their liabilities. It induced them, subsequently to that event, to encourage a continuance of the suspension of 1837, to suspend again in 1839, and to aid the United States Bank in its endeavours to constrain the banks of New York to join in that second act of suspension.

"To the banks of Philadelphia, as well as to the general business concerns of that city, the late United States Bank, both in the early stages of its history as well as in its latter days, has been a source of immense injury. 'Philadelphia,' says Mr. Gallatin, in his last work; 'had a sound capital, greater in proportion to its commerce than that of New York, or of almost any other city in the union; its banks proper were sound and cautiously administered; not one of them had ever failed. But they have for several years been pressed by two great evils—the United States Bank and the state legislature. They have at last got rid of the first burden, from which they ought to have detached themselves long ago.'

"It is true that the state of Pennsylvania has got rid of the United States Bank, whose operations, directly or indirectly, have been the main source of pecuniary embarrassments and losses to which the city of Philadelphia and the state of Pennsylvania have been subjected, beyond those which, under the vicious system of banking and currency on which the country is acting, must have otherwise fallen to her share. The Pennsylvanians have got rid of what Mr. Gallatin has termed a '*public nuisance*,' with reference to the results of its operations—but it is to be feared they have not yet repudiated the sound principles of banking and currency which, in compliance with the prevailing popular notions upon these subjects, were carried out to their fullest extent by the managers of the United States Bank, and by all the other banks of Pennsylvania. It is to be apprehended, we repeat, that the same erroneous views of currency and banking, which led to the late ruinous results of their imprudent and dishonest banking, as well as those which were endured from similar cause by the banking operations of 1814 to 1820, are still in existence, among that class of influential and leading persons who, however ignorant upon subjects of currency and banking, they may appear to be to the well-in-

formed, continue to lead the public mind on those important matters. To this conclusion we have been led by numerous resolutions passed at popular meetings, under the management of influential party leaders, and by the almost universal voice of the business community, as far as it has found expression through the diurnal and periodical press, which, not only in Pennsylvania, but in every section, has, with few exceptions, been at all times, as it now is, strongly in favour of the popular principles of currency and banking on which the whole nation, for the past thirty years, have been acting.

"It has often been said, and constantly reiterated, by the advocates of a national bank, and the apologists of the late United States Bank, that it was its disconnexion from the government which led to its subsequent errors. So far from there being any weight due to such an assertion, we conceive that the disjunction of the bank from the government, which took place prior to the expiration of its charter, was a circumstance extremely favourable to its safe and independent action. Under the state charter of Pennsylvania, it was under no obligations to maintain its numerous branches, which, in respect to many of them, must have been a source of great embarrassment to the parent bank. Indeed, it is well known that they were difficult of control, while the loans they made were, in the early stages of the bank, as well as in its later periods, upon securities of a character inferior in safety to those on which banks usually operate in most of the Atlantic cities—and their losses were, therefore, much greater than in those cities.

"It was alleged by the partisans and advocates of the bank, that its ceasing to be the agent of the government would curtail its means of loaning and issuing. No one would deny that such must be the consequence of the withdrawal of the public deposits, but such a change in its circumstances did not furnish any reason for a departure from a wise course of action, on the part of its conductors, nor decrease their ability to maintain its issues and its loans on a safe and prosperous footing. Under that alteration in its condition, 'its loans and its profits,' as Mr. Gallatin has said, 'under a wise administration, should have been reduced to the amount corresponding with its actual means.'

"Again, it was said and repeated in thousands of speeches, and other modes of communication with the public, that as the credit of the bank rested upon its connexion with the government, the character of its circulation would become lowered—that it would lose its '*national odour*,' as the phrase ran—its shares decline in value—and consequently it would be rendered powerless, as a regulator of the local currencies, and as the manager of the exchanges.

"That the credit of the bank was not injuriously affected, was manifest from the prices at which its stock was sold after the re-charter. The shares held in this quarter were eagerly purchased by the people of Pennsylvania, at a premium of twenty per cent and upwards. They continued to maintain their value till Mr. Biddle's retirement from the bank, March, 1839, at which time they were current in the Philadelphia and New York stock markets at 116. That high rate was predicted on a continuance of eight per cent dividends, from which it was naturally inferred the affairs of the bank were in a safe and prosperous condition. The shares continued to maintain a high value long after the expiration of its first charter, nor were the issues of the bank under the slightest degree of discredit in consequence of a dissolution of its connexion with the general government. On the other hand, it is well known that the president of the United States Bank and its most intelligent directors entertained, or affected to entertain, as favourable an opinion of the advantages and of the prospects of the institution, as they had previously entertained while acting under a government charter."

Such were the circumstances which deceived the foreign stockholders, as well as others, and which made them continue their shares or stock in the new bank, which they had held in the bank under its old charter. Its credit was kept up on fallacious and deceptive principles, and a thorough investigation of its affairs and of the value of its *bona fide* assets and capital, would have exhibited its unsound condition. It was afterwards ascertained that its business was conducted with unpardonable want of security.

"The loans of the United States Bank were principally made in those sections of the country where it is difficult to find securities upon which a bank, with an immense capital, can lend with safety. Even the first United States Bank, with a capital of only 10,000,000 dollars, with but few branches, and those under the management of more

experienced, prudent, and skilful persons than had charge of the branches of the late United States Bank anywhere, save in a few of the Atlantic cities. Even that well-governed institution, which had only the competition of some thirty to fifty local banks, that were conducted with as much prudence, and integrity, and success, as the national bank, suffered severe losses in some of its branches, and it could not have prospered had not those losses been more than counterbalanced by extraordinary gains in other places. But that bank was managed on principles very different from those acted upon by Mr. Biddle, or by any other persons in charge of the late United States Bank, except Mr. Cheeves, and he became unpopular because he acted upon conservative principles.

"The late United States Bank, as the disclosures of its conduct and of its fate have most clearly shown, owes its ruin, not to the violation of its charter by the government, nor to the removal of the public deposits, nor the issue of the specie circular, nor to the political hostility of party men. The primary and operating causes of the mistakes, misdemeanours, misfortunes, losses, and the final destruction of that establishment, may all be traced to a violation of those sound, prudent, and honest principles of banking, currency, and credit, through almost every stage of its existence, which ought to have governed the feelings, opinions, and conduct of its administrators."

"In a country where, owing to the existence of a paper currency of so low a denomination as one dollar, there never can be any considerable amount of specie in circulation; and where also their reserves of coin, when the banks are in their ordinary condition, do not exceed one-sixth or one-seventh the amount of their liabilities. It follows, we repeat, that the only security against sudden commercial pressures of a ruinous severity, succeeded by revulsions and bank suspensions, is for the issuers and managers of the currency to keep down its circulation to a level with the sound currencies of those countries with whom we have commercial interchanges.

"To revert to what Mr. Gallatin has alleged against the United States Bank, for its share in producing the suspension of October, 1839; we do not mean to deny that her operations were more instrumental than those of the local banks, but we have shown that the New England and New York banks were culpable, and so were the banks in all the states. There was an universal disregard to all considerations of prudence on the part of the managers of banks, as regarded the safety and interests of the shareholders, and of the public as recipients and holders of their issues, and of the business community generally as interested in having the circulating medium of the country maintained in that stable and sound condition so essential to their prosperity.

"On the 1st of April, 1839, the foreign debt of the bank,' says Mr. Gallatin, 'amounted to 12,800,000 dollars, and the various stocks owned by it to near 23,000,000 dollars, of which 6,300,000 dollars, consisting principally of *Mississippi and Michigan stocks*, and previously contracted for, were not yet entered on the ledger. Its credit had, indeed, been artificially sustained; and its stock was selling at a considerable advance. It was, nevertheless, on the verge of destruction. In August of the same year, it was compelled to issue post notes, which soon fell to a discount of more than one per cent a month. In September the bank drew largely on Europe without funds, and partly without advice. In order, if possible, to provide funds for that object, and also, as has been acknowledged, for the purpose of breaking the banks of New York, payment of the bills thus sold in that city was suddenly required in specie, and the amount shipped to Europe. The attempt was a failure in both respects:—the banks stood, and the bills were dishonoured. On the 9th of October, the United States Bank suspended its payments, and it is not improper to observe, that a fortnight later another attempt was made under its auspices, by the debtor-interest of New York, to compel the banks to expand their discounts, and thus prepare the way for another general suspension. The banks, as might well be expected, unanimously refused to yield.'

"In the criminations and recriminations, among the parties connected with that ill-managed and ill-fated institution, the facts—discreditable as they are to the persons concerned in the act alleged against the bank by Mr. Gallatin—are admitted to have been correctly stated. In a letter from Mr. Cowperthwaite, cashier of the bank, to Mr. N. Biddle, its former president, there is the following passage:—

"After the feverish excitement consequent on this too speedy effort to return to cash-

payments (in 1838) had in a good degree subsided, another crisis was anticipated, and it was feared that the banks generally would be obliged again to suspend. This was unhappily too soon to be realised, for the storm was then ready to burst, but instead of meeting its full force at once, it was deemed best to make it fall first upon the banks of New York. To effect this purpose large means were necessary, and to procure these resort was had to the sale of foreign exchange. The state of the accounts of the bank with its agents abroad, did not warrant any larger drafts upon them, especially that of Messrs. Hottinguer in Paris. This difficulty, however, it was thought, might be avoided, by shipping the coin to be drawn from the New York banks immediately to meet the bills. Accordingly large masses of exchange, particularly bills on Paris, which were then in great demand, were sent to New York to be sold without limit. Indeed the bills were signed in blank, and so sent to New York, and although a large book was thus forwarded, it was soon exhausted, and application was made to the agent of the Paris house in New York, for a further supply, who drew a considerable amount besides. The proceeds of these immense sales of exchange created very heavy balances against the New York banks, which after all signally failed in producing the contemplated effect.'

"In Mr. Biddle's comments on Mr. C.'s communication, he thus notices this ingenious plan of regulating the currency and the exchanges:—

"Here, then, is revealed the real and secret causes of the disasters of the bank. Now, without meaning to say a single word about the object of these drafts, and without intending the slightest censure of any one, it is impossible not to see in this single circumstance, the solution of many difficulties of the bank. The bank, as I understand, suddenly draws an immense amount of bills on Messrs. Hottinguer and Company, without having a dollar of funds in their hands—without having any authority to draw for a dollar—without a line of explanation as to the nature and extent of these unexpected drafts—and without even the usual commercial notice that such bills had been drawn. Messrs. Hottinguer and Company could not, as prudent men, do otherwise than protest these bills; and thus the bank, in the very fulness of its credit, was suddenly disgraced in the eyes of all Europe. The talents of Mr. Jaudon repaired, to a certain extent, this disaster,' &c.

"What was the '*disaster*' referred to by Mr. Biddle, *without*, as he has told us, *intending to censure, in the slightest degree, any one concerned in the measures which led to it?* Why, according to his own statement, and the confessions of the cashier of the bank, the cause of that *disaster*, as it is termed, was the failure, in part, of a scheme to raise money by dishonest expedients, for the purpose of breaking the New York banks, who were struggling against difficulties and embarrassments, partly arising from the imprudence and misconduct of the United States Bank, that they might fulfil their engagements to the public, as holders of their bills; and what, to the country, was infinitely more important, in order to prevent the monetary concerns of New York and New England, comprising, as those sections probably do, nearly one-half the active capital of the country, from falling into the ruinous and *hopeless* condition of the paper currencies and pecuniary concerns of all the other states of the union.

"Another disastrous event, in the latter stages of the existence of the United States Bank, was the *first resumption* of specie payments. This occurred in New York and New England, in May, 1838, and in Pennsylvania, and most of the other states, in August, 1838. Mr. Cowperthwaite, in explaining to Mr. Biddle the reasons why the bank—which, on the 29th of March, 1839, when the latter gentleman retired from it, '*was strong and prosperous*'—should, in less than two years afterwards, have sunk its entire capital of 35,000,000 dollars—its reserve fund of 4,421,289 dollars—and some 5,000,000 dollars or more in the form of unredeemed circulation and deposits, and of liabilities, for over-advances in Europe on depreciated or worthless securities. Mr. Biddle's successor, Mr. Dunlap, says, 'The utter prostration of the Bank of the United States, passes, I confess, my comprehension! I may, however, point out some of the causes that, in my judgment, have mainly contributed to bring about its painful and humiliating condition. The first cause,' he continues, 'may be traced to the consequences of the *premature resumption* of cash payments, after the first suspension of the banks,' &c."

Notwithstanding the ruin which the failure of the bank of the United States extended over the country, and the suspension or bankruptcy of banks in each state, a desire was soon after manifested for establishing a national bank. On this subject, Mr. Lee remarks :—" *That banks as they have been managed—have been among the retarding, and are not to be reckoned among the accelerating, causes of the accumulated wealth of the country. That reasonable proofs are found in treatises and essays of our own writers, that the currency as it has been managed by the banks the last thirty years, has cost the country more money than the whole peace expenditure of the government would probably have amounted to, under a metallic currency, or a mixed currency, so managed as to be subject to no greater fluctuations than are incident to a metallic currency.*"

The chartering of a national bank soon became a great party question.

Mr. Webster in a speech made to his fellow-townsmen in Boston, admitted that a bank founded upon the principles of the former one, was unattainable and inexpedient. "A bank (said Mr. Webster) founded on private subscriptions, is out of the question. That is an obsolete idea, and people who are working for power to make a bank of the United States, may as well postpone all attempts to benefit the country—to the coming of the Jews."

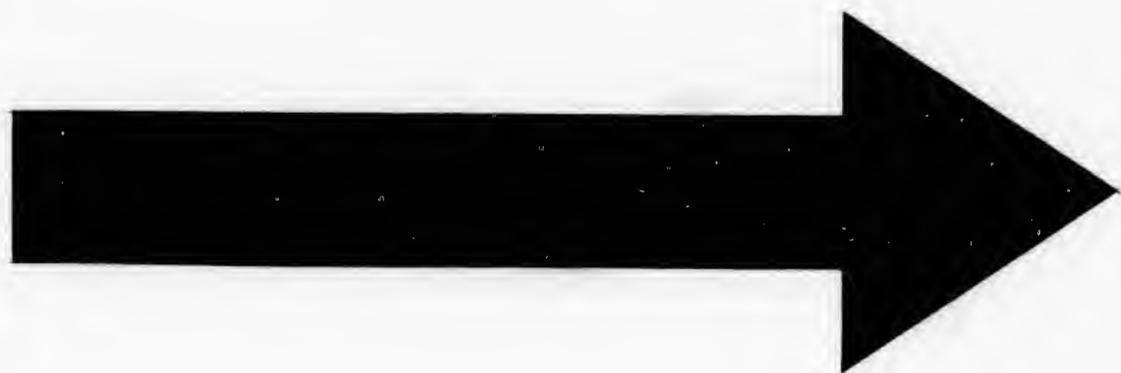

"It was, however," says Mr. Lee, "under pledges of establishing a bank, that the party to which Mr. Tyler belonged came into power; and he was, as has been maintained, as strongly committed in favour of such an institution, as any of their political leaders.

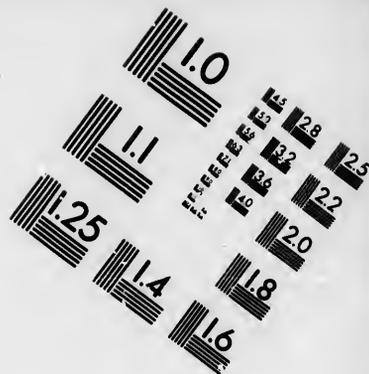

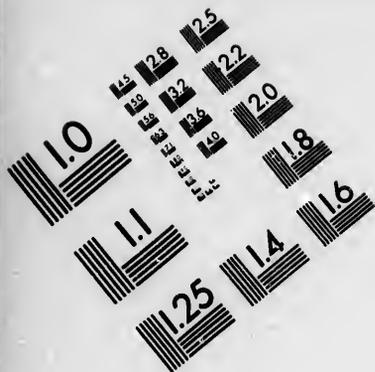

"The establishment of a national bank was, during the canvass for the presidency, held up by the contending party which prevailed, as of great importance to the welfare of the country, and the obtaining of a charter for one, was considered as one of the expected benefits that would ensue from a change of administration. Such an institution was not only called for by the party in power; but was pretty universally wished for by the mass of the people in all quarters, although many of the party leaders affected to be opposed to a bank, and some of them were sincerely so, in both the great divisions of parties.

"The scheme of a bank presented to congress by Mr. Clay, would, in fact, whatever might be the intentions of its projector, have been a political bank, with the means of extending those corrupting influences over public men, which are already too abounding for the slight resistance likely to be made to temptations held out to *armies of patriotic persons*, who, fancying they were born to be supported by the nation, would think it was *unjust if they were not allowed to carry off a large portion of the 50,000,000 dollars, capital, in exchange for their accommodation notes.* Such an ordinary banking incident would, however, have been but a slight evil in comparison with the effect of its operations in aiding, as did the late United States bank, the local banks to extend their loans and issues.

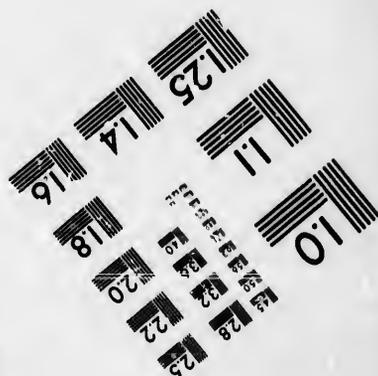

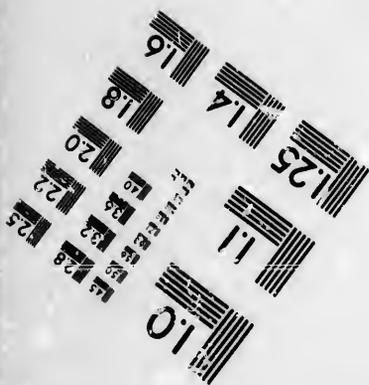

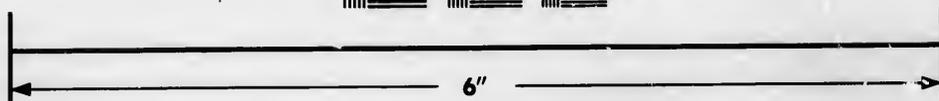

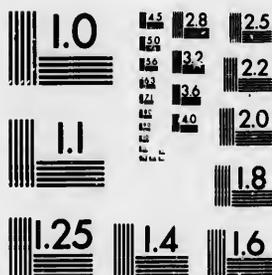

"*An inflation of currency would have raised the prices of goods; this would have led to over-importations, and to diminished exportations. The result of that state of things would have been another commercial and monetary pressure—caused by a demand for the coin of the banks, to pay up a balance against us for an excess of importations.* The banks would have paid out part of their coin, but as that could not have been done without breaking down prices—and consequently embarrassing all the debtor part of the community, and ruining a large portion of them; why, in such an emergency, the banks would have been called upon to suspend.

"From 1833 to 1837, the currency of the country, as we have before shown, was in a constant state of expansion. It was, also, always in excess, as compared with the currencies of other countries. So long as this progress of augmentation continued, all who bought and sold had an opportunity of increasing their nominal wealth, namely—the

money value of their property, because the prices of commodities advanced, in a greater or less degree, though not in proportion, as we have before remarked, to the numerical increase of the currency.

“So long as this unnatural abundance of money (currency), and its usual concomitant, an abundant credit, continued, prices of every commodity were high in comparison with the prices of the same commodities prior to the enlargement of the currency. This increase of prices of commodities, as far it arose from an increase of currency, was not an *augmentation of value*.”

We agree with Mr. Lee, for there cannot be a greater fiscal error than confounding *price* with *value*.

One of the great moral evils which Mr. Lee exposes with ability in regard to the executive power of the United States, is what is termed “*the democratic principle of the executive*,” the proper designation should be the DESPOTIC PRINCIPLE OF ANARCHICAL DEMAGOGISM, namely, the removal, on the accession of a president, of all men from offices, of every grade, who were appointed by his predecessor; such removal having no justification but mere difference of opinion on political questions. This extends to banking questions and to tariff duties, when such become party questions. In exposing this monstrous bane of honest and intelligent administration, we cannot do so more conclusively than by introducing the opinions of American citizens. Mr. Lee remarks:—

“Now, if any reliance can be placed on information derived from sources common to every one, such a principle, such a *democratic principle*, as is laid down by many of our political leaders, and which the present chief magistrate is acting upon—it is one of those theoretic principles of which the right to exercise is claimed, *in all governments but FREE GOVERNMENTS*—but is nowhere carried into such frequent and full operation as in this democratic Republic. In Turkey such a ‘*democratic principle*’ could hardly be acted upon, with such frequency as among us. In Austria, half of whose revenues are expended in the support of armies and of a military and civil police, for ever at the call and the command of the monarch, it is not, we apprehend, the practice of the government to carry the ‘*democratic principle*’ to the extent which is now done by the democratic head of this Republic, and which has also been done by some of his late predecessors. The soldiers themselves might revolt at what, in *unfree* countries, would be considered as *too arbitrary, and too destructive of the stability and happiness of a nation, under any form of government but a republican government*.

“In France and Great Britain, whose monarchical governments we, of this *enlightened and free country*, hold in such *slight political estimation*, or in such *democratic abhorrence*, the democratic principle of proscribing and punishing men for opinion’s sake, if carried into such extensive operation as it is deemed right to do in this country, and which it is now deemed expedient to do, *would be denounced and resented by enlightened and reflecting persons of all parties*. The exercise of such an *unjust and demoralizing principle* would, in those two nations, unsettle and overthrow the ablest and most popular administrations that ever held the reins of power. *It was the too free use of the power claimed by our democratic rulers, and exercised by them*, which was among the most effective causes of the overthrow of the French monarchy, and of some of the revolutions which have occurred in our parent country. And as the people of this country are not, as yet, it is to be hoped, *less jealous of those rights which are secured to us, or which were meant to be secured to us, by our constitution, than the subjects of France and England*, there must come a time when we shall show as great a *disapprobation of this principle of despotism as is now shown by these nations*; or, *failing of that advancement, to a more just appreciation of our rights and our duties than we now have, fall into that state of political degradation and moral weakness which might render it impossible for us to maintain the institutions under which we now live; in any tolerable degree of*

strength and purity. It would hardly require a succession of many administrations, governed by the principles on which the country has been ruled of late years, and is still ruled, to plunge this too extended a league of nations, poorly qualified, as some of them appear to be, for free institutions, into a state of demoralization and disorganization that would prove fatal to the continuance of the union,—that would prove fatal, not only to the existence of the union, but also to those principles of political morality and of civil government, on which this ill-governed confederacy must hereafter rely for its moral regeneration, and its political re-organization, when it shall be resolved into its several constituent parts, in its rapid advancement to that state of ignorance, corruption, alienation, disunion, and political destruction to which, if we may rely on the teachings of history and of experience, every nation is doomed when, for a long period of time, it has been not under the government of men desirous of promoting the prosperity and welfare of their constituents, but under the domination of a faction, whose personal views and private interests are incompatible with the safety, honour, and happiness of their country.

“In Great Britain and France, a change of ministry involves only a change of the heads of the departments and their chief secretaries. If the principle of removing the numerous subordinates were acted upon, those nations, wealthy and powerful as they are, could not have sustained their political greatness and independence, through the severe trials to which they so often have been exposed. *Experience in the performance of the duties of civil stations, is as essential as it is in the performance of military duties.* Now what chance would there be of succeeding with an army, however numerous it might be, if the principal officers were changed every year or two, and with them a considerable number of the subalterns and a portion of the rank and file, and raw recruits and untaught and inexperienced officers enlisted as substitutes?

“Look at the moral effect of such a disorganizing and cruel principle—cruel as respects the objects of such unjust treatment. If a due and faithful performance of official duties is no security against political proscription and removal from office, what inducement can men of ability and character have to seek or to accept public employment? or, if engaged in that service, to put forth their utmost ability and exertions to serve their country? *And what has been the effect of this demoralizing principle? Why, the history of the past twenty years exhibits, in the fiscal branch of the public service, a degree of corruption and dishonesty, which, considering the circumstances of the country and the small amount of pecuniary responsibility resting upon the revenue officers—in comparison with what exists in some other countries—is without example in any well-governed nation. It amounts to a very large per centage on the gross receipts of the nation, and it is an item of the public burdens which is rapidly increasing. In case of a war, when it might be necessary to raise three or four times as much money as is done under a peace establishment, the plunder of the public revenue would, of itself, be a heavy burden on the country, and especially if there were a national bank to aid by its influence, and its corrupting power, the needy, reckless, and unprincipled men who, in such an emergency, are as active and dexterous in preying upon their country, as they are in stirring up feelings of hostility against foreign nations with a view of producing wars.* The Florida war cost the country some 30,000,000 or 40,000,000 dollars, only a small proportion of which went to the national troops who defended that territory from invasion; while the balance leaked out of the public purse, and was drained off in some unknown, or in some unlawful direction.

“Will any reflecting man advocate a money-coining machine, under whatever plausible name it may be disguised, whether a ‘national bank,’ a ‘fiscal agent,’ or an ‘exchequer,’ either to be under the direct control of the government, or only connected and influenced by it? Are there not, as the government is now administered, and as it has, for some years, been administered, too many sources of corruption available to a large class of public men, without adding to their number?

“The object of a national bank, as far as the government has any connexion with it, is to be able to increase the public receipts without hazarding their popularity by taxation—to borrow the people's money to pay the debts of the people—the result of which,

according to the financial measures of the present administration, has been to pay one debt by the creation of a still larger one.

"Or, if the 'exchequer plan' of President Tyler had been carried into operation, the effect would have been to throw upon the country a large amount of irredeemable paper money, beginning with 10,000,000, and by an extension of its powers to any sum which may be deemed desirable by this administration or any succeeding administration."—*Letter to Cotton Manufacturers.*

President Tyler in his messages, declares :

"It has now become obvious to all, then, that the government must look to its own means for supplying its wants, and it is consoling to know that those means are altogether adequate for the object. The exchequer, if adopted, will greatly aid in bringing about this result. Upon what I regard as a well-founded supposition, that its bills would be readily sought for by the public creditors, and that the issue would, in a short time, reach the maximum of 15,000,000 dollars, it is obvious that 10,000,000 dollars would thereby be added to the available means of the treasury without cost or charge.*

"If it were the object of the 'exchequer plan' to keep the 10,000,000 afloat perpetually, as it would appear to be the case, then there would be an accession of 10,000,000 dollars to the public revenue derived from this issue of 10,000,000 dollars of 'assignats, or what may be better understood by the term of 'continental money.'"

Upon the tendency and object of this financial scheme of the executive, Mr. Fillmore, the chairman of ways and means, said in regard to the government "exchequer plan:"—

"As a bank, then, what are to be its probable effects upon the currency of the country? So far as it shall furnish a paper circulation of equal value with gold and silver, it would be beneficial. But, if we are to judge from past experience, this could not be done to any great extent, and would not be maintained for any length of time. All go-

* The first Essay, by Mr. Middleton, was published under the same title as the second—"The Government and the Currency." The following is a paragraph of a criticism on it.

"We have briefly indicated the leading topics considered in this very able pamphlet. But the subject of the currency is now so hopelessly overwhelmed by the cant and vulgar ferocity of party politics, that calm and temperate writing, like this of Mr. Middleton, stands but slight chance of fixing the public attention. Still, the work will do good. It is written in a singularly clear, manly, and elegant style; the arrangement of topics is excellent; the statements are well weighed, and conscientiously made; and no trace of the rampant party spirit, which perverts public opinion to a dreadful and alarming extent, on all questions of national policy, is discernible in its pages. The object aimed at by Mr. Middleton, namely, 'to combine, as far as it is possible to do so, the advantages of the metallic with those of the bank-note system,' is one which ought to be studied by the public men of all parties; but the demagogues have seized upon the subject for their own purposes, and the minds of the people are filled with ignorance, prejudice, and passion, until they are scarcely capable of acting without manifesting an insane violence, by which their real interests are sacrificed."—*North American Review.*

"After what we have now said, we think it must appear that we were fully justified in assuming, as we did in the former part of this essay, that the only portion of the circulation, or medium of exchange, which required legislative interference and regulation, was that which consisted of the bills and notes of banks of issue. We have endeavoured to show that the essential point of difference between the notes of a bank and those of a merchant or trader, consists in this: that the notes of a bank are payable at an indefinite period, while those of a merchant or trader (which constitute mercantile paper) are payable at a period fixed and certain. We have endeavoured, too, to show that this difference between mercantile and bank paper is one of great importance, and leads to important differences in the effects produced by these two descriptions of paper, when left unrestrained by legislative regulation; that while private, or mercantile paper, is, by necessity which exists for its payment at a given and fixed period, kept within moderate and reasonable limits, bank paper, on the contrary, is tempted constantly to exceed those limits; because, not being payable at any definite and fixed period, no such restraint exists—and the banks issuing such paper, prompted by the desire of gain, naturally seek to increase the amount of their issue, and to keep it from returning upon them for redemption for the longest period possible."—*Government and the Currency.*

vernment banking, in all ages and countries, has proved a failure. We believe there is no exception to this rule. To prove this we need not resort to the assignats of France, or the imperial bank of Russia, with its paper rubles, or even the far-famed deposit bank of Amsterdam, which was under the charge of the governors of the city, annually elected by the citizens, and for whose fidelity the city itself was liable. All these, at different times and under different circumstances, had a common end. The assignats, though based upon the avails of large estates which had been confiscated, and made a legal tender by severe penalties, gradually sunk in the market, in consequence of excessive issues, until they became worthless. A similar fate attended the paper rubles of Russia; and the governors of the Bank of Amsterdam, in violation of their official duty and solemn oaths, secretly withdrew the specie that had been deposited in its vaults; and this fraud was not discovered for forty or fifty years. But the attempts in our own country, by different states, to establish banks owned by the states, have been equally unfortunate. Few, if any, have maintained their credit, and the committee believe that there is some inherent and insurmountable difficulty in *government banking*, that cannot be overcome or obviated.

"In the first place, the various officers and agents which would be selected to take charge of such an institution, are not likely to have the requisite financial skill, even if they should have the requisite moral honesty. *They will be selected from party and political considerations. Thus it ever has been, and thus it ever will be.* But, even if they had the skill, they would not feel that solicitude which self-interest alone can create, and which is indispensable to the successful management of a bank. But, among such agents appointed from such motives, there will be many whose moral integrity cannot be safely trusted. *We have deplorable evidence of this in the numerous defaulters to the government, and the scarcely less numerous instances of bank officers acting under the immediate eye of those interested, who have embezzled the funds which they were paid to guard.*

"But even if these difficulties could be overcome, there is still another which admits of no remedy, and against which you can provide no security; and that is the dangerous increase in the issues of such paper by legislative authority. *It matters not that you limit it by this act—the next Congress has power to change it; and, having the power, if there should be a deficiency in the revenue, it will be exercised.* All experience leads to this inevitable result. It was so in France. It was so in Russia. It was so in this country during the Revolution, when continental money was poured out until it became worthless; and it was so during the last war, when treasury notes were increased until they were twenty or twenty-five per cent below the par value of non-specie paying banks; and, even within a few months after this exchequer plan was first recommended to Congress, in a time of profound peace, treasury notes were issued until they fell five per cent below par, and the credit of the treasury was, at last, only saved by promising to pay six per cent interest on these notes semi-annually, which converted them at once from currency, receivable in public dues, into a species of stock for investment. *Even we could not sell a six per cent stock, having twenty years to run, without a discount to meet these notes; and had they been issued under this exchequer, the result must have been the same.* All these facts lead to but one conclusion, and that seems irresistible; which is, that the government ought not to engage in banking, but that that should be left to private corporations or companies, which may be effectually restrained in their issues by penal laws, for the violation of which they may be made amenable to the courts. Certainly nothing short of this can prevent excessive issues, or insure prompt redemption; and even this has not always effected that object."

Thus much Mr. Fillmore has alleged against the scheme of President Tyler, upon its economical defects. Of its corrupting tendency he makes the following just and forcible observations:—

"If it were possible to have such an institution without increasing executive power or endangering the treasury, which should be administered by men of undoubted talents and integrity, endued with competent financial skill, and a cautious, vigilant sagacity,

uncontaminated with political and partisan bias, it is undoubtedly capable of rendering some service both to the business wants of the country and the financial embarrassments of the treasury. But to hope for this is to expect a change in human nature itself, and in the ordinary motives that govern the conduct of men, and especially political men, little less than miraculous. *Our institutions are based upon no such theory of human perfectibility.* They contemplate the possibility of error and vice in those who are intrusted with power, and therefore guard the trust by every limitation, as to time and amount, not incompatible with the object to be obtained.

"Suppose the exchequer agent dishonest; suppose him a warm political partisan? might not these favours be dealt out to political friends, and denied to political enemies? Or suppose money is wanted to corrupt the fountains of elective power, or carry some great political contest; how easy would it be for a dishonest and pliant exchequer agent to buy the drafts of some irresponsible political friend, and thereby pour out the national treasury for the basest purposes; and yet, when called to an account, he has committed no crime—he has merely misjudged by purchasing a draft not accepted, the drawer of which has proved irresponsible."

"Mr. Tyler previously," says Mr. Lee, "vetoed a plan of a national bank founded on principles much more practicable, and fraught with infinite less danger to the cause of sound currency and sound morals than this plan of raising money by other means than taxation.

"But it is said that, sustained by government credit, there would be no danger that this government paper would become depreciated. Now, is it true that there is such a high degree of confidence in public credit? Have we not seen treasury notes selling below par, when money was superabundant? Is it already forgotten that within a year the government six per cents have been offered on every exchange in Europe at par, and refused at that high rate of interest, when the three and a half per cent stocks of Hamburg were eagerly sought after at par? While the three per cents of Great Britain, owing 3,800,000,000 dollars, would command more money than our six per cents? This is not all: were not those six per cents, which had been rejected by every banker and stock dealer in Europe, sold in this country on lower terms than money could be borrowed on the notes of hand of hundreds of individuals? Perhaps we might say some thousands of individuals, in the great commercial cities, where for twelve or eighteen months there has been a superabundance of disposable capital in exchange for which its possessors were in pursuit of safe investments?

"It is true that the government *six per cents* which were disposed of at something under their par value, have since advanced to twelve per cent beyond par; but this has arisen, not from a firm reliance on government credit, but from an extraordinary abundance of money accompanied by speculative operations, which have carried up state stocks from fifteen to fifty per cent above the prices they bore twelve months ago, while at the same time the notes of individuals, bearing interest of from three to four per cent per annum, are selling at par. In other words, there are now, as twelve months ago, thousands of men in private life, who can borrow money on considerably lower terms than the government.

"If the financial and fiscal concerns of the nation had been managed with any tolerable degree of skill and prudence, and there was a reasonable degree of confidence in the capacity and good faith of the existing administration, a government loan, bearing an interest of four per cent, would have commanded as much, if not more money, than was realised for the last loans, though disposed of when money was so abundant that mercantile securities were in demand at lower rates of interest than have been current among us for many years; while in the great money marts of Europe, borrowings could be effected on business paper, of a fair character, at from two to three per cent per annum, and at some periods on still lower terms.

"These facts, which few persons can be ignorant of, although they may be unmindful of them, show what a *low degree of credit the public securities enjoy* at home and abroad. Some of the causes of this discredit have been referred to in various passages of these letters. Superadded to these causes, may be reckoned the proposition advanced by the executive, of raising, by means of what he is pleased to term '*the exchequer*,' whatever

money the public wants may require, beyond the existing amount of revenue, greatly insufficient as it is, and as it has been for some past years, *by an issue of national paper money.*"

We have not adduced these remarks for the purpose of proposing a system of banking, but to exhibit the evils of fallacious currencies, and to show what has been done, and what exists—what has been, and what is proposed as remedies for these evils, regarding the currency of the United States. The following are extracts from a recent report of the Select Committee on banking and currency in the United States, of which Mr. Cushing was chairman.

"The constitution of the United States empowers Congress 'to lay and collect taxes, duties, imposts, and excises, to pay the debts, and provide for the common defence and general welfare of the United States,' it being requisite that 'all such duties, imposts, and excises shall be uniform throughout the United States.' And it recognises the existence of 'the treasury of the United States.' But it does not prescribe the organisation of that treasury, nor set forth the mode in which its *personnel* shall be constituted or its business transacted, otherwise than as it provides that the president, with the advice and consent of the senate, shall appoint the principal officers of the United States. But the constitution further provides that Congress shall have power to make all laws 'necessary and proper for carrying into execution' all other powers vested by it in the federal government. And under these constitutional provisions is the treasury of the United States to be organised by legislation, and its concerns conducted; the president being empowered and enjoined 'to take care that the laws be faithfully executed.'

"*Treasury Department.*—By the act to establish the treasury department, passed on the 2nd of September, 1789, it was provided that it shall be the duty of the treasurer to receive and keep the moneys of the United States, and to disburse the same, upon warrants drawn by the secretary of the treasury; but the plan and mode of so keeping the moneys of the United States were not specifically prescribed, unlimited scope of choice being left to the treasurer in this respect, subject always to the authority of the president to see to the due execution of the laws, and in his executive capacity to guard the interests of the government.

"*Bank of the United States.*—Under these provisions of law, the fiscal operations of the federal government, as now constituted, commenced, and so proceeded, until the 25th of February, 1791, when the Bank of the United States, according to the proposal of the secretary of the treasury, was incorporated for a period of twenty years.

"This bank answered immediately three purposes of the government, namely,—I. Of its capital of 10,000,000 dollars, three-fourths were composed of funded debt; II. It was made the fiscal agent of the United States; III. Its notes became a legalised currency, being declared receivable in all payments at the treasury.

"And the system of the government was completed by the act of the 2nd of April, 1792, establishing a mint, and regulating the coins of the United States upon the basis of the dollar unit, previously prescribed by the continental Congress.

"On the expiration of its charter, it does not appear to have been deemed necessary or expedient to legislate further, either as to the means of collecting or the mode of keeping the public moneys; but this was left to stand on the authority vested in the treasurer, by the act of 1789, to receive and keep the moneys of the United States.

"Meanwhile, the number of banks, incorporated by the several states, had increased, previous to or at this time, to *one hundred*, and in 1812 about *twenty more* were incorporated, *with an aggregate capital, in the whole, of upwards of seventy-seven millions of dollars*; and the business of the treasury was conducted in their notes, and by deposits with them. *In the progress of the war with Great Britain, all the state banks, south of New England, ceased to pay coin for their bills* (in 1814), as the United States Bank would, in all probability, have done, if it had continued to exist, as the suspension was chiefly in consequence of advances made by them to the government; but, notwithstanding the non-redeemability of their bills, they continued, from the necessity of the

case, to be received and paid in the business of the treasury, *though gold and silver coin was at this time, by express enactment, the only legal currency of the United States.*

"Under this condition of things, the act of the 10th of April, 1816, was passed, establishing the second Bank of the United States.

"The prime inducement to the establishment of this corporation, as stated by the president (Mr. Madison), in the message recommending it, was to restore to the community 'a uniform national currency;' to provide a 'substitute' for coin, 'which might encourage the confidence and accommodate the wants of the citizens throughout the union,' until the time when the precious metals could again be rendered 'the general medium of exchange.'

"The president, in his message, indicated three means of providing a 'common (paper) medium of circulation,' viz:—1. By the bills of the state banks; 2. By a national bank; and, 3. By 'the notes of the government.'

"The newly chartered bank, then, like its predecessor, furnished a paper currency declared by law to be receivable in all payments at the treasury; it was made the fiscal agent and the depository of the treasury; and it absorbed in its capital a portion of the public debt; since, of the 35,000,000 dollars constituting its stock, only 7,000,000 dollars were required to be in specie, the remaining 21,000,000 dollars of private subscription being authorised to be received in stock, as also the 7,000,000 dollars to be subscribed by the government.

"In further regulation of the currency, at the same session of Congress, by an act in the form of a resolution, passed on the 30th of April, 1816, it was provided that all duties, taxes, debts, or sums of money, accruing or becoming payable to the United States, shall be collected and paid in nothing but the legal currency of the United States, or treasury notes, or notes of the United States Bank, or the notes of banks payable and paid on demand in the legal currency of the United States.

"And by the combined action of the government, the United States Bank, and other causes, the bank currency of the country was brought back to a specie standard.

"On the expiration of the legal term of the charter of this bank, in 1836 (a bill for its rechartering having been vetoed by President Jackson, and the public deposits withdrawn from it), the business of the treasury was again transferred to the banks of the several states, and transacted by them, at first, under the general authority of the act establishing the treasury department, and afterwards according to the more specific provisions of the act of Congress, passed the 23rd of June, 1836, to regulate the deposits of the public money.

"Under the new system, the public revenue on hand was deposited in selected banks, with various regulations of security; the public funds were transferred by their agency; their notes were received and paid out in the dealings of the treasury; and they were relied on to conduct the exchanges of the country, and furnish its paper currency.

"At this period (1836), the number of banks chartered by the several states had greatly increased, many being created for the alleged purpose of supplying the anticipated vacuum in business by reason of the refusal of a new charter to the United States Bank; *the total number of banks in operation in the United States being six hundred and seventy-six, with a capital of upwards of three hundred and twenty-four millions of dollars.* This amount of capital was greatly beyond the real wants of the country; *much of it was fictitious; the business was altogether overdone; excessive bank issues and overtrading followed hand in hand; and at length (in 1837), the whole machinery fell into pieces, and a general suspension of cash payments by all the banks in the United States occurred.*

"The president (Mr. Van Buren), considering the incorporation of a national bank unconstitutional, and if constitutional, yet unwise, and deeming the continued use of the state banks either impracticable or inexpedient, recommended a radical change in the fiscal operations of the federal government, which (with some modification of the original plan), became the law of the land on the 4th of July, 1840, by the passage of the act to provide for the collection, safe-keeping, transfer, and disbursement of the public money.

"The principle of this plan was the ultimate total separation of the federal govern-

ment from all dependance on banks and bank paper in the business of the treasury. The treasurer of the United States and various officers of the government under him, were required to keep the public moneys in the vaults of the government, and perform all the duties of transfer as well as deposit, and provision was made for exacting immediately one-fourth of all public dues to be paid in gold and silver, and for the addition of one-fourth to that requisition yearly; so that, on and after the expiration of three years all payments to the government should be made in gold and silver only, as the sole and exclusive legal currency of the United States.

"The act continued in force only one year, being repealed by the act of 1841, which threw back the business of the treasury on the provisions of the resolution of 1816, and the original act establishing the treasury department, where it now stands.

"And thus, by the vicissitudes of opinion and of party, and the successive rejection of the plan of a Bank of the United States, that of deposit in state banks, and of the independent treasury, Congress is invited and required to examine the whole subject anew, free from all impediments of existing law, and to settle it on the principles of justice and general expediency, and in the letter and spirit of the constitution."

The committee then report on the *public revenue, the money standard, or measure of value, on bank paper, and on government bills of credit.*

On the subject of public revenue. the committee judiciously observes—

"*Of the Public Revenue.*—Every wise government, whatever may be the source or tenure of its power, will, of course, in the solution of this problem, aim to reconcile its own interests with those of the community it governs. If it be a constitutional government, established and existing only by the consent of the governed, its functions are nothing but a high trust, to be exercised for their advantage. If it be a despotic government, holding its power by force or prescription, still its own greatness is inseparably connected with the welfare and prosperity of those whom it rules, and the extent of its own pecuniary resources depends upon theirs."

On the Money Standard, or Measure of Value, the committee report—"Whatever course of policy government may choose to adopt in these respects, it must, of necessity, as the indispensable condition precedent of any regular system of fiscal measures, fix a money standard, or measure of value, for the regulation of all dealings between itself and the community, unless it receive every thing in kind, and pay out the same. Even then, it must have some sort of measure of value, otherwise all taxation will be arbitrary, unequal, and oppressive. It is convenient that the standard of value between itself and the community shall, if possible, be the same as that between the individuals of the community themselves in their own mutual dealings. It is, moreover, in other relations, a proper function of government, for the sake of uniformity, for the prevention of disputes, and for the execution of the laws between man and man, to prescribe the measure by which the value of property, the exchange of commodities, and the collection of debts shall be regulated. Unless there be such a fixed standard of value, the property and the labour of all are at the mercy of the government and of individuals. Hence the universal exercise, by all civilised governments, of the power to coin money, and assign to it a standard denomination of value.

"If it were possible to discover or devise any substance or thing, of the same *unchangeable quantity and value at all times and places, imperishable, safe, portable, perfectly convenient, indefinitely divisible, and upon which neither time nor man could act to its injury or abuse, that would be the true money standard.**

* In the Reverend Mr. Felt's recent "History of the Early Currency of Massachusetts," we are informed that "The want of a fixed and permanent standard for the adjustment of debts, and also some portable representative of smaller values, drove our good fathers into a great variety of speculative schemes as well as odd and awkward expedients. Having no prominent staple like that of Virginia, where the price of all commodities (not excepting *wives*), was estimated in *lobacco*, they made use of almost every marketable article as currency. Wheat, rye, Indian corn, peas, fish, and beaver, were, however, more especially used as money; while musket-balls, at a farthing a-piece, and white and blue shells of three and four for a penny, answered, many years, as small change.

" *The use of the precious metals*, in this way, resulted from their intrinsic adaptation to that use; and governments only added the legal rate of value, and the stamp or cer-

It is quite a remarkable fact, that our ancestors should find among the aborigines, a circulating medium which could be adapted to their own purposes, and be used both in public and private transactions. The manufacture and use of wampum-peage, or shell-money, it is said, had enriched the Pequots and Narragansetts, and given them an ascendancy over other tribes; and as this article was always convertible into peltry with the natives at definite rates, and as peltry was next to specie in fixedness of value, our fathers gladly availed themselves of so convenient a pecuniary substitute. Wampum and beaver, with articles before enumerated, were the legal and almost only currency of the first thirty years. In these were a great proportion of the taxes paid, by far the largest part being in grain, so that the public treasury resembled the storehouses of Joseph in Egypt, being filled with corn instead of money. The salaries of ministers were paid in the same manner, having just a little silver added to buy such clothing and other articles as must be imported from the old country. The deputy to the general court was allowed money or beaver, but the town magistrate and the surveyor of lands were satisfied with good merchantable corn. Contributions to college, when made in *wampum-peage*, were purchased by the colony treasurer, in amounts not exceeding twenty-five pounds at one time. In 1644, each family was ordered to bestow a peck of corn, or twelve-pence in money for the maintenance of poor scholars.

" The stated prices of the products of the earth varied less in a series of years than might be expected. They were as follows:—

Y E A R S.	Wheat.	Barley.	Pens.	Corn.
	s. d.	s. d.	s. d.	s. d.
1642.....	4 0	4 0	3 4	2 6
1647.....	4 6	5 0	4 0	3 3
1648.....	5 0	5 0	4 0	3 0
1649.....	5 0	5 6	4 0	3 0
1654.....	5 0	5 0	4 0	3 0
1655.....	4 6	4 6	4 0	2 6
1656.....	5 0	4 0	4 0	2 8
1670.....	3 0	4 0	4 0	3 0
1690.....	5 0	3 6	4 0	3 6
1690.....	5 0	4 0	4 0	3 6

" Cattle also were taken in payment, both of the public and private dues.

" The office of collector was, at that time, no sinecure, he being liable for the safe transportation of these cumbrous treasures from the various towns to the place of deposit. As this natural money had often to go back in the way of expenditure to the very places from whence it had been taken, it finally occurred to some sagacious persons, that, in many cases, a schedule would be as convenient in the treasury as the actual presence of grain or live stock. Sub-treasurers were, therefore, multiplied about the country. The constables of the several towns had charge of the portions collected in their districts; and warrants were drawn upon them for public disbursements.

" In 1652, the colony made a great stride in finance by the establishment of a mint. This remarkable act of sovereignty was defended by the plea of necessity, and was artfully sustained some years, under the constant frowns and even prohibitions of the British government. The greatest embarrassments and difficulties that attended the old system led to a constantly increasing desire for a more convenient medium, and great pains were taken to enlarge the stock of silver. Severe laws were enacted against its transportation, involving no less than a forfeiture of the transgressor's whole estate, and searchers were appointed in every port of entry.

" The Dutch coins, ducatoons, guilders, and half guilders, six-dollars, and ryalls, were in some numbers obtained from the Hollanders, at New York. But the most important circumstance favourable to an increase of specie, was the opportunity that occurred at this period, to obtain bullion from the buccaneers who were disposed to bring their plunder into the ports of the colony.

" The mint being established, the famous pine-tree coins were issued, being made twopence in a shilling less valuable than the English coins, to keep them in the country. In 1654, the difference in exchange between our coin and that of England, amounted to twenty-five per cent. The old currency, however, was by no means superseded, and country produce and wampum-peage still found their way to the public treasury. It was found expedient, now and then, to bribe the king to wink at the assumption of a coining power, by occasional presents. The colony, worried along in this way, always pressed for a sufficient circulating medium to supply its growing wants, till 1686, when a corporation for issuing bills in the nature of a banking institution, was established. An obscurity rests over this period for want of records, the public papers having been forwarded to

tificate of purity and denomination, for convenience in counting, and in passing from hand to hand.

"Moreover, the *precious metals*, though of less bulk in proportion to their value than most other commodities, yet cannot be transported from place to place without cost and risk. And to release individuals and governments from the inconveniences attending the continual personal custody and handling, and the unnecessary transportation of specie from one place to another, *bills of exchange*, banks, and other establishments for dealing in *bills and money* and receiving money in deposit, and for the adjustment of commercial and other accounts by bank credits, checks, and bills, came into use, and became fixed ingredients in all the monetary operations of the modern civilised world.

"But the precious metals themselves, in addition to their uses for coin, are likewise, whether coined or uncoined, a commodity, or article for production, consumption, and merchandise. Themselves are a part of that general property of the community, of all the rest of which they are the measure; and they are of actual value, different in different places, according to the contingencies of government or commerce. Their aggregate quantity is subject to be diminished by casual destruction or absorption in the arts of manufacture, or to be diminished or augmented by the greater or less number or productiveness of mines, and thus their aggregate value relatively to other commodities is liable to perpetual change. The influence of these facts upon prices, upon public affairs, and upon commerce, is visible in all the financial history of modern times.

"Besides which, *coin is subject to debasement*, or to be made a legal tender at a rate exceeding its actual value, by the arbitrary act of the government which controls its coinage and prescribes its legal value. In times when the uses of a paper currency, and of public stocks, were not understood or not practised, and communities had not begun to resort to a paper symbol or nominal representative of money capable of being fabricated at will, the adulteration of coin instead of it was, it is well known, the frequent expedient of public necessity or public cupidity to obtain relief from some pressing pecuniary embarrassment.

"*Bills of exchange*, it is obvious, though performing the functions of a medium of exchange like money, are not money. They are, for the most part, and in their proper use, only the representatives of the money or of the value of the merchandise on which they are drawn; and in this respect they are of such universally admitted utility as to render certain their continued employment in the business of society.

"*Bank credits, checks, or bills*, though they also perform some of the functions of money, and constitute a circulating currency, are not money. They are nothing but promises or orders for the payment of money according to their tenor. And whilst paper, actually, and truly redeemable in coin on demand, is not money, still less is that paper in any sense money which, whether professedly or not, is yet in point of fact not redeemable in coin on demand."

On bank paper, the committee report:—

"*Bank paper*, if it stand on a solid specie basis, has circulation by reason of its convenience, and its being therefore preferred to the coin itself. This preference may continue to exist so as to have the effect of keeping suspended in circulation at all times a certain quantity of the paper, and to free the bank from the necessity of retaining always on hand an amount of specie equal to the amount of paper issued. And thus a cheap medium of circulation is supplied in place of a dear one. *And if the redemption of its bills be continually enforced, and the prudence of its conduct incessantly tested and secured, the operation is a useful one to the community as well as a profitable one to the bank.*

"*But in this way the bank acquires the faculty, not indeed of creating value, but of creating at will that which commands value. It is tempted by the cupidity of gain to ex-*

London without the preservation of copies here. This bank did not survive the revolution of 1688.

"In 1687, a public demand on Hingham was paid in *milk pails*. The mint had been suspended under the administration of Andros, and was not renewed after the accession of William and Mary. This was partly owing to the debasement of the coin, which the officers of the London mint had reported to be twenty-two and a half per cent lighter than the English."

par ! its issues. The redeemability in coin set forth on the face of its paper comes to be a fiction or a falsehood. If the government of the country see fit to permit this operation to go on, or the people inadvertently acquiesce in it, the gradual expansion of the currency stimulates to an artificial excitement in business; property rises in nominal value; it is quickly exchanged for that which has no intrinsic value; and every thing wears the aspect of high prosperity, until the bubble of inflated paper circulation bursts, throwing all the currency into confusion, suddenly reducing prices, arresting business, and filling the community with bankruptcy and distress."

These latter remarks illustrate forcibly the cause of the failure of American banks. On government bills of credit, the committee report :—

"Government Bills of Credit.—To issue paper having currency as money, is in fact to borrow money, and command commercial values at will. Why, then, should individuals or corporations have the exclusive enjoyment of this wealth-creating power? Why should not government itself participate in it, or take it to itself? It has done so. By the issue of bills of credit or assignats, it has, under the pressure of war and foreign invasion, absorbed all the labour and property of the community for public uses.

"There is no difference in principle between bills not redeemable in specie, issued by the government for circulation as currency, and similar bills issued in the same way by corporations or by individuals, except that government may have the power to make them a forced legal tender. Nor is it material, if they be not actually redeemable in specie whether they be issued on faith and credit only, like the common promissory notes of individuals, or whether they be nominally secured by the pledge of lands or effects set apart for their redemption. In either case, such bills constitute an act of borrowing, not an emission of money. In both cases the course of things is the same, whether they be issued on public or private responsibility. They continue to have currency as money, so long as, from ignorance, inadvertence, or necessity, men voluntarily receive them. But, under the most favourable circumstances possible, and when such bills are issued upon the highest conceivable credit, and though governments inculcate, and communities believe, that the bills are equal in value to coin, still they speedily begin to undergo a gradual depreciation, indicated in the rise of the comparative price of the precious metals. And, in general, of all such issues the fate is the same, a depreciation in value to a greater or less extent, sometimes absolutely to nothing, having the effect to impose and levy a tax on the community, to abstract from it property or labour without compensation, nearly to the total amount of such depreciation.

"Government, in wielding the physical force of the nation, has the right to take the property or the labour of individuals for the salvation of all, and the question of the form of taxation in which this shall be done, whether by the forced course of a paper currency, or otherwise, may be reduced to a mere problem of expediency or practicability. But, in every such operation, the premises are a case of overwhelming public necessity.

"But there can be no such considerations to justify governments in allowing private individuals or corporations to issue irredeemable bills to circulate as money, and thus to extort a tax from the community, for the purposes of mere private gain. It is conceded that individuals ought not to adulterate the coin, or falsify its denomination; for which reason the coin is placed under the safeguard of the public authority. The reason is greater for subjecting the issues of paper currency to public authority, because the extent of the possible evil is greater, and the nature of the effect on private rights and interests is in both cases substantially the same.

"In addition to which, of all these diverse forms of paper currency not redeemable in specie on demand, the inherent and (so far as yet shown) the incurable vice is a tendency to excess of issues, a fatal facility in the creation of what is called and received as money, which seems to afford all but irresistible temptation to the cupidity of individuals and of governments. This is apparent in regard to all paper currency, of whatever description, and wheresoever it originates, which does not undertake to be redeemable in coin.

"For, be it still remembered, that, in the opinion of the best and most experienced writers, the issue of a paper currency is not the creation of money; and it is most

perfect when no more than equal in amount in a given country to what the currency of that country would be if it consisted only of gold and silver.

"Governments have generally seen that the faculty of issuing a paper to circulate as money should not be conceded to persons engaged in the business of trade; for if it were, issuing bills at discretion, they might engross directly an indefinite amount of the property of the community. Accordingly, the privilege has usually been granted only to persons or companies engaged in the business of lending money. But the persons constituting the company, or controlling its affairs, may themselves be borrowers; and then the restriction becomes a nugatory one: for in that case they create a currency to use it in trade themselves; which is not the least frequent cause of excessive bank issues, and has led to the opinion, entertained now by many, that inasmuch as the business of trading and of issuing a paper currency should be separated, for the same reason that of lending money, and of issuing a paper currency ought not to be intrusted to the same hands.

"In case, however, the government itself be a borrower, and does not choose to issue a paper of its own to circulate as money, it may, and often does, attain the same end by the establishment of a bank of issues, for the very purpose of arranging its debts or anticipating its revenues. Hence the origin, in many cases, of the direct association between governments and banks.

"So that in all communities, and in every form in which currency exists, whether as coined money or as a paper representative of it, and whether this be issued by banks or by public authority directly, the question of the currency of the country and that of its fiscal affairs are inseparable facts.

"Our political institutions are the work of compact and consent. To the federal government belongs all such legislative and administrative power, and such only, as the constitution defines; all functions of government not thereby granted to the union, remaining to the separate states or to the people thereof, and the states themselves possessing many of the substantive powers of political sovereignty.

"Among the substantive powers of political sovereignty exercised (whether rightfully or not) by each of the states, is that of authorising and regulating, by means of chartered instruments of their own, the issue of bank paper to circulate as currency.

"The faculty of issuing paper to circulate as currency, is no more a necessary incident of the faculty to receive money in deposit, and to loan it in the discount of notes and purchase of bills, than it is a necessary incident of the faculty to buy and sell merchandise. A bank having authority to issue bills, after purchasing bills with (that is, loaning out) the whole of its capital, proceeds to purchase other bills with its own promises to pay. Thus it does more business than if rigidly confined to its capital it could, and makes an interest on its own credit or promises, as well as on its capital. The real operation would be the same if a merchant had the same authority. Yet, by the practice in the United States (not so generally in other countries), the two faculties of loaning money and of issuing a currency are conjoined in the banks of the states.

"It may well be doubted whether the bills so issued by the banks of the states, and constituting a currency, are not bills of credit within the meaning of the prohibition of the constitution.

"State Bills of Credit.—Historically, it is demonstrable that the expression 'bills of credit' applied, in all the period anterior to the adoption of the constitution, to these bills of banks. There were two forms of bills of credit, recognised in legislation, speech, and written, namely, 'government bills of credit,' and 'bank bills of credit.'

"It seems difficult to conceive how these two species of the same generic thing came to be considered so far different as that one should be constitutional and the other not. To be a legal tender is not of the essence of either; that is, each had been issued extensively without being declared a legal tender; and in all other respects they are in effect and mischief the same; tending in the same way to excess, alike usurping the place of money, producing the same disorders in the currency, and having the same deleterious influence over the relations of labour and property.

"And it would seem to be a strange anomaly of the fundamental law, or, if not anomaly, then oversight, to provide that a state shall not issue bills of credit by the

instrumentality of a legal person called its 'treasurer,' but may by means of a legal person called its 'bank;' in other words, that it cannot, and yet that it can, be the derivative source of the issue of bills of credit.

"Nor does it vary the principle, to enact that the bank shall consist in part, or in whole, of incorporated private stock. This appears by the practical fact of the times. Most of the banks in the United States, south of New York, have ceased to pay their bills in cash, a large part of them having failed to make any effective redeмпtor for the space of more than four years. *Their bills are an irredeemable paper currency. And their continued irredeemability has been legalised by state legislature; in many instances, as the means of procuring to the use of the state government, an issue of bills of credit, with which to defray the charges of the state, instead of levying taxes on the inhabitants for that purpose. The state cannot issue bills of credit by its treasurer; but it can and does by its banks; which is one great cause of the existing disorders in the currency of the United States.*

"Thus, of the sovereign function to make issue, and regulate money (or its substitute), the state governments (whether by usurpation or constitutionally is immaterial to the result), possess a part in common with the federal government.

"And this is the radical difficulty in the whole matter of the currency. For if the states have the power so to issue bank bills of credit, then the federal government cannot (by any direct legislation) prevent their issue, and of course cannot (by any direct legislation) apply a cure to the inherent chronic disease of the paper circulation of the United States. Whether it may administer any indirect remedy will be seen hereafter."

On the power and duty of the federal government the committee report—

"It is of the power and duty of the federal government, in the first place, to provide for itself a safe and suitable fiscal agent to receive, keep, and disburse the public moneys. This it does under the tax power and other powers of the constitution.

"The federal government has, in the second place, under more than one clause of the constitution, certain powers to exert and duties to discharge concerning the currency of the United States.

"If the duty of the federal government consisted only in doing what is absolutely necessary for itself in a fiscal point of view, and stopped there, the question might be more easily answered. But, in the opinion of the committee, the federal government should consider, not only what is for the convenience of itself, but also, incidentally, what is for the convenience and welfare of the people of the United States.

"It cannot assume and pay that great mass of individual indebtedness of the people of the United States, which now weighs them down, and is one primary evil of their present condition; debts contracted when the currency was excessive, for things having a factitiously large or wholly unreal value, and the possession of which by the debtor, owing to their present depreciated value, affords to him no adequate means of payment. What alone Congress can directly do in this respect it has done, by the passage of a bankrupt law, which, whether rightful or not in its provisions, yet enables the insolvent debtor to settle these debts with such means of payment as he possesses. For the rest, and so far as this indebtedness is a general evil affecting the whole country, 'therein the patient must minister to himself.' The remedy, and the only remedy, is industry, economy, and prudence, and a return to proper principles of trade; by means of which, and with the immense and various productive resources of the country, and the productive energy of its people, with no extraneous cause of war or the like to waste and exhaust them, the speedy return to our accustomed prosperity is as certain as any thing in human affairs can be.

"It cannot, by any direct legislation, prevent unwise extension of credit in time or amount, overtrading, speculation, the excessive importation and consumption of foreign luxuries, and the consequent excess of imports over exports, and displacements of coin to pay foreign balances. What alone it can do in this respect, besides itself setting an example of integrity and frugality in its own affairs, is to regulate its own system of taxation and finance, so as at any rate not to injure the domestic production of the

country, and, if it may, incidentally to foster it impartially in all its forms, and do equal justice to the rights and interests alike of all parts of the union.

"It cannot assume and pay the debts which the individual states have contracted on their own account. All that in this relation it can assume to do it has (whether rightfully or not) done, by ceding to the states the annual nett proceeds of the public lands; For the rest, the people of the United States, who are also the people of the states, have the remedy for this evil in their own hands, by the better regulation of their own finances, and the imposition of taxes to pay the interest of their public debts.

"It cannot command and compel the state legislatures to cease to authorise the suspension of cash payments by their banks, nor prevent those banks from issuing bills of credit to accommodate the present wants, and postpone the final pay day of individual debtors or of the states. It cannot, by its own direct act, retire from circulation their depreciated bills, the currency of which is the greatest evil of the times. *But it can act on the subject-matter by the refusal to receive or use any thing but coin or equivalent paper in its own dealings, and if it receive bank bills, by exacting payment of them at frequent specified periods.* And in the opinion of many, who are conversant with the subject, and whose experience and judgment are entitled to consideration, it can, to some degree, remedy the disorders of the currency, by applying to *legal or artificial persons* the same laws for the immediate distribution of their assets and discharge of their debts, which apply to natural persons.

"It cannot give to the country a paper currency in the bills of an incorporated joint-stock bank of private stockholders; *for the constitutional opinions of the president, and of a considerable part of the members of the two houses, and of the people at large, constitute at present an insuperable impediment to the incorporation of a national bank; and if it could be incorporated, it would be impossible, and if possible, would aggravate rather than lighten existing evils, to collect the stock of such an institution. It can, however, provide a national paper currency of adequate quantity, and of better quality, by other means.*

"It cannot equalise the exchanges throughout the country, so long as the currency of most parts of it consists of irredeemable bank bills in various degrees and stages of depreciation, and the business of buying and selling is transacted in one part of the country by means of specie values; and in another by paper values. Most of the existing rate of exchange between different parts of the country, is not the difference in price between legal coin in one place and legal coin in another, or of the cost of transporting it to settle balances, but the difference between the price of the coin currency and of the paper currency at the same place. This Congress cannot prevent. But it may provide a safe and economical medium of exchanges, correspondent to the true value of exchange as regulated by the course of business, according to supply and demand, in a specie medium of payment.

"It cannot, by any act of its own whatever, *proceed immediately to fill the channels of commerce with a paper currency equal in rate of value to gold and silver, neither by means of a national bank nor by any other instrumentality whatever.* For the same reason that, in the market of a depreciated paper currency, coin cannot be kept in circulation, but becomes at once an article of merchandise, and is bought up as such, and disappears, just so will it always be with a specie value paper currency alongside of a depreciated paper currency. *Until state governments cease to authorise or sanction the issue of irredeemable bank paper in a given community, that community cannot have any better currency.* But the federal government can adopt the means to furnish a paper currency of par value, to be ready to take the place of the depreciated paper currency, so soon as that shall be driven or withdrawn from circulation by the direct action of the state governments, or by the indirect action of the federal government."

The foregoing extracts from the report are remarkably illustrative of the currency of the United States; the committee then report in detail the various proposals made as to the course which Congress should adopt. On this subject,

essays, reports, letters, and schemes, have been printed, which would fill a large library.

From a speech delivered by Mr. Webster, in 1816, in Congress, upon the establishment of the late United States Bank,—a measure to which he, in common with a majority of the federal members of Congress, and a majority of the delegations of the eastern and middle states, was opposed,—we find the following remarks:—

“It was a mistaken idea that we were about to reform the national currency. No nation had a better currency than the United States;—there was no nation which had guarded its currency with more care; for the framers of the constitution, and those who enacted the early statutes on this subject, were hard money-men; they had felt, and therefore duly appreciated, the evils of a paper medium; they therefore sedulously guarded the currency of the United States from debasement. The legal currency of the United States was gold and silver; this was a subject in regard to which Congress had run into no folly.”

“The establishment of a national bank not being, in his opinion, the proper remedy, he proceeded to examine what was, &c.

“The banks not emanating from Congress, what engine were Congress to use for modifying the existing evil? Their only legitimate power, he said, was to interdict the paper of such banks as do not pay specie, from being received at the custom-houses. With a receipt of forty millions a year, if the government were faithful to itself and the interests of the people, they could control the evil, and it was their duty to make the effort. They should have made it long ago, and they ought now to make it.”

In a subsequent speech he says,

“As to any power of compulsion to be exercised over the state banks, they are not subject to the direct control of the general government. It is for the state authorities which created them to decide whether they have acted according to their charters, and if not, what shall be the remedy for their irregularities. But from such of them as continued to receive deposits of public money government had a right to expect that they would conduct their concerns according to the safe and well-known principles which should properly govern such institutions. It is bound also to collect its taxes of the people on a uniform system. These rights and these duties are too important to be surrendered to the accommodation of any particular purpose.

“The only power which the general government possesses of restraining the issues of the states banks, is to refuse their notes in the receipts of the treasury. This power it can exercise now, or at least it can provide now for exercising it in reasonable time, because the currency of some part of the country is yet sound, and the evil is not universal.

“In a country so commercial as ours,” says Mr. Van Buren, in his message of 1839, “banks in some form will probably always exist; but this serves only to render it more incumbent on us, notwithstanding the discouragement of the past, to strive in our respective stations, to mitigate the evils they produce, &c.

“Institutions so framed have existed, and still exist elsewhere, giving to commercial intercourse all necessary facilities, without inflating or depreciating the currency, or stimulating speculation. Thus accomplishing their legitimate ends, they have gained the surest guarantees for their protection and encouragement in the goodwill of the community. Among a people so just as ours the same results could not fail to attend a similar course. The direct supervision of the banks, belongs, from the nature of our government, to the states who authorise them. It is to their legislatures that the people must mainly look for action on that subject. But as the conduct of the federal government, in the management of its revenue, has also a powerful, although less immediate influence upon them, it becomes our duty to see that a proper direction is given to it. While the keeping of the public revenue in a separate and independent treasury, and of collecting it in gold and silver, will have a salutary influence on the system of paper credit with which all banks are connected, and thus aid those that are sound and well managed, it will at the same time seriously check such as are otherwise by at once withholding the means of extravagance afforded by the public funds, and restraining

them from excessive issues of notes which they would be continually called upon to redeem.

"Yet the commerce and currency of the country are suffering evils from the operations of the state banks, which cannot and ought not to be overlooked. By their means we have been flooded with a depreciated paper, which it was evidently the design of the framers of the constitution to prevent, when they required Congress to 'coin money and regulate the value of foreign coins,' and when they forbade the states 'to coin money, emit bills of credit, make any thing but gold and silver a tender in payment of debts,' or 'pass any law impairing the obligation of contracts.' If they did not guard more explicitly against the present state of things, it was because they could not have anticipated that the few banks then existing were to swell to an extent which would expel to so great a degree the gold and silver, for which they had provided, from the channels of circulation, and fill them with a currency that defeats the object they had in view. The remedy for this must chiefly rest with the states from whose legislation it has sprung. No good that might accrue in a particular case from the exercise of powers not obviously conferred on the general government, would authorise its interference, or justify a course that might, in the slightest degree, increase, at the expense of the states, the power of the federal authorities—nor do I doubt that the states will apply the remedy. Within the last few years, events have appealed to them too strongly to be disregarded. *They have seen that the constitution, though theoretically adhered to, is subverted in practice; that while on the statute books there is no legal tender but gold and silver, no law impairing the obligations of contracts, yet that, in point of fact, the privileges conferred on banking corporations have made their notes the currency of the country; that the obligations imposed by these notes are violated under the impulses of interest or convenience; and that the number and power of the persons connected with these corporations, or placed under their influence, give them a fearful weight when their interest is in opposition to the spirit of the constitution and laws. To the people it is immaterial whether these results are produced by open violations of the latter, or by the workings of a system of which the result is the same. An inflexible execution even of the existing statutes of most of the states, would redress many evils now endured—would effectually show the banks the dangers of mismanagement, which impunity encourages them to repeat—and would teach all corporations the useful lesson that they are the subjects of the law and the servants of the people. What is still wanting to effect these objects must be sought in additional legislation; or, if that be inadequate, in such further constitutional grants or restrictions as may bring us back into the path from which we have so widely wandered.*

"*But let it be indelibly engraved on our minds that relief is not to be found in expedients. Indebtedness cannot be lessened by borrowing more money, or by changing the form of the debt.* The balance of trade is not to be turned in our favour by creating new demands upon us from abroad. Our currency cannot be improved by the creation of new banks, or more issues from those which now exist. Although these devices sometimes appear to give temporary relief, they almost invariably aggravate the evil in the end. It is only by retrenchment and reform, by curtailing public and private expenditures, by paying our debts, and by reforming our banking system, that we are to expect effectual relief, security for the future, and an enduring prosperity. In shaping the institutions and policy of the government so as to promote, as far as it can with its limited powers, these important ends, you may rely on my most cordial co-operation."—*Message, 1839.*

"The consideration that a large public debt affords an apology, and produces, in some degree, a necessity also, for resorting to a system and extent of taxation which is not only oppressive throughout, but likewise so apt to lead, in the end, to the commission of that most odious of all offences against the principles of republican government—the prostitution of political power, conferred for the general benefit, to the aggrandisement of particular classes, and the gratification of individual cupidity—is alone sufficient, independently of the weighty objections which have already been urged, to render its creation and existence the sources of bitter and unappeasable discord."—*Message, 1840.*

"It was not designed by the constitution that the government should assume the management of domestic or foreign exchanges. It is indeed authorised to regulate by law the commerce between the states, to provide a general standard of value, or medium of exchange, in gold and silver; but it is not its province to aid individuals in the transfer of their funds, otherwise than through the facilities afforded by the post-office department. As justly might it be called on to provide for the transportation of their merchandise. These are operations of trade. They ought to be conducted by those who are interested in them, in the same manner that the incidental difficulties of other pursuits are encountered by other classes of citizens."—*Message, 1837.*

In respect to the controlling power of a bank founded on the principles of the late United States Bank, over the local currencies of the country, and its ability to prevent or to diminish fluctuations in the rates of exchange, Mr. Gallatin observes in "Suggestions on Banks and Currency," published in 1841 —

"The only way in which a Bank of the United States can regulate the local currencies, is by keeping its own loans and discounts within narrow bounds, and rigorously requiring a regular payment of the balances due to it by the state banks. The object might be attained without its aid, in places where the local banks will, by adopting the same course, check each other and regulate themselves. Where this does not take place, the interference of the national bank is of great importance and highly useful. But the measure is practically difficult and generally unpopular; though it may be rendered more palatable if the bank was forbidden to use the public deposits, beyond a certain amount, for its own benefit."

Mr. Lee observes:—

"That a central bank with a large capital, might be useful in restraining the over-issues and over-loans of the local banks, we have never doubted, provided it should be placed under the government of persons who had the skill, the honesty, and the courage, to manage it upon strict conservative principles—somewhat on the plan of the Bank of France. Such an institution would not answer the purposes which a large majority of those influential persons have in view, who are the most desirous of its creation. If, however, its founders and promoters were sincerely desirous of having it conducted upon strict and honest banking principles, they would not be encouraged and sustained by the nation, nor even by the persons who should be appointed by its proprietors, to govern it, or more commonly those *self-appointed persons*—who, upon the principles on which all our banks are organised, have an interest adverse to the interests of their constituents as stockholders, and to the public as recipients of their paper issues.

"There were periods, when the late United States Bank was conducted with skill and prudence. It was enabled by its moderate issues and its consequent comparative strength, to check the over-loans and over-issues of the local banks. It was, however, extremely unpopular while thus exercising its controlling power over the other banks. The severe contraction, Mr. Appleton has remarked, in one of the passages extracted from his pamphlet, which was forced upon the local banks, when the United States Bank kept its issues and loans within those prudent limits beyond which it should never have strayed, in order to accomplish a useful purpose—made the bank exceedingly unpopular, and induced many of the states to attempt to prevent it from operating within them by taxing the branches, and by other modes of coercion and annoyance."

We do not find any grave, intelligent, and thinking writer, or speaker, deny that the banking system, or rather banking practice, of the United States has caused the most extensive and often ruinous speculations, whether in the sales and purchases of lands (*See Public Lands* hereafter), in shares or stocks of public works and companies, of loss to cotton planters, and to cotton, and other

manufacturers,—to the holders of bank stock,—and to the general credit of the United States.

But still we do not find that any remedy is practicable, while that great *moral and political rottenness of the United States* exists, and predominates, in all parts of that great republic: that is speaking, and voting, and acting, not for imparting truth, wisdom, or usefulness, but for acquiring, and maintaining POPULARITY.

The *moral and political rottenness* is forcibly described by Mr. Lee, after commenting upon the following passage by Dr. Macvicar, lecturer on political economy in Columbia College, New York, in his letter entitled "Hints on Banking."

"I fully agree with you (says Dr. Macvicar), that there is no subject which comes before our legislature, *in which the people at large have so deep an interest*. Other laws touch but a portion of society, and, in general, that portion only which is interested in their enactment, and aware of their operation. Banking laws, on the contrary, operate upon all;—*through the medium of the currency every man's interest is affected, and that in a manner so imperceptible, and yet so certain, that though he feel the evil he cannot foresee it; and even if he could foresee it, he could not avoid it*. The currency, in short, being as it were, the life blood of society, which circulating through every limb and member, carries disease or soundness to its smallest and extremest points."

Again—"Were the abuses of banking confined to what may be termed its commercial evils, and its paper never passed out of the circulation of commerce, the remedy would be as simple as it would be efficacious, viz. :—to cut off all restrictions, and to leave the business of banking to be regulated by the necessary laws of credit.

"But the money of banks is not confined to the transactions of merchants; it is issued of such denominations that it passes into the ordinary exchanges of society, into the hands of those who take it not as a promissory note, *but as an equivalent of value*. It becomes, in short, the substitute for the coin of the country, which it drives out by its superior cheapness, and in this point of view is liable to a new train of evils.

"It is in this point of view, alone, that it requires the interference of the legislature, who, as the guardians of the coin of the country, acquire the right to regulate its substitutes. It becomes them, therefore, *to guard the interests of the many and ignorant*, by thus far limiting the natural freedom of banking as to prevent the currency being displaced by worthless paper."

"These are the views of a learned and disinterested teacher of the important science of political economy—uninfluenced by any other consideration than a laudable desire to inculcate truths of the greatest importance to his fellow-citizens. *The opinions here expressed, in respect to the influence and effects of a well or ill-constructed currency, or a well or ill-managed banking system, upon the welfare of society generally, will meet the concurrence of every person of common understanding, and common reflection, who is possessed of an ordinary degree of information upon the nature, functions, and uses of money*. UNFORTUNATELY THE NUMBERS, AS HAS BEFORE BEEN REMARKED, WHO COME WITHIN THAT DESCRIPTION OF PERSONS, EVEN AMONG THE BEST EDUCATED AND MOST INFLUENTIAL PORTIONS OF SOCIETY, ARE BUT FEW. Of the correctness of that assertion, few persons, we imagine, will doubt, who have read with attention any considerable portion of the speeches of prominent and influential persons, together with the most popular periodicals and public journals, wherein the subjects in question have been discussed; or who have mingled much with the classes to whom we refer, and at moments, when the banking, currency, and credit system of the country, was the theme of conversation.

"They must have found, generally speaking, such an entire absence, in the minds of the persons in question, of the *most elementary truths of economical science*, or what is worse—so many *baneful prejudices and erroneous notions worked into their belief, by the speeches of popular politicians, to whom the majority of men look for light and guidance*

in all such matters—as to have rendered a discussion of those topics difficult, *unsatisfactory and unprofitable*.

“In the more public situations than the limited circles in which most men move, the effect of *controverting, or even of doubting, the soundness of the popular notions entertained upon the subject of banking*, has been, even among persons of kind feelings, to bring suspicion and odium on those who were considered as obstinately and perversely maintaining opinions extremely injurious to the best interests of society—of supporting opinions *correct enough in theory, but practically unsound—and mischievous*, if carried out to their consequences. An individual holding such heretical views of currency and banking was denounced, as ‘*anti-bank*,’ viz.—as being influenced by hostile feelings towards the directors of banks rather than the system on which banks are conducted, or to some other motive equally derogatory to the character and disgusting to the feelings of the advocate of a sound and honest currency.

“On the other hand, if the opposition to the *system of a fluctuating and fraudulent paper currency*, came from a person known to be desirous of entering upon public life, or was already engaged in the public service, it has commonly proved injurious, if not fatal, to his wishes. It was not necessary to answer, to deny, or to disprove the soundness of his opinions, but merely to hold him up as a ‘*hard money aristocrat*,’ or a ‘*hard money democrat*,’ and both parties would indignantly excommunicate him. If this did not answer the intended object, the finishing stroke was given to his popularity, and to his character, in the estimation of over-zealous, deluded party men—by adding to the terms of reprobation, usually bestowed upon dissenters, that of ‘*radical*,’—and whether the unlucky dissenter was *radically right or radically wrong* in his views, according to the standard of common sense and common honesty, it was sufficient for the purposes of his opponents—that he was a ‘*radical*.’

“Now, although reasoning upon general principles, *one might imagine, that in a country praised for the freedom of its institutions—if for nothing else—any person of a manly independent mind, and who was in circumstances above the condition of a common pauper—would deride and despise such a feeble attempt to hamper his understanding, and to abridge the freedom of opinion—yet such a conclusion would pretty generally be condemned as a false one.*

“It would be deemed a false conclusion, because it would be *unwise to do, or omit to do, any act that might impair the popularity of a citizen*. One of the peculiar, if not one of the fortunate, characteristics of this great and enlightened nation, is—that any or every individual in it, endowed with a *common share of physical and intellectual power, and a common share of sanity*, or possibly without a common share of that mental quality, may reasonably hope, if in accordance with his inclinations, to be raised to some important or high station. For instance—to be a *judge, a governor, a general, or commodore*—or, if less ambitious, *member of the national or a state legislature*, or of the *common council, or of the board of selectmen*. But if no room in that direction, then to be *president of a bank, bridge, railroad, or canal company, or some other of the thousands of corporations*. At any rate, as a never failing, unexhausted recourse for the gratification of the ardent and lofty aspirings of public spirited men, he might hope to *preside over some of the tens of thousands of caucusses and conventions and mass meetings*, which are annually assembled in all parts of the union, for the purpose of *enlightening the people*, and, at the same time, for the equally important purpose of promoting the *disinterested views of their patriotic leaders*. Or, if the expectant of public and political offices and honours, should be so singularly unfortunate as to be disappointed of any of these appointments, he may be induced, by his friends and followers, to yield a reluctant and patriotic consent to become a—candidate for the presidency of the union; an office which, it would appear, from the characters and qualities of some of the patriotic persons who have generously offered to accept that station, *is fit for any one who is fit for nothing else*.

“But to insure any thing like a certainty of attaining one of these offices—even that of the presidency—it is expedient and necessary that those who aim at their attainment, *should acquire and retain—not reputation nor character*—those not being generally

deemed indispensable qualifications for office—but *popularity*. Now *popularity* is one of those *political virtues which cannot be attained*, or if attained, may not long be preserved by a public man who *unwisely and perversely* undertakes to maintain an independence of mind, and an *independence of action*. In the *un-free, slavish, aristocratic countries of the old world*, there may be a different meaning attached to the term *freedom*, but in a nation blessed with *free institutions—freedom of opinion consists in the submission of one's intellectual independence to the will and wishes of others*.

"In respect to the obnoxious and vituperative terms which have been applied for the purpose of rendering those persons unpopular who have impugned or called in question the soundness of the principles on which our system of currency, credit, and banking, has been conducted—the odium brought upon the persons in question, however despicable, have been the means employed to accomplish that purpose—has had the effect to lessen or to destroy the influence and power of some of the ablest men engaged in political life. No doubt, too, from that cause, many competent and independent men have been prevented from entering upon a public career, who had the disposition and the ability to render important services to their fellow-citizens, and more especially in every thing relating to *banks, banking, and currency—subjects on which most of our legislators are but indifferently informed*.

"In this state (Massachusetts) where there is not an unusual degree of intolerance felt towards men of independent minds and independent characters, several of the most intelligent, efficient, and high-minded members of the legislature have been rendered *too unpopular* to be renominated, in accordance with the wishes of their most intelligent constituents, because they freely, forcibly, ably, and honestly, expressed opinions, in or out of the legislature, upon banking, currency, and credit, that were at variance with the popular notions of the day."—*Mr. Lee's Letters to Cotton Manufacturers*.

The statement of Mr. Forward, secretary to the treasury, on the presentation of Mr. Tyler's National Exchequer Plan, embraces one of the most desperate expedients for a government, or, a country:—

"Debts due to government are now paid in specie, or in the notes of specie paying banks. Let us suppose that some exigency should come suddenly upon the country, requiring the immediate assessment of heavy taxes, and that the same exigency should compel all the state banks to suspend specie payments. In such a posture of affairs how could taxes be paid? Of specie there would be little to be had; of the bills of specie paying banks none. Government would be driven by absolute necessity to the use of paper resting on its own credit, and created for the occasion. It would have no other resource. All must see how vastly useful the system now proposed would be upon the happening of such an emergency. The exchequer would be found in operation, and in possession of a certain quantity of specie; its notes would become familiar to the public; it would have, in addition to its specie and its own established character, the amount of revenue, whatever that amount might be, to sustain its circulation."

Mr. Gouge observes, many years before, and at a period when there was no moneyed crisis in the United States:—

"No instance is on record of a nation's having arrived at great wealth without the use of gold and silver money. Nor is there, on the other hand, any instance of a nation's endeavouring to supplant this *natural* money, by the use of paper money, without involving itself in distress and embarrassment.

"Government issues of paper would be incentives to extravagance in public expenditures, in even the best of times; would prevent the placing of the fiscal concerns of the country on a proper basis, and would cause various evils. Nor is a system of banking in which the government should deal in exchanges, after the manner of the present bank of the United States, at all desirable. It would be as reasonable in a man to wish his flour transferred from Pittsburg to Charleston by the public officers, as to wish his money transferred through such a medium from St. Louis to Philadelphia. To

manage its own fiscal concerns, and to manage them well, inasmuch as it is in the power of any government. The financial operations of the United States government should be strictly limited to the collection, safe-keeping, and disbursing of the public moneys, and the transferring of them from the places where they are collected to the places where they are disbursed. Further than this, government should have no more concern with banking and brokerage than it has with baking or tailoring."

As bearing on the currency question, the following is an extract from Dr. Vethake's "The Principles of Political Economy:"—

"Another method by which the government can profit directly from the extraordinary gains of banking, is, as has sometimes been done, to assume to itself the business of a banker. The directors of a bank will, in such case, be public officers appointed by the legislature, or by some authority emanating from the legislature; and the nett proceeds of these institutions may be appropriated to meet the various demands on the public treasury. This system of banking is especially objectionable because of its exceedingly great liability to the being perverted to party-political, or still worse purposes.

"In order to prevent the monetary system of a country from being employed by the government, as a political instrument, to enable it to maintain itself against the legitimate opposition of public opinion, it is in a high degree desirable that the system should be as little under its control as is practicable, *consistently with the public interests.*"

Mr. Alexander Hamilton, whose upright mind ranks him next to Washington, among the men of whom America may, with justice and without vanity, be proud, has recorded the following opinion, which American statesmen, if they bear any love for their country, would act wisely, by observing as a regulating maxim in fiscal legislation:—

"The emitting of paper money is wisely prohibited to the state governments, and the spirit of the prohibition ought not to be disregarded by the United States government. Though paper emissions, under a general authority, might have some advantages not applicable, and be free from some disadvantages which are applicable, to the like emissions by the states, separately, yet they are of a nature so liable to abuse—and it may even be affirmed, *so certain of being abused*—that the wisdom of government will be shown in never trusting itself with the use of so seducing and dangerous an expedient. In times of tranquillity it might have no ill consequences; it might even, perhaps, be arranged in a way to be productive of good; *but in great and trying emergencies there is almost a moral certainty of its being mischievous.*"

In a speech made by Mr. Webster, while a member of Congress, in 1815, upon a bill to incorporate a bank of the United States, differing in many respects from the bill for the establishment of an exchequer, but involving some of the most important principles of that bill, we find the following passages. The main purpose of the bill was to establish a bank whose capital should consist partly of coin and partly of government stocks and treasury notes. The capital of the proposed exchequer was to consist of coin and treasury notes:—

"I am sure, sir, that the advantages which would at present result from any bank, are greatly overrated. To look to a bank as a source capable, not only of affording a circulating medium to the country, but also of supplying the ways and means of carrying on the war, especially at a time when the country is without commerce, is to expect much more than will ever be obtained. Such high wrought hopes can only end in disappointment. The means of supporting an expensive war are not of quite so easy acquisition. Banks are not revenue. They cannot supply its place. They may afford facilities to its collection and distribution. They may furnish, with convenience,

temporary loans to government, in anticipation of its taxes, and render important assistance, in divers ways, to the general operations of finance. They are useful to the state in their proper place and sphere, but they are not sources of national income.

"The fountains of revenue must be sunk deeper. The credit and circulation of bank paper are the effects, rather than the causes, of a profitable commerce, and a well ordered system of finance. They are the props of national wealth and prosperity, not the foundations of them. Whoever shall attempt to restore the fallen credit of this country, by the creating of new banks, merely that they may create new paper, and that government may have a chance of borrowing where it has not borrowed before, will find himself miserably deceived. It is under the influence of no such vain hopes, that I yield my assent to the establishment of a bank, on sound and proper principles."

The following statement and tables (which exhibit a condensed historical view of the American currency for more than a quarter of a century), were prepared by Mr. Gouge, editor of the "Journal of Banking," author of "A Short History of Paper Money and Banking," and formerly of the United States treasury department:—

"On the 30th of August, 1814, the Philadelphia banks suspended specie payments for the *first time*, and the other banks in the middle and southern states within a week or two of that date. The New Orleans banks had suspended payment in the April precedents; but the banks of Kentucky and Ohio continued to pay specie till about the 1st of January, 1815; and the only bank then in Tennessee did not suspend payment till July or August, 1815. Through the whole of this, the *first* general suspension of specie payments, the banks of New England continued to pay specie, with the exception of a few banks in Maine that stopped payment early in 1814.

"During the first suspension of specie payments, the notes of non-specie-paying banks were received in payment of public dues.

"On the 1st of January, 1817, the bank of the United States commenced operations at Philadelphia. Of the effect it had in "regulating the currency," the reader can judge for himself. The table gives the prices of western and southern bank notes at Philadelphia, in that and each subsequent year.

"On the 21st of February, 1817, the United States government refused any longer to receive the notes of non-specie-paying banks in payment of public dues.

"In 1824, the system known as the Suffolk Bank system was adopted in New England. The reader, on scanning the table, will not fail to be struck with the *uniformity* of value which the notes of the many hundred banks of the eastern states have since maintained, and this whether the banks have sustained or suspended specie payments.

"On the 11th of May, 1837, the New York and Natchez banks suspended specie payments; and as fast as the news spread from these two cities, east, west, north, and south, the other banks suspended also. In this, the *second* general suspension of specie payments, the banks of New England were included.

"In one year afterwards, or in May, 1838, the New York banks resumed specie payments, and their conduct was immediately followed by the banks of New England. These banks have since (with the exception of the banks of Rhode Island) steadily maintained specie payments.

"In August, 1838, the banks of Philadelphia professed to resume specie payments; and by the 1st of January, 1839, there was at least a *nominal* resumption of specie payments throughout the union.

"In a little more than a year, or on the 9th of October, 1839, the banks of Philadelphia suspended specie payments for the *third time*, and their example was quickly imitated by all the banks to the south and west, and also by the banks of West Jersey and Rhode Island. The bank of Missouri did not, indeed, suspend payment on its own notes; but as it traded on the notes of other western banks, it became an issuer of inconvertible paper. The banks of Rhode Island soon resumed specie payments. The banks of South Carolina resumed specie payments in June or July, 1840. All the other banks to

the south and west of New York (with the exception of the East Jersey banks, and a few others scattered in different places) continued to refuse payment of specie on demand.

"January 16th, 1841, the banks of Philadelphia resumed specie payments, and sustained them for about twenty days, or until the 4th of February. They then, for the fourth time, suspended specie payments; until the 18th and 19th of March, 1842.

A TABLE showing the highest and lowest Prices (comparatively) of Bank Notes at Philadelphia, in each Year, from October 31st, 1814, to December 31st, 1841.

[In this table, p stands for premium; d for discount; s is an abbreviation of the Latin *sed*, to.]

Of the states of Louisiana, Mississippi, and Alabama, three of the most fertile ones in the Union, the aggregate amount of bank capital, according to the returns of 1839, was 84,112,604 dollars. There are no returns of the present condition of the banks in those states, published by the treasury department, as in preceding years, but, from such statements as have been published, it would appear that the aggregate amount of bank

capital in these three states is now something less than 23,000,000 dollars. This is its nominal value, but from the quality of the securities in which it is invested, the proprietors of the shares might not be able to realise more than half the sum stated were the concerns of these banks brought to a settlement. In the states of Illinois, Michigan, and Arkansas, and in the Florida territory, the banking results descend still nearer to the point of annihilation than in the instances just cited.

"A reference to the return of the aggregate bank capital of the country affords further evidence of the enormous extent of the losses from banking to which the shareholders have been subjected. At the close of 1839, the entire bank capital was 358,442,692 dollars. Since that period, and down to this time (November, 1843), considerable sums have been withdrawn by the closing up of concerns which had not lost all their capital. On the other hand, much larger additions have been made by the creation of a considerable number of new banks; to a greater extent in the state of New York than elsewhere, since, under what is termed the 'free banking system,' every individual who has any property can become a money-coiner by pledging it to the state government, and, consequently, every individual is strongly tempted to become a creator of paper money for the chance of gaining a profit on the amount which can be kept in circulation.

Free Banking System of New York.—"It is impossible that a system of banking like the one now in operation in New York, which holds out such strong inducements to over-issuing and over-lending, should not, sooner or later, be productive of injurious consequences to the community generally, and especially so to the trading portion of it. Under the free banking laws of that state, the comptroller is required to deliver bank-notes to any individuals for the purpose of being thrown into circulation to any extent which may be asked for upon a corresponding amount of state stocks or mortgages being deposited with him as security for redemption.

"In the enactment of this law, 'the only object,' says Mr. Gallatin, 'which seems to have attracted the attention of the legislature, is not the danger of suspension, but the ultimate redemption of the notes put in circulation.' That object has not, however, always, nor generally, been accomplished. In the numerous instances of failures of the free banks, the securities deposited for the redemption of their issues have been found insufficient for that purpose. This has been one source of loss to the bill-holders, while the long period usually required for the conversion of real estate and stocks into money is another source of injury, since most of the persons in whose hands the issues of failed banks usually remain are constrained, by their urgent wants, to sell them at a great loss to those who have the means of purchasing them on speculation.

"One of the reasons urged in favour of permitting every individual in a state to become an issuer of paper money was the superior safety of state stocks and mortgages, as a basis on which to found a paper circulation. In respect to state stocks, it may be observed, that the great mass which have been issued are considerably below par, and no inconsiderable portion have fallen fifty per cent below the par rate, and from thence to nearly the point of annihilation; while the solid ones are all in the hands of men who are not inclined to part with them on any terms to free bankers.

"A reliance on a steady and permanent value of real estate has proved to have been equally unsafe. Take, for instance, real property in the city of New York, which is the most wealthy one in the country, and has made the greatest advancement in business and population, and, consequently, it might reasonably be concluded, that real estate would there maintain its value if anywhere. A reference to the official returns of the assessed value of real estate in the city of New York, gives the following results:—

YEARS.	Dollars.
1833.....	114,129,361
1835.....	145,732,425
1836.....	233,742,308
1839.....	199,778,434
1842.....	176,469,048

"In 1836, the population was estimated at about 280,000,000; in 1840, it was, by an enumeration, found to be 312,710,000; and, in 1842, it was estimated at 350,000,000. There had been erected, between the years 1836 and 1842, for the accommodation of

fertile ones of 1839, banks in from such nt of bank

this additional population, a suitable number of dwellings, warehouses, and public buildings, and, generally speaking, of a quality superior to any class of buildings which previously existed. There should, then, be added to the valuation of 1836, twenty-five per cent, that being the ratio of increase of population. According to that estimate, the return of real estate in New York city, in 1842, should have been 233,742,303 dollars, with twenty-five per cent superadded for an increase since 1836 making the amount in 1842, 292,177,879 dollars.

"The actual decline, then, in the value of real estate in New York, between 1836 and 1842 is 116,688,837 dollars, being the difference between what the returns actually were in 1842, and what they would have been, had the prices of 1836 been maintained. It may, perhaps, be imagined that the valuation in 1842 was unnaturally low in consequence of the depression in business and other causes of temporary duration. There might be some reason for such a conjecture, were not the contrary shown to be the case by a subsequent decline in prices of real estate, as will be seen by the returns of 1843, when they are laid before the public."*

"By subsequent contractions of the currency, and, for a short time, to a point below its natural level, prices of some of the above articles were reduced considerably lower than the lowest of the quotations. It is not contended by Mr. Tilden, that there were not other causes in operation to raise and to lower prices besides the variations in the bank loans and liabilities. There were great fluctuations in the supply of some of the commodities as compared with the demand, but not greater than in former years, when prices, instead of fluctuating up and down to the extent of fifty and 100 per cent, did not vary more than twenty or twenty-five per cent.

"It appears by the table, that flour rose from five dollars fifty-six cents—the price per barrel at New York, in 1835—to ten dollars eighty-seven cents, the price in 1837; from which it descended, at the close of 1839, to six dollars per barrel. It has subsequently gone down to a much lower price. In an equal number of years immediately preceding that period, namely, 1830 to 1834, prices varied only from four dollars eighty-three cents to five dollars seventy-two cents per barrel; the fluctuations in the former case extending to ninety-five and a half per cent, and in the latter to eighteen per cent. The excessive enlargement of currency, and the sudden and enormous alterations in its amount, and in the amount of bank loans, are noted in the table.

"On the other hand, at the former period, 1830 to 1834, the currency, as before frequently remarked, was in as sound a state, according to the views of Mr. Gallatin, as can ever be expected, upon the principles on which the currency system is founded, and the banks which issue it are managed. The bank circulation, from 1830 to 1834, did not exceed 94,839,570 dollars; the deposits, 75,636,986 dollars, and the loans, 324,119,499 dollars.

"It has been contended by those who deny that the currency was lowered in value from its excess, that the rise in the prices of flour was attributable to bad seasons. This is true to some extent—but as there was but one unusually bad season from 1835 to 1840, the frequent and excessive alterations in prices cannot be accounted for from that cause.

"Again, as a proof of the scarcity of bread stuffs, the fact that large importations were made has been strongly dwelt upon, and been pretty generally deemed a satisfactory refutation of the position taken by those who maintain, in common with Mr. Tilden, that the principal cause of the fluctuations in prices was to be found in the variations of currency, and in the free and careless system of trusting which prevailed during the period in question.

"It is true, then, that during the years when wheat and other grains, as well as animal food, were at the highest prices, we imported to the extent of several millions of dollars. These articles came, too, from countries in which the cost of production is usually higher than in this country; from countries where prices are almost always in advance of our prices, when the currency of this

"The number of banks, however, which have been governed by men who have had the firmness of principle to resist temptations laid open to them by the false position in which they are placed, as trustees of property of which they are likely to become the principal borrowers; the number of banks which, under the management of such men, have been conducted with a prudent and honest regard to the interests of the stockholders, are few in comparison with those which have been deeply injured or utterly ruined by the imprudence or misconduct of their managers. 'It is believed,' says Mr. Nathan Appleton, 'that in all cases of bank failures in Massachusetts, the failure of the principal stockholders and directors has accompanied, or preceded, the failure of the bank. The great point, therefore, to be guarded against is, the liability of banks to fall into few hands to be used for their private speculations.' This sound advice from one familiar with the art of banking, as well as the principles of banking, was given in 1831. It was, like many other wise suggestions from the same source, disregarded by the shareholders of banks.

"In some other parts of the country, entire capitals have been sunk in gambling operations of the directors of banks and their associates, who were interested with them; and the instances are not rare, where the assets of a bank proved to be insufficient to redeem its circulation; while in other cases, the depositors, bill-holders, and proprietors, were all stripped of their property. There were banks in this state (Massachusetts), and some of them under the management of individuals who clamoured loudly against all banks as '*aristocratic monopolies*,' whose assets would not redeem their circulation and their deposits. In these instances, the losses fell with the greatest weight upon the most helpless and poorest members of society. And such has generally been the case with ruined banks, of whose impending fate the managers and their friends, and others who can obtain access to correct sources of information, have had such early warnings as to induce them to sell out their shares before they fell into discredit, and the buyers, as one might reasonably expect, have generally been among that class of the community to which we have referred.

"In truth, it cannot be too often repeated, that the losses upon banking fall mainly on the most helpless portion of the community, while the benefits which may be supposed to arise from the use of bank capitals are chiefly shared among the most shrewd, enterprising, and intelligent classes of society.

"The shares in the United States Bank were, more than in most instances, held by persons of large capitals as permanent investments, and by others who dealt in them on speculation. Still, a very considerable portion of its capital, at the period of its ruin, belonged to the class of persons referred to. Accordingly, Mr. Dunlap, its president, in a memorial to the legislature of Pennsylvania, thus alludes to this portion of its stockholders. 'They are widows, orphan children, persons retired from business and active life, and not capitalists only; and all of them have been and are sufferers against their will, without their personal agency, and beyond the possibility of redress by themselves.'

country has been in its natural and sound condition, namely, on a level with the currencies of the countries from whence those imports were made.

"It was not, however, because of an insufficiency of food of home production that the foreign articles were imported. They were forced upon us by an artificial rise of prices, originating in, and promoted by, over-issues of currency and credit, accompanied, as usual, by a spirit of speculation, which was more strongly directed to transactions in provisions than to dealings in other products of industry; and more especially were the articles of beef, pork, and flour, the favourite objects of the gamblers, and the banks in the middle and western states which afforded them the means of elevating and sustaining their prices.

"The importation of provisions made a strong impression on the minds of those who overlooked or were ignorant of the effect of a redundant currency, and of the speculative movements superinduced by it on prices. They naturally regarded it as an evidence that the rise of prices was caused wholly by a deficient domestic supply. If they had looked into the custom-house returns they would have seen, that a large amount of other articles; of which, as of provisions, we had an abundance, and even a superfluity, were also imported, and, in many instances, were re-exported. There was not, in point of fact, any insufficiency of home-produced grain, or provisions of any kind, during the years in which we imported these articles. 'This will be made manifest beyond all contradiction or disbelief.'

"Before the final bankruptcy of this institution, a larger number of shares held by speculators and by wealthy individuals who had the means of judging of its condition and prospects, were sold out by their proprietors, and probably many of the buyers were persons of smaller means, and, consequently, the stockholders may, at the end of its career, have become more numerous than at any earlier period. From a statement published in 1840, it appears that there were—

	dollars.	dollars.
2257 persons holding stock of the value of	100 to	2,000
1577 " " " "	2,000 to	10,000
614 " " " "	10,000 to	50,000
30 " " " "	50,000 and upwards.	

"From the comparatively few heavy shareholders, it may reasonably be inferred that the largest portion of the sufferers by the ruin of the United States Bank were persons in narrow, or in very moderate pecuniary circumstances. In the same document, we find the following statement:—

The number of shares held by females	23,676
" " " executors and guardians	4,286
" " " trustees	16,243
" " " benevolent institutions	1,758

"These unfortunate persons not only lost the par value of the shares, but it is probable that a considerable portion of the shares were purchased at an advance of ten to twenty-five per cent; and, in some instances, as high as forty to fifty per cent. Those prices were obtainable within a short period of the origin of the bank. As a further aggravation of the feelings of the sufferer, there can hardly be a doubt that a vast amount of shares were purchased at par and upwards after its capital had been invested in securities which, to a great extent, were of little or no value, and, consequently, the actual worth of the shares, when purchased, was not equal to half the sum paid for them; while a still larger amount was purchased somewhat under par, when the bank was in a ruinous condition. Such will generally be the case with ruined banks. The persons who manage them and others acquainted with the facts necessary to rest a judgment upon, will sell out their shares, and they will generally fall into the hands of the least intelligent and most helpless portion of the community, they being the most readily seduced into purchases of stocks at the declining prices usually attendant upon sales of shares in an unthrifty or a ruined corporation.

"An official statement, emanating from the banks in Pennsylvania other than the United States Bank, shows that a still greater proportion of their shares were held by small proprietors, and by charitable institutions, by females, guardians, &c., than in the latter institution. The returns of shareholders in 1840 show:—

	dollars.	dollars.
6327 persons holding stock of the value of	100 up to	800
2821 " " " "	800 up to	1700
2451 " " " "	1700 up to	4000

"The balance of their shares were owned in sums of 4000 dollars and upwards, and those larger proprietors were probably, as in case of the United States Bank, mostly persons retired from the active pursuits of life, and who, consequently, to their own injury, and to the entire ruin of many of them, had confided their property to the management of agents who, as events have shown, were utterly unworthy of their confidence.

"The number of shares in these institutions held by

Females	39,869
Executors, guardians, and trustees	26,082
Officers of benevolent institutions	1,983

"It is probable that a great portion of the remaining shares were, as before stated, owned by aged and retired persons, or by others who had not the disposition or the skill to manage their property, and, therefore, were willing to place it in a situation where, in the best events, the income would be below the ordinary earnings of capital. But as compensation for a rate of interest restrained by an impolitic and unjust law below the market value of money, they expected *safety*, but they failed of finding it, nor, in the long run, as respects most of the banks, while banks adhere to the principles on which they are based and administered."

Total.....	17,010,000		471,150		481,475		426,300		430,000
Dividend, Apr. 1842.....	442,900
Increase.....	38,575

This gives six dividends on a capital of 17,000,000 dollars, as follows:

April, 1842	dollars. 442,900	October, 1843	dollars. 417,000
October, 1842	471,150	April, 1844	426,300
April, 1843	481,475	October, 1844	480,000

This is the largest October dividend, and shows considerable improvement in the profits of the banks during the past summer. Notwithstanding the low rate of money, as compared with 1843, there is an increase of fifteen per cent in the profits, which probably arose from an extension of credits in that proportion. Neither banks nor stocks, however, seem to command confidence, as a means of investment. The experience of past years has been such, as to prevent much disposition to put money in banking concerns.

"From the remarks of Mr. William C. Bryant we extract the following passages. They were written antecedent to the suspension of 1837, and are in correspondence with the views maintained by him at a still earlier period, and before there were any signs of a revulsion. They indicate the opinions of one familiar with the true principles of currency and banking, as well as a knowledge of the practical results of our system of banking; and thus he was enabled to foresee and predict the ill consequences which must ultimately flow from a violation of those principles.

"One of the most curious circumstances, says he, 'connected with the universal rage for speculation, is the exceeding gullibility of the people. No scheme seems to be too vast to stagger their credulity. The most impracticable plans are received as easy of accomplishment, and the most stupendous projects are entered upon with undoubting confidence, as if they were 'trifles light as air.' The thought obtrudes itself, apparently, into no man's mind, that there is a stopping-place, where all this rapid motion must cease; that the machine, urged to too great velocity, will at last fall to pieces. No one seems to anticipate that there must come a time when the towering fabric which speculation is building up, grown too huge for its foundation, will topple on the heads of its projectors, and bury them in its ruins. Every one acts as if there were no fear that the explosion would take place, while he is in danger. Each one stretches out his hand to grasp his share of the gambler's spoils, without any idea that, like fairy money, it may turn to worthless rubbish in his hands. A general infatuation has seized the

minds of the community, and each one grows wilder in his lunacy from listening to the ravings of those around him.

“ In the meanwhile, the speculators would, indeed, seem to have discovered the Midas art. Their touch turns every thing to gold. They are all getting rich. One buys the refusal of a farm for a vast deal more than it is intrinsically worth. He sells it to another for a large advance before the term of payment has arrived. The second sells it to a third, the third to a fourth; and, in this way, it probably passes through a dozen hands, before the first instalment of the original price is paid. Each successive purchaser fancies himself rich, and the one into whose possession the property falls last has magnificent plans in prospect, and thinks that he is the richest of all. But pay-day must come, and come ere long, we fear, to many an unprepared speculator, and rudely wake him from his dream of fancied wealth.

“ The vast and sudden increase which the paper circulation of this country has undergone within the last eighteen months (from 103,692,495 dollars to 140,000,000 dollars), is the cause of the feverish thirst of riches which the community now exhibits; and whatever shall check that circulation, and turn it back upon the banks, will arrest the disease, but arrest it with a violence that to many will prove fatal, and give a fearful shock to all. Paper money is, to the people of this country, ‘ the insane root that takes the reason prisoner;’ and they can be restored to sanity only by withholding such stimulating and dangerous aliment. As it now is, their appetite grows by what it feeds on. The demand for money increases with each succeeding day; and every new loan of bank credit but gives rise to new projects of speculation, each wilder and more chimerical than the last.

“ The effect of this pervading spirit of speculation (or spirit of gambling of the most desperate character, as it might more properly be called), on the morals of the community, is dreadful. Its direct and manifest tendency is to blunt men’s moral perceptions, and accustom them, by degrees, to acts and devices of traffic which an honest, unsophisticated mind would shrink from with horror, as frauds of the most flagitious dye. It creates a distaste for the ordinary pursuits of industry; it disinclines the mind from the gradual accumulation in some regular vocation, and kindles an intense desire, like that expressed in the prayer of Ortogrul of Basra, ‘ Let me suddenly grow rich!’ To this gambling spirit of the day we may directly trace the most of those prodigious frauds, the discovery of which has recently startled the public mind. ‘ Startled the public mind,’ did we say? The phrase is wrong. The public were not startled. They heard the stories with the most stoical indifference; and if any exclamations were uttered, they conveyed rather a sentiment of commiseration for the criminals, than one of detestation for their stupendous crimes.

“ But the day of the madness of speculation is drawing to a close. The time must come, nor can it be remote, when some financial or commercial revulsion will throw back the stream of paper circulation to its source, and many a goodly vessel, which had ventured too boldly on the current, will be left, by its reflux, stranded on its shores. Circumstances may yet defer the evil day for a while, but it cannot be far off. A failure of the cotton crop, or any one of the thousand contingencies to which trade is perpetually liable, will give a shock to the widely expanded currency of the country, which will be felt with ruinous force through every vein and artery of business. Woe unto them in that day who do not now take timely caution. Their cities, and towns, and villages, which they now are so fertile in planting, as if they thought men might be multiplied as rapidly as paper money, will remain untenanted and desolate memorials of their madness, and the voice of sorrow and mourning, instead of the din of our present unreal prosperity will be heard through the land.”

How very applicable are these remarks to the railway plague of 1845, in England. Mr. Lee, in alluding to paper securities, says :—

“ Of the description of securities referred to, and for the most part created by one class of persons, for the purpose of getting possession, through banks or by some other contrivances, of the property of other persons, there must have been, at one period—say from 1834 to 1841—some thousands of millions of dollars in existence within the compass of those few years—the ultimate effect of which was to injure all the banks—to ruin

a majority of them—and finally to transfer from the most industrious, prudent, economi-
cal, useful, and productive classes of the nation, a considerable portion of their estates, to
the most imprudent, reckless, and unprincipled portion of it.

“Of the various classes of citizens who have suffered from this vicious system of banking
and gambling—the cotton planters, probably, come in for the largest share of the losses—
unless the manufacturers of cotton may be considered as having the unfortunate pre-emi-
nence in that respect. First, in the enhanced prices paid for their raw material and for their
labour—consequent upon a superfluons and fluctuating currency. Secondly, in the
amount of bad debts on the sales of their manufactured goods. Thirdly, in the delusive
appearances of prosperity occasioned by a redundant currency—causing artificially high
prices for goods, and leading to the establishment of more manufacturing concerns than
the real wants of the country required—and more than would have been established
under the more natural and healthy operation of a sound and honest currency. The
high profits gained by manufacturers, at periods when prices were unduly enhanced by
the action of an expanding and expanded currency—together with an unnatural demand
for goods beyond the *paying ability* of consumers—induced by the improvident and too
extended trustings of the sellers of manufactures.

“The evils we have described are the natural, if not the inevitable, fruits of a vicious
system of currency;—of a currency issued by 900 banks, created and regulated, if regu-
lated at all, by thirty states and territories, managed by 9000 directors, who have the
power, and who exercise it too, of expanding and contracting the circulating medium at
any moment and to any extent, they may deem expedient, and, consequently, of causing
great variations in the prices of commodities. The effect of their operations lead
to dangerous speculations, and imprudent and dishonest transactions, and producing
what are termed *good times*. The reaction, however, must come. Then come the fall of
prices, stagnation, depression, discredit, despair, followed by commercial and monetary
convulsions and revulsions; suspensions of individual payments, failures and repudiation;
sometimes ending, as in 1814, and more recently in 1837, in the failure of all the banks;
—of those institutions which are allowed the privilege, or it is taken by them, of circulating
150,000,000 dollars of paper notes on a reserve of coin not usually exceeding 30,000,000
dollars or 40,000,000 dollars, with an engagement, on their part, to maintain the cur-
rency of the country in a stable and sound condition.”

The capital of all the banks in New Orleans was, in 1830, 4,665,980 dollars. This was increased to 39,943,832 dollars in December, 1837, a period of seven years. This capital was held or procured as follows:

Procured in Europe, mostly on the credit of the state	dollars.
“ other United States	20,725,080
“ or held in Louisiana	6,045,710
	12,373,012
Total capital paid up	39,943,832

“This capital was subsequently increased to 41,711,314 dollars. The increase

of banking facilities at this rapid rate was evidently in advance of the real business of the city, which in the same period had increased fifty per cent only. The bank credits constantly accumulating, sought other than legitimate channels for their employment, at the same time that they greatly facilitated speculators in obtaining the means of operating in cotton—the principal article of export from New Orleans. The market for that article became altogether speculative under the influence thus exercised ; and, by a singular inversion of things, the rate at the same period throughout a season would always be higher in New Orleans, the point of purchase, than in Liverpool, the principal market of consumption. If, through over-production, or an untoward state of affairs abroad, the market was checked, a long chain of reclamations and discredit followed, which made its evil influence felt throughout the union, particularly in New York, where the sterling bills were mostly negotiated. The failures of those banks were very disastrous. The two outer columns of the rate of specie and sight checks on New York, indicate the depreciation of the currency through all the period of suspension which took place in October, 1839. Under the present law, the banks are required to retain in their vaults one dollar for every three dollars of their bills in circulation, with the exception of the real estate banks, which are allowed ninety days. We have here then an outline of the remarkable manner in which capital has been drawn into banking at New Orleans, and been sunk by the inherent vices of the system. In all sections of the country the same general features have and do exist. All that capital which, during the undue excitement of the years subsequent to 1832, was drawn into banking by the operation of speculation in raising prices and creating an extraordinary demand for money, has, in the general fall of property, ceased to exist, leaving, however, active, as much capital as is necessary for the transaction of business. The quantity of money required for the interchange of commodities may be illustrated by the comparative value of the crops of cotton and flour, which are the most valuable, for the years 1837 and 1838, according to the average market value for each year. The average crop of cotton for the last seven years, has been 515,280,000 pounds, and of flour 20,000,000 barrels."—*Hunt's Commercial Chronicle.*

We have under the head of New York given statistics of the bank of that state down to the end of the year 1843. The following statements and tables include all the statistical information which we have been enabled to obtain, down to the close of the year 1845.

"The state of the currency throughout the union, as a great whole, has been in a most unusually contracted state. Of the banks in eighteen states, reported nearest to January, 1844, the results were as follows:—

Circulation.....	dollars.	50,328,587	Net circulation.....	dollars.	39,491,263
Capital.....		148,096,486	Specie.....		43,899,678
Notes on hand.....		10,737,234	Loans.....		193,926,761

"Of the amount of notes on hand, a portion were checks and cash items. The nett circulation was about 41,000,000 dollars, or near 3,000,000 dollars less than the specie on hand—a most extraordinary position of affairs, and eminently indicative of the blight which in the past few years, has overtaken paper credits."—*Hunt's Commercial Review*.

BANKS of New York.

"From May to August is usually the season when travellers and traders coming to New York for pleasure, or to buy goods, or pay old debts, bring with them large amounts of money. It is also the season when the supply of foreign bills being the least, an export of coin springs up to supply the deficit. This year, however, notwithstanding the payment of 2,500,000 dollars New York state stock, due July 1st, and the resumption of the Pennsylvania dividends, the remittances are much less than last year. This arises from diminished imports, and from a better price obtained abroad for cotton sold, as well as for increasing quantities of general farm produce sold in England, under the modified tariff of that country."—*Hunt's Commercial Chronicle*.

Rates of sterling bills on London, and of sight checks on New York, with the receipts of specie, and specie in the banks of New Orleans during the following periods of 1844 and 1845:—

"From June, 1843, to June, 1844, the rate for sterling evinced violent fluctuations, as well as the rate for New York checks. The demand at New Orleans for eastern funds usually raises the rate to a premium as early as May 1st; at which period, in 1844, they were at 1 per cent premium. This year, on the 1st of June, they had only attained ½ per cent premium. The receipts of specie at New Orleans are also much less, resulting in a decline of the amount held by the banks of that city. The course of trade between the western country and New York usually turns upon New Orleans. The west buys its goods and merchandise of the northern and eastern Atlantic cities, and sells its produce to a great extent in New Orleans. The demand for northern funds, at New Orleans, is therefore proportioned to the extent of purchases, as compared with sales. When the purchases exceed the sales, specie usually leaves the banks of the states in the valley of the Mississippi, and descends the river to New Orleans, for investment in bills. This demand for bills has, in 1845, been less than during the two previous years; and, as a consequence, the specie of the New Orleans banks has decreased, and spread through the western states in general circulation, improving the state of currency, and promoting the soundness of the western trade. The west has been a good deal in want of a circulating medium; and that circumstance has opened the door to the circulation of considerable quantities of irregular paper. Of this description were the issues of some of the Michigan banks, particularly the bankrupt St. Clair bank. In Chicago, Illinois, there is a large circulation of what purports to be checks or certificates of deposit upon Wisconsin insurance companies. In Ohio, the want of a sufficient supply of currency led to the enactment of the law of the last session of the legislature of that state. A sufficient number of banks, under the state bank feature, have been organised, to constitute the state bank; and the governor has issued his proclamation to the effect that some concerns, having complied with the free banking portion of the law, are authorised to commence business as independent banks. The probability is, that new banks will multiply under the loose provisions for the state bank, until a disastrous reverse overtakes the whole. That branch of the law offers greater inducements to irregular banking than does the other branch of the same law. This latter is a copy of the New York free banking law; in relation to which, a most startling decision has been made in the Supreme Court of New York, by Judge Bronson, to the effect that the law authorising them is unconstitutional, and that the institutions organised under it have no legal existence. The conclusion of the decision of the learned judge is as follows:—

"We are then brought to the following results, all founded—not upon mere *dicta*—but upon the express adjudication of the Court for the Correction of Errors:—1. It is the business and duty of the court to examine and decide whether any law falling within the two-thirds clause of the constitution received the requisite number of votes to give it validity. If it did not, the supposed law is utterly void. 2. Associations formed under the general banking law are corporations;—and 3. The constitution extends to all corporations. The conclusion is obvious. Having examined and ascertained that the general banking law did not have the assent of two-thirds of the members of either house, it follows that, so far as it authorised the forming corporations or associations, it is utterly void; and the banking companies which have been organised under it have no legal existence."

"The interest involved in these existing banks, is, it appears, near 32,000,000 dollars, or rather more than twenty-five per cent of the whole banking interest of the state, in addition to which, there are some 12,000,000 dollars involved in free banks in liquidation in the hands of trustees, &c. This is the second serious difficulty which has grown out of the loose, not to say careless, manner in which the state constitution is trifled with, in the formation of laws, affecting in their operation the best interests of the people of the state. The state constitution provides a vote of two-thirds of all the members elected to each branch of the legislature shall be required to any bill creating, continuing, or altering, or renewing any body, politic or corporate, or for the appropriation of public money to a local or private purpose. Notwithstanding these provisions, some 5,500,000 dollars were given to railroads on a majority vote, and a bill under which sixty-five banks have been organised with reference to some paper, as money, passed by a similar vote. And these great interests are now declared null and void for the want of proper adherence to the organic law of the state."

STATISTICS OF THE SAVINGS' BANK OF NEW YORK.

"According to an official copy of the Twenty-fifth Annual Report of the Trustees of the Bank of Savings, in the city of New York, for 1843, laid before the legislature March 8, 1844, it appears that the trustees have received from 18,479 depositors, from 1st of January to 31st of December, 1843, the sum of 1,157,682 dollars 50 cents. The nature of drafts paid was 148,814 dollars, and the amount paid out was 950,286 dollars.

"The following table exhibits the number of persons from whom deposits were received, and the amount deposited; the number of drafts drawn at the institution, and the amount paid out, in each month of the year, commencing in January, and ending in December, 1843:

"The following table presents a general view of the institution, from the commencement of its charter, in July, 1819, to January, 1844:—

"The foreign, as well as the domestic exchanges, have during the past year, 1844-5, evinced a remarkable steadiness; causing them to assimilate, in a very great degree, to the state of the exchanges between the nations of Europe. As an evidence of this great regularity in price, we may take a table of the prices of bills on England at New Orleans, checks on New York, and the rate of sterling at New York, at corresponding periods throughout the year;—also, the quantity of cotton and tobacco exported from New Orleans, from the 1st of September, when the cotton year commences, to the close of each month, as follows:—

COMPARATIVE Rates of Sterling, at New York and New Orleans.

"Cotton and tobacco form the basis of two-thirds of the foreign bills with which the markets are supplied. Therefore, that the quantity of these bills offering must be the greatest at those seasons when the cotton goes forward most freely—that is to say, in the month of December, when 200,000 bales of cotton, worth 6,000,000 dollars, went forward, the supply of bills must have been very much greater than in the month of June, when 50,000 bales, worth 1,500,000 dollars only, went forward. Most of these bills are sent to New York for negotiation; and, by that means, become the basis on which the domestic exchanges turn, to a very considerable extent. In the winter months, therefore, when the largest supply of foreign bills on southern account is selling in New York, the greatest supply of drafts on New York is created, and the rate falls to a discount in the southern cities. In the spring months, when southern dealers are coming north, and payments mature for goods purchased north and east, on southern and western account, a demand springs up for northern funds, which raises the rate to a premium, as observed in the table. It is very remarkable that, notwithstanding the great irregularity in the supply of bills, the price has maintained a uniformity which, perhaps, the exchanges of this country never before exhibited, for so great a length of time. Two important influences have gradually come into operation, to effect this result. One is the long continued abundance of money in England, and its comparative cheapness, compared with the rates obtainable for its use on this side of the Atlantic, and the facility of its transfer, by means of steam navigation; and also the increase of exchange operations with the continent, by means of which, arbitrations can be made to better advantage, in some cases, indirectly, than directly—thus affording a check upon too exorbitant a demand upon any one point; as, for instance, knowing the price of continental bills in London, which are sold for cash. It is easily ascertainable which will be the best remittance to London, a sterling bill, or a bill on any of the continental cities—say Hamburg. The price of Hamburg bills in London being mks. 13.9½ shillings per 11, then the difference will be as follows:—

15,000 marks banco sold in London, at mks. 13.9½ sh.....	£	s.	d.
Less brokerage, 1-10 per cent.....	1103	8	11
Proceeds in London.....	1102	6	10
Remitted in sterling.....	1111	12	1
Less interest, 60 days.....	9	5	3
	1102	6	10
£1111 12s. 1d. at 4.75, or 107.77, cost in New York ...	dirs.	5324	58
15,000 marks banco cost, at 36½.....		5325	00

" Thus a premium equal to 7.77 per cent on sterling, is equal to 35½ for marks banco. An advance of sterling to 8 per cent would, therefore, make the marks (remaining the same) the best remittance to London; and, as the exports of produce to the continent are largely on the increase, the material for these arbitrations is greatly increasing. It is also the case, that the leading London houses are largely connected on this side of the water; and the fluctuations in the exchanges afford far too profitable a means of employing money, to allow them to take place to such extent as formerly. *The true par of exchange between New York and London, is about 9½ nominal premium.* It requires however, an advance to near 10½, before gold can be shipped to advantage. When, therefore, bills are scarce, and command ten per cent, at a time when money is worth two per cent in London, and six per cent in New York, it is evident that considerable profit is realised by selling at ten per cent; employing the money here to better advantage than it can be employed in Europe, and replacing the bills when the crops come forward, at a difference, perhaps, of one per cent. These are powerful influences in preserving a steadiness of exchange, and are the reverse of that system formerly practised by banks at the south. Those concerns bought bills when they were cheap, and held them without interest, to sell when they advanced. Hence, unless they got a price equal to the accumulated interest, with a profit added, they lost money. Under such a system, the fluctuations in bills, and the margin between the north and south, were necessarily greater than when individual capital is applied, as now, to their regulation.

" The fiscal year, for the federal government, closed on the 30th of June, 1845, and the revenues are about 5,000,000 dollars less than the estimates. This has arisen from the diminished imports; and these, in their turn, have resulted from the fact that the imports of last year were, in excess of the country, at a time when the low prices of produce necessarily compelled an economy in purchases of consumable goods, beyond that which is usually observed when the profits of planting and farming, arising out of high moneyed prices for produce, are large. Among the population of the United States, perhaps, to a degree greater than in any other country, the enterprise of the people keeps pace with their means; and the general trade of the country fluctuates, in a rapid and marked manner, with the temporary prosperity of the leading interests.

" The bulk of the people of the United States derive their means from the sale of tobacco, cotton, rice, and farm produce; all of which depend for their price upon the state of the foreign markets, where the largest proportion of the surplus is consumed. The tariff of 1842 was looked upon, by very many of the friends of protection, as too ultra in its nature to be permanent; and, as such, did not meet their entire approbation.

" In a popular government like our own, there is always a diversity of interests, and a variety of views in relation to the utility of leading measures. In most cases, there are real benefits derivable from legislation on commercial subjects, by one class of citizens, to the positive injury of some other class or classes. There is, perhaps, no subject of legislation, in which stability is of greater importance, than that of the tariff. In constructing a tariff, therefore, which shall serve the interests of all classes, and of the country at large, permanency is the quality which is most to be desired. It matters far less, in the long run, how high or how low may be the average per cent payable on imported goods, provided that rate is enduring. All classes, in the conviction that it is not subject to change, will accommodate themselves to its practical operation, and the business of the country progress steadily.

" On the other hand, a state of uncertainty paralyses the enterprise of citizens, stagnates capital, and imparts a sluggish movement to trade, which is not slow to evince itself in decreased employment, and reduced wages to the working many. Hence it is, that the benefits expected from any commercial measure, of a radical character, rarely, if ever, flow from it. No matter what may be the advantages offered to the employment of capital, in any particular branch of industry, if the constant fear hangs over the capitalist that those advantages may be, after he has embarked his capital, suddenly withdrawn, before he can reap the expected profits, or even be remunerated for his outlay. In such a state of uncertainty, he chooses rather to employ his funds temporarily, even at a less profit, until the future holds out more of stability. This is more particularly

true in relation to those benefits which flow incidentally from legislative action, than in those which take the form of a special charter, as in the case of the Ohio bank law. Notwithstanding that law was strictly a party measure, and a strong opposing party threatened repeal as soon as it became a law, yet numerous banks have been started under it; because those banks, thus started, will have a legal existence up to the period designated by the law under which they were authorised, notwithstanding that the repeal of that law may take place, and prevent any new institutions from being formed.

"The stagnation of trade, to which we have alluded, as incident upon a renewed discussion of the tariff question, at the next session of Congress, will doubtless have a marked influence upon the business of the coming fall. There seems to be an attempt making to continue the employment of banks in some sort, as is now the case under the act of June 17, 1844; under which the banks give a required security, and from them the United States deposits cannot be removed without sufficient cause assigned by the secretary, or on their failing to comply with the requisitions in relation to security.

"It has been the experience of the English government and people (and, in matters of finance theirs are operations of a magnitude sufficient to form a guide for the commercial world), that the mere power of expansion in banking institutions, even when the ultimate payment of every individual bill is in nowise jeopardised, has an influence deleterious to commercial and national interests; and, acting upon that experience, the government has positively restricted the banks of the whole kingdom from exceeding a certain amount of paper issues. It is not that there is danger that the Bank of England will fail, and not be able to pay its notes, that government has positively restricted its credit issues to a point as low as 14,000,000*l.*, or 6,000,000*l.* below its usual actual issues; and has prohibited, hereafter, the creation, throughout the United Kingdom, of any bank of issue whatever. It is because the object to be obtained is a steadiness of the currency, and a uniformity of its action as nearly as can be ascertained, in all the channels of business. The power of increasing or diminishing the volume of the currency at will, is the power of altering the value of all property and of all prices, as well as of raising prices in one branch of trade, and of lowering them in another, by withdrawing funds from one quarter, and putting them out in another. This involves an aggregate loss to the community of far greater magnitude than that incurred by the occasional failure of an isolated bank, in the payment of its notes. Hence, although the Bank of England continues to be the recipient of the deposits of the government, as those deposits are payable promptly out again, for government uses, a small portion of them, only, can be re-loaned by the bank. It has no power of multiplying them by the issues of its own notes, in a proportion greater than the sum of the deposits it holds. In the United States, if the banks were banks of discount and deposit, only, the use of them by the government, as depositories, would not involve any serious changes in the channels of employment, for any considerable sums of money. As the case stands, however, the receipt of the public money gives to the government bank the means by which it extracts specie from the debtor institutions. It then has it in its power to multiply that specie by three, in its loan transactions. Thus, extensive curtailments take place within the circle of the debtor banks, and an equally large expansion around the government depository. The effect of this is to disturb the channels in which the capital of the country is usually employed; and by so doing, to produce great evils. In general estimation, the effect of making the public dues payable in specie, only, is to produce a decline in general prices. This is, no doubt, the legitimate effect of such a measure, if put in operation at a time when a level of prices exists, and which has resulted from a superabundance of credits, based upon the specie called into action by the government demands. Such cannot, however, be the effect when prices are low, and are uninfluenced by the presence of any considerable portion of outstanding credits.

"In England, and on the continent, the consumption of raw produce of all kinds, is vastly in excess of what has been the case for a series of years; and although the crops are so prolific as to afford unusual supplies, there are indications of advancing

prices, consequent upon increased consumption. This latter circumstance is that which the present policy of the British government is avowedly designed to encourage; and a recent announcement of the premier was to the effect that it had succeeded beyond expectation. The enhanced consumption of raw produce in England is, of all other occurrences, best calculated to promote the interests of the United States; but it takes from the over-supplied markets here that surplus, during the presence of which, prices cannot rise healthy. It is obviously the case, that the wealth of all people consists in the quantity of the products of the earth, and of industry, that they are enabled to enjoy. That government, therefore, confers the greatest benefits upon its people, which allows the labour of each individual to procure for him the greatest quantities of necessaries and comforts."—*Hunt's Commercial Chronicle*.

THE SUFFOLK BANK, BOSTON.

The system of this bank, which has a capital of 1,000,000 dollars, is on behalf of an association of banks in Boston, to receive at par bills of any of the New England states, which shall deposit in specie in the Suffolk bank, a certain sum on which no interest shall be allowed, and before drawing out which fifteen days' notice shall be given. Its purpose is, in fact, to arrange the exchanges, and negotiate at Boston the bills of the several New England states,—and its profits arise from the use of the deposits,—while other banks pay interest on deposits.

"There is a marked depression in prices, it appears, in almost all descriptions; which is more remarkable in stocks of the character of United States six per cents, and New York city and state. It is observable, however, that the last quotations for United States stocks are dividend off. This price for United States stocks yields rather less than five per cent for the money. A new loan of 400,000 dollars has been made, however, by the state of New York, under the law for preserving the state credit, at a rate which yields five and three-quarters per cent. The loan is a six per cent semi-annual stock, redeemable in 1852, and was taken at 102 dollars and 25 cents for 170,000 dollars; 102 dollars and 30 cents for 225,000 dollars; and 103 dollars and 25 cents for 5000 dollars. The old stocks of the same time and tenor, are selling in the market at six per cent premium. The following table shows the whole amount of the present debt of the state of New York, and the terms on which each debt was contracted:—

New York state debt, July, 1845.....	19,790,514

" This is the direct debt of the state. There are, in addition, some 5,500,000 dollars New York stock issued in railroad and canal companies, some of which the state is already burdened with. It will be observed that the terms on which New York has been able to borrow money, have varied greatly during the twenty-eight years since she first

became a borrower. In the years 1830—1833, she obtained as high as fifteen and a half per cent premium for regular issues of five per cent stock, twenty-two years to run. Such an enormous price for stocks, in this country, naturally led to their extensive manufacture; and, like all other business, it was overdone. Since that time, the creation of some 230,000,000 dollars of public stock, state and city, has taken place. Under these circumstances, it is to be expected that the price of stocks would rule low. It is, however, to be taken into account, that prices of all commodities are low, profits of business are small, and the number of enterprises demanding extraordinary capital fewer than formerly. Hence, it would naturally follow that money would seek stocks for investment to a greater extent than in those years, when a speculative feeling, pervading all classes of business, induced a demand for capital, even in the smallest channels of business, to invest in extraordinary operations, apart from the regular business of the operator. It is true that the railroad speculation in the New England states has gone on to a surprising extent, but there is nothing in it of that wildness that marked bank speculations in former years; and, after all, the amount of capital to be expended in the projected railroads of the five New England states is small, compared to the actual wealth of that section of the country, the object to which it is to be applied, and the sources whence it will mostly be drawn. The roads projected, are nearly all well located. It is true that, in some cases, parallel lines are laid out; but they are in sections of the country densely populated, connecting important interests. The legislature of Connecticut has granted a charter for a most important link in connecting the great New England web of railroads with the city of New York. We allude to the Hartford and Danbury railroad running forty miles from Hartford, to strike the New York line at or near the boundary of West Chester and Putnam counties. The capital is fixed at 2,000,000 dollars. The route is through the largest and most wealthy manufacturing towns of Connecticut, forming a connexion with the Harlem, the means of communication between New York city and the great eastern districts. This, with the Erie and Harlem roads, will require 10,000,000 dollars in a year or two, and the eastern roads may require 15,000,000 dollars, in addition to 2,500,000 dollars that Boston will require for her water-works. The whole may form an amount equal to 30,000,000 dollars, to be expended in two or three years. This, it will be observed, is an operation far different in its results from that of investing large sums in banking; which, with the credits of those concerns, are loaned out to speculators, and sunk in baseless undertakings, that leave no valuable equivalent for the outlay. In the present state of this country, the construction of a railroad establishes a property, the value of which must constantly be enhanced, as the country progresses in population and wealth.

Iowa	ditto	By agreement as high as twelve per cent. Forfeit treble the excess.

. On debts or judgments in favour of the United States, interest is computed at the rate of six per cent per annum.

DAMAGES ON PROTESTED BILLS OF EXCHANGE.*

The laws and usages of the states vary essentially on the subject of damages on protested bills. In some cases, the regulations of states approximate to each other, while in others, they are widely different. In some cases, the law or rule is unlike, but the result is nearly similar; while, between other states, the result varies from four and a half to fifteen per cent.

In Massachusetts, the usage was to recover the amount of the protested bill at the par of exchange, and interest, as in England, from the time payment of the dishonoured bill was demanded

* Chiefly from the fourth edition of Chancellor Kent's Commentaries.

(continued)

of the drawee, and the charges of the protest, and ten per cent damages in lieu of the price of exchange. But this rule has been changed by statute, in 1825, 1835, and 1837; and bills drawn or indorsed in that state, and payable without the limits of the United States, and duly protested for non-acceptance or non-payment, are now settled at the current rate of exchange and interest, and five per cent damages; and, if the bill be drawn upon any place beyond the Cape of Good Hope, twenty per cent damages. The rate of damages in Massachusetts, on inland bills, payable out of the state, and drawn or indorsed within the state, and duly protested for non-acceptance or non-payment, is two per cent in addition to the contents of the bill, with interest and costs, if payable in any other New England state, or New York; and three per cent if payable in New Jersey, Pennsylvania, Delaware, and Maryland; and four per cent, if payable in Virginia, District of Columbia, North Carolina, South Carolina, or Georgia; and five per cent, if payable in any other of the United States, or the territories thereof.

Maine.—Payable out of the state, and in New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, or New York, three per cent; in New Jersey, Pennsylvania, Delaware, Maryland, Virginia, or District of Columbia, five per cent; in North Carolina, South Carolina, or Georgia, six per cent; at any other place in the United States or territories, nine per cent; at any place out of the United States or territories, ten per cent; payable within the state, at not less than seventy-five miles distance, in sums of 100 dollars and over, one per cent.

New Hampshire.—[In this state there is no statute regulation on the subject. The usual practice has been to charge the rate of damages existing at the point where the bill was payable.]

Vermont.—[No statute regulation. The practice has been similar to that in New Hampshire.]

Rhode Island.—Payable without the United States, ten per cent; or within the United States, and out of Rhode Island, five per cent.

Connecticut.—The rule of damages on bills returned protested, and drawn on any person in New York, is two per cent upon the principal sum specified in the bill; in New Hampshire, Vermont, Maine, Massachusetts, Rhode Island, New York (city of New York excepted), New Jersey, Pennsylvania, Delaware, Maryland, Virginia, or territory of Columbia, three per cent; in North Carolina, South Carolina, Ohio, or Georgia, five per cent; in any other part of the United States, eight per cent upon such principal sum, and to be in lieu of interest and all other charges and without any reference to the rate of exchange.

New York.—The rate of damages on bills drawn and payable within the United States, or other parts of North America, was, in 1819, regulated in New York by statute, and the damages fixed at five, or seven and a half, or ten per cent, according to the distance or situation of the place, on which the bill was drawn. But, by the new revised statutes, which went into operation on the 1st of January, 1830, the damages on bills, foreign and inland, were made the subject of a more extensive regulation. They provide, that, upon bills drawn or negotiated within the state, upon any person, at any place within the six states east of New York, or in New Jersey, Pennsylvania, Ohio, Delaware, Maryland, Virginia, or the District of Columbia, the damages to be allowed and paid, upon the usual protest for non-acceptance or non-payment, to the holder of the bill, as pure chaser thereof, or of some interest therein, for a valuable consideration, shall be three per cent upon the principal sum specified in the bill; and upon any person at any place within the states of North Carolina, South Carolina, Georgia, Kentucky, and Tennessee, five per cent; and upon any person in any other state or territory of the United States, or at any other place on, or adjacent to, this continent, and north of the equator, or in any British or foreign possessions in the West Indies, or elsewhere in the Western Atlantic ocean, or in Europe, ten per cent. The damages are to be in lieu of interest, charges of protest, and all other charges incurred previous to, and at the time of, giving notice of non-acceptance or non-payment. But the holder will be entitled to demand and recover interest upon the aggregate amount of the principal sum specified in the bill, and the damages, from the time of notice of the protest for non-acceptance, or notice of a demand and protest for non-payment. If the contents of the bill be expressed in the money of account of the United States, the amount due thereon, and the damages allowed for the non-payment, are to be ascertained and determined, without reference to the rate of exchange existing between New York and the place on which the bill is drawn. But, if the contents of the bill be expressed in the money of account, or currency of any foreign country, then the amount due, exclusive of the damages, is to be ascertained and determined by the rate of exchange, or the value of such foreign currency, at the time of the demand of payment.

New Jersey.—[There are no statute regulations on this subject in New Jersey.]

In *Pennsylvania*, the rule, for a century past, was twenty per cent damages, in lieu of re-exchange; but by statute, in 1821, five per cent damages were allowed upon bills drawn upon any person in any other of the United States, except Louisiana; if on Louisiana, or any other part of North America, except the north-west coast and Mexico, ten per cent; if on Mexico, the Spanish Main, or the islands on the coast of Africa, fifteen per cent; and twenty per cent upon protested bills on Europe, and twenty-five per cent upon other foreign bills, in lieu of all charges, except the protest, and the amount of the bill is to be ascertained and determined at the rate of exchange.

Delaware.—Payable at any place within the United States, or territories, out of Delaware, five per cent; at any place in Europe, twenty per cent.

In *Maryland*, the rule, by statute, is payable without the state, and at any place in the United States, or territories thereof, eight per cent; in any foreign country, fifteen per cent. And the amount of the bill ascertained at the current rate of exchange, or the rate requisite to purchase a good bill of the same time of payment, upon the same place.

Virginia.—Payable out of the state, at any place within the United States, or territories, three per cent; in any foreign country, fifteen per cent.

In *North Carolina*, by statute, in 1828, damages on protested bills, drawn or indorsed in that state, and payable in any other part of the United States, except Louisiana, are six per cent; payable in any other part of North America, except the West India islands, ten per cent; payable in South America, the African islands, or Europe, fifteen per cent; and payable elsewhere, twenty per cent.

South Carolina.—Payable within the United States, at any place out of South Carolina, ten per cent; in any other part of North America, or the West India islands, twelve and a half per cent; in any other part of the world, fifteen per cent.

Georgia.—The damages in Georgia, by statute, in 1827, on bills drawn on a person in another state, and protested for non-payment, are five per cent; and on foreign bills, protested for non-payment, are ten per cent, together with the usual expenses and interest, and the principal to be settled at the current rate of exchange.

Alabama.—The damages on bills, drawn in the state of Alabama, on any person resident within the state, are ten per cent; and on any person out of it, and within the United States, are fifteen per cent; and on persons out of the United States, twenty per cent on the sum drawn for, together with incidental charges and interest.

In *Louisiana*, in 1838, the rate of damages, upon the protest for non-acceptance or non-payment of bills of exchange, drawn on, and payable in foreign countries, was declared by statute to be ten per cent; and in any other state in the United States, five per cent, together with interest on the aggregate amount of principal and damages. On protested bills, drawn and payable within the United States, the damages include all charges, such as premiums, and expenses, and interest on those damages, but nothing for the difference of exchange.

In *Mississippi*, the damages on inland bills, protested for non-payment, are five per cent; if drawn on any person resident out of the United States, ten per cent.

The damages in *Tennessee*, by statute, in 1830, on protested bills, over and above the principal sum, and charges of protest, and interest on the principal sum, damages, and charge of protest from the time of notice, are three per cent on the principal sum, if the bill be drawn upon any person in the United States; and fifteen per cent, if upon any person in any other place or state in North America, bordering on the Gulf of Mexico, or in the West Indies; and twenty per cent, if upon a person in any other part of the world. These damages are in lieu of interest and all other charges, except the charges of protest, to the time of notice of the protest, and demand of payment.

Kentucky.—On foreign bills, ten per cent, damages are allowed. On inland bills, damages are governed by the law of the place.

Ohio.—Payable at any place without the United States, twelve per cent; within the United States, at any place out of Ohio, six per cent.

Indiana.—Payable at any place without the United States, ten per cent; at any place within the United States, out of Indiana, five per cent. Drawer or indorser not liable for damages, if paid at maturity, with costs.

Illinois.—Payable at any place without the United States, ten per cent; at any point within the United States, and out of Illinois, five per cent.

Missouri.—Payable at any place within the state, four per cent; out of the state, and within the United States, ten per cent; at any place out of the United States, or territories, twenty per cent.

Michigan.—[No statute regulation has as yet been adopted in this state.]

Arkansas.—Payable at any place within the state, two per cent; in Alabama, Louisiana, Mississippi, Tennessee, Kentucky, Ohio, Indiana, Illinois, Missouri, or at any place on the Ohio river, four per cent; in any other place in the United States, or territories, five per cent; at any place out of the United States, ten per cent; together with costs and interest at the rate of ten per cent per annum.

Florida.—Same as the state of Alabama.

Wisconsin.—Payable at any place without the United States, twenty per cent; out of the territory, adjoining the same within the United States, five per cent; in the United States, not adjoining the territory, ten per cent.

Iowa.—The same as in the territory of Wisconsin

District of Columbia.—[The rates established in Maryland and Virginia, are charged on protested bills in the district.]

CHAPTER XXXIV.

MONEYS, WEIGHTS, AND MEASURES, OF THE UNITED STATES OF AMERICA.

The decimal system was adopted by Congress in the subdivision of moneys, but not as respects weights and measures.

The power of regulating the standard of the latter was vested in the federal government, which acted upon this authority, first, in regard to the custom-house duties, and afterwards generally; but not until it was found that the weights and measures of Massachusetts had become inaccurate, and that the weights and measures differed in one state from those of another.

In 1836, a law was passed for regulating the weights and measures of the union. This law directed the secretary of the treasury to construct and supply standards of weights, of length, and of capacity of the United States, to the executives of the different states of the union, the governors of territories, and the custom-houses.

The report of Mr. John Quincy Adams, upon weights and measures in the year 1821, was acted upon, in most of its details, as much as if the law had been passed at the time the report was made. Mr. Adams gave the preference to the standards of Great Britain over those of France, from the circumstance that they were generally in use in the United States, and on the ground that a great change in weights and measures similar to that introduced in France, of the same decimal principle, would have been attended with great embarrassment.

The troy weight of England was adopted for weighing bullion.

The avoirdupois weight of England for weighing all other articles bought or sold by weight.

The British and the American statute acre, square yard, square foot, and inch are the same.

The linear measures of England, that is the mile, yard, foot, and inch, are the same in America.

England has, however, altered her corn and liquid measures, while America retains the old English wine gallon for liquids, and the Winchester bushel for corn, &c.

MONEYS.—It is remarkable that computations in old depreciated currencies should have, in ordinary transactions, continued to prevail. The dollar in the Massachusetts states has been long valued at six shillings; in New York and North Carolina at eight shillings, varying also in almost every other state. The legal moneys are, however, gold eagles, silver dollars, and copper cents. (*See Mint of United States* hereafter.) Coins of foreign countries, many of them old and

much worn, are found in most towns. Into New Orleans, Mexican, South American, and Spanish dollars, and Spanish Mexican and South American gold have always flown in. This has been the case in regard to many other towns. Accounts are kept in dollars and cents. The exchanges with foreign countries fluctuate. The following tables will show the valuations and exchanges.

MONEY TABLES.

A Table of Gold Coins, the exact Weight, the Assay, and the present Value in the United States, according to the Gold Coin Bill passed by Congress during their session in 1833-4.

NAMES.	Weight.	Assay.	Value.	NAMES.	Weight.	Assay.	Value.

Ditto, double in proportion				Napoleon, or 20 francs	4 3½	21 2½	3 85 1
Ditto, since 1802	4 6½	21 1½	3 93 2	Same as the new Louis			
BADEN.							
Ducat	1 23½	23 2½	2 2 0				

* Guinea, when received in this country, are almost invariably one grain light, and, therefore, the real value of them is 5 dollars 7½ cents.
 † A sovereign, when received from the Mint, weighs 5 dwt. 3½ grains, but nine-tenths of those brought to this country do not weigh more than 5 dwt. 2½ grains. The average value of each sovereign is 4 dollars 85 cents; of course, those which are of full weight are worth the price above stated.—New York Merchants' Magazine.

MONEY TABLE—continued.

Sovereigns compared with a Draft on London at 60 days' sight.			Quotations of London Exchange, reduced into Federal Money, as recommended by the Chambers of Commerce in the United States.					
Price of Sovereigns in the United States.	Equal to a Remittance in Pounds Sterling.		Precise proportion between both Quotations.			As adopted by the New York Price Current.

To reduce Dollars to Pounds Sterling.—From one-fourth of the number of dollars deduct 10 per cent of that fourth, and the remainder will be pounds, and the decimals of a pound.
 Example.—Required the value 444.44 dollars in pounds sterling.

One-fourth equal to 111.11
 10 per cent equal to 11.11

£100.00 Answer.

Note.—The value of British silver shilling in the United States is 22 cents a mill.

The following foreign coins, when of the required fineness, are a legal tender in the United States, at the following rates:—

GOLD COINS.

	Carats.
1 Those of Great Britain, Portugal, and Brasil, of 22 carats fineness, at	94.8 per dwt.
2 Those of France, 9-10 fine	93.1 "
3 Those of Spain, Mexico, and Columbia, of the fineness of 20 carats 3 7-16 grains.....	89.9 "

SILVER COINS.

1 Dollars of Mexico, Peru, Chili, and Central America, and those restamped in Brasil, weighing 415 grains, and of the fineness of 10 ounces 15 pennyweights of pure silver in a troy pound.....	At 100 cents each.
2 Five-franc pieces of France, of the fineness of 10 ounces 16 pennyweights in the troy pound, and weighing 284 grains.....	At 93 cents each.

MONEYS, WEIGHTS, AND MEASURES.

1169

Pro forma accounts of shipments of Mexican dollars to France and England, calculated by Mr. J. F. Entz, of the New York Life Insurance and Trust Company:—

PRO FORMA Account of a Shipment of Mexican dollars from New York to London.

20,000 dollars purchased at 1½ per cent premium.....	dollars.	20,330 00
Cost of 4 barrels, packing charges, cartage, &c.....		10 75
Insurance, at ½ per cent, on 20,350 dollars	dollars.	101 75
Policy		1 20
Total cost in New York		20,463 75
The same 20,000 dollars, weighing 17,320 ounces, and sold at 4s. 10½d. per ounce..	£ s. d.	4,104 13 10
Charges—Freight per packet, ½ per cent	10 8 4	
Primage, 5 per cent.....	10 5	
Landing charges, postages, &c.....	1 5 0	
Brokerage, ½ per cent.....	5 4 10	
Commission, ½ per cent	20 19 0	
Net proceeds, cash.....		38 8 10
Add interest of about 45 days, at 4 per cent, until the draft drawn against the shipment becomes due.....		4,156 5 0
Total		4,177 0 7

This amount, drawn at 60 days' sight, to realise the above 20,463 dollars, 75 cents the rate of exchange would have to be 110 23-100 per cent; which shows that the shipment would not be profitable, unless at least 110¼ per cent could be obtained for the draft. Without commission in London, the rate would be 109.67.6, or about 55-100 less.

The following is a table by which the rate of exchange may be ascertained, at any given price for silver, in London:

EXCHANGE TABLES.

Exchange tables between London and the United States, and remittances to London from Paris, Hamburg, and Amsterdam, calculated at various rates from minimum to maximum of exchange.

PARIS Remittances to London for Negotiation, compared with a Direct Remittance at Sixty Days' Sight, exclusive of Commission.

CHAPTER XXXV.

MINT OF THE UNITED STATES.

THE earliest metallic currency of each colony consisted chiefly of the coins of the mother country. In Massachusetts, however (and doubtless in all the settlements), specie was so scarce, that for many years it was common to pay taxes, and to carry on internal trade, by transferring at certain rates, cattle, skins, and the products of the soil.* Various considerations, enhanced by the inconvenience and uncertainty of such a medium, induced the Massachusetts colony, in 1652, to establish a mint. The law enacted for that purpose, provided for the coinage of shillings, sixpences, and threepences, to be of the fineness of sterling silver (925 thousandths), and by a reduction of weight, to be "twopence in the shilling of less value than the English coyne."[†] This New England mint met with much opposition from the British crown, whose prerogative was supposed to have been invaded by its operations; but it continued in existence more than thirty years, during which time a considerable amount of coin was issued. These coins are now extremely scarce, and indeed are not to be found except in the

See Felt's "Historical Account of the Massachusetts Currency, 1839." This work contains much interesting and valuable information.

[†] The mint indenture, or contract, required that the shilling should weigh seventy-two grains, and the smaller pieces in proportion. As the English shilling of those days weighed ninety-three grains, there appears an unaccountable miscalculation. An abatement of one-sixth of the value would have made seventy-seven grains and a half.

cabinets of the curious. The shilling only of this mint is known; the best specimens of which, at this day, weigh from sixty-four to sixty-seven grains, and by a recent assay is proved to be 926 thousandths fine; the intrinsic value, therefore, was about sixteen cents and two-thirds. They are a rude kind of coinage, very thin, and of various diameters; and there is some variety in the impressions; but the date of 1652 appears on all of them. The device of a *pine-tree* on one side, has given to the series the common designation of the "pine-tree coinage." They were taken in England at a discount of one-fourth of their colonial value.

In Maryland, silver and copper coins were issued in 1662. These pieces were to be equivalent to the British, but in reality were not much heavier than the shillings coined at Boston.

These were the only silver moneys coined previous to the American revolution. There were various pieces of copper coined at different periods; as, in 1694, the halfpenny for the Carolinas, a twopenny-piece and penny in 1723, another penny in 1733, and a halfpenny for Virginia in 1773. After the revolution, and before the establishment of the national mint, there were various issues of silver and copper, by states, and by individuals.

As the population and trade of the colonies increased, foreign gold and silver coins found their way into the country, and became a part of the circulating medium. These were chiefly the guinea, the joe and half-joe, the doubloon and pistole, in gold; the dollar, the pistareen, and the British shilling and sixpence, in silver. French crowns were not known until the revolution, when they became common. Of the specie currency, the Spanish American dollar, formed the chief circulation, and it became the effective standard, or unit, of the money of the republic.

The pound of the colonies was at first the same as the pound sterling of England, being simply a money of account. This rate, in process of time, became greatly altered, in consequence of excessive issues of paper by the colonial authorities; but, as these issues were greater in some of the colonies than in others, the proportion was both unequal and complicated. The following were the rates of the colonial pounds, in sterling pounds and Spanish dollars, after the revolution:—

NAMES.	New England and Virginia.	New York and North Carolina.	Middle States.	South Carolina and Georgia.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Pound sterling.....	1 6 8	1 15 6½	1 13 4	1 0 88.9
Spanish dollar.....	0 6 0	0 8 0	0 7 6	0 4 8

When peace was concluded, Congress directed the financier of the confederation, Robert Morris, to lay before them his views upon the subject of coins and currency. The report was presented early in 1782, and is stated by Mr. Jefferson to have been the work of the assistant financier, Gouverneur Morris.

He first laboured to harmonise the moneys of all the states; and found that the one-thousand four hundred and fortieth part of a dollar (Spanish) was a common divisor for the various currencies. Starting with this fraction as his unit, he proposed the following table of moneys:—

- Ten units to be equal to one penny.
- Ten pence one bill.
- Ten bills one dollar (about two-thirds of the Spanish dollar).
- Ten dollars one *crown*.*

The report contains this observation: "Although it is not absolutely necessary, yet it is very desirable, that money should be increased in a decimal ratio; because, by that means, all calculations of interest, exchange, insurance, and the like, are rendered much more simple and accurate, and of course more within the power of the great mass of the people."

The subject was discussed repeatedly in Congress, but no further step was taken until 1784, when Mr. Jefferson, on behalf of a committee appointed for the purpose, brought in a report, disagreeing with that of the financier, except as to the decimal system. The following remarks occur in this document:— "The most easy ratio of multiplication and division, is that of ten. Every one knows the facility of decimal arithmetic. Every one remembers, that when learning money arithmetic, he used to be puzzled with adding the farthings, taking out the fours, and carrying them on; adding the pence, taking out the twelves, and carrying them on; adding the shillings, taking out the twenties, and carrying them on; but when he came to the pounds, where he had only tens to carry forward, it was easy and free from error. The bulk of mankind are schoolboys through life. Certainly, in all cases, where we are free to choose between easy and difficult modes of operation, it is most rational to choose the easy. The financier, therefore, in his report, well proposes that our coins should be in decimal proportions to one another."

He disapproved of the *unit* of Mr. Morris, first, on account of its diminutive size: "A horse or bullock of eighty dollars' value would require a notation of six figures, to wit, 115,200 units;" secondly, because of its want of correspondence in value with any known coins. In lieu of this the Spanish dollar was proposed, as being of convenient size, capable of easy actual division, and familiar to the minds of the people. It was added that the course of our commerce would bring us more of this than of any other foreign coin; and besides, the dollar was all ready as much referred to as a measure of value, as the respective provincial pounds. Upon this basis it was proposed to strike four coins, viz:—

* This last coin was to be of gold. He apologised for introducing the name of *crown*, in a country where that emblem had lost favour, by stating that his project was to have on the coin the representation of an Indian, with a bow in his left hand, and thirteen arrows in the right, with his right foot on a crown.—*Spark's Life of Gouverneur Morris*, i. 278.

A golden piece of the value of ten dollars.

A dollar in silver.

A tenth of a dollar, also in silver.

A hundredth of a dollar, in copper.

The assistant financier conceded something to Mr. Jefferson's views, but adhered to the main principles of his own scheme. But Congress, in 1785, adopted Mr. Jefferson's report, and in the following year made legal provision for a coinage upon that basis.*

All these proceedings were, of course, under the *Confederation*, which lasted from 1778 to 1787. An article in that compact provided as follows: "The United States, in Congress assembled, shall have the sole and exclusive right and power of regulating the alloy and value of coin struck by their own authority, or by that of the respective states." Some of the states issued copper coins during that period. How long they continued current cannot be stated; but at this day those of them that remain are in the custody of coin-collectors. The cent of Massachusetts varies in weight from 148 to 164 grains; the New Jersey piece, 128 to 154 grains; the Connecticut coin is the most irregular, varying from 96 to 144 grains. The Vermont cent, of 1786, weighs about 110 grains. There are also other varieties, particularly the "Nova Constellatio," of thirteen stars, and another piece with the same significant number of *rings*, conjoined, both of which were coined in Massachusetts.†

The constitution of 1787 vested the right of coinage solely in the general government. The establishment of a mint was, however, still delayed. In the report on moneys, weights, and measures, made to Congress, in 1790, by Mr. Jefferson, then secretary of state, it was remarked: "The experiment made by Congress, in 1786, by declaring that there should be one money of account and payment through the United States, and that its parts and multiples should be in a decimal ratio, has obtained such general approbation, both at home and

* The interest taken in this subject by General Washington, and his approval of Mr. Jefferson's plan, appear by the following passage in a letter to Mr. Grayson, member of Congress:—

"I thank you for the several articles of intelligence contained in your letter, and for the propositions respecting a coinage of gold, silver, and copper; a measure which, in my opinion, has become indispensably necessary. Mr. Jefferson's ideas upon this subject are plain and simple; well adapted, I think, to the nature of the case, as he has exemplified it by the plan. Without a coinage, or unless some stop can be put to the cutting and clipping of money, our dollars, pistareens, &c., will be converted, as Teague says, into *five* quarters; and a man must travel with a pair of scales in his pocket, or run the risk of receiving gold at one-fourth less by weight than it counts." (*Writings of Washington*, edited by Sparks, ix. 125.)

The illustrious father of his country took a lively interest in the national coinage. The mint was repeatedly noticed in his messages to Congress. (See Sparks, xii. 25, 32, 53, 63.) It was his practice, whilst president, to visit the institution frequently; the seat of government being then at Philadelphia.

† In this place it may be proper to notice a coinage of silver, bearing the name of "J. Chalmers, Annapolis," and dated 1783. The specimens reserved in the collection at the mint, are a shilling, sixpence, and threepence, weighing 57, 27, and ten grains respectively; of course very carelessly proportioned.

abroad, that nothing seems wanting but the actual coinage, to banish the discordant pounds, shilling, pence, and farthings of the different states, and to establish in their stead the new denominations."

On the 2nd of April, 1792, a code of laws was enacted for the establishment and regulation of the mint, under which, with slight amendments, the coinage was executed for forty-two years.

The denominations of coin, with their rates, were as follows:—

GOLD. The eagle of ten dollars, to weigh 270 grains, the half and quarter in proportion; all of the fineness of 22 carats, or 917 thousandths.

SILVER. The dollar of 100 cents, to weigh 416 grains; the half-quarter, tenth or dime, and twentieth or half-dime, in proportion; the fineness to be 1485 parts in 1664,* or 892·4 thousandths.

COPPER. The cent, to weigh 264 grains; the half-cent in proportion.

Since the act of 1792, the following alterations in the standards have been made:—

On the 14th of January, 1793, the weight of the cent was reduced to 208 grains; the half cent in proportion.†

January 26th, 1796. President Washington issued a proclamation (as he had been empowered to do by law,) that, "on account of the increased price of copper, and the expence of coinage," the cent would be reduced to 7 dwts. or 168 grains, and the half-cent in proportion. The copper coins have since remained at this standard.

June 28th, 1834. An act was passed, changing the weight and fineness of the gold coins, and the relative value of gold to silver. Before stating the alterations, it may be proper to observe, that the estimate of gold as being worth fifteen times as much as silver, which was the original basis, was found too low at the market value; which, although always fluctuating, was nearer sixteen to one, upon a general average. The effect of the legal proportions was to reduce the coinage of gold, and to restrain its circulation; being always at a premium, the coin was immediately exported to Europe, in the course of trade, and there quickly wrought into other shapes.

In June, 1834, the weight of the eagle was reduced by law to 258 grains (the parts in proportion), of which 232 grains must be fine gold, making the fineness

* This was an arithmetical nicety, deduced from a weight of 416 grains, of which 371½ grains must be fine metal; this being considered the average contents of a Spanish dollar. The estimate was slightly erroneous, and makes our dollar of a little less value; the effect of which has been beneficial to our national coinage, as the difference, though not appreciable in ordinary currency, makes a considerable gain upon recoinage in large sums. See letter of Dr. Moore, late director of the mint, to a select committee of Congress, in 1832.

† The mint was not fully in operation until January, 1795. Before that time it was rather engaged in experimenting; hence the variety of specimens, in silver and copper, anterior to that date, which are now so much in request among the virtuosi. The most noted of these is the Washington cent.

21 carats $2\frac{1}{4}$ car. grains, or $899\frac{225}{1000}$. This was an increase of $6\frac{681}{1000}$ per cent on the former value of gold. The silver coinage was not changed.

The standard of nine-tenths fine, as adopted in France and some other countries, was obviously the most simple, and upon every consideration, the most suitable. To bring the silver coins to that proportion, without changing the amount of fine silver in them, it was only necessary to put less copper, by three grains and a half, in the dollar, reducing its weight to $412\frac{1}{2}$ grains. The weight of the gold was not to be changed, but the fineness increased about three-fourths of one-thousandth, a difference far within the scope of the legal allowance, and hardly appreciable. These proportions were incorporated in a consolidated code of Mint Laws, enacted by Congress, in January, 1837. By that act, the eagle is to be 900-thousandths fine, and to weigh 258 grains; the half and quarter in proportion; and the dollar, at the same fineness, to weigh $412\frac{1}{2}$ grains; the parts in proportion.* The allowed deviation in fineness, for gold, is from 898 to 902; for silver, 897 to 903.†

The following is a recapitulation of the various standards, of the gold and silver coins:—

DATE.	GOLD EAGLE.		SILVER DOLLAR.	
	Weight.	Fineness.	Weight.	Fineness.
Act of April 2, 1792.....	grains. 270	thousandths. 916.7	grains. 416	thousandths. 892.4
Act of June 26, 1834.....	258	898.2		
Act of January, 18, 1837.....	258	900	412.5	900

Until the year 1835, there was but one mint, which was established at Philadelphia. In that year three *branches* of the mint were created by act of Congress. Two of these, for the coinage of gold only, were to be situated at the towns of Charlotte, in North Carolina, and Dahlonega, in Georgia—central points of the gold mining region: The third branch was for both gold and silver, at New Orleans, the commercial emporium of the south-west. These three institutions, which, in the view of the law are not distinct mints, but rather branches of the mint, are respectively managed by superintendents, who are under the control of the director of the chief mint. The branches went into operation in the year 1838. Their coinage is uniform with that of the establishment at Philadelphia, being systematically tested there for approval.

The whole mint establishment, thus constituted, is itself a branch of the treasury department of the general government, and is under the supervision of the secretary of the treasury.

The whole coinage of the United States, during the year 1843, amounts to

* The relative value, therefore, of silver to gold, is 15.9884 to 1.

† The practical limits here, are, for gold, 899 to 901; silver 898 to 902.

within a small fraction of 12,000,000 dollars, and exceeds, by more than one-half, that of any former year. Of this coinage, more than 8,000,000 dollars is in gold; showing a greater proportion to silver than has heretofore been presented.

The branch mints at Charlotte and Dahlonega, have each coined nearly double the amount which they have reached in any former year, and the New Orleans mint nearly quadruple.

The production of the gold mines of the United States, as indicated by the amount sent to the mints, exceeds that of any former year.

The following is a statement of deposits and coinage at the mint of the United States and branches, for the year ending 31st December, 1843 :—

Rowan Gold Mines.—It is stated in the *Salisbury Watchman*, "that there is in Rowan county, North Carolina, the richest gold mine that has yet been discovered in the United States. It is a small vein, from four to twelve inches wide; many bushels of the material taken from it, have overgone 200 dollars to the bushel, and some as high as 500 dollars." It is also stated in the *Mecklenburg Jeffersonian*, "that 11,876 dwts. of gold had been taken from it by seven hands about a month since. As might be expected, in so small a vein, the water soon became unmanageable, and they began again at the surface, and struck a vein parallel to the first, and nearly as rich as that. These veins, as also all those in that region, are believed to increase in richness and size as they descend.

There are six or eight other mines in the same region, of extraordinary richness and different in many particulars from the other vein mines in North Carolina."

Georgia Gold Mines.—Extract from a letter from a citizen of Georgia to a member of Congress from that state.

"Dahlonaga, June 7, 1842.

"Mr. Calhoun's mine is still doing wonders; it is the real *El Dorado*. In eighteen days from the time the mine was opened, and ending the 28th ultimo, the amount deposited and assayed at the mint is 6027 dollars 29 cents. The amount dug last week, after burning off the quicksilver, and deposited this morning at the mint is 269 $\frac{3}{4}$ ounces, or 5387 dwts. before melting.

"A mine was discovered in Cherokee about two months since, the product of which, as I am informed by several persons, is one pound of gold per day to four hands.

"The *Augusta (Georgia) Constitutionalist* says, 'It is well, perhaps, that the Dahlonaga branch mint has not discontinued, as was proposed last winter—the operations increasing in importance by the recent discovery of more productive veins of gold.'

Silver Mines in North Carolina.—The Washington Mining Company was incorporated by an act of the General Assembly of North Carolina, in January, 1839, with a capital of 500,000 dollars, divided into shares of 100 dollars each. The charter privileges extend to a period of fifty years. The mine worked is situated in Davidson county, North Carolina, ten miles south-east of Lexington.

The estate in which the mining establishment is situated, and on which about sixty buildings have been erected, contains 466 acres, and was sold to the company in 1840, for 479,500 dollars.

In the descriptive portion of the report of 1842, it is stated that, at the forty-foot level, the yield of the ore, when dressed, was about fifty per cent of lead, and from twenty to 120 ounces of silver to the ton of lead. The value of the silver varied from one dollar eighty cents, to two dollars eighty cents per ounce; its price being enhanced by the large proportion of gold found in combination with it at this depth.

At the sixty-foot level, the ore increased in richness, but was irregular in its value. At its best points, it yielded as much as 5000 ounces to the ton. The general average is stated to be 126 ounces of silver to the ton of metal. Here the sulphuret of lead, or galena, was first met with, in small quantities; but the bulk of the ore continued similar to the forty-foot level, being a carbonate of lead, with the exception of the proportion of gold, which gradually diminished, but was recovered again at the 160-foot level.

Arriving at the 100-foot level, the galena predominated; but, in other respects, the mine presented the same aspect as at the 60 feet, increasing in regularity.

At the 160-foot level, the vein is nearly all sulphuret, as regards the lead, and the area is enlarged. It was estimated, that this argentiferous ore, locally termed "the black ore," produced on an average from eighty-seven dollars fifty cents to 100 dollars per ton, in equal proportions as to value of the lead and the silver, after deducting the expenses of smelting. It was at this level that some masses of rich blue galena were met with, worth at the rate of 1000 dollars per ton.

The Washington mine is situated about eighty miles from Raleigh, the capital of the state, and the present terminus of the great chain of railroad from the north. It is also 100 miles from Fayetteville, the head of sloop navigation on Fear river. The cost of transportation from the mine to Philadelphia, has been generally eighty-five cents per 100 lbs., and has not exceeded one dollar.

From the commencement of the mining operations up to November 1, 1842, a period of twenty-seven months, the actual product was 2661 pigs of argentiferous lead, yielding silver and gold to the amount of 13,238 dollars 68 cents, this being the net value, after deducting the charges of the United States mint for separating the gold from the silver, and alloy requisite to reduce it to the standard of coinage.

The litharge necessarily made in obtaining these results, netted the value of 5499 dollars 11 cents, forming an aggregate value of 18,737 dollars 79 cents. The period embraced by this return was one of heavy expense in erecting buildings and machinery, in sinking the engine shaft, in carrying forward the cross-cut, in expensive explorations, and in much costly work, at a total outlay of 29,824 dollars 84 cents.

The new board of superintendents obtained possession on the 13th of October, 1843, and this statement includes from that time up to the 1st instant, during which time the produce of the mine has been in all 40,379 dollars 47 cents, viz. :—

* Report on the Washington Silver Mine of Davidson County, North Carolina. By Richard C. Taylor. With an Appendix, containing assays of the ores, returns of silver and gold produced, and statements of the affairs of the Washington Mining Company.

GOLD AND SILVER COINS.

The following report has been submitted to Congress by R. M. Patterson, director of the mint, in compliance with a resolution of the House of Representatives. It exhibits the fineness and value by weight of certain foreign gold and silver coins.

GOLD COINS.

The value of the gold coins, as ascertained by assay, is, in nearly every case, less than the legal value as established by the act of 8th of June, 1834. This will be seen by the following schedule :

COUNTRIES.	Value by assay.	Value by law.	COUNTRIES.	Value by assay.	Value by law.
	cents.	cents.		cents.	cents.
Gold coins of Great Britain	94.7	94.62	Great Coins of Spain	83.0	89.51

" Brazil	94.8	94.46	" Columbia, Bogota ..	89.9	89.52
" France	93.1	92.92	" " Popayan	89.9	88.68

" The general over-valuation of foreign gold coins (says the director) has its origin in two circumstances ; the first is, that the coins in question were assumed to reach their legal standard ; an assumption not confirmed by our assays. Thus, for example, the fineness of the coins of Great Britain, Portugal, and Brazil, is estimated at 22 carats (corresponding to 916 1-3 thousandths), whereas our assays show the first to be but 915 1-2, and the two last but 914 thousandths. A second cause of this over-valuation originates from the fact, that by the law of January 18, 1837, the standard of our gold coins was raised from 839.225 thousandths to 900, while their weight remained unaltered ; so that the pure gold in our coins is held at a somewhat less nominal value since the change of standard than it was before. A corresponding diminution was of course called for in the legal value given to the pure gold in foreign coins, but it has not yet been made.

" The act of June 28, 1834, is therefore erroneous and impolitic, because it stamps a

by R. M. Patterson,
House of Representen-
in foreign gold and

greater value upon foreign gold coins than upon our own, and thus misleads the public, and prevents recoinage. It is unnecessary, because the mints of the United States are abundantly sufficient for all the gold coinage required for circulation; and it is inconvenient, because the foreign coins which it makes a legal tender do not correspond in value and denomination with our money of account. I would therefore beg leave, most respectfully, to recommend that the act in question be repealed.

"The Act of June 25, 1834, making Spanish American dollars a legal currency at 100 cents each, and French five-franc pieces at 93 cents each, does not lead to any injustice that I am aware of."

COST OF COINAGE AT THE UNITED STATES MINT AND ITS BRANCHES.

Particulars of the cost of coinage at the several mints of the United States, from a report laid before Congress, March 31, 1842:—

The cost of coining 100 pieces at the New Orleans branch mint was, for 1838, 15 dollars 40 cents; for 1839, 2 dollars 99 cents; for 1840, 1 dollar 50 cents; and for 1841, 1 dollar 41 cents.

The cost of coining 100 pieces at the Charlotte branch mint was, for 1838, 72 dollars 18 cents; for 1839, 35 dollars 30 cents; for 1840, 37 dollars 70 cents; and for 1841, 37 dollars 79 cents.

The cost of coining 100 pieces at the Dahlonega branch mint was, for 1838, 67 dollars 4 cents; for 1839, 42 dollars 62 cents; for 1840, 43 dollars 51 cents; and for 1841, 28 dollars 50 cents.

The actual cost of coining 100 dollars' worth at the Philadelphia mint was, for 1838, 1 dollar 52 cents; for 1839, 2 dollars 7 cents; for 1840, 2 dollars 48 cents; and for 1841, 4 dollars 34 cents; the average of the four years being 2 dollars 23 cents.

The cost of coining 100 dollars' worth at the New Orleans branch mint was, for 1838 154 dollars 6 cents; for 1839, 19 dollars 72 cents; for 1840, 5 dollars 68 cents; and for 1841, 8 dollars 12 cents; the average for the last two years—the first two not being a fair criterion of the average cost, being 6 dollars 68 cents.

The cost of coining 100 dollars' worth at the Charlotte branch mint was, for 1838, 17 dollars 82 cents; for 1839, 9 dollars 3 cents; for 1840, 9 dollars 44 cents; and for 1841, 9 dollars 2 cents; the average of the four years being 10 dollars 59 cents, and that of the last three years 9 dollars 15 cents.

The cost of coining 100 dollars' worth at the Dahlonega branch mint was, for 1838, 12 dollars 43 cents; for 1839, 10 dollars 78 cents; for 1840, 9 dollars 32 cents; and for 1841, 6 dollars 6 cents; the average of the four years being 9 dollars 47 cents.

The actual cost of coining 100 dollars' worth at the Philadelphia mint was, for 1838, 1 dollar 52 cents; for 1839, 2 dollars 7 cents; for 1840, 2 dollars 48 cents; and for 1841, 4 dollars 34 cents; the average of the four years being 2 dollars 23 cents.

The cost of coining 100 dollars' worth at the New Orleans branch mint was, for 1838, 154 dollars 6 cents; for 1839, 19 dollars 72 cents; for 1840, 5 dollars 68 cents; and for 1841, 8 dollars 12 cents. The first of these should be excluded, and perhaps the second, as any foundation for a judgment respecting this mint. The average for the last two years was 6 dollars 68 cents.

The cost of coining 100 dollars' worth at the Charlotte branch mint was, for 1838, 17 dollars 82 cents; for 1839, 9 dollars 3 cents; for 1840, 9 dollars 44 cents; and for 1841, 9 dollars 2 cents; the average of the four years being 10 dollars 59 cents, and that of the last three years 9 dollars 15 cents.

The cost of coining 100 dollars' worth at the Dahlonega branch mint was, for 1838, 12 dollars 43 cents; for 1839, 10 dollars 78 cents; for 1840, 9 dollars 32 cents; and for 1841, 6 dollars 6 cents; the average of the four years being 9 dollars 47 cents; and that of the last three 8 dollars 49 cents.

The cost of coining 100 pieces of coin at the Philadelphia mint was, in 1838, 39 cents; for 1839, 67 cents; for 1840, 79 cents; and for 1841, 1 dollar 12 cents; the average for the four years being 64 cents.

CHAPTER XXXVI.

PUBLIC LANDS IN THE UNITED STATES.

THE public lands, or lands not belonging to individuals or to corporate bodies, were, and continue to be, held, at least administratively, and for sale, as the property of the federal government; but under certain stipulations as bearing on the rights of the respective states, or territories, within which these lands are situated.

The lands lying east of the Mississippi, were, at the close of the revolution, claimed by the several states on the tenure of original colonial charters, which, although general in their terms, extended from sea to sea. At that period, the war had impoverished the coffers, increased the liabilities, and diminished the resources of the United States treasury, and recommendations were accordingly made to the several states, to cede their titles to the western lands in order to aid in the payment of the national debt. In accordance with this recommendation, several of the states ceded their titles to the lands claimed under their original patents.

"The tracts, thus ceded, embrace three separate territories. One of those territories, comprising Ohio, Indiana, Illinois, Michigan, Wisconsin, and Iowa, a tract extending north of the river Ohio and west of Pennsylvania and Virginia, reaching northward to the northern boundary of the United States, and westward to the Mississippi, was originally claimed by Virginia; a state that was in the possession of Vincennes and Kaskaskias, having defended those places during the war of the revolution. Claims to the same territory, were urged by Massachusetts, Connecticut, and New York, which, together with Virginia, ceded to the union their rights to this tract. Georgia ceded to the union its claims to lands lying within the boundaries of the states of Alabama and Mississippi.* North Carolina and South Carolina ceded their claims to land lying within the state of Tennessee."†

The first tract was denominated the north-western territory. For the government of this territory, an ordinance was framed in 1787. The boundaries of the states within the limits of the territory, were fixed by the fifth article of the ordinance: that instrument providing, at the same time, "that there should be formed therein not less than three, nor more than five states." The ordinance declares that "the legislatures of those districts, or new states, shall never interfere with the primary disposal of the soil by the United States in Congress

* Report of the Hon. William Cost Johnson, of Maryland, on the public lands, made in the House of Representatives, March 2, 1843.

† The tract in the state of Ohio, known under the name of the Connecticut reserve, was excepted from the cession by Connecticut. This is now the basis of the Connecticut school fund.

assembled, nor with any regulations Congress may find necessary for securing the title in such soil to the *bonâ fide* purchasers;” and, also, that “no tax shall be imposed on lands, the property of the United States, and that, in no case, non-residents should be taxed higher than residents.” Upon the same subject, the constitution of the United States expressly provides, that Congress shall have power to dispose of, and to make all needful rules and regulations respecting the territory or other public property of the United States. The ordinance also prescribes, “that, when the several territories shall have attained a certain amount of population, they shall be admitted into the union upon an equal footing with the original states.”

Louisiana was purchased from France in 1803. From the valuable object to be attained by the possession of the control of the entire navigation of the Mississippi, although without any clear constitutional authority, the sum of 15,000,000 dollars was paid.

The territory of Florida was purchased the 22nd day of February, 1819, by treaty concluded between Spain and the United States.

STATEMENT respecting the Lands acquired by the United States of North America, under Deeds of Cession, from the States, and from Foreign Nations.

Territory Northwest of the river Ohio, and East of the Mississippi river, ceded by the States.

* South of 31st degree of latitude. † South of 31st degree of latitude.
 ‡ Including the whole north-western territory to the Pacific ocean, and the lands west of the states of Missouri and Arkansas.
 § This quantity of 846,295,680 acres includes the quantity of 132,295,680 acres, south of the La Platte river set apart by government for the emigrant Indians. Also, the 7,082,831 acres, in the territory of Iowa proper, ceded to the United States.
 Note.—In the foregoing tables, the first column contains the quantity of land embraced in the cession; the second the quantity of land sold to September 30, 1841; the third, the quantity of land remaining unsold; the fourth the quantity of land to which the Indian title is extinguished; the fifth, the quantity of land to which the Indian title is remaining unsold, were necessarily made up, in a great measure, by estimates, as follows:—From the estimated area to be sold, the quantity sold, and otherwise disposed of, was deducted, and the remainder treated as land remaining to be sold.

By treaties with the Indian tribes, large tracts of their territories have been ceded to the United States. In respect to the Aborigines on their lands, a writer in the *Mechanics' Magazine* remarks—

“Upon their own soil and among themselves, so far as their rights of person are concerned, the governments of those tribes are considered independent governments. It is true, that the government of the United States has assumed the right of purchasing their land to the exclusion of every other purchaser; but the territory of the Indians has never been offered for sale, by this country, without a fair and full purchase of their title. The first treaty made with them by us, was that of Greenville, in 1795; and as it may be considered a model of subsequent treaties, and may exhibit the tone of our policy regarding them, we would designate its general terms. By this treaty, perpetual peace is established; the Indians acknowledge themselves under the protection of the union, and engage to sell their lands to them only. Certain regulations, to be preserved between the two parties to the treaty, are embodied; and, in return, the United States engage to protect the Indians, to pay them in goods to a certain amount, and to make them certain annual stipulated payments. The relation of the government to the Indian tribes within our borders, is analogous to that of a guardian to a ward, and we trust that our intercourse with them will ever be charged with such responsibilities and duties.”

Upon the public domains which formerly belonged to England, France, and Spain, various claims have been made by individuals to tracts, either by virtue of occupancy, or under the title of grants, made by those governments, before the lands were ceded to the United States. In order to adjust those claims, or rights, commissioners have been appointed by several acts of Congress to examine the validity of those titles or claims, to decide upon them, or to report the facts upon which they are founded, to Congress. Titles derived from legitimate authority, have been confirmed; and claims have also been confirmed upon grounds of equity, although the legal titles had not been perfect.* In 1787, one

iver Ohio.

million and a half of acres was sold to the Ohio company, by which the state of Ohio was first colonised. Two years afterward, a contract was made with Mr. John Cleves Symmes, for the purchase of a million and a half of acres between the Great and Little Miami; but in consequence of the failure of the payment of the purchase money, the patent conveyed a much smaller tract.

The first act of Congress for the sale of public lands limited the sale to tracts of not less than four thousand acres each. This plan might have been convenient, but it was eminently favourable to land jobbing, by confining the purchase to a few rich persons, while those with small means were excluded from making such purchases from the government, and consequently obliged to pay high prices to the jobbers. In July, 1790, Alexander Hamilton, then secretary of the treasury, brought forward a scheme for the sale of the public lands, which provided—

“ That the tracts set apart to each settler, should not exceed 100 acres; that the prices of the land sold under special contract, should be thirty cents per acre, payable in gold or silver, or in public securities, computing those bearing an interest of six per cent per annum, the same as gold and silver, and those bearing a future or less interest at a proportionate value. In every instance of credit it was required, that one quarter should be paid down, and independent security be given for the residue, and that all surveys of the land should be made at the expense of the purchaser.”

Another law was passed by Congress in 1800, which facilitated the sale of the public lands, and a report was made in the House of Representatives, on the 23rd of January, 1804, recommending “ a reduction of the size of the tracts offered for sale.

The minimum price for the public land, previous to the year 1800, was two dollars per acre, one-fourth of which was required to be made at the time of the purchase, and the remainder in three annual instalments, a discount of eight per cent being allowed if the purchaser paid in advance. Jobbers continued to purchase land extensively. Many of those jobbers, speculating on credit, were ruined. They were aided by the banks to an extent that was, among other causes, fatal both to the jobbers and to the banks.

The system now adopted for the survey, sale, and distribution of the public land appears, from the report of the commission of the general land office, to combine many facilities to purchasers and settlers. The tracts ordered to be brought into market are first surveyed and divided into townships of six miles square, and subdivided into sections of one square mile, each containing six hundred and forty acres. The lines are run parallel to the cardinal points, and cross each other at right angles, excepting where they are formed by an Indian boundary line, or the course of a stream. The sections are subdivided into quarter, half-quarter, and quarter-quarter sections, the first containing one hundred and sixty acres, the second eighty, and the third forty; their dimensions

being accurately ascertained by fixed rules which are prescribed by law. The survey is performed by two principal surveyors, by whom their deputies are appointed, all being under the direction of the commissioner of the general land office, in Washington. The townships are ranged and numbered, and the sections in each township are also numbered from one to thirty-six. The parallels of surveys are based upon a series of true meridian lines. One principal meridian line is in Ohio, the second in Indiana, the third in Illinois, and the rest in other states, each constituting the parallel of a series of surveys, which divides the whole territory into squares, defined with accuracy in parallel ranges, by "blazing" the trees, a process that is performed by cutting with a hatchet the bark and a little of the wood from the sides of their trunks. The precision of these modes of survey prevents disputes regarding boundary lines.

When the lands are surveyed, a land office is established in each district, and on the day named by the President of the United States, a public sale of land takes place, the whole being offered in the market to the highest bidder, above the fixed minimum price of one dollar and a quarter per acre. The tracts remaining unsold, are then offered to the public at private sale, and may be purchased at the land offices at the minimum price. One section in each township that is, one thirty-sixth part of the land, is reserved, perpetually, to maintain common schools within the township. One entire township, comprising 23,040 acres is also reserved in each state and territory, for the maintenance of higher seminaries of education. Five per cent are reserved on the amount of sales in each state, three-fifths of which are required to be expended by Congress in the making of roads through the state, and two-fifths for the diffusion of useful knowledge. All salt springs and lead mines are reserved to the government.

In each district, the duties of the land office are performed by a register and receiver; the register sells the land, and the receiver collects the payments. Each of these officers keeps his own records, performing his functions independent of the other, and holding separate responsibilities. They are each required to keep separate accounts, to make periodical reports to the general land office at Washington, the one of sales, and the other of receipts: each officer being considered as a check upon the other. All tracts are so marked and numbered upon the books of the land offices, that a purchaser may select a tract the register and receiver having only to receive the money and give the vouchers for a title. Each purchaser is then granted an original patent from the government, as the most perfect title to the soil.

QUANTITY of Land granted to each of the States and Territories, and the Purposes for which granted—up to February 7, 1839.

CHAPTER XXXVII.

FINANCES OF THE UNITED STATES.

THE federal credit of the United States has been honourably maintained from the commencement of the revolutionary war down to the present period; and we believe that nothing but the certain calamities, which would attend, and be consequent to, a war, will ever disturb the faithful discharge of the fiscal obligations of the federal government.

In Europe a very erroneous estimate, and very unjust conclusions have been entertained, we believe generally from ignorance, by confounding the non-paying and repudiating states, with the revenue, debt, and expenditure of the federal government, and of the states who have honourably, and religiously, discharged their obligations.

The revolutionary war having altogether interrupted the exterior commerce of the country, there was no revenue raised during that period by customs duties; and as Congress had not then the power to levy any general tax, loans and paper-money became the inevitable expedient.

The following passages, which occur in Mr. Henry Lee of Boston's Letters to cotton manufacturers, are worthy of attention.

"War taxes and expenditures--by decreasing the pecuniary means of the great mass of a nation--operate unfavourably on the consumption of commodities.

"The average annual expenditure for the army and navy of Great Britain, from 1801 to 1815, amounted to 344,096,092 dollars, and in one of the last years of the war it came up, including the interest on the war debt, to the enormous sum of 488,558,946 dollars--two-thirds of which was expended for armies mostly engaged in fighting the battles of foreign nations in foreign lands. The war, during every period of its prosecution, was termed a 'successful,' a 'glorious war'--to which the most ambitious portion of the nation were reconciled, by the hope of 'national glory,' or of personal distinction; while the more unreflecting, or the more sordid portion of it were willing or eager for its continuance--upon the supposition of enjoying a monopoly of the commerce and navigation of the world.* In the latter sentiment, many of the people of this country sympathised, and from similar motives--till, at last, we were drawn into its vortex, by a desire, on the part of the thoughtless, or the ambitious portion of the nation, of adding, also, to our fund of 'national glory'--and that, we believe, was the only benefit which the promoters and advocates of that gratuitous war ever pretended had been realised--since the questions of impressment and blockade, which were the ostensible causes of the war, were not only left unsettled, but may, perhaps, have not even been subjects of discussion in the negotiations at Ghent for a termination of the war; a war which ended, as most wars have done, with the accomplishment of no better purpose than the gratification of the ambition of its most zealous and leading fomenters--and the gratification of the passions of the people, who were led into a belief that the war would be productive of national advantages--superadded to the gratification of those belligerent feelings which, in this country, as much, if not more than in most countries, are easily excited by the popular favourites of the day. Of that portion of the war-party who may have been prompted by more patriotic motives, and by a sincere expectation of benefiting their country by a war--there was an utter disappointment of their wishes and expectations--and such, in all probability, would have been the issue of the wars in which some of our most popular and influential public men appear to have been desirous, judging by their sentiments, speeches, and conduct, at various periods, of involving the nation.

"A reflection made by Mr. John Q. Adams upon the effects of war with Great Britain, may not be considered as inappropriate in connexion with this subject. The ex-president in a communication before the public, in which reference is made to some of the schemes for improving the currency that were in agitation in 1837, adds; 'I think of this as I thought of the dry-dock, gun-boat, restrictive, anti-navy system of Mr. Jefferson. It cost the nation a terrible war to be delivered of that, but the nation was effectually cured of its hydrophobia. The war was a drastic purge, but it effectually worked its cure.'

"Well, most wars originate in hydrophobia--in the madness of the people--to which they are excited by their rulers, and for no other purpose than the gratification of their selfishness and ambition, and although they terminate with the application of a 'drastic purge,' or some still more bitter curative, yet there is no security against the returning madness of the people--at least not till the great mass of them, through all ranks of society, shall become more enlightened, more moral, more religious--more patriotic--more virtuous--than they now are--or, according to present appearances, are likely to become in this day and generation.

"The last war between the United States and Great Britain, of only two and a half years' continuance, and with but a very inconsiderable portion of the military and naval power of that country brought into action--cost us upwards of 100,000,000 dollars. This sum was not raised by indirect taxation in the form of duties on imported goods--because a war with any great naval power will always, in this country, reduce that branch of business to a very low point. In 1812, we imported 77,030,000 dollars. In the subsequent year of the war, our imports declined to 22,005,000 dollars, and in 1814, to 12,965,000 dollars; while our exports, in 1814, sunk to the insignificant sum of 6,927,441 dollars.

"There must necessarily be an almost entire cessation of revenue from customs in a war with any great naval power, and consequently a substitution of direct taxes--but as direct taxation, to any considerable extent, is one of those functions of government which, in this country, has never yet been exercised, and when exercised to a very limited degree has been resisted in some of the states, and left un-paid in a still greater number of them--the only mode, then, of obtaining the increased amount of funds

* It is true we prospered during that disastrous period--not, however, from the effects of those wars, but in spite of them. The effects of those wars were, no doubt, injurious to us, though less so than if we had been always a party to them; but there were other causes in operation, which more than counterbalanced the pecuniary evils of those wars, and we prospered, though in a less degree, than we should have done in a time of peace.

for the prosecution of a war, seeing the disinclination of the nation to direct taxation, is the borrowing at home or abroad. That mode of meeting even our peace expenditure, has been practised upon the past three or four years.

"Nor was the last war with Great Britain supported by means of direct taxes, for the whole amount received from that source of supply, in 1813, 1814, and 1815, was but 4,385,975 dollars—and that, too, paid in depreciated currencies averaging, perhaps, a discount, on a sound currency, of twenty per cent. In truth, the entire war expenditure was paid out of the proceeds of loans and treasury notes—constituting a debt, at the close of the war, of about 100,000,000 dollars—superadded to its pre-existing amount. These loans were effected on such high rates of interest, and the payments on their account were in such depreciated currencies, as to have cost the country at least twenty-five per cent more than they received—the stocks issued by government having subsequently been paid to their holders in a sound and honest currency of a full standard value. Nevertheless, there were propositions before Congress, and before the country, for issues of governmental paper-money, which, had they been sustained and acted upon, might have reduced the value of the certificates of the public debt to a level with the old 'continental money'—and had the war been of much longer continuance, it may be reasonably inferred that such would have been the fate of the national creditors.

"Short as the war was, and inconsiderable as were the expenses of conducting it, in comparison with the resources of the country; the credit of the government was so bad, arising from the indisposition of the nation to pay direct taxes—and from a similar unwillingness of our rulers to hazard their popularity in recommending and levying of taxes; that before the war was concluded, the government stocks, bearing high rates of interest, were below sixty-five for 100 dollars, and any further issues would probably have sunk them to almost the present level of the stocks of some of the bankrupt states."

The revenue of the United States has, since the war of independence, been chiefly derived from the duties upon articles of foreign produce and manufactures, imported either by American or foreign ships. Tonnage duties have also been levied by the customs. Next to the customs, the greatest source of revenue has been derived from the sale of public domains. Internal or excise taxes have occasionally been imposed, but they were universally considered obnoxious, and were continued only for short periods. Before the year 1802, excise duties were imposed on manufactured snuff, refined sugar, sales at auction, licences to retail wines, and distilled spirits, stamped paper, and on carriages for the conveyance of persons; but these were all repealed in that year. During the late war between the United States and Great Britain, duties on most of these articles were renewed; and duties were, also, imposed on various domestic manufactures. But, soon after the return of peace, all these excise taxes were repealed.

Some additions have been made to the revenue (but deemed small additions) from the Post-office, from taxes on patents, and from dividends on bank stock. Direct taxes have been levied at four different times only, since the revolution. On the 1st of July, 1812, immediately after the declaration of war against Great Britain, 100 per cent was added to all the permanent duties on imports, to continue only during the war; but these were afterwards continued until the 30th of June, 1816.

The power of a nation in modern times, as all admit, depends, materially, as well as politically, chiefly on the amount of unencumbered revenue it can raise, without oppression to the people.

In financial legislation slight burdens may prove incentives to greater industry. Grievous taxation, which may be exacted and even raised for a cer-

tain not definable period, discourages public thrift. War and profligacy by increasing expenditure, if that expenditure be greater than the natural annual revenue, taxes the industry of the existing generation as well as that of one or more succeeding generations. Hence arise generally all the perplexities of finance.

The extreme natural revenue to be derived from taxing a nation should never exceed the sum which can be spared for paying the reasonable expenses of an honestly and wisely administered government,—and for defraying the expense of defending the country against aggression, without deducting a greater sum from the general income yielded by labour, than an amount which leaves the full average means of a wholesome subsistence, comfortable lodging, and adequate clothing for the population.

The extreme natural revenue, and the general wealth of the nation which yields it, will be greater or less in proportion to the number of its inhabitants, in the same ratio that the greater ingenuity and labour, or the greater ignorance and idleness of the population, yields the greater or lesser amount in value of commodities. This amount again will be regulated in the cost of production, by the prices of raw material and food, and the outlay of fixed capital. The value of the produce of labour at home, and in all the markets of the world, will depend upon the power of selling and buying, and upon the natural demand for consumption. The more the interchange of the commodities of any one place is restricted, or obstructed, from the markets of another, the more will the quantity of those commodities, wherever produced, be restricted, and obstructed, in the selling, buying, and consumption. On examining the various customs tariffs passed at different periods by the Congress of the United States, we are forced to declare, that they exhibit an extraordinary absence of that wisdom, sagacity, and sound principles, which, in other respects, distinguish the great legislators of America. On fiscal, as well as commercial principles, the various American tariffs are only worthy of being classed with the illiberal barbarisms, and fallacies, which have disgraced the worst legislation of European nations. We will endeavour to prove this under a separate head: and in the mean time only remark, that the only defence, a very inexcusable one it is true, that can be made on the part of America, is, that the latter followed the very bad example persevered in by England.

The following tabular statements, compiled from official returns, will serve to illustrate the financial administration of the United States.*

The following estimate was made out by Mr. Nourse, the registrar of the treasury, in 1790.

* See also the organisation of the treasury, under the head of the "Civil Department of Government."

" General Abstract of the Annual Estimates, and Abstract State ments of the Total Amount of the Expenditures and Advances, at the Treasury of the United States.

" The estimated amount of the expenditures of

		dollars.	cts.
1775	} is, in specie.....	20,064,666	66-90ths
1776			
1777	ditto	24,986,646	85 do.
1778	ditto	24,299,438	26 do.
1779	ditto	10,794,020	65 do.
1780	ditto	3,000,000	00 do.
1781	ditto	1,942,465	30 do.
1782	ditto	3,632,745	85 do.
1783	ditto	3,226,583	43 do.
To Nov. 1st, 1784	ditto	348,525	03 do.
Forming an amount total of.....		92,465,693	15 do.

" The foregoing estimates being confined to actual treasury payments, are exclusive of the debts of the United States, which were incurred, at various periods, for the support of the late war, and should be taken into a general view of the expense thereof, viz.:

	dollars.	cts.
Army debt upon commissioners' certificates.....	11,080,576	1-90th
For supplies furnished by the citizens of the several states, and for which certificates were issued by the commissioners.....	3,723,625	20 do.
For supplies furnished in the quarter-master, commissary, hospital, clothing, and marine department.....	1,150,170	5 do.
For supplies, on accounts settled at the treasury, and for which certificates were issued by the register.....	744,638	49 do.
	16,708,000	75 do.
The foreign expenditures, civil, military, naval, and contingencies, amount, by computation, to.....	5,000,000	00
The expenditures of the several states, from the commencement of the war, to the establishment of peace, cannot be stated with any degree of certainty, because the accounts thereof remain to be settled. But as the United States have granted certain sums for the relief of the several states to be funded by the general government, therefore, estimate the total amount of said assumption.....	21,000,000	00

Estimated expense of the late war, in specie 136,193,708 00 dollars.

" The advances made from the treasury, were principally in a paper medium, called continental money, and which in a short time depreciated: the specie value of which is given in the foregoing estimate. The advances made at the treasury of the United States, in continental money, in new and old emissions, are estimated as follows, viz.:

	OLD EMISSION.		NEW EMISSION.	
	dollars.	cts.	dollars.	cts.
in 1776.....	20,064,666	66-90ths		
1777.....	26,426,333	01 do.		
1778.....	66,965,269	34 do.		
1779.....	149,703,856	77 do.		
1780.....	62,908,320	47 do.	891,236	80-90ths.
1781.....	11,408,095	00 do.	1,179,240	00 do.
	357,470,341	43 do.	2,070,485	80 do.

" In a report made to Congress, by the Board of Treasury, in September, 1787, it is stated, that the requisitions upon the states, for the payment of the interest of the domestic debt, in the years 1782, 1784, 1785, and 1786, amounted to the sum of 6,279,376 dollars 27 cents, and the Board say, " it is with regret we are constrained to observe, that to the 31st of March last, the aggregate payments, on account of these requisitions, do not appear, from any document in the Treasury office

	dollars.	cts.
To exceed the sum of	1,003,725	57
Leaving a balance of interest due of no less than	5,275,650	60
	6,279,376	27

REVENUE FROM THE SALE OF PUBLIC LANDS.

Under the head of Public Lands of the United States, Tabular Statements of Revenue derived from Sales will be found.

POST OFFICE.—See Post Office of United States for Revenue derived from

DIRECT TAXES.

Although direct taxes are levied under laws passed by the legislatures of particular states (which see), direct taxation has always been considered odious when levied by the general government. The following statements are chiefly on the authority of Mr. Pitkin. "By the Constitution," he observes, "direct taxes, when laid, are to be apportioned among the states in the same manner as representatives, including three-fifths of the slave population. This part of the Constitution was a compromise between the slave-holding and non slave-holding states; the former, agreeing to pay direct taxes, according to the ratio of their representation. Notwithstanding this, four direct taxes only have been laid from the commencement of the government—the slave-holding states, therefore, have enjoyed the benefits of this compromise without feeling much of its burdens.

"The first direct tax was imposed July 14th, 1798, being 2,000,000 dollars, and was apportioned agreeable to the constitution. It was laid upon all dwelling houses, and lands, and on slaves between the ages of twelve and fifty, in the following manner, viz:—

"Upon every dwelling-house, which, with the out-houses, appurtenant thereto, and the land whereon the same was erected, not exceeding two acres, shall not be valued at more than 100 dollars, and not more 500 dollars, a sum equal to one-tenth of one per cent on the amount of valuation.

At more than 500 dollars, and not more than 1,000 dollars, three tenths of one per cent.							
do.	1,000	do.	do.	3,000	do.	four tenths of	do.
do.	3,000	do.	do.	6,000	do.	five tenths of	do.
do.	6,000	do.	do.	10,000	do.	six tenths of	do.
do.	10,000	do.	do.	15,000	do.	seven tenths of	do.
do.	15,000	do.	do.	20,000	do.	eight tenths of	do.
do.	30,000	do.	do.	30,000	do.	nine tenths of	do.

And on all dwelling-houses, valued at more than 30,000 dollars, one per cent.

"Upon every slave enumerated (and such as 'from fixed infirmity or bodily disability were incapable of labour,' were not to be enumerated) there was assessed fifty cents.

"After deducting the sums thus assessed upon dwelling-houses and slaves, within each state, from the sum apportioned to such state, the remainder was assessed upon the lands in such state, according to the valuation made, in pursuance of law, and at such ratio per centum as should be sufficient to produce the said remainder.

	acres.	Value. dollars.
"The number of acres of land in the United States, then valued, was	163,746,688	479,293,263
"The number of dwelling-houses over 100 dollars was	276,695	140,683,984
"Making for both		619,977,247
"The number of slaves enumerated was 393,219.		
"The proportion of the two millions assessed upon houses was		471,988
"Upon lands		1,327,713
"Upon slaves		196,609

"The second direct tax was laid the 2nd of August, 1813, being 3,000,000 dollars, and was apportioned among the states on the census of 1810; and the sums thus apportioned were divided to each county in the state.

"A difference in the value of lands and houses in different counties produced a great inequality in the sums paid by individuals in the same state, though possessed of lands

valued alike; and showed the injustice of the modes of apportioning each state's quota among the several counties.

"Such was the low state of the public funds, at the commencement of the year 1815, in consequence of the failure of the imposts, and the impossibility of obtaining loans, an act, passed on the 9th of January of that year, Congress laid an annual direct tax of 6,000,000 dollars; and it was laid, as the title of the act declares, 'for defraying the expenses of government, and maintaining the public credit.'

"We would here observe, that peace having taken place, the act laying the annual 6,000,000 dollars tax, was repealed on the 5th of March, 1816, and a tax of 3,000,000 dollars only, was laid for that year."

* Six months.

This money has been borrowed in the shape of treasury-notes and stock. From 1837, up to July, 1841, treasury-notes, bearing mostly six per cent interest, were the medium of borrowing. By the act of 1841, stock, bearing not more than six per cent, was authorised. That stock was negotiated nearly as follows:

DATE.	Redeemable.	Interest.	Amount.
	year.	rate.	dollars.
September, 1841.....	1844	5 2-5	14,596
" " 1841.....	1844	5†	8,213,000

REVENUE AND EXPENDITURE FROM JULY 1, 1843, TO MARCH 1, 1844.

From a subsequent report of the Secretary of the Treasury, made up to February 29th, 1844, we gather the following particulars:

	dols.	cts.	dols.	cts.
The balance in the treasury on the 1st July, 1843, was.....		10,434,507	55
The receipts from that time till 29th February, 1844, were				
From Customs.....	15,102,688	26		
Lands.....	1,337,052	79		
Incidentals.....	84,208	02		
Loan of 1843.....	76,231	33		
Treasury notes.....	1,919,800	00	18,518,961	62
Total.....		28,948,488	57
The payments for the same period have been				
For civil list, miscellaneous, and foreign intercourse.....	3,380,065	18		
Military.....	6,174,485	13		
Naval.....	4,703,966	13		
Reimbursing treasury notes.....	9,738,711	49		
Interest on treasury notes.....	547,286	67		
Interest on public debt.....	647,434	97		
Total.....		25,361,048	93
Balance in the treasury, 1st March, 1844.....		3,587,439	64

From these data it would appear, that the amount of the national debt, including treasury notes, as a part of said debt, has been reduced 7,778,680 dollars 14 cents, between the 1st of July, 1843, and the 29th of February, 1844. Thus:

Amount of treasury notes redeemed.....	dtrs. cts.	dtrs. cts.
Amount received for treasury notes.....	1,919,800 00	9,758,711 49
Receipts for loans for 1843.....	70,231 35	
		1,000 00 35
Showing a reduction of indebtedness of.....	7,778,680 14

From the annual report of Mr. R. J. Walker, Secretary of the Treasury, we extract the following :

“TREASURY DEPARTMENT, December 3rd, 1845.

“In obedience to the Act supplementary to the act to establish the Treasury Department, the undersigned respectfully submits the following report.

“The receipts and expenditures for the fiscal year ending the 30th of June, 1845, were as follows :

VOL. II.

7 Q

RECEIPTS and Means for the Year ending the 30th of June, 1845.

	dls. cts.
From customs	27,528,112 70
From sales of public lands.....	3,077,022 30
From miscellaneous sources.....	163,998 06
Total receipts.....	29,769,133 56
Add balance in treasury July 1, 1844.....	7,837,379 64
Total means.....	37,606,513 20
The expenditures during the same fiscal year amounted to.....	29,868,206 98
Leaving a balance in treasury July 1, 1845, of.....	7,738,306 22

The estimated Receipts and Expenditures for the fiscal Year ending the 30th of June, 1846, are :

RECEIPTS.

	dls. cts.
From customs, first quarter, by actual returns.....	8,861,932 14
For second, third, and fourth quarters, as estimated.....	15,638,067 86
Total from customs	24,500,000 00
From sales of public lands.....	2,200,000 00
From miscellaneous and incidental sources.....	120,000 00
Total receipts.....	26,820,000 00
Add balance in treasury 1st July, 1845.....	7,738,306 22
Total means as estimated.....	34,558,306 22

EXPENDITURES.

The actual expenditures for first quarter, ending the 30th of September, 1845.....	8,463,092 41
The estimated expenditures for the other three quarters, from the 1st of October, 1845, to 30th of June, 1846, are:	
For civil list, foreign intercourse, and miscellaneous purposes.....	6,739,211 06
Army proper.....	3,394,735 06
Fortifications, ordnance, arming militia, &c.....	3,346,778 82
Indian department.....	1,649,791 94
Pensions.....	1,358,556 02

THE TARIFF.—The receipts for the first quarter of this year are less by 2,011,885 dollars 90 cents, than the receipts of the same quarter last year. Among the causes of decrease is the progressive diminution of the importation of many high-protected articles, and the substitution of rival domestic products. For the nine months ending June 30, 1843, since the present tariff, the average of duties upon dutiable imports was equal to 37 dollars 84 1-10 cents per cent; for the year ending June 30, 1844, 33 dollars 85 9-10 cents per cent; and for the year ending June 30, 1845, 29 dollars 90 per cent—showing a great diminution in the average per centage, owing in part to increased importation of some articles bearing the lighter duties, and decreased importations of others bearing the higher duties. The revenue from ad valorem duties last year exceeded that realised from specific duties, although the average of the ad valorem duties was only 23 dollars 57 cents per cent, and the average of the specific duties 41 dollars 80 cents—presenting another strong proof that lower duties increase the revenue. Among the causes tending to augment the revenue, are increased emigration and the annexation of Texas. The estimates for the expenditures of 1846 are based chiefly upon appropriations made by Congress. The estimated expenditures of 1847 are founded upon data furnished by the several departments, and are less by 4,103,238 dollars 65 cents than those of the preceding year. These estimates are submitted in the full conviction that, whenever Congress, guided by an enlightened economy, can diminish the expenditures without injury to the public interest, such retrenchment will be made so as to lighten the burden of taxation, and hasten the extinguishment of the public debt, reduced on the 1st of October last to 17,057,445 dollars 52 cents.

In suggesting improvements in the revenue laws, the following principles have been adopted:

1st. That no more money should be collected than is necessary for the wants of the government, economically administered.

2nd. That no duty be imposed on any articles above the lowest rate which will yield the largest amount of revenue.

3rd. That, below such rate, discrimination may be made, descending in the scale of duties; or, for imperative reasons, the articles may be placed in the list of those free from all duty.

4th. That the maximum revenue duty should be imposed on luxuries.

5th. That all minimums, and all specific duties should be abolished, and ad valorem duties substituted in their place—care being taken to guard against fraudulent invoices and under-valuation, and to assess the duty upon the actual market value.

6th. That the duties should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

No horizontal scale of duties is recommended; because such a scale would be a refusal to discriminate for revenue, and might sink that revenue below the wants of the government. Some articles will yield the largest revenue at duties that would be wholly or partially prohibitory in other cases. Luxuries, as a general rule, will bear the highest revenue duties; but even some very costly luxuries, easily smuggled, will bear but a light duty for revenue, whilst other articles, of great bulk and weight, will bear a higher duty for revenue. There is no instance within the knowledge of this department, of any horizontal tariff ever having been enacted by any one of the nations of the world. There must be discrimination for revenue, or the burden of taxation must be augmented, in order to bring the same amount of money into the treasury. It is difficult also to adopt any arbitrary maximum, to which an inflexible adherence must be demanded in all cases. Thus, upon brandy and spirits a specific duty, varying as an equivalent ad valorem from 180 to 261 per cent yields a large revenue, yet no one would propose either of these rates as a maximum. These duties are too high for revenue, from the encouragement they present for smuggling these baneful luxuries; yet a duty of 20 per cent upon brandy and spirits would be far below the revenue standard, would greatly diminish the income on these imports, require increased burdens upon the necessities of life, and would revolt the moral sense of the whole community. There are many other luxuries which will bear a much higher duty for revenue than 20 per cent; and the only true maximum is that which experience demonstrates will bring, in each case, the largest revenue at the lowest rate of duty. Nor should maximum revenue duties be imposed upon all articles; for this would yield too large an income, and would prevent all discrimination within the revenue standard, and require necessities to be taxed as high as luxuries. But, whilst it is impossible to adopt any horizontal scale of duties, or even any arbitrary maximum, experience proves that, as a general rule, a duty of 20 per cent ad valorem will yield the largest revenue.—There are, however, a few exceptions above, as well as many below this standard. Thus, whilst the lowest revenue duty on most luxuries exceeds 20 per cent, there are many costly articles, of small bulk and easily smuggled, which would bring perhaps no revenue at a duty as high as 20 per cent; and even at the present rate, 7½ per cent, they will yield in most cases a small revenue; whilst coal, iron, sugar and molasses, articles of great bulk and weight, yielded last year six millions of revenue, at an average rate of duty exceeding 60 per cent, ad valorem. These duties are far too high for revenue upon all these articles, and ought to be reduced to the revenue standard; but if Congress desire to obtain

the largest revenue from duties on these articles, those duties, at the lowest rate for revenue, would exceed 20 per cent, ad valorem.

“WAREHOUSING SYSTEM.”—Prior to the 30th of June, 1842, a credit was given for the payment of duties; since which date they have been collected in cash. Before the cash duties and the tariff of 1842, our trade in foreign imports re-exported abroad afforded large and profitable employment to our merchants and freight to our commercial marine, both for the inward and outward voyage; but since the last tariff this trade is being lost to the country, as is proved by the tables hereto annexed. The total amount of foreign imports re-exported during the three years since the last tariff, both of free and dutiable goods, is 33,384,394 dollars—being far less than in any three years (except during the war) since 1798, and less than was re-exported in any one of eight several years. The highest aggregate of any three years was 173,103,519 dollars, and the lowest aggregate 41,315,705 dollars—being in the years 1794, 1795, and 1796. Before 1820, the free goods are not distinguished in this particular from dutiable goods; but since that date the returns show the following result: during the three years since the tariff of 1842, the value of dutiable imports re-exported was 12,590,311—being less than in any one of seven years preceding since 1820, the lowest aggregate of any three years since that date being 14,918,444, and the highest 57,727,293. Even before the cash duties, for five years preceding the high tariff of 1828, the value of dutiable goods re-exported was 24,796,241 dollars; and for the five years succeeding that tariff, 66,784,192 dollars—showing a loss of 28,020 dollars 49 cents of our trade in foreign exports after the tariff of 1828. The great diminution of this most valuable branch of commerce has been the combined result of cash duties and of the high tariff of 1842. If the cash duties are retained, as it is believed they should be, the only sure method of restoring this trade is the adoption of the warehousing system, by which the foreign imports may be kept in store by the government until they are required for re-exportation abroad, or consumption at home—in which latter contingency, and at the time when for that purpose they are taken out of these stores for consumption, the duties are paid, and, if re-exported, they pay no duty, but only the expense of storage. Under the present system, the merchant introduces foreign imports of the value of 100,000 dollars. He must now, besides the advance for the goods, make a further advance in cash, in many cases of 50,000 dollars for the duties. Under such a system but a small amount of goods will be imported for drawbacks: and the higher the duty the larger must be the advance, and the smaller the imports for re-exportation.

The imports before payment of duties, under the same regulations now applied to our imports in transit to Canada, may be taken from warehouse to warehouse—from the East to the lakes, and to Pittsburg, Cincinnati, and Louisville—from New Orleans to Natchez, Vicksburg, Memphis, and St. Louis—and warehoused in these and other interior ports, the duties remaining unpaid until the goods are taken out of the warehouse and out of the original package at such ports for consumption; thus carrying our foreign commerce into the interior with all the advantage of augmented business and cheaper supplies throughout the country.

It will introduce into our large ports on or near the seaboard assorted cargoes of goods, to be re-exported with our own, to supply the markets of the world. It will cheapen prices to the consumer, by deducting the interest and profit that are now charged upon the advance of duty—building up the marts of our own commerce, and giving profitable employment to our own commercial marine. It will greatly increase our revenue by augmenting our imports, together, with our exports; and is respectfully recommended to Congress as an important part of the whole system now proposed for their consideration.

The act of the 3rd of March last, allowing a drawback on foreign imports exported from certain ports to Canada, and also to Santa Fé and Chihuahua, in Mexico, has gone to some extent into effect under regulations prescribed by the department, and is beginning to produce the most happy results—especially in an augmented trade in the supply of foreign exports to Canada from our own ports. Indeed, this law must soon give to us the whole of this valuable trade during the long period when the St. Lawrence is closed by ice, and a large proportion of it at all seasons. The result would be still more beneficial if Canada were allowed to carry all her exports to foreign nations in transitu through our own railroads, rivers, and canals, to be shipped from our own ports. Such a system, whilst it would secure to us this valuable trade, would greatly enlarge the business on our rivers, lakes, railroads, and canals, as well as augment our commerce; and would soon lead to the purchase, by Canada, not only of our foreign exports, but also, in many cases, of our American products and fabrics, to complete an assortment. In this manner our commercial relations with Canada would become more intimate, and more and more of her trade, every year, would be secured to our people.

PUBLIC LANDS.—The net proceeds of these sales paid into the treasury during the last fiscal year was 2,077,022 dollars 80 cents; and from the first sales in 1787 up to the 30th of September last was 118,607,335 dollars 91 cents. The average annual sales have been much less than two millions of acres, yet the aggregate net proceeds of the sales in 1834, 1835, 1836, and 1837, was 51,258,667 dollars 82 cents. Those large sales were almost exclusively for speculation; and this

can only be obviated, at all times, by confining the sales to settlers and cultivators in limited quantities, sufficient for farms or plantations. The price at which the public lands should be sold is an important question to the whole country, but especially to the people of the new states, living mostly remote from the seaboard, and who have scarcely felt the presence of the government in local expenditures, but chiefly in the exhaustion of their means for purchases of public lands and for customs. The public lands are not of the same value; yet they are all fixed at one unvarying price, which is far above the value of a large portion of these lands. The quantity now subject to entry at the minimum price of 1 dollar 25 cents per acre is 133,307,457 acres, and 109,035,345 acres in addition, to which the Indian title has been extinguished—being an aggregate of 242,342,802 acres, and requiring a century and a quarter to complete the sales at the rate they have progressed heretofore—without including any of the unsold lands of Texas or Oregon, or of the vast region besides to which the Indian title is not yet extinguished.

SUB-TREASURY.—The only proper course for the government is to keep its own money separate from all banks and bankers, in its own treasury—whether in the mint, branch mints, or other government agencies—and to use only gold and silver coin in all receipts and disbursements. The business of the country will be more safe when an adequate supply of specie is kept within our limits, and its circulation encouraged by all the means within the power of this government. If this government, and the states, and the people, unite in suppressing the use of specie, an adequate supply, for want of a demand, cannot be kept within our limits; and the condition of the business and currency of the country will be perilous and uncertain. It will be completely within the power of the banks, whose paper will constitute the exclusive circulation of the whole community. Nor will it be useful to establish a constitutional treasury, if it is to receive or disburse the paper of banks. Separation from the banks in that case would be only nominal, and no addition would be made to the circulation of gold and silver.

The constitutional treasury could be rendered a most powerful auxiliary of the mint in augmenting the specie circulation. The amount of public money which can be placed in the mint is now limited by law to one million of dollars; and to that extent it is now used as a depository, and as a means of increasing our coinage. It is suggested that this limitation may be so modified as to permit the use of our mint and branch mints for a much larger sum in connexion with the constitutional treasury. The amount of public money received at New York greatly exceeds that collected at all other points, and would of itself seem to call for a place of public deposit there; in view of which, the location of a branch of the mint of the United States at that city would be most convenient and useful. The argument used against a constitutional treasury, of the alleged insecurity of the public funds in the hands of individuals, and especially the vast amount collected at New York, will be entirely obviated by such an establishment. The mint of the United States has now been in existence 52 years. It has had the custody of upwards of 114,000,000 of dollars; and during this long period of time there never has been a loss of any of its specie in the mint by the government. The mint at Philadelphia is now conducted with great efficiency, by the able and faithful officer at the head of that establishment, whose general supervisory authority, without leaving the parent mint, might still be wisely extended to the branch at New York. Besides the utility of such a branch as a place for keeping safely and disbursing the public money, it is believed that the coinage might be greatly augmented by the existence of a branch of the mint at that great city. It is there that two-thirds of the revenue is annually collected—the whole of which, under the operation of the constitutional treasury, would be received in specie. Of that amount a very large sum would be received in coin of other countries, and especially in foreign gold coins—all of which could be speedily converted, upon the spot, into our own coins of gold and silver. The amount also of such foreign coin brought by emigrants to the city of New York is very considerable—a large portion of which would find its way to the branch of the mint for re-coinage.

A considerable amount of foreign gold coin has, during the present year, under the directions of this department, been converted into American gold coin; but the process would be much more rapid if aided by the organisation of the constitutional treasury, and the establishment of a branch of the mint at the great commercial emporium of the union. With the mint and branch mints as depositories, the sum remaining in the hands of other receivers of public money, whether of lands or customs, would be inconsiderable, and the government could be readily protected from all losses of such sums by adequate bonds, and the power, by law, to convict and punish as criminals all who embezzle the public moneys.

The foregoing tables and statements complete our historical statistics of the currency and finances of the United States.

Under circumstances of great national difficulties, which involved the civil and religious liberties of the citizens, and the independence of the republic, we believe the people of the United States would consent to be taxed for that purpose

even as highly as the people of England have patiently consented to be taxed ; but we cannot, at the expense of truth, flatter America, by saying that her citizens would consent long to pay taxes,—direct taxes they would require to be for carrying on a war with any European power, on account of a dispute, or for a cause which did not involve the independence of America,—the liberties of her citizens,—and the domestic happiness of their families, and of their dwellings.

The demagogues who live, and speak, and act on that feverish disease—*popularity* ;* ruinous in all countries, but especially so in America ; and the conductors or editors of the most immoral portion of the press, the worst of whom are certainly not natives of America, may excite a nation, or delude a legislature and executive into a declaration of war ; but we hazard our knowledge, and our judgment, of America, and of the Americans, by declaring that such a war would be of short duration ;—and, that however great its evils to other countries, its injuries to American trade and credit, would be still greater, and tend from financial difficulties, to alienate the several states, in feelings, and interest, from one another.

Rather than obtrude our own reasons in a work of facts like this, we have throughout, generally, given the opinions and authorities of American writers and statesmen ; and we cannot conclude this article better than by adducing American

* “ The people of these states are, by the favour of Providence, and through the sacrifices, sufferings, efforts and virtues of their ancestors, aided by our geographical position, and our physical advantages, in the enjoyment of many privileges, rights, and blessings, which are, or appear to be, safe from the encroachments or the invasion of the most corrupt, unprincipled, and popular demagogues into whose hands the nation may, sooner or later, be destined to fall ; but we cannot number among these privileges and blessings, freedom of opinion and freedom of action in the selection of the chief magistrate of the union, or, when he is selected and chosen, of influencing him to appoint, for his ministers, persons who, in the estimation of the most enlightened, and disinterested, and high-minded portion of his fellow-citizens, are the best qualified for the performance of the duties connected with those high stations.

“ It is true, that the right of voting is free enough, and in an emergency, in a sharply contested election, an elector, imbued with more than a common share of patriotic zeal and fervour, may, in order to save his country from the misfortune of falling into the hands of his political opponents, double or quadruple his vote, or perhaps go to a greater extent, if the crisis is of that dangerous character as to seem to require such a liberal use of this republican privilege, and at the same time he shall show satisfactory evidence that he belongs to the regular army of patriots whose business it is, as in the ancient republics, to see that no harm shall come to the commonwealth. To this class of men there is no want of deference in the business of selecting candidates for the high offices under the government, but that the mass of the nation, by which we mean the farmers, planters, navigators, merchants, mechanics, manufacturers, and, in fine, the classes who work all, who earn all, and who, when the country is in danger, fight all—that this great body of the people, comprising those who own the soil, the ships, the factories, the workshops, and all the other capital of the country, as well as the honest and industrious labourers who are employed by them, and are paid by them, have any influence in the selection of candidates for offices, is a proposition which few well-informed and prudent persons will, we conceive, affirm.

“ In respect, however, to the high offices of government, when, by a concurrence of fortunate circumstances there have been forced upon an executive, by the action of public opinion, persons of experience, ability, and of independent minds, it has often been found difficult for them to remain in the cabinet, without such a sacrifice of their intellectual, and, perhaps, moral independence, as no one, of a mind and character requisite for the due performance of the high duties attached to the office of cabinet minister, would submit to, or to which he ought to submit, or to which he could submit, without a loss of public esteem, if not his own self-respect.”—*Letter to Cotton Manufacturers.*

opinions upon revenue and finance,—a subject, which we commenced by observing, the power of modern states chiefly depend.

The president of the United States may be one of the most honest men and patriots alive on his election to office : that is if he could have passed with purity through the previous acts of his public life. But how is he to maintain the popularity that will either enable him to administer his high functions, or leave him any chance of being re-elected. The history of the two presidencies of General Jackson afford ample means of unravelling and exposing the system or practice. A man less pure, who merely adapted his views to meet popularity, and possessing the great abilities of Mr. Calhoun, would, in the case of that statesman, have certainly been before this time elected chief magistrate of the United States.

In 1835, during the administration of General Jackson, who was supposed the most sternly virtuous of men, we find the following passage in one of Mr. Calhoun's speeches :—

“ I must content myself with saying, that there never was a period in which our institutions were in greater danger, and when our country called more imploringly for relief. It is impossible for any one who has not been an eye-witness, to realise the rapid corruption and degeneracy of the government within the last ten years. So callous has the sensibility of the community become, that things are now not only tolerated, but are scarcely noticed, which, at any other period, would have prostrated the administration of Washington himself. In fact, to prove corruption and abuse, but strengthens the administration in the affections of that powerful and disciplined corps, which is the main support of those in power, and which unfortunately have established so commanding an influence over public opinion. Of this melancholy and alarming truth, we have had of late many striking illustrations. It is time for the people to reflect. A state of things so corrupt cannot long exist, and must, if not reformed, lead to convulsion and evolution.”

We find, in a speech delivered by Mr. Bell, who had previously filled the chair as speaker of the house of representatives, and who had been a member of the cabinet, the following remarkable passage :—

“ Did it ever strike you, Mr. Chairman, how very few of the leading men of this country have been consistent in their opinions and course upon any one subject, however vital or important? Whatever it is that stamps the course of so many American statesmen so unfavourably in this respect, would be a subject of interesting inquiry. Whether it springs from the nature of our institutions, our frequent elections, and the eagerness of most men to acquire present popularity and power, at any sacrifice, and, consequently, their readiness to adjust their principles to the current of public sentiment at the moment, or to some other cause, I leave others to decide; but, whatever it is, in any other country where there is a shadow of freedom, in England especially, the authority and opinions of no public man who had signalled his course by one-half the changes and tergiversations which have marked the course of those who are most forward in their support of this measure, would carry the slightest weight or respect with them. Indeed, what difference does it make what principles our candidate for popular support may avow, or what policy he may prefer to advocate, if he may be allowed to say *he has changed*, the moment he gets into power? Or what weight ought any man's opinions to carry with them, when it is known that only a few years ago he held opposite and conflicting views, and at some period anterior to that, he was, perhaps, the champion of the same doctrines which he has now espoused for the second time? Is there, sir, a single advocate of the bill who can lay any just claim to respect or confidence, on the ground of established and settled opinions, upon any one subject whatever?”

Mr. Bell adverted afterwards to changes for *popularity*, in regard to the dif-

ferent views taken by the same public men with respect to the tariff, bank, and other important national measures. Mr. John Jay was certainly one of the greatest men of his time, and he always enjoyed the affection, esteem, and confidence of Washington.

"Knowing both from history and experience," observes Mr. Jay, in a letter to Mr. Wilberforce, "that men and other creatures will generally act according to their real characters. I have met with few disappointments in that respect. The esteem of the estimable is certainly of great value, but the transient praise of the multitude, like feathers blown on and off by the passing breeze, can weigh but little. Popular fluctuations resemble those of the ocean, and they both depend on wind and weather, and are too natural and common to afford matter for surprise or irritation. Republics are frequently to be pitted rather than blamed, when, mistaking demagogues for patriots, they suffer from the demerit of those they appoint to manage the public affairs."

Even the great Washington did not escape the hatred of the demagogues, and Mr. Jay was burned in effigy for having concluded a treaty with England, which saved America from another expensive war, and a possible disunion of the republic. Mr. Lee, of Boston, observes (1843) in his letters—

"The influence and power gained by this body, the demagogues, of plausible, but base and profligate persons, over the ignorant, the thoughtless, and the credulous, together with the absolute control they acquire over the more idle, reckless, and corrupt members of the community, form one of the great obstacles to the due administration of our government—to institutions which, upon the general suffrage principle, give an equal amount of political power to the wise and the foolish, to the well-informed and the ignorant, to the industrious and the idle, and worse than all, which place the most useless, immoral, irreligious, abandoned person on a level with the most enlightened, virtuous, and useful citizen in the country.

"Now, according to information before the public, there are in the United States at least half a million of electors who, either from an absence of the lowest elements of knowledge—reading and writing—or from moral defects of a much more disqualifying character, are wholly incompetent to a rational use of the power of voting. When, too, from the ordinary increase of population, it is certain that this number will, within twenty-four years, be extended to at least a million, it must, we conceive, be admitted that of all countries on earth there is here laid open to the demagogue, disguised under the mask of the 'friend of the people,' the widest field of action; and he must be a careless or an undiscerning spectator of passing events, and events which have passed, who does not perceive the progressive movements of this corps of destructives in the rapid declension of the character of the Federal Government, and of the State Governments, in the estimation and confidence of men of reflection, discernment, and worth, to whichever of the great political parties they may belong.

"It is this numerous body of persons, intellectually or morally disqualified for the exercise of the right of suffrage, and a portion of whom, as may reasonably be inferred, will be ever ready for the performance of any work assigned them by their leaders, to whom Mr. Calhoun must, we suppose, have referred, as constituting 'that powerful and disciplined corps' which may be relied upon to sustain any description of men in office, who show a disposition to exercise their political power to the disadvantage of their country. Now, on the supposition that the demagogues control one-fifth part of this army of political automata—who are as much under the control of their leaders as the figures of a chess-board are at the command of the players—what is there to prevent them from controlling the elections? What is there, we say, from preventing this disciplined and desperate corps of political operatives, who, while the industrious and labouring portion of the community are engaged in their honest and useful pursuits, are constantly in a state of mischievous activity under the stimulation of their turbulent and profligate conductors? What is there, we ask, to hinder them from deciding between the

two great contending parties who shall rule the nation? The answer to this inquiry must be, we think, that no reason can be given why this portion of the electors should not gain the control of the country, since, if reference be had to the results of the federal elections, it will be found that the majorities on the one side or the other have never but once been so large that a diversion of the electors from one party to the other, of from 20,000 to 75,000, would not have decided the election. Even at the election of President Harrison, who had the largest majority of votes ever given, except in Mr. Munroe's case, where there was no opposition, a transfer of 73,091 votes from his side to that of his opponent would have defeated the election of that gentleman.

"The practical operation, then, of our system of free elections, as far as they are within the influence and sway of demagogues, is to place 18,000,000 of people under the control of less than 75,000, and frequently of not half that number, of the most worthless and abandoned persons in the community—MANY OF THEM FOREIGNERS, FRESH LANDED UPON OUR SHORES, and a portion of them coming from the prisons, penitentiaries, and poor-houses of Europe, without any knowledge of our institutions, or any attachment to them—and the remainder the very scum and refuse of our own country, marshalled under the banners of persons of better education than their followers, and having a still greater pre-eminence over them in every quality which can render a man an object of aversion, disgust, and detestation to the intelligent, reflecting, and well-disposed part of his fellow-citizens."

The following extracts are remarkable as bearing upon the same important subject. They are the opinions of a distinguished gentleman, Mr. Mann, and stated by him before the city magistrates of Boston, in July, 1843:—

"Two dangers, equally fatal, impend over us;—the danger of ignorance, which does not know its duty, and the danger of vice, which, knowing, contemns it. To insure prosperity, the mass of the people must be both well-informed and upright; but it is obvious that one portion of them may be honest but ignorant, while the residue are educated but fraudulent."

"With the heroes and sages of ancient days, I believe in the capability of man for self-government—my whole soul thereto joyously consenting. Nay, if there be any heresy among men, or blasphemy against God, at which the philosopher might be allowed to forget his equanimity, and the Christian his charity—it is the heresy and blasphemy of believing and avowing that the infinitely-good and all-wise Author of the universe persists in creating and sustaining a race of beings who, by a law of their nature, are for ever doomed to suffer all the atrocities and agonies of misgovernment, either from the hands of others or from their own. The doctrine of the inherent and necessary disability of mankind for self-government should be regarded, not simply with denial, but with abhorrence—not with disproof only, but with execration."

"Still, if asked the broad question, whether man is capable of self-government, I must answer it conditionally. If by man, in the inquiry, is meant the Feejee Islanders; or the convicts of Botany Bay; or the people of Mexico, and some of the South American Republics (so called); or those as a class in our own country, who can neither read nor write; or those who can read and write, and who possess talents and an education, by force of which they get treasury, or post office, or bank appointments, and then abscond with all the money they get;—I ANSWER UNHESITATINGLY THAT MAN, OR RATHER SUCH MEN, ARE NOT FIT FOR SELF-GOVERNMENT. Fatuity and guilt are no more certain to destroy an individual, or a family over which they preside, than they are to destroy a government into whose rule they enter. Politics have been beautifully defined to be the art of making a people happy. Such men have no such art; but, with power in their hands, they would draw down personal and disperse universal misery."

Mr Mann then adverts to the right of voting at elections by convicted felons and the picture which he draws, and which is corroborated by others, is certainly appalling:—

"The number of convicts at present in confinement in the penitentiaries and state prisons of the union is very nearly four thousand seven hundred and fifty; and the average duration of their imprisonment is about four years. The number under sentence for crime, in common gaols and houses of correction, is not less than the preceding, and the average length of their imprisonment is estimated at six months. Suppose that these culprits live, on an average, but eight years after their enlargement, and we have the appalling number of *eighty-five thousand five hundred convicted criminals*—proved offenders against the laws of God and man—and almost universally adults—at large, mingling in our society, and a very large portion of them competent to vote; there being but three states in the union where, by the constitution of the state, a conviction for felony, or any infamous offence, works a forfeiture of the elective franchise. Yes! *good and true—for the wrong side, and to send you and me to perdition!* And I do not believe there is one state in the union whose elections for governor and other high officers have not sometimes been so nearly a drawn game, that its quota of this felon host,—its own battalion of sin,—would not have been able to decide them, by what a politician would call—a very respectable majority."

"Superadded to this standing army of convicted felons, '*good and true voters on the wrong side,*' and ready and eager, under the command of men of kindred principles and feelings—and of more influence and power than themselves—to aid in sending the country to perdition. Besides that corps of tried veterans, each of whose votes have the same political weight as that of the most responsible, enlightened, and virtuous citizen of the country, there is another army, possibly still more numerous, and certainly more powerful than the one referred to—of *unconvicted felons*; a body of men who may not have committed such overt acts as would bring them within the scope of legal liabilities; or, if otherwise, who, from their cautious proceedings, or from the inefficiency of the ministers of the law, may have evaded detection or escaped punishment. This class of persons, then, although not '*convicted felons,*' are, nevertheless, *felons*, inasmuch as they are possessed of *felonious sentiments*, or may have been guilty of felonious deeds. The right of voting, in the hands of such men, many of whom have had the advantages of education and the benefits of respectable society, and some of whom may continue to have influence—is infinitely more dangerous to the safety and welfare of the country than its exercise in the hands of men stamped with the signs and evidences of their criminality."

To this class of men, and to their conduct and characteristics, Mr. Mann must have alluded in the following remarks:—

"*Are not the business relations of the community contaminated more and more with speculation and knavery? In mercantile honour and honesty, in the intercourse between buyer and seller, is there not a laxation of all the joints of the body commercial and social? The number of fraudulent bankruptcies—fraudulent in the incurring of the debts, if not in the surrender of the assets—the rapacity of speculation; the breaches of private trust; the embezzlement of corporate funds; the absconding with government property; the malversation of government fiduciaries, whether of a United States Bank, or of a Girard College; the repudiation of state debts;—and that other class of offences which combines the criminality both of fraud and force—such as the shooting of a sheriff, who attempted to execute civil process, or the burning of a bank with all its contents, by a company of debtors, in Mississippi, because their notes had been lodged in it for collection.*

"*We look with a kind of contempt, as well as abhorrence, upon the self-styled republics of South America, which seem to be founded politically, as well as territorially, upon earthquakes. Were it not that so much of human happiness is involved in their revolutions, ridicule would overpower indignation at the spectacle they present.* It is difficult to state the number of their overturns, and of late years it has seemed hardly worth while to keep the tally; but probably the changes of party and of policy in our general government have not been much less numerous than theirs. In some of our states, certainly, the changes of party have been so frequent, that the moon would have been their most appropriate coat of arms.

"In one important particular, indeed, we have the advantage of our namesakes in the southern hemisphere; for our revolutions of party, as yet, have been bloodless. How long they may continue so, even in New England, depends upon the measures we take to give predominance to principle over passion in the education of the young.

"On one of these oft-recurring days, when the fate of the state or the union is to be decided at the polls—when, over all the land, the votes are falling thick as hail, and we seem to hear them rattle like the clangour of arms—is it not enough to make the lover of his country turn pale to reflect upon the motives under which they may be given, and the consequences to which they may lead? By the votes of a few wicked men, or even of one wicked man, honourable men have been hurled from office and miscreants elevated to their places; useful offices abolished, and sinecures created; the public wealth, which had supported industry, squandered upon mercenaries; enterprise crippled; the hammer falling from every hand, the wheel stopping in every mill, the sail dropping to the mast on every sea—and thus capital, which had been honestly and laboriously accumulated, turned into dross;—in fine, the whole policy of the government may be reversed, and the social condition of millions changed, to gratify one man's grudge, or prejudice, or revenge. In a word, if the votes which fall so copiously into the ballot-box on our days of election emanate from wise councils and a loyalty to truth, they will descend like benedictions from Heaven to bless the land and fill it with song and gladness, such as have never been known upon earth since the days of Paradise; but if, on the other hand, these votes come from ignorance and crime, the fire and brimstone that were rained in Sodom and Gomorrah would be more tolerable.

"But I have laboured to supererogation to show both an existing and a prospective deficiency in knowledge for managing the vast and precious interests of this great nation. I have shown, if not an incurable, yet, unless cured, a fatal malady in the heart. I tremble at the catalogue of national crimes which we are exhibiting before heaven and earth! The party rancour and vilification which rages through our newspaper press—in utter forgetfulness or contempt of the great spiritual law, that when men pass from judgment to passion, they will soon pass from passion to violence! The fraud, falsehood, bribery, perjury, perpetuated at our elections; and the spirit of wantonness or malice, of pride or envy, in which the sacred privilege of voting is exercised; the practice of double eating, like parricide in Rome, unheard of in the early days of the republic, is becoming more and more frequent. Although in some of the states a property qualification, and in some even a landed qualification is necessary; yet the number of votes given at the last presidential election equalled, almost without a fraction, one-sixth part of the whole free population in the union. In one of the states the number of votes exceeded, by a large fraction, one-fifth of the whole population—men, women, and children. Will it not be a new form of the republic—unknown alike to ancient or modern writers—when the question shall be, not how many voters there are, but how many ballots can be printed and put surreptitiously into the ballot-box? Then there is the fraudulent registration of votes by the returning officers, because the majority is adverse to their own favourite candidates, which has now been done, on a large scale, in three of the principal states in the union! The scenes of violence enacted, not only *without*, but *within* the capitol of the nation; and the halls, which should be consecrated to order and solemnity, and a devout consultation upon the unspeakable magnitude and value of the interests of this great people, desecrated by outrage, and Billingsgate and drunken brawls! Challenges given and duels fought by members of Congress, in violation or evasion of their own lately enacted law against them; and, within the space of a few days, a proud and prominent member, from a proud and prominent state—the countryman of Washington, Jefferson, and Madison, put under bonds to *keep the peace*, like a wild, fresh-landed Carib. In two of our legislative assemblies one member has been murdered by another member, in open day, and during the hours of session; in one of the cases the deed being perpetrated by the presiding officer of the assembly, who descended from his chair and pierced the heart of his victim with a bowie-knife, and still goes unpunished, though not unhonoured. What outbreaks of violence all over the country:—the lynching of five men at one time at Vicksburg—the murder of human beings by fires—the riots and

demolitions at New York, at Philadelphia, at Baltimore, at Albany, at Cincinnati; yes, and the spectacle of our own more serene part of the heavens, crimsoned, at midnight, by a conflagration of the dwelling-place of women and female children*—a deed incited and brutally executed through prejudice and hostility towards a sect which takes the liberty to protest against Protestants, as Protestants protested against them."

The opinions of a judicial authority of high standing, contained in a letter from Judge MacLean, of Ohio, who for fifteen years (a longer period than held by any, except two others) was a Judge of the Supreme Court, the highest tribunal of the United States, may, we consider, be relied on. It would appear that these opinions were given when an application was made to ascertain whether he would allow himself to be put in nomination for the office of president.

"The office of president (says Mr. McLean) in my opinion has been lowered, and also the character of the country, at home and abroad, by the means used to secure that office. High as the presidency of this great nation is, it may be reached by too great a price. It sinks below the ambition of an honourable mind, when it is attainable only by the sacrifice of the loftiest patriotism. Not to name others, we have in the elevation of Jefferson, Madison, and Munroe, examples of a high and honourable ambition which is worthy of imitation. Those eminent men, when named for the office of president, reposing on what they had done, and what their known capacities enabled them to do, in the highest public trusts, neither took, nor seemed to take any agency in their own advancement.

"For many years I have been deeply impressed with the injustice, the corrupting and ruinous effects of political partizanship. Its introduction into the federal government has well nigh ruined our beloved country. Before this bane had perverted our moral sense, our love of country, and, so far as parties are concerned, almost every noble feeling of the heart, we were happy, as a people, in the enjoyment of great and uninterrupted prosperity. And whatever may be said to the contrary, this terrible evil lies at the foundation of all our embarrassments. It has been mainly instrumental in the commercial revulsions we have witnessed, and it has prostrated our political morality. Our pecuniary losses, within a few years past, are almost beyond the power of computation; but these are scarcely worthy of consideration, in comparison with the loss, it may be the irreparable loss of moral force in our institutions. That man must be blind to the admonitions of history, who supposes that a free government can be long sustained, which addresses itself, with all its influence, to the baser passions of our nature. Such a course leads to a widely diffused corruption and consequent ruin. In my judgment, nothing can rescue our government from this, the common fate of republics, but a change in its political action. This action must be elevated. It must reach and rouse the moral tone of the nation. Instead of administering to the prostituted appetites of demagogues, it must rest on a virtuous and enlightened public opinion. It must gather strength by its acts—moral strength. Its aim should be the general good. The chief of the government in making appointments to offices should carry out the principles of the virtuous Munroe, who, on a certain person being recommended to him for an office, as a personal friend, with good qualifications, remarked, with earnestness, 'No man can feel more grateful than I do for personal acts of kindness, but in making this appointment I have a high public duty to perform, and I must look to the public interest.' A departure from these principles drove me reluctantly from political life; and in all sincerity I assure you that there is no political office, not even the presidency, which could tempt me again into politics, on principles opposed to those which I approve, and on which I endeavour to act."

On the question of candidates' pledges he observes, in the same independent language:—

* The destruction, by a mob of incendiaries, of a Catholic institution near Boston, devoted mainly to the instruction of female children.

"Pledges, when given by a candidate for public favour, should be received with suspicion, as they are generally made to answer a particular purpose, and are seldom deemed. No one, perhaps, should be named for the presidency whose opinions on the leading topics of the day are unknown to the public. Until within a few years past, pledges were not required from the candidates for the chief magistracy. And I may ask, what good has resulted from this innovation? Has it made our chief magistrates more faithful to the constitution, and to their general duties? Let a comparison of our late history with the past answer this question. Who thought of asking a pledge from the venerated fathers of the republic abovenamed? A sound head, and an honest heart, I think, are the best pledges. These will rarely fail, whilst experience shows that pledges are made to be broken."

The following passages in Washington's farewell address to the people of the United States may be said to have been prophetic; and happy will it be if his wise counsel shall be followed:

"In offering to you, my countrymen (says this great and good man), these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course which has hitherto marked the destiny of nations. But, if I even may flatter myself that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism;* this hope will be a full recompense for the solicitude for your welfare by which they have been dictated."

Professor Sparks, in his life of Washington, says:

"Nor were his apprehensions," observes Mr. Sparks, "confined to the defects in the system of government, and the modes of administering it. The intrigues of designing and unprincipled men, little restrained by the arm of an efficient power, were still more to be feared. 'There are errors in our national government,' he said, 'which call for correction; loudly I would add. We are certainly in a delicate situation; but my fear is that the people are not yet sufficiently misled to retract from error. To be plainer, I think there is more wickedness than ignorance mixed in our councils. Ignorance and design are difficult to combat. Out of these proceed illiberal sentiments, improper jealousies, and a train of evils which oftentimes, in republican governments, must be sorely felt before they can be removed. The former, that is ignorance, being a fit soil for the latter to work in, tools are employed which a generous mind would disdain to use; and which nothing but time, and their own puerile or wicked productions, can show the inefficacy and dangerous tendency of. I think often of our situation, and view it with concern.'

"Demagogues are the natural fruit of republics; and the fabled Upas could not be more poisonous or desolating to the soil from which it springs. Envious of his superiors, panting for honours which he is conscious he can never deserve, endowed with no higher faculties than cunning and an impudent hardihood, reckless of consequences, and grovelling alike in spirit and motive, the demagogue seeks first to cajole the people, then to corrupt, and last of all to betray and ruin them. When he has brought down the high to a level with himself, and depressed the low till they are pliant to his will, his work is achieved. The treachery of a Cataline or a Borgia may be dictated by a fortunate accident, and crushed in its infancy; but the demagogue, under his panoply of falsehood and chicane, may gradually sap the foundations of social order, and his country may be left with no other recompense for the ruin he has wrought, and the misery he has caused, than the poor consolation of execrating his name."

We have made these extracts in order to show how demagogues may endan-

* That patriotism which, according to Dr. Johnson, is the last refuge of scoundrels.

ger the safety of the commonwealth, and may bring the country into all the horrors of war, and the financial disasters which must inevitably follow. A war can only be maintained at great expense; and the expense can only be met by loans or heavy taxation. The payment of the first will either be repudiated, or the whole people must voluntarily or forcibly submit to high taxes. Troops either in Europe or America will not serve long unless paid well. On the subject of military expenses, Mr. Lee makes the following observations:

"It might, we think, be safely affirmed, that two or three companies of able-bodied men, who were not so crippled by idleness or intemperance as to be ineffective in the field, would, in this country, cost as much in time of war as a regiment a thousand strong would do in England, or perhaps twice that number of European continental troops. It is true we have millions of *militia*, who, as it is said in the poetical, oratorical, and historical effusions of the day, are, on the average, equal in patriotism and bravery to Leonidas, Hannibal, Hector, Gengis-Khan, or General Jackson, or other modern or ancient heroes. Now, although no one, we hope, will call in question the correctness of this representation (save in its inadequacy to convey a full conception of the reality) still it must be admitted that the mass of the citizens of this prosperous democracy have too many important and interesting objects in view to offer themselves as *targets*, at two or three times the wages ordinarily paid for such a patriotic service, at least unless they could all rank as high as captains, majors, colonels, or generals, of which we already possess more than all the nations of Europe.

"Admitting, then, that there is a much greater share of *patriotism*, and *chivalry*, in this country than in any other, still, in such an emergency as a war with a strong nation, it might be difficult to bring those, who make the highest pretensions to the possession of those qualities, into action without a compensation more solid, needful, and satisfactory to them, than the consciousness of serving their country. The war of 1812, *forced, as it was, upon the nation by a majority of only six votes*, was prompted more by a desire to gratify the feelings of the *chivalrous* portion of the nation, than by the expectation of gaining any of the objects which its promoters professed to have had in view in their appeals to the prejudices and passions of the people, who were deluded, by their false representations, into a support of that measure. The evils of that war, however, fell with the greatest weight upon the *unchivalrous* sections of the country, which, in fact, furnished almost the sole military means of sustaining it.

"The class of persons most desirous of a war, commenced on the principles which governed many of the promoters of the war of 1813, does not comprise that portion of the nation to whom the country must look for its defence against the evil consequences flowing therefrom. *Demagogues are more efficient in placing a country in a dangerous and suffering position than they are in sustaining and defending it. The history of the war of 1812 taught the nation that lesson*, though it is to be feared it is now too generally forgotten.

"*The only available source of revenue is in the duties on imports, which, however, in case of war with a naval power, will cease to produce a fourth part the amount derived from it while the country is at peace.* The sum derivable from duties on imports may be taken, for several years to come, at an average of about twenty-eight millions. During the war of 1812, while only one-fourth of the navy of our opponent was employed against us, the imports declined in value, as has before been stated, from 77,030,000 dollars to 12,965,000 dollars. Had the war been continued another year there would have been a still greater reduction in their amount. The exports fell off from 61,316,831 dollars to 6,927,441 dollars. Here was a nation which thought itself strong enough to aid in the subjugation of the most powerful nation in the world (though far less so then than at this moment) deprived of its commerce, and its only source of revenue in a war of only two years' duration, and against a nation nearly the whole of whose pecuniary and military resources were engaged in defending itself against the combined powers of the old world, aided by nearly all the strength of the new world.

"In such a crippled condition, as regarded our revenue, and, we may add, its finances, and with government credit too low to borrow any considerable sums, even at the enormous rates it had previously paid for money, there was no resource left but direct taxation, or emissions of national paper money. The former experiment was tried, but it failed of success in some of the most chivalrous states, the promoters of the war. The entire amount obtained in that way was insufficient for the payment of a month's war expenditure, and had it been pushed to such an extent as the wants of the country required, it would have destroyed the popularity of the administration, and, at the same time, would have failed of its accomplishment. There is nothing which can be deemed more certain, which is connected with the future, than the determined opposition which will ever be made in all parts of the country to any considerable amount of direct taxation. If states, some of which are among the richest in the nation, will not submit to a tax of one-fourth of one per cent on their capital to meet the interest on debts incurred for valuable improvements;—if they will not submit to so slight a burden for their own benefit, how can it be expected that they would, in any events likely to occur, submit to five, or, perhaps, ten times that ratio of taxation for the support of national objects?—of wars, for instance, from which nothing can be expected but sufferings and disgrace, unless it be the benefits which may be derived from them by that needy, idle, thoughtless, immoral, or unreflecting portion of a nation, through whose instrumentality wars are usually forced upon a country."

Mr. Gouge makes the following statement, which throws light upon some of the various schemes which had been proposed in Congress to raise the means of supporting the war by fraudulent emissions of paper money, instead of resorting to direct taxation:—

"The infatuation of the high authorities of the United States government," says Mr. Gouge, "was as strong as that of the people and the state legislatures. War was declared against Great Britain in June, 1812, and bank notes and bank credits were seized on to defray the expenses of fleets and armies. 'The bank capital has been stated at 75,000,000 dollars,' said the committee of Ways and Means of 1813-14, of which Mr. Eppes was chairman. 'On this capital,' proceeds Mr. Eppes, 'we may calculate with safety on a circulation of 100,000,000 dollars. From this sum deduct 47,569,120 dollars, the maximum of what is deemed necessary for circulation, and the sum remaining, viz., 52,430,880, constitute the ability of the moneyed capitalists to loan. Of this sum we propose to borrow 30,000,000 dollars.'

"In conformity with these principles," continues Mr. Gouge, "about six millions of dollars had been borrowed, in 1812, from the banks, and about four millions more from individuals, who had obtained from the banks the means of lending. These loans were obtained at par. In the next year the government borrowed about 20,000,000 dollars, for every 100 dollars of which it issued a certificate for 113 dollars. In the following year it borrowed about 15,000,000 dollars, for 12,000,000 dollars of which stock was issued at the rate of 125 dollars for 100 (paper) dollars paid in. 'Then,' as Mr. Ing-ham said in Congress, 'then it seemed impossible to borrow further on any terms.'"

In this emergency Mr. Jefferson, as remarked in Mr. Gallatin's pamphlet of 1831, suggested to the government the expediency of issuing two hundred millions of dollars in paper; and Mr. Gallatin, in stating that fact, expressed an opinion that a longer continuance of the war would have driven the administration to the adoption of such a measure.

"The general objections," says Mr. Gallatin, "to paper issued by government have already been stated at large. Yet it must be admitted that there may be times when every other consideration must yield to the superior necessity of saving or defending the country. If there ever was a time, or a cause, which justified a resort to that measure, it was the war of independence. It would be doing gross injustice to the authors of the

revolution and founders of that independence to confound them with those governments which, from ambitious views, have, without necessity, inflicted that calamity on their subjects. The old Congress, as the name purports, was only an assembly of plenipotentiaries delegated by the several colonies or states. They could only recommend, and had not the power to lay taxes; the country was comparatively poor; extraordinary exertions were necessary to resist the formidable power of Great Britain; those exertions were made, and absorbed all the local resources; the paper money carried the United States through the most arduous and perilous stages of the war; and, though operating as a most unequal tax, it cannot be denied that it saved the country. Mr. Jefferson was strongly impressed with the recollection of these portentous times when, in the latter end of the year 1814, he suggested the propriety of a gradual issue, by government, of two hundred millions of dollars in paper. He had, from the imperfect data in his possession, underrated the great expenses of the war. Yet we doubt whether, in the state to which the banks and the currency had been reduced, much greater issues of treasury notes, or other paper not convertible at will into specie, would not have become necessary, if the war had been of much longer continuance. It is to be hoped that a similar state of things will not again occur; but, at all events, the issue of a government paper ought to be kept in reserve for extraordinary exigencies."

Mr. Gallatin was at the head of the Treasury Department from 1802 to 1814. From his experience, knowledge, financial skill, and his general ability as a statesman, the opinions he entertained upon the fiscal and financial condition of the country and its future prospects at the period in question, are worthy of the respect and confidence of every fair and intelligent mind. He is supported in his views by Mr. Gouge, who remarks:

"The news of peace was received on the 13th of February, 1815, and to the timely arrival of this intelligence we must attribute the delivery of the country from the curse of a national paper currency."

If the negotiation for peace had failed, there would have been such a further decline in the value of government securities as to have rendered a resort to Mr. Jefferson's plan of issuing *assignats* unavoidable. The produce of the direct taxes during the war was under five millions.

"The entire revenue of the country," says Mr. Gouge, "from lands, customs, and direct taxes for 1812, 1813, and 1814, averaged only twelve millions. The charges under the peace establishment amounted annually to eight millions, and, with the remaining four millions, we were endeavouring to carry on a war with the most powerful nation on the globe."

Mr. Lee observes:

"These facts afford one instance, among others, of the absence of foresight and wisdom on the part of an administration that allowed itself to be forced into a war from which no possible benefit could be expected to arise to any portion of the nation, even had it been successful in its termination. But so far was it from having ended successfully, it is notorious to all acquainted with the facts in the case, that every point in dispute between the countries was surrendered to our opponent, and, perhaps, without even the formality of a discussion."

"What might have been the amount of the national debt at the termination of the war, had it been continued, must, of course, be a matter of conjecture. Even while a fragment only of the military and naval power of Great Britain was employed against us, in consequence of the other wars in which she was engaged, the annual expenses of the war of 1812 amounted to upwards of 50,000,000 dollars, increasing in a rapid ratio as the war continued; first, in consequence of the increasing force levied for its prosecution,

and, secondly, from the depreciated value of money in which payments were made into the public treasury.

"The expenses of the revolutionary war, estimated in specie, amounted to 135,193,703 dollars. This sum was raised by emissions of paper money to the amount of 357,476,541 dollars, in addition to other sources of revenue of slight amount. The debt existing at the close of the war of 1812 was upwards of 130,000,000 dollars. It was impossible to know the exact sum, as there were outstanding demands against the country to an immense amount, which were not all adjusted and settled for several years after the peace. Mr. Calhoun, who was placed at the head of the war department, in 1817, stated, in a speech made in Congress in 1838, while commenting on the bad financial and fiscal management of the administration of Mr. Madison during the war of 1812, 'that the affairs of that department were utterly disorganized (when he took charge of it), with not much less than 50,000,000 dollars of outstanding and unsettled accounts, and the greatest confusion prevailed in every branch of the public service.' Mr. Calhoun could justly have added, 'and such might have continued to be its condition, had it been intrusted to persons so wholly incompetent to the performance of its duties as some of the individuals have shown themselves to have been, who, of late years, have been placed at the head of that department.' If that office had since been managed with as much skill, economy, and integrity as was evinced by Mr. Calhoun, the saving, even during the continuance of the Florida war, would have amounted to many millions, and perhaps that expensive and disgraceful incident in our history might have been averted.

"It would appear, then, by the facts here adduced, that the paper issues of the revolution produced to the government *something over one specie for three paper dollars*. The credit of the government, when it was proposed by Mr. Jefferson to commence the issues of assignats by an emission of 200,000,000 dollars, was more depressed than that of the revolutionary government during its early existence. It would have continued to decline as the issues increased, for be it remembered, that the local issues of paper were far in excess of the ordinary and wholesome requirements of the country for some time previous to the close of the war.

"To raise three hundred millions of *value*, the supposed expenses of a prolonged war, would no doubt have required the issue of three times that amount. Assuming that calculation to be right, the aggregate amount of the national debt, had the war been continued till 1818, would have exceeded 1,000,000,000 dollars. If the government had maintained the public faith with its creditors, the interest on this debt, at six per cent, which is far below the rate of interest paid during the war of 1812, would have been upwards of 60,000,000 dollars. Superadded to which would have been the ordinary expenses of government, to the extent of about 20,000,000 dollars.

At the termination of the war, assuming it to have continued till 1818, the population of the country may be taken at about 9,000,000. The customs and land revenue, in 1818, was about 22,000,000 dollars. To meet the deficiency of income, a direct taxation would have been necessary to the extent of 58,000,000 dollars upon a population of 9,000,000, everywhere impoverished by a war, and the anti-commercial measures of embargo and non-intercourse which preceded the war. Such was the general condition of the country, but in those sections whose staple products were almost wholly dependent for their sale and value, upon an exportation to foreign markets, the inhabitants were reduced to a miserable state of poverty and destitution. How, indeed, could it be otherwise, when, during the years 1813 and 1814, the exports of cotton and tobacco, on which the population of a large section of the country mainly depended for comfort and subsistence, averaged only 2,779,000 dollars; while the export of rice fell off from 3,021,000 dollars to 230,000 dollars. This is about as near an utter extinction of the commerce of the planting section as might have been expected had our opponents been entire masters of that part of the country.

"Under the adverse circumstances in which the country was left in 1815, by the war with Great Britain, and the still worse state in which it would have been placed by a prolongation of it till 1818, it may reasonably be estimated that an annual direct tax of

58,000,000 dollars, in addition to the duties on imports of 22,000,000 would have been as burdensome on the then existing population of 9,000,000 as three times that amount would now be deemed to be on the existing population of 19,000,000, who are unquestionably in a much more prosperous condition, economically considered, than were the people of these states at the conclusion of the war of 1812. Admitting, however, the tax-paying ability of the two periods, allowing for increased population, a tax of 58,000,000 dollars, in 1819, would be as great in 1819, as 123,000,000 dollars would in 1843.

"A prolongation of the war for three years would have accumulated a debt requiring direct annual taxes of 58,000,000 dollars, or 123,000,000 dollars. Now," says Mr. Lee, "we would ask every reflecting man who takes into consideration the determined resistance which has uniformly been made to taxation on the most moderate scale, what means could have been devised to persuade the nation to submit to so enormous a tax as would have been required to overcome such an emergency? It would be presumptuous to attempt to answer such a question. Some notion, however, may, we think, be formed as to what might probably be done under such circumstances, by a reference to what has occurred in the matter of debts incurred by most of the states of the union.

"It will be conceded, we suppose, that if ever a people who have the power of taxation in their own hands, may be expected to submit to the payment of an unusual amount of taxes, it must be when their avails have been expended for the benefit of the tax-payers. For instance, as in the case of the states, most of whom have borrowed money for the purpose of constructing railroads, canals, &c. Now what has been their conduct, as regards most of them, for paying a tax which would not be one tenth part so burdensome as the war debt in question. Some of the borrowing states have repudiated their debts without ever pretending inability as an excuse for their delinquencies. Others preferring to be shocked at such a dishonourable course are, nevertheless, willing to class themselves among the *non-paying* states. The former (*the repudiators*) are principally in the most chivalrous sections of the country; and *REPUDIATION may, perhaps, be now considered as ONE OF THE ELEMENTS OF THEIR CHIVALRY.*"

The foregoing facts may be disregarded by mere political adventurers,—and by those who aspire to the distinction—generally dangerous in any country, especially in a republic—of becoming *MILITARY HEROES*. Individuals may talk of war in the British Parliament, they may declaim on war in the French Chamber, and they may raise a bluster about war in the American Congress: but wise and good men in America, as well as in Europe, will form their conclusions in accordance with the experience of the past, and their knowledge of the present. They will, therefore, act upon the conviction, that the power of a modern state does not depend upon the number of its population, nor upon its great extent of territory, but on the soundness of its currency, and the stability of an abundant treasury: the revenues for replenishing which, to be derived agreeably to the deliberate and permanent consent of the people, from taxes imposed upon sound, equitable, and not oppressive principles.

CHAPTER XXXVIII.

TAXATION AND DEBTS OF THE SEVERAL STATES.

We have in the separate account of each state given, with few exceptions, their revenues and expenditures. In regard to taxations, the system of one state

generally differs from that of another. In SOUTH CAROLINA, not a warlike, but an honourable state, which has with fidelity maintained its credit, direct and indirect, income taxes are levied.* In MAINE, the revenue is derived from a state and a bank tax, commission duty, and lands. In NEW HAMPSHIRE, which has no debt, by a tax on real property, by a poll tax and a small bank tax.

In MASSACHUSETTS the ordinary receipts (exclusive of coin borrowed) amounting to about 420,000 dollars, consists chiefly of a bank tax, producing about 330,000 dollars of revenue, and an auction duty yielding about 55,000 dollars.—(See *Finances of Massachusetts*.) In RHODE ISLAND, which has no public debt, the revenue is derived from a tax on banks, pedlars, lottery grants, sales of lottery tickets, spirit licences, auction duties, bank bonuses, civil commissions, and dividends on bank stocks. CONNECTICUT has no debt, and the revenue is levied by one cent in the dollar, on a rate called the grand list, dividends on bank stock belonging to the state, auction duties, &c.

* The rates per cent, &c., of taxes in South Carolina are increased or diminished in accordance with the expenditure. The taxes for 1842 were as follows, viz.:

" Lots and buildings; also glebe leasehold.....	45 cents per cent.
On the amount of sales of all goods, wares, or merchandise, sold within the limits of the city of Charleston, by any person or persons whomsoever, and whether for cash or credit, between the 1st of April last and the 1st of day April of the present year, on the amount of such sales respectively—rice and cotton sold by wholesale, by any factor, or goods, wares, and merchandise, sold at public vendue, excepted	20 cents on every 100 dollars.
Stock in trade of transient persons	1 per cent.
All profit or income arising from the pursuit of any trade, faculty, profession, occupation, or employment whether in the profession of the law, the profits to be derived from the costs of suit, counsel fees, or other professional income; and on the amount of commissions received by vendue masters, or other persons vending goods, wares, and merchandise, or real or personal property on commissions: (Judges and other officers exempt from taxation, by the state; clergymen, mechanics, schoolmasters, and other teachers employed in the education of youth and minors, or the salaries of banks or other clerks where they do not amount to, or exceed, 800 dollars excepted).	50 cents per cent.
Buying or selling bills of exchange; also notes, &c.....	60 cents per cent.
Profit and income of persons carrying on business within the city, but residing beyond the limits thereof.....	50 cents per cent.
Slaves over twelve years of age	2 dollars 50 cents each.
Slaves per head under twelve years of age.....	1 dollar 50 cents each.
Slaves working out, or employed in the city, whose owners reside without the city	7 dollars each.
Slaves, on gross amount of sales at private sales.....	37½ cents on every 100 dollars.
Every coach, or other four-wheel carriage, used within the city, usually drawn by two horses, exclusive of the horses	25 dollars each.
Four-wheel carriages, usually drawn by one horse, exclusive of the horse.....	15 dollars each.
Every two wheel chaise, chair, sulky, or other carriage.....	10 dollars each.
Every horse or mule, except such as are used in licensed carts and drays, whose owners reside in the city, i. e. two horses or mules for each licensed double cart, and one horse or mule for every licensed cart or dray.....	5 dollars each.
Horses and mules on the gross amount of sales, at private sale. 1 per cent every 100 dollars.	
Lots without wells or cisterns.....	40 dollars each.
Every dog kept in any lot.....	3 dollars each.
Break waggons.....	25 dollars each.
Omni-buses, hacks, &c.	25 dollars each.

" The taxes generally are the same as last year, with the exception of real estate, last year 40 cents. Salaries last year were liable when they amounted to 1500 dollars; this year, 800 dollars pays. Break waggons last year, fifty dollars; this year, twenty-five dollars."—*Charleston Courier*.

NEW YORK, NEW JERSEY, PENNSYLVANIA, and MARYLAND. For full details of the taxes and expenditure, &c., see separate descriptions of these states.

In VIRGINIA the revenue is derived from a poll tax on slaves, assessed taxes on horses, private carriages, four and two-wheeled stage coaches, private sledges or carryalls, clocks and watches, pianos and plate, licences to merchants, insurance offices, lawyers, doctors, keepers of houses of private entertainment, to exhibitors of shows, vendors of lottery tickets, and to owners of stud horses. A most inquisitorial system of taxation, no doubt; but to which Virginia has honourably submitted, in order to maintain untarnished the invariably high character and the credit of the state.

NORTH CAROLINA has no state debt, and the revenue to meet the annual expenditure is raised within the year chiefly by a direct tax.

In GEORGIA:	dollars.	cts.

ALABAMA, MISSISSIPPI, LOUISIANA, TENNESSEE, KENTUCKY, MISSOURI, ILLINOIS, OHIO, and MICHIGAN, see separate accounts of each of these states for details of taxation, debts, &c.

INDIANA, lands are taxed, and there is also a poll tax.

ARKANSAS levies a small state coloured tax and a poll tax.

STATE DEBTS IN 1838-9.

In May, 1838, after the passage of the general banking law of New York, authorising the comptroller to issue circulating bank notes, on a pledge of the evidences of public debt of the several states, Mr. Flagg sent a circular to the financial officer of each state, soliciting information in regard to the amount of stock created, the rate of interest and when payable, the mode of transferring the stock, whether specific funds were pledged for the payment of interest, and whether the interest in all cases was paid by the state. Full answers were received to these inquiries except in two or three cases.

The following tables, founded on those returns, show the total amount of stock issued, and authorised to be issued, by each of the eighteen states which have resorted to this mode of raising money. Where the returns from the financial officer did not afford all the information which was desired, the state laws have been examined to ascertain the extent of the authorised loans. The operations of many of the states have been so extensive and varied, that it is not an easy matter to get at the precise amount of stock issued and authorised to be issued. It is probable however, that the aggregate amount of stock authorised by all the states is even greater than the amount stated in the tables.

MAINE.—The stock issued by this state is to be redeemed under the direction of the legislature, by the sale of public lands, from the debts due to the state, by taxes, or new loans, as may be deemed expedient from time to time. The amount of notes due from individuals to the state (August, 1838) is 326,721 dollars. The whole amount of located lands belonging to the state is 1,400,000 acres, valued at 1,500,000 dollars. The undivided lands belonging to Maine are estimated at 3,011,000 acres, making the total number of acres 4,411,000. This total includes half of the land north of the St. John's river, in the King of Holland's award. The stock of this state is negotiable and transferable by the holder, and the interest in all cases is payable by the state. The interest on 235,000 dollars is payable at Boston annually, and the interest on the residue at the state treasury, annually and semi-annually; the stock bears interest at 5, 5½, and 6 per cent. The value of the taxable property of the state in 1830 was 28,807,687 dollars 24 cents.

NEW HAMPSHIRE has issued no stock.

VERMONT.—The state has issued no stock, and has no state debt.

CONNECTICUT.—This state has issued no stock or bills of credit since the revolutionary war.

RHODE ISLAND.—This state has issued no stock, and has no debt.

MASSACHUSETTS.—Interest on two millions of stock payable in London by the railroad corporation, in whose favour the stock is created; the interest on the rest is payable at the state treasury, the several corporations reimbursing the treasury for the interest so paid out. The scrip in all cases is made payable to bearer, and no form is necessary in transferring the same. The real and personal property within the state is 208,360,407 dollars.

NEW YORK.—This state commenced issuing stock in 1817, for the construction of the Erie and Champlain canals. The sum of 600,000 dollars was issued prior to 1820. The law of 1817 created a board of commissioners of the canal fund, consisting of the state officers, and placed under the management of the board specific revenues, which were pledged for the payment of the money borrowed. There has been derived from the auxiliary funds, thus set apart since the first organization of the canal fund, the sum of 5,247,761 dollars, which exceeds, by 276,000 dollars, the whole amount paid for interest on all the money borrowed for the Erie and Champlain canals for 21 years, from 1817 to 1838. From 1821 to 1838 these two canals have yielded in tolls 15,088,375 dollars 97 cents. The result is, that the whole of the original debt is provided for, and, except about two millions and a quarter, has been paid off, and the stock cancelled. The laws authorising money to be borrowed previous to 1825 contained the following provision, viz.: "That it shall not be lawful for the commissioners of the canal fund to make loans under this act beyond such amounts as, for the payment of the interest thereof, the canal fund, at the time, shall be deemed ample and sufficient."

In 1825 the financial policy, in regard to moneys borrowed, was changed, and loans from that time to the present have been authorised, without setting apart specific funds for the payment of interest. In each case, however, the payment of the interest is made a charge on the treasury; and provision has been made to borrow from the Erie and Champlain canal fund to meet this demand on the treasury. In 1837, after the suspension of specie payments, this state paid the interest on its whole debt in coin, and redeemed about one million of the stock due in 1837, by paying 109 dollars in New York city paper for each 100 dollars of stock redeemed. For six years, from 1833 to 1838, the revenue from the tolls of the canals, after defraying all expenses of repairs, and paying interest on the whole amount of the outstanding debts, has yielded an average surplus of 610,000 dollars per annum. This surplus will sustain a debt of 12,000,000 dollars.

The stocks issued by the state of New York are transferable in the city of New York, either by the owner in person or by a power of attorney. The original certificate, in all cases, to be produced when the transfer is made.

The aggregate valuation of real and personal estate in 1837 was 627,554,784 dollars. PENNSYLVANIA.—This state has engaged to pay the interest on its stock at the bank of Pennsylvania, where the stock is transferable. The following revenues have been set apart for the payment of interest on the stock loans, viz., canal and railroad tolls, dividends on turnpike and bridge stock, auction duties, collateral inheritances, county rates and levies, tax on personal property, and escheats. Whenever the revenue arising from the above sources is not sufficient for the payment of the interest on the stock loans, the deficiency is taken out of the treasury proper. The acts of assembly, directing the loans to be made, direct also that the governor shall borrow on the credit of the commonwealth, and such fund or funds as have been, or shall be created, for securing the punctual payment of the interest and the reimbursement of the principal.

The aggregate valuation of real and personal estate in 1835 was 294,509,187 dollars. NEW JERSEY has not issued stock of any kind, or loaned her credit to any company.

MARYLAND.—This non-paying state engaged in all cases to pay the interest on the stock half-yearly and quarterly; but the companies which the state has aided by its loans were bound to reimburse the treasury for the amount of interest paid from time to time. A sinking fund has been established from premiums and other sources, which now (1838) amounts to 1,070,306 dollars 03 cents, which is applied to the purchase of the state stock.

During the suspension of specie payments, this state did not pay the interest on its stock, either in specie or its equivalent. Some of the holders of the stock refused to receive depreciated bank paper for the dividends, and the treasurer, in December, 1837, reported this fact to the legislature; and in March, 1838, an act was passed which provides that the state treasurer shall cause the interest on the state stock that shall hereafter accrue, and that which has accrued since the 1st of April, 1837, to be paid either in coin or its equivalent in current bank notes, to be determined by the commissioners of loans by the price of coin in Baltimore on the quarter day.

The private, real, and personal property, other than merchandise, and rights and credits of all sorts, were estimated at above 100,000,000 dollars. No uniform mode of valuing property throughout the state is observed. In most of the counties the valuations are made under the acts of 1785 and 1797, which require all lands to be put down at 3 dollars per acre, male slaves at the highest 100 dollars, and females at 80 dollars each.

VIRGINIA.—The interest on the stock issued by this state is payable semi-annually at the treasury, in gold or silver. The profits of the improvements for which the stock is issued are pledged for the payment of interest and principal; and, if necessary, the general revenues of the commonwealth are pledged for the payment of the interest.

The aggregate valuation of the real property of the state in 1818, was 206,893,978 dollars; and now, probably, 300,000 dollars. There is no mode of ascertaining the personal property.

SOUTH CAROLINA.—The faith of the state and the capital of the bank of the state of South Carolina, and the annual dividends thereof, are pledged for the payment of 800,000 dollars, issued from 1822 to 1826. And the annual dividends have been formed into a

sinking fund for that purpose, and at this time (October, 1838), amount to upwards of 800,000 dollars, so that the six per cents, redeemable in 1840, has been paid. The interest on 2,000,000 dollars, to be loaned to the Louisville, Cincinnati, and Charleston railroad, is payable semi-annually in London. The 2,000,000 dollars for rebuilding a part of Charleston, is to be loaned to individuals, and the stock to be reimbursed from the mortgages of individuals. The interest on the state stock is payable semi-annually in London.

Valuation of property, 200,000,000 dollars.

OHIO.—The interest on the stock of this state is payable in New York, where the stock is transferable. Auxiliary funds are set apart for the payment of the interest, and in case of a deficiency therein, it is made the duty of the auditor of state to levy an adequate amount by direct taxation. The loans were invariably made on pledges of specific revenues for the payment of both principal and interest.

The state of Ohio, at the commencement of its loans, organised a system of finance on a firm foundation, providing by direct taxation for the payment of the interest and the ultimate redemption of the principal. In 1837, after the suspension of specie payments, Ohio paid the interest on its debts in New York city paper, at the rate of 109 dollars for each 100 dollars of interest.

Aggregate valuation of real and personal property, 110,000,000 dollars.

KENTUCKY.—This state, in all cases, pays the interest on her own stocks. Auxiliary funds are set apart for the payment of the interest; but if these funds should prove insufficient, the state is bound to resort to direct taxes. In 1836, the legislature established a sinking fund for the payment of the debt; to which fund is appropriated bonuses and dividends on bank stock, premiums on scrip, state dividends in turnpike stock and all internal improvements, profits of the commonwealth's bank, proceeds of state stock in the old bank of Kentucky, and the excess in the treasury over 10,000 dollars of each year.

ILLINOIS.—In addition to the usual pledge of the faith of the state, lands, revenues, &c., there is specifically pledged for the redemption of the canal bonds, the lands granted by the general government to aid in constructing the canal; the estimate of which is equal to the whole cost of the canal. There is also pledged for the interest and final redemption of the bank bonds, the dividends and the stock owned by the state in the banks, which amounts to nearly half a million of dollars more than the amount of these bonds. This is a non-paying state.

INDIANA.—The canal lands granted to the state by the general government on the Wabash river, are pledged for the payment of the loans made on account of the Wabash canal. This is a non-paying state.

Aggregate valuation in 1837, estimated at 95,000,000 dollars.

LOUISIANA.—The interest on the state bonds was paid by the respective banks to which they were originally issued. The interest on other state stocks to be paid out of any moneys in the treasury.

CONSOLIDATION ASSOCIATION.—These bonds were guaranteed by mortgages on real productive property, amounting to 3,000,000 dollars. No stockholder to borrow more than fifty per cent on his stock, and this amount to be returned by yearly instalments to meet the payment of the bonds by the bank. The state for its guarantee was considered as stockholder for 1,000,000 dollars, and on the payment of the bonds will divide accordingly with the stockholders. Dividends to be only declared as the bonds were paid, and in the same proportion. The profits, until then, to be retained as a sinking fund to meet the redemption of the bonds. This bank has failed.

The Union Bank has bonds to the amount of 7,000,000 dollars, and is conducted on similar principles as the above. The original guarantee on mortgages of productive property is 8,000,000 dollars. The state for its guarantee was to receive one-sixth of the nett proceeds.

The Citizens' Bank received loans to the amount of 8,000,000 dollars, and was authorised to demand 4,000,000 dollars, more. The guarantee is on 14,000,000 dollars of mortgages on real productive property. The state was to hold one-sixth of the nett

1241

profits, which were only to be divided as the bonds were paid by the bank, and in the same proportion. This is also a non-paying state.

MISSISSIPPI.—This state has issued bonds on the faith of the state to the amount of 7,000,000 dollars, and has subscribed that amount in the stock of two banks. This is a repudiating state.

MISSOURI has issued bonds to the amount of 2,500,000 dollars to the state bank of Missouri.

ARKANSAS has issued 3,000,000 dollars bonds to two banks in that state. This is a non-paying state.

MICHIGAN.—The proceeds of the public works as well as the faith of the state were pledged for 5,000,000 dollars—the lands set apart for the university were pledged for the loan for that object. The loans to railroads were secured by pledge of the roads, &c. The interest on 100,000 dollars issued to defray the expenses of the controversy with Ohio, was to be paid by a direct tax. But Michigan remains a non-paying state.

NORTH CAROLINA.—This state has set apart a fund for internal improvements and for the establishment of public schools, which is placed under the direction of two boards, styled the Literary and Internal Improvement Boards.

TENNESSEE.—The interest on the state bonds subscribed to the Union Bank, were paid by the dividends on the stock, until the revulsion of 1837, after which the state paid the interest from the ordinary resources of the treasury. The interest on the bonds issued to railroad and turnpike companies has been paid by the state, and the companies are bound to reimburse the treasury for the sum from time to time paid.

STATEMENT showing the Amount of Stocks issued, and authorised by Law to be issued, by the several States named below, in each Period of Five Years, from 1820 to 1835, and from 1835 to 1838.

STATES.	From 1820 to 1825.	From 1825 to 1830.	From 1830 to 1835.	From 1835 to 1838.	TOTAL.

* Nearly all redeemed.

Hence, state after state, as its credit fell and the point at which taxation became necessary approached, became delinquent. Rulers, in some cases, sank from the imposition of taxes; and in others, as in Pennsylvania, where tax-laws were passed, they became inoperative by the force of public opinion. In those states where the debts were created for the supply of bank capital, the failure and liquidation of the banks caused the interest to cease, and the ultimate payment to depend upon the value of the banks' assets, backed by the responsibility which involves taxation. This is the case in Louisiana, where two banks have failed (the Canal and Consolidated), for whose capitals the state loaned its credit to the extent of 9,568,888 dollars. The interest on this the governor has announced will not be paid.

It is stated in the *Merchants' Magazine* for July, 1845 :

"The affairs of Illinois next present themselves in a favourable train. We have, in former numbers, alluded to the position of the canal law, authorising the borrowing of 1,600,000 dollars to complete the great canal, on pledge of that work, and the lands belonging to it. After a long period of delay, the bondholders here, and in Europe, have finally subscribed the whole amount, on condition that the state pays, by a small tax, part of the interest on the whole debt. Simultaneously with this agreement, a bill has been introduced into the Illinois legislature, levying a tax for the payment of 1 per cent on the whole debt, with the exception of the bonds known as the 'M'Alister and Stebbins bonds,' the first payment to take place on the 1st of July, 1846, and to be continued thereafter. This law is that which is required to perfect the arrangement with the bondholders; and as soon as it is approved, the board of trustees will be appointed—one by the 'Boston committee,' on behalf of the London creditors; one by the New York creditors, and one by the governor. The cost of that magnificent work, the great canal, when finished, will be as follows:—

Sums actually disbursed.....	dollars.
Liabilities of the canal.....	5,039,248
	1,063,945
Cost of the canal at this time.....	6,103,193
Sum required to complete it.....	1,500,000
Cost when complete, under the new law.....	7,703,193

"The present debt of the canal is composed as follows:—

Scrip and interest to December 1st, 1844.....	dvs.	cts.
Debt not bearing interest.....	11,646	87
Ninety day checks.....	61,678	76
Due contractors.....	215	00
Damages on private property.....	86,892	37
Scrip issued by Governor Ford, in payment to damage contractors.....	22,567	86
Interest due upon the same to November 1st, 1844.....	226,263	72
	14,000	00
Total.....	608,673	82

"The completion of this work will add to the resources of the people of Illinois, while the sale of the lands along its border will more than discharge the debt incurred for its completion, and leave the nett revenues of the noble avenue to discharge the improvement debt, and ultimately relieve the people from taxation.

state is dreadfully embarrassed by the circulation of an unconstitutional state paper, which circulates as money. The quantity of this stuff is as follows :—

STATE PAPER.	Issued.	Redeem ^d .	Outstanding Nov. 1st, 1844.
	dollars.	dollars.	dollars.
Script.....	669,960	164,530	505,430
Treasury notes, six per cent.....	1,590,000	873,665	636,755
Bank scrip.....	722,640	210,730	511,910
Total.....	2,982,600	1,247,925	1,681,115

“ While this depreciated paper fills the channels of circulation, and forms the medium in which taxes are paid, no effectual movement can be made towards the payment of the state interest. The creditors have, however, intimated that they would be glad to receive a payment of even a small part now, as an earnest of paying the whole by and by. This intimation was misrepresented by a designing agent, to signify that the creditors would consent to take a payment of three per cent in full of five per cent due to them. The disappointment attending the discovery of this trick prevented any *bonâ fide* movement at the present session. There is but little doubt, however, but that, at the next session, a small tax will be laid to commence the payments, and the deficit be funded, bearing interest, up to some future year, when the whole will be resumed. This is the more likely, that there is every probability of a grant of land from Congress, sufficient to complete the White Water canal connexion with the Wabash and Erie, forming a noble work that must, sooner or later, yield a large revenue towards the state expenses.

“ In MARYLAND no effective steps have been taken towards redeeming her honour ; but there is every hope that something may be done. In Louisiana, Arkansas, and Florida, the money for which the governments are responsible was borrowed for the purpose of being constituted the capital of banking institutions. These banks were what are called property banks, from the mode of their organisation. The bonds of the state were issued to the banks, and the stockholders were required to deposit mortgages of their plantations to double the amount. The bonds were then endorsed by the banks, and sold mostly in London. The proceeds were divided among the stockholders, *pro rata*, as loans, on pledge of the mortgages. The banks then issued circulating bills, and received deposits to make regular discounts. All these institutions failed, of course, and the state governments have done nothing towards the payment of the bonds ; which must depend, in a great measure, upon what can be realised from the property held by the banks.

“ It is, however, very apparent that the period for a return of all these states to their payments is rapidly approaching ; and that time will be hastened by the great desire apparent among European capitalists to renew their confidence and investments, whenever they can receive any encouragement to do so. The loan made to the state of Illinois is a remarkable evidence of this, and evinces a great change in public opinion from the fall of 1841, when an agent of the United States federal government in vain sought to borrow a few millions in Europe. That loan was afterwards made at home, and has since been paid, principal and interest. It was not, however, from any supposition, that the United States was not good for the loan ; but from the idea that the mortification attending such a loss of credit would operate upon the states, and induce payments. It has now become pretty well understood, that the want of ability (?), and of a proper organisation of the state finances, is a greater obstacle than any supposed want of will to the payments.”

In the account which we have given of the finances of Pennsylvania, we inadvertently with due severity on the delinquency of that state. At the same time we predicted that the debts of Pennsylvania would be paid ; and, from the authorities of the state, itself, we proved the ability to pay, and the disgrace of having, even for a day, suspended the fulfilment of its obligations.

The following remarks on the state debt of Pennsylvania and South Carolina by Mr. Lee, of Boston, are instructive on the subject :—

"Of the *non-paying* states," says Mr. Lee, "there is one which cannot furnish the slightest excuse on the score of pecuniary inability for the injustice done its creditors. Its improvements, for which the debt of 40,000,000 dollars was incurred, are estimated to be worth 20,000,000 dollars. We will assume their value at 15,000,000 dollars, which they probably would sell for. This state has been valued at from 12,000,000,000 to 14,000,000,000 dollars. If we reduce it to 800,000,000 dollars, then a tax of one-fifth of one per cent on its amount would pay the annually accruing interest, while a tax of one half per cent would, in about five years, clear off the interest and principal. This is not so great a burden as is borne by South Carolina to meet the interest on her debt; and yet the voice of repudiation or non-payment has never been heard within her borders, and, we will venture to say, never will be uttered there without being met with a sentiment of universal reproof and reprobation. She is governed by men of more enlightened views and higher sentiments than have been evinced of late years, not by the people of Pennsylvania, but by their rulers, who have not had the courage or the honesty to tax their constituents, even for the promotion of their best interests, and the salvation of the character of the state, both of which, as it would appear by their conduct, they would see sacrificed rather than risk the loss of their popularity, and their pecuniary support. There is no want of able and high-minded men in Pennsylvania, but they seldom have had a political ascendancy, while South Carolina, which ever of the two great parties may prevail, is generally governed, not by demagogues, but by her ablest and best men."

Mr. Lee then proceeds to remark upon the chief cause of *non-delinquency* in the latter state :

"The right of suffrage in Carolina is confined within much narrower limits than in Pennsylvania, and though that is not in accordance with the democratic theories current in the country, its practical effects have proved to be salutary as far as the restraining principle has been brought into action. In Pennsylvania, or elsewhere, the great mass of citizens are sincerely desirous of electing the person best qualified to govern them; but, in common with the majority of electors in most of the states, they cannot distinguish between the *professed friends of the people* and their *real friends*. Had it been otherwise in Pennsylvania, her debt would never have reached half its present amount; nor would there have been a default in the payment of their debts. Whenever the Pennsylvanian legislature is composed of men of sufficient intelligence and integrity to do their duty, there will be no availing opposition to the payment of the interest on the state debt, on the part of their constituents, who, if less intelligent than the men who have ruled that state the past ten or twenty years, are, it is generally believed, superior to them in point of honesty. That such is the case may reasonably be inferred from the fact that numerous petitions have been sent to the legislature praying that due provision might be made by the imposition of taxes for the payment of the interest on the state debt. *But while there has been money enough in the treasury to pay the wages of these political operatives, or that portion of them who are the 'exclusive friends of the people,'* it would seem, by their conduct, that they were either indifferent or averse to the adoption of such measures as were deemed necessary, by their more worthy associates, for the maintenance of the honour and character of their state. This populous and prosperous commonwealth, termed the '*Key-stone State*,' has been placed to great disadvantage from the *low character of the majority of her rulers*, rather than from the dishonesty of the mass of her citizens. It is their misfortune, as it is that of the people of other states, to be imposed upon by political demagogues, to whose unworthy hands have been confided the governing power.

"If the economical and financial concerns of Pennsylvania had been under the control of persons of as much intelligence and character as have usually been exhibited in such matters by those who have ruled over some of the best governed states; for instance, Virginia and the Carolinas in the south, Kentucky and Ohio in the west, New York and some of the New England states in the east. If Pennsylvania were under the guidance of a class of public men corresponding in ability and character to the majority of the rulers of the states in question, there could be no insuperable difficulty in providing

the insignificant sum requisite for the payment of the interest on her debt. In some of the better governed states referred to, provision has been made for a more burdensome debt, taking into view the superior pecuniary ability of Pennsylvania; for instance, the state of Ohio; while there are others not so heavily in debt as Pennsylvania, yet, considering their inferior amount of products, are taxed two or three times as much as it would be requisite to tax the state of Pennsylvania for the payment of the interest on her debt, were it far beyond its existing amount."

As we have before stated, and as Mr. Lee shows, there has been no want of ability to pay; and a change of circumstances and force of public opinion, and, we hope, the honesty of a great majority, has at length brought the means of Pennsylvania so far into fiscal operation, that the interest of the debt was paid in February, 1845.

"We admit," continues Mr. Lee, "that, in the state of New York, and other heavily indebted states, there has been a great backwardness in resorting to taxation, but their citizens have finally submitted to it rather than be disgraced by a foolish as well as dishonest disregard to the credit and character of their states; accompanied, it is hoped, with a determination not to allow their several governments to contract debts for the erection of public works, which can always be undertaken and managed with more judgment, economy and skill by individuals than by states.

"If the policy once recommended by influential men, viz., that of building canals, railroads, &c., by the United States government, had been acted upon, there might have been, and probably would have been, hundreds of millions of dollars sunk, as in the states, in injudicious and unproductive enterprises, or, as they are commonly termed, 'improvements.'

"If it were possible to overcome the determination evinced by the nation, even when under the guidance of men of ability, experience, and virtue, to resist the imposition of any considerable amount of taxation, it must be done in cases where the sums levied upon them have been disbursed, or are to be disbursed, for their direct benefit;—for instance, as in the construction of public works of great and general utility, and which tend to the promotion of individual interests. *But in all such instances it has been found extremely difficult to impose taxes, however moderate and necessary, although there has been but little difficulty in obtaining from the people the power of contracting debts, whenever it suited the views and interests of their political leaders, who, for the most part, not belonging to the class of tax-payers, have been utterly indifferent to the pecuniary consequences of sinking the sums borrowed in ill-conceived, ill-managed, and unproductive works of improvement.*

"As to direct taxation, which the fiscal wants and financial embarrassments of the country have often rendered necessary, it has constantly been resisted, even when the country, as in 1812, 1813, and 1814, was in a state of discredit tending to utter bankruptcy. A reference to authentic sources shows that, from the organisation of the government down to this period of time, the entire amount of income derived from direct taxation is but 34,995,330 dollars. If this sum is divided among the fifty-four years of our national existence, it dwindles down to the insignificant average amount of 648,062 dollars. The total amount of direct taxes collected in fifty-four years, from a nation which has, for most of the time, been undisturbed by wars, is less than one-seventh of the amount of the taxes now annually levied on the people of the United Kingdom of Great Britain, about seven-eighths of which is borne by the people of England and Scotland, containing by the enumeration of 1841, a population somewhat less than these United States are now supposed to contain. The revenue of the United Kingdom has averaged, in 1841, 1842, about 249,000,000 dollars. Its expenses have somewhat exceeded that sum; yet monarchists as they are, and, consequently, far below the people of this democratic confederation in patriotism and virtue, the voice of repudiation and non-payment has not had utterance amongst them. And for the honour of our ancestors, to whom, as ex-President Jackson has told us, 'we owe many of our most valuable institutions,

and, among them, that system of representative government which has enabled us to preserve and to improve them;—in that nation so justly praised for its firmness of principle, and its severely tried integrity, we hope and trust that the doctrines of repudiation and non-payment will never be heard, however popular and current they now are, and may continue to be, among some portion of their degenerate, dishonest, disgraced, and despised descendants in this country; for, should principles so fatal in their tendencies to all government become prevalent in that country, and other well-governed countries, the nations in the old world, who, since the fall of Buonaparte have advanced rapidly in the improvement of their institutions, would be, as we have been of late years, on the downward road of political demoralisation and political perdition.

“Let those persons, however, who condemn this nation (the United States) for the folly and dishonesty of a portion of them, bear in mind that we are governed on the UNIVERSAL SUFFRAGE PRINCIPLE, by the operation of which the most ignorant, irresponsible, worthless, and depraved individual has as much political weight in the selection of its rulers as the wisest and best man in the country; and that, in fact, such are the practical workings of that principle, as to throw the effective power of appointment of the administrators of the general government, and the state governments, into the hands of the worst portion of the electors.”

Mr. Lee then proceeds by observing that—

“If the rulers of England and France were selected on such principles, and made dependent on such constituents, the doctrines of repudiation and non-payment might be as current and as popular among them, as they have been for some years past, and still are, in some of these twenty-six democratic republics, whose citizens make as high pretensions to intelligence, good faith, honour, and integrity, as any nation within the circle of civilisation.

“In respect to political morality, like many other abstract qualities, it is local and conventional. Repudiation of debts, for instance, though considered as immoral in some political communities, is not everywhere so viewed.

“‘The people of the state of Mississippi,’ says their governor, ‘are brave, generous, and just, yet jealous of their rights and honour, both personal and political. They dare to do any thing that is right and just; therefore they have, without sordid and avaricious influence, dared to disown and reject, or, to use a more common expression, to ‘repudiate’ the bonds issued on account of the Mississippi Union Bank, the act authorising the same being vicious, and prohibited by the constitution. They have dared to preserve the constitution from tarnish, violation, and repudiation. To such a brave, generous, and just, and at the same time so enlightened a people, I look with an abiding confidence that the faith, credit, and constitution of the state will be supported and preserved, with an integrity and promptness which will endure the test of scrutiny and time.’”*

* In justice to the paying states, we select the following extracts from a message of the governor of Kentucky:—

“This exhibition of our financial condition is quite encouraging, and establishes clearly the gratifying fact that our state debt bears little or no comparison with that of most of the other states; that, if prudently and wisely managed, it can be discharged with the most entire ease, without in any respect proving a cause of oppression or inconvenience to our citizens; and that the state has in some degree realised an equivalent for her indebtedness in the construction of many useful and valuable public works.

“To free ourselves from debt, to meet all our liabilities promptly, to maintain our character untarnished, to stand before the world as a bright example of a state always ready and willing to comply with her engagements, to furnish no just cause of complaint to any one, either citizen or foreigner, with whom we have contracts, to avoid heavy indebtedness and heavy taxation, and in all things to act honestly and uprightly—*it, in my humble view, a matter of higher, deeper, nobler importance than the completion of all the internal improvements which could be devised by the ingenuity of man, if made at the sacrifice of honour and violated faith with the money of other people fraudulently and meanly obtained, and, when due, dishonestly and corruptly withheld.*

“The illustrious commonwealth of Kentucky, I am most happy to say, occupies a pre-eminent place in the estimation of her sister states, not only for her patriotism, but for her integrity. She can hold up her head with pride and confidence before the whole world. Her faith has never been

"Here," says Mr. Lee, "is an exhibition of what is termed *moral courage* which has seldom been imitated, and still less frequently equalled. It was rewarded by a transference of the courageous individual from whom it emanated to the national legislature, where similar sentiments are supposed to be prevalent among those who are *brave enough, and honourable enough, to disown, reject, or repudiate a debt, or do any thing else that is right and just.* There are multitudes of governors, senators, and others in authority in the United States, equally *brave and just* as this Mississippian Aristides."

"If the true interests of the borrowing states had been consulted by their rulers there never would have been a loan contracted on behalf of any of them for the use of the state, or of individuals who leaned on the state for aid, without the contemporaneous enactment of a law levying a tax sufficient in amount to meet the accruing interest on the sums borrowed. Such a measure would have been a check upon ill-conceived and ill-managed enterprises, and have prevented many, which have proved ruinous in their results, from having been undertaken. In cases, too, where loans have been effected, the principal of the debt would not have been swelled by an accumulation of interest. Take the case of Pennsylvania, about ten millions of whose debt arises from interest, which, instead of having been annually discharged by the proceeds of taxes, has been settled by increased issues of stock certificates.

"The taxing policy is usually acted upon where the rulers are influenced by a principle of patriotism, instead of being swayed, as is too commonly the case, by a desire to obtain that species of popularity which shrinks from no sacrifice of the public welfare, so long as it may be deemed by them as promotive of their private and personal purposes. Unfortunately for this nation, a majority of the men who usually have been invested with the power of contracting debts, whether in the national legislature, or in most of the state legislatures, have been too irresponsible in their pecuniary circumstances to share in the burdens imposed on their constituents by their creation; or, if otherwise, too careless of character, or too wanting in principle, to be influenced by that consideration, or by any other high motives which ought to affect the feelings and govern the acts of public men.

"If there are persons disposed to doubt, or to deny the truth and justice of these strictures on the characters and conduct of the class of men referred to, let them investigate the proceedings of the state legislatures, and see the pernicious results of their financial transactions as manifested in the pecuniary burdens, and in the disgrace inflicted on their constituents. Or, as regards the national legislature, in the enormous expenditure caused by our wars of aggression, which never would have had existence if the affairs of the nation had always been under the management of prudent, wise, honourable, and patriotic persons, who, besides being under the influences and restraints of good principles, may have had something to lose and something to suffer from the losses, miseries, and disgrace always incident to wars of aggression, revenge, or ambition; and such has been the character of all the wars in which these states have been engaged, save that in which they were involved in defence of their colonial rights, and which terminated in the establishment of their national independence.

"Having adverted to the conduct of the *repudiating* states, from some of which, considering the ignorance and demoralisation of a majority of their population, no good can be expected during the lives of the present generation; and to the course matters have taken in *non-paying* Pennsylvania, from which better things were expected, and forfeited, her credit has never been dishonoured, and I am bold to say, never will be with the consent of her worthy and patriotic citizens. The price of her bonds, even in the present depressed state of the money market, proves her standing and character abroad, and ranks her in the highest class of states determined to meet their liabilities. This must be a most gratifying fact to every citizen of the state. May she always maintain the high reputation she now enjoys. The best mode of effecting this object, however, suffer me to say, is to look with a steady and constant eye to the payment of our old debts, and to be careful how we contract new ones."—Dec. 31, 1841.

are still expected; let us refer to the conduct of New York and Massachusetts. How did these two prosperous and wealthy states behave under circumstances much more favourable to the exercise of the taxing power than those in which Pennsylvania and most of the indebted states are placed? Why, as we have already shown, they evinced as great a reluctance to the imposition of taxes as the Pennsylvanians have done; and, had they been exposed to as great a trial, it may reasonably be inferred from their conduct that they might not have shown more firmness of principle than has been exhibited in Pennsylvania or Maryland.

"In respect to New York, as already stated more at large, it required the most strenuous efforts of the most intelligent, reflecting, and responsible portion of her citizens to overcome the resistance made by the remainder of them to a taxation of 600,000 dollars. This resistance to taxation was made when, from the financial embarrassments of the state, the certificates of its debts had, in consequence of discredit, fallen from 105 to 76, and could not long have been sustained at that low point had the taxing policy been defeated. And what was the burden thrown upon the state by this wise and necessary measure? It amounted to one-twentieth part of one per cent on the property of the state, whose annual products do not, according to the estimates of her own citizens, come short of two hundred and twenty or thirty millions of dollars. Imperceptible, however, as such a requisition upon the resources of a state must be, there are complaints made in some quarters of the severity of its bearings on the landowners. This is the representation made by the high functionaries connected with the fiscal department of government of the state of New York."—*Letters to Cotton Manufacturers*, 1843.

Maryland, and Mississippi, appear to us the most likely to defer a return to the honourable fulfilment of their fiscal obligations; although we believe that *necessity*, and *self-interest*, will eventually cause even those states to pay. There is at present, we regret to say, very little hope of payment held out by either; and a recent message of Governor Thomas, of Maryland, shows that all the remedial measures, heretofore adopted, have signally failed, and the interest in arrear, which was 859,656 dollars on the 1st of December, 1842, and 1,171,872 dollars on the same day of 1843, had swelled on the 1st of December, 1844, to 1,450,961 dollars. Reviewing the projects which have been adopted to produce the requisite amount of revenue, the governor has but to record a series of disappointments. He says—

"It was assumed that the act of March session following, imposing a tax for the first year of twenty cents, and for the three next years twenty-five cents in the 100 dollars on the assessed value of the real and personal property of the state, would bring into the treasury for the four years ending on the 1st of December last 1,818,256 dollars 57 cents, while it appears that the whole amount received from that source within that period is but 985,155 dollars 17 cents. In aid of these estimated incomes, other laws were enacted, expected to bring into the treasury in the course of each fiscal year 200,000 dollars. These laws have been in force during three fiscal years, and, instead of realizing the expectations of their authors by contributing to the demands upon the treasury the sum of 600,000 dollars, have added only 15,297 dollars 95 cents to the income of the state. Notwithstanding these results, the committee of ways and means again, at the last session, founded their action upon estimates, which have proved fallacious. They anticipated 490,000 dollars, but the actual receipt has been only 272,145 dollars. The several revenue laws passed at December session, 1841, imposing taxes on incomes, on brokers silver plate, watches, and ground rents, added to the interest expected from the Baltimore and Susquehanna Railroad and the Susquehanna and Tide Water Canal Companies, would, it was confidently said, add to the resources of the past year 145,000 dollars. From these sources the whole income received is but 32,732 dollars 95 cents."

The following paragraph, in which repudiation is hinted at, looks rather ominous :

“These defalcations in the revenue are to be imputed in a great degree to the palpable insufficiency of the whole taxes levied, even if punctually paid. As long as our tax laws have this obvious aspect, we may expect a large portion of the public dues will be withheld, in the belief that the attempt to pay the public debt will, at no distant day, be abandoned.”

What an extraordinary confession of public dishonesty: i. e., a belief that the attempt to pay the public debt will be abandoned!!!

All the states of the union have pledged their property and their honour for the payment of their debts.

In conclusion, we have now gone through the financial details of the United States as a federal government; and we have searched into the causes of the delinquency of some states, and we hope we have done so, as impartially, as if we were examining the financial condition of the British empire.

Great injustice has been done to the *whole people* of the United States, by extending to them the ignominy of a minority of the states: which have dishonoured their credit; and, even in the repudiating and non-paying states, the circumstances related in the extracts, which we have made, go far to exonerate, a great portion of the inhabitants.

The justice of an existing generation, binding itself, or those who succeed it, to fulfil its obligations, may be practically illustrated by supposing that an individual is possessed of an estate,—the management, and the improvement, of which cost, without extravagance, a greater sum than the *estate* yields; but which management, and outlay, is necessary to render the estate of greater value: then, undoubtedly, whoever possesses, or succeeds to, and considers it his interest to hold, such estate, becomes legally and justly bound to pay the fines, or interest, for which such estate may have been mortgaged; or, if the estate become so productive, as to yield surplus rents, after paying the ordinary expenses of management, improvement, and cultivation; and after paying the interest, or the amount that the estate is mortgaged for,—then such surplus should be applied judiciously, to reduce or pay off the incumbrance, or mortgage.

Should the same estate, or an estate without any incumbrance, have a powerful, and unjust neighbour, and such neighbour attempt to trespass, or injure the estate, and disturb its possessor, family, and servants; and, that the said possessor is, in consequence, subjected to extraordinary expense, in order to preserve his estate, and repel the aggressor,—then, also, he who succeeds to, or accepts of, the estate, succeeds to, and accepts, its liabilities.

Further, if the possessor has had the privilege of carrying the produce of the said estate, by certain roads, to certain markets, and bringing back for his use, and that of his family and servants, and for the benefit of the said estate, certain commodities; and should he, or his family or servants, be prevented carrying the said produce, and commodities, by the said road, to and from the said markets, then it becomes a question of expediency, how far he can, for the purpose of pre-

serving his privileges undisturbed, expend for the benefit of the estate, its revenues and if, further necessary, to borrow money, for the use and payment of which the estate, and he who succeeds to it, become, in such case, undoubtedly, and justly, responsible.

Should, however, the possessor of the said estate, in his prosperity (for we presume he would not in his adversity, or when his, or rather the, estate was grievously mortgaged), without himself, or his family or servants, or his highways, or his markets, being attacked, interfere in the affairs of his formidable neighbour, and, in waging war with him, exhaust his own resources, and then pledge his estate for money, to ruin or annoy his said neighbour; it then becomes questionable how far the estate can afterwards bear, or disengage, itself of the burden imposed upon it by the folly, profligacy, and injustice of its owner, or rather its mismanager.

Such are the conditions upon which every state in North and South America, and every nation in the world, that has borrowed capital, have placed themselves in regard to those who lent them money. The obligation holds true with equal force and justice, whether, the money has been, discreetly, or recklessly borrowed, or whether necessity, wisdom, or even profligacy, may have prevailed in its borrowing, or in its expenditure.

CHAPTER XXXIX.

TEXAS.

THIS extensive region, which once formed part of the Spanish vice-royalty of Mexico, and afterwards of the Mexican republic, acquired independence of the latter, and was acknowledged as a sovereign power, by the United States of America, by England, France, Holland, and some other of the European nations.

During the year 1845 the local government, and legislature, of Texas have consented to annexation with the great American confederation. Henceforward the foreign navigation trade, and customs regulations, and tariff, will be consequently amalgamated with those of the United States.

The probable future prospect of this magnificent region, and the effects, which the rapid influx of the enterprising Anglo-Saxon race over its territories may have on the power, policy, and civil and religious liberties of the neighbouring states of Mexico, and of central, and, even, of South America, are subjects upon which statesmen, legislators, and philosophers may contemplate as replete with the elements of good, and of evil,—of grandeur and of power: the progress, of which, cannot be always free from outrage, and domestic suffering, however certain, and great, must be the ultimate attainment, and security, of civil and religious liberty,—of just laws, and wise administration.

The area of Texas, not yet well defined, is, however, more than sufficiently extensive to form a separate and independent state.

Mr. Kennedy's account of Texas describes the different sections of the country in detail, and forms the most comprehensive work on this state. Several reports, and short descriptions, of Texas, have, also, been published in the United States.

The boundaries on the south-western or Mexican frontier have not been adjusted; but the government of the United States will no doubt insist on extending this boundary to Rio Grande, or Bravo del Norte; while, the Red River and a line, due north from the latter separate it from the state of Arkansas; and the river Arkansas, on the north, divides it from the western territory. The river Sabine, the limit of Louisiana, bounds Texas on the east. The extent of its maritime frontier may be variously measured. Following the courses of its lagoons, this distance is greatly extended. From point to point, along the outside, of the long sandy islands, which line the coast, and within which are the lagoons, the distance from the Sabine to the Rio Grande del Norte, has been estimated, we would say rather than measured, at about 500 English statute miles.

The area of Texas has, also, been estimated at from 310,000, to 330,000 English square miles, or much more than twice the area of the United Kingdom; and according to all accounts, no country on earth has less of its surface unfit for cultivation.

Its whole *sea coast region*, varying in breadth from 30, to 100 miles, is composed of a fertile alluvium, in which there is not, or at least rarely, a stone that would intercept the plough; and, unlike many parts of Virginia, Georgia, Florida, Alabama, and Louisiana, there are but few, and these not extensive, swamps. This region is extolled for its great capability of producing, that finest quality, Sea Island cotton. Besides which it will yield the most delicious fruits: such as peaches, olives, melons, figs, oranges, lemons, pine-apples, dates, &c., also the sugar cane, maize, and other grain. This region is well watered by numerous rivers, and streams. The greater part consists of extensive meadows, with magnificent belts of wood, along the margin of the rivers.

The *second*, or *undulated*, and *high region*, slopes down from the hills and mountains to the sea coast region, crossing the territory, and is in breadth from 120, to 180 miles. It is described as consisting chiefly of a rich, fertile, soil, covering substrata of either limestone, or sandstone, and presenting alternately woodlands, and rich grassy districts.

The *third*, or *mountainous region*, stretches upwards to the west, north-west, and from which all the rivers flow down, to the east, and south-east, into the Mexican gulf, or into the Mississippi, and its branches. Elevated table-lands spread over north-western points. None of the mountain slopes are described as too steep for agriculture; and, except in the prairies of this region, oak pine, and other magnificent and valuable timber trees abound.

If we can depend upon descriptions, Texas is naturally, with less exceptions than any other country, capable of producing all kinds of crops and fruits:—more so than France, which has all the climates for grain:—from oats and barley, to wheat, rice, and maize,—for fruits, from the apple to the orange; for wine, the olive, the mulberry, &c. Texas has the climate, and the soil, for the sugar-cane the olive, the cotton plant, the mulberry, the melon, fig, and apple; and its pasturage has always been renowned.

The RIVERS of Texas are numerous, and for a great extent navigable; but large vessels cannot ascend them from the sea. The great natural disadvantage of Texas, in common with the whole eastern sea coast of Mexico, is the want of good harbours. Humboldt observes, “The intendency of San Luis comprehends more than 230 leagues of sea coast, but without commerce and without activity. That part which extends from the Rio Grande del Norte, to the river Sabine is almost still unknown, and has never been examined by navigators.”

This coast would have probably still continued to be “unknown and without commerce and activity,” had it remained under the intendency of San Luis, or under the non-enterprising Spanish-Mexicans; and if it had never been entered, or traversed, by the Anglo-Saxon race, who were invited into Texas by the Emperor Iturbide: not to establish its independence, but to defend it from Spain. The Anglo-Saxons were invited into Texas, under nearly like circumstances as Hengist and Horsa were invited into Britain, and the result has been similar.

The rivers SABINE and NECHES fall into the Sabine lagoon. The Sabine was obstructed by a raft, and deemed impassable; but it was removed by the government of the United States, and the river was then (1837) navigated by a steamboat 125 feet long, drawing six feet water. Since 1839 one or more steamboats navigate this river, from its mouth to the upper settlements. The Sabine, like most of the Texan rivers, periodically overflows its banks, and fertilises the soil. It has several small tributaries.

The NECHES, which is navigable for small steamboats for about 100 miles, flows also into the Sabine lagoon; the passage over the muddy bar, at the entrance into this lagoon from the gulf, only admits small vessels.

The next inlet is GALVESTON, which spreads into two large bays, or lagoons, and the eastern entrance will admit vessels drawing about twelve and a half feet water. TRINIDAD river falling into it may, it is said, be ascended, by steamboats, for from three to four hundred miles from its mouth. It is rapid, and from eight to ten feet deep. At the western extremity of Galveston Island is SAN LUIS harbour. The passage, over its bar, is stated to be somewhat deeper than that of Galveston. A few leagues west, of San Luis, the BRAZOS DE DIOS flows across a shifting sand-bar, over which there is only six to eleven feet depth of water.

Mr. Kennedy says, the Brazos is exceedingly well adapted for steam navigation. "Opposite Velasco (at its mouth) its width is about 170 yards, and for 500 miles it varies from 150 to 200 yards." After heavy rains it swells into a torrent. In ordinary seasons its banks, twenty to forty feet high, are overflowed. Like the Red river, its waters are coloured red, with earthy particles, carried down from the uplands. It is navigated by several steam vessels, and has numerous tributaries. The first colonists from the United States made *San Felipe*, 150 miles up this river, their head-quarters.

MATAGORDA BAY is a lagoon, sixty miles long, and from six to ten miles broad: the entrance, *Paso Cavallo*, from the gulf, has only from eight to nine feet water on its bar: within it is safe and deep.

The COLORADA, or TEXAS, falls into this inlet by two branches. It has steep banks, which are seldom overflowed. Its navigation is interrupted by a raft; but if not already, it will, no doubt, soon be removed by the government. The river will then be found navigable, for steamers, more than 200 miles. Many of its tributaries are navigable. Several rivers fall into La Baca Bay, a branch of Matagorda. The *La Baca*, and *Novida*, are navigable, about thirty miles for steamers.

The large inlet, forming the bays of ESPIRITU SANTO, ARANSAS, and COMPANO, are separated from the gulf, by two long islands, Matagorda, and St. Joseph. The *Aransas* passage from the gulf is not more than seven to eight feet deep over the bar. The bay is also shallow, and the river *Guadaloupe*, and the *Nuences*, and other streams, which fall into these bays, are described as not deep, but capable of being rendered advantageous, for bringing down the produce of the upper countries to the sea, in vessels requiring only a light draft of water.

CORPUS CHRISTI and the LAGUNA DEL MADRE, form an inlet, about 100 miles long, within three long islands, separated by narrow passages. The bay of Corpus Christi extends, inland, about forty miles, north and south. The *Río de las Mucas*, which falls into this bay, is a long, rapid river, navigable for small boats for about forty miles.

The LAGUNA DEL MADRE, though so long, and from five to six miles in breadth, is shallow, and the water in many places is not more than from eight, to eighteen, inches deep. The *Barra del Santiago*, or the outer inlet from the gulf into the lagoon, has from six to seven feet water over the bar, and small vessels with merchandise frequently enter, and discharge.

The mouth of the RIO GRAND DEL NORTE, is separated by a narrow neck of land from the *Barra del Santiago* by a narrow isthmus. The entrance to this large river, from the gulf, has no greater depth of water than from three to five feet over its shifting bar. For 200 miles upwards, its current is described as smooth and deep, to Loredó, where rapids commence.

The CLIMATE OF TEXAS is described as mild and salubrious. Not subject

to yellow fever, or pulmonary consumption. The *Minerology* of the country we believe to be only imperfectly known. Bituminous coal is said to be abundant in the interior. Gold and silver are also asserted to abound in the hilly and mountainous country; and specimens of both have been produced. Iron ore is said to be plentifully distributed; and copper, lead, and alum are asserted to have been discovered in considerable quantities. Excellent building stone is abundant in all parts except the sea coast region. There are large salt lakes and salt springs; and as, it is by all admitted, that, the soil, and climate, of Texas, are not surpassed in any country, as there is sufficient timber and minerals,—the want of deep harbours appears to be the only great natural disadvantage of this extensive region of America: which has, until the last few years, remained more wild, and uncivilized than it could have been when Mexico was conquered by Cortez.

HISTORICAL ABSTRACT.*

On the 17th of January, 1821, Moses Austin, a native of New England, obtained permission, from the supreme government of the eastern, internal, provinces of Mexico, to introduce three hundred families, as colonists, from Louisiana, into Texas.

In consequence of Moses Austin's death, his project of colonisation was taken up, and prosecuted, by his son Stephen, who was obliged, in 1822, to apply to the authorities of revolutionized Mexico, for confirmation of the privilege, which had been conceded to his father, by the authorities of old Spain. On the 4th of January, 1823, a colonization law, approved by the Mexican emperor Iturbide, was promulgated; and on the 18th of February of the same year, an imperial decree was issued, empowering Austin to found a colony, under the provisions of the general law.

A revolutionary movement having displaced Iturbide; and, the government which succeeded him having decreed the nullity of all imperial titles, Austin was constrained to solicit the confirmation of his concession from the congress of Mexico. This he obtained on the 14th of April, 1823, which may, therefore, be recorded as the legal date of the commencement of Anglo-American colonization in Texas.

To encourage the settlement of her waste frontier lands, and thereby interpose a barrier against Indian aggression, and strengthen herself against Spanish attempts at reconquest, Mexico held out various inducements to the earlier colonists of Texas; and, among them, a temporary exemption from taxes and tithes.

By article 24 of the Mexican colonization law of the 4th of January, 1823, it was enacted, that, during six years from the date of the concession, the colonists should not pay tithes, or duties, on their produce, nor any contribution whatever of a public kind.

* Chiefly from a compilation by Mr. Kennedy.

By article 25, of the same law, it was enacted, that during the six years immediately succeeding the termination of the first specific period the colonists should pay half the tithes and half the contributions, direct and indirect, that were paid by native citizens.

These enactments emanated from *the general government of Mexico*.

The united state of Coaguila and Texas, as a member of the Mexican Federation, by article thirty-two, of a colonisation law, passed by its legislature on the 24th of March, 1825, ordained that during the first ten years—reckoning from the commencement of the settlement—colonists, within the limits, of the state should be free from any kind of public contribution, except such as were generally demanded to prevent, or repel, invasion. After ten years, new settlers were to bear an equal proportion of the public burdens with native citizens.

The law containing these provisions was repealed by an act, dated the 28th of April, 1832, which exempted "all new towns" for ten years, from the time of their foundation, from every description of tax, except contributions for defence against foreign invasion. For the site of each of these "new towns," the state appropriated four square leagues of land.

The establishment of custom-houses in Texas, and of garrisoned posts, to enforce the collection of the national revenue, which followed the periods of exemption from taxation granted to the infant settlements, formed, with the colonists, prominent causes of dissatisfaction; while, on the other hand, the infraction of its fiscal enactments, was regarded by the government of Mexico as ungrateful, and rebellious, on the part of men invited, by its liberality, to occupy its fertile lands. The colonists were refractory. In June, 1832, a party of them attacked and captured, the Mexican garrison, at the port of Velasco—in April, 1833, petitions complaining of the tariff, and praying for the privilege of free importation, for a term of three years, of the most important articles of consumption, were transmitted by the colonists to the general government. In the autumn of 1834, a number of persons seized the collector of customs, at Anahuac, and expelled the military stationed at that post—and, in the autumn of 1835, the Anglo-Americans in Texas and Mexico were in a state of declared war.

In November, 1835, an Anglo-American convention was held in Texas, and a provisional government proclaimed, which conferred on a governor and council the power "to impose and regulate impost and tonnage duties, and to provide for their collection under such regulations as might be deemed expedient."

An ordinance of this provisional government, imposing certain duties of customs, passed on the 12th of December, 1835, was repealed by another ordinance on the 27th of the same month, which placed a duty of twenty-five per cent, *ad valorem*, on such goods, wares, and merchandise, as were "entitled to a debenture" in the port of shipment, and a duty of fifteen per cent, *ad valorem*, on such as were not entitled to debenture. Articles imported, *bonâ fide*, for the

use of emigrants, including farming implements, household furniture, provisions, stores and machinery of all kinds, were to be admitted free.

The declaration and establishment of the independence of Texas, and the adoption of a constitution, by its inhabitants, were followed by the convocation of a Congress, which, on the 20th of December, 1836, passed an act "to raise a revenue by impost duties," under which the following charges were exigible :

On the invoice value of wines, spirituous and malt liquors, 45 per cent, ad valorem ; silk goods, and all manufactures of silk, 50 per cent, ad valorem ; sugar and coffee, 2½ per cent, ad valorem ; teas, 25 per cent, ad valorem ; bread stuffs, 1 per cent, ad valorem ; iron and castings, 10 per cent, ad valorem ; coarse clothing, shirtings, shoes, blankets, kerseys, satinets, and stuffs formed of a mixture of cotton and wool, 10 per cent, ad valorem. All other non-enumerated goods an ad valorem duty of 25 per cent on invoice price.

Another and more comprehensive customs law was passed on the 12th of June, 1837, "for the purpose of raising a revenue to aid in defraying the public expenses, sustaining the public credit, and securing to the public creditors a fair annual, or semi-annual, interest on the shares of stock in the funded debt."

The tariff underwent a farther revision by an act passed on the 5th of February, 1840.—(See the late tariff of Texas, subjoined to the tariff of the United States.)

It is to be observed that the receipt of duties, in national paper, profusely issued, on an unsound basis—and, of course, rapidly depreciated—has, from time to time, caused the tariff to appear much higher than it really was ; and the successive endeavours, to realise, amidst the confusion occasioned by a spurious currency, an adequate tangible revenue, has imparted a capricious character to the fiscal legislation of the republic, discouraging and injurious to the merchant and the emigrant. The duties, at present, are receivable only in gold and silver, at their market value.

More than two-thirds of the revenue from customs have been received at the port of Galveston. The eastern counties of Texas, which possess a comparatively dense population, contribute but a small proportion to the public funds, owing to their geographical position, which secures every facility to the smuggler. The gross amount received at the port of Galveston, for the year ending the 31st of December, 1842, was, in round numbers, about 110,000 dollars ; the receipts for the same period at Brazos, Matagorda, Red River, San Augustine, and Sabine, at 30,000 dollars. The average expense of collection was a fraction above fourteen per cent.

All attempts hitherto made to raise a revenue by *direct taxation* have been unsuccessful.

The laws for regulating the general trade of Texas, as well as the coasting trade, and the tariff, are now the same as those of the United States. Certain

local regulations are continued in force, until changed under the state constitution and legislature of the state of Texas.

The following laws may be considered as remaining in force :

HOSPITAL AT GALVESTON.—By an act approved by the president on the 3rd of February, 1845, for the establishment of a hospital at Galveston, it is provided that, from and after the 1st of May next ensuing, "the commander of every vessel arriving at the port of Galveston shall be required to pay to the collector of customs at that port the sum of 50 cents for every foreign white male cabin passenger over sixteen years of age, and twenty-five cents for every white male steerage passenger over sixteen years of age, according to the list of passengers produced by the said commander, or his clerk, which list shall be sworn to."

CHAMBER OF COMMERCE AT GALVESTON.—By an act approved by the president, 3rd of February, 1845, a corporate body was created under the style and title of "The Galveston Chamber of Commerce," an institution which, according to the preamble of the act, "is much required by the mercantile community, as tending to diminish litigation and to establish uniform and equitable charges."

It is provided that the act of incorporation shall "be in force for and during the space of twenty years from the passage thereof, and take effect from and after its passage.

LAW PROCEEDINGS.—An Act supplementary to "an Act to regulate Proceedings in Civil Suits." This act provides that, from and after the 27th of June, 1845, "in all suits brought to recover the price or value of any goods, wares, or merchandise imported, or notes given for the same, the fact that such goods, wares, or merchandise, were imported or introduced into the republic without payment of the lawful duties, or in violation of any revenue law thereof, may be pleaded in defence, and if established, shall constitute a legal and valid defence in all such cases." It is further provided that, "In cases where such defence shall be pleaded"—and also in cases—"when any civil action shall hereafter be brought to recover duties not paid, the party so charged, or unpleaded, shall not be liable to any criminal prosecution for the same offence on non-payment."

WRECK-MASTERS.—An Act "to amend an Act passed the 8th of January, 1841, respecting wreck-masters," approved by the president February 3rd, 1844, provides—

"That from and after its passage, the wreck-masters of the republic shall be appointed by the president of the republic, and controlled by the collectors of customs of the several maritime districts, who shall each appoint for his district at least one, and not more than three wreck-masters; and it shall be the duty of each of these persons so appointed to attend, in the manner set forth in the act to which this is an amendment—to the saving and disposing of all property wrecked

in his district, or in the part of it allotted to him, if such property be declared to be abandoned by its owner, or the agent, or factor for the same; or be found abandoned, no such person appearing.

"That it shall not be lawful for the wreck-master to recover out of the proceeds of any wrecked property sold by him as wreck-master, an auctioneer's commission, or any other in addition to that allowed in the act aforesaid; but he shall be allowed to charge for the services and mileage of a carrier, at a rate which shall be fixed by the collector of the district

"That, in order to award the rate or amount of salvage, on property wrecked, one arbitrator shall be appointed by the wreck-master, on behalf of the salvors, and one by the owner of the property saved, or the agent, or factor, for the same, or, default of those, by the chief justice of the county in which the wreck happens.—And the wreck-masters, before appointing an arbitrator, shall notify the salvors of such intent, and if a majority of the whole number of salvors shall request him to appoint any individual named and agreed on by them, as arbitrators, for the salvors, the said wreck-master shall so appoint such individual, and in case of the arbitrators not agreeing, they shall choose an umpire, who shall decide between them—his awardment not being higher than the rates, or amounts awarded by the two arbitrators;—and, from the decision of the arbitration, an appeal to the Court of Admiralty may be taken by either of the parties, or by any portion of either, if the amount in question be such as by law would entitle the party to appeal from a magistrate to a district court;* but, in such case, the party appealing must notify the opposite party of such intention, within two days after the awardment appealed from is made known—otherwise the right to appeal shall be forfeited; and where an appeal is taken it shall not impede the sale of the property wrecked.

"Finally—That it shall be the duty of all wreck-masters, in whose district any wreck may occur, to publish, or cause to be published, either in some public journal in said district, or by affixing to the doors of at least three several public places in said district, a written or printed notice, with a description of property offered at said wreck-master's sale, at least ten days previous to the aforesaid sale.

"This act to take effect from and after its passage."

* By an act of Congress, passed January 19th, 1841, an appeal may be had from the decision of a magistrate to the district court, where the sum in controversy shall exceed twenty dollars.

Gross Return of British and Foreign Trade within the Consulate of Galveston, during the Year ending December 31, 1844.

Total	95	17,634	Return incomplete.	128,408 0 1	61	11,792	Return incomplete.	

REMARKS.—Three of the vessels classed by the custom-house under the head of "Bremen," were Hanoverian; chartered at Embden, for Bremen use. The demand for cotton exceeding the supply, some European vessels were obliged to leave Galveston without cargo. The vessels classed "Belgian," and four of the vessels classed "Bremen," conveyed emigrants to Texas. The British ships brought no emigrants.

No account of the crews of ships entering the port of Galveston is kept by the local authorities; the return, therefore, is, in this particular, incomplete.

* Average rate of exchange, 10s.

The following is a statement relative to its previous debt, revenue, and trade, compiled by Mr. J. P. Kettel; also from official returns.

PUBLIC Debt of Texas.

DEBT.	Term.	Amount.		
		dollars.	dollars.	dollars.
Funded act of 1837	1841	750,000	335,000	1,625,000
" " 1840	5 years	800,000	240,000	1,840,000
Bonds pledged	20 "	500,000	170,000	670,000
Issued for navy	1842	690,000	302,000	992,000
Bonds at 8 per cent.	5 years	100,000	32,000	132,000
Treasury notes	2,250,000	...	2,250,000
Land receipts	1,500,000	...	1,500,000
Floating debt	500,000	...	500,000
Total debt	7,090,000	1,079,000	8,169,000

According to a congressional report of 1839, the quantity of government land was as follows:

L A N D.	Acres.	
	number.	number.
Extent of the Texian republic	53,811,267	208,420,000
Granted by Mexico, and confirmed by Texas	5,937,336	
Texas grants, since her independence	4,393,074	
Military bounty lands	1,690,000	
Land scrip issues		64,801,797
Unappropriated balance	138,618,203

The imports and exports of the United States, to and from Texas, have been as follow :—

IMPORTS and Exports to and from Texas.

Y E A R S.	Exports to Texas.		TOTAL.	Imports.
	Domestic Goods.	Foreign Goods.		
	dollars.	dollars.	dollars.	dollars.
1837	797,312	210,616	1,007,928	163,384
1838	1,028,818	219,062	1,247,880	165,718
1839	1,379,016	308,617	1,687,633	318,116
1840	397,073	381,199	1,318,371	365,847
1841	516,335	292,041	808,376	365,065
1842	278,978	127,951	406,929	480,692
1843	705,340	27,713	142,753	445,399

The largest exports to Texas were in 1839, and consisted mostly of clothing, furniture, lumber, and dry goods, of which over 250,000 dollars was domestic cottons. A large portion of their exports consisted, undoubtedly, of the property of emigrants; but they seem now to supply themselves from other quarters, the United States having lost the trade. In the mean time, the exports of Texas, consisting of cotton almost altogether, have rapidly increased. The quantity and value brought into the United States, in each year, have been as follows :—

IMPORTS of Cotton into the United States, from Texas.

Y E A R S.	Pounds.	Value.	Y E A R S.	Pounds.	Value.
	number.	dollars.		number.	dollars.
1836	1,472,133	232,356	1840	2,569,535	222,152
1837	1,028,466	144,567	1841	3,129,776	276,815
1838	1,401,393	166,942	1842	5,355,142	406,943
1839	1,690,052	240,130	1843	7,593,107	379,750

This shows a regular and steady increase of business, apparently largely in favour of Texas. The imports and duties for the port of Galveston, for the year ending November 1, are as follows :—

IMPORTS AND DUTIES.	1842	1844	Increase.
	dollars.	dollars.	dollars.
Imports	365,532	510,399	161,867
Duties	82,042	158,815	69,773

The revenue and expenditure are as follow :—

Revenue	dollars.
Expenses	466,158
Excess revenue	400,209
	5,949

By the "Annual Report of the Treasury Department, to the ninth Congress of the Republic of Texas," dated "Washington, December 1, 1844," and signed "J. B. Miller, Secretary of the Treasury;" it appears that during the year ending on the 31st of July, 1844, 130 vessels entered the ports of Texas from foreign ports, or with cargoes subject to duty.

Amount of merchandise imported	dls.	cts.	dls.	cts.
Total gross amounts of revenue	201,413	30	686,563	03
Expenses of collection	23,551	45		
Net amount of revenue	177,861	85		

Brazil, Central America, Denmark, Ecuador, Greece, the Hanseatic cities, Prussia, Russia, Sardinia, Sweden, and Venezuela, have met the propositions of America in a spirit of liberality. In the ports of all these countries American vessels, with their cargoes, whether the produce of the United States or not, are admitted on the same terms as the vessels of those countries respectively. If outward bound, they are entitled to the same drawback or bounties on goods exported, as domestic vessels are. The report then observes,

"With Great Britain, France, the Netherlands, Mexico, and Texas, our commercial relations are of a more restricted character. These nations severally confine the principle of equality to the *direct trade*. That is to say, Great Britain admits the vessels of the United States into her ports on payment of the same tonnage duties and charges as British vessels, with these conditions: First, that the vessel be built and owned in the United States, and navigated by a master and crew, three-fourths of which are citizens of the United States; and second, that the goods composing the cargo be the produce of the United States, which in practice limits the import trade to the direct intercourse between one country and the other. The trade of the United States with the British colonial possessions is regulated by treaty stipulations or by diplomatic arrangement. In all cases, however, some restrictions are observed, giving an advantage in general trade, to British bottoms. The importation from the United States of all goods but those of their own produce is mostly prohibited.

"France admits the vessels of the United States into her ports on payment of a discriminating duty of five francs, or ninety-four cents, per ton over and above that paid by French vessels. In the importation of articles, the produce of the United States, no difference is made between French and American vessels; but in reference to other articles the discriminating duty prevails in favour of French bottoms.

"In the Java trade, under the government of the Netherlands, the productions of the United States, and of other countries, are admitted at a duty of seven and four-fifths per cent ad valorem, if imported in Dutch vessels, and fifteen and three-fifths per cent ad valorem, if imported in vessels belonging to the United States.

"Chili and the Ottoman dominions admit our vessels and productions upon the footing of the most favoured nations, reserving the privilege of giving a preference to their own. Five Powers, viz., the Argentine confederation, Belgium, China, Hayti, New Grenada, Portugal Spain, the Two Sicilies, and Uruguay, are left free to deal with the commerce and the navigation of the United States as they may think proper, without any other check than our countervailing legislative provisions. With three of them, however, Belgium, Portugal, and the two Sicilies, negotiations are on foot for the conclusion of commercial treaties."

Since the publication of that report, treaties of navigation and commerce have been ratified between the United States and the following countries, viz., China, Belgium, Hanover, and Portugal.

TREATIES OF COMMERCE AND NAVIGATION BETWEEN THE UNITED KINGDOM AND THE UNITED STATES.

Treaties of peace and amity between the United Kingdom and the United States, and for the suppression of the slave trade treaty (by which the United States stipulates with England to consider that trade piracy) have at different times been concluded. The following treaties contain the stipulations agreed upon for regulating the trade and navigation between the United States and the United Kingdom and British dominions.

The treaty of commerce of the 3rd of July, 1815 has been interrupted by absurdly conceived British orders in council, and president's proclamations; but that treaty and other conventions, now in force, are those under which the trading intercourse between both countries is regulated.

Convention of Commerce between Great Britain and the United States. Signed at London, 3rd July, 1815. Renewed by Convention signed at London, 6th of August, 1827.

I. There shall be between all the territories of his Britannic Majesty in Europe, and the territories of the United States, a reciprocal liberty of commerce. The inhabitants of the two countries respectively shall have liberty freely and secretly to come with their ships and cargoes to all such places, ports, and rivers in the territories aforesaid, to which other foreigners are permitted to come, to enter into the same, and to remain and reside in any parts of the said territories respectively; also to hire and occupy houses and warehouses for the purposes of their commerce; and generally the merchants and traders of each nation respectively shall enjoy the most complete protection and security for their commerce; but subject always to the laws and statutes of the two countries respectively.

II. No higher or other duties shall be imposed on the importation into the territories of his Britannic Majesty in Europe, of any articles the growth, produce, or manufacture of the United States, and no higher or other duties shall be imposed on the importation into the United States, of any articles the growth, produce, or manufacture of his Britannic Majesty's territories in Europe, than are or shall be payable on the like articles, being the growth, produce, or manufacture of any other foreign country, produce, or manufacture of either country respectively, the amount of the said drawbacks shall be the same whether the said goods shall have been originally imported in a British or American vessel; but when such re-exportation shall take place from the United States in a British vessel, or from the territories of his Britannic Majesty in Europe in an American vessel, to any other foreign nation, the two contracting parties reserve to themselves, respectively, the right of regulating or diminishing, in such case, the amount of the said drawback.

The intercourse between the United States and his Britannic Majesty's possessions in the West Indies, and on the continent of North America, shall not be affected by any of the provisions of this article, but each party shall remain in the complete possession of its rights, with respect to such an intercourse.

III. His Britannic Majesty agrees that the vessels of the United States of America shall be admitted, and hospitably received, at the principal settlements of the British dominions in the East Indies, viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, and that the citizens of the said United States may freely carry on trade between the said principal settlements and the said United States, in all articles of which the importation and exportation, respectively, to and from the said territories, shall not be entirely prohibited: provided only, that it shall not be lawful for them in any time of war between the British government and any state or power whatever, to export from the said territories, without the special permission of the British government, any military stores, or naval stores, or rice. The citizens of the United States shall pay for their vessels, when admitted, no higher or other duty or charge than shall be payable on the vessels of the most favoured European nations, and they shall pay no higher or other duties or charges on the importation or exportation of the cargoes of the said vessels, than shall be payable on the same articles when imported or exported in the vessels of the most favoured European nations.

But it is expressly agreed, that the vessels of the United States shall not carry any articles from the said principal settlements to any port or place, except to some port or place in the United States of America, where the same shall be unladen.

It is also understood, that the permission granted by this article is not to extend to allow the vessels of the United States to carry on any part of the coasting trade of the said British territories, but the vessels of the United States having, in the first instance, proceeded to one of the said principal settlements of the British dominions in the East Indies, and then going with their original cargoes, or any part thereof, from one of the said principal settlements to another, shall not be considered as carrying on the coasting trade. The vessels of the United States may also touch, for refreshment, but not for commerce, in the course of their voyage to or from the British territories in India, or to or from the dominions of the Emperor of China, at the Cape of Good Hope, the island of St. Helena, or such other places as may be in the possession of Great Britain, in the African or Indian seas; it being well understood that in all that regards this article the citizens of the United States shall be subject, in all respects, to the laws and regulations of the British government, from time to time established.

IV. It shall be free for each of the two contracting parties, respectively, to appoint consuls for the protection of trade, to reside in the dominions and territories of the other party; but before any consul shall act as such, he shall in the usual form be approved and admitted by the government to which he is sent; and it is hereby declared, that in case of illegal or improper conduct towards the laws or government of the country to which he is sent, such consul may either be punished according to law, if the laws will reach the case, or be sent back, the offended government assigning to the other the reasons for the same.

It is hereby declared, that either of the contracting parties may except from the residence of consuls such particular places as such party shall judge fit to be so excepted.

V. This convention, when the same shall have been duly ratified by his Britannic Majesty and by the president of the United States, by and with the advice and consent of their senate, and the respective ratifications mutually exchanged, shall be binding and obligatory on his Majesty and on the said United States for four years from the date of its signature; and the ratifications shall be exchanged in six months from this time, or sooner if possible.

Convention between Great Britain and the United States. Signed at London, the 20th of October, 1818; renewed by Convention, Signed at London, the 6th of August, 1827.

I. Whereas differences have arisen respecting the liberty claimed by the United States, for the inhabitants thereof, to take, dry, and cure fish, on certain coasts, bays, harbours, and creeks, of his Britannic Majesty's dominions in America, it is agreed between the high contracting parties, that the inhabitants of the said United States shall have, for ever, in common with the subjects of his Britannic Majesty, the liberty to take fish of every kind, on that part of the southern coast of Newfoundland which extends from Cape Ray to the Rameau Islands, on the western and northern coast of Newfoundland, from the said Cape Ray to the Quirpon Islands, on the shores of the Magdalen Islands, and also on the coasts, bays, harbours, and creeks, from Mount Joly, on the southern coast of Labrador, to and through the straits of Belleisle, and thence northwardly indefinitely along the coast, without prejudice, however, to any of the exclusive rights of the Hudson's Bay Company: and that the American fishermen shall also have liberty, for ever, to dry and cure fish in any of the unsettled bays, harbours, and creeks, of the southern part of the coast of Newfoundland hereabove described, and of the coast of Labrador; but so soon as the same, or any portion thereof, shall be settled, it shall not be lawful for the said fishermen to dry or cure fish at such portion so settled, without previous agreement for such purpose, with the inhabitants, proprietors, or possessors of the ground. And the United States hereby renounce for ever any liberty heretofore enjoyed or claimed by the inhabitants thereof, to take, dry, or cure fish, on or within three marine miles of any of the coasts, bays, creeks, or harbours of his Britannic Majesty's dominions in America, not included within the abovementioned limits:

provided, however, that the American fishermen shall be admitted to enter such bays or harbours, for the purpose of shelter and of repairing damages therein, of purchasing wood, and obtaining water, and for no other purpose whatever. But they shall be under such restrictions as may be necessary to prevent their taking, drying, or curing fish therein, or in any other manner whatever abusing the privileges hereby reserved to them:

Act of Congress "concerning the Convention to regulate the Commerce between the Territories of the United States and his Britannic Majesty." Approved the 1st of March, 1816.

Be it enacted and declared by the Senate and House of Representatives of the United States of America in Congress assembled, that so much of any act as imposes a higher duty of tonnage or of impost, on vessels, and articles imported in vessels, of Great Britain, than on vessels, and articles imported in vessels, of the United States, contrary to the provisions of the convention between the United States and his Britannic Majesty, the ratifications whereof were mutually exchanged the 22nd day of December, 1815, be, from and after the date of the ratification of the said convention, and during the continuance thereof, deemed and taken to be of no force or effect.

Act of the British Parliament "to carry into effect a Convention of Commerce concluded between his Majesty and the United States of America, and a Treaty with the Prince Regent of Portugal."

VI. And whereas it is expedient that vessels built in the countries belonging to the United States of America, or any of them, or condemned as prize there, and being owned and navigated as herein-before mentioned, should be allowed to clear out from any part of the United Kingdom for the principal settlements of the British dominions in the East Indies; viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, with any articles which may legally be exported from the United Kingdom to the said settlements in British-built ships; be it therefore further enacted, that all vessels built in the said United States of America, or any of them, or condemned as prize there, and being owned and navigated as hereinbefore mentioned, shall be allowed to clear out from any port of the United Kingdom for the following principal settlements of the British dominions in the East Indies, viz., Calcutta, Madras, Bombay, and Prince of Wales's Island, with any goods, wares, or merchandise which may be legally exported from the United Kingdom to the said settlements in British-built vessels, subject to the like rules and regulations, restrictions, penalties, and forfeitures as are now by law imposed upon the exportation of such goods to the said settlements in British-built ships, any law, custom, or usage to the contrary notwithstanding.

VII. And be it further enacted, that nothing in this act contained shall extend, or be construed to extend to repeal or in anywise alter the duties of package, scavage, ballage, or portage, or any other duties payable to the mayor and commonalty, and citizens of the city of London, or to the Lord Mayor of the said city for the time being, or to any other city or town corporate within Great Britain, or any other special privilege or exemption to which any person or persons, bodies politic or corporate, is or are now entitled by law in respect of goods imported and exported, but the same shall be continued as heretofore.

Convention of Commerce, signed at London, August 6, 1827.

ART. I.—All the provisions of the convention concluded between his Majesty the King of the United Kingdom of Great Britain and Ireland, and the United States of America, on the 3rd of July, 1815, and further continued for the term of ten years by the fourth article of the convention of the 20th of October, 1818, with the exception therein contained as to St. Helena, are hereby further indefinitely, and without the said exception, extended and continued in force, from the date of the expiration of the said

ten years, in the same manner as if all the provisions of the said convention of the 3rd of July, 1815, were herein specifically recited.

ART. II.—It shall be competent, however, to either of the contracting parties, in case either should think fit, at any time after the expiration of the said ten years—that is, after the 20th of October, 1828—on giving due notice of twelve months to the other contracting party, to annul and abrogate this convention; and it shall, in such case, be accordingly entirely annulled and abrogated, after the expiration of the said term of notice.

Act of Congress of the United States, "to repeal the Tonnage Duties upon Ships and Vessels of the United States, and upon certain Foreign Vessels." 31st May, 1830.

SEC. I.—Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that, from and after the 1st day of April next, no duties upon tonnage of the ships and vessels of the United States, of which the officers and two-thirds of the crew shall be citizens of the United States, shall be levied or collected; and all acts and parts of acts imposing duties upon the tonnage of ships and vessels of the United States, officered and manned as aforesaid, so far as the same relate to the imposition of such duties, shall, from and after the said first day of April next, be repealed.

SEC. II.—And be it further enacted, that, from and after the said 1st day of April next, all acts and parts of acts imposing duties upon the tonnage of the ships and vessels of any foreign nation, so far as the same relate to the imposition of such duties, shall be repealed: provided, that the President of the United States shall be satisfied that the discriminating or countervailing duties of such foreign nation, so far as they operate to the disadvantage of the United States have been abolished.

[Approved 31st of May, 1830.]

Proclamation of the President of the United States, opening to British Vessels the Trade between the British Colonial Possessions and the American Ports. 5th October, 1830.

Whereas, by an act of the Congress of the United States, passed on the 29th day of May, 1830, it is provided, that whenever the President of the United States shall receive satisfactory evidence that the government of Great Britain will open the ports in its colonial possessions in the West Indies, on the continent of South America, the Bahama Islands, the Caicos, and the Bermuda or Somer Islands, to the vessels of the United States, for an indefinite or for a limited term; that the vessels of the United States, and their cargoes, on entering the colonial ports aforesaid, shall not be subject to other or higher duties of tonnage or impost, or charges of any other description, than would be imposed on British vessels, or their cargoes, arriving into the said colonial possessions, from the United States; that the vessels of the United States may import into the said colonial possessions, from the United States, any article or articles which could be imported in a British vessel into the said possessions, from the United States; and that the vessels of the United States may export from the British colonies aforesaid, to any country whatever, other than the dominions or possessions of Great Britain, any article or articles that can be exported therefrom in a British vessel, to any country other than the British dominions or possessions as aforesaid—leaving the commercial intercourse of the United States, with all other parts of the British dominions or possessions, on a footing not less favourable to the United States than it now is; that then, and in such case, the President of the United States shall be authorised, at any time before the next session of Congress, to issue his proclamation, declaring that he has received such evidence, and that thereupon, and from the date of such proclamation, the ports of the United States shall be opened indefinitely, or for a term fixed, as the case may be, to British vessels coming from the said British colonial possessions, and their cargoes, subject to no other or higher duty of tonnage or impost, or charge of any description whatever, than would be levied on the vessels of the United States, or their cargoes, arriving from the said British possessions; and that it shall be lawful for the said British vessels to import into the United States, and to export therefrom, any article or articles which

may be imported or exported in vessels of the United States; and that the act, entitled, "An Act concerning navigation," passed on the 18th day of April, 1818, an act supplementary thereto, passed the 15th day of May, 1820, and an act, entitled, "An Act to regulate the commercial intercourse between the United States and certain British ports," passed on the 1st day of March, 1823, shall, in such case, be suspended or absolutely repealed, as the case may require.

And whereas, by the said act, it is further provided, that whenever the ports of the United States shall have been opened under the authority thereby given, British vessels and their cargoes shall be admitted to an entry in the ports of the United States, from the islands, provinces, or colonies of Great Britain, on or near the North American continent, and north or east of the United States.

And whereas satisfactory evidence has been received by the President of the United States, that, whenever he shall give effect to the provisions of the act aforesaid, the government of Great Britain will open, for an indefinite period, the ports in its colonial possessions in the *West Indies*, on the continent of *South America*, the *Bahama Islands*, the *Caicos*, and the *Bermuda* or *Somer Islands*, to the vessels of the United States, and their cargoes, upon the terms, and according to the requisitions of the aforesaid act of Congress:

Now, therefore, I, Andrew Jackson, President of the United States of America, do hereby declare and proclaim, that such evidence has been received by me; and that by the operation of the act of Congress, passed on the 29th day of May, 1830, the ports of the United States are, from the date of this proclamation, open to British vessels coming from the said British possessions, and their cargoes, upon the terms set forth in the said act; the act entitled, "An Act concerning navigation," passed on the 18th day of April, 1818, the act supplementary thereto, passed the 15th day of May, 1820, and the act, entitled, "An Act to regulate the commercial intercourse between the United States and certain British ports," passed the 1st day of March, 1823, are absolutely repealed; and British vessels and their cargoes, are admitted to an entry in the ports of the United States, from the islands, provinces, and colonies of Great Britain, on or near the North American continent, and north or east of the United States.

Given under my hand, at the city of Washington, the 5th day of October, in the year of our Lord 1830, and the 55th of the independence of the United States.

By the President:

ANDREW JACKSON.

M. VAN BUREN,

Secretary of State.

British Order in Council, for regulating the Commercial Intercourse between the United States and the British Colonial Possessions. 5th November, 1830. At the Court of St. James's, the 5th day of November, 1830. Present, the King's most excellent Majesty in Council.

Whereas by a certain act of parliament, passed in the sixth year of the reign of his late majesty, King George the IVth [cap. 114.], entitled, "An Act to regulate the Trade of the British Possessions Abroad," after reciting that, "by the law of navigation, foreign ships are permitted to import into any of the British possessions abroad, from the countries to which they belong, goods, the produce of those countries, and to export goods from such possessions, to be carried to any foreign country whatever, and that it is expedient that such permission should be subject to certain conditions;" it is, therefore, enacted, "that the privileges thereby granted to foreign ships shall be limited to the ships of those countries which, having colonial possessions, shall grant the like privileges of trading with those possessions to British ships, or which, not having colonial possessions, shall place the commerce and navigation of this country, and of its possessions abroad, upon the footing of the most favoured nation, unless his majesty, by his order in council, shall, in any case, deem it expedient to grant the whole, or any of such privileges, to the ships of any foreign country, although the conditions aforesaid shall not in all respects be fulfilled by such foreign country."

And whereas by a certain order of his said late majesty in council, bearing date the 27th day of July, 1826, after reciting, that the conditions mentioned and referred to in the said act of parliament had not in all respects been fulfilled by the government of the United States of America, and that, therefore, the privileges so granted as aforesaid by the law of navigation to foreign ships, could not lawfully be exercised or enjoyed by the ships of the United States aforesaid, unless his majesty, by his order in council, should grant the whole or any of such privileges to the ships of the United States aforesaid: his said late majesty did, in pursuance of the powers in him vested by the said act, grant the privileges aforesaid to the ships of the said United States; but did thereby provide and declare that such privileges should absolutely cease and determine in his majesty's possessions in the West Indies and South America, and in certain other of his majesty's possessions abroad, upon and from certain days in the said order appointed, for that purpose, and which are long since passed:

And whereas, by a certain other order of his said late majesty in council, bearing date the 16th of July, 1827, the said last-mentioned order was confirmed; and whereas, in pursuance of the acts of parliament, in that behalf made and provided, his said late majesty, by a certain order in council, bearing date the 21st day of July, 1823, and by the said order in council bearing date the 27th day of July, 1826, was pleased to order, that there should be charged on all vessels of the said United States, which should enter any of the ports of his majesty's possessions in the West Indies or America, with articles of the growth, produce, or manufacture, of the said states, certain duties of tonnage and of customs therein particularly specified:

And whereas it hath been made to appear to his majesty in council, that the restrictions heretofore imposed by the laws of the United States aforesaid, upon British vessels, navigated between the said states and his majesty's possessions in the West Indies and America, have been repealed, and that the discriminating duties of tonnage and customs heretofore imposed by the laws of the said United States upon British vessels and their cargoes, entering the ports of the said states from his majesty's said possessions, have also been repealed, and that the ports of the United States are now open to British vessels and their cargoes, coming from his majesty's possessions aforesaid; his majesty doth, therefore, with the advice of his privy council, and in pursuance and exercise of the powers so vested in him, as aforesaid, by the said act, so passed in the sixth year of the reign of his said late majesty, or by any other act or acts of parliament, declare, that the said recited orders in council, of the 21st day of July, 1823, and of the 27th day of July, 1826, and the said order in council, of the 16th day of July, 1827 (so far as such last-mentioned order relates to the said United States), shall be, and the same are, hereby respectively revoked:

And his majesty doth further, by the advice aforesaid, and in pursuance of the powers aforesaid, declare that the ships of and belonging to the said United States of America, may import from the United States aforesaid, into the British possessions abroad, goods the produce of those states, and may export goods from the British possessions abroad to be carried to any foreign country whatever.

And the right honourable the Lords Commissioners of his Majesty's Treasury, and the Right Honourable Sir George Murray, one of his majesty's principal secretaries of state, are to give the necessary directions herein, as to them may respectively appertain.

JAMES BULLER.

CHAPTER XII.

ON THE CONSTITUTION OF THE UNITED STATES.

The Honourable J. C. Spencer's Examination of the Honourable A. P. Upshur's Review of the Constitution of the United States.

IN order to comprehend the views entertained by eminent legislators in the United States of America, we consider it just to introduce into this work the following, viewed by a gentleman and statesman of great learning and ability, on Mr. Upshur's strictures on the American constitution. Mr. Spencer is not only a profound jurist, but he has held the most important trusts in the government of his country. He was one of the most able secretaries of the treasury: an office which nearly corresponds with that of chancellor of the exchequer in England.

"Having," says Mr. Spencer, "been favoured by a friend with the perusal, in sheets, of a part of Mr. Macgregor's great work on the Progress of America, which contained the remarks of the Honourable Abel P. Upshur on the constitution of the United States, I expressed my unhesitating opinion that they were as erroneous as they were injurious; that they were calculated to produce a very false impression of the weakness of our union, and the incapacity of our federal government to maintain itself, or to fulfil the high duties assigned to it; and that it would be equally unfortunate for us and for other countries if those views should be received and accredited, as just expositions of a system somewhat complicated, and therefore liable to be much misunderstood by those who had neither the means nor the leisure for its thorough investigation. I was urged to prepare a statement of the opinions of that class of our countrymen (believed to be, by far, the largest portion of the active and intelligent men engaged in such discussions), who take a practical view of our government, and seek to ascertain its powers and duties by a reference to the plain words and fair meaning of the constitution. Under the impression that the withdrawal from the cares of public life, and the absence of professional engagements, would afford abundant leisure for such an undertaking, a partial assent was given. This having been communicated to Mr. Macgregor, he has announced that in a subsequent part of his work, a review of Mr. Upshur's remarks, by me, would be given. Under these circumstances, although the anticipated leisure has not been enjoyed, yet the desire to fulfil an implied pledge, impels me to endeavour to execute a task which should have been committed to more competent hands.

"Judging from the portions of Mr. Upshur's communication, for portions only of it are given, it would seem that he quite disapproved of our federal constitution; for while he points out what he supposes to be defects, which he severely censures, no part of it has received his unqualified approbation. To those who were acquainted with the peculiar character of his mind, this, probably, will not be surprising. A knowledge of those peculiarities will serve to explain, if it does not elucidate some of his views. Mingling very little with the world, and in a profound retirement, in a secluded part of Virginia, he indulged a naturally speculative mind to its fullest extent, in reflections upon our form of federal government, without ever having had the advantage of personally partaking in its operations.

"He had held public stations in the state of Virginia, but had held no office under the general government, nor had he ever been a member of either house of Congress, when his opinions or nullifications were promulgated. He had prided himself on being one of the most high-toned federalists of the country, until about the time when the disputes with South Carolina commenced. These disputes involved deeply and extensively, the interests of the southern states, who complained that their agriculture was made subservient to northern manufactures, by means of the tariff acts of Congress. Failing to secure a numerical majority in that body, they questioned its constitutional power thus to oppress them, as they said by legislation; and having satisfied themselves of the want of such power, they next inquired into the means of resisting its exercise. This led them to what is called the doctrine of nullification; which means, according to their theory, that any one state legislature which conceives an act of the federal Congress to be unconstitutional, may nullify such act, by declaring it to be inoperative within the limits of the state, and by punishing through the state tribunals, the officers who should attempt to execute it. The old maxim, that where there is a will there is generally a way, was exemplified in this case. The novel system of a federal government uniting several sovereign states in one confederacy, and under one government for certain definite purposes, afforded an ample field for the speculative tendencies of our southern

statesmen; and to a man like Mr. Upshur, it was a rich mine, in which he could strike his own quarry, and pursue it at his own option. There was nothing in the institutions of ancient, or modern republics, at all similar. Neither experience nor the labour of learned or thoughtful men afforded guides to reflection, or checks to the wildest licence of speculation. He entered this field warmly; and as the first step in his progress, abandoned all the political principles which forty years had enabled him to form and strengthen. He became a writer for the periodicals of the day, and contributed the principal articles to the 'Southern Review,' the champion of nullification. In the support of that cause, and in discussions, written, printed, and oral, he was engaged more or less extensively, for about eight years, when he was called to take charge of the navy department, by Mr. Tyler, from which he was transferred to the state department, and in which he remained about eight months. The communication to Mr. Macgregor, a part of which appears in his work, is but a condensation of the essays published in the 'Southern Review,' and other periodicals.

"This account of the author of the remarks which are proposed to be examined, and this history of the question he has discussed, seemed useful, if not necessary, to a full comprehension of his views. It should be added that the nullifiers profess to derive their doctrine from Mr. Jefferson and Mr. Madison; and Mr. Macgregor has apparently fallen into the error of supposing that doctrine to constitute the great point of difference between the federalists and democrats.* It is very true that these parties have differed much in their construction of the constitution, the former being latitudinarian, pushing to its utmost extent the principle embodied in the eighteenth subdivision of section eight of the first article of the constitution, that of passing all laws necessary and proper for carrying into execution, the powers vested by that instrument in the government, or in any of its departments, while the democrats have insisted on a rigid and strict construction, and have maintained that these implied powers must always be subordinate and ancillary, and can never be converted into main and principal purposes of government. But as to the remedy, for the abuse of the legislative authority, proposed by the nullifiers, the democrats, when in full possession of power, and with ample means to sustain and vindicate it, so far from supporting, rebuked and denounced it in the most significant manner. On the occasion already referred to, South Carolina asserted this reserved right to nullify a tariff act of Congress, and passed laws for the purpose. General Jackson, the then president, with a vast majority of democrats, in both houses of Congress, adopted the most stringent measures to put down the doctrine and its abettors.

"He issued a proclamation, which received the warm approbation of the whole country (excepting South Carolina, and a very few in some of the other southern states), in which the doctrine was examined, and its fallacy exposed. And the misguided men who acted under it were warned to return to their allegiance; and this was followed by acts of Congress of the most effective character. The incipient rebellion was crushed—by democratic men—indeed, by the democratic party.

"In truth, this doctrine of nullification is the peculiar property of a distinguished statesman of South Carolina, who has enjoyed all the highest stations in the republic but the very highest, and who has repeatedly been a competitor for that station. His own state, and some citizens of other states, whose interests are supposed to be identical with those of South Carolina, have embraced it; and although partisan writers talk about reserved rights of the states, on special occasions, the general and almost universal feeling of the country abhors and condemns it.

"In these circumstances an apology will be found for an effort to prevent any erroneous impression as to its prevalence, and to exhibit what are deemed the unfounded assumptions in Mr. Upshur's communication, by which it is sought to be sustained.

"It should be remarked preliminarily, that Mr. Madison has publicly and fully disavowed the paternity of any such doctrines, and declared his conviction of its fallacy, as well as its dangerous consequences. It was contended, by its friends, that the germ of the principle was to be found in the resolutions of the legislatures of Virginia and Kentucky, passed in 1798, and 1799, and which are known to have been prepared by Mr. Jefferson and Mr. Madison.

"These resolutions were aimed at the alien and sedition laws, enacted under the administration of the elder Adams. After denouncing these acts as unconstitutional, the resolutions declared, that if they were not repealed it would be the duty, as it was the right, of the states of the union to interpose and seek a rightful remedy. In a letter to Mr. Rivers, written a few years since, Mr. Madison denies that the language or spirit of the resolutions authorises any separate state to resort to any means of resistance, but that the action of the states combined was contemplated; and he refers to the provision of the constitution for calling a convention of all the states, on the application of two-thirds of the number, as the remedy intended.

"The reader, not particularly conversant with American politics, will find some advantage in these preliminary remarks, by their enabling him to perceive the exact position advanced by Mr. Upshur on the subject of nullification.

* This might have been inferred from the uncorrected proof sheets which were sent off hastily by the mail-packet,—but this is not the fact. Mr. Macgregor, on this point (see page 12), is of the same opinion as Mr. Spencer.

which, in

"Justice to him requires that it should be stated in his own words.

"He first admits, that the supreme court is the proper tribunal, in the last resort, to determine whether the federal government has transcended its constitutional obligation, or not, *to a certain extent*; that its decision is binding and absolutely final, so far as the court has jurisdiction over cases affecting the rights of the individual citizens, and over certain others, affecting the rights of the individual states; and that states, as well as individuals in these cases, have not 'an independent right to construe, control, and judge of the obligations of the federal government, but that they are bound by the decisions of the federal courts, so far as they have authorised and agreed to submit to them.' So far Mr. Upshur has but expressed the clear and unequivocal import of the constitution, and the common opinion of every man in America, who has ever publicly declared his opinion on the subject. It will be seen, then, that the dispute is rather about a question of fact than of principle. The principle is conceded, that the jurisdiction of the federal courts is final and conclusive in all cases where such jurisdiction exists. The dispute is, whether a given case comes within that jurisdiction. If it does not, then no one has yet contended that the decision of the supreme court would be more effectual in determining it, than that of the Emperor of China; it would still remain to be settled. If the parties to the controversy should happen to be a powerful state, on one side, and the federal union, on the other, it must be determined by physical strength—as all controversies must be, where there is no umpire, and the parties will not amicably adjust them. This is natural nullification—independent of all law, all constitutions, and all compacts; in other words, it is a revolution. If this be all that Mr. Upshur and his nullifying associates mean—that when the federal government exercises powers not delegated, no decision of the supreme court can supply the defect in the grant, and that resistance to oppression, even in a judicial form, is a right and a duty, few or none on this side the Atlantic will be found to controvert their views. And it is very immaterial whether this resistance proceeds from voluntary and temporary associations of individuals, or from an organised state government. The intelligent reader will perceive at once that this cannot be the question at issue, respecting which so much ink has been shed. The great and the real question is, *who shall decide whether the case presented does or does not fall within the circle of powers, duties, and obligations of the federal government, as prescribed by the constitution?* It is not as Mr. Upshur would have the reader to infer, whether a state may resist the decision of the supreme court in a case of acknowledged usurpation. But it is, whether the supreme court shall decide whether the power claimed in the given case be an usurpation or not. Now, the real object of the nullifiers is to establish the doctrine, that the states may sit in judgment upon the decisions of the supreme court, review them, like an appellate tribunal; and if any one state conceives that the federal judiciary has sanctioned an usurpation, it may of its own will, and as an incident to its sovereignty, apply the remedy of nullifying, as before explained, or may secede—withdraw from the union.

"Unwilling at the onset to state the question in this broad form, Mr. Upshur, after making the admission before quoted, says,—'But there are many cases involving the question of federal power which are not cognisable before the federal courts; and of course, as to these we must look out for some other umpire.' And in this case it is, as he contends, that each state has the right to construe its own contracts, and decide upon its own rights and powers. In this short extract lies the root of the whole matter; every thing is based upon the quiet and apparently simple assumption, that there are many cases involving the question of federal power, which are not cognisable before the federal courts. Now, this is utterly denied, and it is averred that in the whole history of our government, no such case has ever occurred, and from the nature of our institutions it cannot occur. In other words, it is affirmed that no case can be conceived, where federal power could be exercised of which the courts of the United States could not take cognisance, by means of a suit or legal proceeding presenting the question directly to them.

"If an officer of the United States forcibly collects an impost upon an important article, the laws and the forms of proceeding enable the citizen conceiving himself oppressed to present the question by an action at law. The courts act upon individuals; if they claim to be clothed with authority for their proceedings, the extent and constitutionality of that authority necessarily come up for judgment. If the officers and process of the United States be resisted, civil actions, as well as criminal prosecutions, instantly furnish the means of determining whether such resistance was justifiable or not. By the terms of the second section of the third article of the constitution, the judicial power extends to *all cases* in law and equity arising under the constitution, the laws of the United States, and treaties made under their authority. The question discussed by Mr. Upshur supposes a law of Congress, because, without the authority of the legislative department there can be no exercise of the federal power. And as if to remove every vestige of doubt, and to provide for cases, if any should occur, which did not arise under a law of Congress, the same section provides that the judicial power shall extend 'to controversies to which the United States shall be a party,' without distinction or discrimination. How can there be any cases, then, 'involving the question of federal power,' to which 'the judicial power' of the United States does not extend, or which, in the language of Mr. Upshur, 'are not cognisable before the federal courts?'

"If this, then, be the case, as Mr. Upshur supposes, 'In which the question, who are parties to the constitution, becomes all-important and controlling,' the question itself might be dismissed as of no practical consequence; for the case itself never can occur. But although introduced in this quiet and unpretending form, the question, nevertheless, is one which lies at the foundation of the whole argument advanced by the nullifiers. Their theory is, that the government is federative—a confederation of sovereign states, and not consolidated—and that the states, the parties to the league, retain the right to construe the compact—the constitution—each for itself, and to decide upon its own rights and powers. It is for this purpose that Mr. Upshur has examined our colonial history, contending that we were not 'one people' before the adoption of our own constitution. In the sense in which he uses this term, no one will dispute his correctness. The American colonies certainly were not 'a political corporation;' and great injustice would be done to Judge Story by the supposition that he maintained such an historical untruth. Mr. Upshur has also shown, what no one had ever denied, that by the articles of confederation the several states retained their sovereignty; and he might have added, that the very weakness of the league which connected them was so apparent—its utter unfitness, either in war or in peace, to unite the common strength of the Americans, to restrain the powerful states, and to compel the reluctant to contribute equally to the common defence, was the cause, and the sole cause, of its abandonment, and of the adoption of the new constitution. The question arises under this new form of government. The inhabitants of the thirteen colonies had waged a common war, and they, unitedly as well as severally, had been acknowledged to be independent by the treaty of 1783. They united in appointing ambassadors to negotiate this treaty, and, by its terms and operation, they were not only separated from Great Britain, but were bound together in a common mass. France, Spain, and Holland, had recognised them as one people, and had sent ministers to the body, not to the several states. The body had formed treaties with those nations; it had acted as a nation, had assumed its duties and responsibilities—nay, in the very first line of the Declaration of Independence, they had called themselves 'one people.' They were, therefore, to some extent 'a people;' they were in the incipient stages of forming 'a political corporation,' and were in a condition—physically, morally, and politically—to do so. Yet Mr. Upshur remarks, that 'in the states the sovereign power is in the people of the states respectively, and the sovereign power of the United States would, for the same reason, be in the people of the United States, if there were any such people known as a single nation, and the framers of the federal government.' The historical references already made show sufficiently that there *was* a people composing the thirteen colonies, who had made themselves somewhat extensively known as a single nation, having an army and a navy, a national ensign, issuing a national currency, represented abroad by its ministers, and receiving embassies from other nations. The first condition stated by Mr. Upshur would seem to have been complied with. As to the second condition, viz., that a people known as a single nation should have been 'the framers of the federal government'—perhaps the instrument which was the work of their hands—will be allowed to be good evidence, if not conclusive, upon the point. It commences with these words: 'We, the people of the United States, in order, &c., &c., do ordain and establish this constitution for the United States of America.' It made provision for its own existence by its last article, that the ratification by nine states should be sufficient for its establishment. It was accordingly submitted to the people of the several states, not to their ordinary legislatures, but to conventions elected specially to consider the new constitution, and to adopt or reject it. This was the most expedient form in which it could be submitted to the people directly. A ballot, or a *visa voce* vote at the election polls, directly upon the various parts of the constitution, was obviously objectionable, if not wholly impracticable; and the same object was obtained by calling on the electors to choose delegates who should directly and immediately express their will. Admitting, then, that up to the time of the formation of the constitution the inhabitants of the thirteen colonies did not form a separate and distinct political corporation, perfect in its organisation, and capable of maintaining itself, yet it must be apparent that they had so long associated together under a common government, had exercised unitedly so many of the functions of the national sovereignty, that they were in a condition to become integrated, and to perfect their identity; and the exact question is, what was the effect of the constitution upon them in this respect?

"There has certainly been a class of politicians who have contended that this effect was a complete consolidation, and that the federative principle was extinguished. Another class, and these are the nullifiers, maintain that the federative principle still prevails as effectually under the new constitution as it did under the articles of confederation; and that, consequently, the separate states have the same right as before to construe for themselves the new compact—in other words, to set aside the decisions of the federal judiciary. There is another class, comprising, it is believed, two-thirds of the American people, who hold both these views to be extremes, and to be fallacious, and who adopt a middle course regarding the federal government as both federative and consolidated—federative in its origin, federative in reference to domestic and internal concerns, and yet consolidated; that is, an independent integer, a popular government in relation to

foreign
states.

foreign affairs, and in general to all that concerns the common interest of the people of all the states. The idea has been correctly expressed by M. de Tocqueville. 'The object was,' he says, 'so to divide the authority of the different states which composed the union, that each of them, represented by the union, should continue to form a compact body, and to provide for the exigencies of the people.' And the whole matter is condensed in one line: 'The United States form not only a republic, but a confederation;' and he shows that the authority of the nation is more central than it was in France or Spain, when the American constitution was adopted. The identity of the people of the several states, their *oneness*, as Mr. Upshur expresses it, is very clearly shown by the second section of the fourth article. 'The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.' Here is a provision that operates, not upon the states, but individually upon every citizen, clothing him with a new character, in addition to that he already possesses. It enables the citizens of Louisiana to inherit lands by descent in Massachusetts; it removes all alienage at once, and leaves no trace of a foreign feature. Without dwelling upon the first section of the same article, which gives full faith and credit in 'each state to the public acts, records, and judicial proceedings of every other state,' and which has been held by all our courts to give them the same effect in every part of the union that they have in the state where they originate, or upon the power given to Congress exclusively, of establishing the mode of making citizens of the United States; and, without adverting to various other provisions of a similar character, it must be sufficient to rest on this single section, which makes the citizen of one state a citizen of every state, to demonstrate that the union is not a mere confederacy, or league of sovereign states, but that it is an integer, a political body under a constitution which declares that treason may be committed against it by declaring war, or adhering to its enemies. It becomes quite immaterial how this result was accomplished, or who were the parties to the instrument by which it was effected. The question, and the only question, is, what is the political condition of the people under that instrument? Are they one people, or are they twenty-seven distinct people, alien to each other?

"Contenting myself with these general views of some of the leading and prominent features of the constitution, I do not deem it necessary to follow Mr. Upshur in his examination of the structure of the different departments. He admits, however, that the House of Representatives is not federative. The ordinary course of electing a president by the votes of the people of the different states, in choosing special delegates to express their will on that subject, is also certainly not federative; while the mode of proceeding in the event of a failure to elect in the first instance, is evidently federation; and thus, in the structure of the departments, the federative and the consolidating, or central principle, are both adopted, and are applied as the nature of the power to be conferred may require.

"We may now approach more directly the true question which the nullifiers present against the residue of their countrymen, and which Mr. Upshur has rather intimated than distinctly avowed. After enumerating at some length the cases to which the judicial authority of the United States extends, he refers to the tenth amendment of the constitution, by which it is provided, that 'the powers not delegated to the United States by the constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.' And he contends that these powers are reserved as well against the judiciary as against the other departments of the federal government; that among these powers is that of each state, judging *alone* of its own compacts and agreements; that the constitution being such a compact, each state has a right to interpret it for itself, unless, and then comes a most important qualification, which presents the point of the whole controversy, 'unless it (each state) has clearly waived that right in favour of another power.' Now the position advanced and maintained by all parties in America, except the nullifiers, is, that by the very terms of this compact this right of each state to interpret it for itself, has been expressly waived in favour of the federal judiciary. No language which I can employ would so clearly state this position as that of M. de Tocqueville: 'The attributes of the federal government,' he says, 'were, therefore, carefully enumerated, and all that was not included among them, was declared to constitute a part of the privileges of the several governments of the states. Thus the government of the states remained the rule, and that of the confederation became the exception. But as it was foreseen that in practice questions might arise as to the exact limits of this exceptional authority, and that it would be dangerous to submit those questions to the decision of the ordinary courts of justice established in the states by the states themselves, a high federal court was created which was destined, among other functions to maintain the balance of power which had been established by the constitution between the two rival governments.' 'To suppose,' he remarks in another place, 'that a state can subsist, when its fundamental laws may be subjected to four-and-twenty different interpretations at the same time, is to advance a proposition alike contrary to reason and to experience. The object of the erection of a federal tribunal, was to prevent the courts of the states from deciding questions affecting the national interests in their own departments, and so to form a uniform body of jurisprudence for the interpretation of the laws of the union.' The supreme court of the United States was, therefore, invested with the right of determining all questions of juris-

diction. And to effect this purpose, can language be more clear and explicit than that of the second section of the third article? 'The judicial power shall extend to *all* cases in law and equity arising under this constitution, the laws of the United States, and treaties made, or which shall be made under their authority, to controversies to which the United States shall be a party,' &c. If it *extends* to them it must be for the purpose of deciding them, not for the purpose of referring them to some other power or tribunal. It has already been shewn it is supposed that this description necessarily comprises every case that can possibly arise, involving the exercise of the federal power. Every such case must be founded on a claim that it springs from the authority given by the constitution, and then the courts must decide whether it 'arises under the constitution.' If it does not it must be dismissed. If it does, the courts must entertain and decide it. And it is somewhat extraordinary that this very power is conceded by Mr. Upshur in a previous part of his remarks: 'So far, therefore, as the federal constitution has provided for the subject at all, the supreme court is beyond question, the *final* judge or arbiter; and this, too, whether the jurisdiction which it exercises be legitimate or usurped.' These are his words, and they afford a complete and perfect answer to the qualification he makes of the right of each state to interpret the constitution for itself, 'unless it has clearly waived that right in favour of another power.' If, then, the federal constitution has provided for the subject in the way he states, and if the states have assented to that provision by adopting the constitution, have they not 'waived the right of interpreting it in favour of another power'?

"But Mr. Upshur says, that it is not waived, and this, he says, is apparent from the fact 'that, if the judiciary be the sole judges of the extent of their own powers, their powers are universal, and the enumeration in the constitution is idle and useless.' Now, with deference be it said, this is very inconclusive. The liability of any power to abuse to gross perversion, does not, in sound minds, tend in the least to prove its non-existence. The same remark, which Mr. Upshur makes in reference to the judiciary, is still more applicable to the states. If *they* are 'the sole judges of their own powers, *their* powers are universal,' and the grant of authority to the federal government, or to the judiciary, is 'idle and useless.' The question, however, still remains, whether the power has been granted? The object of all political compacts and constitutions is to produce and preserve peace, and to prevent wars, by providing a mode of final settlement peaceably by an independent tribunal. Every umpire may err; may enlarge its jurisdiction, and take cognisance of what is not submitted to it. In the formation of a constitution, the question is open, whether it is better to incur this hazard, than the opposite one of having nothing finally settled? And this was the very question which the framers of our constitution considered, and debated and decided, and this decision having been ratified by the states, as well as by the people of the United States, it is too late to seek to evade it by questioning its wisdom.

"Mr. Upshur, however, persists in falling back on principles anterior to the constitution, instead of looking to that instrument alone; and he urges that the federal government is the creature of the states; that it is a mere agent, with limited powers, and then asks,—'Shall the agent be permitted to judge of the extent of his own powers, without reference to his constituents? To a certain extent he is compelled to do this, in the very act of exercising them; but this is always in subordination to the authority by whom his powers were conferred.' Besides, the fallacy, as it is believed to be, that the federal government is the creature of the states, as distinguished from the people of the states, there is a fundamental error in considering the judiciary as an *agent* to exercise certain political powers—as a mere attorney, in fact, to perform certain delegated functions, and as being subordinate to the states, by whom it is intended to be implied the judicial power was conferred. It is conceived that its functions are of a character entirely different. As its very name imports, it is to *adjudge*—not execute, nor legislate. It is the means by which disputes and controversies are to be terminated, without a resort to force. It is the contrivance of civilisation, to prevent a recurrence to the law of nature. It is the last and strongest link which unites the ends of the chain of civil government, and renders that complete, which, without it, would not deserve the name of government. So far from partaking of the nature of agents, or being subordinate to the authority which conferred their powers, the judiciary are by the constitution rendered wholly independent of their constituents, who cannot revoke or annul the authority once granted; and, instead of being subordinate, they are by the same instrument placed above those who created them, and administer the law to them and to all others. Even controversies between states are subjects of their jurisdiction. What becomes then of this idea of their being agents, and bound to make 'reference to their constituents' to determine the extent of their powers?

"It will be observed, that the argument of Mr. Upshur covers the whole ground. 'True,' he says, 'the states ought to be, and, I presume, will be, extremely careful not to interpose their sovereign power against the decisions of the supreme court in any case where that court clearly has jurisdiction.' But this involves the very point of determining whether it has jurisdiction or not; and whatever may be Mr. Upshur's opinion of certain cases being *clearly* within their jurisdiction, a state which has passed a *stop-law*, as it is termed—an act to suspend the collection

of debts, or to prevent their recovery—will not be very scrupulous in its construction of one part of a constitution which interposes a check to its rashness, when it has already violated another part of the same instrument. In truth, this doctrine, that a judiciary is not 'to judge of the extent of its own powers without reference to its constituents,' at one blow prostrates that department of government in the states, as well as in the United States. For, if it be true in one case, it is equally so in the other. Mr. Upshur was himself a local judge in Virginia; but history does not record the instance of his having referred to the General Assembly of that state, which passed the laws instituting his court, and which appointed him to the office; for its directions as to the extent of his judicial jurisdiction, although many perplexing cases of that kind must have occurred before him.

"The argument, so often repeated in Mr. Upshur's remarks, that because the constitution was a compact between the states, one with the other, each must possess the right to construe it for itself, is deemed a very dangerous fallacy. According to our ideas, every government is the result of a compact, express or implied, by those who submit to it. In the states then the citizens who are the parties to this compact must respectively have the same right to construe it for themselves, and in a clear case of judicial usurpation must have the right to nullify the decision. Before admitting such consequences it will be well to test the soundness of the premises from which they flow. Now, as remarked in General Jackson's proclamation in 1832; it is precisely because it is a compact that the parties cannot depart from it. It is an agreement, a binding obligation, entered into for mutual benefit, and upon a mutual consideration between the respective parties, that they will respectively fulfil the obligations and perform the duties which it enjoins. Each party has an interest in its performance by the other, and therefore no party can withdraw from that performance without the consent of the others. To secure this performance, all the parties have agreed upon the creation of a distinct and independent tribunal to determine their controversies, not only with each other, but with the common or federal government, and have further agreed that such determination shall be final. That tribunal is not the agent or functionary of the federal government alone. Its members must be appointed with the advice and consent of a majority of the states, expressed by their representatives in the senate. They are the umpires chosen by the federal government and the states conjointly. The very first step which that tribunal must always take when a case is presented to it, is to inquire whether it be one of those that have been agreed on to be submitted to its determination. Now the pretence that one of the parties may under this agreement revise the decision of this tribunal, and decide for itself whether a given case was subject to its jurisdiction, is to nullify not only the decision but the agreement itself. But this it has no moral or political right to do. It would be a shameful violation of not only its faith, but an outrage upon all the other parties to the compact, which they would have the unquestionable right to resent and to punish. This then would immediately bring on a war. It is to avoid this very consequence that the tribunal created to decide these controversies is armed with power to enforce its decisions; and, fortunately, it operates not on states, but on individuals, on the citizens composing the people of the United States. If a state should, through its courts, imprison or otherwise punish an officer of the United States, for executing one of its laws, the persons committing the offence would be held responsible, and to enforce that responsibility the whole power, civil and military, of all the other states, would be put in requisition. Such are the guarantees of our constitution, and that they are effectual and will be called into action whenever occasion shall require, has already been proved in a case peculiarly calculated to test their value and strength.

"With these remarks Mr. Upshur's views on the doctrine of nullification are dismissed, although the subject is far from being exhausted. Many incidental matters have been purposely omitted with the view of engaging attention to the one single point involved. It is hoped that it will at least appear that the constitution of the United States is not the miserable rope of sand which the nullifying doctrine would render it, and that we do not hold our liberties our rights, and our property, by the feeble tenure of the fitful caprice of a state exasperated into fury by faction, or overawed by combinations of powerful interests.

"I have no disposition to follow Mr. Upshur in his remarks upon that clause of the constitution which allows representation to three-fifths of the slaves. It is enough to say that it was one of the results of a compromise without which no constitution could have been formed. Whatever doubts of its justice or its expediency may be entertained, every good citizen will observe and obey it in its integrity.

"He also remarks upon the omission in the constitution to provide for removals from office. He might have noticed a hundred other omissions of details which necessarily flow from express provisions, or which are supplied by the usages of the country from which we borrow our language and so many of our legal and political institutions.

"He regards as a 'striking imperfection' in our constitution the existence of the veto-power, and adds the right to forbid the 'people to pass whatever laws they please, is the right to deprive them of self-government.' Can this be the view of a statesman, or even of a lawyer? The veto

power, or the veto, does not forbid the people to pass what laws they please. How much more accurate and discriminating is the accomplished author of 'Democracy in America'! The veto is, as he represents it, an appeal to the people by a president, in defence of the independence which the constitution awards him. It is an appeal to the sober second thought of the representatives of the people, to re-consider the matter, and if two-thirds of both houses still believe the proposed bill to be just and constitutional, they may pass it notwithstanding the president's objections. It is a *suspension* veto, not an *absolute* one, as in England; and without it the president would long since have been stripped of every valuable function of his office, or rendered utterly dependent on the Congress. In fifty-five years that have elapsed since the power was granted, it has not been exercised more than ten or twelve times; and in every instance but one its exercise has been sanctioned by the people.

"The re-eligibility of the president from term to term is also complained of by Mr. Uphur, and he thinks proper to add, 'Presidents are now made, not by the free suffrages of the people, but by party management.' But he has not intimated that the ineligibility of a president would have the least effect in preventing party management. A president has the same means of choosing his successor—nay, greater means than of promoting his own re-election; and we have not found less party management during the second term to which our presidents are limited by the unwritten law of public opinion, than during their first term, when they were candidates for re-election. It is obvious that exigencies may arise, such as a foreign war, which would require indispensably the continuance in power of an existing administration, that it might carry out a plan of measures it had devised. The opinion that ordinarily the same person should not serve more than once in the presidential office is becoming prevalent: and a sound public sentiment will doubtless regulate the matter as well, if not better, than it could be done by a positive provision of the constitution.

"In conclusion, I ask leave to express a deep regret that Mr. Uphur could have found nothing in the constitution of his country worthy of his commendation, and that his ingenuity should have been employed in attempting to prove it utterly defective, as the foundation of a government of laws, incapable of restraining the oppressions of powerful states, and of affording the shelter and protection which it promised to every citizen. If these remarks shall have the effect of dispelling such a reflection upon the wisdom of that distinguished body of men who calmly and deliberately weighed every suggestion that sprang from their own minds, or was suggested to them by others; who investigated most carefully the very peculiar condition of the states, and understood their various local interests; who had felt the defects of the confederation in seven years of war and six of peace; and invoking the blessing and aid of Divine Providence, devoted themselves to their task with a fidelity, patience, and forbearance which have been the admiration of the world, and finally produced the first written constitution of government that ever emanated direct from the people themselves—a constitution venerated by the intelligence of all Europe, and enshrined in the hearts of all patriotic Americans; if that constitution shall have been in any degree cleared of the mists with which a partial, theoretic, and created imagination had invested it, I shall be thankful, and shall feel that neither my time nor the patience of the reader has been misspent.

"Albany, State of New York, June 14, 1845.

"(Signed) J. C. SPENCER."

CHAPTER XLII.

COMMERCIAL POLICY AND LEGISLATION OF ENGLAND AND AMERICA.

1. ENGLAND.

In order to comprehend, distinctly, the commercial policy, and legislation, of the United States of America, it will be indispensable to review, cursorily, the former, and recent, commercial policy, and legislation of England; and, it will then appear evident, that all the erroneous principles, which have degraded the commercial laws of America, bear a closely imitative affinity to those fallacious legislative commercial enactments, that have been maintained, since the first planting of her trans-Atlantic colonies, by England.

It would have been superfluous to advert to the former, and recent, commercial policy of England, were it not, that in the United States, and in the states of continental Europe, the *example of England, however unsound, is always referred to, by the advocates of the fallacies of legislative protection to national industry, ingenuity, and enterprise.* We state boldly, that England owes not her prosperity to that specious legislative protection, which America and other nations, extol as sagacious wisdom; or, as grasping maritime, and commercial, monopoly, on the part of the rulers, and lawgivers, of Britain. We repeat, that which we have frequently endeavoured to prove, and which happily, although the progress of conviction has been slow, is now very generally believed in the United Kingdom, and which will be, at no remote period, as generally entertained, and acted upon, in the United States,—but which foreign statesmen, and foreign writers, have very seldom admitted.—We repeat, that England has attained her prosperity,—not by the aid,—but in defiance, of her illiberal commercial system;—that England has owed her wealth, and power, and even her liberty, to her geographical position; to her many commanding harbours; to her fisheries, which originated her naval architecture and her fleets; to the vast power of production, yielded by her mines of coal and iron—*interstratified* for the coal to smelt the iron;—to the coal fields, generally, of the north, central, and western counties, and of Wales; to the coal and iron of the Clyde; to the salt mines of Cheshire, and Gloucestershire; to the copper and tin mines of Cornwall and Wales;—to her geological formation, from her granite, and limestone, to the chalk and sandstone;—to the variety, elevations, and depressions of her soils, rising, from the rich, low, lands of Kent, Essex, Norfolk, and Lincolnshire,—from the fertile valleys and plains of the south, and of the central counties, up to the pastures, on the heights of the South Downs,—on the hills of Devonshire and Somersetshire,—and up to the peaks of Derby, and to the mountains of Wales and Cumberland:—to soils and pastures, varying from the straths, and dales, of Scotland, up to the brows of the Cheviot and Pentland hills, and, north, to Bredalbane, to the Grampians, and to the highlands:—to the materials for building, which her stone, lime, and slate, quarries, and her clays, and her woods, have yielded;—to her oak, and other forests, which enabled her to build her war fleets, her merchant ships, her coasting vessels, and her fishing boats, until wood, when wanted, could have been brought to her ports, and ship yards, from afar;—to the very inconstancy of a climate, not liable to great heat, nor to intense cold:—and, superadded to these great natural advantages,—to those political, moral, and inventive elements, without which all other blessings would have been of minor power:—that is to say,—to civil liberty, under the constitution of England, founded on the Magna Charta, and strengthened, and secured by the Petition of Rights, the Habeas Corpus Act, the Bill of Rights, and the Act of Settlement:—to the perseverance, and industry of her people;—to the enterprise of her manufacturers, and the skill of her artisans; to the Bridgewater canal, and the canals which it origi-

nated ;—to the steam-engine, spinning-jenny, mule, and power-loom ;—to the adventurous spirit of her princely merchants ;—and, to the hardy intrepidity of her brave mariners :—To all these physical, and moral elements, does Great Britain owe her power, and prosperity,—her manufacturing and commercial wealth,—her ability, in the maintenance of her power and credit, to pay high taxation and high rents :—in despite of monopolies, protective duties, and dear food ;—in despite of all these *banes to national prosperity*—*banes to national progress*, which all countries, and none more so than the United Kingdom, and the United States, would act wisely by cancelling from their legislation.

Nor must it be forgotten, that England also escaped, on her own soil, the perpetual wars, which devastated, and prevented the manufacturing industry of, the continental states of Europe ; and although her taxation, and her public debt, have been carried to an incredible height, and her people compelled to pay far higher for maintaining existence, than those of any other country ; yet the genius and character of her people, and the natural advantages of the British islands, have enabled her, in defiance of Napoleon's wars and decrees—in spite of high taxation and dear food, to enrich herself, so far, as to bear all her war burdens. Her people were enabled to do all this, and to pay those high prices for bread and butchers' meat, which served to yield high rents to the landlords of the United Kingdom ;—not by restrictive legislation, but by home industry, and by maritime enterprise,—by a most profitable carrying-trade,—and, by throwing her manufactures, with great gain, into all the markets of the world : while the industry, of other European countries, was paralyzed by the insecurity, occasioned by desolating invasions.

In time of war, the harbours of England gave her military, and commercial, fleets, an incalculable advantage over those of continental Europe. Lying west of the continent, the prevailing winds, which prevented foreign ships from putting to sea, enabled those of the east coasts, of Britain, and Ireland, to leave their ports ; those of the west coasts being at the same time safe, from their position, as well as from the protection of our ships of war, cruising in, and off, the entrance of the English and Irish Channels. Thus, while the nations of the continent were disturbed in all their industrious pursuits, Great Britain enjoyed, from her geographical situation and commanding harbours, peace at home, and the opportunity of supplying the rest of the world with her domestic fabrics and the produce of her colonies. In defiance of the Berlin and Milan decrees, our manufactures found their way into the heart of Germany, and Italy ; while, even in France, we clothed the soldiers of Napoleon ! Thus, although taxed, beyond all possible calculation of endurance, the natural advantages of England, and the enterprise of her people, enabled her to withstand, in magnificent splendour, the convulsions that shook the continent to its foundation.

During the whole period of the last war, and since the days of Charles II., the navigation laws of England, and the system of high duties, or the prohibition

of the fabrics of other countries, similar to those manufactured in the United Kingdom, were, it is true, in full force: the only *valve* of elusion, escape, and circumvention of these laws, being the *contraband trade*.

But let us fully understand the condition of Europe, and of America, during that period.

For a great portion of the time which elapsed between the passing of the navigation act* and the peace of Utrecht, the continent of Europe was involved in

* We have never attributed our maritime greatness to the much extolled Navigation Act. The geographical position of England rendered her always, to some extent, a maritime power. The Danish invasions, and their settlement in various parts of Britain, increased the spirit of naval adventure, and tolls and customs were levied in the port of London before the *Angles* discontinued selling their children to foreign countries, which slave trade did not cease until the latter part of the time of Canute the Great. In the reign of King John, 1219, his fleet is said to have captured 300, and sunk 100 French ships near Helvoetsluis, being the greater part of a French fleet, sent by Phillippe Augustus against the Flemings; and we find a commercial and navigation treaty between England and Norway, as early as 1230, and a similar treaty with Flanders as early as 1274.

In 1302, the same year that the mariner's compass is asserted to have been invented, Edward I. passed a law, *Charta Mercatoria*, for the protection of *foreign merchants in England*; and the Cinque Ports were then compelled to provide him with fifty-seven ships. Two years after, he was enabled to *lend her biggest ships of war to France*.

During the fourteenth century we find that treaties of commerce and navigation had been concluded between England, and Portugal, Spain, Venice, Holland, Genoa, the towns of Flanders, Cologne, Pisa, and with Scotland and Finland. Edward III. had a great galley built for him at Nice. In 1393 England *lends* ships of war to Denmark. In 1483 the king of England prohibits the importation of foreign manufactures.

In 1512, the king formed a permanent royal navy. He had one ship of 1000 tons, and hired two ships of war to Venice to fight against the Turks.

The first navigation act on record is that of the 5th, Richard II., 1381, which enacted in substance, "That for increasing the shipping of England, of late much diminishes, none of the king's subjects shall hereafter ship any kind of merchandise either outward or homeward, but only in ships of the king's subjects, on forfeiture of their ships and merchandise, in which also the greater part of the crew shall be the king's subjects."

Henry VII. prohibited the importation of certain commodities, unless imported in ships belonging to English owners, and manned by English seamen. By the 5 Eliz. c. 5, foreign ships were excluded from our fisheries and coasting trade. The Parliament, in 1650, prohibited all ships, of all foreign nations whatever, from trading with the plantations in America, without having previously obtained a licence; and on the 9th of October, 1651, the Parliament of the Commonwealth passed the famous *Act of Navigation*, intended 'to promote British navigation, and to weaken or destroy the naval power of the Dutch.' The act declared 'that no goods or commodities whatever, of the growth, production, or manufacture of Asia, Africa, or America, should be imported either into England or Ireland, or any of the plantations, except in ships belonging to English subjects, and of which the master and the greater number of the crew were also English; that no goods of the growth, production, or manufacture of any country in Europe, should be imported into Great Britain, except in British ships, or in such ships as were the real property of the people of the country or place, in which the goods were produced, or from which they could only be, or, most usually were, exported.

The Dutch had but little home produce to export. The act of the Commonwealth not having been allowed to remain on the statute-book, the provisions of the Navigation Act were embodied, with some little modifications, in the act of 12 Car. 2, c. 18. It was broadly proclaimed, and considered to be, the *Charta Maritima* of England.

In the 14th of Charles II. a supplemental statute was passed, for obviating evasions of the previous statute. The latter statute prohibited all importation of a long list of enumerated commodities, under any circumstances, or in any vessels, whether British or foreign, under the penalty of seizure and confiscation of the ships and goods, from Holland, the Netherlands, Germany, Turkey, and Russia, were included in the 12 Car. 2, c. 18.

war, and manufacturing industry was consequently paralysed except in England. The fleets of England were generally victorious, and often enriched the country

Amongst the very few fallacies uttered by Adam Smith, is his admiration of the navigation laws. 'When,' says he 'the act of navigation was made, though England and Holland were not actually at war, the most violent animosity subsisted between the two nations. It had begun during the government of the long parliament, which first framed this act, and it broke out soon after in the Dutch wars during that of the Protector and of Charles II. It is not impossible, therefore, that some of the regulations of this famous act may have proceeded from national animosity. They are as wise, however, as if they had all been dictated by the most deliberate wisdom. National animosity at that particular time aimed at the very same object which the most deliberate wisdom would have recommended,—the diminution of the naval power of Holland; the only naval power which could endanger the security of England. The act of navigation is not favourable to foreign commerce, or to the growth of that opulence which can arise from it. The interest of a nation in its commercial relations to foreign nations is like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to sell as dear as possible. But the act of navigation, by diminishing the number of sellers, must necessarily diminish that of buyers; and we are thus likely not only to buy foreign goods dearer, but to sell our own cheaper, than if there was a more perfect freedom of trade. As defence, however, is of much more importance than opulence, the act of navigation is, perhaps, the wisest of all the commercial regulations of England.'—*Wealth of Nations*.

Mr. Mac Culloch, on this opinion, makes the following judicious remarks. "It may, however, be very fairly doubted, whether, in point of fact, the navigation law had the effects, here ascribed to it; of weakening the naval power of the Dutch, and of increasing that of this kingdom. The Dutch were very powerful at sea, for a long period after the passing of this act; and it seems natural to conclude, that the decline of their maritime preponderance, was owing rather to the gradual increase of commerce and navigation in other countries, and to the disasters and burdens occasioned by the ruinous contests the Republic had to sustain with Cromwell, Charles II., and Louis XIV., than to the mere exclusion of their merchant vessels from the ports of England. It is not meant to say, that this exclusion was altogether without effect. The efforts of the Dutch, to procure a repeal of the English navigation law, show that, in their apprehension, it operated injuriously on their commerce. It is certain, however, that its influence, in this respect, has been greatly over-rated in this country. *Excessive taxation*, and not our navigation law, was the principal cause of the fall of profits, and of the decline of manufactures, commerce, and navigation in Holland. 'Les guerres,' says the well-informed author of the *Commerce de la Hollande*, 'terminées par les traités de Ninégue, de Ryswick, d'Utrecht, et enfin la dernière par le traité d'Aix-la-Chapelle, ont successivement obligé la République de faire usage d'un grand crédit, et de faire des emprunts énormes pour soutenir les fraix. Les dettes ont surchargé l'état d'une soume immense d'intérêts, qui ne pouvoient être payés que par une augmentation excessive d'impôts, dont il a fallu faire porter la plus forte partie par les consommations dans un pays qui n'a qu'un territoire extrêmement borné, et par conséquent par l'industrie. Il a donc fallu faire enchérir infiniment la main-d'œuvre. Cette cherté de la main-d'œuvre a non seulement restreint presque toute sorte de fabrique et d'industrie à la consommation intérieure, mais elle a encore porté un coup bien sensible, au commerce de frêt, partie accessoire et le plus précieuse du commerce d'économie: car cette cherté a rendu la construction plus chère, et augmenté le prix de tous les ouvrages qui tiennent à la navigation, même de tous les ouvrages des ports et des magasins. Il n'étoit pas possible que l'augmentation du prix de la main-d'œuvre ne donnât, malgré tous les efforts de l'économie Hollandoise, un avantage sensible aux autres nations qui voudroient se livrer au commerce d'économie et a celui de frêt.'—(Tome ii. p. 221.)

"This extract, which might, were it necessary, be corroborated by others to the same effect from all the best Dutch writers, show that it is not to our navigation law, nor to

VOL. II.

with the spoils of the enemy; the Anglo-Americans carried on an active contraband trade in supplying the Spanish, and French, colonies, in America, and in the West Indies with British manufactures; although Spain and France prohibited any foreign trade or intercourse with their colonies. The periods of peace, which occurred between the treaty of Utrecht, in 1713, and the general peace of the world, 102 years afterwards, were of far too short duration for the nations of Europe to become great manufacturing states. The French, and Germans, and Flemings, were industrious; but the profligate extravagance of Louis XIV., the derangement of the public revenues under Louis XV. and his unfortunate successor,—the extortion of the farmers general, and the degraded state of the industrious, and productive, classes in France, were all ruinous to French manufactures, notwithstanding the genius and thrift of the artisans and manufacturers of Paris and other towns. To a certain extent, the silk manufacturers of Lyons, who always declaimed against legislative protection, formed a remarkable exception;* and this prosperity was favoured by the contraband trade in French silks, prohibited to be legally imported into England.

In Germany, including the Austrian dominions, the inhabitants were not sufficiently advanced in the arts, nor were the feudal, or military, systems of those

the restrictive regulations of other foreign powers, but to the abuse of the funding system, and the excess of taxation, that the decline of the commercial greatness and maritime power of Holland was really owing. Neither does it appear that the opinion maintained by Dr. Smith and others, that the navigation law had a powerful influence in augmenting the naval power of this country, rests on any better foundation. The taste of the nation for naval enterprise had been awakened, the navy had become exceedingly formidable, and Blake had achieved his victories, before the enactment of this famous law. So far, indeed, is it from being certain that the navigation act had, in this respect, the effect commonly ascribed to it, that there are good grounds for thinking it had a precisely opposite effect, and that it operated rather to diminish than to increase our mercantile navy. It is stated in Roger Coke's *Treatise on Trade*, published in 1671 (p. 36), that this act, by lessening the resort of strangers to our ports, had a most injurious effect on our commerce; and he further states that we had lost, within two years of the passing of the act of 1650, the greater part of the Baltic and Greenland trades. (p. 48.) Sir Josiah Child, whose treatise was published in 1691, corroborates Coke's statement; for while he decidedly approves of the navigation law, he admits that the English shipping employed in the Eastland, and Baltic trades, had decreased at least *two thirds* since its enactment, and that the foreign shipping employed in these trades had proportionally increased. (*Treatise on Trade*, p. 89, Glasg. edit.) Exclusive of these contemporary authorities, it may be worth while to mention, that Sir Matthew Decker, an extensive and extremely well-informed merchant, condemns the whole principle of the navigation act; and contends that, instead of increasing our shipping and seamen, it had diminished them both; and that, by rendering the freight of ships higher than it would otherwise have been, it had entailed a heavy burden on the public, and been one of the main causes that had prevented our carrying on the fishery so successfully as the Dutch. (*Essay on the Causes of the Decline of Foreign Trade*, p. 60, ed. 1756.)

* See Commercial Statistics. Part V. France.

countries favourable to manufacturing industry. Pasturage and agriculture were more immediately remunerative occupations; both the latter could be resorted to with little means; even by the soldier on *furlough*. Excepting some imperial and royal fabrics, producing some porcelain, glass, and other articles of luxury, all at an enormous cost;—excepting, also, the common woollens and linens, spun and woven, in most countries, by the peasantry, and common smiths' work, and the rough gear, and other articles made by millwrights, wheelwrights, and other ordinary artisans, there were but two manufactures, of any great importance, in all Germany, including the Austrian dominions. These manufactures were the linen fabrics, chiefly of Silesia, and the woollens, especially the fine cloths of Saxony. *Both attained perfection without any legislative protection: without the government prohibiting, or imposing high duties on, British or other linens or woollens: without, as in England, Scotland, and Ireland, on linens, as in France on woollens, excluding, by prohibitions and duties: without premiums on their exportation, or bounties on their being made, and used, for home consumption.* In England at one time imposed legislative impositions, or prohibitions, on both foreign linen and woollen manufactures. But, *cui bono?* Did either thrive in consequence? Certainly not. The wars of Frederick the Second, and the wars of Napoleon, which involved, in ruin, the peaceful homes, and industry, of Saxony and Silesia, rendered useless high duties on, or prohibitions of, the linens and woollens of those countries, in England.

The manufactures of Venice, and of Italy, were on the decline; and, as far as they entered into the general traffic of the world, were vanishing before the wars of the French revolution. Those of Flanders and Holland, also, had been paralysed by those, and previous, wars. The characteristic industry, and thrifty habits of the Dutch, and Flemings, did not abandon them; but the wars caused them to fail in producing fabrics, to compete with those of England.

Denmark, Sweden, and Russia, never had, before the peace of 1814, any manufactures of consequence. Portugal had none, except some jewellery, common trinkets, and the ordinary woven fabrics of the peasants, and the common articles, made by ordinary handicraftsmen. Long before the date of the unwise Methuen treaty, British woollens were worn, and used, in Portugal.

The imbecility of the Spanish monarchs, and administrators,—the bigotry of the ecclesiastics,—and the ignorance, and superstition, of the common people,—and the pride and haughty character of the aristocracy, rendered it impossible, at all times, for that country to manufacture in competition with England.

Anglo-America was not, nor, during the colonial sway, England would not allow her to become, a manufacturing country; and, although we have denounced that policy as arbitrary and unjust on the part of England, it would not have been profitable for America to fabricate articles, which would have been supplied

much cheaper by England, in exchange for the raw materials of the old colonies, and for the money realised by the trade carried on, illicitly, or otherwise, with the foreign West Indies.

With the exception of one article, therefore, there were none that it could have been even pretended, any other country was able to manufacture cheaper than England: that article consisted of silk in its various forms. Yet in Lyons, the chief, and most profitable, seat of the silk manufactures, the manufacturers always denounced legislative interference, and protection. In order to create magnificent silk manufactures in Spitalfields and Derby, French silks were absolutely prohibited until 1828; and, since then, high, and in many cases prohibitory duties, have been imposed, and are still imposed, on French silk manufactures. Now what has been the result of high duties, or prohibitions, in England? It is evident that the manufacturers of cotton, of wool, of metals, and of earthenware, never—or scarcely ever—looked up to high duties, and prohibitions, as protections, under which they should rise and flourish. They naturally considered the home demand, as a remunerating market; but they looked, also, to the markets of the world for their fabrics, and in which, if they did not manufacture as cheaply, as other countries, they must sell at a loss, and not at a profit. Can any French, or German, or American statesman, or legislator, or politician, or elector, or manufacturer, or shipowner, be sufficiently credulous to believe, that English manufacturers, would have persisted, since the days of Charles the Second, in fabricating goods, extensively, for supplying foreign markets, at a loss, because a monopoly of the home market was secured to them by the legislature? No! It is evident that whenever an article, of any importance, continues to be exported to a foreign market, it cannot be injured, by a similar article, manufactured abroad, entering into competition in the home market with the home-produced article: otherwise, the home-produced fabric could not be prepared for any market so cheaply as the foreign article,—and, consequently, would not sell in a foreign market, except at a loss: that is, at a price as low as a similar foreign article of equal quality.

It was attempted, in the United Kingdom, to rear and encourage linen manufactures, by prohibiting, or nearly excluding, by high duties, all foreign manufactures of flax, except linen yarns: the latter being required for the looms, the importation of them chiefly from Silesia. Bounties were also granted on the exportation of linens. The whole fallacious expedient proved a miserable failure. The forced manufacture, was never really profitable, but it was expensive. The Scotch linen-spinners, weavers, and bleachers, did not depend upon artificial, but upon the intrinsic cheapness of their fabrics, and upon economy: they considered the bounty on the exportation of linens a free gift, which they did not refuse to accept. The bounty upon linens, exported, was abolished, and the prices actually in-

creased. We could, without difficulty, prove, in all other cases of productive industry, as well as in regard to linen manufactures, that protection has been the bane of prosperity; and that competition, where the practical elements of production exist, is the true promoter of perfecting, and rendering profitable, and consequently prosperous, the works of labour and ingenuity.

Of all the fabrics of England, the silks of Spitalfields have been the most highly protected. Yet there are not so wretched a body of artisans, in the United Kingdom, as the silk weavers of that dirty, unhealthy, squalid district. The weather-beaten, daring, smuggler, has always despised the customs laws, and the coast guards, upon which depended the shrivelled, degraded, and feeble artisans, who have inhabited, and now inhabit, the miserable dwellings in the south-eastern London districts. If there had been no prohibitions, or high duties, the silk manufactures of Spitalfields, would have either never existed, to tempt men into wretched employment, or, they would have arisen, and prospered, on fair, practical grounds of moral, and natural, advantages, or principles; and, would have, consequently, entered into profitable competition with similar fabrics produced elsewhere. The weavers, and others, concerned as artisans, would have clean, and salubrious, places of abode,—they would have had a sufficiency of what we believe they have never had, either in the present generation, or in past generations,—that is, a sufficiency of wholesome food, and decent clothing. Instead of which, they were miserable when foreign silks were prohibited; they continue miserable, when there have been only modifications in the duties, so far as still to allow the smuggler ample profits, by eluding the duties, of from thirty to sixty per cent, on fabrics which are small in bulk compared with their great value. We have little hope of greatly ameliorating the wretchedness of the present generation of silk weavers in Spitalfields; but let us not entice, by the fallacious hypocrisy of high duties, another generation into the same, or similar abodes of wretchedness.

But whenever a diminution of duties upon foreign articles has been attempted, the manufacturers, of similar articles at home, have very generally, though not always, proclaimed, that ruin must be the consequence. We have never discovered that this effect has followed; and the only arts, or manufactures, which we have found not to prosper have been those, for which natural, and moral, elements were not favourable, and which, consequently, ought never to have been attempted. One drawback we have to observe,—that is, when the raw material has been highly taxed. When the duties were lately reduced on gloves, and manufactures of leather, on leather itself,—on rosin, by the distillers of turpentine,—all engaged in those fabrics assured the Board of Trade *that they would be ruined*. But they have all gone on, since then, prospering: so has experience, in England, proved it to have been, in all cases, where restrictions have been abolished,—and such will be the salutary effect of removing every duty, which has been imposed, under the assumption of *protecting* any branch of productive industry.

Were it otherwise, we should still consider it pernicious, and unjust, in a government, or a legislature, to tax any one class, or any one individual, at the expense of another.

We lay it down as a sound principle, that the *occupations of the people, commodities, and commerce, should not*, any one of the three, be taxed at the expense of the other two.

Since the year 1821 there have been great modifications in the British customs duties. The tariffs of 1842, and 1845, have constituted the greatest advances since Mr. Pitt's tariff in 1787, towards sound principles; but the existing tariff still includes the most pernicious rates of duties. Modifications of the navigation laws, have also been made.—*See Navigation and Customs Laws.*

As to the terms RECIPROCITY, and PROTECTION, the first, as well as the last term, has been fertile in fallacious arguments. The advocates of reciprocity contend, that we should not, in England, reduce our customs duties, if other countries do not diminish their import taxes. In plain language, that so long as other nations continue to do what is *wrong*, the British government, and parliament, should also maintain that which is *wrong*—that we should not do that, which, we know, to be *right*, because other nations do not, simultaneously, decide upon doing that which is *right*.

When the interchange of commodities, either raw or manufactured, between the inhabitants of a town or district, is subjected to no other restriction than, its just proportion, of the tax purely necessary to maintain its *security* and its *municipal order*, and to defray the expense of erecting and supporting *indispensable public buildings and institutions*, we find, in that case, practical *free trade* existing, within such town or district, based upon a common interest, which each individual will, from personal interest, struggle to maintain in its peaceful course.

A great nation is a great community, and all the nations of the earth, if the intercourse and trade between them were as free as between the individuals of a municipality, would then actually enjoy a peaceful and profitable system of common intercourse, based upon common interests, which it would be ruinous to any one of the nations concerned to disturb. The greater the commercial relations between the nations, the more disastrous would be the consequences of a war which would interrupt their reciprocity of interests. In proportion as this commercial and reciprocal interest has been of long standing, and of great extent, the greater would be the securities for the maintenance of peace, and the more disastrous would be the calamity, of continuing a war, between two or more countries so circumstanced.

All wars are, more or less, detrimental to the production of wealth, but a suspension of intercourse with a nation in which England finds but a trifling demand for her manufactures, would be of minor consequence, provided such war did not interrupt our intercourse with countries whose trade was of important

value. A suspension of intercourse, for example, between England and America, could, only with great loss to both, from the long duration, and enormous extent of their mutual intercourse, be possibly maintained.

A WAR OF MATERIAL INTERESTS, or, more properly speaking, of MATERIAL INJURIES—that is, a war of custom-houses or fiscal forts, with their garrisons of revenue officers and servants, has long been declared and carried on between most European nations. This warfare of interests, or injuries, has not ceased with the wars of bloodshed; and, if we may ever expect security against a recurrence of the calamities attendant on, and consequent to the latter, it will be, when we destroy the elements of the former,—in short, by the extension of free trade between all nations.

In the history of Europe we cannot discover a sovereignty, great or insignificant, that has not maintained its war of material injuries against its neighbours, during the usually considered state of peace, as well as when engaged in actual armed hostility.

There is no theory, probably, more flattering to princes and statesmen, or to a whole nation, than to institute measures which hold out independence of all other nations, by producing, and manufacturing, at home, all that is considered necessary and luxurious. It was easy to win a prince, and people, to adopt the application of so very plausible a delusion. Louis XIV., authorised M. Colbert to revise and establish* those fabrics which that monarch, by his *dragonades*, and by revoking the edict of Nantes, nearly ruined; while he, at the same time, drove the most skilful artisans from France into England, Holland, and Germany. M. Colbert, one of the most honest and patriotic ministers, of whom France can boast, directed his steadfast attention to financial reform; but, unfortunately for his country, he became dazzled with the fallacious principle of forcing home manufactures by monopolies, by premiums, and by imposing duties on those of other countries. He encouraged, by large bounties, and by exclusive privileges, manufacturers to settle in France; he protected them by despotic laws, without considering that he was taxing, and oppressing, the many for the benefit of the few,—that he was destroying that competition which creates cheapness, and perfection, in manufactures,—that his bounties, and duties, were taxes on the whole community, and especially on the agriculturists, who have ever since been oppressed by duties, nearly prohibitory, on the article iron: most necessary, for ploughs, harrows, and all other implements of husbandry. The system of Colbert,

* M. Colbert did not, however, establish the system of prohibition. The duties he imposed on imports, never exceeded ten per cent ad valorem. "He gave way to national prejudice," says Voltaire, "against the freedom of trade in corn." With the exception of his erroneous though patriotic views respecting manufactures, we are bound to admit the general wisdom of Colbert's administration. He had to struggle all his life against rivals and prejudices. The king was shamefully ungrateful to him. The aristocracy detested him, and his unpopularity was so great, when he died in 1683, that he was buried at night to prevent a riot.

however, became exceedingly popular. Its promised grandeur, flattered national vanity; and neither the monarch, nor the people, nor Colbert himself, understood its fallacy. Political economy was then unknown.

If we are to be governed by the lessons of experience, we are led to the following conclusions, on the taxing of commodities; whether levied, by an excise on the produce of home labour, or, by a customs, on foreign or colonial articles.

In order to obtain the greatest revenue, from taxes so imposed, the maximum of taxation will be the point, which will yield the most revenue, without that maximum ascending higher than the point, where it commences to reduce the consumption of the taxed article, in a greater ratio than the increase of the tax: or if the article taxed, be imported from, or similar to one produced in a foreign country, the tax must not, whether the object be revenue, or, the fallacy called, protection, be so high, as to leave any profit, exclusive of the risk, to the contraband trader.

The governments of nearly all countries have, probably as far back as their foundation, exacted tribute, or tolls, on the importation, or exportation, of commodities. The department of government, established to levy those taxes, was variously named. It was originally neither more nor less than a toll-house, erected at in and passes, or at landing-places, for collecting a tribute to be paid to the king, or prince. In progress of time, it grew up to be one of the most formidable departments of state,—by the sea-coast, by straits, by rivers, and by land. In Germany the name is still *Zoll*, or toll,—in France, *Douane*, in Italy, *Dogana*.

Commodities produced in one country, and imported into another country, to be used therein, can only enter extensively into consumption when the price is, as low as, or lower than, that which similar commodities can be produced at home.

The natural advantages, or disadvantages, of soil, climate, minerals, raw materials; geographical position, population, and the state of the arts and sciences, vary so greatly in one country from those of another, that some countries can produce some commodities, which others cannot, at equally low prices.

Commodities which a country does not produce at all, or only at high prices, can be consumed, by the non-producing, or dear-producing, country, with more advantage, and in greater quantity, if those articles are purchased at, and brought from, the places where they are to be found at the cheapest cost.

There is no country, with ordinary advantages, that does not produce some commodities so cheaply, as to find a market for what it produces, over its home consumption, in some other country; and, from which a different kind of article may be brought, with profit, in return.

This interchange constitutes international trade.

The more numerous, or more burdensome, are the restrictions, the more limited will this commerce be.

The fewer and lighter are the restrictions, the more extended will it prove.

All experience forms evidence of these facts.

If a nation were in a condition that its administration, and security, could be maintained without exacting that tax upon the value of commodities, which constitutes, not the whole national income, but, as usually levied, what is termed the indirect public revenue, then no duty whatever should be levied either upon articles produced at home, or upon those imported from foreign countries.

A public revenue being indispensable to defray the necessary public ex-

penditure, PROPERTY, whether in LAND, or in COMMODITIES produced at home, or imported from abroad, ought to be taxed, or made to yield up annually a just proportion of its rent, or profit, equal to the amount of the annual legitimate claims upon the nation. This proportion of the annual rent, or profit, of PROPERTY would then form the whole amount of equitable taxation; levied upon all that could equitably constitute the WHOLE NATIONAL INCOME.

But unless the revenue required be small, and the property taxed be such as not to render the collection of the tax inquisitorial, direct taxes will not be willingly submitted to. Yet they are submitted to in every state in Europe, though scarcely at all in the United States of America. But in levying a revenue, independently of direct taxation, if commodities which enter into home consumption are to be taxed, the equitable scale of levying this tax would be, to impose exactly the same duty upon an article, produced at home, as upon a similar article, imported from abroad.

There can be no other equitable scale of taxing commodities, whether produced at home, or imported from abroad, for domestic consumption.

The producer never pays the tax upon the article he produces; he must add, to make any profit by it, the duty, or tax, as well as his profit, to the cost of production, and then the consumer pays the whole, including the tax.

Whoever produces the article consumed, or wherever it is produced, the consumer pays, not the cost of producing it, but the whole market value of the article, including every tax upon it. The producer is, however, limited in his sales by the article he produces being highly taxed, whether at home or abroad, and his profits are also diminished by taxes, either at home or abroad, upon the article which he produces, as well as by the taxes upon every article which he consumes.

If the market value, of the home-produced article, be higher than the cost of a similar article, produced and imported from abroad, that difference of value arises from a restriction upon the admission, for consumption, of the cheaper article: either by actual prohibition, or by high duties forming practical prohibition, or by duties so high, that the foreign article can only be imported, and used, at prices equal to the amount, both of its natural market value, and also of the tax added, either for revenue, or to protect the article produced at home.

The difference between the natural price of an article imported from abroad, and the higher price of a similar article produced at home, is a tax imposed upon the whole community, with the view, for there can be no other, of putting the amount of that difference into the pocket of the producer of the home-made article. It is also a far greater burden upon the nation, which is further taxed to the value of so much of the labour, production, trade, and navigation, which the protective tax restricts.

If taxation upon articles of consumption be indispensable to meet the claims

VOL. 11

upon the public revenue: *then*, if a quarter of wheat imported from Prussia, Odessa, or elsewhere, pay a duty of eight shillings, or four shillings, when entered for consumption in the United Kingdom: in like manner, every quarter of wheat produced at home ought, on sound principle, to pay a duty of eight shillings or four shillings: or, if 112 lbs. of sugar imported from Jamaica pay a duty of fourteen shillings when entered for consumption, there should be no distinction made to the consumer, when he pays a tax on the sugar he uses, whether it has been produced in Bengal, Brazil, Cuba, Jamaica, Java, or elsewhere: or, if a gallon of distilled spirits *produced*, and *consumed*, at home be taxed ten shillings, in that case a gallon of distilled spirits whether *imported* from France, Holland, the West Indies, or elsewhere, ought to pay no more, when *consumed* in the United Kingdom, than a tax of ten shillings.

But although this mode of taxing commodities must be admitted equitable, there will always exist in the United Kingdom, as great a feeling against, as great a resistance to, taxing articles produced at home, as there would be to levy the revenue by direct taxation. *In fact, an excise, from the necessarily inquisitorial nature of its character, will always be odious among a free people.*

It, therefore, remains to be considered how far we can advance, in simplifying, or reforming a system of finance, in order, at the same time, to raise the necessary revenue; and, to impose taxes according to the most equitable distribution, and consistently with the least possible inquisitorial, or oppressive, mode of collection.

FIRST, AS TO TAXES UPON COMMODITIES.

The following statements will illustrate the revenue collected by the two great departments of these taxes, the *excise* and *customs*.

Excise.—There is no disputing that the permanent establishment of this, at all times to the people of England, odious means of taxation, owes its foundation to the long parliament, which “*assembled, and sat, with the resolute purpose of never dissolving until all illegal taxation was abolished.*”

Odious, however, as the excise has ever been to the people of England, numerous articles were subjected to it, from the time when it was established by the long parliament, and afterwards under William III., and from that time it was increased under every sovereign, down to the late war, when we find the list of excise paying articles to include, before the close of the year 1800,—

Auction duty and licences; beer, bricks and tiles, candles, duty and licences; coffee, cocoa-nuts, coaches, duty and licences; cyder, perry, and verjuice, coffee dealers, chocolate dealers; dealers in all other excisable articles; gold and silver dealers, glass, hides and skins, hops, leather, malt, manufacturers of all excisable articles, metheglin or mead, old malt, mum, cyder and perry duties continued; paper, parchment, printed calico, and all printed woven goods; salt, soap, shawls British, Irish, and foreign snuff, starch, sweets, or home-made wines, tea, tobacco vellum, wine, wire.

These forty-two heads of excise duties yielded, in 1802, a gross revenue:

In England, of	£15,517,290
„ Scotland	1,034,595
	<hr/>
Expenses of collection	16,551,885
	<hr/>
Net revenue	£13,718,659

Ireland had then its separate revenue and income.

Great reductions have been made in the number of exciseable duties since 1820, viz.;

In 1821, the excise yielded a gross revenue of 27,399,902*l*.

But this included the revenue upon the following articles transferred, reduced, or repealed, viz.;

Date.	ARTICLES.	Date.	ARTICLES.
1825.....	Cocoa and cocoa-nuts.	1832.....	Candles, ditto.
„	Pepper.	1833.....	Tiles, ditto.
„	Foreign spirits. } Transferred to the customs.	1834.....	Starch, ditto.
„	Wine.	„	Stone bottles, ditto.
„	Salt, repealed.	„	Sweets, mead, and home-made wines, ditto.
„	Coches transferred to stamps and taxes.	„	Tea, transferred to the customs.
1826.....	Wire, repealed.	1835.....	Glass, reduced.
1836.....	Cyder and perry, ditto.	1836.....	Paper ditto.
„	Hides and skins, ditto.	„	Soap, ditto.
1831.....	Printed goods, ditto.		

One of the great causes of grievance under the excise, is the necessary surveys or visits of the excise-officers, which, according to the report of the commission on excise management, subjected in 1835 to surveys or visits 587,917 establishments. The principal of which were:—

TRADES.	Number.	TRADES.	Number.
Brewers.....	42,715	Tea-dealers.....	104,974
Malsters.....	14,284	Brandy-dealers and retailers.....	84,338
Brickmakers.....	6,836	Beer-dealers and retailers.....	36,569
Tallowmakers—not for revenue, but as a check upon soap-bollers.....	2,925	Wine-dealers.....	36,034
Soapmakers.....	302	Glass-manufacturers.....	515
		Papermakers and stainers.....	745

Besides numerous others: as pyroligneous acid makers, rectifiers, glass pinchers, white-lead makers, snuff-mills, card-makers, University printers, corn-mills, and kilns (Ireland).

Since 1835, surveys on several of the above trades have been taken off. Those relieved from the excise surveys on tea, wine, beer, vinegar, starch, sweets, and home-made wine, and stone bottles, amounted to 262,191 persons. Licences to these were found to cost those in surveys, above 1*l*. each person, and the expense of surveys abstracted 72½ per cent from the amount of the licence-duty, the net produce was only 37½ per cent of the 401,004*l*. paid by the dealers.

The gross duty on vinegar was only 22,000*l*.; to obtain this trifling amount 72,970 persons were subjected to a survey of their premises.

The excise laws have been revised and very greatly simplified: and the present management of the department is intrusted to persons, who administer its duties with every leniency, consistent with the necessity of preventing fraud.

In 1832, the gross revenue levied by the excise amounted to 18,266,071*l.*, but this included tea, 3,509,820*l.* Tiles, starch, stone bottles, sweets, mead, and home-made wines, &c., abolished; and soap, paper, and glass, on which the duties were reduced to about one-half.

The produce of the excise has apparently decreased, but not, if the duties repealed, and those transferred to the customs and stamps are added to the account.

PRODUCE OF EXCISE DUTIES IN THE YEAR 1844.

In 1845 Sir Robert Peel abolished the auction duty, and the obnoxious duty on glass, amounting together to 953,013*l.*

Now, in order to render the excise as little oppressive—as free from inquisitorial interference with labour, manufactures, and trade, we consider that, whenever the revenue can be levied equitably, and less oppressively, from any other source, we should abolish all the remaining excise taxes: excepting the duties on distilled spirits, malt, and licences; and, the collection of the two first of these might be transferred to one *new and efficient revenue department*, to replace those of the existing customs, and excise, and which would collect the taxes on commodities. The third licences might be transferred to the stamps and taxes.

We would therefore abolish, 1. The duty on bricks, as bearing oppressively hard upon a laborious occupation, which affords, and would afford, much greater employment to the people; thereby giving employment to bricklayers, carpenters, glaziers, joiners, upholsterers, &c., &c., thereby diminishing poor-rates.

2. The hop duty is partially repealed; an excise duty upon wheat or apples would be as reasonable as upon hops. It imposes a tax upon particular productions which can only be cultivated in certain parts of England; and the poor-rates in Kent are much higher than in any other county.

3. Paper duties are also an obnoxious and unequal tax.

3. The post-horse duty is a tax upon intercourse, and highly objectionable.

4. The soap duties are absolutely a nuisance.

5. The game certificates are ridiculous as a revenue tax.

6. But with every exception that can be urged against the excise, we cannot dispense with its revenue, except by bold, equal, and just legislation in regard to other sources of taxation.

II.—REVISION OF THE CUSTOMS DUTIES.

With the exception of the duties and prohibitions imposed for protecting various interests, the duties increased since 1787, were augmented with the idea of adding the same proportion to the income then yielded, as to the duty increased. The fact of high duties either causing a diminution of consumption, or an increase of smuggling, seems to have been utterly unknown to the generations which had arisen in the Exchequer, and the House of Commons, during the reign of George the Third, and until the duties and prohibitions were grappled with after the year 1819, by Mr. Huskisson and others. The revisions made in the tariff of 1825, by Mr. Huskisson, 1831 and 1832 by Lord Althorp, and in 1833 and afterwards by Lord Sydenham, then Mr. Poulett Thomson (although those statesmen went as far as parliament would allow them, the ministers having been actually outvoted in an attempt to revise the timber duties), still left the customs duties and corn laws on a scale highly injurious to the nation. The reductions and abolitions of customs duties carried into effect by Sir Robert Peel in 1842 and 1845 formed the greatest reform made in the customs duties since 1787; but the defects even of the existing reformed tariff of customs duties are palpable. The scale of corn duties were not defended as revenue duties, but as a scale of protection to the British agriculturist. The scale could not be protective, without raising the price of bread to the consumer. If it did not intend this it meant nothing. If it did not intend to allow corn to be imported from foreign countries to be sold at *natural prices*—that is unrestricted competition prices—the scale was a fallacy. If it intended to be a scale of revenue duties, the duties should have been fixed, and not variable duties, veering with the weather, and with the season. But we are bound in justice to the minister, to say his difficulties were great, and that his moderate reduction of corn duties, aroused the great body of landlords into opposition against him.

The sugar duties are highly fallacious, both in regard to supply and revenue. There can be no equitable pretence for taxing sugar, or any other commodity, except for revenue. In eight months there has been a decrease of about one 1,000,000*l.* of revenue, occasioned by the recent alteration of the sugar duties. A duty of 18*s.* 8*d.*, or 2*d.* per lb. on all sugars, without reference to production or origin, would have yielded an increase in the year of about 1,000,000*l.*: difference of revenue about 2,000,000*l.*

Nor can the rates of timber duties be equitably defended. There has been a loss of 600,000*l.* occasioned by reducing the colonial timber duties to 1*s.* per load. If this duty had been reduced only to 6*s.* there would have been no loss of revenue; although the duty on foreign timber was reduced from 55*s.* to 25*s.* per load.

A STATEMENT of the Amount of Customs Duty received on the undermentioned Articles during the following Years.

* Exclusive of tea sold by the East India Company prior to the 22nd of April, 1834, the duty on which was paid to the Excise.

† Including copper at reduced duties.

Since the reductions in 1842 the duties on all the articles marked (a) have been abolished, as well as the greater number, about 600, of those classed as "Other articles" (c). On those marked (b) the duties have been reduced. The duties on animals, bacon, beef, pork, and hams, and most of the articles marked (c) will be completely abolished; the duties on corn, grain, flour, meal, rice, reduced to low nominal duties; and the duties on butter, cheese, tallow, rice, silk manufactures, &c., will be greatly reduced by Sir Robert Peel's great free trade measure for 1846.

If we examine the foregoing table we find that, with the exception of timber, metals, tallow, articles of food, which may all be considered as raw materials, and silk and gloves, which are manufactures, the revenue derived from all, with the exception of the first eight articles, is scarcely worth the expense of collection.

The total revenues of customs, deducting articles of food, amounted in 1844, to 22,041,418*l*. Deducting the revenue from articles upon which the duties have been abolished (about 1,400,000*l*), there remains 20,641,418*l*. Of this amount the eight articles first enumerated in the table yielded 19,520,326*l*, leaving a balance only for all other duties (except food), not abolished, of only 1,121,092*l*, and of this balance timber alone, at the reduced duties, yielded 916,606*l*. Nett balance of duties which we would propose to repeal (exclusive of timber) 204,486*l*.

If we therefore proceeded to tax commodities only upon the sound principle that, if an article should be taxed, the duty should be levied without any reference to its origin, let us examine the result as to the extent of oppression, and the inquisitorial mode of imposing and collecting the taxes.

Taking the revenue from customs and excise, for 1844, deducting the duties abolished, and corn, which it has been contended ought not to be considered an article taxed for revenue:

Customs	£21,841,743
Excise, deducting sums which we would propose transferring to stamps and taxes	12,460,062
Total	33,801,805

Now, upon the principle of taxing no article with reference to its origin—if we abolish all the articles included in the excise, with the exception of malt and distilled spirits; and all duties of customs, except the first eight in the table, we attain this object, and we render the excise infinitely less inquisitorial, and oppressive than it has ever been, since its establishment by the Long Parliament.

These abolitions accomplished, the next consideration is the amount of revenue to be received, taking the year 1844 as the basis of calculation, viz.:

The first eight articles under the customs	£19,520,326
Malt and distilled spirit	10,003,752
	29,524,078
Loss of revenue, supposing no increase of consumption	4,277,727
Total	33,801,805

Articles

1845

was paid

greater reduced. abolished; tallow,

The year 1844, however, yielded from malt and distilled spirits less than the average revenue, which has amounted and may be safely calculated upon to yield hereafter, say	£ 10,000,000
If we allowed the consumption of the eight articles of customs first enumerated to increase, even in a much less proportion than the increase of population since 1835, and look at the revenue derived from those articles at that period, and especially if we equalise the duties on sugar without reference to its origin, we consider it perfectly safe to estimate the revenues from the first-named commodities at	<u>21,500,000</u>
Total taxes on commodities	31,500,000

The collection of these taxes might be placed with great saving, which would at least add half a million to the revenue, under one revenue department efficiently and intelligently organised.

REVISION OF THE DIRECT TAXATION.

The next class of taxes are the direct taxes, with which we may include the income tax, viz.,

Assessed taxes	£4,385,067
Income tax	4,989,800
Total direct taxes	<u>9,374,867</u>

The most convenient adjustment of the present assessed taxes, would be to abolish them altogether, and substitute a direct tax upon the profits of all realised property. A revenue of from 10,000,000 to 12,000,000 might be raised by this simple and just method of direct taxation; and we are confident, from what we have observed in France, Austria, Prussia, and some other states, that its collection would in a short period be found less grievous to the inhabitants of Great Britain, than the existing vexatious and inquisitorial assessed taxes. But we are not blind to the parliamentary obstacles opposed to such an equitable tax, in substitution of the existing assessed and income taxes, and to provide for other taxes, which we propose to abolish.

One obstacle to our plan is the Land Tax Redemption Act of 1789—certainly the greatest financial blunder ever committed by a British statesman. The rottenness of one measure, of expediency, will ever be found to give birth to some other, unsound, expedient, to palliate for the time, what is only curable by a bold and sound remedy. Temporary expediencies, without any certain provision for future exigencies, occasioned the financial difficulties that called forth the Bank Restriction Act. The embarrassments in which this act involved the then Chancellor of the Exchequer, made him seize upon the most available expedient: *that* was to offer up for sale the fixed revenues of Great Britain. The history of this measure, as far as it has been carried into effect, may be usefully instructive, in showing how little advantage has been gained to the treasury, not only in proportion to the amount of revenue lost, but as regards the obstacle which

VOL. II.

the Land Tax Redemption Act has formed to a sound adjustment of the taxation of Great Britain. Had the land tax been completely, instead of partially redeemed, this difficulty in the way of financial legislation would have been greatly diminished; but as it is, it has formed a plea for not imposing any further tax upon land. But to this we are honestly bound to demur.

Another difficulty opposed to an equitable adjustment of the assessed taxes is, the circumstance of there being no such taxes levied in Ireland. The justice, again, of this exemption in one, and of liability in the other two, of the three united kingdoms, would be a task requiring powers of more than ordinary ability to defend. The justice of the exemption we deny. Taking the assessed taxes of Great Britain as we now find them, and considering them not only to be inquisitorial, and grievous, in the collection, but exceedingly injurious in their operation, being detrimental to industry, and to the employment of artisans, and the labouring classes, we consider the following revision as the most equitable, which may be adopted with the least objection in practice, and with the greatest safety to the exchequer.

The nett amount of land, and other assessed taxes, for 1843, was	£4,385,067
The nett amount of unredeemed land tax	1,139,148
	<hr/>
Nett amount of assessed taxes, exclusive of land taxes	£3,245,919

All the assessed taxes we propose to abolish, except the unredeemed land tax, and for the following reasons:

First.—THE WINDOW TAX, which yielded for the year 1843 . . . £1,545,281

Reasons for Abolition.—Being inquisitorial and vexatious in the assessment and collection; injurious to the health of the population; being objectionable as regards architecture, cleanliness, and restricting the employment in glass manufactures, of joiners who make window-frames, of glaziers and painters; and being a tax unequal in its assessment, as large houses do not require the same number of windows, in proportion to rents, as small and middle-sized houses. In the latter respect, the window-tax is particularly injurious.

Second.—SERVANTS, yielding revenue in 1843 . . . £200,251

Reasons.—Being a tax which limits the giving employment to servants, and by their not being employed, the occupation of others is limited, as cloth manufacturers, tailors, hatters, shoemakers, &c., for their clothing, &c. Every limitation of employment, whether of servants or others, limits industry, and increases the poor-rates.

Third.—CARRIAGES, in 1843 . . . £428,903

Reasons.—This tax is grievous, as it limits to a most injurious extent the employment of artisans and workmen, the great proportion of the value of carriages of whatever description, and their appurtenances, being the labour and skill of coach-builders, coach-spring makers, coach-smiths, carriers:

cloth-manufacturers, coach-painters and glaziers, harness-makers, and saddlers, &c. The employment of carriages creates also employment for coachmen, servants, and horses, &c., &c.

Fourth.—Horses for riding, &c., and other horses and mules . . . £376,001

Reasons.—By the assessed taxes restricting the employment of horses for riding, and other horses and mules, &c., it is easy to prove that this tax does, to an immense amount, limit employment; *exercise* for health and recreation is also greatly restricted by its expense. It is especially grievous as a tax on horses by the day. Countless thousands, who cannot afford to keep horses, on account of the expense of feeding and taking care of them, would hire horses frequently by the hour or day, were it not for the high duty on each time a horse is let. It is also injurious to curriers, saddlers, harness-makers, horse-cloth makers, blacksmiths, stable-keepers, sellers of fodder and oats, grooms, &c.

Horse-dealers £10,860

Reasons.—Tax unjust. Why not tax other dealers?

Dogs £151,857

Reasons.—Chiefly that of abolishing the assessed taxes, and as the substitution to be proposed will justify the abolition of this tax. It is also inquisitorial, and an often evaded tax.

Hair Powder £ 4,212

Armorial Bearings 67,137

Reasons.—The same as those for abolishing the dog-tax.

Game Duties £127,130

Reasons.—The same as those for abolishing the taxes on dogs.

Now the amount of the direct taxes, exclusive of the income-tax, proposed to be abolished, is about 3,225,000*l.*

We believe if all the grievances and inconveniences of the assessed taxes which we propose to abolish, and the convenience in collection of the taxes we propose to substitute, and the far less inquisitorial nature of raising the rents, or profits, of realised property, were but clearly understood by Members of Parliament and their constituents, that this great financial reform, which may appear, to little men, a bold measure, would be carried in the House of Commons without a division. In order to extend the direct tax upon property, we should, in equity, extend it to Ireland; and we could show that the people of Ireland would neither be treated, unjustly by such taxation upon the rents, and profits, of realised property, but that it would even be made beneficial to the improvement of that country, and to the condition of the inhabitants.

STAMP DUTIES.—This tax yields the treasury,

From Great Britain, about	£ 6,750,000
From Ireland, about	453,487
Total	7,203,487

The delay and restriction imposed by stamps upon trade and commerce, would justify the abolition of this tax altogether, but its amount is too important, in the existing financial condition of the United Kingdom, to permit such a measure of convenience, as well as relief, to the population. In some respects, it cannot be highly objectionable; deeds and other acts and documents of great importance, owing much of their security against fraud and forgery to the stamp, may reasonably be made to bear an expense for this security.

But knowing that the stamp-duty acts oppressively in many respects, we cannot pass it over without proposing some alterations.

The stamp-duty upon fire insurances is, annually, about double the amount charged for insuring property; this high duty, not only greatly prevents the insuring of property, but property, not insured, is frequently exposed to danger, by the firemen with their engines not exerting themselves to extinguish uninsured property, as they are directed by the companies who pay them, to take care, in the first place, to preserve the property insured.

On marine insurances, the stamp-duty is so heavy and pernicious, that a great part of the insurances which would otherwise be effected in England, are made at Antwerp, Rotterdam, Amsterdam, and Hamburg.

The stamps, therefore, on fire and marine insurances, now yielding about a million and a quarter, should be abolished.

Licensing stage-carriages and hackney-coaches appears a duty which ought to be abolished; it produces something above half a million for Great Britain.

Ireland is exempt from this duty on hackney-coaches and stage-carriages. The licence-duty on them in England is, however, not severely felt, nor very restrictive upon occupation; while it forms, to some extent, a guarantee for the faithful performance of the obligations of the proprietors of carriages and their servants.

The probate and legacy-duty yields about two millions sterling annually, for Great Britain; and for Ireland, only 66,032*l*.

It is a duty that may be evaded, by giving, during life, that which is bequeathed by the giver, only after his death, to the person who is to receive the legacy. The mistrust of the possessor, however, or the power that it gives him, while in life, does not often allow him to surrender his property until he is in a state unable any longer to meddle with it. So that while men continue to possess wealth, the treasury will receive a considerable revenue from the stamp-duty

on probates, and legacies. But we cannot defend the principle of making personal estate liable to, and exempting real estate from, this duty. This requires an equitable adjustment.

The duties on hawkers' and pedlars' licences, are grievous impositions upon itinerant dealers; nor do we believe that those licences are of any advantage in preventing fraud.

The stamp-duty on gold and silver plate is less objectionable than many others. It is, however, considered inquisitorial, and may not be a security as to the purity of the metals, for the stamp may very easily be forged. It yields about 100,000*l.*, of which about 2000*l.* only is paid in Ireland.

Taking, therefore, into consideration the exigencies of the treasury, we cannot well propose any diminution or abolition of the stamp duties, except upon,

Fire and marine insurances, which would leave an annual revenue from stamps of at least 1,200,000*l.*

All the stamp-duties, however, require an equitable adjustment.

THE POST-OFFICE.

We have, long before the time of the late reform in the post-office charges, been of opinion that, as the government should never possess a monopoly of trade, the post-office charges should be regulated, not with a view to revenue, but to the purposes of covering all the expenses, required to convey letters, and intelligence with security, and with rapidity.

The tax imposed upon the public, by the late post-office reform, is so very moderate, that while it still yields a considerable revenue, which we believe confidently will increase, no one can desire any alteration in the rate of postage.

Many of the recent arrangements of the government for conveying the mails have been so extremely beneficial, that great credit is due to the late and present administration. There are, however, many additional places, to which we would recommend morning mails to be despatched. This would be beneficial, and would be no expense to the post-office. The line of steam-packets established by the government contract with Mr. Cunard, for carrying the mails twice a month across the Atlantic, between Liverpool, Halifax, and Boston, has not only already more than repaid the outlay made by the government, but leaves every prospect of an increasing surplus of revenue. This fiscal consideration would be effectually secured, if such powerful steam-boats as those of the Liverpool, Halifax, and Boston line were to be despatched from Liverpool once a week during the eight spring, summer, and autumnal months, and once a fortnight during the months of November, December, January, and February.

The post-office would not only gain in revenue from this arrangement, but this frequent intercourse would form a great and rapid line of communication

between the whole of Europe and all North America, including all the countries from the Gulf of Mexico to Lake Superior. It would, in practical effect, be connecting Europe and America in common interests, by convenient, rapid communication, forming, in truth, a great roadway of intelligence and civilisation, and, with freedom of trade, the best means of increasing the commerce and prosperity reciprocally of, and maintaining peace and good faith between, the countries most interested. Under the old packet system, between Falmouth and Halifax, by the gun-brigs, exclusive of the deplorable loss by foundering of nearly all those dangerous vessels, with all their crews and passengers, the expense to government was about 40,000*l.* annually more than the receipts of postage. By the recent line of steam-ships, a balance will, we believe, at the end of one year after the first packet steam-ship sailed from Liverpool, appear to the credit side of the Atlantic mails.

Many other arrangements for carrying the mails by steam have been made by the treasury and admiralty. Traversing the world from England to the Gulf of Mexico, and then overland, to meet other steam-ships on the west of the Isthmus of Panama, to communicate over the Pacific to New Zealand and New Holland, —meeting other lines communicating with India, the Red Sea; and by crossing over the Isthmus of Suez, meeting the British mail steam-packets for England at Alexandria, we believe to be far from an impracticable delusion. The practicable, and not unprofitable, establishment of all this is not far distant; especially when we all know, how very lately the practicability of running steam-ships across the Atlantic was questioned, doubted, and denied. The recent contracts for multiplying the steam communication with India, and by a branch line from Ceylon to China, will be found of immense advantage. The steam communication recently extended to the Levant, is also important.

There is another great consideration, one of economy, too, in the end, in regard to large, strongly built, and powerful steam-ships—that is the readiness with which mail steam-ships of great strength and power may be turned into steam-ships of war; and that they may be *de facto* considered as such on the North American, West Indian, and Mediterranean lines. Now, if this mail steam-marine were to belong to foreign countries, British capital no doubt would, we believe, be that chiefly invested in them; yet in the event of war, they would not only, not be available to England, but they would in all the likelihood of probabilities, be turned against us. This, in the change which steam power must create in naval tactics, is a most serious consideration for the British government, and for the British public.

We would, therefore, recommend that any surplus revenue from the post-office should be applied to increasing the number of mail steam-ships.

PROPERTY AND INCOME TAXES.

These never have been, nor are they likely to be, taxes agreeable to the people:—especially the tax upon incomes not derived from realised property, that is, the tax on trades and professions. But when we have, from ordinary sources, a deficient revenue, we are bound to resort to extraordinary means, and we shall always do so, in order to maintain the national honour, credit, and dignity.

If a house tax, alone, would meet the deficient expenditure, after the abolition of the unsound, and inquisitorial, taxes we have enumerated under the heads of excise, customs, taxes, and stamps, we would prefer, infinitely, to discountenance rather than to have any recourse to, an income and property tax. But it is clear that the demand upon the treasury, to meet the expenditure, will not, for some years, permit the abandonment of the property tax. The next consideration is, can we render it more equitable, and less inquisitorial? We are convinced that this can be effected.

THE Income Tax collected in the Year ending the 5th of April, 1843.

	Income.	Tax.

PRO FORMA FINANCIAL SCHEME.

Having analysed the present system of taxation, we would propose the following simplification of the taxes upon the more sound principles which we consider practicable.

PRO FORMA VIEW of equalising the ANNUAL REVENUE and EXPENDITURE, presuming that the Excise and Assessed Taxes, and the Stamps on Marine and Fire Insurances, and also the Duties of Customs (except on eight articles) should be abolished, and adding Distilled Spirits and Malt, now under the Excise, to the Customs, and Excise Licences to the Stamps : abolishing all other of the Assessed Taxes, and the whole Excise Establishment.

<i>First.</i> Assuming the total annual expenditure not to exceed	£	
Revenue, necessary to meet this expenditure, to be raised as follows :—		50,000,000
I. From <i>uniform</i> duties on (1) Tea ; (2) Sugar and Molasses ; (3) Coffee and Cocoa ; (4) Tobacco ; (5) Distilled Spirits ; (6) Wines ; (7) Dried Fruits ; (8) Spices	£21,500,000	
II. Home Distilled Spirits	£5,000,000	} 31,500,000
Malt, whether made at home, or imported from abroad	5,000,000	
III. Stamps, leaving out Marine and Fire Insurances, and including Licences now under the Excise		7,500,000
IV. Unredeemed Land Tax		1,200,000
Deficit to be provided for during the first year		9,800,000
		<hr/> £50,000,000

This deficit to be levied, not by doubling, or rather more than doubling, the present income tax, but by the less inquisitorial and more direct and equitable plan of an annual assessment, in the pound, upon the annual value of all realised property. And surely 11,000,000*l.*, including the unredeemed land tax, out of 50,000,000*l.* of total taxation, forms but a small proportion of the total sum to be levied directly. But if we may form an estimate, founded on the experience of the past, the ordinary sources of revenue would annually increase ; and the amount of direct taxation would be proportionably diminished, at least so long as peace shall continue. Finally, the direct taxation necessary would, we believe, not embrace more than the unredeemed land tax and a house tax, equal to the present window and other assessed taxes proposed to be abolished.

We could also show that the customs, including the security and collection of the duties on malt and spirits, now under the excise, might be conducted at less expense than at present ; and that, at all events, an amount of expense equal to that of the whole present excise establishment might be saved to the country.

We could also equitably modify the stamp duties, so as to produce a much greater revenue. The interest on exchequer-bills might also be saved, as in

Prussia, by the exchequer-bill office issuing paper, not bearing interest, but being at all times a legal tender, as much so as Bank of England notes are now.

In our *pro formâ* view of fiscal reform, we have stated the deficit to be provided for during the first year at 9,800,000*l.*, or nearly five per cent on the annual rents and profits of all realised property. As we object to the present assessed taxes, and especially to the window tax, which ought to have been repealed simultaneously with the excise upon glass, we do not see how we can diminish the amount of our proposed property tax : except,

1. By substituting an additional tax on houses, in lieu of the *window tax*. But this substitution, though very far less objectionable than the window tax, would, if we are to have a property tax at all, be, however, a tax on houses greater than on other property.

2. By continuing other, though objectionable, duties. Timber is a raw material which, next to the essential food of man, ought to be admitted free from duty. But if the wisdom of Parliament will continue the timber duties, why not adjust these duties upon pure fiscal principles? The duties on foreign and colonial timber have yielded a revenue of 1,691,329*l.* In 1844, by reducing the duties on colonial timber to 1*s.* per load, which scarcely pays the expense of collection, the revenue from timber of all kinds, including deals, amounted to less than 1,000,000*l.* If we should persevere in continuing the timber duties, we should modify them to about the following proportions, viz. : a duty of 5*s.* per load on white pine timber from the colonies, and of 15*s.* upon the more valuable fir timber of the north of Europe; and upon deals, &c., in proportion. We take these two duties fiscally, but not on any other principle. By these low scales, with a proportionate higher duty on deals as a semi-manufactured article, we might levy one million annually of revenue from timber. Exclusive of revenue from corn, the duty on other articles yielding any revenue, and that are not to be abolished, are from copper ore, about 65,000*l.*, from tallow about 175,000*l.* Neither of the duties for revenue from these should be continued. The revenues from duties on corn, butter, and cheese, should all be abolished.

Therefore, we might save and realise, an additional revenue, as follows, viz. :

	£
1. <i>Save.</i> Interest on exchequer-bills due	500,000
2. <i>Realise.</i> From timber	1,000,000
From equalisation of sugar duties, a further sum of	1,000,000
	£2,500,000

This modification of our fixed scheme would reduce the property tax from 9,800,000*l.* to somewhat under 7,000,000*l.*, or to scarcely three-and-a-half per cent on all realised property without distinction.

The following table exhibits how our exports have increased to those countries upon the products and manufactures of which we have removed prohibitions, equalised differential duties, and reduced other duties. This appears especially with reference to our exports to France, the government of which has made no

CONCLUSION.

The foregoing proposed reforms in the financial legislation of the United Kingdom are bold. Yet, we consider them not only equitable but practicable. The tendency of public opinion is, yearly, increasing in their favour; and, considering the financial reforms made during the last few years, it will be impossible to impede the progress of equitably reforming our financial and commercial legislation.

In accordance, therefore, with the principles which we have laid down, that country which possesses average advantages from nature, and whose population possesses the greatest industry, ingenuity, and intelligence, will, if unfettered from legislative restriction upon labour, industry, agriculture, manufactures, navigation, and trade, become, in proportion to its extent, resources, and advantages, the most flourishing country in the world; or, at least as prosperous as any other country, with equal natural, and moral advantages, and legislating upon equally liberal principles.

We believe that the United Kingdom possesses all the requisite advantages to become that, more happy country, which nothing but false legislation prevents; viz., *far more independent, prosperous, and far more rich and powerful; and, with the whole population far less poor, far better employed, more fairly paid for their labour, better sheltered, clad, and fed, and more independent than that, at the present time, of any other country in the world.*

The agriculture, the manufactures, the shipping, the foreign and colonial trade, and the power of the United Kingdom might, in their present stage, be viewed as only in their infancy, instead of being considered as having, before now, attained manhood, if those sound principles of fiscal, and commercial legislation, which we have attempted to elucidate, but which are not new, were boldly taken up, in order to be carried by the Imperial Parliament.

II. COMMERCIAL LEGISLATURE OF AMERICA.

If England has made great advances, towards an equitable, and liberal system of commercial legislation, the Free and United States of America have actually retrograded from a system fiscally, and commercially, unsound in its origin, into the most wretched, and unenlightened schemes of customs duties: framed on the fallacious basis of protecting manufactures.

The numerous customs tariffs of the United States, would be discreditable to the most ignorant, and barbarous government; and, when we consider the intelligence of the citizens, and the condition of the country, when Congress first passed laws to impose duties on the importation of foreign commodities, we can only account for the blunders committed, by an hereditary attachment to the bad example of the mother country.

If any country was ever placed, by favourable circumstances, to legislate wisely, on sound commercial, and fiscal principles, that country was, and is, the United States of America.

In comparing the constitution, agreed to by this great republic, with that of the governments of other nations, we must remember, that when the Anglo-American colonies declared their independence, their moral and physical condition was very different from that of all republics, that had previously existed. The people were generally intelligent, and thoughtful; their habits frugal and

industrious; and, unlike the Europeans of South America, their ideas were free from religious intolerance, and from the thralldom, of ecclesiastical tyranny.

The abilities of the men, who directed their councils, were more solid than brilliant; practical rather than experimental. They adopted the constitution and laws of the then most free government in the world, as the groundwork of theirs; making a royal hereditary chief magistrate, a titled privileged nobility, and a national church establishment, the chief exceptions.

The vast regions of their territory comprehended soils yielding every production under heaven. They were watered by numerous navigable rivers, and streams; they abounded in useful woods and minerals. The sea-coast was indented with harbours; and the shores, rivers, and seas afforded plentiful fisheries. All these secured to them every natural advantage.

Their language and education enabled the people to enjoy all the benefits of English knowledge and literature, without the labour or expense of translation, or paying for copyrights. They had also the earliest advantage of discoveries in the arts and sciences, without the cost of purchasing the rights of patents.

With the good fortune, also, of being governed, at that solemn period of their history, by honest men, they had the experience of all ages and countries to aid their judgment.

Possessing, therefore, such extraordinary advantages, the Anglo-Americans were placed in a condition to avoid the blunders committed by nations, the governments and laws of which, growing up from their birth in the feudal ages, during centuries of bigotry, intolerance, tyranny, and ignorance, down to periods of liberality and intelligence, were consequently incompatible with equal justice, personal liberty, and sound principles.

But with all these lights and advantages to guide them, and having a free course before them, erroneous views of commercial legislation arose out of the very principles of independence, which they declared. Men of moderate ambition and frugal habits, like Washington and many others, entertained, with no doubt pure intentions, the idea, that in order to be perfectly independent, they must produce at home, every thing required for food, raiment, shelter, convenience, and luxury. This fallacious principle has hitherto prevailed, but we believe cannot be very long continued.

"As early as August 14th, 1774, a convention was held in Virginia, and resolutions were passed, signed by George Washington, Thomas Jefferson, and other statesmen, as follows:

"*We do hereby resolve and declare that we will not, either directly or indirectly, import from Great Britain any goods, wares, or merchandises, nor any of her manufactures. We will turn our attention from the cultivation of tobacco to the cultivation of such articles as may form a basis for domestic manufactures, which we will endeavour to encourage throughout this colony to the utmost of our abilities.*"

This declaration, it must be remembered, was directed against England in order to diminish her manufactures and trade, and consequently her means of

coercing the colonies, far more, than for protection to home manufactures. For there was no prohibition of goods from Saxony, France, or other countries, which could send manufactures to America.

It is also a remarkable fact, that when a virtuous and, in other respects, a great man, like Washington, delivers a fallacious, and, at the same time, a specious opinion, such a blunder will be a thousand times more pernicious, than if pronounced by a profligate in power.

General Washington, in his message, in 1789, recommended to Congress the encouragement of manufactures, in the following words:—

“Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures. The object is of too much consequence not to insure a continuance of their efforts, in every way that shall appear eligible. Ought our country to remain dependent on foreign supply, precarious because liable to be interrupted? If the necessary article should, in this mode, cost more in time of peace, will not the security and independence thence arising form an ample compensation?”

We do not, however, find Washington recommending high protecting duties, or prohibition. We would argue the contrary from the following maxims, in his parting address, on retiring from public life.

“Observe good faith,” says he, “and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and (at no distant period) a great nation, to give to mankind the magnanimous and novel example of a people always guided by an exalted justice and benevolence.

“In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations, and passionate attachments for others, should be excluded, and, that in the place of them, just and amicable feelings towards all should be cultivated.

“The great rule of conduct for us in regard to foreign nations, is extending our commercial relations, and to have with them as little political connexion as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

“It is our true policy to steer clear of permanent alliances, with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capitalizing of patronising infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is the best policy. I repeat it, therefore, let those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary, and would be unwise to extend them.

“Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favours, or preferences; consulting the natural course of things; diffusing and diversifying, by gentle means, the streams of commerce, but forcing nothing; establishing with the powers so disposed, in order to give trade a stable course, to define the rights of merchants, and to enable the government to support them, conventional rules of intercourse—the best that present circumstances and mutual opinion will permit; but temporary, and liable to be, from time to time, abandoned, or varied, as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favours from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favours, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or

calculate upon real favours from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard."

President Jackson, in his message as late as the 4th of December, 1838, on alluding to the prosperous trade of the country, and to the relations of America with foreign courts—observes

"This desirable state of things may be mainly ascribed to our *undeviating practice of the rule which has long guided our national policy,—'to require no exclusive privileges and to grant none.'*

"Nor have we less reason to felicitate ourselves on the position of our political than of our commercial concerns. They remain in a state of prosperity and peace—the effect of a wise attention to the parting advice of the revered father of his country (Washington) on this subject, condensed into a maxim for the use of posterity by one of his most distinguished successors—'*to cultivate free commerce and honest friendship with all nations, and to make entangling alliances with none.*'"

The first act for raising a revenue by impost and protecting manufactures was passed July 4, 1789; and advocated by James Madison and others, headed—

"Whereas it is necessary for the support of the government, for the discharge of the debts of the United States, and *the encouragement and protection of manufactures*, that duties be laid on goods, wares, and merchandise imported."

Mr. Jefferson, who is generally called the father of democracy in America, says, in his message, December, 1802 :—

"To cultivate peace and maintain commerce and navigation in all their lawful enterprises, and *to protect the manufactures adapted to our circumstances, are the landmarks by which to guide ourselves in all our proceedings.*"

And, in a letter dated January 9, 1816, says :—

"*We have experienced, what we did not before believe, that there exists both profi- gacy and power enough to exclude us from the field of interchange with other nations; that to be independent for the comforts of life, we must fabricate them for ourselves! We must now place the manufacturer by the side of agriculturist. The grand inquiry now is, shall we make our own comforts or go without them at the will of a foreign power? He, there- fore, who is against domestic manufactures, must be for reducing us either to a depen- dence on that nation, or be clothed in skins, and live like wild beasts in dens and caverns. I am proud to say I am not one of these. Experience has taught me that manufactures are now as necessary to our independence as to our comfort; and if those who quote me as of a different opinion, will keep pace with me in purchasing nothing foreign, when an equivalent of domestic fabric can be obtained, without regard to difference of price, it will not be our fault if we do not have a supply at home equal to our demand, and wrest that weapon of distress from the hand which has so long wantonly wielded it.*"

The specious and fallacious opinions of Messrs. Jefferson and Madison, and those afterwards of Mr. Alexander Hamilton prevailed. Yet Franklin and many others delivered sound maxims on commercial legislation.*

* Those who advocate restrictions on foreign trade, and those who are opposed to such restrictions, may, or at least ought to, derive instruction from the sound and clear opinions of Benjamin Franklin, the most practical statesman and financier ever born in the United States.

"If," he observes, "the importation of foreign luxuries could ruin a people, we should, probably, have been ruined long ago; for the British nation claimed a right and practised it, of importing among us, not only the superfluities of their own production, but those of every nation under heaven; we bought and consumed them, and yet we flourished and grew rich. At present our independent governments may do what we could not then do, discourage by heavy duties, or prevent by heavy prohibitions, such importations, and thereby grow richer; if indeed, which

The sound maxims of Franklin and others were unrespected: but we have little hesitation in saying, that the fallacious commercial system of the United States, would not have been maintained, were it not for the example, as well as the conduct, of England towards America, after the acknowledgment, by the former, of the independence of the latter.

If the governments of England and America had been wise, when, and after, the crown of England had acknowledged the independence of the United States, they might have established, between both countries, as valuable, and important a commercial system, based altogether upon liberal principles and mutual interests, instead of upon jealous prejudices—as could have been maintained, if the regions now forming the United States, and the people constituting the citizens, had continued, as provinces, and as subjects of the sovereign of England.

Under a liberal commercial system, Great Britain might have enjoyed every possible trading advantage with the United States, which could have been desirable, or at least just, to possess, if they had continued under British domination. All these peaceable, and profitable, advantages might, assuredly, have been

may admit of dispute, the desire of adorning ourselves with fine clothes, possessing fine furniture, with elegant houses, &c., is not, by strongly inciting to labour and industry, the occasion of producing a greater value than is consumed in the gratification of that desire.

"The agriculture and fisheries of the United States are the great sources of our increasing wealth. He that puts a seed into the earth is recompensed, perhaps, by receiving forty out of it, and he who draws a fish out of our water, draws up a piece of silver.

"Let us (and there is no doubt but we shall) be attentive to these, and then the power of rivals, with all their restraining and prohibiting acts, cannot much hurt us. We are sons of the earth and seas, and like Antæus in the fable, if in wrestling with a Hercules we now and then receive a fall, the touch of our parents will communicate to us fresh strength and vigour to renew the contest.

"Several of the princes of Europe, having of late, from an opinion of advantage to arise by producing all commodities and manufactures within their own dominions, so as to diminish or render useless their importations, have endeavoured to entice workmen from other countries by high salaries, privileges, &c. Many persons pretending to be skilled in various great manufactures, imagining that America must be in want of them, and that the Congress would probably be disposed to imitate the princes above-mentioned, have proposed to go over on condition of having their passages paid, lands given, salaries appointed, exclusive privileges for terms of years, &c.

"Such persons, on reading the articles of confederation, will find that the Congress have no power committed to them, or money put into their hands, for such purposes; and that if any such encouragement is given, it must be by the government of some separate state. This, however, has rarely been done in America; and when it has been done, it has rarely succeeded so as to establish a manufacture, which the country was not yet so ripe for as to encourage private persons to set up; labour being generally too dear, and hands difficult to be kept together, every one desiring to be a master, and the cheapness of land inclining many to leave trade for agriculture. Some indeed have met with success, and are carried on to advantage; but they are generally such as required only a few hands, or wherein great part of the work is performed by machines. Goods that are bulky, and of so small a value as not well to bear the expense of freight, may often be made cheaper in the country than they can be imported; and the manufacture of such goods will be profitable wherever there is a sufficient demand.

"The farmers in America, indeed, produce a good deal of wool and flax, and none is exported—it is all worked up; but it is in the way of domestic manufacture, for the use of the family. The buying up quantities of wool and flax with the design to employ spinners, weavers, &c., and form great establishments, producing quantities of linen and woollen goods for sale, has been several times attempted in different provinces; but those projects have generally failed, goods of equal value being imported cheaper. And when the governments have been solicited to support such schemes by encouragements, in money, or by imposing duties on importation of such goods, it has been generally refused on this principle,—that if the country is ripe for the manufacture, it may

secured, without the unavoidable expense of governing, restricting, or overawing them.

The trade, and navigation, of the United States might have, in like manner, derived every commercial, and maritime, advantage that could have been, upon the most liberal understanding, obtained from the mother country, without being subjected to the, possible, incapacity of a colonial office ; to the maladministration of colonial governors, to the interference of a British parliament, or to the obstinate exercise of the sovereign prerogative. We lament that there ever should have been causes to warrant separation ; and we grieve that, when that separation was effected, the family relations between both countries were not established upon more just principles, and more kindly feelings. Unfortunately, wisdom did not pervade the councils of either England or America, upon the subject of international trade—during so favourable an opportunity, as the peace of 1783, for establishing the foundation of a commercial system, between England and America, which must have attained an unexampled magnitude :—a trade, and navigation, which would have formed durable bonds of friendship, and of peace,—which the reciprocal interests of the people of the one, and of the other, country, would render too powerful for any government to violate.

In justice to Mr. Pitt, we must absolve him from any share of illiberality in regard to such a commercial intercourse with the United States.

be carried on by private persons to advantage ; and if not it is folly to think of forcing nature. Great establishments of manufacture require great numbers of poor to do the work for small wages ; those poor are to be found in Europe, but will not be found in America till the lauds are all taken up and cultivated, and the excess of people who cannot get land want employment.

"MAXIMS.—1. All food, or subsistence for mankind, arises from the earth or waters.

"2. Necessaries of life that are not food, and all other conveniences, have their value estimated in the proportion of food consumed while we are employed in procuring them.

"3. Fair commerce is where equal values are exchanged for equal, the expense of transport included. Thus if it cost A in England as much labour and charge to raise a bushel of wheat as it costs B in France to produce four gallons of wine, then are four gallons of wine the fair exchange for a bushel of wheat ; A and B meeting at half distance with their commodities to make the exchange. The advantage of this fair commerce is, that each party increases the number of his enjoyments, having, instead of wheat alone, or wine alone, the use of both wheat and wine.

"OF AN OPEN TRADE.—Perhaps in general it would be better if government meddled no further with trade than to protect it, and let it take its course. Most of the statute or acts, edicts, or arrests, and placards of parliaments, princes, and states, for regulating, directing, and restraining of trade, have, we think, been either political blunders or jobs obtained by artful men for private advantage under the pretence of public good. When Colbert assembled some of the wise old merchants of France, and desired their advice and opinion how he could best serve and promote commerce, their answer, after consultation, was in three words only—'*Laissez nous faire* ;'—'Let us alone.' It is said by a very solid writer of the same nation, that he is well advanced in the science of politics who knows the full force of that maxim, '*Pas trop gouverner* ;'—'not to govern too much ;' which perhaps, would be of more use when applied to trade than in any other public concern. It were therefore to be wished that commerce were as free between all the nations of the world as it is between the several counties of England ; so would all, by mutual communications, obtain more enjoyments. Those counties do not ruin each other by trade, neither would the nations. No nation was ever ruined by trade, even seemingly the most disadvantageous.

"Wherever desirable superfluities are imported, industry is excited, and thereby plenty is produced. Were only necessaries permitted to be purchased, men would work no more than was necessary for that purpose."—*Franklin's Essays.*

VOL.

In March, 1783, he brought into Parliament a bill for the temporary regulation of this intercourse.

By this bill vessels belonging to citizens of the United States were to be admitted into the ports of the West India islands, with goods, or merchandise, of American growth or produce; and they were to be permitted to export to the United States any merchandise or goods whatever; subject only to the same duties and charges as if they had been the property of British natural born subjects, and had been exported and imported in British vessels.

Violent opposition was made to this bill by the British shipping interest, headed by Lord Sheffield; and the Pitt administration being soon after dissolved, the bill itself was laid aside; and the power of regulating the commercial intercourse between the two countries was, by the succeeding administration, lodged with the king and council. By orders in council soon after issued, "American vessels were entirely excluded from the British West Indies; and some of the staple productions of the United States, particularly fish, beef, pork, butter, lard, &c., were not permitted to be carried there, even in British bottoms."

But we must admit, that if there were an absence of wisdom, in respect to commercial policy, in the general, as well as in each state government, there was manifested in the policy of England a far more lamentable spirit. When Mr. Adams, the United States minister at the court of St. James's, proposed, in 1785, to place the navigation and trade between all the dominions of the crown of England and all the territories of the United States of America, upon a basis of perfect, and liberal, reciprocity, this generous proposal was not only positively rejected, but he was given to understand that no other would be entertained.*

* The British government refused to accede to this or any other commercial treaty. Mr. Adams, in his letter to the American Secretary of Foreign Affairs (Mr. Jay), dated London, the 21st of October, 1785, referring to this subject, says—"This being the state of things, you may depend upon it the commerce of America will have no relief, at present, nor, in my opinion, ever, until the United States shall have generally passed navigation acts. If this measure is not adopted, we shall be derided; and the more we suffer, the more will our calamities be laughed at. My most earnest exhortations to the states, then, are, and ought to be, to lose no time in passing such acts."

Some of the states passed acts of the character recommended by Mr. Adams; but the others not concurring, they were unavailing, and were repealed.

This was one of the principal causes of the adoption of the present constitution. The acts passed by the first Congress that met under the new form of government, imposing the discriminating tonnage, and other duties, did not escape the particular notice of British statesmen. Their injurious effects, upon the navigating interest of Great Britain, were at once perceived by them. They saw that American commerce was no longer at the mercy of thirteen distinct legislative bodies, nor subject to the control of the king and council. As early as the 30th of September, 1789, therefore, the acts imposing those duties were referred to the lords of the committee of the board of trade.

The same committee was afterwards instructed to consider and report, "what were the proposals of a commercial nature it would be proper to be made by their government to the United States."

In January, 1791, this committee made a report, not only upon the subject of the American duties, but also upon the general subject of the commercial relations between the two countries. This report was drawn up by Lord Liverpool; and on the subject of a commercial treaty, espe-

Instead of acting wisely, and scorning an offer which would have been so beneficial to the empire, it was, by strong sovereign will, decreed, that the full measure of stringency, provided for in the Navigation Act, should be extended to the ships, the trade, and the citizens of the United States.

In consequence of this wretched policy, on the part of the then sovereign and ministers of England, the government and Congress of the United States, on the adoption of the constitution, passed also a Navigation act, which, as regards British trade and shipping, contained the same provisions as the navigation law of England.

In 1789 a tariff of duties on foreign goods was imposed, upon the principle of creating, maintaining, and protecting domestic manufactures.

As a revenue tariff, this tariff was based on an utter disregard of fixed principles. It may be said to have been continued until 1816—meantime, what was the conduct of the government?

Foreign countries always complained of the British navigation laws; but during the war the circumstances detailed, in the first part of this article, rendered any countervailing legislation, on the part of European nations, of little injury to British trade or shipping. This circumstance did not, however, apply to the maritime and commercial relations between the British empire and the United States of America. These considerations, led finally to the adoption of the reciprocity system, which was first argued, and advocated, as well as the system of countervailing and protective duties, by the celebrated Alexander Hamilton.

In the American navigation laws, countervailing duties were imposed, upon all foreign vessels trading to the United States, of half a dollar per ton duty beyond what should at any time be paid by American ships (the duty was soon after doubled); and, further, that goods imported in foreign vessels should pay a duty of ten per cent over and above, what was payable on the same description of goods when imported in American vessels.

These countervailing duties were directed against the navigation of Great Britain, and grounded on the same principles as the British navigation laws. Various

cially in reference to *navigation*, it states—"After full consideration of all that has been offered on the subject of navigation, the committee think that there is but one proposition, which it would be advisable for the ministers of Great Britain to make, on this head, to the government of the United States, in a negotiation for a commercial treaty between the two countries, viz.: that British ships, trading to the ports of the United States, should be there treated, with respect to the duties on tonnage and imports, *in like manner*, as the ships of the United States shall be treated in the ports of Great Britain."

The committee add, however—"If Congress should propose (as they certainly will) that this principle of *equality* should be extended to the ports of our colonies and islands, and that the ships of the United States should be *there* treated as British ships, it should be answered that this demand cannot be admitted, *even as a subject of negotiation*."

As to the advantages this circuitous trade would secure to British shipping, the same committee say—"Many vessels now go from the ports of Great Britain, carrying British manufactures to the United States; there load with lumber and provisions for the British islands, and return with the produce of these islands to Great Britain. The whole of this branch of trade," they add, "may also be considered as a new acquisition, and was attained by your majesty's order in council before-mentioned, which has operated to the increase of British navigation compared with that of the United States."

measures to counteract the American system were devised by the British government; and they failed upon the principle of our continuing to maintain in full force the navigation laws. To all intelligent men it became evident that we had engaged in an unequal struggle, and that the real effect of our policy was to give a bounty on the importation of the manufactured goods of other countries into the United States, to the gradual exclusion, both of our manufactures, and ships, from the ports of America. By a commercial treaty agreed upon between Great Britain and the United States in 1815, it was stipulated that in future *equal charges* should be imposed on the ships of either country in the ports of the other, and that *equal duties* should be laid upon all articles, the produce of the one country, imported into the other, whether such importation were effected in the ships of the one or the other, and further that no higher duties should be levied upon the produce of, or manufactures, of the one, or the other, than upon the produce or manufactures of the most favoured nation.

This is usually considered the first English reciprocity treaty: but such is not the fact. Our early treaties with Spain and Denmark were reciprocity treaties: in the trade with which countries England, however, had always contrived to obtain the chief advantages.

The Americans continue to complain that, as far as the British colonial trade is open to them, although the letter of the treaty is extended to them, that the full principle of reciprocity is not faithfully observed: inasmuch as a British ship can carry a full cargo, or part of a cargo, from a British to a colonial port,—discharge the whole, or part thereof, there; then proceed, reladen, to any port in the United States, and from thence carry a cargo, from the United States, to any other part of the world: or, a British ship may sail with a cargo in the first instance from a British possession to the United States, — then with another cargo to a port in the United States,—there re-lade, and then proceed to any part of the world; while an American ship can only import a cargo direct from the United States to a British port; and although an American ship may re-lade in England and sail to any foreign port, it cannot sail from England to any British possessions:—the East Indian territories excepted.

We admit this legal inequality; and we are convinced that it would be for the interest of both nations to place the trade of every port in the United States, and every port of the British empire, for the ships of both countries, upon the footing of an unrestricted coasting trade. There is no one could deny the immense increase of the carrying trade, which, under a liberal tariff, would follow. The shipping of both countries, instead of being injured, would benefit by such a truly great measure. If the countries, constituting the United States, had continued to this day British possessions, this would have been the present state of the trade and navigation between those countries and every other part of the British empire. To deny this, would be the same as saying it would be wise, commercial, policy to place the navigation between the different ports of the United

Kingdom, and of those of British America and of the West and East Indies, upon the same footing as the laws of trade and navigation with foreign ports. Why should not England and America now enjoy the most unrestricted mutual commercial advantages, when England has neither the expense nor perplexity of governing the American states, as colonies, and when the Americans have not the argument to urge of British subjection, interference, or menace?

Neither in England nor America has the consideration of this question received that grave, earnest attention, which the incalculable importance of international trade and navigation demands.*

* The late Mr. Condy Raguel, President of the Chamber of Commerce of Philadelphia, who thoroughly understood sound commercial and fiscal principles, quaintly introduces an article on the impolicy of countervailing duties, as follows:—

“In the twenty second chapter of the First Book of Kings, we read that Ahab, the King of Israel, invited Jehoshaphat, the King of Judah, to go with him to battle to Ramoth-Gilead, and that the latter consented to go, but at the same time expressed a wish that the former would consult his prophets as to the probable issue of the expedition. We further read, that in compliance with this request, Ahab consulted four hundred prophets, who assured him of victory; but that Jehoshaphat having doubts of the truth of their prediction, and suspecting, perhaps, that they were more of court sycophants and politicians than prophets, was not entirely satisfied with their reply. The following question will show the sequel:

“And Jehoshaphat said, ‘Is there not here a prophet of the Lord besides, that we might inquire of him?’

“And the King of Israel said unto Jehoshaphat, ‘There is yet one man, Micah, the son of Imlah, by whom we may inquire of the Lord; but I hate him; for he doth not prophesy good concerning me, but evil.’

“A dislike to hear the truth when opposed to one’s interests or prejudices, has always existed in the world, and may be considered to be the cause of a large portion of the mischievous errors which so universally prevail. The fault of Ahab, recorded in the chapter referred to, is the fault of nine men out of ten at the present day, who, instead of applying to the sources where truth is most likely to be found, with the honest intention of being guided by its dictates, endeavour to find false prophets who will prophesy unto them ‘smooth things,’ in order to confirm them in their preconceived errors, and minister to their ambition and avarice. Most especially is this true amongst the people of the United States, in reference to those two most important branches of knowledge, the science of government, and the science of political economy; and hence have arisen in the one case, parties which have no fixed principles of action, and in the other, a school of theorists, who propose to make a nation rich by the adoption of measures which can only produce an opposite effect.”

Mr. S. G. Arnold, in an article on the absurdity of prohibitions and protections, observes—

“This doctrine of saving money is one of those popular fallacies which are but too prevalent on the subject of *national wealth*. It should be remembered that commerce is an exchange of equivalents; an exchange which is equally beneficial to both parties. Now it makes no sort of difference whether this exchange is effected by means of money or of goods, as in either it is made *value for value*. If a man wants a hat more than he wants five dollars, he is none the poorer for parting with his money. The loss or gain, therefore, which would attend the home production of silk, must depend on something else beside the mere passage of money across the Atlantic.

“The hatter who should undertake to *save money* by making his own boots, would be regarded as a very poor economist; as every body knows that he could procure more boots by giving his undivided attention to his own business, and exchanging products with the bootmaker, than he could by dividing his time between boots and hats. So, as it regards the culture of silk—the *saving* to the country will depend on the fact whether more silk can be obtained by raising cotton, or wheat, or tobacco, than by cultivating mulberries and propagating silkworms. If it costs more to produce the silk than to procure it by exchange, it is clearly *no saving to the country*.”

The liberal commercial policy, which was proposed by Mr. Pitt, on the part of England, and of Mr. Adams on the part of the United States, having been defeated by an adverse party in Great Britain, the adoption of a counterpart of the British navigation law was adopted and enforced by the United States, and persevered in to this day. Some relaxations have been made, however, towards those countries which treat American vessels upon more favourable terms than they are treated in British ports. An unsound tariff, on protective principles, was adopted by America; and revenue cruisers were built to enforce the United States customs laws—all in imitation of England. Steam revenue-cutters have since then been established to guard the coast against smugglers.

“Another fallacy, quite as common as the last, is, that protection is necessary to encourage *domestic industry*. Thus we often hear it asked, when articles of luxury are brought into the country for the rich, ‘Why such men do not encourage *home manufacture*, and give encouragement to *domestic industry*?’ At first view, this position may appear quite natural. But let us examine it a little more closely. These articles have been procured abroad in exchange for American products, and are therefore just as much the result of American industry as if they had been produced at home. Who will say that the labourer, who, at the end of the week, exchanges his wages for a coat, has not procured it by his own industry just as much as if he had fabricated it with his own hand?

“Further: let us suppose that a wealthy farmer of New York chooses to clothe his family in the richest kind of silk. He could do it in two ways. He might, 1st, employ a dozen men to plant mulberries, and carry on the manufacture on his own farm; or, 2nd, he might set these men to ploughing his fields and producing a crop of wheat. The wheat thus raised, he would exchange with a southern planter for cotton, and this cotton he would exchange with the French merchant for silk. Who will say that the foreign silk is not just as much the product of *American industry* as though it had been made directly by the labourers of the New York farmer?

“But it is said, again, that although under a protective policy, we may be obliged at first to ask a higher price for our productions; yet having once introduced them, they will, in the end, become cheaper by competition than before, and that we shall finally reap a benefit from protection. To this we answer, 1st, that if the soil, climate, &c., present natural obstacles to the production of any article, no competition can ever make it profitable; and, 2nd, that all things being as favourable as in other countries, except labour and capital, still, as no competition can ever reduce prices below the cost of production, and as these circumstances must continue to influence the cost of production while they remain, the protective policy can have no favourable effect in lowering prices.

“In a country like ours, where every thing is progressive, an article which may not be profitably produced now, may be profitably produced at some future time, when capital shall have become more abundant, and labour less productive. To attempt to anticipate that time by means of the forcing system of protection can never prove advantageous to a country, as it must inevitably be attended with public loss, and by injuring the accumulating capital of the nation have a direct tendency to put off that time to a more distant day.

“Besides, it must not be forgotten that our situation, located, as we are, some thousands of miles from the most producing nations, is itself a natural protection, and that this protection is still further increased by the duties which are required for the support of government. These give us an advantage without the special interposition of the state, which is quite sufficient to stimulate our enterprising citizens to the pursuit of wealth in every mode of industry which offers the least prospect of success.

“In short, we are fully satisfied that the only sure guide to wealth and prosperity is FREEDOM, entire and unrestricted FREEDOM. It is, we think, a great mistake for

governments to compel men into this or that mode of production. We believe it to be no part of their duty ; and it seldom fails of leading, in the end, to disaster and ruin. Under a system of free trade, men are guided by the instinct of their own interests, and the cotton-planter, the wheat-grower, the manufacturer, the blacksmith, hatter, shoemaker, tanner, &c., all fix themselves in such situations as they believe will be most profitable to themselves ; and unless they greatly mistake their own interests, their choice will be best calculated to produce the greatest amount of products to the country.

"The best protection, then, is the protection of all men in their persons and property—the protection of society by means of general education—and the protection of our flag wherever it shall be unfurled to the four winds of heaven. It is such protection which gives nerve to enterprise, spirit to industry, and wing to commerce ; and which is destined to carry forward our country in that mighty and glorious progress which she has commenced with such Herculean and lofty strides."

The preambles of the two first revenue bills declared that they were imposed for protection and for revenue ; but the rates of duty did not really amount to a great restriction.*

The preambles, in fact, embrace no more than an erroneous deduction based upon the following passage, delivered by Washington on the 8th of January, 1790, in his second annual message, viz.—

"A free people ought not only to be armed, but disciplined ; to which end, a uniform and well-digested plan is requisite, and their safety and interest require that they should promote such manufactories as tend to render them independent of others for essential, particularly for military supplies. The advancement of agriculture, commerce, and manufactures, by all proper means, will not, I trust, need recommendation ; but I can not forbear intimating to you the expediency of giving effectual encouragement as well to the introduction of new and useful inventions from abroad, as to the exertions of skill and genius in producing them at home."

On January 15th, 1790, the House of Representatives adopted the following resolution :—

"Ordered, that it be referred to the secretary of the Treasury to prepare and report to this house, a proper plan or plans, conformable to the recommendation of the President of the United States, in his speech to both houses of Congress, for the encouragement and promotion of such manufactories as will tend to render the United States independent."

The secretary of the Treasury at that time was the celebrated Mr. Hamilton. A fallacy, if once entertained by a strong mind, enlightened upon most subjects, and by a character of unimpeached integrity, cannot fail to be pernicious. Such unfortunately was the effect of the unsound views taken with undoubted patriotism and honesty of purpose, by Mr. Hamilton. His views, although not at first adopted, were ultimately sanctioned.

On the 5th of December, 1791, his celebrated report on manufactures was presented to the House of Representatives.

* The preamble of this act declared : Whereas it is necessary, for the support of government, for the discharge of the debts of the United States, and the encouragement and promotion of manufactures, that duties be laid on goods, wares, and merchandises imported—

SECTION I. *Be it enacted, &c.*

Notwithstanding the declaration of the preamble, that one of the objects of the bill was the promotion of manufactures, the bill gives earnest of no such intention. The recital became a compliment of peculiar emptiness when it was discovered that the highest *ad valorem* duties were fifteen per cent ; and these were imposed, not on rival manufactures, but on such foreign luxuries as a sumptuary law, which was strongly allied with the prejudices of the revolutionary statesmen, might be supposed to operate. Ten per cent was the average duty on foreign manufactured goods ; and such a duty, it is manifest, savours far more of revenue than of protection.

in the manner prescribed by law, and at a rate not exceeding the par value." The assumed object was to raise the maximum of revenue, which a tax on imports would yield.

In his opening message, Mr. Madison strongly urged the duty of providing amply for the debt, collateral to which, in order to carry all other parties, he dwelt upon those arguments which "the necessities of the manufactures afforded."

On March 20th, 1816, the committee reported to the house a bill, which, with some amendments, was sanctioned by Mr. Madison, and included the celebrated protective tariff of 1816.

SECTION I. *Be it enacted, by the Senate and House of Representatives, in Congress assembled* That from and after the 30th day of June, one thousand eight hundred and sixteen, the duties heretofore laid by law on goods, wares, and merchandise, imported into the United States, shall cease and determine; and there shall be levied, and collected, and paid, the several duties herein-after mentioned; that is to say:—

A duty of twenty-five per centum, ad valorem, on hempen cloth, or sail cloth, (except Russian and German linens, Russia and Holland duck;) stockings, of wool or cotton; printing-types; and all articles manufactured from brass, copper, iron, steel, pewter, lead, or tin, or of which these metals, or either of them, is the material of chief value; brass wire, cutlery, pins, needles, buttons, button-moulds, and buckles of all kinds; gilt, plated, and japanned wares, of all kinds; cannon, muskets, fire-arms, and side-arms; Prussian blue, Chinaware, earthenware, stoneware, porcelain, and glass manufactures, other than window glass, and black glass quart bottles.

A duty of twenty-five per centum, ad valorem, on woollen manufactures of all descriptions, or of which wool is the material of chief value, excepting blankets, woollen rugs, and worsted, or stuff goods, shall be levied, collected, and paid, from and after the 30th day of June next, until the 30th day of June, one thousand eight hundred and nineteen, and after that day, twenty per centum on said articles; and on cotton manufactures, of all descriptions, or of which cotton is the material of chief value, and on cotton twist, yarn, or thread, as follows, viz.: for three years next ensuing the 30th day of June next, a duty of twenty-five per centum, ad valorem; and, after the expiration of the three years aforesaid, a duty of twenty per centum, ad valorem.

A duty of thirty per centum, ad valorem, on carriages of all descriptions, and parts thereof; leather, and all manufactures of leather, or of which leather is the material of chief value; saddles, bridles, harness; paper of every description, pasteboard, paper-hangings, blank-books, parchment, vellum; brushes, canes, walking-sticks, whips, and clothing ready made. And in all cases where an ad valorem duty shall be charged, it shall be calculated on the nett cost of the article at the place whence imported (exclusive of packages, commissions, and all charges), with the usual addition established by law, of twenty per cent on all merchandise imported from places beyond the Cape of Good Hope, and of ten per cent on all articles imported from all other places.

The following duties, severally and specifically:—On tarred cables and cordage, three cents per lb.; on untarred cordage, yarns, twine, packthread, and seines, four cents per lb.; on wax and spermaceti candles, six cents per lb.; on Chinese cassia, six cents per lb.; on cinnamon, twenty-five cents per lb.; on cloves, twenty-five cents per lb.; on cheese, nine cents per lb.; on clocculate three cents per lb.; on cocoa, two cents per lb.; on coal, five cents per heaped bushel; on copperas, one dollar per cwt.; on copper rods, bolts, spikes, or nails, and composition rods, bolts, spikes, or nails, four cents per lb.; on coffee, five cents per lb.; on cotton, three cents per lb.; on gunpowder, eight cents per lb.; on hemp, one dollar and fifty cents per cwt.; on iron or steel wire, not exceeding No. 18, five cents per lb., and over No. 18, nine cents per lb.; on iron in bars and bolts, excepting iron manufactured by rolling, forty-five cents per cwt.; on iron in sheets, rods, and hoops, two dollars and fifty cents per cwt.; on indigo, fifteen cents per lb.; on rolling, and on anchors, one dollar and fifty cents per cwt.; on iron in sheets, rods, and hoops, two dollars and fifty cents per cwt.; on shot manufactured of lead, two cents per lb.; on lead in pigs, bars, or sheets, one cent per lb.; on steel, one dollar per cwt.; on red and white lead, dry, or ground in oil, three cents per lb.; on steel, one dollar per cwt.; on cigars, two dollars and fifty cents per thousand; on spirits from grain, of first proof, forty-two cents per gallon; of second proof, forty-five cents per gallon; of third proof, forty-eight cents per gallon; of fourth proof, fifty-two cents per gallon; on spirits from other materials than grain, of first above fifth proof, seventy-five cents per gallon; on spirits from other materials than grain, of first and second proof, thirty-eight cents per gallon; of third proof, forty-two cents per gallon; above fifth proof, seventy cents per gallon; of fifth proof, fifty-seven cents per gallon; above fifth proof, seventy cents per gallon; on shoes and slippers of silk, thirty cents per pair; on shoes and slippers of leather, twenty-five cents per pair; on shoes and slippers for children, fifteen cents per pair; on spikes, two cents per lb.; on soap, three cents per lb.; on brown sugar, three cents per lb.; on white, clayed, or powdered sugar, four cents per lb.; on lump sugar, ten cents per lb.; on loaf sugar, and sugar candy, twelve cents per lb.; on snuff, twelve cents per lb.; on tallow,

one cent per lb. ; on tea from China, in ships or vessels of the United States, as follows, viz : bohea, twelve cents per lb. ; souehong, and other black, twenty-five cents per lb. ; imperial, gunpowder, and gomee, fifty cents per lb. ; hyson and young hyson forty cents per lb. ; hyson skin, and other green, twenty-eight cents per lb. ; on teas from any other place, or in any other than ships or vessels of the United States, as follows, viz. : bohea, fourteen cents per lb. ; souehong, and other black, thirty-four cents per lb. ; imperial, gunpowder, and gomee, sixty-eight cents per lb. ; hyson, and young hyson, fifty-six cents per lb. ; hyson skin, and other green, thirty-eight cents per lb.

Such was the first tariff, which was avowedly in principle protective ; a tariff which underwent modification afterwards, but which continued unsound in all its principles. With reference to the modifications of the tariff, Mr. Pitkin, a disciple of the protective system, observes:—

“ We would here observe that a *permanent duty* of thirty per cent *ad valorem* was imposed on various other articles ; and among these were hats, cabinet wares, and all manufactures of wood, carriages of all descriptions, leather and all manufactures of leather, and paper of every description. . . And to encourage the manufacture of domestic sugar, a specific duty of three cents per lb., was laid on all imported brown sugar.

“ Without adverting to the details of the various acts, afterwards passed, altering that of 1816, we would observe, that the duty on bar iron was raised in 1818, and that in 1824, the duties on woollens and cottons was revised ; and that by the act of that year, a duty of twenty-five per cent was laid on all woollen goods, the value of which should not exceed 33½ cents per square yard ; and after June 30th, 1825, a duty of 33½ per cent *ad valorem* was imposed upon those costing more than 33½ cents per square yard, with the exception of blankets and stuff goods.

“ Much more time, skill and experience are requisite in the various branches of the manufacture of wool, than in that of almost any other article, in order to meet, with success, more experienced foreign manufacturers.

“ In addition to the want of skill and experience, the American manufacturer of wool had to struggle with the countervailing laws and regulations of the British government, made with the express view of injuring this branch of American industry ; or, in the language of Brougham, ‘ to stifle it in its cradle.’ One of the countervailing measures of that government, was a reduction of the duty on imported wool. Prior to the American act of 1824, the duty on wool imported into England was sixpence sterling per lb. ; but soon after the passage of this act, this duty was reduced to one penny per lb. ; and for the purpose, as the debates in parliament show, of enabling the British manufacturer to send his woollens to the United States at a cheaper rate. And, not long after, with the same view, the duty on all wool, the price of which was less than one shilling sterling, was reduced to a half-penny.

“ The American manufacturer of wool,” says Mr. Pitkin, “ finding it difficult, if not impossible, to struggle against all these difficulties, again applied to Congress for aid ; and the celebrated Tariff act of 1828, was the result of this application—*an act, which has been declared not only highly oppressive to the great mass of the community, and injurious to commerce, but in direct violation of the constitution itself.*

“ By this Act, the minimum system was extended generally to woollens. All manufactures of wool, with some exceptions, the value of which did not exceed fifty cents the square yard, paid a duty on that sum, of forty-five per cent *ad valorem* ; these, the value of which exceeded fifty cents, but did not exceed 1 dollar the square yard, paid a duty of forty-five per cent *ad valorem* on the latter sum ; those between 1 dollar and 2 dollars 50 cents, the same duty on the latter sum ; those between 2 dollars 50 cents and 4 dollars, the same duty on the last sum, and those exceeding 4 dollars, fifty per cent *ad valorem*.

“ Unmanufactured wool was also subjected to a duty of four cents per lb. and forty per cent *ad valorem*. Additional duties were also laid upon iron, hemp, flax, and molasses ; and the minimum price of cottons was raised to thirty-five cents the square yard. The policy of this act was questioned by many of the merchants of this country, and its constitutionality by most of the people of the southern states. Unfortunately,

it was a compound made up by its enemies as well as its friends, and was not satisfactory to either.

"The time was now approaching, when the national debt, being nearly extinguished, the sinking fund, amounting to 10,000,000 dollars annually, would be no longer wanted. A new modification of the revenue system, would soon be necessary, to meet this new state of the financial affairs of this country. In this modification of the duties, the advocates of the protecting system, contemplated a reduction of the duties principally on those articles, which had not been, or could not be, produced in this country; while its opposers, on the other hand, insisted on an abandonment of the system itself, by making the duties on all imports about equal. With a view of obtaining information and enlightening the public mind on this great and interesting subject, two Conventions were held, in the summer and fall of 1831; one in the city of Philadelphia, called the anti-tariff or free-trade convention—the other at the city of New York, called the tariff convention. Both were composed of gentlemen distinguished for talents and experience; and their addresses to the people of the United States, and memorials to Congress, or as they may be called, essays expressive of their different views of the questions of political economy then agitated, were drawn up with no ordinary care and ability, and must always take a high rank among the state papers of that period. Under the influence of these conventions, Congress, after much debate, proceeded to modify the preceding tariffs, by an act of the 14th of July, 1832, to take effect after the 1st of March, 1833. It was called the Compromise Act; and the Tariff on a decreasing Scale."—*Pitkin's Statistics of the United States.*

This modified tariff will clearly appear to be based upon false principles: those of maintaining and creating home manufactures by a tax of at least from twenty-one and a half to twenty-nine per cent, exclusive of other charges, on the value of all the cotton, woollen, and linen manufactures worn by, and on most articles of iron and other metals used by, all the citizens of the United States.

To prove this beyond any shadow of dispute, the manufactured, and all other articles, not likely to compete with those of the United States, were either admitted duty free, or at very moderate duties.

The duties levied under the tariff, in existence previous to the 14th of July, 1832, were avowedly directed against the admission of foreign manufactures in order to protect those of the United States. The duties were:

	Per cent.
Cottons, white, valued per square yard under thirty cents, duty ad valorem	42½
Cottons, coloured, valued per square yard thirty-five cents	42½
Woollen manufactures, value less than eight cents per lb.	free
Woollen manufactures, value exceeding eight cents per lb.	54
Woollen cloths milled, all kinds, and flannels	50
Nails, value five cents per lb.	78
Bar iron, rolled	95
Ditto, hammered	35

The above duties were, by Mr. Clay's bill, to be reduced gradually every two years, until the whole are diminished to twenty per cent, ad valorem in 1842.

The following articles were to be reduced from high duties to the following:—

"Articles manufactured, as exceptions to the foregoing, and others on which the high or protective duties were levied in the old tariff, viz.: slops or made up clothing and hosiery, bags of wool and cotton, kendals of cotton and wool, blank books, waste cards, glass manufactures, pianofortes, artificial flowers, copper and brass manufactures, ironmongery, cutlery, tin and pewter wares, except tools, fire and side arms, carvings of all descriptions, mathematical instruments, fishing nets, brushes of all kinds, saddlery, shoes and boots, and nearly every article into which cotton, wool, hair, iron, copper, enter into the manufacture, to be admitted twenty-nine per cent maximum, twenty-three per cent medium, and twenty-one and a half per cent minimum, *ad valorem* duties.

"The following articles to be admitted at the enormous duties annexed:

"Paper for writing, printing, &c., fifteen to twenty-five cents per lb., or 7d. to 1s. per lb.

"Books printed in the English language, bound, thirty cents, or *1s. 2d.* per lb., unbound, twenty-six cents, or *1s. ½d.* per lb.

"Felt hats, eighteen cents the lb.

"Cordage, four to five cents the lb.

"All silk manufactures are admitted *duty free*, except silks from beyond the Cape, at ten per cent.

"Ditto raw, twelve and a half per cent.

"Ditto, sewing (or silk thread) twenty-six per cent.

"Sugar and distilled spirits are admitted at very moderate duties, which among the many other low rates and duty-free articles, prove how little fiscal considerations have entered into the principles of this tariff.

"Wines are also admitted, especially those of France and Germany, at little more than nominal duties; but discriminatory duties are imposed on those of Spain and Portugal.

"The following among many other articles are exempt from duty:—

"Acetates, acids nearly of all kinds, almonds, aloes, adhesive, and other plasters, ambergris, alabaster and marble figures, argol, barilla, bamboos, bark of all kinds; balls, dice, &c., of ivory; black pepper, bees'-wax; brass in plates, bars, and pigs; brimstone and sulphur, brazil-paste, bones, teeth, and manufactures of ivory, burgundy-pitch, bronze casts and busts, calomel, camomile flowers, camphor, cantharides, capers, cassia, castanas, catsup, chalk, chemical preparations and oils nearly of all kinds, cinnamon, cloves, cochineal, cocoa, and coffee, coculus indicus, copper for sheathing ships, coral, corks, corrosive sublimate, coryander seed, crude saltpetre, currants, cutlasses, daggers, dates, dirks, dolls of wax, if undressed, drillings of pure flax, epauettes of gold and silver, figs, filberts, filtering stones, fish-sauces, fisheries of United States, flax and hemp unmanufactured, frankincense, ginger, grapes, gamboge, gum-arabic and other gums, hair and wool, hair pencils, hats of palm leaf, hemlock, hemp and flax seeds, henbane, hones, honey, hops, horns of all kinds and tips, horn plates for lanterns, ink, ipecacuanha, India rubber, models of inventions: and machines, isinglass, ivory-black; ivory manufactured, except combs; juniper berries, lac-dye, lead ores, linseed cake, mace, madder and its root, macaroni and vermicelli, marble, Manilla hemp, preparations of mercury, mill-stones, models of all kinds, musk, nutmegs; nuts and berries used in dyeing, and of all kinds; oakum; oil of juniper, and all oils except fish-oils and perfumed oils; olives, opium, paintings and drawings, phosphorous, pimento, pipes of clay for smoking, prunes, putty, quicksilver, quills prepared, quadrants, raisins in jars and boxes and all others, rattans unmanufactured, reeds manufactured, rhubarb, rotten-stone, saffron, saltpetre, sago; skins and hides raw, and not made up or tanned; sextants, smalts, shellac, slate-pencils, sponges, spy-glasses, skins of all kinds for musical instruments, sumac, succory, tamarinds; tartar, viz., crude; tea, all kinds, imported in United States vessels from beyond the Cape of Good Hope; telescopes, tinfoil, tin in plates and sheets, tortoise-shell, tar from coal only, turmeric; vegetables, such as are used principally in dyeing and in composing dyes and drugs; vitriol blue, fancy wood of all kinds, wood or pastel, water colours, weld, and all articles used principally for dyeing, coming formerly under the duty of twelve and a half per cent.

"All other dyeing drugs and materials for composing dyes; all other medicinal drugs and all articles not enumerated in this act, nor the existing laws, and which are now liable to an ad valorem duty of fifteen per cent, all to be free, with a few exceptions at duties, from one to fifteen per cent the highest."

This tariff was not based upon sound fiscal principles.† It was a *blundering*

* Moderate calculations have rated the tax imposed by these tariffs on the whole community in order to encourage the manufacture at 48,000 dollars per annum. Goods of all kinds cost, in order to afford a home market for home manufactures, about 100 per cent above the fair price.

† The duties in this bill, though much diminished, were highly protective; *thirty per cent* on most woollen manufactures; on cotton manufactures twenty per cent. Mr. Pitkin defends the New England states as follows —

"We cannot but observe, however, that in the conflict of opinion which has arisen on this question, New England has been placed in a peculiar, and we may add, unfortunate situation.

compromise between monopoly and free trade. For the time, however, it removed all the perplexing and formidable difficulties of nullifying the Union. But, when its maximum duties were to come into operation, a new policy was adopted in 1842, carried by the spirit of party, much more than by the influence of the manufacturers. The result was the monstrous tariff of that year, printed in a previous part of this work.

A new tariff was prepared in 1844, upon a greatly diminished scale, by the Committee of Ways and Means, of which Mr. Mackay was chairman. The report which accompanied it was drawn up with great clearness and ability. It dwells forcibly on the evils to all classes of frequent changes in the tariff, as well as to the revenue, and reverts to the tariff of 1828, which even the advocates of the manufacturing interests styled the "Bill of Abominations."

The Committee "consider the lowest possible duty necessarily protective, to its extent, though it may be imposed with the single view to revenue, and may be a revenue duty, in the strictest sense of those terms. Commencing at this point, they think that the duty upon any given article should be considered, and is properly called, a revenue duty, so long as an increase of the rate will increase the amount of revenue derived from the importation of the article. This conclusion is based upon the simple fact, that, up to this point, the way to increase the revenue from the given article is to raise the rate of duty; and, although the degree of protection afforded by the duty is increased with the increase of the rate, yet that is an incident, and an unavoidable incident, and cannot change the nature and character of the duty, as a duty to raise, to increase revenue. Pass that point, and raise the rate of duty so high that its prohibitory action diminishes the amount of revenue collected under it, and its character is changed. The protection afforded by it is increased, while the revenue it yields is diminished; thus giving protection as its chief fruit; and revenue as the incident. Continue to raise the rate until the prohibitory action of the duty becomes perfect, all importations of the article cease, and no revenue is realised from the duty. Then, certainly, it cannot be considered or called a revenue duty, and its exclusive object must be protection. It must be, therefore, a protective duty, in the strict sense of the term; and, in the opinion of the committee, it is clearly entitled to that appellation from the point where its prohibitory became paramount to its revenue powers, and its increased rate ceases to increase the amount of revenue collected under it. This conclusion is founded upon the equally simple fact, that, at this elevation, the way to increase the revenue is to diminish the rate of

She has been accused of being the author and supporter of the system; and on that account, towards her have been directed some of the keenest shafts of reproach and calumny. Whatever of good or evil there may be in the system, New England was not its author.

"In 1816, it is well known that she voted with the south, and against New York, New Jersey, Pennsylvania, and the western states, on the great question of the extent of protection to be afforded to the manufacture of cotton.

"The committee who reported the tariff bill of that year, recommended a duty of thirty per cent on all imported cotton goods; and on the question of reducing it to twenty-five, nearly two-thirds of the New England members in the house voted for its reduction, while out of forty-three members from New York, New Jersey, and Pennsylvania who voted on the question, nine only were in favour of it. The question of reduction was therefore, carried by the New England votes, joined with those of the south.

"On the tariff of 1824, the votes of New England states were fifteen for, and twenty-three against, it, while those of the states of New York, Pennsylvania, New Jersey, Kentucky, and Ohio, stood seventy-eight for, and nine against; and on the tariff of 1828, the votes of the former were sixteen for, and twenty-three against, and those of the latter stood eighty for, and only six against it. Some of the New England votes on the tariff of 1823, were probably governed by the details of the bill."

duty. The power 'to lay and collect duties' has been carried beyond its object of obtaining revenue 'to pay the debts, and provide for the common defence and general welfare of the United States'; and a reduction of the rate of the duty only will restore the exercise of the power to that object. The understanding of this committee, therefore, is, that, while every duty is necessarily protective to its extent, yet every duty is to be considered, and is properly denominated, a revenue duty, the rate of which yields the largest amount of revenue from the importation of the article upon which it is imposed, or the rate of which is below that point, so that an increase of the rate would produce an increase of the revenue; and that every duty is to be considered, and is properly denominated, a protective duty, the rate of which is so high as to diminish the amount of revenue derived from the importations of the article upon which it is imposed, and the rate of which requires to be reduced to increase the revenue. And when a given amount of revenue is desired to be raised upon any given article of importation, the committee regard the lowest rate of duty which will effect the result as the true and legitimate revenue duty.

"This will show what description of a law the committee would denominate a revenue, and what a protective tariff; and to what extent they would give the one character or the other to any given law. The protection afforded under a revenue tariff, thus defined, they would denominate incidental; and, if the revenue be required, they cannot see that the consequent protection can be a subject of grievance or complaint on the part of any interest. The protection afforded by a protective tariff, according to the same definition, is direct and positive; operates to diminish or destroy the revenue; and constitutes, as the committee believe, an exercise of the power to lay and collect duties entirely indefensible in principle and policy, and often furnishing broad ground for just complaint. The terms 'perfect protection' the committee understand to be synonymous with perfect prohibition; and, therefore, entirely destructive of all revenue, because prohibitory of all importations.

"The terms 'free trade,' in their broad sense, the committee understand to be equally inconsistent with the idea of a revenue from imports, because they suppose that trade, which is perfectly free, cannot be burdened with any duties not imposed to furnish facilities to itself. In this sense, they are assured the phrase is understood in some portions of the country, when used in connexion with legislation of this description; and the advocates of a system of free trade are supposed to be also advocates of a change of one system of revenue from duties on imports, to internal taxation, direct and indirect. The committee believe that, if any hold these views, much the largest class of those who call themselves friends of free trade do not attach to the terms any such extent, and only intend to be understood, by the free trade they advocate, so much freedom of trade as may be enjoyed under a system of duties arranged with sole reference to a supply of the public treasury, and the rates established as low as the economical wants of that treasury will allow."

* Mr. Mac Duffie's speech in the senate is remarkably clear and conclusive on the tariff questions: those of his opponents, especially that of Mr. Evans, most fallacious yet specious. They consider that, as manufactures have arisen in the United States, it must be owing "to protection." The story over again of the pyramids of Egypt existing; consequently the fertility of the valley of the Nile.

Mr. Mac Duffie insists that the tariff law of 1842 should be called an act to *prevent*, instead of an act to *provide* revenue. He says: "It is entitled an act to *provide* revenue—falsehood and deception stamped on the very front of it. A bill to *provide* revenue! which lays an average duty of a hundred per cent on several descriptions of imports that would come into the United States, to the amount of about 40,000,000 dollars annually, under a revenue duty of twenty per cent, but which are now totally excluded by these enormous duties. I will not go into details, but state generally, that the duties on window-glass range from ninety-four to a hundred and seventy-eight per cent, making an average of more than a hundred and fifty per cent on all descriptions; that the duties on many varieties of manufactured iron, embracing most of the tools and implements necessarily used on every farm and plantation in the country, are from seventy-five to a hundred and fifty per cent, and more ad valorem; that the duty on raw iron, an article in universal use, is 112½ per cent; that the duty on all those cotton manufactures which come under the *minimum* principle of valuation (and which would be imported annually to the amount of 10,000,000 or 15,000,000

"Mr. Benton, in the senate in 1844, takes a middle ground, and sets out with a contrast of the two systems of duties—that of duties imposed wholly for revenue, and that of duties imposed for the mixed objects of protection and revenue. In this con-

dollars, under a revenue duty of twenty per cent), range from sixty to a hundred and fifty per cent on their true value; that the duty on salt—an article of universal use, consumed in almost equal quantities by the rich and the poor, and extensively consumed by every farmer, not only for family purposes, but ten times more extensively for his live stock—is eight cents per bushel (the article costing only five or six cents in Liverpool), equal to 133½ per cent on the original cost."

He says—"A large proportion of the prints and calicoes consumed in the United States, and of which every female of the middle and poorer classes is a consumer, cost, in Manchester, from six to twelve cents a yard; but they are charged with duties of from seventy-five to a hundred and fifty per cent by the ingenious contrivance of an artificial and false valuation."

We now come to a very interesting part of Mr. Mac Duffie's argument, that relating to "discrimination." After denouncing the tariff law of 1842 as an imposition of unrighteous burdens, not for purposes of revenue, but for taking money out of the pockets of one class of the community and putting into those of another, he says—"An idea has got abroad—and I am sorry to say that many of the friends of free trade have been deceived and betrayed by it, as many patriot-soldiers have been by the holding out of false colours—an idea has obtained currency that, although you cannot impose duties for any other purpose but that of revenue, yet you may rightfully impose revenue duties, 'with a wise discrimination for the protection of domestic manufactures.' This is part of the new system of tactics to which the manufacturers have found it necessary to resort. They say one thing, and mean another. What do they mean by 'a wise discrimination?' Obviously a discrimination that will exclude imports and diminish revenue. 'A wise discrimination?' Pray, what is your whole system of revenue—levied, as it is, exclusively from duties on imports—but an enormous discrimination in favour of the manufacturers and 'their confederates, and against all other classes?'"

Mr. Mac Duffie next takes up the allegation that protection means the protection of domestic against foreign industry; and he argues at much length, and gives numerous illustrations, to prove that protection induces a conflict between one branch of domestic industry and another, and that there can be no competition between foreign industry and domestic industry, where there is only an exchange of labour for labour. He regards the protective policy of the last twenty years as destructive of half the commerce of this country, comparing what it is with what it would be but for this policy; and yet what is left has to sustain the government, yielding all its revenue as it has done from the beginning; but it is now rapidly verging to extinction, for Europe will not, and cannot, purchase the exports of this country, if its productions will not be received in exchange. While thus steadily advancing the suicidal policy of destroying commerce, 9,000,000 dollars is asked to support a navy, the only use for which is the protection of commerce. "Against whom," exclaims Mr. Mac Duffie, "is a navy required to defend our Atlantic commerce? Against pirates? Against foreign power? Against Great Britain?—for she is the raw-head and bloody-bones always invoked to silence opposition against wasteful expenditure. As a producer of the great staple on which it (commerce) is mainly founded, I declare, with all solemnity, that I regard the Congress of the United States, as it has been constituted for the last twenty years, as more to be dreaded than all the powers of Europe combined, and all the pirates that ever infested the ocean."

He combats a doctrine, promulgated some years ago, and still held up in favour of protection, that it is necessary to relieve 's country from the payment of a tribute to foreign nations. It was first broached by Mr. J. Q. Adams, when president, in one of his messages to Congress. Now what is the fact? The tribute is paid to home manufacturers, not to foreigners, for the latter offer to supply their goods at from twenty to forty per cent cheaper than the home manufacturer, and in exchange too, for the productions of American labour.

"When," observes Mr. Mac Duffie, "you have prohibited the importation of manufactures from Europe, you will have totally destroyed the demand for six-sevenths of our cotton, rendering it utterly valueless."

Mr. Mac Duffie's object was to restore the Compromise Act, and his bill was as follows:—

SEC. 1. *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That so much of the existing law imposing duties upon foreign imports as provides that duties ad valorem on certain commodities shall be assessed upon an assumed minimum value, be, and the same is hereby, repealed; and that said duties be hereafter assessed on the true value of such commodities.

SEC. 2. *And be it further enacted,* That in all cases in which the existing duty upon any imported commodity exceeds thirty per centum on the value thereof, such duty shall hereafter be reduced to thirty per centum ad valorem.

trast, he divides the half century during which the government has existed, into two periods of twenty-five years each; the tariff laws of the first period, having revenue for the object, protection being the incident; and those of the second period, having protection for the object, revenue being the incident. A striking difference he points out in these two systems; first, in the amount of duty imposed, and next, in the mode of assessing or computing it. Before the late war, the rate of duty, whether *ad valorem* or specific, was always moderate, never prohibitory, and uniformly laid on with a view to the production of revenue. Since the war, duties have often been exorbitant or prohibitory, and rendered still more exorbitant by the mode of computing them on the assumption of fictitious values.

"During the first of these periods, harmony and happiness prevailed among the industrial classes; the career of labour, in all its branches, was progressively prosperous; the word *tariff* was never heard of; the incidental protection afforded by the absolute wants of the government, was quietly and silently encouraging the growth of manufactures as fast and as steadily as could be justified by the wants of the community; and the great mass of the people was in the happy condition of Molière's country gentleman, who had talked prose all his lifetime without knowing it. To those good old times, Mr. Benton wished to return; to the object and structure of those good old laws, and to the enjoyment of their happy consequences. He disapproves of the *horizontal principle* of the Compromise Act, and is not, therefore in favour of recreating that law; he avows himself in favour of discriminating between articles of luxury and necessity, making luxuries pay highest; he is for discriminating between articles made at home, and those not made at home, putting the highest duties on the foreign rivals of our own products; but he insists on some limitation, in effect, that no duty, whether *ad valorem* or specific, shall exceed 30 or to 33½ per cent. This discrimination and incidental protection he had always advocated. It was admitted by good free trade authorities, as was proved by the South Carolina legislative report of 1828, by the Philadelphia free trade address of 1831, and by the Virginia democratic address of 1839. In a word he was for returning to the system which had worked so well anterior to the late war, when the specific duties rarely exceeded a fourth, or at most a third of the value, and when the *ad valorem* duties ranged only from five to fifteen per cent. The specific duty of 33½ per cent to which he is willing to go for protection, is, in effect, he argues fifty per cent; for the expences of importation being 7½ per cent, and the importing merchants' profits and charges 12½ per cent, these sums, besides the 33½ per cent duty, have to be added to the first cost abroad, before the imported article can come into our market in competition with the home-made article, and on this issue, he and his friends are willing to go to trial before the country.

SEC. 3. *And be it further enacted*, That from and after the 31st day of December next, all duties upon foreign imports shall be reduced to twenty-five per centum; and, from and after the 31st of December, 1844, to twenty per centum *ad valorem*.

It was defeated by the following resolutions, introduced by Mr. Evans:—

Resolved, That the bill entitled "A bill to revive the act of the 2d of March, 1833, usually called the Compromise Act, and to modify the existing duties upon foreign imports in conformity with its provisions," is a bill for raising revenue within the meaning of the 7th section of the 1st article of the Constitution, and cannot therefore originate in the Senate: therefore

Resolved, That it be indefinitely postponed.

In support of his assertions, with regard to the comparative revenue of the two periods, Mr. Benton submitted the following tables:—

TABLE I.—Low Revenue Duties, from 1791 to 1808.

YEARS.	Population.	Income.	YEARS.	Population.	Income.
	number.	dollars.		number.	dollars.
1791.....	2,000,000	4,369,473	1800.....	2,800,000	9,060,932

1830.....	12,866,000	21,922,391	31,500,000				

The third table shows that the same ratio of revenue for population which existed in Mr. Jefferson's time, would, in the present day, yield an income for the treasury of 46,250,000 dollars. Mr. Benton says—'These tables speak a language which cannot be misunderstood, and they place in the strongest contrast the working of the two systems during the two periods; the beauty and advantages of one, and the deformities of the other, standing out in the boldest relief. In the first period, amplitude of amount, steadiness of the product and regularity of the increase, strike every beholder. In the second period, all this is reversed; confusion and madness seem to reign in our treasury. Sometimes millions too much—then not half enough. Sometimes surpluses to be distributed—then deficits to be supplied. Giving away one day—begging or borrowing

the next. Always a feast or a famine—never the right thing. Our poor treasury became a balloon—sometimes soaring above the clouds—then dragging in the mud—now bursting with distension—now collapsing from depletion.

"Again, after quoting Mr. Jefferson's last annual message to Congress, showing the prosperous condition of the treasury at that time, Mr. Benton says—'Such was the working of the low duty system—ample and steady revenue—no loans, no taxes, no paper money—33,500,000 dollars of public debt paid in eight years—a surplus of 14,000,000 dollars left in the treasury—the result, not of lands exchanged for paper, but the regular result of steady revenue, strict economy, and hard money. How different from the state of things under the high duties of the present day! Instead of paying above 30,000,000 dollars of public debt in eight years, we have created near 30,000,000 dollars in four years; instead of a surplus in the treasury, there is a deficit; loans and taxes are the order of the day; and, to crown all, we have an illegal and fraudulent issue of federal paper money currency, issued by executive power, and sustained by bank alliances. Such is the difference between the working of the two systems after twenty-five years trial of each !'

"With regard to the second proposition, that of the superiority of low duties over high duties, in relation to their effect upon agriculture and commerce, Mr. Benton takes the ground that these two interests go together, the state of the one being an index to the other. The exports make the imports, and agriculture is at the bottom of the whole. He contrasts the exports of the two periods—that before the late war, and that succeeding the war—with a view of showing that, in consequence of the high duty system, with a population of 18,000,000, in 1842, we exported less than we did in 1807, with a population of 7,000,000, under the low duty system. In support of this, he adduces the following tables:—

TABLE of Foreign and Domestic Exports from the United States, from 1791 to 1807.

YEARS.	Exports.	Population.	YEARS.	Exports.	Population.
1791.....	dollars. 19,012,641	number. 4,000,000	1800.....	dollars. 70,971,780	number. 6,340,000

1830.....	73,840,508	12,866,000			

"As there is, in making out tables of this kind, an apparent intricacy, so far as regards re-exports, it is proper to give Mr. Benton's explanation, that, in comparing the two periods, it makes no difference whether the re-exports are included or not. He says, 'I fully understand the nature of our neutral position during the wars of the French

Revolution, and the effect which that neutrality had in promoting imports for re-exportation. We re-exported much from 1791 to 1807, and have re-exported exactly as much from 1817 to 1844! Mexico, South America, and the West Indies, have opened new markets for our re-exportations; and it is a fact, proved by the custom-house returns to be the same; 520,000,000 dollars are, as near as I can ascertain from the most careful research, the amount of re-exportations for each period; so that, in a comparison of the foreign trade in each period, they may either be both omitted or both included, as the speaker pleases. Finding them included in the tables, I choose to use them in that way. The table of revenue has already settled the question in favour of the large amount of foreign goods which remained in the country for consumption. Duties were only paid on the amount so remaining; and a revenue of 16,000,000 dollars, or 17,000,000 dollars from customs, with the low duties then paid, show that the importations for home consumption were greater then than now.

"Assuming the average exports of the present day to be 100,000,000 dollars, Mr. Benton says, take from this sum the article of cotton, now forming two-thirds of our exports, and contrast the balance with that of the exports of 1807, when cotton formed an inconsiderable item, and *an immense falling off will be apparent in our exports of agricultural products.* Had our exports not been checked by the high duty system, affecting imports, and had they been allowed to increase, in the ratio of the increase of population, to that increase would have been superadded the item of cotton; so that, when all this is considered, Mr. Benton says, 'the decline of agriculture, and of the foreign commerce founded upon it, becomes appalling. Leaving out cotton, and the agricultural exports are less now than they were in 1808. They then amounted to 48,000,000 dollars; they only amount to about 100,000,000 dollars now, of which cotton is near two-thirds.'

"In relation to imports, Mr. Benton says, 'After this exposition of our exports under the protective system, it is hardly necessary to trouble the Senate with any detailed view of our imports during the same period. They are obliged to partake of the same character, and such is the fact. They have risen as high as 190,000,000 dollars; they have fallen as low as 64,000,000 dollars; and they have plunged and floundered backwards and forwards at all amounts between these two wide extremes. They are now at about 100,000,000 dollars, which is less than they were at thirty years ago.'

"Mr. Benton next proceeds to his third proposition—that manufactures were flourishing and prosperous before the late war; and would, under the old system of duties have so continued. To show their standing at the close of his first period of twenty-five years, he refers to the census of 1810; in which, however, he states, many imperfections occur, which induced Congress to pass a joint resolution on the 19th of March, 1812, directing the secretary of the treasury, Mr. Gallatin, to have the returns digested and perfected. For this purpose Mr. Gallatin employed Mr. Tench Coxe, of Philadelphia, an eminent advocate of manufactures and a writer of twenty-seven years' standing. He took two years to verify his statements, and after great labour and care presented them. From his report Mr. Benton read several passages, in which it appears that the manufactures of the United States in 1813, with a population of 8,000,000 amounted to 200,000,000 dollars, advancing at the rate of twenty per cent per annum. Here, says Mr. Benton, 'are two striking facts, that manufactures had been advancing at the rate of twenty per cent, and that they amounted to 200,000,000 dollars in a population of 8,000,000. Population was only advancing at the rate of three per cent per annum; foreign commerce was only increasing at a moderate rate; agriculture was steadily but moderately advancing; but manufactures were going ahead of all other interests, advancing twenty per cent per annum, before protection was invented, and before politicians had taken it into their heads to become their patrons. Mr. Coxe, too, in his report, compares the condition of manufactures at that time, with their condition in England at the nearest approximate period of time in which its population was at the same standard; and the result is, that England proper, in 1787, having a population of 8,500,000, had manufactures, after taking 500 years to bring them to the perfection they then had attained, amounting to 266,000,000 dollars. Here was a striking fact, that manufactures of the United States, under low duties, affording but incidental protection,

within thirty years after the country had achieved its independence, had nearly overtaken England, which required 600 years to reach the same goal. Mr. Coxe's work further proves, that cotton factories were well established and able to stand alone, in 1810, in Rhode Island, Connecticut and Massachusetts; so it was with regard to all other branches of manufactures, with respect to which the statistical details gleaned by Mr. Coxe are most abundant. From his report Mr. Benton quotes very copiously in support of his general proposition. Two passages, in italics, Mr. Benton thinks deserve marked attention. They are as follows:—

"The facility of retaining and steadily extending this valuable branch (the manufacturing) of the national industry, is manifested by its very early and spontaneous commencement in every county and township, and by its nearly spontaneous and costless growth, with such aids only as have not occasioned any material expense or sacrifice to agriculture or commerce, since they were chiefly incidental to necessary revenue, or resulted from our distance from the foreign consumers of our productions and manufactures of our supplies."—Page 50. *"Such are the principal facts which occur to recollection at this time, evincing the benefits to owners and cultivators of the soil, from the manufactures which have arisen unforced in the United States. Their principal protection by duties is incidental. Those duties were imposed to raise the necessary revenue, but greatly favoured the manufactures."*—Page 29, Introduction.

"Such," exclaims Mr. Benton, "were the causes of the growth of manufactures among us. They grew up of themselves, without the knowledge of politicians, and without any aid from federal legislation, except the incidental assistance from the imposition of revenue duties. Their growth was natural—without injury to commerce or agriculture—without injury to revenue; and, what is not to be forgotten, not only without a word of discontent or dissatisfaction in any part of the union, but with the absolute approbation of all." Mr. Benton then dwells upon the fact, that Mr. Coxe, looking to the future, says not one word about a tariff; the word *tariff*, is not once mentioned in his book. He speaks only of a *safe, cheap, benevolent, and infallible* method of promoting manufactures, by the diffusion of skill, multiplication of machinery, adoption of new improvements, the application of steam-power, the education of the operatives, and the cultivation of good feelings in every part of the union; "but not a word," adds Mr. Benton, "about protective duties and minimums—not a word about the tariff."

"Mr. Benton next adverts to the present condition of manufactures, taking the census of 1840 for reference. He adduces the statistics of products, contrasted with the capital invested in each branch of manufactures, with a view of showing that they are in various instances from 100 to 300 per cent—enormously beyond the yield of products from capital invested in agriculture or other pursuits. He adverts to the large semi-annual dividends, acknowledged by manufacturers under the protective system, and supposes these are not half the reality, if the reserved surpluses were brought to light. He argues that manufacturers are in no need of such enormous protection as the act of 1842 gives them; and that, to persist longer in requiring more than thirty or thirty-three and a third per cent for a maximum, must be suicidal to themselves, as they will rouse the indignation of the mass of the people, who are already aware that they have been 'most magnificently humbugged and bamboozled.' Under the good old system, which he recommends a return to, the manufacturers would thrive as they did in 1810, harmony would prevail, and, above all things, *stability* would be secured to them."

The tariff bill, prepared by the Committee of Ways and Means, was rejected, and the commercial tariff of England was as usual urged as a defence of the tariff of 1842, by the Committee on Manufactures.* We believe, however, that

* "The committee (on Manufactures, 1844) see nothing in the policy of the other nations which would justify us in adopting the delusive theory of free trade. The new tariff of Great Britain, which has been hailed as the harbinger of a commercial millennium, is highly restrictive in its character. It contains many reductions from her old system, but most of them are of but little practical consequence to us. Some articles which were formerly prohibited she now admits,

sound fiscal and commercial views will prevail in the United States, and that a liberal commercial system will be established. The recent report (Dec. 1845) of Mr. Walker, the Secretary of the Treasury (see *Finances of the United States*), appears in support of this belief. The greatest minds in the republic have advocated sound commercial principles: Mr. Calhoun, Mr. Mac Duffie, Mr. Woodbury, Mr. Mackay, Mr. Benton, and many others in and out of Congress; the late Mr. Raguét, and several able writers; and it is remarkable, that many of the latter writers are in the New England states. The freedom of commercial

but on a duty so nearly prohibitory that they cannot be imported, except in extreme cases. Another large class of articles, on which she has made liberal reductions, consists of raw materials used in her manufactures; and such reductions render her policy more protective. On manufactured articles her duties are generally low, for the plain reason that she fears no competition on such fabrics. But when she comes to any article where other nations are in advance of her, she is careful to impose a duty sufficient to protect her own interests. Take silk for example; fearing the competition of France, Italy, &c., she imposes an average duty of about thirty per cent on imported silk, which is much higher, under the circumstances, than we impose on the same article. Our duty on silks will average about thirty-three per cent, being nominally three per cent higher than that of Great Britain. But when we take the situation of the two nations into view, her duty will be found to be much higher in effect—much more protective than ours. Labour and capital, the two great elements which go into all manufactures, are nearly as cheap in Great Britain as on the continent; and in skill she may be considered as their equal. Under these circumstances, a duty of thirty per cent is a high duty. But with us the case is certainly different. Our capital costs one-third more, and our labour nearly three times as much, as they would in France or Italy. This, to all practical purposes, brings our duty on silks down to one-half the rate imposed by Great Britain. In her situation, thirty per cent would be as protective as sixty would be in ours. England has the advantage of us in the cheapness of her labour and capital; and as she is compelled to impose high duties in certain cases, it cannot be thought strange that we find it necessary.

"But what is the free trade that England tenders to us? On what terms does she receive our staples? Why she imposes the following rate of duties upon our products: Salted beef, sixty per cent; bacon, 109 per cent; butter, seventy per cent; Indian corn, average thirty-two per cent; flour, average thirty-two per cent; resin, seventy-six per cent; sperm oil, thirty-three per cent; sperm candles, thirty-three per cent; tobacco, unmanufactured, 1000 per cent; tobacco, manufactured, 1200 per cent; salted pork, thirty-three per cent; soap, 200 per cent; spirits, from grain, 500 per cent; spirits, from molasses, 1600 per cent. On these fourteen articles she imposes an average duty of 355 per cent, a duty vastly greater than we impose upon any of her fabrics. It is idle, therefore, to pretend that she extends to us any thing like free trade.

"Her policy is also seen in the differential duties which she imposes. While Great Britain imposes a duty of 14s. per cwt. upon bacon imported from the United States, she admits it from her own provinces on a duty of 3s. 6d.; and while she imposes a duty of 16s. per barrel upon our beef, she admits beef from her provinces on a duty of 4s. On sperm oil, from our fisheries, she imposes a duty of 15s. per tun, on oil from her colonies 1s. per tun; on our rice she imposes a duty of 6s. per cwt., on rice from her provinces 6d. per cwt. On the products of the forest this principle is still more strikingly illustrated. On oars from the United States, she collects a duty of thirty-six dollars per 120, on the same from her own provinces a duty of ninety cents; on handspikes from the United States nine dollars sixty cents per 120, from her provinces twenty-four cents; on firewood from the United States two dollars forty cents per 216 cubic feet, from her provinces free. These articles will serve, as a specimen, to illustrate the policy of Great Britain; and they show, beyond controversy, that the first object of her tariff is to sustain her own industry and promote her own interests.

"The committee, then, come to the conclusion, after all the examination they have been able to give the subject, that the corn trade with England cannot be relied upon with any degree of certainty. The sliding scale, which we cannot flatter ourselves will be removed, gives the north of Europe a decided advantage over us. When there is an improvement in the English market, the news can be conveyed to Hamburg, &c., in the space of two or three days, and a supply can be forwarded before the price has declined. But with us it is different. Even by the steamers, we do not usually receive intelligence from England until fifteen to twenty days after date; and then an entire month would be necessary before our wheat or flour would reach the English market. In

intercourse, and its influence on morality and civilisation, has never been more beautifully and forcibly illustrated than in the writings of the great Channing.*

There are no bonding warehouses in the United States, and this circumstance adds to the other restrictions of the whole fallacious system of customs duties and regulations, which we have endeavoured to exhibit in greater detail than may have been necessary, were it not important to afford such information as we have been enabled to collect, upon a question so interesting, to the two greatest commercial and maritime states in the world.

If there be one course of policy, more than another, which we would advocate—to which we would devote our labours, in order to aid in obtaining the only certain *guarantee* of peace and of friendship, between two great nations, who, in language and race, are one people—that course of policy is to establish the least possible restrictions on the interchange of the commodities of the one country in the other—upon the arrival at, remaining in, and departure from, of the ships and citizens of America, in every British port and place in the universe—of British ships, and subjects, in every port, and place, within the American regions.

If ever the history of the world presented two states in a position, and condition, to do each other the utmost possible good, or the greatest possible evil—such are the actual positions, and actual conditions, of the United Kingdom and the United States. These constitute subjects of serious consideration for the governments, and for the people, of both England and America.

Awful, indeed, would be the consequence, if those wild or foolish politicians, who, from ignorance, vanity, ambition or with more dangerous and unprincipled designs, would involve the British and American powers in the certain calamities of war, by misguiding the people, and the governments, of both countries. Civilisation in America, and in Europe, would, for the time, be paralysed; and, not only the present generation, but succeeding generations, would suffer, grievously, by an interruption of peace, and intercourse, between the members of a great family :

1841, there were sixty-eight ships laden in whole or in part with grain from the United States to Great Britain; and the average length of the voyages was thirty days. In every point of view in which we can contemplate this subject, we discover nothing to encourage the hope that we may soon find in the English market a demand for our surplus grain at remunerating prices."

* The exhortation of the philanthropic Channing, contains the following beautiful passage, given not long previous to his death: "Allow me to say a word to the merchants of our country on another subject. The time is come when they are particularly called to take yet more generous views of their vocation, and to give commerce a universality as yet unknown. I refer to the juster principles, which are gaining ground on the subject of *free trade*, and to the growing disposition of nations to promote it. Free trade is the plain duty and plain interest of the human race. To level all barriers to free exchange; to cut up the system of restriction, root and branch; to open every port on earth to every product; this is the office of enlightened humanity. To this a free nation should especially pledge itself. Freedom of the seas; freedom of harbours; an intercourse of nations, free as the winds; this is not a dream of philanthropists. We are tending towards it, and let us hasten it. Under a wiser and more Christian civilisation, we shall look back on our present restrictions as we do on the swaddling-bonds by which, in darker times, the human body was compressed."

who, though divided as to their governments, are, nevertheless, in spite of their respective prejudices, bound together as one people: by the inseparable union of speaking the same language; of being educated in schools, in which the same lessons are taught,—and trained at firesides, where the mothers instil into their children the same virtues; by reading the same literature; by studying similar laws,—professing, generally, the same religion; by cherishing the same domestic associations; practising, from hereditary and common usage, the same manners; by having, until a very late period, a common history: in short, by inheriting their vices and virtues, and their folly and wisdom in common.

It has been the long, and serious, contemplation of these grave circumstances, which has at all times,—while in America,—and while in Europe, urged, and does, and will, hereafter, urge us to advocate and promote every measure, which materially, morally, and honourably, can strengthen the ties that will bind and maintain, in peaceful harmony, the whole British Empire and the United States of America.

PROGRESS OF AMERICA.

SUPPLEMENTS TO VOL. I.

I.—DECLARATION OF INDEPENDENCE.

JULY 4, 1776.

(From the Journals of Congress.)

A Declaration by the Representatives of the United States of America in Congress assembled.

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident :—that all men are created equal ; that they are endowed by their Creator with certain unalienable rights ; that among these are life, liberty, and the pursuit of happiness ; that to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed ; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles, and organizing its powers in such form, as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate, that governments long established should not be changed for light and transient causes ; and accordingly all experience hath shown, that mankind are more disposed to suffer while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these colonies ; and such is now the necessity which constrains them to alter their former systems of government. The history of the present king of Great Britain, is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these states. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation, till his assent should be obtained ; and when so suspended, he has utterly neglected to attend to them. He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature ; a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing, with manly firmness, his invasions on the rights of the people.

He has refused, for a long time after such dissolutions, to cause others to be elected; whereby the legislative powers, incapable of annihilation, have returned to the people at large, for their exercise; the state remaining, in the mean time, exposed to all the dangers of invasion from without, and convulsions within.

He has endeavoured to prevent the population of these states; for that purpose obstructing the laws for naturalisation of foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice, by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, and sent hither swarms of officers, to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

He has affected to render the military independent of, and superior to, the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitutions, and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these states:

For cutting off our trade with all parts of the world:

For imposing taxes on us without our consent:

For depriving us, in many cases, of the benefits of trial by jury:

For transporting us beyond seas to be tried for pretended offences:

For abolishing the free system of English laws in a neighbouring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies:

For taking away our charters, abolishing our most valuable laws, and altering, fundamentally, the forms of our governments:

For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection, and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun with circumstances of cruelty and perfidy, scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilised nation.

He has constrained our fellow-citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections amongst us, and has endeavoured to bring on the inhabitants of our frontiers, the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince, whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attentions to our British brethren. We have warned them from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred, to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They, too, have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war; in peace, friends.

We, therefore, the Representatives of the United States of America, in General Congress assembled appealing to the Supreme Judge of the world, for the rectitude of our intentions, do, in the name and by the authority of the good people of these colonies, solemnly publish and declare, That these United Colonies are, and of right ought to be, FREE and INDEPENDENT STATES; that they are absolved from all allegiance to the British crown, and that all political connection between them and the state of Great Britain is, and ought to be, totally dissolved; and that, as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which independent states may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honour.

JOHN HANCOCK, &c.

II.—THE CONSTITUTION OF THE UNITED STATES.

We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and posterity, do ordain and establish this constitution for the United States of America.

ARTICLE I.—Section 1. All legislative powers herein granted shall be vested in a congress of the United States, which shall consist of a senate and house of representatives.

Section II.—1. The house of representatives shall be composed of members chosen every second year by the people of the several states; and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

2. No person shall be a representative who shall not have attained to the age of twenty-five years; and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state in which he shall be chosen.

3. Representatives and direct taxes, shall be apportioned among the several states, which may be included within this union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and, excluding Indians not taxed, three-fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of representatives shall not exceed one for every thirty thousand, but each state shall have at least one representative; and until such enumeration shall be made, the state of New Hampshire shall be entitled to choose three; Massachusetts, eight; Rhode Island and Providence Plantations, one; Connecticut, five; New York, six; New Jersey, four; Pennsylvania, eight; Delaware, one; Maryland, six; Virginia, ten; North Carolina, five; South Carolina, five; and Georgia, three.

4. When vacancies happen in the representation from any state, the executive authority thereof shall issue writs of election to fill such vacancies.

5. The House of Representatives shall choose their speaker and other officers; and shall have the sole power of impeachment.

Section III.—1. The senate of the United States shall be composed of two senators from each state, chosen by the legislature thereof, for six years; and each senator shall have one vote.

2. Immediately after they shall be assembled, in consequence of the first election, they

shall be divided as equally as may be into three classes. The seats of the senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the legislature of any state, the executive thereof may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies.

3. No person shall be a senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

4. The vice-president of the United States shall be president of the senate, but shall have no vote, unless they be equally divided.

5. The senate shall choose their other officers, and also a president pro tempore, in the absence of the vice-president, or when he shall exercise the office of president of the United States.

6. The senate shall have the sole power to try all impeachments: when sitting for that purpose, they shall be on oath or affirmation. When the president of the United States is tried, the chief justice shall preside; and no person shall be convicted without the concurrence of two-thirds of the members present.

7. Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honour, trust, or profit, under the United States; but the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment, according to law.

Section IV.—1. The times, places, and manner of holding elections for senators and representatives, shall be prescribed in each state by the legislature thereof; but the congress may at any time, by law, make or alter such regulations, except as to the places of choosing senators.

2. The congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

Section V.—1. Each house shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorised to compel the attendance of absent members, in such manner and under such penalties as each house may provide.

2. Each house may determine the rules of its proceedings, punish its members for disorderly behaviour, and with the concurrence of two-thirds, expel a member.

3. Each house shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may, in their judgment, require secrecy; and the yeas and nays of the members of either house on any question, shall, at the desire of one-fifth of those present, be entered on the journal.

4. Neither house, during the session of congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be sitting.

Section VI.—1. The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective houses, and in going to and returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place.

2. No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States, shall be a member of either house during his continuance in office.

Section VII.—1. All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

2. Every bill which shall have passed the House of Representatives and the senate,

shall, before it become a law, be presented to the president of the United States: if he approve, he shall sign it; but if not, he shall return it, with his objections, to that house in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If, after such reconsideration, two-thirds of that house shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered, and if approved by two-thirds of that house, it shall become a law. But in all such cases, the votes of both houses shall be determined by yeas and nays; and the names of the persons voting for and against the bill, shall be entered on the journal of each house respectively. If any bill shall not be returned by the president within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the congress by their adjournment prevent its return, in which case it shall not be a law.

3. Every order, resolution, or vote, to which the concurrence of the senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the president of the United States; and before the same shall take effect, shall be approved by him, or being disapproved by him, shall be repassed by two-thirds of the senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

Section VIII. The congress shall have power—

1. To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

2. To borrow money on the credit of the United States.

3. To regulate commerce with foreign nations, and among the several states, and with the Indian tribes.

4. To establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies throughout the United States.

5. To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

6. To provide for the punishment of counterfeiting the securities and current coin of the United States.

7. To establish post-offices and post-roads.

8. To promote the progress of science and useful arts, by securing, for limited times, to authors and inventors the exclusive right to their respective writings and discoveries.

9. To constitute tribunals inferior to the supreme court.

10. To define and punish piracies and felonies committed on the high seas, and offences against the law of nations.

11. To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water.

12. To raise and support armies; but no appropriation of money to that use shall be for a longer term than two years.

13. To provide and maintain a navy.

14. To make rules for the government and regulation of the land and naval forces.

15. To provide for calling forth the militia to execute the laws of the union, suppress insurrection, and repel invasions.

16. To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively, the appointment of the officers, and the authority of training the militia according to the discipline prescribed by congress.

17. To exercise exclusive legislation in all cases whatsoever, over such district (not exceeding ten miles square) as may by cession of particular states, and the acceptance of congress, become the seat of the government of the United States; and to exercise like authority over all places purchased by the consent of the legislature of the state in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings:—And

18. To make all laws which shall be necessary and proper for carrying into execution

the foregoing powers, and all other powers vested by this constitution in the government of the United States, or in any department or officer thereof.

Section IX.—1. The migration or importation of such persons as any of the states now existing shall think proper to admit, shall not be prohibited by the congress prior to the year 1808; but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

2. The privilege of the writ of *habeas corpus* shall not be suspended, unless when in cases of rebellion or invasion the public safety may require it.

3. No bill of attainder or *ex post facto* law shall be passed.

4. No capitation or other direct tax shall be laid, unless in proportion to the *census* or enumeration herein before directed to be taken.

5. No tax or duty shall be laid on articles exported from any state.

6. No preference shall be given by any regulation of commerce or revenue to the ports of one state over those of another: nor shall vessels bound to, or from, one state, be obliged to enter, clear, or pay duties in another.

7. No money shall be drawn from the treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

8. No title of nobility shall be granted by the United States: and no person holding any office of profit or trust under them, shall, without the consent of the congress, accept of any present, emolument, office, or title of any kind whatever, from any king, prince, or foreign state.

Section X.—1. No state shall enter into any treaty, alliance, or confederation; grant letters of marque and reprisal; coin money; emit bills of credit; make any thing but gold and silver coin a tender in payment of debts; pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts; or grant any title of nobility.

2. No state shall, without the consent of the congress, lay any imposts or duties on imports, exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts, laid by any state on imports or exports, shall be for the use of the treasury of the United States; and all such laws shall be subject to the revision and control of the congress.

3. No state shall, without the consent of the congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

ART. II.—Section I.—1. The executive power shall be vested in a president of the United States of America. He shall hold his office during the term of four years, and, together with the vice-president, chosen for the same term, be elected as follows:

2. Each state shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the state may be entitled in the congress: but no senator or representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

3. The congress may determine the time of choosing the electors, and the day on which they shall give their votes; which day shall be the same throughout the United States.

4. No person, except a natural-born citizen, or a citizen of the United States at the time of the adoption of this constitution, shall be eligible to the office of president; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

5. In case of the removal of the president from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the vice-president, and the congress may by law provide for the case of removal, death, resignation, or inability, both of the president and vice-president, declaring what officer shall then act as president, and such officer shall act accordingly, until the disability be removed, or a president shall be elected.

6. The president shall, at stated times, receive for his services a compensation, which

shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

7. Before he enters on the execution of his office, he shall take the following oath or affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the office of president of the United States, and will, to the best of my ability, preserve, protect, and defend the constitution of the United States."

Section II.—1. The president shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment.

2. He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers, and consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law: but the congress may by law vest the appointment of such inferior officers, as they think proper, in the president alone, in the courts of law, or in the heads of departments.

3. The president shall have power to fill up all vacancies, that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

Section III.—He shall, from time to time, give to the congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

Section IV.—The president, vice-president, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

ART. III.—Section I.—The judicial power of the United States shall be vested in one supreme court, and in such inferior courts as the congress may, from time to time, ordain and establish. The judges, both of the supreme and inferior courts, shall hold their offices during good behaviour, and shall, at stated times, receive for their services, a compensation, which shall not be diminished during their continuance in office.

Section II.—1. The judicial power shall extend to all cases, in law and equity, arising under this constitution, the laws of the United States, and treaties made, or which shall be made, under their authority;—to all cases affecting ambassadors, other public ministers, and consuls;—to all cases of admiralty and maritime jurisdiction;—to controversies to which the United States shall be a party;—to controversies between two or more states;—between a state and citizens of another state; between citizens of another state; between citizens of different states; between citizens of the same state claiming lands under grants of different states, and between a state or the citizens thereof, and foreign states, citizens, or subjects.

2. In all cases affecting ambassadors, other public ministers, and consuls, and those in which a state shall be a party, the supreme court shall have original jurisdiction. In all other cases before mentioned, the supreme court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations, as the congress shall make.

3. The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.

Section III.—1. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort.

2. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

3. The congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted.

ART. IV.—Section I. Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the congress may, by general laws, prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

Section II.—1. The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

2. A person charged in any state with treason, felony, or other crime, who shall flee from justice, and be found in another state, shall, on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

3. No person held to service or labour in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labour, but shall be delivered up on claim of the party to whom such service or labour may be due.

Section III.—1. New states may be admitted by the congress into this Union, but no new state shall be formed or erected within the jurisdiction of any other state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislatures of the states concerned, as well as of the congress.

2. The congress shall have power to dispose of and make needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this constitution shall be so construed as to prejudice any claims of the United States, or of any particular state.

Section IV.—The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion; and on application of the legislature, or of the executive (when the legislature cannot be convened), against domestic violence.

ART. V.—The congress, whenever two-thirds of both houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two-thirds of the several states shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the congress; provided that no amendment, which may be made prior to the year 1808, shall in any manner affect the first and fourth clauses in the ninth section of the first article; and that no state, without its consent, shall be deprived of its equal suffrage in the Senate.

ART. VI.—1. All debts contracted, and engagements entered into, before the adoption of this Constitution, shall be as valid against the United States under this Constitution, as under the Confederation.

2. This Constitution, and the laws of the United States, which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every state shall be bound thereby, any thing in the constitution or laws of any state to the contrary notwithstanding.

3. The senators and representatives before-mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation, to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ART. VII.—The ratification of the conventions of the nine states, shall be sufficient for the establishment of this Constitution, between the states so ratifying the same.

Done in convention by the unanimous consent of the States present, the 17th day of September, in the year of our Lord, 1787, and of the Independence of the United States of America the twelfth. In witness whereof we have hereunto subscribed our names.

GEO. WASHINGTON,

President and Deputy from Virginia.
&c. &c. &c.

AMENDMENTS to the Constitution of the United States, ratified according to the Provisions of the Fifth Article of the foregoing Constitution.

ARTICLE I.—Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble and to petition the government for a redress of grievances.

II. A well-regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

III. No soldier shall, in time of peace, be quartered in any house, without the consent of the owner, nor in time of war, but in a manner to be prescribed by law.

IV. The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue, but upon probable cause supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

V. No person shall be held to answer for a capital, or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in actual service in time of war or public danger; nor shall any person be subject, for the same offence, to be twice put in jeopardy of life or limb; nor shall be compelled, in any criminal case, to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

VI. In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favour, and to have the assistance of counsel for his defence.

VII. In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any court of the United States, than according to the rules of the common law.

VIII. Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

IX. The enumeration, in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

X. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the states respectively, or to the people.*

XI. The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by citizens of another state; or by citizens or subjects of any foreign state.†

XII. The electors shall meet in their respective states, and vote by ballot for president and vice-president, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as president, and any distinct ballots the person voted for as vice-president, and they shall make distinct lists of all persons voted for as president, and of all persons voted for as vice-president, and of the

* The first ten amendments were proposed in 1789, and ratified in 1791.

† The eleventh article was ratified in 1798.

number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the president of the Senate. The president of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted; the person having the greatest number of votes for president, shall be the president, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers, not exceeding three, on the list of those voted for as president, the House of Representatives shall choose immediately, by ballot, the president. But in choosing the president, the votes shall be taken by states, representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a president, whenever the right of choice shall devolve upon them, before the 4th day of March next following, then the vice-president shall act as president, as in the case of the death or other constitutional disability of the president. The person having the greatest number of votes as vice-president, shall be the vice-president, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the vice-president; a quorum for the purpose shall consist of two-thirds of the whole number of senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of president, shall be eligible to that of vice-president of the United States.*

It would be pronouncing a most partial and one-sided judgment, if we said that America had not defects in her government, and *domestic institutions*. In her *government executive weakness*, or that *want of power to enforce an implicit obedience to the laws, and to the administration of justice, so necessary*, as Washington has so nobly expressed it, *to liberty itself*, forms the chief insecurity, in regard to the protection of person or property, and of uncertainty, as to the equal and just administration of the laws in the United States. Take for example, the president, or speaker of the legislature of Arkansas, descending from his chair, and rushing at one of the members, and assassinating him with a *bowie knife* on the floor of the house. Yet no one dared to punish the monster for his crime! This defect of executive power in the strict enforcement of the laws, is more applicable to the separate state governments, over which the central government, as is maintained by the great American jurists, has no authority.†

* The twelfth was substituted in 1804, for a clause suppressed between (2) and (3) in the 1st Section of Article II.

CONGRESS, OR LEGISLATURE OF THE UNITED STATES.

The Legislature, or Congress, of the United States, consists of two chambers, a Senate, and House of Representatives; and, constitutionally, must assemble once each year; on the first Monday of December; unless otherwise by law appointed.

THE HOUSE OF REPRESENTATIVES.—Each State in the Union elects members to represent it in the federal congress of the United States. The suffrage in the election of members to the House of Representatives may be considered universal: excepting that women, minors, and slaves have no votes.

In March, 1823, an act of congress fixed the representatives of each state to one member for every 40,000 inhabitants, which for the following congress returned 213 representatives and three delegates.

In consequence of the extraordinary increase of the population, it was found that, according to this rule, the number of representatives would become too numerous to form a central debating assembly; especially in a federal government, in which each state had its particular legislature.

An act of congress was accordingly passed, in 1832, regulating the return of representatives to one for every 47,700 persons, computed according to the mode stated in the constitution.

The present or 28th congress is chosen according to the act of congress of 1842, the ratio being "one representative for every 70,680 persons in each state, and of one additional representative for each state having a fraction greater than one moiety of the said ratio, computed according to the rule prescribed by the constitution of the United States." The law of 1842 also requires, that the representatives of each state "shall be elected by districts composed of a contiguous territory, equal in number to the number of representatives to which each state may be entitled, no one district electing more than one representative." The present number is 223 representatives and 3 delegates.

According to the law of 1842, and the scale of 1832, the members returned by the respective states were as follows:—

Since the 4th of March, 1807, the compensation of each member of the Senate and House of Representatives, has been eight dollars a day, during the period of his attendance in congress, without deduction in case of sickness; and eight dollars for every twenty miles' travelled, on the usual road, in going to and returning from the seat of government. The compensation of the president of the Senate, *pro tempore*, and of the Speaker of the House of Representatives, is sixteen dollars a day.

The salaries of the officers are:—1 clerk of the house, 3000 dollars; 1 chief under clerk, 1800 dollars; 10 clerks, each 1500 dollars; 1 serjeant-at-arms, 1500 dollars; 1 principal door-keeper, 1500 dollars; 1 assistant door-keeper, 1450 dollars; 1 postmaster, 1500 dollars; 1 messenger, 600 dollars; 1 librarian, 1500 dollars; 2 assistant librarians, 1150 dollars.

The privileges and powers of the House of Representatives are prescribed in the constitution. Election of members to the House of Representatives takes place every two years.

THE SENATE.—The Upper House of Congress, consists of forty-eight members, elected by the legislatures of the several states; each sending two. They are elected for six years; one-third going out every two years. The pay and allowances to the members and president are the same as to those of the House of Representatives. The vice-president of the United States is president, ex-officio, of the Senate.

The salaries of the officers are:—1 secretary, 3000 dollars; 1 chief clerk, 1800 dollars; 5 clerks, each 1500 dollars; 1 clerk, 1000 dollars; 1 serjeant-at-arms and door-keeper, 1500 dollars each; 1 assistant door-keeper, 1450 dollars; 1 messenger, 700 dollars; 1 postmaster, 1500 dollars; 1 librarian, 1500 dollars; 2 assistant librarians, 1150 dollars.

THE PRESIDENT OF THE UNITED STATES.—The chief magistrate of the United States is elected by a body of distinct electors, qualified within each state.* Their votes are sent under seal to congress who have the right of electing the president, if the candidate have not more than half the whole number of votes in his favour.

The powers of the president, during his administration of four years, are very extensive. See them stated, as well as the privileges and rights of congress, in the constitution. His salary is, 25,000 dollars, or 5125*l.*; that of the vice-president, 5000 dollars, or 1025*l.*

The powers vested by the constitution in the central government extend to all negotiations with foreign nations; maintaining and organising the naval and military forces; the sole regulation of foreign trade; and all matters connected with the general revenue and finances.

The views taken by the federalists, and the democrats, of the constitution of the United States, have, frequently, been greatly opposed to each other. Of the several jurists who have written on the constitution of the United States; the authors of the *Federalists*, Judge Story and Chief-justice Kent are the most eminent. The late learned Secretary of State, Mr. Upshur, appears to us to have comprehended that celebrated act more clearly than any other jurist.

“A work,” says Mr. Upshur,† “presenting a proper analysis and correct views of the constitution of the United States, has long been a desideratum with the public. It is true that the last fifteen years have not been unfruitful in commentaries upon that instrument: *such* commentaries, however, as have, for the most part, met a deserved fate in immediate and total oblivion. A few have appeared, however, of a much higher order, and bearing the stamp of talent, learning, and research. Among these, the work of Judge Story and the ‘*Commentaries*’ of Chief Justice Kent hold the first rank. Both these works are, as it is natural they should be, strongly tinged with the political opinions of their respective authors; and as there is a perfect concurrence between them in this respect, their joint authority can scarcely fail to exert a strong influence upon public opinion.

“The authority of great names is of such imposing weight, that mere reason and argument can rarely counterpoise it in the public mind; and its preponderance is not easily

* See the 2nd article of the constitution, and the 12th article of the Amendments.

† The late Judge Upshur, a short time before his lamentable death, sent me his views on the Constitution of the United States. They are so remarkable that I consider the leading parts, which I have extracted, as absolutely necessary to a just understanding of the Constitution of the United States, as a confederative government, and as elucidating the separate constitutions of the several states. The late Mr Upshur was one of the highest legal authorities in the United States. His predecessor in the office of secretary of state, Mr. Legaré, was also a profound lawyer, and my personal friend. He was carried off suddenly while on a visit to Boston, in 1842; and Mr. Upshur, who succeeded him, was destroyed, with several others, in 1843, by the bursting of a monstrous cannon on board a steam frigate. A more pure-minded statesman, and more virtuous man than Mr. Upshur, I believe there did not exist.

overcome, except by adding like authority to the weight of reason and argument, in the opposing scale. I hope it is not yet too late for this suggestion to have its effect upon those to whom it is addressed.

"The first commentary upon the constitution, the 'Federalist,' is decidedly the best which has yet appeared. The writers of that book were actors in all the interesting scenes of the period, and two of them were members of the convention which formed the constitution. Added to this, their extensive information, their commanding talents, and their experience in great public affairs, qualified them, in a peculiar degree, for the task which they undertook. Nevertheless, their great object was to *recommend* the constitution to the people, at a time when it was very uncertain whether they would adopt it or not; and hence their work, although it contains a very full and philosophical analysis of the subject, comes to us as a mere argument in support of a favourite measure, and, for that reason, does not always command our entire confidence. Besides, the constitution was then untried, and its true character, which is to be learned only from its practical operation, could only be conjectured. Much has been developed in the actual practice of the government, which no politician of that day could either have foreseen or imagined. New questions have arisen, not then anticipated, and difficulties and embarrassments, wholly unforeseen, have sprung from new events in the relation of the states to one another, and to the general government. Hence the 'Federalist' cannot be relied on as full and safe authority in all cases. It is, indeed, matter of just surprise, and affording the strongest proof of the profound wisdom and far-seeing sagacity of the authors of that work, that their views of the constitution have been so often justified in the course of its practical operation. Still, however, it must be admitted that the 'Federalist' is defective in some important particulars, and deficient in many more. The constitution is much better understood at this day than it was at the time of its adoption. This is not true of the great principles of civil and political liberty, which lie at the foundation of that instrument, but it is emphatically true of some of its provisions, which were considered at the time as comparatively unimportant, or so plain as not to be misunderstood, but which have been shown by subsequent events, to be pregnant with the greatest difficulties, and to exert the most important influence upon the whole character of the government. Contemporary expositions of the constitution, therefore, although they should be received as authority in *some* cases, and may enlighten our judgments in most others, cannot be regarded as safe guides, by the expounder of that instrument at this day. The subject demands our attention now, as strongly as it did before the 'Federalist' was written.

"Judge Story fills a high station in the judiciary of the United States, and has acquired a character, for talents and learning, which ensures respect to whatever he may publish under his own name. His duty, as a judge of the supreme court, has demanded of him frequent investigations of the nicest questions of constitutional law; and his long service in that capacity, has probably brought under his review, every provision of that instrument, in regard to which any difference of opinion has prevailed. Assisted, as he has been by the arguments of the ablest counsel, and by the joint deliberations of the other judges of the court, it would be, indeed, wonderful, if he should hazard his well-earned reputation as a jurist, upon any hasty or unweighed opinion, upon subjects so grave and important. He has also been an attentive observer of political events, and although, by no means obtrusive in politics, has yet a political character, scarcely less distinguished than his character as a jurist. To all these claims to public attention and respect, may be added a reputation for laborious research, and for calm and temperate thinking.

"The first part of Judge Story's work relates to a subject of the greatest interest to every American, and well worthy the study of philosophical inquiries, all over the world. There is not within the whole range of history, an event more important, with reference to its effects upon the world at large, than the settlement of the American colonies. It did not fall within the plan of our author to inquire very extensively, or very minutely, into the mere history of the events, which distinguished that extraordinary enterprise. So far as the first settlers may be regarded as actuated by avarice, by ambition, or by any other of the usual motives of the adventurer, their deeds belong to the province of the historian alone. We, however, must contemplate them in another and a higher character. A deep

and solemn feeling of religion, and an attachment to, and an understanding of, the principles of civil liberty, far in advance of the age in which they lived, suggested to most of them the idea of seeking a new home, and founding new institutions, in the western world. To this spirit we are indebted for all that is free and liberal in our present political systems. It would be a work of very great interest, and altogether worthy of the political historian, to trace the great principles of our institutions back to their sources. Their origin would probably be discovered at a period much more remote than is generally supposed. We should derive from such a review, much light in the interpretation of those parts of our systems, as to which we have no precise rules in the language of our constitutions of government. It is to be regretted that Judge Story did not take this view of the subject. Although not strictly required by the plan of his work, it was, nevertheless, altogether consistent with it; and would have added much to its interest with the general reader. His sources of historical information were ample, and his habits and the character of his mind fitted him well for such an investigation, and for presenting the result in an analytic and philosophical form. He has chosen, however, to confine himself within much narrower limits. Yet, even within those limits, he has brought together a variety of historical facts of great interest; and has presented them, in a condensed form, well calculated to make a lasting impression upon the memory. The brief sketch which he has given of the settlement of the several colonies, and of the charters from which they derived their rights and powers as separate governments, contains much to enable us to understand fully the relation which they bore to one another, and to the mother country. This is the true starting point in the investigation of those vexed questions of constitutional law, which have so long divided political parties in the United States. It would seem almost impossible that any two opinions could exist upon the subject; and yet the historical facts upon which alone all parties must rely, although well authenticated, and comparatively recent, have not been understood by all men alike. Our author was well aware of the importance of settling this question at the threshold of his work. Many of the powers which have been claimed for the federal government, by the political party to which he belongs, depend upon a denial of that separate existence, and separate sovereignty and independence, which the opposing party has uniformly claimed for the States.

“It appears to be a favourite object with the author, to impress upon the mind of the reader, at the very commencement of his work, the idea, that the people of the several colonies were, as to some objects, which he has not explained, and, to some extent, which he has not defined, ‘one people.’ But although the colonies were independent of each other in respect to their domestic concerns, they were not wholly alien to each other. On the contrary, they were fellow-subjects, and for many purposes one people. Every colonist had a right to inhabit, if he pleased, in any other colony, and as a British subject he was capable of inheriting lands by descent in every other colony. The commercial intercourse of the colonies, too, was regulated by the general laws of the British empire, and could not be restrained or obstructed by colonial legislation. The remarks of Mr. Chief Justice Jay are equally just and striking:—‘All the people of this country were then subjects of the King of Great Britain, and owed allegiance to him, and all the civil authority then existing or exercised here, flowed from the head of the British empire. They were, in a strict sense *fellow-subjects*, and, in a variety of respects, *one people*. When the revolution commenced the patriots did not assert that only the same affinity and social connexion subsisted between the people of the colonies which subsisted between the people of Gaul, Britain, and Spain, while Roman provinces, to wit, only that affinity and social connexion which results from the mere circumstance of being governed by the same prince.’

“The historical facts stated by both of these gentlemen are truly stated, but it is surprising that it did not occur to such cool reasoners, that every one of them is the *result of the relation between the colonies and the mother country, and not the result of the relation between the colonies themselves*. Every British subject, whether born in England proper or in a colony, has a right to reside anywhere within the British realm, and this *by the force of British laws*. Such is the right of every Englishman wherever he may be found. As to the right of the colonist to inherit lands by descent in any other colony than his own, our author himself informs us, that it belonged to him, ‘as a British subject.’ That right,

indeed, is a consequence of his allegiance. By the policy of the British constitution and laws, it is not permitted that the soil of her territory should belong to any, from whom she cannot demand all the duties of allegiance. This allegiance is the same in all the colonies as it is in England proper; and, wherever it exists, the correspondent right to own and inherit the soil attaches. The right to regulate commercial intercourse among her colonies, belongs, of course, to the parent country, unless she relinquishes it by some act of her own; and no such act is shown in the present case. On the contrary, although that right was resisted for a time by some of the American colonies, it was finally yielded, as our author himself informs us, by all those of New England; and I am not informed that it was denied by any other. Indeed, the supremacy of parliament, in most matters of legislation which concerned the colonies, was generally—nay, *universally* admitted, up to the very eve of the revolution. It is true, the right to *tax* the colonies was denied, but this was upon a wholly different principle; it was the right of every British subject to be exempt from taxation, except by his own consent; and as the colonies were not, and, from their local situation, could not be, represented in parliament, the right of that body to tax them was denied, upon a fundamental principle of English liberty. But the right of the mother country to regulate commerce among her colonies is of a different character, and it never was denied to England by her American colonies, so long as a hope of reconciliation remained to them. In like manner, the facts relied on by Mr. Jay, that 'all the people of this country were then subjects of the King of Great Britain, and owed allegiance to him,' and that, 'all the civil authority then existing or exercised here, flowed from the head of the British empire,' are but the usual incidents of colonial dependence, and are by no means peculiar to the case he was considering. They do, indeed, prove a unity between all the colonies and *the mother country*, and show that these, taken altogether, are, in the strictest sense of the terms, 'one people;' but I am at a loss to perceive how they prove that two or more parts, or subdivisions, of the same empire, necessarily constitute 'one people.' If this be true of the colonies, it is equally true of any two or more geographical sections of England proper; for every one of the reasons assigned, applies as strictly to this case as to that of the colonies. Any two countries may be 'one people,' or 'a nation *de facto*' if they can be made so by the facts that their people are 'subjects of the King of Great Britain, and owe allegiance to him,' and that, 'all the civil authority exercised therein, flows from the head of the British empire.'

"And, so far as the rights of the mother country are concerned, they existed in the same form, and to the same extent, over every other colony of the empire. Did this make the people of *all* the colonies 'one people?' If so, the people of Jamaica, the British East Indian possessions, and the Canadas, are, for the very same reason, 'one people' at this day.

"The *general* relation between colonies and the parent country is as well settled and understood as any other; and it is precisely the same in all cases, except where special consent and agreement may vary it. Whoever, therefore, would prove that any peculiar *unity* existed between the American colonies, is bound to show something in their characters, or some peculiarity in their condition, to exempt them from the general rule. Judge Story was too well acquainted with the state of the facts, to make any such attempt in the present case. The congress of the nine colonies, which assembled at New York, in October, 1765, declare that the colonists "owe the same allegiance to the crown of Great Britain that is owing from his subjects born within the realm, and all due subordination to that august body, the Parliament of Great Britain." "That the colonists are entitled to all the inherent rights and liberties of his (the king's) natural-born subjects within the Kingdom of Great Britain." We have here an all-sufficient foundation of the right of the crown to regulate commerce among the colonies, and of the right of the colonists to inhabit and to inherit land in each and all the colonies. They were nothing more than the ordinary rights and liabilities of every British subject; and, indeed, the most that the colonies ever contended for, was an equality, in these respects, with the subjects born in England.

"The great effort of the author, throughout his entire work, is to establish the doctrine, that the constitution of the United States is a government of 'the people of the United States,' as contra-distinguished from the people of the several states; or, in other words,

that it is a consolidated, and not a federative system. His construction of every contested federal power, depends mainly upon this distinction; and hence the necessity of establishing a *oneness* among the people of the several colonies, prior to the revolution.

"In order to constitute 'one people,' in a political sense, of the inhabitants of different countries, something more is necessary than that they should owe a common allegiance to a common sovereign. Neither is it sufficient that in some particulars they are bound alike, by laws which that sovereign may prescribe; nor does the question depend on geographical relations. The inhabitants of different islands may be one people, and those of contiguous countries may be, as we know they in fact are, different nations. By the term *people*, as here used, we do not mean merely a number of persons. We mean by it a political corporation, the members of which owe a common allegiance to a common sovereignty, and do not owe any allegiance which is *not* common; who are bound by no laws except such as that sovereignty may prescribe; who owe to one another reciprocal obligations; who possess common political interests; who are liable to common political duties; and who can exert no sovereign power except in the name of the whole. Any thing short of this would be an imperfect definition of that political corporation which we call a *people*.

"Tested by this definition, the people of the American colonies were, in no conceivable sense, 'one people.' They owed, indeed, allegiance to the British king, as the head of each colonial government, and as forming a part thereof, but this allegiance was exclusive in each colony to its own government, and consequently to the king as the head thereof, and was not a common allegiance of the people of all the colonies, to a common head.* These colonial governments were clothed with the sovereign power of making laws, and of enforcing obedience to them, from their own people. The people of one colony owed no allegiance to the government of any other colony, and were not bound by its laws. The colonies had no common legislature, no common treasury, no common military power, no common judiciary. The people of one colony were not liable to pay taxes to any other colony, nor to bear arms in its defence; they had no right to vote in its elections; no influence nor control in its municipal government, no interest in its municipal institutions. There was no prescribed form by which the colonies could act together, for any purpose whatever; they were not known as 'one people' in any one function of government, although they were all, alike, dependencies of the British crown, yet, even in the action of the parent country in regard to them, they were recognised as separate and distinct. They were established at different times, and each under an authority from the crown which applied to itself alone. They were not even alike in their organisation. Some were provincial, some were proprietary, and some charter governments. Each derived its form of government from the particular instrument establishing it, or from assumptions of power acquiesced in by the crown, without any connexion with, or relation to, any other. They stood upon the same footing, in every respect, with other British colonies, with nothing to distinguish their relation either to the parent country or to one another. The charter of any one of them might have been destroyed, without in any manner affecting the rest. In point of fact, the charters of nearly all of them were altered from time to time, and the whole character of their governments changed. These changes were made in each colony for itself alone, sometimes by its own action, sometimes by the power and authority of the crown; but never by the joint agency of any other colony, and never with reference to the wishes or demands of any other colony. Thus they were separate and distinct in their creation, separate and distinct in the forms of their governments, separate and distinct in the modifications of their government, which were made from time to time, separate and distinct in political functions, in political rights, and in political duties.

"The provincial government of Virginia was the first established. The people of Virginia owed allegiance to the British king, as the head of their own local government. The authority of that government was confined within certain geographical limits known as

* The resolutions of Virginia, in 1796, show that *she* considered herself merely as an appendage of the British Crown; that *her* legislature was *also* authorised to tax *her*; and that *she* had a right to call on *her* king, who was also King of England, to protect *her* against the usurpations of the British parliament.

Virginia, and all who lived within those limits were 'one people.' When the colony of Plymouth was subsequently settled, were the people of that colony one with the people of Virginia? When, long afterwards, the proprietary government of Pennsylvania was established, were the followers of William Penn 'one' with the people of Plymouth and Virginia? If so, to which government was their allegiance due? Virginia had a government of her own, Pennsylvania a government of her own, and Massachusetts a government of her own. The people of Pennsylvania could not be equally bound by the laws of all three governments; because those laws might happen to conflict; they could not owe the duties of citizenship to all of them alike, because they *might* stand in hostile relations to one another. Either then the government of Virginia which originally extended over the whole territory, continued to be supreme therein, (and only to its dependence upon the British Crown,) or else its supremacy was yielded to the new government. Every one knows that this last was the case, that within the territory of the new government, the authority of that government alone prevailed. How then could the people of this new government of Pennsylvania be said to be 'one' with the people of Virginia, when they were not citizens of Virginia, owed her no allegiance and no duty, and when their allegiance to another government might place them in the relation of enemies of Virginia?

"In further illustration of this point, let us suppose that some one of the colonies had refused to unite in the declaration of independence; what relation would it then have held to the others? Not having disclaimed its allegiance to the British crown, it would still have continued to be a British colony, subject to the authority of the parent country in all respects as before. Could the other colonies have rightfully compelled it to unite with them in their revolutionary purposes, on the ground that it was part and parcel of the 'one people' known as the people of the colonies? No such right was ever claimed or dreamed of, and it will scarcely be contended for now, in the face of the known history of the time. Such recusant colony would have stood precisely as did the Canadas, and every other part of the British empire. The colonies which had declared war, would have considered its people as enemies, but would not have had a right to treat them as traitors, or as disobedient citizens resisting their authority. To what purpose then were the people of the colonies 'one people,' if in a case so important to the common welfare, there was no right in all the people together, to coerce the members of their own community to the performance of a common duty?

"It is thus apparent that the people of the colonies were not 'one people' as to any purpose involving allegiance on the one hand or protection on the other.

"As early as 1765, a majority of the colonies had met together in congress, or convention, in New York, for the purpose of deliberating on these grave matters of common concern; and they then made a formal declaration of what they considered their rights, as colonists and British subjects. This measure, however, led to no redress of their grievances. On the contrary, the subsequent measures of the British government gave new and just causes of complaint; so that, in 1774, it was deemed necessary that the colonies should again meet together, in order to consult upon their general condition, and provide for the safety of their common rights. Hence the congress, which met in Carpenter's Hall on the 5th of September, 1774. It consisted of delegates from New Hampshire, Massachusetts Bay, Rhode Island, and Providence Plantations, Connecticut, Hampshire, Massachusetts Bay, Rhode Island, and Providence Plantations, Connecticut, *from the City and County of New York, and other counties in the Province of New York, New Jersey, Pennsylvania, Newcastle, Kent, and Sussex, in Delaware, Maryland, Virginia, and South Carolina.* North Carolina was not represented until the 14th of September, and Georgia not at all. It is also apparent that New York was not represented *as a colony*, but only through certain portions of her people; in like manner, Lyman Hall was admitted to his seat, in the succeeding congress, as a delegate from the parish of St. John's, in Georgia, although he declined to vote on any question requiring a majority of *the colonies* to carry it, because he was not the representative of a colony. This congress passed a variety of important resolutions, between September, 1774, and October 22nd, in the same year, during all which time Georgia was not represented at all; for even the parish of St. John's did not appoint a representative till May, 1775. In point of fact, the congress was a *deliberative and advisory* body, and nothing more; and for this reason it was not deemed important, or, at least, not *indispensable*, that all the

colonies should be represented, since the resolutions of congress had no obligatory force whatever. It was appointed for the sole purpose of taking into consideration the general condition of the colonies, and of devising and recommending proper measures for the security of their rights and interests. For these objects no precise powers and instructions were necessary, and *beyond* them none were given. Neither does it appear that any precise time was assigned for the duration of congress. The duty with which it was charged was extremely simple; and it was taken for granted that it would dissolve itself as soon as that duty was performed.

“Speaking of the congress of 1774, Marshall says: ‘The members of this congress were *generally* elected by the authority of the colonial legislatures, but, in *some* instances, a different system had been pursued. In New Jersey and Maryland, the elections were made by committees, chosen in the several counties for that particular purpose: and in New York, where the royal party was very strong, and where it is probable that no legislative act, authorising an election of members to represent that colony in congress could have been obtained, the people themselves assembled in those places, where the spirit of opposition to the claims of parliament prevailed, and elected deputies, who were very readily received into congress.’ Here the *general rule* is stated to be, that the deputies were elected by the ‘colonial legislatures;’ and the instances in which the people acted, ‘directly in their primary, sovereign capacity,’ without the intervention of the ordinary functionaries of government, are given as *exceptions*.

“As to New York, neither her people nor her government, had so far lost their attachment to the mother country, as to concur in any measure of opposition, until after the battle of Lexington, in April, 1775; and the only representatives which New York had in the congress of 1774, were those of a comparatively small portion of her people. It is well known, and, indeed the author himself so informs us, that the members of the congress of 1775, were elected substantially, as were those of the preceding congress; so that there were very few of the colonies, in which the people performed that act in their ‘primary sovereign capacity,’ without the intervention of their constituted authorities. It is of little consequence, however, to the present inquiry, whether the deputies were chosen by the colonial legislatures, as was done in most of the colonies, or by conventions, as was done in Georgia, and some others; or by committees appointed for the purpose, as was done in one or two instances; or by the people in primary assemblies, as was done in *part* of New York. The circumstances under which the congresses of 1774 and 1775, were called into existence, precluded the possibility of any precise limitations of their powers, even if it had been designed to clothe them with the functions of government. The colonies were suffering under common oppressions, and were threatened with common dangers from the mother country. The great object which they had in view, was to produce that concert of action among themselves which would best enable them to resist their common enemy, and best secure the safety and liberties of all. Great confidence must necessarily be reposed in public rulers, under circumstances of this sort.

“Many of those powers which, for greater convenience, were entrusted exclusively to congress, could not be effectually exerted, except by the aid of the state authorities. The troops required by congress, were raised by the states, and the commissions of their officers were countersigned by the governors of the states. Congress were allowed to issue bills of credit, but they could not make them a legal tender, nor punish the counterfeiter of them. Neither could they bind the states to redeem them, nor raise, by their own authority, the necessary funds for that purpose. Congress received ambassadors and other public ministers, yet they had no power to extend to them that protection, which they receive from the government of every sovereign nation.

“Thus it appears that, in the important functions of raising an army, of providing a public revenue, of paying public debts, and giving security to the persons of foreign ministers, the boasted ‘sovereignty’ of the federal government was merely nominal, and owed its entire efficiency to the co-operation and aid of the state governments. Congress had no power to coerce these governments, nor could it exercise any direct authority over their individual citizens.

“Although the powers actually assumed and exercised by congress, were certainly very great, they were not always acquiesced in, or allowed by the states. Thus, the power to

lay an embargo, was earnestly desired by them, but was denied by the states; and in order the more clearly to indicate that many of their powers were exercised merely by sufferance, and, at the same time, to lend a sanction to their authority, so far as they chose to allow it, it was deemed necessary, by at least *one* of the states, to pass laws indemnifying those who might act in obedience to the resolutions of that body.

"The following extract from the journals of the convention, containing the history of this interesting event, cannot fail to be acceptable to every American reader.

"Wednesday, May 15th, 1776.—The convention, then, according to the order of the day, resolved itself into a committee on the state of the colony; and after some time spent therein, Mr. President resumed the chair, and Mr. Carey reported that the committee had, according to order, had under their consideration the state of the colony, and had come to the following resolutions thereupon; which he read in his place, and afterwards delivered in at the clerk's table, where the same were again twice read, and unanimously agreed to, one hundred and twelve members being present.

"For as much as all the endeavours of the united colonies, by the most decent representations and petitions to the king and parliament of Great Britain, to restore peace and security to America under the British government, and a reunion with that people, upon just and liberal terms, instead of a redress of grievances, having produced, from an imperious and vindictive administration, increased insult, oppression, and a vigorous attempt to effect our total destruction. By a late act, all these colonies are declared to be in rebellion, and out of the protection of the British crown, our properties subject to confiscation, our people, when captivated, compelled to join in the plunder and murder of their relations and countrymen, and all former rapine and oppression of Americans declared legal and just. Fleets and armies are raised, and the aid of foreign troops engaged to assist these destructive purposes. The king's representative in this colony hath not only withheld all the powers of government from operating for our safety, but, having retired on board an armed ship, is carrying on a piratical and savage war against us, tempting our slaves by every artifice to resort to him, and training and employing them against their masters.

"In this state of extreme danger, we have no alternative left, but an abject submission to the will of those overbearing tyrants, or a total separation from the crown and government of Great Britain, uniting and exerting the strength of all America for defence, and forming alliances with foreign powers for commerce and aid in war. Wherefore, appealing to the searcher of all hearts, for the sincerity of former declarations, expressing our desire to preserve our connexion with that nation, and that we are driven from that inclination by their wicked councils and the eternal laws of self-preservation; resolved, unanimously, that the delegates appointed to represent this colony in general congress, be instructed to propose to that respectable body, to declare the united colonies free and independent states, absolved from all allegiance to, or dependence upon, the crown or parliament of Great Britain; and that they give the assent of this colony to that declaration, and to whatever measures may be thought proper and necessary by the congress, for forming foreign alliances, and a confederation of the colonies, at such time and in such manner as to them may seem best. Provided, that the power of forming government for, and the regulations of the internal concerns of each colony, be left to the respective colonial legislatures.

"Resolved, unanimously, that a committee be appointed to prepare a declaration of rights, and such a plan of government, as will be most likely to maintain peace and order in this colony, and secure substantial and equal liberty to the people."

"It is impossible to contemplate this proceeding on the part of Virginia, without being convinced that she acted from her own free and sovereign will; and that *she*, at least, *did* 'presume' to establish a government for herself, without the least regard to the recommendation or the pleasure of congress.

"We all admit that the power and authority of the federal government, within its constitutional sphere, are superior to those of the states, in some instances; and co-ordinate in others; and that every citizen is under an absolute obligation, to render them respect and obedience; and this *simply because his own state, by the act of ratifying the constitution, has commanded him to do so.* We all admit it to be true, as a general proposition, that no citizen nor state has an independent right to 'construe,' and still less to 'control,' the constitutional obligations of that government, and that neither a citizen nor a state can

'judge,' that is, 'decide' on the nature and extent of those obligations, with a view to control them. All that has ever been contended for, is, that a state has a right to judge of its own obligations; and, consequently, to judge of those of the federal government, so far as they relate to *such state itself*, and no farther. It is admitted on all hands, that when the federal government *transcends* its constitutional power, and when, of course, it is not acting *within* its 'obligations,' the parties to that government, whoever they may be, are no longer under any duty to respect or obey it. This has been repeatedly affirmed by our courts, both state and federal; and has never been denied by any class of politicians. Who then is to determine whether it has so transcended its constitutional obligations, or not? It is admitted, that to a certain extent, the supreme court, is the proper tribunal, in the last resort, because the states in establishing that tribunal, have expressly agreed to make it so. The jurisdiction of the federal courts extends to certain cases, affecting the rights of the individual citizens, and to certain others affecting those of the individual states. So far as the federal government is authorised to act on the individual citizen, the powers of the one and the rights of the other, are properly determinable by the federal courts; and the decision is binding too, and absolutely final, so far as the relation of the citizen to the *federal government* is concerned. There is not, within that system, any tribunal of appeal, from the decisions of the supreme court. And so also of those cases in which the rights of the *states* are referred to the federal tribunals. In this sense and to this extent, it is strictly true that the parties have not 'an independent right to construe, control, and judge of the obligations' of the federal government; but they are bound by the decisions of the federal courts, so far as they have authorised and agreed to submit to them. But there are many cases involving the question of federal power, which are not cognisable before the federal courts; and, of course, as to these, we must look out for some other umpire. It is precisely in this case, that the question who are the parties to the constitution, becomes all important and controlling. If the states are parties as sovereign states, then it follows, as a necessary consequence, that each of them has the right which belongs to every sovereignty, to construe its own contracts and agreements, and to decide upon its own rights and powers.

"The nullifier contends only for the right of a state to *prevent the constitution from being violated by the general government*, and not for the right either to repeal, abrogate, or suspend it. The seceder asserts only, that a state is competent to withdraw from the union whenever it pleases; but does not assert that in so doing, it can repeal, or abrogate, or suspend the constitution as to the other states. Secession would, indeed, utterly destroy the compact as to the seceding party; but would not necessarily affect its obligation as to the rest. If it would, then the rest would have no right to coerce the seceding state, nor to place her in the attitude of an enemy. *It is certain, I think, they would not have such right*; but those who assert that they would—and Judge Story is among the number—must either abandon that idea, or they must admit that the act of secession does not break up the constitution, except as the seceding state. For the moment the constitution is destroyed, all the authorities which it has established, cease to exist. There is no longer such a government as that of the United States; and, of course, they cannot, as such, either make any demand, or assert any right, or enforce any claim.

"Having disposed of this preliminary question, we now approach the constitution itself. *I affirm that it is in its structure a federative and not a consolidated government*; that it is so in all its departments, and in all its leading and distinguishing provisions; and, of course, that it is to be so interpreted, *by the force of its own terms*, apart from any influence to be derived from that rule of construction which has just been laid down. We will first examine it in the structure of its several departments.

"*The Legislature.*—This consists of two houses. The senate is composed of two members from each state, chosen by its own legislature, whatever be its size or population, and is universally admitted to be strictly federative in its structure. The house of representatives consists of members chosen in each state, and is regulated in its numbers according to a prescribed ratio of representation. The number to which each state is entitled is proportioned to its own population, and not to the population of the United States; and if there happen to be a surplus in any state less than the established ratio, that surplus is not added to the surplus or population of any other state, in order to make up the requisite number

for a representative, but is wholly unrepresented. In the choice of representatives, each state votes by itself, and for its own representatives, and not in connexion with any other state, nor for the representatives of any other state. Each state prescribes the qualifications of its own voters, the constitution only providing that they shall have the qualifications which such state may have prescribed for the voters for the most numerous branch of its own legislature. And as the *right* to vote is prescribed by the state, the *duty* of doing so cannot be enforced, except by the authority of the state. No one can be elected to represent any state, except a citizen thereof. Vacancies in the representation of any state are to be supplied under writs of election, issued by the executive of such state. In all this there is not one feature of nationality. The whole arrangement has reference to the states as such, and is carried into effect solely by their authority. The federal government has no agency in the choice of representatives, except only that it may prescribe the 'times, places, and manner of holding elections.' It can neither prescribe the qualifications of the electors, nor impose any penalty upon them for refusing to elect. The states alone can do these things; and, of course, the very existence of the house of representatives depends, as much as does that of the senate, upon the action of the states. A state may withdraw its representation altogether, and congress has no power to prevent it, nor to supply the vacancy thus created. If the house of representatives were national, in any practical sense of the term, the 'nation' would have authority to provide for the appointment of its members, to prescribe the qualifications of voters, and to enforce the performance of that duty. All these things the state legislatures can do, within their respective states, and it is obvious that they are strictly national. In order to make the house of representatives equally so, the people of the United States must be so consolidated that the federal government may distribute them, without regard to state boundaries, into numbers, according to the prescribed ratio; so that *all* the people may be represented, and no unrepresented surplus be left in any state. If these things could be done under a federal constitution, there would then be a strict analogy between the popular branches of the federal and state legislatures, and the former might with propriety be considered 'national.' But it is difficult to imagine a national legislature which does not exist under the authority of the nation, and over the very appointment of which the nation, as such, can exert no effective control.

"The second argument is, that the states are not *equally* represented, but each one has a representation proportioned to its population. There is no reason apparent to me, why a league may not be formed among independent sovereignties, giving to each an influence in the management of their common concerns, proportioned to its strength, its wealth, or the interest which it has at stake. This is but simple justice, and the rule ought to prevail in all cases, except where higher considerations disallow it. History abounds with examples of such confederations, one of which I will cite. The states general of the United provinces were strictly a federal body. The council of state had almost exclusively the management and control of all their military and financial concerns; and in that body, Holland and some other provinces had three votes each, whilst some had two, and others only one vote each. Yet it never was supposed that for this reason the United provinces were a consolidated nation. A single example of this sort affords a full illustration of the subject, and renders all farther arguments superfluous.

"It is not, however, from the apportionment of its powers, nor from the modes in which those powers are exercised, that we can determine the true character of a legislative body, in the particular now under consideration. The true rule of decision is found in the manner in which the body is constituted, and that, we have already seen, is in the case before us, federative, and not national.

"We may safely admit, however, that the house of representatives is not federative, and yet contend, with perfect security, that the *legislative department* is so. Congress consists of the house of representatives and senate. Neither is a complete legislature in itself, and neither can pass any law without the concurrence of the other, and as the senate is the peculiar representative of the states, no act of legislation whatever can be performed, without the consent of the states. They hold, therefore, a complete check and control over the powers of the people in this respect, even admitting that those powers are truly and strictly represented in the other branch. It is true that the check is mutual; but if the legislative department were national, there would be no federative feature in it. It cannot be replied with equal propriety, that, if it were federative, there would be no national feature in it.

The question is, whether or not the states have preserved their distinct sovereign characters, in this feature of the constitution. If they have done so, in any part of it, the whole must be considered federative; because national legislation implies a *unity*, which is absolutely inconsistent with all idea of a confederation; whereas, there is nothing to prevent the members of a confederation from exerting their several powers, in any form of *joint action* which may seem to them proper.

“But there is one other provision of the constitution which appears to me to be altogether decisive upon this point. Each state, whatever be its population, is entitled to at least one representative. It may so happen that the unrepresented surplus, in some one state, may be greater than the whole population of some other state, and yet such latter state would be entitled to a representation. Upon what principle is this? Surely if the house of representatives were national, something like *equality* would be found in the constitution of it. Large surpluses would not be arbitrarily rejected in some places, and smaller numbers not equal to the general ratio, be represented in others. There can be but one reason for this: as the constitution was made by the states, the true principle of the confederation could not be preserved, without giving to each party to the compact a place and influence in each branch of the common legislature. This was due to their perfect *equality* as sovereign states.

“*The Executive.*—In the election of the president and vice-president, the exclusive agency of the states, as such, is preserved with equal distinctness. These officers are chosen by electors, who are themselves chosen by the people of each state, acting by and for itself, and in such mode as itself may prescribe. The number of electors to which each state is entitled, is equal to the whole number of its representatives and *senators*. This provision is even more federative than that which apportions representation in the house of representatives; because it adds two to the electors of each state, and, so far places them upon an equality, whatever be their comparative population. The people of each state vote *within* the state and not elsewhere; and for their own electors and for no others. Each state prescribes the qualifications of its own electors, and can alone compel them to vote. The electors, when chosen, give their votes within their respective states, and at such times and places as the states may respectively prescribe.

“There is not the least trace of national agency in any part of this proceeding. The federal government can exercise no rightful power in the choice of its own executive. ‘The people of the United States’ are equally unseen in that important measure. Neither a majority, nor the whole of them together, can choose a president, except in their character of citizens of the several states. Nay, a president may be constitutionally elected, *with a decided majority of the people against him*. For example: New York has forty-two votes; Pennsylvania, thirty; Virginia, twenty-three; Ohio, twenty-one; North Carolina, fifteen; Kentucky, fourteen; and South Carolina, fifteen. These seven states can give a majority of all the votes, and each may elect its own electors by a majority of only one vote. If we add their minorities to the votes of the other states (supposing those states to be unanimous against the candidate), we may have a president, constitutionally elected, with less than half—perhaps with little more than a fourth—of the people in his favour. It is true that he may also be constitutionally elected, with a majority of the *states*, as such, against him, as the above example shows; because the states may, as before remarked, properly agree, by the provisions of their compact, that they shall possess influence in this respect, proportioned to their population. But there is no mode, consistent with the true principles of free representative government, by which a minority of those to whom, *en masse*, the elective franchise is confided, can counterveil the concurrent and opposing action of the majority. If the president could be chosen by the people of the ‘United States’ in the aggregate, instead of by the states, it is difficult to imagine a case in which a majority of those people, concurring in the same vote, could be overbalanced by a minority.

“All doubt upon this point, however, is removed by another provision of the constitution, touching this subject, if no candidate should receive a majority of votes in the electoral colleges, the house of representatives elects the president from the three candidates who have received the largest electoral vote. In doing this, two-thirds of the states must be present by their representatives, or one of them, and then *they vote by states, all the mem-*

bers from each state giving one vote, and a majority of all the states being necessary to a choice. This is precisely the rule which prevailed in the ordinary legislation of that body, under the articles of confederation, and which proved its federative character, as strongly as any other provision of those articles. Why, then, should this federative principle be preserved, in the election of the president by the house of representatives, if it was designed to abandon it, in the election of the same officer, by the electoral colleges? No good reason for it has yet been assigned, so far as I am informed.

"This view of the subject is still further confirmed by the clause of the constitution relating to impeachments. The power to try the president is vested in the senate alone, that is, in the representatives of the states. There is a strict fitness and propriety in this; for those only, whose officer the president is, should be entrusted with the power to remove him.

"It is believed to be neither a forced nor an unreasonable conclusion, from all this, that the executive department is, in its structure, strictly federative.

"*The Judiciary.*—The judges are nominated by the president, and approved by the senate. Thus, the nominations are made by a federative officer, and the approval and confirmation of them depend on those who are the exclusive representatives of the states, this agency is manifestly federative, and 'the people of the United States' cannot mingle in it, in any form whatever.

"As the constitution is federative in the structure of all three of its great departments, it is equally so, in the power of amendment.

"Congress may propose amendments, 'whenever two-thirds of both houses shall deem it necessary.' This secures the states against any action upon the subject, by the people at large. In like manner, congress may call a convention for proposing amendments, 'on the application of the legislatures of two-thirds of the several states.' It is remarkable that, whether congress or the states act upon the subject, the same proportion is required; not less than two-thirds of either being authorised to act. From this it is not unreasonable to conclude, that the convention considered that the same power would act in both cases; to wit, the power of the states, who might effect their object either by their separate action as states, or by the action of congress, their common federative agent; but whether they adopted the one mode or the other, not less than two-thirds of them should be authorised to act efficiently.

"The amendments thus proposed 'shall be valid to all intents and purposes, as part of this constitution, when ratified by the legislatures of three-fourths of the several states, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by congress.' It is the act of adoption or ratification alone which makes a constitution. In the case before us, the states alone can perform that act. The language of the constitution admits of no doubt, and gives no pretext for double construction. It is not the people of the United States in the aggregate, merely acting in their several states, who can ratify amendments. Three-fourths of the several states can alone do this. The idea of separate and independent political corporations could not be more distinctly conveyed by any form of words. If the people of the United States, as one people, but acting in their several states, could ratify amendments, then the very language of the constitution requires that three-fourths of them shall concur therein. Is it not, then, truly wonderful, that no mode has yet been prescribed to ascertain whether three-fourths of them do concur or not? By what power can the necessary arrangement upon this point be effected? In point of fact, amendments have already been made, in a strict conformity with this provision of the constitution.

"So strongly were the states attached to that perfect equality which their perfect sovereignty implied, and so jealous were they of every attack upon it, that they guarded it, by an express provision of the constitution, against the possibility of overthrow. All other rights they confided to that power of amendment, which they reposed in three-fourths of all the states; but this they refused to entrust, except to the separate, independent and sovereign will of each state; giving to each, in its own case, an absolute negative upon all the rest*.

* So absolutely is the federal government dependent on the states for its existence, at all times, that it may be absolutely dissolved, without the least violence, by the simple refusal of a

"The object of the preceding pages has been to show that the constitution is federative, in the power which framed it; federative in the power which adopted and ratified it; federative in the power which sustains and keeps it alive; federative in the power by which alone it can be altered or amended; and federative in the structure of all its departments. In what respect then can it be justly called a consolidated or national government?"

"We come now to a more particular and detailed examination of the question. 'Who is the final judge or interpreter in constitutional controversies?' Judge Story's conclusion is, that 'in all questions of a judicial nature,' the supreme court of the United States is the final umpire; and that the *states*, as well as individuals, are absolutely bound by its decisions.

"Whatever comes within the legitimate cognizance of that tribunal it has a right to decide, whether it be a question of the law, or of the constitution; and no other tribunal can reverse its decision. The constitution which creates the supreme court, creates no other court of superior or appellate jurisdiction to it; and consequently its decisions are strictly 'final.' There is no power in the same government to which that court belongs, to reverse or control it, nor are there any means therein of resisting its authority. So far, therefore, as the *Federal Constitution* has provided for the subject at all, the supreme court is, beyond question, the final judge or arbiter; and this, too, whether the jurisdiction which it exercises be legitimate or usurped.

"Let us now inquire what 'constitutional controversies' the federal courts have authority to decide, and how far its decisions are final and conclusive against all the world.

"The third article of the constitution provides, that 'the judicial power shall extend to all cases of law and equity, arising under this constitution, the laws of the United States, and the treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers and consuls, to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more states; between a state and citizens of another state; between citizens of different states; between citizens of the same state, claiming lands, under grants of different states; and between a state and the citizens thereof, and foreign states, citizens or subjects.'

"The eleventh amendment provides that, 'The judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States, by citizens of another state, or by citizens or subjects of any foreign state.'

"It will be conceded on all hands that the federal courts have no jurisdiction except what is here conferred. The judiciary, as a part of the federal government, derives its powers only from the constitution, which creates that government. The term 'cases' implies that the subject matter shall be proper for judicial decision; and the *parties* between whom alone jurisdiction can be entertained, are specifically enumerated. Beyond these cases, and these parties they have no jurisdiction.

"There is no part of the constitution in which the framers of it have displayed a more jealous care of the rights of the states, than in the limitations of the judicial power. It is remarkable that no power is conferred, except what is absolutely necessary to carry into effect the general design, and accomplish the general object of the states, as independent, confederated states. The federal tribunals cannot take cognizance of any case whatever in which all the states have not an equal and common interest, that a just and impartial decision shall be had. A brief analysis of the provisions of the constitution will make this sufficiently clear.

"Cases 'arising under the constitution,' are those in which some right or privilege is denied, which the constitution confers, or something is done which the constitution prohibits, as expressed in the constitution itself. Those which 'arise' under the laws of the United States, are such as involve rights or duties which result from the legislation of congress.

part of the states to act. If, for example, a few states, having a majority of electoral votes should refuse to appoint electors of president and vice-president, there would be no constitutional executive, and the whole machinery of the government would stop.

"Cases arising under treaties, made under the authority of the United States, and those 'affecting ambassadors and other public ministers and consuls,' could not be properly entrusted to any other than the federal tribunals. Treaties are made under the common authority of all the states, and all alike are bound for the faithful observance of them. Ambassadors and other public ministers and consuls are received under the common authority of all the states, and their duties relate only to matters involving alike the interests of all. The peace of the country and the harmony of its relations with foreign powers, depend, in a peculiar degree, on the good faith with which its duties, in reference to these subjects, are discharged. Hence it would be unsafe to entrust them to any other than their own control; and even if this were not so, it would be altogether incongruous to appeal to a state tribunal, to enforce the rights, the obligations, or the duties of the United States. For like reasons, cases of admiralty and maritime jurisdiction are properly entrusted to the federal tribunals.

"Controversies, to which the United States shall be a party, should, upon general principles, belong only to her own courts. There would be neither propriety nor justice in permitting any one state to decide a case in which all the states are parties. In like manner, those between two or more states—between a state and citizens of another state, where the state is plaintiff (it cannot *be sued*), and between citizens of different states, could not be entrusted to the tribunals of any particular state interested, or whose citizens are interested therein, without danger of injustice and partiality. Jurisdiction is given to the federal courts, in these cases, simply because they are equally interested for all the parties, are the common courts of all the parties, and therefore are presumed to form the only fair and impartial tribunal between them. The same reasoning applies to cases between citizens of the same state, claiming lands under grants of different states. Cases of this sort involve questions of the sovereign power of the states, and could not, with any show of propriety, be entrusted to the decision of either of them, interested, as it would be, to sustain its own acts against those of the sister state. The jurisdiction in this case is given upon the same principles which gave it in cases between two or more states.

"Controversies between a state or the citizens thereof, and foreign states, citizens, or subjects, depend on a different principle, but one equally affecting the common rights and interests of all the states. A foreign state cannot, of course, be sued; she can appear in our courts only as plaintiff. Yet, in whatever form such controversies, or those affecting the citizens of a foreign state, may arise, all the states have a deep interest that an impartial tribunal, satisfactory to the foreign party, should be provided. The denial of justice is a legitimate, and not an unfruitful, cause of war. As no state can be involved in war without involving all the rest, they all have a common interest to withdraw from the state tribunals a jurisdiction which may bring them within the danger of that result. All the states are alike bound to render justice to foreign states and their people; and this common responsibility gives them a right to demand that every question involving it shall be decided by their common judicatory.

"The tenth article of the amendments of the constitution provides that, 'The powers not delegated to the United States by the constitution, nor prohibited by it to the states, are reserved to the states respectively, or to the people.' The powers thus reserved, are not only reserved against the federal government in whole, but against each and every department thereof. The judiciary is no more excepted out of the reservation than is the legislature or the executive. Of what nature, then, are those reserved powers? Not the powers, if any such there be, which are possessed by all the states together, for the reservation is to 'the states *respectively*;' that is, to each state separately and distinctly. Now we can form no idea of any power possessed by a state as such, and independent of every other state, which is not, in its nature, a sovereign power. Every power so reserved, therefore, must be of such a character, that each state may exercise it, without the least reference or responsibility to any other state whatever. It is incident to every sovereignty to be alone the judge of its own compacts and agreements. No other state or assemblage of states, has the least right to interfere with it, in this respect, and cannot do so without impairing its sovereignty. The constitution of the United States is but the agreement which each state has made, with each and all the other states, and is not distinguishable, in the principle we are examining, from any other agreement between sovereign states. Each state, therefore, has a right to interpret that agreement for itself, unless it has

clearly waived that right in favour of another power. That the right is not waived in the case under consideration, is apparent from the fact already stated, that if the judiciary be the sole judges of the extent of their own powers, their powers are universal, and the enumeration in the constitution is idle and useless.

"The federal government is the creature of the states. It is not a party to the constitution, but the result of it—the creation of that agreement which was made by the states as parties. It is a mere agent entrusted with limited powers for certain specific objects; which powers and objects are enumerated in the constitution. Shall the agent be permitted to judge of the extent of his own powers, without reference to his constituents? To a certain extent he is compelled to do this, in the very act of exercising them, but this is always in subordination to the authority by whom his powers were conferred.

"Considering the nature of our system of government, the states ought to be, and I presume always will be, extremely careful not to interpose their sovereign power against the decisions of the supreme court, in any case where that court clearly has jurisdiction. Of this character, are the cases cited at the commencement of this inquiry; such, for example, as those between two states, those affecting foreign ministers, those of admiralty and maritime jurisdiction, &c. As to all these subjects, the jurisdiction is clear, and no state can have any interest to dispute it.

"According to the principles of all our institutions, sovereignty does not reside in any government whatever, neither state nor federal. Government is regarded merely as the agent of those who create it, and subject in all respect to their will. In the states, the sovereign power is in the people of the states respectively; and the sovereign power of the United States would, for the same reason, be in 'the people of the United States,' if there were any such people, known as a single nation, and the framers of the federal government.

"The true sovereignty of the United States, therefore, is in the states, and not in the people of the United States, nor in the federal government. That government is but the agent through whom a portion of this sovereign power is exerted; possessing no sovereignty itself, and exerting no power, except such only as its constituents have conferred on it. In ascertaining what these powers are, it is obviously proper, that we should look only to the grant from which they are derived. The agent can claim nothing for itself, and on its own account. The constitution is a compact, and the parties to it are each state, with each and every other state. The federal government is not a party, but is the mere creature of the agreement between the states as parties. Each state is both grantor and grantee, receiving from each and all the other states, precisely what, in its turn, it concedes to each and all of them. The rule, therefore, that the words are to be taken most strongly in favour of the grantee, cannot apply, because, as each state is both grantor and grantee; it would give exactly as much as it would take away. The only mode, therefore, by which we may be certain to do no injustice to the intentions of the parties, is by taking their *words* as the true exponents of their meaning.

"The lovers of a strong consolidated government, have laboured strenuously, and, I fear, with too much success, to remove every available restriction upon the powers of congress. *The tendency of their principles is to establish that legislative omnipotence, which is the fundamental principle of the British constitution, and which renders every form of written constitution idle and useless.* They suffer themselves to be too much attracted by the splendours of a great central power. Dazzled by these splendours, they lose sight of the more useful, yet less ostentatious purposes of the state governments, and seem to be unconscious that, in building up this huge temple of federal power, they necessarily destroy those less pretending structures, from which alone they derive shelter, protection, and safety. This is the *ignis fatuus* which has so often deceived nations, and betrayed them into the slough of despotism. On all such, the impressive warning of Patrick Henry, drawn from the lessons of all experience, would be utterly lost. 'Those nations who have gone in search of grandeur, power, and splendour, have also fallen a sacrifice, and been the victims of their own folly. While they acquired those visionary blessings, they lost their freedom.' The consolidationists forget these wholesome truths, in their eagerness to invest the federal government, with every power which is necessary to realise their visions in a great and splendid nation. Hence they do not discriminate between the several classes of

federal powers, but contend for all of them, with the same blind and devoted zeal. It is remarkable that, in the exercise of all those functions of the federal government which concern our foreign relations, scarcely a case can be supposed requiring the aid of any implied or incidental power, as to which any serious doubt can arise. 'The powers of that government, as to all such matters, are so distinctly and plainly pointed out, in the very letter of the constitution; and they are so ample for all the purposes contemplated, that it is only necessary to understand them according to their plain meaning, and to exercise them according to their acknowledged extent. No auxiliaries are required; the government has only to go on in the execution of its trusts, with powers at once ample and unquestioned. It is only in matters which concern our domestic policy, that any serious struggle for federal power has ever arisen, or is likely to arise. Here, that love of splendour and display, which deludes so large a portion of mankind, unites with that self-interest by which *all* mankind are swayed, in aggrandising the federal government, and adding to its powers. He who thinks it better to belong to a splendid and showy government, than to a free and happy one, naturally seeks to surround all our institutions with a gaudy pageantry, which belongs only to aristocratic or monarchical systems. But the great struggle is for those various and extended powers from the exercise of which *avarice* may expect its gratifications. Hence the desire for a profuse expenditure of public money, and hence the thousand schemes under the name of internal improvements, by means of which hungry contractors may plunder the public treasury, and wily speculators prey upon the less skilful and cunning. And hence, too, another sort of legislation, the most vicious of the whole, which, *professing* a fair and legitimate object of public good, looks, *really*, only to the promotion of private interests. It is thus that *classes* are united in supporting the powers of government, and an interest is created strong enough to carry all measures and sustain all abuses.

"Let it be borne in mind that, as to all these subjects of domestic concern, there is no absolute necessity that the federal government should possess any power at all. They are all such as the *state* governments are perfectly competent to manage; and the *most* competent, because each state is the best judge of what is useful or necessary to itself. There is, then, no room to complain of any want of power to do whatever the interests of the people require to be done.

"Here, then, are all the powers which it is necessary that government should possess; not lodged in one place, but distributed; not the power of the state governments, nor of the federal government, but the aggregate of their several and respective powers. In the exercise of those functions which the state governments are forbidden to exercise, the federal government need not look beyond the letter of its charter for any needful power; and in the exercise of any other function, there is still less necessity that it should do so; because, whatever power that government does not plainly possess, is plainly possessed by the state governments.

"A clause in the constitution allows representation to three-fifths of the slaves.* Judge Story considers the compromise upon this subject as unjust in principle, and decidedly injurious to the people of the non-slave-holding states. Mr. John Adams was of a different opinion. He said, in the convention which framed the constitution, 'that as to the numbers of the people being taken as the index of the wealth of the state, it was of no consequence by what name you called your people, whether by that of freemen or slaves; that in some countries the labouring poor are called freemen, in others they are called slaves; but that the difference as to the state was imaginary. That five hundred freemen would produce no more profits for the payment of taxes than five hundred slaves. Therefore the state in which the labourers are called freemen should be taxed no more than that in which the labourers are called slaves.

"If slaves are people, as forming the measure of national wealth, and, consequently, of taxation: and if taxation and representation be placed upon the same principle, and regulated by the same ratio, then that slaves are people, in fixing the ratio of representation, is a logical *sequitur* which no one can possibly deny.

"But it is objected that slaves are *property*, and, for that reason are not more entitled

to representation than any other species of property. But they are also *people*, and, upon analogous principles, are entitled to representation as people. It is in this character alone that the non-slave-holding states have a right to consider them as has already been shown, and in this character alone is it *just* to consider them. We ought to presume that every slave occupies a place which, but for his presence, would be occupied by a free white man, and, if this were so, every one, and not three-fifths only, would be represented; but the states who hold no slaves have no right to complain, that this is not the case in other states, so long as the labour of the slave contributes as much to the common stock of productive industry, as the labour of the white man. It is enough that a state possesses a certain number of *people*, of living rational beings, we are not to inquire whether they be black, or white, or tawny, nor what are their peculiar relations among one another. If the slave of the south be property, of what nature is that property, and what kind of interest has the owner in it? He has a right to the profits of the slave's labour. And so the master of an indentured apprentice has a right to the profits of *his* labour. It is true, one holds the right for the life of the slave, and the other only for a time limited in the apprentice's indentures; but this is a difference only in the *extent*, and not in the *nature* of the interest. It is also true, that the owner of a slave has, in most states, a right to *sell him*; but this is only because the laws of the state authorise him to do so. And, in like manner, the indentures of an apprentice may be transferred if the laws of the state will allow it. In all these respects, therefore, the slave and the indentured apprentice stand upon precisely the same principle. To a certain extent they are both property, and neither of them can be regarded as a *free man*; and if the one be not entitled to representation, the other also should be denied that right. Whatever be the difference of their relations to the separate members of the community, in the eye of that community they are both *people*. Here, again, Mr. Adams shall speak for me; and our country has produced few men who could speak more wisely: 'A slave, may indeed, from the custom of speech, be more properly called the wealth of his master, than the free labourer might be called the wealth of his employer; but as to the state both are equally its wealth, and should therefore equally add to the quota of its tax.' Yes; and consequently, they should equally add to the quota of its *representation*.

"It is remarkable that the constitution is wholly silent in regard to the power of removal from office. The *appointing* power is in the president and senate; the president nominating, and the senate confirming. But the power to *remove* from office, seems never to have been contemplated by the convention at all, for they have given no directions whatever upon the subject. The consequence has been precisely such as might have been expected, a severe contest for the possession of that power, and the ultimate usurpation of it, by that department of the government to which it ought never to be entrusted. In the absence of all precise directions upon the subject, it would seem that the power to remove ought to attend the power to appoint; for those whose duty it is to fill the offices of the country with competent incumbents, cannot possibly execute that trust fully and well, unless they have power to correct their own errors and mistakes, by removing the unworthy, and substituting better men in their places. This, I have no doubt, is the true construction of our constitution. It was for a long time strenuously contended for by a large party in the country, and was finally yielded, rather to the confidence which the country reposed in the virtues of Washington, than to any conviction that it was properly an executive power, belonging only to the president. It is true of Washington alone, of all the truly great of the earth, that he never inflicted an injury upon his country, except only such as proceeded from the excess of his own virtues. His known patriotism, wisdom, and purity, inspired us with a confidence, and a feeling of security against the abuses of power, which has led to the establishment of many precedents, dangerous to public liberty in the hands of any other man.

"Another striking imperfection of the constitution, as respects the executive department, is found in the veto power. *The right to forbid the people to pass whatever laws they please, is the right to deprive them of self government.**

* So thoroughly is this right of the people to make the laws understood in the British parliament, that the royal disallowance of any bill is never contemplated; and, although the royal prerogative of disallowance still exists, *de jure*, it has long ceased *de facto*, by *disusage*.

"The re-eligibility of the president, from term to term, is the necessary source of numberless abuses; at present there is no danger of this. *Presidents are now made, not by the free suffrages of the people, but by party management*, and there are always more than one in the successful party, who are looking to their own turn in the presidential office. It is too early, yet, for a monopoly of that high honour; but the time will come, within the natural course of things, when the actual incumbent will find means to buy off opposition, and to insure a continuance in office, by prostituting the trusts which belong to it. We cannot hope to be free from the evils which result from an abuse of presidential power and patronage, until that officer shall be eligible only for *one term*, a long term if you please; and until he shall be rendered more easily, and directly responsible to the power which appoints him."

ADDRESS OF GEORGE WASHINGTON,

PRESIDENT OF THE UNITED STATES, TO HIS FELLOW-CITIZENS, ON DECLINING BEING CONSIDERED A CANDIDATE FOR THEIR FUTURE SUFFRAGES.

FRIENDS AND FELLOW-CITIZENS.—The period for a new election of citizen to administer the executive government of the United States being not far distant, and the time actually arrived, when your thoughts must be employed in designating the person who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed to decline being considered among the number of those, out of whom a choice is to be made.

I beg you, at the same time, to do me the justice to be assured, that this resolution has not been taken without a strict regard to all the considerations appertaining to the relation which binds a dutiful citizen to his country; and that, in withdrawing the tender of service which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest; nor of any deficiency of grateful respect for your past kindness; but am supported by a full conviction, that the step is compatible with both.

The acceptance of, and continuance hitherto in the office to which your suffrages have twice called me, have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped, that it would have been much earlier in my power consistently with motives, which I was not at liberty to disregard, to return to that retirement from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea.

I rejoice that the state of your concerns, external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty or propriety; and am persuaded, whatever partiality may be retained for my service, that in the present circumstances of our country, you will not disapprove my determination to retire.

The impressions with which I first undertook the arduous trust, were explained on the proper occasion. In the discharge of this trust, I will only say, that I have, *with good intentions, contributed towards the organisation and administration of the government, the best exertions of which a very fallible judgment was capable*. Not unconscious, in the outset, of the inferiority of my qualifications, experience, in my own eyes, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and every day the increasing weight of years admonishes me more and more, *that the shade of retirement is as necessary to me as it will be welcome*. Satisfied that if any circumstances have given peculiar value to my services, they were temporary, I have the consolation to believe, that while choice and prudence invite me to quit the political scene, patriotism does not forbid it.

In looking forward to the moment which is intended to terminate the career of my public life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude which I owe to my beloved country for the many honours it has conferred

upon me ; still more for the steadfast confidence with which it has supported me ; and for the opportunities I have thence enjoyed of manifesting my inviolable attachment, by services faithful and persevering, though in usefulness unequal to my zeal. If benefits have resulted to our country from these services, *let it always be remembered to our praise, and as an instructive example in our annals, that under circumstances in which the passions, agitated in every direction, were liable to mislead, amidst appearances sometimes dubious, vicissitudes of fortune often discouraging,—in situations, in which not unfrequently want of success has countenanced the spirit of criticism,—the constancy of your support was the essential prop of the efforts, and a guarantee of the plans, by which they were effected.* Profoundly penetrated with this idea, I shall carry it with me to the grave, as a strong incitement to unceasing vows, that Heaven may continue to you the choicest tokens of its beneficence—that your union and brotherly affection may be perpetual—that the free constitution, which is the work of your hands, may be sacredly maintained—that its administration in every department may be stamped with wisdom and virtue—that, in fine, the happiness of the people of these states, under the auspices of liberty, may be made complete, by so careful a preservation, and so prudent a use of this blessing, as will acquire to them the glory of recommending it to the applause, the affection, and adoption of every nation which is yet a stranger to it.

Here, perhaps, I ought to stop. But solicitude for your welfare, which cannot end but with my life, and the apprehension of danger natural to that solicitude, urge me, on an occasion like the present, to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments, which are the result of much reflection, of no inconsiderable observation, and which appear to me all-important to the permanency of your felicity as a people. These will be offered to you with the more freedom, as you can only feel in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion.

Interwoven as is the love of liberty with every ligament of your hearts, no recommendation of mine is necessary to fortify or confirm the attachment.

The unity of government which constitutes you one people, is also now dear to you. It is justly so ; for it is a main pillar in the edifice of your real independence, the support of your tranquillity at home, your peace abroad ; of your safety ; of your prosperity ; of that very liberty which you so highly prize. But, as it is easy to foresee, that from different causes and from different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth ; as this is the point in your political fortress, against which the batteries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed, it is of infinite moment that you should properly estimate the immense value of your national union to your collective and individual happiness ; that you should cherish a cordial, habitual, and immovable attachment to it ; accustoming yourselves to think and speak of it as of the palladium of your political safety and prosperity, watching for its preservation with jealous anxiety ; discountenancing whatever may suggest even a suspicion that it can in any event be abandoned ; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts.

For this you have every inducement of sympathy and interest. Citizens, by birth or choice, of a common country, that country has a right to concentrate your affections. The name of *American*, which belongs to you in your national capacity, must always exalt the just pride of patriotism, more than any appellation derived from local discriminations. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have, in a common cause, fought and triumphed together ; the independence and liberty you possess are the work of joint counsels, and joint efforts, of common dangers, sufferings, and successes.

But these considerations, however powerfully they address themselves to your sensibility, are greatly outweighed by those which apply more immediately to your interest. Here every portion of our country finds the most commanding motives for carefully guarding and preserving the union of the whole.

The *North*, in an unrestrained intercourse with the *South*, protected by the equal laws of a common government, finds in the productions of the latter, great additional resources of maritime and commercial enterprise, and precious materials of manufacturing industry. The *South* in the same intercourse, benefiting by the agency of the *North*, sees its agriculture grow, and its commerce expand. Turning partly into its own channels the seamen of the *North*, it finds its particular navigation invigorated; and while it contributes, in different ways, to nourish and increase the general mass of the national navigation, it looks forward to the protection of a maritime strength, to which itself is unequally adapted. The *East* in a like intercourse with the *West*, already finds, and in the progressive improvement of interior communications, by land and water, will more and more find a valuable vent for the commodities which it brings from abroad, or manufactures at home. The *West* derives from the *East* supplies requisite to its growth and comfort; and what is perhaps of still greater consequence, it must of necessity owe the *secure* enjoyment of indispensable *outlets* for its own productions to the weight, influence, and the future maritime strength of the Atlantic side of the Union, directed by an indissoluble community of interests as *one nation*. Any other tenure by which the *West* can hold this essential advantage, whether derived from its own separate strength, or from an apostate and unnatural connection with any foreign power, must be intrinsically precarious.

While then every part of our country thus feels an immediate and particular interest in union, all the parts combined cannot fail to find in the united mass of means and efforts, greater strength, greater resource, proportionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and what is of inestimable value, they must derive from union an exemption from those broils and wars between themselves, which so frequently afflict neighbouring countries, not tied together by the same government; which their own rivalships alone would be sufficient to produce, but which opposite foreign alliances, attachments, and intrigues would stimulate and embitter. Hence, likewise, they will avoid the necessity of those overgrown military establishments, which, under any form of government, are inauspicious to liberty, and which are to be regarded as particularly hostile to republican liberty; in this sense it is, that your union ought to be considered as a main prop of your liberty, and that the love of the one ought to endear to you the preservation of the other.

These considerations speak a persuasive language to every reflecting and virtuous mind, and exhibit the continuance of the Union as a primary object of a patriotic desire. Is there a doubt, whether a common government can embrace so large a sphere?—Let experience solve it. To listen to mere speculation, in such a case, were criminal. We are authorised to hope that a proper organisation of the whole, with the auxiliary agency of governments for the respective subdivisions, will afford a happy issue to the experiment. It is well worth a fair and full experiment. With such powerful and obvious motives to union, affecting all parts of our country, while experiment shall not have demonstrated its impracticability, there will always be reason to distrust the patriotism of those, who, in any quarter, may endeavour to weaken its hands.

In contemplating the causes which may disturb our union, it occurs as matter of serious concern, that any ground should be furnished for characterising parties, by *geographical* discriminations—*Northern* and *Southern*—*Atlantic* and *Western*; whence designing men may endeavour to excite a belief, that there is a real difference of local interests and views. One of the expedients of party to acquire influence within particular districts is to misrepresent the opinions and aims of other districts. You cannot shield yourselves too much against the jealousies and heart-burnings which spring from these misrepresentations: they tend to render alien to each other, those who ought to be bound together by fraternal affection.

To the efficacy and permanency of your union, a government for the whole is indispensable. No alliances, however, strict, between the parts, can be an adequate substitute; they will inevitably experience the infractions and interruptions which all alliances, in all times, have experienced. Sensible of this momentous truth, you have improved upon your first essay, by the adoption of a constitution of government better calculated than your former for an intimate union, and for the efficacious management of your common concerns. This government, the offspring of your own choice, uninfluenced and unawed, adopted upon full investigation, and mature deliberation, completely free in its principles, in the

distribution of its powers, uniting security with energy, and containing, within itself, a provision for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true liberty. The basis of our political systems is the right of the people to make and to alter their constitutions of government. But, the constitution which at any time exists, till changed by an explicit and authentic act of the whole people, is sacred and obligatory upon all. *The very idea of the power and the right of the people to establish government, presupposes the duty of every individual to obey the established government.*

All obstructions to the execution of the laws, all combinations and associations, under whatever plausible character, with the real character to direct, control, counteract, or awe the regular deliberation and action of the constituted authorities, are destructive of this fundamental principle, and of fatal tendency.

Towards the preservation of your government, and the permanency of your present happy state, it is requisite, not only that you steadily discountenance irregular opposition to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretxts.

In all the changes to which you may be invited, remember that time and habit are at least as necessary to fix the true character of government, as of other human institutions; and remember, especially, that for the efficient management of your common interest, in a country so extensive as ours, a government of as much vigour as is consistent with the perfect security of liberty, is indispensable. Liberty itself will find in such a government, with powers properly distributed and adjusted, its surest guardian.

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who would labour to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them.

It is substantially true that virtue or morality is a necessary spring of popular government. The rule indeed extends with more or less force to every species of free government. Who that is a sincere friend to it can look with indifference upon attempts to shake the foundation of the fabric?

Promote then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

As a very important source of strength and security, cherish public credit. One method of preserving it, is to use it as sparingly as possible, avoiding occasions of expense, by cultivating peace, but remembering also, that timely disbursements, to prepare for danger, frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions, in time of peace, to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives; but it is necessary that public opinion should co-operate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind that towards the payment of debts there must be revenue; that to have revenue there must be taxes; and no taxes can be devised which are not more or less inconvenient and unpleasant; that the intrinsic embarrassment inseparable from the selection of the proper objects (which is always a choice of difficulties), ought to be a decisive motive for a candid construction of the conduct of the government in making it, and for a spirit of acquiescence in the measures for obtaining revenue which the public exigencies may, at any time, dictate.

Observe good faith and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct; and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and (at no distant period) a great nation, to give to mankind the magnanimous and novel example of a people always guided by an exalted justice and benevolence. Who can doubt that in the course of time and things, the fruits of such a plan would richly repay any temporary

advantages which might be lost by a steady adherence to it? Can it be that Providence has not connected the permanent felicity of a nation with virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas! is it rendered impossible by its vices?

In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations, and passionate attachments for others, should be excluded; and that, in place of them, just and amicable feelings towards all should be cultivated.

Against the insidious wiles of foreign influence (I conjure you to believe me, fellow-citizens), the jealousy of a free people ought to be *constantly* awake; since history and experience prove that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial; else it becomes the instrument of the very influence to be avoided, instead of a defence against it.

The great rule of conduct for us in regard to foreign nations, is, in extending our commercial relations, to have with them as little *political* connexion as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith. Here let us stop.

Europe has a set of primary interests, which to us have none, or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities.

Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off, when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality, we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation; when we may choose peace or war, as our interest, guided by justice, shall counsel.

Why forego the advantages of so peculiar a situation? Why quit our own, to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalry, interest, humour, or caprice?

It is our true policy to steer clear of permanent alliances with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronising infidelity to existing engagements. I hold the maxim no less applicable to public than to private affairs, that honesty is always the best policy. I repeat it, therefore, let those engagements be observed in their genuine sense. But, in my opinion, it is unnecessary, and would be unwise to extend them.

Taking care always to keep ourselves, by suitable establishments, in a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies.

Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favours or preferences; consulting the natural course of things; diffusing and diversifying, by gentle means, the streams of commerce, but forcing nothing; establishing, with the powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be, from time to time, abandoned or varied, as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favours from another; that it must pay, with a portion of its independence, for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favours, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect or calculate upon real favours from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard.

dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course which has hitherto marked the destiny of nations; but, if I may even flatter myself, that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare by which they have been dictated.

In relation to the still subsisting war in Europe, my proclamation of the 22nd of April, 1793, is the index to my plan. Sanctioned by your approving voice, and by that of your representatives, in both houses of congress, the spirit of that measure has continually governed me; uninfluenced by any attempts to deter or divert me from it.

After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound in duty and interest to take, a neutral position. Having taken it, I determined, as far as should depend on me, to maintain it, with moderation, perseverance, and firmness.

Though in reviewing the incidents of my administration, I am unconscious of intentional error, I am nevertheless, too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils, to which they may tend. I shall also carry with me the hope that my country will never cease to view them with indulgence; and that, after forty-five years of my life dedicated to its service, with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest.

Relying on its kindness in this as in other things, and actuated by that fervent love towards it, which is so natural to a man who views in it the native soil of himself and his progenitors for several generations, I anticipate with pleasing expectation that retreat, in which I promise myself to realise, without alloy, the sweet enjoyment of partaking, in the midst of my fellow-citizens, the benign influence of good laws under a free government—the ever favourite object of my heart, and the happy reward, as I trust, of our mutual cares, labours, and dangers.

GEORGE WASHINGTON.

United States, September 17, 1796.

COURTS OF LAW, OR JUDICIARY OF THE UNITED STATES.

The United States vest the judicial authority in one supreme court, forty-two district courts, and ten circuit courts, including the local circuit court of the district of Columbia. The supreme court has one chief justice, and six associate justices. It is held annually in the city of Washington; and each of the justices attends a circuit, comprising two or more districts. A justice of the supreme court and the judge of the district preside in each circuit court.

A district court is presided in by the district judge alone. Appeals are allowed from the district to the circuit courts in cases where the matter in dispute, exclusive of costs, exceeds the sum or value of fifty dollars; and from the circuit courts to the supreme court, in cases where the matter in dispute, exclusive of costs, exceeds the sum or value of two thousand dollars. In some cases, where the inconvenience of attending a court by a justice of the supreme court is very great, the district court is invested with the jurisdiction of a circuit court. Each state forms a district, for holding district and circuit courts, with the exception of New York, Pennsylvania, Virginia, Tennessee, Louisiana, and Alabama, each of which is divided into two districts. There are, also, territorial courts. These change that character on the territory assuming the rank of a state. In the district of Columbia there is also a circuit court, which exercises, under the authority of congress, common law and equity jurisdiction.

Each court has a clerk, a public attorney, or prosecutor, and a marshal; all appointed by the president of the United States, with the exception of the clerks, who are named by the courts. The compensation of the judges is fixed by law; that of the clerks, attorneys, and marshals, con-

power with reference to those of the states. It would place every thing in the state governments, except their mere existence, at the mercy of a single department of the federal government. The maxim, *stare decisis*, is not always adhered to by our courts; their own decisions are not held to be absolutely binding upon themselves. They may establish a right to-day and unsettle it to-morrow. A decision of the supreme court might arrest a state in the full exercise of an important and necessary power, which a previous decision of the same court had ascertained that she possessed. Thus the powers of the state governments, as to many important objects, might be kept indeterminate and constantly liable to change, so that they would lose their efficiency, and forfeit all title to confidence and respect. It is true that in this case too, there is a possible corrective in the power to amend the constitution. But that power is not with the aggrieved state alone; it could be exerted only in connexion with other states, whose aid she might not be able to command. And even if she could command it, the process would be too slow to afford effectual relief. It is impossible to imagine that any free and sovereign state ever designed to surrender her power of self-protection in a case like this, or ever meant to authorise any other power to reduce her to a situation so helpless and contemptible. This want of uniformity and fixedness in the decisions of courts renders the supreme court the most unfit umpire that could be selected, between the federal government and the states, on questions involving their respective rights and powers. Suppose that the United States should resolve to cut a canal through the territory of Virginia, and being resisted, the supreme court should decide that they had a right to do so. Suppose that when the work was completed, a similar attempt should be made in Massachusetts, and being resisted, the same court should decide that they had no right to do so. The effect would be that the United States would possess a right in one state, which it did not possess in another. Suppose that Virginia should impose a tax on the arsenals, dockyards, &c., of the United States within her territory, and that, in a suit to determine the right, the supreme court should decide in favour of it. Suppose that a like attempt should be made by Massachusetts, and, upon a similar appeal to that court, it should decide *against* it; Virginia would enjoy a right in reference to the United States, which would be denied to Massachusetts. Other cases may be supposed involving like consequences, and showing the absurdity of submitting to courts of justice the decision of controversies between governments, involving the extent and nature of their powers.

"I know that the decisions of the supreme court on constitutional questions have been very consistent and uniform; but that affords no proof that they will be so through all time to come. It is enough for the purposes of the present argument that they *may be* otherwise.

"Yielding, therefore, to the supreme court all the jurisdiction and authority which properly belongs to it, we cannot safely or wisely repose in it the vast trust of ascertaining, defining, or limiting the sovereign powers of the states."

Circuit Courts.—The circuit courts of the United States have original cognisance, concurrent with the courts of the several states, of all suits of a civil nature, at common law, or in equity, where the matter in dispute exceeds, exclusive of costs, the sum or value of 500 dollars, and the United States are plaintiffs or petitioners, or an alien is a party, or the suit is between a citizen of the state where the suit is brought and a citizen of another state. They have exclusive cognisance of all crimes and offences cognisable under the authority of the United States (except where the laws of the United States otherwise direct), and concurrent jurisdiction with the districts courts of the crimes and offences cognisable therein. But no person can be arrested in one district for trial in another, in any civil action, before a circuit or district court. No civil suit can be brought, before either of the said courts, against an inhabitant of the United States, by any original process, in any other district than that whereof he is an inhabitant, or in which he shall be found at the time of serving the writ; and no district or circuit court has cognisance of any suit to recover the contents of any promissory note, or other *chose* in action, in favour of an assignee, unless a suit might have been prosecuted in such court to recover the said contents if no assignment had been made, except in cases of foreign bills of exchange.

The circuit courts have appellate jurisdiction from final decrees and judgments of the district courts, in all cases where the matter in dispute exceeds the sum or value of fifty dollars. They also have jurisdiction of certain cases, which may be removed into them before trial from the state courts. But no district judge (sitting in a circuit court) can give a vote in any case of appeal, or error, from his own decision; but may assign the reasons of such his decision.—The trial of issues, in fact, in the circuit courts in all suits, except those of equity and of admiralty and maritime jurisdiction, is by jury.

District Courts.—The district courts of the United States, have, exclusively of the courts of the several states, cognisance of all crimes and offences that are cognisable under the authority of the United States, committed within their respective districts, or upon the high seas, where no other punishment than whipping, not exceeding thirty stripes, a fine not exceeding 100 dollars, or a term of imprisonment not exceeding six months, is to be inflicted, and also have exclusive original cognisance of all civil causes of admiralty and maritime jurisdiction, including all seizures under laws of impost, navigation, or trade, of the United States, where the seizures are

made on waters which are navigable from the sea by vessels of ten or more tons burthen, within their respective districts, as well as upon the high seas, saving to suitors, in all cases, the right of a common law remedy, where the common law is competent to give it; and also have exclusive original cognisance of all seizures, on land or other waters than as aforesaid, made, and of all suits for penalties and forfeitures incurred, under the laws of the United States. And they also have cognisance, concurrent with the courts of the several states, or their circuit courts, as the case may be, of all causes where an alien sues for a tort only in violation of the law of nations, or a treaty of the United States. They also have cognisance, concurrent as last-mentioned, of all suits at common law, where the United States sue, and the matter in dispute amounts, exclusive of costs, to the sum or value of 100 dollars. They also have jurisdiction, exclusively of the courts of the several states, of all suits against consuls or vice-consuls, except for offences above the description aforesaid. The trial of issues, in fact, in the district courts, in all causes except civil causes of admiralty and maritime jurisdiction, is by jury.

An act of the 14th of December, 1812, requires the district and territorial judges of the United States to reside within the districts and territories, respectively, for which they are appointed; and makes it unlawful for any judge, appointed under the authority of the United States, to exercise the profession or employment of counsel or attorney, or to be engaged in the practice of the law. And any person offending against the injunction or prohibition of this act, shall be deemed guilty of a misdemeanor.

The salaries of judges, &c., of the supreme court are:—chief justice, 5000 dollars; eight associate judges, each 4500 dollars; attorney-general, 4000 dollars; reporter, 1000 dollars; clerk, fees, &c.

The circuit courts are presided over by judges of the supreme courts, and without any additional salary.

NOTE.—The common law of England was adopted by the republic after the revolution; and although altered and modified by acts of congress, it may be still considered as the text-book of the American lawyer.

In all the States except New Jersey, Virginia, and South Carolina, the governor is voted for by the people; and if no one has a majority of all the votes, in the states in which such a majority is required, the legislature elects to the office of governor, one of the candidates voted for by the people.

I. MAINE.

In 1652, the inhabitants of Maine were placed under the jurisdiction of Massachusetts. From that time the territory formed a part of the colony and afterwards of the state of Massachusetts, as the *District of Maine*, until erected, in the year 1820, into an independent state.

The constitution of this state was formed in 1819, and went into operation in 1820.

The Legislative Power is vested in a senate and a house of representatives, both elected annually by the people, on the second Monday in September.

The number of representatives cannot be less than 100, nor more than 200. A town having 1500 inhabitants is entitled to send one representative; having 3750, two; 6775, three; 10,500, four; 15,000, five; 20,250, six; 26,250, seven; but no town can ever be entitled to more than seven representatives.—The number of senators cannot be less than twenty, nor more than thirty-one.

The legislature meets at *Augusta*, annually, on the first Wednesday in January.

The Executive Power is vested in a governor, elected annually by the people, on the second Monday in September; his term of office commences on the first Wednesday in January. A council of seven members is elected annually on the first Wednesday in January, by joint ballot of the senators and representatives, to advise the governor in the executive part of government.

* Each state is within itself a government, with its particular laws, revenue, and expenditure. In the finances of the United States, as a federal government, the state revenues and expenses should not be overlooked; for, although not entered in the general budget, yet form equally a part of the general public burdens and expenditures.

The Right of Suffrage is granted to every male citizen aged twenty-one years or upwards (excepting paupers, persons under guardianship, and Indians not taxed), having had his residence established in the state for the term of three months next preceding an election.

The Judicial Power is vested in a supreme judicial court, and such other courts as the legislature may, from time to time, establish. All the judges are appointed by the governor, with the advice and consent of the council: they hold their offices during good behaviour, but not beyond the age of seventy years.

Salaries of the Officers of Government.—Governor, 1500 dollars; secretary of state, 900 dollars; treasurer of state, 900 dollars; adjutant-general, 700 dollars; warden of the state prison, 700 dollars.

The members of the senate and house of representatives receive each two dollars a day; and the president of the senate and the speaker of the house, four dollars.

Supreme Judicial Court.—Chief justice, 1800 dollars; two associate justices, each 1800 dollars; attorney-general, 1000 dollars; reporter, 1000 dollars.

Court of Common Pleas, or District Court.—Chief justice, 1200 dollars; three associate judges, each 1200 dollars.

II. NEW HAMPSHIRE.

In 1641, the settlements in New Hampshire voluntarily put themselves under the government of the colony of Massachusetts, and were allowed to send representatives to the general court at Boston, till 1679, when a new government was formed, and New Hampshire was made a separate province.

In 1686, New Hampshire was placed, together with the rest of New England, under the same government. In 1689, the union with Massachusetts was revived, and continued till 1692. From 1699 to 1702, it was united with Massachusetts, and New York; in 1702, it was again united with Massachusetts, and so continued till 1741, when a final separation took place.

The constitution established in 1784; was in 1792, altered and amended, as now in force. *The Governor* is elected annually by the people, on the second Tuesday in March. The qualifications necessary to render a candidate eligible to this office, are, a residence in the state during seven years immediately preceding the election, the age of thirty years, and property to the amount of 500*l.*, one-half consisting of a freehold within the state, held in the candidate's own right.

The Council consists of five members, elected by the freeholders and other inhabitants qualified to vote for senators. The qualifications requisite in a candidate for the office of councillor are: a residence of seven years within the state; a residence within the county at the time of the election; property within the state to the amount of 500*l.*; and thirty years of age.

The Legislative Power is vested in a senate and house of representatives, each of which bodies has a negative upon the acts of the other. This joint legislature is styled the General Court of New Hampshire. It assembles annually on the first Wednesday in June.

The Senate contains twelve members, elected annually by the people. To be eligible as a senator, the candidate must have been an inhabitant of the state for seven years immediately preceding the election, he must be at least thirty years of age, and must possess freehold property within the state, to the amount of 200*l.*

The House of Representatives contains 250 members, elected annually by the people. The qualifications required of a candidate for membership of the house, are a residence within the state for two years, immediately preceding the election, thirty years of age, and property to the amount of 100*l.*, within the district which he intends to represent, one-half of this property being a freehold. On ceasing to be thus qualified, he also ceases to be a representative.

The Judiciary Power.—All judicial officers, the attorney-general, solicitors, sheriffs, coroners, registers of probate, are nominated and appointed by the governor in council, and hold their offices during good behaviour. At the representation of both houses of the legislature, the governor, with the consent of council, may make removals at any time. No person can hold the office of judge in any court, judge of probate, or sheriff of any county, after he has attained the age of seventy years.

The Secretary and Treasurer are chosen by the joint ballot of the senators and representatives assembled in one room.

<i>Executive.</i> —Governor's salary	1000 dollars.
Five councillors	—
Secretary of state	800 do.
Treasurer	600 do.

The councillors, senators, and representatives, receive 2 dollars a day, for attendance during the session of the legislature, and 10 cents a mile for travel; of the president of the senate and the speaker of the house of representatives, also the councillors (when in service, except during the session of the legislature,) 2 dollars 50 cents a day.

tices, who hold one term annually in each of the ten counties of the state, for the hearing and determining questions of law, &c. This court is also vested with chancery jurisdiction, for certain purposes prescribed by the statute.

The judges of the superior court of judicature are, *ex officio*, judges of the court of common pleas. This court, before whom all actions for recovery of debts and the enforcement of contracts, and all jury trials are brought, consists of one of the justices of the superior court, who sits as chief justice of the court of common pleas, and of two county judges, generally appointed from among the yeomanry, whose principal duty it is to attend to the ordinary business of the county, its roads, expenses, &c. Terms of this court are held semi-annually, in each of the counties.

<i>Superior Court.</i> —Chief justice's salary	1400 dollars.
Three associate justices	1200 do.
Attorney-general	1200 do.
<i>Circuit Court.</i> —Two judges	1200 do.
Attorney-general	1200 do.

There are two judges of common pleas in each of the ten county courts of the state, who are paid 3 dollars per day during attendance at the court, and 10 cents per mile for travelling. There are also courts of probate, the judges of which have salaries of from 100 to 334 dollars; and registrars, with salaries of from 125 to 462 dollars.

III. VERMONT.

Vermont was originally claimed both by New Hampshire and New York. Its political condition was, for a considerable time, unsettled; and the people preferring a separate government, formed a constitution in 1777, under which a government was organised in March, 1788. In 1791, Vermont was admitted into the union.

The Governor is elected annually by the people. No person is eligible to this office unless he is a citizen of the United States, and has resided in the state four years next preceding his election.

The Lieutenant-governor is also elected annually by the people, and must possess the same qualifications as the governor. He acts as governor in the event of that officer's absence or inability to serve. As lieutenant-governor, he is president of the senate.

The Supreme Executive Council consists of the governor, lieutenant-governor, and twelve persons chosen by the people.

The Legislative Power is vested in a senate and house of representatives, which, together, are styled the General Assembly.

The Senate consists of thirty members, each county choosing at least one. Some counties are entitled to more, according to the amount of population.

The House of Representatives consists of 231 members, elected annually by the people. Every representative must have resided in the state two years, the latter in the town for which he is elected, and must be a citizen of the United States.

The Judicial Power.—Courts of justice are maintained in every county. There is a supreme court consisting of five judges, who are justices of the peace throughout the state. All the judges and justices are elected annually by the legislature. The supreme court sits once, and the county courts twice in each county. There is also a Court of Chancery, which holds its sessions every year in each county, each judge of the supreme court being chancellor of a circuit.

Secretary, Treasurer, &c.—The secretary of state is elected by the joint vote of the general assembly annually; and the treasurer by the people, also annually.

Right of Suffrage.—Every man of the age of twenty-one years, a citizen of the United States, having resided in the state one year next preceding the election, and being of a quiet and peaceful behaviour, if he will take an oath or affirmation of allegiance, is entitled to all the privileges of a freeman.

A Council of Censors.—Once in seven years a council of thirteen censors is elected for the term of one year. It is their duty to inquire whether the constitution has been preserved inviolate during the last septennary; and whether the legislative and executive branches have performed their duty as guardians of the people, or have assumed or exercised other or greater powers than those conferred upon them by the constitution; also to look after various other matters connected with the administration of the state government.

The governor's salary is 750 dollars; lieutenant-governor, as president of the senate, 4 dollars a day; the compensation of the members of the general assembly is 1½ dollars per day during session.

Salary of the Judges of the Supreme Court.—Chief justice, 1375 dollars; 4 associate judges, 1375 dollars each; and reporter, 450 dollars.

IV. MASSACHUSETTS.

The territory of Massachusetts comprised, for many years after its first settlement, two separate colonies; viz., the Plymouth Colony and the Colony of Massachusetts Bay.

The two colonies continued separate, and elected their own governors annually, till 1685-6, when they were deprived of their charters. In 1692, they were united into one colony under a new charter; and the governors were afterwards appointed by the king.

By the constitution formed in 1780, and amended in 1821, the legislative power is vested in a senate and house of representatives, styled The General Court of Massachusetts.

The *House of Representatives* consists of 336 members, who are elected annually in May, ten days at least before the last Wednesday of that month. Corporate towns having 150 rateable polls elect one representative, and another for every additional 225 rateable polls.

No person is eligible to the house who is not possessed of a freehold of the value of 100*l.* within the town he shall be chosen to represent, or rateable estate, to the value of 200*l.* and shall cease to represent the said town immediately on his ceasing to be qualified as above.

The *Senate* consists of 40 members, chosen by districts, annually, on the first Monday in April.

No person is eligible to the senate, unless he possesses a freehold of 300*l.*, a personal estate to the value of 600*l.*, or of both to the amount of the same sum, and who has not been an inhabitant of the commonwealth five years immediately preceding his election.

The pay of each member of the council, of the senate, and of the house of representatives, is two dollars for each day's attendance, and two dollars for every ten miles they travel.

The *Supreme Executive Magistrate* is styled the Governor of the Commonwealth of Massachusetts, with the title of "His Excellency." He is elected annually by the people on the first Monday of April, together with a lieutenant-governor. The latter is styled "His Honour." The governor is assisted in the executive part of government by a council of nine members, chosen by the joint ballot of the senators and representatives, from the senators. In case the persons elected, or any of them, decline the appointment, they are elected from among the people at large. The councillors rank next to the lieutenant-governor.

The general court meets, at Boston, on the last Wednesday of May, and also in January.

The *Right of Suffrage* is granted to every male citizen twenty-one years of age and upwards (excepting paupers and persons under guardianship), who has resided within the commonwealth one year, and within the town or district in which he may claim a right to vote, six calendar months preceding any election, and who has paid a state or county tax assessed upon him within two years next preceding such election; and also every citizen who may be by law exempted from taxation, and who may be, in all other respects, qualified as above-mentioned.

The *Judiciary* is vested in a supreme court, a court of common pleas, and such other courts as the legislature may establish.

All judicial officers, the attorney-general, the solicitor-general, all sheriffs, coroners, and registrars of probate, are nominated and appointed by the governor, by and with the advice and consent of the council, and hold their offices during good behaviour. At the representation of both houses of the legislature, the governor, with the consent of the council, may at any time remove them.

Justices of the peace have original and exclusive jurisdiction in all civil cases not exceeding 20 dollars, excepting in matters of real estate. They have concurrent criminal jurisdiction in breaches of the peace, and in cases of larceny, where the goods stolen do not exceed the value of 5 dollars.

The court of common pleas has appellate jurisdiction in civil and criminal cases tried before a justice of the peace; original and exclusive jurisdiction in civil common-law cases not exceeding 20 dollars; and final jurisdiction, where the damages do not exceed 100 dollars. Its criminal jurisdiction depends on particular statutes. In offences at common law, its jurisdiction includes every thing where the punishment does not extend to life, or banishment, except where the punishment is, by statute, to be administered by the supreme court. In case of mortgages and forfeitures annexed to contracts, this court has a concurrent chancery jurisdiction.

The supreme judicial court has appellate jurisdiction in all civil cases where the debt or damage exceeds 100 dollars, and in all criminal cases originally tried in the common pleas or the municipal court of Boston. It has concurrent jurisdiction in all criminal cases cognisable by the inferior courts, and original and exclusive jurisdiction in all capital cases. It has also original and exclusive jurisdiction in all cases of alimony and divorce; and chancery powers in cases of trusts, specific performance of contracts in writing, mortgages, settlement of partnership accounts, waste, nuisance, and forfeitures annexed to contracts. It is the supreme court of probate entertains appeals from the probate courts of the counties, and has a general superintending power over all inferior tribunals by writ of error, certiorari, quo warranto, &c.

original and exclusive jurisdiction in the probate of wills, settlement of estates, and guardianship of minors, idiots, lunatics, &c.

In Boston, a court, consisting of three justices, styled the police court for the city of Boston, and a justices' court for the county of Suffolk, have the same civil jurisdiction as justices of the peace in other counties, and the same criminal jurisdiction as justices of the peace, concurrently with the municipal court.

In Boston, a municipal court, consisting of one judge, which has also cognisance of all crimes, not capital, committed within the county of Suffolk, and appellate jurisdiction in all criminal cases tried before the police court.

Salaries for the year ending on the 1st Wednesday in January, 1844.—Governor, 2500 dollars; lieutenant-governor, 4 dollars a day; secretary of the commonwealth, 1600 dollars; treasurer and receiver-general, 1600 dollars; adjutant-general and keeper of military stores, 1500 dollars; secretary of state's office, 1000 dollars; treasurer's office, 1000 dollars; secretary of the board of education, 1500 dollars; president of the senate, 4 dollars per day; speaker of the house of representatives, 4 dollars per day; clerk of the senate, 8 dollars per day; clerk of the house of representatives, 8 dollars per day.

Supreme Judicial Court.—Chief-justice, 3000 dollars; 3 justices, each 2500 dollars; reporter, 300 dollars; 4 district attorneys, 700 dollars each; 1 attorney-general, 1500 dollars.

Court of Common Pleas.—Chief-justice, 1800 dollars; 4 associate-justices, 1700 dollars each.
Police Court of Boston.—Four justices, 1500 dollars each.

V. RHODE ISLAND.

The government of this state (first settled in 1636), is founded on the provisions of the charter granted to the colony by Charles II., in 1663. It is the only state of the union without a written constitution.

Any duly qualified elector in this state, not holding office under the government of the United States, is eligible to any civil office therein.

A governor, a lieutenant-governor, a secretary of state, an attorney-general, and a general treasurer, are elected annually by the people on the first Wednesday in April.

The chief executive power of the state is vested in the governor.

The lieutenant-governor acts as governor in case of a vacancy in the office, or the inability of this officer to serve, &c.

The legislative power is vested in a senate and house of representatives, collectively styled the general assembly; and, when acting conjointly, the grand committee. The general assembly holds two sessions annually, one at Newport on the last Monday of October,—the other biennially at South Kingstown, and, in the intermediate years, at Bristol and East Greenwich alternately. An adjournment of the October session is held annually at Providence.

The senate consists of the lieutenant-governor, and one senator from each town or city in the state. The governor, or, in his absence, the lieutenant-governor presides, and votes in cases of equal division. The secretary of state is also secretary of the senate, and presides in the absence of the governor and lieutenant-governor, until an election of a presiding officer is made by the senate.

The house of representatives is limited to seventy-two members. Each town or city is entitled to at least one member, provided that no town or city shall elect more than one-sixth of the entire number. The present ratio of representation is that of one member to every 1530 inhabitants; and the election being general in each town or city, each fraction exceeding a moiety is entitled to one representative. The house at present consists of sixty-nine members.

The judicial power consists of one supreme court, and such inferior courts as the general assembly may ordain. The judges of the supreme court are elected by the general assembly in grand committee, and may be dismissed by a majority of all the members elect of each house separately.

Right of Suffrage.—The requisites for the general franchise are, male citizenship of the United States; the age of twenty-one years; residence and home in the state for one year and in

the town or city where the vote is offered for six months next preceding the election; and real estate in the said town or city of the value of 134 dollars, or renting for seven dollars above all incumbrances whatsoever, whether held in fee-simple, fee-tail for life, or in reversion or remainder, the conveyance of which, if by deed, has been recorded at least ninety days; provided the said estate entitles no other person to vote. If the voter, otherwise qualified, own such an estate in any town or city within the state other than that in which he resides, he is required to produce a certificate to that effect from the clerk of the town or city in which his estate lies, dated within ten days of the time of voting, and showing that the deed, if there be any, has been recorded ninety days.

The right of voting, under the following restrictions, is extended to every male citizen of the United States, twenty-one years of age, resident for two years in the state, and for six months in the town or city where his vote is offered, whose name has been legally enrolled in the said town or city during the calendar year next preceding that of the election, and who produces legal proof that he has paid within the said year a tax of one dollar assessed within any town or city in the state, or that he has been enrolled and has actually performed duty in any military company of the state.

Restrictions.—No person can vote in the election of the town council of the city of Providence, or upon any proposition for the expenditure of money in any town or city, unless he has paid, within the year next preceding, a tax upon his property therein, valued at least at 134 dollars.

Legal residence is not obtainable by dwelling in any garrison, barrack, or military or naval station within the state.

Paupers, lunatics, persons *non compos mentis*, persons under guardianship, and Narraganset Indians, are disfranchised.

Salaries.—Governor, 400 dollars; lieutenant-governor, 200 dollars; secretary of state, fees and 750 dollars; treasurer, fees and 650 dollars; attorney-general, fees.

Supreme Court.—Chief justice, 650 dollars; 3 associates, 550 dollars each.

The supreme court also receive entries on petitions for the insolvent act. The justices of this court also preside alternately as chief of the common pleas in the several counties, for which they receive a proportion of the entries.

VI. CONNECTICUT.

Connecticut originally comprised two colonies, the Colony of Connecticut, and the Colony of New Haven.

In 1662, a charter was granted by Charles II., with ample privileges, uniting the colonies of Connecticut and New Haven under one government. The colony of New Haven refused for some time to accept the charter, and the union did not take place till 1665. The charter was suspended in 1687, but restored again after the revolution of 1688 in England, and formed the basis of the government till 1818.

The present constitution was framed in 1818.

The legislative power is vested in a senate and house of representatives.

The members of the house of representatives are chosen by the different towns in the state: the more ancient towns, the majority of the whole number, send each two representatives; the rest one each. The present number is 215.

The senate must consist of not less than eighteen, nor more than twenty-four members, who are chosen by districts. The present number is twenty-one.

The executive power is vested in a governor. A lieutenant-governor is also chosen, who is president of the senate, and on whom the duties of the governor devolve in case of his death, resignation, or absence.

The representatives, senators, governor, and lieutenant-governor are elected annually by the people on the first Monday in April.

The general assembly has one stated session every year, on the first Wednesday in May, alternately Hartford, 1831, and at New Haven, 1832.

"Every white male citizen of the United States, who shall have gained a settlement in this state, attained the age of 21 years, and resided in the town in which he may offer himself to be admitted to the privilege of an elector, at least six months preceding, and have a freehold estate of the yearly value of seven dollars in this state; or, having been enrolled in the militia, shall have performed military duty therein for the term of one year next preceding the time he shall offer himself for admission, or, being liable thereto, shall have been, by authority of law, excused therefrom; or shall have paid a state tax within the year next preceding the time he shall present himself for such admission, and shall sustain a good moral character, shall, on his taking such an oath as may be prescribed by law, be an elector."

The judicial power is vested in a supreme court of errors, a superior court, and such inferior

courts as the general assembly may, from time to time, establish. The judges are appointed by the general assembly; and those of the supreme and superior courts hold their offices during good behaviour; but not beyond the age of 70 years.

No person is compelled to join, or support, or to be classed with, or associated to any congregation, church, or religious association. But every person may be compelled to pay his proportion of the expenses of the society to which he may belong: he may, however, separate himself from the society by leaving a written notice of his wish with the clerk of such society.

Government Salaries.—Governor, 1100 dollars; lieutenant-governor, 800 dollars; treasurer, 1000 dollars; secretary, (exclusive of fees) 84 dollars; comptroller, 1000 dollars; commissioner of the school fund, 1250 dollars.

The pay of the senators is 2 dollars a day each, during the session, and of the representatives 1 dollar 50 cents a day, and both receive 9 cents a mile for travel. The speaker of the house of representatives receives 2 dollars 50 cents a day.

Judiciary.—*Supreme Court of Errors.*—Chief-justice, 1100 dollars; 3 associate justices, 1050 dollars each; reporter, 350 dollars.

The supreme court of errors is composed of the five judges, and is held in each of the eight counties.

The superior court is a court held in each of the counties, by one of the judges of the supreme court.

There is also a county court in each county, composed of a chief judge and two associate judges, who are appointed annually by the legislature. The chief judges of these courts receive 3 dollars 50 cents a day, and the associate judges 3 dollars a day, during the session of the court, and 9 cents a mile for travel.

VII. NEW YORK.

In 1664, Charles II. of England granted his brother, the Duke of York, a patent for the country forming the present states of New York and New Jersey; and, during the same year, Colonel Nicolls, with a considerable force, in the service of the duke, made a conquest of the country. The name of New Netherlands was afterwards changed to New York. In 1673, the colony was recaptured by the Dutch, and retained a few months. With the exception of this period, it was in the possession of the English from 1664 till the American revolution, in 1775.

The colonial government was suspended in May, 1775, from which time to April, 1777, New York was governed by a provincial congress. A constitution having, at length, been formed and adopted, the government, under this constitution, went into operation April 20, 1777.

The constitution of the state of New York was formed in 1821.

The executive power is vested in a governor, elected by the people every two years. At the same time, a lieutenant-governor is also chosen, who is president of the senate; on whom, in case of the impeachment, resignation, death, or absence of the governor from office, the powers and duties of governor devolve.

The legislative power is vested in a senate of 32 members, chosen for five years, and an assembly of 128 members, elected annually.

For the election of the senators, the state is divided into eight districts, each being entitled to choose four senators, one of whom is elected every year. The members of the assembly are chosen by counties, and apportioned according to population.

The election of governor, lieutenant-governor, senators, and members of the assembly, is held at such time in the month of October or November, as the legislature may by law provide.

The legislature meets annually (at Albany), on the first Tuesday in January, unless a different day is appointed by law.

The constitution grants the right of suffrage, in the election of public officers, to every white male citizen, of the age of 21 years, who has been an inhabitant of the state one year next preceding any election, and, for the preceding six months, a resident in the county where he may offer his vote; but no man of colour is entitled to vote unless he is possessed of a freehold estate of the value of 250 dollars, without any incumbrance.

The chancellor and judges are appointed by the governor, with the consent of the senate. The chancellor and justices of the supreme and circuit courts hold their offices during their good behaviour, or until they attain the age of sixty years. The judges of the county courts, or courts of common pleas, are appointed for a term of five years.

The court of errors consists of the president of the senate, the senators, chancellor, or any judge of the supreme court.

EXECUTIVE.

	Salaries. dollars.		Salaries. dollars.
Governor.....	4000	Deputy comptroller	1500

There are eight circuit courts, one in each senate district, with eight judges, each with a salary of 1250 dollars; and a superior court of the city of New York, with three judges, with salaries of 2500 dollars each.

VIII. NEW JERSEY.

The territory comprised in this state was included in the patent granted by Charles II. to his brother the Duke of York, in 1664; and in the same year conveyed to Lord Berkeley and Sir George Carteret; when it received the name of New Jersey. It then contained a few families.

In 1676, New Jersey was divided into two provinces, East Jersey and West Jersey.

In 1682, East Jersey was transferred to William Penn and eleven associates; and Robert Barclay, the celebrated author of the "Apology for the Principles of the Quakers," was appointed governor.

In 1702, East and West Jersey were again united into one province, by the name of New Jersey, under the governor of New York; and this connexion with New York continued till 1738, when a separate government was instituted, which lasted till the American revolution.

The constitution of New Jersey was formed in 1776; and no revision of it has since taken place, except that the legislature has undertaken to explain its provisions in particular parts. The government is vested in a governor, legislative council, and general assembly.

The members of the legislative council and of the general assembly are elected annually, on the second Tuesday in October.

The number of members of the legislative council is eighteen. The general assembly has consisted, for a number of years past, of forty-three members; but it will hereafter consist of fifty.

The legislature meets annually (at Trenton), on the fourth Tuesday in October.

The governor is chosen annually by a joint vote of the council and assembly, at their first joint meeting after each annual election. The governor is president of the council and chancellor of the state; and the council also elect from their own body, at their first annual meeting, a vice-president, who acts in the place of the governor in his absence. The governor and council form a court of appeal in the last resort in all causes of law; and they possess the power of granting pardon to criminals after condemnation.

The constitution grants the right of suffrage to "all persons of full age who are worth fifty pounds proclamation money, clear estate in the same, and have resided within the county in which they claim to vote, for twelve months immediately preceding the election." (The legislature has declared by law, that every white male inhabitant, over the age of twenty-one years, who has paid a tax, shall be considered worth fifty pounds, and entitled to vote. By another legislative act, females and negroes are prohibited from voting.)

The judges are appointed by the legislature, those of the supreme court for a term of seven years, and those of the inferior courts for five years; both are capable of being reappointed.

Salaries:—
Governor (exclusive of fees of office as chancellor of the state *ex officio*) 2000 dollars.

	dollars.
Vice-president of the legislative council (pay, during attendance, 3 dollars 50 cents a day).	
Secretary of state, and auditor (exclusive of perquisites)	50
Treasurer, elected annually	1000
Attorney-general, fees and	80
Clerk in Chancery	perquisites.

The members of the legislative council and the general assembly receive 3 dollars for each day's attendance, and 3 dollars for every twenty miles' travel; and the president 3½ dollars per day.

Judicial Power.—The judges of the supreme court hold their offices seven years; the judges of the inferior court of common pleas and quarter-sessions, the attorney-general and secretary, five years; the state treasurer, one year; but all are capable of being reappointed. These officers are appointed by the council and assembly.

The supreme court holds four terms each year at Trenton; on the last Tuesday in February, second in May, first in September, and second in November; and the judges of this court hold circuit courts and courts of oyer and terminer four times a year in each county, except the counties of Atlantic and Cape May, in which two terms only are held. Inferior courts of common pleas are held four times in a year in each county, by judges appointed by the legislature, who receive no salary, and the number of whom is not limited by any law.

The court of appeals and pardons is composed of the governor, who is, *ex officio*, president judge, and eighteen associate judges; that is, it consists of the governor and the legislative council, which is composed of one member for each county. This court holds two terms annually, at Trenton.

Court of Chancery.—The governor of the state is chancellor; and this court holds four terms annually, at Trenton, on the third Tuesday in January, first Tuesday in April, second Tuesday in July, and second Tuesday in October.

The salaries in the supreme court are—chief justice, 1500 dollars; four associate justices, each 1400 dollars; clerk, fees; reporter, 200 dollars.

IX. PENNSYLVANIA.

From the beginning of the eighteenth century till the commencement of the American revolution, the government was generally administered by deputies appointed by the proprietaries, who mostly resided in England.

The first constitution of Pennsylvania was adopted in 1776 the present in 1790.

The legislative power is vested in a senate and house of representatives.

The representatives are elected annually on the second Tuesday in October, by the citizens of Philadelphia and of the several counties, apportioned according to the number of taxable inhabitants. The number cannot be less than 60, nor more than 100.

The senators are chosen for three years, one-third being elected annually, at the time of the election of the representatives. Their number cannot be greater than one-third, nor less than one-fourth of the number of the representatives.

The executive power is vested in a governor elected by the people, who holds office during three years, from the third Tuesday in December next following his election. He may, by re-elections, hold office nine years, in any term of twelve years.

The judicial power is vested in a supreme court, in courts of oyer and terminer and gaol-delivery, in courts of common pleas, an orphans' court, a registrar's court, a court of quarter-sessions of the peace for each county, and in such other courts as the legislature may, from time to time, establish. The judges of the supreme court and the several courts of common pleas are appointed by the governor, by and with the advice of the senate. The judges of the supreme court hold their office for fifteen years; those of the common pleas for ten years; the associate judges of the common pleas for five years.

The right of suffrage is possessed by every freeman of the age of twenty-one years, who has resided in the state two years next preceding an election, and within that time paid a state or county tax, assessed at least six months before the election.

Salaries.—Governor, 4000 dollars; secretary of the commonwealth, 1700 dollars; state treasurer, 1400 dollars; auditor-general, 1400 dollars; surveyor-general, 1200 dollars; secretary of the land office, 1200 dollars; attorney-general (exclusive of fees), 300 dollars.

The senators and representatives receive 3 dollars for each day's attendance, and 15 cents a mile for travel; the speaker of each house, 4 dollars a day; canal commissioners, 3 dollars per day.

Judiciary.—Chief justice's salary, 2666 dollars 67 cents; four associate justices, each 2000 dollars; prothonotary, fees.

The judges of the supreme court hold circuit courts throughout the state, for which they

receive, in addition to their salaries, 4 dollars a day while on the circuits; and by a law passed in 1843, the chief justice's salary is to be reduced to 1800 dollars, and the associate justices, to 1600, with an addition of 3 dollars a day while on the circuits.

The jurisdiction of the four district courts for Philadelphia and for the counties of Lancaster, Alleghany, Erie, &c., is the same as that of the court of common pleas in other counties.

District Court for the City and County of Philadelphia.—President judge, salary, 2000 dollars; two associate judges, each 2000 dollars; prothonotary.

District Court for the Counties of Lancaster and York.—President judge, salary, 1600 dollars; associate judge, 1000 dollars.

The state is divided also into twenty districts, for the sessions of the courts of common pleas. The president judge of the district of Philadelphia has a salary of 2000 dollars, and two associate judges, 400 dollars each. The president judges in the other districts have salaries of 2000 dollars, and their associates 120 dollars.

The state is also divided into four districts, for the sessions of the supreme court, which, as a court in banco, holds six regular terms, for argument, &c., annually; viz., for the eastern district, at Philadelphia, on the second Monday in March, and on the second Monday in December; for the Lancaster district, at Lancaster, on the second Monday in May; for the middle district, at Sunbury, on the Wednesday following the second week of the term of the Lancaster district; for the western district, at Pittsburg, on the first Monday in September.

It is only in the city and county of Philadelphia that the supreme court has original jurisdiction, and there only when the sum in controversy exceeds 500 dollars; all issues of fact are tried by jury before a single judge, at *nisi prius*.

For the other counties of this state circuit courts are held, which are unlike courts of *nisi prius*, as judgment may be rendered at them, subject to revision by appeal in the supreme court in bank, and causes are only brought into them by removal from the courts of common pleas. They are held by one judge in each county, at least once a year.

X. DELAWARE.

In 1682, when this state as a county was granted to William Penn, under the same executive and legislative government with Pennsylvania, it was then, as it is now, divided into three counties, Newcastle, Kent, and Sussex, generally styled, till the American revolution, "The Three Lower Counties upon the Delaware."

In 1701, the representatives of Delaware withdrew from those of Pennsylvania; the first separate legislative assembly met at Newcastle, in 1704; and it ever afterwards continued distinct from that of Pennsylvania; though the same governor presided over both provinces till the 4th of July, 1776.

The first constitution of Delaware, which was formed in 1776, placed the executive power in a president, and a privy council of four members. In 1792, a new constitution, the one now in operation, was adopted, by which the executive power is vested in a governor.

The Governor is elected by the people for four years, and cannot be elected a second term. Requisites for eligibility—the age of thirty years, a citizenship and residence in the United States for twelve years next before his election, the last six within the state.

The Legislative Power is vested in a general assembly, consisting of a senate and house of representatives.

The Senate consists of nine members (three from each county), elected by the people for four years. Requisites for membership of the senate—the age of twenty-seven years, an estate in the county for which the member is chosen of the value of a thousand pounds, a residence in the county one year, and in the state three years next preceding the election.

The House of Representatives consists of twenty-one members (seven from each county), elected by the people biennially. Requisites for membership—the age of twenty-four years, residence in the state three years, and in the county for which the member is elected one year next preceding election.

The Judiciary Power.—All judges are appointed by the governor, and hold their offices during good behaviour.

Right of Suffrage.—Every free white male citizen of the age of twenty-two years and upwards, having resided in the state one year next previous to election, the last month thereof in the county where he offers his vote, and having paid a tax within two years, enjoys the right of an elector. Every free white male citizen of the age of twenty-one years, and under the age of twenty-two years, having resided as aforesaid, is entitled to vote without the payment of any tax. No person in the military, naval, or marine service of the United States is considered a citizen of the state in consequence of being quartered or stationed within the state; and no idiot, insane person, pauper, or person convicted of a crime deemed by law felony, enjoys the rights of an elector. The legislature has power to impose the forfeiture of the right of suffrage as a punishment for crime.

Election, &c.—All elections for governor, senators, representatives, sheriffs, and coroners, are held on the second Tuesday of November. The general assembly meet on the first Tuesday of January, biennially, at Dover.

Salaries.—Governor, 1333½ dollars; secretary of state, fees and 400 dollars; state treasurer, 500 dollars; auditor, 500 dollars; pay of the members of the legislature, 3 dollars a day; chancellor, 1100 dollars.

Superior Court.—Chief justice, 1200 dollars; associate justice, 1200 dollars; two associate justices, each 1000 dollars; attorney-general, fees and 300 dollars.

The judicial power is vested in a court of chancery, a supreme court, court of common pleas, register's court, &c.

XI. MARYLAND.

In 1632, Maryland was granted by Charles I., of England, to Sir George Calvert, Lord Baltimore; but before the patent was completed, he died, and the patent, dated June 20th, 1632, was given to his eldest son, Cecilius, who succeeded to his titles, and who, for upwards of forty years, directed, as proprietor, the affairs of the colony.

Leonard Calvert, brother to Cecilius, Lord Baltimore, was appointed the first governor; and he, together with about 200 persons, commenced the settlement of the town of St. Mary's, in 1634.

The constitution of this state was first formed in 1776; since which time many amendments have been made.

The Legislative Power consists of two branches, the senate and house of delegates.

The Senate consists of twenty-one members, elected by the people for six years; one-third of the number being elected every two years. Requisites for membership of the senate—the age of twenty-five years, and residence in the city or county for which the member may be chosen, three years next preceding the election.

The House of Delegates consists of seventy-eight members, elected by the people. Requisites for membership of the house—the age of twenty-one years, and residence in the county for which the member may be chosen one year next preceding the election.

The Judiciary Power.—All judges are appointed by the governor, with the advice and consent of the senate, and hold their offices during good behaviour.

Right of Suffrage.—Every white male citizen above the age of twenty-one years, who has resided in the state one year next preceding the election, and in the county or city where he offers his vote, six months preceding the election, has the right of suffrage. The annual election takes place on the first Wednesday of October. The legislature meets at Annapolis on the last Monday of December, annually.

Salaries.—Governor, 4200 dollars; secretary of state, 2000 dollars; surveyor-general, 800 dollars; attorney-general, fees; adjutant-general, 500 dollars.

The Executive Power is vested in a governor, elected by the people once in three years. The governor is assisted by a council of five members, chosen annually by a joint ballot of the senate and house of delegates.

Judiciary.—Salaries in court of chancery—chancellor, 3600 dollars; in court of appeals—chief judge, 2500; four associate judges, each 2200; one associate judge, 3000.

County Courts.—The state is divided into six judicial districts, for each of which there are three judges. Each court is constituted of one of the judges of the court of appeals, and two associates. The salary of these county associate judges is 1400 dollars, except in the Baltimore district, where the associate judges are paid 2200 dollars each.

Baltimore City Court.—Chief justice's salary, 2400 dollars; two associate judges, each 1500 dollars.

XII. VIRGINIA.

The government of the colony was first administered by a council of seven persons, with a president chosen from among their number; but afterwards it was administered by a governor, appointed, except during the commonwealth in England, by the crown.

The constitution of this state was formed in 1776. In 1829, a convention met at Richmond, "to consider, discuss, and propose a new constitution, or alterations and amendments to the existing constitution;" and on the 14th of January, 1830, the convention adopted an amended constitution, by a vote of 55 to 40.

The amended constitution, on being submitted to the legal voters of the state, was ratified by a majority of 10,492 votes.

By this constitution, the legislative power is vested in a senate and a house of delegates. No person holding a lucrative office, minister or priest, is eligible to sit in the house.

The house of delegates consists of 134 members, chosen annually; 31 from the 26 counties

west of the Alleghany Mountains; 25 from the 14 counties between the Alleghany Mountains and Blue Ridge; 42 from the 29 counties east of the Blue Ridge, and above tide-water; and 36 from the counties, cities, towns, and boroughs lying upon tide-water.

The senate consists of 32 members, 13 from the counties west of the Blue Ridge, and 19 from the counties, cities, towns, and boroughs east thereof. The senators are elected for four years; and the seats of one-fourth of them are vacated every year. In all elections to any office or place of trust, honour, or profit, the votes are given openly, or *videlicet*, and not by ballot.

The executive power is vested in a governor, elected by the joint vote of the two houses of the general assembly. He holds his office three years, commencing on the 1st of January next succeeding his election, or on such other day as may be, from time to time, prescribed by law; and he is ineligible for the three years next after the expiration of his term of office.

There is a council of state, consisting of three members elected for three years, by the joint vote of the two houses; the seat of one being vacated annually. The senior counsellor is lieutenant-governor.

The judges of the supreme court of appeals and of the superior courts, are elected by a joint vote of both houses of the general assembly, and hold their offices during good behaviour; or until removed by a concurrent vote of both houses. The attorney-general is appointed in the same manner.

The right of suffrage is extended to every white male citizen of the commonwealth, resident therein, aged 21 years and upwards, who is qualified to exercise the right of suffrage according to the former constitution and laws; or who owns a freehold of the value of 25 dollars; or who has a joint interest to the amount of 25 dollars in a freehold; or who has a life estate in, or reversionary title to, land of the value of 50 dollars, having been so possessed for six months; or who shall own, and be in the actual occupation of, a leasehold estate, having the title recorded two months before he shall offer to vote, of a term originally not less than five years, and of the annual value or rent of 200 dollars; or who for twelve months before offering to vote, has been a house-keeper and head of a family, and shall have been assessed with a part of the revenue of the commonwealth, within the preceding year, and actually paid the same.

Salaries.—Governor, 3333 dollars 50 cents; lieutenant-governor, 1000 dollars; 2 councillors of state, 1000 dollars each; treasurer, 2000 dollars; auditor, 2000 dollars; 2d auditor and sup. library fund, 2000 dollars; register of land office, 1500 dollars; attorney-general, fees and 1000 dollars; secretary of the commonwealth and librarian, 1720 dollars; adjutant-general, 1000 dollars; clerk of the council, 1000 dollars; superintendent of penitentiary, 2000 dollars; speaker of the senate, 6 dollars per day; speaker of the house of delegates, 8 dollars per day.

Court of Appeals.—President, 2750 dollars; 4 judges, 2500 dollars each; clerk of eastern district, 1000 dollars; ditto western, 1000 dollars.

Twenty judges of the central circuit courts. Salary of the first 20 judges, 1500 each, and 4 dollars for every 20 miles they may be compelled to travel to and from their respective courts. Metropolitan circuit, 2000 dollars; judge of the court of chancery for the 21st circuit, 2000 dollars.

The court of appeals holds two sessions annually; one at Louisburg, Greenbrier county, for the counties lying west of the Blue Ridge, commencing on the 2d Monday in July, and continuing 90 days, unless the business shall be sooner despatched; the other at Richmond, for the counties lying east of the Blue Ridge, commencing at such times as the court may from time to time appoint, and continuing 160 days, unless the business shall be sooner despatched. Suits commenced during the year ending August 1842, 121; suits pending 580; suits decided, 106; Number of days in session, 179.

General Court.—The state is divided into ten judicial districts, and each district into two circuits, except the 4th, which comprises three. The third circuit of the 4th district is the 21st district of the state, containing but a single court, called the Circuit Superior Court of Law and Chancery for the county of Henrico and city of Richmond. In this court there are two judges, one on the law side, the other on the chancery side. On the death, resignation, or removal of either of the two judges now attached to this court, his duties are to devolve on the other, without any increase of salary.

A circuit superior court of law and chancery is held twice every year in each county and corporation.

The judges who hold the circuit courts, are also required to hold, every year, two terms of the general court in the capital at Richmond. It is the duty of 15 of the judges to attend this court, 11 being necessary to form a quorum. One term begins on the last Monday in June; the other on the 15th of December. The judges are required to arrange themselves into four classes, of five judges each, one of whom is exempt, in rotation, from attending the court.

The general court has appellate jurisdiction in the last resort in criminal cases; also original jurisdiction of probates and administrations, and some claims of the commonwealth. Its judges, or a portion of them, sit as a special court of appeals, in cases in which the judges of the court of appeals proper are disqualified by interest or otherwise.

The state, tw

County Courts.—A county court sits in each county every month, held by four or more justices of the peace. These courts, formed of plain farmers or country gentlemen, are invested with a jurisdiction wider than that of any other court in the state, covering almost the whole field of cognisance, civil, criminal, legal, and equitable. Any one justice can hold a court with jurisdiction over all causes in which the value does not exceed 20 dollars. At the monthly and quarterly sessions, which are held by four or more justices, deeds and wills may be proved and chancery matters and suits at common law be heard and determined, with a right of appeal to a superior court, when the value at issue amounts to 100 dollars and upwards. These courts, exclusively, try slaves for all offences; and they examine free persons charged with felony, previously to their trial in the circuit court. Free negroes and Indians are on the same footing with slaves.

The governor is elected by the qualified voters of the house of commons once in two years. The same individual cannot be elected more than four, in any term of six years. Requisites for eligibility—the age of thirty years, a freehold estate of the value of 1000*l.*, and five years' residence in the state.

The council of state consists of seven persons, elected by the general assembly at their first meeting, who hold the office two years.

The legislative power is vested in a senate and house of commons, which, collectively, are denominated the general assembly.

The senate is composed of fifty members, elected by the people biennially. Requisites for membership of senate—residence and possession, for one year previous to the election, of three hundred acres of land in the county for which the member may be chosen.

The house of commons is composed of 120 members, elected biennially by the people. Requisites for membership—residence, and possession, for a year previous to election, of land to the amount of 100 acres in the county for which the member may be chosen.

The Judiciary Power.—The general assembly, by joint ballot, appoint judges of the supreme courts of law and equity, judges of admiralty, and the attorney-general. The judges hold their offices during good behaviour; the attorney-general for four years.

Right of Suffrage.—All freemen of the age of twenty-one years and upwards, who have resided in any one county within the state twelve months immediately preceding the election, and have paid taxes, are entitled to vote for members of the house of commons for the county in which they reside; and every freeman qualified as above, and possessing within the senatorial district of which he is an inhabitant, fifty acres of land—excepting free negroes, free mulattoes, or free persons of mixed blood descended from negro ancestors to the fourth generation—is entitled to vote for a member of the senate.

Salaries.—Governor, a furnished house and 2000 dollars; secretary of state, fees and 800 dollars; treasurer, 1500 dollars; comptroller, 1000 dollars; clerk of treasury, 500 dollars; councilors 3 dollars per day each, and 3 dollars for every 30 miles when travelling.

Supreme Court.—Chief-justice, 2500 dollars; 2 associate justices, 2500 each; reporter, 300 dollars with the copyright of the reports.

The supreme court holds two sessions in each year, in the city of Raleigh; to wit, on the second Monday in June and the last Monday in December; and continues to sit at each term until all the business on the docket is determined, or continued upon good cause shown. It has power to hear and determine all questions at law, brought before it by appeal from a superior court of law, and to hear and determine all cases in equity, brought before it by appeal from a court of equity, or removed there by the parties thereto. It has original and exclusive jurisdiction in repealing letters patent, and also has power to issue writs of *certiorari*, *scire facias*, *habeas corpus*, *mandamus*, and all other writs which may be proper and necessary for the exercise of its jurisdiction, and agreeable to the principles and usages of law.

The judges of the supreme and the superior courts are elected by joint ballot of both houses of the general assembly, hold their offices during good behaviour, and, under a provision in the amendments to the constitution of the state, their salaries cannot be diminished during their continuance in office.

The seven judges of the superior or circuit courts have a salary of 1950 dollars each; six solicitors 20 dollars each for each court which they attend, besides fees for conviction. The attorney-general receives, in addition, 100 dollars for each term of the supreme court which he attends.

The superior courts of law and the courts of equity are holden in each and every county of the state, twice in each year, by the judges thereof. For this purpose, the state is divided into seven circuits, each of which comprises about ten counties, and the judges ride these circuits alternately, according to an arrangement agreed upon among themselves, the only restriction imposed upon them in making the arrangements being, that no judge shall ride the same circuit twice in succession. As judges of the superior courts of law, they have jurisdiction of all pleas, real, personal, and mixed; of all suits and demands relative to legacies, filial portions, and estates of intestates; and also of all pleas of the state and criminal matters, of what nature, degree, or denomination soever, whether brought before them by original or mesne process, or by *certiorari*, writs of error,

appeal from any inferior court, or by any other way or means whatsoever. As judges of the courts of equity, they have all the jurisdiction and powers appertaining to courts of chancery.

XIII. SOUTH CAROLINA.

In 1663, the territory which now comprises the states of North and South Carolina, and the greater part of Georgia, was granted by Charles II. to the Earl of Clarendon, and seven others, who were constituted proprietors. The colony was named Carolina, and the government was vested in the hands of the proprietors. The proprietary government lasted about fifty years, when it was abolished by the people; and the government was afterwards directed by governors appointed by the king. The first constitution of this state was formed in 1775; the present constitution was adopted in 1790.

The legislative authority is vested in a general assembly, consisting of a senate and a house of representatives.

The senate consists of 45 members, who are elected by districts for four years, and half being chosen biennially.

The house of representatives consists of 124 members, who are appointed among the several districts, according to the number of white inhabitants and taxation; and are elected for two years. The representatives and one-half of the senators are chosen every second year, on the second Monday in October, and the day following.

The executive power is vested in a governor, who is elected for two years, by a joint vote of the senate and house of representatives, at every first meeting of the house of representatives. A governor, after having performed the duties of the office for two years, cannot be re-elected till after the expiration of four years.

At the time of the election of governor, a lieutenant-governor is chosen in the same manner and for the same period.

The general assembly meets annually (at Columbia), on the fourth Monday in November.

The chancellor and judges are appointed by the joint ballot of the senate and house of representatives, and hold their offices during good behaviour.

The constitution grants the right of suffrage to every free white male citizen, of the age of 21 years, having resided in the state two years previous to the day of election, and having been possessed of a freehold of 50 acres of land, or a town lot, at least six months before such election, or (not having such freehold or town lot) having been a resident in the election district in which he offers his vote, six months before the said election, and having paid a tax the preceding year of 3s. sterling towards the support of the government. Governor's salary, 3900 dollars; secretary, fees only.

The 45 state senators and 124 representatives receive each 4 dollars per day.

Chancellors in equity, first and second, at 3500 dollars; three at 3000 dollars each.

Common Pleas and General Sessions.—Judges, one at 3500 dollars; five at 3000 dollars; reporter, 1500 dollars.

“Appeal courts of law and of equity shall hereafter be heard and determined in Columbia, on the first Monday in May, and on the fourth Monday in November, in every year.

“The courts for the correction of errors, consisting of all the chancellors, and judges of the courts of law, shall be held at such time during the sittings of the courts of appeal, as the chancellors and judges may appoint.”—*Acts of the General Assembly, passed in December, 1842.*

XIV. GEORGIA.

The first constitution of Georgia was formed in 1777; a second, in 1785; and a third, the one now in operation, in 1798.

The legislative power is vested in a senate and house of representatives.

The executive power is vested in a governor, who was formerly elected by the general assembly; but he is now (and ever since 1824) elected by the people, on the first Monday in October; and he holds the office for two years. No person is eligible to this office, unless he has been a citizen of the United States twelve years, an inhabitant of the state six years, has attained the age of thirty years, and is in possession of 500 acres of land within the state, and other property to the amount of 4000 dollars, nor unless his estate is worth this sum above the amount of his debts.

The senate consists of ninety-three members, (one from each county), which are elected annually. Every senator must have attained the age of twenty-five years, must have been a citizen of the United States nine years, an inhabitant of the state three years, and of the county for which he is returned one year, and must be possessed of a freehold estate of 500 dollars, or taxable property to the amount of 1000 dollars within the county for which he is elected, above the amount of his debts.

The house of representatives consists of 207 members, which are elected annually. Every representative must have attained the age of twenty-one years, must have been a citizen of the United States seven years, of the state three years, and of the county for which he is returned, one

year previous to the election, or taxable property to the amount of 500 dollars.

year preceding his election, and must be possessed of a freehold estate of the value of 250 dollars, or taxable property to the amount of 500 dollars within the county for which he is elected, above the amount of his debts.

The general assembly meets (at Milledgeville), on the first Monday in November; unless convened at another time by the governor.

The constitution grants the right of suffrage to all "citizens and inhabitants, who have attained the age of twenty-one years, and have paid all the taxes which may have been required of them, and which they may have had an opportunity of paying, agreeable to law, for the year preceding the election, and shall have resided six months within the county."

The judicial power is vested in a superior court, and in such inferior jurisdictions as the legislature may, from time to time, ordain and establish; and the superior and inferior courts sit twice in each county every year. The judges of the superior court are elected by the legislature for three years; the justices of the inferior courts, and justices of the peace, are elected annually by the people; and the clerks of the superior and inferior courts biennially. The secretary of the state, treasurer, and surveyor-general, are elected at the same time and manner as the governor.

Salaries.—Governor's salary, 3000 dollars; secretary of state, comptroller, treasurer, surveyor-general, each 1600 dollars.

The officers of the executive government are required by law to reside, during their term of office, at Milledgeville.

Secretary of the senate, and clerk of house of representatives, each 500 dollars per annum; president of the senate, and speaker of the house of representatives, each 5 dollars a day.

The pay of the members of the legislature, is 4 dollars a day.

The state is divided into eleven circuits, with a judge for each, at a salary of 1800 dollars; attorney-general, 250 dollars and perquisites; judge of court of oyer and terminer, Savannah, and judge of court of oyer and terminer, Augusta, each 1000 dollars.

An inferior court is held in each county, each composed of five justices, elected by the people every four years. These courts possess the powers of courts of probate. The justices have no salary.

XV. ALABAMA.

Mobile, in the southern part of Alabama, was settled long since by the Spanish; yet the territory, which now forms this state, contained but very few civilised inhabitants before 1810. Since that time its increase in population has been exceedingly rapid.

Alabama was erected into a territorial government in 1817; the inhabitants formed a constitution in 1819; and in 1820 it was admitted into the union.

The legislative power is vested in two branches, a senate and house of representatives, which together constitute the general assembly.

The executive power is vested in a governor, who is elected by the people, for two years; and is eligible four years out of six. He must be a native citizen of the United States, or resident for five years in the state, and not under thirty years of age.

The senate consists of thirty-three members, elected by the people for three years, one-third being elected annually. Every senator must be a free white citizen of the United States, at least twenty-seven years of age. He must have been an inhabitant of the state two years immediately preceding the election, and of the district for which he is elected during the latter of these years.

The house of representatives consists of one hundred members, elected annually by the people. Every representative must be a white man, a citizen of the United States, an inhabitant of the state at least two years immediately preceding his election, the last of which was in the district for which he is elected, and must have attained the age of twenty-one years.

Chancellors, judges of the supreme court, of the circuit and inferior courts, are elected by joint vote of the general assembly, and hold their offices during six years. The attorney-general is elected in the same manner, and holds his office four years.

The secretary of state is elected by joint vote of the general assembly, and holds his office two years. The treasurer and the comptroller of public accounts are elected in the same manner annually.

The general assembly meets annually (at Tuscaloosa), on the fourth Monday in October, and the elections take place on the first Monday and following day in August, annually.

The right of suffrage is possessed by every white male citizen of twenty-one years of age, who has resided within the state one year next preceding an election, and the last three months within the county, city, or town, in which he offers his vote.

The judicial power is vested in one supreme court, in circuit courts, and such inferior courts as the general assembly may, from time to time, direct and establish. The judges are the reporters of their own decisions, and are allowed to print, at their own expense, any number, not exceeding 500 of their reports, to be circulated out of the state.

The supreme court has appellate jurisdiction only, and only upon points of law, taken up from

the circuit or county courts, by writ of error. This court sits at Tuscaloosa, the seat of government, on the first Mondays of January and June; and it commonly sits six or eight weeks at each term.

The court of chancery was established in 1829, and re-modelled in 1841, and is divided into three divisions. One session of the court is held annually in each division, and the chancellors are required to alternate with each other, so that neither may preside twice in succession in either division. A separate chancery court is held in the county of Montgomery, on the first Monday in July in each year.

Salaries.—Governor, 2500 dollars; secretary of state, fees and 1000 dollars; comptroller of public accounts, fees and 1000 dollars; state treasurer, fees and 1000 dollars; attorney-general, fees and 425 dollars. The pay of the members of both houses is 4 dollars a day each. Chief justice, 2250 dollars; two associate justices, each 2250 dollars.

XVI. MISSISSIPPI.

The governor is elected biennially by the people, and is ineligible for more than four years in any term of six years. He must be at least thirty years of age, and must have been a citizen of the United States for twenty years, resident in the state at least five years next preceding his election.

The legislative power is vested in two distinct branches, a senate and house of representatives, which together are styled the legislature of the state of Mississippi.

The senate consists of thirty members, citizens of the United States, at least thirty years of age, one half of the number being elected annually by the people, to serve four years. Every senator must have been an inhabitant of the state four years, and of the district for which he is elected one year, immediately preceding his election.

The house of representatives consists of ninety-one members, citizens of the United States, at least twenty-one years of age, elected biennially by the people. Every representative must have been a resident of the state two years, and of the county, city, or town for which he is elected, one year next preceding the election.

The Judiciary Power.—The judicial officers are elected by the people as follows:—The judges of the high court of errors and appeals, for the term of six years; the judges of the circuit court, for the term of four years; the chancellor, for the term of six years; the judges of the court of probate, for the term of two years. The judges of the high court of appeals and errors and the chancellor are required to have attained the age of thirty years; the judges of the circuit court and court of probate, twenty-six years.

Secretary, Treasurer, &c.—The secretary of state, the treasurer, and the sheriffs are elected by the people for the term of two years.

Right of Suffrage.—Every free white male person, twenty-one years of age and upwards, a citizen of the United States, who has resided in the state one year, and in the county where he offers his vote, four months preceding an election, is entitled to vote.

Salaries.—Governor, 3000 dollars; secretary of state, 3000 dollars; state treasurer, 2000 dollars; auditor of public accounts, 3000 dollars.

Judiciary—High Court of Errors and Appeals.—Presiding judge, salary 3000 dollars; two judges, each 3000 dollars; attorney-general, 1000 dollars; clerk.

This court, which has no jurisdiction except what properly belongs to a court of errors and appeals, holds its sessions annually at Jackson, commencing on the first Monday in January and July.

Superior Court of Chancery.—Chancellor, salary 4000 dollars; clerk.

This court, which has jurisdiction over all matters, pleas, and complaints whatsoever, belonging to, or cognisable in, a court of equity, holds two sessions annually, on the first Monday of December and June, and continuing as long as business requires.

An inferior court of chancery, styled the "District Chancery Court of the State of Mississippi," was created by act, approved Feb. 26, 1842.

District Chancery Court.—Vice-chancellor, salary 3000 dollars, sits at Columbus, Fulton, Holly Springs, and Carrollton.

This court has concurrent power and jurisdiction within the district with the superior court of chancery, when the amount in controversy does not exceed 500,000 dollars. The vice-chancellor is elected for the term of four years; appoints the clerks, who hold their office for four years; he must be at least thirty years of age. Appeals may be made to the superior court of chancery, unless by consent of both parties, when the same may be taken directly to the high court of errors and appeals.

District or Circuit Courts.—The judicial divisions were re-organised in 1840, and formed into eleven districts, or circuits. The salary of the judges is 2000 dollars each.

A circuit court is holden in each county twice a year. This court has original jurisdiction in

civil cases, in which the principle of the sum in controversy exceeds 50 dollars. It has chancery jurisdiction in all cases under 500 dollars; and has power to foreclose mortgages, without limit as to sum. It has also exclusive criminal jurisdiction.

Judges of the high court of errors and appeals, and the chancellor, are chosen by the electors for six years; the judges of the circuit courts, attorney-general, and district attorneys, as well as all military officers, are chosen by the electors for four years; all other officers for two years.

XVII. LOUISIANA.

The country now forming the state of Louisiana, was separated from the rest in 1804, and called the Territory of Orleans; and, in 1812, it was admitted into the union as an independent state, by the name of Louisiana.

The constitution of this state was formed in 1812.

The legislative power is vested in a senate and house of representatives.

The representatives are elected for two years, on the first Monday, Tuesday, and Wednesday, in July. Their number is sixty; and they are apportioned according to the number of electors, as ascertained by enumeration every four years. To be eligible, a residence for two years, and citizenship, with landed property to the value of 500 dollars, is required.

The members of the senate are elected for four years; one half being chosen every two years, at the time of the election of the representatives. The state is divided into seventeen senatorial districts, in each of which one senator is chosen, who must be at least twenty-seven years old, and have property in land to the value of 1000 dollars, and a citizen of the state for four years.

The executive power is vested in a governor, who is elected for the term of four years—must be thirty-five years of age, a resident of the state for six years previous to his election, and possess within it landed property to the value of 5000 dollars. The people give their votes for a governor at the time and place of voting for representatives and senators; and on the second day of the succeeding session of the general assembly, the two houses, by a joint ballot, elect for governor, one of the two candidates who have the greatest number of votes. The governor's term of office commences on the fourth Monday succeeding his election.

The general assembly meets (since 1829), at Donaldsonville annually, on the first Monday in January; except in the years of the election of president of the United States, when it meets on the third Monday in November.

The right of suffrage is possessed by every white male citizen of the United States, of the age of twenty-one years, who has resided in the county in which he offers to vote, one year next preceding the election, and who, in the last six months prior to said election, has paid a state tax.

The judiciary power is vested in a supreme court, which possesses appellate jurisdiction only, and such inferior courts as the legislature may establish. The judges, attorneys-general, and prosecuting attorneys, are appointed by the governor, with the advice and consent of the senate, and hold their offices during good behaviour.

Governor's salary, 7500 dollars; pay of the members of both houses, four dollars a day each, during attendance.

The supreme court sits in the city of New Orleans, for the eastern district of the state, during the months of November, December, January, February, March, April, May, June, and July; and for the northern district, at Opelousas and Attakapas, during the months of August, September, and October. The nine district courts, with the exception of the courts in the first district, hold, in each parish, two sessions, during the year, to try causes originally instituted before them, and appeals from the parish courts. The parish courts hold their regular sessions in each parish, on the first Monday in each month. The courts in the first district, composed of the district, parish, and criminal courts, and courts of probate, are in session during the whole year, excepting the months of July, August, September, and October, in which they hold special courts when necessary. The salary of each of the five judges of the supreme court is 5000 dollars, the judge of the first district court, 4000 dollars, the other 7000 dollars per annum. There are, also, a court of error, court of commerce, parish court of New Orleans, probate court, and courts of appeal in criminal cases.

XVIII. TENNESSEE.

The country was included within the limits of North Carolina till 1790, when it was placed under a separate territorial government, under the name of the "Territory South of the Ohio;" and, in 1796, the inhabitants formed a constitution, and Tennessee was admitted into the union as an independent state.

The governor is elected by the people biennially, and is not eligible for more than six years in any term of eight years. He must have attained the age of thirty years, and must be a citizen of the United States, and a citizen of the state seven years next preceding his election.

The legislative power is vested in a senate and house of representatives, which are styled the general assembly.

The senate consists of twenty-five members, elected by the people once in two years. Every senator must have attained the age of thirty years. He must be a citizen of the United States, and an inhabitant of the state three years, and of the district for which he is elected one year immediately preceding his election.

The house of representatives consists of seventy-five members, elected at the same time and for the same period as the senators. Every representative must be a citizen of the United States, of the age of twenty-one years, a citizen of the state three years, and a resident in the county he represents one year immediately preceding his election.

The Judiciary Power.—All judges are elected by joint vote of the general assembly. The judges of the supreme courts are elected for twelve years, and must have attained the age of thirty-five years. The judges of the inferior courts are elected for eight years, and must have attained the age of thirty years. The state attorneys are elected in same manner. Their term of service is six years.

Secretary and Treasurer.—The secretary of state and the state treasurer are elected by joint vote of the general assembly, the former for four, and the latter for two years.

Right of Suffrage.—Every free white man of the age of twenty-one years, being a citizen of the United States, and a citizen of the county where he may offer his vote six months next preceding the day of election, is entitled to vote; but no person is disqualified from voting on account of colour who is by the laws of the state a competent witness in a court of justice against a white man.

Election, &c.—The election is held on the first Thursday of August biennially. The general assembly meet biennially at Nashville on the first Monday of October.

Salaries.—Governor, 2000 dollars; secretary of state, fees and 750 dollars; treasurer, 1500 dollars.

Supreme Court.—Three judges each 1800 dollars; chancery court, four judges, each 1500 dollars; fourteen district courts, salary of each judge, 1500 dollars.

XIX. KENTUCKY.

The country formed a part of the state of Virginia till 1790; and, in 1792, it was admitted into the union as an independent state.

On the separation of Kentucky from Virginia, in 1790, a constitution was adopted, which continued in force till 1799, when a new one was formed instead of it; and this is now in force.

The legislative power is vested in a senate and house of representatives, which, together, are styled, "The General Assembly of the Commonwealth of Kentucky."

The representatives are elected annually, and are apportioned, every four years, among the different counties, according to the number of electors. Their present number is 100, which is the highest number that the constitution authorises; 58 being the lowest. Eligibility requires a residence of two years, and being a citizen of the United States.

The senators are elected for four years, one quarter of them being chosen annually. Their present number is 38; and they cannot exceed this number, nor fall short of 24. To be eligible, a senator must have had a residence in the state for six years, and in the district one year.

The executive power is vested in a governor, who is elected for four years, and is ineligible for the succeeding seven years after the expiration of his term of office; he must have resided six years in the state, be at least thirty-five years of age, and a citizen of the United States. At the election of a governor, a lieutenant-governor is also chosen, who is speaker of the senate, and on whom the duties of the governor devolve, in case of his absence or removal.

The representatives, and one quarter of the members of the senate, are elected annually by the people, on the first Monday in August; the governor is elected by the people, every fourth year, at the same time; and he commences the execution of his office on the fourth Tuesday succeeding the day of the commencement of the election at which he is chosen. The polls are kept open three days; and the votes are given openly, or *viva voce*, and not by ballot.

The general assembly meets (at Frankfort) annually, on the first Monday in November.

The constitution grants the right of suffrage to every free male citizen (people of colour excepted), who has attained the age of twenty-one years, and has resided in the state two years, or in the county where he offers his vote, one year, next preceding the election.

The judiciary power is vested in a supreme court, styled the court of appeals, and in such inferior courts as the general assembly may, from time to time, erect and establish. The judges of the different courts and justices of the peace, hold their offices during good behaviour, and are appointed by the governor, with the consent of the senate.

six dollars a day while presiding over the senate; secretary of state, 1000 dollars; auditor of the public accounts, 1500 dollars; register of the land office, 1250 dollars; treasurer, 1500 dollars; second auditor, 1250 dollars. The senators and representatives receive two dollars each for every day's attendance, and three dollars for every twenty miles' travel.

Court of Appeals.—Chief-justice, 1500 dollars; second judge, 1500 dollars; third judge, 1500 dollars; attorney-general, fees and 300 dollars.

Circuit Courts.—The state is divided into eighteen districts for the holding of the circuit courts. The circuit judges receive a salary of 1500 dollars each; and an attorney to each court, with a salary of 300 dollars and fees; chancellor's salary, 2000 dollars.

County courts are held by justices of the peace, who are paid by fees. Any three justices of the peace may hold a court once in every month, except the month when the circuit court is held. There is also a chancery court, and a general court, with two judges, salaries 1300 dollars.

XX. OHIO.

The first permanent settlement of Ohio was commenced at Marietta, in 1788; in 1789, the country was put under a territorial government, and called the Western Territory, which name was afterwards altered to the Territory Northwest of the Ohio; and, in 1802, it was erected into an independent state.

The constitution of this state was formed, at Chillicothe, in 1802.

The legislative power is vested in a senate and house of representatives, which, together, are styled "The General Assembly of the State of Ohio."

The representatives are elected annually, on the second Tuesday in October; and they are apportioned among the counties, according to the number of white male inhabitants, above twenty-one years of age. Their number cannot be less than thirty-six, nor more than the present number, seventy-two.

The senators are chosen biennially, and are apportioned according to the number of white male inhabitants, of twenty-one years of age. Their number cannot be less than one-third, nor more than the present number, one-half of the number of representatives.

The executive power is vested in a governor, who is elected by the people for two years, on the second Tuesday in October; and his term of service commences on the first Monday in December. He must be a citizen of the United States, at least thirty years of age, and an inhabitant of the state for four years previous to his election.

The general assembly meets annually (at Columbus), on the first Monday in December.

The right of suffrage is granted to all white male inhabitants, above the age of twenty-one years, who have resided in the state one year next preceding the election, and who have paid, or are charged with a state or county tax.

The judicial power is vested in a supreme court, in courts of common pleas, for each county, and such other courts as the legislature may, from time to time, establish. The judges are elected by a joint ballot of both houses of the general assembly, for the term of seven years.

Salaries.—Governor, 1500 dollars; secretary of state, 1000 dollars; auditor of state, 1200 dollars; treasurer, 1200 dollars; warden of state penitentiary, 1500 dollars; clerk of audit office, 850 dollars; adjutant-general, 300 dollars; quarter-master-general, 100 dollars; and librarian of state, 400 dollars.

The senators receive three dollars a day each, and three cents a mile for travel; four commissioners of public works, 1000 dollars each.

Supreme Court.—Chief judge's salary, 1500 dollars; and three associate judges, each 1500 dollars. Two judges form a quorum, who hold a court in each county once a year.

Courts of Common Pleas.—For the holding of the courts of common pleas, the state is divided into fifteen districts or circuits, in each of which there is a presiding judge, who holds annually three courts in each county within his district. The salary of each of these judges is 1200 dollars. These judges are severally assisted by three associate judges in each county, who receive two dollars a day during their attendance at court.

The Superior Court of Cincinnati.—Judge's salary, 1200 dollars. This court has concurrent jurisdiction with the court of common pleas, of the county of Hamilton, in matters of common law as well as in cases in chancery.

XXI. INDIANA.

In 1800, Indiana was erected into a territorial government; in 1816, its constitution was formed, and it was admitted into the union as an independent state.

The executive power is vested in a governor, who is elected by the people for a term of two years, and may be once re-elected. He must have been a resident of the state two years before his election, and a citizen of the United States for five years. At every election of governor, a lieutenant-governor, qualified in like manner as the governor, is also chosen, who is president of

the senate, and on whom, in case of the death, resignation, or removal of the governor, the powers and duties of governor devolve. In an equal division of votes, he has the casting vote.

The legislative authority is vested in a general assembly, consisting of a senate, the eighteen members of which are elected for two years, and a house of representatives, elected annually. Senators must be citizens of the United States, and qualified electors in their counties.

The number of representatives is 100; and they are apportioned among the several counties, according to the number of white male citizens, above twenty-one years of age. The number of senators, who are apportioned in like manner, cannot be less than one-third, nor more than one-half of the number of representatives.

The representatives and members of the senate are elected annually, on the first Monday in August; and the governor is chosen on the same day, every second year.

The general assembly meets annually (at Indianapolis) on the first Monday in December. The right of suffrage is granted to all male citizens of the age of twenty-one years or upwards, who may have resided in the state one year immediately preceding an election.

The secretary of state, treasurer, and auditor are elected by joint vote of the general assembly, the first for four, the two last for three years.

The judiciary power is vested in one supreme court, in circuit courts, and in such other inferior courts as the general assembly may establish. The supreme court consists of three judges; and each of the circuit courts consists of a president and two associate judges. The judges are all appointed for the term of seven years. The judges of the supreme court are appointed by the governor, with the consent of the senate; the presidents of the circuit courts by the legislature, and the associate judges are elected by the people.

Governor's salary, 1500 dollars; lieutenant-governor, pay 6 dollars a day during the session of the general assembly. Pay of the members of both houses, 2 dollars a day each. President of the state bank, 1300 dollars; cashier, 1000 dollars.

Judiciary.—Three judges of the supreme court, salary, each 1500 dollars; seven president judges of the circuit courts, each 700 dollars; the associate judges receive each 2 dollars a day; the judges of the twelve circuit courts, each 1000 dollars.

XXII. ILLINOIS.

Almost all the settlements which have been formed by the citizens of the United States have been begun since 1800. In 1809 Illinois was erected into a territorial government; in 1818, the inhabitants formed a constitution, and Illinois was admitted into the union as an independent state.

The governor is elected by the people once in four years, and is ineligible for more than four years in any term of eight years. He must be at least thirty years of age, and must have been a citizen of the United States thirty years, and resident within the limits of the state two years next preceding his election.

The lieutenant-governor is elected at the same time, in the same manner, and must possess the same qualifications. He is speaker of the senate, has a voice and vote on all subjects, and acts as governor in the event of that officer's death, impeachment, resignation, or absence from the state, which meets on the 1st of December, biennially, at Springfield.

The legislative power is vested in two distinct branches, the senate and house of representatives, which together are styled the general assembly.

The senate consists of forty members, citizens of the United States, at least twenty-five years of age, elected by the people once in four years, one half being elected biennially. Every senator must have resided one year in the county or district for which he is elected, and must have paid a state or county tax.

The house of representatives consists of ninety-one members, citizens of the United States, at least twenty-one years of age, elected once in two years by the people. Every representative must be an inhabitant of the state, and must have resided within the district or county for which he is elected, at least twelve months preceding the election.

The Judiciary Power.—The judges of the supreme court and of the inferior courts are appointed by joint vote of the general assembly, and hold their offices during good behaviour.

Secretary and Treasurer.—The secretary of state is appointed by the governor, with the advice and consent of the senate. The state treasurer is appointed biennially by the joint vote of the general assembly.

Right of Suffrage.—All white male inhabitants, above the age of twenty-one years, who have resided in the state six months next preceding the election, are entitled to vote in the county or district in which they actually reside at the time of election.

Salaries.—Governor, 2000 dollars; lieutenant-governor, six dollars per day, during session, and four dollars for every twenty miles he travels; pay of each member usually four dollars a day; secretary of state, 1500 dollars per annum; auditor, 1850 dollars; treasurer, 1000 dollars.

Supreme Court.—Chief justice's salary, 1500 dollars; eight associate judges, each 1500 dollars; attorney-general, 100 dollars.

Five judges constitute a quorum. The judges all perform circuit duties (the state being divided into nine circuits), or preside in the circuit courts. There are nine state attorneys, who are elected by the legislature biennially. Salary 350 dollars and fees.

The only other courts now in the state, are those held by probate justices and justices of the peace. The former have jurisdiction in actions of debt or assumpsit by or against administrators, &c, where the amount in controversy does not exceed 1000 dollars, and the general powers of probate courts. The latter have jurisdiction in actions of debt or assumpsit, not exceeding in amount 100 dollars; and exclusive jurisdiction in cases of assaults and battery. In trespass to personal property and trover, where the damages claimed do not exceed twenty dollars, justices of the peace have also jurisdiction.

In all suits for debts, where the damages claimed exceed twenty dollars, the circuit courts have jurisdiction, and they are superior courts of general jurisdiction, both civil and criminal.

The governor and justices of the supreme court constitute a council of revision, which act upon all laws, either approving or disapproving them.

XXIII. MISSOURI.

Missouri formed a part of the extensive country of Louisiana, which was purchased of France, by the United States, in 1803.

In 1804, this country was separated from the rest of Louisiana, and erected into a territorial government, by the name of the "Territory of Louisiana," afterwards altered to the "Territory of Missouri;" and, in 1821, it was admitted into the union as an independent state.

The governor is elected once in four years by the people. He must be at least thirty-five years of age, and a natural-born citizen of the United States. He must also have been a resident of the state at least four years next preceding his election, and is ineligible for the next four years after the expiration of his term.

The lieutenant-governor is elected at the same time, in the same manner, and must possess the same qualifications as the governor. He is president of the senate; in committee of the whole he may debate on all questions; and when there is an equal division in the senate or in joint vote of both houses, he gives the casting vote. He acts as governor when that office becomes vacant by death, resignation, removal from office or otherwise, until the office is filled.

The legislative power is vested in a general assembly, which consists of a senate and house of representatives.

The senate consists of eighteen members, free white male citizens of the United States, at least thirty years of age, elected by the people for four years, one-half of the number being elected biennially. Every senator must have been an inhabitant of the state four years preceding his election, and of the district which he represents one year before his election. He must also have paid a state or county tax.

The house of representatives consists of forty-nine members, free white male citizens of the United States, at least twenty-four years of age, elected biennially by the people. Every representative must have been an inhabitant of the state two years immediately preceding his election, and of the county which he represents one year before the election, and must also have paid a state or county tax.

The Judiciary Power.—The governor, with the advice and consent of the senate, appoints the judges of the superior and inferior courts, and the chancellor, who hold their offices during good behaviour. No person can be appointed to either of these posts until he shall have attained the age of thirty years, or exercise the duties after he shall have attained the age of sixty-five years.

Secretary, Treasurer, &c.—The secretary of state is appointed by the governor, with the advice and consent of the senate, and holds his office four years. The treasurer is elected by joint vote of the general assembly biennially. The auditor of public accounts is appointed in the same manner, and holds his office for the same length of time as the secretary of state.

Right of Suffrage.—Every free white male citizen, of the age of twenty-one years and upwards, who has resided in the state one year before an election, the last three months of this period in the district in which he offers his vote, is deemed a qualified elector.

Elections.—The general election is held biennially on the first Monday of August. The general assembly meets biennially at Jefferson City on the first Monday of December, also biennially. The next election and meeting of the general assembly will be in 1844.

Salaries.—Governor, 2000 dollars; auditor, 1500 dollars; attorney-general, fees and 650 dollars; speaker of the house,

Supreme Court.—Presiding judge, 1100 dollars; two associates, each 1100 dollars. Adjutant-general, 100 dollars; quartermaster-general, 100 dollars; surveyor-general, 1500 dollars; cashier of state bank, 2000 dollars.

The lieutenant-governor is, *ex officio*, president of the senate, and receives 4 dols. 50 cents a day while presiding over the senate; and the pay of the speaker of the house of representatives is the same. The senators are chosen every fourth year, and the representatives every second year. Their pay is three dollars a day. The legislature meets at the city of Jefferson, biennially, on the fourth Monday in November.

The Supreme Court is held at the city of Jefferson. This court exercises appellate jurisdiction from the circuit court, and has original jurisdiction in cases of habeas corpus, mandamus, &c. The decisions of this court are published at the end of each term in some newspaper printed in the district; and they are collected and published in a pamphlet form semi-annually by the attorney-general. The judges of the fourteen circuit courts have each a salary of 1000 dollars, and the attorney 250 dollars and fees.

A circuit court for each county is held twice in each year. The jurisdiction of the circuit court extends to all matters of tort and contracts over ninety dollars, where the demand is liquidated, and fifty dollars, where the agreement is parol. It has exclusive criminal jurisdiction, and superintending control over the county courts and justices of the peace, subject to the correction of the supreme court. The circuit court is held in each county. The judges of the supreme and circuit courts are nominated by the governor, and confirmed by the senate; and they hold their office during good behaviour, though not beyond sixty-five years of age.

Court of Common Pleas, of St. Louis—Judge's salary, 2000 dollars.

Criminal Court of St. Louis—Judge's salary, 1000 dollars.

This is a local tribunal, established for exercising criminal jurisdiction only in the county of St. Louis. An appeal lies to the supreme court. The judge is appointed by the concurrent vote of the two houses of the general assembly; and he holds his office during good behaviour.

The jurisdiction of the county courts is limited to matters of probate and local county affairs, as roads, &c. A county court sits in each county, and is composed of three justices, who are elected by the people, and hold their offices for four years. An appeal lies to the circuit court.

XXIV. ARKANSAS.

The Governor is elected by the people once in four years. He must be at least thirty years of age, and a native-born citizen of the United States, or a resident in the state ten years previous to the adoption of the constitution. He must also have been a resident of the state four years next preceding his election.

The Legislative Power is vested in a general assembly, which consists of a senate and house of representatives.

The Senate consists of twenty-one members, free white male citizens of the United States, at least thirty years of age. The term of senatorial service is four years, and one-half the number is chosen biennially by the people. No one is eligible unless a resident of the state for one year preceding, and an actual resident of the district at the time of the election.

The House of Representatives consists of sixty-six members, free white male citizens of the United States, at least twenty-five years of age. The representatives are chosen biennially by the people, and no one is eligible unless an actual resident of the county in which he is a candidate.

The Judiciary Power.—The judges of the supreme and circuit courts are elected by joint vote of the general assembly. The judges of the supreme court must be at least thirty years of age. They hold their offices eight years. The judges of the circuit courts must be at least twenty-five years of age. They hold their offices four years.

Secretary, Treasurer, &c.—The secretary, treasurer, and auditor, are elected by the general assembly. The secretary holds his office four years; the treasurer and auditor each two years.

Right of Suffrage.—Every white male citizen of the United States, of the age of twenty-one years and upwards, who has resided in the state six months, is deemed a qualified elector in the county or district where he actually resides.

Election.—The election takes place biennially on the first Monday of October. The votes are given *vivô voce*. The general assembly meets at Little Rock on the first Monday of December, also biennially. The next election and the next meeting of the general assembly will be in 1844.

Salaries.—Governor, 1800 dollars; secretary of state, 600 dollars; auditor of public accounts, 800 dollars; treasurer, 800 dollars; president of the senate, ; speaker of the house,

Supreme Court.—Chief justice, 1500 dollars; two associate justices, each 1500 dollars.

Seven judges of circuit courts, each 1000 dollars.

The supreme court has appellate jurisdiction only, except in particular cases pointed out by the constitution. The judges are elected by the general assembly, by a joint vote of both houses, for eight years.

The circuit court has original jurisdiction over all criminal cases which are not otherwise provided for by law; and exclusive original jurisdiction of all crimes amounting to felony at the common law; and original jurisdiction of all civil cases which are not cognisable before justices of the peace, until otherwise directed by the general assembly; and original jurisdiction in all matters of contract where the sum in controversy is over one hundred dollars. The judges are elected by the general assembly, for a term of four years.

This state chooses but one member of the United States house of representatives.

XXV. MICHIGAN.

The Governor is elected once in two years by the people. He must have been a citizen of the United States five years, and a resident of the state two years next preceding his election.

The Lieutenant-Governor is elected for the same time, and in the same manner, and must possess the same qualifications. He is president of the senate, in committee of the whole may debate on all questions, and when there is an equal division, may give the casting vote. He acts as governor in the event of that officer's decease, impeachment, resignation, or absence.

The Legislative Power is vested in a senate and house of representatives.

The Senate consists of eighteen members, elected by the people for two years, one-half of the number being elected annually. Senators must be citizens of the United States, and qualified electors in the respective counties and districts which they represent; a removal from which is deemed a vacation of their seats.

The House of Representatives consists of fifty-four members, elected annually by the people. The requisite qualifications of representatives are similar to those of senators.

The Judiciary Power.—The judges of the supreme court are appointed by the governor, with the advice and consent of the senate, and hold their offices seven years. Judges of all county courts, associate judges of circuit courts, and judges of probate, are elected by the qualified electors of the county in which they reside, and hold their offices four years.

Secretary, Treasurer, &c.—The secretary of state is appointed by the governor, with the advice and consent of the senate, and holds his office two years. The treasurer is appointed by joint vote of the legislature, and holds his office two years.

The auditor-general, attorney-general, and a prosecuting attorney for each county, are appointed in same manner as the secretary of state. They also hold their offices for the term of two years.

Right of Suffrage.—Every white male citizen above the age of twenty-one years, who has resided in the state six months next preceding any election, is entitled to vote at such election, in the district, county, or township, in which he resides, only.

The annual election takes place on the first Monday of November annually. The legislature meets annually at Detroit on the first Monday of January.

Governor's salary, 1500 dollars; lieutenant-governor, during session of legislature, per day, 6 dollars; treasurer, 1000 dollars; secretary of state, 1000 dollars.

Supreme Court.—Chief-justice, 1600 dollars; three associates, each 1500 dollars; attorney-general, with fees, 500 dollars.

Court of Chancery.—Chancellor, 1500 dollars.

There are five chancery circuits. The terms of the 1st circuit are held annually at the city of Detroit, on the 3d Tuesday in July, and the 1st Tuesday in February; of the 2d circuit, at Ann Arbor, on the 2d Tuesday in January and July; of the 3d circuit, at Kalamazoo, on the 3d Tuesday in January, and the Thursday next after the 4th Tuesday in June; of the 4th circuit, at Pontiac, on the 1st Tuesday in May, and the Tuesday after the 2d Monday in November; of the 5th circuit, at Adrian, on the 1st Tuesday in January, and the 3d Tuesday in June.

The judges of the supreme court are appointed by the governor, with the advice and consent of the senate, for the period of seven years. The terms of this court are held at Detroit, on the 1st Tuesday in January and June; at Ann Arbor, on the last Tuesday in December; at Kalamazoo, on the 1st Tuesday in July; and at Pontiac, on the 4th Tuesday in June.

Circuit Courts.—There are four judicial circuits, in each of which one of the judges of the supreme court sits as presiding judge; and a district criminal court for the counties of _____, with a presiding judge; salary, 1000 dollars.

XXVI. DISTRICT OF COLUMBIA.

The district of Columbia is a tract of country ten miles square, situated on both sides of the Potomac, comprising two counties, Washington and Alexandria. It was ceded to the United States in 1790, and is under the immediate government of congress. The city of Washington, which is included within this district, became the seat of the government of the United States in 1800, and it is the residence of the president and the other chief executive officers, of whom an account has been already given.

The congress of the United States meets every year, at Washington, on the first Monday in December, unless it is otherwise provided by law; and the supreme court of the United States meets here, annually, on the second Monday in January.

The *Circuit Court* for the district of Columbia, is held at Washington, on the second Monday in April and the third Monday in December; and at Alexandria, on the second Monday in April and the fourth Monday in November; and the *District Court*, on the first Mondays in June and December.

Circuit Court.—Chief judge's salary, 2700 dollars; two assistant judges, each 2500 dollars.

District Courts.—Washington, chief judge, 2700 dollars; assistant judge, 2500 dollars; Georgetown, ditto, 2500 dollars. There are also a criminal and an orphan court.

XXVII. TERRITORY OF FLORIDA.

In 1821, it was ceded by Spain to the United States; and, in 1822, both parts, East and West Florida, were formed into one government or province, under the name of the *Territory of Florida*.

Governor, first appointed in 1822, salary, 2500 dollars; secretary, 1500 dollars; pay of the ministers, 4 dollars per diem.

The legislative council consists of a senate of 12 members, and a house of representatives of 29 members, who are elected annually, meet at Tallahassee, on the first Monday in January.

It has five district courts, two of the judges have salaries of 2300 dollars each; and three have each a salary of 1800 dollars. The territory is divided into twenty counties, in each of which courts are held twice a year. There is a court of appeal, in which the judges of the supreme court preside, held annually at Tallahassee.

XXVIII. TERRITORY OF WISCONSIN.

A government for this territory was organised in 1836, with a governor and legislature consisting of a council of 13 members, elected for four years; and a house of representatives, of 26 members, elected for two years. Governor's salary, 2500 dollars; secretary of state, 1200 dollars; and attorney-general, 200 dollars. Pay of councillors and representatives, 2 dollars a day, and 3 dollars for every twenty miles they travel. Salary of chief justice, and of two assistant judges, 1800 dollars each.

XXIX. IOWA TERRITORY.

This country was erected into a territorial government by an act of congress, of June, 1838, to take effect on the 4th of July following. The legislative power is vested in the governor and a legislative assembly, which meets annually on the first Monday of December, at Iowa city, the seat of government; and it consists of 13 members of the council, elected for two years, and of a house of representatives consisting of 26 members, elected annually. Pay of the members, 3 dollars a day, and 3 dollars for every twenty miles' travel.

The sum of 20,000 dollars was appropriated by the government of the United States, for the erection of public buildings at the seat of government; 20,000 dollars for the erection of a penitentiary, (at Fort Madison,) and 5000 dollars for a library. These public works are now in progress.

The judges are appointed for four years, and the term of the present judges expires July 4th, 1846. The territory is divided into three judicial districts, and the judges perform circuit duties. The supreme court, composed of all the judges, meets annually, in July, at Iowa city.

Salary of governor and superintendent of Indian affairs, 2500 dollars; secretary, 1200 dollars; auditor, 100 dollars; treasurer and librarian, 210 dollars; territorial agent and superintendent of capital, 1000 dollars; director and warden of the penitentiary, 500 dollars.

Judiciary.—Chief justice and two associate justices, each, 1800 dollars; attorney, fees and 200 dollars; marshal, fees and 200 dollars; reporter, 300 dollars; clerk, fees; three district attorneys, fees.

PUBLIC DEPARTMENTS OF THE CENTRAL GOVERNMENT—WASHINGTON.

DEPARTMENT OF STATE.—This department was created by an act of Congress of the 15th of September, 1789: by a previous act of the 27th July, 1789, it was styled the Department of Foreign Affairs; and combines the attributions of the foreign and home departments in England.

The functions of the secretary of state are: conducting the arrangement of all treaties between

the United States and foreign powers; corresponding, officially, with the ministers of the United States at foreign courts, and with those of foreign powers resident in the United States; the publication and distribution of all the acts and resolutions of Congress, and all treaties with foreign powers and Indian tribes; the preserving of the originals of all laws and treaties; and of the public correspondence growing out of the intercourse between the United States and foreign nations; he grants passports to American citizens visiting foreign countries; preserves the evidence of copyrights, and has control of the office, which issues patents for useful inventions. He has the charge of the seal of the United States, but cannot affix it to any commission until signed by the president, nor to any instrument or act, without the special authority of the president. In his department are deposited copies of the statutes of each state.

Treasury Department.—This department was created by an act of Congress the 2d of September, 1789. The secretary of the treasury superintends all the fiscal concerns of the government, and, upon his own responsibility, recommends to congress measures for improving the condition of the revenue.

All the public accounts are finally settled at the treasury department; for which purpose it is divided into the office of the secretary, as general superintendent; the offices of two comptrollers, five auditors, a treasurer, a registrar, and a solicitor. The auditors of the public accounts are empowered to administer oaths or affirmations to witnesses, for the due examination of the accounts.

First Comptroller of the Treasury.—The first comptroller examines all accounts settled by the first and fifth auditors, certifies the balances arising thereon to the registrar; countersigns all warrants legally drawn by the secretary of the treasury; reports to the secretary the official forms to be used in the different offices for collecting the public revenue; and the manner and form of keeping and stating the accounts of the several persons employed therein. He superintends the preservation of the public accounts subject to his revision, and provides for the regular payment of all monies which may be collected.

Second Comptroller.—The jurisdiction of the second comptroller extends to the final decision upon all accounts originating in the war and navy departments. From his decision there is no legitimate appeal, except by application and appeal to congress. Besides the examination and revival of accounts settled in the offices of the second, third, and fourth auditors, it is the second comptroller's further duty to decide on all appeals from the decisions of the respective auditors; to register the reports of certificates of balances for, or against the United States; to register and countersign all the requisitions legally drawn by the secretaries of the war and navy departments; to register and preserve all contracts and bonds entered into or taken by those departments; to direct suits and stoppages on account of delinquencies; to keep the account with each specific appropriation, and to make the annual and other statements of disbursements and the state of appropriations required by law, or the heads of departments; and to prescribe the forms and manner of keeping and stating the accounts, and to superintend their preservation.

First Auditor.—This functionary receives all accounts accruing in the treasury department, and in relation to the revenue and the civil list. After examination, he certifies the balance, and transmits the accounts, with the vouchers and certificates, to the first comptroller, for his decision thereon.

Second Auditor.—This auditor receives and settles:—1. All accounts relative to the pay of the army, subsistence and forage of officers, and pay, subsistence, and clothing of their servants. 2. All accounts appertaining to the clothing and purchasing department. 3. All accounts for the contingent disbursements of the army, for which no specific appropriations are made by congress. 4. All accounts relating to the purchase of medicines, drugs, surgical instruments, hospital stores, &c.; also to the claims of private physicians, for medical services rendered sick officers and soldiers, who cannot be attended by the surgeons of the army. 5. All accounts relating to the recruiting service. 6. All accounts of the ordnance department; those of the various arsenals; and accounts appertaining to the armament of new fortifications, and to arming and equipping the militia, &c. 7. Accounts for disbursements at the national armories. 8. All accounts appertaining to disbursements in the Indian department, such as pay of agents, presents, annuities, expense of holding treaties, running of boundary lines, contingent expenses, &c., and the property accounts of the army, arising out of the foregoing expenditures.

Third Auditor.—The duties of the third auditor extend to the auditing of all accounts for the quartermaster's department, both as to money and property; and the same as to the accounts for subsistence for the army, also of accounts for fortifications; for the Military

Academy; for roads, surveys, and other internal improvements; for revolutionary, invalid, and half-pay pensions; pensions to widows and orphans; of outstanding claims arising before and during the late war; and of all unsettled accounts of the war department, from the commencement of the government to the 1st of July, 1815. There are employed in this office:—One chief clerk, and the auditor in the general superintendence; two clerks as book-keepers of the principal books; three clerks as examiners of accounts in the quartermaster's department, fortifications, Military Academy, and internal improvements; two clerks as examiners of subsistence accounts; three clerks as examiners of pension accounts; two clerks as examiners of soldiers' claims, and pensions to widows and orphans; one clerk as examiner of paymasters' accounts, and other unsettled accounts of the late war; one clerk engaged in recording reports and requisitions, one clerk engaged in recording letters and copying documents.

Fourth Auditor.—The fourth auditor receives all accounts accruing in the navy department, or relative to it. He examines the accounts, certifies the balances, and transmits the accounts, with the vouchers and certificates, to the second comptroller, for his decision upon them.

Fifth Auditor.—The fifth auditor receives all accounts accruing in, or relative to, the department of state, the general post-office, and those arising out of Indian trade; examines them, certifies the balances, and transmits the accounts, with the vouchers and certificates, to the first comptroller for his decision upon them. To the fifth auditor has also been assigned the duties heretofore performed by the commissioner of the revenue in superintending the building and repairing of light-houses and light vessels, beacons, buoys, and piers, the supplying of the light-houses with oil, and the adjustment of the expenditures of the light-house establishment.

Treasurer.—The treasurer receives and keeps the moneys of the United States, and disburses the same upon warrants drawn by the secretary of the treasury, countersigned by the proper comptroller and auditor, and recorded by the register.

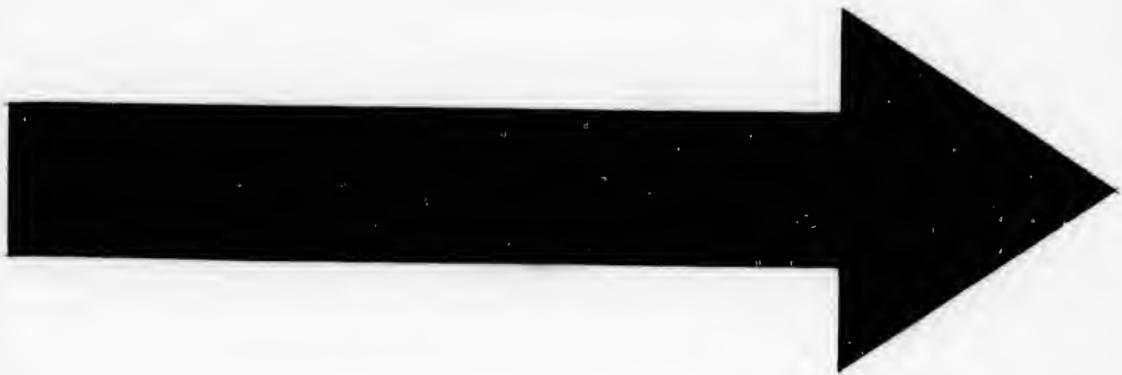

Register.—The register of the treasury keeps all accounts of the receipts and expenditures of the public money, and of all debts due to or from the United States; he keeps the district tonnage accounts of the United States; he receives from the comptrollers the accounts which have been finally adjusted, and, with their vouchers and certificates, preserves them; he records all warrants for the receipt or payment of moneys at the treasury, certifies the same thereon, and transmits to the secretary of the treasury copies of the certificates of balances of accounts adjusted. By an act of the 10th of February, 1820, it is also made the duty of the register of the treasury to prepare statistical accounts of the commerce of the United States to be laid before congress annually.

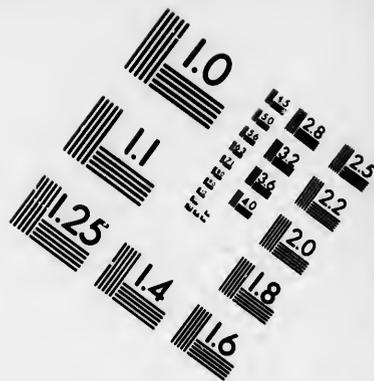

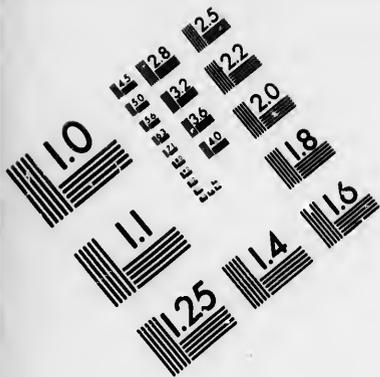

Solicitor of the Treasury.—The office of the solicitor of the treasury was created by the act of the 29th of May, 1830, after having been recommended by several administrations. He superintends all the civil suits, commenced in the name of the United States, in all the courts, until they are carried up to the supreme court of the United States, when they come under the superintendence of the attorney-general. He instructs the district attorneys, marshals, and clerks, in all matters and proceedings appertaining to those suits, and receives from them, after each term of court, reports of their situation and progress. He receives from collectors reports of custom-house bonds put in suit, and of informations, &c., directed by them. He establishes, with the approbation of the secretary of the treasury, such rules and regulations, not inconsistent with law, for the observance of collectors, district attorneys, and marshals, as may be deemed necessary for the just responsibility of those officers and the prompt collection of all revenues and debts due and accruing to the United States.

This officer also has charge of all lands and other property, which have been or shall be assigned, set off or conveyed to the United States, in payment of debts, and of all trusts created for the use of the United States, in payment of debts due to them; and has power to sell and dispose of lands assigned or set off to the United States in payment of debts, or vested in them by mortgage, or other security, or the payment of debts.

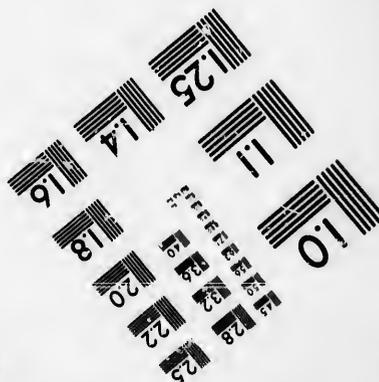

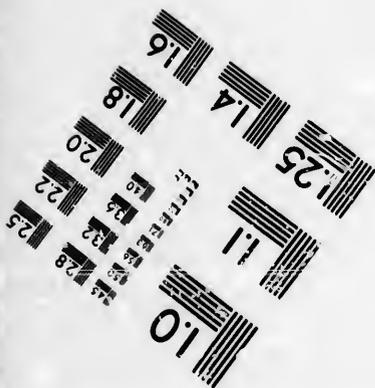

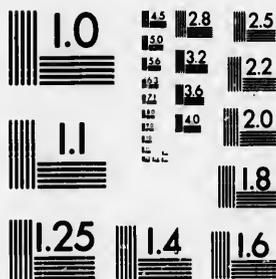

General Land Office Treasury Commissioner.—Prior to the 25th of April, 1812, grants of land were issued by letters patent from the department of state. By an act of that date, a general land office was established, in which all patents for land are now made out and recorded. It is a subordinate branch of the treasury department, with which it is closely connected by the accountability of the receivers of public monies arising from the sale of the national lands.

The Mint.—This establishment is at Philadelphia, where it was fixed in 1752, by an act of congress, for the purpose of a national coinage. It is lawful for any person to carry gold and silver to be coined at the mint, where it is assayed, and coined, if of the standard of the United States. If below the standard, the expense of refining must be deposited. The treasurer is not obliged to receive a less quantity of gold than twenty ounces, nor than two hundred ounces of silver.—(See financial statistics, hereafter, for operations of the mint.) The assayer and refiner and chief coiner, give bonds to the secretary of the treasury.

WAR DEPARTMENT.

This department formerly embraced the naval as well as military administration of the United States.

They were afterwards separated, and the secretary of war has now the superintendence of erecting forts, topographical surveys, intercourse with the Indians, leasing, exploring, or surveying national mines, and every branch of military affairs; for the administration of which his department has under it the following offices:—

Requisition Bureau.—From this bureau all the requisitions of the war department on the treasury are made out, and salaries and the contingencies of the department are paid.

Pension Office.—The pension office of the war department is a bureau in which all claims for pensions, properly so called, are settled, except such as arise under the laws respecting persons disabled in the navy since 1799. To pay such pensions, a fund has been set apart, from prize money, &c., and the business in relation to those claims is under the control of a board of commissioners appointed for that purpose. Widows of militiamen and volunteers are allowed five years' half-pay in certain cases. Such claims are settled at the treasury department; as are the claims under the act of May 15, 1828, which makes certain allowances to officers who served to the end of the revolutionary war.

Bureau of Indian Affairs.—To this bureau all matters touching Indian relations are referred, and, in subordination to the secretary of war, acted on. The duties are various and multifarious, embracing the estimates of the present year for the holding of treaties; together with instructions for the application of the one, and the holding of the other. All accounts for expenditures pass through this bureau, where they are first examined, as to the object and propriety of expenditure, and *briefed*; hence they pass to the second auditor. The supervision and management of the fund for the civilisation of Indians, and, in general, the correspondence arising out of Indian relations, pass through this bureau.

Bounty-Land Office.—The Bounty-Land Office of the war department is a bureau in which claims for military bounty-lands, originating in the revolutionary and the late war, are examined, and from which military bounty-land warrants issue.

Besides the foregoing, there are also in the war department the following offices, viz: *Adjutant-General's Office; Paymaster-General's Office; Ordnance Department; Topographical Bureau; Subsistence Department; Surgeon-General's Office; Quarter-master-General's Office* and the *Engineer Department.*

The standing army of the United States consists of one regiment of dragoons, one regiment of riflemen, four regiments, or rather companies, of artillery, and eight regiments of infantry.

The regular force, as now authorised by law, consists of 717 commissioned officers, 17 store-keepers, of whom 15 are attached to the ordnance, and two to the purchasing department; 250 enlisted men for the ordnance service, and 7590 non-commissioned officers, musicians, artificers, and privates; 20 chaplains and schoolmasters, and as many ordnance sergeants as there are military posts. Clerks, forage masters, and waggon masters, are also employed in the quartermaster's department, from time to time, according to the exigencies of the service. The act of August 23, 1842, reduced the rank and file of the army 3920 men. The reduction is gradually proceeding, in the manner contemplated by the act, and the excess, according to the last returns, is 1970 men. It is supposed the prescribed minimum will have been reached by the beginning of the year 1844.

From the general returns of the army, it appears that the whole number of troops now in service is 9847, consisting of 781 commissioned officers, 9600 non-commissioned officers, musicians, artificers, and privates, and 247 enlisted men of ordnance.

MILITARY ACADEMY.—This institution is at West Point, pleasantly situated on the west bank of Hudson river, 52 miles above New York. It was established by an act of congress in 1802, on 250 acres of land ceded to the United States by the state of New York, in 1826. "The buildings are two stone barracks, one three and the other four stories high, occupied by 250 cadets, the limited number; a large three-story stone building, 275 feet by 75 feet, for military exercises in winter, and as a depository of the chemical apparatus, models of fortification, &c., and as drawing and recitation rooms; a fine two-story stone building of Gothic architecture, 150 feet by 60 feet, with three towers for astronomical apparatus, the middle tower revolving for an astronomical observatory, a chapel, hospital, mess hall, two cavalry stables, several workshops and store-rooms, and seventeen separate dwellings for the officers of the institution. There are also a magazine, a laboratory, soldiers' barracks, a store, and about twenty-five dwellings for families connected with the establishment, and a total population of 900. Here is a convenient landing, and a large hotel, capable of accommodating 100 visitors. This place was fortified during the revolutionary war, and the remains of Fort Putnam, on Mount Independence, elevated 500 feet above the level of the river, and of Fort Clinton, are still seen. The education given at West Point, both scientific and military, is of a high order, and thirty-four officers and professors are attached to the institution. Near West Point is an academy, kept by J. D. Kinsley, formerly an instructor in the West Point Military Academy, which is flourishing."—*United States Gazetteer*, 1844.

NAVY DEPARTMENT.

The office of the Secretary of the Navy was created by an act of congress of the 30th of April, 1798. The secretary issues all orders to the navy of the United States, and superintends the concerns of the navy establishment generally.

A Board of Navy Commissioners was established by an act of congress of the 7th of February, 1815. This board is attached to the office of the secretary of the navy, is under his superintendence, and discharges all the ministerial duties of that office relative to the purchase of naval stores and materials, and the construction, armament, equipment, and employment of vessels of war, as well as other matters connected with the navy. Its records and accounts are on all occasions subject to the inspection of the President of the United States and the secretary of the navy.

The following list of Officers was corrected at the Navy Department, July 19th, 1843.

	Salary. dollars.		Salary. dollars.
Secretary	6000	Assistant	
Chief Clerk	2000	Clerk	1200

POST-OFFICE.

This department is under the superintendence of a postmaster-general, who has three assistants. The postmaster-general has the sole appointment of all the postmasters throughout the United States, the making of all contracts for carrying the mails, and the direction of every thing relating to the department.

The revenue arising from the general post-office has been principally expended upon the extension and improvement of the establishment, by which means the regular conveyance, by mail, of letters, newspapers, pamphlets, &c., has been extended to the inhabitants of every part of the Union, even to the remotest territorial settlements.

This establishment is remarkably well and cheaply administered, considering the inconvenience of the bad roads in the remote districts, and the vast extent of national territory. The following scale of postages under the new law of 1845, is also very moderate.

	cents.
For a letter, not exceeding half an ounce in weight (avoirdupois), sent not exceeding 300 miles	5
Sent over 300 miles	10
For every half-ounce, and any excess over every half-ounce, the same rates of postage; and when advertised, two cents on each letter; or four cents, if the advertising cost so much, additional.	
For drop letters (not to be mailed), each	2
For any printed circular, handbill, or advertisement, on quarto post, single cap, or paper not larger than single cap, unsealed, sent any distance	2
For any pamphlet, magazine, periodical, or other matter of every kind, that is transmittable by mail, and has no written communication on it, of one ounce or less, or for a newspaper exceeding 1900 square inches of surface	2½
For each additional ounce, or an excess greater than half an ounce	1
Newspapers of 1900 square inches or less, sent by editors or publishers, from their offices of publication, any distance not exceeding thirty miles	free.
For any other newspaper sent over thirty, and not more than 100 miles, or any distance within the same state	1
Sent over such distance	1½

Where the circular is on a sheet larger than single cap, it is to be rated as a pamphlet. As the postage on these articles is chargeable on each copy, postmasters will carefully examine all packets, and rate the postage accordingly. When the article to be mailed is a circular, pamphlet, or newspaper, it should be so enveloped, or folded, that it can be distinctly seen at the office to be such, and also that it contain no writing, marks, or signs, to serve the purpose of written communications. If not done up so as to open at the end, it is to be charged as a letter, by weight.

No packet can be mailed which weighs more than three pounds. Bound books of any size are not included in the term "mailable matter," except books sent by governors of states.

The establishment of private expresses for the conveyance of any letters, packets, or packages of letters, or other matter transmittable in the United States mail (newspapers, pamphlets, magazines, and periodicals excepted), from one city, town, or other place, to any other city, town, or place in the United States, between which the United States mail is regularly transported, is prohibited.

1. The President, ex-Presidents, and Mrs. Madison, and Mrs. Harrison, retain the franking privilege, as regulated by former laws.

2. The Vice-President, members of Congress, and delegates from territories

May transmit public documents free during their official terms;

May send and receive free, newspapers, letters, or packets, weighing under two ounces, during the session of Congress, and for thirty days before the commencement and thirty days after the close of any session;

May receive letters free, not weighing over two ounces, during the recess. This does not include the interval from the close of one Congress to the commencement of the next;

May transmit free written letters from themselves the whole year—that is, from sixty days before the commencement of any session, until the meeting of the next Congress.

3. The Secretary of the Senate and the Clerk of the House of Representatives

May send free public documents during their official terms;

May send and receive free letters, newspapers, and packages, not weighing over two ounces, during the session of Congress, and for thirty days before and after;

May send free letters written by themselves during their official terms.

4. The Governors of States may send free the laws, records, and documents of the legislature, to the governors of other states.

5. The three Assistant Postmasters-general.

May send free letters, packages, or other matters, relating exclusively to their official duties, or the business of the post-office department;

May receive all such letters and documents as relate to their own duties, or that of the department, and have the postages remitted at the city post-office.

6. Deputy postmasters may send free all such letters and packages as may relate exclusively to the business of their respective offices, and may have allowed all postage paid or charged to them in the settlement of their accounts.

7. Exchange newspapers between editors pass free.

8. Editors or publishers of newspapers may send their papers free within thirty miles of the place of publication.

9. Communications addressed to the officers of the government, heretofore having the franking privilege, touching the business of their respective offices, are to be paid for out of the contingent fund provided for their offices, or out of the treasury.

The following Salaries of Officers as corrected at the Post Office Department, July 20th, 1843.

	Salary in Dollars.
Postmaster-General.....	6000
Assistant Postmaster-General	2500
Ditto ditto	2500
Ditto ditto	2500
Chief Clerk	2000

The other clerks have salaries varying from 250 dollars to 1800 dollars per annum; and the postmasters in the various state, county, and town post-offices, are allowed compensations of from 500 to 2000 dollars per annum.

The establishment of the post-office by the federal government was never with the view of deriving revenue from it as a trade, by giving the government a monopoly of that trade. The object was only to do that by government agency, which, although indispensable for public convenience and the transaction of business, public and private, was, in that early period of the government, beyond the means of individuals, or associations of individuals. The following is a table of the leading features of the department from the commencement of the government:

POST OFFICE Establishment of the United States—1790 to 1845.

 The pay of postmasters for the year 1,409,875 18

Extract from the Report of the Postmaster-General, dated December 3rd, 1842.

"A public service which requires the agency of 13,783 postmasters and their clerks, 2843 contractors and their agents, covering, during the year, 34,835,991 miles of transportation, and extending almost to the door of every citizen, must encounter difficulties, and be subjected to occasional irregularities, not only from the neglect of some of its numerous agents but from physical causes, not in the power of this Department to overcome.

"The whole number of free letters sent through the post office annually, so far as the returns of postmasters exhibit, is about 3,000,000.

"While the government is charged exorbitant rates for the transportation of the mails, individuals have great facilities for the conveyance of letters out of the mails. *This, like all smuggling, will be carried on whenever the government charge is so high as to afford a premium for so doing.* On all the railroad and steamboat routes, not only is a large proportion of letters sent by private hands, but regularly established private expresses or "common carriers" are established, which transport, according to the authority of the secretary of the treasury, one-third of all the letters between New York and Boston. These expresses have become very important, and are constantly increasing. The first established was that of Harnden and Co., about the year 1835. He commenced as a package express, without any reference to letters, simply to carry small packages between New York and Boston, and deliver them promptly on arrival. Gradually he acted as a kind of commission merchant, being deputed to buy the goods he was to bring back with him. The great convenience of this express, and the high confidence reposed in Mr. Harnden by the mercantile community, made his business grow with great rapidity, and he soon made arrangements with the railroads and steamboats, by which his business was conducted on a more permanent basis, mutually beneficial. On the establishment of Cunard's line of steamboats to Boston, Mr. Harnden was applied to, to undertake the freight-agency of the line, which he accepted, and to carry it out, established a branch in Liverpool. Being thus situated, with expresses running through all the principal cities concentrating in Boston, and communicating with his branch in Liverpool through the government steamers, it became obvious that a safe, cheap, and prompt channel, for foreign letters to their destination, was formed through his arrangements, and he was importuned to undertake the business. Under these circumstances, Mr. Harnden made arrangements with the post-office department, by which he was appointed a mail carrier. Thus empowered, he received foreign letters, took them to the post-office, paid the postage to the government, put them in a separate mail-bag, with a separate way-bill, and delivered them promptly and regularly. An important object was thus effected. The department got its postage, and the merchants were assured of the prompt delivery of their letters; efficacy was given by individual enterprise to an important branch of the mail service, but still hampered by the government restrictions. Its usefulness was, however, carried out still further. The correspondence between this country and Europe is immense; far greater than between any country of Europe and the remaining portions of it. This arises, in part, from the immense number of immigrants which has been pouring in for half a century, leaving friends and relations behind them. These latter are mostly in poor circumstances, and those here, in writing home, wish to remit money in small amounts, and pay postage in advance. This never could be done until the establishment of Harnden's agency, by which a person in any of the Atlantic cities may remit funds in small amounts, and pay postage to any place in Great Britain or Europe. The letter and money may be paid to Harnden's agent, and thence go free to its destination. For these purposes Mr. Harnden remits by each packet from 20,000 dollars to 30,000 dollars to his agent. Here is an establishment for public convenience constantly increasing in importance, and is checked in its advance only by the government monopoly of the post-office, which operates as a heavy tax upon the business of Mr. Harnden. The ramifications of that business afford the means of destroying the post-office ultimately altogether. The success of Harnden has induced the establishment of numerous other lines, of which there are twenty different ones running into Boston alone, and numerous others stretching as far west as Buffalo; although none of these are so extensive as Harnden's, they run upon all the routes between points which have the greatest business connexion. Hence all those merchants and others whose business lies in the same direction, make up their letters into packages, which are conveyed upon their lines for 50 cents, and have been known to contain letters on which the postage would have been from 20 dollars to 30 dollars. Most of the hotels have boxes to collect letters for their customers, and in merchants' stores packages are made up alternately. Thus, even without the knowledge of the carriers, immense quantities of letters are conveyed by these means without cost of postage; on one occasion a merchant sent from New York to Philadelphia 45,000 dollars in bills, enclosed in two pattern cards. The transaction was made public through the ignorance of the recipient of the package of its contents, until an outcry about the supposed loss of the money brought it to light. Independent of these common carriers, there are on the principal routes, employed by banks and brokers, special carriers, who bear mostly letters and money packages. The extent of this business is manifest in the fact, that two, employed between New York and Philadelphia, pay each to the railroads, for their fares alone, 1200 dollars per annum. These are the means by which letters are carried without the connivance of the agent. But by far the greater quantity is carried with their knowledge: for instance, on one occasion, Mr. Harnden stated that between Boston and New York he paid the department 600 dollars per month for a year, making 7200 dollars. Other lines, which convey nearly as many, did not pay one dollar. Under the operation of all these causes, the revenue of the office at Boston is fast decreasing, and the same influences are rapidly producing the same results at other points.

"The great success of these undertakings is the surest indication that they 'go with the peo-

ple; that they supply a want which the government arrangements do not supply. General Jackson, in his first annual message, describes the post-office department as being 'to the body politic what the veins and arteries are to the natural—conveying rapidly and regularly, to the remotest parts of the system, correct information of the operations of the government, and bringing back to it the wishes and feelings of the people. Through its agency, we have secured to ourselves the full enjoyment of the blessings of a free press.'

THE UNITED STATES TARIFF OF 1846.

An Act reducing the Duty on Imports, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That from and after the 1st day of December next, in lieu of the duties heretofore imposed by law on the articles hereinafter mentioned, and on such as may now be exempt from duty, there shall be levied, collected, and paid, on the goods, wares, and merchandise herein enumerated and provided for, imported from foreign countries, the following rates of duty : that is to say—

On goods, wares, and merchandise mentioned in schedule A, a duty of 100 per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule B, a duty of forty per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule C, a duty of thirty per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule D, a duty of twenty-five per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule E, a duty of twenty per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule F, a duty of fifteen per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule G, a duty of ten per cent ad valorem.

On goods, wares, and merchandise mentioned in schedule H, a duty of five per cent ad valorem.

Sec. 2. And be it further enacted, That, from and after the first day of December next, the goods, wares, and merchandise mentioned in schedule I, shall be exempt from duty.

Sec. 3. And be it further enacted, That, from and after the first day of December next, there shall be levied, collected, and paid on all goods, wares, and merchandise imported from foreign countries, and not specially provided for in this act, a duty of twenty per centum ad valorem.

Sec. 4. And be it further enacted, That, in all cases in which the invoice or entry shall not contain the weight, or quantity, or measure of goods, wares, or merchandise now weighed, or measured, or gauged, the same shall be weighed, gauged, or measured at the expense of the owner, agent, or consignee.

Sec. 5. And be it further enacted, That, from and after the first day of December next, in lieu of the bounty heretofore authorised by law to be paid on the exportation of pickled fish of the fisheries of the United States, there shall be allowed, on the exportation thereof, if cured with foreign salt, a drawback equal in amount to the duty paid on the salt, and no more; to be ascertained under such regulations as may be prescribed by the Secretary of the Treasury.

Sec. 6. And be it further enacted, That all goods, wares, and merchandise imported after the passage of this act, and which may be in the public stores on the second day of December next, shall be subject to no other duty upon the entry thereof than if the same were imported respectively after that day.

Sec. 7. And be it further enacted, That, the twelfth section of the act entitled "An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports and for other purposes," approved August 30, 1842, shall be, and the same is hereby so far modified, that all goods imported from this side of the Cape of Good Hope or Cape Horn may remain in the public stores for the space of one year, instead of the term of sixty days, prescribed in the said section; and that all goods imported from beyond the Cape of Good Hope or Cape Horn may remain the public stores one year, instead of the term of ninety days, prescribed in the said section.

Sec. 8. And be it further enacted, That it shall be lawful for the owner, consignee, or agent of imports which have been actually purchased, on entry of the same, to make such addition in the entry, to the cost or value given in the invoice, as, in his opinion, may raise the same to the

true market-value of such imports in the principal markets of the country whence the importation shall have been made, or in which the goods imported shall have been originally manufactured or produced, as the case may be; and to add thereto all costs and charges which, under existing laws, would form part of the true value at the port where the same may be entered, upon which the duties shall be assessed. And it shall be the duty of the collector within whose district the same may be imported or entered to cause the dutiable value of such imports to be appraised, estimated, and ascertained, in accordance with the provisions of existing laws; and if the appraised value thereof shall exceed, by ten per centum or more, the value so declared on the entry, then, in addition to the duties imposed by law on the same, there shall be levied, collected, and paid, a duty of twenty per centum ad valorem on such appraised value: provided nevertheless, that under no circumstances shall the duty be assessed upon an amount less than the invoice value; any law of Congress to the contrary notwithstanding.

Sec. 9. And be it further enacted, That the deputies of any collector, naval officer, or surveyor, and the clerks employed by any collector, naval officer, surveyor, or appraiser, who are not by existing laws required to be sworn, shall, before entering upon their respective duties, or, if already employed, before continuing in the discharge thereof, take and subscribe an oath or affirmation faithfully and diligently to perform such duties, and to use their best endeavours to prevent and detect frauds upon the revenue of the United States; which oath or affirmation shall be administered by the collector of the port or district where the said deputies or clerks may be employed, and shall be of a form to be prescribed by the Secretary of the Treasury.

Sec. 10. And be it further enacted, That no officer or other person connected with the navy of the United States shall, under any pretence, import in any ship or vessel of the United States any goods, wares, or merchandise liable to the payment of any duty.

Sec. 11. And be it further enacted, That all acts and parts of acts repugnant to the provisions of this act be, and the same are hereby repealed.

Schedule A, one hundred per centum ad valorem.—Brandy, and other spirits distilled from grain or other materials; cordials, absynthe, arrack, curaçoa, kirschenschwasser, liqueurs, marischino, ratifia, and all other spirituous beverages of a similar character.

Schedule B, forty per centum ad valorem.—Alabaster and spar ornaments, almonds; anchovies, sardines, and all other fish preserved in oil; camp'or, refined; cassia, cloves, composition tops for tables or other articles of furniture; comfits, sweetmeats, or fruit preserved in sugar, brandy, or molasses; currants, dates, figs, ginger root, dried or green; glass, cut; mace, manufactures of cedar-wood, granadilla, ebony, mahogany, rose-wood, and satin-wood; nutmegs, pimento, prepared vegetables, meats, poultry, and game, sealed, or enclosed in cans, or otherwise; prunes, raisins, scagliola tops for tables or other articles of furniture; cigars, snuff, paper cigars, and all other manufactures of tobacco: wines, Burgundy, champagne, claret, Madeira, port, sherry, and all other wines, and imitations of wines.

Schedule C, thirty per centum ad valorem.—Ale, beer, and porter, in casks or bottles; argentine, alabatta, or German silver, manufactured or unmanufactured; articles embroidered with gold, silver, or other metal; articles worn by men, women, or children, of whatever material composed, made up, or made wholly, or in part, by hand; asses' skins; balsams, cosmetics, essences, extracts, perfumes, pastes, and tinctures, used either for the toilet or for medicinal purposes; baskets, and all other articles composed of grass, osier, palm-leaf, straw, whalebone, or willow, not otherwise provided for; bay rum; beads, of amber, composition, or wax, and all other beads; benzoes, Bologna sausages; bracelets, braids, chains, curls, or ringlets, composed of hair, or of which hair is a component part; braces, suspenders, webbing, or other fabrics, composed wholly or in part of India-rubber, not otherwise provided for; brooms and brushes of all kinds; cameos, real and imitation, and mosaics, real and imitation, when set in gold, silver, or other metal; canes and sticks for walking, finished or unfinished; capers, pickles, and sauces of all kinds, not otherwise provided for; caps, hats, muffs, and tippet of fur, and all other manufactures of fur, or of which fur shall be a component material; caps, gloves, leggings, mits, socks, stockings, wove shirts and drawers, and all similar articles made on frames, worn by men, women, or children, and not otherwise provided for; card-cases, pocket-books, shell-boxes, souvenirs, and all similar articles, of whatever material composed; carpets, carpeting, hearth-rugs, bed-sides, and other portions of carpeting, being either Aubusson, Brussels, Ingrain, Saxony, Turkey, Venetian, Wilton, or any other similar fabric; carriages, and parts of carriages; cayenne pepper, cheese, cinnamon; clocks, and parts of clocks; clothing, ready made, and wearing apparel of every description, of whatever material composed, made up or manufactured, wholly or in part, by the tailor, sempstress, or manufacturer; coach and harness furniture, of all kinds; coal, coke, and culm of coal, combs of all kinds; compositions of glass or paste, when set; confectionary of all kinds, not otherwise provided for; coral, cut or manufactured; corks, cotton-cords, gimps, and galleons, court-plaster; crayons of all kinds; cutlery of all kinds; diamonds, gems, pearls, rubies, and other precious stones, and imitations of precious stones, when set in gold, silver, or other metal; dolls, and toys of all kinds; earthen, china, and stone ware, and all other wares, composed of earthy or mineral

substances, not otherwise provided for; epaulets, galloons, laces, knots, stars, tassels, tresses, and wings of gold, silver or other metal; fans and fire-screens of every description, of whatever material composed; feathers and flowers, artificial or ornamental, and parts thereof, of whatever material composed; fire-crackers; flats, braids, plaits, sparterre and willow squares, used for making hats or bennets; frames and sticks for umbrellas, parasols, and sun-shades, finished or unfinished; furniture, cabinet and household; ginger, ground; glass, coloured, stained, or painted; glass crystals for watches; glasses or pebbles for spectacles; glass tumblers, plain, moulded, or pressed, not cut or punted; paintings on glass; porcelain glass; grapes; gum benzoin, or Benjamin; hair-pencils; hat bodies of cotton; hats and bonnets for men, women, and children, composed of straw, satin straw, chip, grass, palm-leaf, willow, or any other vegetable substance, or of hair, whalebone, or other material not otherwise provided for; hemp, unmanufactured; honey; human hair, cleansed or prepared for use; ink, and ink-powder; iron, in bars, blooms, bolts, loops, pigs, rods, slabs, or other form, not otherwise provided for; castings of iron, old or scrap iron; vessels of cast-iron; japanned ware of all kinds, not otherwise provided for; jewellery, real or imitation; jet, and manufactures of jet, and imitations thereof; lead-pencils; macaroni, vermicelli, gelatine, jellies, and all similar preparations; manufactures of the bark of the cork-tree, except corks; manufactures of bone, shell, horn, pearl, ivory, or vegetable ivory; manufactures, articles, vessels, and wares, not otherwise provided for, of brass, copper, gold, iron; lead, pewter, platina, silver, tin, or other metal, or of which either of those metals or any other, metal shall be the component material of chief value; manufactures of cotton, linen, silk, wool, or worsted, if embroidered or tamboured in the loom, or otherwise, by machinery, or with the needle, or other process; manufactures, articles, vessels and wares, of glass, or of which glass shall be a component material, not otherwise provided for; manufactures, and articles of leather, or of which leather shall be a component part, not otherwise provided for; manufactures, and articles of marble, marble paving tiles, and all other marble more advanced in manufacture than in slabs or blocks in the rough; manufactures of paper, or of which paper is a component material, not otherwise provided for; manufactures, articles, and wares of papier maché; manufactures of wood, or of which wood is a component part, not otherwise provided for; manufactures of wool, of which wool shall be the component material of chief value, not otherwise provided for; medicinal preparations, not otherwise provided for; metallic pens, mineral waters, molasses, muskets, rifles, and other fire-arms; nuts, not otherwise provided for; ochres, and ochrey-earths, used in the composition of painters' colours, whether dry or ground in oil; oil-cloth of every description, of whatever material composed; oils, volatile, essential, or expressed, and not otherwise provided for; olive-oil in casks, other than salad-oil; olive salad-oil, and all other olive-oil, not otherwise provided for; olives, paper; antiquarian, demy, drawing, elephant, foolsoap, imperial, letter, and all other paper not otherwise provided for; paper-boxes, and all other fancy boxes; paper envelopes, parasols and sun-shades, parchment, pepper, plated and gilt ware of all kinds, playing cards, plums, potatoes, red chalk pencils; saddlery of all kinds, not otherwise provided for; salmon, preserved; sealing-wax; sewing silks, in the gum or purified; shoes composed wholly of India rubber, side-arms of every description, silk twist and twist composed of silk and mohair; silver-plated metal, in sheets or other form; soap: Castile, perfumed, Windsor, and all other kinds; sugar of all kinds, syrup of sugar; tobacco, unmanufactured; twines and pack-thread, of whatever material composed; umbrellas, vellum, vinegar, wafers, water-colours; wood, unmanufactured, not otherwise provided for, and fire-wood; wool, unmanufactured.

Schedule D, twenty-five per centum ad valorem.—Borax or tinctal, Burgundy pitch, buttons and button-moulds of all kinds; baizes, bockings, flannels, and floor-cloths, of whatever material composed, not otherwise provided for; cables and cordage, tarred or untarred; calomel, and all other mercurial preparations; camphor, crude; cotton laces, cotton insertings, cotton trimming laces, cotton laces and braids; floss silks, feather beds, feathers for beds, and downs of all kinds; grass-cloth; hair-cloth, hair-seating, and all other manufactures of hair not otherwise provided for; jute, sisal grass, coir, and other vegetable substances, unmanufactured, not otherwise provided for; manufactures composed wholly of cotton, not otherwise provided for; manufactures of goat's hair or mohair, or of which goat's hair or mohair shall be a component material, not otherwise provided for; manufactures of silk, or of which silk shall be a component material, not otherwise provided for; manufactures of worsted, or of which worsted shall be a component material, not otherwise provided for; matting, china, and other floor-matting and mats, made of flax, jute, or grass; roofing slates, and slates other than roofing; woollen and worsted yarn.

Schedule E, twenty per centum ad valorem.—Acids: acetic, acetous, benzoic, boracic, chromic, citric, muriatic, white and yellow, nitric, pyroligneous and tartaric, and all other acids of every description, used for chemical or medicinal purposes, or for manufacturing, or in the fine arts, not otherwise provided for; aloes, alum, amber, ambergris; angora, thibet, and other goat's hair or mohair, unmanufactured; aniseed, animal carbon; antimony, crude and regulus of; arrow-root; articles, not in a crude state; used in dyeing or tanning, not otherwise provided for; asafetida, bacon,

bananas, barley, beef, bees'-wax; berries, vegetables, flowers and barks, not otherwise provided for; bismuth, bitter apples, blankets of all kinds; blank books, bound or unbound; blue or Roman vitriol, or sulphate of copper; boards, planks, staves, lath, scantling, spars, hewn and sawn timber; and timber to be used in building wharfs; boucho leaves, breccia, bronze liquor, bronze powder, butter, cadmium, calamine, cantharides; caps, gloves, leggings, mits, socks, stockings, wove shirts and drawers, made on frames, composed wholly of cotton, worn by men, women, and children; cassia buds, castor oil, castorum; cedar-wood, ebony, granadilla, mahogany, rose-wood and satin-wood, unmanufactured; chocolate, chromate of lead; chromate, bichromate, hydriodate, and prussiate of potash; cobalt, cocoa-nuts, coculus indicus; coppers or green vitriol, or sulphate of iron; copper rods, bolts, nails, and spikes; copper bottoms; copper in sheets or plates, called brazier's copper, and other sheets of copper, not otherwise provided for; cream of tartar, cubebs, dried pulp, emery, ether, extract of indigo; extracts and decoctions of logwood and other dye-woods, not otherwise provided for; extract of madder, felpar, fig blue; fish, foreign, whether fresh, smoked, salted, dried, or pickled, not otherwise provided for; fish glue or isinglass, fish-skins, flaxseed, flour of sulphur, Frankfort black, French chalk; fruit, green or ripe, not otherwise provided for; fulminates or fulminating powders, furs dressed on the skin, gamboge, glue, green turtle, gunny cloth, gunpowder; hair, curled, moss, sea-weed, and all other vegetable substances used for beds or mattresses; hams, hats of wool; hat bodies, made of wool, or of which wool shall be a component material of chief value; hatters' plush, composed of silk and cotton, but of which cotton is the component material of chief value; hemp-seed or linseed, and rape-seed oil, and all other oils used in painting; Indian corn and corn-meal, ipecacuanha, iridium, iris or orris root, iron liquor, ivory or bone black, jalap, juniper berries, lac spirits, lac sulphur, lampblack, lard; leather, tanned, bend or sole; leather, upper of all kinds; lead, in pigs, bars, or sheets; leaden pipes, leaden shot, leeches, linsens of all kinds, liquorice paste, juice, or root; litharge, malt, manganese, manna; manufactures of flax, not otherwise provided for; manufactures of hemp, not otherwise provided for; marble, in the rough, slab, or block, unmanufactured; marine coral, unmanufactured; medicinal drugs, roots, and leaves, in a crude state, not otherwise provided for; metals, Dutch and bronze, in leaf; metals, unmanufactured, not otherwise provided for; mineral and bituminous substances, in a crude state, not otherwise provided for; musical instruments of all kinds, and strings for musical instruments of whip-gut or cat-gut, and all other strings of the same material; needles of all kinds, for sewing, darning, or knitting; nitrate of lead, oats and oat-meal; oils: neatfoot and other animal oil, spermaceti, whale, and other fish oil, the produce of foreign fisheries; opium; oranges, lemons, and limes; orange and lemon peel; osier or willow, prepared for basket-makers' use; patent mordant; paints, dry or ground in oil, not otherwise provided for; paper hangings and paper for screens or fire-boards; paving-stones, paving and roofing tiles and bricks, pearl or hulled barley; periodicals and other works in the course of printing and republication in the United States; pine-apples, pitch, plantains; plaster of Paris, when ground; plumbago, pork, potassium, Prussian blue, pumpkins, putty, quicksilver, quills, red chalk, rhubarb; rice or paddy, roll brimstone, Roman cement, rye and rye-flour; saddlery, common, tinned, or japanned; saffron and saffron-cake, sago; sal soda, and all carbonates of soda, by whatever names designated, not otherwise provided for; salts: Epsom, glauber, Rochelle, and all other salts and preparations of salts, not otherwise provided for; sarsaparilla, sepia, shaddocks, sheathing paper; skins, tanned and dressed, of all kinds; skins of all kinds, not otherwise provided for; slate pencils, smalts, spermaceti candles and tapers, spirits of turpentine, sponges, spunk, squills, starch, stearine candles and tapers; steel, not otherwise provided for; stereotype plates, still bottoms; sulphate of barytes, crude or refined; sulphate of quinine, tallow candles, tapioca, tar, thread laces and insertings, type metal; types, new or old; vanilla beans, verdigris; velvet, in the piece, composed of cotton and silk, but of which cotton is the component material of chief value; vermilion, wax candles and tapers; whalebone, the produce of foreign fisheries; wheat and wheat flour, white and red lead; whiting, or Paris white; white vitriol, or sulphate of zinc; window glass, broad, crown, or cylinder; woollen listings, yams.

Schedule F, fifteen per centum ad valorem.—Arsenic; bark, Peruvian; bark, Quilla; Brazil paste; brimstone, crude, in bulk; codilla, or tow of hemp or flax; cork-tree bark, unmanufactured; diamonds, glaziers', set or not set; dragon's blood; flax, unmanufactured; gold and silver leaf, mineral kermes; silk, raw, not more advanced in manufacture than singles, tram and thrown, or organzine; steel in bars, cast, shear, or German; terne tin plates, tin foil; tin, in plates or sheets; tin plates, galvanized, not otherwise provided for; zinc, spelter, or teutenegue, in sheets.

Schedule G, ten per centum ad valorem.—Ammonia; annatto, Rancon or Orleans; barilla; bleaching powders, or chloride of lime; books printed, magazines, pamphlets, periodicals, and illustrated newspapers, bound or unbound, not otherwise provided for; building stones; burr stones, wrought or unwrought; cameos and mosaics, and imitations thereof, not set; chronometers, box or ships', and parts thereof; cochineal, cocoa, cocoa-shells; compositions of glass or paste, not set; cudbear; diamonds, gems, pearls, rubies, and other precious stones, and imitations there-

of, when not set; engravings or plates, bound or unbound; hemp-seed, linseed, and rape-seed; fullers' earth; furs, hatters', dressed or undressed, not on the skin, ditto, undressed, when on the skin; gold-beaters' skins, gum Arabic and gum Senegal, gum tragacanth, gum Barbary, gum East India, gum Jedda; gum substitute, or burnt starch; hair of all kinds, uncleaned and unmanufactured; India rubber, in bottles, slabs, or sheets, unmanufactured; indigo, kelp, lemon and lime juice, lime, maps and charts; music and music paper, with lines, bound or unbound; natron, nux vomica; oils, palm and cocoa-nut; orpiment; palm-leaf, unmanufactured; polishing stones, pumice and pumice stones; ratans and reeds, unmanufactured; rotten stone, sal ammonia; saltpetre (or nitrate of soda, or potash) refined or partially refined; soda ash; sulphuric acid, or oil of vitriol; tallow, marrow, and all other grease and soap stocks and soap stuffs, not otherwise provided for; terra japonica, or catechu; watches, and parts of watches; watch materials of all kinds, not otherwise provided for; woad or pastel.

Schedule H, five per centum ad valorem.—Alcornoque; argol, or crude tartar; bells, when old, or bell metal, fit only to be remanufactured; berries, nuts, and vegetables, used exclusively in dyeing or composing dyes, but no article shall be classed as such that has undergone any manufacture; brass, in pigs and bars; brass, when old, and fit only to be remanufactured; Brazil wood, and all other dye-wood, in sticks; bristles; chalk, not otherwise provided for; clay, unwrought; copper, in pigs or bars; copper, when old, and fit only to be remanufactured; flints; grindstones, wrought or unwrought; horns, horn-tips, bones, bone-tips, and teeth, unmanufactured; ivory, unmanufactured; ivory nuts, or vegetable ivory; kermes, lac dye; lastings suitable for shoes, boots, bootees, or buttons, exclusively; madder, ground; madder root; manufactures of mohair cloth, silk twist, or other manufacture of cloth suitable for the manufacture of shoes, boots, bootees, or buttons, exclusively; nickel, nut-galls; pearl, mother-of; pewter, when old, and fit only to be remanufactured; rags, of whatever material; raw hides and skins of all kinds, whether dried, salted, or pickled, not otherwise provided for; safflower; saltpetre or nitrate of soda, or potash, when crude; seedlac, shellac, sumac; tin in pigs, bars, or blocks; tortoise and other shells, unmanufactured; turmeric; waste, or shoddy; weld; zinc, spelter, or teutenegue, unmanufactured, not otherwise provided for.

Schedule I, exempt from duty.—Animals imported for breed; bullion, gold, and silver; cabinets of coins, medals, and other collections of antiquities; coffee and tea, when imported direct from the place of their growth or production, in American vessels, or in foreign vessels entitled by reciprocal treaties to be exempt from discriminating duties, tonnage, and other charges; coffee, the growth or production of the possessions of the Netherlands, imported from the Netherlands in the same manner; coins, gold, silver, and copper; copper ore; copper, when imported for the United States mint; cotton; felt, adhesive, for sheathing vessels; garden seeds, and all other seeds, not otherwise provided for; goods, wares, and merchandise, the growth, produce, or manufacture of the United States, exported to a foreign country, and brought back to the United States in the same condition as when exported, upon which no drawback or bounty has been allowed: Provided, That all regulations to ascertain the identity thereof, prescribed by existing laws, or which may be prescribed by the secretary of the treasury, shall be complied with; guano; household effects, old and in use, of persons or families from foreign countries, if used abroad by them, and not intended for any other person or persons, or for sale; junk, old; models of inventions and other improvements in the arts: Provided, That no article or articles shall be deemed a model or improvement which can be fitted for use; oakum; oil, spermaceti, whale, and other fish, of American fisheries, and all other articles the produce of such fisheries; paintings and statuary, the production of American artists residing abroad, and all other paintings and statuary: Provided, The same be imported in good faith as objects of taste, and not of merchandise; personal and household effects (not merchandise) of citizens of the United States dying abroad; plaster of Paris, unground; platina, unmanufactured; sheathing copper, but no copper to be considered such, and admitted free, except in sheets forty-eight inches long and fourteen inches wide, and weighing from fourteen to thirty-four ounces the square foot; sheathing metal; specimens of natural history, mineralogy, or botany; trees, shrubs, bulbs, plants, and roots, not otherwise provided for; wearing apparel in actual use, and other personal effects not merchandise, professional books, implements, instruments and tools of trade, occupation, or employment of persons arriving in the United States: Provided, That this exemption shall not be construed to include machinery or other articles imported for use in any manufacturing establishment, or for sale.

An Act establishing a Warehousing System, and to amend an Act entitled "An Act to provide Revenue from Imports, and to change and modify existing Laws imposing Duties on Imports, and for other purposes."

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the twelfth section of the act entitled "An act to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other

purposes," approved the 30th day of August, 1842, is hereby amended so as hereafter to read as follows:—(Sec. 12.) And be it further enacted, That on and after the day this act goes into operation, the duties on all imported goods, wares, or merchandise, shall be paid in cash: Provided, that in all cases of failure or neglect to pay the duties within the period allowed by law to the importer to make entry thereof, or whenever the owner, importer, or consignee shall make entry for warehousing the same in writing, in such form and supported by such proof as shall be prescribed by the Secretary of the Treasury, the said goods, wares, or merchandise, shall be taken possession of by the collector, and deposited in the public stores, or in other stores to be agreed on by the collector or chief revenue officer of the port and the importer, owner, or consignee, the said stores to be secured in the manner provided for by the first section of the act of the 20th day of April, 1818, entitled "An act providing for the deposit of wines and distilled spirits in public warehouses, and for other purposes," there to be kept with due and reasonable care, at the charge and risk of the owner, importer, consignee, or agent, and subject at all times to their order upon payment of the proper duties and expenses, to be ascertained on due entry thereof for warehousing, and to be secured by bond of the owner, importer, or consignee, with surety or sureties, to the satisfaction of the collector, in double the amount of the said duties, and in such form as the secretary of the treasury shall prescribe: Provided, that no merchandise shall be withdrawn from any warehouse in which it may be deposited in a less quantity than in an entire package, bale, cask, or box, unless in bulk; nor shall merchandise so imported in bulk, be delivered, except in the whole quantity of each parcel, or in a quantity not less than one ton weight, unless by special authority of the secretary of the treasury. And in case the owner, importer, consignee, or agent of any goods on which the duties have not been paid, shall give to the collector satisfactory security that the said goods shall be landed out of the jurisdiction of the United States, in the manner now required by existing laws relating to exportations for the benefit of drawback, the collector and naval officer, if any, on an entry to re-export the same, shall, upon payment of the appropriate expenses, permit the said goods, under the inspection of the proper officers, to be shipped without the payment of any duties thereon. And in case any goods, wares, or merchandise, deposited as aforesaid, shall remain in public store beyond one year, without payment of the duties and charges thereon, then said goods, wares, or merchandise, shall be appraised by the appraisers of the United States, if there be any at such port, and if none, then by two merchants designated and sworn by the collector for that purpose, and sold by the collector at public auction, on due public notice thereof being first given, in the manner and for the time to be prescribed by a general regulation of the treasury department; and at said public sale, distinct printed catalogues descriptive of said goods, with the appraised value affixed thereto, shall be distributed among the persons present at said sale; and a reasonable opportunity shall be given before such sale, to persons desirous of purchasing, to inspect the quality of such goods; and the proceeds of said sales, after deducting the usual rate of storage at the port in question, with all other charges and expenses, including duties, shall be paid over to the owner, importer, consignee, or agent, and proper receipts taken for the same: Provided, that the overplus, if any there be, of the proceeds of such sales, after the payment of storage, charges, expenses, and duties as aforesaid, remaining unclaimed for the space of ten days after such sales, shall be paid by the collector into the treasury of the United States; and the said collector shall transmit to the treasury department, with the said overplus, a copy of the inventory, appraisement, and account of sales, specifying the marks, numbers, and descriptions of the packages sold, their contents, and appraised value, the name of the vessel and master in which and of the port or place whence they were imported, and the time when, and the name of the person or persons to whom said goods were consigned in the manifest, and the duties and charges to which the several consignments were respectively subject; and the receipt or certificate of the collector shall exonerate the master or person having charge or command of any ship or vessel, in which said goods, wares, or merchandise were imported, from all claim of the owner or owners thereof, who shall, nevertheless, on due proof of their interest, be entitled to receive from the treasury the amount of any overplus paid into the same under the provisions of this act: Provided, that so much of the fifty-sixth section of the general collection law of the 2nd of March, 1799, and the thirteenth section of the act of the 30th of August, 1842, to provide revenue from imports, and to change and modify existing laws imposing duties on imports, and for other purposes, as conflicts with the provisions of this act, shall be, and is hereby repealed, excepting that nothing contained in this act shall be construed to extend the time now prescribed by law for selling unclaimed goods: Provided, also, that all goods of a perishable nature, and all gunpowder, fire-crackers, and explosive substances, deposited as aforesaid, shall be sold forthwith.

Sec. 2. And be it further enacted, that any goods, when deposited in the public stores in the manner provided for in the foregoing section, may be withdrawn therefrom and transported to any other port of entry, under the restrictions provided for in the act of the 2nd of March, 1799, in respect to the transportation of goods, wares, and merchandise from one collection district to another, to be exported with the benefit of drawback; and the owner of such goods so to be withdrawn for transportation, shall give his bond with sufficient sureties, in double the amount of

the duties chargeable on them, for the deposit of such goods in store in the port of entry to which they shall be destined, such bond to be cancelled when the goods shall be re-deposited in store in the collection district to which they shall be transported: Provided, that nothing contained in this section shall be construed to extend the time during which goods may be kept in store, after their original importation and entry, beyond the term of one year.

Sec. 3. And be it further enacted, That if any warehouse goods shall be fraudulently concealed in or removed from any public or private warehouse, the same shall be forfeited to the United States; and all persons convicted of fraudulently concealing or removing such goods, or of aiding or abetting such concealment or removal, shall be liable to the same penalties which are now imposed for the fraudulent introduction of goods into the United States; and if any importer or proprietor of any warehoused goods, or any person in his employ, shall by any contrivance fraudulently open the warehouse, or shall gain access to the goods, except in the presence of the proper officer of the customs, acting in the execution of his duty, such importer or proprietor shall forfeit and pay, for every such offence, 1000 dollars. And any person convicted of altering, defacing, or obliterating any mark or marks which have been placed by any officer of the revenue on any package or packages of warehoused goods, shall forfeit and pay, for every such offence, 500 dollars.

Sec. 4. And be it further enacted, That the collectors of the several ports of the United States shall make quarterly reports to the Secretary of the Treasury, according to such general instructions as the said secretary may give, of all goods which remain in the warehouses of their respective ports, specifying the quantity and description of the same; which returns, or tables formed thereon, the Secretary of the Treasury shall forthwith cause to be published in the principal papers of the city of Washington.

Sec. 5. And be it further enacted, That the Secretary of the Treasury be, and he is hereby authorised to make, from time to time, such regulations, not inconsistent with the laws of the United States, as may be necessary to give full effect to the provisions of this act, and secure a just accountability under the same. And it shall be the duty of the secretary to report such regulations to each succeeding session of Congress.

An Act for the Allowance of Drawback on Foreign Merchandise imported into certain Districts of the United States from the British North American Provinces, and exported to Foreign Countries.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any merchandise imported from the British North American provinces, adjoining the United States, which shall have been duly entered, and the duties thereon paid or secured according to law, at either of the ports of entry in the collection districts situated on the northern, north-eastern, and north-western frontiers of the United States, may be transported by land or by water, or partly by land and partly by water, to any port or ports from which merchandise may, under existing laws, be exported for the benefit of drawback, and be thence exported with such privilege to any foreign country: Provided, that such exportations shall be made within one year from the date of importation of said merchandise, and that existing laws relating to the transportation of merchandise entitled to drawback from one district to another, or to two other districts, and the due exportation and proof of landing thereof, and all regulations which the Secretary of the Treasury may prescribe for the security of the revenue, shall be complied with.

The *North-eastern Boundary Treaty* fixes the limits between New Brunswick, Canada, and the United States. Provides that the produce of the ceded territory brought down the River St. John, shall be treated when imported into the United Kingdom, as if it were the produce of a British possession.

The Oregon Treaty.

ART. I. From the point of the forty-ninth parallel of north latitude, where the boundary laid down in existing treaties and conventions between the United States and Great Britain terminates, the line of boundary between the territories of the United States and those of her Britannic Majesty shall be continued westward along the said forty-ninth parallel of north latitude to the middle of the channel which separates the continent from Vancouver's Island; and thence southerly, through the middle of the said channel, and of Fuca's Straits, to the Pacific Ocean: Provided, however, that the navigation of the whole of the said channel and straits south of the forty-ninth parallel of north latitude remain free and open to both parties.

ART. II. From the point at which the forty-ninth parallel of north latitude shall be found to

intersect the great northern branch of the Columbia River, the navigation of the said branch shall be free and open to the Hudson's Bay Company, and to all British subjects trading with the same, to the point where the said branch meets the main stream of the Columbia, and thence down the said main stream to the ocean, with free access into and through the said river or rivers; it being understood that all the usual portages along the line thus described shall in like manner be free and open. In navigating the said river or rivers, British subjects, with their goods and produce, shall be treated on the same footing as citizens of the United States; it being, however, always understood that nothing in this article shall be construed as preventing, or intended to prevent, the government of the United States from making any regulations respecting the navigation of the said river or rivers, not inconsistent with the present treaty.

ART. III. In the future appropriation of the territory south of the forty-ninth parallel of north latitude, as provided in the first article of this treaty, the possessory rights of the Hudson's Bay Company, and of all British subjects who may be already in the occupation of land or other property lawfully acquired within the said territory, shall be respected.

ART. IV. The farms, lands, and other property, of every description, belonging to the Puget's Sound Agricultural Company, on the north side of the Columbia River, shall be confirmed to the said company. In case, however, the situation of those farms and lands should be considered by the United States to be of public and political importance, and the United States' government should signify a desire to obtain possession of the whole, or of any part thereof, the property so required shall be transferred to the said government, at a proper valuation, to be agreed upon by the parties.

ART. V. The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the senate thereof, and by her Britannic Majesty; and the ratifications shall be exchanged at London, at the expiration of six months from the date hereof, or sooner, if possible.
