## Technical and Bibliographic Notes / Notes techniques et bibliographiques

The Institute has attempted to obtain the best original copy available for filming. Features of this copy which may be bibliographically unique, which may alter any of the images in the reproduction, or which may significantly change the usual method of filming are checked below.

- Coloured covers / Couverture de couleur
- Covers damaged / Couverture endommagée
- Covers restored and/or laminated / Couverture restaurée et/ou pelliculée
- Cover title missing / Le titre de couverture manque
- Coloured maps / Cartes géographiques en couleur
- Coloured ink (i.e. other than blue or black) / Encre de couleur (i.e. autre que bleue ou noire)
- Coloured plates and/or illustrations / Planches et/ou illustrations en couleur
- Bound with other material / Relié avec d'autres documents
- Only edition available / Seule édition disponible
- Tight binding may cause shadows or distortion along interior margin / La reliure serrée peut causer de l'ombre ou de la distorsion le long de la marge intérieure.
- Blank leaves added during restorations may appear within the text. Whenever possible, these have been omitted from filming / Il se peut que certaines pages blanches ajoutées lors d'une restauration apparaissent dans le texte, mais, lorsque cela était possible, ces pages n'ont pas été filmées.
- Additional comments / Commentaires supplémentaires:

L'Institut a microfilmé le meilleur exemplaire qu'il lui a été possible de se procurer. Les détails de cet exemplaire qui sont peut-être uniques du point de vue bibliographique, qui peuvent modifier une image reproduite, ou qui peuvent exiger une modification dans la méthode normale de filmage sont indiqués ci-dessous.

- Coloured pages / Pages de couleur
- Pages damaged / Pages endommagées
- Pages restored and/or laminated / Pages restaurées et/ou pelliculées
- Pages discoloured, stained or foxed / Pages décolorées, tachetées ou piquées
- Pages detached / Pages détachées
- Showthrough / Transparence
- Quality of print varies / Qualité inégale de l'impression
- Includes supplementary material / Comprend du matériel supplémentaire
- Pages wholly or partially obscured by errata slips, tissues, etc., have been refilmed to ensure the best possible image / Les pages totalement ou partiellement obscurcies par un feuillet d'errata, une pelure, etc., ont été filmées à nouveau de façon à obtenir la meilleure image possible.
- Opposing pages with varying colouration or discolourations are filmed twice to ensure the best possible image / Les pages s'opposant ayant des colorations variables ou des décolorations sont filmées deux fois afin d'obtenir la meilleure image possible.

This item is filmed at the reduction ratio checked below / Ce document est filmé au taux de réduction indiqué ci-dessous.

10x	12x	14x	16x	18x	20x	22x	24x	26x	28x	30x	32x
-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----	-----

The copy filmed here has been reproduced thanks to the generosity of:

National Library of Canada

The images appearing here are the best quality possible considering the condition and legibility of the original copy and in keeping with the filming contract specifications.

Original copies in printed paper covers are filmed beginning with the front cover and ending on the last page with a printed or illustrated impression, or the back cover when appropriate. All other original copies are filmed beginning on the first page with a printed or illustrated impression, and ending on the last page with a printed or illustrated impression.

The last recorded frame on each microfiche shall contain the symbol ➞ (meaning "CONTINUED"), or the symbol ▽ (meaning "END"), whichever applies.

Maps, plates, charts, etc., may be filmed at different reduction ratios. Those too large to be entirely included in one exposure are filmed beginning in the upper left hand corner, left to right and top to bottom, as many frames as required. The following diagrams illustrate the method:

henks  
L'exemplaire filmé fut reproduit grâce à la générosité de:

Bibliothèque nationale du Canada

ty  
ity  
  
med  
res-  
the  
ed

Les images suivantes ont été reproduites avec le plus grand soin, compte tenu de la condition et de la netteté de l'exemplaire filmé, et en conformité avec les conditions du contrat de filmage.

Les exemplaires originaux dont la couverture en papier est imprimée sont filmés en commençant par le premier plat et en terminant soit par la dernière page qui comporte une empreinte d'impression ou d'illustration, soit par le second plié, selon le cas. Tous les autres exemplaires originaux sont filmés en commençant par la première page qui comporte une empreinte d'impression ou d'illustration et en terminant par la dernière page qui comporte une telle empreinte.

Un des symboles suivants apparaîtra sur la dernière image de chaque microfiche, selon le cas: le symbole → signifie "A SUIVRE", le symbole ▼ signifie "FIN".

Les cartes, planches, tableaux, etc., peuvent être filmés à des taux de réduction différents. Lorsque le document est trop grand pour être reproduit en un seul cliché, il est filmé à partir de l'angle supérieur gauche, de gauche à droite, et de haut en bas, en prenant le nombre d'images nécessaire. Les diagrammes suivants illustrent la méthode.

# Dominion Forestry Branch Message Code

## INTRODUCTION

The purpose of a message code is to enable the more expeditious transmission of messages that are largely of a routine character. Such a code not only makes for speed of communication but also for certainty, since only a comparatively few signals have to be transmitted and chances of mistakes are correspondingly reduced. These factors make the use of a code particularly valuable where poorly trained signallers are employed, as will usually be the case in forest protection. Such a code is adapted to any form of signalling using the Morse alphabet but its usefulness depends mostly on its comprehensiveness. Experience in the practical use of such codes in forest work is lacking. Therefore, the following code is to be considered merely tentative and may be altered to fit local conditions as far as is necessary. Suggestions regarding general modifications of the code, where it is found defective or requires extension, should be made to the Director.

## PREPARATION OF CODE

In preparing a message code for any activity it is desirable first to divide the signals into two or more distinct classes if possible. The message under each class should then be arranged in alphabetical order by the key-word (or leading word) in the message. When there are two or more important words in a message, it should appear in the code under each of them in its proper order. After arranging all the messages as indicated, signals also running in alphabetical order should be assigned them. These are best placed in a column to the left of the messages. A message that appears under more than one key-word is indicated by having its signal inserted to the right of the message in the places where it is repeated.

In preparing a message code for forest fire lookout stations it is first necessary to consider what classes of message a lookout man desires to send. Evidently the reporting of the discovery, location, and progress of fires are among the foremost of these. Fires are generally reported by azimuth bearings, in whole degrees or sometimes half degrees. To cover the entire circle by half degrees would require, therefore, 720 signals.

In many cases, the azimuth bearing alone is not considered sufficient and the lookout man is required to determine the approximate distance to the fire, and report by both bearing and distance. To do this by message code it is best to adopt a numeral code running up to the greatest distance at which a lookout man would be likely to report a fire, and, by combining this numeral code with the bearing code, such a sentence as the following may be sent:—

**OG DS** = "I have sighted a fire with azimuth bearing, from my station, of 24 degrees, 30 minutes; distant, approximately 19 miles."

If the location of fires is being determined by a station that is itself communicating by visual signal, radiotelegraphy, or any other method to which a code is adaptable, it will be necessary to provide a set of signals that will indicate the precise location of the fire within the area being protected. If the region is covered by the Dominion public land survey, a separate signal for each section or even quarter-section on the entire area may be provided, although for the latter on an area of one million acres at least 6,500 signals would be required. The message might read as follows:—

**B T T** = "A fire has been located on the southwest quarter of section 12, township 36, range 14, west of the fifth meridian."

In a region that is not sectionized, the most convenient scheme is to divide it on the map into squares, arbitrarily, and number each square, assigning a separate signal to each for reporting a fire therein. Squares may be one mile to a side or smaller or larger as the conditions warrant.

For convenience in future reference each lookout man should number his fires and refer to them by number only. Various reports as to the progress of the fire as seen from the lookout station are usually desired, and each of these will require a set of signals long enough to cover as many fires as any one lookout man would be likely to report during a season.

Necessity for another class of signals arises from the fact that in many regions permits to settlers to start fires are required, and it is important that lookout men be informed whenever such permits are issued. To do this by code, each settler in the entire region should be designated by a signal. Such a message would then be of the following type:—

**F L T** = "A permit has been issued to John Smith to burn slash on his homestead."

## EXPLANATION OF CODE

In order to indicate the date, if this is desirable, the code date would have to be added to the signal above, making it one of two parts.

For convenience in finding signals which apply to definite locations, blocks, homesteads, etc., on the map, they can be written or lettered on the map itself in the proper places.

Lookout stations are often supplied with food by pack-train. In order that the lookout man may, if necessary, put in an order for supplies, a complete set of code signals covering all the food and other supplies furnished, must be prepared, the amounts being indicated by the numeral code.

Finally there are a number of miscellaneous and routine messages covering the forwarding of mail, presence of tourists, progress of pack-train, etc., that cannot be classified.

### 1—EXPLANATION OF FORESTRY BRANCH CODE

Two general classes of signals are provided : first, Forest Signals, and second, Fire Signals. The first class consists of signals of two letters only and is mostly used in connection with signals of the second class as indicated in the messages. This class covers numerals up to 104; a signal for each man on the protection staff and a signal for each ranger station, lookout station, fire guard station, and district on the reserve. Names are to be filled in locally for each reserve in proper alphabetical order.

The second class is arranged for convenience under the following subheadings:—

- (1) Fire Discovery Signals (page 24)
- (2) Fire Location Signals (page 29)
- (3) Fire Progress Signals (page 38)
- (4) Slash-burning Permit Signals (page 39)
- (5) Food and Supply Signals (page 48)
- (6) Miscellaneous Fire Signals (page 63)

In each subclass the messages are arranged alphabetically but the signals for the entire class are in a single, alphabetically arranged series.

"Fire Discov 'y'" includes all messages covering the report of fires detected, with bearing and distance from one or more stations.

"Fire Location" includes all messages covering the localization of fires on definite sections, blocks or other subdivisions of the area.

"Fire Progress" includes all messages covering the behaviour of fires as noted from lookout stations or as reported by the men on the fire-line.

"Slash-burning Permit" includes all messages covering the issuance or cancellation of permits to burn slash on or near the reserve within lookout range.

"Food and Supply" includes all messages covering the ordering, forwarding, receipt, delivery, etc., of food, tools, men, horses, and all other things required by lookout men or other officers.

"Miscellaneous" includes all messages not included elsewhere. Among these are time, days of the week and month, places near the reserve, report of movements of travellers, etc., etc.

In many cases it will be necessary to send two or more signals in order to complete the message. This is particularly so in cases when to the main signal it is necessary to add a numeral, date, name of place or person, etc. Whenever a compound signal of this sort is to be sent, always send first **G E H** = "Prepare to take compound signal".

When sending compound signals great care must be exercised to indicate the *pause* between the signals and the *period* at the end of each group.

The proper order of signals is to send first the main signal of the group and to follow this with the numeral, date, etc., in the order indicated in the message.

#### DEFINITION OF CERTAIN TERMS

"Fire Guard" includes all assistant forest rangers, patrol men, or other temporary employees hired entirely or essentially for the purpose of supplementing the fire-protective force during the dangerous period, and working for the most part under the direct supervision of the district ranger.

"Fire Guard Station" includes the headquarters of an assistant forest ranger, patrolman, or other temporary employee as distinguished from the headquarters of the district ranger.

### 3—FIRE SIGNALS

#### (1) Fire Discovery Signals

NOTE.—The following table gives a signal for each whole degree and half degree of the circle. The signal when received from a lookout station or other fire detection station conveys the following message :—"I have discovered a fire the bearing of which from my station is the number of degrees indicated." The indicated bearing is, of course, that shown in the table opposite the signal transmitted.

If the bearing signal is followed by a numeral signal, the message is as follows : "I have discovered a fire, the bearing of which from my station is the number of degrees indicated and the approximate distance in miles is as indicated."

If the bearing signal is preceded by a name signal, the message is as follows : "John Jones reports that he has discovered a fire, the bearing of which from his station is the number of degrees indicated."

## (2) Fire Location Signals

In the following tables 3172 signals are listed. As explained on page 4 these signals are to be assigned to sections, lots or other definite subdivisions of the area under protection, and for convenience should appear in the proper place on all maps. If transmitted alone, any one of these signals conveys the following message : "A fire is burning in the section indicated." The section indicated is, of course, the one that corresponds to the signal as shown in a table or on the map.

These section signals may be used in combination with others. For instance, if followed by a numeral signal, the message would indicate that more than one fire was burning in the same section.

If followed by a signal representing one of the four quarters of a public land section, the message would indicate that the fire was in the quarter-section designated.

Rules for the use of section signals with others must be made definite and prepared locally according to local conditions.

Signal	Signal Meaning
<b>(3) Fire Progress Signals</b>	
<b>FHA</b>	Corralled. The fire indicated is corralled.
<b>FHB</b>	Corralled. Report to headquarters (or station indicated) that the fire whose number follows is corralled.
<b>FHC</b>	Corralled. The district (or ranger) indicated reports that the fire whose number in that district follows is corralled.
<b>FHE</b>	Larger. The fire indicated is growing larger.
<b>FHF</b>	Larger. Report to headquarters (or station indicated) that the fire whose number follows is growing larger.
<b>FHG</b>	Larger. The district (or ranger) indicated reports that the fire whose number in that district follows is larger.
<b>FHI</b>	Out. The fire indicated is out.
<b>FHJ</b>	Out. Report to headquarters (or station indicated) that the fire whose number follows is out.
<b>FHK</b>	Out. The district (or ranger) indicated reports that the fire whose number in that district follows is out.
<b>FHM</b>	Report to headquarters (or station indicated) that the fire whose number follows is corralled.
<b>FHN</b>	Report to headquarters (or station indicated) that the fire whose number follows is growing larger.
<b>FHO</b>	Report to headquarters (or station indicated) that the fire whose number follows is out.
<b>FHP</b>	Report to headquarters (or station indicated) that the fire whose number follows is about the same.

Signal	Signal Meaning
<b>(3) Fire Progress Signals—Con.</b>	
<b>FHQ</b>	Report to headquarters (or station indicated) that the fire whose number follows is growing smaller.
<b>FHT</b>	Same. The fire indicated is about the same.
<b>FHU</b>	Same. Report to headquarters (or station indicated) that the fire whose number follows is about the same.
<b>FHV</b>	Same. The district (or ranger) indicated reports that the fire whose number in that district follows is about the same.
<b>FHW</b>	Smaller. The fire indicated is becoming smaller.
<b>FHX</b>	Smaller. Report to headquarters (or station indicated) that the fire whose number follows is becoming smaller.
<b>FHY</b>	Smaller. The district (or ranger) indicated reports that the fire whose number in that district follows is becoming smaller.
<b>(4) Slash-burning Permit Signals</b>	
<p><b>NOTE.</b>—Names of all settlers and other persons to whom slash-burning permits might be issued on or near the forest reserve should be entered as nearly as possible in alphabetical order opposite the following signals. These signals when sent to a lookout or patrol station then convey the following message: "A slash-burning permit has been issued to (settler whose name corresponds to signal in code)".</p>	
<p>If the burning is to take place on a fixed date, follow the name signal with a date signal. If the burning is to take place between two fixed dates, follow the name signal with the two proper date signals.</p>	
<p>In order to indicate cancellation instead of issuance of a burning permit, follow the code signal with the sign of the negative, the letter K.</p>
